31. Respondents failed to prove Claimant willfully violated a safety rule. Even if the cited “rule” is sufficiently specific to satisfy the requirements of the statute, Claimant did not willfully violate it. Claimant’s testimony she was suddenly caught off guard by the hail is credible. At most, her failure to reduce speed was the result of carelessness or oversight, not “willfulness.”

32. Claimant has ongoing back and neck pain attributable to the MVA. On October 14, 2019, Dr. Sandell stated, “I will continue to see her and treat symptoms as related to the motor vehicle accident specifically. I anticipate she will need some physical therapy to address some of the spine complaints. . . . I have referred her for cervical, thoracic, and lumbar spine stabilization for 10-12 visits. I am prescribing the physical therapy as treatment specifically for the [motor] vehicle accident [separate] from the neurological disorder.”

33. Dr. Sandell’s referral to PT to treat residual symptoms from musculoskeletal injuries suffered in the May 7, 2019 MVA is reasonable, and his opinions on the topic are credible and persuasive.

34. Claimant failed to prove occupational or speech therapy are related to the MVA. There is no persuasive evidence Claimant requires occupational or speech therapy for her musculoskeletal symptoms or another other condition related to the work accident. Rather, OT and speech therapy were recommended to treat the effects of the nonwork-related MG.

CONCLUSIONS OF LAW

A. Respondents proved Claimant’s myasthenia gravis was not proximately caused, aggravated or accelerated by the May 7, 2019 accident.

Respondents seek to withdraw their admission for TTD under the theory that Claimant’s disability and resulting wage loss was not proximately caused by the work accident. Respondents agree Claimant was disabled and suffered a wage loss, but argue her wage loss was caused by a personal medical condition instead of the work accident.

Section 8-43-201(1) provides that the party seeking to modify an issue determined by a general admission bears the burden of proof for any such modification by a preponderance of the evidence. In the present context, the practical effect of this requirement is that Respondents must prove the MG is not related to the work accident.

The existence of a pre-existing condition does not preclude a claim for medical benefits if an industrial injury aggravated, accelerated, or combined with the pre-existing condition to produce the need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The ultimate question is whether the need for treatment was the proximate result of an industrial aggravation or merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Respondents proved MG is not causally related to the May 7, 2019 MVA. MG is an autoimmune disorder caused when the patient's body mistakenly attacks and blocks acetylcholine receptors in the neuromuscular junction. Most cases are related to thymic abnormalities, either thymomas or (as here) thymic hyperplasia. The mere fact that one event precedes another does not automatically make the first event causative of the second. The development and expression of antibodies in Claimant's body was not related to the MVA, and the manifestation of symptoms shortly after the accident was probably just a coincidence. Admittedly, the fluid nature of Dr. Morgenstern's opinions detracts somewhat from their persuasiveness. But, the ALJ ultimately finds two factors dispositive. First, Dr. Morgenstern and Dr. Raschbacher persuasively explained it takes several days for the antibodies responsible for MG take to develop, meaning they were almost certainly present before the accident. Second, there is no persuasive evidence of a biologically plausible mechanism by which generalized "trauma" or "stress" associated with the MVA would trigger or accelerate rapid expression of antibodies, thereby causing MG to become symptomatic overnight. The Reed case study cited by Dr. O'Neil merely "speculated" as to a mechanism by which trauma "might" have caused MG to manifest. Ultimately, the Reed case study amounts to a single anecdote, and is simply too thin a reed upon which to rest a decision regarding general or specific causation. Similarly, the authors of the Peterson case study postulated direct trauma to the patient's thymic remnants "might" have precipitated the condition or exacerbated subclinical disease by injecting thymic tissue directly into the bloodstream. But they also conceded the apparent temporal relationship "may be purely coincidental, and more likely than not, it is." Moreover, the patient in the Peterson study suffered a serious chest trauma that fractured his sternum, whereas there is no persuasive evidence of a significant trauma to Claimant's chest. In any event, the authors also referenced a study of 50 patients with direct trauma to their sternum, none of whom developed MG. As Dr. Morgenstern pointed out, no other published literature even suggests trauma as a potential cause of MG. Although Dr. O'Neil stated stress is a "known" trigger or exacerbator of MG, he cited no specific literature to support that point. By contrast, Dr. Morgenstern unequivocally opined that no such literature exists. The balance of persuasive evidence shows Claimant's MG is probably not related to the MVA.

B. Respondents may withdraw their admission for TTD benefits.

A claimant is entitled to TTD benefits if the injury caused a disability, the disability caused the claimant to leave work, the claimant missed more than three regular working days, and suffered an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Entitlement to TTD is not dependent on formal work restrictions from a

treating physician, and eligibility may be established with any competent evidence, including lay testimony. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). An injury need not be the *sole* cause of the wage loss, and a claimant is entitled to TTD if a work-related injury contributes “to some degree” to a temporary wage loss. *PDM Molding, supra*. Because Respondents have the burden of proof to withdraw the admission for TTD, Respondents must show that Claimant’s injury did not contribute in any degree to her wage loss.

As found, Respondents proved that the work accident did not cause a disability, did not cause Claimant to leave work, and did not cause or contribute to a wage loss. Claimant could not work because of her MG and treatment for it. The musculoskeletal injuries she suffered in the accident were relatively mild and would not have prevented her from working in the absence of MG. Claimant had no formal work restrictions for conditions other than MG, and there is no other persuasive evidence of any other reason she could not have performed her regular job. Respondent proved Claimant was not entitled to TTD in the first instance.

C. The TTD previously paid under the GAL is an overpayment

Section 8-40-201(15.5) defines an “overpayment” as:

[M]oney received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability or death benefits under said articles.

Claimant argues admitted TTD can only be terminated prospectively absent fraud or wrongdoing on the claimant’s part. Therefore, Claimant reasons benefits paid pursuant to an admission cannot be an overpayment. Although that was the law at one time,¹ statutory amendments in 1997 regarding overpayments changed that rule. See *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev’d in part on unrelated grounds*, 232 P.3d 777 (Colo. 2010). The ICAO’s analysis in *Josue v. Anheuser-Busch, Inc.*, W.C. No. 4-954-217-04 (June 17, 2016) is persuasive and dispositive of this issue. In *Josue*, the respondents had admitted for TTD based on a medical procedure that was later determined by an ALJ to be unrelated to the work accident. Citing *Simpson, supra*, the Panel held the respondents were entitled to retroactive relief from the GAL, and benefits previously paid were an overpayment, notwithstanding prior caselaw limiting respondents to prospective relief only.

The situation in Claimant’s case is not appreciably different than that in *Josue*. Accordingly, the ALJ agrees with Respondents the TTD benefits paid since June 6, 2019 are an overpayment.

¹ *Kraus v. Artcraft Sign Company*, 710 P.2d 480 (Colo. 1985).

D. Respondents failed to prove Claimant willfully violated a safety rule

Section 8-42-112(1)(b) provides for a fifty percent reduction of indemnity benefits “where injury results from the employee’s willful failure to obey any reasonable rule adopted by the employer for the safety of the employee.” A safety rule need not be formally adopted or reduced to writing to be effective. *Bennett Properties Co. v. Industrial Commission*, 437 P.2d 548 (Colo. 1968). The term “willful” means “with deliberate intent,” and mere “carelessness, negligence, forgetfulness, remissness or oversight” does not satisfy the statutory standard. *Id.* The respondents do not have to present evidence about the claimant’s state of mind or prove he had the rule “in mind” when he did the prohibited act. Rather, a “willful” violation may be inferred from evidence the claimant knew the safety rule and did the prohibited act. *Id.* The respondents have the burden to prove the requisite elements for the penalty, including the existence of a safety rule, the willfulness of the claimant’s conduct, and that violation of the safety rule caused the injury. *Lori’s Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995).

Respondents identify the safety rule in question as “Honor all posted traffic signs and obey all state and local laws.” Claimant was traveling at the posted speed limit at the time of the accident, so there is no argument she failed to “honor all posted traffic signs.” The question is whether she willfully failed to “obey all state and local laws.”²

Section 42-4-1101(3) provides, “No driver of a vehicle shall fail to decrease the speed of such vehicle from an otherwise lawful speed to a reasonable and prudent speed when a special hazard exists . . . by reason of weather or highway conditions.” The question thus becomes whether Claimant “willfully” exceeded the maximum “prudent” speed at the time of her accident. Deciding the appropriate speed for changing weather conditions is very much a judgment call. The individual’s ability to make that determination in real time depends to a large extent on their perception and experience. The specific maximum “prudent” speed for the circumstances will likely be more apparent to an experienced State Patrol officer or an accident reconstruction expert than a typical driver. There is no persuasive evidence Claimant was ever trained on proper speed during inclement weather, or that she was familiar with the provisions of the Colorado Driver Handbook cited by Respondents’ expert.³ Nor is there any persuasive evidence of the specific speed that would have been “safe” for the conditions, much less that Claimant knew what it was. The ALJ does not accept Respondents supposition that Claimant has some heightened “expertise” in this matter simply because she “grew up in Minnesota.” In any event, the persuasive evidence shows Claimant was caught off guard by the

² It is questionable whether the broad and generalized directive to “obey all state and local laws” qualifies as a “safety rule” within the meaning of the statute. There are many “state and local laws” that do not directly relate to safety. While following all laws would undoubtedly protect a worker’s safety in certain circumstances, that is not the type of “rule” contemplated by statute. See e.g., *Garcia v. Rio Grande County*, W.C. No. 4-993-780 (March 3, 1992). Nevertheless, it is unnecessary to make a definitive determination in this regard, because, as explained below, Claimant’s conduct was not “willful.”

³ The ALJ notes the Driver Handbook specifically states, “It is not a book of laws and should not be used as a basis for any claims or legal actions.”

amount of hail on the road and lost traction without warning. Respondents failed to prove the accident resulted from Claimant's "willful" failure to obey a safety rule.

E. Physical therapy, occupational therapy, and speech therapy

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Even if the respondents admit liability for an accident, they retain the right to dispute the reasonable necessity or relatedness of any treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

As found, the PT recommended by Dr. Sandell to treat musculoskeletal symptoms in Claimant's back and neck is reasonably necessary and related to the MVA. However, while occupational therapy and speech therapy may be reasonably necessary, it is not related to the MVA.

ORDER

It is therefore ordered that:

1. Respondents' request to withdraw their admission for TTD commencing June 6, 2019 is granted.
2. TTD benefits paid since June 6, 2019 are an overpayment. Respondents may credit the overpayment against any future indemnity benefits owed on this claim. Recovery of any remaining overpayment after credits is reserved for future determination, if necessary.
3. Respondent's request to reduce indemnity benefits by 50% based on willful violation of a safety rule is denied and dismissed.
4. Insurer shall cover the physical therapy recommended by Dr. Sandell to treat Claimant's neck and back symptoms.
5. Claimant's request for medical treatment related to myasthenia gravis, including occupational and speech therapy is denied and dismissed.
6. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: April 12, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable head injury or mental impairment during the course and scope of his employment with Employer on May 8, 2018.
2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized, reasonable, necessary and related medical treatment designed to cure or relieve the effects of a work-related injury.

FINDINGS OF FACT

1. Claimant is a 35-year-old former police officer for Employer. Claimant explained that on May 8, 2018 he and two other officers were attempting to control a combative suspect. However, the officers were unsuccessful in subduing the individual. Claimant testified that he then "had the opportunity while the suspect's back was to me to do a diving, leaping bear-hug tackle and that successfully brought us to the ground." Claimant contends he suffered a head injury on May 8, 2018 while tackling the suspect by striking his head on the individual or the ground. Claimant also sustained scrapes on his elbows and knees during the altercation. Immediately after the incident Claimant returned to the police department and completed a report that did not include any mention of a head injury.
2. On May 10, 2018 Claimant suffered an episode at work in which he fell backward onto his buttocks. Claimant was transported by ambulance and admitted to the hospital for possible seizures. The paramedic report reflects that Claimant collapsed at the station but noted no seizure activity.
3. Claimant suffered a prior "fainting episode" at work in November of 2016. Without any precipitating event, Claimant collapsed with apparent seizures. He was eventually diagnosed with psychogenic pseudo-seizures following the incident and placed on light/desk duty while receiving treatment for the condition. Claimant eventually returned to full duty in August of 2016 but was directed to continue with psychological counseling for the next six months.
4. After the May 10, 2018 seizure episode, Claimant was admitted to Rose Medical Center where he was originally evaluated by Michael Schwartz, M.D. He reported that he was unconscious for approximately three minutes. When he awoke, he was confused and had noticeable right-sided weakness. Claimant was having trouble answering questions, had noticeable dysphagia and exhibited slurred speech. He also complained of a headache and blurred vision.

5. The records reveal that Claimant disclosed multiple grand-mal seizures eight months earlier but was not taking any medications. He reported short-term memory loss or confusion on at least four occasions in the last few days. Furthermore, Claimant mentioned a history of PTSD related to his war time experiences while serving in the Air Force in Afghanistan and a traumatic brain injury or TBI secondary to a blast in 2006. Claimant mentioned the physical altercation at work two days earlier.

6. Dr. Schwarz activated a stroke alert due to possible residual right upper extremity weakness. However, Claimant's EEG was normal, there was no evidence of additional seizure activity and no neuroanatomical lesions on any imaging studies. A head CT and brain MRI conducted on May 10, 2018 were also normal. Dr. Schwarz noted that Claimant reported some anxiety that may have been triggered due to a recent altercation at work. On May 11, 2018 neurologist Koi Pham, M.D. determined that the May 10, 2018 incident was a "stroke mimic" due to a migraine.

7. At discharge from Rose Medical Center Claimant's neurological examination was normal. Dr. Schwartz determined Claimant could be suffering from conversion disorder or another psychosomatic manifestation of emotional and social stressors in the setting of a recent violent encounter. He predicated his opinion on Claimant's waxing/waning neurologic symptoms. Claimant also had no objective signs of a head injury during his hospitalization. He specifically had no documented bumps, scrapes, or lacerations around the head or face. Claimant also had a normal EEG, CT scan and brain MRI.

8. Claimant subsequently visited neurologist Michael Pearlman, M.D., Ph.D. on May 15, 2018. He had undergone treatment with Dr. Pearlman since 2016. Dr. Pearlman noted that Claimant had "recently passed out and hit his head on the way down; suffered a concussion." He remarked that Claimant was experiencing severe PTSD and panic attacks with flashbacks of an episode in Iraq. Dr. Pearlman's impression was identical to Claimant's prior visit on February 16, 2018 except that he included a diagnosis of post-concussive syndrome related to the May 8, 2018 incident.

9. On June 18, 2018 Claimant returned to Dr. Pearlman for an evaluation. Dr. Pearlman remarked that Claimant's migraines and headaches were back to baseline. He was thus ready to return to work with no restrictions. Claimant subsequently underwent a repeat MRI without contrast that was normal.

10. Claimant was evaluated at the Marcus Institute from August 20-22, 2018 for a sleep study. Prior to the May 8, 2018 incident Claimant primarily worked a night shift. He reported always feeling tired during the day, restless sleep and loud snoring. Claimant noted recurring combat-related nightmares since leaving the military that had worsened in 2016 and again in 2018. Claimant was diagnosed with PTSD and major depressive disorder. Providers recommended therapy for PTSD, depression and anger management. They also specified that Claimant should not return to law enforcement due to his history of psychological trauma and severe PTSD. Moreover, Claimant demonstrated significant stress responses and low frustration tolerance that impaired his

performance and higher level functioning. Claimant's symptoms also produced significant deficits in daily tasks.

11. On August 28, 2018 Claimant again visited Dr. Pearlman. Dr. Pearlman commented that Claimant's "recent experience at the Marcus Institute seemed to trigger his PTSD even more than the concussion in May 2018." Dr. Pearlman recommended the inpatient Head Strong program for additional treatment. He also prescribed Trokendi for migraine, seizures and mood swings. Dr. Pearlman continued to diagnose Claimant with post-concussion syndrome related to the May 8, 2018 incident.

12. Claimant underwent inpatient treatment at the VA from October 4, 2018 through November 12, 2018 for his military-connected PTSD and Gulf War Syndrome. While receiving treatment at the VA, Claimant suffered a non-epileptic seizure that caused another admission to Rose Medical Center Emergency Department. Providers again diagnosed Claimant with non-epileptic seizures and instructed him to follow-up with his primary care physician.

13. At the request of Employer's Chief of Police William H[Redacted], Claimant was referred to Stanley H. Ginsburg, M.D. for a fitness-for-duty evaluation. Dr. Ginsburg initially evaluated Claimant on November 1, 2018. Claimant told Dr. Ginsburg that he was attempting to take down a violent suspect with no help, hit his head on the ground and probably lost consciousness. After reviewing limited medical records and interviewing Claimant, Dr. Ginsburg concluded that he was not fit for duty as a patrol officer given his history of pseudo-seizures and behavioral issues. Dr. Ginsburg asked to see additional records from the VA, the Deputy City Manager, Dr. Pearlman, Good Samaritan Hospital, Swedish Medical, Denver Health and the Marcus Institute because they had not been available for review.

14. Dr. Ginsburg subsequently reviewed records from Good Samaritan, Dr. Pearlman, Denver Health and the Marcus Institute. He thus completed a supplemental report on January 18, 2019. Dr. Ginsburg did not change his opinion and maintained that Claimant was only capable of returning to desk work as a police officer. He wrote Claimant "had very significant problems as a result of his active duty in the Mideast with injuries suffered as noted." Claimant disputed Dr. Ginsburg's determination and obtained a letter from Dr. Pearlman stating that he was fit for duty.

15. Claimant was not permitted to return to work and was subsequently evaluated for disability through the Fire and Police Pension Association (FPPA). Claimant underwent evaluations with Robert E. Kleinman, M.D., Ronald S. Murray, M.D., Marc M. Trihaft, M.D. and Annu Ramaswamy, M.D. They all concluded that Claimant had a permanent occupational disability.

16. Dr. Kleinman evaluated Claimant on June 20, 2019 and noted that he had a service-connected disability of PTSD. He stated that it was difficult to determine the extent of Claimant's PTSD without review of the VA records. Based on the limited records, Dr. Kleinman determined that Claimant had PTSD with sequelae of a traumatic brain injury prior to his work for Employer. He remarked that the May 8, 2018 incident had

worsened Claimant's symptoms. Dr. Kleinman summarized that Claimant had a permanent occupational disability with cognitive impairment and post-concussive syndrome as well as PTSD caused by his military service that was exacerbated by the May 8, 2018 altercation.

17. On June 20, 2019 Claimant underwent an evaluation with Ronald S. Murray, M.D. After reviewing Claimant's medical records and performing a physical examination, Dr. Murray concluded that Claimant satisfied "the definition for permanent occupational disability secondary to complications of a work-related close head injury." He explained that, because of the complications from the May 8, 2018 closed head injury, Claimant was no longer able to fulfill his duties as a police officer.

18. On July 11, 2019 Claimant was evaluated by Marc M. Trieft, M.D. Claimant reported that on May 8, 2018 he hit his head and face on the pavement. He immediately felt dazed and confused. Claimant subsequently reported short-term memory loss and rage attacks with emotional lability. After examining Claimant and reviewing medical records, Dr. Trieft also concluded that Claimant had a permanent occupational disability. He specifically remarked that Claimant suffered a head injury during the May 8, 2018 altercation that caused an exacerbation of his PTSD.

19. On July 28, 2019 Annu Ramaswamy, M.D. conducted Claimant's final FPPA evaluation. Claimant told Dr. Ramaswamy that he did not feel capable of performing the duties of a police officer and had been terminated on March 1, 2019. Dr. Ramaswamy noted that Claimant had a history of PTSD and post-concussive symptoms prior to the May 2018 work incident. Claimant also had a history of seizures and pseudo-seizures. Nevertheless, Dr. Ramaswamy remarked that Claimant had been able to perform his duties as a police officer for about two years. Dr. Ramaswamy concluded that Claimant suffered a mild traumatic brain injury in May 2018. He summarized that the concussion aggravated Claimant's pre-existing headaches "as well as aggravated the PTSD/post-concussive symptomatology." Dr. Ramaswamy concluded that Claimant had a permanent occupational injury and was thus unable to perform his job duties as a police officer.

20. On August 21, 2019 Claimant underwent an independent medical examination with Eric Hammerberg, M.D. Dr. Hammerberg reviewed several medical records including the fitness-for-duty examination by Dr. Ginsburg and the complete records from the VA that had not been reviewed by any other provider. He also considered the written incident reports from other officers involved in the altercation. Dr. Hammerberg diagnosed Claimant with PTSD and non-epileptic seizures. After reviewing the medical records and performing a physical examination Dr. Hammerberg noted that there was no documentation that Claimant suffered any significant physical injury in the May 8, 2018 incident. He explained that Claimant had likely experienced a significant psychological trauma during the May 8, 2018 altercation. In Claimant's words, the incident opened a "floodgate" of emotions, including extreme anxiety and anger. Dr. Hammerberg reasoned that the altercation triggered a conversion symptomatology, consisting of dissociation, psychogenic unresponsiveness and non-epileptic seizures caused by pre-existing PTSD. Dr. Hammerberg determined that Claimant suffered pre-existing

symptoms that were unrelated to the May 8, 2018 injury. Claimant sustained only minor abrasions to the upper extremity as a result of the altercation.

21. On December 23, 2019 Dr. Kleinman completed a supplemental report and record review after receiving the VA records and Dr. Hammerberg's report. Dr. Kleinman diagnosed Claimant with PTSD and functional neurological conversion disorder. He explained that both of the diagnoses preceded the May 8, 2018 incident. Dr. Kleinman specifically commented that Claimant's cognitive complaints were documented in the VA records in 2017 and had been related to PTSD rather than a TBI. After reviewing Claimant's symptoms in the context of the additional records, he concluded that Claimant did not suffer a TBI on May 8, 2018. Instead, Dr. Kleinman reasoned that Claimant had suffered "a brief surge in symptoms that all predated the injury." He did not determine that Claimant had sustained a permanent aggravation of his pre-existing condition but rather had returned to his baseline as documented in the VA records.

22. Claimant testified at the hearing in this matter. He explained that he was involved in an arrest on the evening of May 8, 2018 with a combative suspect. After attempts to subdue the suspect with a taser and pepper spray were unsuccessful, Claimant tackled the perpetrator and believed he struck his head. Claimant stated he immediately felt dazed, confused and had a headache that worsened through the night. He remarked that he told a fellow officer his head was hurting. Claimant completed a written report of the May 8, 2018 altercation that detailed the events that occurred leading to the arrest of the suspect. The report also recorded Claimant's injuries to his "left elbow and thumb in the form of lacerations. I declined medical treatment from paramedics while at the Police Station and was told my injuries should heal." Although Claimant testified that he had hit his head and had a worsening headache throughout the evening, he did not mention either in his report.

23. Several other officers involved in the May 8, 2018 altercation also completed incident reports. The individuals included Officers W[Redacted], Gonzales, Moore and Gillis as well as supervising officer sergeant B[Redacted]. The report of Officer Gonzales described the take down as "sliding down the side of a vehicle parked in the parking lot" rather than an abrupt fall to the ground as described by Claimant. Officer Gonzales assisted Officer W[Redacted] and Claimant in restraining the suspect. None of the reports documented that Claimant struck his head or had any evidence of a head injury. However, the reports of both Officer W[Redacted] and Sergeant B[Redacted] noted that Officer W[Redacted], who had tackled the suspect between two vehicles, had a bump on the right side of his head.

24. On February 10, 2020 Chief William H[Redacted] testified through a post-hearing evidentiary deposition in this matter. He explained that Claimant worked as a solo officer for approximately six months and then suffered a non-work related seizure in November 2016. The seizures were eventually diagnosed as psychogenic and Chief H[Redacted] requested a fitness-for-duty examination from a psychologist. Claimant was not initially cleared to return to duty. However, he was eventually permitted to return to duty in August of 2017 with considerations that included treatment for six months. With respect to the May 8, 2018 incident, Chief H[Redacted] explained that officers are trained

to document all injuries in written reports. Documentation is not only important for Workers' Compensation purposes but also to the severity of charges against the perpetrator. However, none of the written reports pertaining to the May 8, 2018 incident specified that Claimant suffered any kind of head injury. In fact, Claimant's own written report and Workers' Compensation form did not document any head injuries on May 8, 2018.

25. On February 10, 2020 Lieutenant Jamie D[Redacted] testified through a post-hearing evidentiary deposition in this matter. Lt. D[Redacted] was present on May 10, 2018 and confirmed that Claimant never lost consciousness while in the station. He explained that he had weekly conversations with Claimant after he left work in May of 2018 and did not notice any changes in his attitude or behavior. Lt. D[Redacted] commented that the reports of the May 8, 2018 incident did not reflect that Claimant had suffered a head injury. In fact, Officer W[Redacted] came up from behind the suspect and tackled him to the ground during the altercation.

26. Claimant has failed to establish that it is more probably true than not that he sustained a compensable head injury or mental impairment during the course and scope of his employment with Employer on May 8, 2018. Although Claimant was involved in a traumatic incident helping to take down a suspect resisting arrest on May 8, 2018, the evidence does not demonstrate that he sustained a compensable injury. Instead, the record reflects that Claimant suffered only minor cuts and bruises that did not require medical treatment. The persuasive medical opinions demonstrate that Claimant's other symptoms are related to his pre-existing PTSD and conversion disorder and did not cause a compensable mental impairment.

27. The record reveals that Claimant suffers PTSD, post-concussive symptoms and other psychological trauma as a result of his military experience prior to the May 8, 2018 work related incident. Claimant also has a history of seizures and pseudo-seizures. In November of 2016 while at work without any precipitating event, Claimant collapsed. He was eventually diagnosed with psychogenic pseudo-seizures and placed on light/desk duty while receiving treatment for the condition. Claimant returned to full duty in August of 2016. Furthermore, two days after the May 8, 2018 altercation Claimant suffered a seizure prior to his work shift. At Claimant's discharge from Rose Medical Center Dr. Schwartz noted that Claimant was suffering from a conversion disorder or other psychosomatic manifestation of emotional and social stressors in the setting of a recent violent encounter. He based his opinion on Claimant's waxing/waning neurologic symptoms.

28. The record demonstrates that it is unlikely Claimant suffered a head injury during the May 8, 2018 altercation. Initially, Claimant's own written report and Workers' Compensation form did not document any head injuries on May 8, 2018. Claimant also had no objective signs of a head injury during his hospitalization at Rose Medical Center after the May 10, 2018 seizure. He specifically had no documented bumps, scrapes or lacerations around the head or face. He also had a normal EEG, CT scan and brain MRI. Furthermore, Chief H[Redacted] explained that officers are trained to document all injuries in written reports. Documentation is not only important for Workers' Compensation

purposes but also to the severity of charges against the perpetrator. However, none of the written reports pertaining to the May 8, 2018 incident specify that Claimant suffered any kind of head injury. Moreover, Lt. D[Redacted] commented that the reports of the May 8, 2018 incident did not reflect Claimant suffered a head injury. In fact, Officer W[Redacted] came up from behind the suspect and tackled him to the ground during the altercation. Finally, none of the reports of officers involved in the May 8, 2018 altercation documented that Claimant struck his head or had any evidence of a head injury. Instead,, the reports of both Officer W[Redacted] and Sergeant B[Redacted] noted that Officer W[Redacted], who had tackled the suspect between two vehicles, had a bump on the right side of his head. Accordingly, the record reflects that Claimant did not likely suffer a head injury as a result of the May 8, 2018 incident. He sustained only minor cuts and bruises that did not require medical treatment.

29. The persuasive medical opinions demonstrate that Claimant's psychological symptoms are related to his pre-existing PTSD and conversion disorder instead of the May 8, 2018 incident. After reviewing the medical records and performing a physical examination Dr. Hammerberg noted that there was no documentation that Claimant suffered any significant physical injury in the May 8, 2018 incident. He explained that Claimant had likely experienced a significant psychological trauma during the altercation. Dr. Hammerberg reasoned that the event triggered a conversion symptomatology that consisted of dissociation, psychogenic unresponsiveness and non-epileptic seizures caused by pre-existing PTSD. He concluded that Claimant's symptoms existed prior to the May 8, 2018 altercation and were not related to the incident. Furthermore, in Dr. Kleinman's supplemental report after receiving the VA records and Dr. Hammerberg's report, he diagnosed Claimant with PTSD and functional neurological conversion disorder. He explained that both of the diagnoses preceded the May 8, 2018 incident. Dr. Kleinman specifically commented that Claimant's cognitive complaints were documented in the VA records in 2017 and had been related to PTSD rather than a TBI. After reviewing Claimant's symptoms in the context of the additional records, he concluded that Claimant did not suffer a TBI on May 8, 2018. Instead, Dr. Kleinman reasoned that Claimant suffered "a brief surge in symptoms that all predated the injury." He did not determine that Claimant had sustained a permanent aggravation of his pre-existing condition but instead had returned to his baseline as documented in the VA records.

30. Drs. Murray, Trieft and Ramaswamy conducted FPPA evaluations and concluded that Claimant had a permanent occupational disability. However, the evaluations were designed to determine whether Claimant could perform his duties as a police officer and did not constitute a causality assessment about whether Claimant suffered a compensable injury during the May 8, 2018 altercation. The opinions of Drs. Hammerberg and Kleinman are based upon a review of more complete and thorough information and do not rely as heavily on Claimant's subjective reports. Specifically, Dr. Hammerberg reviewed Claimant's complete records from the VA, Swedish Medical Center and Good Samaritan detailing his extensive history with PTSD and psychogenic pseudo seizures. Similarly, Dr. Kleinman reviewed Dr. Hammerberg's report as well as the extensive records from the VA detailing Claimant's PTSD and associated physical symptoms in the absence of any medically documented TBI. Accordingly, their opinions

that Claimant's symptoms constitute the sequelae of his pre-existing PTSD and conversion disorder are persuasive and supported by Employer's records that do not reflect Claimant suffered a head injury on May 8, 2018.

31. Notably, both Drs. Kleinman and Hammerberg believed Claimant may have sustained a temporary exacerbation of his underlying PTSD and conversion disorder but did not sustain any permanent aggravation. Dr. Triehaft noted the exacerbation might have more lasting effects. If Claimant is alleging an injury in the form of an aggravation of his pre-existing mental condition, he must prove that he meets the statutory requirements for a mental impairment claim under §8-41-301, C.R.S. Whether the original mental impairment statute or its amended version effective July 1, 2018 applies, Claimant did not suffer a mental impairment as a result of the May 8, 2018 incident. Initially, as a patrol officer, arresting and taking down a suspect would be within Claimant's usual work experiences. Moreover, Claimant did not present any evidence that he suffered PTSD because he repeatedly visually witnessed serious bodily injury, or the immediate aftermath of serious bodily injury, while working for Employer. Although Claimant's medical records are replete with examples of witnessing serious bodily injury including death during his combat-related military service, there is no evidence that Claimant witnessed traumatic serious bodily injury and death as part of his work duties for Employer. Claimant has thus failed to establish that he suffered a psychologically traumatic event pursuant to §8-41-301, C.R.S. Accordingly, Claimant's claim that he suffered a compensable injury at work on May 8, 2018 is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. Section 8-41-301(2)(a), C.R.S. imposes additional evidentiary requirements regarding mental impairment claims. The section provides, in relevant part:

A claim of mental impairment must be proven by evidence supported by the testimony of a licensed physician or psychologist. For purposes of this subsection (2), “mental impairment” means a recognized, permanent disability arising from an accidental injury arising out of and in the course of employment when the accidental injury involves no physical injury and consists of a psychologically traumatic event that is generally outside of a worker's usual experience and would evoke significant symptoms of distress in a worker in similar circumstances. A mental impairment shall not be considered to arise out of and in the course of employment if it results from a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the employer.

The definition of “mental impairment” consists of two clauses that each contains three elements. The first clause requires a claimant to prove the injury consists of: “1) a recognized, permanent disability that, 2) arises from an accidental injury involving no physical injury, and 3) arises out of the course and scope of employment. *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023, 1030 (Colo. 2004). The second clause requires the claimant to prove the injury is: “1) a psychologically traumatic event, 2) generally outside a worker's usual experience, and 3) that would evoke significant symptoms of distress in a similarly situated worker.” *Id.*

6. Effective July 1, 2018, §8-41-301, C.R.S. was amended by House Bill 17-1229. The amendments broadened the category of compensable mental impairment injuries to include PTSD arising from events “within a worker’s usual experience” where “the worker repeatedly visually witnesses serious bodily injury, or the immediate aftermath of serious bodily injury, of one or more people as the result of the intentional act of another person or an accident.” §8-41-301(3)(b)(II)(C), C.R.S.; see *Montoya v. Fremont County Sheriff’s Office*, W.C. No. 5-084-877 (ICAO, Oct. 16, 2019). Additionally, the PTSD is not required to evoke symptoms of distress in a worker in similar circumstances. *Id.*

7. As found, Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable head injury or mental impairment during the course and scope of his employment with Employer on May 8, 2018. Although Claimant was involved in a traumatic incident helping to take down a suspect resisting arrest on May 8, 2018, the evidence does not demonstrate that he sustained a compensable injury. Instead, the record reflects that Claimant suffered only minor cuts and bruises that did not require medical treatment. The persuasive medical opinions demonstrate that Claimant's other symptoms are related to his pre-existing PTSD and conversion disorder and did not cause a compensable mental impairment.

8. As found, the record reveals that Claimant suffers PTSD, post-concussive symptoms and other psychological trauma as a result of his military experience prior to the May 8, 2018 work related incident. Claimant also has a history of seizures and pseudo-seizures. In November of 2016 while at work without any precipitating event, Claimant collapsed. He was eventually diagnosed with psychogenic pseudo-seizures and placed on light/desk duty while receiving treatment for the condition. Claimant returned to full duty in August of 2016. Furthermore, two days after the May 8, 2018 altercation Claimant suffered a seizure prior to his work shift. At Claimant's discharge from Rose Medical Center Dr. Schwartz noted that Claimant was suffering from a conversion disorder or other psychosomatic manifestation of emotional and social stressors in the setting of a recent violent encounter. He based his opinion on Claimant's waxing/waning neurologic symptoms.

9. As found, the record demonstrates that it is unlikely Claimant suffered a head injury during the May 8, 2018 altercation. Initially, Claimant's own written report and Workers' Compensation form did not document any head injuries on May 8, 2018. Claimant also had no objective signs of a head injury during his hospitalization at Rose Medical Center after the May 10, 2018 seizure. He specifically had no documented bumps, scrapes or lacerations around the head or face. He also had a normal EEG, CT scan and brain MRI. Furthermore, Chief H[Redacted] explained that officers are trained to document all injuries in written reports. Documentation is not only important for Workers' Compensation purposes but also to the severity of charges against the perpetrator. However, none of the written reports pertaining to the May 8, 2018 incident specify that Claimant suffered any kind of head injury. Moreover, Lt. D[Redacted] commented that the reports of the May 8, 2018 incident did not reflect Claimant suffered a head injury. In fact, Officer W[Redacted] came up from behind the suspect and tackled him to the ground during the altercation. Finally, none of the reports of officers involved in the May 8, 2018 altercation documented that Claimant struck his head or had any evidence of a head injury. Instead, the reports of both Officer W[Redacted] and Sergeant B[Redacted] noted that Officer W[Redacted], who had tackled the suspect between two vehicles, had a bump on the right side of his head. Accordingly, the record reflects that Claimant did not likely suffer a head injury as a result of the May 8, 2018 incident. He sustained only minor cuts and bruises that did not require medical treatment.

10. As found, the persuasive medical opinions demonstrate that Claimant's psychological symptoms are related to his pre-existing PTSD and conversion disorder instead of the May 8, 2018 incident. After reviewing the medical records and performing

a physical examination Dr. Hammerberg noted that there was no documentation that Claimant suffered any significant physical injury in the May 8, 2018 incident. He explained that Claimant had likely experienced a significant psychological trauma during the altercation. Dr. Hammerberg reasoned that the event triggered a conversion symptomatology that consisted of dissociation, psychogenic unresponsiveness and non-epileptic seizures caused by pre-existing PTSD. He concluded that Claimant's symptoms existed prior to the May 8, 2018 altercation and were not related to the incident. Furthermore, in Dr. Kleinman's supplemental report after receiving the VA records and Dr. Hammerberg's report, he diagnosed Claimant with PTSD and functional neurological conversion disorder. He explained that both of the diagnoses preceded the May 8, 2018 incident. Dr. Kleinman specifically commented that Claimant's cognitive complaints were documented in the VA records in 2017 and had been related to PTSD rather than a TBI. After reviewing Claimant's symptoms in the context of the additional records, he concluded that Claimant did not suffer a TBI on May 8, 2018. Instead, Dr. Kleinman reasoned that Claimant suffered "a brief surge in symptoms that all predated the injury." He did not determine that Claimant had sustained a permanent aggravation of his pre-existing condition but instead had returned to his baseline as documented in the VA records.

11. As found, Drs. Murray, Trieft and Ramaswamy conducted FPPA evaluations and concluded that Claimant had a permanent occupational disability. However, the evaluations were designed to determine whether Claimant could perform his duties as a police officer and did not constitute a causality assessment about whether Claimant suffered a compensable injury during the May 8, 2018 altercation. The opinions of Drs. Hammerberg and Kleinman are based upon a review of more complete and thorough information and do not rely as heavily on Claimant's subjective reports. Specifically, Dr. Hammerberg reviewed Claimant's complete records from the VA, Swedish Medical Center and Good Samaritan detailing his extensive history with PTSD and psychogenic pseudo seizures. Similarly, Dr. Kleinman reviewed Dr. Hammerberg's report as well as the extensive records from the VA detailing Claimant's PTSD and associated physical symptoms in the absence of any medically documented TBI. Accordingly, their opinions that Claimant's symptoms constitute the sequelae of his pre-existing PTSD and conversion disorder are persuasive and supported by Employer's records that do not reflect Claimant suffered a head injury on May 8, 2018.

12. As found, notably, both Drs. Kleinman and Hammerberg believed Claimant may have sustained a temporary exacerbation of his underlying PTSD and conversion disorder but did not sustain any permanent aggravation. Dr. Trieft noted the exacerbation might have more lasting effects. If Claimant is alleging an injury in the form of an aggravation of his pre-existing mental condition, he must prove that he meets the statutory requirements for a mental impairment claim under §8-41-301, C.R.S. Whether the original mental impairment statute or its amended version effective July 1, 2018 applies, Claimant did not suffer a mental impairment as a result of the May 8, 2018 incident. Initially, as a patrol officer, arresting and taking down a suspect would be within Claimant's usual work experiences. Moreover, Claimant did not present any evidence that he suffered PTSD because he repeatedly visually witnessed serious bodily injury, or the immediate aftermath of serious bodily injury, while working for Employer. Although

Claimant's medical records are replete with examples of witnessing serious bodily injury including death during his combat-related military service, there is no evidence that Claimant witnessed traumatic serious bodily injury and death as part of his work duties for Employer. Claimant has thus failed to establish that he suffered a psychologically traumatic event pursuant to §8-41-301, C.R.S. Accordingly, Claimant's claim that he suffered a compensable injury at work on May 8, 2018 is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: April 14, 2020.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-110-804-001**

ISSUES

- Did Claimant prove she suffered a compensable injury on June 22, 2019?
- If Claimant proved a compensable injury, did she prove right hip problems, including a probable labral tear, are causally related to the accident?
- Did Claimant prove entitlement to a closed period of TTD from June 23, 2019 through July 28, 2019?
- The parties stipulated to an average weekly wage of \$592.03.

FINDINGS OF FACT

1. Claimant works for Employer as a customer service clerk. She alleges an injury to her right hip on June 22, 2019, while working as a cashier in the fuel center. The incident was captured by the surveillance cameras in the cashier kiosk. At 8:23 AM, Claimant bent down to pick up some money she had inadvertently knocked to the floor. When she stood up, she tripped on a stool behind her and lost her balance. She lurched backward and twisted, catching herself on an adjacent counter to prevent falling to the ground. Claimant's demeanor, postures, and movements after the incident were consistent with severe pain. A few minutes later she called a coworker for help. The coworker offered physical support because Claimant could barely walk. Emergency personnel were summoned, and she was transported to Good Samaritan Medical Center emergency department.

2. Claimant's case is complicated by an extensive preinjury history of back problems. She underwent three low back surgeries since 2015, including an L4-S1 fusion in February 2019. She also had a C5-6 fusion in April 2019. Claimant missed work because of the surgeries from February 24, 2019 through June 15, 2019. She returned to work the week of June 16, 2019.

3. Both fusion surgeries were performed by Dr. Andrew Bauer. Dr. Bauer's last note before the work accident is dated June 7, 2019. Claimant's neck was doing well and her main complaint was severe muscle spasm in her low back. The spasms only happened at night and "she's good all day as long as she's moving." She was prescribed Soma and advised to follow up in August for lumbar x-rays.

4. On June 21, 2019 (the day before the incident in the fuel kiosk), Claimant was seen at the Good Samaritan Medical Center emergency department for an "acute exacerbation of her chronic back pain." She described three previous episodes of "similar flares." She reported 8/10 "throbbing achy sharp pain" in her right lower back. Examination showed tenderness of the right paraspinal muscles. Claimant was diagnosed with "muscle spasm" and given Toradol, dexamethasone, morphine, Dilaudid,

valium, and lidocaine. She was feeling “much better” within a few hours and was discharged with prescriptions for Percocet and a muscle relaxer.

5. Claimant was still having back pain when she reported to work the next morning (June 22). She clocked in and immediately went to the fuel center to relieve her coworker, Kim P[Redacted]. Ms. P[Redacted] later completed a written statement describing her observation of Claimant before the incident, in which she wrote,

[Claimant] limped in the kiosk slowly – as I asked if she was OK . . . she stated she was hurting very badly and wasn’t sure if she should even be working, due to her pain level. . . . As she was leaning on the counter, I asked if she wanted me to leave the stool out in case she needed it to sit, lean on, rest a leg on – she said yes, leave it, thank you!

6. In her post-hearing deposition, Ms. P[Redacted] explained she normally would have put the stool away but left it out that day because Claimant was hurting.

7. The video from surveillance CAM 5 shows Claimant walking from the store to the fuel center from 8:13:04 AM to 8:13:23. The ALJ viewed that segment of video several times and did not perceive a definitive limp. At most, her gait appears somewhat stiff. Nor did she walk with an obvious limp when she entered the kiosk a few moments later at 8:13:38 on CAM 1. But her movements inside the kiosk appear consistent with some level of pain, and the ALJ credits Ms. P[Redacted]’s testimony she left the stool out so Claimant would have some support.

8. Claimant was taken to the emergency room by ambulance after the accident. She reported,

severe bilateral lumbar spasm type pain radiating into the bilateral buttocks. It developed at work approximately 1 hour prior to arrival after a bending and twisting injury. Patient stumbled over an object and tried to catch herself. . . She was evaluated in the ED for similar spasms yesterday and was treated with IV Toradol, Decadron, morphine, Dilaudid, and lidocaine. She was discharged with prescriptions for Percocet and Robaxin but has not yet filled them.

Claimant could not walk because of severe pain. Physical examination showed moderate midline tenderness of the lower lumbar spine, mild bilateral lumbar paraspinous tenderness, and limited range of motion. After consulting with Dr. Bauer and the attending hospitalist, Claimant was admitted to the hospital for pain control and to get a lumbar MRI.

9. Dr. Bauer evaluated Claimant in the hospital the evening of June 22. He stated, “luckily her MRI is quite reassuring with regards to her previous surgery, that her hardware appears intact and there are no signs of obvious infection.” Lower extremity motion was significantly limited by pain. She had pain to palpation over the lateral paraspinous muscles, greater on the left, and severe pain with palpation of the left and right SI joint. FABER test was “strongly positive” for SI joint pain, but she did not appear to have pain with internal and external rotation of the hip. Dr. Bauer opined, “I have a

suspicion that a lot of her pain may be coming from the SI joints as her testing for the SI joint was quite provocative and reproduced her pain.” He recommended anti-inflammatories and muscle relaxers, physical therapy, and the diagnostic SI joint injection.

10. Claimant’s pain gradually improved over the next 2 days, and she was discharged from the hospital on June 24, 2019.

11. Employer referred Claimant to SCL Health, and she was initially evaluated by PA-C Tara Clemens on June 25, 2019. Claimant’s pain diagram shows pain across the lower back and buttocks, wrapping around both hips into the bilateral groin areas. Physical examination showed decreased range of motion, tenderness, and pain around the low back. Her legs were weak, and more painful with testing on the right than the left. Ms. Clemens diagnosed SI joint inflammation and acute bilateral low back pain without sciatica. She gave Claimant work restrictions of 5 pounds lifting, alternate sitting, standing, and walking as needed, and limited her to 2 hours shifts.

12. Claimant returned to SCL Health the next day (June 26) and saw Dr. Dean Prok. She again reported pain across the low back, in both hips and bilateral groin areas. She said, “the right side is slightly worse.” She was having difficulty sitting, standing, and walking. Examination showed very limited movement of her legs because of pain. She described “severe pain in the right greater than left low back areas diffusely that is causing her to be careful today.” Dr. Prok deferred most of the examination because she was in so much pain. Dr. Prok referred Claimant to follow up with Dr. Bauer and to Dr. Nicholas Olsen for a physical medicine consul. He also took Claimant off work.

13. Claimant saw PA-C Jolene Hammond in Dr. Bauer’s office on June 28, 2019. Physical examination showed extreme tenderness to palpation of the right SI joint. Provocative SI maneuvers including thigh thrust, compression, and FABER were positive. Ms. Hammond noted, “Her symptoms seem more associated with SI joint dysfunction at this time as it she did have a lumbar MRI that did not show any other issues in her hardware looks great as well.” She opined, “I think the fall probably inflamed a lot of muscles, etc. around her spine and will most likely calm down with time, heat, ice, etc.” Ms. Hammond referred Claimant for a diagnostic right SI joint injection with lidocaine only, because she previously had a bad reaction to steroids.

14. Dr. Chavda performed a right SI joint injection on July 8, 2019. Claimant later reported the injection temporarily reduced her pain from 7/10 to 3/10, which indicates at least a component of her pain was probably related to the SI joint.

15. Claimant’s initial evaluation with Dr. Olsen was on July 11, 2019. Claimant told Dr. Olsen “after this [June 22] event, she developed marked pain in her right buttock and hip.” Her pain diagram showed aching pain in the right buttock, hip and groin. Sitting, walking, and laying on her right side increased her pain. They discussed her prior back surgeries, and Claimant indicated the prior symptoms were “distinct and separate from the pain she experienced on 6/22/19.” On examination, Dr. Olsen observed an antalgic gait on the right. Internal and external rotation of the right hip increased her pain. She had no pain on the left side. Femoral thrust, Patrick’s (FABER), and femoral acetabular

impingement tests were positive on the right. Palpation of the bilateral SI joints revealed mild tenderness, but iliac compression test and Gaenslen's maneuver were equivocal on the right. Dr. Olsen commented, "she reports greater symptoms stemming from her right hip." Dr. Olsen opined,

[Claimant's] examination suggests a potential injury to her right hip. Per her report, she underwent MRI imaging which did not identify a reinjury or defect to her prior surgical site. To the degree she had some relief from the lidocaine SI joint injection, this does not appear to be her primary pain generator and is more likely related to her spinal complaints. I have recommended she undergo an MRI arthrogram of her right hip to screen for a possible labral tear.

16. Claimant returned to Dr. Prok on July 15, 2019. Most of her pain was in the right hip area. Examination showed decreased right hip range of motion and diffuse pain around the right hip. She also reported soreness between the back and gluteal area around to the front of the groin. Dr. Prok continued Claimant's off work status and agreed with Dr. Olsen's recommendation for imaging of the right hip.

17. The right hip MRI arthrogram was completed on July 22, 2019. It showed a questionable small labral tear and a "cam" morphology of the femoral head, consistent with femoroacetabular impingement.

18. Claimant followed up with Dr. Olsen on July 25, 2019. He reviewed the MRI films and agreed it showed a possible labral tear. Claimant explained the lidocaine included with the arthrogram dye injection gave her almost six hours of "complete relief of her pain." Claimant's gait was significantly antalgic on the right, and she was ambulating with a crotch. She continued to have significant tenderness with femoral thrust and Patrick maneuver on the right side. Dr. Olsen referred Claimant to Dr. Brian White, an orthopedic surgeon, "to review her films and determine whether there are significant findings to warrant additional treatment."

19. Claimant saw Dr. White's PA-C, Shawn Karns, on August 22, 2019. Claimant described pain "deep in the groin" ever since the work accident. She reported her right hip "bothers her with everything she does. . . . [P]rior to this incident she had no issues with her hip whatsoever." Examination of the right hip showed decreased range of motion and "pinching" with extreme flexion. Anterior impingement maneuver on the right recreated her typical pain. FABER test was negative for SI joint pain. Mr. Karns reviewed the MR arthrogram and noted an "obvious labral tear [and] CAM morphology over the femoral neck." He opined the significant relief Claimant received from the lidocaine injection to the hip "confirm[s] the hip joint is the source of her pain." He diagnosed right hip femoral acetabular impingement and a labral tear. He recommended Claimant start with conservative treatment, including therapy, and opined she is a candidate for right hip surgery if conservative treatment fails.

20. Dr. John Burris performed an IME for Respondent on August 27, 2019. She complained of symptoms localized to her right hip. Her low back was asymptomatic, and

examination of Claimant's back was normal. Dr. Burris found decreased right hip range of motion, pain with internal and external rotation, and a positive FADIR test. He opined the femoroacetabular impingement was due to a congenital abnormality (cam morphology) and labral tears commonly occur in the context of impingement with no specific mechanism. He opined the forces of the accident "are not sufficient to cause, accelerate, or contribute in any meaningful manner to her pre-existing right hip condition."

21. Dr. Burris testified that Claimant's prior back flares "could have been" caused by her hip instead, and her symptoms at the emergency room on June 21 were an "atypical presentation" of a labral tear. He "guessed" the medications Claimant received at the ER on June 21 temporarily relieved her pain, but it returned the next morning when the medication wore off.

22. Claimant was off work because of the injury from June 23, 2019 through July 28, 2019. Claimant proved her wage loss during that closed period of disability was causally related to the June 22, 2019 work accident.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). A pre-existing condition does not disqualify a claim for compensation if a work accident aggravates, accelerates, or combines with the underlying condition to cause disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). An injury need not be dramatic or serious to support a finding of compensability. Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused her to seek medical treatment. *E.g.*, *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996). There is no requirement that an injury cause any objective structural damage change to the claimant's underlying anatomy. A purely symptomatic aggravation can suffice for a compensable claim if it causes the claimant to seek treatment they otherwise would not have pursued but for the accident. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016).

Claimant had significant preexisting low back problems necessitating three surgeries and needed emergency treatment for back spasms the day before the accident. She was still in pain immediately before the accident, as evidenced by her demeanor on the video and statements to Ms. P[Redacted]. But the video footage objectively shows a significant worsening of pain immediately after stumbling and falling backward. Her body

carriage and postures after the incident were consistent with severe pain making even basic movements difficult. She could not continue working and requested assistance. The pain flare that sent Claimant to the hospital on June 22, 2019 was precipitated by the stumbling incident, which establishes a compensable injury.

B. Causal relationship of the right hip

The question of what, if any, treatment Respondent should cover beyond the emergent hospitalization is more difficult to answer. The solution comes into focus once we dispense with the expectation or assumption that all of Claimant's symptoms must be attributable to a single cause. Her symptoms after the accident were probably multifactorial. The persuasive evidence shows the work accident probably temporarily aggravated Claimant's preexisting low back pain *and* caused temporary SI joint strains *and* caused or aggravated¹ a right hip labral tear. This explanation harmonizes several pieces of seemingly conflicting evidence, including documented bilateral low back and buttock pain in the emergency department, Dr. Bauer's exam findings suggesting an SI joint problem, Claimant's repeated description of pain in the right hip and right groin, and her positive response to an SI joint injection and a right hip injection. When Claimant arrived at the emergency room on June 22, the ER personnel naturally assumed she was having more back spasms, since she complained of back pain and was in the ER for back spasms only the day before. But Dr. Bauer determined something else was going on and her symptoms were not simply a continuation of the prior back issues. His examination pointed to SI joint dysfunction, which is consistent with the report of pain across her low back and buttocks. When Claimant saw Dr. Prok a few days later, she emphasized her back and hips. By the time she saw Dr. Olsen, she was primarily focused on her right hip and groin. The initial combination of back flare, SI joint strains and hip pain probably made it difficult for Claimant to precisely differentiate her pain. As the back flare subsided and the SI joint strains resolved, she was left with the right hip pain as the main issue.

Admittedly, there are no documented complaints of right hip pain in the records from the June 22 hospital admission. But those records only contain summaries written by other of what Claimant reported. The ALJ has given significant weight to Claimant's pain diagrams, because they reflect her first-hand description of symptoms, not filtered through any third party. Claimant's pain diagrams repeatedly show pain in the right hip and right groin (the classic symptom of a labral tear). The most incongruous piece of data is probably Dr. Bauer's note she had no pain with internal and external rotation of the hip, although it is unclear how much he was able to move the hip, because her leg movement was so limited by pain. In any event, Claimant reported right hip pain at her initial ATP appointment on June 25, and there is no persuasive evidence of any intervening event that could have caused a hip injury after she was released from the hospital on June 24.

Dr. Burris' testimony that Claimant's symptoms at the ER on June 21 were the manifestation of an undiagnosed hip problem is too speculative to be persuasive. There

¹ As Dr. Burris noted, the forces involved in the June 22 accident were relatively minor, and not likely to cause a labral tear. Moreover, Claimant's cam morphology is commonly associated with degenerative labral tears. Thus, it is more likely she aggravated a preexisting but asymptomatic tear. But from a compensability standpoint, the distinction is meaningless.

is no mention of any hip pain on June 21, and no exam finding suggestive of a hip problem. Furthermore, Dr. Burris' arguments are internally inconsistent, because on the one hand he speculated her June 21 ER visit was due to labral tear, but also argued the records from the June 22 hospitalization were inconsistent with a labral tear.

There is no doubt Claimant had significant preexisting back problems. But on balance, the persuasive evidence supports her testimony something changed after the work accident on June 22. The totality of evidence shows the work accident either caused or (more likely) aggravated a pre-existing labral tear.

B. TTD from June 23, 2019 through July 28, 2019

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id.*

As found, Claimant proved her wage loss from June 23 through July 28, 2019 was causally related to the work accident.

ORDER

It is therefore ordered that:

1. Claimant's claim for an injury on June 22, 2019 is compensable.
2. Respondent shall cover reasonably necessary treatment from authorized providers to cure and relieve the effects of Claimant's compensable injury, including the June 22, 2019 hospitalization at Good Samaritan Medical Center, Dr. Prok and his referrals, and treatment for the right hip.
3. Claimant's AWW is \$592.03 per the parties' stipulation, with a corresponding TTD rate of \$394.69.
4. Respondent shall pay Claimant TTD benefits from June 23, 2019 through July 28, 2019, at the weekly rate of \$394.69.
5. Respondent shall pay Claimant statutory interest of 8% per annum on all indemnity benefits not paid when due.
6. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: April 16, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- I. Whether Respondents proved by a preponderance of the evidence that they should be permitted to withdraw their admission of liability for post-MMI medical maintenance care.
- II. If Respondents have not proved entitlement to withdraw their admission, whether Claimant proved by a preponderance of the evidence that she may receive ongoing maintenance medical treatment at Colorado Pain Clinic.
- III. Respondents' request that this claim be closed.

STIPULATIONS

At the hearing, Respondents' counsel specified Claimant is authorized to treat at CROM (Colorado Rehabilitation and Occupational Medicine). Claimant's counsel argued no such authorization had been extended before the date of the hearing, and that Respondents' alleged failure to authorize any more maintenance care resulted Claimant being permitted to select the treating medical provider, and she selected Colorado Pain Clinic. After the hearing, Respondents' counsel advised Claimant's counsel that Claimant is in fact authorized to receive maintenance medical care at Colorado Pain Clinic.¹ Thus, the ALJ finds the issue is moot and will not address it further in this Order. Rather, the ALJ will simply address whether Respondents may withdraw their admission of liability for maintenance care, whether Claimant has a right to continue receiving this care, and whether the case should be closed.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Employer is a distributor of wine and spirits. Claimant works in Employer's warehouse. She credibly testified the job is physical; that she is "constantly lifting boxes and moving them from one area to the next." She estimated the boxes weigh from 5 to 45 pounds. She moves boxes of liquor and wine and is on her feet during her entire shift.

¹ Along with her position statement, Claimant's counsel provided the ALJ with an email from Respondents' counsel dated February 26, 2020 confirming that "...Your client is authorized to treat at Colorado Pain Clinic." At the end of hearing the ALJ requested the parties advise him if this issue has been resolved, and it has been.

2. Claimant sustained admitted industrial injuries in June 2014. She received conservative treatment from Dr. Nelson, who placed her at MMI with no impairment on July 23, 2014. (*Ex. 5, pp. 154 - 156*)
3. Dr. Thomas Higginbotham performed a DIME in February 2015. He determined Claimant had not reached MMI, and that she required "...a second orthopedic consult for relatedness, reasonableness, and necessity for treatment of both hips." He issued an advisory impairment rating of 17% for both hips and the low back. (*Ex. 5, p. 157*)
4. Claimant received further evaluation and treatment, and ultimately underwent left hip surgery with Dr. White in January 2016, to include left femoral osteoplasty, with acetabular Ganz osteotomy. (*Ex. 5, p. 161*)
5. Claimant came under the care of physiatrist Dr. Joseph Fillmore on February 22, 2016. (*Ex. 5, p. 163*)
6. While recovering from surgery, Claimant tripped and fell on March 8, 2016, fracturing her left distal radius and ulnar styloid. (*Id. at 163*) She underwent surgery with Dr. Sachar for this on March 22, 2016. (*Id. at 164*)
7. On August 1, 2016, Claimant underwent surgery to her right hip with Dr. White, including arthroscopy with femoral osteoplasty and acetabular rim trimming and reconstruction. (*Id. at 166*)
8. Dr. Fillmore ultimately placed Claimant at MMI on October 10, 2017 and made recommendations for post-MMI maintenance care; "...she should be afforded followup visits as needed with her orthopedic surgeons and should be reevaluated should she have further problems. I would recommend today for followup visits over the next 6 months for medication management if needed." (*Ex. 1, p. 60*) Dr. Fillmore issued a 19% whole-person impairment rating based on impairment of the left wrist, right hip, left hip, and lumbar spine. (*Ex. 1, pp. 62-67*)
9. Claimant underwent a follow-up DIME with Dr. Higginbotham on March 26, 2018. He agreed she had reached MMI, and he issued a 24% whole-person rating for the bilateral hip, low back, and wrist injuries. (*Ex. 5, p. 177*) Dr. Higginbotham recommended maintenance care; "...Chronic pain management is recommended under her present treating physiatrist, Dr. Fillmore. It is recommended that chronic pain management be revisited every 6 months. Treatment in accordance to Rule 17, Exhibit 9, Chronic Pain Disorder Medical Treatment Guidelines was recommended. Consideration of hardware removal in the future was recommended and may be necessary." (*Id.*)
10. Respondents filed a Final Admission of Liability on June 12, 2018, admitting to the impairment rating he issued, and to post-MMI medical maintenance treatment pursuant to his recommendations. (*Ex. 4*)
11. Claimant continued seeing Dr. Fillmore for maintenance care, including prescription medications. On November 1, 2018 he noted, "...Her pain ranges from a 4 to a 7. Her pain still impacts her function. She has been back to work for 2 months. MT [massage therapy] and chiro have been helpful. Her hips have

stabilized. She feels the treatment is helping to make her transition..." (Ex. 1, p. 45) He referred her for chiropractic treatment and massage therapy. (Id. at 43, 44)

12. Chiropractic treatment is provided by Dr. Keith Graves. On January 14, 2019 he reported, "...The patient has not had any treatment for 4 weeks. She has increased pain over the past 2 weeks. She states that her work is in the busy season and she has been performing more physical demanding tasks at work with lifting and carrying. With rest and compliance with home exercise protocols her pain has slightly and temporarily improves." (Ex. 2, p. 104)
13. On April 9, 2019 Dr. Fillmore recommended myofascial release and chiropractic treatment, as well as a 12-month gym membership. (Ex. 1, pp. 33-35)
14. On May 30, 2019 Dr. Fillmore noted, "...Pain 3/10. Ranges from a 3 to an 8 and appears related to work. Meds help 90%. C/O mostly back pain ..." (Ex. 1, p. 20) He renewed prescriptions for cyclobenzaprine, Wellbutrin, Percocet, and Ibuprofen. (Id. at 22)
15. Claimant was seen by Sandra Do, PT, at Manual Therapy Associates on June 14, 2019. Ms. Do reported, "...Currently bilateral low back pain. Varies left to right. Energy level is really low...Able to complete regular work schedule. Standing more than 10' [hours] increases low back pain...Pain wakes her up in 1-2 hours then takes some motrin and Percocet. Also taking a muscle relaxer before bed. Sees Dr. Joseph Fillmore physiatrist every couple of months to manage medication. Dr. Graves, D.C. who does exercise instruction, dry needling and adjustments..." (Ex. 3, p. 143)
16. Dr. Fillmore prescribed 12 more sessions of massage therapy on July 2, 2019. (Ex. 1, p. 18)
17. On July 26, 2019 Ms. Do noted, "...low back pain persists...states she stretches at least 1 time per day. Often 2-3 times per day. Has not had much time to focus on strengthening exercises with heavy work schedule..." (Ex. 3, p. 122) Ms. Do reported, "...Noted improving segmental mobility in lower thoracic facets as well as lumbar facets bilaterally...Psoas, and paraspinals and hips are improved." (Id.)
18. Dr. Fillmore saw Claimant on August 5, 2019 and reported, "...Working a lot including weekends. Muscle relaxant is not working. Needs a refill of meds. Pain is a 3. Meds help 90%. Going to myofascial massage which has started to help. Going 1x per week..." (Ex. 1, p. 130)
19. On September 6, 2019 Ms. Do reported, "...low back pain persists. Tight bilateral LBP, straight across. Feeling it refer into hips. Gets some relief with piriformis stretch in sitting. Pain takes longer to set in than it used to. Worse with bending..." (Ex. 3, p. 110) Claimant had 15 sessions with Ms. Do in 2019 and she credibly testified the treatment was "very beneficial."
20. On October 28, 2019 Dr. Fillmore noted, "...She has 5 more chiropractic visits. She wants therapeutic massage more intense than her previous provider. Functioning is the same. Working days now. Pain ranges from a 3 to a 4. Pain

average is a 3. Meds help 90%. Weaning off her Cymbalta. Pain still keeps her awake. 'I want to get better...'" (Ex. 1, pg. 8) He renewed prescriptions for ibuprofen and Percocet (*Id. at 11*) and he wrote a referral for 12 more sessions of neuromuscular massage. (*Id. at 6*) He also noted Claimant requested cognitive therapy "...as she reports was recommended by her primary care doctor." (*Id. at 8*) Dr. Fillmore declined to recommend it because "...It was not part of the maintenance program." (*Id. at 10*)

21. Dr. Graves saw Claimant on November 18, 2019 and he noted, "...The patient states that she has had progressive increased pain and muscle spasms throughout her lumbosacral junction and pelvis with full-duty work activities at her warehouse job, which now requires her to standing [sic] for long periods of time. On today's presentation her lumbar spinal/lumbosacral junction complaints are still significantly flared-up." (Ex. 2, p. 69) Dr. Graves added, "...I am still concerned that the patient's condition will digress without additional manual treatment, due to her continued labor intensive workloads with her warehouse job. That being said, the patient has exceeded workers compensation treatment guidelines and she is no longer making additional functional levels of improvement with my care." (*Id. at 73*) Claimant saw Dr. Graves 7 times in 2019.
22. On December 16, 2019 Dr. Fillmore wrote to Claimant and stated, "Shalon, as suggested we recommend that you seek care from another pain physician that could perhaps have a different treatment plan for you. You could see some of the physicians below, depending on your work comp carrier or preference." Dr. Fillmore provided the addresses and phone numbers for CROM, Colorado Pain, and MD Pain. (Ex. 1, pg. 5) Dr. Fillmore's practice manager emailed the letter to Claimant the same day. (*Id. at 4*)
23. Claimant testified she researched the issue and wishes to see Colorado Pain because of the level of experience she believes they can bring to the table. She testified it is also the closer of the three providers to her home.
24. Dr. Fillmore wrote to Respondents' counsel on January 31, 2020 and noted, "...While passive treatment can be a helpful supplement to an active exercise program, it generally provides only temporary relief at best and can foster dependence. I, therefore, do not agree with continued passive treatment modalities. Rather, the patient should pursue an active exercise program independently. Medication management has been continued at approximately 2-3 month intervals. She was given one Percocet 10/325 mg. each day along with ibuprofen 800 mg. three times a day at her last visit in October of 2019. She had tapered and discontinued the rest of her medications on her own. Going forward, I believe continued medication [sic, medication] management, not to exceed on Percocet 10/325 mg. and the ibuprofen is reasonable considering the physical nature of her employment. This should be re-evaluated every 3-6 months for continued efficacy." (Ex. 1, pp. 2, 3)
25. Claimant credibly testified the post-MMI treatment she received has been very beneficial. She explained that when she has pain flare-up and cannot take care of it through stretching or exercising, seeing a chiropractor who provides a

combination of dry-needling and manipulation to “put things back into alignment” helps her. She testified chiropractic and myofascial release/massage have been the most beneficial forms of maintenance treatment. Claimant explained she typically wakes up in pain after 1-2 hours of sleep at night. She then takes Percocet and ibuprofen, prescribed by Fillmore,² so she can sleep. She dislikes taking medications and does so only when needed.

26. Claimant credibly testified the lack of maintenance care since last seeing chiropractor Dr. Graves on November 18, 2019 has caused her to be “in a lot more pain and had a lot more flare-ups” of her low back. She performs exercises at home and stretches throughout the day. But her self-care program is not as effective without the professional medical treatment she formerly received. Claimant credibly testified she wishes to receive ongoing maintenance care because she continues to have trouble with chronic pain.
27. The ALJ finds Claimant has proved a probable need for medical treatment to relieve the effects of her industrial injuries. The persuasive evidence shows Claimant’s ongoing symptoms are causally related to her admitted work injuries, and she is reasonably likely to require future treatment to manage her symptoms. At a minimum, Claimant’s continuing need for medical evaluations and regular use of over the counter and prescription medications supports an award of post-MMI medical benefits. Respondents have failed to prove they should be permitted to withdraw their admission of liability for post-MMI treatment.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers’ Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is what leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers’ compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers’ compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ’s factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

² The last time Dr. Fillmore met with Claimant, on October 28, 2019, he prescribed 1 tablet of Percocet to be taken 1 time per day, and ibuprofen to be taken 3 times per day as needed. (Ex. 1, pg. 10).

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness’s testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers’ compensation case is decided on its merits. C.R.S. § 8-43-201.

- I. **Whether Respondents proved by a preponderance of the evidence that they should be permitted to withdraw their admission of liability for post-MMI medical maintenance care.**
- II. **If Respondents have not proved entitlement to withdraw their admission, whether Claimant proved by a preponderance of the evidence that she may receive ongoing maintenance medical treatment at Colorado Pain Clinic.**

Medical Benefits after MMI

Respondents are liable for authorized medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Indus. Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Indus. Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, she is entitled to a general award of medical benefits after MMI, subject to the respondents’ right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expeditors, Inc.*, 77 P.3d 863 (Colo. App. 2003). A claimant need not be receiving treatment at the time of MMI or prove a particular course of treatment has been prescribed to obtain a general award of Grover medical benefits. *Miller v. Saint Thomas Moore Hospital*, W.C. No. 4-218-075 (September 1, 2000). Proof of a current or future need for “any” form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). The

claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

Claimant established that she needs to undergo regular medical evaluations by a physician. It is through these regular medical evaluations that specific medications and medical treatment can be prescribed to maintain Claimant at MMI and prevent her condition from deteriorating. The medications might include pain relieving over-the-counter medications such as ibuprofen as well as controlled substances such as Percocet that require a prescription. The treatment might also include additional active and passive modalities. Again, this will be up to the physician to determine what is appropriate maintenance medical treatment at each evaluation. As stated above, maintenance medical benefits are in the form of a general award. This is because although future medical treatment is found to be reasonable and necessary, the exact type of treatment that will be prescribed at any given time might be indeterminable at the time of the award.

Moreover, Claimant's regular use of over-the-counter (OTC) ibuprofen (not to mention the prescribed Percocet) provides a legally sufficient basis for a general award of medical benefits after MMI. The ICAO has repeatedly held that OTC medications are a permissible form of *Grover* benefits. E.g., *Guillotte v. Pinnacle Glass Company*, W.C. No. 4-443-875 (November 20, 2001) ("the fact [a] medication is available without a prescription does not vitiate its compensability or nullify the award of *Grover*-style medical benefits."); *Mann v. Ridge Erection Company*, W.C. No. 4-225-122 (April 4, 1996) (no distinction between "over the counter" medications and prescribed medications for purposes of *Grover* benefits); *Ashton-Moore v. Nextel Communications, Inc.*, W.C. No. 4-431-951 (September 12, 2002) (recommendation to use OTC anti-inflammatories "as necessary for pain" can support a *Grover* award).

As found, Claimant established by a preponderance of the evidence a probable need for future treatment to relieve the effects of her industrial injuries. As a threshold matter, Claimant proved a sufficient causal nexus between her ongoing symptoms and the work accident. She sustained injuries that required surgeries to both hips. Her hip and low back symptoms have persisted, and she continues to require maintenance medical treatment. The fact that Dr. Fillmore no longer wishes to treat Claimant is inconsequential to her ongoing need for treatment, and as discussed above Respondents have authorized Colorado Pain Clinic to provide more maintenance treatment.

Withdrawal of Admission for Post-MMI Treatment

Respondents are seeking to withdraw their admission for post-MMI medical treatment. By filing a final admission of liability and admitting for maintenance medical treatment Respondents have "admitted that the claimant has sustained the burden of proving entitlement to benefits." *City of Brighton v. Rodriguez*, 318 P.3d 496, 507 (Colo. 2014). If Respondents seek to withdraw the admission of liability, they must prove by a preponderance of the evidence that Claimant requires no additional post-MMI treatment. See § 8-43-201(1) ("a party seeking to modify an issue determined by a general or final admission ... shall bear the burden of proof for any such modification."). As found, Respondents failed to prove a basis to withdraw their admission of liability for

post-MMI treatment. The persuasive evidence shows Claimant continues to require post-MMI treatment. Post-MMI treatment was appropriately admitted and shall remain so.

III. Respondents' request that this claim be closed.

a. Respondents request to "close" Claimant's claim for lack of prosecution under § 8-43-207(1)(n).

Respondents requested the ALJ to "close" Claimant's claim for lack of prosecution. Based on the prior findings and conclusions determining Claimant is still entitled to maintenance medical treatment, as well as the arguments asserted by each party at hearing and their respective proposed order, the ALJ finds Respondents' request is misplaced, moot or both.

Respondents contend the ALJ has jurisdiction to close Claimant's claim for lack of prosecution under § 8-43-207(1)(n). Claimant, on the other hand, contends the ALJ lacks jurisdiction to close her claim for lack of prosecution because that authority rests solely with the Director in WCRP 7.

Pursuant to § 8-43-207(1)(n), an ALJ has the authority to:

Dismiss all issues in the case except as to resolved issues and except as to benefits already received, upon thirty days notice to all the parties, for failure to prosecute the case unless good cause is shown why such issues should not be dismissed. For purposes of this paragraph (n), it shall be deemed a failure to prosecute if there has been no activity by the parties in the case for a period of at least six months.

The ALJ, however, does not find this statute to be applicable to the facts here for many reasons. First, under this statute, the ALJ only has the authority to "dismiss all issues in the case except as to resolved issues and except as to benefits already received." Here, the issue of maintenance medical benefits has already been resolved pursuant to Respondents' FAL where they admitted liability for maintenance medical treatment. As a result, there is nothing for Claimant to prosecute over her general award of maintenance medical treatment. For that reason, the ALJ cannot dismiss Claimant's general award for maintenance medical benefits.

Second, as required by this statute, this court was neither asked to issue a thirty-day show cause order, nor issued one sua sponte, stating certain issues would be dismissed for failure to prosecute if Claimant failed to show good cause why the issues identified should not be dismissed based on a failure to prosecute. Respondents' exhibits do contain Claimant's June 10, 2019, application for an expedited hearing. Attached to the application is an April 19, 2019, prescription from Dr. Fillmore for Claimant to have 6 visits of chiropractic treatment. But that application was not before

this ALJ and might have been withdrawn. That said, at the February 25, 2020, hearing held by this ALJ, Claimant was not seeking a specific medical benefit and Respondents were not seeking to deny a specific medical benefit. Respondents were, however, seeking to withdraw their FAL as it relates to maintenance medical treatment, which would lead to the blanket denial of all maintenance medical treatment. Thus, the obligation to prosecute the termination of Claimant's maintenance medical treatment was on Respondents.

Third, in the end, Respondents agree the closure issue for failure to prosecute is misplaced, moot or both. In their proposed order, Respondents state the following:

Claimant has not shown good cause why her case should not be closed for failure to prosecute. However, because the claim is closed by FAL it shall remain closed on that basis. The failure to prosecute issue does not need to be addressed. Claimant has not initiated legal action since objecting to the FAL. Claimant is defending against Respondents attempt to close the claim.

As a result, the ALJ finds and concludes Respondents have failed to establish that any issue relating to Claimant's claim should be dismissed for lack of prosecution pursuant to § 8-43-207(1)(n).

- b. Case closure pursuant to § 8-43-203(2)(b)(II)(A) is not an independent claim or remedy, but an affirmative defense.

Respondents have also asked this court to close Claimant's case pursuant to § 8-43-203(2)(b)(II)(A). But case closure under § 8-43-203(2)(b)(II)(A) is neither an independent claim nor a remedy, but an affirmative defense. As a result, Respondents cannot transmute this procedure based affirmative defense into an independent claim or remedy merely by asserting it as one. This defense can be used only to defend against a claim for a specific benefit or category of benefits that has been closed procedurally under this statute.

Section 8-43-203(2)(b)(II)(A) provides that a claimant's failure to object to a final admission of liability and request a hearing on any disputed issues that are ripe for hearing or request a DIME within 30 days will lead to automatic closure of the claim over all admitted liability. The automatic closure of issues raised in an uncontested FAL is "part of a statutory scheme designed to promote, encourage, and ensure prompt payment of compensation to an injured worker without the necessity of a formal administrative determination in cases not presenting a legitimate controversy." *Leeway v. Indus. Claim Appeals Office*, 178 P.3d 1254 (Colo. App. 2007). Once a case has automatically closed by operation of the statute, the issues resolved by the FAL are not subject to further litigation unless they are reopened under § 8-43-303, C.R.S. *Berg v. Indus. Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005).

Claimant has not raised an issue to which the affirmative defense of case closure can be asserted. Respondents admitted liability for maintenance medical benefits in their final admission of liability. As a result, the issue of maintenance medical benefits was resolved and Claimant's maintenance medical benefits cannot be procedurally closed or terminated under this statute.

The ALJ thus finds and concludes Respondents' request to close Claimant's case pursuant to § 8-43-203(2)(b)(II)(A) is also misplaced and is not a defense to any claim asserted by Claimant.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' request to withdraw their admission of liability for post-MMI medical maintenance care is denied and dismissed.
2. Respondents shall continue to authorize and pay for reasonably necessary medical treatment after MMI from authorized providers, including Colorado Pain Care, to relieve the effects of Claimant's injury or prevent deterioration of her condition.
3. Respondents' request for closure of this claim is denied and dismissed.
4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: April 20, 2020.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-114-540-001**

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable back injury during the course and scope of his employment with Employer on August 1, 2019.

2. If Claimant has established a compensable injury, whether he has proven by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical treatment including payment of an August 7, 2019 St. Joseph Hospital Emergency Room bill.

FINDINGS OF FACT

1. Claimant worked for Employer as a Tech Foreman. His job duties primarily involved changing street light poles and underground electrical vaults.

2. Claimant testified that on August 1, 2019 he was working with crewmembers David D[Redacted] and Ryan W[Redacted]. Mr. D[Redacted] was assigned to operate the digger truck. The vehicle was used to lift and set telephone poles. When Mr. D[Redacted] parked the truck, Claimant believed it was in the incorrect location. He told Mr. D[Redacted] to move the digger truck "to get better power off the ground." Claimant explained that Mr. D[Redacted] became upset with the request. A verbal argument ensued. After Mr. D[Redacted] remarked that he was done working for the day, Claimant told him to move away from the equipment. Claimant stated he would enter the truck and load it onto the trailer.

3. Claimant explained that when he got into the digger truck, Mr. D[Redacted] also entered the vehicle to raise the outriggers. Claimant asked Mr. D[Redacted] to move away. Claimant then attempted to get down from the truck, but slipped and injured his back. Claimant detailed that he slipped on hydraulic oil that was coming out of a hose. He fell and struck his back on the steel edge of the vehicle. Claimant explained that Mr. D[Redacted] subsequently pushed him, but the shove did not cause any additional back symptoms. Claimant again told Mr. D[Redacted] to get away from the truck and Mr. D[Redacted] replied, "go ahead and hit me."

4. Claimant remarked that he then contacted Employer's General Manager Curtis T[Redacted] and reported his back injury. Mr. T[Redacted] responded that he did not want to hear about it. Claimant noted he also spoke with Union Representative Chris B[Redacted] about appropriate action.

5. Because of the altercation, Employer directed Claimant and Mr. D[Redacted] to go home and take off the following day to cool down. They were instructed

to return to work on Monday, August 5, 2019. Claimant did not contact Employer on August 2, 2019 to report his back injury.

6. On Monday August 5, 2019 Employer terminated both Claimant and Mr. D[Redacted] from employment as a result of the August 1, 2019 altercation. Claimant was terminated for creating a hostile work environment and his termination notice specified that he was “not eligible for re-hire.”

7. On January 6, 2020 the parties conducted the pre-hearing evidentiary deposition of Mr. D[Redacted]. Mr. D[Redacted] also testified in rebuttal at the hearing in this matter. He detailed his August 1, 2019 verbal altercation with Claimant. Mr. D[Redacted] specified that both men were swearing at each other and the incident became confrontational. He remarked that he contacted the union, spoke to Mr. B[Redacted] and reported the altercation. Mr. D[Redacted] advised Mr. B[Redacted] he would not work in a hostile environment. He explained that he never saw Claimant slip on oil and denied pushing Claimant during the August 1, 2019 altercation. In fact, Mr. D[Redacted] detailed that there was no hydraulic oil leak on the digger truck because the hoses are positioned below the turret where he sits and he did not notice any oil. He commented that, if oil had been leaking, the truck would have been unsafe and created a safety hazard that required mechanics to repair.

8. Mr. T[Redacted] completed a written statement and testified at the hearing in this matter. He remarked that he received a call about a verbal altercation between Claimant and Mr. D[Redacted] on August 1, 2019. Claimant explained that the altercation involved the position of a truck. Mr. T[Redacted] advised that the men should be separated and act like adults. Claimant did not report that he had fallen off the digger truck and struck his back or otherwise been injured. In fact, Mr. T[Redacted] noted that Claimant never mentioned the injuries during conversations on August 1, August 2, or August 5, 2019. Finally, while conducting an investigation of the incident, Mr. T[Redacted] remarked that no employees mentioned Claimant had slipped on oil or been pushed by a co-worker on August 1, 2019.

9. Mr. T[Redacted]’s written statement described the circumstances surrounding Claimant’s August 5, 2019 termination from employment. After Claimant’s termination, Employer asked him to turn in work packets and other miscellaneous items. Claimant waited for his termination slip and final check in his personal vehicle. At about 8:45 a.m. Mr. T[Redacted] was notified that Claimant’s check was ready and by 9:00 a.m. Claimant received his termination. Mr. T[Redacted] explained that he later received a call from Claimant at around 3:00 p.m. Claimant reported that he had “hurt himself while in the yard waiting for his check.”

10. Mr. T[Redacted] detailed in his testimony that Claimant was terminated for creating a hostile work environment and was not eligible for re-hire because he had previous incidents with other employees. On the afternoon of the termination Mr. T[Redacted] received a telephone call from Claimant stating that he had injured himself. Because Mr. T[Redacted] had not previously been informed of any injury, he assumed Claimant was reporting that he had injured himself in the parking lot while waiting for his

check earlier in the day. Notably, Claimant did not inform Mr. T[Redacted] during the call that he had slipped on hydraulic oil on the digger truck and injured his back.

11. Ryan W[Redacted] completed a written statement and testified at the hearing in this matter. He worked for Employer as a Groundman. Mr. W[Redacted] explained that on August 1, 2019 his crew was assigned to work on a street light. He was in a truck with Mr. D[Redacted]. When they stopped at the jobsite Claimant began yelling at Mr. D[Redacted] for parking in the wrong spot. Mr. W[Redacted] noted the two men began swearing at each other and the argument became heated. He began picking up his tools and packing the truck because he did not want to work in a hostile environment. Mr. W[Redacted] testified that he did not see Claimant slip and fall off the digger truck or strike his back. He also did not observe any leaking hydraulic oil.

12. Former Union Representative for Employer Mr. B[Redacted] testified at the hearing in this matter. He explained that he spoke with Claimant about his altercation with Mr. D[Redacted]. At no time during this discussion did Claimant advise Mr. B[Redacted] that he had injured his back in any fashion on August 1, 2019.

13. On August 7, 2019 Claimant visited the St. Joseph Hospital Emergency Room for an evaluation. Claimant reported lower back pain after a fall seven days earlier. He specifically explained that “he slipped and his coworker thought he was going to run into him so he pushed him causing him to fall landing on his lower back.” After reviewing Claimant’s medical history and conducting a physical examination, the Emergency Room medical provider diagnosed Claimant with a strain of the thoracic back region.

14. Claimant completed a Workers’ Claim for Compensation regarding the August 1, 2019 injury. The form specified that Claimant injured his back when he “slipped on some oil while being pushed by a coworker.” Claimant noted that he reported the back injury to Mr. T[Redacted] on August 6, 2019.

15. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable lower back injury during the course and scope of his employment with Employer on August 1, 2019. Initially, Claimant testified that he slipped on hydraulic oil while getting down from a digger truck at a jobsite on August 1, 2019. He fell in the truck and hit his back on the steel edge of the vehicle. Claimant explained that Mr. D[Redacted] subsequently pushed him, but the shove did not cause any additional back symptoms.

16. Mr. D[Redacted] detailed his August 1, 2019 verbal altercation with Claimant. He explained that he never saw Claimant slip on oil and denied pushing Claimant. In fact, Mr. D[Redacted] detailed that there was no hydraulic oil leak from a hose on the digger truck. He remarked that the hoses are positioned below the turret where he sits and he did not notice any leaking oil. Mr. D[Redacted] commented that leaking oil would have constituted a safety hazard requiring the intervention of a mechanic. Mr. W[Redacted] similarly testified that he did not see Claimant slip and fall off the digger truck or strike his back on August 1, 2019. He also did not observe any leaking hydraulic oil. Moreover, Mr. T[Redacted] explained that he received a call about a verbal

altercation between Claimant and Mr. D[Redacted] on August 1, 2019. Claimant remarked that the altercation involved the position of a truck. However, he did not report that he had fallen off the digger truck and struck his back or otherwise been injured. In fact, Mr. T[Redacted] noted that Claimant never mentioned any injuries during conversations on August 1, August 2 or August 5, 2019. After conducting an investigation of the incident, Mr. T[Redacted] determined that no employees mentioned that Claimant had slipped on oil or been pushed by a co-worker on August 1, 2019. Finally, Mr. B[Redacted] explained that he spoke with Claimant about his altercation with Mr. D[Redacted]. At no time during this discussion did Claimant advise Mr. B[Redacted] that he had injured his back in any fashion on August 1, 2019.

17. The record reveals that Claimant did not report any back injury to Employer until after he had been terminated on August 5, 2019. Mr. T[Redacted] described that Claimant received his termination slip and final check at about 9:00 a.m. on August 5, 2019 after waiting in his personal vehicle. He explained that he later received a call from Claimant at around 3:00 p.m. In a written statement he noted Claimant reported that he had “hurt himself while in the yard waiting for his check.”

18. The record also reflects that Claimant attributed his back injury to being pushed by a coworker. On August 7, 2019 Claimant visited the St. Joseph Hospital Emergency Room and reported lower back pain after a fall seven days earlier. He specifically explained that “he slipped and his coworker thought he was going to run into him so he pushed him causing him to fall landing on his lower back.” Similarly, Claimant completed a Workers’ Claim for Compensation and specifies that he injured his back when he “slipped on some oil while being pushed by a coworker.”

19. The totality of the evidence thus reflects that it is unlikely Claimant slipped and fell on leaking hydraulic oil from a digger truck on August 1, 2019. Claimant’s crewmembers did not notice any leaking hydraulic oil or observe any fall. Moreover, Claimant did not report any fall to Employer until after he was terminated on August 5, 2019. Finally, because Claimant’s description of the August 1, 2019 incident in the medical record and Workers’ Claim for Compensation suggest that he injured his back after being pushed by a coworker, they are inconsistent with his hearing testimony. Accordingly, Claimant’s request for Workers’ compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the

rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.*, W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014). When a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity.

The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on August 1, 2019. Initially, Claimant testified that he slipped on hydraulic oil while getting down from a digger truck at a jobsite on August 1, 2019. He fell in the truck and hit his back on the steel edge of the vehicle. Claimant explained that Mr. D[Redacted] subsequently pushed him, but the shove did not cause any additional back symptoms.

8. As found, Mr. D[Redacted] detailed his August 1, 2019 verbal altercation with Claimant. He explained that he never saw Claimant slip on oil and denied pushing Claimant. In fact, Mr. D[Redacted] detailed that there was no hydraulic oil leak from a hose on the digger truck. He remarked that the hoses are positioned below the turret where he sits and he did not notice any leaking oil. Mr. D[Redacted] commented that leaking oil would have constituted a safety hazard requiring the intervention of a mechanic. Mr. W[Redacted] similarly testified that he did not see Claimant slip and fall off the digger truck or strike his back on August 1, 2019. He also did not observe any leaking hydraulic oil. Moreover, Mr. T[Redacted] explained that he received a call about a verbal altercation between Claimant and Mr. D[Redacted] on August 1, 2019. Claimant remarked that the altercation involved the position of a truck. However, he did not report that he had fallen off the digger truck and struck his back or otherwise been injured. In fact, Mr. T[Redacted] noted that Claimant never mentioned any injuries during conversations on August 1, August 2 or August 5, 2019. After conducting an investigation of the incident, Mr. T[Redacted] determined that no employees mentioned that Claimant had slipped on oil or been pushed by a co-worker on August 1, 2019. Finally, Mr. B[Redacted] explained that he spoke with Claimant about his altercation with Mr. D[Redacted]. At no time during this discussion did Claimant advise Mr. B[Redacted] that he had injured his back in any fashion on August 1, 2019.

9. As found, the record reveals that Claimant did not report any back injury to Employer until after he had been terminated on August 5, 2019. Mr. T[Redacted] described that Claimant received his termination slip and final check at about 9:00 a.m. on August 5, 2019 after waiting in his personal vehicle. He explained that he later received a call from Claimant at around 3:00 p.m. In a written statement he noted Claimant reported that he had “hurt himself while in the yard waiting for his check.”

10. As found, the record also reflects that Claimant attributed his back injury to being pushed by a coworker. On August 7, 2019 Claimant visited the St. Joseph Hospital Emergency Room and reported lower back pain after a fall seven days earlier. He specifically explained that “he slipped and his coworker thought he was going to run into him so he pushed him causing him to fall landing on his lower back.” Similarly, Claimant completed a Workers’ Claim for Compensation and specifies that he injured his back when he “slipped on some oil while being pushed by a coworker.”

11. As found, the totality of the evidence thus reflects that it is unlikely Claimant slipped and fell on leaking hydraulic oil from a digger truck on August 1, 2019. Claimant's crewmembers did not notice any leaking hydraulic oil or observe any fall. Moreover, Claimant did not report any fall to Employer until after he was terminated on August 5, 2019. Finally, because Claimant's description of the August 1, 2019 incident in the medical record and Workers' Claim for Compensation suggest that he injured his back after being pushed by a coworker, they are inconsistent with his hearing testimony. Accordingly, Claimant's request for Workers' compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: April 23, 2020.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-113-130-002**

ISSUES

- Did Claimant prove compensable injuries because of a fall on July 18, 2019?
- Was [Redacted] insured for workers' compensation liability relating to Claimant's accident?
- Is [Statutory Employer Redacted] liable for workers' compensation benefits as the statutory employer?

FINDINGS OF FACT

1. On July 18, 2019, Claimant suffered severe injuries when he fell at least 40 feet from a scaffold while working for [Redacted Employer].

2. [Redacted] is an exterior finishing contractor based in O'Fallon, Missouri.

3. [Statutory Employer Redacted] is a general contractor specializing in commercial construction. [Statutory Employer Redacted] served as the general contractor on a four-story Home2 Suites by Hilton project in Southwest Colorado Springs. In approximately November 2018, [Statutory Employer Redacted] subcontracted with [to complete Exterior Insulation and Finish Systems (EFIS) and stone veneer on the project. [Redacted] started work in November 2018 without a formal contract. NCG made [Redacted] stop working on November 30, 2018 after receiving a Certificate of Insurance that did not meet [Statutory Employer Redacted] 's minimum requirements. In early December 2018, [Statutory Employer Redacted] sent a formal subcontractor agreement and detailed information regarding its insurance requirements. The contract described the project as "Ground up construction of a 4-story, 74,477 square-foot Home2 Suites hotel." The contract obligated [Redacted] to supply all scaffolding, man lifts, and hoisting to complete all EFIS on the project. [Redacted] signed the contract on January 11, 2019 and resumed work on January 19, 2019.

4. On January 29, 2019, [Redacted] retained an insurance broker, Sean W[Redacted], to help it procure a workers' compensation policy. [Redacted] informed Mr. W[Redacted] it had a project lined up in Colorado but did not give details such as the start date or a specific description of the work. Mr. W[Redacted] did not know [Redacted] had already started work on the project.

5. On behalf of [Redacted Employer], Mr. W[Redacted] completed an online application for a workers' compensation policy with Y[Redacted Insurer]. The online application included several underwriting questions designed to ensure the work is within Y[Redacted Insurer]' "risk appetite." The applicant must verify it meets the eligibility requirements before Y[Redacted Insurer] will issue a policy.

6. One eligibility requirement is the applicant performs “[n]o work on exterior buildings or structures over 2 stories in height.” Mr. W[Redacted] selected “yes” to indicate [Redacted] met the eligibility requirements.

7. After completing the online application, Mr. W[Redacted] experienced technical issues and could not issue the policy. Mr. W[Redacted] contacted a Y[Redacted Insurer] underwriter, Mike P[Redacted], for assistance. Mr. P[Redacted] requested that [Redacted] complete and sign an ACORD form as part of the application process.

8. Mr. W[Redacted] completed the ACORD form on [Redacted Employer]’s behalf. Mr. W[Redacted] input “N,” meaning “no,” to the question if “[a]ny work [is] performed underground or above 15 feet?”

9. Mr. W[Redacted] transmitted the ACORD form to [Redacted Employer]’s owner, Chad Lawson, for his review and signature. Mr. W[Redacted] sent the ACORD form to Mr. Lawson to “review to make sure things are correct and make any corrections[.]” Mr. Lawson made no corrections to the application.

10. On or about February 4, 2019, Mr. Lawson and Mr. W[Redacted] signed the ACORD form, affirming that a “reasonable inquiry has been made to obtain the answers to the questions on this application” and representing “that the answers are true, correct and complete to the best of [their] knowledge.”

11. Relying on [Redacted Employer]’s representations in the online application and ACORD form, Y[Redacted Insurer] issued workers compensation and employers liability policy no. UB-1N931421-19-42-G to [Redacted Employer] with effective dates from February 1, 2019 to February 1, 2020. The policy issue date is February 4, 2019.

12. Y[Redacted Insurer] did not know [Redacted Employer] was performing work above 15 feet or two stories when it issued the policy. Had [Redacted Employer] disclosed that information during the application process, Y[Redacted Insurer] would not have issued the policy.

13. Mr. W[Redacted] has selected Missouri as the location for primary coverage under the workers’ compensation policy, and the application gave no indication [Redacted Employer] had work in Colorado. But Mr. W[Redacted] also requested “other states” coverage under the policy because he understood [Redacted Employer] planned to work a job in Colorado.

14. Section 3.A on the Policy Information Page states it provides coverage for workers’ compensation claims under Missouri law. Section 3.C addresses “OTHER STATES INSURANCE,” and specifies coverage for injuries in the other listed states is governed by Part Three of the policy. Colorado is included under Section 3.C.

15. Part Three of the policy describes the conditions for coverage in Section 3.C states as:

OTHER STATES INSURANCE

A. How This Insurance Applies

1. This other states insurance applies only if one or more states are shown in Item 3.C. of the Information Page.
2. If you *begin* work in any one of those states *after the effective date of this policy* and are not insured or are not self-insured for such work, all provisions of the policy will apply as though that state were listed in Item 3.A. of the Information Page.
4. If you *have work on the effective date* of this policy in any state not listed in Item 3.A. of the Information Page, coverage will not be afforded for that state unless we are notified within thirty days.

B. Notice

Tell us at once if you begin work in any state listed in Item 3.C. of the Information Page.

(Bold in original, emphasis in italics added).

16. Mr. W[Redacted] contacted Mr. P[Redacted] on February 5, 2019 to verify the policy included Section 3.C Other States coverage because he understood [Redacted Employer] planned to start work in Colorado. Mr. W[Redacted] did not know, and therefore did not inform Mr. P[Redacted] (or anyone else at Y[Redacted Insurer]) that [Redacted Employer] was already working in Colorado when the policy was issued.

17. [Redacted Employer] hired Claimant in April 2019. Claimant was living in Texas at the time and moved to Colorado to work on the Home2 project.

18. [Redacted Employer] had installed a 42-foot high scaffold system around the hotel building to work on the EFIS. On July 18, 2019, Claimant was on the scaffold performing exterior work at the fourth-floor level. He fell approximately 40 feet and suffered multiple serious injuries.

19. Claimant was transported by American Medical Response (AMR) EMTs to UCHealth Memorial Hospital. He was hospitalized for nearly two months and was discharged on September 12, 2019.

20. Claimant returned to Texas after being discharged from Memorial Hospital. He established care with New Horizon Medical in Brownsville, Texas on October 1, 2019.

21. Claimant proved he suffered a compensable injury on July 18, 2019.

22. Y[Redacted Insurer] proved [Redacted Employer]'s workers' compensation policy does not cover Claimant's injuries because (1) [Redacted Employer] failed to disclose material information it had contracted to perform work at heights above 15 feet or 2 stories, and (2) because it was already working in Colorado when the policy was

issued but failed to notify Y[Redacted Insurer] within 30 days as required by Part Three § A.4 of the policy.

23. [Statutory Employer Redacted] is liable for workers' compensation benefits as the statutory employer because [Redacted Employer] did not have workers' compensation insurance coverage for his injuries.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). As found, Claimant proved he suffered a compensable injury on July 18, 2019.

B. [Redacted Employer]'s Y[Redacted Insurer] insurance policy does not cover Claimant's injuries

Y[Redacted Insurer] proved two independent reasons the policy issued to [Redacted Employer] does not cover Claimant's accident. First, [Redacted Employer] failed to disclose that it was performing work over 15 feet or two stories in height. An insurance policy is void if coverage was obtained by material misrepresentations or omissions in the application. To avoid coverage under a policy, the insurer must prove (1) the applicant made a false statement of fact or concealed a fact in his application for insurance; (2) the applicant knowingly made the false statement or knowingly concealed the fact; (3) the false statement or the concealed fact materially affected either the acceptance of the risk or the hazard assumed by the insurer; (4) the insurer was ignorant of the false statement of fact or concealment of fact and is not chargeable with knowledge of the fact; and (5) the insurer relied, to its detriment, on the false statement of fact or concealment of fact in issuing the policy. *Hollinger v. Mutual Benefit Life Insurance Company*, 560 P.2d 824 (Colo. 1977); *State Compensation Insurance Fund v. Industrial Commission*, 737 P.2d 1116 (Colo. App. 1987).

All the required elements set forth in *Hollinger* are present in this case. When it completed and signed the application, [Redacted Employer] knew the project involved work above two stories, because it had already worked on the hotel and the subcontractor agreement expressly described the project as a "4-story . . . hotel." Y[Redacted Insurer] would not have issued the policy if [Redacted Employer] had disclosed it had work above 15 feet or two stories in height. Such activity exceeded Y[Redacted Insurer]' "risk appetite," and Y[Redacted Insurer] would have automatically declined [Redacted Employer]'s application had the true facts been revealed. Failing to disclose the expected work heights was "material" because it was essential to issuance of the policy. Y[Redacted Insurer] did not know of the concealed fact, and there is no persuasive evidence of any circumstance by which Y[Redacted Insurer] could fairly be deemed "chargeable with knowledge of the fact."

Second, the policy does not cover injuries in Colorado because [Redacted Employer] failed to disclose it was already working in Colorado on the application or within 30 days of the policy issue date. An insurer's liability is measured by the terms of the policy, not the liability of the insured. *State Compensation Insurance Fund v. Dean*, 689 P.2d 1146 (Colo. App. 1984). Under the terms of the policy, coverage for injuries in Colorado is governed by Part Three. [Redacted Employer]'s situation falls within § A.4, because it already had work in Colorado on the effective date of the policy. There is no persuasive evidence [Redacted Employer] or anyone acting on its behalf notified Y[Redacted Insurer] of the Colorado project within 30 days of February 4, 2019. Mr. W[Redacted]'s verbal statement to Mr. P[Redacted] on February 5 was insufficient, because he only told Mr. P[Redacted] [Redacted Employer] *planned* to work in Colorado, not that it was *already* doing so. Mr. P[Redacted] reasonably took no further action at that point other than verify the policy included the "Other States" provision, under which [Redacted Employer] would automatically be covered under § A.2 for work in Colorado commencing in the future.

C. [Statutory Employer Redacted] is liable for Claimant's injuries as the statutory employer

A general contractor in Colorado is considered the "statutory employer" of its subcontractors' employees. Section 8-41-401(1)(A)(I), C.R.S. provides that,

Any person, company, or corporation operating or engaged in or conducting any business by leasing or contracting out any part or all of the work thereof to any lessee, sublessee, contractor, or subcontractor, irrespective of the number of employees engaged in such work, shall be construed to be an employer as defined in articles 40 to 47 of this title and shall be liable as provided in said articles to pay compensation for injury or death resulting therefrom to said lessees, sublessees, contractors, and subcontractors and their employees or employees' dependents

The statutory employer is immune from workers' compensation claims by its subcontractor if the subcontractor "before commencing such work, insures and keeps insured its liability for [workers'] compensation [benefits]." Section 8-41-401(2), C.R.S. This prevents employers from avoiding liability for workers' compensation claims by farming out their work to uninsured independent contractors. *Finlay v. Storage Technology Corp.*, 764 P.2d 62 (Colo. 1988). The statutory employer is liable to the employees of an uninsured subcontractor regardless of whether it knew or should have known the subcontractor was uninsured, or whether the subcontractor had previously provided a certificate of insurance. E.g., *Hernandez v. MDR Roofing, Inc.*, W.C. No. 4-850-627-03 (September 20, 2013); *Flores v. Needham Roofing, Inc.*, W.C. No. 4-892-164-04 (August 21, 2014). The statutory employer scheme reflects a legislative policy that the risk of errors regarding the existence or validity of a subcontractor's insurance should fall on the general contractor rather than the injured worker.

Here, [Statutory Employer Redacted] was the general contractor for the Home2 project and [Redacted Employer] was its subcontractor. Neither [Statutory Employer

Redacted] nor [Redacted Employer] has argued or suggested [Statutory Employer Redacted] would not be the statutory employer if [Redacted Employer] is deemed uninsured. Rather, [Statutory Employer Redacted] focused its efforts on trying to show [Redacted Employer] was insured for workers' compensation liability.

As found, [Redacted Employer]'s workers' compensation policy does not cover Claimant's injuries. [Redacted Employer] is therefore uninsured for this claim. [Statutory Employer Redacted] and its workers' compensation carrier, X[Redacted]Insurance Company, are liable for any benefits due Claimant under the Act.

ORDER

It is therefore ordered that:

1. Claimant's claim for injuries suffered on July 18, 2019 is compensable.
2. Y[Redacted Insurer] proved the workers' compensation policy issued to [Redacted] does not cover Claimant's injuries.
3. The claim against Y[Redacted Insurer] for workers' compensation benefits relating to Claimant's July 18, 2019 accident is denied and dismissed.
4. [Statutory Employer Redacted] Group is Claimant's statutory employer for the July 18, 2019 accident.
5. [Statutory Employer Redacted] Group's insurer, X[Redacted]Insurance Company, shall cover all reasonably necessary medical treatment from authorized providers to cure and relieve the effects of Claimant's compensable injury, including, but not limited to, emergency transport by AMR and treatment at UCHHealth Memorial Hospital from July 18, 2019 through September 12, 2019.
6. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to

review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us

ISSUES

➤ Whether claimant has proven by a preponderance of the evidence that the L5-S1 disc replacement surgery recommended by Dr. Clifford is reasonable medical treatment necessary to cure and relieve the claimant from the effects of her admitted industrial injury?

FINDINGS OF FACT

1. Claimant was employed with employer as a home maintenance attendant. Claimant's job duties included taking care of the home duties of clients, including steadying a patient, helping the patient into and out of the shower. Claimant testified that on October 31, 2018 she was helping a client out of the shower when the client became off balance and claimant tried to catch the client so the client would not fall. Claimant testified that she caught the client leaning forward and felt severe back pain.

2. Claimant testified at hearing that she had a prior back injury while working for employer. Claimant testified she treated for the back injury with Dr. Pulsipher and was released from care after approximately one month. Claimant's medical care for that prior injury included a magnetic resonance image ("MRI") scan on August 18, 2017 which demonstrated L5-S1 degenerative disc changes with a small focal central disc bulge with annular tear.

3. Claimant was initially sought medical treatment following the October 31, 2018 work injury with Physicians' Assistant ("PA") Polsley with Cedar Points Health Family Practice on November 1, 2018. Claimant complained of midline low back pain with some radiating symptoms into her gluteus muscle on her right side. PA Polsley diagnosed claimant with a strain of the lumbar region, provided claimant with work restrictions and referred claimant for physical therapy.

4. Claimant returned to PA Polsley on November 15, 2018 and noted that her back pain was persisting without any improvement. PA Polsley noted that the radiating symptoms were now down to her mid posterior thigh. PA Polsley recommended an MRI of the lumbar spine.

5. The MRI was performed on November 28, 2018. The MRI demonstrated a central bulge at L5-S1 with annular tear. Mild degenerative change at the L4-5 facet joints with small synovial cyst off the superior lateral right facet joint. Minimal interval changes from the August 18, 2017 MRI were noted.

6. Claimant returned to PA Polsley on December 3, 2018. PA Polsley noted claimant's MRI results and noted that claimant complained that the prolonged sitting when she is driving for her job, it seemed to worsen her back pain. PA Polsley noted

that claimant's sciatic pain remained unchanged. Claimant was diagnosed with acute bilateral low back pain with bilateral sciatica as well as lumbago with sciatica on the left and right side.

7. Claimant returned to Cedar Point health on December 10, 2018 and was evaluated by Dr. Shelton. Claimant complained of increasing back pain to a level of 9 out of 10. Claimant complained of pain mostly across her lower back with little to any radiation. Dr. Shelton noted claimant believed she was worsening and found little relief with her therapy so far. Dr. Shelton referred claimant to Dr. Olson and recommended anti-inflammatories.

8. Claimant was evaluated by PA Bell with Dr. Clifford's office on December 31, 2018. PA Bell noted claimant's accident history of having an acute onset of low back pain when she tried to catch and stabilize a client and had a tearing pain in her low back. PA Bell noted claimant complained of bilateral upper and lower extremity numbness since the accident. PA Bell obtained x-rays of claimant's lumbar spine and performed a physical examination. PA Bell recommended claimant continue physical therapy and consider injection therapy, including a right sided L5-S1, S1-S2 transforaminal epidural steroid injection ("ESI").

9. Claimant underwent the right L5-S1, S1-S2 transforaminal epidural steroid injections on January 17, 2019 under the auspices of Dr. Clifford. Claimant returned to Dr. Clifford on March 4, 2019 and reported that she had good relief of the pain following the injections for three weeks, before her pain returned. Claimant reported her pain was about 50% as severe as it was before the injection and that it was aggravated by standing for long periods of time or bending.

10. Claimant returned to Dr. Clifford on March 25, 2019. Dr. Clifford again noted that claimant had 3 to 4 weeks of good pain relief after her January 17 injections. Claimant reported that she was experiencing pain primarily in her low back with radiating pain down the posterior aspect of both legs. Dr. Clifford opined that claimant may need surgical intervention to address the stenosis and disc degeneration at the L5-S1 level and but noted that claimant should continue non-operative treatment before considering surgical intervention.

11. Claimant underwent a second right L5-S1, S1-S2 transforaminal ESI under the auspices of Dr. Clifford on April 17, 2019. Claimant returned to Dr. Clifford's office on May 6, 2019 and was evaluated by PA Ousley. PA Ousley noted that claimant had slight improvement with the second injection but continued to complain of significant pain in her legs radiating into both legs.

12. Claimant returned to Dr. Clifford on June 3, 2019. Dr. Clifford noted claimant only had slight improvement with the second injection. Claimant complained to Dr. Clifford of significant pain in her back radiating into both legs. Dr. Clifford recommended a repeat ESI. Dr. Clifford noted that from a surgical standpoint, if a year went by from claimant's injury, and she still had very little improvement, Dr. Clifford

would consider either disc replacement surgery at the L5-S1 level or possibly anterior lumbar interbody fusion at the L5-S1 level.

13. Claimant underwent another bilateral L5-S1 transforaminal ESI on June 12, 2019. Claimant reported initially after the ESI that she had excellent leg pain relief.

14. Claimant returned to Dr. Clifford's office on July 8, 2019 and was evaluated by PA Bell. Claimant reported that the third ESI provided her with very short relief, unlike her first injection which provided her with relief for one month. Claimant reported her primary symptoms as low back and posterior thigh pain with occasional pain radiating below her knees. PA Bell noted that due to claimant's young age, they felt that claimant's superior option would be the artificial disk replacement surgery.

15. Respondents obtained a physicians' advisory opinion from Dr. Ogsbury on July 9, 2019. Dr. Ogsbury opined in his report claimant's findings on MRI when compared to the August 2017 MRI were quite consistent. Dr. Ogsbury opined that all pain generators were not adequately defined and treated. Dr. Ogsbury recommended against approving the requested L5-S1 artificial disk replacement surgery.

16. Respondents thereafter denied the request for surgery.

17. Respondents obtained an IME of claimant with Dr. Messenbaugh on October 3, 2019. Dr. Messenbaugh reviewed claimant's medical records, obtained a medical history from claimant and performed a physical examination in connection with his IME. Dr. Messenbaugh noted claimant reported pain of 10/10 that was present 90% of the time with her least amount of pain being 8/10 5% of the time.

18. Dr. Messenbaugh noted that following claimant's 2017 injury, she was capable of returning to unrestricted work. Dr. Messenbaugh opined that claimant's extreme subjective, diffuse, nonanatomic symptoms of 8 to 10 out of 10 low back pain, with aching, stabbing, numbness, and burning sensations involving her low back, bilateral anterior and posterior thighs and posterior calves are quite inconsistent with claimant's two MRI findings and her repeated physical examinations. Dr. Messenbaugh opined that claimant sustained some degree of myofascial strain and sprain in the October 31, 2018 injury. Dr. Messenbaugh further opined, however, that the injury did not result in a lumbar disc herniation, annular tear or nerve root compression. Dr. Messenbaugh opined that there had been no consistent objective tests performed on claimant that would confirm that her symptoms were specifically and singularly the result of pathology noted at the L5-S1 level. Dr. Messenbaugh opined that claimant was not a reasonable candidate for any lumbar spine surgery.

19. Dr. Clifford responded to the IME report from Dr. Messenbaugh on or about October 31, 2019 and noted that claimant had reported excellent pain relief after her first injection. Dr. Clifford opined that the total disc replacement surgery provided excellent results in greater than 80% of the patients with degenerative disc disease.

20. Dr. Messenbaugh issued an addendum to his report on December 13, 2019. Dr. Messenbaugh reviewed additional records including the October 31, 2018

report from Dr. Clifford and noted that his opinion regarding the surgery was not changed.

21. Claimant underwent an electromyogram (“EMG”) on December 30, 2019. The EMG was performed by Dr. Hehmann, and was reportedly normal. Dr. Hehmann noted that there was no evidence of denervation on EMG.

22. Respondents obtained video surveillance of claimant on multiple occasions. The video surveillance taken on September 1, 2019 demonstrates claimant walking, bending and assisting in holding a piece of wood while another person cuts the wood. Claimant bends over at the waist while holding the wood and steps over a pet gate. The surveillance from September 10, 2019 demonstrated claimant walking. Claimant testified at hearing that the surveillance demonstrated claimant on pretty good days. While claimant is not performing strenuous activity in the video surveillance, the ALJ notes that the surveillance is in conflict with claimant’s reported pain levels as reported to her treating physicians and Dr. Messenbaugh.

23. Claimant testified at hearing that in anticipation of the surgery, she has quit smoking. Claimant testified that she has discussed the risks of the surgery with Dr. Clifford and still wants to have the surgery.

24. Dr. Messenbaugh testified at hearing in this case consistent with his IME report. Dr. Messenbaugh testified that claimant has no neurological deficit that would indicate that surgery was necessary. Dr. Messenbaugh testified that claimant’s subjective complaints are greater than the objective findings. Dr. Messenbaugh testified that he reviewed the video surveillance of claimant. Dr. Messenbaugh testified that in the September 1, 2019 video, claimant does not appear to be someone who needs surgery. Dr. Messenbaugh testified that the negative EMG supported his opinion that the disc replacement surgery could make claimant worse if it were performed.

25. The ALJ finds the testimony and opinions expressed by Dr. Messenbaugh to be credible in this case. The ALJ notes that claimant’s reported pain levels to her treating physicians and in her testimony at hearing are not substantiated by claimant’s actions in the surveillance video.

26. The ALJ credits the testimony of Dr. Messenbaugh along with the medical records entered into evidence in this case and finds that claimant does not have a neurological deficit that would indicate that surgery is necessary in this case. The ALJ credits Dr. Messenbaugh’s testimony regarding the normal EMG and the diffuse nature of claimant’s reports of pain which make it difficult to identify a pain generator in this case as being credible and persuasive regarding the reasonableness and necessity of the proposed surgery.

27. The ALJ finds and concludes based on the evidence presented at hearing, including the testimony of claimant and Dr. Messenbaugh, that claimant has failed to establish that it is more probable than not that the recommended L5-S1 disc

replacement surgery is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with “a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra*.

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The ALJ credits the medical records and the opinions expressed by Dr. Messenbaugh and finds that claimant has failed to demonstrate by a preponderance of the evidence that the recommended L5-S1 disc replacement surgery is reasonable and necessary to cure and relieve the effects of claimant’s work injury.

ORDER

It is therefore ordered that:

1. Claimant's request for an Order requiring respondents to pay for the L5-S1 total disc replacement surgery recommended by Dr. Clifford is denied and dismissed.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: April 27, 2020

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the left total knee replacement recommended by Dr. Rhonda Parker is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted July 29, 2019 work injury.

FINDINGS OF FACT

1. The claimant began working for the employer on April 17, 2019. The claimant typically worked from 6:00 p.m. to 10:00 p.m. stocking the employer's store. On July 29, 2019, the claimant was engaging in this stocking related activity. Specifically, he was using a pallet jack to move pallets of various items to the proper location in the store. Many of these pallets contained heavy tile and flooring. The claimant testified that throughout his shift on July 29, 2019, his left knee became sore.

2. The claimant further testified that this left knee pain developed gradually over the course of that shift, but became intolerable during the night. The claimant notified the employer of his knee pain and he was referred for medical treatment with Peak Professionals.

3. In the interim, the claimant was seen in the emergency department (ED) at Montrose Memorial Hospital on July 30, 2019 by Dr. David Dreitlein. The claimant reported to Dr. Dreitlein that he had constant pain in his left knee that he described as moderate and sharp. The claimant also reported he had experienced this pain since the day before. An x-ray of the claimant's left knee was read as normal. Dr. Dreitlein diagnosed a left knee sprain and recommended the use of crutches and physical therapy. Dr. Dreitlein also instructed the claimant to follow up with his workers' compensation doctor.

4. The claimant's authorized treating provider (ATP) for this claim is Dr. Stephen Adams with Peak Professionals. The claimant was first seen at Peak Professionals on August 2, 2019 by Susan Dockins, FNP. On that date, the claimant described his mechanism of injury as including a twisting motion in his knees while moving and lifting pallets at work. The claimant reported that he had increased swelling in his left knee since receiving treatment in the ED. Ms. Dockins diagnosed a sprain of the claimant's left collateral ligament and referred him to physical therapy. In addition, Ms. Dockins ordered a magnetic resonance image (MRI) of the claimant's left knee. On that same date, Ms. Dockins aspirated 60cc of yellowish liquid from the claimant's left knee.

5. On August 3, 2019, the claimant returned to Ms. Dockins and they discussed that the aspirated fluid was positive for urate crystals, which is indicative of gout. Ms. Dockins opined that the claimant was experiencing a gout attack, that was precipitated by the left knee sprain.

6. On August 5, 2019, the claimant was seen at Peak Professionals by Dr. Adams. On that date, Dr. Adams noted that the claimant experienced increased pain and swelling after his knee pain initially began at work. Dr. Adams agreed that physical therapy and an MRI should be pursued.

7. On August 20, 2019, an MRI for the claimant's left knee was performed. The MRI showed a prior anterior cruciate ligament (ACL) graft that was severely degenerated. In addition, there was severe medial compartment arthrosis, and advanced arthrosis in the lateral aspect patellofemoral compartment. Finally, the radiologist noted hypertrophied synovium or loose bodies in the meniscofemoral recess of the lateral joint which were causing chronic scalloping of the bone.

8. The claimant testified that many years ago, he underwent surgical repair of his left ACL. The medical records indicate that this surgery was performed in 1992. The claimant testified that following the surgery he did not experience left knee pain until July 29, 2019.

9. As recommended by Dr. Adams and Ms. Dockins, the claimant attended physical therapy. The claimant was seen by Aaron Coon, DPT with Rocky Mountain Therapy Services. The claimant testified that physical therapy was helpful in reducing some of his left knee pain. However, the claimant's last physical therapy appointment was on September 26, 2019. On October 1, 2019, Mr. Coon recommended additional physical therapy treatment for the claimant. However, additional physical therapy was not authorized by the respondent.

10. On August 24, 2019, the claimant returned to Ms. Dockins. At that time, Ms. Dockins made a referral to Western Slope Orthopaedics for consultation.

11. On September 12, 2019, the claimant was seen by Dr. Rhonda Parker at Western Slope Orthopaedics. At that time, the claimant reported clicking, popping, and instability in his left knee. Dr. Parker noted that the MRI showed tears of both the medial and lateral menisci, and a lengthening of the ACL. Dr. Parker diagnosed post traumatic osteoarthritis of the left knee and recommended the claimant undergo a left knee arthroplasty (replacement).

12. On September 12, 2019, Dr. Parker submitted a request for authorization for the recommended surgery.

13. On September 25, 2019, Dr. Sean Lager reviewed the request for surgery. In his report, Dr. Lager opined that due to the condition of the claimant's left knee, a total knee replacement would be medically reasonable and necessary. Dr. Lager did not state an opinion as to whether the claimant's need for surgery was work related.

14. On September 26, 2016, Dr. Marc Steinmetz reviewed the claimant's medical records. In his report of that date, Dr. Steinmetz opined that the recommended knee replacement surgery was not reasonable, necessary, or related to the July 29, 2019 incident. Dr. Steinmetz further opined that the claimant's left knee symptoms were the progression of his pre-existing degenerative arthritis, that was accelerated by gout.

15. On December 17, 2019, the claimant attended an independent medical examination with Dr. Steinmetz. In connection with the IME, Dr. Steinmetz reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Steinmetz opined that the claimant's left knee symptoms are not work related. It is the opinion of Dr. Steinmetz that the claimant's symptoms are "due to a progression of his pre-existing degenerative arthritis, which have been accelerated and exacerbated and precipitated by his non-work related gout." Dr. Steinmetz's testimony was consistent with his written report.

16. Dr. Steinmetz testified that all of the claimant's left knee symptoms are caused by the end stage arthritis in that knee. Dr. Steinmetz further testified that in his opinion, the claimant became intolerant of his work activities because of the end stage arthritis in his left knee. Dr. Steinmetz reiterated his opinion that the left total knee replacement is not reasonable, necessary, or related to the claimant's work. In support of this opinion, Dr. Steinmetz noted that the MRI shows no injury to the claimant's left knee.

17. On February 20, 2020, Dr. Parker responded to a number of questions posed to her by the claimant's attorney. In her response, Dr. Parker opined that the claimant suffered a new injury to his left knee on July 29, 2019 when he was pulling pallets at work. Dr. Parker recognized the claimant's long standing degenerative left knee condition, and his "gouty arthritis". Dr. Parker opined that the claimant's work duties exacerbated the condition of his left knee, leading to increased pain and the need for treatment. Dr. Parker stated that a left total knee arthroplasty is reasonable and necessary to relieve the claimant's left knee symptoms. She further opined that the claimant's need for surgery is related to the exacerbation caused by his work activities.

18. The claimant testified that he has experienced gout since he was 35 years old. At the time of the hearing, the claimant was 62 years old. This gout is typically in the claimant's hands, and occasionally in his feet. Prior to July 29, 2019, the claimant had never experienced gout in his left knee. Medical records entered into evidence show that the claimant received gout related treatment in April 2019, for his left foot. There was no gout in his left knee at that time.

19. The claimant's current symptoms include left knee pain that he rates as three to four out of ten. However, he will experience swelling and increased pain of six or seven out of ten, if he is up and using his knee. The claimant testified that since October 2019, his only left knee treatment has been home exercises, ice, and ibuprofen.

20. The ALJ credits the medical records, the claimant's testimony regarding his symptoms, and the opinions of Dr. Parker over the contrary opinions of Dr. Steinmetz. Accordingly, the ALJ finds that the claimant has demonstrated that it is more likely than not that the claimant's need for a left total knee replacement is related to the admitted work injury. The ALJ finds that the claimant's work duties on July 29, 2019 accelerated and exacerbated the preexisting degenerative condition of his left knee. This acceleration and exacerbation has necessitated medical treatment, including surgery. The ALJ further finds that the claimant has demonstrated that it is more likely than not that the surgery is reasonable and necessary medical treatment of the claimant's left knee condition.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” *See H & H Warehouse v. Vicory, supra*.

6. As found, the claimant has successfully demonstrated, by a preponderance of the evidence, that the recommended left total knee replacement is reasonable medical treatment necessary to cure and relieve the claimant from the effect of the July 29, 2019 work injury. As found, the claimant has successfully demonstrated by a preponderance of the evidence that his work duties on July 29, 2019 aggravated and accelerated the preexisting degenerative condition of his left knee, necessitating medical treatment,

including the recommended surgery. As found, the medical records, the claimant's testimony, and the opinions of Dr. Parker are credible and persuasive.

ORDER

It is therefore ordered that the respondent shall pay for the recommended left total knee replacement, pursuant to the Colorado Medical Fee Schedule.

Dated this 29th day of April 2020.

Cassandra M. Sidanycz

Administrative Law Judge

Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-009-754**

ISSUES

- I. Whether Respondents provided clear and convincing evidence to overcome the opinion of DIME physician Hugh Macaulay, M.D. on permanent medical impairment.
- II. Determination of Claimant's average weekly wage ("AWW").

STIPULATIONS

The parties stipulated at hearing that Claimant is entitled to a general award of maintenance medical benefits.

FINDINGS OF FACT

1. Claimant is a 50-year-old male who works for Employer as a mechanic. Claimant began his employment with Employer in September 2002. On January 1, 2013, Employer relocated Claimant's position to a warehouse in Westminster, Colorado that had been vacant for several years. Claimant began developing rashes and respiratory symptoms after relocating to the new warehouse.

2. Claimant has a prior history of asthma. In February 2011, Claimant was seen by his primary care physician at Kaiser Permanent with complaints of a cough over the last two weeks, noting everyone at work was ill. Claimant provided a history of asthma as a child with no problems for many years. Claimant was diagnosed with bronchitis, and intermittent asthma with acute exacerbation. Claimant testified at hearing that he didn't really recall the incident in 2011 or any ongoing problems prior to 2013. Claimant testified that he did not use an inhaler during the time period prior to moving to the new building in 2013. No medical records were admitted into evidence indicating Claimant was actively suffering from respiratory issues leading up to 2013.

3. Claimant filed a workers' compensation claim on February 12, 2016 alleging he sustained an occupational disease with a date of onset of January 26, 2016.

4. Claimant began treatment with authorized provider Concentra on March 15, 2016. Lloyd Thurston, D.O. assessed Claimant with bronchitis with bronchospasm and dermatitis and referred Claimant for a dermatology evaluation and to National Jewish Health for a pulmonary evaluation. He released Claimant to return to regular work.

5. On April 5, 2016, Respondents filed a General Admission of Liability admitting for medical benefits.

6. On April 13, 2016, Claimant saw Carol Alonso, M.D. for a dermatology evaluation. She diagnosed Claimant with dermatitis and prescribed Doxycycline.

7. Claimant first presented to Karin Pacheco, M.D. at National Jewish Health on May 16, 2016. Claimant discussed his medical condition in detail, alleging that his symptoms began on January 17, 2013 and were continuing. Claimant alleged his condition was a result of detritus in the ventilation system of the warehouse including pigeon feces. Regarding his pre-existing history, Dr. Pacheco noted Claimant was born prematurely and spent the first six months of his life in an oxygen tent, he was diagnosed with asthma as a child, and he smoked approximately a half-pack of cigarettes a day from ages 14 - 45, quitting in October 2015. Claimant underwent a pulmonary function test and allergen testing. Dr. Pacheco's assessment was asthma, chronic recurrent dermatitis, and intermittent rhinitis. She noted that, although Claimant has a history of prematurity and presence of asthma as a child, he was not treated with any inhalers until after developing respiratory symptoms following Employer's move into a new building. Regarding the cause of Claimant's condition, Dr. Pacheco wrote,

The patient's initial history is suggestive of bronchopulmonary dysplasia related to prematurity, and it is possible that the patient's asthma is related to this early life exposure.

His symptoms related to work in the [Employer] building are more difficult to characterize. The patient may have simply experienced an exacerbation of his asthma in a generally dirty workplace. Another consideration is whether the patient has developed hypersensitivity pneumonitis from intermittently high exposures to dead pigeons, their feathers and their feces.

Respondents' Exhibit H, p. 54.

8. On May 27, 2016, Claimant underwent additional allergen testing and a CT scan of the chest at National Jewish Health. Claimant tested negative to dove droppings, pigeon serum, and pigeon droppings, indicating no immune response to those allergens. The CT scan was performed that revealed small and large airway disease with bronchial wall trapping. It was noted in the CT interpretive report that this condition may be from asthma or other causes of bronchial inflammation.

9. Dr. Pacheco reexamined Claimant on June 8, 2016, and discussed Claimant's May 16, 2016 pulmonary function test, CT scan, and allergen test results in her medical notes. She noted that Claimant's evaluation demonstrated the presence of asthma and allergic sensitization to both seasonal and perennial aeroallergens, with no signs of hypersensitivity pneumonitis based on lung function testing, dove and pigeon precipitins, and chest CT. Dr. Pacheco instructed Claimant to monitor his peak flow rates to identify any work-related pattern.

10. Claimant returned to Dr. Pacheco on July 11, 2016. Dr. Pacheco noted Claimant's peak flow rates did not reflect particular symptoms associated with a specific job at work

or specific work location. She further noted Claimant was one of several workers referred from Employer for work-related respiratory symptoms and rashes. Dr. Pacheco discussed the potential causes of Claimant's condition, noting,

Of concern is whether the patient's symptoms are associated with exposure to the dead pigeons in the building that were present when initially moving in, or possibly related to the swamp coolers that have not been well maintained until recently.

The patient's asthma is also related to the probable diagnosis of bronchopleural dysplasia related to extreme prematurity. The patient has smoked cigarettes, about one half pack per day between the ages of 15 and 45 before quitting in 10/2015. In addition, the patient is sensitized to numerous trees, grasses, weeds, cockroach, dust mites, cat, dog, and several molds. It is possible that a component of the patient's symptoms relate to exposure to both seasonal allergens, and the presence of three dogs in the home. It is notable that the patient's work area is located directly under one ventilation unit connected to a swamp cooler present on the roof. It is possible that sensitization to either mold or dust mites that may grown in a humid environment relate to the patient's symptoms at work. However, it has been difficult to demonstrate a clearcut association of the patient's respiratory symptoms or lung function with the workplace or with improvement away from work.

Respondents' Exhibit H, p. 77.

11. At a follow-up evaluation with Dr. Pacheco on August 24, 2016, Claimant reported fewer respiratory symptoms at work after Employer conducted a second cleaning of the ventilation system. Dr. Pacheco noted that, although Claimant's peak flow rate was below the lower range of what was predicted, the peak flow data did not show a work-related pattern and there did not appear to be a work-related component. She continued to monitor Claimant.

12. Claimant returned to Dr. Pacheco on January 25, 2017, reporting no respiratory symptoms. Dr. Pacheco opined she could not tell whether Claimant's improvement was due to the end of allergy season or the fact that there had been some renovation of the workplace, including the swamp coolers. She wrote, "It remains unclear if there are still exposures in the workplace that could be triggering his symptoms, and I would like to follow the patient to make sure he does not worsen." She instructed Claimant to return for a follow-up evaluation in three months.

13. When Claimant returned to Dr. Pacheco on April 10, 2017, he reported having some days with respiratory issues. Claimant's peak flows were within the lower range of normal predicted values. Dr. Pacheco noted Claimant "has asthma, in part related to his extreme prematurity. There does not appear to be a work-related pattern to his peak flows, and indeed, he does not use his asthma medications when he was no symptoms."

14. On October 25, 2017, Claimant reported to Dr. Pacheco continuing to have occasional rashes and an episodic cough, which had started to recur. Dr. Pacheco was unsure why Claimant's asthma had worsened, noting seasonal weeds may have triggered the fall season exacerbation. Dr. Pacheco reviewed an investigation report regarding the air quality of the Westminster warehouse and made recommendations for remediation in the warehouse, including cleaning out the swamp cooler and maintaining a routine maintenance schedule of the swamp cooler, fixing the floor drains so that they drain on a daily basis, periodic inspection of the insulation for mold, and installation of effective ventilation.

15. Claimant returned to Dr. Pacheco on February 1, 2018. He reported that his symptoms greatly improved over the holiday when he was away from work and was not reporting any respiratory or skin symptoms related to his work place at the time. Dr. Pacheco noted that a SAMMS conference had been held, wherein she was advised that Employer hired hygienist companies to investigate the cleanliness of the warehouse and that many of her recommendations had been put in place. Specifically, the swamp coolers had been installed and maintained on the roof and had been fitted with aspen scented pads, the floor drains were draining properly, much of the moldy insulation had been removed, water fountains in the service bay had been removed, and nightly cleaning was implemented in the areas in question.

16. Claimant presented to John Burriss, M.D. at Concentra Medical Centers on March 14, 2018 for a further evaluation of his symptoms. Dr. Burriss noted Claimant had no complaints, and that his respiratory symptoms only occurred in the evenings when he returned home from work. He noted that, per Dr. Pacheco's notes, it was unclear that Claimant's rash or asthma were associated with his workplace exposures. He opined Claimant had reached maximum medical improvement ("MMI") and deferred to Dr. Pacheco regarding whether an impairment rating is applicable.

17. Dr. Pacheco reexamined Claimant on August 23, 2018 and opined Claimant had reached MMI as of that date. She noted Claimant was doing well with no particular problems or symptoms at work currently. Dr. Pacheco noted a full pulmonary function test with lung volumes was obtained on September 21, 2018.¹ She compared the test results to Claimant's May 16, 2016 results, noting Claimant currently had more hyperinflation with more limited airflow and reduced diffusion capacity.

18. Dr. Pacheco discussed the effects of Claimant's workplace exposure on his condition, stating,

There was significant contamination of the swamp coolers with bird remains, black effluent in the floor drains under the garage area where he worked, and areas of black mold contamination of the insulation. Over time, these occupational hazards have been cleared. The swamp coolers have been extensively cleaned and fitted with new pads. Although previously

¹ Dr. Pacheco dictated the medical note on October 3, 2018.

there was a barn like odor associated with their use, currently, there is no odor in the garage. The mold contaminated insulation appears to have been completely removed. The floor drains are now serviced, and standing water is not allowed to site for days at a time as before.

Therefore, I do not associate the patient's current symptoms or lung function tests with damage from workplace exposures, since the patient's symptoms and lung function are worse in the context of a cleaned up work environment. Part of the problem has been that the patient continues to use his medications on a perceived as needed basis, rather than routinely as is recommended for inhaled steroids for treatment of asthma.

19. Dr. Pacheco assigned Claimant an impairment rating for his asthma. In determining the impairment rating, Dr. Pacheco used the American Thoracic Society ("ATS") Guidelines for the Evaluation of Impairment/Disability in Asthma and then translated the ATS rating to a rating under the AMA Guides. Based on Claimant's September 21, 2018 test results, Dr. Pacheco determined Claimant fell under Class 3 impairment. She ultimately assigned Claimant a 25% whole person impairment, with the following explanation:

I considered the fact that the patient would actually require more medications based on NIH guidelines, and I assigned him a final 35% whole person impairment. The patient's skin rash on the face is due to rosacea, which is not work-related. The dyshidrotic eczema on his hands, but this does not appear to interfere with activities of daily living. Therefore, I did not assess any other impairment other than that associated with asthma. Given the fact that the patient's lung function is worse in the context of an improved workplace, I cannot attribute all the patient's current asthma impairment to his workplace. I therefore assigned the patient a 25% whole person impairment for asthma aggravated by workplace conditions at [Employer].

Respondents' Exhibit H, p. 103.

20. Dr. Pacheco recommended maintenance treatment in the form of inhaled steroids, inhaled bronchodilators, annual pulmonary function testing, and two visits per year for asthma.

21. At the request of Respondents, Robert W. Watson Jr., M.D. performed a medical record review and issued a report dated January 1, 2019. Dr. Watson noted Claimant has a longstanding history of seasonal and perennial allergic rhinitis and asthma. He concluded that, although Claimant suffered an exacerbation of his asthma due to workplace exposure, there was no permanent aggravation. Dr. Watson noted Dr. Pacheco's repeatedly questioned the relatedness of Claimant's ongoing asthma symptoms to his workplace and ultimately opined she could not equate the ongoing symptoms to the workplace. Dr. Pacheco further noted multiple pulmonary function tests taken over the course of Claimant's treatment showed his FVC, FEV-1 and FEV-1/FVC

ratio had all remained stable. Dr. Watson opined that an impairment rating is not indicated due to Dr. Pacheco's conclusion that Claimant's current asthma is unrelated to the workplace. He further noted that the impairment rating assessed by Dr. Pacheco is invalid, based on her use of the ATS Guidelines. Dr. Watson explained that the determination of an impairment rating is limited to the criteria set forth in the AMA Guides.

22. Dr. Macaulay performed a DIME on March 19, 2019 and issued a DIME report on April 8, 2019. Dr. Macaulay took an extensive history from Claimant, performed a physical examination, and reviewed medical records including, *inter alia*, Dr. Pacheco's records dated October 5, 2016 through August 23, 2018, Dr. Watson's January 1, 2019 report, seven pulmonary function tests dated May 16, 2016 through August 23, 2018, blood studies, and Claimant's chest CT scan. Claimant reported to Dr. Macaulay that, prior to his onset of symptoms in 2013, he had not experienced similar episodes in the past. Dr. Macaulay noted that while all of Claimant's providers and independent medical examiners agreed Claimant has asthma/reactive airway disease, a "disagreement" existed with respect to the cause of Claimant's condition. He concluded Dr. Pacheco believed Claimant's condition was aggravated by the industrial exposure, while Dr. Watson believed there was no change in Claimant's underlying condition and no permanent aggravation.

23. Dr. Macaulay specifically discussed the opinions of Drs. Pacheco and Watson, stating,

Both Drs. Pacheco and Watson have done thorough reviews of [Claimant's] condition. Dr. Pacheco and her report of 10/5/16 on page 5 notes that

The patient gives a history of prematurity requiring intensive treatment as an infant, along with the presence of asthma as a child. However, the patient was not treated with any inhalers until after the developed respiratory symptoms following the move to [Employer location] and 1/1/13 to the building it currently occupies.

At the time of the impairment rating done by Dr. Pacheco on 8/23/18, she noted on page 3

Therefore, I do not associate the patient's current symptoms are long function tests with damage from the workplace exposures since the patient's symptoms and long function are worse in the context of a cleanup work environment.

On page 5 of her impairment rating, she notes

I cannot attribute all the patient's current asthma impairment to his workplace. I therefore signed the patient a 25% whole

person impairment for asthma aggravated by workplace conditions at [Employer].

Dr. Pacheco opined that [Claimant] had sustained pulmonary injury as a result of his workplace exposure resulting in impairment. Thus, I think that the statement noted in two paragraphs above “therefore, I do not associate...” Should read “Therefore I do associate...” The awarding of impairment indicates an injury secondary to work exposure.

(emphasis not added) Respondents Exhibit K, p. 134.

24. Dr. Macaulay opined Dr. Watson’s conclusion that Claimant’s current asthma is not related to the workplace was predicated on what Dr. Macaulay referred to as a “misstatement” by Dr. Pacheco.

25. Regarding the existence of permanent impairment, Dr. Macaulay opined Claimant suffered a worsening of his pre-existing condition as, prior to the industrial exposure, Claimant was asymptomatic and did not require the use of inhalers and now does. He further noted that the pulmonary function tests of May 16, 2016, July 11, 2016, August 24, 2016, January 25, 2017, October 25, 2017, February 1, 2018 and August 23, 2018 showed impairment of pulmonary function. He noted Claimant continues with expiratory symptoms.

26. Dr. Macaulay assessed permanent impairment based on Claimant’s pulmonary function test of August 23, 2018,² using the criteria set for in Table 8, page 125 of the AMA Guides. Dr. Macaulay opined Claimant fell under Class II of respiratory impairment and issued a 20% whole person impairment rating. He did not assign any rating for Claimant’s skin condition. Dr. Macaulay recommended continued use of inhalers, twice yearly follow-ups with Dr. Pacheco, and annual flu shots as maintenance treatment.

27. Dr. Watson testified by post-hearing deposition as an expert in occupational medicine. Dr. Watson testified that he was not an expert in occupational asthma and was relying on, and interpreting the opinions of, Dr. Pacheco as contained in her medical records to come to the conclusion that Claimant did not sustain permanent impairment as a result of his occupational exposure. Dr. Watson testified that Dr. Pacheco concluded Claimant had a flare-up of occupational asthma, but that she could no longer attribute Claimant’s symptoms to the occupational asthma. Dr. Watson explained that to assign permanent impairment, there must be objective criteria. He testified that, based on Dr. Pacheco’s statements in her impairment rating report, Claimant did not meet the objective criteria. Dr. Watson testified that Dr. Macaulay erred by concluding that Dr. Pacheco’s statement should read differently than what it actually does. He explained that Dr. Pacheco’s statement in her impairment rating on the last paragraph on page 3 of her

² As the record does not indicate a separate pulmonary function test was actually conducted on August 23, 2018, the ALJ infers that Dr. Macaulay’s reference to an August 23, 2018 pulmonary function test refers to the September 21, 2018 test referenced in Dr. Pacheco’s August 23, 2018 report, dictated by Dr. Pacheco on October 3, 2018.

report is consistent with her prior statements in the medical notes regarding causation. Dr. Watson reiterated that Dr. Pacheco incorrectly used ATS Guidelines in making her determination on impairment, as examiners are required to use the AMA Guides in assessing permanent impairment.

28. Dr. Watson opined Dr. Macaulay erred in his interpretation of Dr. Pacheco's conclusions regarding causation. Dr. Watson did not otherwise disagree with the methodology used by Dr. Macaulay in issuing a 20% whole person rating under Table 8 of the AMA Guides. He acknowledged that, if Claimant's current condition was causally-related to the industrial exposure, Claimant would meet the criteria for a permanent impairment rating. He further agreed that, if Claimant's current condition was work-related, his test results would place him under Class II respiratory impairment under the AMA Guides. He explained that the AMA Guides outline a range of impairment for each class of respiratory impairment, and it is up to the examiner to determine where a patient falls within that range.

29. Claimant testified that he has a history of allergies, childhood asthma, and smoking. He testified he quit smoking in approximately 2014. Claimant further testified that, prior to the industrial exposure, he did not have a history of rashes or respiratory symptoms like those he experienced after the industrial exposure. Claimant testified he continues to use an inhaler and to have respiratory symptoms, which are increased during the work week while working and improve over the weekend when he is off of work. Claimant acknowledged there were multiple remediation efforts made by Employer than improved the work facility.

30. Claimant's testimony is found credible and persuasive.

31. The ALJ finds the opinion of Dr. Macaulay, as supported by the medical records, more credible and persuasive than the opinion of Dr. Watson.

32. Respondents failed to prove it is highly probable Dr. Macaulay's DIME opinion on permanent impairment is incorrect.

33. Around the date of onset of Claimant's occupational disease, Claimant was earning a flat-rate of \$24.50, plus additional rates for longevity, group leader bonus, and certifications. As of October 1, 2016, the flat rate increased to \$26.50. Claimant testified his total weekly pay varied based on the amount of work available. Employer's pay records (Respondents Exhibit N) from pay period ending January 15, 2015 to May 31, 2019 reflect Claimant's pay varied. Claimant was paid on a biweekly basis. Claimant's 2015 W-2 Wage and Tax Statement (Claimant Exhibit 7) reflects that Claimant earned gross wages of \$84,297.29 in the 12 months preceding January 2016.

34. The ALJ finds that a fair approximation of Claimant's wage loss and diminished earning capacity is an AWW of \$1,756.19, which is \$84,297.29 divided by 24 divided by two. This represents the total amount earned by Claimant in the 12 months preceding the

onset of the occupational disease divided by the number of pay periods during those 12 months, divided by two.

35. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME on Impairment

The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

Respondents argue Dr. Macaulay's opinion on impairment is incorrect, as Dr. Macaulay ignored Dr. Pacheco's well-documented history and incorrectly determined Dr. Pacheco made a typographical error in her impairment rating report.

Dr. Macaulay determined Dr. Pacheco made a misstatement in her impairment report when she wrote, "Therefore, I do not associate the patient's current symptoms or lung function tests with damage from workplace exposures, since the patient's symptoms and lung function are worse in the context of a cleaned up work environment." In reading Dr. Pacheco's statement in context with the preceding paragraph in her impairment report, the ALJ is persuaded it is unlikely Dr. Pacheco's statement is a misstatement or typographical error. The preceding paragraph discusses the remediation efforts taken by

Employer to address the workplace conditions. Dr. Pacheco's statement could reasonably be interpreted to mean that she believed the current workplace conditions were not actively causing Claimant's current symptoms. That the industrial exposures were remediated and Claimant continues to suffer from symptoms is not dispositive that the original industrial exposure did not permanently aggravate Claimant's pre-existing condition and cause some permanent impairment.

More importantly, Dr. Macaulay did not solely rely on this perceived "misstatement" in making his conclusions regarding impairment. As noted in his DIME report, Dr. Macaulay reviewed Dr. Pacheco's medical records from her first evaluation of Claimant through the date of the impairment report, as well as Dr. Watson's report, in which Dr. Watson details his interpretation of Dr. Pacheco's notes. In specifically addressing causation, Dr. Macaulay not only referenced the perceived "misstatement," but other aspects of Dr. Pacheco's notes to support his interpretation of Dr. Pacheco's ultimate conclusions.

As noted by Dr. Macaulay, Dr. Pacheco's did assign Claimant an impairment rating. Her assignment of an impairment rating and her explanation for doing so further supports Dr. Macaulay's interpretation. Dr. Pacheco noted that she believed Claimant's whole person impairment was 35%, but that she could not "attribute *all* the patient's current asthma impairment to his workplace" (emphasis added). The inclusion of the word "all" in the statement indicates Dr. Pacheco considered some portion of Claimant's current impairment to be related to the industrial exposure. She then specifically stated that she assigned 25% whole person impairment "for asthma *aggravated by workplace conditions*" (emphasis added). Thus, although Dr. Pacheco's records do contain seemingly conflicting statements and could be subject to differing interpretations, there is insufficient evidence establishing it is highly probable Dr. Macaulay's interpretation of Dr. Pacheco's records, and thus his ultimate opinion on causation and impairment, is incorrect.

Furthermore, Dr. Macaulay's DIME report indicates that, in addition to his interpretation of Dr. Pacheco's conclusions, he took other factors into consideration in reaching his opinion on causation and impairment. Dr. Macaulay noted Claimant was asymptomatic and did not use an inhaler prior to the industrial exposure and that Claimant now continues with respiratory symptoms. While a 2011 Kaiser medical record notes Claimant presented with complaints of a cough, had a childhood history of asthma, and was prescribed an inhaler, there are no subsequent medical records were admitted at hearing indicating that, leading up to the industrial exposure, Claimant was suffering from symptoms and required the use of the inhaler. Dr. Pacheco's medical records repeatedly reference Claimant's pre-existing condition and Dr. Watson's report references the 2011 Kaiser medical record. As noted, Dr. Macaulay reviewed those reports and thus was aware of such factors.

Dr. Macaulay also reviewed the objective pulmonary function test data, upon which he based the impairment rating using the AMA Guides. Dr. Watson acknowledged that, if

Claimant did suffer permanent aggravation, the objective test data qualified him for Class II respiratory impairment under the AMA Guides. No errors were identified with respect to Dr. Macaulay's methodology and application of the AMA Guides. While differences of opinion exist on causation, based on the totality of the evidence, Respondents failed to meet the higher burden of proof to establish Dr. Macaulay's opinion on permanent impairment is highly probably incorrect.

AWW

Section 8-42-102(2) requires the ALJ to base the claimant's Average Weekly Wage (AWW) on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp.*, *supra*. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply § 8-42-102(3) and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Campbell v. IBM Corp.*, *supra*.

Claimant was paid a flat-rate and his total weekly pay varied based on the amount of work available. As found, a fair approximation of Claimant's wage loss and diminished earning capacity is an AWW of \$1,756.19, which represents the total amount earned by Claimant in the 12 months preceding the onset of the occupational disease divided by the number of pay periods during those 12 months, divided by two.

ORDER

1. Respondents failed to overcome Dr. Macaulay's DIME opinion on permanent impairment by clear and convincing evidence. Claimant's sustained 20% whole person impairment.
2. Respondents shall pay permanent partial disability benefits to Claimant based upon a whole person impairment rating of 20%.
3. Respondents shall pay for medical maintenance treatment that is reasonable, necessary and causally related.
4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

ISSUES

- Did Claimant prove he suffered a compensable hernia injury on April 25, 2019?
- If Claimant proved a compensable injury, did he prove a bilateral hernia repair surgery recommended by Dr. Robert Macdonald is reasonably necessary to cure and relieve the effects of the injury?

STIPULATIONS

The parties stipulated to an average weekly wage (AWW) of \$2,073.95. The parties also stipulated Claimant is entitled to TTD benefits commencing June 15, 2019 if the claim is compensable.

FINDINGS OF FACT

1. Claimant has been diagnosed with bilateral inguinal hernias, most symptomatic on the right. The dispute involves whether one or both hernias were caused by his work activities on April 25, 2019.

2. Claimant works for Employer as a switchgear technician. His duties include servicing large industrial circuit breakers. Although job did not involve much heavy lifting, it required frequent forceful pushing and pulling of large circuit breakers and torquing bolts.

3. Outside of work, Claimant enjoyed outdoor sports, including trail running and biking. In January 2020, Claimant started training for a marathon.

4. During the week of April 22, 2019, Claimant's crew traveled to Cheyenne, Wyoming for a multi-day project. Claimant worked full shifts on Tuesday and Wednesday, and also went on a multi-mile run each day after work for his marathon preparation.

5. On Thursday, April 25, 2019, Claimant and two co-workers moved two 200-pound circuit breakers by hand. Claimant was on the rear left side of the breaker, another coworker was on the rear right side, and the third coworker was on the front. They lifted each breaker approximately one foot off the ground and held it for three to five seconds before setting it into position. Claimant felt no symptoms in his groin or abdomen during the activity or during the remainder of his shift.

6. Claimant returned to his hotel room after work and changed into his running clothes. He walked approximately 10 minutes to the Greenway recreation path and started his run around 3:30-4:00 PM. Early in the run, Claimant felt a burning sensation and pain in his right groin. The pain progressed and about four miles into the run it was so severe he had to stop and walk back to his hotel room.

7. In his hotel room, Claimant noticed a bulge in his right groin. He Googled symptoms of a hernia and called his roommate, who is a physician. Claimant did not immediately connect the hernia to his work until after speaking with his roommate, who suggested the connection.

8. Claimant went to work the next day (Friday) and reported a hernia injury from lifting the breakers the day before. The crew completed light tasks and paperwork before returning to Denver in the afternoon.

9. Employer referred Claimant to Denver Aviation and Occupational Medicine, where he saw Dr. Nazia Javed on April 29, 2019. Dr. Javed's report described the breaker-lifting episode, but incorrectly states Claimant felt right groin pain during the activity and then "throughout the day." Dr. Javed put Claimant on a five-pound lifting restriction and referred him for an abdominal ultrasound.

10. The ultrasound was completed on April 29, 2019. It showed a direct right inguinal hernia with bowel protrusion.

11. After reviewing the ultrasound report, Dr. Javed referred Claimant to Dr. Robert Macdonald for a surgical evaluation.

12. Claimant saw Dr. Macdonald on May 7, 2019. Dr. Macdonald noted "an uncomfortable right inguinal hernia," and "an inguinal hernia on the left side that is only mildly tender." He suggested Claimant have both hernias repaired.

13. Respondents filed a Notice of Contest on June 14, 2019.

14. Employer accommodated Claimant's work restrictions through June 14, 2019. Claimant has been off work since June 15, 2019. He filed for and received short- and long-term disability benefits.

15. Claimant saw Dr. Lawrence Lesnak for an IME at Respondents' request on January 20, 2020. Dr. Lesnak noted Claimant experienced "no symptoms whatsoever" while lifting on April 25 and only developed symptoms after he went for a run 4 to 5 hours later. He opined had Claimant suffered an acute hernia while lifting at work he would have experienced pain or discomfort and probable swelling in the groin immediately, or at least "within minutes." Dr. Lesnak also noted Dr. Macdonald found bilateral small inguinal hernias, which typically reflects a congenital condition. He concluded Claimant did not suffer an acute hernia at work on April 25, 2019.

16. On February 13, 2020, Dr. Macdonald issued a report addressing Dr. Lesnak's conclusions. Dr. Macdonald opined,

The April 25, 2019 lifting event could have resulted in the patient's discovery of a painful hernia on the right side. Whether it definitely caused it I can't say. It is not uncommon for patients to report discomfort and a bulge (hernia) a day or more after heavy exertion (lifting, etc.), even though no pain occurred during the lifting activity.

17. Dr. Macdonald noted patients in his practice reported hernias associated with heavy lifting “far more often than running.” He concluded,

I have no medical evidence to agree or disagree with Dr. Lesnak’s report. I don’t know if the patient’s hernia occurred because of the lifting or not. It simply may have, and it represents a typical presentation. The occurrence of symptoms hours after the event does not sway me as to the cause.

18. Regarding his surgical recommendation, Dr. Macdonald explained,

It’s advisable to repair hernias when they are painful, as the natural history of symptomatic hernias is that pain tends to persist, and hernias often enlarge with time. In general, I do not recommend repair of asymptomatic small hernias unless I’m repairing a symptomatic hernia on the opposite side. In such situations, during a laparoscopic operation, it’s a very simple matter to address both hernias concomitantly. I give the patient a choice because not all asymptomatic hernias become symptomatic. It just represents an opportune time to repair.

19. Dr. Lesnak testified at hearing consistent with his report. He conceded lifting is a more common cause of hernias than running but maintained the evidence is insufficient to connect Claimant’s hernia to lifting the breakers. He reiterated the lack of symptoms for several hours after lifting the breakers is inconsistent with an acute hernia. He explained the presence of bilateral hernias is consistent with a pre-existing congenital condition. He opined Claimant’s symptomatic right-sided inguinal hernia probably reflects an aggravation of his pre-existing, congenital condition. He testified running could have aggravated the condition but lifting at work did not.

20. Claimant failed to prove lifting breakers on April 25, 2019 probably caused or aggravated his hernias.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). A pre-existing condition does not disqualify a claim for compensation if a work accident aggravates, accelerates, or combines with the underlying condition to cause disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). A preponderance of the evidence means “the existence of the contested fact is more probable than its nonexistence.” *Id.* at 800.

As found, Claimant failed to prove lifting breakers on April 25, 2019 probably caused or aggravated his hernias. The presence of *bilateral* hernias, including the asymptomatic or minimally symptomatic left-sided hernia, is particularly significant. The ALJ agrees with Dr. Lesnak that Claimant's hernias were probably pre-existing and probably not caused by lifting on April 25.

Of course, the claim is compensable if Claimant's work aggravated a pre-existing condition. But the persuasive evidence does not show lifting the breakers probably aggravated his hernia. Although heavy lifting is a more probable cause of hernias than running, Claimant experienced no symptoms until several hours after lifting the breakers. The onset of symptoms occurred when Claimant was running. Developing symptoms during an activity is not dispositive but at least suggests a causal relationship. The onset of symptoms while running, an activity that Dr. Macdonald and Dr. Lesnak agree *can* cause or aggravate a hernia, would support an inference running was causative. Similarly, the absence of any symptoms "whatsoever" for several hours supports an inference lifting the breakers did not aggravate Claimant's hernia. Considering these factors together, the ALJ concludes the run after work on April 29 was at least equally likely to be causative as lifting at work earlier in the day.

An injury sustained during his run is not compensable notwithstanding that Claimant was in travel status at the time. Ordinarily, travelling employees remain continuously in the course and scope of employment so long as they are not engaged in a personal deviation. *Employer's Liability Insurance Corp. v. Industrial Commission*, 363 P.2d 646 (Colo. 1961); *Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo. App. 1995). But Claimant's after-work runs were personal deviations as a matter of law under the "recreational activity" exception codified in § 8-40-301(1). See, e.g., *Kendrick v. United Airlines*, W.C. No. 4-991-007-01 (November 15, 2016), *aff'd Kendrick v. Industrial Claim Appeals Office*, 16CA2048 (Colo. App. August 3, 2017) (NSOP); *McLachlan v. Center for Spinal Disorders*, W.C. No. 4-789-747 (July 2, 2010).

Claimant has the burden of proof in this matter. Respondents do not have to prove an alternate, nonwork-related cause to defend the claim. Ultimately the ALJ agrees with Dr. Lesnak's conclusion the evidence is insufficient to establish lifting at work as the probable cause of Claimant's symptomatic hernia. Because a non-compensable cause is at least equally likely as the alleged work-related cause, Claimant failed to carry his burden to prove causation by a preponderance of the evidence.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm> **In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office.**

ISSUES

- Did Claimant prove C4-C7 diagnostic facet injections recommended by Dr. Sacha are reasonably necessary and related to her admitted injury?

FINDINGS OF FACT

1. Claimant suffered an admitted injury on December 5, 2016, when she slipped and fell onto her right side.

2. She was initially seen at the Parker Adventist Hospital emergency department with complaints of right rib pain, right elbow pain, and left hand pain.

3. Employer referred Claimant to Concentra Medical Centers for authorized treatment. Her initial evaluation at Concentra took place on December 6, 2016. At her second visit on December 9, 2016, Claimant complained of neck pain. Physical examination showed cervical paraspinal tenderness from C1 to C7, limited cervical flexion and extension, and bilateral trapezius and rhomboid tenderness. She was diagnosed with a cervical strain.

4. Claimant participated in physical therapy for approximately two months without significant improvement.

5. Claimant started seeing Dr. John Sacha, a physical medicine and rehabilitation specialist, on February 22, 2017. Claimant complained of right shoulder pain radiating into the arm, neck pain, and trapezius pain. Physical examination showed a positive Hawkins test and Neer test, right shoulder crepitus with motion, and minimal right-sided cervical tenderness. Dr. Sacha diagnosed right shoulder impingement with a possible rotator cuff or a labral tear. He opined her neck complaints were probably referred from the shoulder. He recommended a right shoulder MRI arthrogram.

6. The right shoulder MRI was completed on March 21, 2017. It showed mild supraspinatus tendinosis with a partial-thickness tear of the distal insertion, and chronic mild degenerative changes.

7. Dr. Sacha performed a right shoulder steroid injection on April 4, 2017, which was not helpful.

8. On April 27, 2017, Claimant saw Dr. Mark Failing for a surgical consultation regarding the right shoulder. She reported right shoulder pain and neck pain. He injected the right shoulder with anesthetic, which relieved her shoulder pain, but did not help the neck pain. Dr. Failing diagnosed right shoulder girdle pain and right rotator cuff tendinosis. He did not recommend surgery.

9. On May 3, 2017, Dr. Sacha noted Claimant's positive diagnostic response to the shoulder injection administered by Dr. Failinger confirmed shoulder impingement as the source of her pain. He declared Claimant at MMI with a 12% upper extremity impairment related to the right shoulder. He recommended "maintenance care," primarily medications and a gym membership.

10. Concentra affirmed Dr. Sacha's MMI determination and impairment rating on May 18, 2017. Claimant's final diagnoses were right shoulder impingement and cervical myofascial pain.

11. Claimant saw Dr. John Douthit for a Division IME on September 25, 2017. Dr. Douthit was impressed with "much overlay of pain behavior, with volitional guarding, which shrouded the authenticity of the clinical exam." Dr. Douthit agreed Claimant was at MMI and assigned a 6% upper extremity impairment based on right shoulder range of motion. He further opined, "I do not think there is evidence that she sustained injury to her cervical spine [] and these appeared to be factitious complaints." He recommended no maintenance care because "my impression is that this is a functional pain syndrome which by definition is not organic and does not respond to conventional therapies or drugs."

12. Claimant continued to follow up with Dr. Sacha regularly for post-MMI treatment. Dr. Sacha's records reflect repeated flares of right shoulder pain radiating into the neck and trapezius. His examination on January 9, 2018 documented no cervical segmental dysfunction.

13. On February 12, 2018, Dr. Sacha wrote to Respondent's counsel outlining his expectation for future post-MMI treatment. Dr. Sacha replied,

[E]xpected maintenance for this patient is 12 months of maintenance care with two or three follow-ups, medications during that time frame, and being allowed to keep the inferential unit. It is unlikely other care beyond that is reasonable or necessary. She is certainly not a candidate for any further interventional care or surgical care.

14. On April 9, 2018, Respondent filed an Amended FAL admitting for a 4% whole person impairment for the right shoulder and reasonable, necessary, and related medical benefits after MMI.

15. Dr. Sacha administered at least two more right shoulder injections in 2018, each time noting a good diagnostic response of "100% temporary relief." He also continued to document soft tissue paracervical findings.

16. In late 2018, Dr. Sacha administered trigger point injections of the bilateral cervical paraspinal muscles, with only transient improvement.

17. On April 4, 2019, Dr. Sacha again addressed expected future treatment in anticipation of an upcoming settlement conference,

I recommend . . . medications for 12 months further and then should be transitioned to her private insurance, a couple of follow-ups in that time frame, a gym pass for 12 months for a neck strengthening and conditioning program, and 16 visits of massage therapy approximately one to two per month over that time frame.

Dr. Sacha reaffirmed the longstanding diagnoses of shoulder impingement and “myofascial pain.”

18. Claimant followed up with Dr. Sacha on May 7, 2019. She was “requesting more aggressive care for this, especially for the neck and parascapular pain.” Claimant had obtained a cervical MRI on her own in April 2019, that showed straightening of the cervical lordosis (suggesting muscle spasm), mild degenerative disc disease, and facet spondylosis, consistent with a lower cervical facet syndrome. Examination of her neck showed cervical paraspinal muscle spasm, pain with extension and extension with rotation, and segmental dysfunction in the mid-to lower cervical spine. This report is the first documented instance of segmental dysfunction in the record. Dr. Sacha added a new diagnosis of “secondary cervical facet syndrome.” He recommended “one-time bilateral C4 to C7 facet injections. This will be for diagnosis and treatment.”

19. Dr. Eddie Sassoon performed a Rule 16 peer review on June 27, 2019. He opined,

[T]here is no conclusive evidence provided that the pain is facet mediated at the three proposed levels. While an MRI was mentioned and appears to suggest some degree of facet arthropathy, levels were not provided and the report was not provided for this review. CO guidelines do support a one-time diagnostic facet injection not to exceed two levels. Therefore, based on lack of sufficient documentation to support this request and a request for three levels, my recommendation is for non-certification.

20. On August 23, 2019, Dr. Sacha opined cervical facet injections were appropriate because Claimant’s cervical facet syndrome was worsening secondary to her shoulder problem.

21. Claimant saw Dr. Michael Striplin for an IME at Respondent’s request on January 9, 2020. Dr. Striplin opined cervical facet syndrome reflects specific spinal pathology, distinct from Claimant’s shoulder injury. Dr. Striplin agreed with Dr. Douthit Claimant suffered no injury to her cervical spine. He opined cervical facet syndrome is not related to her December 5, 2016 work injury.

22. Dr. Sacha testified via deposition on January 31, 2020. He explained that medial branch blocks are the “gold standard” for diagnosing cervical facet dysfunction. But he did not recommend MBBs because Claimant is not interested in radiofrequency ablation (rhizotomy). He opined facet injections are “the second-best diagnostic procedure for facet syndrome,” and may also provide therapeutic benefit. He opined Claimant may have had cervical facet syndrome “this whole time” since her injury.

23. Dr. Striplin testified at hearing to elaborate on the opinions expressed in his report. He explained cervical facet syndrome is intrinsic to the cervical spine and reflects some dysfunction or abnormality of the spine itself. He opined Claimant suffered no specific cervical spine injury in December 2016. He believes the documented neck pain throughout the claim represents referred pain from the right shoulder. Dr. Striplin opined facet injections would not affect neck pain referred from Claimant's shoulder. He persuasively opined facet injections are not reasonably necessary to diagnose or treat any injury-related condition.

24. The ALJ credits Dr. Striplin's opinions that cervical facet injections are not causally related to Claimant's admitted injury. The requested facet injections have no reasonable prospect of diagnosing or treating any work-related condition. The ALJ also credits Dr. Sassoon's opinion that three levels of facet injections are outside the MTGs, and no persuasive evidence was presented to justify departing from the MTGs.

25. Claimant failed to prove C4-C7 facet injections recommended by Dr. Sacha are reasonably necessary to diagnose or relieve the effects of her admitted injury.

CONCLUSIONS OF LAW

Respondents are liable for authorized medical treatment reasonably needed to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Even if the respondents admit liability for post-MMI treatment, they retain the right to dispute the reasonable necessity or relatedness of any particular treatment. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003). The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

The Director has adopted Medical Treatment Guidelines (MTGs) to advance the statutory mandate to assure quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers. WCRP 17, Exhibit 8 addresses cervical spine injuries. As the arbiter of disputes regarding medical treatment, the ALJ may consider the MTGs as an evidentiary tool but is not bound by them when determining whether requested treatment is reasonably necessary or injury-related. Section 8-43-201(3); *Logiudice v. Siemens Westinghouse*, W.C. No. 4-665-873 (January 25, 2011). According to the cervical spine MTGs, "Facet injections have very limited therapeutic or diagnostic use." Section (E)(2)(b)(iv)(C). The MTGs also provide, "Because facet injections are not likely to produce long-term benefit by themselves and are not the most accurate diagnostic tool, they should not be performed at more than two levels, neither unilaterally

nor bilaterally. . . . There is insufficient evidence to support the use of therapeutic cervical facet injections.” Section (F)(3)(d)(iii).

As a threshold matter, Respondent argues Claimant cannot seek treatment for her neck because she did not challenge the DIME’s impairment determination. The ALJ disagrees. The DIME’s opinion regarding treatment after MMI is not entitled to any special weight, and is simply another medical opinion for the ALJ to consider when evaluating the preponderance of the evidence. See *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995). Similarly, the DIME’s causation determination regarding MMI or impairment are not dispositive or entitled to special weight on whether *Grover*-type treatment is related to the industrial accident. *Yeutter v. Industrial Claim Appeals Office*, ___ P.3d ___, 2019 COA 53, 18CA0498 (Colo. App. 2019). Thus, the Claimant may pursue post-MMI medical treatment for her cervical spine even though the DIME determined she has no cervical spine impairment.

As found, Claimant failed to prove C4-C7 facet injections are reasonably needed to diagnose or treat her industrial injury. Diagnostic procedures are compensable if they have a reasonable prospect of diagnosing or defining a claimant’s condition so as to suggest a course of further treatment. *Walker v. Life Care Centers of America*, W.C. No. 4-953-461-02 (March 30, 2017). But there must still be a reasonable causal nexus to the work injury. As Dr. Sacha explained, the cervical facet injections are solely to determine whether Claimant has facet-mediated pain. Even if the result is positive, it will not result in compensable treatment because cervical facet dysfunction is not causally related to the December 2016 accident. Claimant did not injure her cervical *spine* on December 5, 2016; her neck symptoms are solely the result of soft tissue problems. Claimant’s neck pain is primarily referred myofascial pain from her right shoulder. It is also reasonable to conclude she suffered a mild cervical soft tissue strain based on the mechanism of injury and clinical findings documented throughout the claim. Neither condition represents a structural injury to the spine itself. There is no persuasive indication or suggestion of facet-mediated pain until Dr. Sacha’s May 7, 2019 report, almost two- and one-half years after the accident. After reviewing all the evidence, the ALJ concludes Claimant failed to prove facet injections have a reasonable prospect of diagnosing or defining her injury-related condition and suggesting a course of injury-related treatment.

Additionally, the ALJ credits Dr. Sassoon’s opinion there is insufficient justification for disregarding the provisions of the MTGs limiting facet injections to two levels. Although the MTGs are not binding, they reflect the Division’s synthesis of the available epidemiological evidence regarding various treatment modalities. Absent a persuasive explanation regarding the efficacy of three-level injections, the ALJ sees no reason to deviate from the MTGs.

ORDER

It is therefore ordered that:

1. Claimant's request for C4-C7 cervical facet injections is denied and dismissed.

2. All issues not decided herein, that are not otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: May 4, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-095-589-001**

ISSUES

1. Whether Respondents have demonstrated by a preponderance of the evidence that they are entitled to terminate Claimant's medical and Temporary Total Disability (TTD) benefits based on an intervening event in the form of a right rotator cuff tear that occurred on March 2, 2019.

2. Whether Respondents have proven by a preponderance of the evidence that they are entitled to recover an overpayment of TTD benefits from Claimant beginning March 2, 2019.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of \$1,564.77.

FINDINGS OF FACT

1. Claimant worked for Employer as an Equipment Maintenance Technician. His job duties primarily involved performing maintenance and minor repairs.

2. On October 2, 2018 Claimant suffered an admitted industrial injury to his right shoulder. In the course of performing his job duties, Claimant was tightening the 13/16" retaining nut of a high pressure fan spray nozzle. He experienced a sharp, burning ache and a pinch in his right shoulder.

3. Claimant subsequently continued to perform his regular job duties. However, based on the failure of conservative treatment, Claimant underwent open right rotator cuff repair and subacromial decompression surgery on December 26, 2018 with Authorized Treating Physician (ATP) Garth C. Nelson, M.D.

4. Claimant has an extensive history of right shoulder problems and surgeries. In 2009 Claimant slipped in the snow and caught himself with his right arm. He suffered a rotator cuff tear and underwent surgical repair. Claimant reported that he completely healed and resumed his regular activities. In 2013 Claimant was involved in a bicycle accident and fell over the handlebars. He re-tore his rotator cuff and again underwent surgical repair. Claimant reported that he recovered and resumed his normal activities. In 2015 Claimant became caught up in his shirt while dressing. He experienced immediate pain and heard a snapping sound in his right shoulder. Claimant again underwent right shoulder surgery and resumed his regular work activities.

5. After his December 26, 2018 right shoulder surgery Claimant reported continued progress. By January 10, 2018 Claimant told PA-C Emily Lebow at UC Health that he experienced 50% improvement. In a followed-up visit with PA-C Lebow on February 28, 2019 Claimant reported 70% functional recovery.

6. On March 2, 2019 Claimant had been recovering for approximately 9.5 weeks. He attempted to enter his car with about one-half inch of snow on the ground and drive to a store for groceries. Claimant testified he could not drive while wearing his sling because there was not enough room between the seat and the steering wheel. He detailed that he wore a sling and holster with a belt fastened around his waist to hold his arm against his body. As Claimant entered his car, he removed his immobilizer splint, lost his balance and abducted both shoulders in an attempt to regain his balance. He experienced immediate pain as well as a “pop and pinch” in his right shoulder. A subsequent MRI revealed a repeat right rotator cuff tear.

7. On April 9, 2019 Claimant visited Dr. Nelson for a right shoulder evaluation. Dr. Nelson had not only performed Claimant’s December 26, 2018 rotator cuff repair, but also conducted Claimant’s right shoulder surgeries in 2013 and 2015. Dr. Nelson noted that on March 2, 2019 Claimant had suffered a right supraspinatus re-tear from an “involuntary jerk of arm from startle reflex.” He recommended a repeat right rotator cuff repair. Dr. Nelson explained that Claimant’s need for “right revision rotator cuff suture repair directly relates to the original Work Comp rotator cuff injury as an unexpected sequel postoperative complication.” He summarized that Claimant’s rotator cuff tear would not have occurred in the absence of his October 2, 2018 industrial injury.

8. On May 31, 2019 Claimant underwent an independent medical examination with John J. Raschbacher, M.D. Dr. Raschbacher reviewed Claimant’s medical records and conducted a physical examination. He addressed whether the March 2, 2019 slipping incident was related to the October 2, 2019 admitted industrial injury. He reasoned that Claimant’s March 2, 2019 right rotator cuff tear was “separate from and not a result of the [October 2, 2019] work-related injury.” Dr. Raschbacher explained that Claimant would likely have sustained a recurrent right rotator cuff tear from the March 2, 2019 fall absent any injury on October 2, 2018. He specified that Claimant had a prior history of right rotator cuff tears and the March 2, 2019 incident “in and of itself is quite sufficient in terms of mechanism of injury to tear a rotator cuff, whether that cuff had previously been torn or not.” Dr. Raschbacher summarized that the March 2, 2019 event was “entirely unrelated” to the October 2, 2018 work injury because Claimant had been “healing well and progressing” prior to the non-work accident.

9. On June 25, 2019 Dr. Nelson issued a report after reviewing Dr. Raschbacher’s independent medical examination. He disagreed with Dr. Raschbacher’s analysis because a “cuff is vulnerable to re-tear in the first several months postop with much less force than a normal cuff.” Dr. Nelson recommended Claimant not delay rotator cuff surgery to avoid atrophy and a poorer outcome.

10. On July 1, 2019 Claimant visited ATP Kimberly L. Siegel, M.D. for an examination. After reviewing Dr. Raschbacher’s independent medical examination, Dr. Siegel determined that Dr. Nelson’s request for right rotator cuff revision surgery was likely related to Claimant’s October 2, 2018 industrial injury. She explained that quickly abducting his right shoulder would not have torn Claimant’s right rotator cuff if he had not had rotator cuff repair surgery on December 26, 2018. Dr. Siegel specified that quickly abducting a shoulder is not a mechanism that would cause a rotator cuff tear “unless the rotator cuff were already very susceptible to a tear.” She remarked that Dr. Raschbacher

erroneously noted that Claimant slipped and fell on March 2, 2019. Dr. Seigel explained that Claimant slipped but did not fall because he was able to regain his balance.

11. On July 10, 2019 Claimant underwent a right rotator cuff repair with Dr. Nelson. Dr. Nelson specified that he would keep Claimant's arm in a sling for three months after the procedure and would "be less aggressive with gentle passive motion at this time." He commented that it would be eight months before Claimant could even do something "semi-strenuous with the right shoulder" because his healing potential was lower based on multiple revisions.

12. On September 3, 2019 Dr. Raschbacher issued an addendum to his May 31, 2019 independent medical examination after reviewing additional records. He maintained that Claimant's March 2, 2019 right rotator cuff tear was not related to his October 2, 2018 work accident. He commented that the March 2, 2019 incident constituted an intervening event and any medical treatment was not work-related.

13. On January 10, 2020 Claimant underwent an independent medical examination with Sander Orent, M.D. He reviewed Claimant's medical history and performed a physical examination. Dr. Orent disagreed with Dr. Raschbacher's analysis and explained that the March 2, 2019 slipping incident was "clearly the cause of the rotator cuff injury." He acknowledged that the mechanism of injury would not likely tear a healthy rotator cuff. However, he noted that Claimant has undergone multiple right rotator cuff surgeries and the December 26, 2018 procedure weakened his rotator cuff. Dr. Orent detailed that the healing of a rotator cuff produces scar tissue that is "never as strong as native tissue." Claimant's right shoulder was particularly susceptible to injury because he was still in the acute postoperative period from his surgery. Claimant's right shoulder was thus in a "weakened state" as a result of the December 26, 2018 rotator cuff repair.

14. On January 21, 2020 Claimant underwent a second independent medical examination with Dr. Raschbacher. Dr. Raschbacher noted that Claimant injured his right shoulder in July 2013 while he was putting on his jacket in the absence of a slip, trip, fall or sudden abduction of the arms. He reasoned that, because the normal activity of putting on a jacket produced a rotator cuff tear, a startled response and abduction of the arms on March 2, 2019 "could have happened completely in the absence of his surgery on that rotator cuff in December." Dr. Raschbacher thus determined the March 2, 2019 incident constituted an intervening event.

15. Dr. Raschbacher testified at the hearing in this matter. He maintained that Claimant's March 2, 2019 slipping incident was not related to the October 2, 2018 industrial injury. Dr. Raschbacher explained that the mechanism of injury was a common cause of rotator cuff tears and the March 2, 2019 incident was separate and distinct from the October 2, 2018 work injury. He summarized that the March 2, 2019 incident constituted an intervening event that severed the causal connection with Claimant's industrial injury.

16. Dr. Raschbacher remarked that after the March 2, 2019 incident Claimant required physical activity restrictions. In fact, he returned to the same restrictions assigned before October 2018. Dr. Raschbacher explained that, if the March 2, 2019

incident had not occurred, Claimant would have continued his work restrictions but would have returned to work sooner. Dr. Raschbacher commented that Claimant essentially defeated the purpose of the December 26, 2018 surgery because he had a new tear and required treatment.

17. Dr. Orent testified at the hearing in this matter. He maintained that Claimant's right shoulder was in a weakened condition and thus susceptible to injury as a result of the December 26, 2018 rotator cuff repair. Claimant would not have torn his right rotator cuff on March 2, 2019 if he had not suffered an industrial injury on October 2, 2018. Therefore, Claimant's July 10, 2019 surgery was causally related to his October 2, 2018 work-related injury.

18. Respondents have failed to demonstrate that it is more probably true than not that they are entitled to terminate Claimant's medical and TTD benefits based on an intervening event in the form of a right rotator cuff tear that occurred on March 2, 2019. Initially, Claimant suffered an admitted industrial injury to his right shoulder on October 2, 2018. He subsequently underwent open right rotator cuff repair and subacromial decompression surgery on December 26, 2018. However, on March 2, 2019 Claimant again tore his right rotator cuff while he was attempting to enter his car to shop for groceries. Claimant specifically removed his immobilizer splint, lost his balance and abducted both shoulders in an attempt to regain his balance. Respondents contend that the March 2, 2019 non-industrial accident constituted an intervening event that severed the causal connection with Claimant's October 2, 2018 work injury. However, despite Claimant's extensive history of right shoulder rotator cuff tears and surgeries, the persuasive medical evidence demonstrates that the March 2, 2019 incident was causally related to Claimant's admitted industrial injury.

19. Dr. Orent persuasively maintained that Claimant's right shoulder was in a weakened condition as a result of the December 26, 2018 rotator cuff repair and thus susceptible to injury. Claimant would not have torn his right rotator cuff on March 2, 2019 if he had not suffered an industrial injury on October 2, 2018. Dr. Orent acknowledged that the mechanism of injury on March 2, 2019 would not likely have torn a healthy rotator cuff. However, he noted that Claimant has undergone multiple right rotator cuff surgeries and the December 26, 2018 procedure weakened his rotator cuff. Dr. Orent detailed that the healing of a rotator cuff produces scar tissue that is "never as strong as native tissue." Claimant's right shoulder was particularly susceptible to injury because he was still in the acute postoperative period from his surgery. Claimant's right shoulder was thus in a "weakened state" as a result of the December 26, 2018 rotator cuff repair. Therefore, Claimant's July 10, 2019 surgery was causally related to his October 2, 2018 work-related injury. Similarly, Dr. Siegel determined that Dr. Nelson's request for right rotator cuff revision surgery was likely related to Claimant's October 2, 2018 industrial injury. She explained that quickly abducting his right shoulder would not have torn Claimant's right rotator cuff if he had not undergone rotator cuff repair surgery on December 26, 2018. Dr. Siegel specified that quickly abducting a shoulder is not a mechanism that would cause a rotator cuff tear "unless the rotator cuff were already very susceptible to a tear."

20. In contrast, Dr. Raschbacher maintained that Claimant's March 2, 2019 slipping incident was not related to the October 2, 2018 industrial injury. He explained

that the mechanism of injury was a common cause of rotator cuff tears and the March 2, 2019 incident was separate and distinct from the October 2, 2018 work injury. Dr. Raschbacher noted that Claimant injured his right shoulder in July 2013 while he was putting on his jacket in the absence of a slip, trip, fall or sudden abduction of the arms. He reasoned that, because the normal activity of putting on a jacket produced a rotator cuff tear, a startled response and abduction of the arms on March 2, 2019 could have happened in the absence of the December 26, 2018 surgery. Dr. Raschbacher summarized that the March 2, 2019 incident constituted an intervening event that severed the causal connection with Claimant's industrial injury.

21. Despite Dr. Raschbacher's opinion, the record reveals that the March 2, 2019 accident did not sever the causal connection with Claimant's October 2, 2018 rotator cuff tear. Instead, Claimant's industrial injury and surgery left his right rotator cuff in a weakened condition susceptible to additional injury. Notably, Dr Nelson explained that he disagreed with Dr. Raschbacher's analysis because a "cuff is vulnerable to re-tear in the first several months postop with much less force than a normal cuff." He summarized that Claimant's rotator cuff tear would not have occurred in the absence of his October 2, 2018 industrial injury. Claimant's October 2, 2018 work accident left his right shoulder in a weakened condition and the weakened condition proximately caused his March 2, 2019 right rotator cuff tear. Accordingly, the March 2, 2019 injury constitutes a compensable consequence of Claimant's original industrial injury. Respondents' request to terminate Claimant's medical and TTD benefits based on an intervening event is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAO), Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). If an industrial injury leaves the body in a weakened condition and the weakened condition proximately causes a new injury, the new injury is a compensable consequence of the original industrial injury. *Price Mine Service, Inc. v. Industrial Claim Appeals Office*, 64 P.3d 936 (Colo. App. 2003); *Lanuto v. Amerigas Propane, Inc.*, W.C. No. 4-818-912, (ICAO, July 20, 2011). The preceding principle constitutes the “chain of causation analysis” and provides that a subsequent injury is compensable if the “weakened condition played a causative role” in the new injury. *In Re Fessler*, W.C. No. 4-654-034 (ICAO, Dec. 19, 2007). Finally, an industrial injury is the “proximate cause” of a subsequent disability if it is the “necessary precondition or trigger of the disability.” *Subsequent Injury Fund v. State Compensation Insurance Authority*, 768 P.2d 751 (Colo. App. 1988); see *Martinez v. City of Colorado Springs*, W.C. No. 5-073-295-002 (ICAO, Sept. 12, 2019).

6. However, the new injury is not compensable “merely because the later accident might or would not have happened if the employee had retained all his former powers.” *In Re Chavez*, W.C. No. 4-499-370 (ICAO, Jan. 23, 2004). Respondents are only liable for the “direct and natural” consequences of the work related injury. *Reynal v. Home Depot USA, Inc.*, No. 4-585-674-05 (ICAO, Dec. 10, 2012). No compensability exists if the disability and need for treatment are the direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002); *Merrill v. Pulte Mortgage Corporation*, W.C. No. 4-635-705-02, (ICAO May 10, 2013). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

7. As found, Respondents have failed to demonstrate by a preponderance of the evidence that they are entitled to terminate Claimant’s medical and TTD benefits based on an intervening event in the form of a right rotator cuff tear that occurred on March 2, 2019. Initially, Claimant suffered an admitted industrial injury to his right shoulder on October 2, 2018. He subsequently underwent open right rotator cuff repair and subacromial decompression surgery on December 26, 2018. However, on March 2, 2019

Claimant again tore his right rotator cuff while he was attempting to enter his car to shop for groceries. Claimant specifically removed his immobilizer splint, lost his balance and abducted both shoulders in an attempt to regain his balance. Respondents contend that the March 2, 2019 non-industrial accident constituted an intervening event that severed the causal connection with Claimant's October 2, 2018 work injury. However, despite Claimant's extensive history of right shoulder rotator cuff tears and surgeries, the persuasive medical evidence demonstrates that the March 2, 2019 incident was causally related to Claimant's admitted industrial injury.

8. As found, Dr. Orent persuasively maintained that Claimant's right shoulder was in a weakened condition as a result of the December 26, 2018 rotator cuff repair and thus susceptible to injury. Claimant would not have torn his right rotator cuff on March 2, 2019 if he had not suffered an industrial injury on October 2, 2018. Dr. Orent acknowledged that the mechanism of injury on March 2, 2019 would not likely have torn a healthy rotator cuff. However, he noted that Claimant has undergone multiple right rotator cuff surgeries and the December 26, 2018 procedure weakened his rotator cuff. Dr. Orent detailed that the healing of a rotator cuff produces scar tissue that is "never as strong as native tissue." Claimant's right shoulder was particularly susceptible to injury because he was still in the acute postoperative period from his surgery. Claimant's right shoulder was thus in a "weakened state" as a result of the December 26, 2018 rotator cuff repair. Therefore, Claimant's July 10, 2019 surgery was causally related to his October 2, 2018 work-related injury. Similarly, Dr. Siegel determined that Dr. Nelson's request for right rotator cuff revision surgery was likely related to Claimant's October 2, 2018 industrial injury. She explained that quickly abducting his right shoulder would not have torn Claimant's right rotator cuff if he had not undergone rotator cuff repair surgery on December 26, 2018. Dr. Siegel specified that quickly abducting a shoulder is not a mechanism that would cause a rotator cuff tear "unless the rotator cuff were already very susceptible to a tear."

9. As found, in contrast, Dr. Raschbacher maintained that Claimant's March 2, 2019 slipping incident was not related to the October 2, 2018 industrial injury. He explained that the mechanism of injury was a common cause of rotator cuff tears and the March 2, 2019 incident was separate and distinct from the October 2, 2018 work injury. Dr. Raschbacher noted that Claimant injured his right shoulder in July 2013 while he was putting on his jacket in the absence of a slip, trip, fall or sudden abduction of the arms. He reasoned that, because the normal activity of putting on a jacket produced a rotator cuff tear, a startled response and abduction of the arms on March 2, 2019 could have happened in the absence of the December 26, 2018 surgery. Dr. Raschbacher summarized that the March 2, 2019 incident constituted an intervening event that severed the causal connection with Claimant's industrial injury.

10. As found, despite Dr. Raschbacher's opinion, the record reveals that the March 2, 2019 accident did not sever the causal connection with Claimant's October 2, 2018 rotator cuff tear. Instead, Claimant's industrial injury and surgery left his right rotator cuff in a weakened condition susceptible to additional injury. Notably, Dr. Nelson explained that he disagreed with Dr. Raschbacher's analysis because a "cuff is vulnerable to re-tear in the first several months postop with much less force than a normal cuff." He summarized that Claimant's rotator cuff tear would not have occurred in the absence of

his October 2, 2018 industrial injury. Claimant's October 2, 2018 work accident left his right shoulder in a weakened condition and the weakened condition proximately caused his March 2, 2019 right rotator cuff tear. Accordingly, the March 2, 2019 injury constitutes a compensable consequence of Claimant's original industrial injury. Respondents' request to terminate Claimant's medical and TTD benefits based on an intervening event is thus denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' request to terminate Claimant's medical and TTD benefits based on an intervening event is denied and dismissed.
2. Claimant earned an AWW of \$1,564.77.
3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

ISSUES

1. Determination of Division Independent Medical Examination (DIME) physician Dr. Reichhardt's opinion on maximum medical improvement (MMI).
2. Determination of whether either party has overcome the DIME physician's opinion on MMI by clear and convincing evidence.

FINDINGS OF FACT

1. Claimant is a 58-year-old female who was employed by Employer as an operator.
2. On January 15, 2018, Claimant sustained an admitted compensable work related injury to her right shoulder and right wrist after slipping on ice while scraping her car in Employer's parking lot.
3. Claimant was initially referred to physical therapy. On February 13, 2018, therapist Barbara Walden evaluated Claimant noting it was the sixth therapy visit. PT Walden noted a diagnosis of right shoulder sprain and right wrist sprain. PT Walden noted that Claimant had an inappropriate angry response and that Claimant was angry that no one had figured out what was going on. PT Walden noted increased range of motion and function. See Exhibit 12.
4. On February 16, 2018, Claimant underwent an MRI of her right shoulder. The findings included thinning of the supraspinatus footprint at the supraspinatus-infraspinatus confluence with bursal and articular sided fraying and suspected focal rent, moderate fluid in the sub acromial sub deltoid bursa, an intra substance delaminating tear of the infraspinatus extending medially toward the myotendinous junction, moderate tendinopathy of the supraspinatus and mild tendinopathy of the infraspinatus, mild biceps tendinopathy, and degeneration of the superior labrum. The impression by McKinley Lawson, M.D. was marked thinning of the rotator cuff at the supraspinatus-infraspinatus confluence with articular and bursal sided fraying and suspected perforation, intra substance delaminating tear of the infraspinatus, infraspinatus and supraspinatus tendinopathy, hypertrophic degenerative change of the AC joint, and mild intrascapular biceps tendinopathy. See Exhibits 2, 3.
5. On February 16, 2018, Claimant also underwent an MRI of her right wrist. The impression provided by Dr. Lawson was partial tear of the TFCC at the foveal and ulnar styloid attachments with some concomitant irregularity of the ulnar collateral ligament with no fracture or dislocation. See Exhibit 3.

6. On April 17, 2018, Ryan Hartman, M.D. performed right shoulder surgery on Claimant. Dr. Hartman performed a right shoulder arthroscopic rotator cuff repair of a 2.8 cm tear with a combination of margin convergence and double row suture anchor technique. Dr. Hartman performed superior labral debridement and subacromial decompression including bursectomy and acromioplasty. The post operative diagnoses included right shoulder full thickness rotator cuff tear, right shoulder chronic impingement with subacromial bursitis and type II acromion, and right shoulder superior labral fraying with intact biceps labral anchor and stable biceps tendon. See Exhibit 1.

7. On April 24, 2018, Dr. Hartman referred Claimant to physical therapy with instructions to undergo physical therapy one to three times per week then two to four times per month. Dr. Hartman provided instructions of rotator cuff repair protocol. The protocol noted that early passive range of motion was encouraged to prevent shoulder stiffness and that most patients would be in a sling for 6 weeks except for therapy, home exercises, and showering. See Exhibit 4.

8. On May 16, 2018, Neal Tah, M.D. evaluated Claimant. He noted that Claimant had temporary restrictions of no use of the right arm and requirement to wear immobilizing sling while at work, could only lift 7 pounds with the left arm, and had to do sedentary work only. Dr. Tah discussed treatment plans and indicated that Claimant was being followed by a neurologist after a non work related concussion. Dr. Tach discussed that Claimant had an exacerbation of depression and he planned to refer her to psych for further evaluation. Dr. Tah recommended Claimant continue physical therapy for right shoulder rehabilitation. See Exhibit 11.

9. On August 20, 2018, Dr. Tah evaluated Claimant. He noted work restrictions of maximum lift with right arm of 10 pounds near the body with no lifting away from the body or overhead. He noted that Claimant was making good progress with her right shoulder through physical therapy, that she still had some wrist discomfort and numbness in her right 4th and 5th digits, and that she would have Dr. Peterson evaluate her wrist. Dr. Tah recommended continued physical therapy and massage therapy. See Exhibit 14.

10. On January 24, 2019, Dr. Raschbacher evaluated Claimant. Dr. Raschbacher opined that it was fairly clear that medically Claimant had plateaued. Dr. Raschbacher noted that Claimant had been released quite some time ago for work and had been found to be at MMI by other physicians quite some time ago. Dr. Raschbacher opined that it was quite unlikely that further application of medical resources would substantively change Claimant's overall complaints or level of function. Dr. Raschbacher opined that Claimant had been playing racquetball yet indicated she was not comfortable going back into work. Dr. Raschbacher opined that Claimant's work restrictions were likely more restrictive than what could be supported objectively, and he scheduled a functional capacity evaluation to assist in determination of appropriate restrictions. Dr. Raschbacher opined that Claimant had significant psychological problems that predated this claim and opined that there was no psychological basis for an impairment due to the January 15, 2018 injury. Dr. Raschbacher noted that Claimant was also under care for a

non-work related motor vehicle accident. Dr. Raschbacher performed a physical examination and opined that Claimant's impairment of the shoulder and wrist amounted to a 5% upper extremity impairment. He noted that the functional capacity evaluation would be done as medical maintenance and that work restrictions might be updated at that time after review. See Exhibit A.

11. On February 11, 2019, Respondents filed a final admission of liability (FAL) admitting to a 5% upper extremity impairment rating consistent with Dr. Rachbacher's January 24, 2019 report. Respondents listed a maximum medical improvement (MMI) date of January 24, 2019. See Exhibit A.

12. On June 13, 2019, Greg Reichhardt, M.D. performed a Division Independent Medical Evaluation (DIME). Claimant reported that she was injured on January 15, 2018 when she slipped and fell while scraping ice off her windshield at work. Claimant reported that she had immediate right wrist pain and right shoulder weakness. Claimant reported that she had a motor vehicle accident three weeks before her fall at work and that she felt worsened by her fall. Claimant reported that she underwent surgery and physical therapy but did not feel the therapy was done appropriately. Claimant reported that she had done physical therapy through her private doctor after she was discharged by workers' compensation providers and that she had completed sixty or more sessions. Claimant also reported that she was doing home exercises every other day. Claimant reported that she had been playing tennis, racquetball, and swimming. Claimant reported depression, anxiety, and suicidal thoughts and related it to feeling mistreated by multiple providers. Dr. Reichhardt reviewed medical records and performed a physical examination. He noted that Claimant had not had a psychological evaluation and that Claimant was voicing suicidal thoughts and required further evaluation. Claimant reported the suicidal thoughts were in part related to the work injury although she admitted there were other non-work related stressors as well. Dr. Reichhardt opined that Claimant was not at MMI. He indicated that she needed to be evaluated under workers' compensation and potentially concurrently outside workers' compensation by a psychologist and a psychiatrist. Dr. Reichhardt opined that it would be helpful to have pre-injury psychological records to determine whether there was a work related component and that it was not clear whether there was any work related component to Claimant's psych condition. Dr. Reichhardt opined that no further physical therapy was indicated. He opined that a follow up with Dr. Hartman was recommended to see if an MRI or MRI arthrogram were recommended and to get his opinion on continued participation in racquetball and tennis. Dr. Reichhardt opined that after any work-related aspect of the psychiatric condition is addressed and if no further surgery is indicated by Dr. Hartman, then Claimant would be at MMI. Dr. Reichhardt opined that if Claimant refused to see the psychologist and psychiatrist, she would be at MMI. Dr. Reichhardt opined that Claimant had a 10% upper extremity impairment rating. See Exhibit C.

13. On June 19, 2019, Claimant underwent a right shoulder MRI. The impression was moderate right shoulder supraspinatus and infraspinatus tendinopathy with partial-thickness supraspinatus bursal sided tearing and intermediate to high grade

undersurface infraspinatus tearing with a component of medial delamination. No full thickness extension was seen. The impression also included subscapularis insertional tendinopathy with intrasubstance insertional tearing with resultant medial subluxation of the biceps tendon from the bicipital groove. It found long head biceps tendinopathy and subacromial subdeltoid bursitis. See Exhibit 3.

14. On July 19, 2019, orthopedist Adam Seidl, M.D. evaluated Claimant. Claimant reported that she fell at work in January of 2018 and eventually underwent arthroscopy with rotator cuff repair and subacromial decompression to fix a supraspinatus tear shown by MRI. Claimant reported that since surgery, she had persistent pain and discomfort in her shoulder that limited her from activities. Claimant reported weakness and pain and that she was worried her surgery did not fully treat her injury. Dr. Seidl reviewed a right shoulder post surgical MRI. Dr. Seidl opined that the MRI showed standard post surgical changes without discrete re-tear and opined that the teres minor and infraspinatus appeared intact. Dr. Seidl opined that there were no new tears or clear pathology on the MRI that would contribute to her pain and he showed her the MRI that demonstrated her rotator cuff repair was intact and well healed. Dr. Seidl opined that it was unclear why Claimant had been unable to gain strength and unclear why she had persistent pain. Dr. Seidl opined that surgical intervention was not indicated and that there would be nothing to repair. See Exhibit D.

15 On August 16, 2019, Dr. Seidl evaluated Claimant. He opined that he did not see a structural cause of Claimant's reported weakness. Claimant requested an MRI arthrogram and he agreed to order one. See Exhibit D.

16. On August 23, 2019, Claimant underwent a right shoulder MRI arthrogram. The impression was superior cuff tendinosis with no full thickness tear identified. The findings included diffuse degenerative tearing and fraying of the labrum, no substantial rotator cuff muscular atrophy, and persistent postsurgical appearance of prior superior cuff repair of the supraspinatus and infraspinatus. The findings included moderate supraspinatus and infraspinatus tendinosis with partial thickness articular sided tearing of the undersurface at the junction of the supraspinatus and infraspinatus tendons, which was opined as maybe being post surgical. See Exhibit 3.

17. On August 28, 2019, Claimant was scheduled for a psychiatric evaluation with Robert Kleinman, M.D. Claimant did not show up for the evaluation. See Exhibit E.

18. On August 29, 2019, Dr. Seidl evaluated Claimant. He noted that Claimant underwent a rotator cuff repair surgery, reported that she never recovered, and complained of significant pain and weakness of the shoulder. Claimant reported her main goal was to return to tennis and pickleball. Dr. Seidl noted that at the last visit, Claimant was adamant that she had a tear of her infraspinatus that was not fixed during the last shoulder surgery despite an MRI and that she wanted an MRI arthrogram. Dr. Seidl noted that an MRI arthrogram was performed and reviewed with Claimant. Dr. Seidl opined that the recent MRI arthrogram showed no new high grade partial thickness or full thickness tears of the infraspinatus or supraspinatus. Dr. Seidl noted that he had a long discussion

with Claimant and Claimant's social worker and opined that he did not have a solution for her problem of pain and weakness. Dr. Seidl noted Claimant was fixated on her belief that her infraspinatus was not fixed, but he opined that the MRI confirms that Claimant's infraspinatus is intact and does not need further surgery. See Exhibit D.

19. On September 17, 2019, John Burriss, M.D. performed an independent medical evaluation. Claimant reported that she developed right shoulder and right wrist pain after a slip and fall at work January 15, 2018. Dr. Burriss noted that Claimant was a poor historian with a tangential thought process that avoided direct responses. He noted that Claimant spent much of the interview perseverating on her dissatisfaction with her providers and care reporting her care had been delayed, caused emotion distress, and that she felt dehumanized. Claimant reported that the right shoulder surgery she underwent provided was not beneficial and that she continued to have weakness and believed there was something structurally wrong with her shoulder. Claimant reported that second opinions had not provided her explanation for her weakness and that she was frustrated she had no answers. Claimant also reported continued problems with her right wrist and that surgery was now recommended for her wrist. Claimant reported pain at a 4/10 and that the pain varied between 0-8/10 and was a 0 when she didn't think about it. Claimant reported that she had not worked since February 2018 and that if she lifted a 2 pound weight over her head, her arm was crooked. Dr. Burriss reviewed medical records and performed a physical examination. Dr. Burriss noted that during medical treatment, Claimant had a falling out at UC health WC clinic and Workwell WC clinic before transferring to midtown WC clinic. He noted that Claimant had extensive treatment including extensive post surgery rehabilitation and massage. Dr. Burriss opined that despite the extensive treatment, Claimant continued to have subjective complaints of pain in the right shoulder and wrist that were out of proportion to objective findings. Dr. Burriss opined that the examination he performed was consistent with numerous examinations in the medical records with a benign exam with psychosomatic overlay, inconsistencies, and no objective findings. See Exhibit F.

20. Dr. Burriss noted that Claimant had undergone a DIME with Dr. Reichhardt with recommendations of psychiatric/psychologic evaluation and follow up regarding her right shoulder. Dr. Burriss noted that Claimant saw Dr. Seidl consistent with the DIME opinion and there were no further recommendations for her right shoulder. Dr. Burriss also noted that Claimant was scheduled for a psychiatric appointment with Dr. Kleinman but did not show up. Dr. Burriss opined that Claimant was at MMI pursuant to the DIME conditions. Dr. Burriss also reviewed a recent request for right wrist surgery to remove an occult ganglion cyst but Dr. Burriss opined that there was no reasonable expectation Claimant would benefit from surgical intervention. He noted the vague/diffuse nature of her complaints, the significant inconsistencies and psychosomatic overlay identified by multiple providers, lack of correlating findings on MRI, lack of response to appropriate treatment including a nondiagnostic response to a dorsal wrist injection, and lack of appropriate response at the shoulder after surgery. See Exhibit F.

21. DIME physician Dr. Reichhardt testified by deposition. Dr. Reichhardt reviewed medical records from an orthopedic follow up visit with Dr. Seidl that occurred

after the DIME. He opined, after review, that Claimant did not need further orthopedic care for her right shoulder. Dr. Reichhardt testified that he considered frozen shoulder as a possible diagnosis, but opined that Claimant's examination and overall presentation was not consistent with frozen shoulder. Dr. Reichhardt testified that Claimant's shoulder range of motion was better than what would be expected with adhesive capsulitis, and that her rotator cuff external rotation was normal. Dr. Reichhardt noted that at an examination with Dr. Lesnak, Claimant had normal range of motion so it was again unlikely she had adhesive capsulitis. He also noted her early recovery making adhesive capsulitis unlikely related to her work injury. Dr. Reichhardt noted that Claimant did not show up for the psychiatric evaluation with Dr. Kleinman and opined that Claimant would be at MMI as of the date of the missed psychiatric evaluation. Dr. Reichhardt opined that it would be appropriate for Claimant to have an evaluation with a psychiatrist to determine whether or not any of her psych issues were related to the work injury. He also opined that it would be appropriate, after a psychological evaluation, for Claimant to see Dr. Peterson and to resolve psych issues before proceeding with right wrist surgery. Dr. Reichhardt opined that his permanent impairment rating of 10% of the right upper extremity remained the same and that he could not, at this time, assess a psychological impairment as he didn't see consistent reports of psychological issues related to the work injury in the medical records. He testified that without a psychological evaluation he was unable to provide a medically probable psychological or psychiatric diagnosis related to the work accident. Dr. Reichhardt testified that there was no further treatment indicated for Claimant's work related injury other than continuation with an independent active exercise program.

22. In February of 2009, Claimant was evaluated by Pamela Rodden, Ph.D, for purposes of psychological testing. Dr. Rodden noted a mental health history of suicidal thoughts starting in 1997 and several different past mental health disorder diagnoses but without standard psychological testing. Dr. Rodden administered a battery of psychological tests and noted Claimant's responses. Dr. Rodden noted that the validity of the test results was limited by Claimant's honesty and self-awareness. Dr. Rodden noted a prior Axis I diagnosis of major depression, recurrent and an Axis II diagnosis of personality disorder, NOS with borderline and narcissistic features from the year 2000. Dr. Rodden opined that testing did not indicate the presences of any behaviors suggesting any such diagnosis presently. Dr. Rodden also noted that in 2003, Claimant had a diagnosis of Axis I mood disorder possibly recurrent major depression or bipolar disorder with a history of psychosis and recurrent suicidal ideation or schizoaffective disorder, adjustment disorder with mixed features-severe as well as an Axis II diagnosis of mixed personality disorder with borderline, impulsive, and narcissistic features. Dr. Rodden opined that at this February 2009 assessment, there were no personality disorders or mental health disorders identified based on Claimant's responses to testing. Dr. Rodden opined that Claimant did not appear to be, at the present time, potentially harmful to patients who might be under her care and Dr. Rodden supported reinstatement of Claimant's nursing license. See Exhibit 15.

23. Dr. Burris testified at hearing. He opined that Claimant was at MMI and that she had undergone comprehensive care for her injury, including physical therapy that

exceeded the guidelines for her diagnosis. He noted that the surgeon had released Claimant from care and that on his examination of Claimant, she looked good with good range of motion despite some self-limitation and some inconsistencies. Dr. Burris testified that the provocative testing to check the integrity of the rotator cuff repair was all normal. Dr. Burris testified that he reviewed DIME physician Dr. Raschbacher's deposition testimony where Dr. Raschbacher changed his mind and opined that Claimant was at MMI with a 10% impairment rating and Dr. Burris testified he agreed with the deposition opinion. Dr. Raschbacher testified that Claimant did not need surgery on her right wrist and that Claimant had no pain in the area after her fall and had no relief from a diagnostic injection, so surgery was not necessary. Dr. Burris testified that although Claimant believes she is not at MMI because she needs more physical therapy, Claimant had over 100 sessions of physical therapy already when a normal course is 12-24 sessions. Dr. Burris also testified that Claimant appeared fixated on the infraspinatus, but noted that it had been determined by orthopedic surgeon to be not in need of repair. Dr. Burris noted Claimant's long history of mental illness and opined that there was no work related psych component.

24. Claimant also testified at hearing. She testified that she fell quickly, abruptly, and laterally on January 15, 2018 when scraping her car and that she thought it was just her wrist at first but by the next morning she could hardly get dressed. Claimant testified she was angry because the next day it was still icy. Claimant testified that she disagrees with a determination of MMI because she is still currently in therapy. Claimant testified that she was very strong before the injury and played racquetball where she was rated in the top 14 in the state and that she had been strong her whole life. Claimant testified that she is in mental anguish now because she can't participate in sports and because she has received substandard care. Claimant testified that the physical therapist was not following orders and that she was not getting strength back and was stuck and frustrated because she didn't get care. Claimant testified that she disagrees with being placed at MMI because she wants hope that she will still get better. Claimant testified that the operating report doesn't discuss the infraspinatus and that photos of surgery showed only supraspinatus. She testified that she did not go to a neuropsych evaluation because she didn't get notice properly but testified she hasn't had a welfare check in years. Claimant testified that she has adhesive capsulitis and needs more physical therapy before she can be at MMI.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME physician's opinion on MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Kamakele v. Boulder Toyota-Scion*, W.C. No. 4-732-992 (ICAO, Apr. 26, 2010).

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.*, W.C. No.

4-320-606 (ICAO, Mar. 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management*, W.C. No. 4-356-512 (ICAO, May 20, 2004);

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries*, WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

When a DIME physician issues conflicting or ambiguous opinions concerning MMI, the ALJ may resolve the inconsistency as a matter of fact so as to determine the DIME physician's true opinion. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016). An ALJ may consider the DIME physician's deposition testimony as part of his opinion for purposes of determining the DIME physician's opinion. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 659 (Colo. App. 1998); *Gagnon v. Westward Dough Operating Co. D/B/A Krispy Kreme* W.C. No. 4-971-646-03 (ICAO, Feb. 6, 2018).

As found above, in his DIME report, Dr. Reichhardt opined that Claimant was not at MMI and that Claimant needed a psych evaluation. Dr. Reichhardt was unsure whether there were work related psych issues and he opined that it would be helpful to review the pre-injury psych records. Dr. Reichhardt also opined that Claimant was not at MMI because she needed a follow up evaluation with her orthopedic surgeon to see if a new MRI, MRI arthrogram, or any surgery were recommended. His DIME report concluded that if the orthopedic surgeon indicated nothing further was necessary, and if the work related aspects of Claimant's psych issues were addressed, Claimant would be at MMI. Dr. Reichhardt opined that if Claimant refused to see a psychologist or psychiatrist, Claimant would be at MMI. Dr. Reichhardt opined that no further physical therapy was indicated.

During deposition testimony, Dr. Reichhardt opined that Claimant was at MMI and that there was no further treatment indicated for her work injury other than continued independent exercises. Dr. Reichhardt noted that Claimant was evaluated by an orthopedic surgeon after his DIME report and that the doctor, Dr. Seidl, opined that Claimant did not need further orthopedic care. Dr. Reichhardt also opined that Claimant missed a psychiatric evaluation with Dr. Kleinman. Dr. Reichhardt opined that he could not assess a psychological impairment and opined there were not consistent reports of psychological issues related to the work injury.

The ALJ notes that DIME physician Dr. Reichhardt provided an opinion in his DIME report that Claimant needed a psych evaluation and a follow up with the orthopedic surgeon before Dr. Reichhardt could find her at MMI. Dr. Reichhardt was unsure whether psych components were work related. Dr. Reichhardt was also unsure whether there was something more going on in Claimant's right shoulder that the orthopedist would have recommendations for. During his deposition, Dr. Reichhardt changed his opinion. He opined Claimant was at MMI. Dr. Reichhardt noted that the orthopedist had no further treatment recommendations for the right shoulder and that there were not consistent reports of psychological issues that related to the work injury. He therefore opined that Claimant was at maximum medical improvement.

The ALJ concludes that the DIME physician's true opinion is that Claimant reached MMI on August 28, 2019 with a 10% upper extremity impairment. Dr. Reichhardt's determination involved his assessment that psych components are not causally related to the industrial injury. Claimant's physical impairment as a result of her injury is stable and no further treatment is reasonably expected to improve her condition. Dr. Reichhardt reviewed the treatment records and orthopedic records before coming to his opinion. No further medical treatment, including surgery, will reduce Claimant's pain or improve her function nor are there additional diagnostics (that have not already been completed) that can offer a reasonable prospect for defining Claimant's condition or suggesting further treatment.

Claimant has failed to overcome, by clear and convincing evidence, DIME physician Dr. Reichhardt's opinion. Claimant is at MMI with a 10% upper extremity impairment. Claimant has failed to establish that Dr. Reichhardt was highly probably incorrect nor has she shown by unmistakable evidence or evidence free from serious or substantial doubt that Dr. Reichhardt is incorrect. Claimant argues that she is not at MMI because physical therapy is still helping her, yet even when he initially opined Claimant was not at MMI, Dr. Reichhardt recommended against further physical therapy. Claimant argues that she has been misdiagnosed and mistreated by a variety of providers. Claimant alleges she has adhesive capsulitis, yet providers document inconsistencies with that diagnosis. DIME physician Dr. Reichhardt testified that her examination and treatment history was inconsistent with that diagnosis.

Claimant has failed to meet her burden to overcome the opinion of DIME physician Dr. Reichhardt by clear and convincing evidence. Although Claimant testified to and pointed out that her current providers may have different opinions, the mere difference of

medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. The weight of the medical evidence and the overall opinions by various providers supports a determination that Claimant is at MMI with a 10% upper extremity permanent impairment rating.

ORDER

It is therefore ordered that:

1. Division Independent Medical Examination (DIME) physician Dr. Reichhardt's true opinion is that Claimant is at MMI with a PPD rating of 10% upper extremity.
2. Claimant has failed to overcome the DIME physician's opinion on MMI by clear and convincing evidence. Claimant reached MMI on August 28, 2019 and has a 10% right upper extremity impairment.
3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: May 6, 2020

/s/ Michelle E. Jones

Michelle E. Jones

Denver, CO 80203

ISSUES

➤ Whether respondent has demonstrated by a preponderance of the evidence that claimant's temporary partial disability benefits should be suspended based on an intervening event?

FINDINGS OF FACT

1. Claimant is employed with employer as an assistant grocery manager. Claimant sustained a compensable work injury on July 1, 2017 when she was pushing a bookshelf and felt a pop in her right knee. Claimant sustained a second injury that same day when a co-worker kicked out claimant's right knee causing her knee to buckle.

2. Claimant came under the care of Dr. McClellan for her work injury. Dr. McClellan treated claimant conservatively and provided claimant with work restrictions that included no lifting more than 10 pounds and no walking or standing greater than 2 hours per day as of July 5, 2017.

3. Claimant underwent a magnetic resonance image ("MRI") of the hip and was diagnosed with a labral tear. Claimant subsequently underwent an arthroscopy on October 25, 2017 and the primary finding was synovitis.

4. Claimant provided the work restrictions to employer and was originally taken off of work and provided with temporary total disability benefits beginning July 27, 2017. Employer subsequently provided claimant with modified work within her restrictions, and limited claimant to 30 hours of work per week. As a result of the modified duty, claimant was provided with temporary partial disability ("TPD") benefits in the amount of \$166.00 per week (\$232 every two weeks). Respondent transitioned claimant to TPD benefits effective January 15, 2018. The temporary disability benefits paid to claimant are reflected in a general admission of liability ("GAL") dated June 21, 2018 and entered into evidence at hearing.

5. Claimant's work restrictions would periodically change minimally during the time in which she was receiving TPD benefits. As of September 4, 2018, claimant was still limited to no lifting, carrying, pushing or pulling over 10 pounds with limitations on walking and sitting of no more than 3 hours.

6. During this period of time, claimant became pregnant. Claimant also developed the onset of low back pain. A repeat MRI was recommended but claimant testified she could not have the MRI accomplished until after the first trimester of her pregnancy. Claimant testified that once she was past the first trimester of pregnancy where the MRI could be performed safely, the MRI was denied.

7. Claimant applied for family leave from employer on November 8, 2018. The leave claimant elected was related to her pregnancy and offered by employer and not related to her work injury. Claimant testified at hearing that she left work on the advice of her mid wife who told claimant if she wanted to take leave, she could. Claimant testified that the due date for her baby was November 29, 2018.

8. After claimant took leave for her pregnancy, respondent filed a petition to suspend temporary disability benefits on December 6, 2018. Claimant objected to the petition to terminate and respondent sought a hearing on whether employer could terminate claimant's ongoing temporary partial disability benefits.

9. At hearing, respondent argued that the earnings for claimant would have been reduced to \$0 once claimant elected to take leave for the birth of her child, regardless of the work injury. Respondent argued that the leave claimant sought represented an intervening event sufficient to terminate claimant's ongoing receipt of temporary disability benefits as the wage loss was related to the family leave, and not the work injury as of November 8, 2018 when claimant stopped working due to her pregnancy.

10. The ALJ agrees that the basis for the wage loss after November 8, 2018 is related to claimant's maternity leave, and not the work injury. In fact, claimant does not appear to dispute this fact. However, the Colorado Workers' Compensation Act does not provide that temporary disability benefits can be cut off under these circumstances. The Act specifically provides that benefits continue until either claimant is placed at maximum medical improvement ("MMI"), or is released to return to work by a treating physician in a modified duty position, a position is offered to the claimant in writing, and claimant does not return to work.

11. As argued by claimant, claimant's temporary disability benefits would have continued whether she was taking the leave for her pregnancy or not until a statutory cut off for the temporary disability benefits occurred. While there was an interruption in claimant's treatment for her work injury in order for claimant to give birth to her child, the extent to which the interruption delayed claimant reaching MMI is speculation.

12. Insofar as the Act does not allow for TPD benefits to be suspended under the circumstances in this case, respondent's request for an Order suspending receipt of TPD benefits while claimant is on leave is denied.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page*

v. Clark, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. Section 8-42-106(2), C.R.S., provides in pertinent part:

Temporary partial disability shall continue until the first occurrence of either of the following: (a) The employee reached maximum medical improvement; or (b)(I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment.

4. While the ALJ agrees that the claimant's total wage loss was related in this case to the election to undergo leave related to claimant's pregnancy and not related to the work injury, the ALJ finds that the Act does not allow for temporary disability benefits to be suspended in this case based on the election of the claimant to take family leave offered by employer.

5. Due to the fact that respondent has failed to establish a statutory basis for the suspension of TPD benefits, the request to suspend benefits is hereby denied.

ORDER

It is therefore ordered:

1. Respondent's request for an Order suspending claimant's TPD benefits due to an intervening event is denied.

2. All matters not determined here are reserved for future determination.

Dated May 7, 2019

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- I. Whether Respondents overcame Dr. Caroline Gellrick's DIME opinion on whole person impairment by clear and convincing evidence and on scheduled impairment by the preponderance of the evidence.
- II. Whether Claimant proved by a preponderance of the evidence she is entitled to a general award of maintenance medical benefits.
- III. Whether Claimant proved by a preponderance of the evidence she is entitled to reimbursement for out-of-pocket expenses for medical treatment related to the work injury.

FINDINGS OF FACT

1. Claimant is a 41-year-old woman who worked for Employer as a store manager.
2. Claimant sustained an admitted industrial injury to her low back on August 10, 2015 when lifting boxes.
3. On August 11, 2015, Claimant presented to her primary care physician, James Williams, M.D., with complaints of severe low back pain radiating down the left leg. Dr. Williams assess Claimant with back pain and left sciatica, prescribed her medication, and removed Claimant from work.
4. Claimant subsequently underwent a lumbar MRI on September 4, 2015, which revealed a L4-5 large disc extrusion and severe thecal sac narrowing, as well as multilevel mild facet osteoarthritis.
5. Claimant continued to treat with Dr. Williams and continued to report low back and left leg symptoms. She continued on restrictions and medication.
6. April 8, 2016, John Raschbacher, M.D. performed an independent medical examination ("IME") at the request of Respondents. Dr. Raschbacher noted Claimant's September 4, 2015 lumbar MRI showed a large disc extrusion at L4-5. He diagnosed Claimant with lumbar disc disease, herniated disc. Dr. Raschbacher, however, opined that Claimant's subjective complaints were not substantiated by the MRI findings, and her presentation was not physiologic. He felt Claimant had fairly remarkable pain behaviors and noted he was unable to explain her degree of symptomatology and presentation based on the radiographic findings. Dr. Raschbacher recommended Claimant undergo a repeat lumbar MRI and a bilateral lower extremity EMG/NCS.

7. Claimant underwent a repeat lumbar MRI on June 22, 2016, which was compared to the September 4, 2015 MRI. The radiologist's impression was: resolved disc extrusion and central stenosis at L4-5, and unchanged mild lateral recess and foraminal narrowing at L4-5 and right L5-S1.

8. On August 10, 2016, John Hughes, M.D. performed an IME at Claimant's request. On examination, Dr. Hughes noted decreased lumbar range of motion and diffusely diminished sensation in the left lower leg and give-way weakness. His assessment was (1) a lumbar spine sprain/strain with development of an L4-5 disc extrusion, resolved, and (2) persistence of facet joint arthropathy, secondary to the sprain and resolved disc extrusion. He opined that Claimant had not reached maximum medical improvement ("MMI") and recommended a left lower extremity EMG/NCS to assess for radiculopathy. Dr. Hughes offered a provisional combined whole person impairment rating of 19%, consisting of 7% impairment under Table 53 II-C of the AMA Guides and 13% for deficits in lumbar range of motion.

9. The parties went to hearing before ALJ Michelle Jones on the issues of compensability and medical treatment. On October 27, 2016, ALJ Michelle Jones issued an order finding Claimant sustained a compensable injury on August 10, 2015 and that Claimant is entitled to reasonable and necessary medical treatment. Respondents filed a General Admission of Liability on December 2, 2016 admitting for medical benefits for Claimant's low back pursuant to ALJ Jones' order.

10. Claimant testified at the present hearing she had paid for treatment for the work injury out-of-pocket. She testified that after the hearing with ALJ Jones, she submitted her out-of-pocket expenses to Respondents for reimbursement but never recouped those costs. Claimant's Exhibits 15-17 detail some of the out-of-pocket expenses incurred by Claimant, including office visits with Dr. Williams, medications prescribed by Dr. Williams, MRIs. Certain expenses identified in Claimant's Exhibits 15-17 appear to be for testing procedures unrelated to the work injury.

11. Claimant subsequently began treating with Kristin D. Mason, M.D. as her primary authorized treating physician. Claimant first saw Dr. Mason on December 22, 2016. Claimant reported pain varying from a 5-10/10, with current pain a 9/10, and numbness in what Dr. Mason noted conformed to an L5 distribution. On examination, Dr. Mason noted very consistently reduced sensation in the left L5 distribution and diffuse weakness in the left lower extremity but more pronounced for the L5 myotome. The slump test was strongly positive on the left and flexion and extension was quite limited. Dr. Mason's assessment was, in relevant part: (1) status post large disk extrusion L4-5 with some degree of resolution but ongoing left L5 radiculopathy and significant axial back pain, and (2) depression with prominent irritability. She prescribed Claimant medication, and referred Claimant for flexion/extension x-rays, an EMG/NCS, and a psychologic evaluation with Lupe Ledezma, Ph.D.

12. Claimant underwent an EMG/NCS of her left lower extremity on January 19, 2017, conducted by Dr. Mason. The EMG/NCS revealed mild, chronic left L5 radiculopathy.

13. Claimant presented to Dr. Ledezma on January 20, 2017 for initial evaluation. Dr. Ledezma noted Claimant had strong physiological and psychological reactions to pain with strong psychological overlay to her presentation. She further noted there was no indication Claimant was intentionally trying to exaggerate or distort her symptoms. Dr. Ledezma diagnosed Claimant with depression and recommended Claimant begin psychotherapy and anti-depressant medication. Claimant continued treating with Dr. Ledezma until at least May 21, 2018.

14. At a follow-up evaluation with Dr. Mason on February 9, 2017, Dr. Mason noted flexion/extension x-rays had been obtained and did not show any instability. Dr. Mason noted that the disc extrusion had receded, but Claimant continued to experience ongoing radiculopathy. Claimant continued treating with Dr. Mason, who prescribed medications and physical therapy, which she noted in various medical notes were, at various times, not authorized by Respondents. On July 27, 2017, Dr. Mason referred Claimant to Nicholas Olsen, M.D. for evaluation for possible injections.

15. Claimant presented to Dr. Olsen on August 10, 2017. Dr. Olsen reviewed the flexion/extension x-rays and noted that the x-rays did not show evidence of instability, but did show degenerative facet arthropathy, most marked at L4-5 and L5-S1. Dr. Olsen opined that Claimant potentially had two pain generators both of a facetogenic component as well as possible discogenic component. He proposed Claimant undergo a lumbar facet injection at bilateral L4-5 and L5-S1 levels, which Claimant underwent on September 26, 2017.

16. Claimant returned to Dr. Olsen on October 2, 2017 reporting approximately three days of pain relief after the injection with pain levels subsequently returning to 8/10. Dr. Olsen reviewed the lumbar MRIs and noted it was clear the disc extrusion resolved as of the June 22, 2016 MRI study. He further noted facet arthropathy at bilateral L4-5 and L5-S1. He opined Claimant benefitted "enough" from the facet injection to warrant a possible rhizotomy, but first recommended Claimant undergo medial branch blocks.

17. Dr. Raschbacher performed a review of additional medical records and issued a report on October 10, 2017. He opined that there was no documentation on physical examination of anything that would be suggestive of a facet origin. He noted Claimant's L4-5 extrusion had resolved, Claimant's functional status had not improved, and thus opined that no further treatment, including facet injections, was likely to change her status. Dr. Raschbacher opined Claimant had likely reached MMI.

18. On January 19, 2018, Dr. Raschbacher performed an additional medical record review. He opined that medial branch blocks were not reasonable, necessary or related to Claimant's August 10, 2015 work injury. He noted that Claimant's presumptive pain

generator was a large disc extrusion, which had resolved. Dr. Raschbacher opined that facet joint was not mentioned early on in the course of treatment and evaluation and Claimant did not have any clinical findings that were clearly suggestive of facet joint issues.

19. Respondents denied the request for medial branch blocks. At a follow-up evaluation by Dr. Mason on January 11, 2018, Dr. Mason noted Claimant's progression had been slow because it had been very difficult to get any treatment authorized by Respondents. She opined Claimant had a diagnostic response to the intra-articular facet injections and agreed Claimant was a candidate for medial branch blocks.

20. Claimant continued to see Dr. Mason, who continued to note positive slump test on the left, limited range of motion for extension and flexion, continued weakness of the left EHL, and sensory loss in the left L5 distribution.

21. Claimant eventually underwent a 24-month DIME, performed by X.J. Ethan Moses, M.D. on June 27, 2018. On physical examination, Dr. Moses noted diminished sensation to light touch in the entire left lower extremity and limited lumbar range of motion. His assessment was: (1) low back sprain with residual facetogenic back pain, (2) lumbar disc herniation, resolved on MRI, and (3) chronic L5 radiculopathy. Dr. Moses opined Claimant was not at MMI and required additional physical therapy, and psychotherapeutic services. He further opined that Claimant was a candidate for medical branch blocks and, if those blocks were diagnostic, a rhizotomy. He noted that Claimant had a diagnostic response to the bilateral L4-5 and L5-S1 facet injections, his physical exam was indicative of facetogenic pain, as were both of her MRIs. Dr. Moses specifically stated, "Even though the lumbar disc herniation is resolved, the dessication (*sic*) of the disc as a result of the herniation often causes facetogenic back pain. This is a generally accepted principle regarding the origins of facetogenic back pain." (Claimant Exhibit 10, p. 228).

22. Claimant returned to Dr. Mason on July 19, 2018, at which time Dr. Mason referred Claimant for a medial branch blockade, additional physical therapy, and additional sessions with Dr. Ledezma.

23. Claimant underwent the medial branch blockade on August 7, 2018. Claimant reported an increase in pain after the blockade and was determined to have a negative response to the medial branch block.

24. Claimant continued to see Dr. Mason, who continued to, on physical examination, note ongoing left L5 sensory dysfunction and limitations of lumbar range of motion. Dr. Mason ultimately placed Claimant at MMI at her January 24, 2019 evaluation. On physical examination, Dr. Mason again noted some L5 sensory deficit and limitations of range of motion. Her final assessment was: History of large L4-5 extrusion with chronic left L5 radiculopathy despite remission of the disc, and depression. As maintenance treatment, Dr. Mason recommended medication, further

sessions with Dr. Ledezma, a pool pass, and a functional capacity evaluation ("FCE"). She recommended 10-pound lifting restrictions.

25. On March 28, 2019, Claimant attended a maintenance evaluation with Dr. Mason. Claimant reported increased leg symptoms. Dr. Mason noted that, although Claimant's disc herniation had receded, Claimant was likely left with some nerve damage to the L5 nerve root. On examination Dr. Mason noted Claimant continued to have mild weakness in the L5 myotome, as well as sensory deficit, and a positive slump test on the left. Range of motion remained limited.

26. Caroline Gellrick, M.D. performed a DIME on May 16, 2019. Dr. Gellrick reviewed medical records dating back to August 11, 2015, including the IME reports of Drs. Raschbacher and Hughes, and Dr. Moses' June 27, 2018 DIME. She included a comprehensive review of the medical records noting findings, diagnoses and course of treatment. She noted Dr. Raschbacher, in his initial IME report, found Claimant's pain behaviors fairly remarkable, which he found precluded the use of subjective complaints as a very good basis upon which to proceed. Claimant reported continued low back and left leg pain, as well as arm pain she indicated began three months prior. Claimant rated her pain at 9/10, which Dr. Gellrick noted did not conform to Claimant's activity when observed in the waiting room or exam room. On physical examination, Dr. Gellrick noted neurosensory decreased in the left lower extremity as compared to the right and 4/5 strength testing on the left compared to 5/5 on the right. Lumbar range of motion, measured using dual inclinometers, was limited. Dr. Gellrick noted she found the lumbar range of motion measurements valid.

27. Dr. Gellrick listed the following diagnoses, in relevant part:

S/P Work Comp injury 08/10/15 resulting in:

1. Lumbar strain, disc protrusion L4-5, severe thecal narrowing with multilevel facet OA on MRI 09/04/14.

A. Facetogenic lumbar pain with positive Spurling's today on exam.

B. Repeat lumbar MRI 06/22/16, resolved disc extrusion with mild lateral recess and foraminal narrowing L4-5 and L5-S1.

C. EMG/NCS; chronic L5 radiculopathy left.

D. S/P MBB nondiagnostic.

E. Lack of authorization for finishing up physical therapy, pool therapy, FCE recommended with Dr. Olsen and Dr. Moses.

28. Dr. Gellrick also diagnosed Claimant with Reactive Adjustment Disorder manifest as depression, noting further counseling with Dr. Ledezma was needed as maintenance. She agreed Claimant reached MMI as of January 24, 2019.

29. Claimant Dr. Gellrick assigned a final combined 18% whole person impairment rating. Dr. Gellrick assigned 7% whole person impairment under Table 53 II-C of the AMA Guides for the original disc herniation at L4-5 and 9% whole person impairment for deficits in lumbar range of motion. She further assigned a 10% lower extremity impairment for neurologic L5 radiculopathy, which converts to 4% whole person impairment.

30. Dr. Gellrick did not assign any psychiatric impairment, opining that Claimant reported being much improved as of the date of her examination. She noted that, with maintenance psychological treatment, Claimant would have no residual psychiatric impairment rating. Dr. Gellrick opined that Claimant's arm complaints, which developed three months prior to her examination, were unrelated to Claimant's original work injury.

31. Dr. Gellrick recommended extensive maintenance care for Claimant, including at least another 6 to 8 sessions of pool therapy and land therapy, maintenance medication for six to 12 months, and another trial of facet injections and repeat radiology studies, if deemed necessary by Drs. Mason and Olsen.

32. Respondents filed an Application for Hearing seeking to overcome Dr. Gellrick's opinion on impairment, as well as the need for medical maintenance treatment. Claimant filed a Response to Application for Hearing seeking to uphold the DIME opinion of Dr. Gellrick, reimbursement for out-of-pocket expenses, interest owed on payments due, and medical maintenance benefits.

33. Claimant returned to Dr. Mason for follow-up maintenance appointments on June 27, 2019 and October 14, 2019. Dr. Mason noted she reviewed Dr. Gellrick's DIME report. Dr. Mason did not note any perceived issues or disagreements with Dr. Gellrick's report. She referred Claimant for further aquatic therapy based on Dr. Gellrick's recommendations.

34. On September 17, 2019, Dr. Raschbacher performed a second IME at the request of Respondents. Dr. Raschbacher reviewed additional medical records, including Dr. Gellrick's DIME report. On examination, Dr. Raschbacher noted give-way weakness at the left knee and poor effort with manual muscle testing. Claimant reported being circumferentially numb at the left lower extremity at the thigh and the leg. Range of motion was limited. Dr. Raschbacher opined Claimant's circumferential numbness and limited range of motion were nonphysiologic and Claimant presented with significant pain behaviors. He concluded that Claimant had a herniated disc with complete resolution, and that her current diagnosis is low back pain and left lower extremity pain.

35. Dr. Raschbacher further opined that Dr. Gellrick erred by assigning impairment on the basis of Claimant's subjective complaints without substantial objective support. He noted Claimant has had the same pain complaints for the past four years and Claimant was likely at MMI prior to January 24, 2019. Dr. Raschbacher opined Claimant should not be assigned a rating for range of motion. He noted that he could offer a rating based on Table 53 II-C of the AMA Guides for the prior disc herniation, but that would require six months of symptomatology and we do not know when the disc herniation actually resolved. He opined that he would not offer an impairment rating until such time as a repeat EMG was performed to verify the presence or absence of any nerve root findings.

36. On December 5, 2019, Dr. Mason issued a letter disagreeing with Dr. Raschbacher's prior recommendation for a bilateral lower extremity EMG/NCS. Dr. Mason noted that she is board certified in electrodiagnostic medicine and did not feel there was any clinical indication for a repeat EMG/NCS. She explained that EMGs are only 70% sensitive for radiculopathy and tends to be less helpful in patients that have only sensory symptoms. She further explained that Claimant's disc had receded, so there was no clinical utility in conducting another EMG.

37. On December 18, 2019, Gary Zuehlsdorff, M.D. performed an IME at Claimant's request. On examination, Dr. Zuehlsdorff noted limited range of motion, no give away weakness, and 4/5 strength in the left lower extremity compared to the right. Dr. Zuehlsdorff's impression was, in relevant part, "low back pain syndrome with left lower leg probable radiculopathy consistent with most likely the L5 distribution with symptomatic pain, dysesthesias, and slight weakness by history and exam." He agreed Claimant reached MMI on January 24, 2019.

38. Dr. Zuehlsdorff agreed with Dr. Gellrick's assignment of impairment for the low back and left lower extremity radiculopathy, but opined he would add a rating for psychiatric impairment, as Claimant reported to him that her psychiatric condition had worsened. Dr. Zuehlsdorff assigned 11% whole person impairment for loss of range of motion, 7% whole person impairment under Table 53 II-C, 5% lower extremity neurologic impairment (which converts to 2% whole person), and 3% psychiatric impairment, for a total combined whole person impairment rating of 21%.

39. In support of Dr. Gellrick's opinion, Dr. Zuehlsdorff noted that multiple providers, IMEs and responses to treatments had been concurrent with the diagnoses as documented by Dr. Gellrick. He opined that, while Dr. Gellrick did find some nonphysiologic findings, "she did not utilize that as a final determinate of ultimate causality or applicability." He further noted he did not find such pain behaviors or subjective/objective non-correlates in his review. As maintenance treatment, Dr. Zuehlsdorff recommended follow-up evaluations with Drs. Mason and Ledezma, consideration of further pool therapy and land therapy, and a gym pass.

40. Dr. Raschbacher testified by evidentiary deposition as a Level II accredited expert in occupational medicine. Dr. Raschbacher testified that the pain generator, a

herniated disc, had resolved; thus, Claimant's continued and essentially unchanged subjective complaints did not make sense. Dr. Raschbacher testified that there was nothing pushing on Claimant's nerve root to cause Claimant's alleged left lower extremity symptoms. He explained that Claimant's reported circumferential numbness was non-dermatomal and not consistent with a radiculopathy, or nerve root at the spine. Dr. Raschbacher testified that he noted pain behaviors on his most recent physical examination of Claimant. He explained that Claimant's range of motion could not be explained with objective findings and was not consistent with anatomic disruption. There was no medical reason that Claimant would have very limited range of motion, particularly with the herniated disc resolved. He testified that, on straight leg testing, Claimant complained of pain with her legs barely moving, for which he explained there was no medical reason. Dr. Raschbacher opined that Claimant's physical exam findings were abnormal without a medical or objective explanation, particularly in light of MRI findings establishing the resolution of the disc herniation.

41. Dr. Raschbacher testified to various perceived issues with Dr. Gellrick's DIME report. He testified that Dr. Gellrick diagnosed Claimant with facetogenic lumbar pain when there are no facts to support that diagnosis, and that Dr. Gellrick diagnosed Claimant with a disc protrusion and lumbar strain as if those diagnoses were still present. He explained that Dr. Gellrick diagnosed Claimant with chronic L5 radiculopathy when there was no medical basis for radiculopathy to be present at the time.

42. Dr. Raschbacher opined that Dr. Gellrick erred by assigning an impairment rating based on subjective complaints without objective findings. He explained that the AMA Guides and Impairment Rating Tips provide that an impairment rating should be based on objective findings that correlate with subjective complaints. Dr. Raschbacher testified that, although Dr. Gellrick's range of motion measurements were valid, they did not make sense medically, considering the pain generator had resolved. He testified that this reasoning also applied to Claimant's lower extremity complaints. He explained that, although Claimant's initial radicular symptoms were caused by the herniated disc, the herniated disc had since resolved. Dr. Raschbacher further took issue with Dr. Gellrick noting that Claimant's subjective pain rating did not conform with Claimant's activity observed in the waiting room, yet nonetheless assigning an impairment rating based on subjective complaints.

43. Dr. Raschbacher testified that Claimant should receive a 7% whole person impairment rating under Table 53 II-C of the AMA Guides for the nonsurgical, symptomatic disc. He opined Claimant did not sustain any range of motion or psychological impairment. He recommended a repeat EMG of Claimant's lumbar spine to determine whether there was any nerve root impingement or to determine if a different level of the spine was involved.

44. Dr. Raschbacher further testified that Claimant did not require medical maintenance treatment nor restrictions. He reiterated that Claimant continues to report essentially the same level of pain despite the original pathology resolving, undergoing

treatment, and the passage of time. He opined that Claimant could receive significant medical resources, including pool therapy, and her subjective complaints would not likely change.

45. Dr. Zuehlsdorff testified at hearing on behalf of Claimant as a Level II accredited expert in internal medicine and occupational medicine. Dr. Zuehlsdorff testified consistent with his IME report. He explained that, as a result of the work injury, Claimant had a disc extrusion, lumbar sprain, and aggravated facet syndrome. Dr. Zuehlsdorff opined that Claimant's L5 radiculopathy is related to the work injury. He testified that the EMG evidenced mild, chronic left L5 radiculopathy. Dr. Zuehlsdorff explained that, although the disc extrusion receded, Claimant continues to experience the effects of the prior disc protrusion. He testified that, even in the absence of disc protrusion, chronic damage could result in numbness. He further testified that there remains an objective basis for Claimant's limited range of motion even in light of the resolved disc extrusion.

46. Dr. Zuehlsdorff continued to opine Claimant sustained a 21% combined whole person impairment, as he detailed in his IME report. Regarding alleged pain behaviors, Dr. Zuehlsdorff noted pain behaviors do not necessarily invalidate a physical exam, and noted he did not observe any pain behaviors on his examination of Claimant. He opined there were no issues with Dr. Gellrick's range of motion measurements or conclusions, and that the impairment ratings and treatment plans Drs. Hughes, Gellrick and Moses were appropriate.

47. Claimant credibly testified at hearing. She testified that her pain ratings have been fairly consistent for last three years. She further testified that treatment did assist with her symptoms, although treatment was not consistent due to delays in authorization or denials of treatment.

48. The ALJ finds the DIME opinion of Dr. Gellrick, as well as the opinions of Drs. Mason, Olsen, Hughes, Moses and Zuehlsdorff, more credible and persuasive than the opinion of Dr. Raschbacher.

49. Respondents failed to prove it is highly probable Dr. Gellrick's DIME opinion on whole person impairment is incorrect.

50. Respondents failed to prove it is more probable than not Dr. Gellrick's DIME opinion on scheduled impairment is incorrect.

51. Claimant proved by a preponderance of the evidence she is entitled to a general award of maintenance medical benefits.

52. Claimant proved by a preponderance of the evidence she is entitled to reimbursement for reasonable, necessary and related out-of-pocket medical expenses.

53. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME on Permanent Impairment

The finding of a DIME physician concerning the claimant's non-scheduled medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*,

914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

The increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that "when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in §8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The court of appeals has explained that scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. Specifically, the procedures of § 8-42-107(8)(c), C.R.S. only apply to non-scheduled impairments. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000); *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Gagnon v. Westward Dough Operating CO. D/B/A Krispy Kreme* W.C. No. 4-971-646-03 (ICAO, Feb. 6, 2018).

A party disputing the impairment rating of a scheduled injury bears the burden of proof by a preponderance of the evidence. *Maestas v. American Furniture Warehouse*,

W.C. No. 4-662-369 (June 5, 2007); *Ortiz v. Ingersoll-Rand Co.*, W.C. No. 4-981-218-04 (January 25, 2018); *Gagnon v. Westward Dough Operating CO. D/B/A Krispy Kreme*, *supra*. A “preponderance of the evidence” is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark*, 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.*, 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.*, W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. Also see *Ortiz v. Principi*, 274 F.3d 1361 (D.C. Cir. 2001). “Preponderance” means “the existence of a contested fact is more probable than its nonexistence.” *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

As found, Respondents failed to overcome Dr. Gellrick’s DIME opinion on whole person impairment and scheduled impairment. Respondents argue Dr. Gellrick erred by solely assigning impairment based on Claimant’s subjective complaints and nonphysiologic findings, with no objective medical basis. Respondents rely on Dr. Raschbacher’s opinion, which is essentially based on the premise that Claimant’s disc extrusion was the sole pain generator and, thus, resolution of the herniated disc should have resulted in resolution of all symptoms. It is undisputed Claimant’s herniated disc resolved, as evidenced by the June 22, 2016 MRI. This was clearly noted by each provider and IME physician, including Dr. Gellrick. Dr. Gellrick, however, determined that the work injury resulted in additional diagnoses, including facetogenic lumbar pain and chronic L5 radiculopathy.

While Dr. Raschbacher opined there is no factual basis for Dr. Gellrick’s diagnosis of work-related facetogenic pain, the medical records indicate otherwise. Dr. Hughes diagnosed Claimant with persistent facet joint arthropathy secondary to the lumbar sprain and disc extrusion. Dr. Olsen opined Claimant potentially had two pain generators – facetogenic and discogenic – for which he recommended facet injections and the results of which were considered diagnostic. Dr. Moses opined the work injury resulted in a low back strain with residual facetogenic pain, as indicated on physical exam and MRI. He included a clear explanation regarding the casual link between the receded herniated disc and Claimant’s facetogenic pain, noting it is a generally accepted principle that desiccation of a herniated disc often causes facetogenic back pain. Thus, Dr. Gellrick’s diagnosis of facetogenic lumbar pain is supported by the medical records and opinions of multiple other physicians. Moreover, although the disc extrusion has resolved, there remains an objective basis for Claimant’s limited range of motion, as testified to by Dr. Zuehlsdorff.

Respondents further argue there is no objective medical basis for Claimant’s lower extremity complaints and Dr. Gellrick’s assignment of a scheduled impairment rating. In support of this contention, Dr. Raschbacher reiterated the fact that the disc extrusion resolved and nothing is pressing on Claimant’s nerve. Again, the medical records and opinions of Drs. Mason, Hughes, Moses and Zuehlsdorff support Dr. Gellrick’s lower extremity diagnosis and impairment. Subsequent to the resolution of the disc herniation, documented exam findings consistently note diminished sensation in an L5 distribution, weakness and numbness. The January 19, 2017 EMG provided objective evidence of mild, chronic L5 radiculopathy. Dr. Mason specifically noted that, despite the rescission of the extruded disc, Claimant likely sustained nerve damage to

the L5 nerve root and continued to experience ongoing radiculopathy. Drs. Moses and Zuehlsdorff agreed Claimant suffered chronic L5 radiculopathy resulting from the work injury. Dr. Zuehlsdorff credibly testified at hearing that, although the extrusion receded, the herniation did result in chronic damage to the nerve, which could serve as a basis for Claimant's symptoms.

Although Dr. Gellrick noted, but did not discuss, the difference in Claimant's reported pain levels and observed presentation at her examination, there is substantial credible and persuasive evidence establishing she did not solely rely on Claimant's subjective complaints in reaching her conclusions. Having performed a comprehensive medical records review, which included the IME reports of Dr. Raschbacher, Dr. Gellrick was aware of Dr. Raschbacher's perceived concerns regarding pain behaviors and nonphysiologic findings. She nonetheless determined Claimant sustained permanent impairment, indicating Dr. Gellrick deemed there to be adequate objective evidence to do so per the AMA Guides. Dr. Gellrick's DIME report supports her analysis and conclusions.

Respondents do not allege issues with the validity of Dr. Gellrick's measurements or her calculations. The impairment rating issued by Dr. Gellrick are in line with those assessed by Drs. Hughes and Zuehlsdorff. Although Dr. Raschbacher opined Claimant should not receive a rating for lumbar range of motion deficits or lower extremity symptoms, he did acknowledge Claimant meets the criteria for an impairment rating under Table 53 II-C of the AMA Guides. As discussed above, the contention that there is no objective medical basis supporting Dr. Gellrick's opinion is unpersuasive in light of consistently noted exam findings, EMG results, and the corroborating opinions of Drs. Mason, Olsen, Hughes, Moses and Zuehlsdorff. To the extent Dr. Raschbacher disagrees with the impairment rating assessed by Dr. Gellrick, such disagreement is a mere difference of opinion. Based on the totality of the credible and persuasive evidence, Respondents failed to prove, both by a preponderance of the evidence and by clear and convincing evidence, that Dr. Gellrick's erred in her DIME opinion on impairment.

Medical Maintenance Benefits

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expeditors Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, W. C. No. 4-471-818 (ICAO, May 16, 2002). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015).

An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003); *Anderson v. SOS Staffing Services*, W.C. No. 4-543-730, (ICAO, July 14, 2006). A DIME physician's opinion on the need for medical maintenance benefits is entitled to no special weight. *Yeutter v. Industrial Claim Appeals Office and CBW Automation, Inc.*, No. 18CA0498 (Colo. App. 4-11-19).

As found, Claimant proved it is more likely than not she is entitled to an award of maintenance medical benefits. Claimant sustained permanent impairment and continues to experience back and lower extremity symptoms as a result of the work injury. Dr. Gellrick recommended extensive maintenance care of multiple modalities. While Dr. Gellrick's DIME opinion has no presumptive weight on the issue of maintenance medical treatment, the ALJ considers Dr. Gellrick's opinion among the totality of the evidence. Claimant's ATP, Dr. Mason, also recommended maintenance medical treatment for Claimant, as did Dr. Zuehlsdorff. The totality of the credible and persuasive evidence establishes future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of Claimant's condition. Respondents retain the right to challenge the compensability, reasonableness, and necessity of specific maintenance treatments. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services*, W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015).

Reimbursement of Medical Expenses

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

Sections 8-42-101(6), C.R.S. provides:

(a) If an employer receives notice of injury and the employer or, if insured, the employer's insurance carrier, after notice of the injury, fails to furnish reasonable and necessary medical treatment to the injured worker for a claim that is admitted or found to be compensable, the employer or carrier shall reimburse the claimant, or any insurer or governmental program that pays for related medical treatment, for the costs of reasonable and necessary treatment that was provided. An employer, insurer, carrier, or provider may not recover the cost of care from a claimant where the employer or carrier has furnished medical treatment except in the case of fraud.

(b) If a claimant has paid for medical treatment that is admitted or found to be compensable and that costs more than the amount specified in the workers' compensation fee schedule, the employer or, if insured, the

employer's insurance carrier, shall reimburse the claimant for the full amount paid. The employer or carrier is entitled to reimbursement from the medical providers for the amount in excess of the amount specified in the worker's compensation fee schedule.

WCRP Rule 16-11(F) provides,

An injured worker shall never be required to directly pay for admitted or ordered medical benefits covered under the Workers' Compensation Act. In the event the injured worker has directly paid for medical services that are then admitted or ordered under the Workers' Compensation Act, the payer shall reimburse the injured worker for the amounts actually paid for authorized services within 30 days after receipt of the bill. If the actual costs exceed the maximum fee allowed by the Medical Fee Schedule, the payer may seek a refund from the medical provider for the difference between the amount charged to the injured worker and the maximum fee. Each request for a refund shall indicate the service provided and the date of service(s) involved.

Claimant has proven by a preponderance of the evidence she is entitled to reimbursement for out-of-pocket medical expenses paid related to the work injury. ALJ Jones found Claimant sustained a compensable injury and was entitled to reasonable, necessary and related medical treatment. Respondents filed a GAL pursuant to ALJ Jones' order. Drs. Mason, Olsen, Moses, Hughes, Gellrick and Zuehlsdorff have opined Claimant suffered low back and lower extremity symptoms as a result of the work injury. Claimant credibly testified she paid for treatment related to the work injury out-of-pocket. Such expenses include, but are not limited to, medications, evaluations and imaging studies, which were reasonable, necessary and related to the work injury.

ORDER

1. Respondents failed to overcome Dr. Gellrick's DIME opinion on whole person and scheduled impairment. Respondents shall pay permanent partial disability benefits based upon the medical impairment rating issued by Dr. Gellrick.
2. Respondents shall reimburse Claimant for reasonable and necessary out-of-pocket expense paid by Claimant related to the work injury.
3. Respondents shall pay for reasonable, necessary and related maintenance medical treatment.
4. The Insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

ISSUES

➤ Whether claimant has proven by a preponderance of the evidence that the sacroiliac ("SI") joint fusion surgery recommended by Dr. Clifford is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury?

FINDINGS OF FACT

1. Claimant was employed with employer as a cosmetology instructor. Claimant sustained an admitted injury with employer on May 22, 2018 when she slipped on water and fell on to her right side, landing on her right arm, right hip and low back.

2. Claimant was referred to WorkPartners for medical treatment by employer. Claimant was initially examined by Physicians' Assistant ("PA") Herrera on May 22, 2018. Claimant reported a consistent accident history with complaints of pain located in the lumbar spine area that was constant. PA Herrera also noted pain in to the right hip and right ankle. PA Herrera noted a prior accident history that included a significant car accident about 12 years ago that a C2 fracture, sternum fracture, rib fracture and right ankle fracture. PA Herrera diagnosed claimant with low back pain, pain in the right hip, pain in the right ankle and joints of the right foot and pain in the thoracic spine. PA Herrera opined that claimant had exacerbated her right lower back and hip injury, but did not suspect an acute fracture or disc herniation.

3. Claimant returned to PA Herrera on June 1, 2018. Claimant reported that her neck was doing better, but her back was still giving her some problems with stiffness and pain with prolonged sitting and standing. PA Herrera provided claimant with some stretches and instructed her to return in 2 weeks.

4. Claimant was next evaluated by PA Herrera on June 18, 2018. Claimant reported an increase in her low back pain after standing on the floor for greater than 2 hours. Claimant reported that with certain movements like bending, she will feel a shocking pain in the middle of her lower back. PA Herrera noted that claimant had been treating with her primary care physician for low back pain for the past six years. PA Herrera prescribed claimant Celebrex and referred claimant for physical therapy.

5. Claimant's prior history of low back and hip pain included treatment with Dr. Rodriguez. Claimant was prescribed oxycodone for her low back pain in 2015 along with an epidural steroid injection ("ESI"). Claimant had x-rays of the low back in 2017. Claimant was examined by Dr. Rodriguez on May 19, 2018 with reports for low back pain with discomfort most prominent in the mid lumbar spine.

6. Claimant returned to PA Herrera on July 17, 2018 with complaints of increased symptoms in her lower back. PA Herrera noted claimant had not yet begun

physical therapy. Claimant eventually began her physical therapy on July 23, 2018. The therapist noted claimant was complaining of high levels of central low back pain.

7. Claimant again returned to PA Herrera on August 14, 2018. Claimant reported to PA Herrera that she had some improvement in her daytime pain with the use of Celebrex. PA Herrera noted that claimant had a high amount of degenerative changes in her lumbar spine as noted on the x-ray at the L5-S1 level. PA Herrera recommended claimant undergo a magnetic resonance image ("MRI") of the lumbar spine.

8. Claimant was examined by Dr. Fay with WorkPartners on August 31, 2018. Dr. Fay noted claimant did not have sciatic notch tenderness bilaterally. Dr. Fay noted claimant did have tenderness over her right SI joint. Dr. Fay referred claimant for an MRI of the lumbar spine.

9. The MRI was performed on September 7, 2018. The MRI demonstrated severe disc space height loss with minimal spinal canal narrowing second to a disc bulge and mild to moderate right and moderate left neural foraminal narrowing secondary to facet arthropathy at the L5-S1 level.

10. Claimant returned to PA Herrera on September 11, 2018. PA Herrera reviewed the results of the MRI and noted no acute findings. PA Herrera recommended claimant continue the Celebrex and physical therapy. Claimant again returned to PA Herrera on October 4, 2018. Claimant reported her back pain was a little worse with the weather changes. PA Herrera noted claimant was not completing the physical therapy and opined that claimant was approaching maximum medical improvement ("MMI").

11. Claimant was examined by Dr. Fay on November 1, 2018. Claimant reported that she had increased symptoms and some days she could not get out of bed. Dr. Fay recommended claimant be evaluated by Dr. Lewis for pain management.

12. Claimant was examined by Dr. Lewis on December 5, 2018. Dr. Lewis noted claimant had advanced degenerative changes at L5-S1 and recommended a right L4-5 epidural steroid injection along with the left L5-S1 epidural steroid injection. Claimant underwent the right sided injection on January 10, 2019. Claimant reported to Dr. Fay on January 14, 2019 that the injection resolved her right leg pain with 99% improvement. By January 17, 2019, claimant was reporting improvement of 60% of her pain.

13. Claimant underwent the left sided injection on January 29, 2019.

14. Claimant returned to Dr. Fay on February 4, 2019 and reported 50% improvement with the recent injections. Dr. Fay noted that the injections had improved claimant's pain significantly and recommended claimant discuss a possible rhizotomy. Dr. Fay recommended chiropractic visits for claimant's somatic dysfunction.

15. Claimant returned to Dr. Fay on March 4, 2019. Dr. Fay noted that claimant reported significant improvement following the injections, but not for long. Dr. Fay referred claimant to Dr. Tice for a surgical consultation.

16. Claimant was examined by PA Scruton in Dr. Tice's office on April 2, 2019. PA Scruton noted claimant reported a history of a prior motor vehicle accident in 2006. Claimant reported a history of chiefly right sided low back pain that radiated down the posterolateral aspect of the right lower extremity but not past the knee. PA Scruton recommended diagnostic injection of the right SI joint, potentially with steroid for therapeutic effect. PA Scruton further recommended considering an electromyogram and nerve conduction velocity (EMG/NCV) study of the lower extremity and a sacroiliac stabilizing belt if there was a diagnostically positive injection. PA Scruton also recommended considering a radiofrequency ablation neurotomy if claimant did not receive therapeutic effect with the steroid injection or SI belt.

17. Claimant returned to Dr. Lewis for a right SI joint injection on April 16, 2019. Claimant reported to Dr. Fay on April 17, 2019 and reported that the injection completely resolved her pain for about 8 hours, before the pain gradually returned. Dr. Fay referred claimant to Dr. Carris for treatment of her adjustment disorder and recommended that claimant follow up with Dr. Clifford and/or Dr. Tice.

18. Claimant returned to PA Scruton on April 23, 2019. PA Scruton noted claimant's report of having 100% pain relief for 6-7 hours after the injection. Claimant also reported that she may be getting worse over time. PA Scruton noted that claimant had not experienced a therapeutic result with the intraarticular steroid injection and spoke with claimant about trying the SI belt as a form of conservative treatment. PA Scruton noted that if claimant did not improve with the SI belt, he would recommend radiofrequency ablation neurotomy.

19. Respondents obtained a Physician Advisor report from Dr. McCranie on May 2, 2019 that recommended denying the radiofrequency ablation procedure due to the fact that medial branch blocks had not yet been performed.

20. Claimant returned to Dr. Fay on May 8, 2019. Dr. Fay noted the denial of the radiofrequency ablation procedure and recommended claimant follow up with Dr. Lewis. Claimant was referred for additional massage therapy appointments and referred to Dr. Clifford, an orthopedic surgeon, for evaluation and treatment.

21. Respondents obtained an independent medical evaluation ("IME") of claimant with Dr. Bernton on May 14, 2019. Dr. Bernton reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Bernton noted claimant's prior history of back pain and left hip complaints. Dr. Bernton noted claimant was evaluated three days prior to her work injury with reports of low back pain in the mid lumbar spine. Dr. Bernton opined that claimant's work injury, a slip and fall, would not result in long term or permanent exacerbation of her pre-existing pain levels.

22. Dr. Bernton opined that claimant's examination was consistent with the pain generator being the right SI joint and public symphysis, but opined that this was related to claimant's pre-existing condition, and not her work related slip and fall injury. Dr. Bernton further opined that a SI joint fusion would be not be appropriate treatment or consistent with the medical treatment guidelines. Dr. Bernton instead recommended repeat SI joint injections, medial branch blocks and a possible SI rhizotomy. Dr. Bernton opined that none of these treatments would be related to claimant's work injury, however.

23. PA Scruton evaluated claimant on May 22, 2019. PA Scruton noted claimant's pain response following the injection and reviewed the report from Dr. McCranie. PA Scruton noted that they would request authorization for a right L4 through S3 medial branch block testing and if diagnostically positive, seek authorization for radiofrequency ablation neurotomy.

24. Claimant was examined by Dr. Clifford on June 17, 2019. Dr. Clifford noted claimant reported 100% relief following the injections from Dr. Lewis on January 10, January 29 and April 16, 2019. Dr. Clifford stressed to claimant the importance of weight loss and recommended claimant utilize conservative treatment including core strengthening, stretching, anti-inflammatories and using ice daily. Dr. Clifford mentioned claimant would benefit from undergoing a right SI joint fusion. Dr. Clifford recommended that prior to surgery, claimant should repeat the right SI joint injection for diagnostic purposes. Dr. Clifford noted that he was recommending focusing on the SI joint as he did not believe claimant's pain was associated with levels higher in her lumbar.

25. Claimant underwent a right L4-S3 diagnostic blockade of the innervations to the right SI joints (L4 medial branch, L5 dorsal ramus and the posterior lateral banches of the S1, S2 and S3 foramina on the right) under the auspices of Dr. Lewis on June 18, 2019.

26. Claimant returned to Dr. Fay on June 20, 2019 and reported that the medial branch blocks caused right leg numbness, but claimant could still feel the pain as well. Dr. Fay recommended claimant return to Dr. Clifford for the right SI joint fusion.

27. Claimant returned to PA Scruton on June 27, 2019. PA Scruton reviewed claimant's pain log from after the medical branch block testing and noted at best a peak of 50% improvement in her pain before quickly weaning back. PA Scruton noted that this result was not amenable to a second medial branch block test or radiofrequency ablation neurotomy. PA Scruton recommended a confirmatory diagnostic only injection of her right SI joint.

28. Claimant was examined by PA Herrera on July 8, 2019. PA Herrera noted that claimant's medial branch blocks with Dr. Lewis had not provided her with help for her pain and noted that claimant had discussed with Dr. Clifford an SI joint fusion surgery. PA Herrera noted that fusions of the SI joint were not generally recommended

to treat joint dysfunction, but also noted that there is new technology and advancements/physician training that has been yielding better outcomes.

29. Claimant was examined by Dr. Fay on July 18, 2019. Dr. Fay noted she had reviewed the IME report from Dr. Bernton and concurred with his assessment that claimant was at maximum medical improvement (“MMI”) in October 2018 and that her claimant should be closed. Dr. Fay opined that claimant had not disclosed that she was seeing her primary care physician in Denver and that she was receiving prescriptions from him. Dr. Fay opined that claimant had no work restrictions or permanent impairment as a result of the injury.

30. Claimant returned to Dr. Fay on July 25, 2019. Dr. Fay noted that she had concurred with Dr. Bernton that claimant was at maximum medical improvement (“MMI”) in October 2018. However, after reviewing her notes more carefully, Dr. Fay opined that there was a greater than 50% probability that claimant’s SI joint dysfunction and pain which claimant was experiencing was related to her injury in May 2018. Dr. Fay opined that claimant’s claim should remain open until such time as she is at MMI as related to the SI joint dysfunction.

31. Claimant returned to Dr. Clifford on September 18, 2019. Dr. Clifford noted claimant was unable to get the right SI joint injection as recommended. Dr. Clifford again recommended claimant proceed with the injection and, if successful, claimant would be a candidate for right SI joint fusion. Claimant subsequently underwent the SI joint injection under the auspices of Dr. Clifford on October 9, 2019. Claimant reported 100% relief of back pain following the injection.

32. Claimant returned to Dr. Fay on October 17, 2019. Claimant reported to Dr. Fay that following her SI joint injection, she had 100% pain relief for 3 hours. Dr. Fay again recommended claimant’s case remain open until she is at MMI as related to the SI joint dysfunction.

33. Claimant returned to Dr. Clifford on November 4, 2019. Dr. Clifford reported claimant had 100% back pain relief for 4 hours following her injection. Dr. Clifford recommended that claimant lose weight prior to the surgery, but recommended proceeding with the right SI joint fusion surgery.

34. Claimant returned to Dr. Fay on November 19, 2019. Dr. Fay noted Dr. Clifford was recommending claimant proceed with the fusion and noted that claimant needed to lose an additional 12 pounds prior to the surgery.

35. Dr. Bernton performed an additional medical records review and issued a second IME report dated March 18, 2020. Dr. Bernton reviewed the results of claimant’s medial branch blocks and additional SI joint injections. Dr. Bernton opined that the recommended SI joint fusion was not reasonable medical treatment as it was not recommended by the Colorado Medical Treatment Guidelines. Dr. Bernton again opined that claimant’s right SI joint pain generator was not related to her work injury.

36. Dr. Fay testified at hearing in this matter. Dr. Fay noted that it was her opinion that claimant's SI joint pain and dysfunction was related to her work injury. Dr. Fay testified that while she initially agreed with Dr. Bernton's opinion with regard to claimant being at MMI, she no longer holds this opinion. Dr. Fay further testified that it was her opinion that claimant's SI joint is the primary pain generator. Dr. Fay opined that the SI joint fusion surgery was reasonable medical treatment necessary to cure and relieve the claimant from the effects of her work injury.

37. Dr. Clifford testified at hearing in this matter. Dr. Clifford testified that he was recommending a right SI joint fusion and that the goal of that procedure was to fuse the SI joint. Dr. Clifford testified that he has performed this procedure approximately 40 times and that he has seen improvement in approximately 90% of the surgeries he has performed. Dr. Clifford opined that the problems with the SI joint were related to claimant's May 22, 2018 work injury. Dr. Clifford testified on cross examination that he was not aware of claimant's 2006 motor vehicle accident and did not review the medical records from Dr. Rodriguez.

38. Dr. Bernton testified at hearing in this matter consistent with his IME reports. Dr. Bernton testified that it was his opinion that claimant's occupational injury was not the cause of her pain. Dr. Bernton opined that claimant has chronic lumbar pain that is related to degenerative changes in the lumbar spine. Dr. Bernton testified that claimant had advanced degenerative changes at the L5-S1 level which was likely causing much of claimant's pain.

39. Claimant testified at hearing in this matter. Claimant testified that prior to her work injury, she had lower lumbar symptoms that felt like her lumbar spine was being squeezed. Claimant testified that her symptoms after the work injury were different than her low back symptoms prior to the work injury. Claimant testified she now has pain just right of the tailbone which she described as an aching constant pain, with some groin and buttock pain.

40. The ALJ credits the opinions and testimony of Dr. Fay and Dr. Clifford and finds that claimant has demonstrated that it is more probable than not that the recommended right SI joint fusion surgery recommended by Dr. Clifford is reasonable medical treatment necessary to cure and relieve claimant from the effects of her work injury. The ALJ notes that while claimant had a prior history of low back complaints, the medical records demonstrate that it is more likely true than not that the work injury on May 22, 2018 caused new symptoms related to the SI joint dysfunction that is intended to be addressed by the proposed right SI joint fusion surgery. The ALJ credits the opinions expressed by Dr. Fay and Dr. Clifford in their reports and testimony in reaching this factual finding.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-

102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, claimant has demonstrated by a preponderance of the evidence that the right SI joint fusion surgery recommended by Dr. Clifford is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the opinions expressed by Dr. Fay and Dr. Clifford are determined to be credible and persuasive in reaching this finding of fact.

ORDER

It is therefore ordered that:

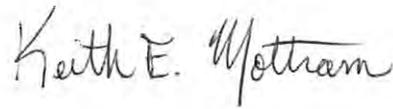

1. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury including the right SI joint fusion surgery recommended by Dr. Clifford, pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed

it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. . **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

DATED: May 12, 2020

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-119-301-001**

ISSUES

- Did Claimant prove he suffered a compensable injury arising out of and in the course and scope of his employment on September 7, 2019?
- Did Claimant prove entitlement to reasonably necessary medical benefits?
- What is Claimant's average weekly wage (AWW)?
- Did Claimant prove entitlement to temporary total disability (TTD) benefits commencing September 7, 2019?
- Did Claimant prove Employer should be penalized for failure to admit or deny liability?
- Is Employer required to pay an additional 25% to the Colorado Uninsured Employer Fund?

FINDINGS OF FACT

1. Employer hired Claimant in August 2019 to tear off and re-cover a 1500 square foot roof on a customer's home. Employer told Claimant it was a "simple" one-layer job.

2. Employer agreed to pay Claimant \$35 "per square" to tear off and replace the roof. A "square" is 100 square feet of roof, so there were 15 "squares" in the 1500 square foot roof. Claimant estimated it would have taken two weeks to complete the job had it been a single-layer roof as anticipated.

3. When he got on the roof and started the job, Claimant realized there were four layers of existing roof to tear off.

4. Employer was supposed to supply the materials for the project and stock them on the roof. Employer also told Claimant he would provide a worker to help with the project. Employer provided a helper the first day, but after that Claimant was left to finish the job by himself.

5. Claimant worked on the project for a couple of days but his progress was stymied by weather. Then a representative from Regional Building came and shut the project down because Employer had not pulled a permit.

6. Two days later, Employer called and informed Claimant he had secured the building permit and work could resume.

7. Employer stopped responding to Claimant's calls after that. The homeowners also tried to reach Employer without success. They had paid Employer \$3,200 for materials, but he had not brought materials to the job site. Repeated heavy rains were causing leaking into the home, so Claimant used his personal funds to buy materials to cover the roof. The homeowners then gave Claimant additional money so he could purchase the materials needed to finish the job.

8. Claimant purchased the materials and loaded them onto the roof by himself because Employer provided no one to help him. Throughout the project, Claimant struggled to move roofing materials and complete repeated trips up and down the ladder. He developed progressively worsening low back and leg pain during the project as a direct and proximate result of the physically demanding work. The lack of help during the project probably contributed to Claimant's injury.

9. Employer appeared at the job site on September 7, 2019, when Claimant was almost finished with the project. Claimant informed Employer he could not keep working because of his severe low back and leg pain. Employer took over work on the project.

10. Claimant filed a Workers' Claim for Compensation form on September 20, 2019. He mailed a copy to Employer.

11. On October 15, 2019, Employer appeared at Claimant's home and berated him for filing a workers' compensation claim. He told Claimant, "You are not getting anything." Employer never paid Claimant for his work on the project.

12. Employer never referred Claimant to a physician for treatment.

13. In December 2010, Claimant sought treatment for his back pain at the VA Rocky Mountain Regional Medical Center. He underwent x-rays on December 10, 2019, but the results are not in the record. Claimant was referred for a lumbar MRI and a physical medicine evaluation before he could have a surgical consultation.

14. Claimant proved he was performing services for pay for Employer when he was injured. There is no persuasive evidence he was free from direction and control or customarily engaged in an independent trade or business related to the service provided.

15. Claimant proved he suffered an injury to his low back arising out of and occurring within the course and scope of his employment for Employer.

16. The right to select a physician passed to Claimant and he selected the VA Medical Center.

17. Under the terms of hire, Claimant would have been paid \$525 for the roof project. Claimant estimated it would have taken two weeks to complete the project. Claimant's AWW is \$262.50 ($\$525 \div 2 = \262.50). This equates to a weekly TTD rate of \$175 and a daily rate of \$25.

18. Claimant proved he is entitled to TTD benefits commencing September 8, 2019 and ongoing. Claimant stopped work on September 7, 2019 because of the effects of the work injury. Claimant has not returned to work, has not been released to full duties, and has not been put at MMI.

19. The total past-due TTD is \$6,200 through the date of this decision. The total accrued statutory interest is \$161.58 through the date of this decision. TTD will continue to accrue at the rate of \$175 per week until terminated by law. Interest will continue to accrue at the rate of \$1.39 per day until the past-due TTD is paid in full.

20. Employer must pay an additional \$1,550 to the Colorado Uninsured Employer Fund because it was uninsured at the time of Claimant's injury ($\$6,200 \times 25\% = \$1,550$).

21. Employer knew Claimant had to stop working because of the injury on September 7, 2019. Employer was required to formally admit or deny liability no later than Monday, October 7, 2019. Employer never filed an admission of liability or notice of contest with the Division of Workers' Compensation.

22. Employer should be penalized \$25 per day, from October 7, 2019 through the date of this decision (May 12, 2020), for failing to admit or deny liability.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001).

An individual who performs services for another in exchange for compensation shall be deemed an employee unless such individual is free from direction and control in the performance of the service and is customarily engaged in an independent trade, occupation, profession, or business related to the service performed. Section 8-41-202(2)(a), C.R.S. If the claimant establishes he performed services for pay, the burden shifts to the employer to prove the claimant was an independent contractor. *Stampados v. Colorado D & S Enterprises*, 833 P.2d 815 (Colo. App. 1992); *Almanza v. W.Y.B. d/b/a What's Your Beef*, W.C. No. 4-489-774 (April 16, 2002).

As found, Claimant proved he suffered a compensable injury to his low back arising out of and in the course of his employment on September 7, 2019. The injury resulted from repeated lifting and carrying of heavy roofing materials by himself during the project. The onset of disability occurred on September 7, 2019 when he could no longer continue working. There is no persuasive evidence Claimant was free from direction and control in the performance of service to Employer or was customarily engaged in an independent trade or business.

B. Medical Benefits

The employer is liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101, C.R.S. The employer has the right to choose the claimant's treating physician "in the first instance." Section 8-43-404(5)(a)(I)(A), C.R.S. If the employer does not tender medical treatment forthwith upon learning of the injury, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987).

As found, right to select a treating physician passed to Claimant, and he selected the Rocky Mountain Regional VA Medical Center. Employer is liable for reasonably necessary treatment from the VA Medical Center and its referrals to cure and relieve the effects of Claimant's industrial injury.

C. Average Weekly Wage

Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993).

As found, Claimant's AWW is \$262.50. This is based on the \$525 Employer promised for the roof project, averaged over the two weeks Claimant estimated the job should have taken had it been a one-layer roof as described to him.

D. Temporary disability benefits

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the wage loss to obtain TTD benefits. *Id.* The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function, and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Once commenced, TTD benefits continue until the occurrence of one of the factors enumerated in § 8-42-105(3), C.R.S.

The persuasive evidence shows Claimant was disabled by severe injury-related low back and leg pain and could no longer tolerate his physically demanding work on September 7, 2019. He stopped working and has not returned to work since then. There is no persuasive evidence Claimant has been released to regular duty or been put at MMI

by an authorized treating physician. Accordingly, Claimant is entitled to TTD benefits commencing September 8, 2019 and continuing until terminated by law. The TTD rate is \$175 per week $\$262.50 \times 2/3 = \175).

E. Total TTD and statutory interest owed

Employers or their insurers must pay statutory interest of 8% per annum on all benefits not paid when due. Section 8-43-410(2), C.R.S. Based on the TTD rate of \$175 per week, Employer owes \$6,200 in TTD benefits and \$161.58 in statutory interest from September 8, 2019 through May 12, 2020. TTD will continue to accrue at the rate of \$175 per week until terminated by one of the events enumerated in § 8-42-105(3). Interest will continue to accrue at the rate of \$1.39 per day until the past-due TTD is paid. The accrued interest and ongoing daily interest were calculated using the Division of Workers' Compensation Benefits Calculator, which is available on the Division's website. <https://dowc.cdle.state.co.us/Benefits/tab/interest.aspx>

F. Penalties for failure to admit or deny

Claimant seeks a penalty under § 8-43-203 for “failure to file [a] General Admission of Liability.” The employer must admit or deny liability within 30 days after it learns of an injury that results in “lost time from work for the injured employee in excess of three shifts or calendar days.” Section 8-43-101; 8-43-203(1)(a). Under § 8-43-203(2)(a), an employer “may become liable” to the claimant “for up to one day’s compensation for each day’s failure” to file an admission or notice of contest with the Division. The maximum penalty for failure to admit or deny liability cannot exceed “the aggregate amount of three

hundred sixty-five days' compensation." Fifty percent of any penalty shall be paid to the claimant and fifty percent to the Subsequent Injury Fund. Section 8-43-203(2)(a), C.R.S.

The phrase "may become liable" means imposition of a penalty under § 8-42-203(2)(a) is discretionary. *E.g., Gebrekidan v. MKBS, LLC*, W.C. No. 4-678-723 (May 10, 2007). The purposes of the requirement to admit or deny liability are to notify the claimant he is involved in a proceeding with legal ramifications, and to notify the Division of the employer's position so the Division can exercise its administrative oversight over the claim process. *Smith v. Myron Stratton Home*, 676 P.2d 1196 (Colo. 1984). Two important purposes of penalties are to punish the violator and deter future misconduct. *May v. Colorado Civil Rights Commission*, 43 P.3d 750 (Colo. App. 2002). The ALJ should consider factors such as the reprehensibility of the conduct and the extent of harm to the non-violating party. *Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005). The penalty should not be constitutionally excessive or grossly disproportionate to the violation found. *Dami Hospitality, LLC v. Industrial Claim Appeals Office*, 442 P.3d 94 (Colo. 2019). The claimant must prove circumstances justifying the imposition of a penalty under § 8-43-203(2)(a). *Pioneer Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005).

As found, Employer has never filed an admission or denial of liability regarding Claimant's injury. Employer knew Claimant suffered a lost time injury on September 7, 2018, so the deadline to admit or deny liability was October 7, 2019. Employer should be penalized \$5,475 from October 7, 2019 through May 12, 2020 for failure to admit or deny liability. This is based on 219 days at the daily compensation rate of \$25 dollars. Employer offered no explanation for its failure to admit or deny liability or any persuasive evidence to mitigate the allowable penalty. The penalty of \$5,475 is sufficient to penalize Employer's violation of the law and encourage future compliance without being excessively punitive. Fifty percent (50%) of this penalty shall be paid to Claimant and fifty percent (50%) to the Subsequent Injury Fund.

G. Increased compensation for failure to insure

Section 8-43-408(5), C.R.S. (2018) provides,

In addition to any compensation paid or ordered . . . an employer who is not in compliance with the insurance provisions of [the Act] at the time an employee suffers a compensable injury or occupational disease shall pay an amount equal to twenty-five percent of the compensation or benefits to which the employee is entitled to the Colorado uninsured employer fund created in section 8-67-105.

The penalty for failure to insure only applies to indemnity benefits; it does not apply to medical benefits. *Industrial Commission v. Hammond*, 77 Colo. 414, 236 P. 1006 (1925); *Jacobson v. Doan*, 319 P.2d 975 (Colo. 1957); *Wolford v. Support, Inc.*, W.C. No. 4-155-231 (February 13, 1998). Although the ALJ is not aware of a case directly on point, statutory interest is not properly considered "compensation or benefits" within the meaning of 8-43-408(5). Interest is a statutory right intended to secure claimants the

present value of benefits to which they are entitled by creating an equitable remedy for the lost time value of money during the accrual period. *Subsequent Injury Fund v. Trevethan*, 809 P.2d 1098 (Colo. App. 1991).

Employer has been ordered to pay Claimant \$6,200 in TTD benefits. Twenty-five percent (25%) of the compensation awarded is \$1,550.

H. Payment to Division trustee or a bond to secure payment of benefits

Employer was not insured for workers' compensation liability at the time of Claimant's injury. Under § 8-43-408(2), Employer must pay to the trustee of the Division of Workers' Compensation ("Division") an amount equal to the present value of all unpaid compensation or benefits, computed at 4% per annum. Although this Order awards ongoing TTD benefits, the end date is unknown, so the present value of ongoing TTD cannot be calculated. The total compensation, penalties, and interest Ordered herein is \$13,386.58. In the alternative, Employer may file a bond with the Division signed by two or more responsible sureties approved by the Director or by some surety company authorized to do business in Colorado. Employer may contact the Division trustee for assistance with its obligations in this regard. The Division trustee may be contacted via telephone through the Division's customer service line at 303-318-8700, or via email to Gina Johannesman gina.johannesman@state.co.us. The Division can also help Employer calculate medical payments owed under the fee schedule.

ORDER

It is therefore ordered that:

1. Claimant's injury on September 7, 2019 is compensable.
2. Employer shall cover reasonably necessary treatment from authorized providers to cure and relieve the effects of Claimant's injury.
3. The Rocky Mountain Regional VA Medical Center is authorized.
4. Claimant's average weekly wage is \$262.50.
5. Employer shall pay Claimant \$6,200 in TTD benefits from September 8, 2019 through May 12, 2020.
6. Employer shall pay Claimant \$161.58 in statutory interest accrued through May 12, 2020 on the past-due TTD. Interest will continue to accrue at the rate of \$1.39 per day until the past-due TTD is paid.
7. Employer shall pay Claimant \$175 per week in TTD benefits commencing May 15, 2020 and continuing until terminated by law.
8. Employer shall pay statutory interest of 8% per annum on all TTD owed on or after May 15, 2020 not paid when due.

9. Employer shall pay \$5,475 in penalties for failure to admit or deny liability. Fifty percent of the penalty shall be paid to the Claimant, and fifty percent of the penalty shall be paid to the Subsequent Injury Fund. The check for the Subsequent Injury Fund shall be payable to and sent to the Division of Workers' Compensation, 633 17th Street, Suite 900, Denver, Colorado 80202, Attention: Gina Johannesman, Trustee Special Funds Unit.

10. Employer shall pay \$1,550 to the Colorado Uninsured Employer Fund. The check shall be payable to the Division of Workers' Compensation, 633 17th Street, 9th Floor, Denver, CO 80202, Attention Iliana Gallegos, Revenue Assessment Officer.

11. In lieu of payment of the above compensation and benefits to the Claimant, the Employer shall:

a. Deposit \$13,386.58 with the Division of Workers' Compensation, as trustee, to secure payment of all unpaid compensation and benefits awarded. The check shall be payable to and sent to the Division of Workers' Compensation, 633 17th Street, Suite 900, Denver, Colorado 80202, Attention: Gina Johannesman, Trustee Special Funds Unit; or

b. File a surety bond in the amount of \$13,386.58 with the Division of Workers' Compensation within ten (10) days of this order:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation, penalties and benefits awarded.

12. Employer shall notify the Division of Workers' Compensation and Claimant's attorney of payments made pursuant to this order.

13. Filing any appeal, including a petition to review, shall not relieve Employer of the obligation to pay the designated sum to the Claimant, to the trustee or to file the bond as required by paragraph 11(b) above. Section 8-43-408(2), C.R.S.

14. Any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless an agreement or Order authorizing distribution provides otherwise.

15. If Employer fails to pay the Claimant indemnity and/or medical benefits as ordered herein, Employer shall pay an additional 25% penalty to the Colorado Uninsured Employer Fund of the Colorado Division of Workers' Compensation, pursuant to § 8-43-408 (6), C.R.S.

16. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: May 12, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that surgery recommended by Dr. David Miller is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted May 23, 2017 work injury.

FINDINGS OF FACT

1. The claimant worked for the employer as a superintendent. The claimant's job duties included overseeing construction and remodeling projects. Due to the nature of these projects, the claimant was considered a "working superintendent". This meant that he did all of the job duties of his crew members.

2. On May 23, 2017, the claimant and his crew were working on a remodeling project. On that date, the claimant assisted his crew with the lifting of a sales counter. While lifting, the claimant felt a pain in his back. The claimant completed an incident report for the employer.

Prior Low Back Treatment

3. Prior to May 23, 2017, the claimant had extensive treatment of low back symptoms. On August 4, 2007, the claimant was seen at the Veterans' Administration (VA) and reported low back pain "since Iraq".

4. On February 16, 2011, the claimant was seen for a neurology consultation at the VA. At that time, a nerve conduction study showed denervation in the L3-L4 dermatome, consistent with L3-L4 radiculopathy in the left lower extremity.

5. On February 22, 2011, a magnetic resonance image (MRI) of the claimant's lumbar spine showed moderate left neural foraminal stenosis and a broad-based disc bulge eccentric to the left side at the L3-L4 level and moderately severe bilateral facet arthrosis at the L4-L5 level.

6. On January 29, 2012, Dr. Craig Gustafson authored a letter regarding treatment for a work injury the claimant suffered on May 7, 2012. Dr. Gustafson noted a diagnosis of left lumbar radiculopathy and treatment including two epidural steroid injections (ESIs). At that time, Dr. Gustafson requested authorization for a third ESI.

7. On March 26, 2012, the claimant underwent a lumbar spine MRI. The MRI showed a central disc protrusion at the L3-L4 level; a broad-based disc bulge at the L4-L5 level; and a small disc protrusion to the left at the L5-S1 level.

8. On April 2, 2013, Dr. Gustafson placed the claimant at maximum medical improvement (MMI) for the March 7, 2012 injury. Dr. Gustafson assessed a 16 percent whole person impairment for the lumbar spine and assigned permanent work restrictions of no carrying, lifting, pushing, or pulling more than 45 pounds. In addition, Dr. Gustafson recommended maintenance medical treatment that included ESIs, physical therapy, medications and “potentially even surgery”.

Treatment After May 23, 2017

9. After the May 23, 2017 incident, initial medical treatment of the claimant’s low back was provided at the VA on June 9, 2019. On that date, the claimant was seen by Dr. John Severs. The claimant reported a history of low back pain that he believed began when he was in the military. The claimant also reported that the pain radiated down his left leg. Dr. Severs recommended x-rays and an MRI of the claimant’s lumbar spine.

10. On July 12, 2017, Dr. Severs noted that he had reviewed the claimant’s MRI and it showed “several bulging discs”¹ that were worse from the claimant’s “last MRI”. On that date, Dr. Severs referred the claimant for a neurological² consultation.

11. On September 19, 2017, the claimant was seen by Dr. Jeffrey Seigel for an electromyography (EMG) study. Dr. Seigel noted that the results of the EMG study suggested chronic and relatively mild left sided L5 radiculopathy. He also noted some possible mild involvement of the L4 nerve root.

12. On September 25, 2017, the claimant returned to Dr. Severs for a skin related concern. While at the VA on that date, the claimant reported that he “had an on the job injury” prior to his June 9, 2017 appointment with Dr. Severs. The claimant continued to report that he was experiencing radicular low back pain.

13. On October 2, 2017, the claimant first treated with his authorized treating physician (ATP), Dr. David Lorah. The claimant described feeling a sharp pain in his left lumbar area following the lifting incident on May 23, 2017. The claimant disclosed a prior injury that resulted in a whole person impairment rating of 16 percent. The claimant told Dr. Lorah that he fully recovered from that previous injury. The claimant reported that prior to May 23, 2017, he was not having any difficulties with lifting, walking, or moving. On that date, Dr. Lorah referenced the EMG study performed by Dr. Siegel. In addition, he recommended a neurosurgical evaluation for possible injections.

14. On December 29, 2017, the claimant returned to Dr. Lorah and reported ongoing low back and left lower extremity pain. On that date, Dr. Lorah referenced the June 30, 2017 MRI that showed a left paracentral disc extrusion at the L4-L5 level. In addition, Dr. Lorah referred the claimant to Dr. Cole for a physiatry consultation.

¹ The parties did not provide theALJ with a July MRI report.

² Although not mentioned by name, based upon the medical records, it appears that the claimant was referred to Dr. Jeffrey Seigel.

15. On April 27, 2018, the claimant was again seen by Dr. Lorah. At that time, the claimant reported continued left greater than right lumbar spine pain, with radicular symptoms into his left leg. Dr. Lorah referred the claimant to Dr. Giora Hahn for injections.

16. The medical records entered into evidence indicate that the claimant was seen by Dr. Hahn sometime between the April 27, 2018 referral and July 6, 2018. On July 6, 2017, the claimant returned to Dr. Hahn and reported that an ESI given approximately 10 days prior was helpful in addressing the claimant's low back pain. On July 7, 2019, Dr. Hahn recommended a repeat L5-S1 intralaminar ESI at the L5-S1 level.

17. Subsequently, the claimant was referred to Dr. David Miller for surgical consultation. On November 7, 2019, the claimant was seen by Dr. Miller. On that date, Dr. Miller made reference to MRIs that were performed in 2011, 2017, and November 2018.³ Dr. Miller noted that a comparison of the 2011 and 2017 MRIs indicated the development of a disc herniation at the L3-L4 and L4-L5 levels. In addition, he noted that the 2018 MRI showed a worsening when compared to the 2017 MRI. Dr. Miller opined that the claimant's symptoms were caused by the structural pathology at the L3-L4 and L4-L5 levels. Dr. Miller recommended surgery to address these issues.

18. Based upon the records entered into evidence, it appears that Dr. Miller has recommended a lumbar decompression laminectomy, with discectomy at the L3-L4 and L4-L5 levels.

19. At the request of the respondents, the claimant attended an independent medical examination (IME) Dr. Brian Reiss. In connection with the IME, Dr. Reiss reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his February 13, 2019 IME report, Dr. Reiss opined that the May 23, 2017 lifting incident caused a temporary aggravation of the claimant's preexisting and low back condition. In addition, he opined that the claimant has now returned to his baseline. Dr. Reiss opined that it is most likely that the bulging disc at the L3-L4 level is a degenerative change, rather than the result of an acute injury. Dr. Reiss further opined that the surgery recommended by Dr. Miller is neither reasonable nor necessary to treat the claimant's symptoms. In support of this opinion, Dr. Reiss noted that the claimant has mechanical low back pain and the recommended surgery would not decrease the claimant's pain or improve the claimant's function.

20. On November 27, 2019, Dr. Lorah responded to a number of questions posed by the respondents regarding the claimant's condition. In his response, Dr. Lorah opined that the claimant's low back and bilateral radicular symptoms were most likely related to the May 23, 2017 work injury. In support of this opinion, Dr. Lorah stated that the May 23, 2017 "lifting incident was a very clear point in time at which [the claimant's] symptoms worsened." With regard to possible treatment recommendations for the claimant, Dr. Lorah listed physical therapy, massage therapy, possible injections, and ultimately surgery.

³ The ALJ does not have the report for a November 2018 MRI.

21. On April 8, 2020, the respondents filed a General Admission of Liability (GAL) related to the claimant's May 23, 2017 lifting incident.

22. The ALJ credits the medical records and the opinions of Dr. Reiss over the contrary opinions of Dr. Lorah. Accordingly, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the recommended surgery is reasonable medical treatment necessary to cure and relieve him from the effects of the work injury. The claimant has a long history of low back complaints. Following his prior injury the claimant was given a permanent impairment rating and permanent work restrictions. In addition, Dr. Gustafson opined that the claimant would likely need future low back surgery. The ALJ is not persuaded that the incident on May 23, 2017 aggravated, accelerated, or combined with the claimant's chronic preexisting low back condition to necessitate a need for surgery.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; see *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the

proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” See *H & H Warehouse v. Vicory*, *supra*.

6. As found, the claimant has failed to demonstrate that the surgery recommended by Dr. Miller is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the May 23, 2017 work injury. As found, the medical records and the opinions of Dr. Reiss are credible and persuasive.

ORDER

It is therefore ordered that the claimant’s request for surgery, as recommended by Dr. Miller, is denied and dismissed.

Dated this 13th day of May 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable work-related injury on May 26, 2018.
2. Whether Claimant has established by a preponderance of the evidence an entitlement to medical benefits.
3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from May 26, 2018 through September 28, 2018.
4. Determination of Claimant's average weekly wage (AWW).
5. Whether Claimant has established by a preponderance of the evidence that [Redacted Employer] was his statutory employer on May 26, 2018.

FINDINGS OF FACT

1. Claimant is a 31-year-old male who worked as a framer at a construction project for Epoque Apartments. Claimant's duties at the project included installing trusses and beams for apartments that were being built.

2. On May 26, 2018, while working at the project, Claimant fell off a 9-foot deck onto his outstretched left hand while setting beams and trusses. Claimant had a harness on with rope grabs at the time he fell.

3. Claimant underwent medical treatment on the date of his fall, initially at Golden Freestanding Emergency Department and then at St. Anthony Hospital Emergency Department.

4. At St. Anthony Hospital Emergency Department, Claimant reported that he fell off a deck earlier in the day from a height of approximately 9 feet, landing on an outstretched left hand. Claimant reported severe pain in his left wrist. X-rays showed a displaced fracture of the left distal radius. Michael Ruygrock, M.D. performed a left distal radius reduction using hyperextension inline traction and applied a sugar tongue splint. Dr. Ruygrock noted that the left hand was neurovascularly intact with no other signs of trauma or complaints. Dr. Ruygrock recommended Claimant follow up with orthopedics and suspected Claimant would likely require open reduction internal fixation surgery. Claimant was discharged with pain medications. See Exhibits 2, G.

5. On May 31, 2018, Thomas Frierhood, M.D. at Panorama Orthopedics evaluated Claimant. A CT of the left wrist was performed for surgical planning. Surgical fixation was recommended. See Exhibits 3, I.

6. On June 6, 2018, Panorama Orthopedics noted that there was a delay as they were trying to find out if this was a workers' compensation injury since it happened at work. The note indicated that since Claimant was hired as a contractor, it did not fall under workers' compensation and would be self-pay. The next day, June 7, 2018 Panorama Orthopedics noted that Claimant's boss would be helping with payments and that the boss was included on HIPPA forms and was requesting a quote for surgical cost. See Exhibit I.

7. On June 19, 2018, Claimant underwent left open reduction internal fixation surgery for his distal radius fracture. On July 31, 2018, it was noted that Claimant was doing relatively well overall and that he would transition to a removable brace. Claimant was referred to hand therapy with instructions to work on range of motion and to start strengthening in two weeks. See Exhibits 3, I, J.

8. On August 10, 2018, a physical therapy evaluation noted that Claimant was not using his left hand much. Claimant reported that he was limited with some self-care activities, could not lift or carry, could not open jars, and could not take care of house or yard work. The therapist opined that Claimant was not able to work. Claimant's left wrist was noted to be quite stiff and Claimant had discomfort with range of motion. The goal was to return Claimant to full function. See Exhibits 3, K.

9. Claimant was off work from the date of his injury through September 28, 2018 when he began employment with a different company.

10. On October 3, 2018, Claimant underwent physical therapy. Claimant reported that his employer had stopped paying his therapy bills and that he needed to speak with his lawyer to see what to do. The therapist noted that Claimant's active range of motion in the left wrist was still considerably limited and that it would be detrimental to Claimant's recovery to not be able to continue with therapy. See Exhibit K.

11. On February 12, 2020, Gregory Reichhardt, M.D. performed an independent medical evaluation. Claimant reported that he was injured while working for [Employer Redacted] as a framer when he fell through the second floor. Claimant reported he was unsure how he landed but that he had the immediate onset of left wrist pain with no other areas of pain. Claimant reported that he was diagnosed with a left wrist fracture, was splinted, and discharged that day. Claimant reported that he underwent left wrist surgery in June, with splinting initially and casting for 1 to 1.5 months afterwards. Claimant reported that he was referred to physical therapy after surgery but did not go much because the company he worked for did not pay for it. Claimant reported that he stopped seeing his surgeon because he could not afford it and his company no longer paid for it. Claimant reported that his pain was aggravated by lifting heavy things. Dr. Reichhardt reviewed medical records and performed a physical examination. Dr.

Reichhardt opined that Claimant sustained a comminuted mildly displaced intraarticular distal radius fracture on May 26, 2018 and that he underwent appropriate treatment with 15 physical therapy visits. Dr. Reichhardt opined that Claimant was likely at maximum medical improvement on September 25, 2018, his last visit with his orthopedic surgeon. Dr. Reichhardt opined that medical maintenance treatment would be reasonable with two follow ups with a physician per year and four follow up visits with physical or occupational therapy for year for the next two years. Dr. Reichhardt opined that a 60-pound lifting restriction would be reasonable. Dr. Reichhardt provided a 15% upper extremity impairment rating for Claimant's injury. See Exhibits 4, L.

12. It is not disputed that Claimant fell while performing construction work at the Epoque Apartment project and injured his left wrist on May 26, 2018. However, a dispute exists as to who was Claimant's employer at the time of the injury and/or whether Claimant was an independent contractor.

13. Claimant is not an independent contractor and no evidence presented suggested he independently operated a business. Rather, the overwhelming evidence shows he was a non-sophisticated labor employee working hourly and paid personally with no independent business operation at all. The question and dispute surrounds who Claimant was employed by and/or whether any of the named Respondents are Claimant's employer or statutory employer under the WC Act.

14. Prior to Claimant's injury, and on April 11, 2018, Claimant underwent a project safety orientation for the Epoque Apartment project. The project safety orientation training record is an [General Contractor Employer Redacted] training record. It notes the name of the project as Newstar-Epoque Apartments and Travis J[Redacted] is listed as the superintendent. The subcontractor is listed as Summit. Claimant signed the training record acknowledging that he had received training regarding the site-specific safety plan and that he received a copy of the FCI job site safety rules. On April 11, 2018, Claimant also signed a sign in sheet noting he had received hard hat #144 and Claimant listed his company name as Summit. See Exhibit 1.

15. Following his injury, and on June 8, 2018, Claimant received a paycheck for \$570.28 from [Employer Redacted], Inc. with the notation Enrique A[Redacted] Worker. See Exhibits 5, D.

16. On July 6, 2018, Claimant received a paycheck for \$570.28 from [Employer Redacted], Inc. with the notation Enrique A[Redacted] Worker. Claimant also testified that he received three direct deposits from [Employer Redacted], Inc. as well, all in the amount of \$570. See Exhibits 5, D.

17. The Colorado Secretary of State lists Enrique A[Redacted] as the registered agent for Respondent [Redacted Employer].

18. On August 31, 2018, Claimant filed a Workers' Claim for Compensation reporting that he injured his left wrist when working for [Subcontracting Employer

Redacted], Inc. while on top of a joist pulling up beams and was thrown and fell breaking his left wrist. See Exhibit A.

19. The Workers' Claim for Compensation is filled out in handwriting that is not Claimant's. Claimant's signature appears at the bottom. It is unclear where "[Subcontracting Employer Redacted], Inc." came from or whom that company is. At hearing, Claimant's attorney indicated that listing [Subcontracting Employer Redacted] appeared to be a mistake and that Claimant was seeking a determination of employee/statutory employee against [Employer Redacted] and/or [Redacted Employer]. The Application for Hearing lists [Subcontracting Employer Redacted], [Employer Redacted], and [Redacted Employer] as the employee respondents.

20. [General Contractor Employer Redacted] was the general contractor on the site for the apartment complex that was being built. FCI project superintendent, Travis J[Redacted], testified credibly that FCI subcontracted all of the framing, siding, and window work to OZ2. In a Prehearing Conference on September 3, 2019, counsel for [Redacted Employer] and Pinnacol Assurance conceded that [Redacted Employer] was subcontracted for the framing work on the project at Epoque Apartments. Claimant was a framer at the Epoque Apartment site who was paid hourly in cash by his supervisor "Christian." Claimant received two paychecks both from [Employer Redacted], Inc. Both paychecks noted him as an Enrique A[Redacted] worker. If Claimant were an Enrique A[Redacted] worker, he would be a [Redacted Employer] worker since Enrique A[Redacted] is the registered agent for [Redacted Employer].

21. On the date of Claimant's injury, May 26, 2018, an Incident Reporting and Investigation Form was completed by Travis J[Redacted], project superintendent for FCI Constructors. The Incident Reporting and Investigation Form was signed by Mr. J[Redacted] and by Jayson E[Redacted], supervisor of OZ2.

22. The form lists the injured party as Luis C[Redacted], Framer, with contact information of Jayson E[Redacted], supervisor. The witnesses are listed as Rogelio-OZ2 and Christian-OZ2. The incident description indicates that crews were working on a 3rd floor section setting trusses and perimeter beams and that one truss crew decided to get one beam set before leaving for the weekend and that while doing so, Claimant fell down to the 2nd floor deck below. Mr. J[Redacted] noted he was at the project and that Claimant was able to stand up, walk around, and get into Jairo G[Redacted]' car to go to the hospital. Mr. J[Redacted] noted that he discussed what had happened with the OZ2 employees in the area and that they reported not wanting to set the beam by hand but that their supervisor Christian was in a hurry and decided to scoot the beam out on the trusses. The employees reported they knew what they were doing was not right, but still proceeded. Mr. J[Redacted] concluded that the incident was the result of hast and negligence and not using all the equipment available onsite. He concluded the accident could have easily been prevented and that the truss crew was removed permanently from the project. Mr. J[Redacted] noted that all cantilever trusses would now be fully attached prior to any loading whatsoever and that forklifts must be used in the future to set beams first, then trusses. Mr. J[Redacted] noted he reviewed truss setting process with OZ2,

had a stand down with framing crew with OZ2, and removed truss crew performing unsafe work processes with OZ2. Mr. J[Redacted] signed the investigation form on behalf of FCI and Mr. E[Redacted] signed on behalf of OZ2. See Exhibit 7.

23. Claimant testified at hearing. Claimant testified that prior to his injury, he was paid cash for his work by Christian R[Redacted]. Claimant testified that Mr. R[Redacted] directed him where to work and what to do each day onsite at Epoque. Claimant testified that he was paid \$18 per hour and worked between 40 and 45 hours per week and was always paid directly by Mr. R[Redacted]. Claimant testified that he was instructed to write Summit on the April 11, 2018 safety training orientation record by Mr. R[Redacted]. Claimant testified that his medical treatment was all paid for by his boss but didn't know who exactly made the payments. Claimant testified that although he worked for Mr. R[Redacted], the checks he received after his injury noted him as an Enrique A[Redacted] Worker. Claimant testified that prior to his injury he was never paid by [Employer Redacted], Inc. or by Enrique A[Redacted] but that he was always paid in cash by Mr. R[Redacted]. Claimant testified that around August 11, 2018, he stopped receiving checks or direct deposits and then filed a claim for workers' compensation.

24. Mr. J[Redacted] testified at hearing. He testified that he works for [General Contractor Employer Redacted] and was the project superintendent at Epoque Apartments. He testified that he managed FCI's subcontractors. He testified that he was onsite on the date of Claimant's injury but did not see the injury or talk with Claimant. He testified that he interviewed witnesses and completed an Incident Reporting and Investigation Report. He testified that he only mentioned OZ2 on the report because OZ2 is whom FCI subcontracted with and that if OZ2 subcontracted out their work, it was out of FCI's realm. He testified that FCI subcontracted all of the framing, siding, and window work to OZ2.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should

consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Employer/Statutory Employer

The claimant is required to prove by a preponderance of the evidence that at the time of the injury that both he and the employer were subject to the provisions of the act, that he was performing service arising out of and in the course of his employment, and that the injury was proximately caused by the performance of such service. Section 8-41-301(1)(a) through (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

The term "employer" is defined to include every person, firm or corporation "who has one or more persons engaged in the same business or employment, except as expressly provided in articles 40 to 47 of this title, in service under any contract of hire, express or implied." Section 8-40-203(1)(b), C.R.S. Similarly, the term "employee" is defined as including any person in the service of any person or corporation "under any contract of hire, express or implied." Section 8-40-202(1)(b), C.R.S.

A contract of hire is subject to the same rules as any other contract. Thus, there must be competent parties, subject matter, legal consideration, mutuality of agreement, and mutuality of obligation. However a contract of hire may be formed without every formality attending commercial contractual agreements if the fundamental elements of the contract are present. *Aspen Highlands Skiing Corp. v. Apostolou*, 866 P.2d 1384 (Colo. 1994). A contract of hire may be implied from the circumstances. Where there is conflicting evidence the existence of a contract of hire presents a question of fact for the ALJ. *Rocky Mountain Dairy Products v. Pease*, 161 Colo. 216, 422 P.2d 630 (1966). To be entitled to compensation, Claimant also has the initial burden of establishing that he is an actual employee or a statutory employee at the time of the injury. *Surdi v. Timber Mountain Builders*, WC 4-209-544 (ICAO June 28, 1996). The determination of whether claimant sustained his burden to prove an injury out of an employment relationship is a

factual determination for an ALJ. *Stampados v. Colorado D&S Enterprises*, 833 P.2d 815 (Colo. 1992).

While a company may not be an injured worker's employer under common law, it may nevertheless be a statutory employer for purposes of workers' compensation coverage and immunity purposes. *O'Quinn v. Walt Disney Productions*, 177 Colo. 190, 493 P.2d 344 (1972). A statutory employment relationship can only exist between a subcontractor and a general contractor which "contracted out" work. Section 8-41-401(1)(a), C.R.S., provides:

Any person, company, or corporation operating or engaged in or conducting any business by leasing or contracting out any part or all of the work thereof to any lessee, sub lessee, contractor, or subcontractor ... shall be construed to be an employer ... and shall be liable ... to pay compensation for injury ... resulting there from to said lessees, sub lessees, contractors, and subcontractors and their employees

General contractors are ultimately responsible for injuries to employees of subcontractors. *Edwards v. Price*, 191 Colo. 46, 550 P.2d 856 (1976). The purpose is to prevent employers from avoiding responsibility for injuries under the Act by contracting out their regular work to uninsured independent contractors. *Hefley v. Morales*, 197 Colo. 523, 595 P.2d 233 (1979). The general test to determine an entity's status as a statutory employer pursuant to section 8-4-401(1)(a) C.R.S., "is whether the work contracted out is part of the regular business of the constructive employer." *Finlay v. Storage Tech. Corp.*, 733 P.2d 322, 323 (Colo.App.1986), *aff'd*, 764 P.2d 62 (Colo.1988). A relationship will be construed between an employer and an injured worker even if the employer is not the injured worker's employer as understood in the ordinary nomenclature of the common law, so long as the employer is a "statutory employer" within the meaning of the Act. *Id.*

Claimant has established, by a preponderance of the evidence that he qualifies under the WC Act as an employee of Respondent [Redacted Employer]. [Redacted Employer] was, more likely than not, Claimant's employer or statutory employer on the date of injury. As found above, FCI was the general contractor at the Epoque Apartment site. FCI contracted out the framing, siding, and window work to OZ2. OZ2 contracted out the framing work to [Redacted Employer]. Claimant was a framer who was onsite and working on May 26, 2018 when he was injured. [Redacted Employer] conceded that they were contracted to provide the framing work at Epoque Apartments. As a company contracted to performing framing work, framing was a regular part of the business of [Redacted Employer]. Claimant is a non-English speaking non-sophisticated worker. Although he was unable to indicate who his employer was with any certainty, Claimant credibly testified that he was paid by Christian and instructed by Christian at the project site and that he worked as a framer at the location of his injury. He was an employee with a non-formal contract of hire to perform framing work at an hourly rate with instruction from a person onsite. Claimant was injured while performing this work. The evidence establishes that Claimant was told by his supervisor to list Summit as the company that he worked for in April 2018 when he underwent training and signed out a hard hat. The

evidence also establishes that payments made to Claimant noted Claimant to be a worker of Summit's registered agent. [Employer Redacted], who issued the checks, is non-insured for workers' compensation. Summit Builders cannot contract its regular work of framing to an uninsured contractor (Canyon) to avoid responsibility for injuries.

A review of the evidence establishes that [Redacted Employer] is in the chain of employment with workers' compensation insurance. FCI subcontracted the framing, siding, and window work to OZ2. OZ2 subcontracted the framing work to [Redacted Employer]. On April 11, 2018, Claimant signed out his hard hat listing his company name as Summit. Claimant also underwent project safety training on April 11, 2018 and again listed Summit as the subcontractor. Following the accident, Claimant was listed as a "framer" in an incident investigation report and Claimant credibly testified that he worked as a framer on the project. Claimant was not onsite at Epoque Apartments performing framing work for fun. He was there as an employee. He was paid cash and his testimony was somewhat uncertain as to who his employer was given that he was not formally hired by contract, not paid by paychecks with paystubs, withholding information, etc. However, as the framing subcontractor onsite, and as listed in various places in the record, it is more likely than not that [Redacted Employer] was Claimant's employer or statutory employer. Further evidence of payments to Claimant to cover Claimant's lost time from work included a memo that Claimant was an Enrique A[Redacted] worker. Enrique A[Redacted] is the registered agent for Summit. The overall weight of the evidence establishes an employment relationship between Claimant and Summit such that Summit is an employer under the WC Act responsible for the injury Claimant sustained while working at the Epoque Apartments on May 26, 2018.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

Claimant has established, by a preponderance of the evidence, that he sustained a compensable work related injury on May 26, 2018. Claimant is entitled to reasonable and necessary medical benefits to cure and relieve the effects of his injury. Claimant has established that the emergent treatment at St. Anthony Hospital and that his treatment at Panorama Orthopedics was reasonable and necessary to cure and relieve the effects of his injury. Respondents are liable for the medical treatment at St. Anthony, Panorama, and physical therapy that Claimant underwent on referral from Panorama Orthopedics.

Temporary Total Disability Benefits

To prove an entitlement to TTD benefits, claimant must prove that an industrial "injury": (1) caused a disability lasting more than three work shifts, (2) that he left work as

a result of the disability, and (3) that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Claimant has established, by a preponderance of the evidence, an entitlement to TTD benefits from the date of his injury through September 28, 2018. As found above, Claimant sustained a distal radius fracture after his fall onsite on May 26, 2018. Claimant testified credibly that he was unable to work after his accident. He testified that he had surgery and afterwards had to wear a cast brace and that he was unable to do the work with joists and nails and couldn't have done the work one handed because the job required both hands to carry heavy things. His testimony is supported by the surgical record from June 19, 2018 and by the subsequent therapy records where it was noted that Claimant was not able to work, was quite stiff, and had impacted function. A preponderance of the evidence establishes that Claimant was medically incapacitated following his injury, surgery, and therapy and that he was unable to resume his prior work as a framer, which impaired his wage earning capacity. This resulted in actual wage loss until Claimant resumed employment on September 28, 2018. Respondents are entitled to an offset for any previously paid TTD benefits.

Average Weekly Wage (AWW)

Section 8-42-102(2) requires the ALJ to base the claimant's Average Weekly Wage (AWW) on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra*. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply § 8-42-102(3) and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Campbell v. IBM Corp., supra*.

Claimant testified that he typically worked 40-45 hours per week and that he was paid at an hourly rate of \$18 per hour. The only records included in evidence are two checks paid to Claimant in the amount of \$570. This amount could be inferred to account for 2/3 of a 45-hour work week at a rate of \$19 per hour. Claimant testified that he understood these checks to be for his missed work and recovery time, however, no testimony surrounding the amount of the checks or how it was calculated/paid was presented. Although the ALJ could infer that the checks represented a pay rate of \$19/hour for a 45-hour work week, the ALJ finds Claimant's testimony surrounding his rate of pay to be the best approximation of Claimant's average weekly wage and diminished earning capacity. The ALJ finds that 45 hours per week at a rate of pay of \$18 per hour fairly approximates Claimant's wage loss and diminished earning capacity and finds Claimant's AWW to be \$810.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that he sustained a compensable work-related injury on May 26, 2018.
2. Claimant has established by a preponderance of the evidence an entitlement to reasonable, necessary, and causally related medical benefits to treat his May 26, 2018 work injury.
3. Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from May 26, 2018 through September 28, 2018. Respondents are entitled to offset any TTD benefits previously paid during this time period.
4. Claimant's average weekly wage is \$810.00.
5. Claimant has established by a preponderance of the evidence that [Redacted Employer] was his employer or statutory employer on May 26, 2018.
6. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: May 13, 2020

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-088-222-003**

ISSUES

- Did Claimant prove he suffered a compensable injury arising out of and in the course of his employment on September 1, 2018?
- Did Employer prove Claimant was an independent contractor at the time of his injury?
- Is Employer liable for medical treatment Claimant received at the Parkview Hospital emergency Department on September 1, 2018?
- Did Claimant prove entitlement to a closed period temporary total disability (TTD) benefits from September 18, 2018 through October 22, 2018?
- Did Employer prove Claimant was responsible for termination of his employment?
- Did Claimant prove Employer should be penalized for failure to admit or deny liability?
- Must Employer pay additional compensation to the Colorado Uninsured Employer Fund failure to carry workers' compensation insurance coverage regarding Claimant's injury?

FINDINGS OF FACT

1. Employer is a marijuana grower and wholesale distributor. Kate B[Redacted] is the company's owner.

2. Claimant started working for Employer on July 18, 2018 at its "[Employer facility Redacted]" location in Pueblo West. At the time of his injury, Claimant's job title was "metric administrator." He performed a variety of duties, including pesticide control, plant care, harvesting, payroll, and managing the bio-tracking system. He was paid \$15 per hour.

3. When Claimant started with Employer, his typical shift was 8 AM to 5 PM, five days per week. The metric administrator functions were added to his job during the last week of July or first week in August 2018. He primarily performed those additional tasks on the weekend. Claimant testified he generally worked eight hours on Saturday and Sunday. Ms. B[Redacted] testified Claimant did not work "every" Saturday and Sunday. Claimant conceded at hearing he did not "always" work 16 hours each weekend.

4. No wage records were submitted into evidence by either party. Claimant alleged an average weekly wage of \$735 on his Workers' Claim for Compensation form, including \$135 of overtime per week.

5. The [Employer facility Redacted] facility is protected by a perimeter fence with an automatic gate. The gate is secured at night with a chain and padlock. When Claimant and his co-workers arrived for work on September 1, 2018, the key broke off in the padlock. Claimant's supervisor, Enda M[Redacted], decided to cut the lock with an angle grinder. Claimant held the chain taught with his hands on either side of the padlock while Mr. M[Redacted] cut the hasp. The grinder accidentally slipped and cut Claimant's left hand at the base of the thumb.

6. A co-worker drove Claimant to the Parkview Hospital emergency department. Claimant fainted in the triage area, which prompted the ER physician to order additional tests. The results were normal, and the ER physician assessed vasovagal syncope. Claimant's hand was sutured, and he was released with instructions to keep the wound clean and return in ten days to have the sutures removed.

7. On or about September 11, Claimant returned to Parkview Hospital and a triage nurse removed his stitches. Claimant has seen no other medical provider regarding this injury.

8. Employer never referred Claimant to a physician to treat the injury.

9. Claimant returned to work after the accident. He could only perform work with his right hand because his injured left hand was bandaged and painful. Employer modified his duties to accommodate the injury. Claimant primarily performed metric administration duties because he could not effectively work with plants. He performed various one-handed tasks, albeit with reduced efficiency.

10. Mr. M[Redacted] suspended Claimant on September 18, 2018 and terminated him on September 24, 2018. Mr. M[Redacted] did not testify, and Employer introduced no first-hand evidence of the reasons for the suspension or termination. Claimant testified he was "not too clear" why he was suspended or fired. Ms. B[Redacted] testified Claimant was fired because "he was a racist," but did not provide persuasive proof to support that allegation. Employer failed to prove Claimant performed any volitional act that resulted in his termination or exercised a degree of control over his termination.

11. Claimant was disabled from his regular job duties by the effects of the work injury. He suffered a wage loss commencing September 18 when Employer stopped offering modified work.

12. Claimant returned to work for a different employer on October 23, 2018.

13. Claimant filed a Workers' Claim for Compensation form with the Division on September 27, 2018.

14. Employer was uninsured for workers' compensation liability on the date of Claimant's accident.

15. Employer has never filed a Notice of Contest or an Admission of Liability. Employer offered no persuasive explanation why it did not admit or deny liability for Claimant's injury.

16. Parkview billed Claimant \$5,175.34 for injury-related treatment received in the emergency department on September 1, 2018.

17. On January 2, 2019, Parkview sent Claimant a letter stating,

The above account was billed to WORKERS COMP. As of this date we still have not received payment. Please call your insurance company to find out why they have not paid.

When payment is received, we will bill you for any co-pays, coinsurance or deductible.

18. On February 24, 2019, Parkview billed Claimant directly because no payment had been received.

19. On June 19, 2019, Claimant was notified the Parkview account had been sent to collections. The collection agency added interest at the rate of 8%, which increased the amount due to \$5,504.28 as of the date of the notice.

20. Claimant has been paying \$100 per month toward the Parkview bill. He did not provide details regarding when or how many payments he made, so no specific order regarding reimbursement can be entered.

21. Ms. B[Redacted] stated multiple times on the record Employer is responsible for the Parkview ER charges, is willing to pay the bill, and Claimant should not be responsible for it. The ALJ finds these statements were judicial admissions. Ms. B[Redacted] offered no explanation for why Employer did not pay the bill.

22. Ms. B[Redacted] testified Claimant was an independent contractor and not an employee. No persuasive evidence was offered to show Claimant was free from direction and control in the performance of his duties or that he is customarily engaged in an independent trade or business.

23. Claimant proved he was Employer's employee at the time of his accident.

24. Employer failed to prove Claimant was an independent contractor at the time of his accident.

25. Claimant proved he suffered a compensable injury to his left hand on September 1, 2018 arising out of and in the course and scope of his employment for Employer.

26. Claimant proved the treatment he received at the Parkview Hospital emergency Department on September 1, 2018 was reasonably necessary to cure and relieve the effects of his compensable injury.

27. Claimant's average weekly wage is \$735 as stated on the Workers' Claim for Compensation form. Claimant's testimony he typically worked over 40 hours per week is credible. He completed the WC claim form close to the date of injury, at which time his recollection of his typical earnings was fresher in his mind and probably more accurate than his recollection at hearing.

28. Claimant proved he was disabled by the effects of the work injury.

29. Claimant proved he is entitled to a closed period of temporary disability benefits from September 18, 2018 through October 22, 2018. Claimant's compensable injury contributed to a wage loss starting September 18, 2018, when Employer stopped accommodating his injury-related limitations. The period of TTD ended October 23, 2018 when he returned to work for a new employer.

30. Employer failed to prove Claimant was responsible for termination of his employment. Employer presented no persuasive evidence Claimant performed a volitional act or otherwise exercised a degree of control over the circumstances leading to his termination.

31. The TTD rate is \$490 per week, with a daily rate of \$70 ($\$735 \times 2/3 = \$490 \div 7 = \70). The total TTD owed from September 18, 2018 through October 22, 2018 (7 weeks) is \$2,450 ($\$490 \times 7 = \$2,450$).

32. Employer owes statutory interest in the total amount of \$331.27 through May 13, 2020. Interest will continue to accrue at the rate of \$0.61 per day until the past-due TTD is paid in full.

33. Employer must pay additional compensation to the Colorado Uninsured Employer Fund under § 8-43-408(5) for failure to maintain workers' compensation insurance coverage on the date of Claimant's accident.

34. Employer should be penalized \$70 per day for 70 days for failing to admit or deny liability.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001).

An individual who performs services for another in exchange for compensation shall be deemed an employee unless such individual is free from direction and control in the performance of the service and is customarily engaged in an independent trade, occupation, profession, or business related to the service performed. Section 8-41-202(2)(a), C.R.S. If the claimant establishes he performed services for pay, the burden shifts to the employer to prove the claimant was an independent contractor. *Stampados v. Colorado D & S Enterprises*, 833 P.2d 815 (Colo. App. 1992); *Almanza v. W.Y.B. d/b/a What's Your Beef*, W.C. No. 4-489-774 (April 16, 2002).

As found, Claimant proved he suffered a compensable injury to his left hand arising out of and in the course of his employment on September 1, 2018. There is no persuasive evidence Claimant was free from direction and control in the performance of service to Employer or was customarily engaged in an independent trade or business.

B. Medical Benefits

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101, C.R.S. The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

As found, Claimant proved the treatment he received at the Parkview Hospital emergency Department on September 1, 2018 was reasonably necessary to cure and relieve the effects of his compensable injury.

C. Right to select a treating physician

Section 8-43-404(5)(a)(I)(A), C.R.S. allows the employer to choose the claimant's treating physician "in the first instance." If the employer does not tender medical treatment forthwith upon learning of the injury, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). Treatment received on an emergency basis is deemed authorized without regard to whether the claimant had prior approval from the employer or a referral. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990); see also WCRP 8-2. The emergency exception is not necessarily limited to life-threatening situations, and whether a "bona fide emergency" existed is a question of fact for the ALJ to be determined based on the circumstances. *Hoffman v. Wal-Mart Stores*, W.C. No. 4-774-720 (January 12, 2010). Once the emergency ends, the employer must designate a treating physician or the right of selection passes to the claimant.

As found, Employer never referred Claimant to a medical provider to treat the injury. Accordingly, the right of selection passed to Claimant. Because Claimant has not yet seen a physician regarding his injury, he may now see a doctor of his choice.

D. Average Weekly Wage

Section 8-42-102(2), C.R.S. provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth

several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to “fairly” calculate the employee’s AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a “fair approximation” of the claimant’s actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). As found, Claimant’s AWW is \$735. The ALJ credits Claimant’s closely contemporaneous statement on the WC Claim form as the most reliable evidence of his typical earnings at the time of the injury.

E. Temporary disability benefits

A disabled claimant is entitled to TTD benefits if they miss more than three days of work. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant’s inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant’s ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. If a work-related injury contributes “to some degree” to a claimant’s wage loss, the claimant is entitled to temporary total disability benefits. *Id.* at 548. “Temporary disability benefits are precluded only when the work-related injury plays no part in the subsequent wage loss. Therefore, if the injury contributed in part to the wage loss, temporary total disability benefits can be denied, suspended, or terminated only if one of the four statutory factors in § 8-42-105(3) is satisfied.” *Horton v. Industrial Claim Appeals Office*, 942 P.2d 1209, 1210-11 (Colo. App. 1996). Returning to work is one criteria for terminating TTD benefits. Section 8-42-105(3)(b), C.R.S.

The persuasive evidence shows Claimant was disabled by the injury because he could not use his left hand for work tasks. Employer accommodated his limitations by assigning work he could do primarily with the one hand. Employer stopped offering modified work on September 17, 2018. Claimant still had difficulty using his hand, which impaired his ability to perform his regular job and find suitable alternate employment. The totality of persuasive evidence shows Claimant is entitled to a closed period of TTD benefits from September 18, 2018 until he returned to work for another employer on October 23, 2018.

When a temporarily disabled claimant is terminated from modified duty, the claimant is generally entitled to TTD benefits unless he was “responsible for termination” of the employment. See §§ 8-42-103(g) and § 8-42-105(4)(a), C.R.S. The employer must prove by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the employer must show the claimant performed a volitional

act or otherwise exercised “some degree of control over the circumstances which led to the termination.” *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). Whether the claimant acted volitionally or exercised control over the circumstances of the termination must be evaluated based on the totality of circumstances. *Knepler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

As found, Employer failed to prove Claimant was “responsible for termination” of his employment. Employer presented no persuasive evidence Claimant committed a volitional act or otherwise exercised a degree of control over the circumstances leading to his termination.

F. Total TTD and statutory interest owed

Employers or their insurers must pay statutory interest of 8% per annum on all benefits not paid when due. Section 8-43-410(2), C.R.S. Based on Claimant’s AWW of \$735, and corresponding TTD rate of \$490 per week, Employer owes \$2,450 in TTD benefits from September 18, 2018 through October 22, 2018. Employer also owes Claimant \$328.23 in statutory interest through May 13, 2020. Interest will continue to accrue at the rate of \$0.61 per day until the past-due TTD is paid. The accrued interest and ongoing daily interest were calculated using the Division of Workers’ Compensation Benefits Calculator, which is freely available to the public on the Division’s website. <https://dowc.cdle.state.co.us/Benefits/tab/interest.aspx>

The screenshot shows the 'Workers' Compensation Benefits Calculator' interface. The 'Interest Calculator' tab is selected. The form contains the following data:

| | | |
|--|-----------------|-----------|
| Name: | DEMETRIUS SMITH | Calculate |
| Bi-Weekly benefit amount that should have been paid: | 980 | Clear |
| Bi-weekly amount that has been paid: | 0 | |
| Beginning date of unpaid benefits: | 09/18/2018 | |
| Ending date of unpaid benefits: | 10/22/2018 | |
| Date benefits were or will be paid: | 05/13/2020 | |
| Annual Interest rate: | 8 | |
| Number of days benefits are due: | 35.00 | |
| Number of days benefit not paid when due: | 569 | |
| Total bi-weekly benefits accrued through 10/22/2018 | \$2,450.00 | |
| Total interest accrued through 10/22/2018 | \$331.27 | |
| Total benefits and interest accrued | \$2,781.27 | |
| Daily interest after 5/13/2020 | \$0.61 | |

G. Penalties for failure to admit or deny

Claimant seeks a penalty under § 8-43-203 for “failure to file [a] General Admission of Liability.” The employer must admit or deny liability within 30 days after it learns of an injury that results in “lost time from work for the injured employee in excess of three shifts or calendar days.” Section 8-43-101; 8-43-203(1)(a). Under § 8-43-203(2)(a), an employer “may become liable” to the claimant “for up to one day’s compensation for each day’s failure” to file an admission or notice of contest with the Division. The maximum penalty for failure to admit or deny liability cannot exceed “the aggregate amount of three hundred sixty-five days’ compensation.” Fifty percent of any penalty shall be paid to the claimant and fifty percent to the Subsequent Injury Fund. Section 8-43-203(2)(a), C.R.S.

The phrase “may become liable” means imposition of a penalty under § 8-42-203(2)(a) is discretionary. *E.g.*, *Gebrekidan v. MKBS, LLC*, W.C. No. 4-678-723 (May 10, 2007). The purposes of requiring the employer to admit or deny liability are to notify the claimant he is involved in a proceeding with legal ramifications, and to notify the Division of the employer’s position so the Division can exercise its administrative oversight over the claim process. *Smith v. Myron Stratton Home*, 676 P.2d 1196 (Colo. 1984). Two important purposes of penalties are to punish the violator and deter future misconduct. *May v. Colorado Civil Rights Commission*, 43 P.3d 750 (Colo. App. 2002). The ALJ should consider factors such as the reprehensibility of the conduct and the extent of harm to the non-violating party. *Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005). The penalty should not be constitutionally excessive or grossly disproportionate to the violation found. *Dami Hospitality, LLC v. Industrial Claim Appeals Office*, 442 P.3d 94 (Colo. 2019). The claimant must prove circumstances justifying the imposition of a penalty under § 8-43-203(2)(a). *Pioneer Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005).

As found, Employer has never filed an admission or denial of liability regarding Claimant’s injury. Employer knew Claimant was losing time from work as of September 18, 2018, so the deadline to admit or deny liability was October 18, 2018. Although the Act allows a penalty of up to 365 days’ compensation, the maximum penalty would be grossly disproportionate to the harm suffered by Claimant or the system. The ALJ concludes Employer should be penalized seventy (70) days at the daily compensation rate for failure to admit or deny liability. A penalty of seventy (70) days is sufficient to penalize Employer’s violation of the law and encourage future compliance without being excessively punitive. This determination is based on balancing multiple factors. Employer offered no reasonable explanation for its failure to admit or deny liability. The Parkview Hospital bill was sent to collections despite Employer’s multiple judicial admissions it is responsible for and willing to pay the charges. And the system suffers harm when employers shirk their obligation to file the required notices. On the other hand, Claimant’s injury was relatively minor and did not require extensive treatment. He suffered a brief period of disability before returning to work. Given the nature of the injury and the body part involved, it is unlikely Claimant will ultimately be entitled to a substantial permanent partial award. A penalty equal to double the compensation awarded adequately balances these considerations.

H. Increased compensation for failure to insure

Section 8-43-408(5), C.R.S. (2018) provides,

In addition to any compensation paid or ordered . . . an employer who is not in compliance with the insurance provisions of [the Act] at the time an employee suffers a compensable injury or occupational disease shall pay an amount equal to twenty-five percent of the compensation or benefits to which the employee is entitled to the Colorado uninsured employer fund created in section 8-67-105.

The penalty for failure to insure only applies to indemnity benefits; it does not apply to medical benefits. *Industrial Commission v. Hammond*, 77 Colo. 414, 236 P. 1006 (1925); *Jacobson v. Doan*, 319 P.2d 975 (Colo. 1957); *Wolford v. Support, Inc.*, W.C. No. 4-155-231 (February 13, 1998). Although the ALJ is not aware of a case directly on point, statutory interest is not properly considered “compensation or benefits” within the meaning of 8-43-408(5). Interest is a statutory right intended to secure claimants the present value of benefits to which they are entitled by creating an equitable remedy for the lost time value of money during the accrual period. *Subsequent Injury Fund v. Trevethan*, 809 P.2d 1098 (Colo. App. 1991).

Employer has been ordered to pay Claimant \$2,450 in TTD benefits. Twenty-five percent (25%) of the compensation awarded is \$612.50.

I. Payment to Division trustee or a bond to secure payment of benefits

Employer was not insured for workers’ compensation liability at the time of Claimant’s injury. Under § 8-43-408(2), Employer must pay to the trustee of the Division of Workers’ Compensation (“Division”) an amount equal to the present value of all unpaid compensation or benefits, computed at 4% per annum. This Order awards no ongoing benefits, so the present value equals the total benefits awarded. The total medical benefits, compensation, penalties, and interest Ordered herein is \$13,798.05. In the alternative, Employer may file a bond with the Division signed by two or more responsible sureties approved by the Director or by some surety company authorized to do business in Colorado. Employer may contact the Division trustee for assistance with its obligations in this regard. The Division trustee may be contacted via telephone through the Division’s customer service line at 303-318-8700, or via email to Gina Johannesman gina.johannesman@state.co.us. The Division can also help Employer calculate medical payments owed under the fee schedule.

ORDER

It is therefore ordered that:

1. Claimant’s injury on September 1, 2018 is compensable.
2. Employer shall pay the Parkview Hospital charges associated with Claimant’s emergency department treatment on September 1, 2018.

3. Employer shall reimburse Claimant for any payments he made toward the Parkview Hospital charges.

4. Claimant may select a physician to treat his compensable injury.

5. Claimant's average weekly wage is \$735.

6. Respondents' defense that Claimant was responsible for termination of his employment is denied and dismissed.

7. Employer shall pay Claimant \$2,450 in TTD benefits from September 18, 2018 through October 22, 2018.

8. Employer shall pay Claimant \$331.27 in statutory interest accrued through May 13, 2020 on the past-due TTD. Interest will continue to accrue at the rate of \$0.61 per day until the past-due TTD is paid.

9. Employer shall pay \$4,900 in penalties for failure to admit or deny liability. Fifty percent of the penalty shall be paid to the Claimant, and fifty percent of the penalty shall be paid to the Subsequent Injury Fund. The check for the Subsequent Injury Fund shall be payable to and sent to the Division of Workers' Compensation, 633 17th Street, Suite 900, Denver, Colorado 80202, Attention: Gina Johannesman, Trustee Special Funds Unit.

10. Employer shall pay \$612.50 to the Colorado Uninsured Employer Fund. The check shall be payable to the Division of Workers' Compensation, 633 17th Street, 9th Floor, Denver, CO 80202, Attention Iliana Gallegos, Revenue Assessment Officer.

11. In lieu of payment of the above compensation and benefits to the Claimant, the Employer shall:

a. Deposit \$13,798.05 with the Division of Workers' Compensation, as trustee, to secure payment of all unpaid compensation and benefits awarded. The check shall be payable to and sent to the Division of Workers' Compensation, 633 17th Street, Suite 900, Denver, Colorado 80202, Attention: Gina Johannesman, Trustee Special Funds Unit; or

b. File a surety bond in the amount of \$13,798,05 with the Division of Workers' Compensation within ten (10) days of this order:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation, penalties and benefits awarded.

12. Employer shall notify the Division of Workers' Compensation and Claimant's attorney of payments made pursuant to this order.

13. Filing any appeal, including a petition to review, shall not relieve Employer of the obligation to pay the designated sum to the Claimant, to the trustee or to file the bond as required by paragraph 11(b) above. Section 8-43-408(2), C.R.S.

14. Any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless an agreement or Order authorizing distribution provides otherwise.

15. If Employer fails to pay the Claimant indemnity and/or medical benefits as ordered herein, Employer shall pay an additional 25% penalty to the Colorado Uninsured Employer Fund of the Colorado Division of Workers' Compensation, pursuant to § 8-43-408 (6), C.R.S.

16. Pursuant to § 8-42-101(4), C.R.S., any medical provider or collection agency shall immediately cease any further collection efforts from Claimant because Employer is solely liable and responsible for the payment of all medical costs related to Claimant's work injury.

17. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: May 13, 2020

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the MRI as recommended by Dr. Conyers is reasonable, necessary, and related to his work injury, as a part of admitted maintenance medical care?

STIPULATIONS

At the outset of the hearing, it was agreed by the parties that the sole issue for determination at this hearing is the issue noted above. Claimant is not pursuing treatment from Respondents for issues relating to 'trigger finger' or 'trigger thumb'.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Procedural History

1. Claimant suffered an admitted work injury to his left wrist on July 21, 2013. (Ex. A, pp. 1-2).
2. Claimant was ultimately placed at maximum medical improvement ("MMI") by his ATP, Dr. Jones, on January 12, 2016. (Ex. B, p. 16).
3. Respondents have filed an Amended Final Admission of Liability on June 17, 2016, which among other things, admitted to Claimant's left wrist injury and reasonable and necessary medical maintenance. (Ex B, p. 4).

Claimant's Treatment and Recovery for the Work Injury to Date

4. On December 12, 2013, Dr. David Conyers, MD performed a bone graft surgery to correct Claimant's Kienbock's disease with fragmentation of the left lunate and triangular cartilage tear and palmar radial wrist ganglion cyst. (Ex. F, p. 194).
5. On January 29, 2015, Claimant then underwent a proximal row carpectomy, also by Dr. Conyers. In his operative notes, Dr. Conyers noted, under *Indications*:

This patient had *pretty well preserved articular cartilage*, and certainly rather than a fusion, it was felt that proximal row carpectomy was still his best option.....it was felt that *microfracturing would improve the articulating surface*. (Ex. F, p. 196)(emphasis added).

6. On December 4, 2015, Claimant underwent a CT scan on his left wrist. (Ex. I, p. 214). This CT scan was ordered by Dr. Conyers, and read by Krynne Stegelmeier, MD. Under Findings, Dr. Stegelmeier notes, in its entirety: "Resection of the proximal carpal row is identified. There is *severe degeneration* of the radial capitate articulation with subcortical cystic change." (emphasis added).

7. In a follow-up visit on 8/29/2017, under *Assessment and Plan*, Dr. Conyers noted:

I think David is doing pretty well.....His proximal row carpectomy seems to be holding up. The natural history of proximal row carpectomies is that they do eventually wear out and become arthritic because of the different size of the proximal articular surface of the capitate compared with the lunate fossa. The small capitate radius results and (sic) force concentration. *Up until now the only option with an arthritic painful proximal row carpectomy was fusion. Fortunately it does appear that there is a resurfacing device which will resurface the lunate fossa and the proximal pole of the capitate so the preservation of motion would be possible instead [of] a fusion.* I think David would be an *excellent candidate* for that considering his bone stock and carpal alignment. *For now however no treatment is indicated...*(Ex. 3, p. 39) (emphasis added).

8. Claimant had permanent work restrictions of no lifting more than 5 pounds with the left hand and no lifting or carrying more than 20 pounds with both hands. *Id.* He found new employment working in an office in 2016 where he did not lift forcefully. (Ex C, p. 17).

Additional Medical Treatment is now Recommended

9. During a follow-up appointment on August 30, 2019, Dr. Conyers noted, under *Assessment and Plan*:

We reviewed his wrist radiographs today as compared to radiographs from 1 year ago, indicating no further collapse of the radiocapitate articulation. I recommend he proceed with an *update MRI to re-evaluate* the articular cartilage, evidence of bony edema and any other *changes* which have occurred. I anticipate he will require further treatment as symptoms progress, and *may ultimately need a wrist arthrodesis*. (Ex. 3, p. 19)(emphasis added).

Dr. Mordick's IME Opinion of Claimant's Trigger Finger/Thumb Causation
(A point not now in dispute by Claimant).

10. Dr. Mordick performed an IME on behalf of Respondents in January, 2019. (Ex. C.). This included a records review, history taken from Claimant, and a physical exam. He is board certified in plastic surgery, and has practiced hand surgery since 1993. He has opined that Claimant's trigger finger/thumb issues are not related to his original work injury.

11. At hearing, Dr. Mordick also testified that, in his expert opinion, Claimant did not develop a trigger finger as a result of his July 2013 work injury. Dr. Mordick further noted that Claimant exhibited significant trigger nodules on multiple other digits, which indicated he is predisposed to trigger digit issues, and that the left trigger thumb was not caused by the cast he wore after his surgery. (Ex. C, p. 19).

Dr. Mordick's Opinion on the Proposed MRI

12. At hearing, Dr. Mordick noted that Dr. Conyers recommended the MRI to specifically evaluate Claimant's articular cartilage. Dr. Mordick reviewed Claimant's medical treatment records and testified that the MRI recommended by Dr. Conyers was not reasonable, because Claimant previously had a CT scan in 2015, which already revealed severe arthritis between the radius and the capitate. Dr. Mordick specifically noted that this CT had been read by a board-certified radiologist.

13. Dr. Mordick opined the MRI would not provide a benefit because Claimant did not have a previous MRI to use for a comparison to address any changes. Dr. Mordick testified that an MRI would not show resolution or improvement of Claimant's arthritis, and would only re-document the condition that was already revealed in the 2015 CT scan.

14. Dr. Mordick testified, that in his expert opinion, an MRI would be unnecessary to evaluate the status of a joint when a previous CT scan had already revealed severe arthritis. He opined that Claimant's arthritis would only get worse over time, and therefore he did not see any indication for another study.

15. Additionally, he noted that Dr. Conyers stated that he recommended the MRI since he wanted to review changes or evidence of bony edema. (Ex. E, p. 190). Dr. Mordick testified that bony edema is another component of arthritis. Dr. Mordick testified that the CT scan already revealed severe arthritis, and an MRI was unnecessary to confirm the presence of edema. Dr. Mordick testified that a CT scan was *just as good as an MRI to show arthritis.*

16. Dr. Mordick added:

A.....I don't see the MRI changing clinical decision-making regarding this when we have a CT scan. *All I can guess...is that maybe Dr. Conyers*

forgot that ...the CT scan had been done four years ago. (Transcript, p. 13)(emphasis added)

17. Additionally, Dr. Mordick testified that Dr. Conyers previously noted damage to Claimant's proximal capitate during his original surgery procedure. He testified that since Dr. Conyers was already aware of this damage, the proposed MRI would be unnecessary.

18. Dr. Mordick testified that there are several stages of Kienbock's disease, each of which can be treated with several different operations. However, he testified that a wrist arthrodesis (i.e. fusion) is the sole surgical option to treat Claimant at this point, given the severity of his arthritis.

19. Dr. Mordick, when asked if the proposed MRI could pick up changes since the [2015] CT scan, stated:

A. [It is] Hard to compare an MRI and a CT scan. If you wanted to compare two studies over two different time periods, *I'd repeat the CT scan* so you can compare apples and apples.

Q.So you just said that it's hard to compare an MRI to a CT scan?

A. *You look at it differently*, yes... But...if you want to compare a study in 2015 and a...study in 2019 to see for change, then you'd be asking for the same study, not something different.

Q. And in fact, you *don't even know what an MRI would have shown in 2015, do you?*

A. *No*, I can't go back in time and look at it...It doesn't exist, so you can't get one now and compare back to it. (Transcript, pp. 18-19)(emphasis added).

Dr. Mordick's Opinion of a Repeat CT Scan

20. Despite touting the advisability of a new CT scan compared to a new MRI, Dr. Mordick testified that a follow-up CT scan was also unnecessary, because Claimant's 2015 CT has already revealed severe arthritis and a second CT would only re-document this severe arthritis.

21. Dr. Mordick testified that a subsequent imaging study would not be valuable during Claimant's decision-making process, since Claimant would still essentially be balancing the reduction in pain with the loss of motion should he choose to undergo a fusion.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1)*. Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. *Section 8-43-201, C.R.S.* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*.

B. In determining credibility, the Administrative Law Judge should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil 3:16*. The Administrative Law Judge, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Trumbull, 802 P.2d 1182, 1183 (Colo. App. 1990)*. In this instance, the Administrative Law Judge finds there to be a sincere difference in medical opinion between Dr. Mordick, who testified, and Dr. Conyers, whose medical opinion is expressed through his reports. As a result, their respective opinions will be weighed according to their *persuasiveness*, as opposed to their *credibility per se*.

C. In accordance with *Section 8-43-215, C.R.S.*, this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the Administrative Law Judge has made credibility determinations, drawn plausible inferences from the record and resolved essential conflicts in the evidence. *See Davidson v. Industrial Claim Appeals Office, 84 P.3d 1023 (Colo. 2004)*. This decision does not address every item contained in the record, instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc., v. Industrial Claims Appeals Office, 5 P.3d 385, (Colo. App. 2000)*.

Medical Treatment, Generally

D. Respondents are liable for medical treatment reasonably necessary to cure or relieve the effects of an industrial injury. *Section 8-42-101*. Even if the Respondents admit liability, they retain the right to dispute the reasonable necessity or relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the Administrative Law Judge to approve all requested treatment. *Snyder v. City of Aurora, 942 P.2d 1337 (Colo. App. 1997)*; *McIntyre v. KI, LLC., W.C. No. 4-805-040 (July 2, 2010)*. The Claimant must prove

that an injury directly and proximately caused the condition for which she seeks treatment, and that the treatment is reasonably necessary. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

Post MMI-Maintenance Medical Care, Generally

E. In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services*, W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District*, W.C. No. 4-309-217 (ICAO, Feb. 12, 2009). The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. See *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Is the MRI as Proposed by Dr. Conyers Reasonable and Necessary?

F. There is nothing in the record to suggest that Dr. Conyers has not been attentive to Claimant's treatment. At the time of Claimant's (1/29/2015) proximal row carpectomy, he noted that Claimant had "*pretty well preserved articular cartilage*", and sought to preserve his articulating surface to the extent possible. Eleven months later, the CT scan radiologist interpreted Claimant's articular surface as showing "severe degeneration". No other detail is noted in the radiologist report.

G. On the 8/29/2017 follow-up, Dr. Conyers noted the possibility of a resurfacing device, as an intermediate surgical step, which might obviate a future fusion for Claimant. He noted in particular Claimant's possible suitability for this procedure, but proposed that they wait and see what progress might occur without intervention. Two years later, upon review of the radiographs, the possibility of a fusion in the future was raised. There was no specific mention of the resurfacing procedure, but neither was it taken off the table. But first, he wanted an *updated* MRI to *re-evaluate* the articular cartilage, evidence of *edema*, and *any other changes* which *may* have occurred. This follow-up MRI was timely denied by Respondents.

H. Dr. Mordick posits that a new CT scan would be preferable to a new MRI *to look for changes*, but sees no real value in either one. He also opines that a CT scan was as good as an MRI *to show arthritis*. However, he acknowledges that he *does not know what a 2015 MRI* would have shown. One might expect him to say it *would have shown exactly what the CT scan* did, but he stopped short of that. It is apparently hard to compare an MRI directly to a CT scan, since "you look at it differently." This suggests the possibility that subtle differences in interpretation might have been noted in a 2015 MRI vs. the 2015 CT scan. This also suggests there might be differences in the results

of an MRI vs. a CT scan beyond *changes*, and showing *arthritis*; however, those possible differences were not addressed.

I. As noted by Claimant, Dr. Mordick did not even address the possibility of the resurfacing option. After his review of Dr. Conyers' records, one would expect, at the very least, that Dr. Mordick might have opined that such a procedure would never be a good possibility for Claimant. Instead, he presented Claimant's choice on a single axis: Fuse or don't fuse – trade motion loss for pain relief. Dr. Conyers wants Claimant, if warranted, to have a better compromise, but first, he wants to see what Claimant's wrist looks like now. He wants to *re-evaluate* the cartilage, look for *edema*, and look for other *changes* (whatever they might be) which may have occurred.

J. Because Dr. Conyers is looking for *changes*, and wants to *re-evaluate* the cartilage is strongly suggestive (and the ALJ so finds) that he was, in fact, aware of the 2015 CT scan results. It was he who ordered the CT scan, and it is presumably in Claimant's medical file. He did not forget about those results. Furthermore, being the surgeon who has seen to Claimant's care for 6+ years, and the one who would operate again, if warranted, *Dr. Conyers wants to read the MRI himself, and perform his own evaluations.* He does not want to rely solely on the non-treating, radiologist's CT interpretation from 4 years ago, before he performs a surgery – *or even chooses between available surgical alternatives.*

K. Dr. Mordick is a successful, highly credentialed hand surgeon. Perhaps his surgical approach - *should Claimant be his patient* - is medically reasonable. However, the ALJ is not prepared to accept his approach to the exclusion of that of Dr. Conyers. Dr. Conyers is the treating physician, and wants to see for himself the *current state* of Claimant's wrist. He does not want to rely solely upon the radiologist's interpretation of the 2015 CT scan. He has chosen an MRI, instead of another CT scan –to get a better preview of the *cartilage*, to look for *edema*, to contrast any other *changes*, and perhaps *to look at them differently.* Dealer's choice.

L. Dr. Conyers' rationale for the MRI is more persuasive than the contrary opinion of Dr. Mordick. The ALJ finds, by a preponderance of the evidence, that the requested MRI is reasonable, necessary, and related to Claimant's work injury, and is a necessary component to his medical maintenance treatment.

ORDER

It is therefore Ordered that:

1. Respondents shall pay for the MRI as recommended by Dr. Conyers.
2. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: May 13, 2020

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

PROCEDURAL HISTORY

The applications for hearing in these separate claims for compensation, WC No. 5-075-625 (DOI 4/18/18) and WC No. 5-103-884 (DOI 3/18/19) were consolidated for hearing.

Compensability under WC No. 5-075-625 has been admitted pursuant to a General Admission of Liability ("GAL") and was only endorsed in anticipation of consolidation to determine liability for a subsequent work injury and resulting workers' compensation benefits. The issue of AWW in WC No. 5-075-625 was withdrawn at the commencement of hearing. The issue of reopening temporary indemnity benefits in WC No. 5-075-625 on the grounds of change in medical condition and error/mistake was added via Claimant's uncontested motion at the commencement of hearing.

ISSUES

WC No. 5-075-625 (DOI 4/18/18)

- I. Whether [Redacted Respondents] are liable for the costs of the surgery performed by Dr. Nanney on October 26, 2018, and continuing medical benefits to cure and relieve the effects of Claimant's April 18, 2018 work injury.
- II. Whether the Director's order terminating temporary indemnity benefits should be reopened due to error/mistake or change in condition. If so, whether Claimant was responsible for his termination.
- III. Whether Claimant is entitled to temporary indemnity benefits.

WC No. 5-103-884 (DOI 3/18/19)

- I. Whether Claimant sustained a compensable industrial injury on March 18, 2019.
- II. If so, whether Claimant is entitled to medical benefits and temporary indemnity benefits beginning March 19, 2019 and ongoing.
- III. If so, determination of Claimant's average weekly wage ("AWW").
- IV. If not, whether, [Redacted subsequent Employer] is entitled to reimbursement from [Redacted Respondents] for wage loss benefits paid to Claimant, and [Redacted subsequent Employer Insurer] is entitled to reimbursement from [Redacted Respondents] for medical benefits paid on behalf of Claimant.

FINDINGS OF FACT

1. Claimant sustained an industrial injury to his low back on April 18, 2018 during the course and scope of his employment as a plumber for [Redacted Employer].

2. Claimant treated with UC Health and Melinda Gehrs, M.D. as his primary authorized treating physician ("ATP") for the April 18, 2018 work injury. Dr. Gehrs initially assessed Claimant with acute on chronic low back pain without sciatica, noting Claimant had a prior work injury involving the low back for which he underwent L4-5 rhizotomies and received permanent impairment. She prescribed Claimant a Medrol dosepak, Percocet, and physical therapy.

3. Claimant underwent a lumbar spine MRI on May 15, 2018 that revealed multilevel spondylitic changes; a posterior broad-based disc protrusion at L5-S1 with impingement upon the traversing left S1 nerve root and mild central canal stenosis and moderate bilateral neural foraminal narrowing; and a posterior broad-based disc protrusion at L4-5 with a central annular tear, facet hypertrophic changes, and moderate bilateral neural foraminal narrowing with moderate canal stenosis. The findings were felt to be most significant at the L4-5 level.

4. [Redacted Employer] filed a GAL on May 25, 2018 admitting for an AWW of \$1,790.57 and corresponding temporary total disability ("TTD") rate of \$948.15.

5. Claimant received TTD benefits from April 24, 2018 to May 20, 2018.

6. On May 21, 2018, Claimant returned to modified duty with [Redacted Employer] pursuant to an offer of modified employment signed off by Dr. Gehrs. Claimant was to work 40 hours/week at \$12/hour for a total of \$480/week. In addition to one-pound ongoing lifting restrictions, Dr. Gehrs indicated ongoing restrictions of no bending and frequent position breaks.

7. Claimant received temporary partial disability ("TPD") from May 21, 2018 to June 19, 2018.

8. Claimant resigned his employment with [Redacted Employer] on June 19, 2018. He testified he resigned due to his belief that he would not be able to perform his regular job duties again without an assistant. Claimant was under the impression he would have to pay for an assistant. Claimant testified that he was advised by his doctor to look for a lighter duty job and/or to get an assistant to perform the heavy lifting required for his plumbing job. Claimant testified he could not perform his regular duties with [Redacted Employer] on one-pound lifting restrictions.

9. Claimant began working for [Redacted subsequent Employer] as an inspector on July 2, 2018. Claimant applied for the position with [Redacted subsequent Employer] on or around May 10, 2018 and attended an interview on or around May 25, 2018. At the interview, he indicated he could perform all aspects of the job without accommodation. Per the job description, the position required frequent standing,

walking, crawling, lifting, carrying, bending/stooping, and twisting, occasional exertion of up to 20 pounds of force, and frequent exertion of up to 10 pounds of force.

10. Claimant testified at hearing that, despite having good and bad days with respect to his symptoms, he was able to perform his job duties for [Redacted subsequent Employer]. Claimant performed his regular job duties for [Redacted subsequent Employer] until October 23, 2018.

11. On June 27, 2018, [Redacted Employer] filed a Petition to Modify, Terminate, or Suspend Compensation (the "Petition to Terminate") on the basis that Claimant voluntarily terminated his employment as of June 18, 2018. The Petition to Terminate noted Claimant was receiving TPD at the rate of \$948.15 per week. [Redacted Employer] requested termination of benefits as of June 20, 2018.

12. Claimant did not respond to the Petition to Terminate. On July 23, 2018, the Division approved [Redacted Employer]'s Petition to Terminate, terminating Claimant's disability benefits as of the date of the Petition to Terminate. [Redacted Employer] filed a GAL on July 30, 2018 terminating temporary indemnity benefits pursuant to the Division's approval of the Petition to Terminate.

13. Claimant continued to undergo treatment with Dr. Gehrs for his April 18, 2018 work injury, including physical therapy, medication, dry needling, acupuncture and chiropractic care. Claimant continued to report mid and low back pain radiating into the left gluteal region and left leg. He denied any significant numbness and tingling. At his September 25, 2018 examination, Claimant reported pain in the low back greatest in the left gluteal region radiating down the posterior thigh. Claimant reported being unable to bend and get his shoes and socks on the left leg. Dr. Gehrs recommended a L4-5 facet injection. She noted Claimant's pain is likely multifactorial and stated Claimant was not a good surgical candidate, but that referral to a surgeon could be a future option. Dr. Gehrs noted trigger point injections could also be a consideration.

14. Claimant underwent a left L4-5 facet joint steroid injection on October 12, 2018.

15. On October 23, 2018, Claimant felt a sudden onset of increased low back pain after getting up for work and using the bathroom at home. Claimant testified nothing specifically occurred to increase his pain. Claimant was transported to the emergency room at UC Health via ambulance. He reported 10/10 pain and some ongoing left foot tingling. The admitting physician remarked that there was "[n]o evidence of acute issues or anything that needs emergent surgical intervention." Claimant underwent a repeat lumbar spine MRI that revealed worsened disc extrusions at L5-S1 with worsened spinal canal stenosis, most severely affecting the left lateral recess with possible impingement of the left S1 nerve root. Claimant was admitted for pain control and a neurosurgery evaluation.

16. Allan Nanney III, M.D. performed the neurosurgical evaluation that same day. Claimant reported left buttock and leg pain of the left side that had progressively

worsened over the last five months. Dr. Nanney reviewed Claimant's MRIs and agreed Claimant had a "significant amount of stenosis to the descending S1 nerve on the left from a disc herniation." He noted Claimant had tried a significant amount of traditional nonsurgical therapies and there was significant structural explanation for his symptoms. Dr. Nanney wrote,

I do believe he would benefit from microdiscectomy on the left at L5-S1 and I am willing to perform this during this hospital admission, if he chooses to do so. Other options include continued medical management, tincture of time and other nonsurgical strategies. I will follow him closely along.

17. Claimant remained in the hospital, electing to proceed with the surgery recommended by Dr. Nanney. He testified at hearing that Dr. Nanney possibly discussed other treatment options with him but he elected to proceed with the surgery. Claimant did not seek prior approval for the surgery from [Redacted Employer]. Dr. Nanney performed a left L5-S1 hemilaminotomy, medial facetectomy, and microdiscectomy on October 26, 2018.

18. Claimant initially reported significant improvement in his pain complaints post-surgery, with some continued numbness and tingling in the left lower extremity. On November 15, 2018, Dr. Gehrs released Claimant to modified duty with restrictions of no lifting more than five pounds, no walking for more than four hours a day, and no crawling, bending, twisting or climbing ladders. On November 27, 2018, Claimant reported to Dr. Gehrs he felt like he could do 100% field work. He continued to report cramping and numbness. Dr. Gehrs continued restrictions of no bending or twisting and limited lifting to 15 pounds.

19. Claimant's symptoms subsequently began to worsen. On December 18, 2018, Claimant reported to Dr. Gehrs worsening pain over the last month with fairly consistent cramping pain in the left gluteal region which intermittently radiated down the left leg. Claimant continued to have numbness and tingling in a S1 distribution on the left leg. Dr. Gehrs prescribed Claimant Gabapentin on January 9, 2019. By January 23, 2019, Claimant was reporting 9/10 pain, again complaining of progressive worsening of symptoms since the surgery.

20. On January 30, 2019, Claimant reported progressive left leg symptoms that had been getting worse and worse. Dr. Gehrs noted the pain was generally more of a dull, aching pain, but also could be sharp and shooting pain with movement. She prescribed Claimant a Medrol dosepak and recommended Claimant undergo a lumbar MRI.

21. The lumbar MRI was obtained on February 1, 2019 and compared to Claimant's October 23, 2018 lumbar MRI. The radiologist noted multilevel lumbar disc pathology and spondylopathy and, at the level of L5-S1, a 1.0 cm free disc fragment within the left lateral position that contacted the left S1 nerve root that "appear[ed] to represent a recurrent free disc fragment."

22. On February 6, 2019, Claimant saw Richard Skurla, M.D., who opined that the recent MRI revealed a recurrent L5-S1 disc herniation compressing the S1 nerve root, but not nearly as severe as prior to the surgery. He noted Claimant continued to work, but had significant pain at night, with pain radiating down the left lower extremity and numbness in the left foot. Claimant reported using one of his mother's fentanyl patches to help relieve his pain. Dr. Skurla noted Claimant was failing conservative management at the time, but recommended an injection and continuing physical therapy. He prescribed Claimant Percocet for his pain.

23. Claimant returned to Dr. Gehrs on February 20, 2019. She noted Claimant initially had some improvement post-surgery, but that his pain never completely resolved and then progressively worsened. Dr. Gehrs noted the repeat lumbar MRI showed a recurrent left L5-S1 disc herniation and that Claimant had been advised to undergo a L5-S1 epidural steroid injection, which had not been authorized. Claimant was reporting constant pain in the low back and left gluteal radiating down the posterior thigh with occasional shooting pains into the foot. Claimant also complained of constant numbness and tingling down the posterior thigh and foot. Dr. Gehrs noted Claimant continued to work, but did not do any significant lifting, climbing ladders, or crawling.

24. While working as an inspector for [Redacted subsequent Employer] on March 18, 2019, Claimant's left foot went through flooring, causing Claimant to fall approximately 18 inches. Claimant testified he landed on his feet and then went into a seated position on the floor and felt immediate low back pain. Claimant reported the incident to [Redacted subsequent Employer] and was taken by his manager to Concentra. Claimant reported 8/10 sharp back pain. Richard Shouse, PA-C assessed Claimant with lumbar back pain. He characterized it as a new injury that aggravated Claimant's pre-existing April 18, 2018 back condition. He sent Claimant to the emergency room at UC Health for pain control. At UC Health, Christopher Scott PA-C noted Claimant may have exacerbated his chronic low back condition. Claimant was prescribed medication and discharged.

25. Claimant returned to Concentra on March 20, 2019 and saw Nancy Strain, M.D., who noted Claimant suffered a large jolting action on March 18, 2019, but did not fall down. She opined Claimant aggravated his prior back condition.

26. Claimant underwent a repeat lumbar MRI on March 21, 2019 that was compared to his February 1, 2019 lumbar MRI. The radiologist found no significant change since the February 1, 2019 MRI. The impression was stable postoperative and spondylitic change, continued findings of left lateral recess stenosis and moderate bilateral neural foraminal narrowing at L5-S1 and no underlying canal stenosis.

27. All of the medical evaluators agreed that the March 21, 2019 MRI showed no significant change compared to the February 1, 2019 MRI.

28. Dr. Gehrs reexamined Claimant on March 26, 2019, noting the March 18, 2019 incident that occurred while Claimant was working for [Redacted subsequent Employer]. Claimant reported pain in the low back, left gluteal, and down the posterior thigh into the calf down to the lateral foot with a S1 distribution. Dr. Gehrs noted Claimant's pain had worsened but remained in the same location. She further noted Claimant was now using a cane to ambulate. Dr. Gehrs remarked there were not significant changes on MRI. She wrote,

Patient unfortunately has recurrent left-sided disc. Prior to incident on 3/18 was recommending an epidural injection which to date has been denied. He really needs to undergo this so he can be more comfortable and proceed with his work...His pain is not in a new location and its just somewhat worse but even prior to that incident he needed an injection. Will maintain him on gabapentin and ibuprofen in addition to limited amounts of Percocet.

29. Dr. Gehrs related Claimant's symptoms to the April 18, 2018 work injury. On April 4, 2019 she wrote,

Patient once again continues to be flared up in the left leg as a result of disc protrusion at L5-S1 towards the left. It has not been getting better with time. He needs to try either injection or surgical interventions...Unfortunately patient now has 2 insurance companies dealing with the injury but I think most of his issues are really related to his first injury and this should be taken care of through that one. MRI did not worsen after the second injury.

30. On April 5, 2019, PA-C Shouse reexamined Claimant at Concentra. He noted Claimant had not returned to work because of the pain for the second most present injury. Claimant reported that, since the March 18, 2019 incident, his pain had doubled and he was now walking with a cane. On April 17, 2019, Dr. Linda Thomas at noted Claimant was having significant back and leg pain in February 2019, that worsened with the fall in March 2019. She noted Claimant was having significant difficulties with the physical requirements of his job.

31. On April 18, 2019, Dr. Gehrs noted Claimant "had a second incident with another job which aggravated his symptoms but I really do not think there is any significant change in his etiology of his pain."

32. On April 19, 2019, Claimant presented to Bryan Castro, M.D. Claimant reported that, prior to the March 18, 2019 incident his pain was 4-6/10 and he was able to work. Claimant reported that after the incident his pain was 6-8/10 and he was not working. Dr. Castro reviewed the February 1, 2019 and March 21, 2019 MRIs and opined there appeared to be a small recurrence of a disc herniation on both, but there was not substantially worsening revealed on the March 21, 2019 MRI. He wrote, "In fact, I do not see largely any change. These are noncontrasted images and it is unclear to see how

much of this is actually scar tissue versus recurrent herniation.” Dr. Castro noted microdiscectomy decompression revision could be a consideration, but recommended obtaining a repeat MRI with contrast to determine if the possible recurrent disc herniation could actually be scar tissue.

33. [Redacted Employer] retained Jeffrey J. Sabin, M.D. for an independent medical examination (“IME”). Dr. Sabin provided three reports, including a record review dated February 28, 2019, an evaluation dated April 1, 2019, and an additional record review dated April 26, 2019. In his first report, Dr. Sabin concluded, “it would appear that the patient’s low back condition and need for further treatment are necessary and related to the April 2018 incident.” He did not have a copy of the MRIs. He stated, “If the MRIs do indeed show recurrent disc herniation at L5-S1, then epidural steroid injections would be reasonable and if no benefits, then re exploration and repeat hemilaminotomy and partial discectomy should be performed for the predominant leg pain greater than back pain.” Dr. Sabin’s conclusion remained the same after his evaluation of Claimant and additional record review. He opined “There is no medical record evidence of any intervening or new injury and therefore worsening of the disc herniation would be a naturally occurring event related back to the 04/18/18 alleged lifting incident.”

34. [Redacted subsequent Employer] filed a Notice of Contest on April 4, 2019.

35. On April 26, 2019, [Redacted Employer] denied Claimant’s request for authorization of L5-S1 steroid injections.

36. On May 6, 2019, Dr. Gehrs noted Claimant had considerable pain issues limiting his ability to work which started after the second accident and that Concentra was working to get Claimant back to pain levels before the March 2019 incident. She opined Claimant likely needed surgical intervention, stating, “This should be done under the injury for which I am seeing him for because felt that this was necessary even prior to his second injury.”

37. On June 6, 2019, Claimant underwent a left S1 transforaminal epidural steroid injection which did not provide Claimant any significant improvement.

38. Jeffrey Raschbacher, M.D. conducted a Physician Advisor Review on July 9, 2019. Dr. Raschbacher did not recommend authorization of any further treatment of Claimant in connection with the March 18, 2019 incident. He opined,

It appears given his level of symptomatology and the lack of any clear objective change from his prior status, from before 03/18/2019, that he should simply continue his care as he was already planning on doing for date of injury 04/18/2018. Again, it is remarkable to note that further care was clearly planned and recommended, and that his pain levels were quite significant before he reported the injury claim on 3/18/2019.

39. Dr. Castro reexamined Claimant on July 10, 2019. Claimant reported that, prior to the March 2019 incident, his pain was 4/10 and that if he worked a hard day, he would take anti-inflammatories and ice, but remained able to work. Claimant reported that since the March 2019 incident his symptoms have worsened and he is unable to perform activities. Dr. Castro noted that an April 30, 2019 lumbar MRI revealed majority scar tissue from his previous surgery and only a very small recurrence of disc bulge. He recommended Claimant undergo an EMG of the lower extremities.

40. Claimant underwent an EMG on August 13, 2019 which revealed some mild findings of both acute and chronic denervation and re-innervation in S1 distribution.

41. Claimant returned to Dr. Castro on August 28, 2019. Dr. Castro noted Claimant's April 2019 MRI revealed partial displacement of the nerve related to recurrence of scar tissue rather than large herniation. He stated that moving forward with surgery was a 50/50 proposition, noting further surgery could result in more scar tissue and may not alter Claimant's symptoms dramatically, if at all.

42. Kathy McCranie, M.D. provided physiatry treatment through Concentra. After review of the records she provided a report, dated August 30, 2019. She stated that recommendations for surgical evaluation and injections would have been the same without the [Redacted subsequent Employer] incident. She indicated that chiropractic care, massage and acupuncture had been recommended by Concentra under the March 18, 2019 claim. She would describe the [Redacted subsequent Employer] incident as a temporary aggravation. She noted that Claimant's pain ratings have been essentially unchanged compared to his visits just prior to the [Redacted subsequent Employer] incident. She stated that she did not anticipate permanent impairment for the March 18, 2019 injury, as it was a temporary aggravation. Dr. McCranie opined that Claimant's symptoms, medical recommendations and additional restrictions are due to the expected progression of the documented admitted [Redacted Employer] claim.

43. On September 5, 2019, Allison Fall, M.D. performed an IME at the request of [Redacted subsequent Employer]. Dr. Fall noted that, although Claimant reported increased pain after the March 2019 incident, the pain was in the same area and the March 2019 MRI did not reveal any changes as compared to the February 2019 MRI. Dr. Fall opined that, while Claimant may have had a temporary exacerbation of his symptoms, there was no substantial intervening injury on March 18, 2019, and the need for treatment was related to the April 18, 2018 work injury. She noted that the fact Claimant was taken off of work after the March 18, 2019 incident did not indicate that there was objective evidence of a substantial worsening of his condition.

44. On September 13, 2019, Gretchen L. Brunworth, M.D. performed a medical record review at the request of [Redacted Employer]. She noted that Claimant's symptoms worsened after the March 18, 2019, but there was no change in pathology on the MRI. Dr. Brunworth opined that surgery and injections were being contemplated prior to the March 2019 incident and it was "most reasonable" do injections and surgery under the 2018 claim. She noted, however, that Claimant had completely been taken off

of work since March 18, 2019 and opined that the “additional disability since the 2019 incident would be related to that incident.”

45. Dr. Brunworth testified at hearing as a Level II accredited expert in physical medicine and pain rehabilitation. Dr. Brunworth opined Claimant suffered a worsening of his condition as a result of the March 18, 2019 incident. She testified Claimant had an increase in symptoms and disability after the March 18, 2019 incident, and continues to report pain and has been unable to return to work. Dr. Brunworth admitted that she was relying upon Claimant’s representations in making her conclusions. Dr. Brunworth acknowledged that surgery and injections were contemplated as treatment prior to March 18, 2019, and testified that one cannot determine causation solely based on pain complaints. Dr. Brunworth agreed that without the treatment that was being recommended under the [Redacted Employer] claim, Claimant’s pain could have worsened.

46. Dr. Fall testified at hearing as a Level II accredited expert in physical medicine and rehabilitation. Dr. Fall explained Claimant is currently suffering from a recurrent disc herniation causing denervation and radiculopathy, which was his condition prior to the March 18, 2019 incident and was already causing disability and the need for medical treatment. Dr. Fall opined that Claimant did not suffer a distinct injury on March 18, 2019, nor a substantial aggravation of his condition. Dr. Fall stated that, although he may have had a temporary exacerbation of his symptoms, there was no substantial intervening injury at the time of the [Redacted subsequent Employer] incident. Claimant’s diagnosis did not change. Dr. Fall pointed out that, during his visit after the [Redacted subsequent Employer] incident, his pain complaint was still 8/10, as it had been in his February 20, 2019 appointment. His January 23, 2019 pain complaints were described as 9/10. Dr. Fall explained that the natural progression for Claimant’s condition was that Claimant was most likely headed for surgery. She explained that even without the [Redacted subsequent Employer] incident, there was no reasonable expectation that Claimant’s symptoms would have improved. She would not therefore expect that restrictions would have been removed. Dr. Fall testified that Claimant had pain complaints prior to March 18, 2019 that were the natural consequence of his admitted [Redacted Employer] injury. She did not anticipate that Claimant’s complaints would have improved without the treatment recommended under that claim.

47. Dr. Fall testified that, prior to March 18, 2019 Claimant had an active process that included inflammation on the nerve, which was very painful. This type of pain is easily set off or stressed once a patient has a disc impacting the nerve because of this kind of pre-existing condition. She stated that this is a natural consequence of Claimant’s pre-existing condition. Given Claimant’s situation, she testified that Claimant’s pre-existing condition produced the effect that Claimant experienced at the time of the [Redacted subsequent Employer] incident. She reiterated her opinion no new pathology was created after the [Redacted subsequent Employer] incident and there is no new pathology driving Claimant’s complaints after the [Redacted subsequent Employer] incident. The [Redacted subsequent Employer] incident did not result in any unexpected complaints, given the pre-existing condition. Without the admitted

[Redacted Employer] work injury and its effects, Dr. Fall testified that she would not have expected that Claimant would have been removed from work entirely because of the mechanism of the [Redacted subsequent Employer] incident.

48. Dr. Fall addressed the relevance of Claimant's off-work status after the [Redacted subsequent Employer] incident. She testified that the records did not reflect a change in pathology, and she attributed differences in restrictions to differences in the opinions of his medical providers. She testified that working before the [Redacted subsequent Employer] incident and not working afterward did not indicate to her that there was a distinct compensable injury, nor did it indicate that the [Redacted subsequent Employer] incident caused the need for restrictions. Dr. Fall testified that she attributed Claimant's disability to the admitted [Redacted Employer] April 18, 2018 injury.

49. Dr. Brunworth and Dr. Fall both testified that the acupuncture, massage, and chiropractic treatment provided to Claimant by Concentra were reasonable treatment for Claimant's condition. Dr. Fall testified that the [Redacted subsequent Employer] incident did not lead to new or different treatment that could not have been provided under the admitted [Redacted Employer] claim. She testified that the Concentra providers were just trying to give Claimant any pain relief that they could provide him, and that that need for treatment existed before the [Redacted subsequent Employer] incident.

50. As of the date of the hearing, no physician, whether from Concentra or UC Health, has released Claimant to return to work since being taken completely off work after the March 18, 2019 incident.

51. Claimant was separated from his employment with [Redacted subsequent Employer] after exhausting available and donated leave.

52. Claimant's pay records indicate that, at the time of the March 18, 2019 incident, Claimant earned \$28.28/hour and worked 40 hours per week. Accordingly, a fair approximation of Claimant's AWW for [Redacted subsequent Employer] is \$1,131,20.

53. Amy Wells, Benefits Manager for [Redacted subsequent Employer] , testified at hearing that based upon [Redacted subsequent Employer] 's policy, Claimant would not have been eligible for his position if he had informed [Redacted subsequent Employer] of his ongoing work restrictions. Following the [Redacted subsequent Employer] incident, [Redacted subsequent Employer] was made aware of restrictions for Claimant that they could not accommodate. Despite [Redacted subsequent Employer] denying Claimant's claim, [Redacted subsequent Employer] continued to pay when he was not physically working, totaling Claimant paid 700 hours in holiday pay, sick leave, annual leave, short term disability, injury leave, comp time, donated leave and other leave from March 18, 2019 to October 23, 2019. This was paid at the rate of \$28.28 per hour, for a total of \$19,796.00.

54. Claimant testified at hearing that he had a substantial increase in pain after the March 18, 2019 incident. He acknowledged that his pain is not different in nature, just more intense. Claimant testified he currently walks with a cane, which he did not do prior to the [Redacted subsequent Employer] incident. Claimant testified that as of the date of hearing, even if he had not separated from his employment with [Redacted subsequent Employer] due to exhausting available leave, he would still be unable to return to work due to his significant pain.

55. Claimant's testimony is found credible and persuasive.

56. The ALJ finds Dr. Brunworth's testimony more credible and persuasive than the testimony of Dr. McCranie.

57. [Redacted Employer] and [Redacted Insurer] are not liable for the October 26, 2018 surgery performed by Dr. Nanney, as the surgery was unauthorized and non-emergent.

58. [Redacted Employer] and [Redacted Insurer] remain liable for reasonable and necessary medical treatment that is causally-related to the April 18, 2018 work injury.

59. Claimant failed to prove it is more likely than not there was an error/mistake justifying reopening temporary disability benefits in the [Redacted Employer]/[Redacted Insurer] claim. Claimant failed to prove entitlement to TPD benefits from June 28, 2018 to October 22, 2018.

60. Claimant proved by a preponderance of the evidence he suffered a significant worsening of his condition as of October 23, 2018. Claimant is entitled to TTD benefits from October 23, 2018 to November 15, 2018.

61. Claimant failed to prove he suffered wage loss as a result of the April 18, 2018 between November 16, 2018 to March 18, 2019, and thus failed to prove entitlement to TPD for such time period.

62. The preponderant evidence establishes Claimant sustained a compensable aggravation arising out of and during the course of his employment for [Redacted subsequent Employer] on March 18, 2019.

63. [Redacted subsequent Employer] is liable for reasonable, necessary and causally-related medical benefits to cure and relieve the effects of the March 18, 2019 aggravation.

64. [Redacted subsequent Employer] is liable for temporary indemnity benefits for wage loss suffered by Claimant beginning March 19, 2019 and ongoing, until terminated by law.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

October 2018 Surgery & Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

Section 8-43-404(7)(a), C.R.S. provides that “an employer or insurer shall not be liable for treatment provided pursuant to article 41 of Title 12, C.R.S. unless such treatment has been prescribed by an authorized treating physician.” If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. *In Re Patton*, W.C. Nos. 4-793-307 and 4-794-075 (ICAO, June 18, 2010); see *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999).

Authorization to provide medical treatment refers to a medical provider’s legal authority to provide medical treatment to the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office*, 914 P.2d 501 (Colo. App. 1995); *In re Bell*, W.C. No. 5-044-948-01 (ICAO, Oct. 16, 2018). Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Office*, 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, W.C. No. 5-044-948-01 (ICAO, Oct. 16, 2018); *In re Patton*, W.C. Nos. 4-793-307 and 4-794-075 (ICAO, June 18, 2010)

Section 8-43-404(5)(a), C.R.S. grants employers the initial authority to select the ATP. However, in a medical emergency a claimant need not seek authorization from her employer or insurer before seeking medical treatment from an unauthorized medical provider. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777, 781 (Colo. App. 1990). A medical emergency affords an injured worker the right to obtain immediate treatment without the delay of notifying the employer to obtain a referral or approval. *In Re Gant*, W.C. No. 4-586-030 (ICAP, Sept. 17, 2004). Because there is no precise legal test for determining the existence of a medical emergency, the issue is dependent on the particular facts and circumstances of the claim. *In re Timko*, W.C. No. 3-969-031 (ICAP, June 29, 2005). Once the emergency is over the employer retains the right to designate the first “non-emergency” physician. *Bunch v. Indus. Claim Appeals Office of State of Colorado*, 148 P.3d 381, 384 (Colo. App. 2006); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

[Redacted Employer] and [Redacted Insurer] concede they are liable for Claimant’s initial emergency care provided on October 23, 2018. They contend, however, that the surgery performed by Dr. Nanney on October 26, 2018 was non-emergent and unauthorized. The ALJ agrees. The admitting emergency room physician remarked that there was no evidence of acute issues or anything requiring emergent surgical intervention. Although Claimant was subsequently admitted for pain control and, pursuant to a surgical evaluation, recommended for surgery, the medical records indicate the need for surgery was not emergent. Dr. Nanney noted he was willing to perform the surgery while Claimant was hospitalized if Claimant chose to do so, yet Dr.

Nanney clearly noted other options for treatment that included medical management, tincture of time and nonsurgical strategies.

Claimant testified he elected to proceed with the surgery. While it is understandable Claimant likely wished to proceed with the surgery at the time for convenience and in hopes of experiencing some relief of his symptoms sooner rather than later, there is insufficient evidence indicating the surgery was emergent. Although Dr. Nanney performed the surgery during the same stint of hospitalization, the emergency effectively ended with Dr. Nanney's determination that surgery was one option of others, and that the surgery could or could not be performed at that time. It is undisputed Claimant did not seek prior authorization for the surgery. The totality of the evidence establishes the surgery performed by Dr. Nanney on October 26, 2018 was non-emergent and unauthorized. Accordingly, [Redacted Employer] and [Redacted Insurer] are not liable for the costs of the October 26, 2018 surgery. [Redacted Employer] and [Redacted Insurer] remain liable for authorized, reasonable and necessary medical benefits related to the April 18, 2018 work injury.

Reopening the Petition to Terminate & Claimant's Entitlement to Temporary Indemnity Benefits

An "award" may be reopened on the ground of "mistake." Section 8-43-303, C.R.S. The party seeking to reopen bears the burden of proof to establish grounds to reopen. See *Richards v. Industrial Claim Appeals Office*, 996 P.2d 756 (Colo. App. 2000). The term "mistake" refers to any mistake whether one of law or fact. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). The authority to reopen is discretionary provided the statutory criteria have been met. *Berg v. Industrial Claim Appeals Office, supra*. In order to reopen based on mistake the ALJ must determine that there was a mistake that affected the prior award. If there was a mistake the ALJ must determine whether, under the circumstances, it is the type of mistake that justifies reopening the claim. *Travelers Insurance Co. v. Industrial Commission*, 646 P.2d 399 (Colo. App. 1981). Factors the ALJ may consider when determining whether a mistake warrants reopening include the potential for injustice if the mistake is perpetuated, and whether the party seeking to reopen could have avoided the mistake by the exercise of due diligence in the handling or adjudication of the claim. *Klosterman v. Industrial Commission*, 694 P.2d 873 (Colo. App. 1984); *Travelers Insurance Co. v. Industrial Commission, supra*.

Claimant contends that termination of all temporary disability benefits pursuant to the Petition to Terminate was an error/mistake because Claimant was only receiving TPD based on modified employment at the time. Claimant argues that, at most, [Redacted Employer] was entitled to a credit against TPD in the amount of \$480 pursuant to the modified job offer.

As found, Claimant failed to meet his burden to prove any error/mistake occurred justifying the reopening of the termination of temporary indemnity benefits pursuant to the approved Petition. WCRP Rule 6-4 allows insurers to, in certain circumstances, file

a petition to suspend, modify or terminate temporary disability benefits. If the claimant does not file a written objection with the Division within 20 days of the date of the mailing of the petition, the Director may grant the insurer's request to suspend, modify or terminate disability benefits as of the date of the petition.

Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S., a claimant who is responsible for his or her termination from regular or modified employment is not entitled to temporary indemnity benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006).

The Petition to Terminate was properly filed and approved under WCRP Rule 6-4, terminating Claimant's temporary benefits pursuant to §8-42-105(4) C.R.S. and §8-42-103(1)(g). As noted above, when a claimant is responsible for his or her termination, any resulting wage loss is deemed not attributable to the industrial injury. Thus, Claimant's contention that only Claimant's TPD benefits at the time should have been affected per the Petition to Terminate is unpersuasive. Even assuming, arguendo, that there was a mistake regarding whether Claimant was responsible for his termination, the ALJ is not persuaded such mistake in fact would justify reopening, when Claimant had the opportunity to respond to the Petition to Terminate and failed to respond or timely appeal the Director's approval of the Petition to Terminate. The record does not support any mistake in law or fact justifying reopening under the circumstances.

Accordingly, Claimant is not entitled to TPD benefits from June 28, 2018 to October 22, 2018. As Claimant failed to prove the Petition to Terminate temporary disability benefits should be reopened on the basis of error/mistake, the ALJ does not address the issue of Claimant's responsibility for his termination.

Claimant has, however, established he suffered a significant worsening of his April 18, 2018 work injury as of October 23, 2018, entitling Claimant to additional temporary disability benefits.

Section 8-42-105(4) does not bar TTD wage loss claims after a termination for which the employee was responsible when the worsening of a work-related injury incurred during that employment causes subsequent wage loss. *Anderson v. Longmont Toyota, Inc.*, 102 P.3d 323, 326 (Colo. 2004). This is limited to cases in which the "claimant's condition worsens after the termination of employment and prevents or diminishes the claimant's ability to work," rather than where the wage loss is the result of the voluntary or for-cause termination of the regular or modified employment. *Gilmore*, 187 P.3d at 1132; *Grisbaum v. Indus. Claim Appeals Office*, 109 P.3d 1054, 1056 (Colo. App. 2005); *Anderson*, 102 P.3d at 326.

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result

of the disability, and that the disability resulted in an actual wage loss. See Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Claimant suffered increased pain and a repeat lumbar spine MRI revealed worsened disc extrusions, resulting in the need for surgery on October 26, 2018. Claimant did not work at all from October 23, 2018 to November 15, 2018 due to the worsening of his April 18, 2018 work injury and related treatment. As Claimant suffered wage loss due to the significant worsening of his April 18, 2018 work injury, Claimant is entitled to TTD benefits from October 23, 2018 to November 15, 2018, when Claimant was released to modified duty by Dr. Gehrs.

Claimant argues he is entitled to TPD from November 16, 2018 to March 18, 2019, as the wages Claimant earned for [Redacted subsequent Employer] during such time period were less than Claimant's AWW on the [Redacted Employer] claim. Although Claimant was on work restrictions during this time period, the wage loss was not due to the restrictions from his worsened condition. Accordingly, Claimant is not entitled to TPD benefits from November 16, 2018 to March 18, 2019.

Compensability of the March 18, 2019 Incident

A claimant is required to prove by a preponderance of the evidence that at the time of the alleged injury he was performing service arising out of and in the course of the employment, and that the alleged injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The Act creates a distinction between an “accident” and an “injury.” The term “accident” refers to an “unexpected, unusual, or undesigned occurrence.” Section 8-40-201(1), C.R.S. In contrast, an “injury” contemplates the physical or emotional trauma caused by

an “accident.” An “accident” is the cause and an “injury” is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable “injury.” A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.*, W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). However, no compensability exists if the disability and need for treatment was caused as the direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). Similarly, the question of whether the disability and need for treatment was caused by the industrial injury or an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office*, *supra*.

It is undisputed that, at the time of the March 18, 2019 injury, Claimant was subject to certain work restrictions, and had worsening symptoms and recommendations for additional treatment in connection with the April 18, 2018 work injury. Nonetheless, leading up to March 18, 2019, Claimant was able to perform his job duties and maintained some level of function. Subsequent to the March 18, 2019 injury, Claimant has suffered from increased pain, he now walks with the assistance of a cane, and he has not returned to work due to his pain. Claimant has not been released to return to work by any providers. [Redacted subsequent Employer] argues that Claimant would not have been qualified for his job in the first instance had he revealed his pre-existing disability at the time of his interview, and that additional restrictions assigned after the March 18, 2019 merely represent differences in physician opinions. These arguments are unpersuasive to the ALJ as the fact remains, that despite Claimant’s worsening pre-existing condition and disability, Claimant was physically performing his job duties before the March 18, 2019 injury and subsequently was unable to do so. Accordingly, the preponderant evidence indicates the March 18, 2019 injury produced additional disability.

To prove an aggravation, a claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy. *Cambria v. Flatiron Construction*, W.C. No. 5-066-531, 2019 WL 2115963 (Colo. Indus. Cl. Apps. Office May 7, 2019). Pain is a typical symptom from the aggravation of a pre-existing condition, and a claimant is entitled to worker’s compensation benefits, “so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition.” *Martinez v. LKQ Holding Corp.*, W.C. Nos. 5-007-076; 5-066-360, 2019 WL 580514 (Colo. Indus. Cl. Apps. Office, Feb. 4, 2019). Although there has not been any identifiable structural change to Claimant’s underlying anatomy,

Claimant's reports of increased pain and decreased function subsequent to the March 18, 2019 are credible. The ALJ acknowledges that, in the month prior to the March 18, 2019 work injury, Claimant was reporting significant pain. However, medical records from February 2019 specifically note that while Claimant had significant pain at night, and he was not doing any significant lifting, climbing ladders, or crawling, he was continuing to work.

Dr. Brunworth testified that Claimant suffered additional disability as a result of the March 18, 2019 work injury. Drs. McCranie and Fall have acknowledged that Claimant likely suffered a temporary aggravation, but no substantial intervening injury. A temporary aggravation of a pre-existing condition is compensable, as long as the industrial exposure is the proximate cause of the claimant's need for treatment. See *Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 448 (1949); *Subsequent Injury Fund v. State Compensation Insurance Authority*, 768 P.2d 751 (Colo. App. 1988). Here, Claimant's March 18, 2019 injury proximately caused at least some of Claimant's additional disability. While the aggravation may have been temporary, whether Claimant has returned to what could be considered baseline is a determination for an ATP.

Medical Benefits

Respondents are liable to provide reasonable, necessary and casually related medical treatment to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

As the ALJ determined Claimant sustained a compensable aggravation of his pre-existing condition on March 18, 2019, [Redacted subsequent Employer] and [Redacted subsequent Insurer] are liable for reasonable, necessary and causally related medical treatment to cure and relieve the effects of the aggravation.

TTD Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. See Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which

impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

As found, Claimant is entitled to temporary indemnity benefits beginning March 19, 2019 until terminated by law. The March 18, 2019 injury produced additional disability and Claimant has not worked since such time. [Redacted subsequent Employer] and [Redacted subsequent Insurer] are liable for temporary indemnity benefits to the extent Claimant suffered lost wages since March 19, 2019.

AWW

Section 8-42-102(2) requires the ALJ to base the claimant's Average Weekly Wage (AWW) on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp.*, *supra*. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply § 8-42-102(3) and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Campbell v. IBM Corp.*, *supra*.

As found, Claimant earned \$28.28/hour and worked 40 hours per week. Accordingly, a fair approximation of Claimant's wage loss and diminished earning capacity is an AWW of \$1,131.20.

ORDER

1. [Redacted Employer] remains liable for reasonable, necessary and causally related medical benefits to cure and relieve the effects of the April 18, 2018 work injury.

2. [Redacted Employer] is not liable for the costs of the October 26, 2018 surgery performed by Dr. Nanney, as such treatment was non-emergent and unauthorized.
3. Claimant's petition to reopen temporary disability benefits based on error/mistake is denied and dismissed. Claimant is not entitled to TPD benefits from June 28, 2018 to October 22, 2018.
4. [Redacted Employer] shall pay Claimant TTD benefits from October 23, 2018 to November 15, 2018 due to Claimant's wage loss as a result of a significant worsening of his condition.
5. Claimant is not entitled to TPD benefits from November 16, 2018 to March 18, 2019.
6. Claimant sustained a compensable aggravation arising out of and during the course of his employment for [Redacted subsequent Employer] on March 18, 2019.
7. [Redacted subsequent Employer] is liable for reasonable, necessary and causally-related medical benefits to cure and relieve the effects of the March 18, 2019 aggravation.
8. [Redacted subsequent Employer] is liable for temporary indemnity benefits for wage loss suffered by Claimant beginning March 19, 2019 and ongoing, until terminated by law.
9. Claimant's AWW for [Redacted subsequent Employer] is \$1,131.20.
10. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory

reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: May 14, 2020

A handwritten signature in black ink, appearing to read 'Kara Cayce', is written over a horizontal line.

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Whether the respondent hospital was properly joined as a party to this proceeding.
- Whether the language included in the claimant's Application for Hearing pled the issue of penalties with sufficient specificity.
- Whether the claimant has demonstrated, by a preponderance of the evidence, that penalties should be assessed against the respondent hospital pursuant to Sections 8-43-304 and 8-43-305, C.R.S., for the respondent hospital's alleged violation of Section 8-42-101(4), C.R.S. The claimant has requested penalties for the period of June 13, 2019 up to and including October 9, 2019.

FINDINGS OF FACT

1. On July 22, 2017, the claimant suffered an injury while working as a tow truck driver. The injury occurred while the claimant was loading an F250 pickup truck onto her assigned tow truck. To do so, the claimant was lying on the ground attaching the safety chains. At that time, the winch on the tow truck released and caused the truck to roll back. The claimant was underneath the truck when this occurred and one of the tires of the pickup truck rolled onto the claimant's right arm. The claimant was able to remove her arm from under the tire. However, the truck rolled a second time and the tire rolled onto the claimant's chest. The claimant was able to extract herself from out from under the truck and called for help. Bystanders assisted the claimant in calling the respondent employer and emergency services.

2. The claimant initially received medical treatment at Valley View Hospital (VVH) in Glenwood Springs, Colorado. That initial treatment included six days in ICU at VVH. At the time of the accident, the claimant lived in New Castle, Colorado. Subsequently, the claimant moved to Hotchkiss, Colorado. After her move, the claimant transferred medical treatment for her injury to Delta County Memorial Hospital, the respondent hospital in the current case.

3. On September 11, 2018, the undersigned ALJ held a hearing on the issues of: 1) whether the claimant was an employee of the respondent employer; 2) whether she suffered a compensable injury; 3) whether the claimant's medical treatment was reasonable, necessary, and related to that injury; 4) whether the claimant's medical treatment was authorized; 5) whether the claimant was entitled to temporary total disability (TTD) benefits; and 6) whether penalties were to be assessed for the respondent employer's failure to obtain and maintain workers' compensation insurance.

4. On October 11, 2018, the ALJ entered Findings of Fact, Conclusions of Law, and Order (FFCLO) in which the respondent employer was found to have been the employer of the claimant at the time of the July 22, 2017 injury. In addition, the ALJ ordered that the employer was responsible for the payment of medical treatment related to the claimant's work injury. That treatment included treatment the claimant received from Delta County Memorial Hospital.

5. At hearing, the claimant testified that she provided the respondent hospital a copy of the ALJ's FFCLO. The claimant has also provided copies of the FFCLO to collection agencies attempting to collect on behalf of the hospital. However, the claimant has continued to receive bills from the hospital for medical treatment related to her work injury.

6. The claimant also testified that the respondent employer has not paid any amount related to her work injury, as ordered by the ALJ. The claimant testified that to her knowledge the respondent employer has not made any payment to any of her medical providers.

7. On April 10, 2019, the claimant's attorney authored a letter in which he informed the hospital that they were to collect from the respondent employer. In that letter counsel referenced Section 8-42-101(4), C.R.S. which states:

Once there has been an admission of liability or the entry of a final order finding that an employer or insurance carrier is liable for the payment of an employee's medical costs or fees, a medical provider shall under no circumstances seek to recover such costs or fees from the employee.

8. In addition, the April 10, 2019 letter notified the hospital that they could be subject to penalties pursuant to Sections 8-43-304 and 8-43-305, C.R.S.

9. Ms. B[Redacted] is the hospital's Billing Manager for physician billing. Ms. B[Redacted] explained that the hospital has two billing departments. Those departments are physician billing and facility billing. Ms. B[Redacted] testified that she first became aware of issues surrounding the claimant's bills on May 7, 2019. At that time, Ms. B[Redacted] received the April 10, 2019 letter from the claimant's counsel and a copy of the FFCLO. Based upon her understanding of the FFCLO, Ms. B[Redacted] instructed her staff to send the claimant's bills to the Division of Workers' Compensation (DOWC).

10. At the hearing, the hospital provided a copy of a communication from the DOWC in response to the hospital's attempts to bill the DOWC. In that communication the DOWC confirmed that the employer did not send any payment to the DOWC; nor did the employer post a bond. In a later communication from the DOWC, it was clarified that even if monies had been paid by the employer to the DOWC, those funds would ultimately be distributed to the claimant and not to any specific medical provider.

11. On June 13, 2019, counsel for the hospital responded to the April 10, 2019 letter from the claimant's counsel. In that reply, the hospital reiterated the information obtained from the DOWC. In that same response, the hospital took the position that "[the hospital's] only recourse is to resume collection from [the claimant]."

12. Ms. B[Redacted] testified that physician billing has not sent a bill to the claimant since May 7, 2019. A bill was sent to the claimant on that date, which was the same date Ms. B[Redacted] learned of the ALJ's FFCLO. Ms. B[Redacted] credibly testified that the May 7, 2019 bill was generated automatically within the billing system. Records entered into evidence at hearing indicate that the physician billing department has not billed the claimant since May 7, 2019.

13. Ms. B[Redacted] also testified that amounts are owed the claimant's medical treatment. However, Ms. B[Redacted] is "holding" those bills as it is unclear to her where to send the billing. Based upon the information submitted via testimony and evidence, it does not appear to the ALJ that the hospital has sent any billing directly to the employer.

14. Ms. BX[Redacted] is the hospital's Business Office Manager. She and her staff handle facility billing. Ms. BX[Redacted] testified that she first learned that the claimant has an order regarding her medical bills in July 2019. Ms. BX[Redacted] also testified that bills are sent to collections through an automated system.

15. Records entered into evidence show that the respondent hospital sent bills directly to the claimant on June 18, 2019; July 2, 2019; July 8, 2019; July 18, 2019; July 31, 2019; August 7, 2019; August 13, 2019; and September 12, 2019.

16. Records entered into evidence indicate that some of the claimant's bills from the facility billing department have been turned over to collections. Specifically, on September 20, 2019, A-1 Collections began attempts to collect on two bills, one in the amount of \$977.00 and the other in the amount of \$547.00.

17. On June 18, 2019, the claimant filed an Application for Hearing (AFH) for penalties for the hospital's alleged violation of Section 8-42-101(4), C.R.S. That application was rejected by the Office of Administrative Courts (OAC) because the case caption listed the hospital as the employer and did not correctly identify the respondent employer.

18. On June 19, 2019, the claimant filed a second AFH endorsing the same penalty issues. This AFH was also rejected by the OAC because the hospital and the respondent employer were identified together as "employer". The staff with the OAC instructed the claimant's counsel to caption the case as identified by the DOWC (ie. the claimant vs. the uninsured respondent employer).

19. On June 20, 2019, the claimant filed a third AFH for penalties for the respondent hospital's alleged violation of Section 8-42-101(4), C.R.S. This application was processed by the OAC as the claimant and employer were properly identified on the

case caption. In the June 20, 2019 AFH, “Penalties” was marked as an endorsed issue. In addition, the AFH included the following:

8-42-101(4) DELTA MEMORIAL HOSPITAL; No Recovery from Employee, Once there had been Once there has been an admission of liability or the entry of a final order finding that an employer or insurance carrier is liable for the payment of an employee's medical costs or fees, a medical provider shall under no circumstances seek to recover such costs or fees from the employee.

20. All of the AFHs filed by the claimant were provided to the respondent hospital. In addition, the hospital was provided notice of the October 9, 2019 hearing.

21. The respondent hospital argues that the claimant has received other medical treatment from their facilities that is unrelated to the claimant’s work injury. However, neither party presented evidence clarifying this “other” and allegedly unrelated treatment.

22. The respondent hospital further argues that if they are unable to collect from the claimant and are unable to collect from the DOWC, they are left without recourse. The ALJ is not persuaded by this assertion. The ALJ finds no impediment to the respondent hospital simply collecting from the respondent employer. As indicated by communications entered into evidence, the employer has apparently attempted to file for bankruptcy and the claimant is a creditor.

23. The ALJ credits the claimant’s testimony and the evidence entered into evidence and finds that the claimant has demonstrated that the respondent hospital has continued to bill the claimant after receiving notice of the FFCLO. The ALJ finds that on June 18, July 2, July 8, July 18, July 31, August 7, August 13, and September 12, 2019, the respondent hospital sent bills to the claimant. In addition, the ALJ finds two additional instances of the respondent hospital attempting to collect from the claimant when two bills were forwarded to collections on September 20, 2019. The ALJ also finds that the claimant has demonstrated that it is more likely than not that the respondent employer violated the language of Section 8-42-101(4), C.R.S.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (the Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights

of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

4. The respondent hospital first argues that they were not properly joined in this case, and therefore a claim for penalties cannot be asserted against them. The ALJ disagrees. Section 8-43-304, C.R.S., governs when penalties may be imposed in a workers' compensation matter and provides, in relevant part, that:

Any employer or insurer, or any officer or agent of either, or any employee, **or any other person** who violates articles 40 to 47 of this title 8, or does any act prohibited thereby, or fails or refuses to perform any duty. . . or fails, neglects, or refuses to obey any lawful order made by the director or panel or any judgment or decree made by any court as provided by the articles . . . shall also be punished by a fine of not more than one thousand dollars per day for each offense, to be apportioned, in whole or part, at the discretion of the director or administrative law judge. . . (*emphasis added*).

This provision has been construed as applying to violation of an order issued by an ALJ. *Giddings v. Industrial Claim Appeals Office*, 39 P.3d 1211 (Colo. App. 2001).

5. As one of the claimant's authorized medical providers, the ALJ concludes that the respondent hospital is a subject to the provisions of the Act. Therefore, the hospital can be found to be in violation or in compliance with the Act.

6. The ALJ concludes that the claimant correctly captioned this case as the claimant vs the respondent employer and regarding the respondent hospital. The language of Section 8-43-304, C.R.S. does not require that penalties be asserted against a "party" to the claim. Furthermore, the hospital's reliance on two Industrial Claim Appeals Office (ICAO) orders¹ is unfounded. Neither of those cases are determined on the issue of "joining" a party to a claim. Nor do those cases speak to the procedural process for assessing penalties against a non-party medical provider. The ALJ concludes that the

¹ *Davis v. Cub Foods*, (WC 3-990-098; ICAO 11/20/93) and *Gutierrez v. Startek USA*, (WC 4-842-550-05; ICAO 8/29/14).

respondent hospital was properly notified of their involvement in the claimant's claim as a medical provider and the claimant's allegations of a statutory violation.

7. The respondent hospital has also argued that the claimant did not meet the specificity requirement in filing the Application for Hearing (AFH) requesting penalties. Section 8-43-304(4), C.R.S., provides that in "any application for hearing for a penalty pursuant to subsection (1) of this section, the applicant shall state with specificity the grounds on which the penalty is being asserted." The failure to state the grounds for penalties with specificity may result in dismissal of the penalty claims. *In re Tidwell*, W.C. No. 4-917-514-03 (ICAO, Mar. 2, 2015).

8. The purposes of the specificity requirement are to provide notice of the basis of the alleged violation so as to afford the putative violator an opportunity to cure the violation, and to provide notice of the legal and factual bases of the claim for penalties so that the violator can prepare its defense. See *Major Medical Insurance Fund v. Industrial Claim Appeals Office*, 77 P.3d 867 (Colo. App. 2003); *Davis v. K Mart*, W.C. No. 4-493-641 (ICAO, Apr. 28, 2004); *Gonzales v. Denver Public School District Number 1*, W.C. No. 4-437-328 (ICAP, Dec. 27, 2001). In essence, the notice aspect of the specificity requirement is designed to protect the fundamental due process rights of the alleged violator to be "apprised of the evidence to be considered, and afforded a reasonable opportunity to present evidence and argument in support of" its position. *In re Tidwell*, W.C. No. 4-917-514-03 (ICAO, Mar. 2, 2015). *Matthys v. City of Colorado Springs*, W.C. No. 4-662-890 (ICAO, Apr. 2, 2007). Of course, the statute does not prescribe a precise form for pleading penalties, and an ALJ may consider the circumstances of the individual case to determine whether the application for hearing was sufficiently precise to satisfy the statute. See *Davis v. K Mart*, W.C. No. 4-493-641 (ICAO Apr. 28, 2004).

9. As found, the claimant's AFH marked "Penalties" as an endorsed issue. In addition, the AFH included the following:

8-42-101(4) DELTA MEMORIAL HOSPITAL; No Recovery from Employee, Once there had been Once there has been an admission of liability or the entry of a final order finding that an employer or insurance carrier is liable for the payment of an employee's medical costs or fees, a medical provider shall under no circumstances seek to recover such costs or fees from the employee.

10. The ALJ has considered the specific facts of this case and finds that the claimant has met the specificity requirement in the inclusion of the above language in her AFH. The claimant identified that penalties were sought against the respondent hospital. The claimant also quoted the section of the Act that the hospital is alleged to have violated. The ALJ finds that the hospital was sufficiently notified of the issues to be addressed at hearing.

11. With regard to the issue before the ALJ, the ALJ notes that prior to the assessment of any penalties, the ALJ must first determine whether a party has violated any provision of the Workers' Compensation Act or an order. If the ALJ finds such a violation, penalties may be imposed if it is also found that the employer's actions were objectively unreasonable. Section 8-43-304, C.R.S. *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Jimenez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The "objective standard" is measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995). Section 8-43-305, C.R.S. provides that each day is a separate offense. Therefore, penalties may be assessed of up to \$1,000.00 per day.

12. Section 8-42-101(4), C.R.S. provides: "Once there has been an admission of liability or the entry of a final order finding that an employer or insurance carrier is liable for the payment of an employee's medical costs or fees, a medical provider **shall under no circumstances** seek to recover such costs or fees from the employee (*emphasis added*)." The ALJ reads the legislature's use of the language "shall" and "under no circumstances" to clearly state the intent that a medical provider shall cease all collection against a claimant once there has been an admission of liability or a final order.

13. In this case, the claimant seeks penalties for the hospital's alleged violation of Section 8-42-101(4), C.R.S. for continuing to seek payment from the claimant for medical treatment. The claimant has requested penalties from June 13, 2019 up to and including the date of hearing, October 9, 2019.

14. The respondent hospital points to language found in Section 8-43-304(4), C.R.S. and argues that the claimant's burden of proof is clear and convincing evidence. The ALJ disagrees with this assertion. Section 8-43-304(4), C.R.S. addresses what is to occur if penalties are alleged, but the violation has been cured. Then, and only then, does the burden of proof increase from a preponderance of the evidence to clear and convincing evidence. Here, there has been no cure of the hospital's violation as they continue to seek payment from the claimant. Therefore, Section 8-43-304(4), C.R.S. is not applicable in the current case.

15. As found, the respondent hospital has continued to bill the claimant for medical treatment related to her work injury. In addition, the hospital's facility billing department has turned the claimant's balances over to collections. As found, these continued attempts to collect from the claimant constitute a violation of the clear language of Section 8-42-101(4), C.R.S. The respondent hospital was notified that they were to no longer pursue collection against the claimant. Nevertheless, they continue to seek payment from the claimant, despite the notification that the respondent employer is responsible for payment of the claimant's work related medical expenses.

16. The hospital has argued that there are certain bills at their facilities that may not be part of the treatment of the claimant's work related injury. While that may be the case, the ALJ finds no persuasive evidence on the record to indicate that the hospital has attempted to clarify any non-work related treatment. It is the position of this ALJ that is the responsibility of the medical provider to correctly categorize the claimant's medical treatment as work related and non-work related. The hospital's practice of billing the claimant for any and all treatment, despite the clear language of Section 8-42-101(4), C.R.S., further demonstrates the hospital's clear disregard of the Act.

17. In the Remand Order dated March 13, 2020, ICAO specifically stated "the penalties in this matter may only be imposed for the days on which the billing actually occurred". Therefore, the ALJ concludes that the respondent hospital billed the claimant eight times between June 13, 2019 through and including October 9, 2019; (June 18, July 2, July 8, July 18, July 31, August 7, August 13, and September 12, 2019). In addition, two bills were sent to collections on September 20, 2019, resulting in two additional instances of the respondent hospital attempting to collect from the claimant.

18. Based upon all of the foregoing, the ALJ concludes that penalties are appropriate in this matter. Given the statutory violation, the ALJ orders the respondent hospital to pay to the claimant penalties of \$750.00 per day for the 10 total billing instances that occurred during the period of June 13, 2019 through and including October 9, 2019. This results in total penalties of \$7,500.00 (\$750.00 per day for 10 separate instances). No portion of this total shall be apportioned to the uninsured employer fund.

ORDER

It is therefore ordered that the respondent hospital shall pay the claimant penalties of \$7,500.00.

Dated this 18th day of May 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-121-543-001**

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence that on October 21, 2019, she suffered an injury arising out of and in the course and scope of her employment with the employer.

If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence that medical treatment of her neck and back is reasonable, necessary, and related to the work injury.

If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits and/or temporary partial disability (TPD) benefits, beginning on October 21, 2019 and ongoing.

At hearing, the parties agreed that if the claim is found compensable, they will stipulate to the claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. The claimant began working for the employer in July 2019 as a grocery clerk. The claimant's job duties included unloading the delivery truck for the dairy department. On October 21, 2019, the claimant was engaged in this unloading process. The claimant testified that she was unstacking crates of milk from pallets and then restacking those same crates onto the floor. The claimant further testified that while moving the milk in this way, she began to feel sharp pain in her left shoulder and low back. The claimant continued performing her job duties, but attempted to do so using only her right arm. Thereafter, the claimant began to also experience pain in her right arm.

2. The claimant reported this incident to the employer. Subsequently, the claimant was directed to seek treatment at Glenwood Medical Associates (GMA).

3. On October 24, 2019, the claimant was first seen at GMA by Dr. Konrad Nau. On that date, the claimant reported the pain she developed in her left shoulder and low back on October 21, 2019. Dr. Nau assessed tendonitis and muscle spasm of the shoulders and referred the claimant to physical therapy. In addition, he ordered x-rays of the claimant's lumbar spine, left shoulder, and right shoulder. Dr. Nau assessed work restrictions of no lifting, carrying, pushing, or pulling over five pounds, and no squatting.

4. On October 24, 2019, an x-ray of the claimant's lumbar spine showed moderately advanced degenerative disc space narrowing at the L4-L5 level with endplate sclerosis and marginal spurring. There was no evidence of fracture. The right shoulder x-ray taken on that date showed mild glenohumeral osteoarthritis, with no fracture.

5. The claimant began physical therapy on October 29, 2019 with Brian Edmiston, PT. The claimant testified that she continued physical therapy for four or five sessions. The claimant has not returned to physical therapy because it has been denied by the respondent.

6. Beginning on November 6, 2019, the claimant was seen at GMA by Dr. Bruce Lippman. On that date, the claimant reported neck pain, with pain in both the anterior and posterior of her bilateral shoulders. Dr. Lippman diagnosed cervical radiculopathy and ordered an x-ray of the claimant's cervical spine. Dr. Lippman assessed a 20 pound lifting restriction. In addition, Dr. Lippman recommended the claimant continue with physical therapy, with a focus on the claimant's neck.

7. On November 6, 2019, an x-ray of the claimant's cervical spine showed moderate multilevel degenerative disc disease and facet arthropathy, mild spinal canal stenosis at the C5-C6 level, and multilevel bilateral neural foraminal stenosis.

8. The claimant testified that she did not work from October 21, 2019 through November 17, 2019. On November 18, 2019, the claimant returned to modified duty with the employer.

9. On November 20, 2019, the claimant returned to Dr. Lippman. At that time, Dr. Lippman limited the claimant to working no more than four hours per day. In addition, the claimant was limited to two hours of standing and two hours of sitting restrictions.

10. At the claimant's request, Dr. Lippman further altered the claimant's work restrictions on January 27, 2020. From that date, the claimant was limited to working on her feet for four hours per day, with a break every 30 minutes. In addition, the claimant was limited to two hours of sitting per day, with a break every 30 minutes.

11. The claimant continued to work with the January 27, 2020 work restrictions until March 10, 2020. It was on that date that the claimant became severely ill with influenza. The claimant has not returned to work. The claimant testified that her personal care provider believes that she has both influenza and COVID-19.

12. At the request of the respondent, the claimant attended an independent medical examination (IME) with Dr. Lawrence Lesnak on March 3, 2020. In connection with the IME, Dr. Lesnak reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. At the IME, the claimant reported "constant, diffuse, posterolateral, bilateral neck and bilateral suprascapular pain". In his IME report, Dr. Lesnak opined that the claimant did not sustain an injury at work on October 21, 2019. In support of this opinion, Dr. Lesnak referred to the claimant's prior history of chronic neck, back, and upper trapezius pain and that he observed no reproducible objective evidence of an acute injury on exam. In addition, Dr. Lesnak noted that the claimant did not report any neck pain to Dr. Nau on October 24, 2019.

13. Dr. Lesnak's testimony by deposition was consistent with his written report. Dr. Lesnak testified that it remains his opinion that the claimant did not suffer an injury at work on October 21, 2019. In support of this opinion, Dr. Lesnak testified that the claimant has subjective complaints that are not reproducible on exam. Dr. Lesnak also noted that

it is his opinion that there is no “clinical evidence of any symptomatic pathology”. In his testimony, Dr. Lesnak also referenced the claimant’s prior chronic neck and upper extremity symptoms.

14. With regard to the prior history noted by Dr. Lesnak, the medical records entered into evidence indicate that the claimant obtained treatment of her neck, shoulders, and back prior to October 21, 2019. On October 14, 2016, the claimant’s primary care provider, Dr. Sarah Rieves, opined that the claimant had possible cervical myelopathy and made a referral to a neurologist. Thereafter on November 1, 2016, Dr. Rieves again made reference to the claimant’s chronic neck pain. On November 29, 2016, Dr. J. Siegel conducted electromyography (EMG) studies of the claimant’s right upper extremity. The EMG results were consistent with entrapment neuropathies of the medial nerves at the claimant’s bilateral wrists, with no evidence of cervical radiculopathy or brachial plexopathy.

15. The ALJ does not find the claimant’s testimony regarding the alleged work injury and her symptoms to be credible or persuasive. The ALJ credits the medical records and the opinions of Dr. Lesnak and finds that the claimant has failed to demonstrate that it is more likely than not that she suffered an injury at work on October 21, 2019. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that her work duties on October 21, 2019 aggravated, accelerated, or combined with a preexisting condition to necessitate medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias,

prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJL, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” See *H & H Warehouse v. Vicory*, *supra*.

5. As found, the claimant has failed to demonstrate by a preponderance of the evidence that on October 21, 2019 she suffered an injury arising out of and in the course and scope of her employment with the employer. As found, the claimant has failed to demonstrate by a preponderance of the evidence that her work duties on October 21, 2019 aggravate, accelerated, or combined with a preexisting condition to necessitate medical treatment. As found, the medical records and the opinions of Dr. Lesnak are credible and persuasive.

ORDER

It is therefore ordered that the claimant’s claim for an alleged work injury on October 21, 2019 is denied and dismissed.

Dated this 20th day of May 2020.

Cassandra M. Sidanycz
Administrative Law Judge

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- I. Whether Claimant sustained a compensable injury on January 21, 2019.
- II. Whether Claimant is entitled to reasonable, necessary, and related medical benefits, including the recommended right shoulder surgery.

STIPULATIONS

If found compensable, the parties stipulated to the following:

- A. Claimant earned an average weekly wage (AWW) of \$480.00.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant has been working for Employer since August 2010. She is a swim and water fitness instructor teaching private swim lessons and deep-water aerobics classes. *Hearing Tr. 14:9-23.*
2. In March 2018 Employer underwent an expansion that included constructing a new community center and a hallway that connects the new community center to the original building the pool is in. *Hearing Tr. 15:9-15.*
3. In the hallway that connects the two buildings is a double fire door. To enter the pool building patrons of the community center have to open and walk through the double fire door. *Hearing Tr. 16:20-21.*
4. The double fire doors are side-by-side. Above the right door is a mechanism that, once activated, opens the right-side-door. To activate the opening mechanism patrons have to turn the handle downward and pull the door open two to three inches. After the door has been pulled open two to three inches the mechanism turns on and opens the door the rest of the way. *Hearing Tr. 17:5-20.*
5. The double fire doors are always kept closed because propping one opened is considered a fire hazard. *Hearing Tr. 39:17-19.*
6. On January 21, 2019, Claimant was scheduled to teach a private swim lesson. She had to enter the pool building through the double fire doors. Claimant opened the right-side door by turning the handle downward with her right hand and pulling the door open the required two to three inches with her right arm. When she pulled the door she felt an immediate pop or pull in her right shoulder accompanied by an "annoying ache." *Hearing Tr. 17-18:21-4.*

7. The incident happened around 5:30 p.m. There was no manager or boss on duty to whom Claimant could report the injury. Claimant taught her scheduled swim lesson and went home. *Hearing Tr. 18:10-17.*
8. The next day, January 22, 2019, Claimant's shoulder was still aching and she believed "something had happened" so she reported the injury to her pool manager Tiffany L[Redacted]. *Hearing Tr. 18-19:18-17.*
9. Claimant and Ms. L[Redacted] agreed that Claimant would monitor the condition of her right shoulder and could seek medical care if it worsened. *Hearing Tr. 19-20:14-1.*
10. Claimant's condition worsened over the next two weeks. On February 4, 2019, she sought treatment at UC Health Timberline Medical Center where she was evaluated by Katrina Plassmeyer, NP. It is noted that Claimant suffered a right shoulder injury on 1-21-2019 while opening a fire door at work. Claimant disclosed her prior right shoulder injury. Also, that Claimant's right shoulder was extremely tight and sensitive to touch. Claimant was prescribed Flexeril and referred for an orthopedic evaluation and an x-ray. She was also instructed to take ibuprofen and adhere to work restrictions that limited the use of her right arm. *Cl. Ex. 7.*
11. Claimant suffered a previous work injury to her right shoulder. On September 20, 2013, she slipped and fell while working for Employer. *Cl. Ex. 11.* The fall led to Claimant undergoing right shoulder surgery on April 15, 2014, inclusive of rotator cuff repair, ORIF of the os acromiale, and distal clavicle resection. *Cl. Ex. 6 pg. 22.* Claimant was placed at MMI on October 13, 2015. She was assigned permanent impairment of the right upper extremity, and permanent work restrictions inclusive of 75 lb. push / pull limitations. *Cl. Ex. 11.*
12. On February 5, 2019, Claimant underwent an x-ray of her right shoulder. It reveals post-surgical changes and degenerative changes of the right glenohumeral joint, but no acute displaced injury is identified. *Cl. Ex. 7:44.*
13. On February 6, 2019, Claimant had a scheduled medical appointment with at Estes Park Medical Group. She was evaluated by Juli Schneider, M.D. It is noted that Claimant was there to transition her care from her previous primary care provider. That roughly three weeks prior Claimant injured her right shoulder while opening a fire door at work. Also, Claimant previously injured her right shoulder roughly five years ago after falling at work, which led to surgery. Lastly, that Claimant "was doing fine until injury [three] weeks ago at work." *Cl. Ex. 8:51.*
14. On February 11, 2019, Claimant was evaluated by orthopedist Michael Grant, M.D. at Estes Park Medical Group. Claimant's chief complaint was right shoulder pain that began on January 21, 2019 while opening a heavy fire door at work. It is noted that Claimant "immediately felt a pull to her right shoulder, and now is experiencing right shoulder pain, with limited ROM." Claimant disclosed her prior right shoulder injury and surgery. It is also noted that "overall she has done fairly well but was [pulling] on a door about [three] weeks ago after which she had significant escalation of her symptoms. Since that time her shoulder has been

stiff and painful with noticeable crepitus.” Dr. Grant referred Claimant for physical therapy and, if needed, to follow up with the surgeon who performed her prior surgery. *Cl. Ex. 8:61.*

15. Claimant returned to UC Health Timberline Medical Center on February 21, 2019 where she was again evaluated by Ms. Plassmeyer, NP. Claimant was referred to Armodios Hatzidakis, M.D.; the orthopedist who performed her previous right shoulder surgery. Claimant was instructed to limit the use of her right arm, and to do aqua therapy while she was working in the pool. *Cl. Ex. 7:46-50.*
16. Respondent filed a Notice of Contest on February 26, 2019. *Cl. Ex. 1.*
17. On April 1, 2019, Claimant was evaluated at Western Orthopaedics by Dr. Hatzidakis. It is noted that Claimant was experiencing right shoulder pain that began on January 21, 2019 when she opened a heavy fire door at work. Dr. Hatzidakis concluded that because of Claimant’s “history of previous rotator cuff repair as well as the mechanism of injury, pulling on a heavy exit door, there is a possibility of further rotator cuff pathology post surgically.” Claimant was referred for physical therapy, labs to rule out infection, and an MRI. *Cl. Ex. 6:26-27.*
18. Claimant underwent a right shoulder MRI on April 25, 2019. *Cl. Ex. 4.*
19. On May 14, 2019, Claimant returned to Western Orthopaedics to review the MRI with Rose Christiansen, PA-C. It is noted the MRI shows a full-thickness anterior superior rotator cuff re-tear with evidence of prior extensive surgical repair of the supraspinatus with some slight thinning. Advanced arthritic changes within the joint with some superior migratory change. It is also noted that Claimant reported her right shoulder condition was doing well after her first surgery, and that is “was 90% of normal up to re-injury on January 21, 2019.” Surgical options, inclusive of a total shoulder arthroplasty, were discussed. Claimant elected to undergo steroid injection and continued physical therapy. *Cl. Ex. 6:30-31.*
20. Claimant began physical therapy at MedEx of Estes on June 5, 2019. She underwent 23 sessions. The last on August 19, 2019. *Cl. Ex. 10.*
21. On July 15, 2019, Medical Case Manager Constance Tilghman on behalf of Respondent Insurer wrote a letter to Dr. Hatzidakis asking whether Claimant is at maximum medical improvement (MMI) and what her anticipated plan of treatment was. *Cl. Ex. 6:34-35.*
22. On July 16, 2019, Claimant returned to Western Orthopaedics. Dr. Hatzidakis determined Claimant needed a reverse shoulder arthroplasty with capsular scar release and biopsies for cultures. Dr. Hatzidakis also responded to Insurer’s July 15, 2019 letter stating that Claimant was not at MMI because she would need to undergo claim related right shoulder surgery. *Cl. Ex. 6:34-40.*
23. On July 22, 2020, Dr. Hatzidakis requested authorization to perform right shoulder surgery to cure Claimant from the effects of her January 21, 2019 work injury. *Cl. Ex. 6:40*
24. On August 22, 2019, Nicholas Olsen, D.O., conducted an Independent Medical Examination (RIME) at the request of Respondents. R. Ex. A. Dr. Olsen

reviewed the medical records from Claimant's prior work injury and this work injury. *R. Ex. A:6-9*. Dr. Olsen did not review medical records for medical visits in between the two work injuries which span from November 23, 2015 through October 11, 2018. *Depo Tr. 27-29:7-8*. Dr. Olsen opined Claimant's mechanism of injury cannot cause injury to the rotator cuff. *R. Ex. A:10*. Dr. Olson opined when opening doors people only use their forearm, which places the elbow in a movement of extension, and triceps muscle. *Depo Tr. 9:8-19*.

25. On December 24, 2019, Gary Zuehlsdorff, D.O., conducted an Independent Medical Examination (IME) at the request of Claimant. *Cl. Ex. 4*. Dr. Zuehlsdorff reviewed medical records from Claimant's first work injury, for this work injury, and the medical records for the dates in between the two work injuries. *Cl. Ex. 4:7*. He also reviewed Dr. Olsen's RIME which led Dr. Zuehlsdorff to call Dr. Hatzidakis. *Cl. Ex. 4:9-11*. Ultimately, Dr. Zuehlsdorff concluded that Claimant did suffer a work injury while opening the fire door at work on January 21, 2019, and the recommended surgery is reasonable and necessary medical treatment resultant of this injury. *Cl. Ex. 4:11-13*.
26. On December 24, 2019, Dr. Hatzidakis wrote a letter to Dr. Zuehlsdorff summarizing the phone conversation the two had. Dr. Hatzidakis wrote, "I agree with you that her mechanism of injury can be consistent with causing a re-tear of the rotator cuff. As you know, the rotator cuff is active with all shoulder stabilizing activities, and opening a door with the elbow bent at her waist could certainly cause this, particularly if the door was difficult to open." Further, that "I think it is within the realm of medical probability that a re-tear of the rotator cuff could have occurred at the time of the injury." Additionally, "retraction of the rotator cuff and damage to the rotator cuff that is seen on the MRI could certainly have occurred from the Claimant's mechanism of injury in my opinion." *Cl. Ex. 6:40(A)*.
27. Claimant testified that the condition of her shoulder was "good" and that it felt "fine" from the time she was released from care for her first work injury on October 13, 2015 until she injured her shoulder on January 21, 2019. She could work her full job duties without pain or limitation. She could conduct her daily living activities without pain or limitation. She could work in her garden and remodel her cabin without pain or limitation. *Hearing Tr. 21:2-19*.
28. Claimant's testimony is supported by the medical records from her primary care provider at Estes Park Medical Group. Beginning on November 23, 2015 (about a month after being placed at MMI from the 2013 work injury) through October 11, 2018, there are 29 dates of service and Claimant did not seek treatment for her right shoulder once, nor did she complain of right shoulder pain or limitations. *Cl. Ex. 9:72-97*.
29. Claimant also testified that she has had to modify her work and daily living activities due to the January 21, 2019 work injury. Claimant no longer performs the full exercise routine in her water aerobics class like she did before January 21, 2019. She now has to get help to move equipment around the pool that she could move by herself prior to the January 21, 2019 work injury. Claimant now

also has limitations with doing yard work and maintenance around her property, and other daily living activities. *Hearing Tr. 23-24:1-22.*

30. Claimant opening the fire door so she could access the pool to perform her job duties is sufficiently incidental to her work and employment. Moreover, had Claimant not have had to pull the door open two to three inches before activating the automatic opening mechanism to access the pool to teach her swim lesson that night she would not have been injured.
31. This Judge finds the opinions of Dr. Zuehlsdorff and Dr. Hatzidakis to be credible and more persuasive than that of Dr. Olsen.
32. This Judge finds Claimant is credible. Claimant has remained remarkably consistent on the mechanism of injury and the progression of her symptoms afterward. She has not embellished her symptoms and continues to work full duty for Employer.
33. Claimant did suffer an injury due to the January 21, 2019 incident.
34. Claimant is entitled to medical treatment to cure and relieve her from the effects of her compensable right shoulder injury. This includes the right shoulder surgery recommended by Dr. Hatzidakis that this ALJ finds reasonable and necessary to cure Claimant from the effects of her work injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws these conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness’s testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007). A workers’ compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant sustained a compensable injury on January 21, 2019.

In Colorado, only those injuries “arising out of” and “in the course of employment,” are compensable under the Workers’ Compensation Act. Section 8-41-301(l)(b), C.R.S. The course of employment requirement is satisfied when the claimant shows that the injury occurred within the time and place limits of the employment. *Popovich v. Irlanda*, 811 P.2d 379 (Colo. 1991).

In this case, the incident in question happened on Employer’s premises at a time Claimant was scheduled to work. Thus, Claimant’s incident occurred within the course of her employment.

The inquiry does not stop there, however, and Claimant must also satisfy the “arising out of” requirement for compensability. The “arising out of” element is narrower than the “course” element and requires the claimant to prove that the injury had its “origin in an employee’s work-related functions and is sufficiently related thereto to be considered part of the employee’s service to the employer.” *Popovich v. Irlanda, supra*. The “arising out of” test is one of causation. See *Finn v. Indus. Commission*, 165 Colo. 106, 437 P.2d 542 (1968). The determination of whether there is a sufficient “nexus” or causal relationship between the claimant’s employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *City of Brighton v. Rodriguez, supra*.

To satisfy the arising out of requirement, it is unnecessary that Claimant be engaged in performing job duties at the time of the injury. See *Employers’ Mut. Ins. Co. v. Indus. Commission*, 76 Colo. 84, 230 P. 394 (1924). Our courts have recognized that it is not essential for the compensability determination that the activities of an employee emanate from an obligatory job function or result in some specific benefit to the employer so long as the employee’s activities are sufficiently incidental to the work itself as to be properly considered as arising out of and in the course of employment. See

Price v. Indus. Claim Appeals Office, 919 P.2d 207, 210 (Colo. 1996) (an activity arises out of employment if it is sufficiently “interrelated to the conditions and circumstances under which the employee generally performs the job functions that the activity may reasonably be characterized as an incident of employment”). It is sufficient if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment. *Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo.App. 1995).

Here, Claimant’s job for Employer on January 21, 2019 was to teach a private swim lesson in the Employer’s pool. To get to the Employer’s pool she had to enter through the fire door located in the hallway that connected the pool to the community center. Claimant opening the fire door on January 21, 2019 was done so for the benefit of Employer because it had to be done to allow Claimant to do the job Employer was paying her to do that night. This ALJ concludes that Claimant’s actions of opening the fire door to access the pool to teach a swim lesson is sufficiently incidental to the work itself to be properly considered as arising out of and in the course of her employment.

But the argument put forth by Respondents is not that this incident did not happen on January 21, 2019, but that this incident did not cause an injury to Claimant’s right shoulder.

In Colorado, no benefits flow to the victim of an industrial accident unless the accident causes an injury. See *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.*, 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The question of whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

In this case, Claimant has established by a preponderance of the evidence that she suffered a compensable injury to her right shoulder on January 21, 2019.

As found, Claimant is a reliable historian regarding the mechanism of injury and extent and progression of her symptoms. She relayed the same mechanism of injury to every provider she was evaluated by for this injury, including Ms. Plassmeyer, NP, Dr. Schneider, Dr. Grant, Dr. Hatzidakis, Dr. Olsen, and Dr. Zuehlsdorff. Claimant also disclosed her prior right shoulder injury and surgery to all of these providers.

As found, the medical records from Estes Park Medical Group support Claimant’s testimony that her right shoulder condition was good and felt fine from the time she was discharged from care for her first right shoulder injury on October 13, 2015 until she injured her shoulder on January 21, 2019.

As found, the opinions of Dr. Hatzidakis and Dr. Zuehlsdorff are more persuasive than those of Dr. Olsen. Dr. Hatzidakis is an orthopedist and he believes that the

mechanism of injury as described by Claimant can cause injury to the rotator cuff. Dr. Hatzidakis also opined “the rotator cuff is active with all shoulder stabilizing activities, and opening a door with the elbow bent at her waist could certainly caused [Claimant’s injury], particularly if the door was difficult to open.” Dr. Hatzidakis is an authorized treater on this claim. He was not hired by Claimant or Respondent to do an evaluation. He is truly an independent objective opinion on this matter. Dr. Zuehlsdorff is of the same opinion that Claimant’s mechanism of injury caused her current shoulder condition and need for surgery. Dr. Zuehlsdorff also opines that “there is no position where a rotator cuff is not vulnerable to injury” due to her pre-existing shoulder condition.

Dr. Olsen’s opinions are not credible. He contends that people only use the forearm, elbow, and triceps to open doors. He also states that all adults, whether a young adult male or a female 66 years old, open doors the same way. Both assertions are not credible. First, to become convinced Dr. Olsen is not correct on this matter on simply needs to go pull open a heavy door to realize more than the forearm, elbow, and triceps are activated. When one does this there is activation of the shoulder muscles. Second, not all people use the same muscles to open doors. A female who is 66 is most likely going to require more force, and the activation of more muscles, to open a heavy door than most young people, male or female, require.

As a result, the Judge concludes Claimant has proven by a preponderance of the evidence that she suffered a compensable injury on January 21, 2019 when she injured her right shoulder while pulling open the fire door to access the pool.

II. Whether Claimant is entitled to reasonable, necessary, and related medical benefits, including the recommended right shoulder surgery.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve Claimant from the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether Claimant has proved treatment is reasonable, necessary, and related to the work injury is one of fact for the Judge. *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

As found, and set forth above, Claimant sustained compensable injury to her right shoulder on January 21, 2019. As a result, this Judge concludes that Claimant has established by a preponderance of the evidence that she is entitled to reasonable, necessary, and related medical treatment to cure and relieve Claimant from the effects of the January 21, 2019 injury. Claimant has also established by a preponderance of the evidence that the right shoulder surgery recommended by Dr. Hatzidakis is reasonable and necessary to cure her from the effects of her January 21, 2019 work injury. Therefore, this ALJ concludes that Respondents shall pay for the right shoulder surgery recommended by Dr. Hatzidakis.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury involving her right shoulder on January 21, 2019.
2. Claimant is entitled to reasonable and necessary medical treatment to cure and relieve the effects of her compensable work injury.
3. Respondents shall pay for Claimant to undergo the right shoulder surgery recommended by Armodios Hatzidakis, M.D.
4. Claimant's average weekly wage is \$480.00.
5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: May 22, 2020

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- I. Whether Claimant is entitled to TTD benefits from November 22, 2019 to December 18, 2019, and whether penalties should be imposed against Respondents for failing to pay Claimant TTD benefits from November 22, 2019 through December 1, 2019.
- II. Whether Respondents violated Section 8-43-503(3) C.R.S. by setting demand appointments for Claimant with an Authorized Treating Physician (ATP), and whether penalties should be imposed against Respondents if such violation occurred.
- III. Whether Respondents are entitled to reimbursement for fees charged by the ATP for appointments missed by Claimant.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

Claimant's work injury

1. Claimant, who worked for Employer as a nurse, suffered a compensable injury to his right shoulder on October 5, 2015.
2. Claimant has had two shoulder surgeries under this claim. The first surgery, which was performed by Dr. Noonan, failed to improve Claimant's shoulder condition. Later, Claimant came under the care of Dr. Armodios Hatzidakis, who performed a right reverse shoulder arthroplasty on March 19, 2018. (*Ex. A, p. 4*).
3. On July 11, 2019, Dr. Hatzidakis placed Claimant at MMI for his shoulder injury. (*Ex. 4, p. 1; Ex. A, p. 04*). Dr. Hatzidakis noted Claimant was stable for a rating, but did not perform an impairment rating examination or provide an impairment for Claimant's right shoulder at the July 11, 2019 office visit. *Id.*
4. As of July 11, 2019, the date Claimant was placed at MMI for his shoulder injury, Claimant had been paid \$176,365.69 in TTD benefits. ¹

¹ Based on the November 22, 2019 GAL Claimant was paid TTD benefits from October 6, 2015 through June 7, 2016 at a weekly rate of \$830.01. The total TTD paid during this period was \$29,168.22. Beginning June 8, 2016, Claimant's TTD rate increased to \$914.27. Between June 8, 2016 and July 11, 2019, which is 161 weeks, Claimant had been paid another \$147,197.47 in TTD benefits. As result, when Dr. Hatzidakis placed Claimant at MMI for his shoulder condition, Claimant had been paid \$176,365.69 in TTD benefits. The amount of TTD benefits paid to Claimant at that time exceeded the statutory cap of \$168,677.59 by \$7,688.10. As a result, regardless of Claimant's permanent partial disability rating, the statutory cap in Section 8-42-107.5, C.R.S. precluded Claimant

5. Pursuant to statute, there is a cap that limits the amount of temporary and permanent partial disability benefits payable to Claimant under this claim. If Claimant's whole person impairment rating is 25%, or less, his temporary and permanent partial disability benefits cannot exceed \$84,339.86. If, on the other hand, Claimant's whole person rating is 26%, or more, his temporary and permanent partial disability benefits cannot exceed \$168,677.59. See Section 8-42-107.5, C.R.S.
6. When Claimant was placed at MMI on July 11, 2019 by Dr. Hatzidakis, the amount of TTD benefits received by Claimant exceeded the highest statutory cap by \$7,688.10. As a result, regardless of Claimant's impairment rating, he would not be paid any permanent partial disability benefits. Thus, assuming Claimant was at MMI on July 11, 2019 for all of the medical conditions that were caused by his industrial accident, Respondents would have had the right to terminate Claimant's TTD benefits and file a final admission of liability at that time if they agreed with the conditions rated and the rating provided. And regardless of the permanent partial disability rating, they would not have to pay any permanent partial benefits due to the statutory cap.
7. Thus, Claimant's right to temporary and permanent partial disability benefits could cease once he returned to Dr. Hatzidakis and was provided an impairment rating for his shoulder.
8. As a result, Respondents had a reasonable reason for wanting Claimant to return to Dr. Hatzidakis promptly so Dr. Hatzidakis could provide him an impairment rating. And Claimant had an unreasonable reason to delay returning to Dr. Hatzidakis to receive an impairment rating.

Demand appointments set by Respondents

9. Respondents requested Claimant attend demand appointments on August 15, 2019; September 5, 2019; October 29, 2019; and November 21, 2019 with Dr. Hatzidakis to be evaluated for an impairment rating, if any. (*Exs. B, p. 07; D, p. 12; F, p. 18; H, p. 23*).
10. Notice of the August 15, 2019 appointment was sent to Claimant's attorney, with a copy sent by certified mail to Claimant at 1830 Pinto Trail, Elizabeth, CO 80107-8421. (*Ex. B, p. 08*). The notice stated Claimant's benefits could be suspended for failure to attend, as required by Rule 6-1(A)(5). *Id.* Claimant did not attend the August 15, 2019 appointment. (*Ex. C, p. 10*).
11. Respondents reset the appointment for September 5, 2019. Notice of the September 5, 2019 appointment was sent to Claimant's attorney, with a copy sent by certified mail to Claimant at 1830 Pinto Trail, Elizabeth, CO 80107-8421. (*Ex. D, p.13*). The notice stated Claimant's benefits could be suspended for

from being paid any permanent partial disability benefits since his TTD payments exceeded the statutory cap by \$7,688.10 as of July 11, 2019.

failure to attend, as required by Rule 6-1(A)(5). *Id.* Claimant did attend the September 5, 2019 appointment; however, he was not seen by Dr. Hatzidakis, and no impairment rating examination was conducted. (*Ex. E, pp. 15-16*).

12. Respondents then reset the appointment to October 29, 2019. Notice of the October 29, 2019 appointment was sent to Claimant's attorney, with a copy sent by certified mail to Claimant at his last known address on file at WCRP: 16910 E. Carlson Dr. Apt. 211, Parker, CO 80134. (*Ex. F, p.p. 18-19*). The notice stated Claimant's benefits could be suspended for failure to attend, as required by Rule 6-1(A)(5). *Id.* Claimant did not attend the October 29, 2019 appointment. (*Ex. G, p. 21*).

November 21, 2019 appointment and Order to Compel

13. Respondents again reset the appointment with Dr. Hatzidakis for November 21, 2019. Notice of the November 21, 2019 appointment was sent to Claimant's attorney, with a copy sent by certified mail to Claimant at 1830 Pinto Trail, Elizabeth, CO 80107-8421. (*Ex. H, pp. 23-24*). The notice stated Claimant's benefits could be suspended for failure to attend, as required by Rule 6-1(A)(5). *Id.* Respondents also filed a Motion to Compel Claimant's attendance at the November 21, 2019 appointment, which was granted by PALJ Craig. C. Eley on November 18, 2019. (*Exs. I, pp. 27-29; J, p. 31*).

Claimant's testimony

14. Claimant testified he did not receive notice of the August 15, 2019 or October 29, 2019 appointment. (*Tr. pp. 37, 38-39*). Claimant did receive notice of the September 5, 2019 appointment, but could not recall how he received the notice, and believes the notice came by regular U.S. mail. (*Tr. p, 46*). This is even though the notice procedure performed by Respondents was the same as given for the August 15, 2019, and the November 21, 2019 appointments. Claimant did attend the September 5, 2019 appointment and was seen by Renee Charest, PA-C. Claimant was not seen by Dr. Hatzidakis at the September 5, 2019 appointment, and no impairment rating examination took place. (*Ex. 4, pp. 3-4; Ex. E, pp. 15-16*). Claimant does not dispute receipt of notice of the November 21, 2019 or December 19, 2019 appointments, but again testified he believes he received the notices through U.S. regular mail. (*Tr. pp. 39, 47*).
15. Claimant also testified his prior address was 16910 E. Carlson Dr. Apt. 211, Parker, CO 80134, and that he moved from that address to his current residence in 2015 but could not recall ever updating his address with the WCRP. (*Tr. pp.43, 51*).
16. A letter properly mailed is presumed received by its addressee. *Olsen v. Davidson*, 142 Colo. 205, 350 P.2d 338 (1960); *see also Nat'l Motors, Inc. v. Newman*, 29 Colo. App. 380, 484 P.2d 125 (1971). When an addressee denies receiving the letter, the binding effect of the presumption ends, and the trier of fact is left to decide the issue based on the weight of the evidence. 9 J.

Wigmore, Evidence § 2519 (Chadbourn rev. ed. 1981). See also *Olsen v. Davidson*, *supra*.

17. This ALJ finds parties in workers' compensation proceedings are under a continuing duty to update WCRP records and all parties with current addresses and contact information. This ALJ finds the failure of Claimant to update his current address with WCRP does not provide a basis for claiming lack of notice for the October 29, 2019 appointment.
18. This ALJ finds Claimant's lack of notice argument lacks credibility. Claimant attended the September 5, 2019 appointment, yet could not recall how he received notice, but thought it was by regular U.S. mail. This is despite the procedure used by Respondents was the same for both the August 15, 2019, September 5, 2019, November 21, 2019 and December 19, 2019 appointments. Claimant acknowledged receipt of the notices for the September 5, 2019, November 21, 2019, and December 19, 2019 appointments, which were all sent by certified mail to the claimant's current address: 1830 Pinto Trail, Elizabeth, CO 80107-8421. It is unclear whether he was advised of any of these appointments by his attorney, who also received the notices.

November 21, 2019 appointment and Order to Compel

19. Claimant does not dispute receiving notice of the November 21, 2019 appointment and being ordered to attend. He also testified that he believes he received the notice by U.S. regular mail. (*Tr. pp. 39, 47*). Claimant, however, testified that he decided to not attend the court ordered appointment because of a medical emergency involving his daughter. According to Claimant, his daughter's condition was serious and an emergency and therefore he had to take his daughter to an emergent doctor appointment. (*Tr. pp. 39, 47*).
20. During Claimant's direct testimony - and despite being a nurse - he did not provide any details in support of his contention that his daughter's condition was an emergency. He also provided no details as to why he had to schedule his daughter's medical appointment at the same time of the PALJ ordered appointment with Dr. Hatzidakis.
21. Claimant was, however, cross examined about the alleged medical emergency involving his daughter.
22. Claimant's contention that he missed the appointment with Dr. Hatzidakis that PALJ Eley ordered him to attend due a medical emergency involving his daughter is not found to be credible for many reasons.
 - i. Once Respondents' counsel began cross examining Claimant about the alleged emergency involving his daughter, the overall tone, and fluency of Claimant's voice changed. For example, he started pausing while answering questions. As a result, it appeared to this ALJ that while testifying, he was trying to come up with a story to support his contention that his daughter's condition was an emergency that justified violating PALJ Eley's order.

- ii. As he continued to testify about the “emergency,” his description of his daughter’s symptoms escalated – as if he realized his initial answer did not rise to the level of an emergency. For example, her symptoms were first described as “a little bit of congestion” and then he escalated her symptoms to be a possible asthma attack. As shown below, Claimant testified that:

What I did was that morning she was complaining of -- it was difficulty for -- you know, she was having a little bit of congestion and little difficulty breathing. She thought she was having a -- like, an asthma attack or whatever.

(Tr. p. 48).

- iii. Claimant also used a lot of qualifiers in his answer. For example, he used the qualifier “little” when describing her congestion and breathing symptoms. Then, when he escalated her symptoms into something sounding more serious – “an asthma attack” - he added additional qualifiers and said, “like an asthma attack.”
- iv. In addition, even though Claimant is a nurse, he did not provide his own assessment when he implied his daughter might have been having an asthma attack. Instead, Claimant switched persons by placing on his daughter the responsibility for interpreting - or misinterpreting - her condition as an asthma attack and therefore an emergency. Claimant testified that:

She thought she was having a – ***like***, an asthma attack ***or whatever***. (Emphasis added)

He also qualified “asthma attack” with “like” and “whatever.” As a result, his testimony might mean that neither he nor his daughter thought she was having an asthma attack.

- v. During cross examination, Claimant also said his daughter had a fever. When Respondents’ counsel pressed for more detail and asked Claimant how high his daughter’s fever was, he again struggled to provide a succinct and straight answer. Claimant said:

It was -- well, it -- it -- it was above 100. I -- and I think it was below 101, but it was, like, between 100 and, like, maybe, 106 -- 100.6, 100.8, something like that.

Again, it sounded like his was buying time – by having so many pauses – to try to come up with a reasonable excuse for violating PALJ Eley’s order. In the end, it is not clear whether his daughter’s symptoms were mild, moderate, or severe.

- vi. Claimant was also asked the age of his daughter. Again, he struggled to answer that question promptly as well. Although his daughter was 17 at the time, Claimant dragged out answering the question. This ALJ infers he struggled to answer that questions as well because having a 17-year-old child with a fever, compared to a young child, changes the overall impression Claimant was trying to convey about the emergent nature of the situation and whether it warranted and justified violating PALJ Eley's order.
- vii. Claimant also failed to:
- Testify why he had to schedule his daughter's appointment at the same time of his appointment with Dr. Hatzidakis.
 - Provide any documentation supporting his contention that his daughter had an emergent medical appointment at the same time of the court ordered appointment and that it had to be at the same time.
- viii. Claimant testified that he notified Dr. Hatzidakis' office on November 21, 2019 that he was unable to attend the appointment and that he requested his office to reschedule the appointment. (*Tr. p.39*). Claimant did not, however, say what time he contacted Dr. Hatzidakis' office. The time noted on the transmission of the letter from Dr. Hatzidakis' office, 12:43 p.m., suggests Claimant did not contact them that morning to cancel and reschedule the appointment until sometime after the appointment was to take place and after that letter was issued. (*Ex. K*).
23. Claimant's testimony is not found to be credible or persuasive as it relates to only receiving notice for some of the demand appointments. Claimant's testimony is also not found to be credible or persuasive regarding the reasons he gave for not attending each appointment - including the appointment of November 21, 2019.
24. Claimant failed to present credible and persuasive testimony providing a reasonable excuse justifying missing the November 21, 2019 appointment with Dr. Hatzidakis that he was ordered to attend by PALJ Eley.
25. The ALJ finds Claimant intentionally violated PALJ Eley's order and did not provide a legitimate or reasonable excuse for violating the court order and failing to attend the November 21, 2019 appointment with Dr. Hatzidakis.
26. Claimant did, however, attend another rescheduled appointment with Dr. Hatzidakis on December 19, 2019 and TTD was reinstated.
27. As a result of Claimant missing the November 21, 2019 court ordered appointment, Claimant may have extended the payment of TTD benefits by 28 days, or \$3,657.08.

Respondents General Admission suspending TTD

28. After the missed appointment on November 21, 2019, Respondents filed a General Admission of Liability stopping TTD payments to Claimant under Rule 6-1(A)(5). (*Ex. L, p. 36*).

29. WCRP Rule 6-1(A)(5) states as follows:

TERMINATION OF TEMPORARY DISABILITY BENEFITS IN CLAIMS ARISING FROM INJURIES ON OR AFTER JULY 1, 1991

(A) In all claims based upon an injury or disease occurring on or after July 1, 1991, an insurer may terminate temporary disability benefits without a hearing by filing an admission of liability form with:

(5) a copy of a certified letter to the claimant or a copy of a written notice delivered to the claimant with a signed certificate of service, advising that temporary disability benefits will be suspended for failure to appear at a rescheduled medical appointment with an authorized treating physician, and a statement from the authorized treating physician documenting the claimant's failure to appear.

7 CCR 1101-3:6

30. Dr. Hatzidakis' office provided statements documenting the Claimant's failure to appear at the August 15, 2019, October 29, 2019, and November 21, 2019 appointments. (*Exs. C, p. 10; G, p. 21; K, p. 34*).

31. This ALJ finds proper notice of the demand appointments with Dr. Hatzidakis were provided by Respondents under Rule 6-1(A)(5), and the suspension of TTD benefits after Claimant failed to appear at a rescheduled appointment with an authorized treating physician was proper.

Claimant's Application for Hearing filed December 3, 2019

32. Claimant filed an Application for Hearing on December 3, 2019, endorsing the issues of TTD, and penalties under Section 8-43-304 C.R.S. against Respondents for violating Section 8-43-503(3) C.R.S., which states as follows:

Employers, insurers, claimants, or their representatives shall not dictate to any physician the type or duration of treatment or degree of physical impairment. Nothing in this subsection (3) shall be construed to abrogate any managed care or cost containment measures authorized in articles 40 to 47 of this title.

Section 8-43-503(3) C.R.S.

33. This ALJ finds the Respondents setting demand appointments for Claimant with Dr. Hatzidakis was not a dictation of medical care. There was no credible or

persuasive evidence admitted showing Respondents sought to dictate the duration of treatment or the degree of physical impairment. This ALJ finds Respondents' purpose was to obtain an impairment rating for Claimant's right upper extremity, and was not the dictation of medical care, in compliance with WCRP Rule 5-5(D)(1)(b), as Dr. Hatzidakis was the ATP who found Claimant to be at MMI regarding his right upper extremity, and is level II accredited for upper extremity impairment. See <https://WCRP.cdle.state.co.us/physicians/default.aspx>

34. For that reason, this ALJ finds Respondents did not violate Section 8-43-503(3) C.R.S., and therefore no penalty is warranted.
35. Claimant also endorsed the issue of penalties under Section 8-43-304 C.R.S. against Respondents for violating Section 8-42-105 C.R.S., for Respondents suspending TTD benefits as of November 22, 2019.
36. Having found Respondents' suspension of TTD was proper after the Claimant did not attend the November 21, 2019 rescheduled appointment, there is no violation of the Act. As a result, this ALJ finds there is no penalty warranted as requested by Claimant for Respondents allegedly violating Section 8-42-105 C.R.S.
37. Respondents set yet another appointment for Claimant with Dr. Hatzidakis on December 19, 2019 and followed the same notification procedures used previously. (Ex. Q). Claimant did attend this appointment and received an impairment rating for his right upper extremity from Dr. Hatzidakis. (*Ex.4, p.11*).

**Claimant's request for TTD benefits
from November 22, 2019 to December 18, 2019**

38. Respondents filed a General Admission of Liability on or about January 23, 2020 reinstating TTD benefits from December 19, 2019 and ongoing. (*Ex. 2*).
39. This ALJ finds Claimant is not entitled to TTD benefits for the period from November 22, 2019 through December 18, 2019, as Claimant failed to submit to the examination on November 21, 2019 after being directed to do so by PALJ Eley, and in accord with Section 8-43-404(3) C.R.S., those benefits are barred.

**Respondent's request for reimbursement of the
fees charged by Dr. Hatzidakis for the missed appointments through a penalty.**

40. Dr. Hatzidakis' office billed Respondents \$369.00 for the appointments Claimant failed to attend on August 15, 2019 (\$94.50), October 29, 2019 (\$94.50), and November 21, 2019 (\$180.00). (*Ex. M, p.39*).
41. On November 18, 2019, PALJ Eley did not grant Respondent's request for the reimbursement of missed appointment fees but stated in his order that "the parties may wish to submit the issue of cancellation fees to a prehearing conference." (*Ex. J, p. 31*).

42. The parties did submit this issue at the prehearing conference conducted by PALJ Sisk on February 5, 2020. PALJ Sisk did, *sua sponte*, add the issue of “reimbursement of the no show fees” to the issues at hearing, but did not mention penalties under § 8-43-304. Respondents did not assert penalties in their Response to Application for Hearing and did not mention that they were seeking penalties under such statute at the hearing. As a result, neither party addressed the issue of penalties against Claimant for his failure to attend the demand appointment he was ordered to attend by PALJ Eley during the hearing.
43. Respondents did raise penalties against Claimant under Section 8-43-304(1) and 8-43-305 in their proposed order, but Claimant did not in his proposed order. Claimant was therefore given a chance to file a supplemental proposed order to address the penalty issue. In his supplemental proposed order Claimant objected to the issue of penalties against Claimant being addressed by this ALJ – asserting Claimant was not provided proper notice. This ALJ agrees. The issue of penalties against Claimant under Section 8-43-304(1) and 8-43-305 was not properly noticed for hearing or tried by consent. For those reasons, Respondents’ claim for penalties against Claimant will be reserved.

CONCLUSIONS OF LAW

Based on the foregoing specific findings of fact, the Judge draws these conclusions of law:

General Provisions

The purpose of the Workers’ Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is what leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers’ compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers’ compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. The ALJ’s factual findings concern only evidence and inferences found to resolve the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng’g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App.

2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant is entitled to TTD benefits from November 22, 2019 to December 18, 2019, and whether penalties should be imposed against Respondents for failing to pay Claimant TTD benefits from November 22, 2019 through December 1, 2019.

Any employer or insurer, or any officer or agent of either, or any employee, or any other person who violates articles 40 to 47 of this title 8, or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel, for which no penalty has been specifically provided, or fails, neglects, or refuses to obey any lawful order made by the director or panel or any judgment or decree made by any court as provided by the articles shall be subject to such order being reduced to judgment by a court of competent jurisdiction and shall also be punished by a fine of not more than one thousand dollars per day for each offense, to be apportioned, in whole or part, at the discretion of the director or administrative law judge, between the aggrieved party and the Colorado uninsured employer fund created in section 8-67-105; except that the amount apportioned to the aggrieved party shall be a minimum of twenty-five percent of any penalty assessed. Section 8-43-304 (1) C.R.S.

To assess penalties under Colo. Rev. Stat. § 8-43-304(1), an ALJ must engage in a two-step analysis. First, the ALJ must find that the putative wrongdoer has violated the Workers' Compensation Act ("Act"), failed to perform a duty lawfully enjoined, or failed to obey a lawful order. *Allison v. Indus. Claim Appeals Office*, 916 P.2d 623 (Colo. App. 1995). Second, if a violation is found, the ALJ must determine whether the violation was objectively reasonable in the sense that it was predicated on an argument rationally based in law or fact. *Jiminez v. Indus. Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003).

So long as the employee, after written request by the employer or insurer, refuses to submit to medical examination or vocational evaluation or in any way obstructs the same, all right to collect, or to begin or maintain any proceeding for the collection of, compensation shall be suspended. If the employee refuses to submit to such examination after direction by the director or any agent, referee, or administrative law judge of the division appointed pursuant to section 8-43-208 (1) or in any way obstructs the same, all right to weekly indemnity which accrues and becomes payable

during the period of such refusal or obstruction shall be barred. Section 8-43-404(3) C.R.S.

The Industrial Claim Appeals Panel has held “the provisions for a demand appointment and the consequences for refusing to attend or obstructing a demand appointment in § 8-43-404(3), C.R.S., applies to requests for an examination by an authorized treating physician or to a request for an Independent Medical Examination.” *Larry Johnston V. Hunter Douglas, Inc.*, W.C. No. 4-879-066-01 (April 29, 2014).

WCRP 6-1(A)(5) provides:

In all claims based upon an injury or disease occurring on or after July 1, 1991, an insurer may terminate temporary disability benefits without a hearing by filing an admission of liability form with:

. . .

a copy of a certified letter to the claimant or a copy of a written notice delivered to the claimant with a signed certificate of service, advising that temporary disability benefits will be suspended for failure to appear at a rescheduled medical appointment with an authorized treating physician, and a statement from the authorized treating physician documenting the claimant's failure to appear, OR

Respondents followed the procedures stated in Rule 6-1(A)(5) and were therefore allowed to suspend TTD benefits without a hearing. Respondents provided a copy of the certified letter sent to Claimant at either his current address or his last known address on file at WCRP, advising him that temporary total disability benefits will be suspended for failure to appear; and provided statements from the authorized treating physician documenting the Claimant's failure to appear. Contrary to Claimant's argument, there is no requirement in the rule that Respondent must also provide a copy of the “green card” showing signed receipt of the certified letter by Claimant. To impose such a requirement would make the threat of suspending TTD for failing to attend appointments meaningless, as Claimants could simply choose not to accept or sign for the certified letters.

No violation being found of Rule 6-1(A)(5), there is no basis to proceed with the second step of the penalty analysis under *Allison* and *Jimenez, supra*. Claimant's alleged violation and request for penalties are not supported by the facts or law in this case.

Claimant is not entitled to TTD benefits for November 22, 2019 through December 19, 2019. Claimant failed to attend the November 21, 2019 appointment after being directed to do so by PALJ Eley, and so those benefits are barred, in accord with Section 8-43-404(3) C.R.S., and *Johnston, supra*.

II. Whether Respondents violated Section 8-43-503(3) C.R.S. by setting demand appointments for Claimant with an Authorized Treating Physician (ATP), and whether penalties should be imposed against Respondents if that violation occurred.

Section 8-43-503(3) C.R.S. states as follows:

Employers, insurers, claimants, or their representatives shall not dictate to any physician the type or duration of treatment or degree of physical impairment. Nothing in this subsection (3) shall be construed to abrogate any managed care or cost containment measures authorized in articles 40 to 47 of this title. §8-43-503(3) C.R.S. (2016).

WCRP Rule 5-5(D)(1)(b) states:

If the authorized treating physician determining MMI is Level II accredited, within 20 days after the determination of MMI, such physician shall determine the claimant's permanent impairment, if any.

Dr. Hatzidakis was the ATP who placed Claimant at MMI regarding his right shoulder injury, and that Dr. Hatzidakis is level II certified. So, Dr. Hatzidakis was the proper physician to determine the Claimant's permanent impairment, if any, related to his shoulder injury.

The Respondents' purpose in setting demand appointments for Claimant with Dr. Hatzidakis was to get an impairment rating after Dr. Hatzidakis placed Claimant at MMI on July 11, 2019. At no time did the Respondents dictate the type or duration of treatment, or degree of physical impairment by setting demand appointments with Dr. Hatzidakis

Having concluded there was no violation of Section 8-43-503(3) C.R.S, there is no basis to proceed with the second step of the penalty analysis under *Allison* and *Jimenez, supra*. Claimant's alleged statutory violation and request for penalties are not supported by the facts or law in this case.

III. Whether Respondents are entitled to reimbursement for fees charged by the ATP for appointments missed by Claimant.

Dr. Hatzidakis' office billed Respondents \$369.00 for the appointments Claimant failed to attend on August 15, 2019 (\$94.50), October 29, 2019 (\$94.50), and November 21, 2019 (\$180.00).

On November 18, 2019, PALJ Eley did not grant Respondent's request for the reimbursement of missed appointment fees but stated in his order that "the parties may wish to submit the issue of cancellation fees to a prehearing conference."

The parties did submit this issue at the prehearing conference conducted by PALJ Sisk on February 5, 2020. PALJ Sisk did, *sua sponte*, add the issue of "reimbursement of the no show fees" to the issues at hearing, but did not mention penalties under § 8-

43-304 and 8-43-305. Instead, PALJ Sisk relied on § 8-43-207(1)(p) for imposing sanctions for the no show fees.

Section 8-43-207(1)(p) provides that an ALJ may:

Impose the sanctions provided in the Colorado rules of civil procedure, except for civil contempt pursuant to rule 107 thereof, for willful failure to comply with any order of an administrative law judge issued pursuant to articles 40 to 47 of this title.

Based on a strict reading of Section 8-43-207(1)(p), an ALJ lacks the authority to impose a monetary sanction for Claimant's violation of a PALJ's order compelling Claimant to attend a demand appointment with a treating physician. If the appointment were ordered by the PALJ as part of discovery, this ALJ would have the authority to impose a monetary sanction. See *Reed v. Hewlett Packard* WC No. 3-843-951 (Jan. 12, 1999) (the Act creates a wide array of possible punishments for discovery violations, including monetary and non-monetary sanctions).

Respondents did not, however, assert a claim for penalties in their Response to Application for Hearing and did not mention that they were seeking penalties under Section 8-43-304(1) and 8-43-305 at the hearing. As a result, during the hearing, neither party addressed the issue of penalties under Section 8-43-304(1) against Claimant for his failure to comply with PALJ Eley's order and attend the November 21, 2019 appointment and whether Section 8-43-305 allows a penalty for each day afterward until Claimant attended an appointment with Dr. Hatzidakis on December 19, 2019.

Respondents did raise penalties under Section 8-43-304(1) and 8-43-305 in their proposed order, but Claimant did not. Claimant was therefore given a chance to file a supplemental proposed order addressing the issue of penalties raised by Respondents. In his supplemental proposed order, Claimant objected to the issue being addressed by this ALJ – asserting Claimant was not provided proper notice. This ALJ agrees.

Moreover, although Respondents raised penalties under Section 8-43-304(1) and 8-43-305 in their proposed order, it was not clear whether Respondents were also arguing that the ALJ should consider each day after Claimant failed to attend the November 21, 2019 appointment is a separate and distinct violation under Section 8-43-305. See *Crowell v. Indus. Claim Appeals Office*, 298 P.3d 1014, 2012 COA 30, (Colo. App. 2012). Here, Claimant did not attend a follow up appointment with Dr. Hatzidakis until 28 days after the court ordered appointment. In addition, Claimant, did not have a chance to raise a proportionality and ability to pay defense, as allowed in *Div. of Workers Compensation v. Dami Hospitality, LLC*, 442 P.3d 94, 2019 CO 47 (Colo. 2019).

As a result, Respondents claim for penalties against Claimant under Section 8-43-304(1) and 8-43-305 is reserved for future determination.

ORDER

Based on these findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents did not violate Section 8-42-105 C.R.S. or WCRP Rule 6-1(A)(5) by suspending Claimant's TTD benefits after he failed to attend the appointment set by Respondents for November 21, 2019, and Claimant's request for penalties is denied.
2. Claimant's request for TTD benefits for November 22, 2019 through December 18, 2019 is denied, and those benefits are barred under Section 8-43-404(3) C.R.S.
3. Respondents did not violate Section 8-43-503(3) C.R.S. by setting demand appointments for Claimant with Dr. Hatzidakis to obtain an impairment rating and Claimant's request for penalties is denied.
4. The issue of whether Respondents are entitled to penalties against Claimant for his failure to attend the PALJ ordered demand appointment with ATP Hatzidakis is reserved for future determination.
5. Any other issues not expressly decided herein are also reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

ISSUES

- Did Claimant prove entitlement to a general award of medical benefits after MMI?
- The parties stipulated the endorsed issue of disfigurement will be reserved for future determination, if necessary.

FINDINGS OF FACT

1. Claimant worked for Employer as an undercover detective. On May 22, 2017, he suffered multiple admitted injuries in a “T-bone” motor vehicle accident.

2. Claimant received authorized treatment through Employer’s occupational medicine clinic, primarily under the direction of PA-C Paula Homberger. Ms. Homberger referred Claimant to various specialists, including Dr. Rauzzino, Dr. Sparr, and Dr. Abercrombie.

3. Dr. Nicholas Kurz placed Claimant at MMI on October 23, 2018 with a 6% whole person cervical impairment rating after apportionment for a previous injury.

4. Claimant saw Dr. Timothy Hall for an IME at his counsel’s request on March 7, 2019. Dr. Hall opined Claimant was not at MMI because he required treatment for a head injury. Dr. Hall recommended various modalities, including vestibular therapy, cognitive rehabilitation, counseling, and neuromuscular therapy.

5. Claimant saw Dr. Anjmun Sharma for a Division IME on March 15, 2019. Dr. Sharma agreed Claimant reached MMI on October 23, 2018 but calculated a 20% whole person impairment rating for the cervical and lumbar spines. Dr. Sharma opined Claimant required no “maintenance care.”

6. Dr. Sharma testified in an evidentiary deposition on August 9, 2019. During the deposition, Dr. Sharma amended his opinion regarding medical treatment after MMI. He agreed with many of Dr. Hall’s recommendations but opined they should be done as “maintenance” care:

You could just do this as a maintenance care plan . . . I could certainly draft another addendum where these could be done under maintenance care, a specific plan of action – see Dr. Watt, neuro vestibular therapy, etc. . . . and I think that would be more than reasonable.

7. The case went to hearing before ALJ Lamphere on September 11, 2019. Judge Lamphere found Claimant failed to overcome the DIME regarding MMI but overcame the DIME on impairment. Judge Lamphere awarded an additional 10% whole person impairment for residuals of a head injury.

8. Respondent filed a Final Admission of Liability (FAL) on December 11, 2019 based on Judge Lamphere's order. The FAL contains the following notations regarding medical benefits after MMI:

Admit to Maintenance Care after MMI? Yes No If no, pursuant to Dr. Dr Sharma DIME 's medical report dated 04/26/19

9. This language is internally contradictory because Dr. Sharma's April 26, 2019 DIME report stated Claimant required "no maintenance." Although Dr. Sharma amended that opinion in his deposition, the FAL makes no reference to the deposition.

10. Claimant has continued to pursue treatment with Ms. Homberger, Dr. Sparr, and Dr. Abercrombie since MMI, none of which Respondent has denied. Nevertheless, Claimant's providers are confused about their authorization to treat based on the language of the FAL. As Ms. Homberger explained in her December 17, 2019 report:

I have reviewed available paperwork from the ALJ, the IMEs on file, & the paperwork¹ indicating maintenance care. At this time, there appears to be a discrepancy as the paperwork indicates maintenance per the IME. However, the IME report indicates no need for maintenance care. I will request additional information & review this case with Dr. Kurz to see how to proceed. I have explained to the patient that I will provide [treatment] today based upon this form indicating that the risk management has admitted to a need for maintenance care, but that we would need to clarify what the ruling was in order to provide continued care.

11. On January 28, 2020, Dr. Kurz apparently released Claimant from care, stating "he remains at MMI without the need for any [maintenance medical]." Dr. Kurz' report referenced the same "discrepancy" in the "paperwork" as to whether further treatment is admitted.

12. During the hearing, Respondent's counsel stated on the record Respondent believes it admitted for medical benefits after MMI and the FAL is not intended to limit the general nature of the award. Respondent does not believe an amended FAL is necessary.

13. Claimant proved by a preponderance of the evidence he requires medical treatment after MMI to relieve the effects of his injury and prevent deterioration of his condition.

CONCLUSIONS OF LAW

Respondents are liable for authorized medical treatment reasonably needed to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo.

¹ The ALJ infers "the paperwork" refers to the FAL.

1988). Proof of a current or future need for “any” form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the respondents’ right to dispute causation or reasonable necessity of any specific treatment. *Hanna v. Print Expeditors, Inc.*, 77 P.3d 863 (Colo. App. 2003). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant proved he is entitled to a general award of reasonably necessary and related medical treatment after MMI from authorized providers.

ORDER

It is therefore ordered that:

1. Respondent shall cover reasonably necessary and related medical treatment after MMI from authorized providers.
2. All issues not decided herein and not otherwise closed by operation of law are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, please send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: May 27, 2020

Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that a left total hip replacement (as recommended by Dr. Louis Stryker) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted December 12, 2018 work injury.

FINDINGS OF FACT

1. The claimant created his professional corporation (PC) in 2002. At that time, the claimant became an employee of the PC. On December 12, 2018, the claimant was an employee of the PC.

2. On December 12, 2018, the claimant tripped while carrying a box of paper to be recycled. As the claimant fell, his head struck a door and his right hand struck the wall with enough force to puncture the drywall. In addition, the claimant landed on the box of paper, striking his left upper thigh on the box. The claimant testified that he developed a bruise at the site where he struck the box. The claimant testified that he received medical treatment on December 12, 2018 with his authorized treating provider (ATP), Western Valley Family Practice.

3. The medical records entered into evidence show that beginning on December 12, 2018, the claimant was seen by Dr. Thomas Motz¹ at Western Valley Family Practice. At that time, the claimant reported his symptoms as dizzy and tired, pain in his neck, right arm, and lower back. In addition, the claimant reported pain in the right side of his groin that radiated down the outside of this right leg. Dr. Motz diagnosed acute thoracic back pain and rib pain. Dr. Motz also noted the claimant's fall resulted in a loss of consciousness. Dr. Motz ordered a head computed tomography (CT) scan and imaging of the claimant's thoracic spine.

4. The claimant underwent the recommended head CT after seeking treatment at the emergency department (ED) at Community Hospital². At the ED, the claimant was seen by Dr. Julie McCallen. At that time, the claimant described the tripping incident and reported his symptoms as significant soreness on the left side of his neck,

¹ The claimant testified that on December 12, 2018, he was seen by a nurse practitioner. The claimant also testified that although the medical records indicate that he was seen by Dr. Motz and Dr. Kurtis Holmes, he only saw the nurse practitioner at that practice.

² The claimant testified that he sought treatment at the ED because he was having difficulty scheduling a CT in a timely manner.

right side of this low back, and groin. The head CT performed on that date showed no acute intracranial process.

5. The claimant testified that his initial symptoms included pain in his right wrist and shoulder and a concussion. The claimant further testified that all of those initial symptoms have resolved.

6. On December 21, 2018, the claimant returned to Western Valley Family Practice and was seen by Dr. Kurtis Holmes. On that date, the claimant reported pain in his low back with pain radiating down the outside of his left leg. In addition, the claimant reported numbness and tingling in his left lower extremity. On the right side, the claimant described some pain in his right buttock and down the inside of his right leg. Dr. Holmes diagnosed a lumbar strain with radiculopathy. In addition, Dr. Holmes ordered a magnetic resonance image (MRI) of the claimant's lumbar spine and referred the claimant to physical therapy.

7. On December 31, 2018, the lumbar spine MRI showed multilevel degenerative disc and facet disease.

8. The claimant continued to treat with Dr. Holmes and reported ongoing pain and numbness in both legs. On March 28, 2019, Dr. Holmes referred the claimant to an orthopedic spine specialist. The claimant testified that the referral was to Dr. Kirk Clifford.

9. On April 19, 2019, the claimant was seen by Dr. Clifford and reported a combination of low back and radiating leg pain. On that date, an x-ray of the claimant's lumbar spine showed moderate to severe bilateral hip degenerative joint disease with osteophyte formation and joint space narrowing. Dr. Clifford diagnosed bilateral hip degenerative joint disease and L5-S1 foraminal stenosis with bilateral radiculopathy. Dr. Clifford recommended that the claimant undergo bilateral L5-S1 transforaminal epidural steroid injections (TFESIs). In addition, Dr. Clifford referred the claimant to Dr. Louis Stryker for consultation of the claimant's "hip arthritis". Dr. Clifford opined that the claimant's hip condition could be the result of osteoarthritis and radiation treatment the claimant underwent to treat a sarcoma.

10. A request for authorization of the recommended bilateral L5-S1 TFESI was submitted to the insurer on May 5, 2019.

11. On May 16, 2019, the claimant was seen by Dr. Stryker. On that date, the claimant reported bilateral groin pain radiating down the lateral aspect of the claimant's bilateral hips and into his feet. The claimant also described experiencing limited range of motion that resulted in difficulty putting on socks. Dr. Stryker ordered hip x-rays which were done on that same date. These x-rays showed "complete obliteration" of joint space in both hips with subchondral sclerosis and osteophyte formation, and CAM lesions of both femoral heads. Dr. Strker opined that the claimant has long standing arthritic changes in his hips, that is likely due to femoral acetabular impingement. Dr. Styker also opined that the claimant's hip condition was exacerbated by his fall at work on December 12, 2018. Dr. Stryer discussed treatment opinions that could include gait aids, the use of

antiinflammatories, physical therapy, intra articular joint injections, and total hip replacement.

12. On May 22, 2019, the claimant reported to Dr. Holmes that Dr. Stryker had recommended bilateral hip replacements.

13. On May 29, 2019, Dr. Clifford administered bilateral L5-S1 TFESIs.

14. The claimant returned to Dr. Holmes on June 20, 2019, and reported that the injections reduced his low back and upper leg pain. Despite this improvement, the claimant continued to report numbness and burning in his lower legs.

15. On July 15, 2019, the claimant returned to Dr. Clifford and reported that the injections provided 60 percent overall relief of his symptoms. The claimant further reported that he had 85 percent improvement of his thigh pain and 45 percent relief of his calf and toe pain. Dr. Clifford suggested possible repeat injections if the claimant's pain symptoms returned.

16. On July 24, 2019, the claimant returned to Dr. Stryker and reported excellent relief from the TFESIs. On that date, Dr. Styker recommended proceeding with a total hip replacement. On July 26, 2019, a request for authorization was submitted to the insurer for a left total hip arthroplasty.

17. On August 2, 2019, Dr. Jon Erickson reviewed the surgical recommendation. In his review Dr. Erickson recommended that the surgery be denied, pending an MRI of the claimant's left hip. In support of this recommendation, Dr. Erickson noted that there was some indication in the medical records that the claimant has "radiation-induced" hip arthritis, but without an MRI he could not opine regarding whether the claimant's current hip condition was related to the December 12, 2018 fall at work.

18. On August 20, 2019, Dr. Clifford's office submitted a request for authorization of repeat bilateral L5-S1 TFESIs.

19. On September 16, 2019, an MRI of the claimant's left hip showed advanced osteoarthritis, with no evidence of avascular necrosis.

20. On September 18, 2019, Dr. Clifford administered the recommended repeat bilateral L5-S1 TFESIs.

21. On September 27, 2018, Dr. Erickson again reviewed the request for a left hip replacement. Dr. Erickson noted that the left hip MRI showed evidence of degenerative tearing of the acetabular labrum and advanced degenerative osteoarthritis. Dr. Erickson recommended continued denial of the surgery, to allow him the opportunity to review the MRI with a MSK expert radiologist.³

³ Musculoskeletal radiology.

22. Dr. Erickson did review the claimant's MRI with an MSK expert and on October 29, 2019 he issued his third report related to the recommended left hip replacement. Dr. Erickson recommended denial of the recommended surgery. Dr. Erickson noted that the MRI showed advanced bone on bone arthrosis and "huge" periarticular osteophytes in both of the claimant's hips. Dr. Erickson opined that no fall or trauma would worsen the degenerative condition of the claimant's left hip.

23. On November 7, 2019, the claimant was seen by Dr. Holmes. On that date, Dr. Holmes noted that Dr. Erickson's opinion was that "the degenerative arthritis of [the claimant's] hips is so profound that no accident could have made either of them worse". Dr. Holmes noted that the claimant would seek a second opinion from a surgeon in Vail.

24. On February 21, 2020, Dr Elizabeth Carpenter authored a letter regarding the claimant's September 16, 2019 hip MRI. Dr. Carpenter noted that the MRI showed advanced bilateral hip osteoarthritis, with bone on bone contact (left greater than right). Dr. Carpenter noted that she had also reviewed a pelvic MRI taken on December 24, 2013 and an abdominal and pelvic CT scan performed on December 18, 2014. Dr. Carpenter noted that left hip osteoarthritis with bone on bone contact was present at the time of those prior imaging studies. Dr. Carpenter opined that there is no evidence of an acute injury indicated by the September 16, 2019 hip MRI.

25. The claimant testified that due to a sarcoma in his left groin area, he underwent radiation in 2008. As a result of that treatment, the claimant underwent regular imaging of that area. As noted in Dr. Carpenter's February 2020 letter, on December 11, 2013, an MRI of the claimant's pelvis was performed. The medical records indicate that MRI showed a small amount of fluid in the left hip joint. Thereafter, on December 18, 2014, a CT of the claimant's abdomen and pelvis showed degenerative joint disease in both hips.

26. On January 21, 2020, Dr. James Lindberg performed a review of the claimant's medical records. On February 25, 2020, Dr. Lindberg issued a report in which he noted that the claimant has severe osteoarthritis in both hips, including bilateral and symmetrical osteophytes on the acetabulum and femur. Dr. Lindberg opined that the claimant's December 12, 2018 slip and fall did not cause this osteoarthritis. In his report, Dr. Lindberg opined that the claimant should have bilateral hip replacements. However, the claimant's need for hip replacement was not related to the December 12, 2018 work injury.

27. On March 27, 2020, Dr. Stryker authored a letter in which he disputed the opinions of Dr. Lindberg. Dr. Stryker argued that while the claimant has degenerative changes in his hips, he was asymptomatic prior to the December 12, 2018 fall. Therefore, it is Dr. Stryker's opinion that the claimant's symptoms were exacerbated by his fall at work.

28. At hearing, Dr. Lindberg testified that he continues to opine that the current condition of the claimant's left hip is not related to the December 12, 2018 fall. After hearing the claimant's testimony, Dr. Lindberg changed his opinion regarding whether hip

replacement surgery is reasonable and necessary treatment for the claimant. Although Dr. Lindberg had previously opined that the claimant was in need of bilateral hip replacement, at hearing, he stated that because the claimant does not have hip pain, he is not a candidate for hip replacement.

29. Dr. Lindberg also testified regarding the cause of the claimant's current hip condition. Dr. Lindberg noted that the claimant has a chronic degenerative condition that was advancing before the 2014 MRI. Dr. Lindberg also testified that the claimant's mechanism of injury on December 12, 2018 did not have the requisite rotational forces or excessive flexion necessary to cause the level of damage in the claimant's hips. Dr. Lindberg testified that the claimant's current symptoms are related to sciatica and back pain and not in his hips.

30. Ms. Miller was the claimant's martial arts instructor from approximately 2003 through October 2018. Ms. Miller testified that the claimant progressed in his martial arts training. In October 2018, the claimant was able to complete "midline" kicks. Ms. Miller also testified that the claimant was able to perform warm up exercises involving "opening" his hips. Ms. Miller testified that she recalls last seeing the claimant in class in approximately October 2018. She further testified that the claimant has not returned to martial arts training since that time.

31. The claimant testified that prior to his fall on December 12, 2018, he was able to perform midline kicks in his martial arts training. In addition, he could ride a bicycle and take hikes on rocky terrain. The claimant further testified that since his fall, he is unable to spread his legs more than 26 to 28 inches. He has not returned to martial arts training. In addition, he is unable to spread his legs to be able to straddle a bicycle. It is difficult to place his left foot on his right knee to put on socks and shoes. The claimant testified that he began to notice these limitations approximately two to three weeks after the December 12, 2018 fall.

32. The claimant testified that the recommended left hip replacement surgery has been scheduled for June 1, 2020. The recommended right hip replacement has been scheduled for July 13, 2010.

33. The ALJ credits the medical records and the opinions of Drs. Erickson, Carpenter, and Lindberg over the contrary opinions of Dr. Stryker. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the recommended surgery is reasonable medical treatment necessary to cure and relieve him from the effects of the December 12, 2018 work injury. The ALJ is persuaded that the claimant's current hip condition is related to chronic and long standing degenerative joint disease, and not the December 12, 2018 slip and fall. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that the fall on December 12, 2018 aggravated, accelerated, or combined with that degenerative condition to necessitate treatment, including surgery. The ALJ is persuaded that although the degenerative joint disease in the claimant's hips became symptomatic after his fall at work, the fall did not cause the claimant's condition to become symptomatic.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018).

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” *See H & H Warehouse v. Vicory, supra*.

6. As found, the claimant has failed to demonstrate by a preponderance of the evidence that a left total hip arthroplasty is reasonable medical treatment necessary to cure and relieve him from the effects of the December 12, 2018 work injury. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the fall on December 12, 2018 aggravated, accelerated, or combined with that degenerative condition to necessitate treatment, including surgery. As found, the medical records and the opinions of Drs. Erickson, Carpenter, and Lindberg are credible and persuasive.

ORDER

It is therefore ordered that the claimant's request for a left total hip arthroplasty is denied and dismissed.

Dated the 1st day of June 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NOS. 4-926-368-09 and 4-926-368-05**

ISSUES

1. Whether Insurer has demonstrated by a preponderance of the evidence that it properly cancelled Employer's Workers' Compensation insurance policy effective April 16, 2013.
2. Was Claimant an employee of [Alleged Employer Redacted]?
3. Does the settlement agreement between Claimant and [Prior Insurer Redacted] preclude recovery by Claimant against the remaining Respondents?

STIPULATIONS

The parties agreed to the following:

1. Claimant earned an AWW of \$1,153.84.
2. If Claimant's claim is compensable, he is entitled to Temporary Total Disability (TTD) benefits for the period April 27, 2013 until terminated by statute.
3. Claimant's TTD benefits are subject to a Social Security Disability Insurance (SSDI) offset in the amount of \$755.00 per month since October 1, 2014.
4. Claimant is not seeking a recovery against [Alleged Employer Redacted], as [Alleged Employer Redacted] filed for bankruptcy protection.

These Stipulations were approved by the ALJ and are made part of this Order.

PROCEDURAL HISTORY

This case has been extensively litigated, including on the issues which were set for determination at this hearing:

On December 30, 2014, ALJ Felter granted a Motion for Summary Judgment, dismissing Respondents [Prior claim parties]. This Order was affirmed by a second Order issued by ALJ Felter, dated April 15, 2015.

After a timely Petition to Review was filed, the Industrial Claims Appeals Office concluded the foregoing orders were not final and dismissed the appeal on September 5, 2015. After a hearing was held on January 25, 2016, ALJ Cannici issued findings of Fact, Conclusions of Law and Order (dated February 25, 2016). ALJ Cannici determined Claimant suffered a compensable injury and Respondent-Insurer [Redacted] substantially complied with 8-44-110, C.R.S. canceling the insurance policy it issued to Employer.

The ICAO remanded the case on September 7, 2016, finding that a disputed issue of material fact existed and the orders on the Motion for Summary Judgment were set aside. Because of this determination, this Order also found Respondents [Prior Respondents Redacted] needed to participate in the hearing in order to fully litigate the claim.

On or about June 19, 2017, a full and final settlement was reached between Claimant and [Prior Respondents Redacted]. The settlement was approved by the Director of the DOWC, Paul Tauriello on June 23, 2017.

On November 17, 2017, a Prehearing Conference Order was issued by PALJ Eley. At that time, based upon the acknowledgment by counsel for the parties, PALJ Eley determined the evidence to be presented would be identical to that which was presented at the previous hearing. Respondent-[Insurer Redacted] was permitted to call Mike R[Redacted] as a witness at the hearing. The parties did not waive their right to present rebuttal evidence. Judge Eley ordered the exhibits and transcript from the previous hearing to be submitted to the OAC ALJ assigned at the December 11, 2017 hearing, along with the settlement agreement between Claimant and [Prior Respondents Redacted]. The Order specified that it was not to be construed to take a position on what OAC ALJ should hear the case or the weight, if any, to be given by the OAC ALJ to the previous merits order rendered in the matter.

The parties participated in a Status Conference on February 20, 2020 for the purpose of confirming what pleadings, exhibits and transcripts were part of the record. Respondent [Insurer Redacted] objected to the inclusion of the transcripts of the hearings before ALJ Felter, as well as depositions in which it did not participate. Following the Status Conference, a Hearing Transcript for the December 2017 hearing was lodged with the Court on February 24, 2020 and the record closed.

FINDINGS OF FACT

1. [Alleged Employer Redacted] owns [Company name Redacted] as a sole proprietorship.¹
2. On September 19, 2012, a vendor Agreement between [Prior Respondents Redacted] and [Company name Redacted] was completed. The agreement specified that [Company name Redacted] would provide property, preservation inspections (“PPI”). This agreement was signed on September 21, 2012 by [Alleged Employer Redacted] and William Shapiro on behalf of [Prior Respondents Redacted]. Pursuant to this contract, Mr. [Alleged Employer Redacted] was a vendor for [Prior Respondents Redacted], which contracted out the services [Alleged Employer Redacted] was to perform. The agreement provided that [Alleged Employer Redacted] had restrictions when hiring any subcontractors.

¹ Exhibit A, p. 19.

3. In January 2013, [Alleged Employer Redacted] obtained a workers' compensation insurance policy for [Company name Redacted] in his personal name with [Insurer Redacted]. [Alleged Employer Redacted] 's address was listed as 4137 Warbler Drive, Ft. Collins, CO, 80526.

4. Andy L[Redacted] testified that he works as an Underwriter for Insurer. He previously worked for Insurer as a New Business Representative and Customer Service Representative. Mr. L[Redacted] explained that Employer obtained a Workers' Compensation insurance policy with Insurer in January 2013. The policy was issued in Mr. [Alleged Employer Redacted] 's name and Mr. L[Redacted] was the assigned underwriter. The policy issued by Insurer had a policy period which ran from January 25, 2013-February 1, 2014.

5. [Insurer Redacted] sent a letter to [Alleged Employer Redacted] via certified mail, dated March 26, 2013, which notified him that his insurance premium was overdue and his policy would be canceled on April 16, 2013, unless [Insurer Redacted] received the amount due by April 15, 2013 (hereinafter "Notice of Cancellation").² This Notice was sent to 4137 Warbler Drive, Ft. Collins, CO, 80526. [Insurer Redacted] contemporaneously mailed a copy of the Notice of Cancellation to The Ahbe Group, Inc./TAG Insurance Services ("TAG"), which was [Alleged Employer Redacted] 's insurance agent.

6. Rhonda I[Redacted] testified that she works for Insurer as a Corporate Services Assistant. Ms. I[Redacted] assists the manager who oversees Insurer's outgoing mail team and previously was a member of the outgoing mail team. She said Insurer's business custom was to send all notices of cancellation via certified mail and to enter the assigned certified mail numbers into Pitney Bowes' electronic equipment. The Pitney Bowes equipment meters and tracks Insurer's mail. Insurer also used envelopes that allow the contact information of the addressees listed in outgoing letters to be seen through transparent "windows" to ensure these are sent to the correct recipients. Ms. I[Redacted] explained that "certified mail" and "return receipt certified mail" are different. Insurer's standard practice was to send notices of cancellation via certified mail rather than return receipt certified mail.

7. Ms. I[Redacted] stated that the Pitney Bowes equipment generated a report reflecting that Insurer's March 26, 2013 Notice of Cancellation was mailed to Mr. [Alleged Employer Redacted] 's zip code of 80526 on March 27, 2013 and received on March 28, 2013. The equipment generated a document bearing certified mail number 9171082133393950727893.³ Although the report did not reflect that an individual had signed for the Notice of Cancellation, Ms. I[Redacted] explained that she has never seen a similar report that revealed an individual had signed for the document. Finally, the "Delivery Status" confirmation from the United States Postal Service (USPS) also stated

² Exhibit B, p. 50.

³ Exhibit B, p. 54.

that tracking number 9171082133393950727893 was delivered. The ALJ found the Notice of Cancellation was delivered to [Alleged Employer Redacted] 's business address.

8.Mr. L[Redacted] testified that Insurer sent the Notice of Cancellation to Mr. [Alleged Employer Redacted] at his address of record via certified mail because he failed to timely pay his insurance premiums. Mr. L[Redacted] confirmed that Insurer has a business custom of sending notices of cancellation via certified mail when policyholders fail to timely pay their premiums. He noted that he has never seen Insurer send a notice of cancellation through any method other than certified mail. He detailed that Insurer has a business custom of generating an electronic "notepad entry" when a notice of cancellation is issued and Insurer's underwriting file contains an entry stating that the Notice of Cancellation was sent via certified mail. The ALJ finds Mr. L[Redacted] 's testimony was credible and it was not refuted.

9.Mr. L[Redacted] also testified that Insurer has sent other correspondence to Mr. [Alleged Employer Redacted] using the same name and address since the inception of his Workers' Compensation insurance policy in January 2013. Mr. [Alleged Employer Redacted] never reported any trouble receiving mail. Although Mr. L[Redacted] acknowledged that Insurer does not possess a return receipt for the Notice of Cancellation, he explained that USPS only retains return receipts for two years and he had no reason to believe one might be relevant within the timeframe. Mr. L[Redacted] further commented that Insurer has a business custom of sending copies of notices of cancellation to the insurance agents of its policyholders and the Notice of Cancellation was mailed to [Alleged Employer Redacted] 's insurance agent. This was sent by regular mail.

10. Mr. [Alleged Employer Redacted] testified he received the Notice of Cancellation, but did not know when he received it.⁴

11. James R[Redacted] testified at the December 11, 2017 hearing. He is employed by TAG as the commercial division manager. TAG was the insurance agent for [Alleged Employer Redacted] /[Company name Redacted] in March 2013 in connection with the policy issued by [Insurer Redacted]. TAG received a copy of the Notice of Cancellation which was also addressed to McKeon/[Company name Redacted] . He did not personally see the document when it came in to the agency. TAG maintained business records, including notices of cancellation. The Notice of Cancellation was kept in electronic records, which showed it was received on March 29, 2013. The ALJ concluded that TAG, as the insured's agent received the Notice of the Cancellation.

12. [Insurer Redacted] substantially complied with the requirements of the statute when it cancelled the subject policy.

13. On April 16, 2013, the workers' compensation insurance policy issued to [Alleged Employer Redacted] by [Insurer Redacted] was canceled. There was no evidence in the record that the policy was reinstated.

⁴ January 25, 2016 Hearing Transcript, p. 94:20-25

14. Since [Alleged Employer Redacted] (as a subcontractor) did not have workers' compensation insurance, the ALJ concluded that [Prior Respondents Redacted] was a general contractor for the PPI services and required to provide workers' compensation coverage for any injuries.

15. Mr. [Alleged Employer Redacted] and Mr. P[Redacted] have been friends for approximately 15 years. In early April 2013, Mr. [Alleged Employer Redacted] offered property preservation and inspection work to Mr. P[Redacted] in Granby, Colorado.

16. Mr. P[Redacted] and Claimant completed the job in Granby, Colorado on or about April 21, 2013. They cleaned up firewood and other materials. Mr. [Alleged Employer Redacted] reviewed a picture of the job site and was satisfied with the work. He never showed Claimant and Mr. P[Redacted] how to do the work.

17. Copies of e-mails from Mr. [Alleged Employer Redacted] to Mr. P[Redacted] were admitted at hearing. One dated April 23, 2013 forwarded work orders to Mr. P[Redacted]. The next, dated April 24, 2013 requested a contract to be filled out, as well pictures to be taken of a specific property. There was no evidence in the record that Mr. P[Redacted] completed and returned a signed contract to Mr. [Alleged Employer Redacted]. The ALJ inferred this was evidence on intent on the part of [Alleged Employer Redacted] to enter into a contract with Mr. P[Redacted]. There was no evidence Mr. P[Redacted] executed a written independent contractor agreement.

18. Mr. [Alleged Employer Redacted] did not withhold taxes in the money he paid to Mr. P[Redacted]. He did not pay Claimant directly, as that was through Mr. P[Redacted].

19. Mr. [Alleged Employer Redacted] was aware that Claimant was going to Chicago with Mr. P[Redacted]. He gave Mr. P[Redacted] a list of materials they needed to buy in order to service the work orders when they got to Chicago. The ALJ concluded Mr. P[Redacted] was acting as a subcontractor.

20. Mr. P[Redacted] testified Mr. [Alleged Employer Redacted] directed him to go to Chicago where he would be employed doing PPI work. Mr. P[Redacted] testified he was going to have work orders from [Alleged Employer Redacted] when he arrived in Chicago. He said [Prior Respondents Redacted] and possibly other companies would be involved in giving Mr. [Alleged Employer Redacted] the work they would do. Mr. P[Redacted] did not think he was ever given any paperwork or contracts to sign by Mr. [Alleged Employer Redacted]. Mr. P[Redacted] testified the reason he went to Chicago and Claimant was recruited to go to Chicago was to work for Mr. [Alleged Employer Redacted]. Mr. P[Redacted] had no workers' compensation insurance of his own. Mr. P[Redacted] said that Mr. [Alleged Employer Redacted] told him he would earn at least \$10,000 each month working on projects in the Chicago area. Mr. [Alleged Employer Redacted] did not provide a 1099 tax form or other documents to Mr. P[Redacted].

21. There was no evidence in the record that Mr. P[Redacted] and Claimant executed any sort of contract or employment agreement. There was no evidence Claimant executed a written independent contractor agreement. Mr. P[Redacted] testified that he was going to split the money he received from Mr. [Alleged Employer Redacted] with Claimant.⁵ Mr. P[Redacted] described the arrangement as friends helping a friend, similar to when one friend pays another to help that person move. The ALJ inferred Claimant was going to work exclusively with Mr. P[Redacted] while he was in Chicago.

22. Mr. [Alleged Employer Redacted] testified that when Mr. P[Redacted] and Claimant drove to Chicago he was under the impression that he did not have to have workers' compensation insurance coverage for them because they were independent contractors. He stated that he lent a credit card (from one of his companies) to Mr. P[Redacted]. Mr. [Alleged Employer Redacted] stated he was going to deduct the expenses charged on the credit card from what he would pay Mr. P[Redacted] for the [Prior Respondents Redacted] work in Chicago.

23. There was no evidence in the record that Claimant had any contact with [Prior Respondents Redacted]. There was no evidence in the record that Claimant had any contact with [Alleged Employer Redacted] / [Company name Redacted]. Claimant had no workers' compensation coverage of his own. The ALJ inferred from the evidence that Claimant was travelling to Chicago to work for [Alleged Employer Redacted] with Mr. P[Redacted].

24. On April 26, 2013, Claimant and P[Redacted] were injured in a motor vehicle accident which occurred in Nebraska. Both were severely injured as a result.

25. [Alleged Employer Redacted] did not have workers' compensation insurance coverage in force on April 26, 2013.

26. On June 12, 2013, a First Report of Injury was completed on behalf of Mr. [Alleged Employer Redacted], who is listed as the employer. Kelly Ludu (guardian) completed the form. The employee was listed as Claimant. The date the administrator was notified was listed as April 10, 2013. [Insurer Redacted] was identified as the insurer.

27. The ALJ concluded [Prior Respondent Insurer Redacted] was the workers' compensation insurer for [Prior Respondents Redacted], as that was how it was identified in the settlement documents. The full and final settlement between Claimant and [Prior Respondents Redacted] / [Prior Respondent Insurer Redacted], which was approved on June 23, 2017 provided:

"9. A. The parties agree to each of the following terms as part of this settlement:

⁵January 25, 2016 Hearing Transcript, p. 63:20-64:23

(4) Liability under the Worker's Compensation act has been, and continues to be, denied by Respondents. The settlement of this claim is not an admission of liability by the Respondents. In the event Claimant petitions to reopen, Claimant understands that liability of the Respondents for the injury and Claimant's entitlement to any type of workers compensation benefits must be established since the settlement is not an admission of liability. The parties understand and agree that other than the terms specifically identified in the settlement agreement, Respondents shall not pay any medical or indemnity benefits in relation to the alleged Worker's Compensation claim".

28. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Cancellation of the Insurance Policy by [Insurer Redacted]

In the case at bar, [Insurer Redacted] had the burden to prove, by a preponderance of the evidence, that it effectively cancelled the insurance policy prior to the accident. *Butkovich v. ICAO*, 690 P.2d 257, 259 (Colo. App. 1984). Cancellations of workers' compensation

insurance policies are governed by § 8-44-110, C.R.S. (2019). That section provides in pertinent part:

“Notice of cancellation. Every insurance carrier authorized to transact business in this state, including [Insurer Redacted] Assurance, which insures employers against liability for compensation under the provisions of articles 40 to 47 of this title, shall notify any employer insured by the carrier or [Insurer Redacted] Assurance, and any agent or representative of such employer, if applicable, by certified mail of any cancellation of such employer's insurance coverage...”

The Colorado Court of Appeals has held substantial compliance with the statute suffices, if the insured received actual notice. *EZ Building Components Mfg., LLC v. ICAO*, 74 P.3d 516, 518 (Colo. App. 2003) (“there is no indication . . . that the provision for certified mail is a jurisdictional requirement”); *see also Juarez v. Pillow Kingdom, Inc.*, W.C. No. 4-364-252 (absence of certificate of mailing did not render notice of briefing schedule ineffective even when a different statute required one). Instead, the concept of “substantial compliance” applies when determining whether a workers’ compensation insurance policy was effectively cancelled. *EZ Building, supra*, 74 P.3d at 518.

In deciding whether substantial compliance occurred, the Court should consider whether the allegedly compliant acts fulfill the statute’s purpose. *Koontz v. Bowser Boutique, Inc.*, W.C. No. 4-359-795 (ICAO Jan. 13, 2012). The “purpose of § 8-44-110 is to afford the insured advance notice of an impending cancellation so that the insured has an opportunity to avoid the non-insured status”. *Davidovich v. Team Guilders Inc.*, W.C. No. 4-468-801 (ICAO Oct. 5, 2001).

In *Acosta v. Plumbing Co. of Colorado*, W.C. No. 4-732-044 (ICAO, Mar. 9, 2010) ICAO concluded that the record was “sufficient to establish a presumption that the notice of cancellation was mailed to and received by the employer based on the business custom of the insurer. Substantial compliance with the notice requirements of the statute was thus sufficient to effect cancellation of the policy. *Id.* Whether Insurer substantially complied with §8-44-110, C.R.S. in cancelling Employer’s policy and whether Mr. [Alleged Employer Redacted] actually received the Notice of Cancellation are questions of fact for the ALJ to resolve. *See EZ Building Components*, 74 P.3d at 519.

The question, therefore, is whether there was sufficient evidence to show that [Alleged Employer Redacted] had notice of the cancellation from [Insurer Redacted] that substantially complied with the statute. The ALJ concluded that Insurer proved there was substantial compliance with the statute and its insured had notice of the cancellation. The ALJ concluded Respondent-Insurer provided actual notice via certified mail to [Alleged Employer Redacted] . (Finding of Fact 5). There was direct evidence [Alleged Employer Redacted] received the Notice of Cancellation, as [Alleged Employer Redacted] testified that he received the Notice of Cancellation. (Finding of Fact 10). On this subject, the testimony of Mr. L[Redacted] and Ms. I[Redacted] established the business practice of Insurer when cancelling a policy. (Findings of Fact 6-9). This testimony was also persuasive to the ALJ that Mr. [Alleged Employer Redacted] received the Notice of

Cancellation. The method of cancellation effectuated the purpose of the statute in that it provided notice to Mr. [Alleged Employer Redacted] . The fact that Mr. [Alleged Employer Redacted] did not recall the precise date that he received the Notice of Cancellation does not vitiate the conclusion that the Notice of Cancellation was sent via certified and mail and received by [Insurer Redacted]'s insured, Mr. [Alleged Employer Redacted] .

The ALJ next considered whether there was substantial compliance with the statute by [Insurer Redacted] in mailing the Notice of Cancellation to [Alleged Employer Redacted] 's agent by regular mail. As found, the Notice of Cancellation was sent by regular mail, as opposed to certified mail. (Finding of Fact 9). The Notice of Cancellation was received by TAG, the agent for [Alleged Employer Redacted] /[Company name Redacted] . (Finding of Fact 11). TAG's manager (Mr. R[Redacted]) confirmed that they actually received the notice and a copy was saved electronically in TAG's records. *Id.* The ALJ determined this constituted substantial compliance with the statute by [Insurer Redacted]. (Finding of Fact 12).

Accordingly, the ALJ concluded that Respondent [Insurer Redacted] canceled the workers' compensation insurance policy it issued to [Alleged Employer Redacted] . The cancellation was proper, substantially complied with the requirements of the statute and there was no evidence the policy was reinstated. (Finding of Fact 11). [Alleged Employer Redacted] did not have Worker's Compensation insurance coverage on the day of the accident. (Finding of Fact 25). As found, neither Mr. P[Redacted] , nor Claimant had Worker's Compensation insurance coverage on the date of the accident. (Findings of Fact 6-9).

Claimant's Employer

On the question of which entity employed Claimant, [Insurer Redacted] primarily argued that [Prior Respondents Redacted] was the statutory employer. Respondent-Insurer further argued there can only be one liable employer per statutory employer claim according to the Colorado Supreme Court and cited the Colorado Supreme Court's decision in *Herriott v. Stevenson*, 473 P. 2d 720, 722 (Colo. 1970) in support of this argument. Respondent also argued that based upon the settlement agreement between Claimant and [Prior Respondents Redacted]/ [Prior Respondent Insurer Redacted], [Insurer Redacted]'s insured ([Alleged Employer Redacted]) could not be found to be the employer, since there could only be one employer. Claimant argued at hearing that the settlement agreement did not preclude him from asserting his Worker's Compensation claim against other entities.

The issue raised in the case at bench is whether [Prior Respondents Redacted] constituted the statutory employer of Claimant in this case, as argued by Respondent [Insurer Redacted] is governed by 8-41-401, C.R.S. The section provides in pertinent part:

"8-41-401. Lessor contractor-out deemed employer - liability recovery. (1) (a) (I) Any person, company, or corporation operating or engaged in or conducting any business by leasing or contracting out any part or all of the work thereof to any lessee, sublessee, contractor, or subcontractor, irrespective of the number of employees engaged in such work, shall be construed to be an employer

as defined in articles 40 to 47 of this title and shall be liable as provided in said articles to pay compensation for injury or death resulting therefrom to said lessees, sublessees, contractors, and subcontractors and their employees or employees' dependents, except as otherwise provided in subsection (3) of this section.

- (II) Notwithstanding subparagraph (I) of this paragraph (a) and any other provision of law to the contrary, it is presumed that a buyer of goods is not liable as a statutory employer when a lessee, sublessee, contractor, or subcontractor, or their employee who is delivering the goods to the buyer injures himself or herself while not on the buyer's premises. The presumption may be overcome by a showing that the lessee, sublessee, contractor, or subcontractor, or their employee was performing a job function that would normally be performed by an employee of the buyer of the goods being delivered. Nothing in this subparagraph (II) creates a presumption of a statutory employer-employee relationship when an injury occurs on the buyer's premises.
- (III) For the purposes of this section, a "statutory employer" is an employer who is responsible to pay workers' compensation benefits pursuant to subparagraph (I) of this paragraph (a).

As a starting point, the ALJ found that a contract existed between [Prior Respondents Redacted] and [Alleged Employer Redacted], under which [Alleged Employer Redacted] provided PPI services to [Prior Respondents Redacted]. (Finding of Fact 2). [Prior Respondents Redacted] contracted for these services, to be performed by Mr. McKeon, as opposed to an [Prior Respondents Redacted] employee. *Id.* Mr. [Alleged Employer Redacted] hired Mr. P[Redacted] and there was evidence of written documentation related to the work (work orders), as well as potentially a contract between Mr. [Alleged Employer Redacted] and Mr. P[Redacted]. (Finding of Fact 17). However, no evidence of a signed contract was admitted at hearing. There was also no evidence that Mr. [Alleged Employer Redacted] provided a 1099 tax form or other documents to Mr. P[Redacted]. (Finding of Fact 20). Mr. [Alleged Employer Redacted] directed Mr. P[Redacted] regarding work to be done in Granby, as well as arranging for him to travel to Chicago to perform PPI services. (Findings of Fact 16, 20). The ALJ determined Mr. P[Redacted] was acting as a subcontractor. (Finding of Fact 19).

Mr. P[Redacted], in turn, asked Claimant to work with him. As determined in the Findings of Fact 20-23, there was no evidence of a written contract between Mr. P[Redacted] and Claimant. Neither P[Redacted], nor Claimant had workers' compensation insurance or a signed independent contractor agreement. There was not a great deal of evidence in the record as to the precise circumstances of Claimant's hiring, except that Mr. P[Redacted] testified that this was in the nature of a friend helping out a friend. (Finding of Fact 21). Mr. P[Redacted] worked with Claimant on one of the jobs he did for Mr. [Alleged Employer Redacted] in Granby, Colorado and planned to split the proceeds of any remuneration he received for work done in Chicago. *Id.* Mr. [Alleged Employer Redacted] was aware that Claimant worked with Mr. P[Redacted] on the job. (Finding of Fact 19). However, there

was no evidence in the record of any contact between Claimant and Mr. Mr. [Alleged Employer Redacted] . (Finding of Fact 23).

The ALJ noted none of the parties argued Mr. P[Redacted] was Claimant's employer. Rather, the parties described Claimant and Mr. P[Redacted] as co-employees. Accordingly, based upon the totality of the evidence under the facts of the case, the ALJ concluded Claimant was hired to work with Mr. P[Redacted] for [Alleged Employer Redacted] . (Finding of Fact 23). Claimant and Mr. P[Redacted] 's work was for Mr. [Alleged Employer Redacted] , who uninsured at the time of the accident and who contracted with [Prior Respondents Redacted].

The Court next turned to the application of *Herriott v. Stevenson*, 473 P. 2d 720, 722 (Colo. 1970) to the facts in this case. In *Herriott*, the Supreme Court considered the 50% penalty assessed for the failure to carry insurance Provided for by § 81-5-7, C.R.S. [the predecessor to §8-43-408(1)]. In that case, Claimant worked for a subcontractor, which did not carry workers' compensation insurance. The general contractor was covered by a workers' insurance. The referee ruled that the general contractor was the statutory employer. The Colorado Supreme Court affirmed the lower courts' decision, which held that the general contractor fit within the statutory definition of an employer and since it carried insurance, the 50% could not be assessed. Writing for the Court, Justice Pringle concluded:

“Just as when the subcontractor is insured under the act, the contractor-out is not liable for compensation, so we have held that when the contractor-out is insured under the act, then the uninsured subcontractor is not liable for compensation. Under the latter circumstances the subcontractor who has failed to keep his liability insured is an employee and the contractor-out is the only employer contemplated under the act. *Hartford Accident & Indemnity Co. v. Clifton*, N, 190_P.2d_909. The amendment of 81-9-1 by the legislature in 1963 in no way modifies our decision in *Clifton*.

Under the rule set forth in *Clifton* it is clear that under the circumstances of this case no action by the employee against his subcontractor existed under the act, and that the subcontractor could not be classified as *the employer* under C.R.S. 1963, 81-5-7. Because the subcontractor was uninsured, and the primary contractor was insured, the contractor was the only employer contemplated by the statute. Since it was insured, the fifty per cent penalty does not apply”.

Herriott remains good law and the ICAO recently applied *Herriott* in *Read v. Gaines*, W.C. No. 4-835-962 (ICAO Aug. 10, 2011), which also concluded that there can only be one employer. In *Read*, Claimant replaced an air conditioning unit while working for an uninsured subcontractor. The ALJ concluded that Claimant was precluded from pursuing claims against the alleged actual employers because he entered into a settlement agreement with the statutory employer. The ICAO affirmed and cited *Herriott* as support for the proposition that “there only can be one employer liable for workers' compensation benefits.” The Court of Appeals agreed with this analysis in an unpublished opinion and concluded that *Herriott* precludes recovery against an alleged uninsured even when the statutory employer's “liability as an employer was established through a settlement”. This

was recently affirmed in the *Read v. ICAO*, Case No. 12CA0253, 2012 WL4950752 (unpublished) [Colo. App. Oct. 18, 2012]. No other authority was cited to contradict the holdings of these cases.

In the case at bar, [Prior Respondents Redacted] was the statutory employer of Claimant, given the evidence in the record. Since Mr. [Alleged Employer Redacted] was an uninsured at the time of the accident, pursuant to 8-41-401, [Prior Respondents Redacted] was potentially liable for the payment of benefits under the Colorado Worker's Compensation Act. Further, the settlement between Claimant and [Prior Respondents Redacted]/ [Prior Respondent Insurer Redacted] precludes Claimant from pursuing a recovery against another entity or person for these benefits. *Herriott* and *Read v. Gaines, supra*. No contrary authority was cited to lead the ALJ to conclude that these cases were overruled. Therefore, Claimant's claim for benefits is dismissed.

ORDER

Based upon the preceding Findings of Fact and Conclusions of Law, the Judge enters the following Order:

1. Claimant suffered a compensable industrial injury during the course and scope of his employment with Employer on April 26, 2013.
2. Claimant's claim against [Alleged Employer Redacted] is denied and dismissed, as [Prior Respondents Redacted] was the statutory employer. Claimant's full and final settlement with this entity extinguished his claim against other entities.
3. Claimant's claim for medical and TTD benefits is denied and dismissed.
4. Insurer substantially complied with §8-44-110, C.R.S. in cancelling its workers' compensation insurance policy with [Alleged Employer Redacted] / [Company name Redacted] , effective April 16, 2013.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S.

For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

Digital signature

Timothy L. Nemechek
Administrative Law Judge
Office of Administrative Courts

ISSUES

- I. Whether Claimant established by a preponderance of evidence that he suffered a compensable work injury on November 13, 2018.
- II. Whether the medical treatment Claimant received is reasonable, necessary, and related.
- III. Whether Respondents are responsible for the payment of the medical treatment Claimant received.
- IV. Whether the right to select an authorized treating physician passed to Claimant.
- V. Whether Dr. Cebrian is an authorized treating physician if the claim is found compensable.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was born in Guatemala on April 22, 1966. In November 2018, when he reported his work injury, Claimant was 52 years old.
2. Claimant's primary language is Q'anjob'al and he is not 100% fluent in Spanish. He is also not fluent in English and requires an interpreter to communicate in English.
3. Throughout this Claim, co-employees translated for Claimant. It was not, however, established that his co-employees who provided translation were fluent in Q'anjob'al.
4. Claimant is small in stature and is about four feet, 9 inches tall, and weighs about 139 pounds. (*Ex K, p. 104.*)
5. Claimant has been employed by [Employer Name Redacted] since about November 1998. (*Hr'g Tr. p. 24.*)
6. Claimant's job title for about the last 15 years, including the date of injury, was brisket trimmer. (*Hr'g Tr. p. 25.*)
7. As a brisket trimmer, Claimant stands at a table with a cutting board and trims meat. There is a conveyor belt that runs continuously in front of the brisket trimmer tables from right to left. (*Hr'g Tr. p. 73.*) The conveyor belt is around 4-5 feet in front of the brisket trimmer's tables. (*Hr'g Tr. p. 67-68.*) Claimant uses a long metal meat hook to stretch over his table and retrieve each brisket and pull it to his station where he then trims off the fat. (*Hr'g Tr. p. 68.*) The long metal meat hook is about 18 inches long. (*Hr'g Tr. p. 70.*) To help retrieve the meat, Claimant will use his right and left hand to grab the handle of the meat hook and then pull each brisket to his station. After Claimant

retrieves each brisket, he puts down the 18-inch meat hook and picks up his knife in his right hand. (*Hr'g Tr. p. 70*). He then uses a small meat hook in his left hand and a knife in his right hand and trims the fat from the brisket.

8. Claimant works an 8-hour shift, with two fifteen-minute breaks and a ½ hour lunch break. As a result, Claimant works on the assembly line processing briskets for 7 hours a day.
9. A cursory ergonomic assessment of Claimant's job duties was performed and submitted as an exhibit at hearing. (*Exhibit J, p. 89*). Based on the ergonomic assessment, as well as the testimony from Dr. Cebrian, Claimant processes one brisket every 37 seconds. As a result, during each 7-hour shift, Claimant processes about 681 briskets each day at work.
10. The ergonomic assessment also states each brisket weighs 21 pounds. As a result, Claimant must grab and pull about 14,300 (fourteen thousand three hundred) pounds of brisket from the conveyor belt and onto his workstation during each workday. Once the brisket is at his workstation, Claimant must then grab, manipulate, and trim each brisket at a production pace. During the process, Claimant trims about 6 pounds of fat off each brisket during each 37 second cycle. After trimming off the fat, Claimant then pushes the 15-pound brisket back onto a conveyor belt. This results in Claimant pushing about 10,215 (ten thousand two hundred fifteen) pounds of brisket back onto the conveyor belt each workday. Claimant works 5 days a week. Thus, Claimant pulls about 71,500 pounds of brisket off the conveyor belt each week and pushes about 51,075 pounds of brisket back onto the conveyor belt each week. As a result, Claimant is moving about 122,575 pounds of brisket a week.
11. On November 13, 2018, Claimant began work at about 5:30 AM at [Employer Name Redacted]'s plant. (*Hr'g Tr. p. 28*). At around 9:00 AM or 9:30 AM, Claimant was working at his assigned station as a brisket trimmer when he tried to retrieve a piece of meat off the conveyor belt that weighed around 20-21 pounds, with the 18-inch meat hook. The conveyor belt had stopped for a minute, which caused about five pieces of meat to pile up on top of the piece of meat that Claimant was trying to retrieve. (*Hr'g Tr. p. 25-28, 48*). These pieces of meat were larger than the piece that Claimant was trying to retrieve. (*Hr'g Tr. p. 28*). Claimant estimates that some of the pieces of meat, on top of the piece he was trying to retrieve, weighed as much as 35 pounds per piece. (*Hr'g Tr. p. 29*).
12. Claimant had to use both hands to pull the meat out from under the other pieces of meat. (*Hr'g Tr. p. 76*) As he was pulling the piece of meat with both arms, he felt a "yanking" sensation in his shoulders and back. (*Hr'g Tr. p. 26*). The problem of the meat piling up is a common occurrence. (*Hr'g Tr. p. 76*).
13. Respondents allege that because Claimant did not specifically document on the Employee Statement of Injury that he used both hands when he was injured in November 2018, that Claimant is confusing his November 2018 injury with a later incident in July 2019. (*Hr'g Tr. p. 76*). Claimant clarified through his testimony that he did use both hands when he was injured in November 2018. (*Hr'g Tr. p. 76*). Claimant testified that he did not state how many hands he was using when he pulled the meat on the Employee Statement of Injury form, because there is so little space on the form

to write. (*Hr'g Tr. p. 76*). Claimant also testified that the events in November 2018 (when he was injured) and July 2019 are the same type of event. On both dates Claimant was using both hands to retrieve a piece of meat that was under other pieces of meat. (*Hr'g Tr. p. 78*).

14. Claimant's testimony about the mechanism of injury is found to be credible and persuasive. Claimant works on an assembly line performing a process that takes 37 seconds. Claimant repeats that process about 681 times each day. For that reason, it is more likely than not that Claimant would be doing the same types of tasks on two different days.
15. Claimant testified that on November 12, 2018, the day before the November 13, 2018 date-of-injury, he was working normally and his shoulders were not bothering him. (*Hr'g Tr. p. 40-41*).
16. Claimant reported the injury to his supervisor, Leanna Hernandez. (*Hr'g Tr. p. 26*). Claimant also reported the injury in writing by completing an Employee Statement of Injury on November 14, 2018. (*Cl. Ex. 26, p. 87*).
17. The Statement of Injury was translated by the interpreter at hearing which states, "Trimming brisket when I pulled on a piece with the hook to cut with my knife, and I felt yanking in my shoulder and my neck. And this is a very hard job to do because we are also short of personnel at work. Pain in my shoulder, neck, and back." (*Hr'g Tr. p. 32*).
18. On November 14, 2018, the Employer, [Employer Name Redacted], provided Claimant a designated provider list. The designated provider list makes clear it is being provided to Claimant under Section 8-43-404(5)(a)(I)(a). Dr. Cebrian, who is at the [Employer Name Redacted] on-site health care facility in Fort Morgan, Colorado, is the only provider on the list in Fort Morgan. The other providers are in two other cities. Two are in Denver and one is in Greenwood Village. Moreover, although Claimant does not speak English, the designation list is in English and Dr. Cebrian's name is circled. As a result, it is not clear whether Respondents even complied with Section 8-43-404(5)(a)(I)(a) and whether Claimant chose to treat with Dr. Cebrian at [Employer Name Redacted] or was merely directed there since Dr. Cebrian is onsite and the other three providers might not be reasonable options for Claimant since they are located in different cities.
19. That said, on November 14, 2018, Claimant sought treatment from the Employer's on-site medical clinic ([Employer Name Redacted] clinic). (*Hr'g Tr. p. 32*). At that time, Claimant reported he was experiencing a lot of pain in both shoulders. (*Hr'g Tr. p. 32-33*). Claimant stated, "I couldn't do any work as I normally would." (*Hr'g Tr. p. 33*). Claimant rated his level of pain at 8 out of 10, at this time. (*Hr'g Tr. p. 33*).
20. When an employee is seen at [Employer Name Redacted]'s clinic, the nursing staff enters the relevant information associated with the medical appointment into the Daily Visit Log ([Employer]'s clinic log). (*Cl. Ex. 1*); (*Cebrian Depo., p. 43-44*).
21. The November 14, 2018 entry in [Employer]'s clinic log documents Claimant reported pain in his right bicep and into his right shoulder, right sided neck pain, and left shoulder pain. Claimant also reported pain sometimes traveling down the back of his neck. The notes also reflect Claimant complained of swelling in his right shoulder. The notes also

reference the lipoma. The appointment concluded with Claimant being directed to ice his shoulder, take some ibuprofen, and return to work. (*Cl. Ex. 1, p. 12mn*).

22. On November 15, 2018, Claimant returned to [Employer]’s clinic and again saw a nurse for his bilateral shoulder and neck injury and reported a pain level of 6 out of 10. At this appointment, Claimant was again told to use ice, take ibuprofen, and return to work. (*Cl. Ex. 1, p. 12*).
23. On November 16, 2018, Claimant again returned to the Employer’s clinic for his bilateral shoulder and neck injury, however the nursing notes reveal his pain level increased to 8 out of 10. The [Employer] clinic log notes reflect Claimant’s range-of-motion is normal but “very painful.” Even though this was his third visit to the [Employer] clinic for his November 13, 2018, work injury, the nursing notes establish Claimant was seen by a nurse and not a physician at this appointment. This appointment concluded like the others with Claimant being directed to ice his shoulder, take ibuprofen, and return to work. (*Cl. Ex. 1, p. 12-13*).
24. On November 19, 2018, Claimant returned to Employer’s clinic for his bilateral shoulder and neck injury and again reported a pain level of 8 out of 10. The Employer’s clinic log nursing notes document tightness from the right shoulder extending to the right side of the neck. Although, the [Employer] clinic log states Claimant had full range of motion, it documents Claimant demonstrated hesitation to perform the range-of-motion test. At the end of the appointment, Claimant was again returned to work. (*Cl. Ex. 1, p. 13*).
25. On November 20, 2018, his fifth visit to the on-site [Employer] clinic for his bilateral shoulder pain, Claimant was evaluated by a physician, Dr. Cebrian. (*Hr’g Tr. p. 34*); (*Cl. Ex. 1, p. 13*). Dr. Cebrian is employed by [Employer] as the on-site medical director of the Employer owned and operated on-site medical clinic. (*Dr. Cebrian Depo., p. 42-43*). Dr. Cebrian admits that before the deposition, he had never seen the [Employer] clinic notes, which document Claimant’s four prior visits to the [Employer] clinic or the Employee Statement of Injury, all of which document Claimant’s symptoms (including pain complaints in both shoulders and his neck), and the treatment provided. (*Dr. Cebrian Depo., p. 44*); (*Cl. Ex. 1, p. 12-13*). Further, Dr. Cebrian could not recall whether he had reviewed the Employee Statement of Injury when he evaluated Claimant on November 20, 2018. (*Dr. Cebrian Depo., p. 44*). The Employee Statement of Injury, which was signed by Claimant on November 14, 2018, provides:

Trimming the brisket was pulling my piece with long hook and cutting with knife I felt a pulling pain on shoulders and neck I have to force myself to do my job because we are shorthanded with people. (*Cl. Ex. 27, p. 88*).

26. Claimant testified that he discussed the November 13, 2018 incident with Dr. Cebrian at the November 20, 2018 medical appointment. (*Hr’g Tr. p. 35*). Claimant reported to Dr. Cebrian that the worst part of his pain was in his arms from the shoulder, not the lipoma. (*Hr’g Tr. p. 70*). Claimant testified that he was unable to lift his arms upward when he was evaluated by Dr. Cebrian. (*Hr’g Tr. p. 34*). At this visit, Claimant rated his pain as eight out of ten in his shoulders, as well as the right side of his neck and bicep. (*Cl. Ex. 1, p. 13*).

27. Dr. Cebrian, in his November 20, 2018 medical report simply assessed Claimant with myofascial pain and a lipoma on his right shoulder. (*Cl. Ex. 3*). Yet before making his assessment, Dr. Cebrian did not order any diagnostic imaging to evaluate Claimant's reported injuries. (*Dr. Cebrian Depo., p. 57*). At the same appointment, Dr. Cebrian released Claimant from care and provided no treatment. (*Dr. Cebrian Depo., p. 43-44*). Dr. Cebrian also released Claimant to regular duty and despite concluding Claimant did not suffer a compensable work injury, he noted Claimant was at maximum medical improvement (MMI) with no impairment. (*Cl. Ex. 3*). Dr. Cebrian confirmed in his deposition that he offered Claimant no treatment for his bilateral shoulder pain. (*Dr. Cebrian Depo., p. 51*). Dr. Cebrian also testified that he closed Claimant's case that same day. (*Dr. Cebrian Depo., p. 50-51*).
28. Despite concluding Claimant did not suffer a compensable work injury, Dr. Cebrian gratuitously noted in his report Claimant was at maximum medical improvement (MMI) with no impairment. To the extent there is any ambiguity on Dr. Cebrian's MMI statement, the ALJ finds Dr. Cebrian did not conclude Claimant reached MMI for his November 13, 2018 compensable shoulder injury since Dr. Cebrian did not think Claimant suffered a compensable shoulder injury.
29. Claimant testified that during the appointment on November 20, 2018, Dr. Cebrian directed Claimant to seek care through his personal physician for all his complaints, which included his bilateral shoulder pain and the lipoma. (*Hr'g. Tr. p. 35*). Dr. Cebrian also testified that he referred Claimant outside Worker's Compensation for treatment. (*Dr. Cebrian Depo., p. 49*).
30. Claimant was seen at the Employer's clinic 5 times between the date of injury, November 13, 2018, and the date he was released from care on November 20, 2018. Yet the only treatment he was provided was in the form of being directed to ice his shoulders, take ibuprofen, use Flexall rub, and stay to stay active: return to work. None of the medical providers at the Employer's onsite clinic, including Dr. Cebrian, ordered diagnostic testing, imaging, or referred Claimant to a specialist for further evaluation. (*Cl. Ex. 1, p. 12-13*).
31. Claimant testified that after his injury he was working with a great deal of pain and that his pain was interfering with his ability to perform his job duties. (*Hr'g Tr. p. 37*).
32. On November 20, 2018, the Employer filed an Employer's First Report of Injury.
33. On December 10, 2018, Claimant was evaluated for his bilateral shoulder pain, outside the workers' compensation system, by Rebecca K. Hutcheson, a Nurse Practitioner, at Salud Family Healthcare. (*Cl. Ex. 4, p. 26-28*).
34. Ms. Hutcheson's December 10, 2018 medical record states, "his shoulders are painful." "The pain started about one month ago, he reported it at work but that doctor said the pain had nothing to do with work and that he needs to see his personal doctor." (*Cl. Ex. 4, p. 26*). This statement aligns with Claimant's reported date of injury as well as his testimony that Dr. Cebrian directed Claimant to seek treatment on his own for bilateral shoulder pain.

35. At the December 10, 2018 appointment, Ms. Hutcheson performed several tests on each shoulder to determine whether Claimant's shoulder pain was based on an underlying injury to Claimant's rotator cuff, labrum, or both.

The tests and results are as follows:

- Empty can test. This was performed to assess Claimant's rotator cuffs. This test was positive bilaterally, right greater than left.,
- Lift-Off test. This test was also performed to assess each of Claimant's rotator cuffs. This test was also positive, bilaterally.
- Yergason's test. This was performed to assess whether Claimant had any tendonitis involving his biceps. This test was positive for tendonitis of the biceps.
- Hawkins impingement test. This was performed to assess Claimant for any impingement. This test was also positive.
- Sulcus sign test. This was performed to assess Claimant for glenohumeral instability. This test was negative.
- Apprehension test. This was performed to assess whether Claimant had any glenohumeral instability. This was positive bilaterally.

(See *Cl. Ex. 4, p. 25-27*); (*Dr. Cebrian Depo., p. 54-56*).

36. Dr. Cebrian performed none of the tests performed by Ms. Hutcheson. Dr. Cebrian did document Claimant had full shoulder range of motion but failed to mention whether it was with or without pain. He also failed to document which shoulder planes had normal range of motion. On the other hand, Ms. Hutcheson did both and specifically documented that during her examination, Claimant had bilateral shoulder pain with:

- Anterior abduction.
- Lateral abduction.
- Anterior adduction.
- Lateral adduction.
- Internal rotation.
- External rotation.

(See *Cl. Ex. 4, p. 26-28*); (*Dr. Cebrian Depo., p. 54-56*).

37. Ms. Hutcheson also noted tenderness to palpation of the AC joint and the glenohumeral joint. She also found Claimant had tenderness at the subscapular & insertion of the long head of the biceps tendon, which was mild on the left but moderate on the right. (*Id. at p. 26-28*).

38. After performing and documenting a thorough examination of Claimant's right and left shoulder, Ms. Hutcheson assessed his condition as follows:

- Unspecified rotator cuff tear or rupture of the left shoulder, not specified as traumatic, and
- Unspecified rotator cuff tear or rupture of the right shoulder, not specified as traumatic.

(Id. at p. 26-28).

39. Based on her examination and assessment, Ms. Hutcheson ordered an MRI of each shoulder. In contrast, after Claimant was seen at the employer's onsite-clinic four times in the week before Dr. Cebrian's evaluation, (consistently rating his pain between six to eight out of ten for his bilateral shoulder and neck injury), Dr. Cebrian conducted no specific shoulder tests to fully evaluate Claimant's bilateral shoulder pain and ordered no diagnostic imaging. (*Cl. Ex. 3*); (*Dr. Cebrian Depo., p. 57*).

40. On March 20, 2019, Claimant underwent an MRI of each shoulder. The left shoulder MRI showed the following:

- A full-thickness supraspinatus tendon tear with retraction,
- Severe subscapularis tendinopathy with partial tearing, and
- Advanced acromioclavicular joint arthrosis and tearing of the superior posterior glenoid labrum.

The right MRI showed the following pathology:

- A full-thickness supraspinatus tendon tear with mild retraction,
- Tearing of the superior to posterior glenoid labrum, and a
- Subcutaneous lipoma along the superior posterior shoulder.

41. On April 15, 2019, Claimant was seen by Dave Keller, P.A., reporting a three-year history of on and off again pain. In addition, Mr. Keller documented that there has been a slow and steady progression and worsening. (*Cl. Ex. 5, p. 29*). The medical record also states Claimant denied any trauma to either shoulder and any time. *Id.* That said, Claimant testified that although he may have denied any trauma to his shoulders, Claimant does not know the words "traumatic" or "trauma." (*Hr'g. Tr. 58*). Claimant's native language is Q'anjob'al. (*Hr'g. Tr. 35*). Claimant is not 100% fluent in Spanish, there are words he does not understand. (*Hr'g. Tr. 36*). Claimant has never had an interpreter at his medical appointment's that spoke Q'anjob'al. (*Hr'g. Tr. 36*).

42. At the April 15, 2019, medical appointment, Mr. Keller assessed bilateral rotator cuff symptoms but would not recommend formal treatment until he reviewed the x-rays and MRIs. (*Cl. Ex. 5, p. 29-31*).

43. On April 25, 2019, Claimant attended a follow-up appointment with Mr. Keller, to evaluate Claimant's bilateral shoulder symptoms. After reviewing the MRIs, Mr. Keller diagnosed Claimant with complete bilateral rotator cuff tears. (*Cl. Ex. 5, p. 32-34*). Mr. Keller also noted the rotator cuff tears were nontraumatic. *Id.*

44. On September 9, 2019, Claimant was evaluated for his bilateral shoulder pain by an orthopedic surgeon Dr. Ken Keller, M.D. (*Cl. Ex. 6, p. 35-37*). Dr. Keller is Dave Keller's

brother. Dr. Keller noted that Claimant related bilateral shoulder pain due to his work for the past couple decades of doing fairly heavily assembly-line work. (*Cl. Ex. 6, p. 35*). Dr. Keller's report notes Claimant noticed development of an intolerable worsening pain in the right shoulder back in November and he saw the company doctor at that time who did not relate this to a work-related event. He continued to work with both shoulders hurting and in June had another event in the right shoulder with exacerbation of pain. (*Cl. Ex. 6, p. 35*). Dr. Keller physically examined Claimant and found, "obvious rotator cuff signs with painful abduction toward flexion as well as internal rotation behind the back. Although there is no evidence of frozen shoulder, he does have limited internal rotation. Passive motion is nearly full. Positive lift-off test with reproducible pain bilaterally and reproducible pain superior laterally with active abduction." (*Cl. Ex. 6, p. 36*). Dr. Keller also noted that he reviewed the MRI, which revealed a retracted superior cuff tear as 8-9 mm, as well as moderate tendinosis of his subscapularis. (*Cl. Ex. 6, p. 36*). Dr. Keller stated that the "many years of repetitive resisted work with the arms away from the body could certainly contribute to rotator cuff disease." (*Cl. Ex. 6, p. 36*).

45. Dr. Keller diagnosed Claimant with complete bilateral complete rotator cuff tears. (*Cl. Ex. 6, p. 36*). The only treatment recommended by Dr. Keller was surgical repair. (*Cl. Ex. 6, p. 36*).
46. On July 10, 2019 Claimant reported a second event at work that might have aggravated his November 13, 2018, bilateral shoulder injuries. Claimant testified that after his November 13, 2018 injury, he continued to work his normal position at [Employer], however his shoulders were causing him so much pain that he had to use the force of his back to perform his duties. (*Hr'g. Tr. p. 63*). It is found, however, that the July 2019 increase in bilateral shoulder pain flows from his November 2018 injury and the increase in shoulder pain in July 2019 is not an intervening superseding injury.
47. On July 31, 2019, Dr. Cebrian authored a medical report in response to Claimant's claimed second date-of-injury of July 10, 2019. The medical report was authored without evaluating Claimant. Dr. Cebrian comments on two prior shoulder injuries in 2005 and 2012, which he documents as both resolving with conservative treatment. In addition, Dr. Cebrian's report also references the March 20, 2019 MRIs. Dr. Cebrian did not, however, review the MRI films. (*Dr. Cebrian Depo., p. 58*).
48. Dr. Cebrian diagnosed Claimant with bilateral rotator cuff tears. (*Resp. Ex. J, p. 84-87*). He also concluded that Claimant's rotator cuff tears were not causally related to his work or aggravated by his work. (*Resp. Ex. J, p. 85*). Part of Dr. Cebrian's opinion on causation turns on a video that he viewed that demonstrated Claimant's job duties. (*Resp. Ex. J, p. 84-85*). During the deposition of Dr. Cebrian, Claimant's counsel objected to questions relating to the video because the video was not disclosed to Claimant or authenticated. (*Cebrian Depo., p. 14*). Respondents never exchanged the video and there was scant evidence provided to establish exactly what the video represented.
49. In his July 31, 2019 report, Dr. Cebrian also references the video of Claimant's job. That said, neither in his report or his testimony does Dr. Cebrian specify:
 - i. Whether Claimant was performing the brisket trimming tasks in the video or whether it was a co-worker?

- ii. If it was a co-worker in the video, are they taller than Claimant?
And if they are taller, how much taller?
- iii. Was the brisket trimmer working at a production pace or at a slower
pace for demonstrative purposes?

50. Respondents did submit a job description at hearing that sets forth the general tasks required to trim a brisket. The job description shows there is a hyperlink that can be accessed to watch a video demonstrating the tasks required to trim a brisket. (*Resp. Ex. C, p.14*). The video referenced in this job description was not made available to Claimant's counsel or the court. As a result, the ALJ infers Dr. Cebrian watched a general training video and not a video of Claimant trimming a brisket. Whether Dr. Cebrian reviewed a video of Claimant or another worker trimming briskets is important because Claimant is small in stature and is about 4 feet, nine inches tall. It seems unlikely that the assembly line was maximized ergonomically for someone of that stature. As result, Claimant would have to raise his arms higher than the average worker to perform his job duties and end up exerting more force through his rotator cuffs. As a result, the quality of the data used by Dr. Cebrian to support his opinion is of questionable quality as is his resulting opinion.
51. Moreover, in his July 31, 2019, report. Dr. Cebrian outlines how he assessed causation in assessing whether Claimant suffered a compensable injury on July 10, 2019. The ALJ, however, does not find his causation assessment to be credible or persuasive for many reasons.
52. First, Dr. Cebrian explains the scientific evidence on degeneration of the shoulder and rotator cuff. He explains that degeneration by itself does not result from a wear and tear process, but the natural consequence of degeneration at the cellular level based on aging. Thus, he contends that the degenerative process is usually independent of external factors such as the physical demands of work. In the end, he concludes in his report that "This is the normal human predicament." ¹ As a result, he concludes Claimant's need for medical treatment and resulting disability is completely unrelated to the physical demands of his job on November 13, 2018 – but completely related to the "normal human predicament," i.e., the aging process.
53. Second, Dr. Cebrian moves on to the Colorado Workers' Compensation Shoulder Medical Treatment Guidelines to support his causation opinion that Claimant's job

¹ In his report, Dr. Cebrian provides:

It is important to understand that degeneration is not a wear and tear process. The concept and terminology of wear and tear has been outdated by appreciating the genetics and biochemistry behind degeneration. Degeneration takes place at the cellular level. Degeneration is the result of the inability to replace normal tissues as one ages. This is not the result of external trauma to the tissues but the aging of the cells. Over time, there is progressive loss of the number of cells that are available to produce new healthy tissue. The rate at which cells disappear is genetically determined. The ability of the cell to continue to produce healthy cartilage and tendon tissue is determined by the telomere at the end of each DNA strand. With each cell division, the telomere shortens. When the telomere is gone so is that cellular function. This results in the replacement of healthy tissue with less healthy tissue that then begins the fray and split (tear). This is the normal human predicament. There is nothing unique about the abnormalities in Mr. Juan's shoulders.

duties, on a cumulative basis, did not cause the need for Claimant's medical treatment and resulting disability in the form of an occupational disease.

54. Dr. Cebrian provides in his report the following except from the Guidelines:

There is some evidence that jobs requiring heavy lifting, heavy carrying, above shoulder work, and handheld vibration, are likely to be associated with an increased risk of symptomatic supraspinatus tendon lesions, either partial or full thickness tears. Given all of this information, it is reasonable to consider that there is some evidence for the following causative risk factors for shoulder tendon related pathology:

- i. Overhead work of 30 minutes per day for a minimum of five years;
- ii. Work that requires shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and
- iii. Work that requires shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle.

(Respondents' Ex. J, p. 86; Exhibit 4, Medical Treatment Guidelines, pg. 15-16.)

It is also likely that jobs requiring daily heavy lifting at least 10 times per day over the years may contribute to shoulder disorders. In the study relying on self-report, men over 45 and women of any age were more likely to report heavy lifting (probably 20kg or greater) which was significantly related to shoulder findings.

Overhead work is defined as only the specific amount of time in which the arm is utilized with the upper arm above a 90-degree angle at the shoulder.

55. After setting forth the factors above, Dr. Cebrian failed to show whether Claimant's job duties, as performed by Claimant, meet any of the job task thresholds in the *Guidelines*. But, more troubling, is that even if Claimant's job tasks did not meet the thresholds outlined in the *Guidelines* and quoted by Dr. Cebrian, Dr. Cebrian also failed to quote the following section from the *Guidelines*, which reveals there is a lack of quality studies from which to obtain exposure thresholds involving the shoulder. The portion of the *Guidelines* Dr. Cebrian failed to include in his report provides:

Given the lack of multiple high quality studies [regarding the shoulder] it is necessary to consider each case individually when dealing with the likelihood of cumulative trauma contributing to or causing shoulder pathology.

(Rule 17, Exhibit 4, Medical Treatment Guidelines, p. 16).

56. The *Guidelines* also provide that:

Work-related conditions may occur from the following:

- a specific incident or injury,
- aggravation of a previous symptomatic condition, or
- a work-related exposure that renders a previously asymptomatic condition symptomatic and subsequently requires treatment.

57. In the end – after cherry picking certain information from the *Guidelines* - Dr. Cebrian concludes Claimant's bilateral shoulder complaints, current symptoms, and need for treatment are independent, incidental, and unrelated to his work for [Employer].

58. Dr. Cebrian also failed to explain how he concluded Claimant's job duties could not have led to an:

- aggravation of a previous symptomatic condition, or
- a work-related exposure that renders a previously asymptomatic condition symptomatic and subsequently requires treatment.

59. Dr. Cebrian explains that Claimant's shoulders have weakened and degenerated - genetically – to the point where he needs surgery. That said, despite Claimant's shoulders becoming so weak and brittle – genetically - he fails to explain how the exertional forces of Claimant's job on November 13, 2018, did not aggravate or accelerate Claimant's underlying shoulder conditions and necessitate the need for medical treatment.

60. The critical juncture is whether the incident described by Claimant that occurred on November 13, 2018 aggravated Claimant's underlying degenerative shoulder conditions and necessitated the need for medical treatment. And at that critical juncture, the ALJ finds Dr. Cebrian's opinions on causation are neither credible nor persuasive.

61. On September 13, 2019, Claimant filed a Workers' Claim for Compensation. (Resp. Ex. A, p. 1).

62. On September 30, 2019, Respondents filed a Notice of Contest. (*Cl. Ex. 11*).

63. On October 15, 2019, Claimant's counsel emailed Respondents under C.R.S. section 8-42-101(6)(a), again placing Respondents on notice that Claimant required medical treatment for his claimed work-related injury and it is Claimant's understanding that Respondents were not authorizing any medical treatment at that time. (*Cl. Ex. 28, p. 89*). The email also places Respondents on notice again that Claimant would be seeking treatment outside the Worker's Compensation system and, if the claim is found compensable, Claimant would seek reimbursement of costs for the medical treatment. (*Cl. Ex., p. 28*). Claimant presented evidence that the Notice was received by Respondents' counsel in the form of a computer-generated email read notification dated October 15, 2019 from Respondents. (*Cl. Ex. 29*). In addition, on October 15, 2019, Respondents counsel responded to Claimant's counsel's email, further evidencing that Respondents did receive the notice. (*Cl. Ex. 31*). Nor do Respondents dispute being put on notice of these issues.

64. On October 18, 2019, Claimant filed an Application for Hearing. The Application specified Claimant would be seeking medical benefits, including medical benefits based on a physician's refusal to treat for non-medical reasons. (*Cl. Ex. 12.*)
65. After being placed on notice that Claimant required medical treatment and had been denied medical treatment for non-medical reasons, Respondents offered no other treatment or appointments with Dr. Cebrian or an alternative provider.
66. On November 12, 2019, Claimant was evaluated by Armodios Hatzidakis, M.D. who is an orthopedic surgeon with expertise in shoulders. In addition, Dr. Hatzidakis, although not a radiologist, also has over 17 years of experience reading MRIs. (*Hatzidakis Depo, p. 4.*)
67. Dr. Hatzidakis' November 12, 2019 medical record states Claimant reported that he injured both shoulders on November 13, 2018, while working at the [Employer] meat processing plant in Ft. Morgan. "The patient described the incident as having a hook in the left hand, which was used to grab a piece of meat on a conveyor belt. He described the meat as coming very quickly and piling up. While trying to retrieve the meat, he felt a sharp jolt in both shoulders." (*Cl. Ex. 7, p. 39.*) Claimant's statements to Dr. Hatzidakis aligns with his testimony and other records.
68. On November 12, 2019, Dr. Hatzidakis performed various shoulder specific tests including: range-of-motion examination, inspection, tenderness examination to evaluate for tenderness over the shoulder, and evaluation of the contour of the shoulder, range of motion measurements, strength testing, and special tests that specifically apply to certain shoulder muscles and tendons. (*Hatzidakis Depo, p. 12*); (*Cl. Ex. 7, p. 40*).
69. At the November 12, 2019 appointment with Dr. Hatzidakis, Claimant rated his pain as a constant 8 out of 10 with up to 9 out of 10 with overhead activity. Dr. Hatzidakis diagnosed Claimant with bilateral work-related shoulder strain with rotator cuff tears, symptomatic AC joint arthrosis, and subacromial impingement. Claimant was also diagnosed with right shoulder large lipoma. (*Cl. Ex. 7, p. 40*).
70. Dr. Hatzidakis reviewed the MRI films and confirmed that Claimant suffered a full thickness rotator cuff tear in both shoulders. (*Hatzidakis Depo., p. 15*). In addition, Dr. Hatzidakis concluded that there is nothing in MRI films that would help determine whether the Claimant's rotator cuff tears were chronic versus acute. (*Hatzidakis Depo., p. 15-16*).
71. Dr. Cebrian testified that Claimant's condition was chronic and not an acute injury that occurred on November 13, 2018. (*Cebrian Depo., p. 12*).
72. Armodios Hatzidakis, M.D., an orthopedic surgeon with expertise in shoulders and 17 years of experience reading MRIs, concluded that Claimant was not at MMI on November 20, 2018. (*Hatzidakis Depo. p. 4, 20*). Dr. Hatzidakis reasoned that Claimant was still having significant complaints, and the actual injury or problem was not fully evaluated. (*Hatzidakis Depo, p. 20*).
73. Dr. Hatzidakis testified that conducting specific shoulder tests including strength testing; testing to determine whether there's been a soft tissue injury; stability testing; and rotator cuff/labral tear tests is a large portion of figuring out if there is a significant injury to a patient's shoulder. (*Hatzidakis Depo, p. 19*). These tests should have been

conducted by Dr. Cebrian during the November 20, 2018 appointment. (*Hatzidakis Depo*, p. 18-19). Dr. Cebrian admitted that he did not conduct any shoulder specific tests other than range-of-motion. (*Cebrian Depo*., p. 56-57). Dr. Hatzidakis testified that someone can have a full range of motion of their shoulder but still have significant injury. (*Hatzidakis Depo*., p. 19).

74. Dr. Hatzidakis also testified that to sufficiently evaluate Claimant's shoulder, Dr. Cebrian should have ordered radiographs and potentially further imaging, such as MRIs. No imaging was ordered until Claimant was evaluated by Ms. Hutcheson outside the workers' compensation system. (*Hatzidakis Depo*., p. 20, 28-29).
75. Dr. Hatzidakis' provided his medical opinion that the November 13, 2018 work-related incident exacerbated Claimant's pre-existing condition. (*Hatzidakis Depo*., p. 26). Dr. Hatzidakis testified that he disagreed with Dr. Cebrian's opinion that Claimant's bilateral shoulder rotator cuff tears were not causally related to his work at Employer, nor has a pre-existing condition been aggravated. Dr. Hatzidakis explained, "The patient's had recurrent shoulder issues over time, with waxing and waning symptoms. The patient has an injury in November. There is imaging afterwards that shows definitive damage to rotator cuff and tears. And with the patient's continued symptoms from a temporal standpoint, it makes some sense that the patient has an industrial-related injury due to his work as a meat cutter, which is very demanding job on the upper extremities. (*Hatzidakis Depo*., p. 23-24).
76. Dr. Cebrian also testified that a person can have a chronic condition that is asymptomatic and then have an event that causes the condition to become symptomatic. (*Cebrian Depo*., p. 59).
77. Dr. Hatzidakis stated that it would be reasonable to conclude that Claimant's bilateral rotator cuff tears have some relation to the event in November 2018 or work-related activities. (*Hatzidakis Depo*., p. 25-26).
78. Dr. Hatzidakis discussed treatment options with Claimant and advised, "Given the line of work that he is in and the risk for enlargement of the tear, we did suggest definitive treatment with rotator cuff repair, subacromial decompression, distal clavicle resection, a possible lipoma excision, and possible biceps tenodesis if required." (*Cl. Ex. 7*, p. 41).
79. Shortly after his appointment with Dr. Hatzidakis, Claimant selected Dr. Hatzidakis to treat his shoulder injury and provide the surgery that he recommended.
80. Claimant continued working his normal position for Employer from the date-of-injury until December 13, 2019, when he underwent surgery to repair his rotator cuff of his right shoulder. (*Hr'g Tr. p. 37*); (*Cl. Ex. 7*, p. 42-44).
81. On December 13, 2019, Claimant underwent a right shoulder arthroscopy with excessive debridement, arthroscopic subacromial decompression, arthroscopic rotator cuff repair, and arthroscopic long head of biceps tenodesis, performed by Dr. Hatzidakis. (*Cl. Ex. 7*, p. 42-44). The non-work-related lipoma was also excised. *Id.*
82. Claimant has continued his post-surgery treatment with Dr. Hatzidakis. (*Cl. Ex. 7*, p. 45-48).

83. The ALJ finds Dr. Hatzidakis' testimony and opinions on causation to be credible and persuasive.
84. The ALJ finds Claimant's testimony to be credible and persuasive.
85. The ALJ does not find Dr. Cebrian's medical reports to be reliable, credible, or persuasive.
86. The ALJ does not find Dr. Cebrian's testimony to be reliable, credible, or persuasive.
87. The ALJ finds Claimant suffered a compensable bilateral shoulder injury on November 13, 2018, while using a long meat hook with both hands to pull a brisket that was stuck under other briskets. The compensable injury caused the need for medical treatment and became disabling.
88. Claimant timely reported his injury in writing to his supervisor and Employer. Claimant was directed to seek treatment at the on-site [Employer] medical clinic. Claimant was seen four times by a nurse and basically told to use ice, take ibuprofen, and stay active, i.e., go back to work.
89. On the fifth visit to the onsite [Employer] clinic, Claimant was seen briefly by Dr. Cebrian. Dr. Cebrian provided a cursory examination and focused mainly on the lipoma on Claimant's right shoulder. Dr. Cebrian failed to recognize the compensable nature of Claimant's shoulder complaints and refused to provide any medical treatment. Dr. Cebrian's mistaken belief that Claimant's shoulder problems were not compensable is a refusal to treat for non-medical reasons. Dr. Cebrian also directed Claimant to seek treatment for his shoulder problems on his own and referred Claimant to see his own medical providers.
90. Claimant went to Salud and was seen by a nurse practitioner. She diagnosed Claimant with bilateral rotator cuff tears. Claimant was evaluated by another nurse practitioner, Mr. Keller, who made the same diagnosis. Claimant was then evaluated by Dr. Keller who also diagnosed Claimant as suffering from bilateral rotator cuff tears and recommended surgery.
91. Claimant decided to get a second opinion about Dr. Keller's surgical recommendation. Claimant's actions of seeking a second opinion about a surgical recommendation is a reasonable undertaking. As a result, Claimant made an appointment to be evaluated by Dr. Hatzidakis. After performing a thorough examination, Dr. Hatzidakis also recommended surgery. As a result, Claimant selected Dr. Hatzidakis to be a treating physician to surgically repair his right shoulder.
92. The evaluations and medical treatment Claimant incurred at Salud (Ms. Hutcheson, N.P.) Eastern Colorado Orthopedic Center (Mr. Keller and Dr. Keller), the MRIs, and the evaluation and treatment with Dr. Hatzidakis, including the surgery, was reasonable, necessary, and related to Claimant's November 13, 2018 compensable injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002).

The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of evidence that he suffered a compensable work-related injury on November 13, 2018.

To recover benefits under the Worker's Compensation Act, the Claimant's injury must have occurred "in the course of" and "arise out of" employment. See § 8-41-301, C.R.S.; *Horodyskyj v. Karanian*, 32 P.3d 470 (Colo. 2001). The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements to establish compensability. *Younger v. City and Cty. of Denver*, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals*, 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which

a work-related injury occurs. *Popovich v. Irlando*, 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs “in the course of” employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.*, 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976).

The term “arises out of” refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra*. There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and Cty. of Denver, supra*. An injury “arises out of” employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra*.

The determination of whether there is a sufficient “nexus” or causal relationship between Claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals*, 759 P.2d 17 (Colo. 1988); *Moorhead Mach. & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996).

The mere existence of a pre-existing condition does not disqualify a claim for compensation for medical benefits. A claimant with a pre-existing condition may recover benefits if an industrial accident “aggravates, accelerates, or combines with” the pre-existing condition to cause disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom caused by the aggravation of a pre-existing condition, but an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable aggravation. *Witt v. James J. Keil, Jr.*, W.C. No. 4-225-334 (ICAO, April 7, 1988). Rather, a claimant is entitled to medical benefits for treatment of pain only if the pain is proximately caused by the work-related activities or accident, rather than the underlying pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Rockwell Int'l v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990).

As found, on November 13, 2018, Claimant was working for Employer at his assigned station as a brisket trimmer. Claimant testified he was retrieving a piece of meat off a conveyer belt when he stretched across the table with an 18-inch meat hook to retrieve the piece of meat. The piece of meat the Claimant hooked weighed about 20 pounds. Further, the 20-pound piece of meat was buried under several other pieces of meat that weighed about 20 pounds each.² Claimant testified that it is was common occurrence for the conveyor belt to sometimes stop, causing the meat to pile up. Claimant credibly testified that, with both hands, he pulled the meat trying to retrieve the piece of meat that was beneath the pile of other meat and felt an immediately “yank” in both shoulders and neck. Claimant testified that he was working normally, and his shoulders did not bother him the day before the injury.

The action and force Claimant used to retrieve the meat more likely than not caused the bilateral shoulder injuries. Claimant was observed in court to be of small

² It is estimated that about 100 pounds of meat was piled on top of the piece of meat Claimant was trying to retrieve.

stature and with a limited reach. It is also undisputed that the conveyor belt that carried the meat was about five feet in front of Claimant's station. At hearing, Claimant showed the action of retrieving the meat and it is found that the action caused him to stretch his body and arms to reach the meat on the conveyor belt. Considering the weight of the multiple pieces of meat (weighing about 20 pounds each) on top of the piece of meat he was pulling, there would be a substantial force against Claimant's outstretched arms and shoulders.

Claimant reported the injury and sought medical care through the Employer's on-site medical clinic. Claimant orally reported his injury to his supervisor Leanna Hernandez and in writing to Employer the next day. Claimant sought treatment for his injuries the day after the incident at Employer's on-site medical clinic.

On November 20, 2018, Claimant was scheduled to be evaluated by Dr. Cebrian at the Employer's onsite clinic for his work-related injury. Claimant testified that the reason for the evaluation with Dr. Cebrian was his bilateral shoulder injuries. Although Dr. Cebrian testified that the reason for the visit was the concern of the non-work-related lipoma on his shoulder and not his shoulder injury itself, Dr. Cebrian's testimony is not found to be credible.

Claimant was seen at Employer's onsite clinic on November 14, 15, 16, and 19, consistently reporting a pain level of six to eight out of ten in both shoulders and neck, which is documented in the Employer's clinic log notes. And although Claimant received minimal treatment (e.g., instructions to ice his shoulders, take ibuprofen, and return to work) as the medical director for Employer's clinic, Dr. Cebrian would have access to the Employer's clinic log. It does not make sense that Claimant, who was reporting a pain level of six to eight out of ten in both shoulders and neck the day he was seen by Dr. Cebrian and who had requested treatment every day of the work week following the initial onset, would state that his only concern was the lipoma on his shoulder. It is found that Claimant reported to Dr. Cebrian his primary concern was the bilateral shoulder and neck injuries that occurred during the November 13, 2018 work-related incident. Dr. Cebrian's testimony to the contrary is not credible.

Dr. Cebrian's opinion that Claimant did not sustain work-related bilateral shoulder injuries on November 13, 2018, is found not credible, as he did not fully evaluate Claimant's injury. Dr. Hatzidakis', who is a level II accredited orthopedic shoulder surgeon, credibly testified that considering Claimant's bilateral shoulder symptoms documented in the Employer's clinic log, the minimum standard of care would have included a bilateral shoulder evaluation with specific shoulder tests and diagnostic x-ray imaging of the shoulders. Dr. Hatzidakis testified that upon reviewing Dr. Cebrian's November 20, 2018 medical record, Dr. Cebrian did not conduct any specific shoulder tests, nor did he order any diagnostic imaging/tests. To the contrary, Dr. Cebrian, discharged Claimant, referred him outside the workers' compensation system to his personal physician for treatment, and closed his case. Further, Dr. Cebrian offered no treatment during or after the November 20, 2018 appointment.

The MRIs of his shoulders outside the workers' compensation system confirmed Claimant's bilateral shoulder injury. On March 20, 2019, MRIs of Claimant's bilateral shoulders were obtained outside the workers' compensation system. The MRIs

confirmed bilateral rotator cuff tears. Dr. Cebrian testified that Claimant's rotator cuff tears were present when he was evaluated on November 20, 2018, as the condition was chronic. The fact that Dr. Cebrian, assessed Claimant with minor muscle soreness, when in fact, Claimant was suffering with bilateral rotator cuff tears, bolsters a finding that Dr. Cebrian's evaluation on November 20, 2018, was insufficient to accurately assess causation for Claimant's bilateral shoulder condition.

Respondents' argument that Claimant's bilateral shoulder condition is merely a chronic condition that was not aggravated by Claimant's job duties on November 13, 2018, is not found to be credible or persuasive. Dr. Cebrian stated that the MRI reports documented findings of a chronic condition. Dr. Cebrian conceded, however, that the MRIs cannot distinguish between acute and chronic findings. Dr. Cebrian also agreed that a person can have a chronic condition that is asymptomatic and then have an event that causes the condition to become symptomatic. Claimant testified that his shoulders were not bothering him the day before the injury, and he was performing his job duties without issue. Further, Dr. Hatzidakis, who is an expert in shoulders, testified that nothing in the MRI films would help determine whether the Claimant's rotator cuff tears were chronic versus acute. Dr. Hatzidakis personally viewed the MRI films, while Dr. Cebrian only reviewed the radiologist's reports.

Two orthopedic surgeons Dr. Keller and Dr. Hatzidakis concluded that the Claimants work likely caused the bilateral rotator cuff tears to become symptomatic and necessitated the need for medical treatment. Dr. Keller stated in his September 9, 2019 medical report, that the many years of repetitive resisted work with the arms away from the body could certainly contribute to the rotator cuff disease. In addition, Dr. Hatzidakis testified that it would be reasonable to conclude that Claimant's bilateral rotator cuff tears have some relation to his work-related activities. Further, Dr. Hatzidakis stated that the November 2018 work-related incident exacerbated claimant's pre-existing shoulder conditions.

Finally, Respondents' expert Dr. Cebrian causal analysis also relies on the viewing of an Employer's video of Claimant performing his job duties. Despite his reliance on that video, the video was not submitted into evidence by Respondents and not provided to Claimant's counsel. Claimant has requested Dr. Cebrian's opinion be stricken as a sanction for Respondents' failure to provide Claimant the video. Claimant did not, however, file a motion to compel the production of the video. As a result, there is no order compelling Respondents to produce the video. Thus, the ALJ will not sanction Respondents for not providing the video to Claimant.

The ALJ finds and concludes Claimant established by a preponderance of the evidence that he suffered a compensable injury involving both of his shoulders on November 13, 2018.

II. Whether the medical treatment Claimant received is reasonable, necessary, and related.

Claimant bears the burden of establishing entitlement to medical treatment. See *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Sims v. Indus.*

Claim Appeals Office, 797 P.2d 777 (Colo. App. 1990). Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. But the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.*, 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co.*, 124 Colo. 210, 236 P.2d 293 (1951).

All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury. *Joslins Dry Goods Co. v. Indus. Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001); *H and H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Seifried v. Indus. Comm'n*, 736 P.2d 1262 (Colo. App. 1986).

Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. See *Merriman v. Indus. Comm'n*, 120 Colo. 400, 210 P.2d 488 (1940).

As stated above, on November 13, 2018 Claimant suffered a work-related injury to his right and left shoulders and neck, when he pulled with both arms a 20-pound piece of meat that had about five pieces of meat piled on top of it, from a moving conveyor belt. Claimant was asymptomatic before the November 13, 2018 work-related incident. Claimant reported a pain level of 6 to 8 out of 10 at his medical visits in the week after his November 13, 2018 work injury. On the other hand, Claimant was performing his job duties before November 13, 2018, without issue.

Diagnostic imaging in the form of x-rays and MRIs were taken of Claimant shoulders which revealed bilateral rotator cuff tears.

Dr. Hatzidakis credibly testified that it was necessary and prudent to order the x-rays and MRIs to sufficiently evaluate Claimant's shoulders. In addition, both Dr. Keller

and Dr. Hatzidakis (who is an expert in shoulders) found that the recommended course of treatment would be surgery for Claimant's right shoulder rotator cuff tear.

Respondents presented no credible and persuasive evidence that the medical treatment Claimant received for his bilateral shoulder injuries was not reasonable or necessary.

It is found and concluded that Claimant established by a preponderance of the evidence that the November 13, 2018 workplace incident was a significant cause for the need for treatment Claimant received, including the right shoulder surgery performed by Dr. Hatzidakis. The November 13, 2018 work incident aggravated Claimant's preexisting shoulder condition and produced the need for treatment. Since, the treatment with Salud (PA Hutcheson), Eastern Colorado Orthopedic Center (PA Keller and Dr. Keller), and Dr. Hatzidakis flows from the November 13, 2018 compensable injury, the treatment they provided it is found reasonable, necessary, and related to evaluate, diagnose, and treat Claimant's work injury.

III. Whether Respondents are responsible for the payment of the medical treatment Claimant received.

Pursuant to C.R.S. § 8-42-101(6)(a),

If an employer receives notice of injury and the employer or, if insured, the employer's insurance carrier, after notice of the injury, fails to furnish reasonable and necessary medical treatment to the injured worker for a claim that is admitted or found to be compensable, the employer or carrier shall reimburse the claimant, or any insurer or governmental program that pays for related medical treatment, for the costs of reasonable and necessary treatment that was provided. ...

(b) If a claimant has paid for medical treatment that is admitted or found to be compensable and that costs more than the amount specified in the workers' compensation fee schedule, the employer or, if insured, the employer's insurance carrier shall reimburse the claimant for the full amount paid....

This section allows Claimant to obtain reimbursement for reasonable and necessary medical treatment without requiring that the treatment, or the medical provider, be authorized by Respondents. The conditions that serve as a prerequisite to an order for reimbursement include: 1) the request must be for reimbursement — the medical treatment has already been provided; 2) the claim has been admitted or found compensable by an ALJ or the Director; 3) the Respondents have failed to furnish the medical treatment; 4) and an ALJ or the Director finds the medical treatment is "related ... reasonable and necessary." C.R.S. § 8-42-101(6)(2).

Moreover, if compensability of Claimant's injury is disputed and Respondents do not provide medical treatment, the ability to select the treating doctor passes to the Claimant and when the claim is deemed compensable, the Respondents are liable for the cost of the reasonable and necessary treatment provided by Claimant's selected

medical providers. See *Ruybal v. University of Colorado Health Sciences Ctr.*, 768 P.2d 1259 (Colo. App. 1988).

Furthermore, an authorized provider can be reimbursed even when the treatment was not authorized by the Respondents but was found to be reasonable and necessary. *Martin v. Hyams*, W.C. No. 4-781-144 (May 11, 2010).

Claimant sought treatment at [Employer]'s onsite clinic and received only minimal treatment for his injuries. Claimant was not provided the reasonable and necessary medical treatment necessary to treat him from the effects of his work injury because Dr. Cebrian failed to adequately assess Claimant's shoulder condition and determine that it was a compensable work injury. Instead, on November 20, 2018, Dr. Cebrian, evaluated Claimant and referred Claimant outside the workers' compensation system for treatment of his work-related injuries. As [Employer]'s onsite physician, he also directed Claimant to seek treatment for his shoulder pain with his own providers and "closed" Claimant's case. Dr. Cebrian offered no other treatment for Claimant's shoulder injuries.

As a result, Dr. Cebrian's general referral in the capacity of [Employer]'s onsite physician shifts the responsibility of payment for medical treatment to Claimant, his personal health insurance carrier, or both. It also allows Claimant to treat with medical providers outside the Workers' Compensation system. Thus, the responsibility for payment would fall on Claimant, his insurer, or both unless compensability is established, and the treatment is found reasonable and necessary.

Claimant provided Respondents the notice required by § 8-42-101(6)(a), C.R.S., several times. These occasions include, but are not limited to, the following:

- i. November 14, 2018, when he verbally advised his supervisor,
- ii. November 14, 2018, when he reported the injury in writing,
- iii. November 14th, 15th, 16th, 19th and 20th of 2018 when he sought treatment from the [Employer] onsite medical clinic,
- iv. September 13, 2019, Claimant's Worker's Claim for Compensation,
- v. October 15, 2019, email from Claimant's counsel to Respondents' counsel, and
- vi. October 18, 2019, Application for Hearing filed by Claimant where he endorsed several medical benefit issues, including multiple authorized provider issues.

Moreover, the email from Claimant's counsel dated October 15, 2019, specifically stated that it is Claimant's understanding that the insurance carrier/employer was not authorizing any medical treatment, Claimant required medical treatment for his bilateral shoulders and neck, and therefore Claimant would be seeking treatment outside the workers compensation system, per Dr. Cebrian's referral. The email also notifies Respondents that if the claim is found compensable Claimant will seek reimbursement of any costs of any reasonable and necessary medical treatment. The notice was provided before Claimant's appointment with Dr. Hatzidakis and surgery. Again, upon

receiving Claimant's notice on October 15, 2019, Respondents provided no medical care and took no action to attempt to redirect Claimant to a treater within the workers' compensation system.

In accordance with Dr. Cebrian's referral, Claimant received the following medical treatment outside the workers' compensation system: Evaluation with nurse practitioner Hutcheson at Salud Family Health Centers; evaluations by physician assistant Dave Keller and Dr. Keller at Eastern Colorado Orthopedics Center; and evaluations and surgery with Dr. Hatzidakis at Western Orthopedics. The surgical procedures performed included: right shoulder open lipoma excision, right shoulder arthroscopic with debridement, arthroscopic subacromial decompression, arthroscopic rotator cuff repair, and arthroscopic long head of biceps tenodesis.

As found, Claimant established by a preponderance of the evidence a compensable injury and that the treatment provided was reasonable, necessary, and related.

As a result, the ALJ finds and concludes Claimant established by preponderance of the evidence that he met the requirements of Section 8-42-101(6)(a), and therefore Respondents shall reimburse Claimant and his insurance carrier for the treatment provided for his bilateral shoulder injuries and neck pain. The Respondents are not, however, liable for costs associated with removing the lipoma.

- IV. Whether the right to select an authorized treating physician passed to Claimant when Dr. Cebrian referred Claimant outside the workers' compensation system for treatment of his work-related injury.**
- V. Whether Dr. Cebrian was deauthorized as a treating physician when he referred Claimant outside the workers' compensation system for treatment of his work-related injury.**
 - i. Employer's Failure to designate a physician in a timely manner who treats Claimant in a timely manner.

If upon notice of the injury the employer fails to timely designate a physician to treat Claimant, the right of selection passes to Claimant. *Rogers v. Indus. Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). The Employer's obligation to appoint a treating physician who will treat Claimant arises when it has some knowledge of the accompanying facts connecting an injury to the employment such that a reasonably conscientious manager would recognize the case might result in a claim for compensation. *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006).

The Employer's obligation to appoint and provide a "physician" who will treat Claimant timely is also set forth in WCRP 16. Under rule 16-3(A)(1), a designated provider can delegate some of their treatment obligations to a nurse practitioner or physician assistant. That said, the Employer is still required to provide a physician who will oversee the assessment, treatment, and return to work decisions being made by a nurse practitioner or physician assistant. For example, the physician has to "counter-sign patient records related to the injured worker's inability to work resulting from the

claimed work injury or disease, and the injured worker's ability to return to regular or modified employment." See *Rule 16-3(A)(5)(a-b)*.

Here, upon reporting his injury in writing to his Employer on November 14, 2018, the Employer provided Claimant a designated provider list the same day. Dr Cebrian, at the [Employer] on-site clinic in Fort Morgan, was listed as one of the designated providers. There were three other providers, but they were not in the same city. Two were in Denver and one was in Greenwood Village, Colorado.

Claimant sought treatment with Dr. Cebrian by going to the [Employer] clinic on November 14, 2018, where he was evaluated by a nurse. The nurse evaluated Claimant's shoulders and other pain complaints and directed him to use ice on his shoulders, take ibuprofen, and returned Claimant to work. Claimant returned to the [Employer] clinic again on November 15th, 16th and 19th of 2018 for ongoing bilateral shoulder pain. Each time, Claimant was seen by a nurse and not a physician. On each occasion, the nurse assessed Claimant's condition, made basically the same recommendations for Claimant to use ice and take ibuprofen, and then returned Claimant to work. And although the nurses were making return to work decisions, those decisions were never signed off by a physician as required by WCRP 16-3(A)(5)(a-b).

WCRP 16 also requires that "The treating physician [designated by the Employer] must evaluate the injured worker within the first three visits to the physician's office." *Rule 16-3(A)(5)(c)*. But, in this case, Claimant was not seen by a physician within the first three visits to the [Employer] clinic. It was not until the fifth visit to the [Employer] clinic on November 20, 2018 that Claimant was seen by a physician — Dr. Cebrian.

Rule 16 prevents employers from circumventing their statutory obligation to provide an injured worker a treating "physician" in a timely manner by using "non-physician providers" such as nurse practitioners or physician assistants – especially when making return to work decisions. Rule 16 prevents employers from circumventing their statutory obligation to provide an injured worker a treating physician by requiring return to work decisions to be signed off on by a physician. Rule 16 also prevents employers from circumventing their obligation to provide Claimant a treating physician in a timely manner by using non-physicians more than twice at the start of a claim.

As a result, if a physician is not signing off on each return-to-work decision made by a "non-physician provider" and if a physician does not evaluate the Claimant by the third visit, the employer has failed to provide Claimant a treating physician in a timely manner under rule 16.

Thus, the ALJ finds and concludes [Employer] failed to provide Claimant a physician in a timely manner to treat Claimant for his claimed work injuries pursuant to WCRP 16-3(A)(5)(a-c).

- ii. Employer must designate a physician who will provide medical treatment and treat Claimant's claimed injuries.

Likewise, §8-43-404(5), C.R.S. contemplates that the Respondent will designate a physician who is willing to provide treatment. See *Ruybal v. University Health Sciences Ctr.*, 768 P.2d 1259, 1260 (Colo. App. 1988). If the Employer fails to timely tender the services of a physician who is willing to treat the Claimant, the right of selection passes to the Claimant and the selected physician becomes an authorized treating physician. See *Rogers v. Indus. Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987); *Garrett v. McNelly Construction Company, Inc.*, W.C. No. 4-734-158 (ICAO, Sept. 3, 2008).

On November 20, 2018, Claimant presented to the [Employer] clinic for the fifth time to obtain treatment for his bilateral shoulder injury. At this visit, Claimant was seen by Dr. Cebrian.

Claimant credibly testified that he discussed the November 13, 2018 incident with Dr. Cebrian at the November 20, 2018 medical appointment. Claimant reported to Dr. Cebrian that the worst part of his pain was in his arms and shoulders, not the lipoma. Claimant was unable to lift his arms upward when he was evaluated by Dr. Cebrian because of his bilateral shoulder pain. At this visit, Claimant rated his pain as eight out of ten in his right neck, bicep, neck, and shoulders.

At this appointment, Dr. Cebrian ignored Claimant's shoulder complaints and failed to perform even a rudimentary physical evaluation of Claimant's shoulders. In contrast, Ms. Hutcheson, the nurse practitioner from Salud, evaluated Claimant's shoulders. Based on her initial findings, she assessed Claimant as suffering from a probable right and left shoulder rotator cuff tears. Based on her examination, she also ordered an MRI of each shoulder to assist in her diagnoses and treatment recommendations. As found, the MRIs confirmed her initial assessment.

On the other hand, Dr. Cebrian did not order any diagnostic imaging to assist in evaluating Claimant's reported shoulder injuries. Dr. Cebrian also failed to even review the prior [Employer] nursing notes from Claimant's four prior appointments at the [Employer] clinic.

By the end of the November 20, 2018 appointment, Dr. Cebrian diagnosed Claimant with myofascial pain and a lipoma on his right shoulder. He also concluded that none of Claimant's pain complaints resulted from a compensable work injury. As a result, Dr. Cebrian directed Claimant to seek treatment on his own and outside the workers' compensation system for his bilateral shoulder pain, the lipoma, and other pain complaints. Dr. Cebrian also advised Claimant to stay active, i.e., return to work, and returned Claimant to regular duty.

Despite concluding Claimant did not suffer a compensable work injury, Dr. Cebrian gratuitously noted in his report Claimant was at maximum medical improvement (MMI) with no impairment. To the extent there is any ambiguity over Dr. Cebrian's MMI statement, the ALJ finds and concludes Dr. Cebrian did not conclude Claimant reached MMI for his November 13, 2018 compensable shoulder injury because Dr. Cebrian concluded Claimant did not suffer a compensable work injury.

As a result, the ALJ finds and concludes Dr. Cebrian was not willing to treat Claimant as required by Section 8-43-404(5), C.R.S. The mere fact Claimant was

directed to a physician by Employer does not mean the Employer provided Claimant a physician who was willing to treat him and that the treatment rose to the level of the provision of medical treatment by a physician required by Section 8-43-404(5), C.R.S.

The employer must not only provide a physician who will look at an injured worker in his office, the Employer must provide a physician who is willing to provide treatment in the form of at least an initial evaluation in which the physician actually evaluates the injuries claimed by Claimant.

The ALJ is not finding and concluding that just because a physician misses a diagnosis, the Employer has failed to provide medical treatment. The ALJ is finding and concluding, however, that when the Employer provides a physician who fails to perform even a basic evaluation and summarily “closes” the case, such actions do not rise to the level of satisfying the provision of medical treatment by a physician as required by the Act.

As a result, the ALJ finds and concludes the Employer failed to properly designate a physician who was willing to treat Claimant for his work injury. Claimant established by a preponderance of the evidence that the right of selection passed to Claimant.

- iii. If the designated physician refuses to treat for non-medical reasons, such as compensability has not been established, the right of selection passes to Claimant.

If Respondents timely designate a physician and the physician provides medical treatment in a timely manner in the first instance, the right of selection passes to the Claimant if the physician refuses to treat the Claimant for non-medical reasons. Whether an authorized physician has refused to provide treatment for non-medical reasons is a question of fact for the ALJ. *Ruybal v. University of Colorado Health Sciences Ctr.*, 768 P.2d 1259 (Colo. App. 1988); *Lesso v. McDonalds, W.C. No. 4-915-708-01* (ICAO, Apr. 21, 2014).

As found, Claimant established by a preponderance of the evidence that Dr. Cebrian refused to treat Claimant’s shoulder problems because he did not think Claimant’s shoulder problems were due to a compensable injury. Refusal to treat because “compensability has not been established” is considered a non-medical reason. See WCRP 16-11(B)(1). Thus, the ALJ finds and concludes that to the extent Dr. Cebrian was a designated physician, his refusal to treat Claimant because he did not think Claimant’s shoulder conditions were compensable led to the right of selection passing to Claimant.

- iv. If the designated physician refers Claimant to his personal physician because the designated physician mistakenly thinks the condition is not work related, the referral is valid because the risk of mistake falls on Employer.

If an Employer's designated physician refers Claimant to the Claimant's personal physician based on the mistaken conclusion that a condition is not work related, the referral may be considered valid because the risk of mistake falls on the Employer. *Cabela v. Industrial Claim Appeals Office*, 198 P.3d 1277 (Colo. App. 2008). Whether an employer's designated physician has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997); *Suetrack USA v. Indus. Claim Appeals Office*, 902 P.2d 854 (Colo. App. 1995).

Here, about a week after Claimant's injury he was evaluated by Dr. Cebrian at the Employer's clinic. At that time, Dr. Cebrian was Respondent's selected authorized treating physician. Claimant credibly testified that on November 20, 2018, Dr. Cebrian referred Claimant outside the workers compensation system to his personal doctor for treatment of Claimant's bilateral shoulder injuries. The November 20, 2018, medical report, written by Dr. Cebrian, also documents the referral outside workers' compensation for medical treatment. In addition, Dr. Cebrian offered no treatment for Claimant shoulder injuries and instead closed Claimant's case.

Although Respondents allege that Dr. Cebrian's referral was only for treatment of the lipoma and not the shoulder injuries, Claimant's understanding of the referral is documented in his December 10, 2018 medical record from Salud Family Health Centers, with Ms. Hutcheson, that provides: "The pain started at work about 1 month ago, he reported it at work but the doctor said the pain had nothing to do with work and that he needs to see his personal doctor." Dr. Keller also documented that Claimant saw the company doctor who did not relate this injury to the work-related event.

Respondents did not timely tender medical services of a physician. On the Claimant's fifth visit to the [Employer] clinic, he saw Dr. Cebrian. Dr. Cebrian, however, provided no medical care for Claimant's injuries. As discussed above, Dr. Cebrian's only evaluation after the date-of-injury was insufficient as he did not conduct any specific shoulder tests, nor did he order any diagnostic imaging/tests. Dr. Cebrian offered no treatment during or after the November 20, 2018 appointment, for Claimant's bilateral rotator cuff tears.

Dr. Cebrian did, however, make a general referral and directed Claimant to treat with his personal physician for his bilateral shoulder pain and the lipoma. The failure of Dr. Cebrian to refer Claimant to a specific treating physician, allows Claimant to select the treaters of his choice and maintain the chain of referral - if necessary.

As found, Dr. Cebrian refused to treat Claimant's shoulder problems because he did not think Claimant's shoulder problems were due to a compensable injury. As a result, Dr. Cebrian directed and referred Claimant to seek treatment for his shoulder pain outside of the workers' compensation system. As a result, to the extent Dr. Cebrian was an authorized physician, his general referral for Claimant to seek treatment outside the workers' compensation system allows Claimant to select his treating physicians and for such physicians to be authorized to treat his work-related shoulder injuries. Moreover, once Dr. Cebrian refused to treat Claimant and directed Claimant to seek treatment outside the workers compensation system, Dr. Cebrian surrendered any status he might have had as an authorized treating physician.

Once Dr. Cebrian directed Claimant to treat with his personal physician, Claimant went to Salud Family Health services and was evaluated by Rebecca Hutcheson, a nurse practitioner. Ms. Hutcheson directed Claimant to Eastern Colorado Orthopedics Center, where he was evaluated by Mr. David Keller, a physician assistant, and then David Keller, an orthopedic surgeon. Both recommended rotator cuff surgery. Claimant, however, wanted a second opinion and saw Dr. Hatzidakis. After seeing Dr. Keller and Dr. Hatzidakis, Claimant selected Dr. Hatzidakis to treat his shoulder injuries via surgery. As a result, Dr. Hatzidakis operated on the claimant's right shoulder. During the surgery, he also removed the lipoma.

Claimant has established treatment with Dr. Hatzidakis, for the treatment of his bilateral shoulder injuries. Dr. Hatzidakis is a level II accredited physician. Respondents were on notice that Claimant required treatment and intended to seek treatment outside the workers' compensation system. Respondents took no action to attempt to redirect Claimant into the workers compensation for treatment and waived any remaining right to control the selection of Claimant's treating physicians. As a result, Dr. Hatzidakis is an authorized treating physician.

Based on the totality of the evidence, the ALJ finds and concludes Claimant established by a preponderance of the evidence that the providers from Salud (PA Hutcheson), Eastern Colorado Orthopedic Center (PA Keller and Dr. Keller), Dr. Hatzidakis (Western Orthopedics), and their referrals, are authorized providers. The ALJ also finds and concludes Claimant established by a preponderance of the evidence that Dr. Cebrian is not an authorized provider.

ORDER

Based on the foregoing specific findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury involving both shoulders on November 13, 2018, while working for Employer.
2. Respondents shall provide Claimant reasonable, necessary, and related medical treatment for his bilateral shoulder injury and neck pain.
3. The evaluations and treatment Claimant received for his bilateral shoulder injury and neck pain - including the surgery to his right shoulder that was performed by Dr. Hatzidakis - is reasonable, necessary, and related to his November 13, 2018 injury.
4. Respondents are responsible to pay for the treatment Claimant received from Salud Family Health Center (Rebecca Hutcheson, N.P.); Eastern Colorado Orthopedics Center (Dave Keller, P.A., and Ken Keller, M.D.); and Western Orthopedics (Armodios Hatzidakis, M.D.), and their referrals. This includes the shoulder surgery performed by Dr. Hatzidakis.

5. Respondents shall reimburse Claimant and any other insurer for the costs associated with evaluating, diagnosing, and treating Claimant's shoulders and neck pain under § 8-42-101(6).
6. Respondents are not responsible for the other costs associated with treating and removing the lipoma.
7. The right to select treating providers passed to Claimant. As a result, Rebecca Hutcheson, N.P., Dave Keller, P.A., Ken Keller, M.D., and Dr. Hatzidakis are authorized treating providers and Dr. Hatzidakis is Claimant's current authorized treating physician.
8. Dr. Cebrian is not authorized to treat Claimant.
9. All matters not determined herein are reserved for future determination.

Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: June 3, 2020.

ISSUE

I. Has Claimant presented sufficient evidence that orthopedist Lucas King is an Authorized Treatment Provider for Claimant's admitted work injury? For purposes of this Supplemental Order, Issue # I can be broken into two components:

Should the statements made by Claimant at hearing regarding what he was told by medical personnel have been admitted as substantive evidence?

If such statements should not have been received as substantive evidence, is there sufficient evidence in the record, independent of those statements, to support a finding that Dr. King is an Authorized Treatment Provider?

SUPPLEMENTAL FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Supplemental Findings of Fact:

Claimant's Medical Records re: Treatment at Parkview ER

82. Claimant reported to the ER at Parkview Medical Center at 11:54 a.m. on 3/21/2019. (Ex. 11, p. 70). It was noted that Claimant "had a workman's comp MRI recently...has not seen Ortho to date" *Id.*

Tried to fu [follow-up] workmans comp today but they had no appt times x 3 days. Has not got treatment since MRI. *Id* at 70.
(emphasis added).

83. Later on the same page, it notes:

Pt here with Right knee pain, slipped in ice 3 weeks ago and has already been seen and MRI shows a miniscus (sic) tear. **Unable to see w/ comp dr today** and needs some sort of shot to the knee that is not NSAID. *Id* at 70. (emphasis added).

84. In the same report, signed by Alexis N. Bencze, MD, she notes:

I will have the patient follow-up with orthopedics. *Id* at 72.

Follow up with:

King, David C. [non-staff MD/DO/PA/NP] *Id.*

Claimant's Medical Records under Treatment with Dr. Olson

85. The first medical record from CCOM supplied by Claimant is dated 3/26/2019. (Although Dr. Olson, *upon questioning by Respondent's counsel*, stated he had also examined Claimant on 3/19/2019) (Olson Depo, p. 6). Dr. Olson notes, under HISTORY OF PRESENT ILLNESS ("HISTORY")

...Jose comes in for follow-up of this right knee pain. He did get his MRI scan is here to review it. *He states he went over to Parkview Emergency room recently and was made appointment with Dr. King for later today.* (Ex. 13, p. 76)

Under SPECIALIST VISITS:

Patient was seen at Park view E Don 3.21.19. ED referred patient to Ortho, Dr. King. *Id.*

Under **TREATMENT PLAN** (Emphasis added), Dr. Olson notes:

1. **He is scheduled to see Dr. King later today.** [which actually did occur/Finding of Fact #26]. 2. Discussed treatment options with him today. 3. Recheck his progress in 3 weeks. *Id* at 77 (emphasis added).

86. The next exam date with Dr. Olson is dated 4/10/2019 (Ex. 13, pp. 78-79). Under HISTORY, Dr. Olson notes:

The problem began on 3/04/2029 (sic). The patient states that *he should be scheduling surgery with Dr. King* for his right knee within the next 2 weeks. Patient states he isn't to go over [work] restrictions prior to surgery.The patient is aware that **we** would like to see him *after his surgery* so we can start physical therapy. (emphasis added). *Id.*

Under **TREATMENT PLAN**, Dr. Olson notes:

Schedule surgery with Dr. King for right knee arthroscopy within the next 2 weeks.

I would like to see Jose after surgery to schedule physical therapy right away *depending upon what Dr. King finds during surgery.* Follow-up 4 weeks after surgery. *Id.* (emphasis added).

87. Dr. Olsen next saw Claimant on 5/8/2019 (Ex. 13, pp. 81-83). Dr. Olson notes in HISTORY:

.....He did undergo arthroscopic surgery and chondroplasty by Dr. King. He did see the surgeon yesterday and will follow-up in 6 weeks. He is going to physical therapy at the PAC. *Id* at 81.

In SPECIALIST VISITS, Dr. Olson notes:

June 18 *Dr. King next. Id.*

Under **TREATMENT PLAN**, Dr. Olson notes:

1. Continue physical therapy
2. Continue the knee brace and an Ace wrap.
3. *Follow-up with Dr. King in 6 weeks.*
4. *I will follow up on **June 19**.* Id. (emphasis added).

88. On 5/30/2019, Dr. Olson next saw Claimant. (Ex. 13, pp. 84-86).

In HISTORY, Dr. Olson now notes:

....The Patient states that Dr. King would like to try hyaluronic Acid injections. That needs approval from insurance first. **We** are waiting on that now....Id at 84.

Dr. Olson notes under **TREATMENT PLAN**:

Continue tramadol prescribed by Dr. King.

We are currently waiting approval for hyaluronic injections to the right knee by insurance. Id at 85. [Insurance carrier is noted to be Broadspire].

89. Each subsequent periodic report from Dr. Olsen (6/3/19, 6/19/19, 7/18/19, 7/31/19, 9/3/19, 10/23/19, 1/8/20, 1/29/20) references Claimant's treatment by Dr. King, and includes Dr. King's treatment recommendations in Dr. Olsen's own TREATMENT PLAN. At no point does Dr. Olson dissent from, or object to, Dr. King, although he does reference that such surgeries do not always go as hoped.

90. Of significance, Dr. Olson notes on 8/29/2019:

HISTORY: He did have arthroscopic surgery, which did not help. Dr. King therefore sitting [sic..setting] up a total knee replacement on October 9...(Ex. 13, p. 96).

TREATMENT PLAN:

He is scheduled to have total knee replacement on October 9.

Broadspire received this invoice from the ATP on 9/10/2019. *Id.*

91. On 12/11/2019, Dr. Olson notes:

HISTORY: He is now status post total knee replacement by Dr. King. Unfortunately it appear that surgery has not given the results

everyone is hoping for. The physical therapy was delayed and now he has a great deal of adhesions that leaves his range of motion from -30-78 at best. *He did see Dr. King yesterday and he will be doing a joint manipulation by next Monday.* (Ex. 13, p. 104)

TREATMENT PLAN:

1. *He is to have manipulation of the joint next week.*
2. He will have aggressive physical therapy after the manipulation.
3. Recheck here in 3-4 weeks. Id. (emphasis added).

92. Dr. Olson filed WC164 Physician's Reports on 1/8/2020 (Ex. 13, p. 113), and 1/29/2020 (Ex. 13, p. 114). In each instance, he recommended that Claimant follow up with the surgeon. The final recommendation was to see the surgeon (Dr. King) on 2/11/2020.

Dr. Olson's Deposition Testimony re: Referral of Claimant to Dr. King

93. Neither party simply asked Dr. Olson if Claimant was referred to Dr. King by Dr. Olson. However, the following exchanges are noted:

Q. Okay. And in your March 26, 2019 chart note, you noted that Mr. Herrera was going to see a Dr. King. Now, had he scheduled this this before you saw him on the 26th?

A. I think that **referral** actually got started when he went to Parkview Emergency Room because he was having some increase in pain. And the emergency department there made the appointment for Dr. King. (Depo, p. 12)(emphasis added).

94. Q. All right. Have you ever been provided with a copy of Dr. King's April 22, 2019 operative report?

A. Let me look. I think have it. **Yes.** (depo, p. 13)

95. Q. And if you can recall, what was the context of the conversation with regard to whether or not he should even undergo Dr. King's first surgery, or what was it?

A. I just shared with him what the orthopedic literature has said, that – I told him, I said, you know, sometimes operating on these things does not solve the pain. And but I guess *Dr. King still wanted to do it*, so....(depo, p. 18)(emphasis added).

96. Q.when you have a patient, as you do here, who has seemingly worsened over time, despite Dr. King's operative interventions, would you, *as an authorized treating provider, make a referral to a second or different orthopedic surgeon* to get a fresh set of eyes on the situation?

A. That's a possibility. *I can be talking with Mr. Herrera after he meets with Dr. King*, and we'll see what the plan is there. (depo, p. 35)(emphasis added).

DISCUSSION

In this ALJ's own (mildly asserted) defense, these abbreviated hearings under the Administrative Procedure Act (except where noted) are generally completed within an hour or two (case in point). Documents are received, and objections thereto, are ruled upon summarily; the ALJ having just been tendered these packets mere moments before. And as testimony proceeds, objections are made, and ruled upon, without having the hindsight of what actually does or does not exist in the evidence packet, nor in deposition transcripts which perhaps have not even occurred. Thus, rulings must be made on the spot, without knowing at that moment if the implications therefrom prove to be trivial, cumulative, or pivotal.

Nonetheless, Respondents complain (and with significant justification) that the ALJ overruled his hearsay objections to all queries of Claimant about what he was told what to do, and where to go, when he complained of pain in his knee. The ALJ ruled at that time that he was receiving those statements from Claimant merely as background information, in order to make sense of the sequence of events. Respondents did a thorough and proper job of preserving this issue, and were granted a running objection, in order to maintain some continuity in understanding what Claimant did, and why he did it. Then, in the April 1, 2020 Order, the ALJ found Claimant's statements credible, and relied, in part, upon these statements in finding that Dr. King was an Authorized Treating Provider. In hindsight, Respondents have a valid argument, which must be addressed and corrected.

Claimant also complains (and also with justification) that the ALJ should have permitted Claimant's counsel to argue in response to the hearsay objection, perhaps with an alternative theory of substantive admissibility, as an exception to the hearsay rule. Alas, Claimant also has a valid point. However, before each of Claimant's alternate theories of admissibility are addressed separately, the ALJ does make the following:

Supplemental Conclusions of Law-Authorized Treating Physician, As Applied

10.1 The ALJ still finds Claimant to be credible in each of his responses to queries about what he was told to do by Dr. Olson's office, and by personnel at Parkview, which led to his referral and treatment by Dr. King. Claimant's statements at hearing are corroborated by significant medical records in evidence, and by Dr. Olson's deposition testimony. Nonetheless, (and for purposes of this Supplemental Order) Claimant's oral statements at hearing are now being disregarded as substantive evidence of the referral process, since they were not admitted at hearing for the truth of the matter asserted. The ALJ will abide by his own ruling at hearing.

10.2 Independent of that, the medical records in evidence, as now elaborated in the Supplemental Findings of Fact, are sufficient to conclude that Claimant was referred by Dr. Olson's office to the Parkview ER, since no one was available for at least 3 days for a WC appointment through traditional channels. Claimant was in great pain, and was correctly sent to the ER by Dr. Olson's staff. As noted by Claimant, this does not have to be Dr. Olson himself. Anyone in an Occupational Medicine Office knows to send an injured worker to the emergency room in an emergency. Given the amount of pain Claimant was in (and despite the efforts he made to try to go through Dr. Olson's office) *he did not even have to call CCOM first*. Had it been 3:00 a.m., for example, *Claimant was entitled to go straight to the ER for the severe pain he was in, due to his (admitted) work injury*. However, since someone answered at CCOM, it strains credulity to say Claimant must stay home in pain and wait at least three days to get a CCOM appointment.

10.3 At the ER, Claimant was referred by a Parkview physician to Dr. King, who took over his surgical care. **This referral to Dr. King has been fully sanctioned, adopted, and approved by Dr. Olson**, who, despite some misgivings about the surgery, worked hand in glove at every step of Claimant's orthopedic treatment with Dr. King from March 26, 2019 through the present. *This referral to Dr. King, albeit with mirrors, was made in the normal progression of Claimant's treatment*. The ALJ finds substantial evidence in support of this referral. The 3/18/2019 MRI, ordered by CCOM, rendered a referral to an orthopedist inevitable. **All treatments by Dr. King were part of the ATP's TREATMENT PLAN**. Dr. Olson corroborates this in his deposition testimony. No evidence in rebuttal has been presented by Respondents. The ALJ finds and concludes that Dr. King is an Authorized Treating Provider.

Meanwhile, about Claimant's Statements at Hearing...

Should the documentary and deposition evidence have proven insufficient to show a valid ATP referral to Dr. King, what could have been Claimant's theory of substantive admissibility for Claimant's statements about what he was told by CCOM and Parkview?

Claimant first argues that there are sufficient indicia of reliability to admit such statements under the APA provisions of C.R.S. 24-4-105(7). Thus the ALJ should engage in the nine-part analysis for administrative hearings under *ICAO v. Flower Stop Marketing*, 782 P. 2d 13 (Colo. 1983).

However, (and as Claimant himself obliquely notes) the ALJ finds that the specific Workers Compensation Statute, C.R.S. 8-43-210 will trump the general APA provisions, and render *Flower Stop* inapplicable to Workers Compensation administrative proceedings. In pertinent part, 8-443-210 states:

Notwithstanding section 24-4-105, C.R.S., the Colorado rules of evidence and requirements of proof for civil nonjury cases in the district courts shall apply in all hearings; except that medical and hospital records, physicians'

reports, vocational reports, and records of the employer *are admissible as evidence* and can be filed in the record as evidence without formal identification if relevant to any issue in the case... (emphasis added).

Thus, in a Workers Compensation case, the Colorado Rules of Evidence must be applied, and no nine-part *Flower Stop* analysis is permitted. Instead, the legislature has written in a huge hearsay exception, encompassing medical and hospital records and physician's reports. So long they are *relevant* to the ATP issue in this case, for example, such records come in as substantive evidence, no matter how much hearsay the hospital or physician chooses to stuff in there. Such was the case here. The legislature has deemed such documents to be sufficiently reliable per se, and en masse, and Workers Comp cases are streamlined thusly.

Claimant next argues that Claimant's testimony falls under CRE 803(4)-*Statements made for purposes of medical diagnosis or treatment*. Such reliance is misplaced. While *Claimant's own statements* to medical personnel would be admissible under this exception, what was excluded herein were the *responses* that Claimant (credibly, but inadmissibly) said came *from* the medical providers. Similarly, CRE 803(3)-*Then existing mental, emotional, or physical condition*, would not permit the statements from the declarant (medical providers) to come in as an exception- *only what Claimant said to them* at the time.

While criteria A, B, and C under the *Residual Hearsay Exception* CRE 807 were arguably met, Claimant could not assert it here. (Although, in fairness, the ALJ should have afforded him the opportunity to try). CRE 807 further requires the proponent [Claimant] to make it known to the adverse party [Respondents] sufficiently in advance of the hearing to provide Respondents a fair opportunity to meet it, the intention of Claimant to offer it, the particulars of the statement(s), and the name and address of the declarant. There is nothing in the record to indicate this was done in advance by Claimant. The difficulty for Claimant in this situation is compounded by the fact that while he was in distress, he could only call the *office* at CCOM, and was in no realistic position to identify the specific *person* who told him just to go to the ER.

Claimant also asserts, if briefly, that Dr. Olson's deposition testimony would somehow make Dr. Olson's oral statements as declarant to Claimant admissible for *Claimant* to recount at the hearing, under CRE 804(b)(1) *Former Testimony*. The ALJ does not concur. Any such statements made during the deposition *by the declarant*, Dr. Olson himself, would of course be admissible in the form of the transcript. It is thus incumbent upon the parties to ask the pertinent question of the declarant at the deposition, to make it a part of the record. In the Conclusions of Law thus rendered, sufficient evidence was elicited from Dr. Olson, but it could have been more straightforward by just asking him directly: "After the ER visit, did you refer Claimant, or sanction the referral by Parkview, to Dr. King?" Live and learn.

Lastly, as noted by the ALJ, Respondents were afforded a running hearsay objection, in order to keep the process intelligible. The ALJ will not thus penalize Respondents for failing to object each and every time a similar question is asked which calls for a hearsay answer. Otherwise, a running objection would effectively grant nothing. Respondents preserved this issue properly.

All of the foregoing leads to the most intriguing prospect of all: CRE 801(d)(2)(C) or (D), which reads:

*(d) A statement is **not hearsay** if.. (2) the statement is offered against a party and is....(C) a statement made by a person authorized by the party to make a statement concerning the subject, **or** (D) a statement by the party's agent or servant concerning a matter within the scope of the agency or employment, made during the relationship...[Further]....The contents of the statement shall be considered but are not alone sufficient to establish the declarant's authority under subdivision (C), [**or**] the agency or employment relationship and scope thereof under subdivision (D)...(emphasis added).*

Parsing this language [and noting that the legal subparts go well beyond what one might otherwise consider an *Admission* by party-opponent] if Dr. Olson is *authorized* by either Respondent [Employer **or** Insurer] to make a statement concerning his appointment of Dr. King, subdivision (C) has been met. The ALJ is without authority to conclude this would *not* be the case – in fact, this is precisely what ATPs are paid by Employers and Insurers to do, if specialty care is needed. There is arguably sufficient extrinsic evidence of declarant's [Dr. Olson's] authority to make such statements, by simple virtue of administrative notice of the Workers Compensation process (including statutes, Rules, and case law). If the conditions are met (as this ALJ would posit), then *objection overruled* - Dr. Olson's and staff's statements to Claimant come in as substantive evidence, (although not the statements of ER personnel).

Similarly, if Dr. Olson were an *Agent or Servant* of either Employer or Insurer, subsection (D) would apply. ATPs are acting at the specific behest of Employers and Insurers and are *selected* by them to be part of a small pool of providers (sometimes even to the exclusion of all other providers). ATPs bill Employers/Insurers directly for services rendered on their behalf. ATPs thus perform an auxiliary function in behalf of Employers that is required by law in Colorado. This ALJ would posit that the Black's Law Dictionary definition of *Agent* fits this bill (less so for the definition of *Servant*). Similarly, if subsection (D) is satisfied, the ALJ should be able to take administrative notice of the Workers Compensation process as noted above, to establish extrinsic evidence of Dr. Olson's agency or employment relationship. Once again, if so, *objection overruled*.

Application of CRE 801(d)(2)(C) or (D) in such cases would satisfy the stated purposes of the Workers Compensation Act, to wit: to assure the quick and efficient

delivery...of medical benefits to injured workers...without the necessity of any litigation....*Admission* of these statements is exactly that, nothing more; there is no requirement that such statements be believed by the fact finder, especially those lacking in corroboration, or contradicted by other evidence. However, it would afford the opportunity for an injured worker in an administrative hearing to simply explain what he was told to do by his ATP in the course of his treatment, especially where the medical records don't tell the story on his behalf.

No case law has been identified by this ALJ interpreting CRE 801(d)(2)(C) or (D) in this context - pro or con. So, while the appellate courts are not generally in the business of issuing advisory opinions, should a court of appellate jurisdiction wish to tackle this issue (by finding insufficient evidence to support the ALJ's Conclusions of Law based upon these medical records and deposition), then the invite is hereby extended. Guidance from above is always a benefit to all concerned.

ORDER

It is therefore Ordered that:

1. The terms of the ALJ's initial ORDER, dated 4/1/2020, remain unchanged.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's Supplemental order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: June 3, 2020

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-076-601-002**

ISSUES

- I. Whether Claimant overcame the opinion of the DIME physician, Dr. Tyler, by clear and convincing evidence and established that she is not at MMI.
- II. If Claimant is at MMI, whether she established that her impairment rating should be converted to a whole person impairment rating.
- III. Whether Respondent established ALJ Jones' prior order that found Dr. Gellrick to be an authorized treating physician should be reversed based on new facts, changes in the applicable law, or other persuasive circumstances.
- IV. Whether Claimant established the medical treatment recommended by Dr. Gellrick and Dr. Tyler is reasonable, necessary, and related to her compensable injury.
- V. Whether Respondent failed to timely pay PPD benefits pursuant to W.C.R.P. 5-6(C) and is subject to penalties pursuant to 8-43-304(1), C.R.S.
- VI. Whether Respondent violated ALJ Jones' Order and is subject to penalties pursuant to 8-43-304(1), C.R.S.
- VII. Whether Respondent providing Claimant a list of 4 providers, pursuant to W.C.R.P. 8-2(A), but directing Claimant to a specific provider on the list subjects Respondent to penalties pursuant to 8-43-304(1), C.R.S.
- VIII. Whether Claimant's Claim for penalties based on an alleged violation of W.C.R.P. 8-2(A) is barred by the statute of limitations.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. This case involves an admitted Claim.
2. Claimant suffered a compensable injury on September 18, 2017, for which Respondent has admitted liability.
3. Before Claimant's injury was found to be work related, Claimant began treating with her personal physician for shoulder pain and underwent about 6 weeks of physical therapy.

4. Once it appeared her shoulder condition was work related, her personal insurance refused to pay for more treatment. Then, Claimant formally reported the injury to Employer.
5. Claimant contacted Heather N[Redacted], Employer's payroll clerk, about filing a workers' compensation claim. Ms. N[Redacted] sent Claimant an email on January 31, 2018. The email states:

"Attached is ALL the documentation you receive when filing a workers comp claim...Anything that says Dear Physician you give to them when you go to the Workers Comp Doctor. I circled the Concentra Medical Center. That is the location you need to go to.

Exhibit 2.

6. Ms. N[Redacted]' email contained a PDF attachment entitled "IF YOU ARE INJURED AT WORK." The document lists four medical providers and one hospital. Concentra Medical Center is circled. An arrow is drawn pointing to the circled Concentra provider. A handwritten notation states, "This is where you need to go." *Exhibit 1.*
7. Concentra was also highlighted in yellow on the attachment to Ms. N[Redacted]' email. The circle, highlighting, arrow and handwritten notation all appeared on the original PDF attachment to Ms. N[Redacted]' email.
8. Claimant did not understand Ms. N[Redacted] to be giving her a choice of four doctors. Claimant did not know the list was a provider list from which she could choose. She thought it was a list that Employer gave to all locations, but Concentra was the location she had to go to. Concentra was not Claimant's choice. Instead, Concentra was Respondent's choice. And Respondents directed Claimant to treat at Concentra. As a result, Concentra was selected by Respondent and not Claimant.
9. Exhibit 1 was the only list of designated providers that Claimant has received from Employer to date.
10. On January 31, 2018, Claimant went to Concentra and was evaluated by Hanna Bodkin, PA-C. Claimant presented with complaints of right shoulder pain. But because of her persistent symptoms, which did not improve with physical therapy, Claimant was referred to Dr. Nathan Faulkner, an orthopedic surgeon, for an evaluation.
11. On February 9, 2018, Claimant was evaluated by Dr. Faulkner. Based on his findings, Dr. Faulkner ordered an MRI of Claimant's right shoulder.
12. On February 27, 2018, Claimant underwent an MRI.
13. On March 2, 2018, Claimant returned to Dr. Faulkner. He noted the MRI shows the rotator cuff to be intact and that there was no indication of significant subacromial bursitis. He did, however, specify Claimant's symptoms were more localized into her biceps and that the MRI might suggest Claimant has a

longitudinal biceps tear. For that reason, he recommended an ultrasound-guided biceps tendon sheath injection and scheduled it for the next week.

14. After the injection failed to relieve Claimant's symptoms, Dr. Faulkner concluded that the MRI showed a longitudinal biceps tear and a partial subscapularis tear. Because conservative treatment failed, Dr. Faulkner recommended surgery.

15. On May 31, 2018, Claimant underwent shoulder surgery by Dr. Faulkner. Dr. Faulkner performed a:

- Right shoulder exam under anesthesia,
- Arthroscopy, and debridement including fraying of the superior labrum, particularly the articular side tearing of the supraspinatus,
- Subacromial bursectomy, and
- Mini open biceps tenodesis.

16. In his operative report, Claimant's preoperative diagnosis was:

- Right longitudinal biceps tear, and
- Right partial subscapularis tear.

His postoperative diagnosis was more extensive and included:

- Right sided type II SLAP tear,
- High grade partial tear of the biceps anchor,
- Subacromial bursitis, and a
- Partial articular sided supraspinatus tear.

17. On October 30, 2019, Claimant was evaluated by Dr. Burns at Concentra. Claimant had returned to work three weeks earlier and had completed her three-week graduated return to work plan. After working for three weeks and gradually increasing her workload, Claimant's shoulder condition began to worsen. Claimant was therefore referred to Dr. Faulkner for another appointment.

18. On November 16, 2018, Claimant was seen by Dr. Faulkner. At this visit, he noted Claimant developed "worsening pain as she returned to work doing repetitive reaching away from her body." He concluded that "her exam is consistent with subacromial bursitis/impingement, which has been refractory to therapy and anti-inflammatory pain medication." Based on Claimant's increasing symptoms, he provided Claimant a steroid injection into her shoulder.

19. On November 20, 2018, Claimant was seen by Dr. Burns at Concentra. Dr. Burns noted Claimant had been provided a steroid injection by Dr. Faulkner last week and noted some improvement regarding her shoulder. Claimant, however, was no longer working because the Employer could no longer accommodate her restrictions, even though Claimant wanted to work. As a result, it is not clear whether the steroid injection helped reduce Claimant's symptoms, her cessation

of work, or both. In any event, Claimant still had stiffness and catching in her right shoulder.

20. Based on Respondent's selection and direction, Claimant continued being treated at Concentra. Claimant, however, was dissatisfied with the care provided by Concentra. Claimant reported to Concentra that she was not happy treating with Physician Assistants. Claimant complained that Concentra did not provide consistency of care, since she saw different Physician Assistants each visit. She asked her Concentra providers for a second opinion several times. She did not receive the second opinion.
21. On December 17, 2018, before being placed at MMI, Claimant requested a change of physician to Dr. Caroline Gellrick. Claimant's request to treat with Dr. Gellrick stemmed from her contention that she was directed to a specific provider, Concentra, and was not given a choice of 4 providers as required by W.C.R.P. 8-2(A). Because her employer violated 8-2(A) and did not give her a choice of providers, Claimant asserted W.C.R.P. Rule 8-2(E) provided her the right to select Dr. Gellrick as an authorized treating physician.
22. The December 17, 2018, letter provides:

Respondents have not complied with Rule 8-2, WCRP. [Employer's] representative Heather N[Redacted] told claimant in writing, twice, that she had to go Concentra. I have attached her email stating as such, and the designated provider list in which she selected Concentra for claimant. Please accept this as Claimant's designation and request for Respondent's confirmation of Caroline Gellrick M.D., as Claimant's primary authorized treating physician (ATP).

Exhibit 3, Bates No. 4 (Bold in original).

23. On January 7, 2019, Respondent denied Claimant's request to change physicians and treat with Dr. Gellrick. Respondent asserted that even if Claimant was not provided a list of providers to choose from, as required by Rule 8-2(A), she ultimately "selected" Concentra by treating at Concentra.
24. On February 5, 2019, Claimant was seen by Hanna Bodkin, Physician Assistant, at Concentra. At this appointment, Claimant complained of continuing right sided neck pain with limited range of motion. She also described an episode in January where she woke up and could not lift her head off her pillow, with associated right sided neck pain and stiffness. Based on her assessment, PA Bodkin referred Claimant to Dr. Kawasaki. PA Bodkin states in her report that she is referring Claimant to Dr. Kawasaki to evaluate and treat Claimant's right cervical spine complaints and her trapezius. She also discusses restarting "MT" (manual therapy). Lastly, she indicates Claimant is to "restart psychology" treatment. On the other hand, in the discussion and summary portion of her report she indicates Claimant is approaching MMI and that she will send Claimant for an "IR," which the ALJ infers is an impairment rating. *Ex F, Bates No. 76.* PA Bodkin, however,

does not indicate to whom she is referring Claimant for an impairment rating. Moreover, concurrently sending Claimant for treatment and an impairment rating seems inconsistent. And there is no indication Dr. Burns is not Level II accredited. So, in the end, it is not clear from PA Bodkin's report if she is sending Claimant to Dr. Kawasaki for treatment or for an impairment rating.

25. On February 7, 2019, Claimant filed an Application for Hearing on the issue of authorized physician and sought to have Dr. Caroline Gellrick become an authorized treating physician.
26. On February 28, 2019, Claimant was evaluated by Dr. Kawasaki, a physiatrist, for assessment of her shoulder and neck complaints. Dr. Kawasaki, who was seeing Claimant for the first time, opined Claimant was at maximum medical improvement (MMI), assigned a permanent impairment rating, and did not recommend any maintenance medical treatment.
27. On March 4, 2019, Claimant returned to Concentra, and was seen by PA Bodkin. The report from this appointment is inconsistent with Claimant being at MMI. For example, in one section of the report PA Bodkin notes Claimant is at MMI. Yet in another section of the report, PA Bodkin notes that she has referred Claimant for a second opinion with another physiatrist for her right shoulder and neck pain. She also says that the referral is to "evaluate and treat" by a physiatrist and determine whether Claimant is at MM, and if so, to provide an impairment rating. It appears that based on the indication there would be a referral to another physiatrist for a second opinion, Respondent did not file a final admission of liability at that time.
28. On April 15, 2019, Claimant returned to Concentra and the report from that visit specifies Claimant is waiting for a second opinion with a physiatrist.
29. On April 26, 2019, Claimant called PA Bodkin at Concentra with the names of three physiatrists. PA Bodkin noted that she called Claimant back the same day and left a voice message stating that they can only put in one physiatrist referral, and that Claimant would have to call her back and let her know which one she preferred. On April 30, 2019, PA Bodkin noted that since she had not received a call back, she would be picking one of the physiatrists to provide a second opinion. PA Bodkin also noted that if Claimant does not have the second opinion within four weeks, her case will be closed and Claimant can "dispute case closure with insurance." There is, however, no indication PA Bodkin followed through and selected a physiatrist to evaluate Claimant for a second opinion.
30. On May 16, 2019, a hearing was held before Administrative Law Judge Margot W. Jones. The sole issue presented was: "Whether Claimant proved by a preponderance of the evidence that the right of selection of authorized treating physician (ATP) under W.C.R.P., Rule 8-2, passed to Claimant."
31. On May 28, 2019, after the hearing in front of ALJ Jones, Dr. Burns placed Claimant at MMI. Dr. Burns determined Claimant reached MMI on March 4, 2019.

32. On May 30, 2019, ALJ Jones issued her Summary Order. She found and concluded that:

- Claimant may select an authorized provider of her choosing pursuant to W.C.R.P. 8-2(E).
- Respondent did not supply a list of providers in accordance with W.C.R.P. 8-2(A), from which Claimant could choose.
- Claimant's request to change physicians is not a constructive challenge of an opinion regarding maximum medical improvement. Here, Claimant requested the change under W.C.R.P. 8-2(E) and filed her application for hearing prior to Dr. Kawasaki's opinion that she was at maximum medical improvement.

33. On June 6, 2019, after ALJ Jones issued her Summary Order, Respondent filed a Final Admission of Liability based on Claimant being placed at MMI as of March 4, 2019.

34. On June 13, 2019, Claimant requested a Division Independent Medical Examination.

35. On July 10, 2019, Claimant began treating with Dr. Gellrick.

- At Claimant's initial appointment, Claimant had pain and tenderness into the right side of the cervical spine, right shoulder, scapular deltoid region of the right upper extremity. She had ongoing right arm and neck pain. Driving made the pain worse and her hand could go numb. *Exhibit 10, pg. 43.*
- Dr. Gellrick's physical examination showed tight trigger points both trapezius, right greater than left with tenderness on the right side of the neck with pain going from the neck down into the back into the upper thoracic regions, pain from the right shoulder into the trapezius and from the neck into the trapezius on the right side. She had positive tenderness subscapular on the right. Her right shoulder range of motion produced mild crepitus with decreased internal rotations, abduction, and flexion. Her right shoulder was higher than the left. *Exhibit 10, p. 45.*
- Dr. Gellrick observed that after Claimant's surgery, she developed a worsening of condition, especially in October 2018, as reflected in the records, when she returned to work and had to lift above shoulder height in the clothing department. *Exhibit 10, p. 46.*
- Dr. Gellrick ultimately opined:

What is missing is any further pathology that has developed in the right shoulder because of return to modified duty. Repeat MRI of the shoulder with contrast needs to be completed for further evaluation. Once this is done, she should be re-seen with the surgeon of record, Dr. Faulkner, on this issue. In addition, the patient has been symptomatic for the C-spine pain and granted this may be surely due to the

shoulder, an MRI of the cervical spine is warranted in this situation to check for any further pathology. *Exhibit 10, pg. 46.*

36. Claimant saw Dr. Gellrick for another visit in August 2019. Dr. Gellrick noted the MRI's were not authorized. *Exhibit 10, p.48.* She also requested the MRI's again on her M-164 form. *Exhibit 10, p.50.*
37. On August 21, 2019, ALJ Jones issued her Findings of Fact, Conclusions of Law and Order. Consistent with her Summary Order, she concluded Respondent violated W.C.R.P. 8-2(A) and issued an order granting Claimant's request to change to Dr. Gellrick as her authorized treating physician.
38. On September 4, 2019, Claimant underwent a Division Independent Medical Examination (DIME) with John Tyler, M.D. During the DIME, Claimant was reporting that she was still having difficulties with her shoulder. Her problems included her shoulder locking when raising her arm above shoulder height or after sleeping. She was also having shoulder pain while cooking and stirring things. Claimant also described having difficulties with her neck. Dr. Tyler noted Claimant specified that in October 2018 she began having right sided lateral cervical pain that included difficulty lateralizing with rotation and flexion to the right. She also had problems when she was driving and looking behind her. And although her neck pain was not constant, it was brought on with lateral rotations mostly when looking behind herself while driving.
39. After obtaining Claimant's history, reviewing her medical records, and performing a physical examination, Dr. Tyler concluded Claimant reached MMI on March 4, 2019.
40. Dr. Tyler then assessed Claimant for any permanent impairment. As for her cervical spine, he concluded that an impairment rating was not warranted because he did not believe Claimant directly injured her cervical spine. He explained his rationale as follows:

I do not believe that the cervical spine was directly injured in this case and there was only a referral of pain symptomatology to the cervical spine based on the structural tightness within the region of the superior trapezii on the right side. This does not qualify the cervical spine for an impairment rating based on the AMA guidelines. There, again, was no trauma specifically to the cervical spine and no pathology of the cervical spine specifically is found on examination.
41. As for her shoulder, he concluded Claimant had an 11% upper extremity impairment or 7% whole person under the AMA Guides. *Exhibit 12, p.58.*
42. However, in direct contrast to a finding of MMI, Dr. Tyler recommended additional pre-MMI (curative) medical treatment. In his report, he explains Claimant needs to undergo additional diagnostic testing and evaluations to determine the extent of Claimant's work injury and to also determine whether additional curative treatment such as surgery is necessary.

Dr. Tyler states in his report:

I do believe that this patient has the potential of having further pathology that has not been addressed in relationship to ongoing pain in the right shoulder. It is my medical opinion that this patient should have a repeat MRI scan with arthrogram of the right shoulder at this time and that this should be covered under worker's compensation.

Once that has been completed, the patient should have an opportunity to undergo a 2nd opinion evaluation by another orthopedic surgeon besides Dr. Faulkner (I know of Dr. Faulkner's excellent reputation and do not question the appropriateness of all the surgery and the findings at that time) as this patient's level of pain and limitations has not, unfortunately, improved to the degree one would expect from the surgery performed.

If that 2nd opinion performed by an independent orthopedic surgeon specializing in shoulders finds evidence that further surgery is required, then that surgery would reopen this workers compensation case for the completion of that surgery and the postoperative care. If that surgeon, with the results of the MRI arthrogram, finds no reason for further surgical intervention, then the patient will remain at a point of maximum medical improvement. Beyond the above, no further maintenance care is required. *Exhibit 12, p. 67.*

43. Dr. Tyler determined Claimant needs to undergo additional diagnostic procedures and medical evaluations to define the extent of her work injury and to cure Claimant from the effects of her work injury.
44. As a result, the ALJ finds Claimant requires more diagnostic procedures and medical evaluations to define the extent of her work injury. The ALJ also finds that the diagnostic testing and evaluations are reasonable and necessary to cure Claimant from the effects of her work injury. The ALJ further finds this treatment offers a reasonable prospect for defining the extent of Claimant's work injury and the need for more medical treatment, which might include surgery.
45. On September 10, 2019, shortly after the DIME, Respondent filed a Petition to Review ALJ Jones' order. Claimant filed a motion to strike Respondent's petition to review. Claimant asserted that the portion of Judge Jones' order that determined Dr. Gellrick is an authorized provider is interlocutory and not subject to appeal.
46. On October 4, 2019, ALJ Kimberly Turnbow granted Claimant's motion and struck Respondent's Petition to Review. Judge Turnbow determined the portion of the order on which Claimant prevailed, granting a change of physician, is interlocutory and not subject to review.
47. On October 8, 2019, Respondent informed Dr. Gellrick, by a letter, that she was not authorized, and her treatment would not be paid. Respondent specifically

advised Dr. Gellrick that Claimant requested a hearing to change her authorized treating provider to her, but the order was found to be interlocutory and therefore there is not a final determination on whether she is an authorized treating physician. They also stated that treatment was being denied as not related to the September 18, 2017, claim. They also advised Dr. Gellrick that their position stemmed from Dr. Burns placing Claimant at MMI and not recommending any maintenance care and Dr. Tyler, the DIME, physician who agreed Claimant was at MMI.

48. On October 1, 2019, the Division of Workers' Compensation issued a notice that the DIME process was concluded. *RHE: A. Pg. 19.*
49. On October 3, 2019, Respondent issued a check to Claimant totaling \$3,094.62. This was for PPD benefits based on the difference between the previously admitted 6% impairment rating and the 11% impairment rating in the DIME. *Tr. 80.* The adjuster inadvertently sent the check to Claimant's attorney's old law firm, Ramos Law. That said, there was no credible and persuasive evidence submitted at the hearing establishing the check was delivered to Ramos Law and that addressing and sending the check to the wrong address led to the check getting lost or delayed. In other words, there is no way to determine at which point the check got lost and why it got lost. Thus, the court is unable to determine whether the wrong address on the check had anything to do with the check not getting delivered to Ramos Law. Had the check merely been delivered to the wrong address, i.e., Ramos Law, it seems logical that the Ramos Law firm would have forwarded the check to Claimant or her attorney, or contacted one of the parties to seek direction on what to do with the check.
50. On October 10, 2019, Respondent filed a Final Admission of Liability that was received by the Division on October 11, 2019. Respondent admitted for an 11% scheduled impairment rating and denied maintenance care after MMI pursuant to Dr. Burns' medical report of May 28, 2019. *RHE: A. Pg. 18. Tr. 79.* The certificate of mailing on the FAL also inadvertently listed June 6, 2019 and was mailed to Claimant's counsel's former address at Ramos Law. This was because the previous FAL form filed on June 6, 2019, was used. *Tr. 78.* But, the FAL was still mailed to Claimant. *RHE A. Pg. 18.*
51. Pursuant to Rule 5-6(C), and the October 10, 2019, filing of the FAL, Claimant was to receive her PPD benefit check by October 15, 2019.
52. On October 16, 2019, The Division issued an error letter notifying Respondent - and Claimant's counsel at her new firm - that the certificate of service on the FAL received on October 11, 2019, was incorrect because it listed the wrong date. The letter also stated the FAL listed the incorrect body code for the impairment. The Division requested these issues be corrected. *RHE: A. Pg. 17.*
53. Respondent filed an Amended FAL on October 18, 2019. It again denied medical maintenance care. A copy of the amended FAL was sent to Claimant's counsel at her new firm, The Frickey Law Firm. *RHE: A. Pg. 16.*

54. The October 16, 2019, letter from the Division was received by Claimant's counsel on October 18, 2019. As explained in the letter, the misdated FAL was received by the Division on October 11, 2019. Thus, it was apparent from the Division letter that a check for any additional PPD benefits should have been received by Claimant by approximately October 16, 2019. Despite Claimant's counsel receiving notice that a new admission was filed, and the FAL being mailed to Claimant, Claimant's counsel did not contact Respondent's counsel about the additional PPD benefits until October 31, 2019, which was two weeks later and the first day of the adjuster's vacation.
55. Brianna M[Redacted] is the adjuster for Claimant's claim. She was on vacation from October 31 through November 3, 2019. *Tr. 81-82.*
56. On October 31, 2019, Claimant's counsel emailed Respondent's counsel advising that she had not received the PPD check following the FAL admitting for 11% impairment rating. *Tr. 84.* Respondent's counsel responded promptly the same day, informing Claimant's counsel that the adjuster was out of town, and asked if she could she wait until the adjuster returned for a response about the status of the PPD check. There was no response from Claimant's counsel. *Tr. 84.*
57. Ms. M[Redacted] first became aware Claimant had not received the PPD check mailed on October 3, 2019, from defense counsel after she returned from vacation. *Tr. 82.*
58. Ms. M[Redacted] had coverage while she was on vacation who could have assisted with the lost PPD check while she was out of the office if Respondent had known of the urgency of the issue. *Tr. 83.*
59. It is not clear from the record the extent of communication between the parties between October 31, 2019, and November 11, 2019, about the lost PPD check. For example, did Claimant's attorney contact her old firm to determine whether they received the check, and if so, what happened to it? Or, did the parties decide to wait a few more days to see if the check would ultimately show up?
60. Regardless of the nature and extent of any additional discussions between the parties, the adjuster requested the \$3,094.62 PPD check be reissued to Claimant on November 11, 2019. *Tr. 84-85.* Later, the reissued PPD check was mailed to Claimant's attorney at her new address on November 14, 2019 and received by Claimant's attorney on November 15, 2019. (*Tr. 85 and CHE Ex. 13*)
61. The ALJ finds that misaddressing the initial check was a clerical error. The ALJ further finds that the overall conduct of the adjuster in issuing the first check and then the second check was objectively reasonable. Moreover, the clerical error was not shown to have delayed Claimant's receipt of the first PPD check because the check was lost in the mail. As a result, even if the check were properly addressed, it might have gotten lost as well and not arrived on time. Therefore, based on the totality of the circumstances, the clerical error that was found to be objectively reasonable cannot automatically elevate the error to unreasonable conduct that requires a penalty to be assessed. In the end, the clerical error was not updating Claimant's counsel's new address. Once the error was brought to

the attention of the adjuster, the clerical error was promptly cured. In the end, Claimant failed to establish by a preponderance of the evidence that such error caused the delay in Claimant receiving her PPD benefits.

62. When Claimant filed her Application for Hearing on November 14, 2019, she also endorsed a penalty against the Employer for the alleged violation of Rule W.C.R.P. 8-2(A) that occurred on January 30, 2018 when the Employer directed Claimant to obtain medical treatment from Concentra.
63. Respondent contends Claimant's claim for penalties pursuant to W.C.R.P. 8-2-(A) and 8-43-304(1), C.R.S., based on the Employer directing Claimant to treat at Concentra, is barred by the statute of limitations.
64. As found above, Claimant started treating at Concentra on January 31, 2018. For that reason, the facts that give rise to Claimant's penalty claim, which stems from Respondent's violation of W.C.R.P. 8-2(A), occurred on January 30, 2018 and were known to Claimant on January 30, 2018. As result, Claimant's claim for penalties for the conduct that occurred on January 30, 2018, was made more than one year after she became aware of the facts that form the basis of her penalty claim pursuant to W.C.R.P. 8-2-(A) and 8-43-304(1), C.R.S.
65. Claimant established by a preponderance of the evidence that the right of selection passed to her because Respondent failed to comply with W.C.R.P. 8-2. Respondent did not provide Claimant with a list of providers from which to select a provider for treatment of her September 2017 work injury. Instead, the Employer selected and directed Claimant to treat at Concentra.
66. On December 17, 2018, about 10 months after the Employer selected and directed Claimant to treat at Concentra and before Claimant was placed at MMI, Claimant asserted her right to select a treating physician and requested the right to select Dr. Gellrick.
67. Claimant's request to exercise her right of selection was not shown to be an effort to defeat an ATPs determination of MMI that occurred after she applied for a hearing and after the hearing concluded in front of ALJ Jones.
68. Moreover, based on the findings of this ALJ, Claimant is not at MMI.
69. Claimant can select Dr. Gellrick to be her authorized provider – and did so. As a result, Dr. Gellrick is an authorized provider.
70. The evaluations provided by Dr. Gellrick and her treatment recommendations are found to be reasonable, necessary, and related to treat and cure Claimant from the effects of her work injury.
71. The MRI of Claimant's cervical spine is reasonable and necessary to determine whether Claimant's cervical complaints flow from her initial work injury or flow from an independent condition.
72. The psychological evaluation is reasonable and necessary to assess whether Claimant's work injury has had a psychological impact on Claimant and whether treatment is appropriate.

CONCLUSIONS OF LAW

Based on these findings of fact, the Judge draws these conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant overcame the opinion of the DIME physician, Dr. Tyler, by clear and convincing evidence, and established that she is not at MMI.

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S.

A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). Moreover, any ambiguities in the DIME physician's report over MMI can be resolved by the ALJ. See *MGM Supply Co. v. Indus. Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding on MMI bears the burden of proof by clear and convincing evidence. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, *supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding on MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding on MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Under the statute MMI is primarily a medical determination involving the diagnosis of Claimant's condition. *Berg v. Indus. Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Monfort Transp. v. Indus. Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of Claimant's medical condition are causally related to the industrial injury. *Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007).

That said, it contradicts a finding of MMI that more diagnostic procedures, medical evaluations, or both, are needed and offer a reasonable prospect for defining the extent of Claimant's work injury and need for additional medical treatment. See *Patterson v. Comfort Dental East Aurora*, WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co.*, W.C. No. 4-638-712 (ICAO August 11, 2000).

As found, on July 10, 2019, Claimant began treating with Dr. Gellrick. It was also found that:

- At Claimant's initial appointment, Claimant had pain and tenderness into the right side of the cervical spine, right shoulder, scapular deltoid region of the right upper extremity. She had ongoing right arm and neck pain. Driving made the pain worse and her hand could go numb.
- Dr. Gellrick's physical examination showed tight trigger points both trapezius, right greater than left with tenderness on the right side of the neck with pain going from the neck down into the back into the upper thoracic regions, pain from the right shoulder into the trapezius and from the neck into the trapezius on the right side. She had positive tenderness subscapular on the right. Her right shoulder range of motion produced mild crepitus with decreased internal rotations, abduction, and flexion. Her right shoulder was higher than the left.
- Dr. Gellrick observed that after Claimant's surgery, she developed a worsening of condition, especially in October 2018, as reflected in the records, when she returned to work and had to lift above shoulder height in the clothing department.

- Dr. Gellrick opined, “What is missing is any further pathology that has developed in the right shoulder because of return to modified duty. Repeat MRI of the shoulder with contrast needs to be completed for further evaluation. Once this is done, she should be re-seen with the surgeon of record, Dr. Faulkner, on this issue. In addition, the patient has been symptomatic for the C-spine pain and granted this may be surely due to the shoulder, an MRI of the cervical spine is warranted in this situation to check for any further pathology.”
- Claimant saw Dr. Gellrick for another visit on August 7, 2019. Dr. Gellrick noted the MRI’s were not authorized. Dr. Gellrick again requested the MRI’s on her M-164 form.

The ALJ finds and concludes Dr. Gellrick’s opinions regarding Claimant’s need for future medical treatment to cure her from the effects of her work injury to be credible and highly persuasive. Her findings and opinions track Claimant’s reporting of symptoms and progression of symptoms throughout her claim and after returning to work in October 2018. Moreover, her conclusion that additional medical treatment is reasonable and necessary to cure Claimant from the effects of her work injury fits with some of the DIME physician’s findings regarding the need for future medical treatment to determine the extent of Claimant’s work injury and whether another surgery is necessary to treat Claimant’s work injury.

As also found, the Division Examiner concluded Claimant needs to undergo a repeat MRI scan with arthrogram of her right shoulder. He also concluded that upon completion of the MRI, Claimant should undergo a second opinion evaluation by another orthopedic surgeon who specializes in treating shoulders. The Division Examiner also states that if the new orthopedic surgeon finds evidence that further surgery is required, then a second shoulder surgery should be provided under this claim.

The ALJ finds Dr. Tyler’s opinion regarding Claimant’s need for more medical treatment to cure her from the effects of her work injury to be credible and persuasive. This portion of his opinion is credited because:

- It aligns with Dr. Gellrick’s opinion regarding Claimant not being at MMI.
- It aligns with Claimant’s ongoing pain complaints and functional limitations that emerged after returning to modified duty in October 2018 and have continued; and
- It aligns with PA Bodkin’s unsuccessful attempt to have Claimant evaluated by another psychiatrist for a second opinion.

That said, the ALJ finds and concludes Dr. Tyler’s opinion that Claimant is at MMI is wrong because his recommendations for additional medical treatment in the form of diagnostic testing and an orthopedic evaluation to determine the extent of Claimant’s work injury and whether additional surgery is needed conflicts with a finding of MMI. The DIME physician’s analysis defies the sequential evaluation and provision of medical treatment that must be provided before placing a Claimant at MMI. Before a Claimant can be placed at MMI, the physician must first determine whether more diagnostic testing and medical evaluations are reasonable and necessary to define the extent and scope of Claimant’s

work injury and to determine whether more treatment can be provided that has a reasonable prospect of curing Claimant from the effects of her work injury.

To first place Claimant at MMI and then provide diagnostic testing and medical evaluations to determine the extent of Claimant's work injury and various treatment options is putting the cart before the horse. Here, the DIME physician recommended more medical treatment in the form of evaluations to determine the extent of Claimant's work injury and help define the type and extent of additional treatment that is reasonable and necessary to cure Claimant from the effects of her work injury. In this case, his treatment recommendations prevent a finding of MMI.

The ALJ thus finds and concludes Claimant has overcome the Division Examiner's opinion on MMI by clear and convincing evidence. Claimant has established by clear and convincing evidence that she is not at MMI.

II. If Claimant is at MMI, whether she established that her impairment rating should be converted to a whole person impairment rating.

Since Claimant has overcome the opinion of the DIME physician on MMI - and is not at MMI - conversion of her impairment rating is no longer ripe for determination and is moot for now.

III. Whether Respondent established ALJ Jones' prior order finding Dr. Gellrick to be an authorized treating physician should be reversed based on new facts, changes in the applicable law, or other persuasive circumstances.

Respondent contends ALJ Jones' order that was issued on August 21, 2019, is interlocutory and subject to modification by this ALJ. Assuming Respondent is correct - about the interlocutory nature of the order - this ALJ may modify a prior interlocutory ruling by another judge as necessary if new facts, changes in the applicable law, or other persuasive circumstances warrant such a modification. *See In re Marriage of Burford*, 26 P.3d 550 (Colo.App.2001); *see People ex rel. Garner v. Garner*, 33 P.3d 1239 (Colo.App.2001)(one division of appellate court denied motion to dismiss; then another division granted a similar motion that raised an additional argument, even though the first ruling might have been considered law of the case); *Moore v. 1600 Downing St., Ltd.*, 668 P.2d 16 (Colo.App.1983)(reconsideration of a motion for summary judgment, even if based on the same issues argued in earlier motions to dismiss, is not barred by law-of-the-case doctrine).

After reviewing the record from the May 16, 2019 hearing, as well as Judge Jones' Summary Order - and her Specific Findings of Fact, Conclusions of Law, and Order - this ALJ determines that reversal of her decision is not warranted even though some new facts have emerged since the May 16, 2019 hearing.

Respondent has set forth some new facts that occurred after ALJ Jones held and concluded the hearing on May 16, 2019. But the emergence of these new facts after the hearing was not unexpected and do not rise to a level requiring a different result. These facts include, but are not limited to, the following:

- Claimant being placed at MMI by one of her authorized treating physicians.
- The filing of a FAL.
- Claimant being placed at MMI, retroactively, to a date that preceded the hearing held by ALJ Jones.
- Claimant undergoing a DIME and being found at MMI.

To the extent there was a jurisdictional bar to ALJ Jones addressing the change of physician issue, that bar has been removed by this ALJ finding Claimant is not at MMI and was not at MMI when ALJ Jones issued her order. To the extent necessary, this ALJ adopts and incorporates Judge Jones' findings of fact, conclusions of law, and order into this opinion in support of this ALJ's findings of fact and conclusions of law in determining Dr. Gellrick is an authorized provider.

As found, the only party who selected a provider and physician to treat Claimant at the outset was the Employer. The fact that Claimant was treated by Concentra, the Employer selected provider, for approximately ten months does not amount to a selection of Concentra by Claimant based on the facts of this case. Claimant did not select a physician until she selected Dr. Gellrick and therefore Dr. Gellrick is an authorized treating physician.

As a result, based on the totality of the circumstances, this ALJ finds and concludes that reversal of Judge Jones' decision that found Dr. Gellrick to be an authorized treating physician is not warranted. This ALJ also finds and concludes Claimant established by a preponderance of the evidence that the right of selection passed to Claimant and she selected Dr. Gellrick on December 17, 2018.

IV. Whether Claimant established the medical treatment recommended by Dr. Gellrick and Dr. Tyler is reasonable, necessary, and related to her compensable injury.

Section 8-42-101(1)(a), C.R.S., provides as follows:

Every employer, regardless of said employer's method of insurance, shall furnish such medical, surgical, dental, nursing, and hospital treatment, medical, hospital, and surgical supplies, crutches, and apparatus as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury."

This statute has not been interpreted as distinguishing between medical "treatment" that tends to cure or relieve symptoms or pathology (such as surgery or medications), and medical "treatment" (such as x-rays and EMG's) performed to identify the claimant's medical condition and clarify what specific procedures are likely to cure or relieve the effects of the injury. As a general matter our courts have held that medical "treatment" for purposes of § 8-42-101(1)(a) includes expenses for "medical or nursing treatment or incidental to obtaining such medical or nursing treatment," provided the

expenses are “reasonably needed to cure and relieve the effects of the injury and related to claimant’s physical needs.” See *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997) (holding childcare expenses constituted medical treatment under facts of the case). The cases also suggest that medical “treatment” encompasses both diagnostic and curative medical procedures. See *Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 448 (1949) (exploratory surgery held compensable even where it revealed non-industrial condition); *Public Service Co v. Industrial Claim Appeals Office*, 979 P.2d 584 (Colo. App. 1999) (“The record must distinctly reflect the medical necessity of any such treatment and any ancillary service, care or treatment as designed to cure or relieve the effects of such industrial injury.”); *Villela v. Excel Corp.*, W.C. No. 4-400-281 (ICAO February 1, 2001) (reasonable diagnostic procedures are a prerequisite to MMI if they have reasonable prospect for defining claimant’s condition and suggesting further treatment).

As found, Claimant established that after she had shoulder surgery she returned to work in October 2018. After Claimant returned to work, her shoulder symptoms worsened. Her new symptoms included her shoulder locking as well as an increase in shoulder pain. Claimant also developed neck pain and limitations with rotation and flexion to the right. It was also found that Claimant’s provider, Concentra, planned to refer Claimant to a new physiatrist for a second opinion. For whatever reason, Concentra failed to arrange for Claimant to undergo a second opinion with a new physiatrist.

Claimant, however, was ultimately evaluated by Dr. Gellrick, who became her authorized treating physician. Dr. Gellrick concluded Claimant should undergo a repeat MRI of her shoulder with contrast. Dr. Gellrick also recommended Claimant should be reevaluated by her surgeon, Dr. Dr. Faulkner. Dr. Gellrick also believes Claimant’s cervical complaints may relate to her shoulder injury. But to help determine whether Claimant’s neck pain relates to her work injury in some way, Dr. Gellrick also recommended an MRI of Claimant’s cervical spine. See *Merriman, supra*, at 403 (exploratory surgery held compensable even where it revealed non-industrial condition). Lastly, Dr. Gellrick also recommended a referral to Dr. Torres for a psychological evaluation to due Claimant’s delayed recovery, resultant reactive adjustment disorder, and increased stress.

As a result, the ALJ finds and concludes the treatment recommended by Dr. Gellrick is reasonable and necessary to treat Claimant from the effects of her industrial injury. Claimant has thus established by a preponderance of the evidence that she is entitled to a right shoulder MRI with contrast, a cervical spine MRI, a psychological evaluation with Dr. Torres, a follow up evaluation with Dr. Faulkner, and an evaluation by a physiatrist for a second opinion, as recommended by Concentra, but never completed.

The DIME physician did recommend Claimant undergo a surgical evaluation by a surgeon, other than Dr. Faulkner, who specializes in shoulders, for a second opinion. The ALJ, however, cannot order Respondent to provide specific diagnostic testing, evaluations, or both, which have not been prescribed by an authorized treating physician. See W.C.R.P. 11; *Potter v. Grounds Service Co.*, W.C. No. 4-935-523-04 (August 15, 2018); *Torres v. City and County of Denver*, W.C. No. 4-917-329-03 (May 15, 2018.) As a result, Claimant’s request for an order granting a second opinion with a surgeon based on the DIME physician’s recommendation is denied. If, however, an authorized treating

physician recommends Claimant have a second surgical opinion to see if more surgery is warranted, that is a separate issue and is not addressed in this order.

V. Whether Respondent failed to timely pay PPD benefits under W.C.R.P. 5-6(C) and are subject to penalties under 8-43-304.

Claimant contends Respondent should be penalized because she received a portion of her permanent partial disability more than five calendar days after Respondent filed their FAL on October 10, 2019 and their Amended FAL on October 16, 2019.

Rule 5-6(C) provides:

Permanent impairment benefits awarded by admission are retroactive to the date of maximum medical improvement and shall be paid so that the claimant receives the benefits not later than five (5) calendar days after the date of the admission. Subsequent permanent disability benefits shall be paid at least once every two weeks from the date of the admission. When benefits are continuing, the payment shall include all benefits which are due as of the date payment is actually issued.

As found, the Respondent decided to admit for the rating provided by the DIME physician. Pursuant to Rule 5-6-(C), Respondent had to provide Claimant her PPD benefits within in 5 days of the date of their FAL.

For that reason, on October 3, 2019, before they filed their FAL, the adjuster issued and mailed a check to Claimant's counsel totaling \$3,094.62. This was for PPD benefits based on the difference between the previously admitted 6% impairment rating and the 11% impairment rating provided by the DIME physician. The adjuster, however, inadvertently sent the check to the law firm at which Claimant's attorney previously worked. Regardless of the error, the check was lost in the mail and was not delivered to the prior law firm, the Claimant, or the Claimant's attorney at her new law firm, The Frickey Law Firm.

On October 10, 2019, Respondent filed a Final Admission of Liability that was received by the Division on October 11, 2019. Based on a clerical error, the FAL was dated June 6, 2019. When preparing the FAL, the adjuster revised the prior admission and forgot to update the date of mailing and to also update the new mailing address for Claimant's attorney.

On October 16, 2019, The Division issued an error letter notifying Respondent that the certificate of service on the FAL received on October 11, 2019, was incorrect because it listed the wrong date. The letter also stated the FAL listed the incorrect body code for the impairment. The Division requested these issues be corrected. The letter was also sent to Claimant's attorney at her new address at The Frickey Law Firm. As a result, Claimant's attorney knew that a new admission was filed and that it was most likely consistent with the DIME physician's finding regarding permanent impairment and that additional benefits were payable.

On October 18, 2019, Respondent promptly filed an Amended FAL. A copy of the Amended FAL was sent to Claimant's counsel at her new address, The Frickey Law Firm. Although PPD payments are due 5 days after the date of the admission, there is no indication Claimant's counsel followed up with Respondent on the status of the PPD payments until 2 weeks after the Amended FAL was filed.

On October 31, 2019, approximately two weeks after receiving the letter from the Division, and about a week after receiving the amended FAL, Claimant's counsel emailed Respondent's counsel advising that she had not received the PPD check following the FAL admitting for the 11% impairment rating. The same day, October 31, 2019, Respondent's attorney responded and informed her that the adjuster was out of town and asked if she could wait until the adjuster returned for a response to the status of the PPD check. There was no response from Claimant's counsel.

The adjuster, Ms. M[Redacted] first became aware Claimant had not received the PPD check mailed on October 3, 2019, from defense counsel after she returned from vacation. There is not, however, any indication regarding the extent of communication between the parties about what took place before the adjuster reissued the PPD check on November 11, 2019. The adjuster had coverage while she was on vacation. So someone else could have assisted with the missing PPD check while she was out of the office. That said, Claimant's counsel did not respond to Respondent's attorney. Was the lack of response because the check ultimately showed up and therefore the adjuster did not have to reissue the PPD check? Or, did Claimant and her attorney want to wait for the adjuster to return and see if the check would show up within the next week? In any event, the adjuster reissued the PPD check on November 11, 2019, and it was received by Claimant's counsel on November 15, 2019.

General Penalties Provision and Standard

Section 8-43-304(1) allows an ALJ to impose penalties of up to \$ 1,000 per day against any party "who violates any provision of articles 40 to 47 of [Title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel, for which no penalty has been specifically provided, or fails, neglects, or refuses to obey any lawful order made by the director or panel or any judgment or decree made by any court." The failure to comply with a procedural rule has been found to be a failure to obey an "order" and failure to perform a "duty lawfully enjoined" within the meaning of § 8-43-304(1); *Pioneers Hospital v. ICAO*, 114 P.3d 97,98 (Colo. App. 2005).

Penalties are not assessed on a strict liability standard.

Claimant contends that the imposition of penalties is mandatory if an indemnity payment is late. But penalties under § 8-43-304(1) are not imposed on a strict liability standard. See *Cruz v. Sacramento Drilling, Inc.*, W.C. No. 4-999-129-04, (July 28, 2017).

Once a claim for penalties is properly plead, the imposition of penalties under § 8-43-304(1) is a two-step process. The ALJ must first determine whether the disputed conduct violated the Workers' Compensation Act, of a duty lawfully enjoined, or of an order. If the ALJ finds such a violation, he may impose penalties if he also finds that the

actions were objectively unreasonable. *City Market v. ICAO*, 68 P.3d 601 (Colo. App. 2003).

Claimant must prove by clear and convincing evidence Respondent knew or reasonably should have known they were in violation of the Act or Rule.

Moreover, once a party applies for a hearing for a penalty under subsection § 8-43-304(1), with the requisite specificity of the violations asserted, the alleged violator shall have twenty days to cure the violation. If the violator cures the violation within such twenty-day period, and the party seeking a penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed. See § 8-43-304(4), C.R.S.

As found, when Claimant filed her application for hearing on November 14, 2019 and asserted a penalty for the late payment of permanent partial disability benefits, the reissued check for her additional PPD benefits had been issued to Claimant on that same day and received by her attorney the next day. As a result, Respondent cured the violation. Thus, Claimant had to establish by clear and convincing evidence that Respondent knew or reasonably should have known they were in violation of the act or rule.

As found, the adjuster credibly testified that she inadvertently mailed Claimant's check for PPD benefits on October 3, 2019 to the wrong address. For some unknown reason, the check was lost and was not received by anyone. Moreover, even though the check was mailed to the wrong address, which was Claimant's attorney's prior law firm, there is no finding that using the wrong address caused Claimant to not get her PPD check on time. In other words, it was not established that the address on the check had anything to do with the first check that was issued getting lost in the mail.

As found, misaddressing the initial check was a clerical error because the new address of Claimant's attorney was not used. However, the ALJ finds and concludes that based on the totality of the circumstances the overall conduct of the adjuster in issuing the first check and then the second check was not unreasonable. Furthermore, as found, the clerical error was not shown to have delayed Claimant's receipt of the first check because the first check was lost in the mail.

Thus, the ALJ finds and concludes Claimant failed to meet her burden of proof to establish by clear and convincing evidence that the adjuster acted unreasonably in the payment of Claimant's PPD benefits and that the unreasonable conduct was the cause of the delay in Claimant receiving her PPD benefits and that penalties should be awarded.

VI. Whether Respondent violated ALJ Jones' Order and are subject to penalties under 8-43-304(1).

Claimant sought an order from ALJ Jones on the sole issue as to whether Dr. Gellrick is an authorized medical provider. ALJ Jones issued her Summary Order on May 30, 2019 and her full order — Findings of Fact, Conclusions of Law, and Order, on August 21, 2019. As found in each order, ALJ Jones concluded Dr. Gellrick is Claimant's authorized provider for her work injury.

Respondent filed a petition to review ALJ Jones' August 21, 2019 order. Claimant then filed a motion to strike Respondent's petition to review. Claimant asserted Judge Jones' order, which granted Claimant the right to select Dr. Gellrick as an authorized treating physician and found Dr. Gellrick was authorized was interlocutory and not subject to review.

Then, ALJ Turnbow issued an order on October 4, 2019, granting Claimant's motion and striking Respondent's petition to review.

An ALJ's order which is on appeal is interlocutory. Moreover, most interlocutory orders are not "lawful orders," for purposes of imposing penalties. This is true because a petition to review serves to stay the obligation to pay an award and an interlocutory order does not require a party to pay a benefit. See *Mosley v. Asphalt Paving, Co.*, W.C. No. 4-439-762 (March 26, 2003); *Citing Industrial Commission, v. Spoo*, 150 Colo. 581, 380 P.2d 49 (1963); *Industrial Commission v. Continental Investment Co.*, 85 Colo. 475, 277 P. 303 (1929) (penalties may not be imposed for the failure to pay during a good faith appeal from order); *Selcer v. Total Plumbing, Inc.*, W.C. No. 4-374-217 (August 11, 2000).

ALJ Jones' order merely found Dr. Gellrick authorized. The order did not direct Respondent to pay for any treatment. And Respondent attempted to appeal Judge Jones' order, but Claimant successfully struck Respondent's petition to review by asserting that the order merely found Dr. Gellrick authorized and was interlocutory because it did not order Respondent to pay anything. As a result, under Claimant's own argument, Respondent was not ordered to pay for any medical treatment. As a result, and under these circumstances, Respondent cannot be subject to penalties for failure to comply with an order that did not direct them to pay anything.

As a result, the ALJ finds and concludes Claimant failed to establish Respondent violated ALJ Jones' order and should be subjected to penalties.

VII. Whether Respondent's failure to comply with W.C.R.P. 8-2(A), subjects them to penalties under Section 8-43-304(1).

On January 30, 2018, after Claimant reported her work injury to Employer, and the Employer provided Claimant a list of 4 designated providers. The Employer, however, on January 30, 2018, directed Claimant to seek treatment from one specific provider on the list, which was Concentra. Claimant contends that this conduct, subjects Respondent-Employer to penalties under section 8-43-304.

The Employer, however, has raised several defenses. The first defense raised by Employer is that Claimant's claim for penalties under section 8-43-304(1) for the violation of W.C.R.P 8-2(A) is barred by the statute of limitations.

Section 8-43-304(5) provides that a "request for penalties shall be filed with the director or administrative law judge within one year after the date that the requesting party first knew or reasonably should have known the facts giving rise to a possible penalty." Section 8-43-305, C.R.S., provides that each day an insurer "fails to comply with any lawful order" of the director constitutes a "separate and distinct violation thereof." Section

8-43-305 further provides that in an action to enforce a penalty “such violation shall be considered cumulative and may be joined in such action.”

In *Spracklin v. Industrial Claim Appeals Office*, 66 P.3d 176 (Colo. App. 2002), the claimant observed that § 8-43-305 provides that each day an insurer disobeys an order constitutes a “separate violation” of the order. As a result, the claimant reasoned that failure to file an application seeking a penalty within one year of first learning the facts giving rise to the penalty was not fatal to the entire penalty claim. Rather, the claimant reasoned that § 8-43-304(5) acts as a “cap” on the amount of recovery and bars only those penalty claims based on violations that occurred more than one year before the application for hearing was filed.

But the *Spracklin* court rejected the claimant’s analysis of these statutes. The court reasoned that § 8-43-304(5) is a statute of limitations designed to “ensure prompt litigation of penalty claims once the underlying violation is first discovered.” Thus, the statute plainly “requires a request for penalties to be filed within one year after the requesting party first became aware of the circumstances that constitute a violation and support the imposition of a penalty, even if that violation was ongoing.”

As found, the conduct for which Claimant bases her penalty under W.C.R.P. 8-2(A) occurred on January 30, 2018, when the Employer directed the Claimant to seek treatment at Concentra. As found, Claimant was aware of this conduct because based on the directive by her Employer to treat at Concentra, Claimant started treating at Concentra on January 31, 2018. Claimant, however, did not file an application for hearing on the penalties issue for such conduct until November 14, 2019, which is more than one year after the conduct that forms the basis of Claimant’s penalty claim.

As a result, because Claimant did not file an Application for Hearing and seek penalties based on Respondent’s violation of 8-2(A) until November 14, 2019, Claimant’s claim for penalties under section 8-43-304(1) is barred by the statute of limitations.

ORDER

Based on these findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is not at MMI.
2. Respondent failed to establish ALJ Jones’ prior order finding Dr. Gellrick to be an authorized treating physician should be reversed.
3. The right to select a treating physician passed to Claimant. Claimant exercised her right and selected Dr. Gellrick on December 17, 2018.
4. Dr. Gellrick became an authorized treating physician for Claimant on December 17, 2018.
5. Respondent shall pay for the treatment provided to Claimant by Dr. Gellrick as of December 17, 2018.

6. Respondent shall pay for Claimant to undergo the treatment recommended by her authorized treating physician, Dr. Gellrick. This treatment includes a:
 - a. right shoulder MRI with contrast,
 - b. cervical spine MRI,
 - c. psychological evaluation with Dr. Torres, and a
 - d. referral to a physiatrist for a second opinion, as discussed by Dr. Gellrick and recommended by Concentra, but never completed.
7. Claimant's claim for penalties relating to the payment of PPD benefits is denied and dismissed.
8. Claimant's claim for penalties relating to her contention Respondent violated Judge Jones' order is denied and dismissed.
9. Claimant's claim for penalties under W.C.R.P. 8-2(A) and Section 8-43-304(1) based on the Employer directing Claimant to treat at Concentra is denied and dismissed.
10. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: June 3, 2020

Denver, CO 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-100-151-004**

ISSUE

Whether Respondents have produced a preponderance of the evidence to overcome the Division Independent Medical Examination (DIME) opinion of David Orgel, M.D. that Claimant suffered an 11% left upper extremity impairment rating as a result of his August 29, 2017 admitted industrial injury.

FINDINGS OF FACT

1. Claimant worked as a Beef Processor for Employer. His responsibilities included cutting the ribs of beef carcasses and moving the carcasses into the cold area of the cooler. On August 29, 2017 Claimant was working in the cooler when an approximately 400-pound beef carcass that had been suspended on a chain fell on him. Claimant reported the carcass hit the top of his left shoulder. He fell to the ground and lost consciousness.

2. Employer's on-site Medical Director Carlos Cebrian, M.D. evaluated Claimant shortly after the accident. Claimant reported numbness in his left arm and leg. He also noted left-sided head and left hip pain. Upon physical examination, Dr. Cebrian documented Claimant had tenderness on the left side of his head and neck, as well as decreased sensation in the left arm and left leg. Dr. Cebrian placed Claimant in a hard collar and requested an ambulance.

3. Claimant was transported by ambulance to Colorado Plains Medical Center. X-rays and CT scans of Claimant's head, neck, cervical spine, chest, back, abdomen, pelvis, hips, left humerus and left forearm revealed no fractures and were otherwise normal.

4. On September 6, 2017 Claimant returned to visit Authorized Treating Physician (ATP) Dr. Cebrian. Claimant reported he was feeling better. He noted pain in his left shoulder, left arm, left hip, left leg and right elbow. Claimant also reported numbness in his left hand and into his left foot. Upon physical examination, He demonstrated full range of motion of the cervical spine, bilateral shoulders, lumbar spine, knees and ankles. Claimant mentioned subjective decreased sensation of the left arm and left leg. Dr. Cebrian noted Claimant would continue to be monitored at the nursing station with daily treatments.

5. On September 26, 2017 Claimant was getting a drink of water at work when he slipped on fat and bones on the floor. He landed on his right lower back and right hand. Claimant had bruising and swelling in those areas. Providers ordered x-rays of the lumbar spine and right hand.

6. On October 4, 2017 Claimant underwent a left shoulder MRI. The MRI revealed minimal infraspinatus tendinopathy and minimal degenerative changes at the left AC joint.

7. Claimant returned to Dr. Cebrian for a follow-up appointment on October 10, 2017. He reported continued subjective pain in the left shoulder, lower back and left hip. Nevertheless, Dr. Cebrian documented Claimant was able to move around easily without any apparent discomfort and had full lumbar range of motion. Specifically, Claimant's left shoulder had 120° of abduction. Dr. Cebrian noted that Claimant's left shoulder MRI revealed no tears, minimal tendinopathy of the infraspinatus and degenerative changes of the acromioclavicular (AC) joint.

8. By October 24, 2017 Claimant reported to Dr. Cebrian that he was feeling significantly better. Dr. Cebrian documented Claimant was able to move around easily without any discomfort and had full range of motion of the cervical spine and left knee. Further, Claimant reported that his shoulder, back and hip were all completely better and the only area where he had some discomfort was in the front of his left knee. Dr. Cebrian held Claimant's physical therapy sessions in abeyance and increased lifting and pushing limitations to 40 pounds based on his improving condition.

9. Claimant visited Dr. Cebrian on November 7, 2017 and reported he was doing well. His only area of concern was a small amount of pain just above his left hip. Claimant was able to return to his regular job. Dr. Cebrian noted Claimant had undergone multiple diagnostics that did not reveal any significant findings. Further, Claimant no longer had any numbness or pain in the shoulder, back, neck or leg. Dr. Cebrian noted Claimant had full range of motion of the left shoulder, left hip, lumbar spine, cervical spine and left leg. He thus placed Claimant at Maximum Medical Improvement (MMI) with no permanent impairment and determined there was no need for maintenance care. Dr. Cebrian released Claimant to full duty employment.

10. On December 19, 2017 Claimant returned to Employer's medical clinic and visited Kathleen D'Angelo, M.D. Claimant reported the development of neck and back pain, along with numbness in his left arm and leg after pushing and pulling at work. Dr. D'Angelo remarked that motion of Claimant's left and right arms did not elicit any complaints of thoracic muscle pain. Furthermore, upon lumbar examination, Dr. D'Angelo noted limited range of motion on testing, but normal motion when Claimant was transitioning between postures. Dr. D'Angelo summarized that Claimant exhibited a number of unusual and inconsistent pain behaviors.

11. On March 19, 2018 Claimant reported he was struck on the right side of his chest by a cow carcass. He remarked that the incident aggravated all of his prior symptoms.

12. On April 23, 2020 Respondents filed an amended Final Admission of Liability (FAL). The FAL recognized Dr. Cebrian's November 7, 2017 MMI determination, a 0% permanent impairment rating and medical benefits totaling \$4,993.55.

13. Claimant visited Dr. D'Angelo on August 1, 2018 regarding his March 19, 2018 injury. Despite having been struck by a carcass on the right side of his chest four months earlier, Claimant noted pain on his left side from "head to toe." Dr. D'Angelo again mentioned a number of unusual and inconsistent pain behaviors with non-physiologic complaints of numbness.

14. Claimant challenged the FAL and sought a Division Independent Medical Examination (DIME). On August 12, 2019 Claimant underwent a DIME with David Orgel, M.D. Dr. Orgel specifically addressed Claimant's August 29, 2017 injuries, but also noted Claimant's March 19, 2018 accident. He specifically evaluated Claimant for left shoulder, lumbar spine, left knee and left hip symptoms. Dr. Orgel noted that Claimant's October 4, 2017 left shoulder MRI revealed minimal left shoulder infraspinatus tendinopathy without tearing and minimal changes of the AC joint. Claimant reported that the symptoms from his first injury were improving until his second injury on March 19, 2018. The second injury aggravated all of Claimant's previous complaints and caused lower back pain, thoracic back pain and anterior right chest pain. Claimant continued to report worsening left shoulder pain with motion. Dr. Orgel diagnosed Claimant with left shoulder impingement. In specifically evaluating Claimant's left shoulder, Dr. Orgel noted range of motion deficits. He concluded that, "based on the MRI of August 4, 2017, there is a range of motion impairment of 11%." There were no other impairments. He thus assigned an 11% upper extremity impairment rating for Claimant's left shoulder. Finally, Dr. Orgel determined that Claimant reached MMI on the date of his second injury or March 19, 2018.

15. On January 25, 2020 Gary Zuehlsdorff, M.D. conducted a records review of Claimant's claim. He detailed that on August 29, 2017 Claimant was working in the cold storage area of Employer's meat packing plant when he was struck from behind and knocked to the ground by an approximately 400 pound carcass of steer. Dr. Cebrian placed Claimant at MMI with no impairment, restrictions or maintenance care on November 7, 2017. Dr. Zuehlsdorff also remarked that Claimant suffered a second injury on March 19, 2018 when he was hit on the right side of his chest by a cow carcass. In reviewing the DIME report, Dr. Zuehlsdorff noted that Claimant exhibited nonphysiologic findings throughout the records. He also remarked that Dr. Orgel determined that Claimant's only objective abnormality was an MRI of the left shoulder. Dr. Zuehlsdorff commented that Claimant's only work-related injury was thus left shoulder impingement. He explained that the October 4, 2017 left shoulder MRI revealed minimal left shoulder infraspinatus tendinopathy and minimal degenerative changes in the left AC joint.

16. Dr. Zuehlsdorff concluded that Claimant suffered "two significant mechanisms of injury," but the first injury was "by far the most consistent with subjective/objective correlates lending itself to a final singular diagnosis of left shoulder syndrome with pathology inclusive of tendinitis per the MRI." He thus agreed with Dr. Orgel's 11% range of motion impairment of the left upper extremity. He also agreed with Dr. Orgel's determination that Claimant reached MMI on the date of the second accident or March 19, 2018.

17. Claimant underwent an independent medical examination with Allison M. Fall, M.D. on January 30, 2020. Claimant recounted that on August 29, 2017 an approximately 400 pound piece of meat fell and struck him on the left side, including the top of his left shoulder, and he fell to the ground. After reviewing Claimant's medical records and performing a physical examination, Dr. Fall concluded that Claimant had "multiple bodily complaints without correlating objective findings." In evaluating the DIME, Dr. Fall concluded that Dr. Orgel erroneously assigned a left shoulder impairment because there was no diagnosis of a left shoulder injury as a result of the August 29, 2017 accident. Dr. Fall specified that merely because Claimant exhibited less than full range of motion on the day of the DIME did not mean that the deficits were the result of the work injury. Moreover, Dr. Orgel did not account for Claimant's report of the resolution of symptoms by November 7, 2017. Notably, Claimant had no left shoulder complaints and had been released back to regular-duty work. Finally, the left shoulder MRI was unremarkable without any evidence of internal derangement as a result of the work accident. Instead, Claimant only had subjective complaints. Therefore, relying on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides)*, Dr. Fall determined "there is no impairment rating for pain complaints without correlating objective findings."

18. On January 31, 2020 Dr. Zuehlsdorff issued an Addendum to his report after reviewing medical records. He noted that it was interesting Claimant had been placed at MMI for his first injury based on marked improvement, feeling fine and that he sought to be discharged. Based on the implication from the final note from the first injury, Dr. Zuehlsdorff found Claimant was close to being asymptomatic and had a negative examination

19. On April 2, 2020 Dr. Fall issued an Addendum to her independent medical examination. After reviewing Dr. Zuehlsdorff's Report and Addendum, she did not change her medical opinion.

20. On April 2, 2020 the parties conducted the pre-hearing evidentiary deposition of Dr. Cebrian. Dr. Cebrian testified Claimant experienced a resolution of his complaints as of October 24, 2017. Reviewing the course of Claimant's treatment over multiple examinations, Dr. Cebrian explained that he believed Claimant had a contusion to the shoulder girdle that caused his complaints. However, a contusion cannot be rated for permanent impairment unless it produces some other condition. In reviewing the chronic findings revealed by the MRI, and comparing them to his examination findings, Dr. Cebrian determined tendinopathy constituted an unrelated, incidental finding. He noted that tendinopathy is a chronic condition. Moreover, Dr. Cebrian remarked the MRI did not reveal objective evidence of any substantial and permanent aggravation, acceleration, or exacerbation of Claimant's pre-existing conditions caused by the August 29, 2017 work injury. Finally, he commented that the mechanism of the second injury resulting in subsequent complaints of an aggravation of pain on the left side did not make medical sense.

21. In considering Dr. Orgel's DIME, Dr. Cebrian explained that range of motion deficits demonstrate limitations on a specific date. However, based on the *AMA Guides*, when an examiner is performing an impairment rating and their findings are not in substantial accord with the medical records, they must provide an explanation. Reviewing the entire medical record prior to the DIME, there were multiple evaluations by Dr. Cebrian that demonstrated normal range of motion, with a few visits where it was abnormal, but then it returned to normal. After several more visits with normal range of motion, Dr. Cebrian released Claimant from care. Notably, even when Dr. Cebrian saw Claimant for the March 19, 2018 injury, he had normal shoulder range of motion and did not have left shoulder complaints. Dr. Cebrian thus concluded that Claimant had no permanent impairment as a result of his work accidents.

22. Respondents filed an Amended FAL on April 23, 2019. The FAL acknowledged that Claimant reached MMI on November 7, 2017, had a 0% permanent impairment rating and received medical benefits to date totaling \$4,993.55.

23. On May 14, 2020 the parties conducted the post-hearing evidentiary deposition of Dr. Fall. Dr. Fall maintained that Dr. Orgel erroneously assigned a left shoulder impairment because there was no diagnosis of a left shoulder injury as a result of the August 29, 2017 injury. Specifically, Claimant's left shoulder MRI was unremarkable without any evidence of internal derangement. The MRI revealed tendinopathy or chronic degeneration of the tendon. The imaging did not reveal any inflammation or tearing. Furthermore, the MRI reflected only mild degenerative changes at the left AC joint. In performing a physical examination of the left shoulder, Dr. Fall noted that Claimant had unrestricted range of motion with diffuse pain complaints. Moreover, there were no signs of left shoulder impingement or internal derangement.

24. Dr. Fall explained that Dr. Orgel erroneously assigned an 11% permanent impairment rating for Claimant's left shoulder. She specified that Claimant did not suffer a left shoulder injury as a result of the August 29, 2017 work accident. Dr. Fall noted that Dr. Orgel failed to consider Claimant's reported resolution of symptoms on November 7, 2017. Moreover, there were no objective findings that would cause decreased left shoulder range of motion. Dr. Fall emphasized that Dr. Orgel erroneously assigned a left shoulder impairment rating in violation of the *AMA Guides* based only on range of motion deficits without any objective correlation.

25. Because Respondents are challenging DIME Dr. Orgel's upper extremity impairment rating, a preponderance of the evidence is the appropriate burden of proof. Respondents have produced a preponderance of the evidence to overcome Dr. Orgel's opinion that Claimant suffered an 11% left upper extremity impairment rating as a result of his August 29, 2017 admitted industrial injury. Initially, Claimant recounted that on August 29, 2017 an approximately 400 pound piece of meat fell and struck him on the left side, including the top of his left shoulder, and he fell to the ground. On October 4, 2017 Claimant underwent a left shoulder MRI. The MRI revealed minimal infraspinatus tendinopathy and minimal degenerative changes at the left AC joint. By November 7, 2017 Claimant reported to ATP Dr. Cebrian that he was doing well and only concerned

with a small amount of pain just above his left hip. Dr. Cebrian noted Claimant had undergone multiple diagnostics that did not reveal any significant findings. He remarked that Claimant had full range of motion of the left shoulder, left hip, lumbar spine, cervical spine and left leg. Dr. Cebrian thus placed Claimant at MMI with no permanent impairment and determined there was no need for maintenance care. He released Claimant to full duty employment.

26. After Respondents filed a FAL, Claimant underwent a DIME with Dr. Orgel. Dr. Orgel noted that Claimant's October 4, 2017 left shoulder MRI revealed minimal left shoulder infraspinatus tendinopathy without tearing and minimal changes of the AC joint. He diagnosed Claimant with left shoulder impingement. In specifically evaluating Claimant's left shoulder, Dr. Orgel noted range of motion deficits. He concluded that, "based on the MRI of August 4, 2017, there is a range of motion impairment of 11%." He thus assigned an 11% upper extremity impairment rating for Claimant's left shoulder. Finally, Dr. Orgel determined that Claimant reached MMI on the date of his second injury or March 19, 2018. After conducting a records review, Dr. Zuehlsdorff agreed with Dr. Orgel and commented that Claimant's only work-related injury was left shoulder impingement. He explained that the October 4, 2017 left shoulder MRI revealed minimal left shoulder infraspinatus tendinopathy and minimal degenerative changes in the left AC joint. Dr. Zuehlsdorff diagnosed Claimant with "left shoulder syndrome with pathology inclusive of tendinitis per the MRI." He thus agreed with Dr. Orgel's 11% left upper extremity permanent impairment rating based on range of motion deficits.

27. Despite Dr. Orgel's DIME opinion and Dr. Zuehlsdorff's supporting conclusions, Respondents have produced a preponderance of the evidence that Dr. Orgel erroneously assigned Claimant an 11% left upper extremity impairment rating. ATP Dr. Cebrian persuasively explained that Claimant's left shoulder condition did not warrant a permanent impairment rating. In reviewing the chronic findings revealed by the MRI and comparing them to his examination findings, Dr. Cebrian determined tendinopathy constituted an unrelated, incidental finding. Moreover, Dr. Cebrian remarked the left shoulder MRI did not reveal objective evidence of any substantial and permanent aggravation, acceleration, or exacerbation of the pre-existing conditions caused by the August 29, 2017 work injury. Dr. Cebrian explained that Dr. Orgel's range of motion deficits demonstrated limitations on a specific date. However, based on the *AMA Guides*, when an examiner is performing an impairment rating and their findings are not in substantial accord with the medical records, they must provide an explanation. Reviewing the entire medical record prior to the DIME, there were multiple evaluations that demonstrated normal range of motion, with a few visits where it was abnormal, but then returned to normal. After several more visits with normal range of motion, Dr. Cebrian released Claimant from care. Dr. Cebrian thus concluded that Claimant had no permanent impairment as a result of his work injury.

28. Similarly, Dr. Fall persuasively explained that Claimant did not suffer a permanent left shoulder impairment as a result of his August 29, 2017 work injury. She reasoned that there was no diagnosis of a left shoulder injury. Dr. Fall specified that merely because Claimant exhibited less than full range of motion on the day of the DIME

did not mean that the deficits were the result of the work injury. Moreover, Dr. Orgel did not account for Claimant's report of the resolution of symptoms by November 7, 2017. Finally, the left shoulder MRI was unremarkable without any evidence of internal derangement of the shoulder as a result of the work injury. The MRI specifically exhibited tendinopathy or chronic degeneration of the tendon. The imaging did not reveal any inflammation or tearing. Furthermore, the MRI reflected only mild degenerative changes at the left AC joint. Instead, Claimant only had subjective complaints. Therefore, relying on the *AMA Guides*, Dr. Fall determined "there is no impairment rating for pain complaints without correlating objective findings."

29. Respondents have demonstrated that it is more probably true than not that Dr. Orgel erroneously assigned Claimant an 11% left upper extremity impairment rating. The medical records and persuasive opinions of Drs. Cebrian and Fall reflect that Claimant did not suffer left shoulder range of motion deficits based on any objective pathology as a result of his August 29, 2017 work injury. Dr. Orgel failed to correlate a specific diagnosis regarding Claimant's left shoulder with objective signs or analysis. Based on the lack of a permanent impairment attributable to Claimant's work accident, Claimant does not warrant a left shoulder rating. Accordingly, based on the persuasive opinions of Drs. Cebrian and Fall Claimant suffered a 0% permanent impairment as a result of his August 29, 2017 admitted industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio*, W.C. No. 4-660-149 (ICAO, June 30, 2008); see *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; see *Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Subparagraph (II) is limited to parties' disputes over "a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI]." §8-42-107(8)(b)(II). "Nowhere in the statute is a DIME's opinion as to the cause of a claimant's injury similarly imbued with presumptive weight." See *Yeutter*, 2019 COA 53 ¶ 18. Accordingly, a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment. *Id.* at ¶ 21.

6. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

7. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola*, W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett*, W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

8. If a party has carried the initial burden of overcoming the DIME physician's impairment rating by clear and convincing evidence, the ALJ's determination of the correct rating is then a matter of fact based upon the lesser burden of a preponderance of the evidence. See *Deleon v. Whole Foods Market, Inc.*, W.C. No. 4-600-47 (ICAO, Nov. 16, 2006). The ALJ is not required to dissect the overall impairment rating into its numerous component parts and determine whether each part has been overcome by

clear and convincing evidence. *Id.* When the ALJ determines that the DIME physician's rating has been overcome, the ALJ may independently determine the correct rating. *Lungu v. North Residence Inn*, W.C. No. 4-561-848 (ICAO, Mar. 19, 2004); *McNulty v. Eastman Kodak Co.*, W.C. No. 4-432-104 (ICAO, Sept. 16, 2002).

9. The increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that "when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in §8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The court of appeals has explained that scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. Specifically, the procedures of § 8-42-107(8)(c), C.R.S. only apply to non-scheduled impairments. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000); *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Gagnon v. Westward Dough Operating CO. D/B/A Krispy Kreme* W.C. No. 4-971-646-03 (ICAO, Feb. 6, 2018). The determination of the impairment rating by the DIME physician regarding a scheduled impairment is thus not entitled to presumptive effect, including any prerequisite findings of relatedness. *Morris v. Olsen Heating & Plumbing Co.*, No. 4-980-171-002 (ICAO, July 6, 2018). Accordingly, Respondents' have the burden of overcoming a DIME's extremity impairment rating by a preponderance of the evidence. *Burciaga v. AMB Janitorial Services, Inc. and Indemnity Care ESIS Inc.*, W.C. No. 4-777-882 (ICAO, Nov. 5, 2010); *Maestas v. American Furniture Warehouse and G.E. Young and Company*, W.C. No. 4-662-369 (ICAO, June 5, 2007).

10. The Division of Workers' Compensation Desk Aid #11 for *Impairment Rating Tips* provides in pertinent part that, "[i]mpairment ratings are given when a specific diagnosis and objective pathology is identified. (Reference: C.R.S. §8-42-107(8)(c))." Desk Aid #11 notes that impairment ratings are given when a specific diagnosis and "objective pathology" are identified. The definition of "objective pathology" mentioned in Desk Aid #11 refers "to the identification of a problem, injury, disorder, condition, or disease that can be identified by virtue of objective signs or analysis." *Bryant v. Transit Mix Concrete*, W.C. No. 5-058-044-001 (ICAO, June 5, 2019).

11. As found, because Respondents are challenging DIME Dr. Orgel's upper extremity impairment rating, a preponderance of the evidence is the appropriate burden of proof. Respondents have produced a preponderance of the evidence to overcome Dr. Orgel's opinion that Claimant suffered an 11% left upper extremity impairment rating as a result of his August 29, 2017 admitted industrial injury. Initially, Claimant recounted that on August 29, 2017 an approximately 400 pound piece of meat fell and struck him on the left side, including the top of his left shoulder, and he fell to the ground. On October 4, 2017 Claimant underwent a left shoulder MRI. The MRI revealed minimal infraspinatus tendinopathy and minimal degenerative changes at the left AC joint. By November 7, 2017 Claimant reported to ATP Dr. Cebrian that he was doing well and only concerned with a small amount of pain just above his left hip. Dr. Cebrian noted Claimant had

undergone multiple diagnostics that did not reveal any significant findings. He remarked that Claimant had full range of motion of the left shoulder, left hip, lumbar spine, cervical spine and left leg. Dr. Cebrian thus placed Claimant at MMI with no permanent impairment and determined there was no need for maintenance care. He released Claimant to full duty employment.

12. As found, after Respondents filed a FAL, Claimant underwent a DIME with Dr. Orgel. Dr. Orgel noted that Claimant's October 4, 2017 left shoulder MRI revealed minimal left shoulder infraspinatus tendinopathy without tearing and minimal changes of the AC joint. He diagnosed Claimant with left shoulder impingement. In specifically evaluating Claimant's left shoulder, Dr. Orgel noted range of motion deficits. He concluded that, "based on the MRI of August 4, 2017, there is a range of motion impairment of 11%." He thus assigned an 11% upper extremity impairment rating for Claimant's left shoulder. Finally, Dr. Orgel determined that Claimant reached MMI on the date of his second injury or March 19, 2018. After conducting a records review, Dr. Zuehlsdorff agreed with Dr. Orgel and commented that Claimant's only work-related injury was left shoulder impingement. He explained that the October 4, 2017 left shoulder MRI revealed minimal left shoulder infraspinatus tendinopathy and minimal degenerative changes in the left AC joint. Dr. Zuehlsdorff diagnosed Claimant with "left shoulder syndrome with pathology inclusive of tendinitis per the MRI." He thus agreed with Dr. Orgel's 11% left upper extremity permanent impairment rating based on range of motion deficits.

13. As found, despite Dr. Orgel's DIME opinion and Dr. Zuehlsdorff's supporting conclusions, Respondents have produced a preponderance of the evidence that Dr. Orgel erroneously assigned Claimant an 11% left upper extremity impairment rating. ATP Dr. Cebrian persuasively explained that Claimant's left shoulder condition did not warrant a permanent impairment rating. In reviewing the chronic findings revealed by the MRI and comparing them to his examination findings, Dr. Cebrian determined tendinopathy constituted an unrelated, incidental finding. Moreover, Dr. Cebrian remarked the left shoulder MRI did not reveal objective evidence of any substantial and permanent aggravation, acceleration, or exacerbation of the pre-existing conditions caused by the August 29, 2017 work injury. Dr. Cebrian explained that Dr. Orgel's range of motion deficits demonstrated limitations on a specific date. However, based on the *AMA Guides*, when an examiner is performing an impairment rating and their findings are not in substantial accord with the medical records, they must provide an explanation. Reviewing the entire medical record prior to the DIME, there were multiple evaluations that demonstrated normal range of motion, with a few visits where it was abnormal, but then returned to normal. After several more visits with normal range of motion, Dr. Cebrian released Claimant from care. Dr. Cebrian thus concluded that Claimant had no permanent impairment as a result of his work injury.

14. As found, similarly, Dr. Fall persuasively explained that Claimant did not suffer a permanent left shoulder impairment as a result of his August 29, 2017 work injury. She reasoned that there was no diagnosis of a left shoulder injury. Dr. Fall specified that merely because Claimant exhibited less than full range of motion on the day of the DIME did not mean that the deficits were the result of the work injury. Moreover, Dr. Orgel did

not account for Claimant's report of the resolution of symptoms by November 7, 2017. Finally, the left shoulder MRI was unremarkable without any evidence of internal derangement of the shoulder as a result of the work injury. The MRI specifically exhibited tendinopathy or chronic degeneration of the tendon. The imaging did not reveal any inflammation or tearing. Furthermore, the MRI reflected only mild degenerative changes at the left AC joint. Instead, Claimant only had subjective complaints. Therefore, relying on the *AMA Guides*, Dr. Fall determined "there is no impairment rating for pain complaints without correlating objective findings."

15. As found, Respondents have demonstrated by a preponderance of the evidence that Dr. Orgel erroneously assigned Claimant an 11% left upper extremity impairment rating. The medical records and persuasive opinions of Drs. Cebrian and Fall reflect that Claimant did not suffer left shoulder range of motion deficits based on any objective pathology as a result of his August 29, 2017 work injury. Dr. Orgel failed to correlate a specific diagnosis regarding Claimant's left shoulder with objective signs or analysis. Based on the lack of a permanent impairment attributable to Claimant's work accident, Claimant does not warrant a left shoulder rating. Accordingly, based on the persuasive opinions of Drs. Cebrian and Fall Claimant suffered a 0% permanent impairment as a result of his August 29, 2017 admitted industrial injury.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have overcome Dr. Orgel's DIME opinion regarding Claimant's upper extremity impairment rating. Claimant suffered a 0% left upper extremity impairment rating as a result of his August 29, 2017 admitted work injury.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

ISSUES

- I. Whether Respondents overcame Dr. Pham's DIME opinion by clear and convincing evidence that Claimant's bladder condition is related and subject to a rating.
- II. Whether Claimant established by a preponderance of the evidence that she is permanently and totally disabled.
- III. Whether Claimant established that she is entitled to maintenance medical treatment.
- IV. Whether Claimant established by a preponderance of the evidence that her bladder condition is causally related to her industrial injury.
- V. Whether the medical treatment set forth in Exhibit 16, is reasonable, necessary, and related to Claimant's work injury.
- VI. Whether Claimant is entitled to reimbursement for past expenditures for medical services and supplies.
- VII. What is the appropriate disfigurement award for Claimant due to her industrial injury?
- VIII. Whether Respondent is barred by the doctrine of res judicata and collateral estoppel, from arguing that ALJ Kimberly Turnbow's previous findings regarding Claimant's urinary incontinence condition and need for a second lumbar surgery are not dispositive in the context of a challenge of Dr. Khoi Pham's Division IME opinion that Claimant is entitled to a permanent impairment rating for her incontinence condition.

PROCEDURAL HISTORY

This case was admitted by Respondents, and temporary total and temporary partial disability benefits, as well as medical benefits, have been paid.

After conservative medical care unsuccessfully curtailed Claimant's pain and urinary incontinence, Claimant proceeded to a hearing with ALJ Kimberly B. Turnbow on March 14, 2017 to request an order for lumbar surgery to be performed by Dr. Scott Falci.

By order dated June 26, 2017 (Exhibit 24), Judge Turnbow found and concluded as follows:

- The ALJ finds and concludes that Claimant has met her burden to prove, by a preponderance of the evidence, that Dr. Falci's recommended operative procedure involving a section of her filium

(untethering procedure) is reasonably necessary and relates to the admitted industrial accident. (Conclusions of Law, Turnbow Order, p. 7).

- Both neurosurgeons, Drs. Falci and Shogan, agree that Claimant's urinary incontinence and left leg weakness are caused by her fall at work. Therefore, relatedness of these conditions has been established by preponderance of the evidence. (Conclusions of Law, Turnbow Order, p. 7).
- The ALJ finds credible and persuasive Dr. Falci's theory that a stretched spinal cord suffered in her fall at work in conjunction with Claimant's low-lying conus explains why Claimant suffers from urinary incontinence and left leg weakness. (Conclusions of Law, Turnbow Order, p. 8).
- The ALJ is concerned about the possibility of continuing progressive worsening of the urinary incontinence and left leg weakness conditions, and possible right leg weakness and even bowel incontinence as described by Dr. Falci. This ALJ finds and concludes that all reasonable conservative treatment and diagnostics have been exhausted, and ... that Claimant's conditions are significant and require urgent care. The ALJ notes that Claimant's description of her urinary incontinence was credible and compelling. (Conclusions of Law, Turnbow Order, p. 8).
- Respondents shall pay for a repeat neurosurgical consultation with Dr. Falci and, if he offers a spinal untethering surgery, Respondents shall pay for all reasonable and related pre-operative, operative, and post-operative expenses, according to the Colorado Fee Schedule, that are related to such surgery. (Order, Turnbow Order, p. 9).

After Claimant underwent a surgery as performed by Dr. Falci, and reached MMI as determined by a one-time evaluator, Dr. Brian Harrington, she underwent a Division-sponsored IME by Dr. Khoi Pham on December 14, 2018.

Respondents filed an application for hearing to challenge the DIME with respect to Dr. Pham's impairment rating regarding Claimant's bladder dysfunction. Claimant responded with a claim for permanent total disability, for maintenance care and for reimbursement for past medical expenditures.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was born on April 4, 1965 and was 55 years old at time of the second hearing.
2. Before her injury here, Claimant suffered an injury to her right knee. Claimant ultimately underwent a total knee replacement in July 2014. But by December 2014, Claimant had made a full recovery. On December 2, 2014, her knee surgeon noted that Claimant “had made excellent progress” and released her to “full duty.” (*Exhibit M, p. 609*). The next day, December 3, 2014, Claimant saw Dr. Paulson. At this visit, Dr. Paulsen noted Claimant’s weight to be 238 pounds. (*Exhibit Q, p. 789*).
3. Claimant was injured on July 23, 2015 in the course and scope of her employment as assistant produce manager for Respondent-Employer. On that date, Claimant was pulling a pallet of heavy bags of potatoes. Suddenly the pallet of potatoes began to move extremely fast. As Claimant tried to slow the moving pallet, she turned to face the pallet and was thrown into some double doors. The pallet wheel caught her left shoe, forcing her to fall backwards to the concrete floor on her back and left hip. Because of the industrial accident, Claimant suffered an injury to her low back and a contusion to her sacral nerve.
4. On July 24, 2015, the day after her work accident, Claimant went to the emergency room because of her work injury. At that visit, Claimant’s weight was noted to be 100 kilograms, i.e., 220 pounds. (*Exhibit K, p.62*). Based solely on the December 3, 2014 record of Dr. Paulson and the July 24, 2015 report from the emergency room, Claimant lost 18 pounds once she recovered from her knee injury and was released to full duty.¹
5. Claimant timely reported the back injury, which was admitted by Respondent.
6. Claimant received temporary total disability benefits between August 10, 2015 and January 15, 2016. She returned to work on or about January 16, 2016, at which time she received temporary partial disability benefits which have continued through the date of the second hearing (*Exhibit A, General Admission of Liability dated January 31, 2018*).
7. Claimant is working part-time for Respondent-Employer at a part-time modified position, which includes checking expiration dates for products, changing prices on products as necessary, and returning expired products to a designated location for disposal or redistribution.
8. Claimant received conservative care for her back injury, including physical therapy, three injections, and medications. None of these modalities, however, substantially decreased her low back pain or increased her function.
9. By October 2015, Claimant began to experience the onset of left leg weakness, which would gradually increase with activity. It was also noted that she was experiencing progressive urinary incontinence.

¹ The ALJ acknowledges the record also contains data regarding Claimant’s weight that differs from these figures.

10. Claimant testified at the March 14, 2017 before ALJ Turnbow that she continued to suffer from low back pain and increasing weakness in her left leg despite the conservative care she has had undergone. She testified that she used a cane outside work and relied on carts for balance as much as possible at work. She also testified that her employer would not allow her to use a cane at work. She credibly testified that her left leg weakness was increasing over time. Judge Turnbow found that her testimony was generally “credible and compelling.” (See *Exhibit 24*).
11. On January 3, 2017, Dr. Shogan, who is Board Certified in Neurological Surgery, performed a records review. In his January 2017 report, Dr. Shogan mainly addressed whether the spinal cord untethering surgery proposed by Dr. Falci was reasonable and necessary to treat Claimant’s symptoms from her work injury – which included her urinary incontinence. Dr. Shogan noted in his initial report that Claimant underwent a urologic evaluation that revealed the presence of diminished detrusor function and some stress incontinence. He concluded that those urological findings were most consistent with a possible lower motor neuron abnormality. As a result, he did not think the untethering surgery would relieve Claimant’s symptoms, which included her urinary incontinence. Dr. Shogan did not, however, elaborate on the cause of the lower motor neuron abnormality that he thought was causing Claimant’s incontinence. (*Exhibit X, pp. 272-273*).
12. On February 1, 2017, Dr. Shogan performed an IME and physically examined Claimant. As part of his IME, Dr. Shogan was specifically asked to address whether Claimant’s left leg weakness and incontinence were caused by her accident. Dr. Shogan concluded that:

It is my opinion that Ms. Harper's intermittent left leg weakness and her urinary incontinence are related to her work-related injury of July 23, 2015 (emphasis added). Although her left leg weakness seemed to come on several days after her injury, as did her incontinence, I believe that she may have sustained a musculoskeletal injury, as well as a possible sacral nerve root contusion. I believe that this is responsible for her left leg symptoms and her symptoms of incontinence.
13. In the end, Dr. Shogan clarified that the lower motor neuron abnormality he mentioned in his initial report was most likely caused by a contusion to Claimant’s sacral nerve when she fell at work.
14. Along with Dr. Shogan concluding Claimant’s urinary incontinence was caused when she fell and contused her sacral nerve, the Division Examiner, Khoi Pham, a neurologist, came to the same conclusion. Dr. Pham concluded that the contusion to Claimant’s sacral nerve – which occurred when Claimant fell - was the only known medical cause for Claimant’s urinary incontinence. (*Exhibit AA, pp. 1113-1116*.)
15. After Judge Turnbow’s Order dated June 26, 2017 (*Exhibit 24*), summarized above in “Procedural Background”, Claimant consulted with Dr. Falci, who recommended and then performed a lumbar laminectomy with spinal cord untethering procedure in September 2017. (*Exhibit 12, p. 2*). This surgery was authorized and paid for by Respondent.

16. Although Dr. Paulson was her primary treating physician, he is not Level II Accredited, so Dr. Brian Harrington assessed Claimant's impairment.
17. By report dated August 2, 2018, Dr. Harrington concluded that Claimant was at MMI; that she had a tethered cord syndrome; that she has ongoing oxygen needs that seem to have been highlighted after her surgery; that she has a long smoking history, although there is a report that office spirometry did not show COPD; that severe obstructive sleep apnea was confirmed; that obstructive sleep apnea, combined with here severe obesity (BMI=51), account for her oxygenation problems; that she has treated for depression at one point but that the condition has resolved; that she has a debilitating low back injury and her persistent significant functional impairment; that along with her musculoskeletal problems, this impairment also includes urinary incontinence due to detrusor muscle dysfunction; that her condition is compounded by sero-positive sacroiliitis and severe obesity, but the proximate cause of her impairment was the work related injury. He also noted Claimant's weight was 296 pounds. (*Exhibit 10, pp. 14-15*).
18. As a result of her work injury causing Claimant to be less active, Claimant gained about 76 pounds due to her work injury.
19. In his August 2, 2018 report, Dr. Harrington concluded that, for maintenance care, Claimant will need ongoing medications, including muscle relaxants, NSAIDS, Ibuprofen, nortriptyline and gabapentin. He cautioned her to avoid chronic and daily opioid use. (*Exhibit 10, p. 15*).
20. Dr. Harrington also determined appropriate work restrictions for Claimant. Based on his assessment of Claimant, Dr. Harrington assigned significant work restrictions. The most restrictive aspects were the number of hours she could work each day, the limitation on the number of consecutive workdays she could work, as well as limitations on standing, sitting, and walking. As for permanent work restrictions, Dr. Harrington concluded Claimant should have a 20 pound weight limit lifting, carrying, pulling/pushing; that he would limit her to 4-hour workdays, with only two consecutive work days; that she may walk up to 2 hours, stand up 1 hour and sit up to 2 hours per shift; and that she cannot climb on ladders or stools based on her risk of falling. (*Exhibit 10, p. 15*).
21. As for her permanent impairment, Dr. Harrington assigned a 20% whole person for reduced spinal range of motion and 20% whole person for urinary system impairment because of her bladder disorder. The two ratings combined to a 36% whole person rating. (*Exhibit 10, p. 16*).
22. Respondents filed for a Division-sponsored IME (DIME) after receipt of Dr. Harrington's report.
23. In his report dated December 14, 2018, DIME physician Khoi Pham diagnosed status-post lumbar laminectomies (partial L1 and L3 and total L2, 2 levels) and transection of filium terminale for tethered cord syndrome; agreed with neurosurgeon Dr. Shogan that the mechanism of injury would be contused sacrum (for pain, besides her inflammatory arthropathy) and contused sacral nerve for her incontinence; that she still had the diagnosis of tethered cord syndrome and the procedure which only helped her to be

able to stand up straight; that she was at MMI as of April 18, 2018; and that she had a 38% whole person impairment (13% for specific disorder of the spine, 10% for range of motion and (like Dr. Harrington) 20% for her bladder dysfunction. (*Exhibit 7, p. 4*)).

24. As for the bladder dysfunction, Dr. Pham stated that “I had to rate the bladder dysfunction because other than that the trauma history, I cannot find any other medical cause for this condition.” (*Exhibit 7, p. 4*).
25. As for work restrictions, Dr. Pham opined “Considering all her superimposed medical conditions (spondyloarthropathies, morbid obesity, sleep apnea, s/p right knee replacement and left knee needs to be replaced eventually) she is likely only able for sedentary category work at best.” (*Exhibit 7, p. 4*).
26. For maintenance care, Dr. Pham concluded that Claimant should be allowed to see PA Wetterstein for maintenance care, 3-4 times a year for a couple of years and she be allowed to see “Urology” for another opinion re her incontinence and other therapy recommendations. (*Exhibit 7, p. 5*).
27. Dr. Burris issued three IME reports. Dr. Burris specifically noted in his November 2015, April 2018, and April 2019 IME reports that when he performed Waddell’s testing during each IME for inconsistencies, there were none.
28. In his reports report dated May 10, 2019 and August 6, 2019, Dr. John Burris, Respondents’ independent medical examiner, stated that Claimant reached MMI on April 7, 2018; that she is entitled to a permanent impairment rating of 14% whole person for lumbar dysfunction, but no rating for her urinary incontinence because “it is not clear if this issue is directly related to her work injury”; that she requires maintenance care in the form of follow up visits with PA Wetterstein for medication management and a health club/recreation center for six months; that no permanent work restrictions would be indicated but that participation in a self-directed home exercise program and supervision by PA Wetterstein could allow for staged increases in weight limit and number of hours worked per day. (*Exhibit 12*).
29. In his deposition taken on November 18, 2019, Dr. Burris generally testified consistently with his reports dated May 10, 2018 and August 26, 2019. He also contended that Claimant should be able to work (*p. 11*); that she should be able to manage her urinary incontinence at work with self-catherization and protective garments (*pp. 12, 33-34*); that she should be allowed at least six to eight sessions of directed cognitive behavioral therapy to address her pain issues (*pp.15-16*); that he disagreed with Dr. Paulsen’s recommendations for maintenance treatment (*pp. 16-22*); that the need for oxygen is not work-related since any collapsed lung during surgery would have returned to its normal status (*p. 20*); that Dr. Pham erred by giving a rating for the bladder dysfunction since the condition is not work-related (*pp. 22-23*); that PA Wetterstein and Dr. Paulsen were “coddling” Claimant (*pp. 32-33*); and that Claimant should be placed in the light duty category (*p.33*).
30. Dr. Andrew Castro, another independent medical examiner for Respondent, also prepared two reports dated April 20, 2019 and August 26, 2019. In those two reports, Dr. Castro agreed with Dr. Pham’s impairment rating for the lumbar spine; and that the proper rating should be 22% whole person. (*Exhibit 13, p. 16*).

31. Dr. Castro concluded, however, that Claimant's bladder dysfunction is unrelated to her work accident and should not receive a separate rating; that relating the condition to the injury is "an extremely long reach" because data going into making this diagnosis was progressive weakness, yet multiple providers showed normal neurological function before and after these evaluations, and the normal neurologic function was to sensory, motor, and reflexes; that also EMG studies were negative, and MRIs did not highlight thickening of the filium terminale but instead were relatively normal findings with no stenosis; that surgical intervention for a tethered cord is unrelated to the injury; and that recent evaluations highlighted no substantial alteration in her symptoms or exam findings from the preoperative state. (*Exhibit 13, p. 15*).
32. As for maintenance care, Dr. Castro contended that Claimant should continue home exercises and be allowed a 6-month gym membership; that she not be on narcotic medications; and that urology evaluations and follow-ups are unrelated to the claim. (*Exhibit 13, p. 17*).
33. For restrictions, Dr. Castro contended that Claimant should work 4-5-hour shifts, with two days on and one day off, which would be five shifts per week. (*Exhibit 13, p. 17*).
34. In his deposition, Dr. Castro testified consistently with his two reports. He also testified that he is an orthopedic surgeon. He stated that a tethered cord occurs when the very tip of the spinal cord sometimes has a remnant of some fibrous tissue that tethers it down to the lower sacrum; that a tethered cord can be caused by trauma, penetrating trauma, prior surgery or spinal cord injury; that sometimes it causes pain or incontinence; and that since the surgery did not improve her symptoms, he could not explain Claimant's symptoms. (*Castro Tr., pp 14-16*).
35. In his deposition, Dr. Castro explained that there are many causes of incontinence, but in this case "you've got more of a plumbing problem ... particularly in a female that's morbidly obese and has previous vaginal deliveries...it would be expected...in middle age that's very common." (*Castro Tr., p. 20*). But, Dr. Castro did not distinguish between stress incontinence and urge incontinence with any degree of specificity. He basically said they are "almost the same thing." (*Castro Tr., p. 20*). His lack of specificity may reveal either a lack of knowledge about the difference or an unwillingness to agree that urge incontinence aligns with a sacral nerve contusion as concluded by Dr. Shogan.
36. In his deposition, Dr. Castro also disagreed with all the recommendations made by Dr. Paulsen over maintenance medical care. (*Castro Tr., pp. 24-27*).
37. Dr. Castro also contended that Claimant's need for oxygen stems from her smoking, her COPD and living at higher elevation. As for her CPAP machine, he did not see a causal relation to the work injury. (*Castro Tr., p. 26*). Despite having strong opinions about these pulmonary matters, Dr. Castro is not a pulmonologist and did not testify about any specialization in pulmonary medicine.
38. Dr. Mark Paulsen was deposed on July 3, 2019 (*Exhibit 17*). Among other things, he testified to the following:
- He is a board-certified family medicine practitioner who has treated workers' compensation patients. (*Paulsen Tr. p. 5-6*).

- He served as supervising physician for physician assistant Dianne Wetterstein, who was the primary treating individual for Claimant through the date of the deposition. (*Paulsen Tr. 7-10*).
- As of the date of his deposition he had only met with Claimant once, but he reviewed all of PA Wetterstein's reports and approved of all her recommendations.
- He agreed with PA Wetterstein's restriction of no lifting, pushing, or pulling greater than eight pounds with a four-hour workday, three days per week.
- He also has substantial experience treating patients with urinary incontinence. (*Paulsen Tr. p. 25*).
- He agreed with an assessment of "urinary incontinence", explaining that she has two kinds of incontinence: Stress incontinence and urge incontinence.
- He agreed with Dr. Pham that Claimant should be allowed to see PA Wetterstein for maintenance care three to four times a year for a couple of years.
- He also agreed with Dr. Pham that she should be allowed to see her urology doctor for another opinion about her incontinence, which would be part of her maintenance plan. He also concluded that, as a maintenance treatment plan, it is reasonable for Claimant to have "Always" pads, extra heavy, two bags per week and cloth urinary pads for bed, four pads, two times per year
- As for self-catheterization, he would defer to Claimant's urologist as to the reasonableness and necessity.
- For oxygen and CPAP treatment, he concluded that Claimant's need for these therapies is not directly related to her industrial injury, but it is probably indirectly related based on Claimant's weight gain, morbid obesity and inactivity. He stated that, if her weight gain is proven to be causally related to inactivity and other events, medication or other, after the industrial accident, the need for oxygen would be work-related, or accident-related, specifically. (*Paulsen Tr. p. 28*).
- He stated that Claimant's list of medical supplies related to oxygen delivery are reasonable and necessary.
- He stated that the use of a cane, wheelchair and a "grabber" were appropriate. Likewise, Claimant should have the benefit of a treadmill or recumbent bike, either at home or at a gym. She should also have pool therapy because of her poor recovery after surgeries.
- He concluded that Claimant is not employable full-time, but is possible that she could work a sedentary job and could transition into full-time if she built the stamina necessary, her employer had flexibility to allow her to deal with her urinary incontinence, and she had to do only minimal lifting, pushing, and pulling. (*Paulsen Tr. p. 37*).

39. By report dated April 29, 2019, Dr. Carsten Sorenson, a urologist, noted that Claimant had mild stress urinary incontinence before her injury, and that post injury she still had

mild stress urinary incontinence, but significant symptoms consistent with urge urinary incontinence. (*Exhibit 14*).

40. By report dated May 13, 2019, PA Wetterstein stated that Claimant “will work four-hour days, three days per week.”

41. By report dated August 2, 2019, urologist Dr. Sorenson concluded that:

- Claimant has worsening urinary incontinence following her back injury;
- Claimant reports still having urinary leakage issues and more difficulty emptying her bladder; and
- Claimant should start self-catherization to be performed three times per day. (*Exhibit 25*).

42. By report dated December 2, 2019, PA Wetterstein restricted even more Claimant’s ability to work. She ordered Claimant to decrease her work hours to three hours per shift: that she work Tuesday, Thursday and Saturday: that she requires breaks during the shift as needed; that she do no repetitive bending. She also recommended counseling. (*Exhibit 26*).

43. By report dated February 4, 2020, Dr. Paulsen also increased Claimant’s restrictions to track the restrictions issued by PA Wetterstein. The work restrictions assigned by Dr. Paulsen also limited Claimant to working a “maximum [of] 3 hours per shift, 3 days per week, Tuesday, Thursday, Saturday, with no repetitive bending, and needs hourly break.” (*Exhibit 27*).

44. Claimant testified at hearing as follows:

- She has two years of college and no specialized education.
- She worked as assistant grocery manager for Respondent-Employer since 2013.
- Before her injury she worked an average of 60 hours per week, six to seven days per week.
- Before the injury she was a bigger person but a lot more muscular, so much so that she could throw loads as well as several men with whom she worked.
- Her job before injury required handling 50 pounds while unloading trucks and placing boxes on shelves.
- Her pre-injury weight was 224 pounds.
- She had mild episodes of urinary incontinence pre-injury, but never had to wear pads.
- She had no back or leg problems, or any physical condition that limited her ability to do her job before her injury.
- She injured her lower back and left leg when she was knocked to the floor based on the actions of a truck driver.
- Since her injury she has undergone injections, physical therapy, medications and surgery.

- Two weeks after the injury “I stood up from the couch and my bladder just emptied.
- After Judge Turnbow ordered a surgical consult with Dr. Falci, she underwent a laminectomy and an attempt to untether the spinal cord as performed by Dr. Falci.
- Before the surgery she had a pain level of 8 to 9 and she was unable to stand up.
- Before surgery her urinary incontinence was so serious that her leakage was “like cups” and it would soak her pants clear down into her shoes.
- She could hardly sleep because of leakage in her bed requiring her to take showers.
- That VESI care and other medications did not help her condition.
- Her lung collapsed during surgery.
- She had no problems with breathing before surgery.
- She has used oxygen therapy since surgery.
- The surgery helped her posture but did not correct her urinary incontinence.
- That post surgery her pain was reduced for four months but since then it has progressively worsened, because she returned to work.
- Her left leg problem persists. Her leg swells and she has sharp pains down her buttocks and into her leg and across the bottom of her foot;
- She uses a cane every day, a walker when she goes on long walks, and a wheelchair periodically.
- She uses a shopping cart at work to lean against for stability and to prevent her from falling.
- Her incontinence condition has gotten worse after the surgery. It has ruined her life. She must use pads due to leakage and had to start self-catheterization as of August 2019.
- Self-catheterization involves sitting on a stool in her home bathroom in front of a table set up with a mirror, flashlight and sanitary cloth with her catheters and the urine bag. She has to use the mirror to see where the catheters are going in, and she has to attach the catheter to the bag. The process takes about 15 minutes.
- She cannot do this process at work because she would have to bring in her table and supplies to work, and the bathroom is not sanitary enough.
- She has been self-catheterizing three times daily at home since August 2019.
- She could not follow her regular catheterization procedure at a regular job because of the need to bring her table and supplies and it would not be a private issue any longer.

- If she had an accident at work, she would not return because of embarrassment.
- She continues to have lower back pain which extends from the center point to the left and right sides of the body, along the area of the back a bit lower than the belt line down her left leg and around her left foot.
- She takes Hydrocodone, Flexeril and Ibuprofen for pain, but not at work.
- She has gained 75 pounds since the injury.
- The weight gain has caused her to be depressed.
- She cries often, sometimes at work.
- She currently works three hours per day, three days per week, a schedule which has changed from four hours per day, three days per week.
- PA Wetterstein prescribed specific days to work, Tuesday, Wednesday and Thursday, a schedule which the employer agreed to accommodate.
- Currently her job involves pushing a shopping cart to repack eggs, identify product which needs to be marked down, throw away expired product, and take certain product to a designated area to be marked down.
- She has not been disciplined for not completing her tasks during her shift.
- She takes a 20 to 30-minute break every hour to hour and a half because her back is too painful to continue.
- Her employer has accommodated her break schedule.
- Since her injury she has done no heavy work as she did pre-injury.
- Based on vocational expert Katie Montoya's statement that Claimant should be able to work at the Ski Depot in Winter Park and Granby, Claimant applied at the Ski Depot in Fraser. That store is located about 2 miles from her current job. She went online and completed an application for employment for a part-time cashier position, a seasonal position only. She was interviewed telephonically by a representative of Vail Resorts who told her that she needed knowledge of the equipment being used so she could sell it. She told him that she did not have that knowledge. She also told him about her availability only three days per week based on a doctor's restriction. She never received a call back from that employer.
- She has gone from 16 hours per week at her part-time job to 9 hours.
- She does not believe that she can keep performing that job because her condition has become progressively worse over time.

45. She testified about Exhibit 16, a list of medical supplies and services that she needs. She testified that she needs and would accept the following:

- A specific dietary plan supervised by a dietician.
- Bariatric surgery if prescribed.

- Incontinence pads, extra heavy, two bags per week, which her insurance company and she have been paying for since August 2015.
- Periodic visits with Dr. Paulsen who has assumed direct care.
- Wipes, which she has bought herself.
- Urinary pads for the bed, which she has bought on her own.
- Self-Catheterization supplies.
- Oxygen and oxygen supplies.
- Cane which she bought.
- Grabber which she has bought.
- Large ball, small ball, one and 3-pound weights, balancing pad, recumbent bike recommended by her physical therapist.
- Pool therapy prescribed by PA Wetterstein.

46. During her testimony, Claimant asked for a bathroom break, cried several times, and changed chairs because of discomfort.

47. The ALJ had a chance to observe Claimant during the first day of hearing and during her testimony. During the hearing, Claimant appeared physically uncomfortable and had poor posture. While sitting by her attorney, she also appeared to have a flat affect and looked depressed. Claimant's flat affect and depressed appearance continued through the entire hearing. Claimant's overall appearance and body language exhibited a sense of despair, hopelessness and lethargy. As a result, the ALJ finds Claimant's overall demeanor to match the degree of disability Claimed by Claimant and set forth in the records of her medical providers and vocational expert. Together with Claimant's visual demeanor, her manner of speech, tone of voice, and lack of hesitancy while testifying further added to her credibility. As a result, the ALJ finds Claimant to be credible and her testimony to be persuasive.

48. Claimant revealed her bodily disfigurement to the ALJ, who noted a vertical surgical scar on her back on the upper lumbar area measuring about 3 ½ to 4 inches long up to about a three quarters of an inch wide; and a very faint red pic line scar by her right shoulder that is about 1 ½ inches long and 1/16th of an inch wide.

49. In a report dated July 16, 2019, Gail Pickett, Claimant's vocational expert concluded that:

- Claimant continues to work for Respondent-Employer in a sheltered position.
- She considers the job to be sheltered employment because she is allowed to take an abnormal number of breaks, she can sit down at work, she only does the tasks that she can physically perform, she can enlist others to help her, and she goes home early.
- This is not a job that can be replicated in the economy.

- The job causes Claimant a great deal of pain, so she will be unable to continue it for the long term.
- Claimant only has a high school diploma, she has minimal skills, she has never held a job in the sedentary or light category of work, and she has only worked in retail establishments or in cleaning occupations which are not jobs that she will be able to do because of work restrictions.
- Her current work restrictions of having to have days off in between days makes it impossible for Claimant to locate alternative employment.
- Her labor market in the Colorado mountains has limited choices for employment.
- She is an older worker at 54, and older workers experience are at a disadvantage.
- She cannot compete with younger workers who are better educated, who have work experience in the sedentary category of work and who do not have severely limiting work restrictions.
- She suffers from incontinence.
- Given all these factors, she concluded that Claimant is unable to earn any wages in any regular occupation.

50. At hearing Ms. Pickett testified consistent with the opinions expressed in her July 16, 2019 report (*Exhibit 8*), but gave additional updates and clarifications, including the following:

- She spoke about her resume, which reflects 35 years of experience as a vocational evaluator (*Exhibit 29*).
- The restrictions she used for the opinions in her report were a work schedule of three days per week, four-hour workdays, with two days off in a row; changes in her work environment to make it ergonomically correct; and eight pounds of lifting, with occasional bending only.
- Since the date of her report, she gained an understanding that Claimant's restrictions had changed so that her work schedule decreased to a three-hour shift, three days per week, and that Dr. Paulson had, in a February 4, 2020 report directed Claimant to take a break every hour, while the eight pound lifting and occasional bending restrictions remained the same.
- She has familiarity with the labor market in question based on her personal experience living and owning a business in Winter Park.
- Most businesses in the relevant labor market are small "mom and pop" operations.
- The volume of business in that labor market varies seasonally.
- Claimant is unable to perform the duties of the job she held at time of injury.

- Claimant's current job, which involves markdowns in the dairy department and general merchandise department of the grocery store, does not exist in Claimant's labor market, and is sheltered employment.
- She based her opinion that Claimant works in sheltered employment not available in the local labor market on the number of breaks tolerated by her employer, her freedom to take a break whenever she wants, her freedom to not complete her work without negative consequences, and her ability to select the days she wants to work.
- She is unaware of jobs in the economy that pay health insurance when an employee only works 12 hours per week.
- Claimant is not employable in another sheltered employment within her labor market.
- Her age makes her less likely to be employed.
- Her urinary issues, regardless of causation, severely impact her ability to work due to embarrassment, odor and uncomfortableness of the situation.
- Use of an assistive device to walk would impact her ability to obtain and retain employment.
- The existence of a handicapped parking sticker or placard could also impact her employability.
- Claimant's limited computer skills and depression, as manifested by crying, would also degrade her employability.
- She disagreed with Dr. Burris' opinion that Claimant should be able to self-catheterize at work. She contended that it would be difficult to self-catheterize at work due to time constraints, hygiene issues, questions about ability to store a table and supplies, and potential embarrassment.
- The job identified by vocational expert Katie Montoya at Ski Depot as a cashier was inappropriate for Claimant since she has no experience with the products and could not effectively sell them, she has to stand for long periods, there may be a unisex bathroom shared by customers, there are no shopping carts to use to move items at work, and she would have to put items away, take items out, put the items on shelves and hang them on racks, all tasks Claimant could not do.
- That Dr. Harrington gave more liberal restrictions did not change her opinions about employability.

51. In her report dated November 4, 2019, vocational expert Katie Montoya concluded that Claimant was employable, but identified only one category of job at two locations in Claimant's labor market: Cashier at Ski Depot in Winter Park and Fraser. (*Exhibit 9*).

52. At hearing Ms. Montoya concluded that the job at Ski Depot which she had identified in her report was no longer appropriate for Claimant based on PA Wetterstein's and Dr. Paulsen's recent change of restrictions to three-hour workdays, three days per week.

(*Tr.*, p. 97). Ms. Montoya offered no other appropriate position for Claimant in the economy that existed at the time of the first hearing.

53. Claimant's surgery was complicated by a collapsed lung which required her to stay in the hospital about two weeks. (*Exhibit 12*, p. 2).
54. Due to her work injury, Claimant has become less active, depressed, and unable to control her weight. As a result of her work injury, Claimant has gained approximately 76 pounds.
55. There is no evidence in the record to establish that Respondents appealed ALJ Turnbow's order dated June 26, 2017.
56. Claimant's current work for Employer is sheltered.
57. Claimant is unable to earn any wages in the same or other employment.
58. Claimant's urinary incontinence and need for medical treatment for such condition was caused by her work injury when she suffered a contusion to her sacral nerve.
59. Claimant requires maintenance medical treatment to relieve her from the effects of her work injury and to maintain MMI.
60. Claimant requires maintenance medical treatment for her back injury and urinary incontinence.
61. Based on the General Admission of Liability dated January 31, 2018, Claimant's average weekly wage at that time was \$1,012.55 and her temporary total disability rate was \$675.06. As a result, Claimant's PTD rate is \$675.06. (*Exhibit A*).

CONCLUSIONS OF LAW

Based on the specific findings above of fact, the Judge draws these conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1).

The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

Unless stated otherwise, Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). A DIME physician's opinions concerning MMI and impairment, however, carry presumptive weight under § 8-42-107(8)(b)(III), C.R.S.; see *Yeutter v. Indus. Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this

paragraph (b) may be overcome only by clear and convincing evidence.” *Id.* Subparagraph (II) is limited to parties’ disputes over “a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI].” § 8-42-107(8)(b)(II). “Nowhere in the statute is a DIME’s opinion as to the cause of a claimant’s injury similarly imbued with presumptive weight.” *See Yeutter*, 2019 COA 53 ¶ 18. Accordingly, a DIME physician’s opinion carries presumptive weight only with respect to MMI and impairment. *Id.* ¶ 21.

In deciding whether a party has met the burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A worker’s compensation case is decided on its merits. C.R.S. § 8-43-201.

The ALJ’s factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng’g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

I. Whether Claimant established by a preponderance of the evidence that she is permanently and totally disabled.

To prove her claim that she is permanently and totally disabled, Claimant shoulders the burden of proving by a preponderance of the evidence that she is unable to earn any wages in the same or other employment. Sections 8-40-201(16.5)(a) and 8-43-201, C.R.S. (2003); *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Yeutter v. Indus. Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53 ¶ 26. Claimant must also prove the industrial injury was a significant causative factor in the PTD by demonstrating a direct causal relationship between the injury and the PTD. *Joslins Dry Goods Co. v. Indus. Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001); *Wallace v. Current USA, Inc.* W.C. No. 4-886-464 (ICAO, Dec. 24, 2014).

The term “any wages” means more than zero wages. *See Lobb v. Indus. Claim Appeals Office*, 948 P.2d 115 (Colo. App. 1997); *McKinney v. Indus. Claim Appeals Office*, 894 P.2d 42 (Colo. App. 1995). In weighing whether Claimant can earn any wages, the ALJ may consider various human factors, including Claimant’s physical

condition, mental ability, age, employment history, education and availability of work that Claimant could perform. *Weld County Sch. Dist. Re-12 v. Bymer*, 955 P.2d 550 (Colo. 1998); *Yeutter* 2019 COA 53 ¶ 26. The ALJ may also consider Claimant's ability to handle pain and the perception of pain. *Darnall v. Weld County*, W.C. No. 4-164-380 (ICAO. Apr. 10, 1998). The critical test is whether employment exists that is reasonably available to Claimant under her particular circumstances. *Weld County Sch. Dist. Re-12 v. Bymer, supra*; *Blocker v. Express Pers.* W.C. No. 4-622-069-04 (ICAO, July 1, 2013.). Whether Claimant proved inability to earn wages in the same or other employment presents a question of fact for resolution by the ALJ. *Best-Way Concrete Co. v. Baumgartner*, 908 P.2d 1194 (Colo. App. 1995).

As a matter of public policy, PTD benefits may be awarded even if Claimant has held, or currently holds, some type of post-injury employment where the evidence shows the claimant is not physically able to sustain the post-injury employment, or that the employment is unlikely to become available to the claimant in the future in view of the particular circumstances. *Joslins Dry Goods Co. v. Indus. Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001); *Mccormick v. Exempla Healthcare* W.C. No. 4-594-683-07 (ICAO, Apr. 1, 2014). A worker's ability to secure sheltered or occasional employment under rare or unusual circumstances does not preclude a determination of PTD. *In re Reynal*, W.C. No. 4-585-674-05 (ICAO, Dec. 10, 2012). If the evidence shows that the claimant is not physically able to sustain post-injury employment or the employment is "unlikely to become available to a claimant again in view of the particular circumstances," the ALJ need not conclude that Claimant was capable of earning wages. *Joslins Dry Goods Co. v. Indus. Claim Appeals Office*, 21 P.3d 866. 868 (Colo. App. 2001).

This ALJ finds and concludes Claimant has proven, by a preponderance of evidence, that due to the restrictions that flow directly from her work injury she is permanently and totally disabled. Most important, the ALJ credits Claimant's testimony as it relates to her development of symptoms and limitations after her work injury. This includes her limited ability to engage in activities of daily living, including physical activities necessary to obtain and maintain employment.

The ALJ also credits the opinions of PA Wetterstein and Dr. Paulsen which set forth Claimant's work restrictions due to her work injury.

Those restrictions include:

- Working a maximum of 3 hours per shift.
- Working no more than 3 days per week such as Tuesday, Thursday and Saturday.
- Claimant cannot work two straight days. There must be a day off between any two workdays.
- No lifting, pushing, or pulling greater than eight pounds.
- No repetitive bending.

The ALJ credits their opinions regarding Claimant's restrictions because they align with the medical record from Claimant's treating providers, Claimant's testimony,

and the restrictions issued by other providers, such as Dr. Harrington, who assessed and determined Claimant's permanent impairment. While Dr. Harrington's restrictions might not have been as restrictive when issued, they resembled the restrictions issued by PA Wetterstein and Dr. Paulsen at that time and before Claimant's restrictions were reduced from four to three hours for each workday. And, Dr. Harrington also restricted Claimant to no more than 2 hours per day of sitting or standing while at work which is in line with Claimant's severely restricted capacity to work.

The ALJ also credits and finds persuasive the testimony of Claimant's vocational expert, Gail Pickett, who credibly explained Claimant's physical restrictions and human factors that – collectively - support her opinion that Claimant is unemployable, and that she is simply working in a sheltered position. Those factors include, but are not limited to, the following:

- She considers Claimant's current part-time job to be sheltered employment because she is allowed to take an abnormal number of breaks, she can sit down at work, she only does the tasks that she can physically perform, she can enlist others to help her, and she goes home early.
- She also based her opinion that Claimant works in sheltered employment not available in the local labor market on Claimant's freedom to not complete her work without negative consequences, and her ability to select the days she wants to work.
- She is unaware of jobs in the economy that pay health insurance when a worker only works 12 hours per week.
- This is not a job that can be replicated in the economy.
- The job causes Claimant great pain, so she will be unable to continue it for the long term.
- Claimant only has a high school diploma, she has minimal skills, she has never held a job in the sedentary or light category of work, and she has only worked in retail establishments or in cleaning occupations which are not jobs that she will be able to do because of work restrictions.
- Her current work restrictions of having to have days off in between days makes it impossible for Claimant to locate alternative employment.
- Her labor market in the Colorado mountains, about which Ms. Pickett has personal experience because she owned a business in the area, has limited choices for employment.
- Claimant is an older worker at 54, and older workers experience are at a disadvantage.
- She cannot compete with younger workers who are better educated, who have work experiences in the sedentary category of work and who do not have severely limiting work restrictions.
- She suffers from embarrassing and inconvenient incontinence.
- The restrictions she used for her report were a work schedule of three days per week, four-hour workdays, with two days off in a row; changes in her work

environment to make it ergonomically correct; and eight pounds of lifting, with occasional bending only.

- Since the date of her report, Claimant's restrictions had changed so that her work schedule decreased to a three-hour shift, three days per week, and that Dr. Paulson had, in a February 4, 2020 report directed Claimant to take a break every hour, while the eight pound lifting and occasional bending restrictions remained the same.
- Claimant is unable to perform the duties of the job she held at the time of her injury.
- Claimant's current job, which involves markdowns in the dairy department and general merchandise department of the grocery store, does not exist in Claimant's labor market, and is sheltered employment.
- She is unaware of jobs in the economy that pay health insurance when a worker only works 12 hours per week.
- Claimant is not employable in another sheltered employment within her labor market.
- Her urinary issues, regardless of causation, severely impacts her ability to work due to embarrassment, odor and uncomfortableness of the situation.
- Use of an assistive device to walk would impact her ability to obtain and retain employment.
- The existence of a handicapped parking sticker could impact her employability if seen by a prospective employer when Claimant arrives to apply for a job.
- Claimant's limited computer skills and depression, as manifested by crying, would also impair her employability.
- She disagreed with Dr. Burris' opinion that Claimant should be able to self-catheterize at work. She concluded that it would be difficult to self-catheterize at work due to time constraints, hygiene issues, questions about ability to store a table and supplies and potential embarrassment.
- The job originally identified by vocational expert Katie Montoya at Ski Depot as a cashier was inappropriate for Claimant since she has no experience with the products and could not effectively sell them, she has to stand for long periods, there may be a unisex bathroom shared by customers, there are no shopping carts, and she would have to put items away, take items out, put the items on shelves and hang them on racks, all tasks she could not do.
- She was not surprised that Claimant did not get a call back from hiring agent for the Ski Depot at Granby because Claimant has no experience skiing.
- That Dr. Harrington gave more liberal restrictions does not change her opinions about employability.

The ALJ also credits that portion of Respondent's vocational expert, Katie Montoya, which supports a finding that Claimant is unemployable. This includes her testimony that she was unaware of any jobs in Claimant's local labor that Claimant could perform based on Claimant's most recent work restrictions.

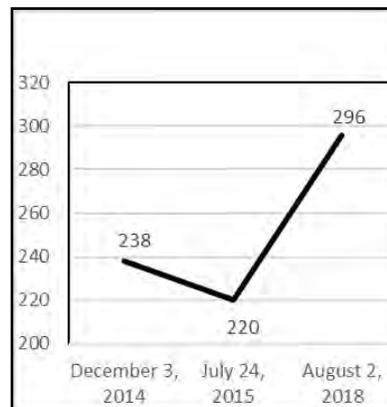

This ALJ does not find Dr. Burris’ opinions regarding Claimant’s restrictions which flow from the work injury to be credible or persuasive for many reasons. Dr. Burris was asked whether Claimant’s weight gain of over 50 pounds since her work injury was due to her work injury. Dr. Burris testified that Claimant’s weight gain was not due to her work injury. Dr. Burris testified that Claimant was “already on the pathway of gaining more weight” due to her knee replacement in 2014. The ALJ has reviewed the record to determine whether Dr. Burris’ conclusion is supported by the record or whether he “cherry-picked” the data to support his conclusion.

This ALJ’s review of the record revealed the following data:

- In December 2014, Claimant’s knee surgeon noted Claimant had made a full recovery after having a knee replacement. He specifically noted Claimant “had made excellent progress.” He also released Claimant to “full duty.” (*Exhibit M, p. 609*). Then, on December 3, 2014, Dr. Paulsen noted Claimant’s weight was 238 pounds. (*Exhibit Q, p. 789*).
- On July 24, 2015, the day after her work accident, Claimant went to the emergency room because of her work injury. At that visit, Claimant’s weight was noted to be 100 kilograms, i.e., 220 pounds. (*Respondent’s Exhibit K, p.62*).
- On August 2, 2018, Dr. Harrington noted Claimant’s weight was 296 pounds. (*Respondent’s Exhibit M, p.655*).

A simple table and chart with the data selected from the record by this ALJ demonstrates Claimant lost weight after she recovered from her knee injury. As a result, the data shows the exact opposite of what Dr. Burris claims. The data shows Claimant was on a pathway of losing weight rather than on a pathway of gaining weight.²

| Date | Pounds |
|------------------|--------|
| December 3, 2014 | 238 |
| July 24, 2015 | 220 |
| August 2, 2018 | 296 |

² This ALJ acknowledges the record also contains data regarding Claimant’s weight that differs from the data in the table and chart. The point, however, is that when an expert cherry-picks data, and does not say so, the overall reliability of their opinion – and credibility - is diminished.

Dr. Burris also testified about certain observations he made during his assessment and examination of Claimant and which he noted in his report. For example, he was asked by Respondent's counsel about the following statement in his 2019 report:

Pain behaviors present with wincing on range of motion exam today. She walks in from the waiting area without significant problems, however (emphasis added).

He was then asked to explain what he is talking about. Dr. Burris testified that:

So those were somewhat inconsistent, to see someone get up out of a chair and walk back, let's say, a hundred feet to the exam room and then during the examination having difficulty with just simple range of motion is typically not consistent (emphasis added).

He was then asked, "What if any impact did that have on your opinions that you formed as a result of this examination?"

Dr. Burris then stated:

Well, you have to be concerned that the pain symptoms that are presented when no one's watching versus when someone is asking them to move are inconsistent. So, I'm concerned that the symptoms, perhaps, are embellished (emphasis added).

The ALJ finds several problems with Dr. Burris' testimony outlined above. First, Claimant states she has pain because of her back injury. As a result, it is not unreasonable for Claimant to have back pain with certain range of motion maneuvers that test the limits of her range of motion.

Second, Dr. Burris suggests Claimant did not exhibit significant pain behaviors when she thinks no one is watching and while walking back to the examination room but does exhibit pain behaviors under formal examination. Yet the only maneuver Dr. Burris documents as causing Claimant back pain is "left lateral bending." Thus, if the only maneuver that caused Claimant to have low back pain was left lateral bending, why would Claimant have back pain while walking in an upright position back to the examination room?

Third, each time Dr. Burris seeks to discredit Claimant with his personal observations – which the ALJ finds ill supported - he uses a qualifier. For example:

- She walks in from the waiting room without "significant" problems. So, the ALJ finds Claimant still had problems walking from the waiting room to the examination room.
- The way she walked from the waiting room when compared to how she presented during the physical examination was "somewhat" inconsistent. As a result, the ALJ finds her walking and physical examination were also consistent.

- He was concerned that “perhaps” she was embellishing her symptoms. Dr. Burris, however, specifically noted in his November 2015, April 2018, and April 2019 IME reports that when he performed Waddell’s testing during each IME for inconsistencies, there were none. As a result, the court credits the lack of Waddell findings as noted in his report versus Dr. Burris’ haphazard assessment methods for determining whether Claimant might be embellishing her symptoms.

Based on the totality of the evidence, the ALJ finds Claimant to be credible and that she is not embellishing her symptoms.

Given the credible opinions of PA Wetterstein and Dr. Paulsen, both vocational experts and Claimant’s credible testimony, this ALJ finds and concludes Claimant has established by a preponderance of the evidence that due to the restrictions that flow directly from her work injury she is unable to earn any wages for another employer. While she is earning minimal wages at her current employer, the Employer is providing this job, with attendant health insurance benefits, as an act of charity and that the job is sheltered employment, an invented job, and not one that exists in the economy. Thus, much like the ruling in *Gruntmeir v. Tempel & Esgar, Inc.*, 730 P2d. 893 (Colo. App. 1986), this ALJ finds that Claimant is not precluded from receiving permanent, total disability benefits beginning on the date of MMI, April 18, 2018. As a result, the ALJ finds and concludes Claimant has established by a preponderance of the evidence that she is permanently and totally disabled.

This ALJ also finds and concludes that even if the urinary incontinence condition were not work-related, this ALJ would reach the same conclusion because this ALJ must consider Claimant’s overall physical and mental health, regardless of causation and this ALJ finds and concludes Claimant’s back injury is the significant causative factor for her work restrictions, the inability to obtain and maintain employment, and the resulting permanent total disability.

II. Whether Claimant established that her bladder condition is causally related to her industrial injury.

A DIME physician’s opinions over MMI and impairment carry presumptive weight under § 8-42-107(8)(b)(III), C.R.S.; see *Yeutter v. Indus. Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. Under the statute, “[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence.” *Id.* Subparagraph (II) is limited to parties’ disputes over “a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI].” § 8-42-107(8)(b)(II). “Nowhere in the statute is a DIME’s opinion as to the cause of a claimant’s injury similarly imbued with presumptive weight.” See *Yeutter*, 2019 COA 53 ¶ 18. Accordingly, a DIME physician’s opinion carries presumptive weight only over MMI and impairment. *Id.* ¶ 21.

Moreover, a pre-existing disease or susceptibility to injury does not disqualify a claim for medical benefits if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical

treatment. See *Duncan v. Indus. Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics*, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

This ALJ is persuaded that Claimant's current severe and debilitating urinary incontinence is injury related based on the following evidence:

- Dr. Sorenson, a urologist (none of the other experts have this specialty) documents a new type of urinary incontinence, urge urinary incontinence, that did not exist before injury.
- Claimant credibly testified that the incontinence problem was mild and only occasional before her injury, while her problem after the injury became severe, constant, and progressively worse.
- On January 3, 2017, Dr. Shogan, who is Board Certified in Neurological Surgery, performed a records review. In his January 2017 report, Dr. Shogan mainly addressed whether the spinal cord untethering surgery proposed by Dr. Falci was reasonable and necessary to treat Claimant's symptoms from her work injury – which included her urinary incontinence. Dr. Shogan noted in his initial report that Claimant underwent a urologic evaluation that revealed the presence of diminished detrusor function and some stress incontinence. He concluded that those urological findings were most consistent with a possible lower motor neuron abnormality. As a result, he did not think the untethering surgery would relieve Claimant's symptoms, which included her urinary incontinence. Dr. Shogan did not, however, elaborate on the cause of the lower motor neuron abnormality that he thought was causing Claimant's incontinence.
- On February 1, 2017, Dr. Shogan performed an IME and physically examined Claimant. As part of his IME, Dr. Shogan was specifically asked to address whether Claimant's left leg weakness and incontinence were caused by her accident. Dr. Shogan concluded that:

It is my opinion that Ms. Harper's intermittent left leg weakness and her urinary incontinence are related to her work-related injury of July 23, 2015 (emphasis added). Although her left leg weakness seemed to come on several days after her injury, as did her incontinence, I believe that she may have sustained a musculoskeletal injury, as well as a possible sacral nerve root contusion. I believe that this is responsible for her left leg symptoms and her symptoms of incontinence.

- In the end, Dr. Shogan clarified that the lower motor neuron abnormality he mentioned in his initial report was caused by a contusion to Claimant's sacral nerve when she fell at work.
- Both neurosurgeons, Drs. Falci and Shogan, agreed at the time of the hearing before ALJ Turnbow that Claimant's urinary incontinence and left leg weakness were caused by her fall at work.

- Along with Dr. Shogan concluding Claimants urinary incontinence was caused when she fell and contused her sacral nerve, the Division Examiner, Khoi Pham, a neurologist, came to the same conclusion. Dr. Pham concluded that the contusion to Claimant's sacral nerve – which occurred when Claimant fell - was the only known medical cause for Claimant's urinary incontinence.
- Neither Dr. Burris nor Dr. Castro have credibly explained why Claimant's urinary incontinence drastically worsened - and she developed urge incontinence - after her work injury except to point to Claimant's weight gain after her injury, which this ALJ finds is related. Drs. Burris and Castro argue that Claimant's serious incontinence - urge incontinence - developed coincidentally after the injury, an opinion that is not credible under the facts and circumstances of this case.
- Dr. Paulsen, PA Wetterstein, Dr. Shogan, and Dr. Pham agree that the urinary incontinence condition is injury related.
- Dr. Pham's opinion that he could not find another explanation for Claimant's urinary incontinence other than trauma is not a failure of diagnosis or causation. Instead, this ALJ reasonably infers that Dr. Pham – who is a neurologist - considered alternative explanations for the condition and rejected them. In this regard, Dr. Pham concluded: "I had to rate the bladder dysfunction because other than the trauma history, I cannot find any other medical cause for this condition."

The ALJ does not find the opinions of Drs. Burris and Castro to be persuasive regarding the cause of Claimant's urinary incontinence. Although each doctor states that Claimant's urinary incontinence is unrelated to her work injury, they each failed to present credible and persuasive reasons why her condition is unrelated to her work accident. For example, Dr. Burris fails to offer a theory why the condition is not injury related; he simply concluded that "it is not clear if this issue is directly related to her work injury."

Dr. Castro argued that the condition was unrelated because Claimant had urinary incontinence before her injury (true, but only mild and, according to urologist Dr. Sorenson, only stress incontinence and not urge incontinence); that since the surgery did not improve her symptoms, he could not explain the symptoms; and that Claimant's bladder dysfunction was essentially a non-injury "plumbing problem." In this latter regard, Dr. Castro explained in his deposition that there are many causes of incontinence, but in this case "you've got more of a plumbing problem ... particularly in a female that's morbidly obese and has previous vaginal deliveries...it would be expected...in middle age that's very common." Neither Dr. Burris nor Dr. Castro explained why a catastrophic bladder dysfunction — urge incontinence — would begin to manifest itself within two weeks of the injury and how a contusion to the sacral nerve could not have occurred during the accident and could not have caused Claimant's urinary incontinence. In the end, they provided no persuasive and credible rationale for their opinions. Thus, their causation opinions are rejected.

As a result, the ALJ finds and concludes Claimant established by preponderance of the evidence that her urinary incontinence was caused by her compensable work accident.

III. Whether Claimant established that she is entitled to maintenance medical treatment.

Claimant has established by a preponderance of the evidence that she is entitled to a general award of maintenance medical treatment.

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Indus. Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expeditors Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs Sch. District #11*, W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012). An award for *Grover* medical benefits is neither contingent on a finding that a specific course of treatment has been recommended nor a finding that the claimant is receiving medical treatment. *Holly Nursing Care Ctr. v. Indus. Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Elec.*, W. C. No. 4-471-818 (ICAO, May 16, 2002). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expeditors Inc.*, 77 P.3d 863 (Colo. App. 2003); *Anderson v. SOS Staffing Services*, W. C. No. 4-543-730, (ICAO, July 14, 2006).

As found, Dr. Harrington, in his August 2, 2018 report, concluded that for maintenance care, Claimant will need ongoing medications, including muscle relaxants, NSAIDS, Ibuprofen, nortriptyline and gabapentin. He did, however, caution Claimant to avoid chronic and daily opioid use.

In addition, Dr. Pham, in his DIME report, concluded that for maintenance care, Claimant should be allowed to see PA Wetterstein 3-4 times a year for a couple of years. Dr. Pham also recommended Claimant be allowed to see "Urology" for another opinion about her incontinence and other therapy recommendations.

Even Dr. Burris, Respondent's independent medical examiner, concluded Claimant will require maintenance medical treatment in the form of follow up visits with PA Wetterstein for medication management as well as a health club/recreation center membership for six months.

Lastly, in his deposition, Dr. Paulsen agreed with Dr. Pham that Claimant should be allowed to see PA Wetterstein for maintenance care three to four times a year for a couple of years.

As a result, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that she needs maintenance medical treatment to relieve her from the effects of her work injury and to maintain her at MMI for her back injury and urinary incontinence.

- IV. Whether the medical treatment set forth in Exhibit 16, is reasonable, necessary, and related to Claimant's work injury.**
- V. Whether Claimant is entitled to reimbursement for past expenditures for medical services and supplies.**

Claimant is requesting reimbursement and the provision of certain medical supplies, exercise equipment and durable medical equipment as set forth in Exhibit 16. The record, however, is not fully developed for all the items set forth in Exhibit 16.

For example, here it is not clear whether all the items in Exhibit 16 have been prescribed by an authorized treating physician. Section 8-43-404(7)(a), C.R.S. provides that "an employer or insurer shall not be liable for treatment provided pursuant to article 41 of Title 12, C.R.S. unless such treatment has been prescribed by an authorized treating physician." If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. *In Re Patton*, W.C. Nos. 4-793-307 and 4-794-075 (ICAO, June 18, 2010); see *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999).

It is also not clear from the record whether Claimant previously requested the Employer to provide any of the items listed in Exhibit 16 and that the Employer furnished none of the items as may be required by under Section 8-42-101(6).

Section 8-42-101(6)(a) and (b) provides:

(a) If an employer receives notice of injury and the employer or, if insured, the employer's insurance carrier, after notice of the injury, fails to furnish reasonable and necessary medical treatment to the injured worker for a claim that is admitted or found to be compensable, the employer or carrier shall reimburse the claimant, or any insurer or governmental program that pays for related medical treatment, for the costs of reasonable and necessary treatment that was provided. An employer, insurer, carrier, or provider may not recover the cost of care from a claimant where the employer or carrier has furnished medical treatment except in the case of fraud.

(b) If a claimant has paid for medical treatment that is admitted or found to be compensable and that costs more than the amount specified in the workers' compensation fee schedule, the employer or, if insured, the employer's insurance carrier, shall reimburse the claimant for the full amount paid. The employer or carrier is entitled to reimbursement from the medical providers for the amount in excess of the amount specified in the worker's compensation fee schedule.

The parties also failed to adequately argue the interplay between Section 8-43-404(7)(a) and 8-42-101(6)(a) and (b). As a result, the record was not fully developed about the benefits at issue in Exhibit 16. Thus, the issues raised by Claimant and set forth in Exhibit 16 will not be addressed by this ALJ and will be reserved for future determination by the parties.

VI. What is the appropriate disfigurement award for Claimant due to her industrial injury?

As found, Claimant has a vertical surgical scar on her back on the upper lumbar area measuring about 3 ½ to 4 inches long and up to about three quarters of an inch wide. There is also a very faint red line about an inch and a half long.

As result, Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation. Section 8-42-108 (1), C.R.S.

VII. Whether Respondent is barred by the doctrine of res judicata and collateral estoppel, from arguing that ALJ Kimberly Turnbow's previous findings regarding Claimant's urinary incontinence condition and need for a second lumbar surgery are not dispositive in the context of a challenge of Dr. Khoi Pham's Division IME opinion that Claimant is entitled to a permanent impairment rating for her incontinence condition.

In light the findings and conclusions above, resolution of this issue is superfluous.

ORDER

Based on the foregoing specific findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is permanently and totally disabled.
2. Claimant shall be paid permanent total disability benefits effective April 18, 2018, which is the date she reached MMI.
3. Based on the admission in the record, Claimant's TTD rate is \$675.06. As a result, Claimant's PTD rate is currently \$675.06.
4. Respondents shall receive and take a credit for any temporary or permanent partial disability benefits paid after MMI against any retroactive PTD benefits payable to Claimant.
5. Respondents shall provide Claimant maintenance medical benefits for her back injury and urinary incontinence.
6. Respondent shall pay Claimant \$1,500.00 for her disfigurement.
7. Respondent shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

8. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: June 11, 2020.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered a compensable left shoulder injury during the course and scope of her employment with Employer on May 22, 2019.
2. Whether Claimant has established by a preponderance of the evidence that her medical treatment was reasonable, necessary and causally related to her May 22, 2019 left shoulder injury.
3. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Claimant is a 65 year-old female who works for Employer as a Certified Nursing Assistant (CNA). On May 22, 2019 Claimant began her shift at 6:00 a.m. She explained that she injured her left shoulder while cleaning up after a patient in the shower room at approximately 7:00 a.m. The patient had been moved into the shower room on a mobile chair approximately three feet in height. Claimant remarked that the patient urinated and had a bowel movement on the floor. Claimant was standing up after cleaning the floor when she suffered the left shoulder injury.
2. Claimant detailed that she was in a squatting position, cleaning the floor underneath the chair with her right hand while holding onto the top of the chair with her left hand. She was in the squatting position for approximately one minute then stood up by using her left arm for balance and assistance. Claimant felt immediate pain in the left lateral biceps area. She continued working for the remainder of her shift and did not report a work injury to Employer on the date of the incident. Claimant reported her injury to Employer on May 23, 2020. Employer directed Claimant to report to the Workers' Compensation clinic in Thornton.
3. On May 28, 2019 Claimant presented to Monica Fanning-Schubert, NP at Thornton COMP. She reported that she felt pain after showering a patient at work but her symptoms worsened in the evening. Claimant detailed she "basically had her body weight on her arm when she was squatting down and then squatting back up" and was in this position for a minute or two. She reported pain in her lateral biceps area and complained of difficulty lifting above the shoulder level and with internal and external rotation. Claimant noted pain radiating from the biceps to the wrist. NP Schubert recommended physical therapy in addition to an MRI and determined that causation was unknown. NP Schubert assigned Claimant 10-pound temporary lifting restrictions for the left shoulder. The report was countersigned by Matthew Lugliani, M.D.

4. On June 10, 2019 Claimant underwent a left shoulder MRI. The MRI revealed the following findings: 1) moderate partial-thickness interstitial tear of the supraspinatus tendon; and 2) mild infraspinatus tendinosis without a tear.

5. On June 11, 2019 Claimant visited Dr. Lugliani for an examination. Claimant reported worsening left shoulder pain and that physical therapy had helped. Dr. Lugliani reviewed the MRI and referred Claimant for an orthopedic evaluation. He checked the "work-related" box on the M164 form but did not document any opinion or analysis in regard to causation. Claimant was working modified duty with Employer at the time.

6. Claimant visited Dr. Lugliani for a follow-up examination on June 25, 2019 with no change in symptoms. Dr. Lugliani continued to note on the M164 form that objective findings were consistent with Claimant's history and/or mechanism of injury.

7. By July 9, 2019 Dr. Lugliani remarked that Claimant was "pending surgery." His assessment remained "pain in the left shoulder" and "strain of musc/fasc/tend at shldr/up arm, left arm." Dr. Lugliani reiterated on the M164 form that objective findings were consistent with Claimant's history and/or mechanism of injury.

8. Claimant last visited Dr. Lugliani on August 14, 2019. Dr. Lugliani recounted that Claimant had suffered a previous work-related right rotator cuff tear and repair. She had permanent right arm restrictions that included no lifting in excess of 20 pounds, repetitive lifting in excess of 10 pounds, carrying in excess of 10 pounds, pushing and pulling in excess of 30 pounds and no overhead reaching. Dr. Lugliani noted that the June 10, 2019 left shoulder MRI had revealed a moderate partial thickness interstitial tear of the midportion of the supraspinatus insertion. He continued to diagnosis Claimant with "[s]train of musc/fasc/tend at shldr/up arm, left arm," Dr. Lugliani again noted on the M164 form that objective findings were consistent with Claimant's history and/or mechanism of injury.

9. On September 18, 2019 claimant underwent an independent medical examination with Carlos Cebrian, M.D. Dr. Cebrian issued a written report dated October 14, 2019. Claimant recounted her mechanism of injury and explained that she was holding the top of the shower chair with her left hand while squatting and cleaning the floor with her right hand. She stated that she was not having any problem with her legs and was able to use her legs when she stood up. Claimant remarked that she used her left arm to help her stand and felt immediate left shoulder pain. Dr. Cebrian performed a detailed causation analysis pursuant to the Level II Accreditation Course and Curriculum. He determined that Claimant's differential diagnosis was left shoulder pain with MRI findings of tendinosis and a partial-thickness interstitial tear of the supraspinatus. Dr. Cebrian explained that the MRI findings were common to persons of Claimant's age and the result of degeneration due to the normal cellular aging process and not any acute trauma. He summarized that it was not medically probable that Claimant's left shoulder complaints or symptoms were the result of the May 22, 2019 work event. Dr. Cebrian explained that the notion that Claimant's work activities caused her left shoulder symptoms was based merely on the fact that there was no

documented pre-existing injury or cause of symptomatology. He specified that no external event was necessary for the MRI findings and they could be explained by the aging process. Dr. Cebrian concluded that further treatment should be performed outside of the Workers' Compensation system.

10. On April 14, 2020 Claimant underwent an independent medical examination with Dr. John S. Hughes, M.D. Dr. Hughes remarked that the June 10, 2019 left shoulder MRI reflected a "3 X 5 mm moderate partial interstitial tear of the midportion of the supraspinatus insertion with mild to moderate underlying tendinosis without tendon retraction or muscle atrophy." Following his review of the subsequent medical documentation and examination of Claimant, Dr. Hughes diagnosed Claimant with a left shoulder strain/sprain with rotator cuff tear secondary to work activities on May 22, 2019. Dr. Hughes specifically disagreed with Dr. Cebrian and determined the forces and mechanism of injury described by Claimant and documented in the medical records were consistent with a rotator cuff tear. He commented that there was no documentation that Claimant had pre-existing left shoulder pathology. Dr. Hughes concluded that Claimant's medical treatment and the surgical recommendation were reasonable, necessary and related to the May 22, 2019 injury.

11. On May 12, 2020 the parties conducted the evidentiary deposition of Dr. Cebrian. He remarked that he specifically questioned Claimant regarding the use of her legs when standing during the May 22, 2019 work incident. Dr. Cebrian determined that, based on Claimant's described mechanism and a reenactment of the event at his independent medical examination, her arm was not completely straight and her elbow would have been bent so that the upper part of the arm extending from the shoulder would not have been "terribly high." He commented that Claimant denied any weakness or problems with her legs and she was able to use her legs to stand while using her arm for balance and assistance. Claimant never stated that she was doing any overhead work or using the left arm for anything other than stabilization. Dr. Cebrian noted that, based on Claimant's description of the top of the chair at 3 ½ feet in height, it would have been "a little above her head when she was squatting down."

12. In addressing the left shoulder MRI findings, Dr. Cebrian noted that Claimant's interstitial tear began inside the tendon and did not extend to the outer edge. However, most traumatic tears begin at the outer edge and then extend into the tendon. However, an interstitial tear in the intrasubstance of the tendon is typically degenerative in nature. Dr. Cebrian explained that a degenerative condition is one that is caused by progressive loss of elasticity of the tendon and cellular degeneration/loss due to age. He summarized that the MRI findings were typical for a 65-year old individual.

13. Dr. Cebrian concluded that Claimant's pathology and complaints were not related to any work activities. In reviewing Dr. Hughes' independent medical examination, Dr. Cebrian maintained his opinion and remarked that there was no documented analysis regarding causation from either Dr. Lugliani or in Dr. Hughes' independent medical examination. Dr. Cebrian further testified that Claimant's MRI

findings were minor and surgical repair of the tendon was not reasonable or necessary regardless of causation.

14. Claimant testified at the hearing in this matter. She noted that the chair she was holding on May 22, 2019 was approximately three feet in height. Claimant detailed that she was close to the chair while cleaning the floor but that her arm was fully extended and not bent. Claimant did not use her legs but instead used her arm to stand up. She then felt immediate pain in her left shoulder. Nevertheless, she was able to finish her shift and waited to see if the pain would subside.

15. Claimant's wage records were submitted into evidence. The documents do not delineate individual pay periods, but instead include check dates for pay periods commencing December 16, 2018. For the 20 weeks of pay prior to the date of injury, Claimant earned \$15,255.09 in gross wages. Divided by 20 weeks, Claimant earned an Average Weekly Wage (AWW) of \$762.75.

16. Claimant has failed to demonstrate that it is more probably true than not that she suffered a compensable left shoulder injury during the course and scope of her employment with Employer on May 22, 2019. Initially, Claimant explained that she injured her left shoulder while cleaning up after a patient in the shower room. Claimant detailed that on May 22, 2019 she was in a squatting position, cleaning the floor underneath the patient's chair with her right hand while holding onto the top of the chair with her left hand. While standing up, Claimant felt immediate pain in her left lateral biceps area. The records reveal that there is a dispute regarding the specific mechanism of Claimant's injury. The discrepancy involves the amount of force and position of Claimant's left arm when she lifted herself from the squatted position. The initial history suggests that Claimant placed all her weight on her left arm/shoulder to help herself up. Additionally, Claimant testified that her hand was located well above her head while standing up. Nevertheless, Claimant's testimony regarding the position of her arm in relation to the chair was inconsistent with the medical records and directly conflicts with what she represented and demonstrated to Dr. Cebrian during the independent medical examination. Because of the inconsistencies and the lack of a causal analysis by Drs. Hughes and Lugliani, the persuasive opinion of Dr. Cebrian reflects that Claimant's work activities on May 22, 2019 did not aggravate, accelerate or combine with a pre-existing condition to produce a need for medical treatment.

17. Claimant's June 10, 2019 left shoulder MRI reflected a moderate partial interstitial tear of the midportion of the supraspinatous insertion. Dr. Cebrian credibly testified that there was insufficient force to cause an acute injury to the rotator cuff based on Claimant's position and use of her arm while standing from a squatting position. The mechanism was minimal and the MRI showed no acute tear of the tendon. Rather, the MRI reflected a degenerative interstitial tear that Dr. Cebrian characterized as incidental and the result of the natural aging process. Dr. Cebrian persuasively noted that Claimant's interstitial tear began inside the tendon and did not extend to the outer edge. An interstitial tear is in the intrasubstance of the tendon and is typically degenerative in nature. In contrast, most traumatic tears begin at the outer edge and

then extend into the tendon. Dr. Cebrian specified that no external event was necessary for the MRI findings and they could be explained by the aging process.

18. In contrast, Dr. Hughes diagnosed Claimant with a left shoulder strain/sprain with rotator cuff tear secondary to work activities on May 22, 2019. Dr. Hughes specifically disagreed with Dr. Cebrian and determined the forces and mechanism of injury were consistent with a rotator cuff tear. Similarly, Dr. Lugliani repeatedly noted on the M164 form that objective findings were consistent with Claimant's history and/or mechanism of injury. However, Drs. Hughes and Lugliani specifically failed to consider that the MRI findings suggested a degenerative interstitial tear that began inside the tendon and did not extend to the outer edge. Notably, an interstitial tear is in the intrasubstance of the tendon and is typically degenerative in nature.

19. Although physicians provided Claimant with diagnostic testing, treatment and work restrictions based on her reported symptoms, the conclusion that Claimant suffered a compensable injury is not warranted. The lack of a scientific theory and causation analysis reveal that Claimant did not likely suffer a left shoulder injury while performing her job duties for Employer on May 22, 2019. Claimant's work activities on May 22, 2019 did not aggravate, accelerate or combine with her pre-existing condition to produce a need for medical treatment. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson*, W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.*, W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. The provision of medical care based on a claimant’s report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant’s reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); cf. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) (“right to workers’ compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately

caused by an injury arising out of and in the course of the employment”). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered a compensable left shoulder injury during the course and scope of her employment with Employer on May 22, 2019. Initially, Claimant explained that she injured her left shoulder while cleaning up after a patient in the shower room. Claimant detailed that on May 22, 2019 she was in a squatting position, cleaning the floor underneath the patient’s chair with her right hand while holding onto the top of the chair with her left hand. While standing up, Claimant felt immediate pain in her left lateral biceps area. The records reveal that there is a dispute regarding the specific mechanism of Claimant’s injury. The discrepancy involves the amount of force and position of Claimant’s left arm when she lifted herself from the squatted position. The initial history suggests that Claimant placed all her weight on her left arm/shoulder to help herself up. Additionally, Claimant testified that her hand was located well above her head while standing up. Nevertheless, Claimant’s testimony regarding the position of her arm in relation to the chair was inconsistent with the medical records and directly conflicts with what she represented and demonstrated to Dr. Cebrian during the independent medical examination. Because of the inconsistencies and the lack of a causal analysis by Drs. Hughes and Lugliani, the persuasive opinion of Dr. Cebrian reflects that Claimant’s work activities on May 22, 2019 did not aggravate, accelerate or combine with a pre-existing condition to produce a need for medical treatment.

9. As found, Claimant’s June 10, 2019 left shoulder MRI reflected a moderate partial interstitial tear of the midportion of the supraspinatous insertion. Dr. Cebrian credibly testified that there was insufficient force to cause an acute injury to the rotator cuff based on Claimant’s position and use of her arm while standing from a squatting position. The mechanism was minimal and the MRI showed no acute tear of the tendon. Rather, the MRI reflected a degenerative interstitial tear that Dr. Cebrian characterized as incidental and the result of the natural aging process. Dr. Cebrian persuasively noted that Claimant’s interstitial tear began inside the tendon and did not extend to the outer edge. An interstitial tear is in the intrasubstance of the tendon and is typically degenerative in nature. In contrast, most traumatic tears begin at the outer edge and then extend into the tendon. Dr. Cebrian specified that no external event was necessary for the MRI findings and they could be explained by the aging process.

10. As found, in contrast, Dr. Hughes diagnosed Claimant with a left shoulder strain/sprain with rotator cuff tear secondary to work activities on May 22, 2019. Dr. Hughes specifically disagreed with Dr. Cebrian and determined the forces and mechanism of injury were consistent with a rotator cuff tear. Similarly, Dr. Lugliani repeatedly noted on the M164 form that objective findings were consistent with Claimant’s history and/or mechanism of injury. However, Drs. Hughes and Lugliani specifically failed to consider that the MRI findings suggested a degenerative interstitial tear that began inside the tendon and did not extend to the outer edge. Notably, an

interstitial tear is in the intrasubstance of the tendon and is typically degenerative in nature.

11. As found, although physicians provided Claimant with diagnostic testing, treatment and work restrictions based on her reported symptoms, the conclusion that Claimant suffered a compensable injury is not warranted. The lack of a scientific theory and causation analysis reveal that Claimant did not likely suffer a left shoulder injury while performing her job duties for Employer on May 22, 2019. Claimant's work activities on May 22, 2019 did not aggravate, accelerate or combine with her pre-existing condition to produce a need for medical treatment. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

ISSUES

- I. The determination of Claimant's average weekly wage under Section 8-42-102(2), C.R.S., or Section 8-42-102(3), C.R.S., to establish a fair approximation of Claimant's wage loss and diminished earning capacity.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is a credible witness and her testimony is both persuasive and consistent with the wage and medical records in the case.
2. Claimant has been employed in Employer's bakery department since approximately August 20, 2016.
3. The number of hours Claimant worked each workday varied. In addition, on some days, Claimant would work overtime. (*Exhibit 1*)
4. Shortly before her injury, Claimant's base rate of pay was \$11.50, per hour, plus overtime.
5. But about one week before her injury, on approximately January 8, 2018, Claimant's base rate of pay was increased to \$12.00 per hour, plus overtime.
6. On January 16, 2018, Claimant suffered a compensable injury for which liability has been admitted.
7. The General Admission of Liability ("GA") admits for an AWW of \$431.19. (*Exhibit 1*)
8. According to the notes on the GA, Respondent calculated Claimant's AWW by using Claimant's wages from a 20-day period, December 25, 2017 to January 13, 2018, which totaled \$1,231.74. According the GA, the admitted "AWW of \$431.12 is more reflective of what she makes." (*See Exhibit C, pp. 39-45*)
9. But a review of Claimant's wage records shows that using the specific 20-day period selected by Respondent - and the wages earned during that period - is not a fair and accurate method to calculate Claimant's AWW. Respondent's calculation is not fair and accurate for several reasons. First, it appears Claimant did not work for the first four days of the 20-day period used by Respondent to calculate Claimant's AWW.¹ Second, around two-thirds of the days used by Respondent to calculate Claimant's AWW did not include Claimant's increased hourly rate of pay in effect on the day of her injury. As a result, the information used by Respondent led to the understatement of Claimant's AWW.

¹ It looks like Claimant did not work on Christmas, 12/25/17, but was paid the equivalent of 3 hours, which was designated at "LHCHS" time and not "REG" - for regular time - and not "OT" - for overtime.

10. The exhibits, and Claimant's credible testimony, established that in 2017, Claimant's total earnings were \$25,058.86. (*Exhibit A*) However, in 2017, Claimant missed about 4½ weeks of work, towards the end of the year, for a non-work-related health problem.
11. Claimant argues that a fair approximation of her AWW would be to take her total earnings for 2017, which were \$25,058.86, and divide them by 48 weeks, because Claimant missed about a month from work in 2017. That method leads to an AWW of \$522.06.
12. Respondent argues that Claimant's admitted AWW is correct and rejects the calculation other than the one prepared by the adjuster. Alternately, Respondent argues that if one divides the total earnings of 2017 by 52 weeks, the proper AWW is \$481.90.
13. Claimant's wage records reveal she missed work from November 27, 2017, through December 28, 2017, which is 4 weeks and 4 days.² (*Exhibit A, pg. 2*) This is consistent with Claimant's testimony that she missed this time due to a personal medical problem. However, there was no credible and persuasive evidence presented that Claimant consistently developed a non-work-related health problem every year that caused her to miss a block of approximately 4½ weeks of work each year. In other words, there was no evidence submitted that Claimant consistently took an unexpected 4½ week sabbatical, or extra vacation, every year. Therefore, dividing Claimant's 47½ weeks of earnings during 2017, by 52 weeks, is not a fair and accurate method to calculate Claimant's AWW.
14. Dividing her total earnings in 2017 by 47½ weeks results in an average weekly wage (AWW) of \$527.55.
15. But the purpose of Section 8-42-102(2), C.R.S. and 8-42-102(3), C.R.S. is to establish a fair approximation of Claimant's wage loss and diminished earning capacity due to the work accident. Moreover, the proposed AWW calculations set forth by Claimant and Respondent both fail to fairly approximate Claimant's wage loss and diminished earning capacity.
16. During 2017, Claimant worked consistently from January 1, 2017 through November 26, 2017 before she took time off for an unrelated medical condition. That period is exactly 47 weeks.
17. However, using Claimant's total earnings from 2017 does not fairly approximate her wage loss from this injury because:
 - i. During the first half of 2017, Claimant was only being paid \$11.00 per hour,
 - ii. During the second half of 2017, Claimant was only being paid \$11.50 per hour,

² The wage records show Claimant was paid 5.42 hours of sick time, totaling, \$62.33, for November 27, 2017. It also looks like Claimant was paid 3 hours of holiday pay, totaling \$34.50, for December 25, 2017, for Christmas. (*See Respondent's Exhibit A, bate stamp 002.*)

- iii. From approximately November 27, 2017, through the remainder of 2017 she missed most of those days due to an unrelated health condition, but was paid "other earnings" in December, and
 - iv. At the time of her injury in January 2018, Claimant was being paid \$12.00 per hour.
18. Thus, the best way to fairly approximate Claimant's wage loss and diminished earning capacity because of her work injury is to:
- i. Use the actual hours claimant worked during the 47 weeks she worked consistently in 2017,
 - ii. Adjust her 2017 earnings by using the rate of pay in effect on the date she was injured, which is \$12.00 per hour, plus overtime, and
 - iii. Divide her adjusted earnings for the 47-week period by 47.
19. As a result, the total adjusted earnings calculation based on the hours Claimant worked in 2017, during the 47-week period from January 1, 2017, through November 26, 2017, based on \$12.00 per hour, plus overtime, is as follows:
- i. Claimant worked a total of 1,942.83 hours during the 2017 period. At \$12.00 per hour, Claimant would have earned \$23,313.96.
 - ii. Of the 1,942.83 hours, 209.20 were overtime. Based on an additional \$6.00 per hour for her overtime hours, Claimant would have been paid \$1,255.20.
 - iii. Claimant's "other earnings" during that period were \$635.52.
 - iv. As result, Claimant's adjusted income for that period is \$25,204.68.
 - v. Dividing Claimants' adjusted income of \$25,204.68 by 47 weeks equals \$536.27.
20. Based on the unique circumstances of this case, a fair approximation and determination of Claimant's AWW is \$536.27.
21. An AWW of \$536.27 is a fair approximation of Claimant's wage loss and diminished earning capacity due to her work injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws these conclusions of law:

General Provisions

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a

reasonable cost to employers, without the need for any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is what leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence dispositive of the issues involved. The ALJ has not addressed every piece of evidence leading to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

Substantial Evidence

An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010); *Leeway v. Indus. Claim Appeals Office*, 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office*, 131 P.3d 1172 (Colo. App. 2005).

Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by evidence which would warrant a reasonable belief in the existence of facts supporting a particular finding. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions therein. See *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001).

The ALJ makes the rational choice to accept Claimant's testimony and the plausible inferences drawn therefrom. A claim may be supported by lay testimony alone. See *Lymburn v Symbois Logic*, 952 P.2d 831 (Colo. App. 1997).

I. The determination of Claimant's average weekly wage under Section 8-42-102(2), C.R.S., or 8-42-102(3), C.R.S. to establish a fair approximation of Claimant's wage loss and diminished earning capacity.

Section 8-42-105(1), C.R.S., provides that a Claimant's TTD rate is sixty-six and two-thirds percent of her AWW.

Section 8-42-102(2), C.R.S., requires the ALJ to base the claimant's Average Weekly Wage (AWW) on his or her earnings at the time of injury. But under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter

the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra*.

Based on a totality of the evidence presented at hearing, and the unique facts of this case, the ALJ finds and concludes Claimant has established by a preponderance of the evidence that her AWW is \$536.27 under §8-42-102(3), C.R.S.

The ALJ finds and concludes that an AWW of \$536.27 is a fair approximation of Claimant's wage loss and diminished earning capacity because of her work injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

- A. Claimant's average weekly wage is \$536.27.
- B. Claimant's TTD and TPD rates from the date of her injury ongoing shall be based on this average weekly wage.
- C. Respondent shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.

Any issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: June 18, 2020.

WORKERS' COMPENSATION NO. WC 5-116-190-001**

ISSUE

Whether Claimant has made a “proper showing” for a change of physician from Authorized Treating Physician (ATP) Robert L. Broghammer, M.D. pursuant to §8-43-404(5)(a), C.R.S.

FINDINGS OF FACT

1. Claimant worked for Employer as a Registered Nurse. Her job duties involved assessing patients, administering treatment and helping with activities of daily living.

2. On May 12, 2019 Claimant suffered an admitted industrial injury to her left upper back and neck areas. Claimant detailed that she and a physical therapist had been attempting to help a patient out of bed after surgery. However, she immediately developed pain in the left shoulder and neck areas. She subsequently experienced double vision and frontal headaches.

3. At the time of her admitted May 12, 2019 work injury, Claimant had been receiving medical maintenance treatment for a June 12, 2018 admitted work injury. Claimant received treatment for the June 12, 2018 event through Centura Centers for Occupational Medicine (CCOM). Robert L. Broghammer, M.D. was her Authorized Treating Physician (ATP) and rendered care through approximately 24 appointments. In his May 24, 2019 report Dr. Broghammer recommended the opening of a new claim based on the May 12, 2019 incident for an acute aggravation of the prior injury arising from a new distinct lifting event.

4. In a January 16, 2020 visit Dr. Broghammer reviewed Claimant’s course of treatment for her May 12, 2019 admitted industrial injuries. Claimant continued to report left neck and shoulder pain. Dr. Broghammer noted that on June 4, 2019 Claimant reported that she had been suffering headaches that required an emergency room visit. He remarked that the headaches were unlikely related to her May 12, 2019 work incident. Dr. Broghammer noted that Claimant subsequently visited Samuel Y. Chan, M.D. for EMG/nerve conducted studies that did not reveal anything related to the cervical spine. He also commented that Claimant received facet injections and underwent chiropractic massage therapy. Because of Claimant’s thorough work-up without objective findings, Dr. Broghammer noted in his December 27, 2019 report that Claimant was essentially at Maximum Medical Improvement (MMI). Nevertheless, Dr. Broghammer requested a functional capacity evaluation prior to placing her at MMI to assess a safe return to work.

5. Despite Dr. Broghammer's opinion that Claimant's headaches were unlikely related to her May 12, 2019 industrial injuries, Claimant sought a cervical MRI. On January 3, 2020 Claimant underwent the MRI.

6. In his January 16, 2020 report Dr. Broghammer explained that the cervical MRI revealed an "annular tear at one level with a large disc osteophyte complex eccentric to one side." He informed Claimant that "her lack of radicular symptoms and negative EMGs would suggest that these are red herring's." Instead, the MRI findings were "likely chronic and degenerative in nature" and not likely caused by lifting a patient. However, Claimant disagreed and suggested the annular tears could be caused by traumatic injuries.

7. Based on a referral from Dr. Broghammer, Claimant visited Orthopedic Surgeon Bryan Castro, M.D. on January 31, 2020. Dr. Castro supported Dr. Broghammer's opinion that a cervical MRI was not medically necessary. Dr. Castro concluded that the cervical findings on MRI were chronic and unrelated to the May 12, 2019 work injury. He specifically noted that Claimant had good range of motion in the neck and her MRI showed a "chronic degenerative problem." Dr. Castro agreed with Dr. Broghammer that Claimant did not have radiculopathy and discharged her because she was not a surgical candidate.

8. On February 10, 2020 Claimant returned to Dr. Chan for an examination. He documented that Claimant suffered left-sided shoulder pain and cervical spine pain as a result of her June 12, 2018 work injury. Dr. Chan noted that, as Claimant helped a patient to sit up in bed, she developed pain from the left-sided cervical spine to the left shoulder girdle region. She had undergone chiropractic care, dry needling, trigger point injections and a physical therapy program. He remarked that she still had pain complaints and "headaches," Dr. Chan also noted that Claimant had "a history of migraine headaches for which she is being seen by Dr. Oh."

9. In reviewing the cervical MRI Dr. Chan noted that the imaging "show[ed] a-level diskogenic disease. In the C6-7 level, it appears to be chronic in origin, as there is actually a disk osteophyte complex." He remarked that it was unclear whether the MRI finding constituted a pain generator. Dr. Chan commented that Claimant was "rather concerned over the MRI findings."

10. On February 13, 2020 Dr. Broghammer responded to an inquiry from Insurer about whether the transforaminal epidural steroid injections recommended by Dr. Chan were related to Claimant's May 12, 2019 industrial injury. Dr. Broghammer agreed with Dr. Chan that the necessity for the injections was the result of the work injury. However, he reiterated that Claimant's annular tear was more likely than not unrelated to the admitted May 12, 2019 injury. Instead, the tear was caused by normal wear and tear as well as the aging and degenerative processes.

11. On February 27, 2020 Dr. Chan administered a transforaminal epidural steroid injection. He determined that the injection trial offered no diagnostic or therapeutic benefit.

12. On April 21, 2020 Dr. Chan discharged Claimant and noted no additional care was reasonable or necessary. In his discharge note, Dr. Chan remarked that EMGs of both upper extremities were negative for cervical radiculopathy and the MRI findings were most likely incidental rather than a pain generator. Although Claimant requested additional injections, Dr. Chan denied the procedure. He noted "I do not see the value of such, given the fact that the patient has noted no improvement at all from the previous injections.... I would not suggest any further injection therapy for [Claimant] at this juncture."

13. On April 28, 2020 Claimant returned to Dr. Broghammer for an evaluation. Dr. Broghammer echoed the opinion of Dr. Chan and commented that Claimant did not have any follow-up visits with Dr. Chan for injection therapy. He documented that Claimant's cervical MRI was evaluated by an orthopedic surgeon who did not recommend surgery. Dr. Broghammer also remarked that Claimant received a multitude of treatment modalities without any subjective benefit. Although Claimant requested another injection, Dr. Broghammer agreed with Dr. Chan that "given the lack of benefit from any therapeutic modalities thus far I do not think any further treatment is medically necessary or warranted."

14. Dr. Broghammer testified at the hearing in this matter. He explained that Claimant reached MMI as of the April 28, 2020 visit. Nevertheless, he again recommended a Functional Capacity Evaluation (FCE) to assess safe working parameters. The FCE was scheduled for June 3, 2020. Dr. Broghammer remarked that he would subsequently evaluate Claimant for permanent impairment.

15. Claimant testified at the hearing in this matter. She explained that she wanted a change of physician from Dr. Broghammer. She specified that Dr. Broghammer ordered chiropractic and massage therapy treatment but she only obtained minimal improvement. Claimant also remarked that her treatment had been unreasonably delayed. She specifically noted that it took seven months to obtain a cervical MRI. Claimant felt she was entitled to receive an MRI earlier in her claim. She also commented that she suffers from headaches and other symptoms but Dr. Broghammer was dismissive of her complaints. Claimant summarized that she has poor communication and lacks an effective doctor-patient relationship with Dr. Broghammer.

16. Dr. Broghammer testified that he did not obtain an earlier cervical MRI despite Claimant's requests because he did not believe any cervical symptoms or findings would be consistent with the mechanism of injury to Claimant's left shoulder. He also noted prior EMGs were negative for any radicular findings. Based on a lack of radiculopathy symptoms, Dr. Broghammer determined that a cervical MRI was not medically necessary.

17. Dr. Broghammer also explained that he did not think Claimant's headaches were consistent with the mechanism of her May 12, 2019 lifting injury. He remarked that she had a pre-existing history of migraines. Nevertheless, due to her ongoing complaints, he referred her to a specialist and deferred to that doctor's opinion regarding causation of the headaches.

18. The record reveals that Claimant has failed to make a “proper showing” for a change of physician from ATP Dr. Broghammer pursuant to §8-43-404(5)(a), C.R.S. Initially, Claimant suffered an admitted industrial injury to her left upper back and neck areas on May 12, 2019. Claimant seeks a change of physician because Dr. Broghammer was dismissive of her complaints and her care was delayed. Specifically, Dr. Broghammer waited seven months to obtain a cervical MRI. Claimant felt she was entitled to receive an MRI earlier in her claim. However, Dr. Broghammer persuasively testified that he did not obtain an earlier cervical MRI despite Claimant’s requests because he did not believe any cervical symptoms or findings would be consistent with the mechanism of injury to Claimant’s left shoulder. He also noted prior EMGs were negative for any radicular findings. In fact, the MRI revealed an annular tear that Dr. Broghammer characterized as likely chronic and degenerative in nature and not likely caused by lifting a patient. The opinions of surgeon Dr. Castro and pain management specialist Dr. Chan supported Dr. Broghammer’s opinion. Dr. Castro specifically concluded that the cervical findings on MRI were chronic and unrelated to the May 12, 2019 work injury.

19. Claimant also commented that she suffers from headaches and other symptoms but Dr. Broghammer was dismissive of her complaints. Although Dr. Broghammer did not initially agree that Claimant’s headaches were caused by a lifting injury, he made appropriate referrals to a neurologist and deferred to the opinions of that specialist. Furthermore, Dr. Chan noted that Claimant had a history of migraine headaches and was receiving treatment.

20. Claimant has failed to produce persuasive evidence that she reasonably developed a mistrust of Dr. Broghammer. Claimant’s perceived dissatisfaction is not consistent with the reasonable care and referrals provided by Dr. Broghammer during the course of her claim. She has also failed to produce sufficient evidence that Dr. Broghammer provided inadequate care or otherwise rendered unreasonable care. Disagreement and dissatisfaction with Dr. Broghammer’s diagnosis are insufficient to constitute a proper showing warranting a change of physician. Accordingly, considering Claimant’s need for reasonable and necessary medical treatment while protecting Respondents’ interest in being apprised of the course of treatment for which it may ultimately be liable, Claimant’s request for a change of physician is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either

the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. A claimant is not entitled to medical treatment by a particular physician. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994); *Vigil v. City Cab Co.*, W.C. No. 3-985-493 (ICAO, May 23, 1995). Section 8-43-404(5)(a), C.R.S. permits the employer or insurer to select the treating physician in the first instance. Once the respondents have exercised their right to select the treating physician, the claimant may not change the physician without the insurer's permission or "upon the proper showing to the division." §8-43-404(5)(a), C.R.S.; *In Re Tovar*, W.C. No. 4-597-412 (ICAO, July 24, 2008). Because §8-43-404(5)(a), C.R.S. does not define "proper showing" the ALJ has discretionary authority to determine whether the circumstances warrant a change of physician. *Jones v. T.T.C. Illinois, Inc.*, W.C. No. 4-503-150 (ICAO, May 5, 2006). The ALJ's decision regarding a change of physician should consider the claimant's need for reasonable and necessary medical treatment while protecting the respondent's interest in being apprised of the course of treatment for which it may ultimately be liable. *Id.* An ALJ is not required to approve a change of physician for a claimant's personal reasons including "mere dissatisfaction." *In Re Mark*, W.C. No. 4-570-904 (ICAO, June 19, 2006).

5. As found, the record reveals that Claimant has failed to make a "proper showing" for a change of physician from ATP Dr. Broghammer pursuant to §8-43-404(5)(a), C.R.S. Initially, Claimant suffered an admitted industrial injury to her left upper back and neck areas on May 12, 2019. Claimant seeks a change of physician because Dr. Broghammer was dismissive of her complaints and her care was delayed. Specifically, Dr. Broghammer waited seven months to obtain a cervical MRI. Claimant felt she was entitled to receive an MRI earlier in her claim. However, Dr. Broghammer persuasively testified that he did not obtain an earlier cervical MRI despite Claimant's requests because he did not believe any cervical symptoms or findings would be consistent with the mechanism of injury to Claimant's left shoulder. He also noted prior EMGs were negative for any radicular findings. In fact, the MRI revealed an annular tear that Dr. Broghammer characterized as likely chronic and degenerative in nature and not likely caused by lifting a patient. The opinions of surgeon Dr. Castro and pain management specialist Dr. Chan supported Dr. Broghammer's opinion. Dr. Castro

specifically concluded that the cervical findings on MRI were chronic and unrelated to the May 12, 2019 work injury.

6. As found, Claimant also commented that she suffers from headaches and other symptoms but Dr. Broghammer was dismissive of her complaints. Although Dr. Broghammer did not initially agree that Claimant's headaches were caused by a lifting injury, he made appropriate referrals to a neurologist and deferred to the opinions of that specialist. Furthermore, Dr. Chan noted that Claimant had a history of migraine headaches and was receiving treatment.

7. As found, Claimant has failed to produce persuasive evidence that she reasonably developed a mistrust of Dr. Broghammer. Claimant's perceived dissatisfaction is not consistent with the reasonable care and referrals provided by Dr. Broghammer during the course of her claim. She has also failed to produce sufficient evidence that Dr. Broghammer provided inadequate care or otherwise rendered unreasonable care. Disagreement and dissatisfaction with Dr. Broghammer's diagnosis are insufficient to constitute a proper showing warranting a change of physician. Accordingly, considering Claimant's need for reasonable and necessary medical treatment while protecting Respondents' interest in being apprised of the course of treatment for which it may ultimately be liable, Claimant's request for a change of physician is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for a change of physician is denied and dismissed.
2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative

Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: June 19, 2020.

Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- I. Whether Claimant proved by a preponderance of the evidence that on July 25, 2019, he sustained a left foot injury arising out of and in the course and scope of his employment with the Employer; and
- II. Whether Claimant proved by a preponderance of the evidence that the medical treatment, including left foot surgery, he received for his left foot is reasonable, necessary, and related to his industrial injury.

STIPULATIONS

- The parties stipulate that if the claim is found compensable Claimant's average weekly wage is \$1,114.92. The parties also stipulate Claimant would have a right to temporary partial disability benefits from July 26, 2019, through December 12, 2019, and that Claimant would have a right to temporary total disability benefits from December 13, 2019, through March 25, 2020, subject to any statutory offsets.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. This claim involves a July 25, 2019 injury to Claimant's left foot.
2. Claimant has a history of left foot problems. Back in December 2003, Claimant was diagnosed with bilateral plantar fasciitis and provided heel cups. (*Respondents' Exhibit B, pages 43-45.*) In April and May 2004, Claimant continued to have issues with bilateral plantar fasciitis, and his doctor recommend Claimant ask his employer for desk work while he heals. (*Respondents' Exhibit B, pages 39-41.*) In August 2004, Claimant had bilateral plantar fascia injections. (*Respondents' Exhibit B, page 37.*) Four years later, in August 2008, Claimant reported he twisted his left foot and had some persistent pain in his foot and 5th metatarsal. X-rays were normal. (*Respondents' Exhibit B, pages 29-31.*) At the end of September 2008, Claimant returned to his doctor and was given a CAM boot for his persistent left foot pain. (*Respondents' Exhibit B, pages 27-28.*) In July 2015, about seven years later, Claimant reported left foot pain after stepping on a board wrong. X-rays were normal. Claimant started wearing a CAM boot again. Claimant was told to return for follow up appointment if he did not get better. Claimant did not return for follow up treatment. *Respondents' Exhibit B, pages 24-26.*)
3. In May of 2017, Claimant sought treatment for his left foot after twisting his left foot while picking up mulch. Left foot x-rays did not reveal any injury. Claimant was

prescribed a CAM boot again. He was also advised to follow up he did not get better. Claimant did not return for additional care. (*Respondents' Exhibit B, pages 21-23.*)

4. Claimant testified that in the two years before July 2019, he did not have any pain, symptoms, or other issues with his left foot. Claimant testified he did not have any limitations or restrictions because of his left foot and that he was able to work full duty without issue prior to July 25, 2019. Claimant's testimony is consistent with his medical records that document prior foot injuries – with the last one being in 2017 – that resolved.
5. Claimant testified he has worked as a concrete truck driver/operator for the Employer since September 2018. Claimant's jobs duties require him to drive a concrete truck and to pour concrete. Claimant testified he works a heavy-duty job. Claimant's concrete truck has a steel chute arm that weighs over 50 pounds. Claimant's job duties require him to clean his truck at the end of his work shift.
6. On July 25, 2019, Claimant was cleaning out his concrete truck at the Employer's wash station, which he does at the end of each workday. To reach a control switch for his truck, Claimant had to maneuver around concrete, dirt, sand, water, and other debris that had collected at the wash station. Claimant stepped around the debris and placed his left foot on an uneven ledge, about 12 inches off the ground. As Claimant transferred his weight to step up on the ledge, he felt (and heard) a pop and had immediate pain in his left foot. Claimant testified he could not put any pressure on his foot. Claimant testified he reported his injury to the Employer right away.
7. As to the ledge, Claimant testified the ledge is uneven and had concrete and other debris all over the top of it. Pictures of the ledge submitted by Respondents corroborate Claimant's testimony. The pictures show the ledge is about 12 inches off the ground. The pictures also demonstrate and confirm that the ledge is uneven and appears to be covered in concrete and other debris. The ledge also slopes down from right to left. And water, concrete, and other debris is present on the ground. (*See Respondents' Exhibit F, pages 134-136.*) Claimant testified that on a typical day he steps up onto the ledge to release his chute, which must be stored up while driving. Claimant testified he must physically release his chute to wash it out. And that he must step on the ledge in order to release his chute before cleaning.
8. On July 26, 2019, Claimant treated with Tom Vanderhorst, M.D., - who specializes in family medicine - and reported that on July 25, 2019, at about 4:00 p.m., he was cleaning out his work truck when he stepped up on a ledge about 12 inches off the ground. Claimant reported he had his forefoot on the edge of the concrete as he stepped up and felt a pop associated with a sudden onset of pain in his left plantar foot. Claimant reported that since then he has had pain with any weight bearing and has to limp significantly. On physical examination, Dr. Vanderhorst noted significant tenderness to palpation of the plantar fascia mid to calcaneal aspect primarily. Dr. Vanderhorst noted increased pain with any passive or active stretch. There is not, however, any indication that he performed a thorough foot examination that included assessing Claimant's peroneal tendons on the lateral side of Claimant's foot. He did, however, provide Claimant a preliminary diagnosis of acute left plantar fasciitis and placed Claimant on work restrictions. But because he is not a foot and ankle specialist,

Dr. Vanderhorst immediately referred Claimant to a podiatrist, James Davis, DPM, for a more thorough assessment and evaluation of Claimant's foot pain. (*Claimant's Exhibit 6, pages 8-11.*)

9. On July 30, 2019, the Employer completed a First Report of Injury, noting Claimant was washing out a mixer truck and stepped up onto a ledge and felt a pop in his foot. (*Claimant's Exhibit 1, page 1.*)
10. On August 2, 2019, Claimant returned to Dr. Vanderhorst. Dr. Vanderhorst noted that despite referring Claimant to a podiatrist for a consultation, the carrier had yet to authorize the evaluation with a specialist. At this visit, Claimant reported persistent left foot symptoms, including pain primarily at the calcaneal aspect of his sole. Claimant reported wearing a left ankle boot, which does help control his symptoms. On physical examination, Dr. Vanderhorst also noted Claimant had mild **lateral midfoot discomfort**, as well as tenderness at the calcaneal aspect of the plantar fascia (emphasis added). But, despite Claimant having lateral foot pain, Dr. Vanderhorst failed to evaluate Claimant's peroneal tendons. On the other hand, he had referred Claimant to Dr. Davis - a foot and ankle specialist - for a more thorough evaluation and assessment. As a result, Dr. Vanderhorst maintained Claimant's treatment plan and work restrictions, while waiting for Dr. Davis' assessment. *Claimant's Exhibit 6, pages 12-13.*
11. On August 19, 2019, Claimant was finally evaluated by Dr. Davis – a foot and ankle specialist. Claimant reported to Dr. Davis that he felt immediate pain in the center of his arch. Claimant reported his pain is localized to the lateral aspect of the cuboid and central arch. On physical examination, Dr. Davis noted mild swelling along the lateral aspect of the foot, pain with palpation along the peroneal tendons to the lateral aspect of the cuboid, which directly reproduced Claimant's symptoms. Dr. Davis added that resisted motion of the peroneal tendons directly reproduced Claimant's symptoms. Dr. Davis noted only minimal pain with palpation of the plantar fascial insertion on the calcaneus. So, although Claimant generally described his pain as coming from the bottom of his foot, when the symptoms were reproduced during his clinical examination, they were coming more towards the lateral side of his foot.¹ Left foot x-rays revealed an accessory os peroneum to the lateral aspect of the cuboid and a questionable transverse lucency along the proximal aspect of the os peroneum. Dr. Davis opined Claimant's injury led to irritation and injury of the os peroneum. Dr. Davis also thought there may be a small fracture of the os peroneum. Dr. Davis diagnosed Claimant with left foot os peroneum and peroneal tendonitis. Dr. Davis recommended immobilization for three weeks and therapy. *Claimant's Exhibit 7, pages 23-27.*
12. On August 22, 2019, Respondents filed a Notice of Contest. (*Claimant's Exhibit 3, page 3.*)
13. On September 10, 2019, Respondents' retained Timothy O'Brien, M.D., to perform a records review. Dr. O'Brien opined Claimant's left foot pain is a manifestation of his

¹ The ALJ does not find this to be a new condition. The ALJ finds that this merely demonstrates Claimant's inability to determine the exact source and pathological cause of his underlying foot pain that was caused by stepping on the ledge. The ALJ also finds Dr. Vanderhorst also had the same problem. He could not identify the source of Claimant's foot pain that was caused by stepping on the ledge.

personal health and not a work-related injury. Dr. O'Brien opined Claimant did not sustain a traumatic plantar fasciitis because traumatic plantar fasciitis does not exist. Without getting the exact details from Claimant about the work incident, Dr. O'Brien opined Claimant's mechanism of injury did not generate enough force to cause an injury. Dr. O'Brien opined Claimant's plantar fasciitis is a manifestation of his age, genetic makeup, nicotine abuse, and obesity. Dr. O'Brien also opined Claimant's symptoms, specifically his lateral left foot pain, was non-organic and was therefore related to secondary gain issues related to Claimant having a workers' compensation claim. Dr. O'Brien diagnosed Claimant with a left calcaneal contusion. In other words, Dr. O'Brien said there was no pathology to account for Claimant's symptoms and was either insinuating or stating Claimant was making up having any symptoms on the lateral side of his left foot to perpetuate a false workers' compensation claim. (*Respondents' Exhibit A, pages 14-20.*)

14. On September 9, 2019, Claimant treated with Dr. Davis and reported some improvement with wearing the boot but that he continues to have pain with walking. On physical examination, Dr. Davis noted less swelling along the foot and pain with palpation of the peroneus longus tendon to the lateral cuboid. Dr. Davis noted Claimant's symptoms are somewhat improved. Dr. Davis recommended Claimant stay in the boot for three more weeks. (*Claimant's Exhibit 7, pages 28-32.*)
15. On September 13, 2019, Claimant returned to Dr. Vanderhorst and reported that on August 19, he treated with Dr. Davis, who suggested Claimant had "a questionable transverse lucency along the proximal aspect of the os peroneum." Dr. Vanderhorst noted Dr. Davis' findings and treatment recommendations. Claimant reported pain on the inferior/lateral aspect of his ankle. On physical examination, Dr. Vanderhorst noted maximal tenderness laterally at the os peroneum, along with minimal tenderness along the peroneal tendon and lateral malleolus. Dr. Vanderhorst maintained Claimant's treatment plan and work restrictions. (*Claimant's Exhibit 6, pages 14-16.*)
16. On September 24, 2019, Claimant treated with Dr. Davis and reported no improvement in his pain and other symptoms since his last visit. Pointing to his left foot, Claimant reported pain that radiates along the lateral foot as well as plantar foot in the distribution of the peroneus longus tendon. On physical examination, Dr. Davis noted continued swelling along the peroneal tendons laterally to the cuboid, corresponding to the os peroneum area and the peroneus longus tendon. Again, Dr. Davis also found upon examination that resisted motion to this area directly reproduced Claimant's symptoms. Dr. Davis diagnosed Claimant with os peroneum and peroneal tendonitis. Dr. Davis related Claimant's symptoms to inflammation along the peroneus longus tendon sheath. Dr. Davis discussed treatment options, including continuing with the boot, fiberglass cast immobilization, and/or surgery. Dr. Davis recommended a left foot MRI and discussed possible surgery. (*Claimant's Exhibit 7, pages 33-38.*)
17. On September 27, 2019, Claimant underwent a left ankle MRI, which revealed mild tendinosis of the distal Achilles tendon, mild tendinosis of the plantar aponeurosis at its insertion onto the calcaneus, greatest medially (no tear), and small osteochondral lesions in the medial and lateral talar dome. On October 1, 2019, Cameron Bahr, M.D., who reviewed the MRI, wrote an addendum after speaking with Dr. Davis. In his addendum, Dr. Bahr noted there is mild edema in the slightly elongated os perineum but

no appreciable fracture, slight irregularity and thinning of the peroneus longus tendon near the os peroneum with likely longitudinal split tear in this location (no full thickness tear). (*Claimant's Exhibit 8, pages 62-64.*)

18. On October 1, 2019, Claimant returned to Dr. Davis, who noted he reviewed the MRI and discussed his MRI findings with Dr. Bahr. Dr. Davis opined the MRI showed edema within the os peroneum and a longitudinal rupture of the peroneus longus tendon at its attachment, which was not noted on the initial MRI report. Dr. Davis added that Dr. Bahr agreed with his assessment. On physical examination, Dr. Davis noted consistent findings with his prior exams. Dr. Davis opined, "Given the large nature of the accessory bone as well as the longitudinal rupture and lack of improvement with previous immobilization, I feel as though the patient would best be served by surgical intervention." Dr. Davis recommended removal and excision of the os peroneum with repair of the peroneus brevis tendon. Dr. Davis requested authorization for surgery. (*Claimant's Exhibit 7, pages 39-44.*)
19. On October 9, 2019, Dr. Vanderhorst noted Claimant's history and Dr. Davis' most recent findings. Dr. Vanderhorst opined Claimant's injury is not work-related because Claimant's "onset of pain occurred with a normal activity of living, simply stepping up onto an edge without unusual forces." Dr. Vanderhorst added that "os peroneum is present in 20% of the population and predisposes to peroneal tendon changes. Dr. Vanderhorst placed Claimant at maximum medical improvement. (*Claimant's Exhibit 6, pages 20-22.*)
20. On October 11, 2019, Claimant completed a Workers' Compensation Claim form and reported that on July 25, 2019, he was washing out his truck when he stepped up on a ledge and felt a pop on the bottom of his foot. Claimant reported the injury to Mike Galbraith. (*Claimant's Exhibit 2, page 2.*)
21. On December 10, 2019, Claimant filed an Application for Hearing on compensability, reasonable and necessary medical benefits, average weekly wage, and temporary disability benefits. (*Claimant's Exhibit 4, pages 4-5.*)
22. On December 16, 2019, Claimant returned to Dr. Davis and reported continued left foot pain and discomfort along the peroneal tendons and the os peroneum. Dr. Davis noted consistent findings on physical examination and Claimant's lack of improvement despite conservative care. Dr. Davis recommended proceeding with surgery. (*Claimant's Exhibit 7, pages 45-50.*)
23. On December 18, 2019, Dr. Davis performed left foot surgery, including repair of the peroneal flexor tendon and open treatment of the os peroneum sesamoid fracture. Dr. Davis noted a large nodular mass along the plantar lateral aspect of the cuboid within the peroneus longus tendon, which he debrided, and he removed a large sesamoid bone from the tendon. Dr. Davis also repaired a longitudinal split ruptured peroneus tendon. *Claimant's Exhibit 7, pages 51-53.* On December 31, 2019, Claimant returned to Dr. Davis, who noted Claimant is doing well since the surgery. Dr. Davis fit Claimant for a cast. (*Claimant's Exhibit 7, pages 54-55.*)
24. On January 2, 2020, Respondents filed a Response to Claimant's Application for Hearing and endorsed the same issues. (*Claimant's Exhibit 5, pages 6-7.*)

25. On January 9, 2020, Claimant treated with Dr. Davis, who noted Claimant was doing well after surgery. Dr. Davis recommended Claimant start range of motion exercises. Dr. Davis recommended Claimant continue with no weight bearing on his left foot. (*Claimant's Exhibit 7, pages 56-57.*)
26. On January 28, 2020, Claimant underwent an IME with Dr. O'Brien, Respondents' retained expert. Dr. O'Brien reviewed additional records and performed a physical examination. Dr. O'Brien maintained his opinion that Claimant did not sustain a work injury. Dr. O'Brien disagreed with Dr. Davis' interpretation of the left foot MRI. Dr. O'Brien relates all of Claimant's left foot symptoms and MRI findings to his preexisting condition, not a work injury. (*Respondents' Exhibit A, pages 4-13.*)
27. On February 3, 2020, Claimant treated with Dr. Davis, who recommended Claimant ease out of the boot and start nonstrenuous activity. *Claimant's Exhibit 7, pages 58-59.* On February 24, 2020, Claimant treated with Dr. Davis, who noted Claimant continues to do well post-surgery. Dr. Davis recommended Claimant start formal physical therapy. (*Claimant's Exhibit 7, pages 60-61.*)
28. On April 9, 2020, Dr. O'Brien issues a third report based on his review of more medical records. Dr. O'Brien maintained his opinions. (*Respondents' Exhibit A, pages 1-3.*)
29. At Hearing, Dr. O'Brien testified consistent with his prior IME reports. Dr. O'Brien testified that in late July and early August 2019 Claimant was suffering from plantar fasciitis. Dr. O'Brien testified Claimant's plantar fasciitis symptoms are a direct result of who he is physiologically and did not result from any work injury. Dr. O'Brien testified Claimant did not sustain an injury on July 25, 2019. Dr. O'Brien testified no evidence exists that Claimant sustained any acute trauma or injury on July 25, 2019. Dr. O'Brien testified an os peroneum is a bone embedded in a tendon on the outside of the foot between the heel and the toes. Dr. O'Brien testified Claimant's left foot MRI was normal for someone his age. Dr. O'Brien testified he disagrees with Dr. Davis' diagnosis and surgery. Dr. O'Brien testified that Claimant did not have a fracture because there was no tendon rupture and no evidence of any bleeding. Dr. O'Brien testified Dr. Davis over read the MRI and should not have done surgery. Dr. O'Brien testified that it is not uncommon for degenerative, preexisting conditions like Claimant's to wax and wane over time. Dr. O'Brien testified Claimant's need for treatment is solely related to his personal medical conditions.
30. The ALJ Does not find Dr. O'Brien's opinions as explained in his reports and his testimony to be credible or persuasive for many reasons. First, Dr. O'Brien states in his report that:

There is not enough energy generated as the result of stepping up onto a step (which is essentially a daily activity) to result in new tissue breakage or yielding. (*Respondents' Exhibit A, page 11.*)

Despite Dr. O'Brien's conclusory statement, he did not provide:

- i. the amount of energy generated by Claimant while performing the task he was doing at the time of the incident,
- ii. the amount of energy necessary to lead to new tissue breakage or yielding, or

- iii. the amount of energy necessary to lead to new tissue breakage or yielding in a Claimant who has preexisting, but asymptomatic foot problems.

He also stated that:

There was no unusual or challenging aspect of his environment such as ice or oil upon the surface upon which he was stepping or disrepair of the step upon which he was stepping.

(Respondents' Exhibit A, page 9.)

That said, pictures presented at hearing by Respondents show that the ledge on which Claimant stepped when he injured his foot was unusual and challenging. The ledge was uneven and had an irregular surface - because it had dried concrete and debris on it. *(Respondents' Exhibit F, p. 136.)* Moreover, how Claimant would have had to have stepped on the ledge – with an irregular surface – differs from going up a normal set of steps. Here, Claimant had to step on an isolated ledge - like a balance beam – that had an irregular surface.

Dr. O'Brien also stated that:

Because there was no new tissue breakage or yielding (there was never any objective evidence of redness, bruising, or swelling and thus no objective evidence of tissue breakage or yielding and certainly this would have been expected if there had been an acute plantar fascial rupture) concepts such as end of healing and permanent partial disability are not applicable in this case. *(Respondents' Ex. A, page. 9.)*

But Claimant was not diagnosed by Dr. Davis with a plantar fascial rupture. Claimant, was, however diagnosed with the following conditions involving his left foot:

- i. Os peroneum syndrome, left foot,
- ii. Peroneal tendon rupture, left foot, and
- iii. Sesamoid fracture,

31. Dr. O'Brien also stated that Claimant:

[H]as a history of diffuse lateral foot pain that he has experienced over the course of years. More often than not, these subjective complaints of pain are found with the complete absence of any objective evidence of tissue breakage or yielding. X-rays were normal. He had no swelling or bruising or any physical sign of trauma or inflammation. Therefore, just as my Independent Medical Evaluation Report proved, Mr. Archuleta's subjective complaints of pain are more often than not devoid of any supportive objective clinical evidence. *(Respondents' Exhibit A, page 3.)*

32. The ALJ has found, through its own analysis of the record, that just because Dr. O'Brien states there are no objective clinical findings to support Claimant's contention that he suffered a compensable injury at work does not make it so. The record contains several objective clinical, x-ray, MRI, and surgical findings that support Claimant's contention that he suffered a compensable injury to his left foot after he developed the immediate

onset of significant left foot pain upon stepping up on the uneven ledge. These findings include, but are not limited to, the following:

- Dr. Davis noted Claimant's pain was localized to the lateral aspect of the cuboid as well as the central arch area.
- Dr. Davis noticed swelling along the lateral aspect of Claimant's foot.
- Dr. Davis noted Claimant had pain with palpation along the peroneal tendons to the lateral aspect of the cuboid. He also noted that the palpation "does directly reproduce symptoms." He further noted Claimant had only minimal pain with palpation of the plantar fascial insertion of the calcaneus.
- He also noted that "resisted motion of the peroneal tendons again directly reproduced Claimant's symptoms."
- Dr. Davis also took and reviewed x-rays. He noted that the x-rays showed a possible transverse lucency along the proximal aspect of the os peroneum.
- Dr. Davis also requested Claimant undergo an MRI. Based on his reading of the actual MRI films, he concluded there was edema within the os peroneum and a longitudinal rupture of the peroneus longus tendon at its attachment. Dr. Davis discussed his review of the MRI findings with the radiologist - and upon further review - the radiologist agreed with Dr. Davis' assessment.
- Lastly, Dr. Davis performed surgery in December 2019. In his surgical report, he identified the following objective pathology during surgery:
 - The peroneal tendon sheath was then opened, and the tendons were inspected. The peroneus brevis tendon was noted to be intact without deficit.
 - He did have a large nodular mass along the plantar lateral aspect of the cuboid within the peroneus longus tendon. This was then debrided, and a large sesamoid bone was then removed from the tendon itself. The bone was removed in toto.
 - The residual peroneus tendon was then inspected, and he did have a longitudinal split rupture extending proximally - which he repaired.

33. Rather than provide an expert opinion within the confines of his expertise - Dr. O'Brien veered from his lane of expertise and began casting aspersions regarding the character of Claimant, the radiologist, and Dr. Davis. In essence, he sought to provide character evidence instead of causation evidence.

For example, regarding Claimant, Dr. O'Brien stated:

Nonorganic pain, especially in the presence of a Workers' Compensation claim, in my experience in all occasions is being generated by the secondary gain aspects inherent to the those claims. In other words, by the date of Podiatrist VanderHorst's evaluation on August 23, 2019, Mr. Archuleta's pain is no longer being generated by an anatomic or physiologic path, but rather is being generated by virtually the fact that he has a Workers' Compensation claim that he is attempting to adjudicate. The pain on August 23, 2019, which is definitely migratory in nature, is therefore claim-based but not anatomically based.

According to Dr. O'Brien's reports and testimony, he wants the ALJ to find:

- i. Claimant was not satisfied with recovering from his initial foot injury. As a result, Claimant decided to make up a non-existent foot problem, in a new area of his foot, and have surgery for a non-existent foot problem.
- ii. Claimant had surgery for a non-existent foot problem so he could stay off work longer and not get paid – rather than go to work and get paid.
- iii. The radiologist was coerced into amending his report to indicate there was a tear or rupture of Claimant's peroneal tendon, when in fact there was none.
- iv. The surgery performed by Dr. Davis was not reasonably necessary, because Claimant's peroneal tendon was not torn or ruptured and the tendon and os peroneum were not causing Claimant any symptoms.
- v. Dr. Davis misrepresented his findings during his examinations and surgery. In essence, Dr. Davis found no clinical findings to support his assessment that Claimant had a ruptured peroneal tendon.
- vi. Or, in the alternative, Claimant suffered a new injury after the initial work injury, while spending most of the time walking in an immobilization boot.

The ALJ, however, will not make such findings based on the evidence in this case. As Claimant credibly testified, he had surgery so he could go back to work – not stay home from work. Based on the credible testimony of Claimant, the reports of Dr. Davis, and the medical record as a whole – the ALJ rejects Dr. O'Brien's opinions and does not find his opinions to be credible or persuasive.

34. The ALJ also does not find Dr. Vanderhorst's opinion on causation to be persuasive. Like Dr. O'Brien, he concluded Claimant stepping on the ledge did not create any unusual forces. But, like Dr. O'Brien, it does not appear Dr. Vanderhorst knew what forces were involved in Claimant's activities, the irregular surface, or the exact way Claimant stepped on the ledge. He also failed to analyze how such action did not aggravate or accelerate any underlying preexisting condition.

35. The ALJ does credit and find persuasive the findings and opinions of Dr. Davis regarding Claimant's condition, the work related cause of the condition, and the need for medical treatment - which included surgery - to cure and relieve Claimant from the effects of his work injury. Dr. Davis' opinions align with Claimant's testimony, his clinical findings on examination, the radiological, x-ray, MRI findings, and ultimately his surgical findings.
36. The issue here is whether Claimant's injury arose out of his employment. Claimant contends he sustained a compensable, left foot injury when he planted his left foot on the uneven ledge while maneuvering around some concrete and other debris to operate and wash his work truck. Claimant contends that his injury is inherent in his work activities and should be analyzed under the "employment risk" category of injuries, not the "neutral risk" or "personal risk" categories. Claimant contends his injury is not idiopathic and not caused by his preexisting condition. Rather, Claimant asserts he suffered a new discreet injury due to his work accident or that the work accident aggravated, accelerated, and/or combined with his preexisting condition to cause his injury and need for treatment.
37. Respondents contend Claimant's injury is strictly personal and thus should be analyzed under the "personal risk" category of injuries. Respondents argue Claimant's injury was caused by a preexisting condition. Respondents argue Claimant's July 25, 2019 mechanism of injury was insufficient to cause an injury.
38. The ALJ finds that on July 25, 2019, Claimant sustained a compensable, left foot injury. The ALJ finds Claimant's injury arose out of his employment. The ALJ finds Claimant's injury should be analyzed under the "employment risk" category of injuries. At the time of his injury, Claimant was in the process of cleaning out his work truck. To access his controls and the chute on his truck, Claimant had to maneuver around concrete, dirt, water, and other debris that had collected at the wash station. Claimant stepped up on the concrete ledge to reach the control panel on his truck and to lower the chute on his truck so that he could clean it. At the time of his injury, Claimant was performing an essential function of his job. But for his job duties, Claimant would not have been at the wash station washing out his work truck, a required part of his employment.
39. The ALJ finds Claimant injured his left foot when he stepped up on the uneven, concrete ledge. The ALJ finds this mechanism of injury sufficient to cause Claimant's left foot injury. The ALJ finds Claimant's injury was not precipitated by a preexisting condition. The ALJ finds Claimant's July 25, 2019 injury is either a new and discreet injury or that it aggravated, accelerated, and combined with his preexisting condition to cause his injury, the need for medical treatment - including surgery- and his disability.
40. The ALJ finds Claimant proved by a preponderance of the evidence that on July 25, 2019, he sustained a left foot injury arising out of and in the course and scope of his employment with the Employer. The ALJ finds the medical treatment, including the December 18, 2019 surgery, Claimant has undergone for his left foot reasonable, necessary, and related to his compensable, July 25, 2019 industrial injury.
41. The Claimant's injury also prevented him from performing his regular job duties.

CONCLUSIONS OF LAW

- A. The purpose of the Workers' Compensation Act (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the right of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.
- B. A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc., v. Indus. Claim. Apps. Office*, 5 P.3d 385 (Colo. App. 2000).
- C. When determining credibility, the fact finder should consider, among other things, the consistency, or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205, 1209 (Colo. 1936); CJI, Civ. 3:17 (2013).

COMPENSABILITY

- D. A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Indus. Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). An injury arises out of employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions so as to be considered part of employment. *Id. at 502*. Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).
- E. In *City of Brighton v. Rodriguez, supra*, the Supreme Court addressed whether an unexplained fall at work satisfies the "arising out of" test. The court identified three categories of risks that cause injuries to employees: (1) employment risk directly tied to the work itself; (2) personal risks, which are inherently personal; and (3) neutral risks, which are neither employment nor personal. The first category of risks encompasses risks inherent to the work environment and are compensable, whereas the second category of risks is not compensable, unless an exception applies. The court also defined the category of personal risks to encompass so-called idiopathic injuries, which are considered "self-originated" injuries that spring from a personal risk of the claimant,

such as heart disease, epilepsy, or similar conditions. The third category, neutral risks, are compensable if the application of a “but for” test shows any employee would have been injured simply by virtue of being at work. The court was careful to point out that the “but for” test does not relieve the claimant the burden of proving causation, nor does it suggest that all injuries occurring at work are compensable. When a claimant’s injury is “precipitated” by a preexisting condition, the injury is not compensable unless a “special hazard” of employment increased the probability or severity of the injury. *National Health Laboratories v. Indus. Claim Apps. Office*, 844 P.2d 1259 (Colo. App. 1992); *Gates Rubber Co. v. Indus. Comm’n*, 705 P.2d 6 (Colo. App. 1985). The classic case is the employee who suffers an epileptic seizure at work that causes him to fall from a scaffold or ladder. E.g., *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

- F. An aggravation of a preexisting condition is compensable. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. 1990). If a direct causal relationship exists between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Indus. Claim Apps. Office*, 107 P.3d 999 (Colo. App. 2004). However, there must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Indus. Comm’n*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id.*
- G. Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant’s need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Indus. Comm’n*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptom at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Indus. Comm’n*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). Rather, the ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Const. v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).
- H. The critical question here is whether the conditions of Claimant’s employment caused a new and discreet injury or aggravated, accelerated, and combined with his preexisting condition to cause his left foot injury and need for treatment. Claimant contends his need for treatment was the proximate result of the industrial injury. Respondents argue Claimant’s need for treatment is merely the direct and natural consequence of his preexisting condition. The ALJ finds Claimant’s injury should be analyzed under the “employment risk” category of injuries.
- I. In *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990), the claimant suffered from a cancerous condition that compromised the strength of the humerus bone in his arm. While at work, the sudden opening of a door caused Claimant to quickly move his arm. That sudden movement, combined with the weakened condition of the bone, led to the fracture of his arm. The Court determined the claimant’s injury should be analyzed

under the “employment risk” category, not the “personal risk” or “neutral risk” categories. The Court determined the sudden opening of the door, not the cancerous condition, caused the claimant’s injury and need for treatment. As a result, the claimant’s injury inherently fell under the “employment risk” category of injuries. *Vicory*, 825 P.2d at 1168-1169.

- J. In the matter of *Gary Enriquez v. Americold d/b/a Atlas Logistics*, W.C. No. 4-960-513 (October 2, 2015), the ICAO upheld an ALJ’s finding that the claimant sustained a compensable knee injury when he stepped off a nine inch high pallet jack. Much like the Court in *Vicory*, the ICAO analyzed Claimant’s injury under the “employment risk” category, finding the claimant’s injury was inherent to his employment.
- K. More recently, in *Cambria v. Flatiron Construction*, W.C. No. 5-066-531 (May 7, 2019), the ICAO upheld an ALJ’s determination that the claimant sustained a compensable knee injury when he was carrying a 20-pound metal cage, stepped forward with his right leg to put down the cage, and felt a pop in his knee. The claimant had a history of right knee problems, including a 2014 right knee surgery. The ALJ determined the claimant’s injury aggravated, accelerate, and combined with the claimant’s preexisting condition to produce a disability and need for treatment. The ALJ determined the claimant’s injury was inherent to his work activities an analyzed the claim under the “employment risk” category of injuries, determining the claimant’s injury was not precipitated by a preexisting condition. The ICAO affirmed the ALJ’s determination that the claimant sustained a compensable knee injury.
- L. As found, this claim, like the claims in *Vicory*, *Enriquez*, and *Cambria*, should be analyzed under the “employment risk” category of injuries. At the time of his injury, Claimant was in the process of cleaning out his work truck, which he does every day as required by the Employer. Claimant maneuvered around some concrete, dirt, water, and other debris and stepped up on an uneven, concrete ledge to access the control panel for his truck. It as the action of stepping on the uneven ledge that proximately caused Claimant’s injury and necessitated the need for medical treatment and caused his disability. At the time of his injury, Claimant was performing an essential function of his employment. Claimant’s injury is inherent to his employment duties, and, but for Claimant’s work duties, he would not have been injured. Claimant’s injury is either a new and discreet injury or it aggravated, accelerated, and combined with his prior condition to cause an injury and need for treatment. As found, Claimant’s injury is not strictly personal. Claimant’s injury was not precipitated by a preexisting condition. Claimant proved by a preponderance of the evidence that on July 25, 2019, he sustained a compensable left foot injury arising out of and in the course and scope of his employment with the Employer.

MEDICAL BENEFITS

- M. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers’ compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the

employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office*, 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.*, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co.*, *supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970).

- N. As found, Claimant proved by a preponderance of the evidence that the medical treatment, including December 18, 2019 left foot surgery, he received through the authorized providers is reasonable, necessary, and related to his compensable July 25, 2019 industrial injury. The medical treatment provided to Claimant was to cure and relieve him from the effects of his compensable work injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. On July 25, 2019, Claimant sustained a compensable left foot injury arising out of and in the course and scope of his employment with the Employer.
2. The medical treatment, including December 18, 2019, left foot surgery Claimant received through his authorized providers is reasonable, necessary, and related to his compensable industrial injury.
3. Respondents shall pay for Claimant's medical treatment, including December 18, 2019 left foot surgery, subject to the Division of Workers' Compensation Medical Fee Schedule.
4. Claimant's average weekly wage is \$1,114.92.
5. Respondents shall pay Claimant temporary partial disability benefits from July 26, 2019, through December 12, 2019.
6. Respondents shall pay Claimant temporary total disability benefits from December 13, 2019, through March 25, 2020.
7. Respondents shall pay eight percent (8%) per annum interest on all benefits not paid when due.

Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: June 22, 2020

Denver, CO 80203

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-102-365-001**

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that he suffered an occupational disease arising out of and in the course and scope of his employment with the employer.

If the claimant proves a compensable occupational disease, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment he has received was authorized.

If the claimant proves a compensable occupational disease, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment he has received was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the occupational disease.

If the claimant proves a compensable occupational disease, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits beginning May 4, 2019 and ongoing.

At hearing, the parties stipulated that if the claim is found compensable, the claimant's average weekly wage is \$1,987.71, resulting in the maximum TTD rate of \$987.84.

FINDINGS OF FACT

1. The claimant began working for the employer in February 2017. In March 2019, the claimant was working as a supervisor. The claimant testified that his position involved manual labor.

2. The claimant's coworker, Mr. H[Redacted], described the nature of the work performed by the claimant. Mr. H[Redacted] testified that the claimant's job duties included doing rig up, rig down, and paperwork. Mr. H[Redacted] explained that "rig up" entailed hauling and installing iron pieces called "chiksens". Mr. H[Redacted] estimated that these chiksens weigh between 45 and 50 pounds each. Installation involves attaching the chiksen to a piece of iron and hammering it to make the connection. This is done approximately four to five inches above the ground. In addition to installing chiksens in this way, the claimant would also carry pieces of iron that varied in length from five feet to 15 feet. Mr. Davis testified that he observed the claimant performing the job duties described above. Mr. H[Redacted] explained that while he was training to become a supervisor, he was supervised by the claimant.

3. The claimant testified that when he was involved in installing chiksen, it was necessary to "hammer down as hard as you can." With regard to hauling chiksen and other iron, it was necessary to reach from shoulder height to grab the iron.

4. The claimant testified that on March 7, 2019 he was working at a job location in Rock Springs, Wyoming. On that date, the claimant assisted with the “rig down” portion of the job duties. The claimant testified that at some point during that shift he had difficulty moving his right ring and small fingers. In addition, he could not use his computer keyboard while completing paperwork. That night, he developed pain in his entire right arm.

5. The next morning, March 8, 2019, the claimant sent a text message to his supervisor, Dallas S[Redacted], in which he stated that he needed to see a doctor. In that same text, the claimant described his symptoms as “[l]ost feeling and movement in half of my right hand and my last two fingers along with terrible pain from my elbow to my wrist.” When Mr. S[Redacted] asked, via text, if the claimant believed it was work related the claimant responded “[l]m not sure. It just happened suddenly.”

6. Mr. S[Redacted] testified that he was contacted by the claimant by text regarding his right arm symptoms. In addition, he spoke with the claimant by telephone. Mr. S[Redacted] also noted that the claimant reported to him that on March 7, 2019, the claimant did not do much of the rig up activities. Mr. S[Redacted] testified that it is typical for a supervisor, like the claimant, to only complete the paperwork related to a rig up.

7. Following his communication with the claimant, Mr. S[Redacted] made arrangements with the employer to schedule medical treatment for the claimant. In addition, Mr. S[Redacted] transported the claimant for that treatment at an urgent care clinic in Rock Springs on March 8, 2019. On that date, the claimant was seen by Dr. Darcy Turner. The claimant reported that the day before he was “just standing there” at work when his right arm went numb below the elbow. The claimant also reported pain into his fingers and difficulty gripping with his right hand. Dr. Turner diagnosed a lesion of the right ulnar nerve and prescribed prednisone.

8. The claimant testified that his regularly scheduled “hitch” in Wyoming was ending March 10, 2019, and he returned to his home in Grand Junction, Colorado on March 11, 2019.

9. Upon his arrival in Grand Junction, the claimant did not pursue treatment with a designated medical provider. Instead, the claimant sought medical treatment with his personal care provider, Dr. Charles Rademacher. The claimant was seen by Dr. Rademacher on March 12, 2019 and reported the inability to extend the fourth and fifth fingers on his right hand. In addition, the prednisone was causing swelling in the claimant’s right hand. The claimant reported to Dr. Rademacher that he did not recall any trauma to his right hand. Dr. Rademacher diagnosed atraumatic acute right ulnar neuritis and referred the claimant for an orthopedic consultation.

10. Beginning on March 12, 2019, all of the claimant’s medical treatment has been paid for by his personal health insurance.

11. On March 18, 2019, the claimant was seen by Dr. Bjorn Irion with Western Orthopedics and Sports Medicine. At that time, Dr. Irion noted that the claimant had right elbow, wrist, and hand symptoms “without any known injury.” The symptoms included

pain, numbness, tingling, swelling, weakness, and decreased range of motion. The claimant reported that his symptoms started when he “was resting his forearms on a metal bar”. Dr. Irion reviewed radiographs of the claimant’s right elbow that showed normal alignment and no acute osseous abnormality. Dr. Irion diagnosed right ulnar neuritis and referred the claimant to occupational therapy. In addition, he prescribed gabapentin.

12. Thereafter, Dr. Irion referred the claimant to Dr. James Rose, a hand and upper extremity surgeon. The claimant was first seen by Dr. Rose on March 29, 2019. The claimant reported right elbow symptoms that included pain, numbness, tingling, swelling, weakness, and decreased range of motion. Dr. Rose diagnosed right cubital tunnel syndrome and recommended surgical intervention. At that time, Dr. Rose also addressed the possibility of nerve conduction studies. However, it was noted that such testing could take six to eight weeks. The claimant elected to undergo surgery.

13. On April 16, 2019, Dr. Rose performed a right ulnar release. In the surgical record, Dr. Rose noted that the claimant’s father had symptoms resulting in bilateral cubital tunnel releases.

14. Following the ulnar release surgery, the claimant was seen by Dr. Rose on April 29, 2019. On that date, the claimant reported that his symptoms were unchanged following the surgery. Dr. Rose referred the claimant to neurologist Dr. Joel Dean for nerve conduction studies.

15. The claimant was seen by Dr. Dean on May 2, 2019. On that date, Dr. Dean administered electromyography (EMG) and nerve conduction studies (NCS) on the claimant’s right upper extremity. Based upon the results, Dr. Dean opined that the claimant had severe right ulnar neuropathy at the elbow. Dr. Dean noted that the claimant experienced instant bilateral arm numbness when wearing a backpack. Dr. Dean indicated that it was possible the claimant had an accessory cervical rib and thoracic outlet syndrome (TOS). As a result, Dr. Dean ordered an x-ray of the claimant’s cervical spine.

16. On May 2, 2019, an x-ray of the claimant’s cervical spine was performed. The radiologist noted mild degenerative changes at the C3-C4 and C5-C6 levels. In addition, the x-ray showed asymmetry of the right thoracic outlet when compared to the left. The radiologist also noted crowding of the clavicle and the first rib.

17. On May 17, 2019, the claimant was seen by Dr. Rose. On that date, Dr. Rose noted Dr. Dean’s mention of TOS. Dr. Rose agreed that the claimant’s cervical spine x-ray showed “some bony fullness around the right first rib”. Dr. Rose ordered x-rays and a magnetic resonance image (MRI) of the claimant’s chest. In addition, he referred the claimant to Dr. Robert Brooks.

18. On May 21, 2019, a chest x-ray was performed and showed no cervical ribs. On June 4, 2019, an MRI of the claimant’s brachial plexus showed joint spurring at the C5-C6 level causing mild to moderate right sided neural foraminal stenosis. The radiologist noted similar findings at the C4-C5 level. The radiologist identified this as a negative MRI of the brachial plexus.

19. The claimant was first seen by Dr. Brooks on June 25, 2019. At that time, Dr. Brooks noted that the claimant's imaging studies were indicative of neurogenic TOS as evidenced by an asymmetrical right clavicle and a first rib. Dr. Brooks diagnosed right neurogenic TOS and recommended surgical intervention of a right first rib resection.

20. On July 1, 2019, Dr. Brooks performed a first and second rib excision on the right. On August 14, 2019, the claimant returned to Dr. Brooks. At that time, the claimant reported that he had not improved and continued to have numbness in his right shoulder, armpit, chest, and down into his elbow. He also reported continued moderate pain from his right wrist to his fingers. Dr. Brooks referred the claimant back to Dr. Rose.

21. On August 26, 2019, the claimant returned to Dr. Rose and reported that he was slowly improving. However, the claimant also reported that he continued to have clawing, weakness, and numbness "in the ulnar distribution" of his right arm. Dr. Rose noted that the claimant had been referred back to him to consider additional ulnar releases. Dr. Rose opined that further nerve compression at the level of the ulnar tunnel was not warranted.

22. The claimant returned to Dr. Rose on October 7, 2019 and reported continuing numbness in his right fourth and fifth fingers and into his forearm. On that date, Dr. Rose ordered an MRI of the claimant's cervical spine "to rule out any proximal cause of [the claimant's] ulnar neuropathy."

23. On October 16, 2019, an MRI of the claimant's cervical spine showed mild to moderate right neural foraminal narrowing with a posterior disc osteophyte complex at the C5-C6 level, with abutment of the ventral spinal cord.

24. Subsequently, Dr. Bell referred the claimant to spine surgeon, Dr. Kirk Clifford. On November 4, 2019, the claimant was seen by Dr. Clifford's physician's assistant, Jason Bell. On that date the claimant reported that that he began to experience numbness in his right ring and small fingers in March, "without any specific inciting mechanism". Mr. Bell noted the recent MRI results and the disc bulge at the C5-C6 level. Mr. Bell opined that surgical intervention would be beneficial to the claimant. However, Mr. Bell indicated that before pursuing surgery the claimant would need to lose weight and stop smoking.

25. On December 2, 2019, the claimant returned to Mr. Bell and indicated that he was ready to proceed with surgery. Mr. Bell noted that authorization would be submitted for a single level disc replacement.

26. On December 14, 2019, the claimant attended an independent medical examination (IME) with Dr. Robert Messenbaugh. In connection with the IME, Dr. Messenbaugh reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Messenbaugh opined that the claimant's right hand and upper extremity symptoms (including the diagnosis of TOS) were developed from repetitive lifting, pushing and pulling at his job on March 7, 2019. In support of this opinion, Dr. Messenbaugh noted that the claimant did not experience these symptoms until he performed his job duties on March 7, 2019. In

addition, Dr. Messenbaugh stated that the type of repetitive activity the claimant engaged in on March 7, 2019 is known to cause TOS. Dr. Messenbaugh further opined that the claimant did not injure his cervical spine on Marcy 7, 2019.

27. Dr. Messenbaugh's testimony by deposition was consistent with his written report. Dr. Messenbaugh testified that it is his opinion that the claimant's job duties are consistent with the development of TOS. Dr. Messenbaugh also reiterated that he does not believe that the claimant has cervical spine symptomatology. During his deposition, Dr. Messenbaugh learned that the claimant's symptoms did not occur while he was engaged in physically vigorous activities. Dr. Messenbaugh noted that would be of some concern, but would not change his opinion regarding the cause of the claimant's TOS symptoms.

28. On December 19, 2019, Dr. Kirk Clifford performed a C5-C6 anterior cervical discectomy and artificial disc replacement.

29. On January 17, 2020, Dr. Rose authored a medical record in response to the opinions expressed by Dr. Messenbaugh in the IME report. In that record, Dr. Rose opined that the cervical disc herniation was caused by the claimant's job duties. In support of that opinion, Dr. Rose noted "the immediacy of the [the claimant's] symptoms directly after heavy overhead work" and the MRI findings of a disc herniation.

30. At the request of the respondents, Dr. Tashof Bernton reviewed the claimant's medical records and issued a report regarding that review on April 27, 2020. In that report, Dr. Bernton opined that there was no occupational cause of the claimant's symptoms. In support of this opinion, Dr. Bernton noted that the claimant's diagnosis is "sudden onset of ulnar weakness." Dr. Bernton also noted that the cervical spine MRI showed issues at the C5-C6 level, which is not the dermatomal pattern for the ulnar nerve. Rather, the ulnar nerve is innervated by C8 and T1. The claimant's cervical spine MRI showed no pathology at the C8-T1 levels. Dr. Bernton further opined that the claimant's history is not consistent with a TOS diagnosis. However, at the time of his report, Dr. Bernton did not have access to Dr. Dean's EMG/NCS testing report. He requested an opportunity to review that report.

31. Dr. Berton wrote a second report on April 28, 2020, after reviewing additional records. In that report, Dr. Berton stated that the "data certainly indicates the patient has a severe ulnar neuropathy." Dr. Bernton also opined that the claimant may have Parsonage-Turner syndrome, a post-infectious or autoimmune condition. Dr. Bernson further noted that the claimant's condition is not work related.

32. Dr. Bernton's testimony by deposition was consistent with his written reports. Dr. Bernton testified that the onset of the claimant's symptoms were atypical for ulnar neuropathy. Dr. Bernton explained that typically these symptoms will begin to develop gradually and over time. However, the claimant describes a sudden onset of his symptoms. Dr. Bernton also testified that the claimant's symptom onset is not consistent with a diagnosis of TOS. Dr. Bernton testified that it is his opinion that the claimant's symptoms/diagnoses were not caused by the claimant's work activities.

33. Dr. Rose testified by deposition. He testified that Dr. Irion referred the claimant to him because of hand numbness and elbow pain. Dr. Rose also testified that he recommended that the claimant undergo surgery because of the amount of muscle wasting present in the claimant's right hand. Dr. Rose felt that the muscle loss could become irreversible if surgery was not pursued quickly. As a result, he did not recommend waiting six to eight weeks to get the claimant in to see a neurologist. However, Dr. Rose agreed in his testimony that the surgery he performed did not resolve the claimant's symptoms, and as a result he made the referral to Dr. Dean. Dr. Rose also noted that the claimant reported to him that his father had similar symptoms of bilateral numbness in his ring and small fingers.

34. Dr. Dean also testified by deposition. Dr. Dean testified that the claimant was referred to him by Dr. Rose. Dr. Dean also testified that the testing he performed does not address the cause of the claimant's symptoms. Rather the testing is used to assess where in the claimant's right upper extremity the weakness was coming from; his neck, shoulder, elbow, or wrist.

35. Dr. Clifford testified by deposition. Dr. Clifford testified that even after the ulnar release and the TOS related rib resection, the claimant had clawing of his right hand, with atrophy and wasting. Dr. Clifford proposed disc replacement surgery because of the disc herniation at the C5-C6 level. Dr. Clifford also testified that the claimant's development of bone spurs in conjunction with a disc herniation would develop over months or years.

36. In October 2019, the claimant began receiving long term disability in the amount of \$3,276.00 per month. This is equal to an average of \$756.00 per week.¹

37. The ALJ credits the medical records and the opinions of Dr. Bernton (and over the contrary opinions of Dr. Messenbaugh) and finds that the claimant has failed to demonstrate that it is more likely than not that he suffered an occupational disease arising out of and in the course and scope of his employment with the employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer.

¹ \$3,276.00 multiplied by 12 months equals \$39,312.00, then divided by 52 weeks equals \$756.00.

Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." See *H & H Warehouse v. Vicory, supra*.

5. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

[A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

6. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251, 252 (Colo. App. 1999). Moreover, Section 8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the

disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

7. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, April 10, 2008). Simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. See *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAP, October 27, 2008).

8. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he suffered an occupational disease arising out of, and in the course and scope of his employment with the employer. The ALJ concludes that the development of the claimant’s symptoms were not a natural incident of the claimant’s work job duties. As found, the medical records and the opinions of Dr. Bernton are credible and persuasive.

ORDER

It is therefore ordered that the claimant’s claim for workers’ compensation benefits related to an alleged occupational disease (with an onset date of March 7, 2019) is denied and dismissed. Therefore, all other issues before the ALJ (authorized, reasonable, necessary, and related medical benefits, TTD benefits) are moot.

Dated this 24th day of June 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the left total shoulder replacement, as recommended by Dr. Kennan Vance, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted work injury.

FINDINGS OF FACT

1. The claimant began working for the employer in 2006. The employer delivers freight to various locations. The claimant's job duties included unloading and reloading freight to be delivered. The claimant testified that the items he would load and reload varied in weight from 25 pounds to over 2,000 pounds. In addition, the claimant performed some of the delivery driving.

2. On July 15, 2019, the claimant was engaged in unloading a trailer of freight, that included kayaks¹. While he was reaching overhead to pull down two kayaks, a third kayak began to slip behind him and struck the claimant in the upper back. The point of impact was between his shoulder blades and to the left. While this occurred, the claimant reached out with his left arm to brace himself against the wall of the trailer and felt a pop. The claimant estimated that the kayak that struck him weighed approximately 80 pounds.

3. The claimant reported this incident to the employer and was referred to Dr. Craig Stagg for medical treatment. The claimant was first seen by Dr. Stagg on July 18, 2019. On that date, the claimant reported left shoulder pain with intermittent tingling into the fingers on his left hand. Dr. Stagg diagnosed a cervical strain and a left shoulder strain. At that time, he ordered x-rays of the claimant's cervical spine and left shoulder. In addition, he referred the claimant to Dr. Kennan Vance for an orthopedic consultation and to physical therapy.

4. On July 18, 2019, an x-ray of the claimant's left shoulder showed glenohumeral degenerative joint disease, with joint space narrowing and marginal osteophytes. An x-ray of the claimant's cervical spine was taken on that same date, and showed degenerative disc disease.

5. On July 19, 2019, the claimant returned to Dr. Stagg because his pain symptoms had increased. Dr. Stagg noted that the claimant might have radiculopathy and/or a rotator cuff tear. Dr. Stagg recommended that the claimant seek treatment at the emergency department (ED) to address his pain symptoms.

¹ The ALJ notes that the medical records often refer to the claimant being struck by a canoe, rather than a kayak. The ALJ is persuaded that the claimant uses the terms kayak and canoe interchangeably.

6. On that same date, the claimant received medical treatment in the ED at Community Hospital and was seen by Lynda Steinbach, FNP. Ms. Steinbach provided the claimant with a sling and prescribed Flexeril to address the claimant's pain symptoms.

7. On July 24, 2019, the claimant was seen in Dr. Stagg's practice by James Harkreader, NP. At that time, the claimant reported pain of 8 out of 10, with tingling and numbness in his left fingers. Mr. Harkreader noted the x-ray results and noted degenerative joint disease in the claimant's acromioclavicular (AC) joint. Mr. Harkreader opined that the claimant likely had cervical radiculopathy and ordered magnetic resonance imaging (MRI) of the claimant's cervical spine and left shoulder.

8. On July 25, 2019, the claimant was seen by Dr. Vance. At that time, he reported left shoulder pain, numbness, tingling, popping, decreased range of motion, and sleep disturbance. Dr. Vance diagnosed impingement syndrome and a possible rotator cuff tear. Although Dr. Vance considered administering an injection on that date, he elected to wait for the MRI results.

9. On July 30, 2019, an MRI of the claimant's left shoulder showed a complete full-thickness tear of the supraspinatus tendon, moderate atrophy of the supraspinatus tendon, tendinopathy and low grade partial thickness tearing of the infraspinatus tendon, and severe acromioclavicular osteoarthritis.

10. On August 8, 2019, the claimant returned to Dr. Vance. At that time, Dr. Vance noted that the left shoulder MRI showed a full thickness rotator cuff tear. Dr. Vance recommended the claimant undergo a left shoulder arthroscopy with rotator cuff repair. However, he opted to wait for one month for the claimant to quit smoking. On that same date, Dr. Vance requested authorization for a left shoulder arthroscopy with rotator cuff repair.

11. On August 14, 2019, the claimant was seen by Mr. Harkreader who noted the full thickness tear indicated by the left shoulder MRI. Mr. Harkreader recommended the claimant continue to use Tylenol and Motrin treat his pain symptoms. Mr. Harkreader also noted that the claimant would not return to physical therapy until after his surgery.

12. On August 27, 2019, Dr. Vance performed arthroscopic surgery. However, once the surgery began, Dr. Vance noted significant arthritic changes with complete loss of cartilage on the humeral side, and extensive degenerative tearing of the labrum. As a result, Dr. Vance did not repair the claimant's rotator cuff. Instead, the surgery was deemed diagnostic in nature. Dr. Vance removed a loose body of the ossified labrum and completed extensive intra-articular debridement.

13. The claimant returned to Dr. Vance on August 11, 2019. In the medical record of that date, Dr. Vance noted that the claimant's rotator cuff was "minimally torn", so it was not repaired. Dr. Vance also noted that during the surgery he observed "bone on bone arthritis" and recommended a total shoulder replacement. An authorization request was submitted on that same date.

14. On September 18, 2019, the respondent's third party administrator, Sedgwick Claims Management Services, filed a General Admission of Liability (GAL) regarding the claimant's July 15, 2019 work injury.

15. On September 20, 2019, Sedgwick sent a letter to Dr. Vance asking a number of questions related to the recommended shoulder replacement surgery. In his undated response, Dr. Vance addressed each question. In that letter, Dr. Vance noted that the goal of the surgery was to relieve the claimant's pain symptoms and improve his function. Dr. Vance also noted that the claimant had failed conservative treatment. Dr. Vance identified that conservative treatment as "activity modification, home exercise program, oral NSAIDs, opioids, and arthroscopy." Subsequently, the respondent denied authorization for the surgery.

16. On November 5, 2019, the claimant attended an independent medical examination (IME) with Dr. Lawrence Lesnak. In connection with the IME, Dr. Lesnak reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Lesnak opined that the claimant may have suffered a minor strain/sprain injury on July 15, 2019, and that minor injury has resolved. Dr. Lesnak noted that the claimant has significant osteoarthritis in his left shoulder. It is Dr. Lesnak's opinion that the condition of the claimant's left shoulder is chronic and not the result of an acute injury. Dr. Lesnak noted that shoulder replacement may be reasonable treatment of the claimant's left shoulder, but that treatment is unrelated to the minor injury the claimant sustained on July 15, 2019. Dr. Lesnak's testimony was consistent with his written report.

17. On December 4, 2019, the claimant was seen by Dr. Stagg. On that date, Dr. Stagg agreed with Dr. Lesnak that the findings on x-ray and MRI predated the claimant's work injury. However, Dr. Stagg also noted that prior to July 15, 2019, the claimant was working full duty with no left upper extremity issues.

18. The claimant credibly testified that prior to July 15, 2019, he had no issues performing his job duties. The claimant also credibly testified he had no treatment to his left shoulder prior to July 15, 2019. With regard to his current symptoms, the claimant testified that it is "virtually impossible" for him to raise his left arm, or reach his left arm behind his back. The claimant also testified that he cannot use his left arm without pain.

19. It is undisputed that the condition of the claimant's left shoulder should be treated with a total shoulder replacement. The conflict arises with regard to whether that surgery is related to the claimant's July 15, 2019 work injury. Upon review of all of the evidence and testimony presented, the ALJ finds that the claimant's need for a total left shoulder replacement is related to the admitted work injury.

20. The ALJ credits the claimant's testimony, the medical records, and the opinions of Dr. Vance over the contrary opinions of Dr. Lesnak. The ALJ finds that the claimant's asymptomatic preexisting left shoulder arthritis became symptomatic because of the July 15, 2019 injury at work. Based upon the testimony of the claimant and the

medical records, the ALJ finds that when the claimant was struck in the upper back on July 15, 2019, his preexisting left shoulder condition was aggravated and accelerated, necessitating medical treatment. Therefore, the ALJ finds that the claimant has demonstrated that it is more likely than not that the recommended left shoulder surgery is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted work injury.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The Colorado Workers’ Compensation Medical Treatment Guidelines (MTG) are regarded as accepted professional standards for care under the Workers’ Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the MTG is as follows: “In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these ‘Medical Treatment Guidelines.’ This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories

of occupational injury or disease to assure appropriate medical care at a reasonable cost.” WCRP 17-1(A). In addition, WCRP 17-5(C) provides that the MTG “set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate.”

6. While it is appropriate for an ALJ to consider the MTG while weighing evidence, the MTG are not definitive. See *Jones v. T.T.C. Illinois, Inc.*, W.C. No. 4-503-150 (May 5, 2006); *aff’d Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the MTG on questions such as diagnosis, but the MTG are not definitive); see also *Burchard v. Preferred Machining*, W.C. No. 4-652-824 (July 23, 2008) (declining to require application of the MTG for carpal tunnel syndrome in determining issue of PTD); see also *Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the MTG were not shown to be present, ICAO was not persuaded that such a determination would be definitive).

7. As found, the claimant has demonstrated by a preponderance of the evidence that the left total shoulder replacement, as recommended by Dr. Kennan Vance, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted work injury. As found, the claimant’s preexisting asymptomatic left shoulder arthritis became symptomatic because of the July 15, 2019 injury at work. As found, the claimant’s testimony, the medical records, and the opinions of Dr. Vance are credible and persuasive.

ORDER

It is therefore ordered that respondent shall pay for the recommended total left shoulder arthroplasty, pursuant to the Colorado Medical Fee Schedule.

Dated this 30th day of June 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- I. Whether Respondent overcame the DIME physician's opinion by clear and convincing evidence that Claimant is not at MMI.
- II. Whether the surgery recommended by Dr. Faulkner is reasonable, necessary, and related to Claimant's compensable injury.
- III. Whether Dr. Faulkner is an authorized treating physician.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant sustained an admitted injury to her right shoulder / upper extremity on February 15, 2019. At the time of her injury, Claimant was 63 years old.
2. Claimant was working for Employer where she had worked for about 7 years. Her job duties mainly included working in food service for the Employer - school district.
3. Claimant testified credibly that on February 15, 2019 she suffered an injury to her right upper extremity when she tried to lift a tray full of meat weighing around 25-30 pounds. This was on a Friday.
4. Claimant testified credibly that other than some minor aches and pains from work, she had never had any issues with her right upper extremity, nor had she sought medical treatment for her right upper extremity before the work injury.
5. The following Tuesday, Claimant obtained treatment at Midtown Occupational Health Services, with Sadie Sanchez, M.D. The treatment notes from that visit say Claimant was:

[T]ransferring a large tray filled with meat. When attempting to lift the tray she felt a "pop" with her right shoulder. She put the tray right down and tried to rub her shoulder and attempt to lift the tray again. She did manage to transfer it a few feet to where it needed to be but felt like her shoulder was "wobbly" and hurt. She kept working without any heavy lifting but was noted to be in pain by a co-worker. She went home and has been applying heat and topical pain meds. She hoped it would resolve on its own. She returned to work today and was attempting to accommodate doing more activities. (*R. Ex. B, p. 7.*)
6. At the first visit, Dr. Sanchez performed a basic shoulder examination and simply assessed Claimant's general range of motion in various planes. She did not document that she performed any specific tests to assess Claimant's rotator cuff or biceps tendon. Her assessment included a right shoulder and biceps strain. She

also documented Claimant had moderate to high levels of shoulder pain. Dr. Sanchez referred Claimant to physical therapy and prescribed medications. Lastly, she noted "So I do not feel that a significant injury is expected to result from the MOI [mechanism of injury] as highlighted above." (*R. Ex. B, p. 9.*)

7. Claimant returned to Dr. Sanchez. She noted:

The patient has moderate to high levels of pain with movement of her shoulder. She continues to have decreased ROM on the right, possibly due to self-limitation due to pain. The patient's complaints appear to lead one to consider a rotator cuff problem. However, I reviewed her MOI and she confirms that she was only lifting the tray of food at waist level. I also reviewed her job description again and she is only expected to lift 20 lbs. unaided. Therefore, it is difficult for me to entertain anything more than a simple shoulder strain, but she is not responding to treatment as anticipated. To this end, I would like to refer the patient to Dr. Lesnak, PMR, for further evaluation and to do a more thorough causative analysis. (*R. Ex. B, p. 12.*)

8. On April 8, 2019, Dr. Lesnak examined Claimant. On exam, he found she:

[E]xhibited severe guarding with even attempted passive range of motion of her right shoulder. Was unable to perform rotator cuff impingement signs on the right because of her severe guarding/fear of pain. She was only willing to actively forward flex her right shoulder to approximately 80 degrees and abduct to approximately 45 degrees. The patient exhibited multiple pain behaviors throughout today's evaluation and appeared to have extremely low tolerance to any type of external pain stimuli. She appeared to be "fearful" of any type of movement of her right shoulder during my evaluation today." (*R. Ex. C, p. 35.*)

9. Dr. Lesnak recommended further testing, to include electrodiagnostic testing and an MRI. In discussing the matter with Claimant, Dr. Lesnak noted:

[T]here is a very high probability given her age (63 years old), there will be some degenerative changes seen on the MRI. The MRI would specifically be to evaluate for any potential injury-related pathology involving her right shoulder that could be related to her previously reported occupational injury and correlate with her symptomatology. Please note that when I initially explained this to the patient, the patient remarked that since she has never had right shoulder symptoms before, any pathology on an MRI would have to be related to her injury. I explained to her that this is not the case and at least 50-75% of all patients over the age of 50 have significant degenerative changes seen on shoulder MRIs." *R. Ex. C, p. 37.*

10. Shortly after her appointment with Dr. Lesnak, Claimant underwent an MRI. The MRI showed:

- i. a complete supraspinatus tendon tear with 2 cm of retraction,

- ii. infraspinatus tendinosis and undersurface low-grade partial-thickness tearing,
- iii. torn and retracted biceps tendon, and
- iv. an undersurface high-grade partial-thickness tear of the subscapularis tendon. (See: *R. Ex. E, p. 51.*)

11. Claimant returned to Dr. Sanchez. Dr. Sanchez reviewed the MRI and noted:

[T]his extensive type of injury does not correlate with her MOI and job description. She denied having anything other than minor shoulder pain in the past from heavy lifting at work. I explained to her that she will be referred to Dr. Faulkner for a causation analysis and determination of need for further treatment. She understands that regardless that this likely will require surgery. (*R. Ex. B, p. 17.*)

12. Consistent with her report, Dr. Sanchez completed documentation showing she referred Claimant to Dr. Faulkner for examination, diagnosis, causality analysis, and treatment. (*R. Ex. B, p. 15.*) As a result, Dr. Faulkner is authorized to treat Claimant.

13. As for MMI, Dr. Sanchez said that: "MMI date unknown at this time because pending surgical evaluation." (*R. Ex. B, p. 15.*) Thus, Dr. Sanchez referred Claimant to Dr. Faulkner, an orthopedic surgeon, for him to examine Claimant and determine:

- i. the cause of her shoulder condition,
- ii. if surgery was reasonable and necessary, and
- iii. to treat Claimant surgically if he determined her shoulder condition and need for surgery were related to her industrial accident.

14. On April 29, 2019, Claimant saw Dr. Faulkner. After examining Claimant and reviewing the MRI, Dr. Faulkner concluded:

While this is not a typical mechanism of injury for a rotator cuff tear, it is more likely than not and this was an acute on chronic injury. She has no rotator cuff atrophy to indicate this was a more chronic tear.

Dr. Faulkner recommended right shoulder arthroscopic surgery, subacromial decompression, rotator cuff repair, subscapular repair, and possible biceps tenotomy. (*R. Ex. F, p. 56*)

15. Dr. Faulkner concluded that Claimant's work injury was an acute incident superimposed on Claimant's preexisting shoulder pathology. His conclusion stems from his finding that Claimant's rotator cuff did not have signs of atrophy, which would have been present if she had a chronic – preexisting - rotator cuff tear.

16. Dr. Mark Failing performed an IME on behalf of Respondent. His medical opinion on causation is essentially that it is medically probable that Claimant sustained a ruptured long head of the biceps tendon, but the tear to the rotator cuff was not

caused by lifting the heavy tray of meat at work based on the mechanism of injury described by Claimant. (C. Ex. 4, Pg. 22)

17. Claimant returned to Dr. Sanchez and was placed claimant at MMI on July 10, 2019. In her MMI report, Dr. Sanchez stated, "I am obligated to follow the recommendations of the IME unless I disagree materially with the IME." Dr. Sanchez did not assign any impairment rating, work restrictions, or maintenance care, even though the Respondent's IME did say the biceps tendon rupture was related. She also failed to explain in any meaningful way why she chose to follow the findings of the IME physician, Dr. Failinger, versus Dr. Faulkner - the surgeon to whom she referred Claimant for evaluation and treatment. (C. Ex. 7, Pg. 118-120).

18. Claimant requested Dr. John Hughes to perform a record review of her case and give an opinion on causation and the reasonableness, necessity, and relatedness of the surgical request to repair Claimant's biceps tendon and rotator cuff. Dr. Hughes concluded that the activity described by Claimant in lifting the tray of meat injured Claimant's biceps tendon and rotator cuff. He described how Claimant lifting the tray of meat did exert force through her rotator cuff. He stated that:

The rotator cuff tendon complex contracts forcefully to counteract musculature acting on the humerus in a superior direction. This places tension on the rotator cuff complex and can lead to a tear as has been manifested in this particular instance. As a result, it is my opinion that both the rotator cuff complex and the biceps tendon were torn on February 15, 2019.

19. Thus, Dr. Hughes concluded that Claimant is not at MMI and endorsed the surgical treatment recommendations made by Dr. Faulkner. (C. Ex. 3, Pg. 13)

20. Claimant later underwent a Division IME with Dr. Timothy Hall. His clinical diagnoses included both a biceps tendon tear and rotator cuff tears of the right shoulder. As for causation, Dr. Hall also stated:

It is clear there is a temporal relationship with respect to this activity at her work and her present symptoms. It is not a common mechanism of injury for regarding the rotator cuff tear. It is certainly a reasonable mechanism of injury for the biceps tendon. I do not see how one can separate those two out in this context since it is probably that both are creating symptoms for her. (C. Ex. 2, Pg. 6-8.)

21. Dr. Hall also stated that he agreed with Dr. Hughes' analysis regarding how Claimant injured her rotator cuff while lifting the tray of meat. Dr. Hall stated and concluded:

I agree with Dr. Hughes' analysis at this situation regarding rotator cuff serving as stabilizers of the humeral head putting them under strain in this situation. This in combination with the temporal relationship and the lack of symptoms of this type prior lead to my opinion that these ongoing symptoms and her need for surgery is the direct consequence of this date of injury.

22. Dr Hall's conclusion is that Claimant's need for surgery is "the direct consequence of this date of injury." He concluded Claimant is not at MMI and the torn rotator cuff relates to her industrial injury. (*C. Ex. 2, Pg. 6-8*)
23. Respondent applied for Hearing to overcome the opinion of the DIME, Dr. Timothy Hall, over Claimant's MMI status.
24. Dr. Failinger testified at hearing. His hearing testimony followed his prior reports.
25. Dr. Failinger contends – in one portion of his analysis – that the activity described by Claimant would not engage the rotator cuff at all. As a result, Claimant could not have injured her rotator cuff as alleged.
26. Based on a portion of Dr. Failinger's opinion, Respondents contend in their proposed order that it is:

Highly [un]likely and free from substantial doubt that claimant's rotator cuff injury resulted from the described mechanism of injury, given the anatomical function of the rotator cuff tendons involved. Given Dr. Hall's incorrect understanding of the anatomy and biomechanical function of the involved rotator cuff tendons, it is highly probable that Dr. Hall's opinion that claimant is not at MMI is incorrect.

The difference in Dr. Hall's conclusion and Dr. Failinger's conclusion is not simply a difference in medical opinions. Rather, it is a dispute regarding the fundamental function and use of the rotator cuff. As found above, Dr. Failinger's conclusions that the rotator cuff tendons involved could not, as a matter of basic scientific anatomy, be injured in the mechanism of injury in this matter rises above a difference of opinion, especially in light of Dr. Hall's reliance on a subjective temporal relationship and Dr. Hughes' incorrect and inaccurate understanding of the anatomy involved.

27. Respondents, however, fail to mention that it was not only Drs. Hughes and Hall that relied on the temporal relationship and the anatomy of the rotator cuff in assessing causation. Claimant's authorized treating surgeon, Dr. Faulkner, also relied on the temporal relationship between the time of the accident and the onset of Claimant's rotator cuff symptoms as well as the anatomy of the rotator cuff. In his succinct opinion, Dr. Faulkner concluded that:

While this is not a typical mechanism of injury for a rotator cuff tear, it is more likely than not this was an acute on chronic injury. She has no rotator cuff atrophy to indicate this was a more chronic tear. (*Claimant Ex. 6, Pg. 40*).

28. Dr. Faulkner astutely observed and concluded that if Claimant's complete rotator cuff tear were preexisting, as concluded by Dr. Failinger, Claimant's rotator cuff would have shown atrophy – which it did not. As a result, the lack of any atrophy signifies the complete tear demonstrated on the MRI occurred recently and was not a long standing and preexisting condition as suggested by Dr. Failinger.

29. The ALJ does not find Dr. Failinger's ultimate conclusions to be persuasive for many reasons. For example, it is not clear whether Dr. Failinger is using two different causation standards in this case. One for Claimant's biceps tendon and a second for her rotator cuff.

For instance, based on the mechanism of injury described by Claimant in his office, Dr. Failinger contended that:

[I]t would be *extremely difficult, if not impossible*, to tear a biceps tendon unless there is a significantly diseased tendon (emphasis added).

30. He then says that because her biceps tendon was diseased, it was possible for her tendon to tear when she lifted the tray of meat – which it did. So, in assessing the biceps tendon, he determined that lifting a 25-30-pound tray of meat will not cause a healthy biceps tendon to tear but can – and did - cause Claimant's diseased tendon to tear.

Then, when assessing Claimant's rotator cuff, Dr. Failinger opined:

At the waist level, and with her demonstration to me of how she lifted the tray, she did not *significantly* reach up with her right shoulder, which would indicate no *significant stresses* were placed on the rotator cuff on 02-15-2019 when the work incident occurred (emphasis added).

That said, Dr. Failinger concluded that the diseased tendons of Claimant's rotator cuff could not have been injured because Claimant did not "*significantly*" reach up with her right shoulder and did not place "*significant stresses*" on her rotator cuff tendons (emphasis added).

As a result, Dr. Failinger did not require Claimant to exert significant stress to injure her diseased biceps tendon but did require Claimant to exert significant stress to injure her diseased rotator cuff tendons.

31. Despite applying the two tests as outlined above, Dr. Failinger then stated:

With the mechanism she showed me, which involves keeping her elbows bent and transferring the meat from one table to the next without even raising up to her shoulder to any significant degree, she would not have, with reasonable medical probability, placed her arms in a position that would have recruited her rotator cuff (which was already torn) to cause further acceleration of disease.

32. So in one section of his report Dr. Failinger says Claimant did not recruit her rotator cuff at all and in another section he says she did, but not significantly. As a result, the false dichotomy on which his opinion is based fails when he concedes that Claimant would have engaged her rotator cuff to some extent while lifting the tray of meat.

33. Moreover, Dr. Failinger focused on the method Claimant demonstrated in his office in picking up the tray of meat. Yet the extent of the demonstration is not clear. For example, there is no indication regarding the height of the table from which Claimant

picked up the tray of meat and if that was replicated. Plus, the tray of meat was about 4 inches deep. If the tray had a lip around the top edge, Claimant might have lifted the tray from the lip or edges which were 4 inches higher. She might also have not lifted the tray in an underhand method with her elbows against her body, but with her elbows and arms away from her body. This might have required her to raise her hands and arms 4 inches higher thereby engaging or recruiting more of her rotator cuff. In the end, the lack of detail in the demonstration noted by Dr. Failinger erodes the quality and persuasiveness of his ultimate conclusion.

34. As a result, the ALJ does not find Dr. Failinger's opinion about Claimant's rotator cuff injury to be persuasive when compared to the totality of the evidence and Claimant's credible testimony.
35. The Claimant is found to be credible. Claimant's statements to medical providers and her testimony at hearing aligns with her medical records. Moreover, except for some minor aches and pains from work, Claimant did not have any shoulder problems that required medical treatment until her work accident of February 15, 2019.
36. Respondent contends Dr. Hall's opinion relies mainly on the subjective temporal relationship between the date of injury and Claimant's subjective symptoms. That said, this is not merely a case of mere temporal proximity, but of near temporal synchrony combined with the credible and persuasive expert opinions of Drs, Faulkner, Hughes, and Hall, explaining how Claimant's injury to her rotator cuff – while not typical – was more likely than not caused by her lifting injury.¹
37. The ALJ finds Dr. Hall's opinion to be credible and persuasive. His opinion tracks Drs. Faulkner and Hughes'. His opinion also fits with the medical record regarding Claimant's description of the onset of her symptoms and the extent of her symptoms that started while lifting the 25-30-pound tray of meat.
38. Before her injury, Claimant's biceps tendon and rotator cuff were diseased and had degenerated. Even so, such conditions were not symptomatic until her work injury. As a result, Claimant's work injury aggravated her preexisting and asymptomatic biceps tendon and rotator cuff condition and necessitated the need for medical treatment.
39. Claimant's job required her to lift a heavy tray of meat that weighed around 30 pounds. And it was the lifting of the tray of meat that caused Claimant to develop a torn biceps tendon and torn rotator cuff. The torn biceps tendon and torn rotator cuff caused Claimant to develop pain and decreased function of her shoulder and arm. The treatment recommended by Dr. Faulkner is to cure Claimant from the effects of her work injury by reducing her pain and increasing her function. As a result, Claimant is not at MMI.
40. Respondents appear to contend Claimant's psychological conditions preclude a finding that she suffered a work injury or that surgery is reasonable and necessary.

¹ See *Wilson v. City of Lafayette*, 07CV02248PABBNB, 2010 WL 728336, at *8 (D. Colo. Feb. 25, 2010) (To the extent certain events occur nearly simultaneously, the causal connection between them becomes quite strong.)

Dr. Timothy Shea, a neuropsychologist, evaluated Claimant. He diagnosed Claimant with the following:

- i. Pain disorder with related psychological factors,
- ii. Adjustment disorder with depressed mood and anxiety,
- iii. Increased irritability and anger, and
- iv. Insomnia due to other medical conditions (pain > mood)

41. The psychological diagnoses, however, as found by Dr. Shea flow from Claimant's injury to her biceps tendon and rotator cuff. As a result, the psychological diagnoses do not negate the fact that Claimant suffered a compensable injury and is in need of the surgery recommended by Dr. Faulkner to cure her from the effects of the work injury. Instead, the diagnoses establish Claimant needs more treatment to cure her from the effects of her work injury.

42. Because of her shoulder injury, Claimant has chronic pain and limited range of motion. The shoulder surgery recommended by Dr. Faulkner – an authorized treating physician - is reasonable and necessary to cure Claimant from the effects of her work injury.

43. Respondents have failed to overcome Dr. Hall's opinion on MMI by clear and convincing evidence. Thus, Claimant is not at MMI.

CONCLUSIONS OF LAW

Based on these findings of fact, the Judge draws these conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the

weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness’s testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers’ compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondent overcame the DIME physician’s opinion by clear and convincing evidence that that Claimant is not at MMI.

MMI exists when “any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition.” Section 8-40-201(11.5), C.R.S. A DIME physician’s finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Eng’g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Kamakele v. Boulder Toyota-Scion*, W.C. No. 4-732-992 (ICAO, Apr. 26, 2010).

MMI is mainly a medical determination involving diagnosis of the claimant’s condition. *Berg v. Indus. Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Monfort Transp. v. Indus. Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant’s medical condition are causally related to the industrial injury. *Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Sch.* W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs more medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function conflicts with a finding of MMI. *MGM Supply Co. v. Indus. Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Indus. Claim Appeals Office*, 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.*, W.C. No. 4-320-606 (ICAO, Mar. 2, 2000). Similarly, a finding that other diagnostic procedures offer a reasonable prospect for defining the claimant’s condition or suggesting further treatment conflicts with a finding of MMI. *Abeyta v. WW Construction Management*, W.C. No. 4-356-512 (ICAO, May 20, 2004);

The party seeking to overcome the DIME physician’s finding on MMI bears the burden of proof by clear and convincing evidence. *Magnetic Eng’g, Inc. v. Indus. Claim Appeals Office*, *supra*. “Clear and convincing evidence” is evidence that shows that it is “highly probable” the DIME physician’s rating is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A*

Colorado Athletic Club W.C. No. 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). Assuming each opinion is well reasoned, the mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. See *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). It is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on MMI. *Oates v. Vortex Indus.*, WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

Respondent has failed to overcome the DIME's determination of not at MMI by the standard of clear and convincing evidence. They have also failed to overcome his opinion that the tears to Claimant's rotator cuff relate to her industrial injury. Except for some minor aches and pains from work, Claimant testified credibly that other than some occasional aches and pains from work, she was not experiencing any significant issues with her right shoulder and upper extremity before the industrial injury, and no credible and persuasive evidence was offered to contradict this position. Claimant reported the injury and sought medical treatment promptly. Her description of the pain, a "pop" in her shoulder, reflects an injury to her biceps tendon and rotator cuff. She has been consistent with her description of the accident and her reports of pain (using a pain scale) appear to be reasonable based on the MRI findings and with this type of injury. There is a lack of credible and persuasive evidence to suggest that Claimant is intentionally inflating or magnifying her symptoms. Her credibility is also enforced because she had worked for Employer for 7 years before the accident and continued to work throughout the claim, despite her pain and symptoms.

Moreover, the psychological evidence submitted at hearing reveals the degree to which the injury is impacting Claimant. As a result, the psychological evidence does not negate the need for medical treatment and surgery, but instead it establishes the need for additional medical treatment to cure Claimant from the effects of her work injury.

Ultimately, Dr. Hall, the DIME physician, agreed with Dr. Faulkner, the authorized surgeon, and Claimant's IME, Dr. Hughes, that the rotator cuff relates to the February 15, 2019 work injury and Claimant will need surgery before reaching MMI.

The primary dissent comes from Respondent's IME, Dr. Failinger. He concedes that the biceps tendon tear was likely caused by the industrial accident, but the rotator cuff was not because of a mechanism of injury argument. His opinion is found to be not entirely credible. He glosses over, as suggested by the DIME, that the temporal correlation of the injury and the subsequent symptoms supports a causation analysis in this case. This finding is bolstered by a lack of shoulder symptoms, disability, and treatment before the industrial accident. At most, this amounts to a simple difference of medical opinion about the mechanism of injury. This does not meet the standard of clear and convincing evidence in this case.

The opinion of the ATP, Dr. Sadie Sanchez, is also found to not be entirely credible. Based on what looks like a lack of experience or expertise, Dr. Sanchez first referred Claimant to Dr. Lesnak for treatment and a causation assessment. Dr. Lesnak referred Claimant for psychological treatment and an MRI. For some unknown reason, Claimant did not return to Dr. Lesnak and he did not issue a report addressing the cause of Claimant's shoulder condition. Later, and based on the MRI findings, Dr. Sanchez referred Claimant to an orthopedic surgeon, Dr. Faulkner. The referral to Dr. Faulkner was for a causation assessment of Claimant's shoulder condition, a surgical evaluation, and to provide surgical treatment if the condition was related. Despite Dr. Faulkner concluding Claimant's shoulder condition relates to her compensable work injury, Dr. Sanchez noted that she felt obligated to adopt the opinion of Dr. Failinger, Respondent's IME.

Even if Dr. Sanchez' report is taken at face value, she seems to ignore the fact that Dr. Failinger did conclude that the biceps tendon tear is related to the work injury. Despite such finding, she released Claimant with no impairment, restrictions, or maintenance care of any type without setting forth the basis for each determination. In the end, she appeared to be making claim adjusting decisions instead of medical decisions.

Thus, the ALJ finds and concludes the Respondent has failed to overcome the opinion of Dr. Hall by clear and convincing evidence. As a result, Claimant is not at MMI.

II. Whether the surgery recommended by Dr. Faulkner is reasonable, necessary, and related to Claimant's compensable injury.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. Whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs Sch. District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that to consider a service a "medical benefit" it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995); *Karim al Subhi v. King Soopers, Inc.*, W.C. No. 4-597-590, (ICAO. July 11, 2012). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Indus. Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006).

As found, Claimant suffered a compensable injury involving her right upper extremity. Her injury caused a torn biceps tendon and torn rotator cuff. As a result of

her compensable injury, Claimant has developed significant and chronic right shoulder pain and limited range of motion. The pain and limited range of motion is also disabling. As a result of her injury, Dr. Faulkner has prescribed a right shoulder arthroscopic surgery, subacromial decompression, rotator cuff repair, subscapular repair, and possible biceps tenotomy.

The ALJ finds and concludes Claimant has established by a preponderance of the evidence that the shoulder surgery recommended by Dr. Faulkner is reasonable and necessary to cure Claimant from the effects of her work injury.

III. Whether Dr. Faulkner is an authorized treating physician.

Authorization to provide medical treatment refers to a medical provider's legal authority to provide medical treatment to the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Indus. Claim Appeals Office*, 914 P.2d 501 (Colo. App. 1995); *In re Bell*, W.C. No. 5-044-948-01 (ICAO, Oct. 16, 2018). Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Indus. Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Office*, 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, W.C. No. 5-044-948-01 (ICAO, Oct. 16, 2018); *In re Patton*, W.C. Nos. 4-793-307 and 4-794-075 (ICAO, June 18, 2010)

As found, Dr. Sanchez - Claimant's authorized treating physician - referred Claimant to Dr. Faulkner for purposes of examination, diagnosis, and treatment. As a result, the ALJ finds and concludes Dr. Faulkner is authorized to treat Claimant.

Thus, the ALJ finds and concludes that the Respondent shall pay for Dr. Faulkner to perform the arthroscopic surgery, subacromial decompression, rotator cuff repair, subscapular repair, and possible biceps tenotomy.

ORDER

Based on the findings of fact and conclusions of law, the Judge enters the following order:

1. Respondent has failed to overcome the DIME's determination of not at MMI. Thus, Claimant is not at MMI.
2. Respondent shall pay for reasonable, necessary, and related medical treatment to bring Claimant to MMI for her torn biceps tendon and torn rotator cuff.
3. Dr. Faulkner is an authorized treating physician.
4. Respondent shall pay for Claimant to undergo surgery with Dr. Faulkner – subject to the Colorado Workers' Compensation fee

schedule. The surgery consists of a right shoulder arthroscopic surgery, subacromial decompression, rotator cuff repair, subscapular repair, and possible biceps tenotomy.

5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: June 30, 2020.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of John S. Hughes, M.D. that he did not warrant a permanent psychological impairment rating for Post-Traumatic Stress Disorder (PTSD) and reached Maximum Medical Improvement (MMI) on May 17, 2019 as a result of his October 28, 2018 industrial injury.

FINDINGS OF FACT

1. Claimant worked as a Patrol Officer for Employer. On October 28, 2018 Claimant and other officers were attempting to secure the perimeter around a house where there had been a reported shooting. While Claimant was moving to secure the rear of the house, the suspect began shooting at him. One of the bullets struck Claimant in the lower left leg.

2. Claimant detailed that on October 28, 2018 he was ambushed by a suspect who was shooting at him from a house. He testified that "I thought I was dead" and "could feel three bullets go by my head." Claimant remarked that he "was on the ground and dirt was coming into his face as the bullets hit the ground around his head." Before he could move he was shot in the left leg. Claimant recounted that he saw blood gushing from his leg. He got up while there was still gunfire "thinking that he would rather get shot getting out of there than die on the front lawn of the house where he was shot." After Claimant was able to get out of the yard he "saw blood gushing from his leg and he couldn't find his tourniquet." Another officer was able to apply a tourniquet and stop the bleeding.

3. Claimant was transported to Denver Health and received treatment in the emergency department. X-rays revealed a comminuted fracture of the left upper fibular shaft with multiple displaced bony fragments seen to be most prominent along the posterior aspect along with multiple bullet fragments embedded in soft tissues in the left upper calf.

4. Claimant selected Concentra Medical Centers as his Authorized Treating Physician (ATP). He treated with Amanda Cava, M.D. and Jonathan Joslyn, PA-C. Claimant was referred to orthopedic surgeon Stuart Myers, M.D. for treatment. Dr. Myers diagnosed Claimant with a proximal fibular fracture and resulting peroneal nerve palsy.

5. Claimant testified that in December 2018 he was assigned to a desk job on limited duty. Although he wanted to get back to patrol working on the streets he had concerns about whether he could perform his job duties.

6. In the spring of 2019 Claimant sought psychological counseling provided by Employer. At his April 5, 2019 visit with Dr. Trey Cole Claimant reported that he was not experiencing anxiety or flashbacks. Claimant commented he had returned to the shooting range and had no problems with shooting. Nevertheless, Claimant later noted he was startled during one of his visits to the range when a person near him began firing a .357 magnum.

7. On May 17, 2019 Dr. Cava determined Claimant had reached Maximum Medical Improvement (MMI) with no permanent work restrictions. She assigned Claimant a 17% lower extremity impairment rating, consisting of 13% for range of motion deficits and 5% for a peroneal nerve injury.

8. Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Cava's MMI and permanent impairment determinations. Claimant challenged the FAL and requested a Division Independent Medical Examination (DIME).

9. On July 1, 2019 Respondent sent a letter to Dr. Cava requesting clarification as to why she did not assign Claimant a rating for psychological impairment and other body parts. On July 5, 2019 Dr. Cava responded in part that Claimant "adjusted very well after his injury. He did not appear to have any difficulty reassimilating to his position at work. He appeared excited to return to his prior duty. He did not express psychological concerns. He does not have a psychological diagnosis."

10. On August 28, 2019 Claimant's counsel contacted Elizabeth Sather, Psy.D. to evaluate Claimant for Post Traumatic Stress Disorder (PTSD). Claimant first saw Dr. Sather on September 11, 2019. After the second visit Dr. Sather issued a "Diagnostic Assessment" report on September 20, 2019. She concluded that Claimant suffered from PTSD.

11. On December 18, 2019 Claimant underwent a DIME with John S. Hughes, M.D. Dr. Hughes noted that he reviewed medical records including Dr. Sather's diagnostic assessment report. He remarked that Dr. Sather had concluded that Claimant "manifested symptoms consistent with [PTSD]." Dr. Hughes ultimately disagreed with Dr. Sather and concluded that Claimant did not have a "permanent psychiatric impairment stemming from PTSD." He specified that Claimant did not exhibit symptoms consistent with PTSD at the DIME appointment and none of his authorized treating physicians considered him for PTSD during the course of treatment. Dr. Hughes agreed with Dr. Cava that Claimant reached MMI on May 17, 2019. He assigned Claimant a 32% left lower extremity permanent impairment that converted to a 13% whole person rating.

12. On January 13, 2020 Respondent filed a Final Admission of Liability (FAL) consistent with Dr. Hughes' MMI and impairment determinations. Respondent also acknowledged that Claimant was entitled to receive reasonable, necessary and related medical maintenance benefits.

13. On February 4, 2020 Claimant filed an application for hearing to overcome Dr. Hughes' DIME opinion regarding MMI and permanent impairment. Claimant also contacted Dr. Sather to request an appointment to resume treatment after not visiting her for almost five months.

14. On May 20, 2020 the parties conducted the pre-hearing evidentiary deposition of Dr. Sather. Dr. Sather commented that she met with Claimant on five occasions. She reported Claimant's description of the October 28, 2018 shooting. Claimant also noted the effects from the shooting incident, including reliving the event, experiencing flashbacks and suffering distressing dreams that woke him up at night. Dr. Sather explained that Claimant relived the experience and the sensation of being shot in the leg. Claimant specifically noted numerous occasions of hyper-arousal and is easily startled. Dr. Sather remarked that Claimant's anxiety is exacerbated by any call that requires him to approach a house.

15. Dr. Sather concluded that, based on the criteria in the Diagnostic and Statistic Manual of Mental Disorders, Claimant suffers from PTSD with a DSM code of 43.10 as a result of the work-related incident on October 28, 2018. In considering the specific elements for a PTSD diagnosis, Dr. Sather commented that the first criteria involve exposure to a life threatening event. Dr. Sather noted that the second criteria includes nightmares, dreams, flashbacks and intrusive thoughts that are the result of hyper-vigilance. The third element is avoidance of people and social situations. Dr. Sather remarked that the fourth criteria includes changes in thoughts or mood such as self-questioning or irritability. The fifth criteria involves changes in arousal, the inability to sleep, becoming scared by loud noises and trouble concentrating. Finally, Dr. Sather explained that symptoms must exceed one month in duration. Citing specific incidents described by Claimant, Dr. Sather determined that he satisfied the criteria for a PTSD diagnosis. Based on her diagnosis, Dr. Sather concluded that Claimant was not at MMI. She recommended additional treatment modalities including office visits twice per month, week-long residential programs and Eye Movement Desensitization Retraining (EMDR). Despite Dr. Sather's diagnosis, she acknowledged that she never reviewed any of Claimant's treatment records from his Workers' Compensation claim, records from Dr. Cole or any summary of Claimant's treatment history.

16. Claimant testified at the hearing in this matter. He explained that after the October 28, 2018 shooting he recuperated at his mother's residence. Claimant remarked that he initially isolated himself from his friends, mostly stayed in his room, often cried and had repetitive nightmares that recreated the scenario of his injury. He reported having approximately 50 or 60 of the nightmares. Claimant commented that the nightmares initially occurred consistently, but decreased in frequency. Moreover, although Claimant initially secluded himself somewhat, his condition improved and he began dating. On cross examination, Claimant acknowledged that he denied having nightmares or flashbacks when he visited Dr. Cole. Claimant also conceded that none of his authorized medical providers referred him for psychological treatment.

17. Claimant's mother Patricia Duhalde testified that after the shooting Claimant appeared more concerned than usual and would not often leave the house.

He specifically demonstrated more concern for his sister's safety. Moreover, Claimant's girlfriend Branislova Cloud testified that Claimant appeared more lethargic and easily startled after the October 28, 2018 shooting.

18. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Hughes that he did not warrant a permanent psychological impairment rating for PTSD and reached MMI on May 17, 2019 as a result of his October 28, 2018 industrial injury. Initially, On October 28, 2018 Claimant and other officers were attempting to secure the perimeter around a house where there had been a reported shooting. While Claimant was moving toward the rear of the house, the suspect began shooting at him. One of the bullets struck Claimant in the lower left leg. Claimant subsequently underwent treatment for his left leg injuries and received psychological counseling. On May 17, 2019 ATP Dr. Cava determined Claimant reached MMI with no permanent work restrictions. She assigned Claimant a 17% lower extremity impairment rating, consisting of 13% for range of motion deficits and 5% for a peroneal nerve injury. On July 5, 2019 Dr. Cava responded to a letter from Respondent requesting clarification as to why she did not assign Claimant a rating for psychological impairment and other body parts. Dr. Cava explained that Claimant "adjusted very well after his injury. He did not appear to have any difficulty reassimilating to his position at work. He appeared excited to return to his prior duty. He did not express psychological concerns. He does not have a psychological diagnosis." Respondent filed a FAL consistent with Dr. Cava's MMI and impairment determinations.

19. Claimant challenged the FAL and contacted Dr. Sather to evaluate him for PTSD. She concluded that Claimant suffered from PTSD as a result of the October 28, 2018 shooting. On December 18, 2019 Claimant underwent a DIME with Dr. Hughes. Dr. Hughes considered Claimant's medical records and reviewed Dr. Sather's diagnostic assessment report. He disagreed with Dr. Sather and concluded that Claimant did not have a "permanent psychiatric impairment stemming from PTSD." He specified that Claimant did not exhibit symptoms consistent with PTSD at the DIME appointment and none of his authorized treating physicians considered him for PTSD during the course of treatment. Dr. Hughes agreed with Dr. Cava that Claimant reached MMI on May 17, 2019. He assigned Claimant a 32% left lower extremity impairment that converted to a 13% whole person rating.

20. Claimant contends that Dr. Hughes erroneously failed to assign him an impairment rating for PTSD and he has thus not reached MMI. Claimant's assertion is primarily based on Dr. Sather's opinion that he suffers from PTSD as a result of the October 28, 2018 shooting. During a pre-hearing evidentiary deposition Dr. Sather explained that she met with Claimant on five occasions and he reported reliving the shooting event, experiencing flashbacks and suffering distressing dreams that woke him up at night. Claimant specifically noted numerous occasions of hyper-arousal and is easily startled. Based on the criteria in the Diagnostic and Statistic Manual of Mental Disorders, Dr. Sather concluded that Claimant suffers from PTSD with a DSM code of 43.10 as a result of the work-related incident on October 28, 2018.

21. Despite Dr. Sather's analysis, Claimant has failed to demonstrate that Dr. Hughes improperly applied the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*) or otherwise erred in concluding that Claimant reached MMI with no psychological impairment. Dr. Sather's disagreement about whether Claimant suffers from PTSD is insufficient to demonstrate that Dr. Hughes' conclusion was clearly erroneous. Notably, because Dr. Sather confirmed that she did not have the benefit of reviewing Claimant's treatment history under this claim, she had an incomplete clinical picture of Claimant's psychological condition. Furthermore, none of Claimant's authorized treating physicians felt he needed treatment for PTSD or had any PTSD related permanent impairment. Claimant's treatment records also did not note any nightmares, flashbacks or anxiety. Specifically, ATP Dr. Cava noted that Claimant adjusted well after the shooting, did not express psychological concerns and did not have a psychological diagnosis. It was thus reasonable for Dr. Hughes to conclude that Claimant did not warrant a permanent impairment for PTSD or require any curative treatment to relieve the effects of PTSD. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Hughes' MMI and impairment determinations were erroneous.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's

determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio*, W.C. No. 4-660-149 (ICAO, June 30, 2008); see *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; see *Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Subparagraph (II) is limited to parties' disputes over "a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI]." §8-42-107(8)(b)(II). "Nowhere in the statute is a DIME's opinion as to the cause of a claimant's injury similarly imbued with presumptive weight." See *Yeutter*, 2019 COA 53 ¶ 18. Accordingly, a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment. *Id.* at ¶ 21.

6. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

7. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola*, W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett*, W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

8. MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997).

9. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Hughes that he did not warrant a permanent psychological impairment rating for PTSD and reached MMI on May 17, 2019 as a

result of his October 28, 2018 industrial injury. Initially, On October 28, 2018 Claimant and other officers were attempting to secure the perimeter around a house where there had been a reported shooting. While Claimant was moving toward the rear of the house, the suspect began shooting at him. One of the bullets struck Claimant in the lower left leg. Claimant subsequently underwent treatment for his left leg injuries and received psychological counseling. On May 17, 2019 ATP Dr. Cava determined Claimant reached MMI with no permanent work restrictions. She assigned Claimant a 17% lower extremity impairment rating, consisting of 13% for range of motion deficits and 5% for a peroneal nerve injury. On July 5, 2019 Dr. Cava responded to a letter from Respondent requesting clarification as to why she did not assign Claimant a rating for psychological impairment and other body parts. Dr. Cava explained that Claimant “adjusted very well after his injury. He did not appear to have any difficulty reassimilating to his position at work. He appeared excited to return to his prior duty. He did not express psychological concerns. He does not have a psychological diagnosis.” Respondent filed a FAL consistent with Dr. Cava’s MMI and impairment determinations.

10. As found, Claimant challenged the FAL and contacted Dr. Sather to evaluate him for PTSD. She concluded that Claimant suffered from PTSD as a result of the October 28, 2018 shooting. On December 18, 2019 Claimant underwent a DIME with Dr. Hughes. Dr. Hughes considered Claimant’s medical records and reviewed Dr. Sather’s diagnostic assessment report. He disagreed with Dr. Sather and concluded that Claimant did not have a “permanent psychiatric impairment stemming from PTSD.” He specified that Claimant did not exhibit symptoms consistent with PTSD at the DIME appointment and none of his authorized treating physicians considered him for PTSD during the course of treatment. Dr. Hughes agreed with Dr. Cava that Claimant reached MMI on May 17, 2019. He assigned Claimant a 32% left lower extremity impairment that converted to a 13% whole person rating.

11. As found, Claimant contends that Dr. Hughes erroneously failed to assign him an impairment rating for PTSD and he has thus not reached MMI. Claimant’s assertion is primarily based on Dr. Sather’s opinion that he suffers from PTSD as a result of the October 28, 2018 shooting. During a pre-hearing evidentiary deposition Dr. Sather explained that she met with Claimant on five occasions and he reported reliving the shooting event, experiencing flashbacks and suffering distressing dreams that woke him up at night. Claimant specifically noted numerous occasions of hyper-arousal and is easily startled. Based on the criteria in the Diagnostic and Statistic Manual of Mental Disorders, Dr. Sather concluded that Claimant suffers from PTSD with a DSM code of 43.10 as a result of the work-related incident on October 28, 2018.

12. As found, despite Dr. Sather’s analysis, Claimant has failed to demonstrate that Dr. Hughes improperly applied the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*) or otherwise erred in concluding that Claimant reached MMI with no psychological impairment. Dr. Sather’s disagreement about whether Claimant suffers from PTSD is insufficient to demonstrate that Dr. Hughes’ conclusion was clearly erroneous. Notably, because Dr. Sather confirmed that she did not have the benefit of reviewing Claimant’s treatment history under this claim, she had an incomplete clinical picture of Claimant’s psychological condition. Furthermore, none of Claimant’s authorized treating physicians felt he

needed treatment for PTSD or had any PTSD related permanent impairment. Claimant's treatment records also did not note any nightmares, flashbacks or anxiety. Specifically, ATP Dr. Cava noted that Claimant adjusted well after the shooting, did not express psychological concerns and did not have a psychological diagnosis. It was thus reasonable for Dr. Hughes to conclude that Claimant did not warrant a permanent impairment for PTSD or require any curative treatment to relieve the effects of PTSD. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Hughes' MMI and impairment determinations were erroneous.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to overcome Dr. Hughes' DIME opinion that Claimant did not have a permanent psychiatric impairment relating to PTSD and reached MMI on May 17, 2019.
2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: July 2, 2020.

Denver, CO 80203

ISSUE

Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Bryan Counts, M.D. that Claimant suffered a 27% whole person impairment rating as a result of his July 27, 2015 industrial occupational disease.

FINDINGS OF FACT

1. Claimant worked as a Firefighter/EMT for Employer for 35 years. He retired on June 12, 2013. On July 27, 2015 Claimant was diagnosed with cancer at the base of his tongue. On October 14, 2015 Sarvjit Gill, M.D. performed a tumor resection and lymph node dissection. Claimant subsequently underwent 26 rounds of radiation treatment.

2. Respondents initially disputed the compensability of Claimant's claim concerning squamous cell carcinoma arising under §8-41-209, C.R.S. However, on June 7, 2017 ALJ Mottram determined that Claimant suffered the compensable occupational disease of cancer under §8-41-209, C.R.S. and ordered Respondents to pay Workers' Compensation benefits. The Colorado Court of Appeals affirmed the order on June 28, 2018.

3. Claimant received primary care treatment from Sander Orent, M.D. and various other providers. On May 6, 2019 Claimant was referred to Authorized Treating Physician (ATP) Alisa Koval, M.D. for a Maximum Medical Improvement (MMI) determination and permanent impairment evaluation. She concluded that he had reached MMI.

4. On June 19, 2019 Dr. Koval assigned Claimant a combined 41% whole person permanent impairment rating consisting of the following: 18% **for** cervical range of motion; 10% for correction of thyroid insufficiency; 10% respiration class 1 for a recognized passage defect; 5% for mastication & deglutition due to a diet limited to semi-solid or soft foods and; 1.5% for decreased sensation in the greater auricular nerve in Claimant's anterior neck. In specifically addressing Claimant's cervical range of motion impairment Dr. Koval commented that he suffered a significant loss of range of motion in the cervical spine "due to extensive ENT surgery for squamous cell carcinoma at the base of the tongue." She detailed that the cervical range of motion loss was required "to reflect [Claimant's] impairment accurately, as his neck anatomy was significantly altered by surgery and radiation."

5. On September 5, 2019 Lawrence Lesnak, D.O. performed a medical records review, prepared a report and identified multiple errors in Dr. Koval's impairment rating. Relying on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*).Dr. Lesnak explained that Dr. Koval erred when she awarded

Claimant an 18% whole person impairment for cervical range of motion deficits. The *AMA Guides* only allow range of motion impairment ratings when a doctor establishes a corresponding Table 53 diagnosis. Furthermore, the Division of Workers' Compensation *Impairment Rating Tips (Rating Tips)* provide for a range of motion impairment only in unusual cases when there is established severe shoulder pathology accompanied by treatment of the cervical musculature and the isolated cervical range of motion impairment is well justified by the clinician. The *Rating Tips* also note that "otherwise, there are no exceptions to the requirement for a corresponding Table 53 rating." Dr. Lesnak commented that assigning a cervical spine range of motion impairment to Claimant constituted error because he did not qualify for a Table 53 cervical spine rating or suffer severe shoulder pathology.

6. Dr. Lesnak also remarked that Dr. Koval erred when she awarded Claimant a 1.5% impairment for decreased sensation in the greater auricular nerve in his anterior neck. He commented that the *AMA Guides* require a "named" nerve or named nerve root involvement to support an impairment rating for sensory abnormalities. Dr. Lesnak noted that none of the medical records "suggest that [Claimant] could have even remotely sustained a greater auricular nerve abnormality as a result of the surgical procedure that was performed." He further commented that Dr. Koval erred when she awarded Claimant a 10% rating for a Class 1 Respiration impairment for a recognized passage defect. Dr. Lesnak specified that there is no reported evidence in the medical records of any abnormalities that suggest any type of respiratory condition related to the occupational injury claim. Moreover, Dr. Koval erred when she awarded Claimant a 5% rating for Mastication & Deglutition for diet limitations to semi-solid or soft foods because Claimant eats "any and all foods without a significant amount of difficulty." Finally, Dr. Lesnak agreed that Dr. Koval properly rated Claimant's thyroid impairment because it appeared that he began to develop hypothyroidism within the first year following his surgical procedure and radiation therapy could possibly induce hypothyroidism.

7. Respondents disagreed with Dr. Koval's conclusions and requested a Division Independent Medical Examination (DIME). The DIME was performed by Bryan Counts, M.D. on November 14, 2019.

8. On December 3, 2019 Dr. Counts issued his DIME report. He concluded that Claimant reached MMI on May 6, 2019 and suffered a 27% whole person impairment. Relying on the *AMA Guides*, his rating consisted of the following: 5% for respiratory impairment due to difficulty swallowing with aspiration; 5% for hypothyroidism; 17% for cervical range of motion deficits; and 2% for spinal nerve impairment based on injury to the great auricular nerve.

9. Dr. Counts included a 17% cervical range of motion impairment even though he acknowledged that the *AMA Guides* do not allow for a cervical range of motion rating in the absence of a Table 53 diagnosis. Dr. Counts also recognized that the *Rating Tips* allow for a cervical range of motion rating without a Table 53 diagnosis in the unusual case of established severe shoulder pathology accompanied by treatment of the cervical musculature. While recognizing that Claimant did not have a specific cervical spinal condition under Table 53, Dr. Counts nevertheless measured Claimant's range of

motion loss because it was “very significantly reduced due to radiation therapy and possibly as a surgical dissection of the neck.” He concluded that Claimant “certainly meets the criteria of neck pain over six months and the pain is musculoskeletal in nature.” Furthermore, Dr. Counts included a cervical range of motion impairment rating because Dr. Koval had included a cervical range of motion rating and he “consulted with the Division of Workers’ Compensation and their medical director felt that it is appropriate in this instance to include the neck range of motion, with or without a Table 53 spine diagnosis.”

10. Dr. Counts explained that he assigned a 5% rating for respiratory impairment due to difficulty swallowing with aspiration. He detailed that Table 5 of the *AMA Guides* addresses the respiratory component of the ENT system. Class 1 permits a 0-10% impairment rating. Dr. Counts explained that Claimant’s “dyspnea occurs only with difficulty swallowing, particularly with aspiration. His swallowing studies have demonstrated food getting hung up at the level of the hypopharynx. Thus a 5% rating is most appropriate.” He also commented that he assigned a 2% rating for spinal nerve impairment based on bilateral injury to the greater auricular nerve. He detailed that he assigned the 3% maximum for “loss of function due to sensory deficit, pain or discomfort.” He chose 3% for both sides because it is “quite troublesome” for Claimant. Dr. Counts determined that “Grade 2 fits the best, since the diminished sensation alone rarely would interfere with activity.” He thus assigned a 1% rating for each side of the greater articular nerve. Combining the two sides yielded a total 2% rating for spinal nerve impairment.

11. On December 9, 2019 Dr. Lesnak reviewed Dr. Counts’ DIME report. He prepared a report and identified multiple errors in Dr. Counts’ impairment rating. Dr. Lesnak specified that Dr. Counts erred when he assigned Claimant a 17% whole person impairment for abnormal cervical spine range of motion without a Table 53 diagnosis or significant shoulder pathology. He remarked that Dr. Counts also erred when he assigned Claimant a 2% spinal nerve rating for an injury to the great auricular nerve because there was no medical evidence that Claimant sustained any injury or residual abnormality involving the greater auricular nerve.

12. Dr. Lesnak testified at the hearing in this matter. He maintained that Dr. Counts erred in assigning Claimant a 27% whole person permanent impairment rating. Dr. Lesnak explained that Dr. Counts erred when he rated Claimant with 17% cervical range of motion impairment. The inclusion of a cervical spine range of motion rating did not comply with the *AMA Guides* because they only allow cervical range of motion impairment ratings if associated with a Table 53 cervical spine disorder. Furthermore, the *Rating Tips* only permit a cervical range of motion impairment without a Table 53 rating when there is severe shoulder pathology. Dr. Lesnak remarked that Claimant did not present with a Table 53 cervical spine disorder and there was no evidence of any shoulder joint pathology related to his occupational injury. Dr. Counts also erred because he did not act “independently” when he “consulted” with the Division of Workers’ Compensation to assign a permanent impairment rating.

13. Dr. Lesnak also detailed that Dr. Counts erroneously included a 2% whole person impairment for abnormalities involving the greater auricular nerves. He testified that

general decreased sensation in the cutaneous skin nerves is not ratable under the *AMA Guides* because they require identification of a specific named nerve or nerve root to support a rating. Dr. Lesnak detailed that the greater auricular nerve enervates the jaw and ear. Claimant only reported some decreased sensation in his anterior neck, possibly involving cutaneous skin nerves. Also, Claimant's surgery did not cut or affect his greater auricular nerve and there was no evidence of radiation damage. Finally, Dr. Lesnak explained that Dr. Counts erred when he included a 5% respiration impairment for a recognized passage defect. He commented that, although Claimant experienced trouble swallowing, any difficulties did not constitute a passage defect according to the *AMA Guides*.

14. Ronald Swarsen, M.D. testified at hearing in this matter. He explained that he reviewed some of Claimant's medical records but acknowledged he did not review Dr. Lesnak's second report that addressed errors in Dr. Counts' DIME report. Dr. Swarsen admitted that the *AMA Guides* require a Table 53 diagnosis and rating in order to assign a range of motion impairment and recognized that no Table 53 diagnosis exists in this case. He noted that the *Rating Tips* allow an exception for cervical range of motion impairment ratings without a Table 53 diagnosis in cases of severe shoulder injuries but admitted that Claimant did not suffer severe shoulder pathology. Nevertheless, Dr. Swarsen suggested that doctors could apply similar logic associated with the severe shoulder pathology exception to other situations and rate range of motion without a Table 53 diagnosis if the *AMA Guides* do not specifically address that situation. However, on cross-examination, Dr. Swarsen acknowledged that the *Rating Tips* specifically state that no other exceptions apply to the requirement for a Table 53 diagnosis.

15. Claimant testified at the hearing in this matter. He acknowledged he can eat everything and is not limited to semisolid or soft foods. Claimant explained that radiation affected his salivary glands and food does not go down smoothly but can get caught until he drinks.

16. Dr. Counts testified at hearing in this matter. He acknowledged that the *AMA Guides* do not allow a cervical spine range of motion impairment rating absent an underlying Table 53 cervical spine diagnosis. He also recognized that the *Rating Tips* allow for an exception to rate cervical spine range of motion impairment without a Table 53 diagnosis in cases of severe shoulder pathology. Dr. Counts determined that Claimant did not present with a Table 53 diagnosis and the *Rating Tips* exception did not apply because Claimant exhibited normal shoulder function. He testified that red and yellow flags went up when he saw that Dr. Koval rated Claimant's cervical range of motion impairment. Dr. Counts thus contacted the Division of Workers' Compensation for assistance. He emailed Courtney Harris and she forwarded the message to Auditor and physical therapist David Indovina at the Division. Dr. Counts provided Mr. Indovina with a factual summary but did not send any medical records. Mr. Indovina reviewed the matter with the Division's Associate Medical Director X.J. Ethan Moses, M.D. Mr. Indovina subsequently told Dr. Counts that he could include a Table 53 rating or a cervical range of motion impairment without a Table 53 rating

17. Dr. Counts explained that he did not consider Mr. Indovina's suggestion an order from the Division and decided a Table 53 impairment rating was not appropriate. He commented that Claimant's condition did not support a Table 53 diagnosis because, even though he received treatment for soft tissue lesions of the neck, he did not suffer an injury to his cervical spine, cervical discs, or nerve roots associated with his cervical spine. Nevertheless, Dr. Counts assigned a 17% range of motion impairment rating without a Table 53 diagnosis. Finally, Dr. Counts testified that he included a 2% rating for Claimant's greater auricular nerve because Claimant identified problems in his neck on his pain diagram. He also noted possible auricular nerve impairment during his physical examination.

18. Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Counts that Claimant suffered a 27% whole person impairment rating as a result of his July 27, 2015 industrial occupational disease. Specifically, Respondents have demonstrated that Dr. Counts incorrectly assigned Claimant a 17% whole person impairment for cervical range of motion deficits. The instructions in the *AMA Guides* only allow range of motion impairment in conjunction with a corresponding Table 53 diagnosis. Furthermore, the *Rating Tips* allow one exception in unusual cases when there is established severe shoulder pathology accompanied by treatment of the cervical musculature, and the isolated cervical range of motion impairment is well justified by the clinician. "Otherwise, there are no exceptions to the requirement for a corresponding Table 53 rating."

19. Dr. Lesnak persuasively explained that Dr. Counts' erroneously assigned Claimant a 17% cervical spine range of motion rating. He specified that Claimant did not present with a Table 53 cervical spine disorder and there was no evidence of any shoulder joint pathology related to his occupational injury. Moreover, Dr. Counts acknowledged that Claimant did not present with a Table 53 diagnosis and the *Rating Tips* exception did not apply because he exhibited normal shoulder function. Dr. Counts detailed that Claimant's condition did not support a Table 53 diagnosis because, even though he received treatment for soft tissue lesions of the neck, he did not suffer an injury to his cervical spine, cervical discs, or nerve roots associated with his cervical spine.

20. Dr. Swarson agreed with Dr. Counts' DIME opinion that Claimant was entitled to receive a 17% whole person impairment for cervical range of motion deficits. However, he admitted that the *AMA Guides* require a Table 53 diagnosis in order to assign a range of motion impairment but recognized that no Table 53 diagnosis exists in this case. He also noted that the *Rating Tips* allow an exception for cervical range of motion impairment ratings without a Table 53 diagnosis in cases of severe shoulder injuries but admitted that Claimant did not suffer severe shoulder pathology. Nevertheless, Dr. Swarson suggested that doctors could apply similar logic associated with the severe shoulder pathology exception to other situations and rate range of motion without a Table 53 diagnosis. However, on cross-examination, Dr. Swarson acknowledged that the *Rating Tips* specifically state that no other exceptions apply to the requirement for a Table 53 diagnosis.

21. The *AMA Guides* require a Table 53 diagnosis and rating in order to assign a range of motion impairment and the *Rating Tips* allow an exception for cervical range of motion impairment ratings without a Table 53 diagnosis only in cases of severe shoulder injuries. The unambiguous language of the *AMA Guides* and *Rating Tips*, in conjunction with the persuasive testimony of Dr. Lesnak, reflect that Dr. Counts erroneously assigned Claimant a 17% whole person impairment rating for cervical range of motion deficits. Furthermore, Dr. Counts acknowledged that Claimant's condition did not support a Table 53 diagnosis. Accordingly, Respondents have produced unmistakable evidence free from serious or substantial doubt that Dr. Counts incorrectly assigned Claimant a 17% whole person impairment rating for cervical range of motion deficits.

22. Because Respondents have overcome Dr. Counts' cervical range of motion rating by clear and convincing evidence, the determination of Claimant's correct rating is a matter of fact based upon the lesser burden of a preponderance of the evidence. In addition to the 17% cervical range of motion rating, Dr. Counts assigned Claimant a 5% rating for respiratory impairment due to difficulty swallowing with aspiration; 5% for hypothyroidism; and 2% for spinal nerve impairment based on injury to the great auricular nerve. Initially, Respondents do not dispute that Claimant is entitled to a 5% impairment for hypothyroidism. Under the *AMA Guides*, a Class I impairment may range from 0% - 10% when continuous thyroid therapy is required for correction of thyroid insufficiency and there is no objective physical or laboratory evidence of inadequate replacement therapy. Dr. Counts chose to rate Claimant with a 5% impairment because Claimant has no symptoms of hypothyroidism. Dr. Lesnak and Dr. Koval also rated Claimant for thyroid impairment because Claimant developed hypothyroidism within the first year following his surgical procedure and radiation therapy could induce hypothyroidism. Accordingly, Claimant is entitled to a 5% whole person impairment rating for hypothyroidism.

23. Claimant has established that it is more probably true than not that Dr. Counts properly assigned Claimant a 5% rating for respiratory impairment due to difficulty swallowing with aspiration. The *AMA Guides* define respiration as the act or function of breathing and permanent impairment produced by defects of the air passages, such as obstruction, "evidenced primarily by dyspnea." *AMA Guides*, Table 5, p. 181, Class 1 allows for a 0%-10% rating due to a recognized air passage defect. Dr. Counts detailed that Table 5 of the *AMA Guides* addresses the respiratory component of the ENT system and Class 1 permits a 0-10% impairment rating. He noted that Claimant's "dyspnea occurs only with difficulty swallowing, particularly with aspiration. His swallowing studies have demonstrated food getting hung up at the level of the hypopharynx." Dr. Counts thus determined that a 5% rating was appropriate. Notably, ATP Dr. Koval also assigned a class 1 respiration rating for a recognized passage defect.

24. In contrast, Dr. Lesnak explained that Dr. Counts erred when he included a 5% respiration impairment for a recognized passage defect. He specified that there was no evidence of any abnormalities or physical passage defect that suggested any type of respiratory condition related to the occupational injury claim. Dr. Lesnak commented that, although Claimant experienced trouble swallowing, any difficulties did not constitute a passage defect according to the *AMA Guides*. However, despite Dr. Lesnak's opinion, the

record reflects that Dr. Counts properly assigned Claimant a 5% respiration impairment for a recognized passage defect. Claimant explained that radiation affected his salivary glands and food does not go down smoothly but can get caught until he drinks. Furthermore, Dr. Counts noted that Claimant has difficulty swallowing and food becomes stuck at the level of the hypopharynx. Claimant's difficulty swallowing causes him to experience breathing difficulties. Accordingly, Claimant is entitled to a 5% whole person impairment rating for a respiratory impairment due to difficulty swallowing with aspiration.

25. Claimant has demonstrated that it is more probably true than not that Dr. Counts properly assigned Claimant a 2% whole person impairment for abnormalities involving the greater auricular nerves. Dr. Counts explained that he assigned a 2% rating for spinal nerve impairment based on bilateral injury to the greater auricular nerve. He detailed that he assigned the 3% maximum for "loss of function due to sensory deficit, pain or discomfort." He chose 3% for both sides because it is "quite troublesome" for Claimant. Dr. Counts determined that "Grade 2 fits the best, since the diminished sensation alone rarely would interfere with activity." He thus assigned a 1% rating for each side of the greater articular nerve. Combining the two sides yielded a total 2% rating for spinal nerve impairment.

26. In contrast, Dr. Lesnak remarked that "[t]here is no medical evidence whatsoever to suggest that the patient sustained any injuries or has any residual abnormalities involving either greater auricular nerve whatsoever." Dr. Lesnak concluded that any abnormalities involving the cutaneous skin region are not ratable according to the *AMA Guides* because there must be a "named" nerve or nerve root involvement. In the present matter, there is no evidence of a named nerve or nerve root abnormality. However, Dr. Counts persuasively testified that he included a 2% rating for Claimant's greater auricular nerve because Claimant identified problems in his neck on his pain diagram. He also noted possible auricular nerve impairment during his physical examination of Claimant. Accordingly, Claimant is entitled to a 2% whole person impairment rating for abnormalities involving the greater auricular nerves.

27. Based on a review of the record and persuasive medical opinions, Dr. Counts erroneously assigned Claimant a 17% whole person impairment rating for cervical range of motion deficits. However, Claimant is entitled to receive a 5% whole person impairment rating for hypothyroidism, a 5% whole person rating for respiratory impairment due to difficulty swallowing with aspiration and a 2% whole person impairment rating for abnormalities involving the greater auricular nerves. Combining the ratings yields a 12% whole person impairment as a result of Claimant's July 27, 2015 industrial occupational disease.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S.

A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio*, W.C. No. 4-660-149 (ICAO, June 30, 2008); see *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; see *Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Subparagraph (II) is limited to parties' disputes over "a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI]." §8-42-107(8)(b)(II). "Nowhere in the statute is a DIME's opinion as to the cause of a claimant's injury similarly imbued with presumptive weight." See *Yeutter*, 2019 COA 53 ¶ 18. Accordingly, a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment. *Id.* at ¶ 21.

6. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear

and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

7. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola*, W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett*, W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

8. Workers' Compensation Rule 12-4(B) provides that "[a]ny physician determining permanent physical impairment shall use the instructions and forms contained in the *AMA Guides*. Furthermore, the *Rating Tips* provide that spinal range of motion impairment must be completed and applied to the impairment rating only when a corresponding Table 53 diagnosis has been established. In unusual cases with established severe shoulder pathology accompanied by treatment of the cervical musculature, an isolated cervical range of motion impairment is allowed if it is well justified by the clinician. Otherwise, there are no exceptions to the requirement for a corresponding Table 53 rating. *Rating Tips* Desk Aid 11.

9. If a party has carried the initial burden of overcoming the DIME physician's impairment rating by clear and convincing evidence, the ALJ's determination of the correct rating is then a matter of fact based upon the lesser burden of a preponderance of the evidence. See *Deleon v. Whole Foods Market, Inc.*, W.C. No. 4-600-47 (ICAO, Nov. 16, 2006). The ALJ is not required to dissect the overall impairment rating into its numerous component parts and determine whether each part has been overcome by clear and convincing evidence. *Id.* When the ALJ determines that the DIME physician's rating has been overcome, the ALJ may independently determine the correct rating. *Lungu v. North Residence Inn*, W.C. No. 4-561-848 (ICAO, Mar. 19, 2004); *McNulty v. Eastman Kodak Co.*, W.C. No. 4-432-104 (ICAO, Sept. 16, 2002).

10. As found, Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Counts that Claimant suffered a 27% whole person impairment rating as a result of his July 27, 2015 industrial occupational disease. Specifically, Respondents have demonstrated that Dr. Counts incorrectly assigned Claimant a 17% whole person impairment for cervical range of motion deficits. The instructions in the *AMA Guides* only allow range of motion impairment in conjunction with a corresponding Table 53 diagnosis. Furthermore, the *Rating Tips* allow one exception in unusual cases when there is established severe shoulder pathology accompanied by treatment of the cervical musculature, and the isolated cervical range of motion impairment is well justified by the clinician. "Otherwise, there are no exceptions to the requirement for a corresponding Table 53 rating."

11. As found, Dr. Lesnak persuasively explained that Dr. Counts' erroneously assigned Claimant a 17% cervical spine range of motion rating. He specified that Claimant did not present with a Table 53 cervical spine disorder and there was no evidence of any shoulder joint pathology related to his occupational injury. Moreover, Dr. Counts acknowledged that Claimant did not present with a Table 53 diagnosis and the *Rating Tips* exception did not apply because he exhibited normal shoulder function. Dr. Counts detailed that Claimant's condition did not support a Table 53 diagnosis because, even though he received treatment for soft tissue lesions of the neck, he did not suffer an injury to his cervical spine, cervical discs, or nerve roots associated with his cervical spine.

12. As found, Dr. Swarson agreed with Dr. Counts' DIME opinion that Claimant was entitled to receive a 17% whole person impairment for cervical range of motion deficits. However, he admitted that the *AMA Guides* require a Table 53 diagnosis in order to assign a range of motion impairment but recognized that no Table 53 diagnosis exists in this case. He also noted that the *Rating Tips* allow an exception for cervical range of motion impairment ratings without a Table 53 diagnosis in cases of severe shoulder injuries but admitted that Claimant did not suffer severe shoulder pathology. Nevertheless, Dr. Swarson suggested that doctors could apply similar logic associated with the severe shoulder pathology exception to other situations and rate range of motion without a Table 53 diagnosis. However, on cross-examination, Dr. Swarson acknowledged that the *Rating Tips* specifically state that no other exceptions apply to the requirement for a Table 53 diagnosis.

13. As found, the *AMA Guides* require a Table 53 diagnosis and rating in order to assign a range of motion impairment and the *Rating Tips* allow an exception for cervical range of motion impairment ratings without a Table 53 diagnosis only in cases of severe shoulder injuries. The unambiguous language of the *AMA Guides* and *Rating Tips*, in conjunction with the persuasive testimony of Dr. Lesnak, reflect that Dr. Counts erroneously assigned Claimant a 17% whole person impairment rating for cervical range of motion deficits. Furthermore, Dr. Counts acknowledged that Claimant's condition did not support a Table 53 diagnosis. Accordingly, Respondents have produced unmistakable evidence free from serious or substantial doubt that Dr. Counts incorrectly assigned Claimant a 17% whole person impairment rating for cervical range of motion deficits.

14. As found, because Respondents have overcome Dr. Counts' cervical range of motion rating by clear and convincing evidence, the determination of Claimant's correct rating is a matter of fact based upon the lesser burden of a preponderance of the evidence. In addition to the 17% cervical range of motion rating, Dr. Counts assigned Claimant a 5% rating for respiratory impairment due to difficulty swallowing with aspiration; 5% for hypothyroidism; and 2% for spinal nerve impairment based on injury to the great auricular nerve. Initially, Respondents do not dispute that Claimant is entitled to a 5% impairment for hypothyroidism. Under the *AMA Guides*, a Class I impairment may range from 0% - 10% when continuous thyroid therapy is required for correction of thyroid insufficiency and there is no objective physical or laboratory evidence of inadequate replacement therapy. Dr. Counts chose to rate Claimant with a 5%

impairment because Claimant has no symptoms of hypothyroidism. Dr. Lesnak and Dr. Koval also rated Claimant for thyroid impairment because Claimant developed hypothyroidism within the first year following his surgical procedure and radiation therapy could induce hypothyroidism. Accordingly, Claimant is entitled to a 5% whole person impairment rating for hypothyroidism.

15. As found, Claimant has established by a preponderance of the evidence that Dr. Counts properly assigned Claimant a 5% rating respiratory impairment due to difficulty swallowing with aspiration. The *AMA Guides* define respiration as the act or function of breathing and permanent impairment produced by defects of the air passages, such as obstruction, “evidenced primarily by dyspnea.” *AMA Guides*, Table 5, p. 181, Class 1 allows for a 0%-10% rating due to a recognized air passage defect. Dr. Counts detailed that Table 5 of the *AMA Guides* addresses the respiratory component of the ENT system and Class 1 permits a 0-10% impairment rating. He noted that Claimant’s “dyspnea occurs only with difficulty swallowing, particularly with aspiration. His swallowing studies have demonstrated food getting hung up at the level of the hypopharynx.” Dr. Counts thus determined that a 5% rating was appropriate. Notably, ATP Dr. Koval also assigned a class 1 respiration rating for a recognized passage defect.

16. As found, in contrast, Dr. Lesnak explained that Dr. Counts erred when he included a 5% respiration impairment for a recognized passage defect. He specified that there was no evidence of any abnormalities or physical passage defect that suggested any type of respiratory condition related to the occupational injury claim. Dr. Lesnak commented that, although Claimant experienced trouble swallowing, any difficulties did not constitute a passage defect according to the *AMA Guides*. However, despite Dr. Lesnak’s opinion, the record reflects that Dr. Counts properly assigned Claimant a 5% respiration impairment for a recognized passage defect. Claimant explained that radiation affected his salivary glands and food does not go down smoothly but can get caught until he drinks. Furthermore, Dr. Counts noted that Claimant has difficulty swallowing and food becomes stuck at the level of the hypopharynx. Claimant’s difficulty swallowing causes him to experience breathing difficulties. Accordingly, Claimant is entitled to a 5% whole person impairment rating for a respiratory impairment due to difficulty swallowing with aspiration.

17. As found, Claimant has demonstrated by a preponderance of the evidence that Dr. Counts properly assigned Claimant a 2% whole person impairment for abnormalities involving the greater auricular nerves. Dr. Counts explained that he assigned a 2% rating for spinal nerve impairment based on bilateral injury to the greater auricular nerve. He detailed that he assigned the 3% maximum for “loss of function due to sensory deficit, pain or discomfort.” He chose 3% for both sides because it is “quite troublesome” for Claimant. Dr. Counts determined that “Grade 2 fits the best, since the diminished sensation alone rarely would interfere with activity.” He thus assigned a 1% rating for each side of the greater articular nerve. Combining the two sides yielded a total 2% rating for spinal nerve impairment.

18. As found, in contrast, Dr. Lesnak remarked that “[t]here is no medical evidence whatsoever to suggest that the patient sustained any injuries or has any residual abnormalities involving either greater auricular nerve whatsoever.” Dr. Lesnak concluded

that any abnormalities involving the cutaneous skin region are not ratable according to the *AMA Guides* because there must be a “named” nerve or nerve root involvement. In the present matter, there is no evidence of a named nerve or nerve root abnormality. However, Dr. Counts persuasively testified that he included a 2% rating for Claimant’s greater auricular nerve because Claimant identified problems in his neck on his pain diagram. He also noted possible auricular nerve impairment during his physical examination of Claimant. Accordingly, Claimant is entitled to a 2% whole person impairment rating for abnormalities involving the greater auricular nerves.

19. As found, based on a review of the record and persuasive medical opinions, Dr. Counts erroneously assigned Claimant a 17% whole person impairment rating for cervical range of motion deficits. However, Claimant is entitled to receive a 5% whole person impairment rating for hypothyroidism, a 5% whole person rating for respiratory impairment due to difficulty swallowing with aspiration and a 2% whole person impairment rating for abnormalities involving the greater auricular nerves. Combining the ratings yields a 12% whole person impairment as a result of Claimant’s July 27, 2015 industrial occupational disease.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have overcome Dr. Counts’ DIME opinion that Claimant is entitled to receive a 17% whole person impairment rating for cervical range of motion deficits.
2. Claimant is entitled to receive a 5% whole person impairment rating for hypothyroidism, a 5% whole person rating for respiratory impairment due to difficulty swallowing with aspiration and a 2% whole person impairment rating for abnormalities involving the greater auricular nerves. Combining the ratings, Claimant suffered a 12% whole person impairment as a result of his July 27, 2015 industrial occupational disease.
3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative

Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: July 9, 2020.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the surgery being proposed by Dr. Rauzzino is reasonable, necessary, and related to his original work injury? In this instance, Dr. Rauzzino is proposing a revision of the original C5 to C7 fusion, as well a new fusion from C3 to C5.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Work Injury and Early Treatment

1. Claimant sustained an admitted injury on October 28, 2011. On November 21, 2011, Neurosurgeon Michael Rauzzino, M.D., then performed a C5-C7 anterior cervical discectomy and fusion as part of Claimant's original treatment. (Ex. A, B, p. 6).
2. On December 23, 2011, post-operative x-rays were taken of Claimant's cervical spine with flexion and extension. The x-rays showed the hardware to be well-positioned, with no instability of the cervical spine between flexion and extension. The x-rays also showed mild disc space degenerative changes with small anterior osteophytes at C4-5. (Ex. C, p. 9)
3. On April 27, 2012, a CT of Claimant's cervical spine was performed. It showed solid bony fusion centrally, but with mild posterior osteophyte formation at C5-6 and C6-7. It also showed minimal degenerative changes of the C3-4 and C4-5 disk spaces, with comparable posterior osteophyte formation. (Ex. D, p. 11)
4. On August 3, 2012, the ATP, Miguel Castrejon, M.D., determined Claimant was at MMI with a 22% whole-person impairment rating. His final impression was: "Status post anterior cervical decompression and fusion at C5-6 and C6-7 with metallic hardware and disc spacers; Left upper limb radiculitis with no electrodiagnostic evidence for cervical radiculopathy; and Nonindustrial left carpal tunnel syndrome". Claimant was released with no work restrictions.
5. Dr. Castrejon recommended maintenance care for the next year, including follow-ups with Dr. Rauzzino and himself, and repeat imaging in the event of a change in neurological status. Dr. Castrejon noted the use of prescription medication was not anticipated, but could be considered in the event of a significant flare-up and on a temporary basis. In such event of a significant flare-up, he recommended access to physical therapy. He specifically noted that no additional surgery was anticipated at that time. (Ex. E, pp. 14-16)

6. On January 9, 2013, Claimant was seen by Timothy Sandell, M.D., for a Division IME. Dr. Sandell's diagnostic impressions were:

Cervical and left upper extremity radicular pain,

Status post C5-6 and C6-7 anterior decompression and fusion;

Possible left upper extremity radiculitis/neuropathic pain; and

Left carpal tunnel syndrome, unrelated to this acute injury. (Ex. 4, p. 23)

He agreed Claimant was at MMI as of August 3, 2012. He assigned an impairment rating of 30% of the whole person. His only recommendations for additional treatment were for maintenance care, and he agreed the maintenance care set forth by the treating physician appeared to be appropriate. This included follow-ups through Dr. Rauzzino and Dr. Castrejon, monitoring medications and addressing symptoms otherwise such as physical therapy in the case of a flare-up. *Id* at 24.

7. On August 12, 2013, Respondent filed a Final Admission of Liability for the DIME physician's MMI date of August 3, 2012, and impairment rating of 30% of the whole person. The FAL also admitted liability for reasonable, necessary, related, and authorized care per Dr. Castrejon's 8/3/12 report. (Ex. 8, p. 84)
8. Claimant returned to work without restrictions (Ex. E, p. 15). He continued to work for Employer until his retirement, according to his hearing testimony. Following the Division IME, Claimant did not have significant treatment for his neck. He did not take pain medication, nor did he have physical therapy or injections. As of August 29, 2017, he reported to Dr. Rauzzino he had not had significant flare-ups. (Ex. I, p. 30).

Claimant returns for Follow-up

9. Claimant returned to Dr. Rauzzino on August 29, 2017, for an evaluation because "the workers' compensation people" had called to offer to settle with him, and he was trying to decide what he wanted to do. *Id*.
10. Claimant noted no new symptoms referable to his neck, and stated that had workers' compensation not contacted him, he would not be pursuing the evaluation. After examination, Dr. Rauzzino stated Claimant was status post C5-C7 ACDF and doing very well clinically. He did not require medical maintenance treatment related to the October 2011 injury. He remained at maximum medical improvement with respect to this injury.
11. Dr. Rauzzino noted Claimant wanted to know the status of the levels above and below his original C5-C7 fusion. He therefore recommended plain films and an MRI to assess the severity of any adjacent level disease relatable to the original surgery. Other than that, he did not think there was any additional treatment to be rendered. (Ex. I, pp. 30–31)

12. On October 23, 2017, an MRI was taken of Claimant's cervical spine. The MRI showed normal cord signal and atlantodens interval at the fusion levels. It also showed a right paracentral disc osteophyte complex at C3-4 causing moderate right-sided foraminal stenosis and mild ventral cord deformity, and a broad-based disc osteophyte complex at C4-5 causing moderate spinal canal stenosis and mild inferior foraminal -narrowing bilaterally. (Ex. J, pp. 32-33)
13. On March 20, 2018, Claimant returned to Dr. Rauzzino. He noted Claimant had done quite well from the operation overall, but he had noticed some more achiness and tightness in the left side of his neck and into his shoulder with no significant associated radiculopathy. He had some chronic numbness from the initial injury, and the pain 'came and went', depending upon his level of activity.
14. On examination Claimant had 5/5 strength in the upper extremities, normal sensation to touch bilaterally, and 2+ reflexes. Dr. Rauzzino noted x-rays of the cervical spine showed no significant abnormalities. Mild early adjacent degenerative changes are seen at C3~C4 and C4-C5. He noted the MRI of the cervical spine showed posterior osteophytes at C4-C5, predominantly on the left, causing foraminal stenosis.
15. Dr. Rauzzino opined Claimant had early adjacent level disease, likely causing Claimant's left-sided neck and shoulder pain. Dr. Rauzzino noted he would not recommend anything surgical at that point, but would instead proceed as conservatively as possible for the time being. He planned to start with some physical therapy of the neck. He noted Claimant might benefit from injections, and at some point there was a possibility he would need an extension to take care of some of the stenosis or even possibly a foraminotomy. (Ex. K, p. 34)
16. On November 1, 2018, Dr. Rauzzino re-evaluated Claimant, noting:
- He [Claimant] presents today with neck pain as well as upper extremity symptoms. This pain is sharp, dull, stabbing, aching, burning, and throbbing. It is constant in nature and rated 8/10 to 9/10 on a scale of 0 to 10. It is associated with numbness, tingling and weakness. This significantly worsened about 3 months ago without injury or event. (Ex. 4, p. 24).
17. Dr. Rauzzino's assessment was worsening neck pain and left shoulder and arm pain with numbness, tingling and weakness. He noted Claimant had adjacent segment degeneration on previous imaging above his fusion, which would correlate to the left shoulder, but it was difficult for him to assess whether it was coming from the shoulder itself. He referred Claimant for a new MRI of the cervical spine, flexion/extension x-rays, and a left shoulder MRI. *Id* at 24-25.

New Diagnostics

18. On December 10, 2018, new x-rays were taken of the cervical spine. The x-rays showed no evidence of dynamic instability and no hardware complication. (Ex. L, p. 36)

19. A shoulder MRI taken that date showed severe tendinopathy and chronic SLAP tear. The cervical MRI showed unremarkable alignment. The spinal cord was normal in caliber and demonstrated normal signal. C6-7 was status post ACDF with mild bilateral foraminal narrowing. There was slight progression in right paracentral disc extrusion at C3-4 with lateral recess stenosis, and mild to moderate central stenosis and foraminal narrowing at C4-5. (Ex. L, pp. 35–37)
20. On January 2, 2019, Derrick Winckler, PA-C, and Dr. Rauzzino reviewed these December 10, 2018 x-rays and MRIs with Claimant by phone. They referred Claimant to an orthopedic surgeon for his shoulder. They opined the x-rays of the cervical spine appeared to show a cleft through the C6-C7 level, with possible pseudoarthrosis.
21. Regarding the cervical MRI, they stated they could not fully evaluate whether Claimant had solid fusion at C6-C7 with possible pseudoarthrosis. They also noted a right paracentral disc protrusion at C3-C4 that had *increased* slightly since the prior study, with narrowing of the right lateral recess and proximal right neural foramen, anterior and posterior osteophytes. At C4-C5, they noted uncovertebral joint hypertrophy with mild broad-based disc-osteophyte complex resulting in mild to moderate central stenosis and moderate bilateral foraminal narrowing. They recommended an updated CT scan to verify solid fusion at C6-C7. (Ex. O, p. 40)
22. On January 14, 2019, a non-contrast CT was taken of Claimant’s cervical spine. It was read by Michael E. Holt, M.D., whose impression was:
1. Status post C5-C7 ACDF;
 2. No complications or acute abnormalities;
 3. Cervical spondylosis intact. (Ex. P, p. 41)
23. Dr. Holt specifically noted the anterior fusion plate with screws and interbody spacers at C5-C7, and that no complications were demonstrated. He also noted “changes of degenerative disc disease with osteophytes or neural C3-4 and C4-5”. *Id* at 42.

Continued Consultations with Dr. Rauzzino

24. On January 28, 2019, Claimant followed up with Dr. Rauzzino. He reported he continued to have neck pain that radiated into his left arm and shoulder and into his hands. He also complained of pain in his left shoulder. He felt he was getting worse, with progressive weakness of his arm. Dr. Rauzzino noted the left shoulder MRI showed significant changes including an SLAP tear. He noted the initial reading of the CT scan of the cervical spine indicated no complications; however, he had reviewed the studies himself and believed there was a clear pseudoarthrosis at C6-C7 with loosening of hardware.
25. Dr. Rauzzino stated he had discussed this with the reading radiologist and they had now agreed on this. He opined Claimant continued to suffer from adjacent level disease at C4-C5, as well as pseudoarthrosis at C6-C7 and disease at C3-C4. He opined all of

this contributed to Claimant's symptomatology. He noted Claimant's shoulder pathology could be adding to his symptoms in something of a double crush type syndrome. He opined the radicular symptoms into the arm would not necessarily be accounted for by Claimant's shoulder pathology. He recommended surgical decompression and reconstruction via anterior approach. He opined that the pseudoarthrosis was clearly related to the original surgery, as was the adjacent level disease. (Ex. Q, pp. 43-44)

26. On January 29, 2019, Dr. Holt issued an addendum to his January 14, 2019 report, stating: "There is complete osseous fusion of C5-6 with intact interbody graft and anterior fusion hardware. There is a persistent lucency through the disc space at the C6-7 level representing a pseudoarthrosis. There is also a subtle horizontal lucency extending through the interbody spacer representing a crack or fracture through the interbody spacer." (Ex. P, p. 41)
27. On January 30, 2019, Dr. Rauzzino's office requested prior authorization of ACDF C3-5 with revision of C5-7. (Ex. R, p. 45).

IME with Dr. Messenbaugh

28. On February 14, 2019, Claimant was seen by Robert L. Messenbaugh, M.D., for an IME. Claimant reported to him that, following the November 29, 2011 surgical procedure, he had done well and regarded it as being successful, but he had some persistent numbness involving his left upper extremity with radiation of discomfort and numbness from his neck into his left thumb area.
29. Claimant indicated to Dr. Messenbaugh that sometime the previous summer, he believed July of 2018, he developed a knot in his neck. He had to stop jogging, which he stated he had previously done some four times per week. He stated that he had pain in and about the left side of his neck, radiating into the shoulder and down his arm "like before surgery." He indicated he had neck pain every day, was not sleeping well, and was losing control of his arm. He stated that he was experiencing arm pain and arm-shoulder weakness. He stated that he experienced some episodic cracking and popping within his neck. On examination, Claimant complained of midline tenderness C3 to T1. (Ex. S, pp. 45-55)
30. Dr. Messenbaugh was deposed on 7/25/2019. He testified at a second deposition, by telephone, on 5/21/2020. He has been retired from orthopedic surgery since 2001, after practicing for 30 years. When he did practice actively, he was involved in "everything *excepting cervical spine surgery*". (Messenbaugh depo, p. 68). His area of expertise now is in evaluation and recommendations for follow-up, and making referrals to others. While he would personally review imaging before performing knee or shoulder surgery, he would rely upon the radiologist for reviewing cervical images, because 'I do not profess to be an expert at reading particularly spinal MRIs.' *Id* at p. 71. When reviewing images for extremities, there were occasions when he would see things that the radiologists did not; in such event, he would sometimes discuss this with the radiologist.

31. Dr. Messenbaugh explained that pseudarthrosis means that the fusion failed. He pointed out that at least 5 examiners, including Dr. Holt, had reviewed Mr. Erickson's cervical spine radiographs, MRIs and CTs. None of them reported finding evidence of a C6-7 pseudarthrosis until Dr. Rauzzino reviewed the latest cervical spine MRI, and identified a pseudarthrosis at C6-7. Only afterwards did Dr. Holt write an addendum reporting that he too had identified C6-7 pseudarthrosis. (Ex. S, pp. 47, 49, 51, 56).
32. Dr. Messenbaugh opined that, if a C6-7 pseudarthrosis was unequivocally determined by an independent radiologist, then further attempts at obtaining a solid fusion at C6-7 might be considered. However, there would be little evidence that Claimant would benefit from such a procedure, and there would be concerns that his condition would well be worsened. *Id* at 57.
33. In his IME report, Dr. Messenbaugh noted that radiographic series going back as far as December 23, 2011, showed Claimant had degenerative disc pathology and bone spurring at the C4-5 level. (Ex. S, p. 47). In his experience, one should anticipate progressive cervical spine degenerative disk disease and arthritis, even in someone who has not undergone a cervical spine fusion. He opined there was no way to confirm that any additional surgery upon Claimant's cervical spine at C3,4 or C4,5 levels would be as a direct and singular result of his having previously undergone a 2-level cervical spine fusion C5 through C7.
34. Dr. Messenbaugh expressed concern that there had been no confirmation that Claimant's complaints of neck and arm pain were related to the degenerative pathology noted at the C3-4 and C4-5 disk levels. He was also concerned there was no credible confirmatory evidence to show that if Claimant underwent additional fusions at the levels of C3-4 and C4-5, "much less a re-do surgery at the level of C6-7," he would benefit from such invasive surgical procedures.
35. He further opined that the surgical recommendations for additional cervical spine fusions at the levels of C3-4 and C4-5 should not be considered to be directly due to his prior 2-level cervical spine fusions; instead, they are due to the expected, natural progression of degenerative changes associated with the passage of time, wear and tear, and aging. (Ex. S, p. 57)
36. In his deposition on July 25, 2019, Dr. Messenbaugh opined that the anterior cervical disc fusion, from C3 through C5 with revision of C5 through 7, recommended by Dr. Rauzzino, was not reasonable, necessary, and related to the original October 28, 2011 workers' compensation claim. In Dr. Messenbaugh's opinion, there has been no confirmation that Claimant's cervical spine discomfort is specifically related to C3-4 or C4-5, the disc levels that are being considered for additional fusion. He also pointed out that there has not been confirmation that any of his lingering discomfort is from a reported pseudarthrosis at the C6-7 level, no confirmatory EMG and no diagnostic therapeutic injections. Dr. Messenbaugh expressed concern Claimant might be significantly harmed and not benefited by the surgical procedure. He recommended obtaining additional confirmation.

37. Dr. Messenbaugh stated that we don't know if Claimant has a pseudarthrosis, but, if he has one, it is questionable whether his cervical spine issues are related to that level. He explained that Claimant did not have a fusion, and then go on to non-fusion. He either had a pseudarthrosis 'from the get-go' or he didn't. If Claimant did have a pseudarthrosis, and all these physicians, including Dr. Rauzzino, noted he was doing great, did that mean he was doing great despite his pseudarthrosis? Dr. Messenbaugh agreed it would be reasonable to have a repeat CT scan to make sure there really is that a pseudoarthrosis.
38. On October 28, 2019, a non-contrast CT was taken of Claimant's cervical spine, and compared to the CT of April 27, 2012. It was read by John Sherman, M.D., whose opinion included:
1. No change in stable anterior interbody fusion at C5-6 and C6-7; Mild spurring has developed anteriorly at C3-4 and posteriorly at C7-T1; At C4-5, there is disc bulging or shallow protrusion posterolateral which has developed on the left side and there is mild left foraminal stenosis, developing since the prior study. (Ex. V, pp. 67-68).
39. With regard to the fusion, the radiologist specifically noted there was no change in alignment and no hardware fracture. There was ossification across the disc space. There was no canal or foraminal stenosis or interval change. *Id.*
40. On November 4, 2019, Dr. Messenbaugh reviewed the October 28, 2019 CT report. He noted that Dr. Sherman made no mention whatsoever of identifying a pseudarthrosis at the level of C6, 7. Dr. Messenbaugh further stated that he found no convincing evidence that Claimant has a pseudarthrosis at C6-C7, much less that he is symptomatic as a result. (Ex. W, p. 69).
41. Dr. Messenbaugh testified the October 23, 2017 cervical spine MRI showed the degenerative disc disease that had been seen in 2012 had now progressed, which, in his opinion, was to be fully expected. He opined that if Claimant had not had the C5-C7 fusion, he still would have expected him to have the same findings on the MRI.
42. Dr. Messenbaugh explained that at his previous deposition he had recommended an additional CT of the cervical spine because six trained radiologists had not identified any evidence of pseudarthrosis, then Dr. Holt changed his opinion after visiting with Dr. Rauzzino, and Dr. Rauzzino stated that he could visually identify evidence of a pseudoarthrosis at that level. Dr. Messenbaugh found those reports to be inconsistent with those previously provided, and thought that before Claimant underwent a procedure at the C6-7 level, looking for evidence of a pseudoarthrosis, there should be strong confirmation of necessity for that procedure.
43. Dr. Messenbaugh noted that the radiologist reading the October 28, 2019 CT scan stated there was an interbody fusion from C5 to C7. He made no mention of a cleft being identified, evidence of a pseudoarthrosis, or evidence of a hardware failure or the screw or plate loosening.

44. Dr. Messenbaugh opined the proposed C6-7 fusion repair is not reasonable and not necessary because there has not been any clear substantiation that there is a pseudarthrosis at the C6-7 level. Dr. Messenbaugh opined that, even if there had been evidence of a pseudarthrosis, there was no evidence of any instability or hardware failure and no documentation to confirm Claimant had discomfort at that level.
45. Dr. Messenbaugh explained that if a fusion fails to fuse, and there is motion, there would be evidence of loosening of the hardware, breaking of the hardware, instability, subluxations, and so forth. He further noted there hadn't been injections or anything to confirm, even if there was a pseudoarthrosis, that going in and changing it to a solid fusion would not necessarily relieve Claimant of his discomfort.
46. With regard to the proposed C4-5 fusion, Dr. Messenbaugh found no evidence to clearly show that Claimant's symptomatology was directly, and singularly, related to the C4-5 disc degeneration he has or that by performing a discectomy and fusion at that level, would necessarily relieve his pain. He also noted he did not find clear evidence that the progression of the degenerative disc disease -- that is mild to moderate at C4-5 and mild at C3-4 -- was related to the fact Claimant had previously undergone the C5 through C7 fusion.
47. Dr. Messenbaugh opined the proposed C3-4 fusion is absolutely not supported by the medical and diagnostic records to date. He saw no clear-cut evidence that Claimant requires a C3-4 disc excision and fusion, and he opined it would be a detriment, instead of a benefit to him. He didn't think it was reasonable or necessary, and he opined it was not in any way related to his prior fusions, C5 through C7. He noted it is not one level adjacent, but two levels adjacent. Dr. Messenbaugh pointed out that fusing two additional levels would leave Claimant with a four-level fusion, and he would be quite significantly, severely restricted, in his cervical spine mobility and his consequent function.

Dr. Rauzzino's Deposition

48. Dr. Michael Rauzzino testified via deposition on May 12, 2020. He is a neurosurgeon, fellowship trained in complex spine and deformity. He has been in private practice since 2000, with approximately 80% of his practice devoted to spinal surgery. He is also Level II accredited.
49. He testified the weakness Claimant demonstrated in the muscle that elevates the left shoulder called the deltoid typically correlates with the nerve that would be at risk at the adjacent level above the fusion, the C4-5 level. Asked about the December 10, 2018 MRI, Dr. Rauzzino testified the surgical levels at C5-6 and C6-C7 did not show any residual stenosis. At the C4-5 level, Claimant had arthritic changes in the joints, a disc osteophyte complex that produced pressure on the spinal sac, and bone spurs that produced pressure on the nerves exiting at that level, called foraminal narrowing. He opined this was symptomatic for Claimant.

50. At the C3-4 level, Claimant had degenerative changes that also progressed over time, but since a radiographic finding did not correlate with his exam, it was not the root cause of his symptoms. It showed that there was a potential to cause pressure on the nerve, but it didn't necessarily mean that it was symptomatic. Dr. Rauzzino acknowledged Claimant had mild disc pathology at the C4-5 level at the time of his 2011 two-level fusion, which he stated would not be surprising in a patient of Claimant's age. In fact, Dr. Rauzzino emphasized that given the propensity for degeneration even back in 2011, this is precisely what would make Claimant a higher risk for adjacent level disease.
51. Dr. Rauzzino recommended Claimant have the level above the spinal fusions treated, and "likely the one above that would have to be included, because if you just fix the one above the adjacent level, the chance of the one above it wearing out, because it's in sort of bad shape right now, would be so high, it would be doomed to failure, and you would have to come right back and do it."
52. Dr. Rauzzino also noted that, at the time of this surgery, "you would explore the previous fusion to diagnose -- to confirm the pseudarthrosis, and if present, go ahead and fix it while you are there." He recommended both the C3-4 and C4-5 levels be fused, but he acknowledged he thought the main problem was at C4-5. When asked that even if the pseudoarthrosis were not present, would he still perform the fusions, he replied "without a doubt."
53. Regarding the October 2019 CT scan, Dr. Rauzzino opined it showed an absence of solid bone growth between the vertebrae, and a cleft in the graft where the bone material had reabsorbed. He believed was consistent with a pseudarthrosis. Dr. Rauzzino expressed regret that he didn't take the time to call the radiologist who read the October 28, 2019 CT scan, and have him amend his report as well. Dr. Rauzzino testified that the lack of fusion was so evident, even a lay jury would be able to tell there was a lack of bone growth across the space. He actually observed the lack of bone growth across the space.
54. Dr. Rauzzino confirmed that, despite Dr. Messenbaugh's opinion, in fact an independent radiologist from Grand Junction, with no connection to either party, had confirmed the pseudoarthrosis.
55. Responding to Dr. Messenbaugh's assertion that, in effect, Claimant would not go from "fusion to non-fusion", Dr. Rauzzino strongly disagreed, stating:

No, sir, that's not correct. And the reason that it's not correct is that *often it will take a year or more for a total fusion to happen*. And there are cases where you think that the bone is fused, or you think that you have a solid fusion, and the fusion fails.

And that's because when you put bone graft into one of these spacers, it's often not the patient's own bone. It belongs to a cadaver or some other source. And sometimes, *despite what looks like a solid fusion*,

that bone can reabsorb and dissolve. And what was once appeared to be a solid fusion can become a pseudoarthrosis.

If you look at the pictures that were taken on April 27th, 2012 and compare them to a study that was done in 2019, you can see the severe loss of bone at this level consistent with the pseudoarthrosis. Interestingly, you can see the level above it a C5-6 where, over time, as one would expect, there's a lot more bone that's grown; whereas at C6-7, not only is there – not been more bone grown, but *the bone that was there has been lost*, and that's entirely consistent with the pseudoarthrosis.

And that's something that Dr. Messenbaugh didn't review when he did his review. *He didn't look at both sets of pictures and compare them*, and see the difference how the bone loss was consistent with the pseudoarthrosis. (Rauzzino depo. pp. 46-47)(emphasis added).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1)*. Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. *Section 8-43-201, C.R.S.* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In this instance, the ALJ finds Claimant to be sincere and persuasive, in his testimony. Claimant has accurately reported his symptoms to his medical providers, and to the IME, in a sincere effort to alleviate his symptoms. Claimant still leads an active lifestyle, and desires to continue with that. Having undergone one cervical fusion already, he will go into subsequent procedures with eyes open [figuratively speaking]. Further, the ALJ finds that each medical expert offering opinions has done so in good faith, and with a sincere effort to provide the ALJ valuable expert information. As such, the ALJ will determine these issues on the basis of *persuasiveness*, and not *credibility* per se. However, it must be noted that, given his long-term familiarity with Claimant, and his active, professional expertise in treating cervical issues, Dr. Rauzzino has proven more persuasive overall than Dr. Messenbaugh. The ALJ takes note that Dr. Rauzzino has, in effect, acknowledged that even this fusions can fail on occasion. Such are the inexactitudes and limitations of even the most modern of medical techniques.

D. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits, Reasonable, Necessary, and Related - Generally

E. Claimant bears the burden of establishing entitlement to medical treatment. See *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

F. Even where the Respondents admit liability for post-MMI medical benefits, they remain free to contest the reasonable necessity and causal connection of any specific future treatment. *Milco Construction v. Cowan*, 860 P.2d 539 (Colo. App. 1992). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Similarly, the question of whether medical treatment is reasonably necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Whether the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove by a preponderance of evidence that the disputed treatment is

reasonably necessary to cure or relieve the effects of the injury. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1997).

G. The mere occurrence of an industrial injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Bell*, 172 Colo. 510, 474 P.2d 662 (1970); Section 8-41-301 (1)(c) C.R.S. 2017.

Reasonable, Necessary, and Related, as Applied

H. Here, Claimant has proven by preponderance of the evidence that the cervical spine fusion at the levels of C3-4 and C4-5 as recommended by Dr. Michael Rauzzino is *reasonable and necessary* to cure the effects of Claimant's industrial injury. Claimant has also shown that this need for the fusion at adjacent levels C3-4 and C4-5 and revision of previous fusion is *related* to the Claimant's 2011 industrial injury. Claimant has unsuccessfully pursued conservative care. Further conservative care, such as injections, would not serve to cure and relieve the effects of the work injury, in the opinion of his treating surgeon. The ALJ concurs. Claimant's disc degeneration at levels C3-4 and C4-5 are a result of adjacent levels disease from his two-level fusion on November 21, 2011.

I. Dr. Messenbaugh opined that Claimant's degenerative disc disease is a result of general wear and tear from an active lifestyle and that Claimant would likely benefit from injections. The ALJ does not concur. Adjacent level disease is a common risk after having a fusion as they involve fusing two or three bones together thus putting stress on the levels above and below the fusion. Further, and as persuasively explained by Dr. Rauzzino, since Claimant already has some pre-existing propensity for degenerative discs, this additional stress on the adjacent levels makes it even *more likely* to result in the need for a fusion. The ALJ is also persuaded that this need goes not only from C5 to C4, but also from C4 to C3, based upon the need to treat Claimant's symptomology and create the best structure, in the opinion of his ATP.

J. Dr. Rauzzino further explained that injections would provide only temporary relief, as adjacent level disease is a mechanical issue that must be surgically corrected. Dr. Rauzzino also identified the presence of a cleft in C6-7, consistent with pseudoarthrosis in the January 14, 2019 CT scan, although it was subtle. Dr. Messenbaugh did not review the actual images from the CT scan and only read the report. Dr. Rauzzino reviewed the images himself and spoke to the reading radiologist personally. There is no evidence in the record this was for any other reason than to assure a correct reading. Regardless of the presence of pseudoarthrosis, Dr. Rauzzino opines that the fusion and decompression of the cervical spine is necessary to cure and relieve the effects of Claimant's work injuries as the adjacent level disease is still present. He also testified that Claimant's left shoulder pain may be resulting from

impingement on the C5 nerve root, which will be relieved with the C4-5 decompression and fusion.

K. Dr. Rauzzino testified in his deposition that a period of several years is enough time for pseudoarthrosis to develop. In his March 12, 2019 report, Dr. Rauzzino discussed that the degenerative disc disease would not have advanced to the point of needing treatment had it not been for the presence of the long construct created by the two-level fusion, as that is the definition of adjacent-level disease. This directly refutes Dr. Messenbaugh's claim that the cervical spine fusion would be well less than 50 percent a direct result of Claimant's previous fusion. Additionally, Dr. Messenbaugh testified that 25 percent of spinal fusion patients have symptoms that later require a revision of the fusion. One in four patients requiring surgical revision is significant. In this case, the weight of the argument regarding management of adjacent level disease must fall to Dr. Rauzzino as a board-certified neurosurgeon.

L. Further, the ALJ finds Dr. Rauzzino's reasoning persuasive regarding the need for a revision surgery to the existing fusion, based upon his direct observations of pseudoarthrosis in the imaging studies. Unfortunately, bone loss can occur in certain individuals over time, even with the best of fusion techniques. It would be easy enough for Dr. Rauzzino to look the other way, or vehemently defend the results of the first fusion; instead, the ALJ finds that he is looking out for his patient, long after the fact. While he is in the process of the additional fusion, it only makes sense to check, up close and personal, the status of the existing hardware and bone condition at C6-C7, and revise as necessary during one procedure.

ORDER

It is therefore Ordered that:

1. Respondents shall pay for the surgery as proposed by Dr. Rauzzino.
2. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

ISSUES

- Is Claimant's claim for compensation barred by the statute of limitations?
- If the Claimant's claim is not barred by the statute of limitations, did Claimant prove by a preponderance of the evidence he suffered a compensable occupational disease of asbestosis?

FINDINGS OF FACT

1. Claimant worked approximately 23 years at Employer's [Redacted] Plant in Colorado Springs before his retirement in November 2000.

2. Claimant worked in several positions including helper, tender, and boiler/turbine operator. He spent an unspecified but significant amount of time working in the basement pulling bottom ash. He also monitored and operated a variety of equipment in the plant. Claimant testified he could see particles moving through the air "from start to finish" of each shift. Claimant generally did not wear a face mask while working. Claimant believes the visible dust contained asbestos but offered no persuasive evidence to substantiate that supposition.

3. In February 1981, the National Institute for Occupational Safety and Health (NIOSH) conducted a "baseline" environmental evaluation of the Martin-Drake facility. NIOSH performed sampling for airborne substances in 34 locations throughout the plant. The most significant health risks identified by the testing were exposure to fly ash and coal dust containing free silica, and exposure to inorganic arsenic, cristobalite, sulfur dioxide, and hydrazine. None of the air samples showed evidence of airborne asbestos. The NIOSH report noted some insulation materials in the plant contained asbestos. Some maintenance tasks involving pipes, meters, gauges, and seals required existing insulation material be temporarily removed to provide access. Of the nine sites from which insulation was sampled, four contained no asbestos, one contained 10% asbestos, one contained 10-20% asbestos, one contained 40% asbestos, and one contained 60% asbestos. The NIOSH report mentions asbestos as a potential health risk but gives no indication workers in the plant were actually exposed to asbestos.

4. In approximately 1985, Claimant participated in asbestos abatement work on his "relief" days. He was given a Tyvek suit and a paper mask during this work, but stated Employer later brought in "professionals" to do the asbestos abatement in the plant. Claimant estimated he performed asbestos abatement for approximately 30 days total.

5. In October 2000, Claimant began having difficulty breathing. He informed his shift supervisor and was sent to Dr. Timothy Rummel, a pulmonologist. Claimant

retired in November 2000, primarily because of limitations related to his breathing. After obtaining x-rays, Dr. Rummel informed Claimant he had 8 to 10 nodules in his lungs. Initially, there was concern for cancer but ultimately the nodules were determined to be benign. Dr. Rummel offered no specific diagnosis or explanation for the cause of the respiratory problems. Claimant was later diagnosed with and received treatment for COPD.

6. Claimant returned to Dr. Rummel on July 17, 2018 because of ongoing breathing difficulty, dyspnea on exertion, and continuous coughing. Claimant told Dr. Rummel he had performed asbestos abatement the power plant in the mid-1980s. He also reported smoking 1 ½ packs of cigarettes per day for 30 years until he quit smoking in 1994. A chest x-ray showed pleural thickening. Dr. Rummel reviewed a pulmonary function test (PFT) performed in April 2018 and opined the results were consistent with GOLD stage II COPD with a superimposed restriction. He opined Claimant “may have simple tobacco-induced COPD with some loss of thoracic height due to osteoporosis/aging. Could alternatively have some component of asbestosis in light of his history and pleural thickening on chest x-ray.” He recommended a chest CT.

7. Claimant did not know or suspect he had asbestosis until Dr. Rummel suggested the diagnosis in July 2018.

8. Claimant returned to Dr. Rummel on October 9, 2018 to review the CT results. The scan showed a 1 cm nodule and increased interstitial markings. He noted the interstitial markings were not mentioned on the last CT performed in 2007. He opined “the findings of the CT scan and pulmonary function tests are consistent with superimposed asbestosis in a patient with known significant asbestos exposure in the late 1980s.” He recommended a PET scan to look for cancer. No specific treatment was recommended for asbestosis.

9. On June 29, 2019, Claimant filed a workers’ compensation claim with the Division claiming an occupational disease of asbestosis.

10. On November 23, 2019, Claimant saw Dr. Jeffrey Schwartz for a pulmonary IME at Respondent’s request. Repeat PTFs in Dr. Schwartz’s office were significantly improved, with normal spirometry and lung volumes. Claimant’s diffusion capacity was mildly reduced but was considered normal when adjusted for alveolar lung volume. According to Dr. Schwartz, the most relevant test regarding asbestosis is the total lung capacity (TLC). Dr. Schwartz opined a TLC less than 80% of predicted is consistent with the diagnosis of asbestosis. Here, Claimant demonstrated 85% of predicted TLC. Accordingly, Dr. Schwartz opined the results of the PFT were not consistent with a diagnosis of asbestosis. Based on the normal spirometry and previous PFTs showing reversible airflow obstruction. Dr. Schwartz opined Claimant probably has asthma of undeterminable etiology.

11. Dr. Schwartz explained the “increased interstitial markings” noted by Dr. Rummel on the prior CT scan do not necessarily indicate asbestosis but could also be

related to prolonged cigarette smoking. Dr. Schwartz recommended a high-resolution CT scan (HRCT) as the “state of the art” radiographic test for asbestosis.

12. Claimant underwent an HRCT on January 17, 2020. The radiologist noted multiple lung nodules, upper and lower lobe centrilobular emphysematous changes and bilateral upper lobe paraseptal emphysematous changes. He saw “no calcified pleural plaque or areas of pleural thickening or thickening of the interlobular septa to suggest asbestosis.” The lung nodules and emphysematous changes were unchanged compared to the August 2018 CT scan.

13. Dr. Schwartz explained a diagnosis of asbestosis requires (1) exposure to respirable asbestos dust sufficient to cause asbestosis, (2) radiographic abnormalities compatible with the diagnosis of asbestosis, and (3) no other pulmonary disorder to account for the clinical and radiographic findings suggesting asbestosis. Based on the lack of positive radiographic findings on the HRCT, Dr. Schwartz opined Claimant does not satisfy the diagnostic criteria for asbestosis.

14. Regarding Claimant’s potential exposure to asbestos, Dr. Schwartz explained the mere presence of asbestos in a building does not necessarily create a health risk. Unless the asbestos is disturbed, the fibers in the insulation are not a problem. It is only the creation of fine asbestos dust when the asbestos is disturbed that causes a problem. He further opined that asbestosis is not caused by brief exposure to asbestosis and typically requires years of high-level exposure. Based on the data in the NIOSH report, even crediting Claimant’s description of approximately 30 days of asbestos abatement work, Dr. Schwartz concluded Claimant was not likely exposed to asbestos sufficient to cause asbestosis.

15. Dr. Schwartz’s opinions and analysis are credible and persuasive.

16. Respondent failed to prove Claimant’s claim is barred by the statute of limitations. Claimant did not reasonably appreciate the nature, seriousness, and probable compensable nature of his condition and tell Dr. Rummel first suggested that diagnosis of asbestosis in July 2018, less than one year before he filed his claim.

17. Claimant failed to prove he suffered an occupational disease of asbestosis, or any other lung condition and proximately caused by his work for Employer.

CONCLUSIONS OF LAW

A. Statute of limitations

Section 8-43-103(2) requires that most claims for compensation be filed with the Division within two years of injury or death. The two-year window is extended the three years if a claimant had a “reasonable excuse” for not bringing the claim within two years. The Act further provides that a claim for asbestosis must be filed within five years after the commencement of disability or death. The statute of limitations is governed by the “discovery rule,” and the begins to run when the claimant, as a reasonable person, knows or should have known “the nature, seriousness and probable compensable character of

his injury.” *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). For purposes of the statute of limitations, a “compensable” injury is a disabling injury that entitles the claimant to compensation in the form of disability benefits. *Id.*; see also *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981). To recognize the “probable compensable character” of an injury, the claimant must appreciate a causal relationship between the employment and the condition. *Taylor v. Summit County*, W.C. No. 4-897-476-01 (March 18, 2014). Confusion regarding the diagnosis or medical causation can be a sufficient basis to prevent the statute of limitations from running. *E.g.*, *Wise v. Rockwell International Corporation*, W.C. No. 4-023-871 (September 20, 1993) (lack of medical opinion indicating a causal relationship is a pertinent factor the ALJ may consider in determining whether the limitation period was triggered).

As found, Respondent failed to prove Claimant’s claim is barred by the statute of limitations. Although Claimant arguably suffered the onset of disability when he retired from his position with Employer in November 2000, he did not reasonably appreciate the nature, seriousness, and probable compensable character of his condition until July 2018 at the earliest, when Dr. Rummel suggested the possibility of asbestosis. At the time of his retirement, Claimant’s primary pulmonary concern was lung nodules and possible cancer. He was later diagnosed with COPD and there is no indication anyone suspected asbestosis until many years later. Additionally, the interstitial markings Dr. Rummel believes are consistent with asbestosis were not shown on the 2007 CT scan, which suggests the condition was not even present or diagnosable in 2000. The statute of limitations did not begin to run until July 17, 2018 at the earliest. Claimant filed his claim with the Division on June 29, 2019, well within the two-year general statute of limitations or the five-year statute applicable to claims of asbestosis. Respondent’s defense relating to the statute of limitations is denied and dismissed.

B. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers’ compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201.

The Act imposes additional requirements for liability of an occupational disease beyond the “arising out of” and “course and scope” requirements. A compensable occupational disease must meet each element of the four-part test mandated by § 8-40-201(14), which defines an occupational disease as:

[A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the

employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

As found, Claimant failed to prove he suffered a compensable injury or occupational disease caused by his work for Employer. Dr. Schwartz's analysis, opinions, and conclusions are credible and persuasive. As an initial matter, it is highly questionable whether Claimant has asbestosis. Dr. Rummel did not definitively diagnose asbestosis, but merely opined the diagnosis was "suggested" by and "consistent with" the PFT results, chest x-rays, and the 2018 CT scan. But Claimant's recent PFT was normal and, more important, the HRCT on January 17, 2020 showed "no calcified pleural plaque or areas of pleural thickening or thickening of the interlobular septa to suggest asbestosis." The HRCT showed upper and lower lobe emphysematous changes which might account for Claimant's reported dyspnea on exertion. The radiographic findings of centrilobular emphysema are probably related to Claimant's long history of heavy smoking, without contribution from his work for Employer.

Even if Claimant has asbestosis, there is no persuasive evidence he was exposed to asbestos at sufficient levels or durations to have caused it. Almost half of the insulation sampled during the 1981 NIOSH evaluation had no asbestos, and the NIOSH report did not identify asbestos exposure as a significant health risk for plant workers. Moreover, as Dr. Schwartz explained, the mere presence of asbestos insulation in a work site is not necessarily a health risk. The asbestos must be disturbed and become airborne before it can be inhaled into the lungs. The NIOSH testing showed no evidence of airborne asbestos anywhere in the plant. Although the ALJ does not doubt Claimant's testimony the air in the plant was routinely filled with "dust," there is no persuasive evidence the dust contained asbestos. Dr. Rummel's opinion regarding a causal connection to Claimant's work is not persuasive because it is based on the inaccurate assumption Claimant had "significant" asbestos exposure in the 1980s. The ALJ instead credits Dr. Schwartz's opinion Claimant did not have sufficient asbestos exposure at work to cause asbestosis.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: July 17, 2020

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-392-153-003**

ISSUES

1. Whether Claimant established by a preponderance of the evidence that medical treatment for right foot neuropathy is reasonably necessary to relieve the effects of his August 25, 1998 industrial injury or to prevent further deterioration of his work-related condition.
2. Whether Claimant established by a preponderance of the evidence that his February 20, 2018 surgery to his right foot was reasonably necessary to relieve the effects of his August 25, 1998 industrial injury or to prevent further deterioration of his work-related condition.
3. Whether Claimant established by a preponderance of the evidence that his October 23, 2018 surgery to his right foot was reasonably necessary to relieve the effects of his August 25, 1998 industrial injury or to prevent further deterioration of his work-related condition.
4. Whether Claimant established, by a preponderance of the evidence that his January 31, 2020 surgery to his right foot was reasonably necessary to relieve the effects of his August 25, 1998 industrial injury or to prevent further deterioration of his work-related condition.
5. Whether Claimant established by a preponderance of the evidence that he is entitled to reimbursement for out of pocket expenditures in the amount of \$134.31.

PRELIMINARY MATTER

This matter previously proceeded to hearing on August 1, 2017. Corrected Findings of Fact were issued on October 11, 2017. Those factual findings are incorporated herein by reference.

FINDINGS OF FACT

1. Claimant sustained an admitted industrial Injury to his low back on August 25, 1998 while lifting an object out of the trunk of his car. Claimant sustained multilevel lumbar disc herniations at L4-5 and L5-S1, and an annular tear at L3-4. Since his injury, Claimant has undergone multiple surgical procedures to his spine and lower back. Claimant underwent a partial laminectomy and discectomy on December 26, 2000. Claimant subsequently underwent a semi-hemilaminectomy, discectomy and foraminotomy on March 19, 2002. (Ex. 1). On June 20, 2005, Claimant underwent a surgical fusion at L4-S1. (Ex. B). On April 12, 2006, Claimant had a spinal cord stimulator

implanted at T12 through S1. On December 22, 2016, a facet removal procedure was performed, and on June 18, 2007, a facet ablation procedure was performed. On February 4, 2008, Claimant underwent a hardware removal. On November 13, 2008, Claimant underwent a fusion at L3-4, and a second spinal cord stimulator was placed at the T3 area. On September 17, 2012, Claimant underwent a posterior lumbar decompression L2-3 with allograft fusion and revision of spine instrumentation, posterior spinal fusion revision, L1-3 decompressive. In July 2013, Claimant underwent an additional surgery to repair a collapse of the fusion at the L4-5 level.

2. Claimant was placed at maximum medical improvement on July 25, 2016, with a 76% whole person rating. (Ex. 2).

3. On February 20, 2018, Claimant underwent surgery on his right foot for toenail fungus and hammertoe of the right foot (the "February 2018 Surgery"). The February 2018 Surgery, performed by Daniel Ocel, M.D., included a toenail ablation, matricectomy to the right 1st second and third toes, and flexor tenotomies of the right second and third toes. (Ex. G).

4. On October 23, 2018, Claimant underwent surgery on his right foot (the "October 2018 Surgery"). Dr. Ocel performed a modified second toe amputation of the second toe on Claimant's right foot for a diagnosis of osteomyelitis (i.e., bone infection) of right foot, unspecified type. (Ex. G).

5. On January 31, 2020, Claimant underwent surgery on his right foot for acute hematogenous osteomyelitis, right ankle and foot (the "January 2020 Surgery"). The January 2020 Surgery, a partial amputation of Claimant's right great toe, was performed by Blake Hines, D.P.M. (Ex. G).

6. Claimant testified he injured his right big toe in a fall in October of November 2019 when he experienced a series of falls. Claimant testified he was wearing a walking cast for his foot in December 2019 because he could not get his shoe on. Claimant testified that sometime around January 2020, the big toe on his right foot began to get really bad. Claimant testified the neuropathy in his foot caused him trouble walking.

FACTS RELATED TO CAUSE OF RIGHT FOOT NEUROPATHY

7. On February 23, 2001, Claimant saw Gordon Yee, M.D., for a postoperative visit. Claimant reported experiencing a recurrence of numbness in his left foot and having constant numbness in the sole of his left foot and involving his second, third and fourth toes. Claimant reported that his right lower extremity was asymptomatic. (Ex. G).

8. On April 12, 2005, Claimant saw Jeffrey Thramann, M.D., for evaluation of, among other things, bilateral foot numbness. Claimant reported a history of back pain and pain radiating in his left leg with numbness into bilateral lower extremities (Ex. I).

9. On July 18, 2005, Claimant saw Phil Cambe, M.D., at Boulder Community Hospital Pain Management for fractured ribs. Claimant reported a "recent fall at home with fracture of right wrist and right ribs." (Ex. D).

10. On July 21, 2006, Claimant saw Eric Busch, PA-C at Boulder Neurosurgical Associates for a neurosurgical visit. Mr. Busch noted Claimant had undergone placement of a spinal cord stimulator in April 2006 resulting in significant improvement of his back pain and the burning pain in his feet. Claimant still reported numbness in his feet. Sensory examination demonstrated mild decreased sensation in the soles of his feet bilaterally. (Ex. I).

11. On September 29, 2006, Claimant saw Mr. Busch, who noted the spinal cord stimulator placed in April 2006 was “doing a very good job of alleviating the burning pain in his feet. [Claimant] still has numbness in parts of his leg and feet.” (Ex. I).

12. On April 13, 2007, Claimant saw Alan Villavicencio, M.D., a neurosurgeon, at Boulder Neurosurgical Associates, for a follow-up visit. Claimant reported the April 2006 spinal cord stimulator significantly helped his burning foot pain. Claimant also numbness in his feet bilaterally. (Ex. I).

13. On June 1, 2007, Claimant saw Dr. Villavicencio for a follow-up visit. Claimant reported “fairly constant pain across his low back that radiates into his buttocks bilaterally associated with a dead sensation in the bottom of his feet and paresthesias in the entire bilateral legs and feet.” (Ex. I, p. 1024-25). Dr. Villavicencio’s found Claimant “has ongoing low back pain and intermittent lower extremity radicular symptoms that may be related to the adjacent degeneration at L3-4.” (Ex. I).

14. On June 10, 2007, Claimant underwent an independent medical examination (IME) with William Shaw, M.D., Respondents’ request. Among other things, Claimant complained of pain on the right from the buttocks, through the thigh, into the lateral calf and the sole of the foot to the mid foot region. “He also feels pain across the instep toward the second and third toes.” In addition, the Claimant described burning numbness in the left foot “without the deep stabbing pain in the foot which is present proximally.” (Ex. E).

15. On August 20, 2007, Claimant saw Dr. Leif Redal, his primary care provider. Dr. Redal diagnosed Claimant with hypertension, edema and diabetes mellitus and Claimant was started on hydrochlorothiazide. (Ex. G).

16. On May 16, 2008, Claimant saw Dr. Villavicencio. Dr. Villavicencio’s neurological examination demonstrated Claimant had decreased sensation in his right thigh and calf and plantar surfaces of his bilateral feet. (Ex. I).

17. On November 13, 2008, Claimant underwent a right-sided L3-4 transforaminal lumbar interbody fusion with decompression of the L3 and L4 nerve roots; a redo right L4-5 posterior hemilaminectomy and foraminotomy; and a trial placement of a thoracic spinal cord stimulator. (Ex. I).

18. On December 3, 2008, Claimant saw Dr. Villavicencio. Claimant reported new decreased sensation in the dorsal aspect of his feet bilaterally starting on postoperative day number one from his surgery on November 13, 2008. Dr. Villavicencio’s found Claimant had a new, right greater than left, lateral thigh decreased

sensation and dorsal foot decreased sensation since the first day after his November 13, 2008 surgery. (Ex. I).

19. On February 3, 2009, Claimant saw Dr. Redal. Claimant reported worsening bilateral lower extremity edema, pain and numbness since surgery in November. (Ex. F).

20. On March 6, 2009, Claimant saw Dr. Villavicencio and reported sharp pain extending along the right lateral thigh and foot numbness. (Ex. I).

21. On June 19, 2009, Claimant underwent an IME with Alexander Jacobs, M.D., at Respondents' request. Claimant reported "pain in the feet, (right greater than left). In the feet the symptoms are more paresthesias." Claimant reported abnormal sensation in the arms and legs. Dr. Jacobs' diagnostic impression for "PROBLEMS RELATED TO THE 08/1995 INJURY" included, among other things, "LUMBAR DISC DISEASE, multiple failed surgeries, pain (including radicular pain into the lower extremities.)" (Ex. D).

22. On November 13, 2009, Claimant saw Dr. Villavicencio and reported he continued to experience chronic pain issues and peripheral neuropathy in his lower extremities. Dr. Villavicencio found Claimant "has persistent numbness in his bilateral lower extremities and anterior lateral thighs." (Ex. I).

23. On April 13, 2010, Claimant saw Dr. Redal. Claimant reported "his feet seem to be hurting him more than they had." Dr. Redal's assessment included as an "alternate" diagnosis: "Other specified idiopathic peripheral neuropathy." Dr. Redal's "plan" included discussion of further workup available, additional information regarding neuropathy in legs. ... Will check comprehensive metabolic panel, vitamin D level today." (Ex. F).

24. On May 7, 2010, Claimant saw Dr. Redal and presented with pain in his shoulders due to a recent fall. (Ex. F).

25. On December 10, 2010, Claimant saw Dr. Villavicencio. Dr. Villavicencio found Claimant "remains neurologically stable with ongoing chronic back pain and bilateral anterior thigh paresthesias and foot paresthesias. These are unchanged from his visit with us one year ago." Dr. Villavicencio opined Claimant had some evidence of adjacent segment disease with retrolisthesis of L4 on L4, as seen on his imaging studies. (Ex. I).

26. On December 30, 2011, Claimant saw Dr. Villavicencio. Claimant reported worsening neuropathic pain in his feet, which he described as burning and stabbing. Dr. Villavicencio found Claimant "continues to struggle with chronic low back pain, as well as chronic and worsening, bilateral neuropathic pain in his feet." (Ex. I).

27. On September 11, 2012, Claimant saw George Frey, M.D., at Colorado Comprehensive Spine Institute. Claimant reported experiencing burning and numbness in his bilateral feet. Dr. Frey opined Claimant had severe stenosis at the L2-3 segment,

and much of his lower extremity symptoms were due to stenosis. He also opined that Claimant had arachnoiditis, “and this may explain the pains in the feet.” (Ex. K).

28. On July 17, 2014, Claimant underwent an IME with Kathie McCranie, M.D., at the request of Respondents. Claimant reported pain in the low and mid back, which is burning, stabbing, aching “with pins and needles and numbness, pain in both of his feet, which is burning, stabbing...” (Ex. C).

29. On February 3, 2015, Claimant saw Dr. Redal. Claimant reported a concern about right lower leg anterior shin swelling. Claimant reported he fell but did not sustain any scrapes or injuries. (Ex. F).

30. On April 8, 2015, Claimant saw Robert Moghim, M.D., for a Division Independent Medical Examination (DIME). Claimant reported he had pain in his bilateral legs and the pain radiated to the feet bilaterally. Dr. Moghim opined Claimant’s prognosis was “poor” and “Patient has chronic pain syndrome with clear findings that highlight central sensitization resulting in paresis, sensation loss, ambulatory assistance and hyperesthesia/allodynia of the back and LEs.” (Ex. B, p. 18).

31. On January 16, 2017, Claimant was evaluated at Craig Hospital. Claimant continued to have severe debilitating neuropathy from feet to the knees extending to his waist at times. Claimant described the pain as shooting and stabbing and limiting his ability to walk functionally. (Ex. J).

32. On September 26, 2017, Claimant was seen by Dr. Frey. Dr. Frey found Claimant had “progressive neuropathy of the feet.” Dr. Frey found Claimant had a predominantly right SIJ dysfunction based on his gate disturbance and peripheral neuropathy (sic) as well as the deconditioning.” (Ex. K).

33. Claimant’s medical records from multiple providers contain references to a history of hypertension. Multiple glucose tests indicate Claimant’s glucose level was in excess of 100 mg/dl. Dr. Burris credibly testified blood glucose levels in excess of 100 are considered elevated. Despite a history of elevated blood glucose and hypertension, the records do not contain evidence that Claimant’s primary care providers offered treatment or treated Claimant for diabetes mellitus or for metabolic syndrome.

FACTS RELATED TO FEBRUARY 2018 SURGERY

34. On December 4, 2017, Claimant saw Dr. Redal for an annual wellness visit. On inspection of Claimant’s skin and subcutaneous tissue, Dr. Redal did not find any rashes or lesions and no areas of discoloration. Dr. Redal ordered labs which showed Claimant’s glucose level to be 124 mg/dl. Dr. Redal’s examination of Claimant’s right lower extremity noted no joint or limp tenderness, no edema present and no ecchymosis. Dr. Redal’s assessment included a diagnosis of onychomycosis. (Ex. F).

35. On January 9, 2018, Claimant saw Dr. Redal. Claimant reported severe pain in his right foot and especially the third toe for the previous 7 to 8 days. Claimant reported pain in his left and right great toes and the second and third toes of his right foot.

Pain was generally under the nail. Dr. Redal found Claimant had onychomycosis with pronounced thickening of the nails and some arching of all toes. Claimant also reported his “typical level of neuropathic pain which is moderate and consistent and bilateral.” Dr. Redal examined Claimant’s right foot and found: “3rd digit with moderate erythema, mild warmth, moderate desquamation, no purulence, thickening of nail, moderate to marked tenderness to touch especially distal portion great nail and great toe tender to touch but no significant erythema no warmth and less tenderness moderate erythema, mild warmth and less tenderness.” Dr. Redal’s assessment was “Cellulitis and abscess of foot.” Dr. Redal referred the patient to Dr. Ocel. Dr. Redal stated cellulitis was the most likely cause of increased pain given redness and desquamation and mild warmth in his toe. (Ex. F).

36. On February 2, 2018, Claimant saw Dr. Ocel, of Cornerstone Orthopedics & Sports Medicine, for right foot pain. Dr. Ocel examined Claimant’s right foot and found “[t]hickened and fungally infected nails ... of the right first, second and third digits. Likewise tip keratosis noted along the second and third digits also that appeared to be superficially infected. He is not tender to palpation over these areas. He does have a palpable dorsalis pedis as well as posterior tibial pulse and brisk capillary refill of his digits is noted.” (Ex. G, p. 396). Dr. Ocel diagnosed Claimant with toenail fungus; hammertoe of right foot, and keratosis of plantar aspect of foot. Dr. Ocel recommended removal of the toenail, matricectomy and flexor tenotomies to help heal the tip keratoses. (Ex. G).

37. On February 12, 2018, Claimant saw Dr. Goldberg. Dr. Goldberg’s treatment note from this date notes, Claimant “is getting his toenails removed secondary to fungus and concerns about seeding his spinal hardware.” (Ex. H).

38. On February 20, 2018, Dr. Ocel performed the February 2018 Surgery on Claimant’s right foot, for a preoperative diagnosis of chronic ingrown and onychomycotic right first, second, and third toenails; flexible hammertoe deformities, right second and third digits. (Ex. G).

39. On March 8, 2018, Claimant saw MaryAnne Persons, PA, for a post-surgery visit. Ms. Persons noted Claimant was three weeks status post-surgery and doing fairly well. Ms. Persons examined Claimant’s surgical incisions and found no erythema or drainage “however his entire foot is in general quite dry and he does have some cracking over the incisions especially under his toes.” Ms. Persons encouraged Claimant to use lotion with cocoa butter vitamin E oil on his cracking foot. Claimant stated this has “always been an ongoing problem for him.” (The ALJ infers from the context Claimant was referencing dryness and cracking of his feet). (Ex. G).

40. On March 23, 2018, Claimant saw Ms. Persons for evaluation of his right foot. Ms. Persons’ found Claimant’s feet improved, and Claimant had been using the recommended cream. Ms. Persons also noted significant improvement in Claimant’s skin. (Ex. G).

41. On April 20, 2018, Claimant saw MaryAnne Persons, PA for evaluation of his right foot. Claimant reported walking better and wearing a regular shoe. Ms. Persons

found well-healed surgical incisions, minimal soft tissue swelling with weight-bearing. (Ex. G).

42. Claimant did not testify concerning the reason for the February 2018 Surgery.

FACTS RELATED TO OCTOBER 2018 SURGERY

43. On September 13, 2018, Claimant saw Dr. Ocel for a complaint of right foot pain. Dr. Ocel found erythema over the distal tip of the second toe, no active drainage and tenderness to palpation. Claimant's foot showed no evidence of osteomyelitic changes or signs consistent with abscess formation. Dr. Ocel's assessment was cellulitis of toe of right foot. Dr. Ocel prescribed a trial of Keflex and recommended Claimant perform Epsom salt soaks. Dr. Ocel's record from September 13, 2018 does not include any statement regarding the cause of Claimant's cellulitis. (Ex. G).

44. On September 20, 2018, Claimant saw Ms. Persons for a complaint of "right foot pain." Claimant reported his toe had improved in the previous 24 hours and he had completed a course of antibiotics 2 days earlier. Ms. Persons examined Claimant's foot and found "large callus across the dorsal surface extending onto the plantar surface of the toe. There is a small area that is open and there is no induration it is very shallow at this point. When compared [pictures] from a week ago I think it is improved." Ms. Persons' assessment was "Cellulitis of toe of right foot." Ms. Persons' record from September 20, 2018 does not include any statement regarding the cause of Claimant's cellulitis. (Ex. G).

45. On September 28, 2018, Claimant saw Dr. Ocel for "right foot pain." Dr. Ocel's assessment was "Cellulitis of toe of right foot." Dr. Ocel's review of systems was negative for gait disturbance. Dr. Ocel's record from September 28, 2018 does not include any statement regarding the cause of Claimant's cellulitis. (Ex. G).

46. On October 3, 2018, Claimant saw Dr. Goldberg. Claimant reported a pressure ulcer on distal right second toe with a heavy callus. Dr. Goldberg's record from October 3, 2018 does not include any statement regarding the cause of Claimant's pressure ulcer. (Ex. H).

47. On October 15, 2018, Claimant saw Dr. Ocel for "right foot pain." Dr. Ocel examined Claimant's right foot and noted "The right second toe continues to be mildly erythematous with a distal ulcer although no significant drainage is appreciated. He does demonstrate moderate soft tissue swelling within this region. He does have a strong dorsalis pedis as well as posterior tibial pulse." Dr. Ocel's assessment was "Cellulitis of toe of right foot." Dr. Ocel's impression was "Continued erythema and soft tissue swelling about the second toe. I am concerned about the possibility of osteomyelitis and for this reason we will obtain an MRI for evaluation. We have discussed potential modified second toe amputation should this be the case. He voices an understanding and agreement and we will follow up after his imaging study." Dr. Ocel's ordered an MRI of

Claimant's right foot. Dr. Ocel's record from October 15, 2018 does not include any statement regarding the cause of Claimant's cellulitis. (Ex. G).

48. October 23, 2018, Dr. Ocel performed the October 2018 Surgery for the diagnosis of osteomyelitis of right foot. (Ex. G).

49. On November 26, 2018, Claimant saw Dr. Goldberg. Dr. Goldberg noted Claimant "had right second toe bone removed due to bone infection." Dr. Goldberg did not opine as to the cause of Claimant's bone infection or relate the injury to his industrial injury. (Ex. H).

50. On January 18, 2019, Claimant saw Dr. Ocel. Dr. Ocel examined Claimant's right ankle and found mild soft tissue swelling of the right ankle consistent with Claimant's lymphedema. Dr. Ocel observed: "It looks like he split the skin of the distal right with no active drainage or sign of infection." Dr. Ocel diagnosed Claimant with bilateral foot pain. Dr. Ocel advised Claimant to continue to use a stiff sold shoe and soak his foot in Epsom salt. (Ex. G).

51. Claimant did not testify concerning the reason for the October 28, 2018 Surgery.

FACTS RELATED TO JANUARY 2020 SURGERY

52. On February 1, 2019, Claimant saw Dr. Ocel. Dr. Ocel found Claimant had a "minimal open ulcer at the distal aspect of the right great toe with no active drainage or sign of infection. Hypertrophic nail plate noted." Dr. Ocel's assessment was "skin ulcer of right great toe, limited to breakdown of skin." Dr. Ocel's record does not contain any statement regarding the cause of Claimant's skin ulcer. (Ex. G).

53. On February 18, 2019, Claimant saw Dr. Ocel. Claimant's right great toe ulcer at the distal aspect of the toe looked much improved with no active drainage or sign of infection. (Ex. G, 603). Dr. Ocel's assessment was skin ulcer of right great toe, limited to breakdown of skin." Dr. Ocel did not restrict Claimant from any activities. (Ex. G).

54. On March 18, 2019, Claimant saw Dr. Ocel. Claimant's calluses were improved after using Palmer's oil. Claimant did not have any signs of infection. (Ex. G).

55. On April 19, 2019, Claimant saw Dr. Ocel. Claimant's right great toe ulcer was improved. Claimant had developed a callous on the fourth toe of the right foot with a small ulceration with no signs of infection. Claimant had minimal soft tissue swelling and redness of the fourth toe. Dr. Ocel trimmed the callous on Claimant's right fourth toe and removed the toenail. Dr. Ocel noted Claimant was continuing to wear his post-operative shoe. (The ALJ infers the shoe is the post-operative shoe from the October 2018 Surgery). (Ex. G).

56. On April 29, 2019, Claimant saw Dr. Ocel. Claimant's ulceration of claimant's fourth toe was healing and there was no swelling or erythema of the toe or right foot. Dr. Ocel noted Claimant was continuing to wear his post-operative shoe. (Ex. G).

57. On June 3, 2019, Claimant saw Dr. Ocel for evaluation of his right fourth toe ulceration. Dr. Ocel noted Claimant would transition out of his post-operative shoe and into his regular shoe wear. (Ex. G).

58. On July 22, 2019, Claimant saw Dr. Ocel for evaluation of his right foot. Dr. Ocel noted Claimant had developed a callous over the fourth toe of his right foot. Dr. Ocel trimmed the callous. Claimant reported he had been doing well in his normal shoe wear. (Ex. G.).

59. On August 7, 2019, Claimant saw Efren Caballes, M.D., at Cornerstone Orthopedics, for evaluation of bilateral knee pain. Claimant reported he had some weakness and reported he had fallen four times over the past few weeks. (Ex. G).

60. On August 12, 2019, Claimant saw Dr. Ocel for right foot pain. Claimant reported he had been wearing his tennis shoes without any difficulties. (Ex. G).

61. On September 30, 2019, Claimant saw Dr. Ocel for follow-up regarding his right fourth toe ulcer. Claimant reported he continued wearing his tennis shoes without difficulties and continued to trim the fourth toe callous. (Ex. G).

62. On October 28, 2019, Claimant saw Dr. Ocel for evaluation of right foot pain. Claimant reported an object fell on his foot the previous week. He stated the foot was painful and swollen afterward, but the swelling and pain had improved at the time of the visit. Dr. Ocel examined Claimant's right foot and found tenderness over the lateral aspect of the mid-foot, and minimal soft tissue swelling. X-rays showed no evidence of acute skeletal pathology. Dr. Ocel did not restrict Claimant from any activities. (Ex. G).

63. On November 20, 2019, Claimant saw Dr. Blake Hines for right foot pain, including "initial evaluation of right hallux wound." Claimant reported gradual onset of pain in his right foot. The pain was described as aching, burning, dull, sharp, throbbing and radiating. Claimant reported the pain was aggravated by climbing and descending stairs and lifting. Claimant reported noting "a darkened blister to the distal tip of the right hallux last week, but his toe became more red and swollen [M]onday, with drainage noted. He notes that it looks better today than Monday." Claimant reported "no injury." Dr. Hines examined Claimant's right foot and noted Moderate edema to right hallux. Dr. Hines found Claimant's "protective sensation absent to level of the toes," and noted a large blister "to distal tip of right hallux. Blister is already open. Mild malodor noted. No purulence noted. Right hallux is erythematous to mid-proximal phalanx. Following derroofing of blister, full-thickness ulceration of distal toe tip noted measuring ~0.8 x 0[.]8 x 0.2 cm. Fat layer exposed. Fibrogranular base. Wound does not probe deeply. No other wounds noted." Dr. Hines' assessment was chronic ulcer of right great toe with fat layer exposed and cellulitis of great right toe. Dr. Hines also indicated "[Claimant] has fallen 2 times in the last year. The patient is not at risk for falls." (Ex. G).

64. Claimant saw Dr. Hines on November 27, 2019 for evaluation of his right hallux wound. Claimant noted improvement since last being seen. Dr. Hines found a "[f]ull-thickness ulceration of distal toe tip persists measuring ~ 0.7 x 0[.]6 x 0.2 cm. Fat

layer exposed. Fibrogranular base. Wound does not probe deeply. No other wounds noted." Dr. Hines performed an excisional debridement of ulceration and noted that the "wound was brought to a healthy bleeding base. "He will change dressings as needed. Dr. Hines advised Claimant to avoid pressure on the toe and to "[m]anage blood sugars closely." Dr. Hines' assessment included: Chronic ulcer of right great toe with fat layer exposed; Type-2 diabetes mellitus with diabetic polyneuropathy with long-term current use of insulin; and cellulitis of right great toe. (Ex. G).

65. At his December 5, 2019 visit with Dr. Hines, Claimant reported "he previously had a foot wound that took a very long time to heal. He also reported that his neuropathy was from previous back surgeries and that he had been told he was borderline diabetic." Dr. Hines found "[f]ull-thickness ulceration of the distal toe tip persists measuring ~0.6 x 0.6 x 0.2cm. Fat layer exposed. Fibrogranular base. Wound does not probe deeply. No other wounds noted." Dr. Hines' relevant assessment was cellulitis of great toe, right; chronic ulcer of right great toe with fat layer exposed; peripheral polyneuropathy. Dr. Hines debrided the wound and provided Claimant with a "CAM walker." Dr. Hines noted "If his [wound] does not continue improving, we will need to get him into a total contact cast." Dr. Hines also indicated "[Claimant] has fallen 2 times in the last year. The patient is not at risk for falls." (Ex. G).

66. On December 9, 2019, Claimant saw Dr. Ocel. Claimant reported he had fallen five times in the past year and the falls resulted in an injury to his "R great toe." Claimant did not specifically report any falls occurring since his December 5, 2019 appointment with Dr. Hines. Claimant reported to Dr. Ocel he had been using a CAM boot and has been trying to stay off his foot. Dr. Ocel noted a 1 by 1 cm great toe ulcer, which he described as smaller in comparison to the picture of the ulcer when Dr. Hines first saw the toe. Photos of Claimant's toe ulcer were not included in the record. (Ex. G).

67. On December 12, 2019, Claimant saw Dr. Hines for evaluation of his right hallux (i.e., great toe) wound. Claimant reported a marked increase in pain in the toe over the previous 2-3 days. He also reported drainage/malodor with dressing changes. Claimant was concerned he may have an infection. Dr. Hines found "[f]ull-thickness ulceration of distal toe tip has increased in size, now measuring ~1.2 x 1.0 x 0.4cm. Cellulitis of right hallux extending from the tip to mid-proximal phalanx. Fat layer exposed. Fibrogranular base. Wound now probes to periosteum, but not bone. Small amount of purulent material noted in wound base. No other wounds noted." Dr. Hines opined Claimant had acquired an infection. Dr. Hines advised Claimant was at high risk for getting osteomyelitis and needing a toe amputation. Claimant reported he had fallen 5 times in the last year and the falls resulted in an injury to his great right toe. Claimant did not report any specific falls occurring since his December 5, 2019 visit with Dr. Hines. (Ex. G).

68. On December 16, 2019, Claimant saw Dr. Ocel for evaluation of his right foot. Claimant and his wife reported the toe looked better than Thursday. (The ALJ infers this is a reference to the December 12, 2019 visit with Dr. Hines). Dr. Ocel found Claimant's toe ulcer appeared improved. Dr. Ocel's assessment included cellulitis of great toe, right and chronic ulcer of right great toe with fat layer exposed. (Ex. G).

69. On December 23, 2019, Claimant saw Dr. Hines for evaluation of his right foot. Claimant reported he was very happy with his progress and his infection was improving. Claimant reported he had fallen five times in the last year, and the fall resulted in an injury to his great right toe. Claimant did not report any specific falls occurring since his December 5, 2019 visit with Dr. Hines. Dr. Hines found the ulceration on the distal toe tip had decreased in size and Claimant's cellulitis was resolving. Dr. Hines' assessment was cellulitis of great toe, right, chronic ulcer of right great toe with fat layer exposed and type-2 diabetes mellitus with diabetic polyneuropathy, with long-term current use of insulin. (Ex. G).

70. On December 30, 2019, Claimant saw Dr. Hines. Dr. Hines found Claimant's toe wound was improved and his infection resolving. Dr. Hines' assessment was cellulitis of great toe, right, chronic ulcer of right great toe with fat layer exposed and type-2 diabetes mellitus with diabetic polyneuropathy, with long-term current use of insulin. (Ex. G).

71. On January 9, 2020, Claimant saw Dr. Hines for evaluation of his right foot. Claimant reported he had fallen six times in the last year, resulting in his then-current right great toe injury. Dr. Hines' relevant assessment was cellulitis of great toe, right, chronic ulcer of right great toe with fat layer exposed. Claimant did not report any falls occurring since his December 12, 2019 visit with Dr. Hines. (Ex. G).

72. On December 11, 2019, Claimant saw Sheldon Goldberg, M.D. Dr. Goldberg stated "[Claimant] has a new ulcer on his right 1st toe. He is seeing a podiatrist. He is in a walking boot. His wound is directly related to his LE neuropathy which is related to his work injury." (Ex. 4).

73. On January 15, 2020, Claimant saw Dr. Goldberg. Claimant reported he "had a fall and injured his right foot and got a wound with an abscess and ulcer. He is seeing a wound doctor at a wound clinic weekly." (Ex. G).

74. On January 16, 2020, Claimant saw Dr. Hines. Claimant reported minimal improvement of his toe wound but noted improvement in the infection. Dr. Hines' relevant assessment was cellulitis of great toe, right, chronic ulcer of right great toe with fat layer exposed. (Ex. G).

75. On January 23, 2020, Claimant saw Dr. Ocel for evaluation of his right foot. Claimant reported he had fallen nine times in the last year. Claimant did not report any specific falls occurring since his January 9, 2020 visit with Dr. Hines. Dr. Ocel found the ulceration on the distal right toe tip had increased slightly in size. X-rays showed osteolytic changes to the right first distal phalanx, and Dr. Ocel recommended amputation at the first DIP joint. Dr. Ocel's relevant assessment included cellulitis of great toe, right, chronic ulcer of right great toe with fat layer exposed, and acute hematogenous osteomyelitis, right ankle and foot. Dr. Ocel noted Claimant had surgery scheduled with Dr. Hines. (Ex. G).

76. On January 31, 2020, performed the January 2020 Surgery for a diagnosis of acute hematogenous osteomyelitis, right ankle and foot. (Ex. G).

77. On February 25, 2020, Dr. Ocel issued a letter to Claimant's counsel indicating it is was in response to a request for his opinions. The letter to which Dr. Ocel was responding is not in the Court's record. Dr. Ocel's letter states:

As you are aware, I am the treating physician for [Claimant] with regard to his foot and ankle issues in association with his occupational injury dated 08/25/98. I am providing this report in response to your January 29, 2020 request for my opinions regarding the cause and nature of his foot and ankle difficulties. Please note that the following opinions are given to a reasonable degree of medical certainty.

Based upon my review of his medical history, as well as follow up examinations and treatment, I believe that [Claimant] sustained a permanent new injury during the 08/25/98 incident which has resulted in [Claimant's] foot and ankle difficulties."

Based on my experience as a board certified orthopedic surgeon, fellowship trained in foot and ankle surgery as well as my actual physical examination and treatment of [Claimant], I can state with a reasonable degree of medical certainty that his profound neuropathy and the subsequent long term effects of the neuropathy on the physiology of the foot and ankle, most recently the requirement of a great toe amputation was the direct cause of the injury noted above.

Given the nature of the injuries sustained by [Claimant] and the resultant neuropathy, regardless of appropriate care of the neuropathy, [Claimant] may indeed require future surgical intervention stemming from debridement to future amputations.

(Ex. 3).

78. Claimant saw Dr. Ocel approximately 28 times between February 2, 2018 and January 23, 2020. Claimant also saw Ms. Persons (a Physician assistant in Dr. Ocel's office) approximately 8 times in 2018. Claimant saw Dr. Hines approximately nine times from November 20, 2019 through February 6, 2020. The records from these providers at Cornerstone do not reference Claimant's industrial injury.

79. Claimant incurred \$134.31 in expenses for medications prescribed for issues with his feet between November 20, 2019 and January 23, 2020. (Ex. 6).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find a fact is more probably true than not. Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. University Park Care Center v. Industrial Claim Appeals Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. Prudential Insurance Co. v. Cline, 57 P.2d 1205 (Colo. 1936); Bodensieck v. Industrial Claim Appeals Office, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. Cordova v. Industrial Claim Appeals Office, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. Colorado Springs Motors, Ltd. v. Industrial Commission, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); see City of Boulder v. Streeb, 706 P.2d 786, 791 (Colo. 1985). The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. Grover v. Industrial Commission, 759 P.2d 705 (Colo. 1988). The claimant must prove entitlement to Grover medical benefits by a preponderance of the evidence. Lerner v. Wal-Mart Stores, Inc., 865 P.2d 915 (Colo. App. 1993).

The claimant must prove a causal nexus between the claimed disability and the work-related injury. Singleton v. Kenya Corp., 961 P.2d 571 (Colo. App. 1998). Proof of causation is a threshold requirement which an injured employee must establish by a preponderance of the evidence before any compensation is awarded. The question of causation is generally one of fact for determination by the ALJ." Faulkner v. Industrial Claim Appeals, 12 P.3d 844, (Colo. App. 2000)

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. See Owens v. Industrial Claim Appeals Office, 49 P.3d 1187, 1188 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. Id., citing Standard Metals Corp. v. Ball, 474 P.2d 622 (Colo. 1970). However, when a later injury occurs as the result of another independent intervening cause, no compensability exists. Owens, supra, citing Post Printing & Publishing Co., supra. Whether a particular condition is the result of an independent intervening cause is a question of fact for resolution by the ALJ. Faulkner, supra; Owens, 49 P.3d at 1188-89.

Claimant has established by a preponderance of the evidence that his right foot neuropathy is the result of his industrial injury of August 25, 1998. The Claimant's medical records establish the Claimant has experienced neuropathic symptoms in his feet since at least 2005, and that these symptoms are related to neuropathic symptoms in his lower back, and legs. Dr. Villavicencio's records demonstrate Claimant's neuropathic foot pain was relieved and controlled through the implantation of a spinal stimulator in April 2006, although Claimant continued to experience foot numbness following surgery. Dr. Villavicencio also noted Claimant's lower extremity radicular symptoms may be related degeneration at L3-4. Following the Claimant's November 13, 2008 surgery, his right foot symptoms worsened.

Dr. Burris' testimony concerning the cause of Claimant's right foot neuropathy is not persuasive. Dr. Burris agreed Claimant has lower extremity/foot neuropathy. Dr. Burris attributed the right foot neuropathy to Claimant's comorbidities and metabolic syndrome. Dr. Burris' opinion is not supported by the Claimant's medical records. For example, although the Claimant has a constellation of symptoms consistent with metabolic syndrome, including hypertension, elevated blood glucose, and obesity, none of Claimant's treating health care providers, including his primary care provider, Dr. Redal, diagnosed Claimant with or treated Claimant for, metabolic syndrome. In June 2009, Respondent's IME physician, Dr. Jacobs attributed Claimant's radicular pain in the lower extremities to his August 25, 1998 industrial injury. In September 2012, Dr. Frey, M.D. attributed the Claimant's lower extremity and foot symptoms to severe stenosis at the L2-3 segment and arachnoiditis. These opinions, coupled with Claimant's right foot neuropathy worsening immediately after his November 2008 surgery, establish Claimant's right foot neuropathy is, more likely than not, a sequelae of Claimant's November 13, 2008 surgery, which was causally related to his industrial injury. As such, the right foot neuropathy is also causally related to the industrial injury.

Dr. Burris' testimony that the inconsistencies in the Claimant's medical records regarding neurologic findings supports the position that the Claimant's neuropathy is related to comorbidities rather than his back injury is not persuasive. The Court concludes it is more likely than not Claimant's right foot neuropathy is causally related to his industrial injury of August 25, 1998.

The ALJ finds the Claimant met his burden of proof of establishing that his right foot neuropathy is related to or caused by his August 25, 1998 industrial injury and, therefore, treatment for right foot neuropathy is reasonably necessary to relieve the effects of his August 25, 1998 industrial injury or to prevent further deterioration of his work-related condition.

SPECIFIC MEDICAL BENEFITS AT ISSUE

The question of whether medical treatment is reasonable and necessary is one of fact for determination by the ALJ. Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office, 989 P.2d 251 (Colo. App. 1999). The ALJ's determinations in this regard must be upheld if supported by substantial evidence. Kroupa v. Industrial Claim Appeals Office, 53 P.3d 1192, 1197 (Colo. App. 2002). Section 8-43-301(8), C.R.S. The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. Cordova v. Industrial Claim Appeals Office, 55 P.3d 186 (Colo. App. 2002). "In the Matter of the Claim of Bud Forbes, Claimant, No. W.C. No. 4-797-103, 2011 WL 5616888, at *3 (Colo. Ind. Cl. App. Off. Nov. 7, 2011).

No compensability exists, however, when a later accident, injury, or disease occurs as the direct result of an independent intervening cause. Owens, supra; Post Printing & Publishing Co., supra. If the need for treatment results from an intervening injury or disease unrelated to the industrial injury, then treatment of the subsequent condition is not compensable. This also is a question of fact for resolution by the ALJ. Owens, supra. In the Matter of the Claim of Susan Merrill, Claimant, No. W.C. No. 4-635-705-02, 2013 WL 2143871, at *4 (Colo. Ind. Cl. App. Off. May 10, 2013).

Claimant offered the written statements of Dr. Ocel and Dr. Goldberg as evidence that Claimant's foot surgeries were causally related to his industrial injury.

Dr. Ocel's report of February 25, 2020 is neither credible nor persuasive. Although Dr. Ocel, and others in his office, saw Claimant approximately 45 times for issues related to his right foot between February 2, 2018 and January 23, 2020. Dr. Ocel's records do not reference the Claimant's industrial injury. While Dr. Ocel's report states he reviewed Claimant's "medical history," it does not indicate he reviewed any of Claimant's medical records, or whether he was aware of the nature and extent of Claimant's industrial injury. Dr. Ocel's report fails to provide any coherent medical basis for the conclusory statement that Claimant's industrial injury is the cause of Claimant's "foot and ankle difficulties."

The February 2018 Surgery

Claimant has not established by a preponderance of the evidence that the February 2018 Surgery was related to his industrial injury. Claimant's February 2018

surgery was for toenail fungus and hammertoe. Claimant did not testify concerning the need or cause for the February 2018 Surgery. Dr Ocel's February 25, 2020 report does not reference the February 2018 Surgery he performed, nor does it provide any medical (or logical) basis for concluding Claimant developed toenail fungus or hammertoe as the result of his industrial injury. Dr. Ocel's contemporaneous medical records do not attribute the Claimant's toenail fungus and hammertoe to his right foot neuropathy or his industrial injury. Dr. Goldberg's December 11, 2019 treatment note does not address Claimant's February 2018 Surgery.

The ALJ finds the Claimant did not meet his burden of proof of establishing his right foot toenail fungus, hammertoe or keratosis or the February 2018 surgery was related to or caused by his August 25, 1998 industrial injury by a preponderance of the evidence. Consequently, this treatment was not reasonably necessary to relieve the effects of his August 25, 1998 industrial injury or to prevent further deterioration of his work-related condition.

The October 2018 Surgery

Claimant has not established by a preponderance of the evidence that the October 2018 Surgery was related to his industrial injury. The medical indication for Claimant's October 2018 Surgery was osteomyelitis (i.e., a bone infection). Although Dr. Ocel performed the October 2018 surgery, his contemporaneous medical records do not address the cause of the injury, and do not attribute the injury to either the Claimant's foot neuropathy or his industrial injury.

Dr. Ocel's February 25, 2020 report does not reference the October 2018 Surgery he performed, nor does it provide any medical (or logical) basis for concluding Claimant developed osteomyelitis in his second toe as the result of Claimant's industrial injury. Dr. Ocel does not explain how the patient's cellulitis or osteomyelitis were related to his neuropathy.

Dr. Goldberg's December 11, 2019 treatment note does not address Claimant's October 2018 Surgery. Claimant reported to Dr. Goldberg that he had a pressure ulcer on the distal right second toe on October 3, 2018. On November 26, 2018, Claimant reported to Dr. Goldberg he "had right 2nd toe bone removed due to bone infection." Dr. Goldberg did not opine as to the cause of these conditions, nor did Dr. Goldberg treat these conditions.

The ALJ finds the Claimant did not meet his burden of proof of establishing either his right second toe wound, or the October 2018 surgery was related to or caused by his August 25, 1998 industrial injury by a preponderance of the evidence. Consequently, this treatment was not reasonably necessary to relieve the effects of his August 25, 1998 industrial injury or to prevent further deterioration of his work-related condition.

The January 2020 Surgery

Claimant has not established by a preponderance of the evidence that the January 2020 Surgery was related to his industrial injury. Claimant testified he fell several times

in October and November 2019 and injured his toe in a fall he attributed to his foot neuropathy. Claimant's testimony regarding this issue is not credible or supported by the contemporaneous medical records.

When Claimant saw Dr. Hines on November 20, 2019, he did not report his injury was the result of a fall or explain the mechanism of an injury. Instead, Claimant reported the onset of his right foot pain was "gradual" and there was "no injury." Claimant reported he noted a "darkened blister on the distal tip of his right hallux last week, but his toe became more red and swollen [M]onday, with drainage noted." Claimant did not report to Dr. Hines the injury to his toe was the result of a fall and reported he had fallen twice the previous year. Claimant had a history of issues with his toes, including an ulcer on his great right toe in February 2019, and an ulcer on his right fourth toe also in 2019. Claimant also reported longstanding issues with dryness and cracking in his feet, and that he had a history of wounds taking an extended time to heal. Dr. Hines initial assessment was of a "chronic" ulcer of the right toe, further indicating that the ulcer was not of traumatic origin. Both Dr. Hines and Dr. Ocel diagnosed Claimant with a "chronic" ulcer of the right great toe on multiple occasions after November 20, 2019.

Claimant's medical records demonstrate he contemporaneously reported falls to his treating care providers when those falls resulted in injury or were suspected of causing an injury. For example, on July 18, 2005, Claimant reported to Dr. Cambe a recent fall resulting in wrist and rib fractures. On May 7, 2010, Claimant saw Dr. Redal and reported he had shoulder pain due to a fall. On February 3, 2015, Claimant saw Dr. Redal and reported he was concerned about right lower leg swelling. He reported to Dr. Redal he had fallen but did not sustain any scrapes or injuries. On August 7, 2019, Claimant saw Dr. Caballes and reported he had fallen "4 times over the past few weeks." Claimant did not report to Dr. Hines he had fallen. Claimant did not attribute his right toe injury to a fall until seeing Dr. Ocel on December 9, 2019, approximately three weeks after seeing Dr. Hines. Claimant's reports of falls gradually increased from an initial report of two falls in the past year on November 2, 2019, to reports of five falls, six falls and then nine falls within the prior year on January 23, 2020. Claimant's medical records do not report any contemporaneous falls during this time period, only an increasing number by history.

Although Claimant incurred \$134.31 in expenses for prescriptions related to the treatment of his right great toe issues, because the expenses arose out of a surgery unrelated to his industrial injury, Claimant is not entitled to medical benefits for these expenses.

The ALJ finds the Claimant did not meet his burden of proof of establishing his right great toe wound, the January 2020 surgery, or the \$134.41 in prescription expenses were related to or caused by his August 25, 1998 industrial injury. Consequently, this treatment was not reasonably necessary to relieve the effects of his August 25, 1998 industrial injury or to prevent further deterioration of his work-related condition.

ORDER

1. Claimant has established, by a preponderance of the evidence, that treatment for right foot neuropathy is reasonably necessary to relieve the effects of his August 25, 1998 industrial injury.
2. Claimant is entitled to general award of reasonable and necessary medical benefits to treat his right foot neuropathy.
3. Claimant's has failed to establish, by a preponderance of the evidence, that his February 2018 surgery was reasonable, necessary, and causally related to his August 25, 1998 industrial injury. His request for payment of expenses related to the February 2018 Surgery is denied.
4. Claimant's has failed to establish, by a preponderance of the evidence, that his October 2018 surgery was reasonable, necessary, and causally related to his August 25, 1998 industrial injury. His request for payment of expenses related to his October 2018 Surgery is denied.
5. Claimant's has failed to establish, by a preponderance of the evidence, that his January 2020 surgery was reasonable, necessary, and causally related to his August 25, 1998 industrial injury. His request for payment of expenses related to his January 2020 Surgery is denied.
6. Claimant's request for reimbursement of prescription expenses in the amount of \$134.31 is denied.
7. Any and all issues not determined here are reserved for future decision.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: July 17, 2020.

/s/ Steven R. Kabler

Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of John Hughes, M.D. that Claimant suffered a 15% whole person impairment rating as a result of his March 12, 2018 lower back injury.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Partial Disability (TPD) benefits for the period March 13, 2018 through May 9, 2018.

3. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period September 17, 2018 through January 18, 2019.

4. Whether Respondents have proven by a preponderance of the evidence that Claimant was responsible for his termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving indemnity benefits.

5. Whether Claimant has established by a preponderance of the evidence that he is entitled to recover penalties for Respondents' failure to admit or deny liability as required by §8-43-203(2)(a), C.R.S.

6. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to recover penalties for Respondents' failure to comply with an October 26, 2018 Order issued by the Director of the Division of Workers' Compensation.

STIPULATIONS

The parties agreed to the following:

1. Claimant earned an Average Weekly Wage (AWW) of \$967.71.
2. If Claimant is entitled to receive TPD benefits from March 13, 2018 through May 9, 2018, they have a total value of \$1,660.55.
3. If Claimant is entitled to receive TTD benefits from September 17, 2018 through January 18, 2019, with an offset for unemployment benefits, they have a total value of \$9,799.72 prior to interest.

FINDINGS OF FACT

1. Claimant worked for Employer as a Framer/Carpenter. His job duties involved building forms that were used to frame concrete.

2. On March 12, 2018 Claimant injured his lower back while lifting forms. After reporting his injury to Employer, Claimant received medical treatment through Workwell.

3. On March 13, 2018 Claimant underwent an examination with Authorized Treating Physician (ATP) Bruce Cazden, M.D. Claimant reported feeling a pulling sensation in his "low right back" and "right groin area" while moving a large wooden form. On physical examination, Claimant was tender to palpation in his right lateral oblique muscles with pain extending around to the right lower abdomen. Dr. Cazden assigned work restrictions of no lifting over 10 pounds, no bending or twisting at the waist and no climbing ladders. He diagnosed Claimant with the following: lower back pain; strain of muscle, fascia and tendon of the lower back and abdomen and; acute pain due to trauma.

4. Employer accommodated Claimant's restrictions by providing light duty work in the yard. However, Claimant failed to report to work from March 19, 2018 through March 22, 2018 and did not respond to phone calls from Employer's Accountant/Controller Amanda F[Redacted]. Claimant acknowledged that he was required to notify a supervisor if he was going to be late or miss a shift. He specifically testified that a supervisor told him "Don't miss work anymore because they will fire you." Claimant's supervisor Dan S[Redacted] completed a Non-Compliance/Disciplinary Action form that specified Employer had not heard from Claimant during the week. The form noted that Claimant called Employer on March 22, 2020 "to say he had been in jail and needed to go pickup his vehicle." Claimant reported for work the following day at 7:00 a.m.

5. On April 3, 2018 Mr. S[Redacted] completed another Non-Compliance/Disciplinary Action form. The form specified that Claimant was supposed to show up for work on April 3, 2018 following a vacation from March 28, 2018 until April 2, 2018. Claimant called Employer at 9:00 a.m. on April 3, 2018 to let Ms. F[Redacted] know he would be at work after running an errand.

6. On April 5, 2018 Claimant followed up with Dr. Cazden. He reported working modified duty and noted "he feels that he could do a little bit more at work so he would like his restrictions reduced." Claimant noted primarily right hip pain that he rated as 3/10. He commented that he felt better and his pain diagram reflected no involvement of his lower extremities beyond his right hip.

7. Claimant returned to Dr. Cazden on April 20, 2018 and reported he had been working full duty. His primary complaint was pain located in the *left* thoracic paraspinous region that he rated as 3/10. Dr. Cazden modified Claimant's work restrictions to prohibit lifting over 40 pounds.

8. Claimant did not appear for his follow-up appointment with Dr. Cazden or show up or call in to work on Monday, May 7, 2018. Claimant testified that pain caused

his absences. On May 9, 2018 Claimant was terminated from employment. Ms. F[Redacted] explained that Claimant was terminated for violating Employer's policy by failing to call in or show up for work on multiple occasions.

9. On May 11, 2018 Claimant applied for a position with Jalisco International, Inc. On May 14, 2018 Jalisco hired Claimant as a Carpenter.

10. On August 20, 2018 Claimant filed a Worker's Claim for Compensation. He listed the date of injury as March 13, 2018. Jeffrey Y[Redacted] of the [Redacted] Law Firm entered his appearance on behalf of Claimant on August 22, 2018. Insurer's Claims Adjuster Lauren M[Redacted] scheduled a demand appointment for Claimant at Workwell for September 11, 2018.

11. On August 30, 2018 the Division of Workers' Compensation sent a letter to Respondents. The letter requested Respondents' position on Claimant's claim within 20 days.

12. Claimant attended the September 11, 2018 demand appointment at Workwell. He was evaluated by Terrance Webb, MD. Claimant reported 4/10 pain in his right lower abdomen, right hip and groin that was aggravated by "heavy lifting." Notably, on his Injury Questionnaire Claimant specified that he was working full duty and feeling "about the same." He also noted that there had not been any changes in his health since his last visit to a physician. Dr. Webb assigned the following work restrictions: no lifting, pushing or pulling over 20 pounds; no overhead work and, sitting/standing as tolerated. Claimant provided his work restrictions to his supervisor at Jalisco.

13. On September 12, 2018 Ms. M[Redacted] left a message for Mr. Y[Redacted] seeking to clarify the date of injury and date of birth listed on the Worker's Claim for Compensation in order to submit a First Report of Injury and position statement electronically without generating duplicate claims. Ms. M[Redacted] sent an email to Mr. Y[Redacted] the afternoon of September 12, 2018 asking him to correct the date of birth so that she could file a position statement. She was also taking steps to verify the date of injury.

14. In a letter dated September 17, 2018 the Executive Vice President of Jalisco wrote that Claimant was disqualified from his Carpenter position based on his work restrictions. The letter specified that the job requirements of Claimant's position included the ability to lift and carry objects in excess of 75 pounds, walk and stand for long periods of time, and lift, push, pull or carry objects while using abdominal and lower back muscles. The letter concluded that, due to Claimant's work restrictions, he was unable to safely perform the necessary duties of the job and was therefore terminated from employment.

15. On September 21, 2018 Mr. Y[Redacted] filed an Amended Worker's Claim for Compensation correcting Claimant's date of birth. The date of injury remained listed as March 13, 2018.

16. On October 10, 2018 Ms. M[Redacted] sent an email to Mr. Y[Redacted] requesting corrections to the Worker's Claim for Compensation so that she could file an electronic position statement. She confirmed that the correct date of injury was March 12, 2018. The email provided "corrections need to be made to your report so I can file" the First Report of Injury.

17. On October 24, 2018 Claimant was evaluated by Kevin Keefe, DO, at Workwell. He reported 3/10 pain primarily in his right hip, lower back and right flank. There was no tenderness in his right groin and his lower extremity examination was normal. Dr. Keefe referred Claimant for an MRI and physiatry evaluation. Claimant's work restrictions remained the same.

18. On October 26, 2018 the Director of the Division of Workers' Compensation (Director) issued an Order requesting Respondents to state a position on liability in the present claim WC 5-085-650. On October 30, 2018 Ms. M[Redacted] sent an email to Mr. Y[Redacted] with a copy to a Division representative. The email noted that "a few things need to be corrected on your end of this claim so I can state a position and avoid a new WC# being assigned." She also remarked that the correct date of injury was March 12, 2018 and the social security number listed on the Worker's Claim "might not be accurate." Ms. M[Redacted] closed the email by stating "[p]lease advise as soon as possible."

19. On November 6, 2018 Ms. M[Redacted] sent another email to Mr. Y[Redacted] with a medical report from Workwell confirming that the correct date of injury for the claim was March 12, 2018. Referencing the Director's Order, Ms. M[Redacted] closed the email by stating "[p]lease let me know if you are in agreement with the 3/12/2018 date of injury so we can resolve this and I can file our position in this case as soon as possible."

20. On November 6, 2018 Claimant underwent an MRI ordered by Dr. Keefe. On November 8, 2018 Claimant was evaluated by Eric Shoemaker, D.O. at Ascent Medical Consultants. After reviewing Claimant's MRI, Dr. Shoemaker determined that Claimant had a right lateralizing disc protrusion at L3-L4 with right L3 radiculitis. Dr. Shoemaker recommended right L3-L4 transforaminal epidural steroid injections for diagnostic and potentially therapeutic benefit to treat persistent, "significant functionally limiting pain" based on "a nerve impingement with radicular pattern pain."

21. Ms. M[Redacted] filed a First Report of Injury electronically by using the incorrect date of injury of March 13, 2018 so that she could then electronically file a Notice of Contest to satisfy the Director's Order. The First Report of Injury generated a duplicate claim number of WC 5-092-444 due to a discrepancy in Claimant's social security number.

22. On November 13, 2018 Ms. M[Redacted] received an email from Debbie T[Redacted] from the Division regarding changing the date of injury from March 13, 2018 to March 12, 2018. Ms. T[Redacted] stated that to change the date of injury "to 3/12/2018 all parties have to agree because of the Worker's Claim indicating

3/13/2018.” Ms. T[Redacted] also noted that the Division had assigned a temporary social security number because none was listed on the Worker’s Claim for Compensation. Ms. M[Redacted] immediately called Mr. Y[Redacted]’s office and left a message for his paralegal requesting a return call.

23. On December 3, 2018 Claimant returned to Workwell. He was evaluated by William Ford, ANP-C. The notes reflect that the epidural injection recommended by Dr. Shoemaker had been authorized, but Claimant did not wish to proceed with the procedure. Claimant denied lower extremity symptoms.

24. On December 4, 2018 the Division received Respondents’ Notice of Contest. On December 5, 2018 counsel for Respondents filed an Unopposed Motion to Merge Duplicate Claims for WC 5-085-650 and WC 5-092-444. The parties agreed to consolidate the duplicate claims under WC 5-085-650, change the date of injury to March 12, 2018 and modify the social security number listed for Claimant. On December 10, 2018 the Division issued an Order granting the unopposed motion.

25. Claimant returned to Workwell on December 17, 2018. He reported worsening right sided low back pain that he rated 6/10. ANP-C Ford noted that Claimant was “not reporting any radicular symptoms.” Claimant refused to undergo an epidural injection. He was referred to an orthopedic surgeon Matthew Gerlach, M.D. for an evaluation.

26. On January 14, 2019 Claimant visited Dr. Gerlach for a surgical evaluation. Dr. Gerlach reviewed the lumbar MRI and noted that the L3-4 and L4-5 small right foraminal disc protrusions were not causing significant nerve compression. He did not recommend surgery and noted that Claimant’s “small foraminal disc protrusions at L3-4 and L4-5 are of uncertain significance and very unlikely the primary source of the patient’s persistent back pain.”

27. On January 18, 2019 Claimant returned to Workwell and was evaluated by ATP Dr. Cazden. Dr. Cazden determined that Claimant had reached Maximum Medical Improvement (MMI). He assigned a 7% whole person permanent impairment rating under Table 53, IIC of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides)* for an unoperated herniated disc with persistent pain. He assigned an additional 6% impairment for range of motion deficits. Combining the ratings yielded a total 12% whole person permanent impairment rating.

28. Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Cazden’s MMI and impairment determinations. Claimant objected to the FAL and sought a Division Independent Medical Examination (DIME).

29. On July 15, 2019 Claimant underwent a DIME with John Hughes, M.D. Dr. Hughes diagnosed Claimant with a lumbar spine sprain/strain with persistent right L3 radiculitis as well as lower back and right groin pain. He agreed with Dr. Cazden that Claimant reached MMI on January 18, 2019. Dr. Hughes assigned a 7% whole person permanent impairment rating under Table 53 II(c) for a specific disorder of the lumbar

spine. He added an additional 8% for range of motion deficits. Dr. Hughes remarked that Claimant's MRI finding of a disk protrusion at L3-4 "is probably an injury related finding of at least 'moderate' severity."

30. Dr. Hughes also assigned a 1% impairment rating for "right L3 radiculopathy" based on Tables 10 and 49 of the *AMA Guides*. Dr. Hughes specifically noted that Claimant exhibited symptoms consistent with an L3 radiculopathy. He commented that MRI findings were consistent with the radicular pathology and Claimant was offered an epidural steroid injection. Dr. Hughes remarked that "Dr. Cazden did not assign impairment for right L3 radiculopathy but I do feel there is an indication to make such an impairment assignment." Table 10 contains the grading scheme for pain and loss of sensation resulting from peripheral nervous system disorders. Dr. Hughes determined that Claimant's sensory loss qualified as 40% grade, which is described as "Decreased sensation with or without pain, which interferes with activity." He then consulted Table 49 entitled "Unilateral Spinal Nerve Root Impairment Affecting the Lower Extremity" to assess a 5% lower extremity rating. Dr. Hughes multiplied the 5% by 40% grade to reach a 2% lower extremity rating for sensory loss based on the right L3 radiculopathy. The 2% lower extremity rating converted to a 1% whole person rating. Combining the ratings yielded a 15% whole person impairment as a result of Claimant's March 12, 2018 lower back injury.

31. On September 9, 2019 Claimant underwent an independent medical examination with F. Mark Paz, M.D. Dr. Paz considered Claimant's medical records and conducted a physical examination. He concluded that it was not medically probable that the "disc protrusion at the L3-4 level right-sided, and the annular tear at the L4-5 level, are causally related to the March 12, 2018, incident." Dr. Paz explained that the mechanism of injury was "inconsistent with the diagnosis/diagnoses of the L3-4 disc protrusion and/or the L4-5 annular tear." He reasoned that Claimant suffers from chronic lower back pain. Dr. Paz summarized that, "in the absence of a Table 53 diagnosis and no objective evidence of a lumbar spine radiculopathy, there is no impairment for range of motion of the lumbar spine or for a peripheral nerve impairment." Accordingly, he assigned a 0% permanent impairment as a result of Claimant's March 12, 2018 work injury.

32. Dr. Paz testified at the hearing in this matter. He maintained that it was not medically probable that the disc protrusion at the L3-4 level or the annular tear at the L4-5 level were causally related to the March 12, 2018 incident. He remarked that the Division of Workers' Compensation *Impairment Rating Tips (Rating Tips)* specify "diagnostic imaging is not sufficient justification to rate a nonspecific spinal complaint" and "the existence of these anatomic findings cannot be considered pathologic unless there are clear physiologic ties and correlation with clinical findings in an individual patient." Dr. Paz agreed with orthopedic surgeon Dr. Gerlach that Claimant's pain generator is unlikely related to the MRI findings at the L3-4/L4-5 levels.

33. Dr. Paz detailed that radiculopathy at the level of Claimant's right groin symptoms would potentially be related to an anatomic MRI finding at T12-L1. He remarked that Claimant's MRI identified a disc protrusion at the L3 level with right-sided

impingement of the foramen or where the L4 nerve exits. Dr. Paz noted that the dermatomal distribution of L4 is over the outside aspect of the thigh, radiating towards the knee, across the knee and down the leg. Claimant's right groin pain was inconsistent with the distribution of the L4 nerve root and thus the MRI findings at L3-4 were not related to his right groin complaints.

34. Ms. M[Redacted] testified at the hearing in this matter. She explained that filing a First Report of Injury is a prerequisite to taking a position on liability. Claimant's injury had been handled as a medical only claim and Respondents' had been authorizing treatment. Ms. M[Redacted] recalled that she received an error message from the electronic filing vendor when trying to submit the First Report of Injury. She then contacted the Division to determine the reasons for the rejection and determined there was a difference in the dates of injury. Ms. M[Redacted] then relied on the Division's advice to correct the date of injury so she could electronically file a First Report of Injury. She ultimately accomplished the filing when the parties agreed on the date of injury and merged duplicate claims. The Division approved the merger in an Order issued December 10, 2018.

35. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Hughes that Claimant suffered a 15% whole person impairment rating as a result of his March 12, 2018 lower back injury. The record reveals that Dr. Hughes correctly applied the *AMA Guides* and properly assigned Claimant a 15% whole person impairment rating. Initially, Dr. Hughes diagnosed Claimant with a lumbar spine sprain/strain with persistent right L3 radiculitis as well as lower back and right groin pain. He agreed with Dr. Cazden that Claimant reached MMI on January 18, 2019. Dr. Hughes assigned Claimant a 7% whole person permanent impairment rating under Table 53 II(c) for a specific disorder of the lumbar spine and an additional 8% for range of motion deficits. He remarked that Claimant's MRI findings of a disk protrusion at L3-4 "is probably an injury related finding of at least 'moderate' severity." Dr. Hughes also assigned a 1% impairment rating for "right L3 radiculopathy" to arrive at a combined 15% whole person rating. Similarly, Dr. Shoemaker determined that Claimant had a right lateralizing disc protrusion at L3-L4 with right L3 radiculitis. He recommended right L3-L4 transforaminal epidural steroid injections for diagnostic and potentially therapeutic benefit to treat persistent, "significant functionally limiting pain" based on "a nerve impingement with radicular pattern pain." Finally, ATP Dr. Cazden also assigned a 7% whole person permanent impairment rating under Table 53, IIC of the *AMA Guides* for an unoperated herniated disc with persistent pain. He assigned an additional 6% impairment for range of motion deficits.

36. In contrast, Dr. Paz concluded that it was not medically probable that the "disc protrusion at the L3-4 level right-sided, and the annular tear at the L4-5 level, are causally related to the March 12, 2018, incident." Dr. Paz explained that the mechanism of injury was "inconsistent with the diagnosis/diagnoses of the L3-4 disc protrusion and/or the L4-5 annular tear." He reasoned that Claimant suffers from chronic lower back pain. Accordingly, he assigned a 0% permanent impairment as a result of Claimant's March 12, 2018 work injury. However, despite the determination of Dr. Paz, the record and persuasive medical opinions reflect that Claimant suffered a specific

disorder of the lumbar spine as a result of his March 12, 2019 work accident. While Dr. Paz testified that a 0% permanency rating is appropriate, his difference of opinion is insufficient to overcome Dr. Hughes' decision to assign a Table 53 rating. Based on Dr. Hughes' range of motion measurements, Claimant is also entitled to receive an impairment rating for his range of motion deficits.

37. Respondents specifically contend that Dr. Hughes' 1% impairment rating for L3 radiculitis was clearly erroneous. Dr. Hughes assigned the 1% impairment rating for "right L3 radiculopathy" based on Tables 10 and 49 of the *AMA Guides*. He noted that Claimant exhibited symptoms consistent with an L3 radiculopathy. He commented that MRI findings were consistent with the radicular pathology and Claimant was offered an epidural steroid injection. Dr. Hughes remarked that "Dr. Cazden did not assign impairment for right L3 radiculopathy but I do feel there is an indication to make such an impairment assignment." Table 10 contains the grading scheme for pain and loss of sensation resulting from peripheral nervous system disorders. Dr. Hughes determined that Claimant's sensory loss qualified as 40% grade, which is described as "Decreased sensation with or without pain, which interferes with activity." He then consulted Table 49 entitled "Unilateral Spinal Nerve Root Impairment Affecting the Lower Extremity," to assess a 5% lower extremity rating. Dr. Hughes multiplied the 5% by 40% grade to reach a 2% lower extremity rating for sensory loss based on the right L3 radiculopathy. The 2% lower extremity rating converted to a 1% whole person impairment.

38. Relying on an orthopedic surgery evaluation by Dr. Gerlach, treatment notes from Workwell and Dr. Paz's expert testimony, Respondents assert that Claimant's MRI findings cannot be causally related to his right groin pain or other lower extremity symptoms. Dr. Paz specifically testified that the dermatomal distribution of the L4 level does not include the right groin area and the disc protrusion at L3-4 was unlikely the source of pain. Moreover, Dr. Gerlach did not recommend surgery because Claimant's "small foraminal disc protrusions at L3-4 and L4-5 are of uncertain significance and very unlikely the primary source of the patient's persistent back pain." Despite Respondents' contentions, the differences in medical opinions with Dr. Hughes are insufficient to overcome his 1% whole person impairment rating for right L3 radiculopathy. Dr. Hughes reasoned that Claimant's symptoms and MRI findings were consistent with L3 radicular pathology.

39. The record reflects that Dr. Hughes correctly applied the *AMA Guides* and did not erroneously assign Claimant a 15% whole person impairment rating as a result of his industrial injury. On March 12, 2018 Claimant suffered a lumbar spine sprain/strain with persistent right L3 radiculitis as well as lower back and right groin pain. Respondents have not produced unmistakable evidence free from serious or substantial doubt that Dr. Hughes' impairment determination was incorrect. Accordingly, Claimant suffered a 15% whole person impairment rating as a result of his March 12, 2018 industrial injury.

40. Claimant has failed to establish that it is more probably true than not that he is entitled to receive TPD benefits for the period March 13, 2018 through May 9, 2018. The record reveals that any reduction in Claimant's earnings while working for

Employer after his injury cannot be attributed to his industrial injury. Employer accommodated Claimant's work restrictions by providing light duty work in the yard. However, Claimant failed to report to work for a variety of reasons. Specifically, from March 19, 2018 through March 22, 2018 Claimant did not present to work or respond to phone calls from Ms. F[Redacted]. On March 22, 2018 Claimant called Employer "to say he had been in jail and needed to go pickup his vehicle." Claimant reported to work the following day at 7:00 a.m. He also took a planned vacation from March 28, 2018 until April 2, 2018. Claimant then called Employer at 9:00 a.m. on April 3, 2018 to report he would be at work after running an errand. Claimant has thus failed to demonstrate that the difference between his AWW at the time of his injury and his earnings during the continuance of temporary partial disability was caused by his March 12, 2018 work injury. Accordingly, Claimant's request for TPD benefits is denied and dismissed.

41. Claimant has failed to demonstrate that it is more probably true than not that he is entitled to receive TTD benefits for the period September 17, 2018 through January 18, 2019. The persuasive evidence demonstrates that Claimant was responsible for his termination from employment with Employer on May 9, 2018. Moreover, Claimant did not suffer a worsening of condition subsequent to his termination that caused a wage loss.

42. Initially, Claimant was responsible for his termination from Employer because he repeatedly failed to show up or call in to work. Claimant failed to report to work from March 19, 2018 through March 22, 2018 and did not respond to phone calls from Ms. F[Redacted]. Claimant acknowledged that he was required to notify a supervisor if he was going to be late or miss a shift. He specifically testified that a supervisor told him "Don't miss work anymore because they will fire you." Claimant's supervisor Dan S[Redacted] completed a Non-Compliance/Disciplinary Action form that specified Employer had not heard from Claimant during the week. The form noted that Claimant called Employer on March 22, 2020 "to say he had been in jail and needed to go pickup his vehicle." Claimant reported for work the following day at 7:00 a.m. On April 3, 2018 Mr. S[Redacted] completed another Non-Compliance/Disciplinary Action form. The form specified that Claimant was supposed to show up for work on April 3, 2018 following a vacation from March 28, 2018 until April 2, 2018. Claimant called Employer at 9:00 a.m. on April 3, 2018 to let Ms. F[Redacted] know he would be at work after running an errand. On Monday May 7, 2018 Claimant again did not show up or call in to work. Claimant testified that pain caused his absence. On May 9, 2018 Claimant was terminated from employment. Ms. F[Redacted] explained that Claimant was terminated based on the violation of Employer's policy for failing to call in or show up for work on multiple occasions.

43. Claimant willfully violated Employer's company policy when he repeatedly failed to notify a supervisor that he would not be coming in or arrive late to work. Claimant acknowledged the obligation to contact Employer if he was going to be late or not come in at all, and recognized that if he failed to show up for work he would be fired. Ms. F[Redacted]'s persuasive testimony and the employment records reveal that Claimant was warned multiple times about no-call/no-show violations. Nevertheless, Claimant failed to call-in or appear for shifts for non-injury-related reasons on at least

three occasions following the March 12, 2018 injury and was ultimately terminated. The record reflects that Claimant was thus responsible for his termination. He precipitated the employment termination by a volitional act that he would reasonably expect to cause the loss of employment. He is therefore precluded from receiving TTD benefits.

44. Claimant contends that, even if he was responsible for his termination of employment with Employer, he is entitled to receive TTD benefits based on a worsening of condition. At the time of termination from Employer he had a restriction of no lifting over 40 pounds. After returning to Workwell on September 11, 2018 Claimant received the following work restrictions: no lifting, pushing or pulling over 20 pounds; no overhead work and, sitting/standing as tolerated.

45. Despite Claimant's assertion, the record reveals that Claimant did not suffer a worsening of condition subsequent to his termination from employment with Employer that caused a wage loss. A subsequent increase in work restrictions is not per se evidence of a worsening condition. Initially, Claimant did not return for medical treatment following his termination from Employer until Ms. M[Redacted] scheduled a demand appointment on his behalf for September 11, 2018. On his September 11, 2018 Injury Questionnaire when he visited Dr. Webb, Claimant specified that he was working full duty and feeling "about the same." He also noted that there had not been any changes in his health since his last visit to a physician. Claimant was terminated by Jalisco on September 17, 2018 because of his work restrictions. The termination letter specified that the job requirements of Claimant's position included the ability to lift and carry objects in excess of 75 pounds, walk and stand for long periods of time, and the ability to lift, push, pull or carry objects while using abdominal and lower back muscles.

46. Although Claimant was terminated from Jalisco based on his work restrictions, he has failed to demonstrate that he suffered a wage loss as a result of a worsening of condition. Claimant earned wages as a Carpenter for Jalisco from May 14, 2018 until he was terminated on September 17, 2018. While the hours Claimant worked for Jalisco varied by week, Claimant demonstrated the ability to work significant overtime sporadically throughout the summer. Based on the objective evidence presented in the form of his wages from Jalisco, Claimant's earnings were not negatively affected by any physical or functional inability to work. Moreover, Claimant did not seek medical treatment during the period. It is speculative to connect Claimant's increased work restrictions and loss of wages from Jalisco to a worsening of condition. Accordingly, Claimant's request for TTD benefits is denied and dismissed.

47. Claimant has failed to establish that it is more probably true than not that he is entitled to recover penalties for Respondents' failure to admit or deny liability as required by §8-43-203(2)(a), C.R.S. He has also failed to demonstrate that he is entitled to recover penalties for Respondents' failure to comply with an October 26, 2018 Order issued by the Director of the Division of Workers' Compensation. Initially, Insurer did not file a First Report of Injury within 20 days after it had knowledge of information that would require the employer to file a First Report of Injury with the DOWC under §8-43-101, C.R.S. Moreover, Respondents violated the Director's October 26, 2018 Order by failing to file a position statement within 15 days. Nevertheless, Respondents actions

constituting the violations were not objectively unreasonable because they were predicated on a rational argument based in law or fact.

48. Ms. M[Redacted] testified at the hearing in this matter. She explained that filing a First Report of Injury is a prerequisite to taking a position on liability. Claimant's injury had been handled as a medical only claim and Respondents' had been authorizing treatment. Ms. M[Redacted] recalled that she received an error message from the electronic filing vendor when trying to submit the First Report of Injury. She then contacted the Division to determine the reasons for the rejection and determined there was a difference in the dates of injury. Ms. M[Redacted] then relied on the Division's advice to correct the date of injury so that she could electronically file a First Report of Injury. She ultimately accomplished the filing when the parties agreed on the date of injury and merged duplicate claims. The Division approved the merger in an Order issued December 10, 2018.

49. The record reflects that Respondents did not ignore or refuse to comply with the Director's Order. Rather, Ms. M[Redacted] followed up repeatedly both with Mr. Y[Redacted] and representatives from the Division in order to correct the date of injury and social security number in the Division's records so she could file a First Report of Injury without generating a duplicate claim in order to file a Notice of Contest. Despite her attempts, Ms. M[Redacted] eventually filed a First Report of Injury electronically by using the incorrect date of injury of March 13, 2018 so that she could then electronically file a Notice of Contest to satisfy the Director's Order. The First Report of Injury generated a duplicate claim number of WC 5-092-444 due to a discrepancy in Claimant's social security number. On November 13, 2018 Ms. M[Redacted] received an email from Ms. T[Redacted] from the Division regarding changing the date of injury from March 13, 2018 to March 12, 2018. Ms. T[Redacted] stated that to change the date of injury "to 3/12/2018 all parties have to agree because of the Worker's Claim indicating 3/13/2018." She also noted that the Division had assigned a temporary social security number because none was listed on the Worker's Claim for Compensation. On December 4, 2018 the Division received Respondents' Notice of Contest. On December 5, 2018 counsel for Respondents filed an Unopposed Motion to Merge Duplicate Claims for WC 5-085-650 and WC 5-092-444. The parties agreed to consolidate the duplicate claims under WC 5-085-650, change the date of injury to March 12, 2018 and modify the social security number listed for Claimant. The record reveals that Ms. M[Redacted]'s actions on Respondents' behalf were reasonable under the circumstances because she took rational steps to correct the confusion in Claimant's social security number and date of injury. Accordingly, Claimant's request for penalties is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S.

A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio*, W.C. No. 4-660-149 (ICAO, June 30, 2008); see *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; see *Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Subparagraph (II) is limited to parties' disputes over "a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI]." §8-42-107(8)(b)(II). "Nowhere in the statute is a DIME's opinion as to the cause of a claimant's injury similarly imbued with presumptive weight." See *Yeutter*, 2019 COA 53 ¶ 18. Accordingly, a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment. *Id.* at ¶ 21.

6. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable

and free from serious or substantial doubt.” *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

7. A DIME physician is required to rate a claimant’s impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician’s impairment rating was incorrect. *In Re Gurrola*, W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician’s findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett*, W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

8. If a party has carried the initial burden of overcoming the DIME physician’s impairment rating by clear and convincing evidence, the ALJ’s determination of the correct rating is then a matter of fact based upon the lesser burden of a preponderance of the evidence. See *Deleon v. Whole Foods Market, Inc.*, W.C. No. 4-600-47 (ICAO, Nov. 16, 2006). The ALJ is not required to dissect the overall impairment rating into its numerous component parts and determine whether each part has been overcome by clear and convincing evidence. *Id.* When the ALJ determines that the DIME physician’s rating has been overcome, the ALJ may independently determine the correct rating. *Lungu v. North Residence Inn*, W.C. No. 4-561-848 (ICAO, Mar. 19, 2004); *McNulty v. Eastman Kodak Co.*, W.C. No. 4-432-104 (ICAO, Sept. 16, 2002).

9. As found, Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Hughes that Claimant suffered a 15% whole person impairment rating as a result of his March 12, 2018 lower back injury. The record reveals that Dr. Hughes correctly applied the *AMA Guides* and properly assigned Claimant a 15% whole person impairment rating. Initially, Dr. Hughes diagnosed Claimant with a lumbar spine sprain/strain with persistent right L3 radiculitis as well as lower back and right groin pain. He agreed with Dr. Cazden that Claimant reached MMI on January 18, 2019. Dr. Hughes assigned Claimant a 7% whole person permanent impairment rating under Table 53 II(c) for a specific disorder of the lumbar spine and an additional 8% for range of motion deficits. He remarked that Claimant’s MRI findings of a disk protrusion at L3-4 “is probably an injury related finding of at least ‘moderate’ severity.” Dr. Hughes also assigned a 1% impairment rating for “right L3 radiculopathy” to arrive at a combined 15% whole person rating. Similarly, Dr. Shoemaker determined that Claimant had a right lateralizing disc protrusion at L3-L4 with right L3 radiculitis. He recommended right L3-L4 transforaminal epidural steroid injections for diagnostic and potentially therapeutic benefit to treat persistent, “significant functionally limiting pain” based on “a nerve impingement with radicular pattern pain.” Finally, ATP Dr. Cazden also assigned a 7% whole person permanent impairment rating under Table 53, IIC of the *AMA Guides* for an unoperated herniated disc with persistent pain. He assigned an additional 6% impairment for range of motion deficits.

10. As found, in contrast, Dr. Paz concluded that it was not medically probable that the “disc protrusion at the L3-4 level right-sided, and the annular tear at the L4-5 level, are causally related to the March 12, 2018, incident.” Dr. Paz explained that the mechanism of injury was “inconsistent with the diagnosis/diagnoses of the L3-4 disc protrusion and/or the L4-5 annular tear.” He reasoned that Claimant suffers from chronic lower back pain. Accordingly, he assigned a 0% permanent impairment as a result of Claimant’s March 12, 2018 work injury. However, despite the determination of Dr. Paz, the record and persuasive medical opinions reflect that Claimant suffered a specific disorder of the lumbar spine as a result of his March 12, 2019 work accident. While Dr. Paz testified that a 0% permanency rating is appropriate, his difference of opinion is insufficient to overcome Dr. Hughes’ decision to assign a Table 53 rating. Based on Dr. Hughes’ range of motion measurements, Claimant is also entitled to receive an impairment rating for his range of motion deficits.

11. As found, Respondents specifically contend that Dr. Hughes’ 1% impairment rating for L3 radiculitis was clearly erroneous. Dr. Hughes assigned the 1% impairment rating for “right L3 radiculopathy” based on Tables 10 and 49 of the *AMA Guides*. He noted that Claimant exhibited symptoms consistent with an L3 radiculopathy. He commented that MRI findings were consistent with the radicular pathology and Claimant was offered an epidural steroid injection. Dr. Hughes remarked that “Dr. Cazden did not assign impairment for right L3 radiculopathy but I do feel there is an indication to make such an impairment assignment.” Table 10 contains the grading scheme for pain and loss of sensation resulting from peripheral nervous system disorders. Dr. Hughes determined that Claimant’s sensory loss qualified as 40% grade, which is described as “Decreased sensation with or without pain, which interferes with activity.” He then consulted Table 49 entitled “Unilateral Spinal Nerve Root Impairment Affecting the Lower Extremity,” to assess a 5% lower extremity rating. Dr. Hughes multiplied the 5% by 40% grade to reach a 2% lower extremity rating for sensory loss based on the right L3 radiculopathy. The 2% lower extremity rating converted to a 1% whole person impairment.

12. As found, relying on an orthopedic surgery evaluation by Dr. Gerlach, treatment notes from Workwell and Dr. Paz’s expert testimony, Respondents assert that Claimant’s MRI findings cannot be causally related to his right groin pain or other lower extremity symptoms. Dr. Paz specifically testified that the dermatomal distribution of the L4 level does not include the right groin area and the disc protrusion at L3-4 was unlikely the source of pain. Moreover, Dr. Gerlach did not recommend surgery because Claimant’s “small foraminal disc protrusions at L3-4 and L4-5 are of uncertain significance and very unlikely the primary source of the patient’s persistent back pain.” Despite Respondents’ contentions, the differences in medical opinions with Dr. Hughes are insufficient to overcome his 1% whole person impairment rating for right L3 radiculopathy. Dr. Hughes reasoned that Claimant’s symptoms and MRI findings were consistent with L3 radicular pathology.

13. As found, the record reflects that Dr. Hughes correctly applied the *AMA Guides* and did not erroneously assign Claimant a 15% whole person impairment rating as a result of his industrial injury. On March 12, 2018 Claimant suffered a lumbar spine

sprain/strain with persistent right L3 radiculitis as well as lower back and right groin pain. Respondents have not produced unmistakable evidence free from serious or substantial doubt that Dr. Hughes' impairment determination was incorrect. Accordingly, Claimant suffered a 15% whole person impairment rating as a result of his March 12, 2018 industrial injury.

Temporary Partial Disability Benefits

14. Section 8-42-106(1), C.R.S., provides for an award of Temporary Partial Disability (TPD) benefits based on the difference between the claimant's Average Weekly Wage (AWW) at the time of injury and the earnings during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury has caused the disability and consequent partial wage loss. Section 8-42-103(1), C.R.S.; *Safeway Stores, Inc. v. Husson*, 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997).

15. As found, Claimant has failed to establish by a preponderance of the evidence that he is entitled to receive TPD benefits for the period March 13, 2018 through May 9, 2018. The record reveals that any reduction in Claimant's earnings while working for Employer after his injury cannot be attributed to his industrial injury. Employer accommodated Claimant's work restrictions by providing light duty work in the yard. However, Claimant failed to report to work for a variety of reasons. Specifically, from March 19, 2018 through March 22, 2018 Claimant did not present to work or respond to phone calls from Ms. F[Redacted]. On March 22, 2018 Claimant called Employer "to say he had been in jail and needed to go pickup his vehicle." Claimant reported to work the following day at 7:00 a.m. He also took a planned vacation from March 28, 2018 until April 2, 2018. Claimant then called Employer at 9:00 a.m. on April 3, 2018 to report he would be at work after running an errand. Claimant has thus failed to demonstrate that the difference between his AWW at the time of his injury and his earnings during the continuance of temporary partial disability was caused by his March 12, 2018 work injury. Accordingly, Claimant's request for TPD benefits is denied and dismissed.

Temporary Total Disability Benefits

16. To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. See Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals*

Office, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

17. Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act “volitionally” or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge*, W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. See *Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus “responsible” if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety*, W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

18. Section 8-42-105(4) does not bar TTD wage loss claims after a termination for which the employee was responsible when the worsening of a work-related injury incurred during that employment causes a subsequent wage loss. *Anderson v. Longmont Toyota, Inc.*, 102 P.3d 323, 326 (Colo. 2004). This is limited to cases in which the “claimant's condition worsens after the termination of employment and prevents or diminishes the claimant's ability to work,” rather than where the wage loss is the result of the voluntary or for-cause termination of the regular or modified employment. *Id.* at 326; *Grisbaum v. Indus. Claim Appeals Office*, 109 P.3d 1054, 1056

(Colo. App. 2005). A subsequent increase in work restrictions is not per se evidence of a worsening condition, and whether a worsened condition caused the claimant's wage loss is a factual question for the ALJ. See *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo.App.2014); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 191 (Colo.App.2002). An ALJ may consider several factors in determining that a worsened condition, and not an intervening termination of employment, caused the claimant's wage loss. *Apex Transportation, Inc.*, 321 P.3d at 633.

19. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he is entitled to receive TTD benefits for the period September 17, 2018 through January 18, 2019. The persuasive evidence demonstrates that Claimant was responsible for his termination from employment with Employer on May 9, 2018. Moreover, Claimant did not suffer a worsening of condition subsequent to his termination that caused a wage loss.

20. As found, initially, Claimant was responsible for his termination from Employer because he repeatedly failed to show up or call in to work. Claimant failed to report to work from March 19, 2018 through March 22, 2018 and did not respond to phone calls from Ms. F[Redacted]. Claimant acknowledged that he was required to notify a supervisor if he was going to be late or miss a shift. He specifically testified that a supervisor told him "Don't miss work anymore because they will fire you." Claimant's supervisor Dan S[Redacted] completed a Non-Compliance/Disciplinary Action form that specified Employer had not heard from Claimant during the week. The form noted that Claimant called Employer on March 22, 2020 "to say he had been in jail and needed to go pickup his vehicle." Claimant reported for work the following day at 7:00 a.m. On April 3, 2018 Mr. S[Redacted] completed another Non-Compliance/Disciplinary Action form. The form specified that Claimant was supposed to show up for work on April 3, 2018 following a vacation from March 28, 2018 until April 2, 2018. Claimant called Employer at 9:00 a.m. on April 3, 2018 to let Ms. F[Redacted] know he would be at work after running an errand. On Monday May 7, 2018 Claimant again did not show up or call in to work. Claimant testified that pain caused his absence. On May 9, 2018 Claimant was terminated from employment. Ms. F[Redacted] explained that Claimant was terminated based on the violation of Employer's policy for failing to call in or show up for work on multiple occasions.

21. As found, Claimant willfully violated Employer's company policy when he repeatedly failed to notify a supervisor that he would not be coming in or arrive late to work. Claimant acknowledged the obligation to contact Employer if he was going to be late or not come in at all, and recognized that if he failed to show up for work he would be fired. Ms. F[Redacted]'s persuasive testimony and the employment records reveal that Claimant was warned multiple times about no-call/no-show violations. Nevertheless, Claimant failed to call-in or appear for shifts for non-injury-related reasons on at least three occasions following the March 12, 2018 injury and was ultimately terminated. The record reflects that Claimant was thus responsible for his termination. He precipitated the employment termination by a volitional act that he would reasonably

expect to cause the loss of employment. He is therefore precluded from receiving TTD benefits.

22. As found, Claimant contends that, even if he was responsible for his termination of employment with Employer, he is entitled to receive TTD benefits based on a worsening of condition. At the time of termination from Employer he had a restriction of no lifting over 40 pounds. After returning to Workwell on September 11, 2018 Claimant received the following work restrictions: no lifting, pushing or pulling over 20 pounds; no overhead work and, sitting/standing as tolerated.

23. As found, despite Claimant's assertion, the record reveals that Claimant did not suffer a worsening of condition subsequent to his termination from employment with Employer that caused a wage loss. A subsequent increase in work restrictions is not per se evidence of a worsening condition. Initially, Claimant did not return for medical treatment following his termination from Employer until Ms. M[Redacted] scheduled a demand appointment on his behalf for September 11, 2018. On his September 11, 2018 Injury Questionnaire when he visited Dr. Webb, Claimant specified that he was working full duty and feeling "about the same." He also noted that there had not been any changes in his health since his last visit to a physician. Claimant was terminated by Jalisco on September 17, 2018 because of his work restrictions. The termination letter specified that the job requirements of Claimant's position included the ability to lift and carry objects in excess of 75 pounds, walk and stand for long periods of time, and the ability to lift, push, pull or carry objects while using abdominal and lower back muscles.

24. As found, although Claimant was terminated from Jalisco based on his work restrictions, he has failed to demonstrate that he suffered a wage loss as a result of a worsening of condition. Claimant earned wages as a Carpenter for Jalisco from May 14, 2018 until he was terminated on September 17, 2018. While the hours Claimant worked for Jalisco varied by week, Claimant demonstrated the ability to work significant overtime sporadically throughout the summer. Based on the objective evidence presented in the form of his wages from Jalisco, Claimant's earnings were not negatively affected by any physical or functional inability to work. Moreover, Claimant did not seek medical treatment during the period. It is speculative to connect Claimant's increased work restrictions and loss of wages from Jalisco to a worsening of condition. Accordingly, Claimant's request for TTD benefits is denied and dismissed.

Penalties

25. Whether statutory penalties may be imposed under § 8-43-304(1) C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to \$1000 per day where the insurer "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel..." Thus, the ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must

determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.*, W.C. No. 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth*, 924 P.2d 1094 (Colo. App. 1996).

26. The question of whether the insurer's conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); see also *Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *Pioneers Hospital v. Industrial Claim Appeals Office*, supra. If the claimant makes such a prima facie showing the burden of persuasion shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office*, supra, *Human Resource Co. v. Industrial Claim Appeals Office*, 984 P.2d 1194 (Colo. App. 1999).

27. Section 8-43-203(1)(a), C.R.S. provides:

The employer or, if insured, the employer's insurance carrier shall notify in writing the division and the injured employee . . . within twenty days after a report is, or should have been filed with the division pursuant to section 8-43-101, whether liability is admitted or contested; except that, for purpose of this section, any knowledge on the part of the employer, if insured, is not knowledge on the part of the insurance carrier.

28. Section 8-43-203(2)(a), C.R.S. specifies that if such notice is not filed, "the employer, or if insured, the employer's insurance carrier, may become liable to the claimant, if successful on the claim for compensation, for up to one day's compensation for each failure to so notify." Because the claimant seeks the imposition of a penalty for failure timely to admit or deny liability, the claimant bears the burden of proof to establish the circumstances justifying the imposition of the penalty. See *Pioneer Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005) (claimant seeking imposition of penalty under § 8-43-304(1) bore burden of proof to establish circumstances justifying a penalty).

29. Under the language of § 8-43-203(1)(a), knowledge of an insured may not be imputed to the insurer. See *State Compensation Insurance Fund v. Wilson*, 736 P.2d 33 (Colo. 1987); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Thus, an insurer is not responsible for admitting or denying liability until 20 days after it has knowledge of information that would require the employer to file a first report of injury with the DOWC under §8-43-101, C.R.S. Those circumstances include injuries that result in "lost time from work for the injured employee in excess of three shifts or

calendar days.” The mere knowledge that the claimant sustained an injury and had restrictions resulting in a prescription for modified duty does not establish that the claimant missed work as a result of the injury or the number of days missed. See *Ralston Purina-Keystone v. Lowry*, 821 P.2d 910 (Colo. App. 1991); *Atencio v. Holiday Retirement Corp.*, W.C. No. 4-532-443 (ICAP Nov. 15, 2002).

30. Section 8-43-304(1) authorizes the imposition of penalties of not more than \$1000 per day if an employee or person “fails, neglects, or refuses to obey any lawful order made by the director or panel.” A person fails or neglects to obey an order if she leaves undone that which is mandated by an order. See *Dworkin, Chambers & Williams, P.C. v. Provo*, 81 P.3d 1053 (Colo. 2003). In cases where a party fails, neglects or refuses to obey an *order* to take some action, penalties may be imposed under § 8-43-304(1), even if the Act imposes a specific violation for the underlying conduct. *Holliday v. Bestop, Inc.*, 23 P.3d 700 (Colo. 2001); *Giddings v. Industrial Claim Appeals Office*, 39 P.3d 1211 (Colo. App. 2001).

31. As found, Claimant has failed to establish by a preponderance of the evidence that he is entitled to recover penalties for Respondents’ failure to admit or deny liability as required by §8-43-203(2)(a), C.R.S. He has also failed to demonstrate that he is entitled to recover penalties for Respondents’ failure to comply with an October 26, 2018 Order issued by the Director of the Division of Workers’ Compensation. Initially, Insurer did not file a First Report of Injury within 20 days after it had knowledge of information that would require the employer to file a First Report of Injury with the DOWC under §8-43-101, C.R.S. Moreover, Respondents violated the Director’s October 26, 2018 Order by failing to file a position statement within 15 days. Nevertheless, Respondents actions constituting the violations were not objectively unreasonable because they were predicated on a rational argument based in law or fact.

32. As found, Ms. M[Redacted] testified at the hearing in this matter. She explained that filing a First Report of Injury is a prerequisite to taking a position on liability. Claimant’s injury had been handled as a medical only claim and Respondents’ had been authorizing treatment. Ms. M[Redacted] recalled that she received an error message from the electronic filing vendor when trying to submit the First Report of Injury. She then contacted the Division to determine the reasons for the rejection and determined there was a difference in the dates of injury. Ms. M[Redacted] then relied on the Division’s advice to correct the date of injury so that she could electronically file a First Report of Injury. She ultimately accomplished the filing when the parties agreed on the date of injury and merged duplicate claims. The Division approved the merger in an Order issued December 10, 2018.

33. As found, the record reflects that Respondents did not ignore or refuse to comply with the Director’s Order. Rather, Ms. M[Redacted] followed up repeatedly both with Mr. Y[Redacted] and representatives from the Division in order to correct the date of injury and social security number in the Division’s records so she could file a First Report of Injury without generating a duplicate claim in order to file a Notice of Contest. Despite her attempts, Ms. M[Redacted] eventually filed a First Report of Injury

electronically by using the incorrect date of injury of March 13, 2018 so that she could then electronically file a Notice of Contest to satisfy the Director's Order. The First Report of Injury generated a duplicate claim number of WC 5-092-444 due to a discrepancy in Claimant's social security number. On November 13, 2018 Ms. M[Redacted] received an email from Ms. T[Redacted] from the Division regarding changing the date of injury from March 13, 2018 to March 12, 2018. Ms. T[Redacted] stated that to change the date of injury "to 3/12/2018 all parties have to agree because of the Worker's Claim indicating 3/13/2018." She also noted that the Division had assigned a temporary social security number because none was listed on the Worker's Claim for Compensation. On December 4, 2018 the Division received Respondents' Notice of Contest. On December 5, 2018 counsel for Respondents filed an Unopposed Motion to Merge Duplicate Claims for WC 5-085-650 and WC 5-092-444. The parties agreed to consolidate the duplicate claims under WC 5-085-650, change the date of injury to March 12, 2018 and modify the social security number listed for Claimant. The record reveals that Ms. M[Redacted]'s actions on Respondents' behalf were reasonable under the circumstances because she took rational steps to correct the confusion in Claimant's social security number and date of injury. Accordingly, Claimant's request for penalties is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to overcome Dr. Hughes' DIME opinion. Claimant suffered a 15% whole person impairment rating as a result of his March 12, 2018 lower back injury.
2. Claimant's request for TPD benefits is denied and dismissed.
3. Claimant's request for TTD benefits is denied and dismissed.
4. Claimant's request for penalties is denied and dismissed.
5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to*

Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: July 20, 2020.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-116-275-002**

ISSUES

- Whether the claimant has demonstrated, by a preponderance of the evidence, that the respondents are subject to the Colorado Workers' Compensation Act.
- If the ALJ concludes that Colorado has jurisdiction, whether the claimant has demonstrated, by a preponderance of the evidence, that on August 13, 2019, he suffered an injury arising out of and in the course and scope of his employment with the employer.
- If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment he has received is reasonable, necessary and related to the August 13, 2019 injury.
- If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that penalties should be assessed against the respondents for violation of WCRP 5-2(a) for failing to timely admit or deny the claimant's claim.
- If the ALJ finds that the respondents have violated WCRP 5-2, whether the respondents have proven, by a preponderance of the evidence, that said violation has been cured.
- If the claim is found compensable, the parties have stipulated to an average weekly wage (AWW) of \$1,611.81.
- The issue of whether the claimant is entitled to temporary total disability (TTD) benefits and for what time period, is reserved for future determination.

FINDINGS OF FACT

1. The claimant resides in Cedaredge, Colorado. The employer operates in the oil and gas industry. The employer's corporate offices are located in Texas. In February 2018, the employer offered the claimant a position performing quality control for the welding aspect of the employer's projects. The work the claimant was offered would take place in the Permian Basin. The Permian Basin is a geographical area in the western part of Texas, and into eastern New Mexico. The employer does not operate in Colorado.

2. Prior to receiving an offer of employment from the employer, the claimant was interviewed in Delta, Colorado. Thereafter, the claimant was sent an email extending an offer of employment. The claimant testified that he also received a phone call regarding the job offer. A written Offer of Employment for the position of QA/QC Quality

was extended to the claimant on February 2, 2018 by Dirk F[Redacted], Area Manager. The offer included language indicating that the offer was conditional upon the completion of a drug test, a background check, and certain paperwork.

3. On February 3, 2018, Mr. F[Redacted] emailed the claimant regarding an orientation date of February 12, 2018. In that same email, Mr. F[Redacted] invited the claimant to attend a team building event on February 10, 2018.

4. On February 6, 2018, the employer emailed the claimant “onboarding” paperwork. That paperwork included an authorization for a background check; benefit enrollment; an IRS W-4 form; direct deposit information; a confidentiality agreement; and wage deduction information. The claimant completed the onboarding paperwork on June 6, 2018 and returned it to the employer through an online portal. The claimant completed this paperwork and responded to employer emails from his home in Cedaredge, Colorado.

5. On February 12, 2018, the claimant was present at the employer’s offices in Seminole, Texas for his orientation and additional training. On that date, the claimant signed a number of documents. These documents included the employment offer; an application for employment; the employer’s company vehicle policy; and a background check and disclosure authorization.

6. Following the orientation on February 12, 2018, the claimant began performing his job duties for the employer. The claimant made arrangements to work five weeks in Texas and then return home to Colorado for one week. During his five weeks of work in Texas, the claimant stayed at an RV park in Midland, Texas. The claimant testified that on four occasions he drove his company vehicle from his trailer in Midland, Texas to his residence in Colorado, and then back to Texas. The claimant was not paid for his drive time to and from Colorado. Likewise, he was not paid for his commute from his trailer in Midland, Texas to any assigned job location or the employer’s offices.

7. The claimant testified that during the one week periods in Colorado, he would respond to work related calls, emails, and texts. The claimant would respond to these issues using both his personal phone and his company phone. Such contact would be from customers, site supervisors, and QC technicians. Responding to these individuals was not required by the employer while the claimant was at home in Colorado. The claimant was not paid for any work he performed while in Colorado. The claimant testified that he elected to perform work for the employer while at his home in Colorado because it made his life easier when he returned to Texas.

8. On August 2, 2019, the claimant left Texas to return to Colorado on his normally scheduled time off. Prior to departing, the claimant emailed Mr. F[Redacted] and stated that he was not sure if he would return to work for the employer. The claimant testified that he felt the employer had stripped him of his authority. Thereafter, the claimant and Mr. F[Redacted] spoke via telephone and the claimant agreed to return to work as scheduled.

9. On August 13, 2019, the claimant left his home in Colorado to report to work for the employer in Texas. While traveling through New Mexico on that same date, the claimant was involved in a motor vehicle accident (MVA). It is undisputed that the claimant was operating his personal vehicle at the time of the MVA.

10. The claimant testified that at the time of the MVA he had reduced his speed because there was a storm outside of Roswell, New Mexico. Another driver rear ended the claimant's vehicle at a high rate of speed. The claimant testified that as a result of the MVA, his head hit the head rest with such force that the head rest was bent.

11. The claimant testified that after the MVA his symptoms included throbbing pain at the base of his skull, pain in his neck, low back pain, and bilateral leg numbness. The claimant also testified he had concussion type symptoms that included headaches, dizziness, photophobia, loss of balance, and difficulty concentrating.

12. Following the MVA, the claimant drove himself to the emergency room at Eastern New Mexico Medical Center to obtain medical treatment. At that time, the claimant reported neck pain that radiated into his head and low back pain. The claimant was diagnosed with sprains of ligaments in the cervical spine and the lumbar spine. The claimant was prescribed hydrocodone.

13. After he received medical treatment, the claimant sent a text message to Mr. F[Redacted] regarding the MVA. In that text, the claimant stated "I will be late [sic] got in a wreck". The claimant also stated that he would be spending the night in Roswell, New Mexico.

14. Following the August 13, 2019 MVA, the claimant returned to work on August 14, 2019 and commenced performing his normal job duties. The claimant testified that he did not feel that he was 100 percent, but he continued to work. Following the August 13, 2019 MVA, the employer did not offer the claimant medical treatment and the claimant did not request medical treatment. The claimant continued working his normal job duties until the end of his five week rotation and his scheduled return to Colorado.

15. In the interim, on August 27, 2019, the claimant's attorney filed a Worker's Claim for Compensation with the Colorado Division of Workers' Compensation regarding the August 13, 2019 MVA.

16. When the claimant returned to Colorado after his five week rotation in Texas, he sought medical treatment with Brady Chiropractic. On September 23, 2019, the claimant was seen at that practice by Dr. Sean Lynch. On that date, the claimant reported headaches, concussion symptoms, pain in his neck, upper back, lower back, and hips.

17. The claimant also sought treatment with his primary care provider, Alice Marie Slaven Emond, FNP with Delta Health and Wellness Center. The claimant was seen by Ms. Slaven Elmond on September 25, 2019. At that time, Ms. Slaven Elmond diagnosed the claimant with a concussion, vision disturbance, headaches, rib pain, and post-traumatic stress disorder. Ms. Slaven Elmond ordered a computerized tomography

(CT) scan of the claimant's head, x-rays of the claimant's cervical spine, and made a referral to ophthalmology.

18. On September 25, 2019, x-rays of the claimant's cervical spine showed moderate degenerative disc and facet joint changes throughout the spine.

19. On October 2, 2019, the claimant was seen by Dr. Michael Hehmann. At that time, Dr. Hehmann noted that the claimant had a history of cervical spine injury, neck injury, and concussion. Dr. Hehmann also noted that the claimant's symptoms involved the C2-C3 level. He recommended the claimant undergo a cervical spine magnetic resonance imaging (MRI) scan.

20. On October 9, 2019, a cervical spine MRI showed moderate degenerative disc and facet joint changes throughout the spine, with varying degrees of foraminal stenosis.

21. On October 10, 2019, the claimant returned to Dr. Hehmann to discuss the MRI results. Dr. Hehmann opined that the claimant would likely need future surgery. At that time, he recommended the claimant avoid "heavy-type of work".

22. On October 11, 2019, the claimant was seen by Dr. Bjorn Irion with Western Orthopedics and Sports Medicine. At that time, Dr. Irion opined that the claimant's symptoms were consistent with a concussion. He also diagnosed lumbar back pain with radiculopathy; cervical foraminal stenosis; cervical degenerative disc disease; and vestibular malfunction. Dr. Irion recommended an MRI of the claimant's lumbar spine and physical therapy.

23. On October 25, 2019, a lumbar spine MRI showed a left paracentral disc extrusion at the L1-L2 level, and a right paracentral disc extrusion at the L2-L3 level. On November 1, 2019, the claimant returned to Dr. Irion who opined that the lumbar spine MRI findings were likely chronic.

24. On November 28, 2019, the employer completed an Employer's First Report of Injury. That form noted that the employer was notified of the claimant's MVA on August 13, 2019.

25. Allison O[Redacted], adjuster with the insurer testified at hearing. Ms. O[Redacted] testified that the insurer learned of the claimant's claim on December 2, 2019. Ms. O[Redacted] further testified that the claimant's file was transferred to her on December 3, 2019 and on December 4, 2019, the insurer's system listed Ms. O[Redacted] as the adjuster. Thereafter, the insurer filed a Notice of Contest on December 6, 2019.

26. Mr. F[Redacted] testified he did not learn that the claimant was asserting the MVA was work related until mid-December 2019.

27. On December 31, 2019, the claimant was seen by Dr. Hehmann. At that time, Dr. Hehmann referred the claimant to orthopedic specialists Dr. Gebhard and Dr.

Clifford. Dr. Hehmann opined that the claimant would benefit from epidural injections at the L1-L2 and L2-L3 levels.

28. In January 2020, Mr. F[Redacted] learned that the claimant was undergoing extensive medical treatment. As a result, Mr. F[Redacted] asked the claimant to obtain a medical release before he would be allowed to return to work.

29. On January 27, 2020, Dr. Hehmann provided the claimant with a written note that indicated that the claimant could return to work with no restrictions. The claimant provided that medical release to Mr. F[Redacted] via text message. Mr. F[Redacted] testified that although the claimant provided the requested medical release, he was not comfortable with the claimant returning to work.

30. Based upon the evidence and testimony presented at hearing, the ALJ finds that the claimant has failed to demonstrate that Colorado jurisdiction is appropriate in this case. The ALJ finds that the last act necessary to create the employment contract between the claimant and the employer occurred on February 12, 2018, when the claimant completed employment paperwork and attended orientation in Texas.

31. The ALJ finds that the work the claimant conducted at his home in Cedaredge, Colorado was insufficient to rise to the level of “substantial employment” in Colorado. The claimant was not required to perform any work while in Colorado and he was not paid for that time. The ALJ finds that the claimant made a unilateral decision when he chose to respond to calls, emails, and texts while on his days off in Colorado. Finally, the ALJ finds that any work related activity the claimant may have performed in Colorado was merely one-sixth (or less) of his total work for the employer, (as he worked five weeks in Texas and then returned to Colorado for one week). The ALJ finds that this is not “substantial” employment occurring in Colorado.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias,

prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. The claimant is required to prove by a preponderance of the evidence that at the time of the injury that he and the employer were subject to the provisions of the Workers' Compensation Act.

5. Section 8-41-204, C.R.S. addresses injuries sustained outside of Colorado. That section states, in pertinent part:

If an employee who has been hired or is regularly employed in this state receives personal injuries in an accident . . . arising out of and in the course and scope of such employment outside of this state, the employee . . . shall be entitled to compensation according to the law of this state. This provision shall apply only to those injuries received by the employee within six months after leaving this state...

6. The six-month limitation period identified in Section 8-41-204, C.R.S. commences to run from the date of departure following the most recent assignment. *Employers' Liability Assurance Corp. v. Industrial Commission*, 363.P.2d 646 (1961). In the present case, there is no six month time period to consider, because the claimant left Colorado the same date as the MVA.

7. In addition to Section 8-41-204, C.R.S., in *United States Fidelity & Guaranty Co. v. Industrial Commission*, 61 P.2d 1033 (Colo. 1936), the Colorado Supreme Court set forth three requirements related to out-of-state injuries. Those requirements are: 1) a contract of employment created in Colorado; 2) employment in Colorado under a contract created outside the state; and 3) substantial employment in Colorado. In *Denver Truck Exch. v. Perryman*, 307 P.2d 805 (Colo. 1957), the Colorado Supreme Court further clarified that if any two of these requirements are met, it makes no difference that the employee is not a resident of Colorado or is killed outside the state, (so long as other statutory time limits on out-of-state employment are met).

8. The *Perryman* court indicated that the place of creation of an employment contract is determined according to the parties' intention, which could mean the place where the offer is accepted, or where the last act necessary to the meeting of the minds or to completion of the contract is performed.

9. There is no specific test defining where "substantial employment" as defined in *Perryman* exists. Courts evaluate what constitutes "substantial employment" on a case-by-case basis.

10. The ALJ concludes that Colorado lacks jurisdiction over the claimant's claim for workers' compensation in this case. As found, the MVA occurred outside of Colorado. The employment contract was created in Texas. The claimant did not engage in substantial employment in Colorado while working for the employer. Therefore, the claimant has failed to demonstrate by a preponderance of the evidence that Colorado jurisdiction is appropriate. The claimant's claim for worker's compensation is denied and dismissed for lack of jurisdiction. All other remaining issues are moot and will not be addressed.

ORDER

It is therefore ordered:

1. The claimant's claim for workers' compensation related to an August 13, 2019 motor vehicle accident is denied and dismissed for lack of jurisdiction.
2. The remaining issues are dismissed as moot.

Dated this 22nd day of July 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- I. Has Claimant shown, by clear and convincing evidence, that the DIME opinion on MMI should be overcome?
- II. Assuming this DIME opinion has been overcome, is Claimant entitled to Temporary Disability payments?
- III. Has Claimant shown, by a preponderance of the evidence, that his left shoulder has worsened such that he may reopen his case?
- IV. If Claimant's case is reopened, has Claimant shown, by a preponderance of the evidence, that the rotator cuff surgery as proposed by Dr. Pak is reasonable necessary, and relate to his work injury?

STIPULATIONS

Claimant stipulated that the Date of MMI is what Claimant seeks to overcome; the Impairment Ratings set by the DIME have been accepted by Claimant.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Executive Summary / Timelines

1. Claimant, a convenience store manager, suffered an admitted work injury on January 10, 2017, when he developed left shoulder pain while stocking and lifting milk at work. According to his testimony at hearing, he was surprised by the weight of a case he lifted overhead.
2. Thomas Centi, M.D. was the primary authorized treating physician, who then referred Claimant to Dr. Pak for orthopedic consultation.
3. Claimant underwent a left shoulder rotator cuff surgery performed on May 10, 2017 by Dr. Pak. During Claimant's recovery, he developed right shoulder pain, as a result of overuse of the opposing shoulder. He underwent right shoulder surgery on November 1, 2017, performed by Dr. Pak.
4. Claimant also developed left cubital tunnel of the ulnar nerve that Respondents initially denied, then later admitted for.

5. Dr. Centi found Claimant reached MMI as of August 9, 2018, and assigned permanent impairment ratings for both shoulder injuries and his left elbow. Respondents filed a FAL on September 26, 2018, consistent with Dr. Centi's MMI date and impairment ratings.

6. On October 9, 2018, orthopedist Karl Larsen, M.D. performed a left ulnar neurolysis at the elbow for Claimant's left cubital tunnel syndrome.

7. Claimant also timely objected to the FAL and requested a DIME. The DIME was conducted by Dr. Frank Polanco, who issued his report on January 8, 2019, and an addendum report on February 19, 2019. Dr. Polanco opined Claimant was at MMI as of August 28, 2018.

8. Respondents filed a new FAL on March 11, 2019, consistent with Dr. Polanco's DIME. Respondents filed an amended FAL on May 28, 2019.

Left Elbow

9. Dr. Murray, from October 20, 2017 until the last visit on May 11, 2018, noted Claimant's grip strength was strong, except for March 22, 2018, when the left hand grip was slightly weaker than the right. (Ex. 12, pp. 234, 243, 251 and 256; Ex. CC, p. 282).

10. Claimant underwent an EMG on 10/13/17 which revealed moderate left ulnar mononeuropathy at the elbow and mild left median mononeuropathy at the wrist. (Ex. 13). The Claimant was referred to Dr. Karl Larsen for his left elbow pain.

11. On November 6, 2017, Claimant saw Dr. Larsen for the first time. Claimant reported numbness and tingling in the fourth and fifth digits of the left hand. (Ex. 14, p. 282) Dr. Larsen diagnosed cubital tunnel syndrome, and indicated that it was causally related to the work injury. Dr. Larsen noted, "[S]ubjectively diminished sensation to light touch in the palmar aspect of the digits including the small finger. Two-point discrimination however is preserved in the hand at 6 mm/6 mm except in the small finger, which is slightly widened to 8 mm. He has preserved intrinsic muscle bulk and strength." "He has a positive Tinel's sign over the ulnar nerve and a positive elbow flexion compression test at the elbow." (Ex. 14, p. 283)

12. Dr. Larsen recommended ulnar nerve decompression surgery with possible nerve transposition "as soon as possible to try to limit the harm to his ulnar nerve". (Ex. 14, pp. 280-284). Although the cubital tunnel syndrome surgery was initially denied as unrelated to the 1/10/17 injury, Respondent's eventually agreed that the Claimant's left cubital tunnel syndrome was related to the left shoulder surgery of 5/10/17 and accepted liability for the condition.

13. On March 7, 2018, Dr. Larsen noted the WC insurer had accepted care for the left arm ulnar nerve. However, Claimant reported continued symptoms. Dr. Larsen noted he did not know that surgery was an emergency that needed to be done that second, but he wanted to get the nerve decompressed as soon as possible. Claimant reported, “[S]till recovering on both shoulders and is not quite ready to have an ulnar nerve surgery.” (Ex. 14, p. 286)

14. On April 16, 2018, Dr. Pak released Claimant from care for both shoulders. Claimant made good progress with range of motion and experienced expected activity related pain. Claimant was to continue the work hardening program. (Ex. EE, p. 288)

15. On April 27, 2018, Claimant informed Dr. Murray he wanted to strengthen his shoulders and complete work hardening before proceeding with left elbow surgery. Shoulder pain was 4/10. (Ex. FF, p. 292) Claimant also declined surgery on March 22, 2018 and April 12, 2018, for the same reasons. (Ex. CC, DD)

16. On May 7, 2018, Claimant returned to Dr. Larsen and reported intermittent numbness and tingling in the ring and small finger of the left hand with elbow discomfort. Claimant declined left elbow surgery at this time, as he still desired to strengthen his shoulders first. Dr. Larson noted they “discussed this at length.”

17. On June 22, 2018, Claimant saw Steven Byrne, PA – C, at Dr. Murray’s office. Claimant “continued to decrease tramadol use successfully.” Claimant had excellent grip strength bilaterally. Positive Tinel’s on the left elbow. Bilateral shoulder pain was 3/10. Claimant reported that he and his attorney do not want the left elbow procedure until his shoulders had resolved. (Ex. II, p. 317)

18. On July 2, 2018, Claimant completed work hardening for both shoulders. He had reached his lifting goals after 12 sessions. He was able to lift, carry and push/pull the weight required for his job. Bilateral shoulder strength was reported at 5/5. (Ex. LL, p. 328)

19. On July 10, 2018, Claimant had normal left hand strength. Claimant informed Dr. Centi he did not want left elbow surgery at that time. (Ex. MM, p. 334)

20. On August 9, 2018, Dr. Centi noted Claimant had regained a great deal of function and strength in his shoulders. Claimant complained of pain with elevation but was improving. Pain was 4/10, but 90% of the time. Dr. Centi placed Claimant at MMI, and allowed a return to work, with restrictions. Claimant did not want the left elbow procedure at this time. (Ex. OO, p. 347-49). Claimant did fill out a pain diagram, which still indicated pain from his left elbow to the 4th and 5th digits of his left hand. *Id* at 351.

21. On August 28, 2018, Claimant returned to Dr. Centi, who noted that although a left elbow procedure had been offered to Claimant, Claimant decided to forego any

further surgical intervention *at that time*. Current medications were noted as 'none'. Dr. Centi noted, "[r]ange of motion is better in the left shoulder than the right shoulder but both are functional. Strength is nearly complete." (Ex. PP, p. 356) Dr. Centi assigned an 8% UE rating for the left elbow, a 13% UE rating for the left shoulder, and a 15% UE rating for the right shoulder. *Id* at p. 357. Dr. Centi recommended maintenance care.

22. On September 12, 2018, Claimant reported to Dr. Larsen his "shoulders are doing quite a bit better, but he has had no improvement in the ring and small finger numbness and medial elbow discomfort." Claimant did not report left hand grip problems. Claimant now wanted left elbow surgery. (Ex. QQ, p. 360)

23. On October 9, 2018, Dr. Larsen performed a left ulnar neurolysis at the elbow. In the operative report, Dr. Larsen noted portions of the ulnar nerve had been flattened and compressed. This surgery fully decompressed the ulnar nerve. (Ex. 14, p. 290)

24. On December 7, 2018, Claimant saw Dr. Larsen, who released Claimant from care on that date. Claimant was "doing very well. He has no numbness or tingling. He had just some residual mild soreness at the elbow." (Ex. 14, p. 294) At hearing, Claimant also testified that he felt that the surgery performed by Dr. Larsen was successful, since his symptoms had been improved considerably.

25. Between being placed at MMI in August 2018 until May 7, 2019, Claimant did not see any authorized provider, including Dr. Pak, Dr. Centi, or Dr. Murray. Between August 28, 2018 until May 7, 2019 when Claimant saw Dr. Pak, no medical report contains any complaints from Claimant of increased left shoulder pain.

26. Claimant requested, and had a DIME on January 8, 2019 with Frank Polanco, M.D. Dr. Polanco stated that Claimant reached MMI on August 28, 2018. Claimant reported left shoulder pain, aching with occasional sharp pain at 3/10. Claimant reported right shoulder aching and soreness at 2/10. (Ex. A, p. 4, 5, 9)

27. At the DIME, Dr. Polanco took a history from Claimant, reviewed medical records, and conducted a medical examination. Dr. Polanco noted that Dr. Larsen performed a cubital tunnel release on October 9, 2018 which was noted to be causally related to this claim. (Ex. A, p. 4-9)

28. Dr. Polanco performed left elbow and bilateral shoulder range of motion measurements, and utilized Tables 10 and 11 of the AMA Guides, to determine Claimant's impairment ratings. He assigned 17% UE for the left shoulder, and 16% UE for the right shoulder. However, this time the DIME physician assigned a *zero* rating for the left elbow/cubital tunnel. (Ex. A, pp. 5, 9-11)

29. In his DIME report, under *Assessment*, Dr. Polanco noted four items:

1. Status post Left rotator cuff repair 5/10/17.
2. Status post right shoulder arthroscopy 11/1/17.
3. Left cubital tunnel release 10/9/18.
4. MMI 8/28/18

30. Dr. Ciccone is an orthopedic surgeon, and is Level II accredited in Colorado workers' compensation. Dr. Ciccone testified at a December 4, 2019 deposition that Dr. Polanco did not err in his medical opinion of Claimant's MMI date.

31. At hearing, Dr. Timothy Hall, Claimant's expert, termed Claimant's left ulnar nerve issue as demyelination, which occurred due to the post-op position of the arm after surgery when pressure was placed upon the nerve. Dr. Hall testified that demyelination is "the beginning of the end of the nerve." He added that if nothing had been done to Claimant's damaged left ulnar nerve, Claimant "would have lost function in his hand."

32. Dr. Hall also testified about the provocative tests he performed on Claimant's shoulders, to attempt to isolate the pathology. Dr. Hall felt like more pain was coming from the rotator cuff than the AC joint. He also testified that the 5/15/19 MRI revealed pathology in the rotator cuff, as well as degeneration of the AC joint.

Reopen; Left Shoulder Rotator Cuff Surgery

33. On May 21, 2019, while still placed at MMI, Claimant returned to Dr. Pak's office and saw Trisha Finnegan, PA. She noted Claimant had tenderness over the left AC joint. She administered a left shoulder intra-articular AC joint injection. (Ex. TT, p. 377-384)

34. Claimant saw NP Finnegan on June 21, 2019, and reported approximately 10 days relief in his symptoms from the AC joint injection; however, he now had left shoulder pain again. Dr. Pak recommended surgery of a left shoulder arthroscopy with debridement, distal clavicle excision, exploration, and possible rotator cuff repair. Claimant wanted this surgery. (Ex. 5, p. 129-30) Dr. Pak testified at this deposition that the surgical procedures he recommended included operating on the left AC joint.

35. Dr. Pak testified that the relief Claimant received from the injection in May 2019 established "there really is pathology there [at the left AC joint] that's causing part of the pain." Dr. Pak did not testify directly that the AC joint injection in May 2019 established that there was pathology in the left rotator cuff.

36. Dr. Pak testified that if the AC joint injection had not provided Claimant relief, he would have recommend injecting the subacromial space to test the rotator cuff. Dr. Pak testified he did not recommend an injection to test the rotator cuff because Claimant

“still has an AC joint problem that needs to be taken care of ...” (Pak Depo p. 30, lines 3-5)

37. Dr. Pak testified that he agreed with Dr. Ciccone that the rotator cuff portion of his recommended surgery was “exploratory”. Dr. Pak was not sure, based on his examination and the MRI, that there was an actual tear to the rotator cuff, and that the MRI results could simply be “the post-operative changes and that’s all.”

38. Dr. Pak noted that MRIs are not absolute, especially after a rotator cuff surgery, because of the interference with the signals from the anchors and other artifacts from the original surgery. He explained that an MRI has a typical resolution of about 2 to 3 millimeters, so that if the rotator cuff is partially torn more than 50%, “you to have to worry about it.” Dr. Pak testified the rotator cuff portion of the surgery would involve “going to look at, essentially, the rotator cuff ... exploring to see what that looks like.”

39. Dr. Pak made clear that Claimant has an AC joint problem that needs to be surgically addressed, regardless of the rotator cuff issue. There is no further need to perform other diagnostic tests on the rotator cuff when the AC joint will be addressed in any event. He is unable to state that the AC joint problem was due to the original work injury. In fact, he felt like it was less likely than not. He was strongly of the opinion, however, that it made no sense to subject Claimant to two surgeries (one to address the AC joint, one to address possible rotator cuff pathology) when both issues could be addressed at the same time. Dr. Pak did opine that “something changed” between when the last saw Claimant before being placed at MMI and upon seeing him again on 5/7/19.

40. Dr. Pak opined Claimant’s left shoulder rotator cuff worsened after MMI. Dr. Pak recommended left rotator cuff surgery due to this worsening. Dr. Pak did not know the reason for the worsening. Dr. Pak did not know with certainty if the worsening was related to the industrial injury. He did, however, confirm that in his opinion it was *more likely than not* that the worsening in Claimant’s left shoulder was *related* to his work injury.

41. Dr. Ciccone testified in a rebuttal deposition that Dr. Pak (who he opined is a good surgeon) did not address the AC joint when he performed the initial surgery because the AC joint was not symptomatic and was not part of the industrial injury. He went on to explain that Claimant could not use his shoulder normally because the AC joint was now inflamed and that Claimant now had impingement and some perhaps rotator cuff tendinitis because the AC joint interfered with proper shoulder mechanics. Accordingly, Dr. Ciccone attributed any worsening in Claimant’s rotator cuff to issues in the unrelated AC joint. Based on this, Dr. Ciccone opined that the requested surgery was not reasonable, necessary, and related to the industrial injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The ALJ finds that Claimant has testified sincerely and credibly, in a sincere effort to convey his symptoms to the medical providers, and the ALJ.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo.

1968). T. The ALJ finds that each expert has rendered their opinions to the best of their abilities, based upon the information they were provided. The real issue here is one of *persuasiveness*.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Overcoming the DIME Opinion on MMI, Generally

F. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*; *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 189-190 (Colo. App. 2002); *Sholund v. John Elway Dodge Arapahoe*, W.C. No. 4-522-173 (ICAO October 22, 2004); *Kreps v. United Airlines*, W.C. Nos. 4-565-545 and 4-618-577 (ICAO January 13, 2005). The MMI determination requires the DIME physician to assess, as a matter of diagnosis, whether the various components of a claimant's medical condition are casually related to the injury. *Martinez v. ICAO*, No. 06CA2673 (Colo. App. July 26, 2007). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding the cause of a particular component of a claimant's overall medical impairment, MMI or the degree of whole person impairment, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).

G. "Maximum medical improvement" is defined in Section 8-40-201(11.5), C.R.S. as:

A point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. The requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement.

H. This enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office, supra*. Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing

evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries*, WC 4-712-812 (ICAO November 21, 2008).

I. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

Overcoming the DIME on MMI, as Applied

J. In his DIME report, Dr. Polanco noted that Claimant's elbow surgery as performed by Dr. Larsen was causally related to the work injury. Further, Dr. Polanco took no (apparent) issue with Dr. Centi's impairment ratings, although there were [as is not uncommonly the case] slight differences in the ratings for Claimant's left and right shoulders. What is quite uncommonly the case, however, is for the ATP to show a left elbow impairment rating of 8%, and the DIME rating on the same elbow be reduced to zero approximately 4 months later. What changed? The ALJ finds and concludes specifically that what changed was Dr. Larsen's successful left elbow surgery a performed on Claimant on 10/9/2018 to decompress the ulnar nerve. This surgery was intended to (and did) cure and relieve Claimant from the effects of his work injury (in this case, stemming initially from his shoulder problems).

K. Dr. Centi apparently concluded that Claimant had chosen to *forego* surgery [thus effectively refusing further medical treatment], and placed him at MMI as a result. The ALJ finds that Claimant had, to that point, chosen to *defer* the proposed elbow surgery, despite his ongoing symptoms, until he became comfortable with his shoulder symptoms first. The ALJ finds Claimant's reticence to move prematurely to have been reasonable. Shortly after he was placed at MMI by Dr. Centi, Claimant determined that it was indeed time to move on the elbow situation. And so he did, and successfully.

L. Respondents argue that Dr. Larsen's 10/9/2018 surgery amounted to mere *maintenance care*. The ALJ does not concur. Mere maintenance care does not bring one from 8% impairment to zero in the span of 4 months. The ALJ finds that Claimant was not at MMI until he was released by Dr. Larsen in 12/7/2018. By extension, the ALJ finds, by clear and convincing evidence, that Dr. Polanco's MMI date of 8/28/2018 was highly probably incorrect. Claimant was never at MMI until he was

released by Dr. Larsen, and that is the date Dr. Polanco should have used in his DIME report.

Reopening due to Worsening of Condition, Generally

M. Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen, Claimant shoulders the burden of proving his condition has changed and that she is entitled to benefits by a preponderance of the evidence. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Industrial Claim Appeals Office*, 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo*, W.C. No. 4-358-465 (ICAO, Oct. 25, 2006). Reopening is warranted if the Claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office*, 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.*, 765 P.2d 1033 (Colo. App. 1988). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen*, W.C. No. 4-543-945 (ICAO, July 19, 2004).

Reopening, as Applied

N. Dr. Pak has opined that the Claimant's left shoulder condition has worsened. His records reflect that the Claimant's symptoms have now worsened to the same level as before the initial rotator cuff surgery. Upon his return to Dr. Pak on 5/7/19, the Claimant complained of sharp, aching, dull, burning and tingling mostly about the posterior lateral and superior aspects of his shoulder at a level of 3 to 7 out of 10. At the point of MMI by Dr. Centi, the Claimant had pain, but it was no more than a 3 out of 10 level. Dr. Ciccone also agrees the Claimant's left shoulder symptoms have worsened. He simply disagrees as to what is causing those symptoms. Dr. Hall's IME also reflects that the Claimant's condition has worsened. Claimant has proven by a preponderance of the evidence that his condition has worsened since being placed at MMI, and that his claim should be reopened. He is, therefore, entitled to all medical treatment that is reasonable, necessary, and related to his original work injury.

Reasonable, Necessary, and Related Shoulder Surgery

O. Here, the parties disagree is whether the surgery recommended by Dr. Pak is "related" to the industrial injury of 1/10/17. They both agree that surgery to the shoulder is now reasonable and necessary-at least as to the AC joint. Dr. Pak agrees that the current AC joint pathology is likely *not related* to the work injury. Both Dr. Pak and Dr. Ciccone acknowledge that MRIs of post-surgical (rotator cuff repair) shoulders are not exceptionally clear due to the metal which is used to reattach the tissues while

repairing the rotator cuff. Dr. Pak testified that the MRI showed about a 50% tear in the footprint where the cuff was repaired. According to Dr. Pak, that is right on the line whether one needs additional surgery to make sure that there is not additional tearing or other pathology of the rotator cuff. Dr. Pak testified that many times once he opens the shoulder up, he finds more tearing at the footprint of the previous surgery than is shown on the MRI.

P. Dr. Pak and Dr. Ciccone's examination findings bear some similarities. Dr. Hall's examination revealed even fewer AC joint symptoms than that of Dr. Pak and Dr. Ciccone. Dr. Hall opined that more of Claimant's pain was coming from the rotator cuff than the AC joint, despite their very close proximity in the shoulder joint. There is clear evidence of AC joint degeneration in Claimant's shoulder; however, the exams performed by Dr. Pak, Dr. Ciccone and Dr. Hall each reveal rotator cuff impingement signs as well. The fact that Dr. Pak cannot be completely sure of whether there is additional rotator cuff tearing (due to poor quality of MRI post-surgery) should not be a reason that Dr. Pak's surgery is unreasonable (purely exploratory) or unrelated to the original injury. The Claimant's testimony that he has had worsening pain in the front and side of his shoulder and that the symptoms he has now are much like those he had before his first rotator cuff repair is credible.

Q. Drs. Pak and Hall's explanation for Dr. Pak's recommendation of a second surgery and its relatedness to the original industrial injury is supported by significant evidence. Dr. Pak (who has, after all, treated Claimant extensively) feels that the worsening of Claimant's condition is more likely than not related to his work injury. He did not recommend a further battery of tests in an attempt to further isolate Claimant's rotator cuff pathology in particular, since the AC joint needs surgery anyway. It certainly makes no medical sense (and the ALJ concurs) to subject Claimant to two separate surgeries, mere millimeters apart, just to sort out who pays for what.

R. Claimant has shown - not with great certainty, but by a preponderance of the evidence - that examining his rotator cuff (in person, as it were) for possible repair by Dr. Pak is reasonable, necessary, and related to his original work injury. That opinion, and that of Dr. Hall is more persuasive than Dr. Ciccone's opinion to the contrary. Rotator cuff surgery is to be paid by Respondents according to the fee schedule set by the Division of Workers Compensation. Additional service to the AC joint has not been shown to be related to the work injury; however, if legal authority (not cited by the parties herein) exists to order payment for the full procedure as recommended by Dr. Pak, it should be ordered. Absent such authority, the parties should take all reasonable steps to assure that all necessary repairs to Claimant's shoulder be accomplished in one surgical procedure.

ORDER

It is therefore Ordered that:

1. The DIME physician's opinion on MMI has been overcome. The date of MMI is December 7, 2018. Respondents shall pay temporary disability payments in accordance with this MMI date.
2. Claimant has suffered a worsening of his left shoulder condition sufficient to reopen his case.
3. Respondents shall pay for the surgery as proposed by Dr. Pak to examine and repair Claimant's left rotator cuff according to the fee schedule. All efforts are to be made by the parties to assure that all recommended repairs to Claimant's left shoulder are performed in one surgery.
4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: July 22, 2020

/s/ William G. Edie

2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on December 17, 2018, he suffered an injury arising out of and in the course and scope of his employment with the employer.

2. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that the claimant is entitled to temporary total disability (TTD) benefits beginning November 21, 2019 and ongoing.

3. If the claimant is awarded TTD benefits, whether the respondents have demonstrated, by a preponderance of the evidence, that the claimant is responsible for his termination of employment.

4. The issues of reasonable, necessary, and related medical benefits and temporary partial disability (TPD) benefits were endorsed for hearing. At hearing, the parties agreed to reserve those issues for future determination.

FINDINGS OF FACT

1. The claimant began working for the employer in 2014. The claimant began as an installer, installing insulation. At some point after 2014, he began working in the employer's warehouse. The claimant's job duties included organizing the warehouse, lifting bags of insulation, moving scaffolding, and shelving rolls of plastic.

2. The claimant and his direct supervisor, Mr. C[Redacted], provided conflicting testimony regarding a December 17, 2018 incident and their related discussions. The ALJ has included both versions below.

3. The claimant testified that while at work on December 17, 2018, he slipped on ice and fell. The claimant testified that he slipped while walking between the employer's buildings with his supervisor, Mr. C[Redacted]. The claimant further testified that when he slipped he fell backwards and landed on cement and immediately had back pain. The claimant asserts that he asked his supervisor to let him seek medical treatment, but his supervisor told him to take pain medication. The claimant continued working on that date. The claimant testified that he worked, but he was in pain. The claimant worked his normal job duties from December 15, 2018 until November 21, 2019.

4. Mr. C[Redacted] testified that he did not see the claimant slip and fall on December 15, 2018. It is Mr. C[Redacted]' testimony that he was in the warehouse when the claimant limped in and stated that he "almost fell". Mr. C[Redacted] testified that the claimant did not appear to be in pain on that date or thereafter. The claimant did not say anything about being injured until "the middle of" 2019. At that time, the claimant reported to Mr. C[Redacted] that he had a burning sensation in his leg and his buttocks.

5. The claimant testified that following the December 17, 2018 incident, he experienced a worsening of his symptoms. Despite this worsening, the claimant continued to work full duty.

6. On October 10, 2019, the claimant sought medical treatment at Vail Health and was seen by Dr. Joshua Rusk. At that time, the claimant reported left lower extremity pain. Dr. Rusk diagnosed sciatica and ordered an x-ray of the claimant's lumbosacral spine. The x-ray was performed on that same date and showed no evidence of fracture, dislocation, spondylolisthesis, or significant degenerative change.

7. On October 18, 2019, the claimant returned to Vail Health and was seen in the emergency department by Dr. Gayle Braunholtz. The claimant reported pain that began in his buttocks and radiated into his left knee and lateral calf. The claimant told Dr. Braunholtz that he had experienced this pain on and off for one year, following a slip on ice, while working. However, the claimant noted that while his prior pain had been intermittent, his pain on October 18, 2019 was constant. Dr. Braunholtz diagnosed lumbago and ordered a magnetic resonance image (MRI) of the claimant's lumbar spine.

8. On October 21, 2019, an MRI of the claimant's lumbar spine showed a subarticular disc protrusion at the left L5-S1 level that narrowed the left lateral recess and displaced the descending left S1 nerve root. The radiologist noted that this disc protrusion was new when compared to a 2012 MRI. It was also noted that there were mild degenerative changes that were unchanged from 2012.

9. With regard to the 2012 MRI, the claimant testified that he injured his back while working for another employer in 2012. The claimant testified that the 2012 injury occurred when he fell off of a ladder. Surgery was recommended for the claimant following that 2012 injury. The claimant testified that he chose not to undergo surgery because he understood that it could possibly make him worse.

10. On October 29, 2019, the claimant was seen at Vail Summit Orthopaedics and Neurosurgery by Dr. Scott Raub. The claimant sought treatment with Dr. Raub because he had previously treated the claimant in 2012. On October 29, 2019, the claimant reported to Dr. Raub that he slipped on ice approximately one year prior. The claimant clarified that he did not fall at that time, but "jarred his body" and began to feel pain in his posterior left thigh and left calf. The claimant also reported that approximately one month prior to seeing Dr. Raub, his symptoms increased significantly and became constant. Dr. Raub diagnosed lumbosacral radiculopathy and recommended a left S1 transforaminal epidural steroid injection (TFESI). Dr. Raub also noted that due to the size of the disc protrusion at the L5-S1 level, the claimant could be a surgical candidate.

11. On October 30, 2019, the claimant returned to Vail Summit Orthopaedics and Neurosurgery and was seen by Dr. Ernest Braxton. At that time, the claimant reported that he was injured at work four weeks prior. Dr. Braxton diagnosed lumbosacral disc herniation, radiculopathy, and stenosis. Dr. Braxton recommended the claimant undergo a left L5-S1 microdiscectomy for resection of the herniated disc. On October 20, 2019, Dr. Braxton administered a caudal epidural steroid injection to help alleviate the claimant's symptoms until surgery could be performed.

12. Mr. C[Redacted] testified that in October or November 2019, that the claimant reported to Mr. C[Redacted] that his leg and buttocks pain was related to the December 2018 incident. Mr. C[Redacted] testified that once the claimant stated the relatedness to the 2018 incident, he offered to write an incident report. However, the claimant declined because he wanted to first see what his doctor advised. Subsequently, the claimant reported to Mr. C[Redacted] that his doctor was recommending surgery. The claimant asked if the employer would pay his deductible so that he could undergo the surgery.

13. The parties agree that the claimant's employment ended on November 21, 2019. The claimant testified that he did not "quit" his employment, but left because he could not perform his job duties due to his pain. On that date, the claimant informed his coworker, Andres M[Redacted], that he could no longer perform his job.

14. Mr. C[Redacted] testified that when the employer did not address the claimant's request to pay the deductible for the surgery, he was upset. Mr. C[Redacted] learned from Mr. M[Redacted] that the claimant quit. The claimant did not speak with Mr. C[Redacted] regarding his reasons for quitting.

15. On May 5, 2020, the claimant attended an independent medical examination (IME) with Dr. John Burriss. In connection with the IME, Dr. Burriss reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Burriss opined that the claimant's leg and back pain is due to lumbar degenerative disc disease, most prominent at the L5-S1 level. Dr. Burriss also opined that the cause of these symptoms is the natural progression of degenerative disc disease, and not due to a fall in December 2018.

16. On May 15, 2020, Dr. Burriss authored an addendum to his IME report after his review of additional medical records. In that addendum, Dr. Burriss noted that the additional records confirm the existence of a preexisting lumbar degenerative disc disease. Dr. Burriss reiterated his opinion that the claimant's lumbar condition was not causally related to the December 17, 2018 incident, but is due to the natural progression of his preexisting condition. Dr. Burriss' testimony by deposition was consistent with his written reports.

17. The ALJ finds that the claimant's current symptoms did not arise from the December 17, 2018 ice slipping incident. The ALJ is not persuaded that the claimant's current symptoms and condition in October of 2019 arose from the December 17, 2018 ice slipping incident.

18. The ALJ credits the testimony of Mr. C[Redacted], the medical records, and the opinions of Dr. Burriss. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that he suffered an injury at work on December 17, 2018 that necessitated medical treatment. The claimant has also failed to demonstrate that it is more likely than not that the slip on the ice on December 17, 2018, aggravated, accelerated, or combined with the claimant's preexisting condition to necessitate treatment.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” *See H & H Warehouse v. Vicory, supra*.

5. As found, the claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable work injury on December 17, 2018. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the on December 17, 2018 incident aggravated, accelerated, or combined with claimant’s preexisting condition to necessitate medical treatment. As found, the testimony of Mr. C[Redacted], the medical records, and the opinions of Dr. Burris are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits is denied and dismissed.

Dated this 23rd day of July 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-130-161-001**

ISSUES

- Did Claimant prove he suffered a compensable injury on February 4, 2020?
If Claimant proved a compensable injury, the ALJ will address the following issues:
- Did Claimant have the right to select his own treating physician?
- Was the medical treatment Claimant received for his injury reasonably necessary and authorized?
- What is Claimant's average weekly wage (AWW)?
- Did Claimant prove entitlement to TTD benefits from February 4, 2020 ongoing?
- Did Respondents prove Claimant was responsible for termination of his employment?
- Did Respondents prove entitlement to an offset for Claimant's union disability benefits?

FINDINGS OF FACT

1. Claimant works for Employer as a journeyman pipefitter. His duties include welding, wrenching, fabricating, and installing pipes. The work was physically demanding and required frequent heavy lifting and frequent use of his upper extremities. In February 2020, Claimant was working on site for Collins Aerospace. Employer was a subcontractor for Collins Aerospace.

2. Claimant's regular schedule was 6:00 AM to 2:30 PM, with a thirty-minute lunch break. Claimant is conscientious about tardiness and typically arrived at the job site between 5:25 AM and 5:30 AM. Other co-workers usually arrived between 5:30 AM and 5:40 AM. Employer never admonished the workers for arriving early. To the contrary, Claimant has the impression Employer appreciated everyone arriving early and being ready to start work promptly at 6:00 AM.

3. Claimant parked his vehicle in a designated lot reserved for subcontractors. Employer did not own the parking lot, but its employees accessed the lot with a key card provided by the general contractor. Claimant usually brought a lunch to work because there are few convenient or quick food options nearby and he did not want to risk returning late from his relatively short lunch break.

4. The general contractor allowed Employer's employees to use part of one of its buildings as a lunchroom. After arriving at work, Claimant routinely put his lunch in the

lunchroom refrigerator. He would then return to his vehicle to wait until approximately 5:50 AM before walking to the “gang box” to receive his assignment for the day. Many of Claimant’s co-workers stored their lunches in the lunchroom too.

5. Claimant was not paid for any time on site before his shift started at 6:00.

6. On February 4, 2020, Claimant entered the lunchroom to store his lunch as usual. Upon entering the lunchroom, he slipped and fell on the linoleum floor. It had snowed that morning and Claimant either slipped because of water on the floor, water on his shoes, or both.

7. When he fell, Claimant heard and felt a pop in his left elbow and felt immediate severe pain. He went back to his vehicle and waited for his foreman to arrive so he could report the injury. Claimant recalls he was sweating despite the cold because the pain was so bad.

8. Claimant’s supervisor, Will P[Redacted], arrived shortly before 6:00 AM. Claimant described the incident to Mr. P[Redacted] and said he needed immediate treatment. The facility has on-site EMTs, but they had not arrived by that time. Claimant did not feel he could wait because the pain was so severe, so he told Mr. P[Redacted] he would go to the Parkview Hospital emergency room. Mr. P[Redacted] gave no specific instructions regarding where to seek treatment.

9. While at Parkview, Claimant received a text message from Mr. P[Redacted] advising this claim was being denied and he should go to an urgent care facility where the cost of treatment would be cheaper. Because Claimant was already at the hospital, in severe pain, and concerned the injury might be too serious for an urgent care clinic, he decided to stay at Parkview.

10. The ER records document Claimant’s pain was primarily in his left upper arm around the elbow with associated paresthesias. Claimant also reported “he has started to develop a tight sensation in his neck and shoulders.” X-rays suggested a radial head fracture, but a CT scan showed no fracture. Claimant was discharged and advised to follow-up with his primary care physician if his pain persisted.

11. Receiving no further direction from Employer, Claimant saw his PCP, Dr. Rochelle Elijah, who referred him to Dr. Karl Larsen, an orthopedist.

12. Claimant saw Dr. Larsen’s physician’s assistant, Stephanie Noble, at his initial appointment on February 10, 2020. He explained, “he went early in to work to put his lunch away and get the day started when he slipped on the lunchroom floor and fell directly onto his left elbow. He felt a pop.” Besides ongoing left arm pain, he reported some neck and back pain. PA-C Noble ordered an “urgent” MRI, which was completed the same day.

13. Claimant met with Dr. Larsen later that day to review the MRI. It showed a high-grade rupture of the triceps tendon. Dr. Larsen informed Claimant “this is of such significance that it needs to be repaired.” He further noted, “recovery from triceps tendon

repairs can be very lengthy, and given his high-demand physical work, especially with overhead lifting activities, I suspect it will be at least three months before he would be able to return to work after that, possibly longer and would not truthfully be able to lift unrestricted overhead until he is about six months postop.”

14. Dr. Larsen performed a left distal triceps tendon repair on February 20, 2020 at Surgical Center of the Rockies.

15. On March 30, 2020, Dr. Larsen documented persistent numbness and tingling in Claimant’s fingers that started after the accident. The numbness was previously in an ulnar distribution, but now was affecting the other fingers too. Dr. Larsen ordered an EMG to check for nerve compression or other neurological lesion.

16. Claimant saw Dr. John Raschbacher for an IME at Respondents’ request on April 24, 2020. Claimant was still wearing a hinged elbow brace and slowly progressing with post-surgical rehab. He thought his range of motion was “on track” and slowly getting better. Claimant described numbness and tingling primarily in an ulnar distribution, although it also affected his index finger. He recently had the EMG and was told it showed nerve damage at the elbow and carpal tunnel syndrome at the wrist. Claimant’s initial neck and upper back symptoms had improved, and he perceived no current need for treatment to any body parts other than his left arm. Dr. Raschbacher concluded Claimant’s left elbow and triceps injury resulted directly from his fall at work and the treatment he received was appropriate. He further opined, “depending on the EMG and nerve conduction study results and progress over the next couple months, the question of whether or not there will be a peripheral nerve problem or injury that demands treatment is a possibility.” He thought a five-pound lifting restriction was appropriate.

17. Dr. Raschbacher testified Claimant presented as straightforward and forthright with no suggestion of exaggeration or embellishment. That assessment matches the ALJ’s impression of Claimant at hearing. Claimant’s testimony was credible and persuasive.

18. Claimant proved he suffered a compensable injury arising out of and in the course and scope of his employment. Even though he was not “on the clock” performing any specific work duty at the time of the accident, putting his lunch away in the lunchroom was sufficiently interrelated with his job duties to be considered an incident of his employment.

19. The treatment at the Parkview Hospital emergency department on February 4, 2020 was reasonably necessary emergent treatment for the compensable injury.

20. Employer did not provide Claimant a list of designated providers or otherwise exercise its right to select the treating physician. The right of selection passed to Claimant and he selected Dr. Elijah, who referred him to Dr. Larsen. Dr. Elijah and Dr. Larsen are authorized.

21. The evaluations and treatment provided by Dr. Elijah and Dr. Larsen, including the February 20, 2020 surgery, were reasonably necessary to cure and relieve the effects of Claimant's compensable injury.

22. Claimant was disabled from his physically demanding job by the effects of the injury and suffered an injury-related wage loss commencing February 4, 2020. As of the hearing, he had not returned to work, been released to regular duty, or put at MMI by any ATP.

23. Respondents argued at hearing Claimant was responsible for termination of his employment. Claimant believes he is still an employee of Employer. He has remained in contact with Mr. P[Redacted], who has indicated "we would love to have you back" when he is released to return to work. No persuasive evidence was presented that Claimant was terminated or quit his job. Even if he were considered terminated but eligible for rehire, there is no persuasive evidence of any noninjury-related reason for separation from his employment. Respondents' post-hearing brief does not mention the issue and it appears the defense has been abandoned.

24. Claimant has received approximately \$1,500 in disability benefits from his union, based on a rate of \$138.52 per week. There is no persuasive evidence Employer paid any premiums or otherwise or contributed to the cost of the disability policy. Respondents failed to prove an offset against TTD benefits.

25. Claimant was generally scheduled to work 40 hours per week but occasionally worked less than 40 hours. The record contains wage records showing his earnings in November 2019 through January 2020. Claimant argues those months do not accurately reflect his average earnings because he took a vacation, missed some time due to illness, and took some time off for the holidays. The wage records for that period show one week around Thanksgiving where he worked only three days (11/29/2019), and one week where he had no earnings (12/6/2019). Claimant did not identify specific days he missed, but the ALJ infers the 11/29/2019 and 12/6/2019 pay periods correspond to the referenced vacation, holiday, and illness. The fairest way to account for these distorting factors is to exclude those two weeks from the calculation.

26. Claimant's AWW is \$1,383.89, based on his twelve paychecks from November 2019 through January 2020:

| <u>Check Date</u> | <u>Gross wages</u> |
|-------------------|--------------------|
| 11/1/2019 | \$1,534.00 |
| 11/8/2019 | \$1,150.50 |
| 11/15/2019 | \$1,150.50 |
| 11/22/2019 | \$1,609.05 |
| 12/13/2019 | \$1,534.00 |
| 12/20/2019 | \$1,227.20 |
| 12/27/2019 | \$1,227.20 |
| 1/10/2020 | \$1,489.00 |

| | |
|-------------|-------------------|
| 1/17/2020 | \$1,390.00 |
| 1/24/2020 | \$1,227.20 |
| 1/31/2020 | \$1,534.00 |
| 2/7/2020 | \$1,534.00 |
| <hr/> | |
| Total: | \$16,606.65 |
| No. weeks: | 12 |
| AWW: | \$1,383.89 |

CONCLUSIONS OF LAW

A. Compensability

To establish a compensable claim, a claimant must prove he suffered an injury arising out of and in the course of his employment. Section 8-41-301(1)(b); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally, for either claimant or respondents. Section 8-43-201.

There is no question Claimant suffered a significant injury when he fell on February 4, 2020. But Respondents deny the injury occurred while performing service arising out of and in the course of his employment.

The terms "arising out of" and "in the course of" are not synonymous. The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" is narrower and requires an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001).

The claimant need not actually be performing work duties at the time of the injury, nor must the activity be a strict employment requirement or confer an express benefit on the employer. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). "Many job functions involve discretionary or optional activities on the part of the employee, devoid of any duty component and unrelated to any specific benefit to the employer, but nonetheless sufficiently incidental to the work itself as to be properly considered as arising out of and in the course of employment." *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The ultimate question is whether the activity is sufficiently "interrelated to the conditions and circumstances under which the employee generally performs the job

functions that the activity may reasonably be characterized as an incident of employment.” *Price, supra* at 210.

As found, Claimant proved his injury arose out of and occurred within the course and scope of his employment. The act of putting his lunch away in the designated lunchroom is sufficiently interrelated to the conditions and circumstances of his job to reasonably be considered incidental to his employment. Storing lunches in the lunchroom was a common practice among Claimant and his co-workers. Taking a break to eat is a near universal activity for full-time workers, and access to the lunchroom provided mutual benefits to Claimant and Employer. Even though Claimant did not have to bring a lunch, it was certainly reasonable for him to do so given the dearth of nearby food options and the short lunch break. As Claimant explained, other employees sometimes left for lunch a few minutes early or were late returning, neither of which he considered appropriate. Employer benefitted from having its employees on time and working throughout their scheduled shift. Access to the lunchroom was a fringe benefit to Claimant since he did not have to store food in his vehicle where it could freeze in the winter or spoil in the summer.

The fact Claimant arrived at work early does not change the outcome. A claimant need not be “on the clock” to suffer a compensable injury, and the “time limits” of employment include a reasonable interval before and after official working hours when the employee is on the employer’s property. *E.g., Ventura v. Albertson’s Inc.*, 856 P.2d 35 (Colo. App. 1992) (injury was compensable even though employee had already clocked out for the day); *Industrial Commission v. Hayden Coal Co.*, 155 P.2d 158 (Colo. 1944) (interval up to 35 minutes has been allowed for arrival and departure from work). Claimant had no personal or nonwork-related reason for being in that location at that time. Rather, he routinely arrived at work early because he is a conscientious employee who does not want to risk being late. It would be incongruous to penalize him for a behavior Employer appreciated.

Nor is it dispositive that Employer did not own the building in which the lunchroom was located. There is no strict requirement that an employee’s injury occur on property “owned, maintained, or controlled by the employer.” *Woodruff World Travel, Inc. v. Industrial Commission*, 554 P.2d 705 (Colo. App. 1976). In *Woodruff*, the court deemed it sufficient that the property was provided for employees to use, the employer was aware its employees used the property, and the property “constituted an obvious fringe benefit to claimant.” *Id.* at 94-95. Although *Woodruff* dealt with a parking lot, its rationale applies equally well to the lunchroom here.

B. Medical benefits

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

Besides proving treatment is reasonably necessary, the claimant must prove the provider is “authorized.” *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). Authorization refers to a provider’s legal right to treat the claimant at the respondents’ expense. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993). Providers typically become authorized by the initial selection of a treating physician, agreement of the parties, or upon referrals made in the “normal progression of authorized treatment.” *Bestway Concrete v Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

Under § 8-43-404(5), the employer has the right to choose the treating physician in the first instance. The employer must tender medical treatment “forthwith,” or the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). To properly exercise its right of selection, the employer must give the claimant a list of at least four providers from which he can choose. Section 8-43-404(5)(a)(I)(A).

Employer never referred Claimant to a physician. Mr. P[Redacted] suggested Claimant go to an urgent care clinic instead of the emergency room, but that was based on the understanding Claimant would have to pay for treatment himself. In any event, Employer did not provide a list of designated providers. Accordingly, the right of selection passed to Claimant. He chose Dr. Elijah, who referred him to Dr. Larsen. Both physicians are authorized and the treatment they provided was reasonably needed to cure and relieve the effects of Claimant’s compensable injury.

Treatment received on an emergency basis is deemed authorized without regard to whether the claimant had prior approval from the employer or a referral. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990); see also WCRP 8-2. The emergency exception is not necessarily limited to life-threatening situations, and whether a “bona fide emergency” existed is a question of fact for the ALJ to be determined based on the circumstances. *Hoffman v. Wal-Mart Stores*, W.C. No. 4-774-720 (January 12, 2010). As found, Claimant’s treatment at the Parkview Hospital emergency department on July 3, 2019 was reasonably necessary emergency treatment for his injury.

C. Temporary total disability (TTD) benefits

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function, and (2) impairment of wage-earning capacity as demonstrated by claimant’s inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999).

As found, Claimant was disabled and suffered a wage loss commencing February 4, 2020. It would have been impossible for Claimant to perform his physically demanding job given the severe injury to his left arm.

D. Responsibility for termination

Sections 8-42-103(1)(g) and 8-42-105(4)(a) provide, “In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury.” The respondents must prove by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised “some degree of control over the circumstances which led to the termination.” *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988).

There is no persuasive evidence Claimant has been terminated, much less that he performed any volitional act to make him “responsible for termination” within the meaning of the statute. Claimant has been off work solely because of his injury.

E. Average weekly wage

Section 8-42-102(2) provides compensation shall be based on the employee’s average weekly earnings “at the time of the injury.” The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to “fairly” calculate the employee’s AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a “fair approximation” of the claimant’s actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993).

As found, Claimant’s AWW is \$1,383.89, based on the twelve paychecks he received from November 2019 through January 2020. This computational method adequately accounts for the distorting effects of “one off” factors such as a vacation and illness. This AWW corresponds to a TTD rate of \$922.59 ($\$1,383.89 \times 2/3 = \922.59).

F. Offset for disability benefits

Section 8-42-103(1)(d)(I) provides the respondents an offset against TTD benefits for disability benefits payable to an employee “under a pension or disability plan financed in whole or in part by the employer.” Here, there is no persuasive evidence Employer contributed to the disability benefits Claimant received through his union. Respondents failed to prove entitlement to an offset.

ORDER

It is therefore ordered that:

1. Claimant's injury of February 4, 2020 is compensable.
2. Insurer shall cover all reasonably necessary treatment from authorized providers to cure and relieve the effects of Claimant's compensable injury, including, but not limited to, treatment from Dr. Elijah, Dr. Larsen, Surgical Center of the Rockies, and Parkview Hospital.
3. Claimant's AWW is \$1,383.89, with a corresponding TTD rate of \$922.59.
4. Insurer shall pay Claimant TTD benefits at the rate of \$922.59 per week, commencing February 4, 2020 and continuing until terminated by law.
5. Insurer shall pay Claimant statutory interest of 8% per annum on all indemnity benefits not paid when due.
6. Respondents' defense that Claimant was responsible for termination of his employment is denied and dismissed.
7. Respondents' request for an offset based on Claimant's receipt of disability benefits through his union is denied and dismissed.
8. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-059-514-001**

ISSUE

1. Whether Respondents established, by a preponderance of the evidence, that Claimant's October 10, 2017 industrial injury resulted from Claimant's willful failure to obey a reasonable rule adopted by Employer for the safety of the employee.

FINDINGS OF FACT

1. Claimant is a 65-year-old man who was employed by Employer beginning on October 9, 2017 as a Lead Fulfillment Associate.
2. Respondents filed a General Admission of Liability on October 26, 2017, (Ex. A) admitting Claimant was injured on October 10, 2017, with an average weekly wage of \$576. Liability was admitted for medical benefits and temporary total disability commencing on October 11, 2017 and ongoing at the rate of \$384 per week but a Safety Rule Violation was claimed with the TTD rate reduced by 50% to \$192 per week.
3. On October 9, 2017, Claimant underwent classroom training regarding, among other things, the operation of powered industrial trucks ("PITs").
4. Employer's PIT Safety Rules included the following rule regarding "Equipment Safety": "When operating PIT the operator must always remain within the confines of the operator compartment or platform. PIT operators are never to extend their hands, feet or any body part outside of the PIT while in operation." (Ex. 9).
5. Claimant received Employer's PIT Safety Rules, acknowledged receipt of the rules in writing, and passed a written quiz regarding PIT Safety Rules.
6. The Acknowledgement Form Claimant signed on October 9, 2017 indicated Claimant understood and would comply with all Amazon PIT Operational Rules and Guidelines. (Ex. 9).
7. On October 10, 2017, Claimant received practical training on the operation of the PIT, and specifically a stand-up forklift.
8. Before October 10, 2017, Claimant had not operated a PIT.
9. During his practical training, Claimant was instructed to attempt to operate the PIT through different maneuvers. After conducting basic operations, Claimant was instructed to operate the PIT in a counterclockwise circle.
10. While conducting the counterclockwise circle maneuver, Claimant was concentrating on the PIT's controls. At some point Claimant looked up and saw the PIT

was about to hit a concrete wall. Claimant took his hands off the PIT controls, but the PIT's forward momentum caused it to continue toward the concrete wall.

11. As the PIT approached the concrete wall, Claimant reflexively raised his left arm to try to protect himself. As a result, Claimant's his left hand was outside the confines of the PIT operator compartment and was crushed between the PIT and the wall. In extracting his hand, Claimant sustained a de-gloving injury to his left hand and injury to his left shoulder.

12. Other than extending his hand in a protective gesture, Claimant did not operate the PIT with his hand outside the operator compartment.

13. Respondents offered no testimony refuting Claimant's account of the incident leading to his injury. Respondents' Exhibit N, a video of the incident, does not demonstrate that Claimant willfully had any body parts outside of the confines of the operator compartment of the PIT he was operating.

14. Claimant's testimony concerning the events of October 10, 2017 is credible and undisputed.

15. The ALJ finds that Claimant did not willfully or deliberately place his hand outside the confines of the PIT operator compartment and that extending his left hand was an instinctive reflex without conscious thought.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony

is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Safety Rule Violation

Section 8-42-112(1)(b), C.R.S. authorizes a fifty percent reduction in compensation for an employee's "willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." "Under § 8-42-112(1)(b) it is the respondents' burden to prove every element justifying a reduction in compensation for willful failure to obey a reasonable safety rule." *Horton v. Swift and Company*, W.C. No. 4-779-078 (ICAO, Apr. 21, 2010). "The term 'willful' connotes deliberate intent, but mere carelessness, negligence, forgetfulness, remissness or oversight does not satisfy the statutory standard." *In re Claim of Goddard*, W.C. 4-919-196-02 (ICAO, Sep. 19, 2016), citing *Bennett Properties Co. v. Industrial Commission*, 437 P.2d 548 (Colo. 1968). Willful conduct may be proven by circumstantial evidence including evidence of frequent warnings, the obviousness of the risk, and the extent of deliberation evidenced by claimant's conduct. See *In re Heien*; W.C. No. 5-059-799-01 (ICAO, Nov. 29, 2018).

Respondents need not establish that an employee had the safety rule in mind and decided to break it. *In re Alvarado*, W.C. No. 4-559-275 (ICAO, Dec. 10, 2003). Rather, it is sufficient to show the employee knew the rule and deliberately performed the forbidden act. *Id.* "Willfulness" also does not encompass "the negligent deviation from safe conduct dictated by common sense." *In re Gutierrez*, W.C. No. 4-561-352 (ICAO, Apr. 29, 2004). Generally, an employee's violation of a rule to facilitate the accomplishment of the employer's business does not constitute willful misconduct. *Grose v. Rivera Electric*, W.C. No. 4-418-465 (ICAO, Aug. 25, 2000). Whether an employee has deliberately violated a safety rule is a question of fact to be determined by the ALJ. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715, 719 (Colo. App. 1995).

Respondents have failed to establish that Claimant's industrial injury resulted from Claimant's willful failure to obey a reasonable rule adopted by Employer for the safety of the employee. The Workers' Compensation Act requires that a Claimant's violation of a safety rule be "willful." Claimant had no experience operating a PIT prior to October 10, 2017. During his initial practical training, Claimant inadvertently caused the PIT he was attempting to operate to collide with a wall in Employer's facility. Claimant's instinct was to extend his arm to protect himself. This was a natural reflex reaction that Claimant did not deliberately perform. The evidence does not demonstrate that Claimant "deliberately" or "willfully" extended his left hand beyond the confines of the PIT's operator

compartment. Thus, although Claimant's action technically was not in compliance with Employer's safety rule, the noncompliance was not willful.

ORDER

It is therefore ordered that:

1. Respondents are not entitled to reduce Claimant's temporary or permanent compensation or benefits by 50% for any alleged safety rule violation. Respondents' claims for a reduction are denied and dismissed.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: July 23, 2020.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-121-498-002**

ISSUE

1. Whether Claimant has established, by a preponderance of the evidence, entitlement to temporary disability benefits from November 4, 2019 and ongoing until terminated by statute.
2. Whether Respondents established, by a preponderance of the evidence, that Claimant was responsible for termination of his employment on or about November 4, 2019 and the resulting wage loss from his termination.

STIPULATIONS

1. The date of injury was September 26, 2019.
2. Claimant's Average Weekly Wage is \$817.25 for a TTD rate of \$544.83.

FINDINGS OF FACT

1. Claimant is a 31-year-old male who worked for Employer as a dry case selector beginning on September 20, 2018. Claimant's work schedule was Sunday through Thursday of each week, and Claimant's daily work shift started at 9:00 a.m.
2. On September 26, 2019, Claimant sustained an admitted industrial injury to his lumbar spine while loading a pallet.
3. Respondents presented testimony from Melissa Y[Redacted], the human resources director for Employer's Aurora distribution center where Claimant worked. Ms. Y[Redacted] testified that Employer instituted a new attendance policy which included a "point system" for employee absences in April 2019 (the "Attendance Policy"). The Attendance Policy in effect at the time of Claimant's industrial injury was, by its terms, effective April 28, 2019. Claimant signed a document acknowledging receipt of the Attendance Policy on April 17, 2019. (Ex. C).
4. Ms. Y[Redacted] testified that upon institution of Employer's Attendance Policy, employees' prior attendance records were expunged, and prior attendance issues were not thereafter considered toward potential disciplinary action.
5. Under the Attendance Policy, employees received "points" for unexcused absences and tardiness. The Attendance Policy provides that a "combination of eight (8) occurrences including absences, tardy or early leaves in a consecutive twelve (12) month period will result in termination of employment." (Ex. C). Ms. Y[Redacted] testified the accumulation of 8 points by an Employee was grounds for termination.

6. The Attendance Policy provides that “Employees prevented from coming to work or delayed in getting to work must call their supervisor/manager at least one hour prior to their scheduled start time. In Distribution Centers where there is a Sick Hotline, the call should be made at least one hour prior to the scheduled start time.” (Ex. C).
7. The Attendance Policy does not provide instruction to employees regarding reporting procedures for attending medical visits related to industrial injuries.
8. Prior to his industrial injury, Claimant had a significant history of attendance issues. Between June 26, 2019 and September 8, 2019, Employer provided Claimant with various “Corrective Action” forms for attendance and tardiness issues. As of September 8, 2019, Claimant had accumulated 8.5 points under the Attendance Policy. (Ex. C).
9. Although Claimant had accumulated more than 8 points, Employer did not terminate Claimant on September 8, 2019, and chose not to enforce the Attendance Policy. The September 8, 2019 Corrective Action Form advised Claimant “to avoid further disciplinary actions, please make a more conscious effort to arrive to work on time, when scheduled.” (Ex. C).
10. Ms. Y[Redacted] testified that Employer had a “standard practice” applicable to employees who suffered workplace injuries. Ms. Y[Redacted] testified it was standard practice for employees, who had workplace-injury-related appointments during their scheduled shift to report to work, clock in, attend medical appointments, and return to work to finish their shift (the “WC Attendance Procedure”).
11. Ms. Y[Redacted] testified she met with the Claimant sometime after October 10, 2019, to discuss the conditions of Claimant’s return to work and for him to sign a “Transitional Duty” contract advising him all Employer policies still applied to him, and providing him with a modified duty description. The “Transitional Duty” contract is not in the Court record. Claimant was placed on a modified duty position, based on the work restrictions provided by PA Joslyn. Claimant was re-assigned to a janitorial position.
12. Ms. Y[Redacted] did not discuss with Claimant Employer’s WC Attendance Procedure. Ms. Y[Redacted] testified she “thinks” Employer’s safety coordinator informed Claimant of the WC Attendance Procedure. Ms. Y[Redacted] also testified she checked Claimant’s employment records, and he was following the WC Attendance Procedure. Ms. Y[Redacted] testified Claimant had medical appointments on “many, many days” on which he followed the WC Attendance Procedure. Ms. Y[Redacted] testified that Claimant had shown “over and over and over again that he knew the process and what to do. He was opting just to not do it.” Claimant testified that he was not informed of Employer’s “WC Attendance Procedure.”

13. Claimant initially presented to UC Health on September 26, 2019, with complaints of back pain, was released and told to return to work. Employers' records of Claimant's absences and tardiness do not contain an entry for September 26, 2019. (Ex. C).
14. On September 30, 2019, Claimant presented to Jonathan Joslyn, PA-C, at Concentra, with complaints of back pain. Claimant was given a work restriction of lifting up to 10 lbs. occasionally; pushing/pulling up to 20 lbs. occasionally; and no bending or twisting. Also, on September 30, 2019, Claimant began physical therapy at Concentra with Jessica McAlee, PT. (Ex. A).
15. PA Joslyn's treatment note from September 30, 2019, indicates Claimant's vital signs were taken at 1:12 p.m., and the note was electronically signed at 2:11 p.m. on September 30, 2019. (Ex. A). The ALJ infers that the appointment was scheduled at approximately 1:00 p.m.
16. Ms. McAlee's note from September 30, 2019 was dictated at 4:42 p.m., indicating the appointment took place sometime between 2:00 and 4:42 p.m. (Ex. A).
17. Employers' records of Claimant's absences and tardiness do not contain an entry for September 30, 2019. Neither Claimant nor Respondents offered testimony regarding whether Claimant followed the WC Attendance Procedure on September 30, 2019. (Ex. C).
18. Claimant did not attend work on October 7, 8, 9 or 10, 2019. Although Claimant did not have a work restriction prohibiting him from working, Employer treated these dates as "excused absences" and did not assign Claimant any "points" under its attendance policy. Claimant received temporary total disability benefits for the time period of October 8, 2019 through October 12, 2019. (Ex. 3).
19. On October 7, 2019, Claimant attended his second physical therapy appointment. (Ex. A).
20. Employer's attendance records indicate that Claimant's absence on October 7, 2019 was "Excused Time – No Pay." (Ex. C).
21. On October 9, 2019, Claimant attended his third physical therapy appointment. (Ex. A).
22. Employer's attendance records indicates that Claimant's absence on October 9, 2019 was "Excused Time – No Pay." (Ex. C).
23. On October 10, 2019, attended an appointment with Cheryl Meyers Saffold, M.D. Dr. Saffold gave Claimant work restrictions to include lifting up to 10 lbs. occasionally, push/pull up to 20 lbs., occasionally, no bending or twisting, no sweeping or mopping, no squatting, no kneeling. (Ex. A).

24. Employer's attendance records indicates that Claimant's absence on October 10, 2019 was "Excused Time – No Pay." (Ex. C).
25. On October 13, 2019, Claimant returned to modified duty and full hours and wages. (Ex. 3).
26. On October 14, 2019, Claimant attended his fourth physical therapy appointment, starting at 9:55 a.m. The treatment note was electronically signed at 10:51 a.m. (Ex. A).
27. Employers' records of Claimant's absences and tardiness do not contain an entry for October 14, 2019. (Ex. C). Neither Claimant nor Respondents offered testimony regarding whether Claimant followed the WC Attendance Procedure on October 14, 2019.
28. On October 16, 2019, Claimant attended his fifth physical therapy appointment. The treatment note was dictated at 11:54 a.m. on 10/10/19. (Ex. A). The ALJ infers that Claimant's physical therapy appointment on October 16, 2019 began at approximately 11:00 a.m.
29. On October 16, 2019, Claimant saw Nickolas Curcija, PA-C, Claimant's vital signs were recorded at 12:43 p.m., and the treatment note was electronically signed at 3:56 p.m. PA Curcija revised Claimant's work restrictions to lifting up to 30 lbs. frequently and push/pull up to 30 lbs. frequently. (Ex. A).
30. Employers' records of Claimant's absences and tardiness do not contain an entry for October 16, 2019. (Ex. C). Neither Claimant nor Respondents offered testimony regarding whether Claimant followed the WC Attendance Procedure on October 16, 2019.
31. On October 21, 2019, Claimant saw PA Joslyn for a "recheck." Claimant's vital signs were recorded at 4:00 p.m., and the note was electronically signed at 5:47 p.m., indicating that the visit took place between these times. PA Joslyn reiterated Claimant's work restrictions of lifting up to 30 lbs. frequently and push/pull up to 30 lbs. frequently. (Ex. A).
32. Employers' records of Claimant's absences and tardiness do not contain an entry for October 21, 2019. (Ex. C). Neither Claimant nor Respondents offered testimony regarding whether Claimant followed the WC Attendance Procedure on October 21, 2019.
33. On October 24, 2019, Claimant saw Richard Mobus, D.C., for chiropractic. The treatment note for this date of service indicated Claimant's vital signs were recorded at 8:29 a.m., and the treatment note was dictated at 8:50 a.m. (Ex. A). The ALJ infers the appointment with Dr. Mobus took place between these times, and likely lasted less than 20 minutes. Claimant testified that his chiropractic appointments began at 8:30 a.m. (The ALJ notes that the record indicates it was

“electronically signed” at 7:50 a.m. but infers this is likely an error and the note was signed at 8:50 a.m.). (Ex. A).

34. Employers’ records of Claimant’s absences and tardiness do not contain an entry for October 24, 2019. (Ex. C). Neither Claimant nor Respondents offered testimony regarding whether Claimant followed the WC Attendance Procedure on October 24, 2019.
35. On October 31, 2019, Claimant saw Richard Mobus, D.C., for chiropractic. The treatment note for this date of service indicated Claimant’s vital signs were recorded at 8:29 a.m., and the treatment note was dictated at 8:50 a.m. (Ex. A). The ALJ infers the appointment with Dr. Mobus took place between these times, and likely lasted less than 20 minutes. (The ALJ notes that the record indicates it was “electronically signed” at 7:50 a.m. but infers this is likely an error and that the note was signed at 8:50 a.m.). (Ex. C).
36. Employers’ records of Claimant’s absences and tardiness do not contain an entry for October 31, 2019. (Ex. C). Neither Claimant nor Respondents offered testimony regarding whether Claimant followed the WC Attendance Procedure on October 31, 2019.
37. On November 4, 2019, Claimant was scheduled to work beginning at 9:00 a.m. Claimant called Employer’s attendance line (the ALJ infers this is was the “Sick Hotline” referenced in the Attendance Policy) sometime before 8:00 a.m., on November 4, 2019. Claimant testified he left a message that he had an appointment and would be in to work after the appointment.
38. Ms. Y[Redacted] testified that, based on notes in Claimant’s file, Claimant left a message on the Sick Hotline indicating that he “has appointments all day” on November 4, 2019. Claimant testified he did not say he had appointments “all day.”
39. Claimant attended his November 4, 2019 physical therapy appointment at 11:30 a.m. Claimant received a voicemail from Employer notifying him his employment was terminated while he was leaving his physical therapy appointment.
40. Employer terminated Claimant’s employment on November 4, 2019, with a stated reason for termination as “attendance.” (Ex. A).
41. Claimant testified that calling in before November 4, 2019 appointment was consistent with what he had done for other appointments. Claimant testified that in some instances, he would call in to work before his shift and attend an appointment, and then come to work after. The ALJ infers from Claimant’s testimony that Claimant also clocked into work before other appointments and then returned to work after.

42. On November 21, 2019, Claimant saw Amanda Cava, M.D. for an office visit. Claimant Dr. Cava modified Claimant's work restrictions lifting up to 30 lbs. constantly and pushing/pulling up to 30 lbs. constantly.
43. On December 12, 2019, Claimant saw PA Joslyn. Claimant continued to be under work restrictions of lifting up to 30 lbs. constantly and pushing/pulling up to 30 lbs. constantly. PA Joslyn noted Claimant was "approximately 50% of the way toward meeting the physical requirements of his job." (Ex. A).
44. Claimant's work restrictions of lifting up to 30 lbs. constantly, and pushing/pulling up to 30 lbs. constantly, remained the same at visits with PA Joslyn on January 2, 2020, January 27, 2020, February 17, 2020. (Ex. A).
45. On May 7, 2020, Claimant saw Mr. Joslyn. Claimant's work restrictions continued to be lifting up to 30 lbs. constantly and pushing/pulling up to 30 lbs. constantly. (Ex. 4).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Entitlement To TTD Benefits

To prove entitlement to Temporary Total Disability (TTD) benefits, Claimant must prove his industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by Claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999).

The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) TTD benefits ordinarily continue until terminated by the occurrence of one of the criteria listed in § 8-42-105 (3), C.R.S.

The existence of disability is a question of fact for the ALJ. No requirement exists that a claimant produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lyburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997).

Claimant suffered an admitted injury to his back, and was under work restrictions through at least May 7, 2020, including lifting, pushing, and pulling no more than 30 lbs. The restrictions of lifting, pushing, and pulling no more than 30 lbs. are substantially similar to the restrictions provided to Claimant prior to his termination. The evidence establishes that although Claimant returned to work, his return was in a modified position subject to the restrictions placed on him by his treating health care providers. The ALJ concludes that Claimant's testimony, Ms. Y[Redacted]'s testimony and the medical records establish by a preponderance of the evidence Claimant's injury prevented him from performing his regular job duties for more than three work shifts, starting October 10, 2019.

Claimant's entitlement to TTD benefits ended upon Claimant's return to modified employment with Employer on October 13, 2019. Because he was working in a modified job capacity for Employer within his work restrictions and earning normal wages, Claimant was not entitled to any TTD benefits from October 13, 2019 until his termination on November 4, 2019. § 8-42-105 (3)(b), C.R.S. However, upon termination of his

employment on November 4, 2019, Claimant again sustained actual wage loss due to his industrial injury and resulting disability. On and after November 4, 2019, Claimant remained under work restrictions that prevented him from resuming his prior pre-injury employment. Claimant is medically incapacitated with restrictions of bodily function that cause him to have work restrictions and impairment in his wage-earning capacity. Since November 4, 2019, Claimant has been medically incapacitated and has been unable to resume his prior work. His wage-earning capacity is thus impaired due to his industrial injury and resulting disability. Claimant testified he has not returned to work since his November 4, 2019 termination and that he has earned no income since that date. Because none of the other criteria listed in § 8-42-105(3) were fulfilled after November 4, 2019, Claimant has established, by a preponderance of the evidence, an entitlement to TTD benefits beginning November 4, 2019.

Claimant's failure to seek new employment does not diminish his entitlement to TTD benefits. The Workers Compensation Act does not create an affirmative duty on the part of a temporarily disabled claimant to seek work within his or her restrictions. *Schlage Lock v. Lahr*, 870 P.2d 615, 617 (Colo. App. 1993). "Thus, a claimant's ability to perform post-injury employment or willingness to seek employment does not necessarily reflect the degree of physical impairment resulting from the change in physical condition." *Id.*, citing *Denny's Restaurant, Inc. v. Husson*, 746 P.2d 63 (Colo. App. 1987). Nor does a claimant's hypothetical ability to perform some employment within his or her temporary medical restrictions sever the causal connection between the injury and the temporary wage loss. See *Eastman Kodak Co. v. Industrial Commission*, 725 P.2d 107 (Colo. App. 1986). The rationale for this rule is that the temporary physical impairment resulting from the injury impairs the claimant's opportunities for employment on the open labor market. See *Hobbs v. Industrial Claim Appeals Office*, 804 P.2d 210 (Colo. App. 1990).

RESPONSIBILITY FOR TERMINATION

The Workers' Compensation Act prohibits a claimant from receiving temporary disability benefits if the claimant is responsible for termination of the employment relationship. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, (Colo. App. 2008); §§ 8-42-103(1)(g), 8-42-105(4)(a), C.R.S. The termination statutes provide that where an employee is responsible for his termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006).

"Under the termination statutes, sections 8-42-103(1)(g) and 8-42-105(4), an employer bears the burden of establishing by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment." *Gilmore*, 187 P.3d at 1132. Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission*, 740 P.2d 999 (Colo. 1987). An "incidental violation" is not enough to show the claimant acted volitionally. *Starr v. Industrial Claim Appeals Office*, 224 P.3d 1056, 1065 (Colo. App. 2009). However, a claimant may act volitionally, and therefore be "responsible" for the purposes of the termination statute, if they are aware of what the employer requires and deliberately fails

to perform accordingly. *Gilmore*, 187 P.3d at 1132. Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

Respondents have not met their burden of establishing that Claimant was responsible for his separation from employment. At issue is whether Claimant failed to follow Employer's putative attendance procedure for employees who are seeking medical treatment for industrial injuries (i.e., the "WC Attendance Procedure").

Employer's HR Director, Ms. Y[Redacted] testified that Employer's "standard procedure" when Claimant had a medical appointment related to his industrial injury was to follow the WC Attendance Procedure. Specifically, that the employee was expected to attend medical appointments while on "on the clock" and return to work after appointments. This WC Attendance Procedure is not contained in Employer's written Attendance Policy. No evidence was offered at hearing that this "standard procedure" is memorialized in any written document.

Ms. Y[Redacted] did not discuss the WC Attendance Procedure with Claimant, and Respondents did not present any credible evidence at hearing demonstrating Claimant had been informed of the WC Attendance Procedure, either verbally or in writing. Ms. Y[Redacted] testified she "thinks" an unidentified "Safety Coordinator" informed Claimant of the WC Attendance Procedure, but she had no personal knowledge this actually occurred. Claimant testified he was not aware of the WC Attendance Procedure, and his understanding was that he required to call into work at least one hour before, in accordance with the written Attendance Policy. The record contains insufficient evidence to establish that Claimant was verbally informed of the WC Attendance Procedure. Claimant testified he believed he was complying with Employers' policy by calling the "Sick Hotline" at least one hour prior to his shift.

The Court is asked to infer that Claimant was aware of the WC Attendance Procedure based on Ms. Y[Redacted]'s testimony that Claimant followed the standard procedure for his other treatment appointments. Ms. Y[Redacted] testified Claimant had appointments on "many, many days" during work hours and that he followed the WC Attendance Procedure "over and over and over again" prior to November 4, 2019. Ms. Y[Redacted]'s testimony in this regard is not supported by the record.

Claimant's work schedule was Sunday through Thursday, starting at 9:00 a.m. Between Claimant's injury on September 26, 2019 and the day before his termination on November 4, 2019, Claimant attended medical, physical therapy or chiropractic appointments on nine days (September 30, October 7, 9, 10, 14, 16, 21, 24, and 31). Claimant's September 30 appointment was his initial appointment, and before the time Ms. Y[Redacted] testified a "Safety Coordinator" may have informed Claimant of the WC Attendance Procedure. On three of these days – October 7, October 9, and October 10 – Claimant did not attend work and was granted "Excused Time – No Pay." Consequently, Claimant had no opportunity to demonstrate compliance with the putative

WC Attendance Procedure on those four dates (i.e., September 30, and October 7, 9, and 10).

On two of the remaining five days – October 24 and October 31 – Claimant's appointments were at 8:30 a.m. Claimant could not have followed the WC Attendance Procedure on these dates because his appointments were before his shift at 9:00 a.m.

Only three dates exist on which Claimant 1) worked; 2) had medical appointments starting during his shift; and 3) were after the date Respondents assert Claimant was informed of the "WC Attendance Procedure" – October 14, October 16, and October 21, 2019. Claimant's appointment on October 14, 2019, began at 9:55 a.m., his appointments on October 16 began at approximately 11:00 a.m., and his appointment on October 21, 2019 began at 4:00 p.m.

Neither Claimant nor Respondents offered evidence of Claimant following the WC Attendance Procedure on any specific date. Moreover, the records contains no evidence from which it can be inferred that Claimant followed or did not follow the WC Attendance Procedure on any of the dates when compliance would have been feasible. Claimant's attendance records do not reflect the times Claimant clocked in on any date. Nor do Claimant's attendance records note medical appointments on any given date. Thus, the Court cannot determine, for example, whether Claimant followed the WC Attendance Procedure on October 14 or 16, or whether Claimant merely called the Sick Hotline before his shift and clocked in after appointments. The lack of entries in Claimant's attendance records merely reflect that the procedure Claimant followed on those days was not considered a violation of Employer's Attendance Policy. The evidence of Claimant's conduct presented at hearing was insufficient to impute knowledge of the WC Attendance Procedure to Claimant.

Respondents have not met their burden of establishing by a preponderance of the evidence that Claimant was aware of what Employer required and deliberately failed to perform accordingly. As such, Respondents have not met the burden of establishing that Claimant was responsible for his termination as required by § 8-42-103(g) and § 8-42-105 (4)(a), C.R.S.

Although Claimant was capable of the work that Employer assigned to him post-injury, Claimant was not "responsible" for his termination by Employer during his period of temporary disability. As such, a causal link between Claimant's industrial injury and his post-termination wage loss is established, and Claimant is entitled to temporary total disability benefits from November 4, 2019 through the date of this Order, and continuing until one of the criteria of § 8-42-105(3)(a)-(d), C.R.S, is met.

ORDER

It is therefore ordered that:

1. Claimant's claim for TTD benefits from November 4, 2019 through the date of this order is granted.

2. Insurer shall pay Claimant TTD benefits from November 4, 2019 through the date of this order in the amount of \$544.83 per week.
3. Insurer shall pay statutory interest at the rate of 8% per annum on compensation benefits not paid when due.
4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: July 23, 2020.

ISSUES

Whether the claimant had demonstrated, by a preponderance of the evidence, that the left total knee replacement recommended by Dr Douglas Huene is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted October 10, 2018 work injury.

FINDINGS OF FACT

1. The claimant has worked for the employer for 21 years. On October 10, 2018, the claimant was working in the employer's wrapping department. The claimant picked up a box weighing approximately 10 pounds, and he pivoted on his left foot. While pivoting, the claimant felt and heard a pop in his left knee. The claimant further testified that he immediately had pain in his left knee and he was unable to place any weight on his left leg.

2. The claimant was sent for medical treatment on October 10, 2018 and was seen at Peak Occupational Wellness by Isaac Klosterman, PA-C. At that time, the claimant reported pivoting on his left leg and feeling and hearing a pop. The claimant also reported that prior to that incident he had experienced tightness in his left knee during the prior two days. On exam, Mr. Klosterman noted moderate to significant edema over the claimant's entire left knee. Mr. Klosterman diagnosed bursitis of the left knee with medial knee pain. He recommended the use of NSAIDs and a hinged knee brace. In addition, Mr. Klosterman placed the claimant under work restrictions.

3. On October 17, 2018, the claimant returned to Mr. Klosterman and reported that his symptoms had improved and he was no longer using a cane. At that time, Mr. Klosterman noted that the claimant had a sprain of the medial collateral ligament of his left knee. Mr. Klosterman referred the claimant to physical therapy. On October 31, 2018, the claimant reported to Mr. Klosterman that he was doing well working light duty. On November 9, 2018, the claimant returned to Peak Occupational Wellness and was seen by Susan Dockins, FNP. The claimant continued to report improvement in his symptoms, but with continuing medial pain in his left knee.

4. On November 26, 2018, the claimant was seen at Peak Occupational Wellness, by Dr. Stephen Adams. At that time, the claimant reported worsening symptoms and a feeling that his left knee would "lock". Dr. Adams administered a steroid injection and ordered additional physical therapy treatment. On December 11, 2018, the claimant reported some pain relief following the injection. Thereafter, on December 27, 2018, Dr. Adams administered a left pes anserine bursa injection.

5. On January 18, 2019, an MRI of the claimant's left knee showed a full thickness radial tear of the posterior horn of the medial meniscus. In addition, the MRI showed a closed fracture of the condyle of the left femur.

6. Following the MRI, Dr. Adams referred the claimant to Dr. Douglas Huene for an orthopedic surgical consultation. The claimant was first seen by Dr. Huene on February 8, 2019. At that time, the claimant described the pivoting/twisting incident that occurred on October 10, 2018. Dr. Huene noted that the claimant had undergone physical therapy, two injections, used NSAIDs, a brace, and a TENS unit. Dr. Huene opined that the claimant was not a good candidate for a total knee replacement. However, he noted that the claimant might benefit from arthroscopic surgery.

7. On February 27, 2019, Dr. Huene performed arthroscopic left knee surgery that included debridement of the medial meniscus tear, debridement of the the medial femoral condyle articular surface, debridement of the patellar articular surface, debridement of the medial plica, and removal of a loose body.

8. On March 6, 2019, the claimant returned to Dr. Huene. At that time, Dr. Huene noted that the claimant's incisions were healing and the claimant was able to ambulate without difficulty. Dr. Huene released the claimant to return to modified duty. The claimant's work restrictions included no crawling, kneeling, squatting, or climbing. In addition, the claimant was limited to walking no more than one hour per day, and standing no longer than one hour per day. On April 3, 2019, Dr. Huene released the claimant to return to full duty work with no work restrictions.

9. Following the surgery the claimant's left knee symptoms improved. However, on April 14, 2019, the claimant reported to Dr. Adams that he "tweaked" his knee at physical therapy, which resulted in increased medial pain. Thereafter, during a vacation in June 2019, his left knee pain worsened.

10. On June 9, 2019, the claimant reported to Dr. Huene that his left knee pain was worse. At that time, the claimant asked Dr. Huene for a total knee replacement. Dr. Huene did not state an opinion regarding knee replacement. However, he placed the claimant on work restrictions that included no lifting, carrying, pushing, or pulling more than 10 pounds; no crawling, kneeling, squatting, or climbing; and limited standing and walking to four hours per day.

11. On June 21, 2019, the claimant reported to Dr. Adams that he experienced an increase in his left knee pain while out of town on vacation. Dr. Adams noted that the claimant had been vacationing at a higher altitude. Despite this increase in symptoms, the claimant also reported that he was "pretty close" to working full duties at work. Thereafter on July 2, 2019, the claimant reported to Dr. Adams that his left knee pain had been much worse since the day before. On that date, Dr. Adams administered a steroid injection into the claimant's left knee.

12. On July 7, 2019, x-rays of the claimant's left knee showed mild degenerative changes, slight loss of articular cartilage, and slight degenerative spurring.

13. On July 9, 2019, Dr. Adams took the claimant off of all work.

14. On July 16, 2019, an MRI of the claimant's left knee showed tricompartmental arthritic changes, with moderate joint effusion, and a loose body.

15. On August 2, 2019, the claimant was seen by Dr. Huene. At that time, the claimant reported that his knee "suddenly became worse with [no known injury] and he is absolutely miserable". Dr. Huene recommended the claimant undergo a repeat arthroscopy.

16. At the request of the respondents, Dr. Mark Failingler reviewed the claimant's medical records and issued an undated written report¹. Dr. Failingler opined that the claimant has high grade chondromalacia and arthritis in his left knee. Dr. Failingler also opined that the claimant's preexisting left knee condition was exacerbated by the October 10, 2018 incident at work. However, the arthroscopy performed by Dr. Huene did not help the claimant's condition. Dr. Failingler opined that the best treatment for the claimant's left knee would include rest so the stress fracture could heal. Dr. Failingler further opined that the claimant's left knee symptoms were caused by the natural progress of the degenerative joint disease in that joint, and not related to the claimant's job duties. Dr. Failingler recommended that the insurer deny the request for a second arthroscopic surgery. The recommended repeat arthroscopy was denied.

17. On January 2, 2020, the respondents filed a General Admission of Liability.

18. Subsequently, on February 7, 2020, Dr. Huene recommended a left total knee arthroplasty (replacement). In support of this surgical recommendation, Dr. Huene noted that the claimant had end stage joint disease in his left knee, had failed conservative treatment, and had reduced range of motion.

19. On May 13, 2020, the claimant attended an independent medical examination (IME) with Dr. Failingler. In connection with the IME, Dr. Failingler reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In the IME report, Dr. Failingler opined that a left total knee replacement would be reasonable treatment of the claimant's left knee. However, Dr. Failingler further opined that the claimant's need for left knee surgery is not related to the October 10, 2018 work incident. In support of this opinion, Dr. Failingler noted that the condition of the claimant's left knee is the result of preexisting degenerative joint disease. Based upon Dr. Failingler's IME report, the respondents denied authorization for the requested left total knee replacement.

20. The ALJ credits the medical records and the opinions of Dr. Huene over the conflicting opinions of Dr. Failingler. The ALJ finds that the claimant has demonstrated that it is more likely than not that the recommended left total knee replacement is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. The ALJ is persuaded that the claimant's October 10, 2018 work injury exacerbated the degenerative condition in the claimant's left knee. The ALJ further finds

¹ In his May 13, 2020 IME report, Dr. Failingler identified the date of his previous records review as August 3, 2019.

that the claimant has demonstrated it is more likely than not that the claimant's current need for a left total knee replacement is causally related to the admitted work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has successfully demonstrated, by a preponderance of the evidence, that the left total knee replacement recommended by Dr. Huene is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted work injury. As found, the medical records and the opinions of Dr. Huene are credible and persuasive.

[This page intentionally left blank]

ORDER

It is therefore ordered that the respondents shall pay for the left total knee replacement recommended by Dr. Huene, pursuant to the Colorado Medical Fee Schedule.

Dated this 27th day of July 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-125-703-001**

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to temporary total disability (TTD) benefits beginning May 8, 2019 and ongoing.

If the claimant is found to be entitled to TTD benefits, what is the claimant's average weekly wage (AWW)?

FINDINGS OF FACT

1. On March 13, 2019, the claimant was employed with the employer as a Certified Nursing Assistant (CNA) and Qualified Medication Administration Personnel (QMAP). The claimant worked on the "float team". This meant that the claimant traveled to different facilities to provide services to patients, based upon the employer's staffing needs.

2. On March 13, 2019, the claimant was injured while at work. The injury occurred when the claimant was assisting a patient while using a "sit to stand" assistive device. During this transfer, the patient started to slip, causing the claimant to fall into a lunging position. The claimant testified that she felt a pop and a warm rush down her back. The respondents have admitted liability for the claimant's March 13, 2019 injury.

3. The claimant testified that her treatment for her injury was overseen by Dr. Stephen Adams and Norman Lee Dockins, PA-C with Peak Professionals. On March 15, 2019, the claimant was seen by Mr. Dockins. At that time, Mr. Dockins assigned temporary work restrictions that included no lifting over 10 pounds, no carrying, pushing, or pulling over five pounds, limited walking to two hours per day, standing of no more than one hour per day, and sitting no more than five hours per day. In addition, Mr. Dockins noted on the WC164 form "frequent standing breaks every 15 minutes as needed". Thereafter, Mr. Dockins continued to assign work restrictions. On April 4, 2019, he included a notation of "frequent standing breaks every 15 minutes as needed".

4. During this same time, the employer offered the claimant modified duty work that complied with her work restrictions. On March 20, 2019, a Modified Duty Work Agreement was accepted by the claimant. The claimant testified that this modified work was performed at a facility in Montrose, Colorado. The claimant resides in Ridgway, Colorado. While performing modified duty work in Montrose the claimant drove from her home in Ridgway to the work location. The claimant testified that her commute to the Montrose location was approximately 30 minutes.

5. The claimant continued working in this manner until the employer offered the claimant a different position on May 3, 2019. In a form titled Employer Transitional Job Offer, the position offered was a receptionist position with a start date of May 7, 2019. The claimant's work restrictions were included on that form and included "with frequent standing breaks every 15 minutes as needed."

6. The claimant testified that she accepted this receptionist position, which was located in Eckert, Colorado. The claimant testified that prior to her injury, the 65 mile drive between Ridgway and Eckert would take approximately one hour and 15 minutes. However, due to her injury and related work restrictions, the claimant had to stop multiple times to walk around and stretch. As a result, this same drive took the claimant two hours.

7. On May 7, 2019, the claimant made the drive from her home in Ridgway to the receptionist job in Eckert. The claimant testified that she was able to perform all of the duties required of her in Eckert. However, due to her need to stop driving every 15 minutes, the commute was two hours each way. This resulted in a 12 hour day for the claimant; (eight hours of work and four hours of total drive time).

8. On May 7, 2019, the claimant notified the employer via email and text message that she was declining the position in Eckert. The claimant noted that although she was able to perform the job duties, the 65 mile commute was too far and too painful for her to drive.

9. On May 8, 2020, the insurer provided a job description to Mr. Dockins and asked him to indicate whether the claimant would be able to perform the position. Mr. Dockins signed this form and indicated that the position would meet the claimant's work restrictions. The job description specifically included "sitting 5 hours per day, with frequent standing breaks every 15 minutes as needed".

10. On May 13, 2019, the employer offered the claimant a temporary modified position with a start date of May 20, 2019. On May 20, 2019, the claimant declined the employer's offer of a temporary modified position.

11. The claimant testified that she has not been offered any other positions with the employer. The claimant testified that she has not been paid any wages since March 7, 2019. In addition, she has not received temporary total disability (TTD) or temporary partial disability (TPD) benefit payments from the respondents. The claimant testified that she has relied on family members for financial support since her injury.

12. The ALJ credits the claimant's testimony and finds that she has demonstrated that it is more likely than not that she is entitled to TTD benefits beginning May 8, 2019. The ALJ is persuaded that the claimant attempted to work in the modified employment position in Eckert, but due to the substantial commute, she was unable to continue in that position. The ALJ finds that the claimant's behavior was objectively reasonable given the distance from her home in Ridgway to Eckert and her work restrictions (that included getting up from sitting every 15 minutes).

13. Wage records entered into evidence indicate that the claimant earned wages totalling \$23,283.75 in 2018, and \$8,245.07 for the period of January 1, 2019 to May 7, 2019. This is a total of \$31,528.82 for a time period of 492 days. The ALJ calculates this to be average wages of \$64.08 per day, or \$448.56 per week.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by a claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that a claimant establish physical disability through a medical opinion of an attending physician; a claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively

and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

5.The claimant's receipt of TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. Section 8-42-105(3)(a)-(d), C.R.S.

6.The ALJ should consider the consequences of the industrial injury, the financial hardship that would be imposed on the claimant by accepting the modified employment, and "[a]ny other reasons that would, in the opinion of the administrative law judge, make it impracticable for the claimant to accept the offer of modified employment." Section 8-42-105(4)(b)(II).

7.As found, the claimant has demonstrated by a preponderance of the evidence that she is entitled to TTD benefits beginning May 8, 2019 and ongoing until terminated by law. As found, the claimant has demonstrated that it was reasonable for her to decline the offer of modified employment due to the distance required by the commute, and her work restrictions. As found, the claimant's testimony is credible and persuasive.

8.The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

9.Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on his earnings at the time of the injury. Under some circumstances, the ALJ may determine the claimant's TTD rate based upon her AWW on a date other than the date of the injury. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

10.As found, the claimant's average weekly wage (AWW) is \$448.56. As found, this calculation was reached by dividing the total of \$31,528.82 by 492 days, resulting in a daily rate of \$64.08. When this is multiplied by seven days in a week, it results in an AWW of \$448.56

ORDER

It is therefore ordered:

1. The claimant is entitled to temporary total disability (TTD) benefits beginning May 8, 2019 and ongoing until terminated by law.
2. The claimant's average weekly wage (AWW) is \$448.56.
3. All matters not determined here are reserved for future determination.

Dated this 28th day of July 2020.

Cassandra M. Sidanycz

Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-112-091-003**

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that penalties should be assessed against the respondent pursuant to Sections 8-43-304 and 8-43-305, C.R.S. for the respondent's alleged failure to comply with ALJ Mottram's December 30, 2019 order; March 10, 2020 order; and March 30, 2020 order.

Whether the claimant has demonstrated, by a preponderance of the evidence, that penalties should be assessed against the respondent pursuant to Section 8-43-408(4), C.R.S.

FINDINGS OF FACT

1. On December 12, 2019, the parties went to hearing before ALJ Mottram on a number of issues. Those issues included compensability of an alleged July 4, 2019 work injury; the reasonableness, necessity, and relatedness of medical treatment; temporary disability benefits; and whether the employer failed to carry workers' compensation insurance.

2. On December 30, 2019, ALJ Mottram issued Findings of Fact, Conclusions of Law and Order (FFCLO). In the order, the respondent was ordered to pay \$30,844.60 in medical bills; \$20,571.43 in temporary total disability (TTD) benefits; and \$12,854.01 to the Colorado Uninsured Employer Fund. These funds were to be paid within 10 days of the date the order was served. Alternatively, the respondent could deposit the total of \$64,270.04 with the Trustee of the Colorado Division of Workers' Compensation, or post a bond in that same amount.

3. The December 30, 2019 order was served on the parties, via e-mail, on December 31, 2019. Therefore, ten days following that date was January 10, 2020.

4. On December 31, 2019, Gina J[Redacted], Trustee, Special Funds Unit, Division of Workers' Compensation, sent an email to the respondent regarding ALJ Mottram's order. In that email, Ms. J[Redacted] referred to Section 8-43-304(1), C.R.S. and notified the respondent that failure to comply with the order could lead to additional penalties.

5. On January 17, 2020, the respondent timely filed a petition to review regarding the December 30, 2019 order.

6. On March 10, 2020, ALJ Mottram issued a Supplemental Order in which he included additional factual findings. That Supplemental Order did not result in a different outcome when compared to the December 30, 2019 FFCLO. However, it did provide the

respondent with an additional ten days to make the ordered payments to the trustee or post a bond as outlined above.

7. The March 10, 2020 Supplemental Order was issued to the parties, via email, on March 11, 2020. Ten days from that date of service was March 21, 2020.

8. On March 27, 2020, the respondent timely filed a petition to review on the March 10, 2020 order.

9. On March 30, 2020, ALJ Mottram issued a Second Supplemental Order. In that order, ALJ Mottram clarified that the amount of \$12,854.01 was to be paid directly to the Colorado Uninsured Employer Fund, and was not to be paid to the Trustee or made a part of the bond. ALJ Mottram further clarified that the remaining amount of \$51,416.03 was to be paid to the Trustee, or a bond was to be posted in that amount.

10. The Second Supplemental Order was served on the parties, via e-mail, on March 31, 2019. Ten days from the date of service was April 10, 2020.

11. On March 31, 2020, Ms. J[Redacted] sent an email to the respondent regarding ALJ Mottram's March 30, 2020 order. In that email, Ms. J[Redacted] again referred to Section 8-43-304(1), C.R.S. and notified the respondent that failure to comply with the order could lead to additional penalties.

12. On April 8, 2020, the respondent filed a timely petition to review regarding the March 30, 2020 order.

13. All three of ALJ Mottram's orders in this matter included the following language:

IT IS FURTHER ORDERED: That the filing of any appeal, including a petition to review, shall not relieve the employer of the obligation to pay the designated sum to the trustee or file a bond. § 8-43-408(2), C.R.S.

14. The claimant testified that the respondent has made no payments in compliance with any of ALJ Mottram's orders.

15. On June 10, 2020, the Industrial Claim Appeals Office (ICAO) issued a Remand Order in which the issue of temporary disability benefits was remanded to ALJ Mottram. On all other issues, the ICAO affirmed ALJ Mottram's Second Supplemental Order.¹

16. The ALJ finds that the respondent failed to comply with the December 30, 2019 order beginning January 11, 2020 through and including the date of service of ALJ Mottram's Supplemental Order on March 11, 2020.

¹ As of the date of this order, the ICAO's June 10, 2020 order has been appealed. As a result, it is the understanding of the ALJ that the file regarding ALJ Mottram's Second Supplemental Order has been forwarded to the Colorado Court of Appeals.

17. The ALJ finds that the respondent failed to comply with the March 10, 2020 Supplemental Order beginning on March 22, 2020 through and including the date of service of ALJ Mottram's Second Supplemental Order on March 31, 2020.

18. The ALJ finds that the respondent failed to comply with the March 30, 2020 Second Supplemental Order beginning on April 11, 2020 through and including the date of the hearing on July 9, 2020.

19. The claimant has also requested penalties pursuant to Section 8-43-408(4), C.R.S., for the respondent's failure to comply with a lawful order. As found, the respondent has failed to comply with three orders issued by ALJ Mottram.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Prior to the assessment of any penalties, the ALJ must first determine whether a party has violated any provision of the Workers' Compensation Act or an order. If the ALJ finds such a violation, penalties may be imposed if it is also found that the employer's actions were objectively unreasonable. Section 8-43-304, C.R.S. *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Jimenez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The "objective standard" is measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation*

Insurance Authority v. Industrial Claim Appeals Office, 907 P.2d 676 (Colo. App. 1995). Section 8-43-305, C.R.S. provides that each day is a separate offense. Therefore, penalties may be assessed of up to \$1,000.00 per day.

5. In this case, the claimant seeks penalties for the respondent's failure to comply with the orders issued by ALJ Mottram. It is undisputed that the respondent has made no payments in compliance with the December 30, 2019, March 10, 2020, or March 30, 2020 orders. The respondent argues that because a petition to review was properly filed in this matter, that they were not required to comply with the orders, pending the outcome of their appeal.

6. The Colorado legislature has provided a specific statutory directive to employers that fail to carry workers' compensation insurance. Specifically, Section 8-43-408(2), C.R.S. provides, in pertinent part:

The filing of any appeal, including a petition to review, shall not relieve the employer of the obligation under this subsection (2) to pay the designated sum to a trustee or to file a bond.

7. Therefore, the ALJ concludes that the respondent's filing of timely petitions to review did not suspend the obligation to comply with ALJ Mottram's orders.

8. The ALJ further concludes that the actions of the respondent were not objectively reasonable. The respondent was informed in all three of the orders that they were to comply with the order, even in the event of an appeal/petition to review. The ALJ concludes that this was not objectively reasonable.

9. Therefore, the respondent violated ALJ Mottram's December 30, 2019 FFLCO. The violation began on the 11th day after service of the order. Therefore, the respondent's violation of that first order was from January 11, 2020 through and including March 11, 2020 (the date of service of the Supplemental Order). The ALJ calculates this to be 30 days.

10. The respondent also violated ALJ Mottram's March 10, 2019 Supplemental Order. The violation began on the 11th day after service of the order. Therefore, the respondent's violation of that order was from March 22, 2020 through and including March 31, 2020 (the date of service of the Second Supplemental Order). The ALJ calculates this to be 10 days.

11. Finally, the respondent violated ALJ Mottram's March 30, 2020 Second Supplemental Order. The violation began on the 11th day after service of the order. Therefore, the respondent's violation of that order was from April 11, 2020 through and including July 9, 2020 (the date of the hearing). The ALJ calculates this to be 89 days.

12. Based upon all of the foregoing, the ALJ concludes that penalties are appropriate in this matter. Given the continued failure to comply with an order of an ALJ, this ALJ orders the respondent to pay the claimant penalties of \$250.00 per day for a total

of 129 days. This results in total penalties of \$32,250.00.² No portion of this total shall be apportioned to the uninsured employer fund.

13. Section 8-43-408(4), C.R.S. provides that an employer who fails to comply with an order issued pursuant to Sections 8-43-408(2) or (3), C.R.S., may be subject to an additional penalty “for an amount equal to fifty percent of such order or judgment or one thousand dollars, whichever is greater, plus reasonable attorney fees incurred after entry of a judgment or order.”

14. As the ALJ has concluded above that the respondent failed to comply with ALJ Mottram’s orders, the 50 percent penalty allowed by Section 8-43-408(4) C.R.S. is appropriate in this matter.

15. Therefore, the respondent shall pay to the claimant additional penalties in the amount of \$25,708.02,³ plus attorney fees beginning April 11, 2020.

ORDER

It is therefore ordered:

1. The respondent shall pay the claimant penalties totaling \$57,958.02. No amount of this total shall be apportioned to the uninsured employer fund.

2. The amount of penalties ordered at this time is **in addition** to the amounts due and owing pursuant to the ALJ Mottram’s March 30, 2020 Second Supplemental order.

3. The respondent shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. In lieu of payment of the above to the claimant, the respondent shall:

a. Within ten (10) days of the date of service of this order, deposit the sum of \$57,958.02 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, 633 17th Street, Suite 900, Denver, Colorado 80202, Attention: Gina J[Redacted], Trustee; **OR**

b. Within ten (10) days of the date of service of this order, file a bond in the sum of \$57,958.02 with the Division of Workers' Compensation within ten (10) days of the date of this order:

² \$250.00 per day for a total of 129 days.

³ 50 percent of the judgment amount of \$51,416.03.

i. Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

ii. Issued by a surety company authorized to do business in Colorado.

iii. The bond shall guarantee payment of the compensation and benefits awarded.

5. The respondent shall notify the Division of Workers' Compensation of payments made pursuant to this order.

6. The filing of any appeal, including a Petition to Review, shall not relieve the respondent of the obligation to pay the designated sum to the trustee or to file the bond. Section 8-43-408(2), C.R.S.

Dated this 29th day of July 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-972-041-002**

ISSUES

- I. Whether Claimant established Respondents failed to timely pay Claimant his TTD benefits and are subject to penalties pursuant to C.R.S. 8-43-401(2) and C.R.S. 8-43-304(1).
- II. Whether Claimant established Respondents failed to timely file an admission pursuant to WCRP 5-5(C)(1) and are subject to penalties under C.R.S. 8-43-304(1).
- III. Whether Claimant failed to plead with specificity his contention that Respondents failed to timely pay certain medical bills pursuant to ALJ Cayce's Order.
- IV. Whether Claimant established Respondents are subject to penalties under C.R.S. 8-43-304(1) for their failure to timely pay Claimant's medical bills pursuant to ALJ Cayce's Order.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

Admitted Industrial Injury

1. Claimant suffered an admitted industrial injury to his low back. (*Cl's Ex. 1, pg. 3.*) Claimant underwent an L5-S1 laminectomy and discectomy. *Id.* He was ultimately placed at maximum medical improvement in December 2015.
2. After being placed at MMI, Claimant underwent a DIME in 2016. Pursuant to the DIME, Claimant's date of MMI was confirmed and he was assigned a 24% whole person impairment rating. (*Cl's Ex. 1, pg. 4.*) Respondents then filed a Final Admission of Liability (FAL). Claimant objected to the FAL and filed an Application for Hearing. Before a hearing took place, Respondents filed another FAL on January 31, 2017 and the claim then closed. *Id.*

Reopening & ALJ Cayce's Order

3. On October 13, 2018 Claimant bent down to pick up a piece of paper and when he stood up, he immediately felt pain in his lower back which radiated bilaterally into his legs and down to his feet.
4. Pursuant to ALJ Cayce's August 30, 2019 Order, the case was reopened under C.R.S. 8-43-303. (*Cl's Ex. 1, pp. 10,11.*) The certificate of mailing is dated September 3, 2019. *Id.*
5. In accordance with the reopening, ALJ Cayce ordered the following:

- a. Medical treatment from the October 13, 2018 exacerbation/aggravation is reasonable, related, and authorized, including, but not limited to, the ER visit, and Dr. Mitchell and Dr. Rauzzino's visits, prescriptions, and referrals. Respondents shall pay for that medical treatment according to the Colorado Medical Fee Schedule; and
 - b. Claimant is entitled to TTD from October 13, 2018 to October 29, 2018.
6. As noted, the Order specifically directed Respondents to pay for Claimant's past medical treatment pursuant to the Colorado Medical Fee Schedule.
7. The Order specified the period for which disability benefits were payable, but it did not specify the rate at which the disability benefits were payable to Claimant. See 8-43-215. The ALJ's order does, however, reference the previously admitted AWW of \$840.
8. Neither Claimant nor Respondents requested a corrected order or filed a petition to review.

Claimant's Application for Hearing – Endorsing Penalties.

9. On February 10, 2020, Claimant filed an application for hearing. In his application, he specifically set forth his penalty allegations regarding Respondents failure to timely pay Claimant the TTD benefits ordered by the ALJ and for their failure to timely file a general admission of liability.
10. On the other hand, Claimant's application broadly sets forth his penalty allegations about the Respondents failure to timely pay Claimant's medical benefits under ALJ Cayce's Order. His application, in part, provides:

Respondents further failed, in accordance with section 8-43-401(2)(a), C.R.S., to comply with the ALJ's Order by not paying Claimant medical benefits (including out-of-pocket reimbursements) and interest within 30 days of when they became due. Respondents are liable for penalties of up to \$1000 per day under section 8-43-304(1), C.R.S., for violating the ALJ's Order.

The Claimant has yet to receive a check for the ordered reimbursement of out-of-pocket medical costs or interest. The violation of the ALJ's order continues.

11. Thus, his application for hearing did not specifically set forth each medical benefit or bill Claimant alleged was not paid, the date each bill was submitted to Respondents (either by the provider or Claimant), the date each medical benefit or bill at issue should have been paid, and the date each bill or medical benefit was paid – if at all. Claimant also failed to do the same regarding his out of pocket medical expenses. As a result, based on his application, it was impossible to determine which medical bills and expenses were allegedly not

paid timely, which exact bills and expenses remained to be paid, and which bills and expenses formed the basis of his penalty claims.

12. The failure of Claimant to set forth his penalty allegations with specificity failed to put the Respondents on notice as to the exact medical bills at issue. As a result, Claimant submitted several medical bills at hearing which he asserted were not paid after ALJ Cayce issued her order. And, because Claimant failed to plead with specificity, Respondents failed to assert at the hearing that many bills submitted by Claimant at the hearing were paid before ALJ Cayce issued her Order.
13. Although pretrial discovery and discussions between counsel should have resolved these issues before the hearing in front of this ALJ, for whatever reason, it did not. As a result, the ALJ spent a significant amount of time going through the evidence submitted by the parties to assess the penalty allegations raised by Claimant. While doing so, the ALJ determined that many of the bills Claimant submitted and asserted were not paid timely after ALJ Cayce issued her order were paid before she issued her Order. This task was made harder based on the medical payment log submitted by Respondents in Exhibit D. The medical payment log submitted by Respondents was printed out in portrait mode instead of landscape mode. As a result, each page of the payment log is but a partial piece of the relevant payment information for each medical bill. As filed by Respondents, the first 13 pages of the payment log are missing the last two columns of the payment log data. Thus, the corresponding columns for pages 1 through 13 of the medical payment logs are contained on pages 14 through 26. Thus, the complete payment log for each transaction is covered over two pages - 13 pages apart. For example, the complete transaction data for the transactions listed on page 1 are contained on page 1 and 14 and the complete transaction data for the transactions listed on page 2 are contained on page 2 and page 15, and so forth.

***Penalty for Failure to file
General Admission of Liability Pursuant to W.R.C.P. 5-5(C)(1)***

14. Rule 5-5(C)(1) states that following an order that has become final, a new admission submitted to comply with that order must be filed within 30 days. Pursuant to § 8-43-301(2), the August 30, 2019 Order of ALJ Cayce, which was served on September 3, became final when no proceeding for judicial review was commenced. By virtue of the rule, Respondents had until October 3, 2019 to file a conforming general admission of liability (GAL).
15. As a result of the Order, Respondents filed a GAL on October 25, 2019. (*CI's Ex. 2.*) The initial GAL was filed 22 days late. On top of the GAL being filed late, the Respondents inadvertently admitted for the wrong period of TTD benefits. Rather than admit for TTD starting on October 13, 2018, the GAL admitted for TTD starting October 23, 2018. As a result, the GAL only admitted for TTD from October 23, 2018 through October 29, 2018. *Id.*
16. The ALJ infers from the evidence submitted that the person inputting the data for the GAL hit the "2" key instead of the "1" key when entering the start date for

Claimant's TTD benefits. As a result, the ALJ finds that the error in the admission for the wrong period of TTD stemmed from a typographical error.

17. Besides admitting to the wrong TTD period, the GAL also admitted for an average weekly wage ("AWW") of \$747.32 rather than the previously admitted AWW of \$860.00. *Id.* That said, the admitted TTD rate on the GAL reflected the previously admitted AWW of \$860.00 creating the correct TTD benefit rate of \$560.00. Thus, Claimant was paid at the correct TTD rate – based on an AWW of \$860.00 - despite a different AWW being listed on the GAL.
18. On November 5, 2019, 11 days after the GAL was filed, an email sent from Claimant's counsel's office to Respondents brought the AWW error to the Respondents attention. The email did not, however bring to Respondents attention the typographical error about the start date for Claimant's TTD benefits.
19. On November 12, 2019 Respondents received correspondence from the Division of Workers' Compensation which noted that under WCRP 5-5(C)(1) an admission consistent with the order was required. (*CI's Ex. 3.*) The Division said that they required an amended admission to be filed within fifteen days of receipt of the letter since the ALJ's order "appears to effect" TTD benefits. *Id.*
20. On November 27, 2019, Respondents filed an amended GAL complying with the Division of Workers' Compensation request and WCRP 5-5-(C)(1). Respondents corrected the TTD dates to October 13, 2018 through October 29, 2018, in conformity with the ALJ's Order. (*CI's Ex. 6.*)
21. Thus, Respondents filed a GAL consistent with the ALJ's order regarding Claimant's TTD benefits 55 days late.
22. The conforming GAL was filed before Claimant filed his application for penalties on February 10, 2020. Thus, Respondents did cure their violation of WCRP 5-5(C)(1).
23. Respondents did not, however, present any evidence explaining why they failed to file a GAL timely.

Payment of TTD

24. Claimant was owed \$1,360.00 in TTD benefits from October 13, 2018 through October 29, 2018. (*CI's Ex. 1, p. 11.*)
25. Under C.R.S. 8-43-301(2), the ALJ's Order, which was served on September 3, 2019, was not appealed, and became final. That said, applying section 8-43-401(1)(a), C.R.S., payment of benefits were due 30 days from the date of the order, in this case October 3, 2019.
26. On October 9, 2019, Claimant's counsels' office followed up with Respondents concerning the status of payment to Claimant's providers and his TTD benefits. (*CI's Ex. 4, p. 30.*)
27. Again, on October 15, 2019, Claimant's counsels' office followed up with Respondents concerning the status of the claim. (*Id. at p. 29.*)

28. On October 24, 2019, Claimant's counsel sent another email stating that Respondents had not complied with the ALJ's Order. (*CI's Ex. 5, p. 31*).
29. On October 25, 2019, Respondents paid Claimant only \$560.00 in TTD benefits instead of \$1,360.00 due to the error related to the start date of Claimant's TTD benefits as set forth on the GAL. (Respondents' *Ex. D.*) Rather than start TTD on October 13, 2018, Respondents started TTD on October 23, 2018. As found above, the error stemmed from a typographical error while inputting the start date into the GAL.
30. On November 12, 2019, the Department of Labor and Employment sent a letter to Respondents stating Respondents had not complied with the Order because an "admission consistent with the order" had not been filed. (*CI's Ex. 3, p. 28.*) That said, even the letter from the Division did not explain the error(s) in the admission.
31. After reviewing the letter from the Division, Respondents figured out the error about the start date for Claimant's TTD benefits. Thus, on November 27, 2019, Respondents filed another GAL that accurately reflected the TTD benefits ordered by the ALJ. They also issued a second check to Claimant for \$800 to make up the difference between the amount ordered by the ALJ and the smaller amount they had paid earlier and that conflicted with the Order. (*CI's Ex. 6, p. 32*), (*CI's Ex. 9.*)
32. By the time Respondents paid Claimant the full amount of TTD benefits following the ALJ's Order, the benefits were 55 days late. As a result, Respondents violated § 8-43-401(2)(a), C.R.S., a provision of the Act, as well as the ALJ's Order by failing to timely pay Claimant the TTD benefits that were awarded.
33. Respondents, however, paid Claimant the proper amount of TTD benefits pursuant to the Order by November 27, 2019. As a result, Respondents cured the violation before Claimant filed his Application for Hearing and endorsed the issue of penalties on February 10, 2020.
34. Claimant presented no evidence establishing Respondents knew or reasonably should have known that they had not complied with the ALJ's order regarding the payment of TTD benefits after the first GAL was filed and the first payment to Claimant was made. Even the first email from Claimant's counsel on November 5, 2019 only referenced the wrong AWW. The email did not point out the wrong TTD period and payment. Thus, Respondents and Claimant's counsel's office were still unaware Claimant was at first paid the wrong amount of TTD benefits.
35. Again, once Respondents became aware that they admitted for the wrong period of TTD, a check to make up the difference was issued on November 27, 2019.

Payment of Medical Benefits

Hatch Chiropractic and Wellness bill from 2017

36. Claimant submitted a bill from Hatch Chiropractic and Wellness. The bill covers treatment from June 12, 2017 through July 31, 2017 and totals \$3,032. (CI's Ex. 15, pp. 72-73.) As for this bill, the ALJ finds as follows:

- ALJ Cayce found the medical treatment from the October 13, 2018 exacerbation/aggravation is reasonable, related, and authorized, including, but not limited to, the ER visit, and Dr. Mitchell and Dr. Rauzzino's visits, prescriptions, and referrals. The treatment billed for in the Hatch bill, however, is from 2017 and predates the 2018 exacerbation/aggravation addressed by ALJ Cayce. Nor is the bill specifically addressed in the Order. As a result, the Hatch bill is not governed by ALJ Cayce's Order.
- Moreover, the Hatch bill is dated August 6, 2018. There is not, however, any credible and persuasive evidence establishing when the Hatch bill was presented to Respondents for payment. (CI's Ex. 15, pp. 72-73.)
- In addition, there is no credible and persuasive evidence establishing the bill was not paid under the fee schedule.
- The Medical Payment Log shows Hatch Chiropractic was paid on January 22, 2019 for services provided during June and July 2017. (See Respondents' Exhibit D, pp. 16, 17, 29, 30.)
- As a result, the Hatch bill was paid before the May 28, 2019 hearing in front of ALJ Cayce and her subsequent order.
- Claimant also failed to plead with specificity the alleged failure to pay the Hatch bill.

Dr. Linda Mitchell's bills from October 2018

37. Claimant submitted bills from Dr. Mitchell. The bills are for treatment provided on October 16, 22, and 29 of 2018. (CI's Ex. 16, pp. 74-75.) As for these bills, the ALJ finds as follows:

- There was no credible and persuasive evidence submitted establishing when Dr. Mitchell's bills were submitted to Respondents.
- There was no credible and persuasive evidence submitted establishing the bills were not paid under the fee schedule.
- The Medical Payment Log shows Dr. Mitchell's bills for treatment provided during October 2018 were paid on January 22, 2019. (See Respondents' Exhibit D, pp. 16 and 29.)
- Dr. Mitchell's medical bills were paid before the May 28, 2019 hearing in front of ALJ Cayce and her subsequent order.

- On November 1, 2019, Claimant's counsel emailed Respondents requesting confirmation that the past medical treatment had been paid and requested a payment log. (*CI's Ex. 10, p. 58*). Claimant's counsel followed up that day with another email stating that Claimant was unable to return to his doctor, because Dr. Mitchell was requiring payment of the past medical bills and confirmation that Respondents would pay moving forward. *Id.* There is not, however, any other evidence, such as a medical report or record from Dr. Mitchell, confirming that specific bills were outstanding and that she would not treat Claimant until those bills were paid.
- As a result, the ALJ finds that the October 2018 bills from Dr. Mitchell that were submitted at hearing by Claimant were paid before the May 28, 2019 hearing in front of ALJ Cayce and her subsequent order.
- Claimant also failed to plead with specificity the alleged failure to pay Dr. Mitchell's bills for these specific dates of service.

Dr. Rauzzino's bill from February 11, 2019.

38. Claimant submitted a bill from Dr. Rauzzino (a/k/a Workers' Compensation RX Solutions) for treatment provided on February 11, 2019. The total amount billed was \$2,689.50. (*See CI's Ex. 14, p. 71.*) As for this bill, the ALJ finds as follows:

- There was no credible and persuasive evidence submitted at hearing establishing when the Dr. Rauzzino's bill was submitted to the Respondents.
- There was no credible and persuasive evidence submitted at hearing establishing the bill was not paid pursuant to the fee schedule.
- The Medical Payment Log shows Dr. Rauzzino's bill was paid on April 16, 2019 for the treatment provided during February 2019. (*See Respondents' Exhibits, BS 16 and 29.*) (Respondents paid Workers' Compensation — Dr. Rauzzino — \$1,419.35 and \$1,270.50, which totals \$2,689.50.)
- As a result, Dr. Rauzzino's bill was paid before the May 28, 2019 hearing in front of ALJ Cayce and her subsequent order.
- Claimant also failed to plead with specificity the alleged failure to pay Dr. Rauzzino's February 11, 2019 bill.

Sky Ridge Medical Center Bill.

39. Claimant submitted a bill from Sky Ridge Medical Center for Claimant's treatment in the emergency department on October 15, 2018. The total amount billed was \$20,174.00. (*See CI's Ex. 17, pp. 76-78.*) As for this bill, the ALJ finds as follows:

- There was no credible and persuasive evidence submitted establishing when the bill was submitted to the Respondents.

- There was no credible and persuasive evidence submitted establishing the bill was not paid under the fee schedule.
- The Medical Payment Log shows the Sky Ridge Medical Center bill was paid on February 4, 2019 for treatment provided during the October 15, 2018 emergency room visit. (See *Respondents' Exhibit D, pp. 16 and 29.*)
- As a result, Sky Ridge Medical Center's bill was paid before the May 28, 2019 hearing in front of ALJ Cayce and before her subsequent order.
- Claimant also failed to plead with specificity the alleged failure to pay the October 15, 2018 Sky Ridge Medical Center bill.

Radiology Imaging Associates, PC Bill.

40. Claimant submitted a bill from Radiology Imaging Associates, PC from Claimant's treatment in the emergency department at Sky Ridge on October 15, 2018. The exact amount of the bill is not clear, but it appears to be \$341. (See *CI's Ex. 17, p. 79.*) As for this bill, the ALJ finds as follows:

- There was no credible and persuasive evidence submitted establishing when the bill was submitted to the Respondents.
- There was no credible and persuasive evidence submitted establishing the bill was not paid under the fee schedule.
- The Medical Payment Log shows the Radiology Imaging Associates bill was paid on January 22, 2019 for radiology services provided during Claimant's October 15, 2018 emergency room visit. (See *Respondents' Exhibit D, pp. 16 and 29.*)
- As a result, the Radiology Imaging Associates bill was paid before the May 28, 2019 hearing in front of ALJ Cayce and before her subsequent order.
- Claimant also failed to plead with specificity the alleged failure to pay the Radiology Imaging Associates' bill.

Payment to Claimant for his out of pocket expenses from October 22, 2018 appointment with Dr. Rauzzino.

41. Based on Respondents' proposed Order, they do not dispute that they had proper notice of their alleged failure to timely reimburse Claimant for his out-of-pocket expenses related to his October 22, 2018 appointment with Dr. Rauzzino. This bill was therefore addressed at hearing and in Respondents' proposed order.
42. Claimant paid out-of-pocket for his treatment with Dr. Rauzzino at Front Range Spine on October 22, 2018. Claimant paid \$338.06. (*CI's Ex. 11.*)

43. On January 22, 2020, Claimant's counsels' office requested Respondents to reimburse Claimant \$338.06 for his out-of-pocket expenses from the October 22, 2018 appointment with Dr. Rauzzino. This request constituted a bill under Rule 16-11(F) (*CI's Ex. 11, p. 59-60.*) Claimant also submitted a bill from Dr. Rauzzino for the October 22, 2018 appointment as an exhibit. (*CI's Ex. 14, p. 69.*)
44. Claimant testified that he did not know when the alleged medical bills were submitted to the insurance company from the provider. (*T:20, lines 18-21.*)
45. There is insufficient credible and persuasive evidence to determine when the bill was provided to Respondents and when they were advised Claimant was seeking reimbursement for the payment he made to Dr. Rauzzino's office until Claimant's counsel requested reimbursement on January 22, 2020.
46. Pursuant to the ALJ's order, and Rule 16-11(F), payment to Claimant was due 30 days after the January 22, 2020 request for reimbursement was made. As a result, reimbursement to Claimant was due by February 21, 2020.
47. On March 18, 2020, Respondents' counsel re-requested the bills that had not been paid from Claimant's counsel. (*CI's Ex. 11, p. 61.*)
48. On April 9, 2020, Respondents reimbursed Claimant for his out-of-pocket expenses paid to Dr. Rauzzino. (*CI's Ex. 12*); (*Tr. at 17:25-18:11.*) Thus, payment was 48 days late. (February 21, 2020 to April 9, 2020 = 48 days.)
49. Since Claimant filed his application for hearing on February 10, 2020, and payment was not made until April 9, 2020, Respondents did not cure the violation.
50. Respondents were 48 days late in reimbursing Claimant for his out-of-pocket medical expenses to Dr. Rauzzino.
51. Respondents did not provide any reason for why they failed to timely reimburse Claimant. As a result, they failed to establish a reasonable basis for their failure to timely reimburse Claimant for his out-of-pocket expenses he paid to Dr. Rauzzino.

Payment to Claimant for out-of-pocket expenses for his prescription medications.

52. On September 18, 2018, Claimant requested reimbursement by email for a single prescription he obtained on September 10, 2018 in the amount of \$33.99. The email makes clear the attachment is the September 10, 2018 receipt. No other attachments are referenced. (*CI's Ex. 13.*)
53. As result, the ALJ finds that the only receipts attached to the email were the receipts for the September 10, 2018 purchase of the of the methylprednisolone dose pack. (*CI's Ex. 13.*)
54. Claimant's *Exhibit 13* also includes receipts for naproxen, cyclobenzaprine, and lidocaine patches. These receipts, however, are dated October 15, 2018. And there is no correspondence from Claimant to Respondents specifically

referencing requests for reimbursement for these prescriptions. As a result, the ALJ cannot determine when, if ever, these other receipts were provided to Respondents and whether Claimant ever requested reimbursement for these prescriptions as well. Thus, the ALJ finds Claimant failed to establish that he requested Respondents to reimburse him for these other prescriptions of October 15, 2018.

55. ALJ Cayce, in her Order that was served on September 3, 2019, found and ordered:

Medical treatment from the October 13, 2018 exacerbation/aggravation is reasonable, related, and authorized, including, but not limited to, the ER visit, and Dr. Mitchell and Dr. Rauzzino's visits, prescriptions, and referrals.

56. Claimant, however, failed to plead with specificity Respondents failure to reimburse him for his out-of-pocket prescription costs of \$33.99. As a result, Respondents were not provided ample opportunity to cure this alleged penalty and defend against this penalty. As a result, Respondents did not address these prescriptions in their proposed order.

Medical Payment Log

57. Claimant's *Exhibit 19* purports to be Respondents' medical payment log setting forth the date Respondents paid certain providers. Claimant contends that payment log supports his contention Respondents did not pay the bills he submitted at hearing and which were ordered to be paid by the ALJ's Order.

58. But the "pay from" and "pay through" dates appear to be the dates of service and do not coincide with the bills submitted by Claimant and which he contends were not paid timely after the ALJ issued her Order. (*CI's. Ex. 19.*)

59. As found above, the payment log provided by Respondents coincides with the bills submitted by Claimant and which he contends were not paid timely. And, as found, Respondents' payment log establishes the medical bills Claimant contends were not paid timely by Respondents after the ALJ's Order - were paid by Respondents before the ALJ's Order. The only medical bill that was not paid before the ALJ's Order is Claimant's request for reimbursement for his out-of-pocket payment of \$338.06 for his October 22, 2018 appointment with Dr. Rauzzino.

Aggravating Factors

60. Claimant presented no credible and persuasive evidence establishing the Respondents' conduct represents a pattern of practice. On the other hand, Respondents presented no witnesses to explain why the violations occurred. In the end, the ALJ does not find the Respondents' conduct - as found in this case - represents a pattern of practice.

CONCLUSIONS OF LAW

Based on these findings of fact, the Judge draws these conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the need for litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is what leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Analysis of Penalties

Whether statutory penalties may be imposed under § 8-43-304(1) C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to \$1,000 per day where the insurer "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel..." Thus, the ALJ must first determine whether the insurer's conduct violates the Act, a rule, or an order. Second, the ALJ must determine whether

any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Indus. Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.*, W.C. No. 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo Sch. Dist. No. 70 v. Toth*, 924 P.2d 1094 (Colo. App. 1996).

Whether the insurer's conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hosp. v. Indus. Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); see also *Pant Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *Pioneers Hosp. v. Indus. Claim Appeals Office*, supra. If the claimant makes such a prima facie showing the burden of persuasion shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hosp. v. Indus. Claim Appeals Office*, supra, *Human Res. Co. v. Indus. Claim Appeals Office*, 984 P.2d 1194 (Colo. App. 1999).

Violation of an Order

Section 8-43-304(1) authorizes imposing penalties of not more than \$1,000 per day if an employee or person "fails, neglects, or refuses to obey any lawful order made by the director or panel." This provision applies to orders entered by a PALJ. Section 8-43-207.5, C. R. S. (order entered by PALJ shall be an order of the director and is binding on the parties); *Kennedy v. Indus. Claim Appeals Office*, 100 P.3d 949 (Colo. App. 2004). A person fails or neglects to obey an order if she leaves undone what an order mandates. A person refuses to comply with an order if she withholds compliance with an order. See *Dworkin, Chambers & Williams, P.C. v. Provo*, 81 P.3d 1053 (Colo. 2003). When a party fails, neglects or refuses to obey an order to take some action, penalties may be imposed under § 8-43-304(1), even if the Act imposes a specific violation for the underlying conduct. *Holliday v. Bestop, Inc.*, 23 P.3d 700 (Colo. 2001); *Giddings v. Indus. Claim Appeals Office*, 39 P.3d 1211 (Colo. App. 2001).

Factors to be Considered in Imposing Penalties

The ALJ may assess a penalty of up to \$1,000 per day for each day the Director's order was violated. § 8-43-304(1) C.R.S. The ALJ may consider a "wide variety of factors" in determining an appropriate penalty. *Adakai v. St. Mary Corwin Hospital*, W.C. No. 4-619-954 (ICAO, May 5, 2006). That said, any penalty assessed should not be excessive in the sense that it is grossly disproportionate to the conduct in question. *Associated Bus. Products v. Indus. Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005). When determining the penalty, the ALJ may consider factors including the "degree of reprehensibility" of the violator's conduct, the disparity between the actual or potential harm suffered by the claimant and the award of penalties, and the difference between the penalties awarded and penalties assessed in comparable cases. *Id.*

Cure Provisions

Section 8-43-304(4), C.R.S., the cure provision, provides that:

In any application for hearing for a penalty pursuant to subsection (1) of this section, the applicant shall state with specificity the grounds on which the penalty is being asserted. After the date of mailing of such application, an alleged violator shall have twenty days to cure the violation. If the violator cures the violation within such twenty-day period, and the party seeking such penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed. The curing of the violation within the twenty-day period shall not establish that the violator knew or should have known that such person was in violation.

The cure statute adds an element of proof to a claim for penalties when a cure is proven. Typically, it is unnecessary for the party seeking penalties to prove that the violator knew or reasonably should have known they were in violation. The party seeking penalties must only prove the putative violator acted unreasonably under an objective standard. See *Jiminez v. Indus. Claim Appeals Office*, 107 P.3d 965 (Colo.App.2003). Section 8-43-304(4) modifies the rule and adds an extra element of proof when a cure has been effected. The party seeking penalties must prove by clear and convincing evidence that the violator had actual or constructive knowledge that its conduct was unreasonable. *Diversified Veterans Corporate Ctr. v. Hewuse*, 942 P.2d 1312 (Colo. App. 1997); see *In re Tadlock*, W.C. No. 4-200-716 (ICAO, May 16, 2007). Constructive knowledge imputes certain knowledge to a party to prevent a party from denying knowledge or acting in a way to remain ignorant. See *Lombard v. Colorado Outdoor Educ. Ctr., Inc.*, 187 P.3d 565, 572 (Colo. 2008).

Penalty for Late TTD Benefits

Section 8-43-401(2)(a), C.R.S. states, "After all appeals have been exhausted or in cases where there have been no appeals, all insurers... shall pay benefits within thirty days after any benefits are due." ALJ Cayce issued her Order on August 30, 2019 and it was served on September 3, 2019. Since no appeal was filed, benefits should have been paid no later than October 3, 2019.

On October 9, 2019, Claimant's counsels' office followed up with Respondents concerning the status of payment to Claimant's providers and payment of his TTD benefits. On October 15, 2019, again Claimant's counsels' office followed up with Respondents concerning the status of the claim. On October 24, 2019, Claimant's counsel sent another email stating that Respondents had not complied with ALJ Cayce's Order.

Finally, on October 25, 2019, 22 days late, Respondents issued an insufficient check for Claimant's TTD benefits. The check paid Claimant TTD for the dates of

October 23, 2018 through October 29, 2018, amounting to \$530, instead of benefits for October 13, 2018 through October 29, 2018, amounting to \$1,360, which was ordered.

On November 12, 2019, the Department of Labor and Employment sent a letter to Respondents stating that Respondents had not complied with the Order, because an “admission consistent with the order” had not been filed. Respondents then filed a General Admission on November 27, 2019 that properly reflected the TTD benefits ordered by the ALJ and issued a second check to Claimant for \$800 to make up the difference between the amount ordered and the smaller amount they had paid that differed from the Order. By the time Claimant had been paid the full amount of TTD benefits ordered by the ALJ, the benefits were 55 days late. Thus, Respondents violated § 8-43-401(2)(a), C.R.S., a provision of the Act, as well as the ALJ’s Order, by failing to timely pay Claimant the TTD benefits ordered to be paid and concurrently met the first step of the penalties analysis under § 8-43-304(1), C.R.S.

As to the second step of the penalty analysis, Respondents acted unreasonably. First, Respondents are presumed to know the law. *Midget Consol. Gold Mining Co. v. Indus. Commission*, 193 P. 493 (Colo. 1920); *Paul v. Indus. Commission*, 632 P.2d 638 (Colo. App. 1981); *Rogan v. UPS*, WC # 4-314-848 (March 2, 1999). Second, Respondents were contacted by Claimant’s counsel’s office several times and once by the Division of Workers’ Compensation regarding the payment of benefits and errors with the GAL. Respondents failed to act as a reasonable insurer by failing to timely pay Claimant his TTD benefits. As a result, penalties are warranted based on the facts here.

As to proportionality, Respondents presented no evidence at the hearing on their ability to pay or appropriate penalties for their failure to comply with the Order timely. As a result, they have essentially waived their right to argue that a penalty of any amount is grossly disproportionate or not warranted based on their conduct. See, *Associated Business Products*, 126 P.3d 323, 33 (Colo. App. 2005).

Respondents did contend that their failure to pay Claimant his TTD benefits was due to a typographical error. While there was a typographical error related to the period of TTD benefits first paid to Claimant, Respondents failed to explain why they were 22 days late in issuing the first payment to Claimant. As found, the first check issued to Claimant for \$530 was 22 days late. And, although Respondents cured the violation, they did not provide any reason for their failure to timely pay Claimant the TTD benefits that were ordered. As a result, Claimant proved by clear and convincing evidence that Respondents either knew or reasonably should have known that they violated the ALJ’s order and violating the act by not timely issuing the first check to Claimant. In similar circumstances when respondents have violated an Order of an ALJ, our courts have imposed significant penalties. See *Toledo v. Res. Management Sys.*, W.C. 3-996-080, *2 (ICAO April 1, 1993) (penalty for \$4800 for employer’s 6-week late payment of benefits following an order of the court).

Here, the ALJ finds and concludes Claimant established that he is entitled to penalties for Respondents failure to timely begin payment of his TTD benefits as ordered by ALJ Cayce. Here, the court imposes a penalty of \$100 per day for the first 22 days the Respondents were late in paying Claimant his TTD benefits. This results in

a total penalty of \$2,200. The court determines this penalty is not excessive considering there were no facts presented by Respondents about their inability to pay or why they failed to timely make any payment. Plus, the penalty is like that in *Toledo v. Res. Management*. Again, it is the lack of any explanation or reason for the late payment of TTD which supports the amount of the penalty for this conduct.

It was, however, found that Respondents failure to pay Claimant the full amount of TTD benefits on time was because of a typographical error related to the start date. And Claimant failed to establish by clear and convincing evidence that Respondents knew or reasonably should have known that Respondents violated the statute and Order based on a typographical error. As found, the initial communication from Claimant's counsel's office and the Division did not specify the error in the GAL about the period TTD was payable. The ALJ therefore finds and concludes that penalties are not warranted for the added delay in issuing Claimant the remaining TTD benefits ordered by the ALJ since this was because of a typographical error. Claimant failed to establish Respondents new or reasonably should have known they violated the ALJ's Order because of any type of error. And, when the error was discovered, they paid Claimant the TTD benefits that were ordered.

As a result, the total penalty for Respondents failure to timely pay Claimant his TTD benefits is \$2,200.

Penalties Regarding the Payment of Medical Benefits

Section 8-43-401(2)(a), C.R.S. states, "After all appeals have been exhausted or in cases where there have been no appeals, all insurers... shall pay benefits within thirty days after any benefits are due."

The ALJ ordered Respondents to pay medical benefits. As found above, Respondents did not file a Petition to Review the ALJ's Order on or before the deadline of September 23, 2019, nor did they pay medical benefits on or before October 3, 2019. Claimant contacted Respondents several times about the medical bills.

Based not on Claimant's Application for hearing, but the evidence submitted by Claimant, Claimant alleges Respondents violated the ALJ's Order by failing to pay several of Claimant's medical bills. Claimant submitted the following medical bills and receipts into evidence:

- i. Dr. Linda Mitchell's bills from October 2018,
- ii. Dr. Rauzzino's bill from February 11, 2019,
- iii. Radiology Imaging Associates' bill from October 15, 2018,
- iv. Sky Ridge Medical Center bills from October 15, 2018,
- v. Hatch Chiropractic and Wellness bills from 2017,
- vi. Payment by Claimant for his out of pocket expenses from October 22, 2018 appointment with Dr. Rauzzino, and

- vii. Payment by Claimant for his out-of-pocket expenses for prescription medications which were incurred on September 18, 2018 and October 15, 2018.

Medical bills i through v.

As found, medical bills i-v were paid before the ALJ issued her Order. Plus, Claimant failed to plead those penalties with specificity. As a result, Claimant's claim for penalties regarding bills i through v is denied.

Medical bill vi.

Claimant was not, however, timely reimbursed for his out-of-pocket expenses paid to Dr. Rauzzino. On January 22, 2020, Claimant's counsels' office requested Respondents to reimburse Claimant \$338.06 for his out-of-pocket expenses for his October 22, 2018 appointment with Dr. Rauzzino. This request constituted a bill under Rule 16-11(F). Claimant also submitted a bill from Dr. Rauzzino for the October 22, 2018 appointment as an exhibit. Before Claimant's counsel requested reimbursement on January 22, 2020, there is no other credible and persuasive evidence establishing this request for reimbursement was made before January 22, 2020.

Pursuant to the ALJ's Order, and Rule 16-11(F), payment to Claimant was due 30 days after the January 22, 2020 request for reimbursement was made. As a result, reimbursement to Claimant was due by February 21, 2020.

On March 18, 2020, Respondents' counsel requested Claimant's counsel to again provide to Respondents any unpaid bills. Then, on April 9, 2020, Respondents reimbursed Claimant for his out-of-pocket expenses paid to Dr. Rauzzino in the amount of \$338.06. Thus, payment was 48 days late and Respondents violated the ALJ's Order and rule by failing to timely pay medical benefits and concurrently met the first step of the penalties analysis under § 8-43-304(1), C.R.S.

As to the second step of the penalty analysis, Respondents acted unreasonably. First, Respondents are presumed to know the law. *Midget Consol. Gold Mining Co. v. Indus. Commission*, 193 P. 493 (Colo. 1920); *Paul v. Indus. Commission*, 632 P.2d 638 (Colo. App. 1981); *Rogan v. UPS*, WC # 4-314-848 (March 2, 1999). Claimant requested reimbursement for his out of pocket medical expenses for treating with Dr. Rauzinno for his work injury on January 22, 2020 and pursuant to the ALJ's Order, Respondents knew, or reasonably should have known, they were liable for such treatment and had to reimburse Claimant within 30 days.

Respondents were contacted several times about the payment of Claimant's outstanding medical bills. Yet, Respondents did not provide any credible and persuasive evidence that they actively tried to determine whether any previously submitted bills remained unpaid, they merely asked Claimant's counsel to resubmit any bills that remained unpaid. This is different than Respondents saying they reviewed the file and determined all bills have been paid and if Claimant contends any bills remain unpaid to please provide those bills so Respondents can investigate more. Instead, Respondents merely did nothing and delayed payment by merely asking for Claimant to

resubmit any previously submitted bills that remained unpaid. That said, Claimant could have been more specific in the first instance by specifically setting forth each unpaid bill.

Respondents presented no evidence at the hearing on their ability to pay or appropriate penalties for their failure to comply with the Order, and so they have waived their right to argue that a penalty of any amount is grossly disproportionate to their conduct. See, *Associated Business Products*, 126 P.3d 323, 33 (Colo. App. 2005). “In *Pueblo School District No. 70 v. Toth*, [P.2d at 1096, 1100], the court upheld an ALJ's order for the imposition of penalties where ALJ found the insurer's ‘repeated and stubborn refusal to respond’ to requests for the payment of medical benefits justified penalties at the rate of \$500 per day. In *Choice Casing Service, Inc., v. Industrial Claim Appeals Office*, [96CA0664 (Colo. App. January 16, 1997) (not selected for publication) (affirming W.C. No. 4-125-136 (ICAO March 29, 1996))] the court affirmed a \$63,000 penalty for an insurer's 126 day delay in filing an admission of liability where the respondents presented no reasonable mitigating actions for the delay, and the ALJ was not persuaded the delay was harmless.” *Giddings v. N. Telecom*, W. C. No. 4-293-203, at *4 (Colo. Ind. Cl. App. Off. Sept. 30, 2002).

Here, Claimant also established by clear and convincing evidence that Respondents knew or reasonably should have known that they were violation of ALJ Cayce's order by not reimbursing Claimant on time.

As a result, the ALJ finds and concludes Claimant established that he is entitled to penalties for Respondents failure to timely reimburse Claimant for his out-of-pocket expenses he paid to Dr. Rauzinno. As a result, the ALJ finds that \$25 per day, for 48 days, is an appropriate penalty. Again, it is the lack of any meaningful Response by Respondents showing they were trying to comply with the ALJ's Order and the failure to provide any reason for not complying with the Order that warrants the daily penalty rate of \$25 for their failure to timely reimburse Claimant. For that reason, the total penalty for Respondents failure to timely reimburse Claimant for his out-of-pocket medical expense of \$338.06 is \$1,200.

Medical bills (prescriptions) vii.

On September 18, 2018, Claimant requested reimbursement by email for a single prescription he obtained on September 10, 2018 in the amount of \$33.99. The email makes clear the attachment is the September 10, 2018 receipt. No other attachments are referenced. As result, the ALJ finds that the only receipts attached to the email were the receipts for the September 10, 2018 purchase of the of the methylprednisolone dose pack. (*Cl. Ex. 13.*)

Claimant's *Exhibit 13* also includes receipts for naproxen, cyclobenzaprine, and lidocaine patches. These receipts, however, are dated October 15, 2018 and there is no correspondence from Claimant to Respondents that specifically references and requests reimbursement for these prescriptions. As a result, the ALJ cannot determine when, if ever, these other receipts were provided to Respondents and whether Claimant ever requested reimbursement for the prescriptions he bought on October 15, 2018. As a result, the ALJ finds Claimant failed to establish that he requested Respondents to reimburse him for the October 15, 2018 prescriptions.

There is no evidence Claimant followed up specifically on the status of his September 18, 2018 request for reimbursement for \$33.99. Respondents also failed to establish that they reimbursed Claimant for his September 2018 out-of-pocket prescription medication expense of \$33.99.

That said, Claimant failed to plead this penalty with specificity. As a result, if properly plead, Respondents might have been able to cure the alleged penalty or produce other evidence about the payment or the reason they failed to pay. As a result, Claimant's request for penalties for the prescription for \$33.99 is denied since Respondents did not have proper notice of this penalty.

Penalty for Failure to Timely File a General Admission of Liability

Section 8-43-401(2)(a), C.R.S. states, "After all appeals have been exhausted or in cases where there have been no appeals, all insurers... shall pay benefits within thirty days after any benefits are due." Failure to obey a workers' compensation rule of procedure is the equivalent of failure to obey an "order" for purposes of § 8-43-304(1). *Fera v. Indus. Claim Appeals Office*, 169 P.3d 231, 234 (Colo. App. 2007) (citing *Pioneers Hosp. v. Indus. Claim Appeals Office*, 114 P.3d 97, 98 (Colo. App. 2005)).

Under WCRP 5-5(C)(1), following any order becoming final which alters or awards benefits, an admission consistent with the Order shall be filed within 30 days. As found above, ALJ Cayce's Order, signed August 30, 2019 and served September 3, 2019, required Respondents to pay TTD benefits. This Order awarded benefits under the Act, as Claimant had not been receiving any benefits just before the reopening. Respondents were therefore required to file a General Admission within 30 days of the order becoming final, October 3, 2019. See WCRP 5-5(C), 5-5(C)(1).

Like the facts in the penalties above, Claimant's counsels' office followed up with Respondents about compliance with the Order, but Respondents did not issue its first GAL following the Order until October 25, 2019, which was 22 days late. Even then, the GAL had the incorrect AWW listed, and it only admitted for TTD benefits for less than half the time the ALJ had ordered. After receiving a letter from the Division noting that the GAL did not comply with the Order, Respondents filed another GAL on November 27, 2019, this time with the correct TTD start date. Respondents violated Rule 5-5(C)(1) by not filing a GAL consistent with the Order within 30 days of the Order becoming finalized, and concurrently met the first step of the penalties analysis under § 8-43-304(1), C.R.S.

As to the second step of the penalty analysis, Respondents acted unreasonably. Respondents are presumed to know the law. *Midget Consol. Gold Mining Co. v. Indus. Commission*, 193 P. 493 (Colo. 1920); *Paul v. Indus. Commission*, 632 P.2d 638 (Colo. App. 1981); *Rogan v. UPS*, WC No. 4-314-848 (March 2, 1999).

But Respondents did cure the penalty before Claimant filed his Application on February 10, 2020. That said, Respondents presented no evidence to dispute a finding that they reasonably should have known the law associated with need to file an admission consistent with an order when an order awards benefits. As a result, Claimant established by clear and convincing evidence that Respondents knew or

reasonably should have known that an admission had to be filed consistent with the ALJ's order within 30 days.

As to proportionality, Respondents presented no evidence at the hearing on their ability to pay or appropriate penalties for their failure to comply with the Rules, and so they have waived their right to argue that a penalty of any amount is grossly disproportionate to their conduct. See, *Associated Business Products*, 126 P.3d 323, 33 (Colo. App. 2005). In *Jakel v. N. Colorado Paper*, the ICAO did not disturb the ALJ's determination to order penalties of \$75 a day for a violation of a Rule. W. C. No. 4-524-991 (ICAO Oct. 6, 2003). In a similar rule violation, the office of administrative courts fined respondents in *Kelly v. Kaiser Hill Co.* \$300 a day for 19 days for failure to produce a medical record within 15 days. W. C. No. 4-332-063, (ICAO Aug.11, 2000). That said, in the prior cases, the rule violated was a long-standing rule. Here, Rule 5-5(C)(1) was amended, effective August 1, 2019.

The ALJ also determined that before August 1, 2019, Rule 5-5(C)(1) only required an admission to be filed when an order "alters benefits being paid." As a result, WCRP 5-5 (C) and 5-5 (C)(1) did not govern when an order "instituted benefits that were not being paid." See *Miller v. Recob & Associates*, W.C. No. 5-001-904-02 (Sept. 17, 2018.)

But in response to *Miller v. Recob & Associates*, Rule 5-5(C)(1) was amended, effective August 1, 2019, to require an admission to be filed when an Order "alters or awards benefits" as done in this case when ALJ Kayce reopened Claimant's claim and awarded TTD benefits.

The ALJ therefore finds and concludes that a penalty of \$10 per day for Respondents' violation of the rule is appropriate for the first 22 days. Once the first GAL was filed, the remaining error was a typographical error and Claimant failed to establish by clear and convincing evidence that Respondents knew or reasonably should have known they continued to violate the applicable rule until they filed their corrected GAL.

As a result, the ALJ finds and concludes that Respondents should be penalized \$10 per day from October 3, 2019 through October 25, 2019, which is 22 days. As a result, Respondents are penalized \$220 for their failure to timely file a general admission of liability under WCRP 5-5(C)(1).

Apportionment of Penalties

If a penalty is assessed under § 8-43-304, C.R.S. the ALJ must apportion payment of the penalty between the aggrieved party and the Colorado uninsured employer fund created by § 8-67-105 C.R.S. except that the amount apportioned to the aggrieved party shall be a minimum of twenty-five percent of any penalty assessed. The ALJ determines that 65% of the penalty shall be apportioned and paid to Claimant and 35% shall be apportioned and paid to the Colorado uninsured employer fund.

ORDER

Based on these findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents are subject to penalties in the amount of \$3,620.
2. The penalties shall be apportioned and 65% paid to Claimant and 35% paid to the Colorado uninsured employer fund.
3. Respondents shall pay a penalty in the amount of \$2,353 to Claimant.
4. Respondents shall pay a penalty in the amount of \$1,267 to the Colorado uninsured employer fund.
5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: July 29, 2020.

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-057-048-001**

ISSUES

- Did Respondents prove they should be permitted withdraw their General Admission of Liability (GAL)?
- Did Claimant prove entitlement to knee surgery recommended by Dr. Simonich?
- Did Claimant prove entitlement to a closed period of TTD from the date of injury to August 8, 2017, and ongoing TTD commencing August 29, 2017?
- Did Respondents prove Claimant was responsible for termination of his employment on August 28, 2017?
- The parties agreed to reserve the issue of average weekly wage. Claimant's opposed oral motion to reserve the issue of disfigurement was granted. Respondents stipulated Dr. McGarry is authorized because Employer did not timely refer Claimant to a provider after his injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a part-time sandwich artist at a Subway restaurant located inside a convenience store in Florence, Colorado. He primarily worked the closing shift. His duties included making sandwiches, taking payments, and closing the store.

2. Claimant suffered an admitted injury to this right knee on July 29, 2017. He slipped on an onion, causing him to "do the splits" and strike his right knee on the floor. He felt immediate pain in the knee that made it difficult to stand and walk.

3. Claimant reported the injury by phone to the District Manager, Mike R[Redacted], who directed Claimant to the emergency room.

4. Claimant went to the St. Thomas More Hospital emergency department that afternoon. The physical examination showed mild effusion and tenderness to palpation over the medial aspect of the right knee. X rays showed "moderate" effusion, unchanged since a prior x-ray on June 8, 2017. Claimant was given crutches, advised to use ice and NSAIDs, and instructed to follow up with his PCP.

5. Causation in this case is complicated by a prior injury to Claimant's right knee in June 2017. On June 7, 2017, Claimant was running up a hill and experienced two painful pops in his right knee. He contacted his PCP, Dr. Joseph McGarry, who ordered an x-ray. The x-ray showed a "small" knee effusion.

6. Claimant saw Dr. McGarry on June 9, 2017. Dr. McGarry noted tenderness over the MCL and joint effusion. He was concerned about ligament or cartilage damage and ordered an MRI.

7. The MRI was completed on June 15, 2017. It showed a small joint effusion and bone contusions of the medial patellar facet and lateral femoral condyle, consistent with sequelae of patellar dislocation. No injuries to the ligaments or cartilage were identified.

8. On June 23, 2017, Dr. McGarry observed “clinically significant reduction in the amount of swelling in the fusion in his knee.” There was no observable ecchymosis. Knee flexion was “good,” but he could not achieve full extension. Claimant had “no particular pain.” Dr. McGarry noted, “I think the patient is healing.” He recommended Claimant perform quad strengthening exercises and follow-up in two months.

9. Claimant did not see Dr. McGarry again until August 2, 2017, four days after the work accident. He was in significant knee pain and using crutches because it was difficult to bear weight on the knee. Dr. McGarry observed increased joint effusion and “fresh” ecchymosis on the medial aspect of the knee around the MCL. Claimant had “extreme pain” when stressing the ligament. Overall, Dr. McGarry believed Claimant was “much more impaired” than at his last visit on June 23.

10. Claimant had another MRI on August 24, 2017. It showed a joint effusion and bone bruising with edema in the medial facet of the patella and lateral femoral condyle “likely related to a recent lateral patellar dislocation.” Although the radiologist did not compare films, these findings are essentially the same as described in the June 15, 2017 MRI report. The radiologist also noted patellar tendinitis, which had not previously been reported.

11. Claimant saw Dr. McGarry again on September 11, 2017. His knee was still very painful, and he “jumped” when the patella was examined. Dr. McGarry opined “the patient is having prolonged but genuine pain in his knee. I think he needs to get into a physical therapy program.” He ordered PT and released Claimant to modified light work, with standing and walking no more than 4 ½ hours in an eight-hour shift.

12. On October 13, 2017, Dr. McGarry noted Claimant “has never been contacted by the work comp people.” His knee was still very painful with limited range of motion, causing a “profound limp.” Dr. McGarry noted atrophy of the right thigh and reiterated the need for PT “to regain function of his leg.” He also referred Claimant for an orthopedic evaluation with Dr. Minihane, Dr. Patterson, or Dr. McFadden.

13. At his November 20, 2017 appointment, Claimant reported he had started physical therapy. The knee was improved since the last visit. Claimant requested a referral to Dr. Danylchuk, who had performed a successful shoulder surgery on Claimant’s father. Dr. McGarry explained it was important for Claimant to strengthen his quads “to get better patella tracking.”

14. By the January 15, 2018 appointment with Dr. McGarry, Claimant had completed 12 sessions of PT. Dr. McGarry opined surgery would not be the pivotal issue and encouraged Claimant to continue home exercises, noting “straight leg raises would help quite a bit.

15. Dr. Danylchuk declined the referral because he does not treat knees, so Dr. McGarry referred Claimant to Dr. William Watson. Claimant saw Dr. Watson on February 8, 2018. The report notes, “he feels the knee is unstable and feels the kneecap goes out of place at the outside.” Symptoms were aggravated by “most activities.” Claimant was markedly tender over the patellofemoral ligaments and the lateral facet of the lateral femoral condyle. Dr. Watson suspected “severe contusion of the cartilaginous surface,” and recommended another MRI.

16. The MRI was performed on February 9, 2018. The radiologist appreciated bone contusions “in the medial femoral condyle as well as the tibial plateau to a lesser degree.” He further noted, “when compared to the prior MRI of the knee of 08/24/17, the bone contusion in the medial femoral condyle is new. Bone contusion in the lateral femoral condyle has resolved.”

17. After reviewing the MRI, Dr. Watson recommended six more weeks of physical therapy to work on strengthening and range of motion.

18. Claimant returned to Dr. Watson on March 15, 2018. His knee was “getting better but still gives out.” Claimant noticed fluid in the knee and swelling at the end of the day. Dr. Watson noted, “I received more information on this case. In June he was running and dislocated his kneecap. He had an MRI on 6/15/2017 [that] showed sequelae of patella dislocation. He states he [did] fairly well after this and was able to work without restrictions and had little problems. On 7/29/2017 he sustained another patellar dislocation when he sustained a valgus stress dislocating kneecap landing hard on the medial femoral condyle.” On examination, Claimant still had marked quadriceps weakness and patellar instability. Dr. Watson made no surgical recommendation but referred Claimant to another orthopedist, Dr. Simonich, for a second opinion.

19. Claimant saw Dr. Simonich on May 25, 2018. Claimant reported a feeling of instability, although his main complaints were pain and clicking beneath his patella. He had not experienced a recurrent dislocation or subluxation. Claimant described knee swelling with activity, and difficulty hiking or walking on uneven terrain. He also reported “erythema and purple skin color changes in the anterior knees and severe shooting pain at rest down the lateral knees and posterior knees.” Dr. Simonich noted Claimant had “very skinny legs with poor quad development.” He opined, “he has increased signal intensity on MRI of the anteromedial tibial plateau and in the region of the medial epicondyle which may not be consistent with patellar dislocation which normally shows injury to the distal medial patella in the lateral trochlea, although this could be consistent with an injury to the MPFL origin.” Dr. Simonich diagnosed patellar dislocation, but qualified the diagnosis by opining, “this has been his working diagnosis, but I’m not sure that this is his true injury. I think he has symptoms of reflex inhibition of his quadriceps more than patellar instability.” He also diagnosed patellofemoral syndrome possible

“pinching” of synovium in the patellofemoral joint. He also suggested a possible diagnosis of complex regional pain syndrome “based on pain at rest and skin color changes and gait.” He wanted to rule out CRPS before recommending surgery to evaluate the patellar cartilage. He further opined, “I’m not certain that he requires an MPFL reconstruction as he has symptoms of reflex inhibition more than instability.”

20. Claimant followed up with Dr. Simonich on July 10, 2018. Claimant described burning around the knee and “soreness” above and below the patella. His ability to walk had improved but was still limited. Claimant indicated his patellofemoral joint “continues to sublux and dislocate and he doesn’t feel like his knee is improving enough and he is not able to perform ADLs adequately.” Dr. Simonich indicated the previous diagnosis of CRPS was “improved.” Without further explanation, Dr. Simonich recommended a right knee arthroscopy with MPFL reconstruction using allograft. He did not attempt to reconcile the statement Claimant’s knee “continued” subluxing and dislocating with the May 25 note indicating Claimant specifically denied recurrent subluxations or dislocations. Nor did Dr. Simonich revisit the diagnostic uncertainty regarding patellar dislocation versus reflex inhibition he noted in the prior report.

21. Respondents denied the surgery and scheduled an IME with Dr. Timothy O’Brien.

22. Claimant saw Dr. O’Brien on August 21, 2018. Dr. O’Brien determined Claimant suffered a patellar dislocation in June 2017 which typically takes up to six months to heal, with waxing and waning pain complaints. Dr. O’Brien opined the July 29, 2017 work accident did not result in a “new injury” because there were no new x-ray or MRI findings, no new accumulation of fluid on the knee joint, and no objective evidence of new tissue breakage or yielding. Dr. O’Brien opined surgery was not reasonably necessary or work-related given Claimant’s global ligamentous laxity and because any injury Claimant “hypothetically” sustained in July 2017 would have already healed.

23. In his hearing testimony, Dr. O’Brien clarified he would have expected Claimant to heal from the June 2017 dislocation in 6 to 12 weeks.

24. On December 12, 2018, Dr. McGarry responded to a request from Respondents to address MMI. He opined Claimant was not yet at MMI because significant loss of leg strength and muscle mass, range of motion loss, and altered gait. He opined Claimant needed to continue with his exercise and strengthening program to attain MMI.

25. Approximately five days later, Claimant suffered a setback when his right knee gave out at home causing him to fall.

26. Claimant moved to California in May 2019 to work in a marijuana grow business, so he did not see Dr. McGarry for several months.

27. Claimant returned to Dr. McGarry on February 21, 2020 after moving back to Colorado. Claimant had been more vigorous with stretches and exercises per Dr. McGarry’s previous instructions. He continued to demonstrate “very obvious atrophy of the right quadriceps,” although this was improved from previous measurements. Dr.

McGarry stated "I have seen significant improvement in his muscle tone on his right leg, but unfortunately, the patient has not regained a muscle mass which he has lost previously." He was unsure "whether there will be much more improvement from this point on," but encouraged Claimant to continue the exercise program.

28. Claimant's last documented appointment with Dr. McGarry was on March 6, 2020. Claimant's condition remained largely the same. Dr. McGarry noted,

I had the patient ambulate up and down the hallway to study his gait and he has somewhat of a knock-knee gait. He has made tremendous progress in 2017 when he could barely walk and could not bend his knee. There is no perceptible limp.

ASSESSMENT: The patient as noted on last dictation should continue with his exercise program. Certainly, still a question of some internal derangement or instability of the right knee. I only got back to the exam room and the patient was putting on his jeans after completing his walking. He had some sudden discomfort and had to shake his knee out of it in order to get it to "unlocked." I think there is still instability in the knee, and as I have noted previously, there is certainly loss of range of motion and strength in the knee.

29. Dr. McGarry testified he does not endorse the surgery recommended by Dr. Simonich, for several reasons. He believes Dr. Simonich's rationale for the proposed surgery is unclear. Nor is it clear whether the surgery is intended to treat the residual effects of Claimant's injury or a nonwork-related condition. More important, Dr. McGarry believes Claimant's best avenue for pain relief and functional improvement is a consistent and vigorous strengthening program.

30. As noted previously, Claimant worked for Employer part-time, primarily on the closing shift. Time records from June 28, 2017 through July 25, 2017 show he worked 18.51, 6.22, 12.73, and 10.57 hours respectively over the four weeks before the June 29, 2017 injury, which averages to 12.01 per week.

31. For the week ending August 1, 2017, Claimant had been scheduled to work July 28, July 29, and July 31. He was scheduled three hours on July 29 (the date of injury), but only worked approximately 30 minutes before injuring his knee. Claimant missed his next scheduled shift on July 31, 2017 because of the injury. He worked his scheduled shifts the next week, on August 4, 2017 and August 8, 2017. Although Claimant was only scheduled to work three shifts the week ending August 15, 2017, he picked up a fourth shift. The week ending August 22, he again picked up a fourth shift.

32. Claimant testified when he returned to work after the accident, he was performing tasks such as making sandwiches, taking payments, and closing the store on "pretty much the same shift" he was working before the accident. Employer accommodated his injury by allowing him extra breaks and a chair in which to sit as needed.

33. There is no persuasive evidence Claimant missed at least three shifts from work because of the work injury. Except for July 31, 2017, Claimant worked all his scheduled shifts and even picked up some extra shifts.

34. Employer terminated Claimant on August 28, 2017. Documents in his employment file, coupled with Mr. R[Redacted]'s persuasive testimony, show Claimant was terminated for numerous performance lapses despite multiple warnings and write-ups. Claimant's first write-up occurred in October 2016 because he and a co-worker left the back door open all day, left the cash register open, and took breaks at the same time, leaving a customer waiting while both employees were outside. On June 5, 2017, Claimant was almost 2 hours late for work and did not call to indicate he would be late. A few days later, Claimant received a written warning for failing to complete multiple items on the closing checklist even though he checked them off as having been done. On June 26, 2017, he was written up for closing the store early and turning away a customer who arrived before the store was scheduled to close.

35. After Claimant was found to have again closed the store early on August 17, 21, and 25 2017, and receiving an additional write-up for not weighing weigh strips and steak after repeated counseling, Mr. R[Redacted] decided to terminate Claimant's employment.

36. Claimant's testimony he was trained by his previous manager to close the store early if it was slow is not credible. As Mr. R[Redacted] persuasively explained, closing the store early violates Company policy and the Subway franchise contract.

37. Dr. McGarry's testimony at hearing was credible and persuasive, particularly regarding the relative severity of Claimant's symptoms and functional limitations before and after the July 29, 2017 work accident. Dr. McGarry is also persuasive reasonably necessary treatment, including surgery (or the lack thereof).

38. Respondents failed to prove a basis to withdraw their GAL. The persuasive evidence shows Claimant suffered a compensable injury on July 29, 2017.

39. The treatment rendered by, and on referral from, Dr. McGarry was reasonably needed to cure and relieve the effects of Claimant's compensable injury.

40. Claimant failed to prove the MPFL reconstruction surgery recommended by Dr. Simonich is reasonably necessary to cure and relieve the effects of his injury.

41. Claimant failed to prove he was disabled and suffered a wage loss more than three shifts because of the work accident.

42. Respondents proved Claimant was responsible for termination of his employment on August 28, 2017.

CONCLUSIONS OF LAW

A. Withdrawal of GAL

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). A pre-existing condition does not disqualify a claim for compensation if a work accident aggravates, accelerates, or combines with the underlying condition to cause disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). An injury need not be dramatic to support a finding of compensability. Even a “minor strain” or a “temporary exacerbation” of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant’s work activities and caused her to seek medical treatment. *E.g.*, *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

By filing an admission of liability, the employer or insurer has “admitted that the claimant has sustained the burden of proving entitlement to benefits.” *City of Brighton v. Rodriguez*, 318 P.3d 496, 507 (Colo. 2014). If the employer subsequently seeks to withdraw its admission of liability, it must prove by a preponderance of the evidence that the claimant’s injuries were not compensable. See § 8-43-201(1) (“a party seeking to modify an issue determined by a general or final admission ... shall bear the burden of proof for any such modification.”). Thus, to withdraw a GAL, the respondents must prove the claimant suffered no compensable injury in the first instance.

As found, Respondents failed to prove a basis to withdraw their GAL. Dr. McGarry’s records and testimony persuasively show Claimant’s condition was worse after the July 29, 2017 work accident than before. On August 2, 2017, Dr. McGarry observed increased joint effusion, “fresh” ecchymosis, and greater apparent pain. Claimant was using crutches and having difficulty walking, which was not the case immediately the work accident. Claimant had a witnessed accident that elicited immediate pain and proximately caused him to seek treatment he would not otherwise have pursued. The persuasive evidence shows Claimant suffered a compensable injury on July 29, 2017.

B. Medical benefits

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Even if the respondents admit liability for an accident, they retain the right to dispute the reasonable necessity or relatedness of any specific treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant’s entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v.*

Industrial Claim Appeals Office, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

As found, the treatment rendered by, and on referral from, Dr. McGarry was reasonably needed to cure and relieve the effects of Claimant's compensable injury. Imaging studies were appropriate to investigate the nature and extent of Claimant's knee pathology and delineate a treatment plan. Dr. McGarry's primary focus on therapy and exercise was appropriate. Dr. McGarry reasonably requested orthopedic evaluation to explore whether Claimant was a surgical candidate. Claimant reasonably sought emergent treatment at the St. Thomas More Hospital immediately after the accident at Mr. R[Redacted]'s instigation.

Claimant failed to prove the MPFL reconstruction surgery recommended by Dr. Simonich is reasonably necessary or related to his injury. Dr. Watson made no surgical recommendation. Dr. McGarry does not favor it, and Dr. O'Brien echoed that opinion. Dr. Simonich is the only physician recommending surgery, but he did not adequately explain his rationale. MPFL reconstruction is typically intended to treat laxity associated with recurrent subluxations or dislocations. But Dr. Simonich initially questioned whether patellar dislocation was Claimant's "true injury," and instead "I think he has symptoms of reflex inhibition of his quadriceps more than patellar instability." At the next appointment, he abruptly recommended MPFL reconstruction, with no further discussion or explanation or the questions raised in his prior report. Additionally, Dr. Simonich offered no persuasive opinion regarding any causal connection between the July 29, 2017 work accident and the proposed surgery. Finally, Claimant did not pursue surgery for more than two years, which suggests even he is not convinced of its necessity or utility.

C. TTD benefits before Claimant's termination

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function, and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999).

There is no persuasive evidence Claimant missed at least three shifts because of the work accident. Claimant missed work on July 31, 2017 but worked all subsequent shifts for which he was scheduled. In fact, Claimant even picked up extra shifts and does not appear to have suffered any wage loss before he was terminated on August 28, 2017.

D. Claimant was responsible for termination of employment

Sections 8-42-103(1)(g) and 8-42-105(4)(a) provide:

In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury.

The respondents must prove by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised “some degree of control over the circumstances which led to the termination.” *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The concept of “volitional conduct” is not necessarily related to culpability, but instead requires the exercise of some control or choice in the circumstances leading to the discharge. *Richards v. Winter Park Recreational Association*, 919 P.2d 983 (Colo. App. 1996). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for his termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

As found, Respondents proved Claimant was responsible for termination of his employment. Claimant received repeated notices and warnings about various performance issues over a period of many months. Mr. R[Redacted]’s testimony and the written documentation in Claimant’s employment file are credible and persuasive. The accretion of multiple issues despite repeated counseling and warnings amply justified Claimant’s dismissal. The totality of persuasive evidence shows Claimant performed volitional acts and otherwise exercised a degree of control over the circumstances leading to his termination.

ORDER

It is therefore ordered that:

1. Respondents’ request to withdraw their General Admission of Liability is denied and dismissed.
2. Insurer shall cover all medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant’s compensable injury.
3. Claimant’s request for MPFL reconstruction surgery recommended by Dr. Simonich is denied and dismissed.
4. Claimant’s request for TTD benefits before his termination on August 28, 2017 is denied and dismissed.
5. Claimant’s request for TTD benefits commencing August 29, 2017 is denied and dismissed.

6. All issues not decided herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

ISSUE

1. Whether Claimant has shown, by a preponderance of the evidence, that a psychological evaluation, as recommended by Lon Noel, M.D., is reasonable, necessary, and causally related to her work injury of March 19, 2019.

FINDINGS OF FACT

1. Claimant is 54-year-old woman who sustained an admitted work-related injury to her left ankle, left shoulder and lower back while working for Employer on March 19, 2019. (Ex. A). Claimant has received medical treatment through Authorized Treating Provider (ATP) Lon Noel, M.D. (Ex. C).

2. On May 28, 2019, Claimant saw Dr. Noel. Dr. Noel reviewed the results of an MRI performed on Claimant's left shoulder, which showed a SLAP 2 lesion with no full thickness rotator cuff tear. (Ex. C)

3. On June 24, 2019, Dr. Noel referred Claimant to Michael Hewitt, M.D., for evaluation of her shoulder. (Ex. C).

4. On July 3, 2019, Claimant saw Dr. Hewitt for evaluation of her left shoulder. Dr. Hewitt diagnosed Claimant with shoulder impingement syndrome of the left shoulder. (Ex. D).

5. After failure of conservative treatment, Dr. Hewitt performed surgery on the Claimant's left shoulder on January 21, 2020. (Ex. D). Claimant's January 21, 2020 left shoulder surgery was reasonable and necessary and related to her work injury of March 19, 2019.

6. Claimant experienced post-operative complications resulting from her January 21, 2020 surgery after she was discharged and returned to her home. Claimant woke in the middle of the night choking, with a racing heartbeat and experiencing difficulty breathing. Claimant called the surgery center and was advised to get to the hospital as soon as possible. Claimant called an ambulance and was taken to Swedish Hospital where she was admitted for approximately 48 hours because of breathing difficulties. Her admission pulse oximetry was 82%, Claimant's blood pressure was elevated and thought to be secondary to her nerve block at the time of surgery and the effect of pain medications. (Ex. C).

7. Claimant testified the experience following her surgery was very upsetting and she felt that she might die.

8. During the week of February 6, 2020, Dr. Noel's office received a text message from Dr. Hewitt's office indicating Claimant "is having a lot of mental stress with

adjustment problems post-surgery. . . She had postop complications and was admitted to Swedish Hospital for 48 hours because of breathing difficulties. . . She is complaining of anxiety and depression.” (Ex. C).

9. On February 6, 2020, Claimant saw Dr. Noel and reported she was having problems sleeping and complained of anxiety and depression. Dr. Noel found that Claimant was demonstrating somewhat of a depressive affect and also seemed anxious in general. Dr. Noel referred the patient to Dr. Timothy Shea for a psychological evaluation. (Ex. C).

10. On February 13, 2020, Claimant saw Dr. Noel. Claimant reported that she was still concerned regarding her psychological situation. (Ex. C).

11. By letter dated February 21, 2020, Respondents denied Dr. Noel’s referral for a psychological evaluation because: “These services are not related to patient’s workers’ compensation claim, or are not medically necessary, § 8-42-101(1)(a), C.R.S. No (sic)”. (Ex. B).

12. On February 25, 2020, Claimant saw Dr. Noel. Claimant reported she was continuing to experience a lot of anxiety. Claimant reported she was “still having flashbacks regarding the complications that occurred after her shoulder surgery involving her lungs and oxygen levels.” Dr. Noel conducted an examination of Claimant and noted she was “demonstrating some anxiety regarding her sleeping situation. She is still having some depression.” Dr. Noel prescribed Claimant alprazolam (i.e., Xanax) 0.5 mg to be taken one half tablet during the daytime when necessary and one tablet at bedtime for anxiety and possible hyperventilation.” (Ex. C).

13. On February 27, 2020, Claimant saw Dr. Noel. Claimant reported the alprazolam prescription had definitely been helping. Dr. Noel’s records reflect that “Today [Claimant] took .25 mg of alprazolam at midday which definitely helped her anxiety.” (Ex. C).

14. On March 27, 2020, Claimant saw Dr. Noel. Claimant reported her depression had worsened, and she was still having problems sleeping. Dr. Noel documented that Claimant “sounds discouraged but is not showing overt signs of mood affect disorder.” Claimant’s medications included alprazolam when necessary during the day. Dr. Noel added a prescription for one daily dose of Zoloft 50 mg. (Ex. C).

15. On April 16, 2020, Claimant had a telephone consultation with Dr. Noel. Dr. Noel noted that Claimant’s medications continued to be alprazolam/Skelaxin/Zoloft/Advil. Claimant reported that she was continuing to rotate alprazolam and Skelaxin but was still having problems sleeping. Claimant also reported that Zoloft had definitely been helping. Dr. Noel’s record of the April 16, 2020 telephone consultation does not comment on Claimant’s affect. (Ex. C).

16. On April 30, 2020, Claimant had a telephone consultation with Dr. Noel. Dr. Noel indicated that Claimant had “done well on increased doses of Zoloft. She takes alprazolam one half doses (sic) daily but mainly at bedtime.” Dr. Noel increased

Claimant's prescription for Zoloft to 100 mg, daily. Dr. Noel's record of the April 30, 2020 telephone consultation does not comment on Claimant's affect. (Ex. C).

17. On May 14, 2020, Claimant had a telephone consultation with Dr. Noel. Dr. Noel noted Claimant's medications included Zoloft 100 mg daily "which has definitely helped her depression." Dr. Noel's record of the May 14, 2020 telephone consultation does not comment on Claimant's affect. (Ex. C).

18. On June 9, 2020, Claimant saw Dr. Noel. Dr. Noel indicated that Claimant continued to take Zoloft and alprazolam. Dr. Noel noted "No overt depressive affect is noted today." (Ex. C).

19. Claimant testified that she is currently experiencing symptoms in her left ankle which includes soreness, stiffness, and difficulty walking on uneven surfaces. Claimant testified that her symptoms in her ankle have negatively impacted her ability to function as it is difficult to stand or walk for any prolonged period of time. Claimant testified her ankle feels unstable, which causes her anxiety regarding the possibility of falling again.

20. Claimant testified that she is currently experiences symptoms in her left shoulder which includes pain, soreness, problems sleeping, and limited range of motion. Claimant stated that her symptoms have impacted her ability to function, as she has issues with conducting any overhead activities as well as any activity that involves rotation of her left shoulder.

21. Claimant testified that her current symptoms and functional limitations has impacted her emotionally. She is frustrated, out of work, unable to sleep which has caused her to be very anxious and depressed. Claimant testified that she experiences panic attacks and feels helpless.

22. Claimant testified that she has discussed her symptoms with Dr. Hewitt and Dr. Noel, which lead to the referral to Dr. Shea.

23. Claimant testified she wishes to pursue the referral to Dr. Shea because she still experiences frustration, depression, and anxiety that is not improving. Claimant also prefers to receive treatment with Dr. Shea in lieu of prescription medications for anxiety and depression. Claimant testified that even with anti-anxiety and anti-depressant medications she continues to experience symptoms of anxiety and depression.

24. The ALJ finds the testimony of Claimant to be credible and persuasive regarding her symptoms associated with anxiety and depression.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to

injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. Respondents may, nevertheless, challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. See *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). "In order to impose liability for medical treatment, the ALJ must find the need for treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1) (b), C.R.S." *In re Claim of Laurienti*, WC No. 5-058-824-001 (ICAO, Feb. 11, 2020). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

Claimant has established by a preponderance of the evidence that psychological evaluation and treatment, as recommended by Lon Noel, M.D., is reasonable, necessary and proximately caused by an injury arising out of and in the course of the employment — specifically, Claimant's March 19, 2019 injury. Claimant's January 21, 2020 left shoulder surgery was to relieve the effects of her admitted left shoulder injury. As a result of the January 21, 2020 surgery, Claimant experienced complications, which gave rise to

anxiety and depression. Claimant's ATP, Dr. Noel, reasonably referred Claimant to Dr. Timothy Shea for a psychological evaluation and treatment.

Although Claimant did not initially experience symptoms of anxiety or depression, her symptoms began as the result of complications following her January 21, 2020 shoulder surgery. Claimant's medical records do not support the position that Claimant's anxiety and depression are "non-existent condition[s]." To the contrary, Claimant experienced a significant and anxiety provoking complication as a result of her January 21, 2020 surgery, requiring two additional days of hospitalization. Following her hospitalization, Claimant repeatedly reported experiencing symptoms of anxiety and depression to her providers, albeit not at every visit with every provider. In addition, Claimant credibly testified to the emotional difficulty she has experienced as a result of her injuries and her decreased function resulting from those injuries.

When Insurer denied Claimant's referral, Dr. Noel prescribed Claimant alprazolam (Xanax) for her anxiety and Zoloft for her depression. Dr. Noel's decision to treat these conditions indicates Claimant was experiencing these symptoms. Claimant reported these medications were helpful, although they did not fully relieve her symptoms. Again, Claimant's reports that anti-anxiety and anti-depressant medications helped her symptoms indicates that the conditions existed. Claimant credibly testified that she continues to experience symptoms of anxiety and depression, and she wishes to see Dr. Shea in the hope of addressing these conditions and avoiding becoming dependent on medication. Claimant's testimony concerning the effect of these complications, as well as her ongoing symptoms, was credible and persuasive.

The ALJ find the Claimant met her burden of proof of establishing that the referral to Dr. Shea for psychological evaluation was related to or caused by her March 19, 2019 industrial injury by a preponderance of the evidence.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that the psychological evaluation recommended by Lon Noel, M.D. is reasonable, necessary, and causally related to her March 19, 2019 work injury. Respondents shall authorize the referral.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-120-176-001**

ISSUE

1. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of employment with Employer on or about September 30, 2019.
2. Whether Claimant established by a preponderance of the evidence entitlement to a general award of reasonable and necessary medical benefits causally related to his September 30, 2019 injury.
3. Whether Claimant established by a preponderance of the evidence entitlement to temporary total disability (TTD) benefits from the date of injury until January 1, 2020.
4. Claimant's average weekly wage.
5. Whether Respondents established by a preponderance of the evidence that Claimant's injury was the result of a safety violation.

FINDINGS OF FACT

1. Claimant is a 33-year-old male who was employed by Employer as a chemist in Employer's lab from June 2, 2019 until October 21, 2019. Claimant's average weekly wage was \$1,370.69 per week.

2. On and before September 30, 2019, Employer's business was extraction and production of crude oil from industrial hemp plants. The end product Employer produced and sold was "winterized crude." The production of winterized crude first requires the extraction of crude oil from hemp. The crude oil is then further refined to remove fats, lipids, and waxes. The resulting product is "winterized crude." (Ex. K). Winterized crude may then be further refined through the process of distillation to create "distillate." (Ex. L). Distillate is used in the production of CBD products. As of September 30, 2019, Employer did not produce or manufacture distillate and did not use distillate in conjunction with its business.

3. Claimant was hired to assist Employer to develop its crude extraction process. Claimant's job responsibilities included primarily the operation of "reactor #1" – a piece of equipment used to extract raw crude from hemp. Employer also used a piece of equipment referred to as "reactor #2" to further refine the raw crude into winterized crude. Employer's chief operating officer, Jimmy W[Redacted], was primarily responsible for the operation of "reactor #2." (Ex. J).

4. Prior to Claimant's employment with Employer, Claimant had produced CBD products independent of Employer. (Ex. H). During the course of Claimant's employment, Claimant expressed the desire to start his own business manufacturing CBD distillate and other CBD products.

5. Toward that end, on approximately September 23, 2019, Claimant acquired 9 kilograms of winterized crude from Employer, with the intent of using the winterized crude to manufacture CBD distillate for his own business (i.e., independent of Employer). (Ex. D).

6. During the course of his employment, Employer permitted Claimant to use space in Employer's laboratory to work on his own "side business" of producing distillate. (Ex. I). Mr. W[Redacted] testified Employer permitted Claimant to use this additional space because Claimant was also a personal friend, and it was a way to permit Claimant to make additional money outside his employment with Employer. Mr. W[Redacted] testified Claimant had started to work on Claimant's distillation business throughout his work week with Employer. Some time prior to September 30, 2019, Claimant and Employer reached an agreement to permit Claimant to work for Employer Monday through Thursday of each week. On Fridays, Claimant was permitted to use space in Employer's laboratory to work on his own distillate production business.

7. On the morning of September 30, 2019, Claimant notified Employer of his resignation effective three weeks from the date of notice (i.e., effective October 21, 2019). Employer accepted Claimant's resignation. (Ex. F). One of the reasons for Claimant's resignation was Claimant's plan to operate his own business manufacturing CBD distillate for sale.

8. Later on September 30, 2019, Claimant was performing what he characterized as "quality control" on some "fatty distillate." Claimant testified he placed the distillate in a one-gallon glass jar with a large amount of ethanol (at a ratio of approximately 4 parts ethanol to one part distillate). Claimant then used a heat gun to heat the distillate/ethanol solution. During this process, the distillate/ethanol solution ignited, causing significant burn injuries to Claimant. September 30, 2019 was a Monday, and not a day on which Employer had agreed Claimant could work on his own distillation projects.

9. Claimant was taken to UC Health for treatment and has sustained significant burn injuries to his lower extremities as a result of the fire or explosion. (Ex. M).

10. Claimant testified the distillate with which he was working was Employer's property and that he was conducting quality control on behalf of Employer. Claimant's testimony regarding the purpose of the quality control and the ownership of the distillate was not credible.

11. Mr. W[Redacted] testified the quality control process Claimant was performing was not done on behalf of Employer or for Employer's benefit, nor was the

distillate with which Claimant was working Employer's property. Mr. W[Redacted] testified that Employer did not perform distillation at the time of Claimant's injury. Mr. W[Redacted] testified that because Employer did not produce distillate, it did not run quality control processes on distillate. Instead, Employer's quality control process was run on the product that Employer produced – winterized crude. Mr. W[Redacted] testified that Employer's quality control process involved the suspension of winterized crude into ethanol or methanol, and then cooling the solution to negative eighty degrees to determine if an unacceptable level of fats, lipids and waxes remained in the solution. Mr. W[Redacted] testified that Employer's quality control process did not involve the use of heat or a heat gun and could be done much faster than a quality control test on distillate. Mr. W[Redacted] testified it would not be logical for Employer to process its winterized crude into distillate, and then run quality control tests on the distillate, because it would be adding unnecessary steps and time to the process.

12. Mr. W[Redacted], testified Employer did not produce distillate, did not use distillate in its business, and did not have distillate within its inventory as of September 30, 2019. Mr. W[Redacted] testified Claimant performing quality control on distillate on September 30, 2019 was not for the benefit of Employer.

13. Mr. W[Redacted] testified that Employer did not request that Claimant bring glass jars or distillation equipment to Employer's premises or that Claimant purchase distillation equipment.

14. Mr. W[Redacted]'s testimony was credible and persuasive.

15. With the exception of the heat gun, the equipment Claimant was using to perform quality control on the distillate, was owned and supplied by Claimant. Claimant brought the one-gallon glass jar to Employer's lab and purchased much of the other equipment on eBay in May 2019. The glass jar Claimant used was not made of heat-resistant glass, and instead was a normal glass jar one could purchase at Wal-Mart, similar to a Mason jar.

16. Although the heat gun was the Employer's property, Mr. W[Redacted] testified that Employer did not use the heat gun for quality control. Employer used the heat gun to assist in removing crude oil from buckets due to its high viscosity. Mr. W[Redacted] testified he was not aware Claimant was using the heat gun in the manner in which Claimant was using it on September 30, 2019.

17. Employer's chief financial officer, Mallery W[Redacted], testified that Employer's business on and before September 30, 2019 was crude oil extraction from industrial hemp. Ms. W[Redacted] testified Employer's end product for sale on and before September 30, 2019 was winterized crude. Ms. W[Redacted] testified Claimant was not hired to assist Employer in the production of distillate.

18. Ms. W[Redacted]'s testimony was credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, ... performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; see *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641.

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. See *Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market*, W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlanda*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equipment Company*, W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

The course of employment test does not necessarily require that the claimant be engaged in work or on the clock if the claimant's activity is a normal "incident" of the employment and not a substantial deviation. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Ventura v. Albertson's, Inc.*, 856 P.2d 35 (Colo. App. 1992). When the employer asserts a personal deviation from employment "the issue is whether the activity giving rise to the injury constituted a deviation from employment so substantial as to remove it from the employment relationship." *Roache v. Industrial Commission*, 729 P.2d 991 (Colo. App. 1986); *In Re Laroc*, W.C. 4-783-889 (ICAO, Feb. 1, 2010). "If the acts of an employee at the time of the injury are for the employee's sole benefit, then the injury does not arise out of and in the course of employment." *Kater v. Industrial Commission of State of Colorado*, 728 P.2d 746, 747 (Colo. App. 1986); *In Re Laroc*, W.C. No. 4-783-889 (ICAO, Feb. 1, 2010). The issue is thus whether the "claimant's conduct constitutes such a deviation from the circumstances and conditions of the employment that the claimant stepped aside from his job and was performing an activity for his sole benefit." *In Re Laroc*, W.C. 4-783-889 (ICAO, Feb. 1, 2010); see *Panera Bread, LLC v. Industrial Claim Appeals Office*, 141 P.3d 970 (Colo. App. 2006).

Claimant has failed to meet his burden to establish by a preponderance of the evidence that his September 30, 2019 injury arose out of and in the course of employment with Employer. At the time of his injury, Claimant was performing quality control on distillate not owned or supplied by Employer and not for any purpose related to Claimant's employment. Employer's quality control processes at that time did not involve distillate or heat. Employer's quality control processes at that time required the cooling of winterized crude. Claimant was conducting quality control on "fatty distillate" he supplied for use in Claimant's side-business or for another personal reason unrelated to Employer's business. In doing so, Claimant engaged in conduct for his own sole benefit and purpose which neither conferred a benefit on Employer nor was it related to or incidental to Claimant's employment duties. Accordingly, Claimant's injury, sustained while performing a task for his own benefit, did not "arise out of" Claimant's employment.

Similarly, because performing quality control on distillate was for his own purpose, it was not connected to his work function, and was not done in the course of his employment.

Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable work-related injury on September 30, 2019. His claim is denied and dismissed.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11*, W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

Because Claimant has failed to establish that he sustained a compensable work-related injury on September 30, 2019, his request for medical treatment is denied and dismissed.

Temporary Total Disability Benefits & Average Weekly Wage

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. See Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)).

Because Claimant has failed to establish that he sustained a compensable work-related injury on September 30, 2019, his request for temporary total disability benefits is denied and dismissed. The determination of Claimant's average weekly wage is therefore moot.

Safety Violation

Section 8-42-112(1)(b), C.R.S. authorizes a fifty percent reduction in compensation for an employee's "willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." A safety rule does not have to be either formally adopted or in writing to be effective. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715, 719 (Colo. App. 1995). To establish that a violation of §8-42-112(1)(b), C.R.S. has been willful, a respondent must prove by a preponderance of the evidence that a claimant acted with "deliberate intent." *In re Alvarado*, W.C. No. 4-559-275 (ICAO, Dec. 10, 2003). Willful conduct may be proven by circumstantial evidence including evidence of frequent warnings, the obviousness of the risk, and the extent of deliberation evidenced by claimant's conduct. *See In re Heien*; W.C. No. 5-059-799-01 (ICAO, Nov. 29, 2018).

Because Claimant has failed to establish that he sustained a compensable work-related injury on September 30, 2019, the issue of whether his injury was the result of a safety violation is moot.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable work-related injury on September 30, 2019. His claim is denied and dismissed.
2. Claimant has failed to establish by a preponderance of the evidence an entitlement to medical benefits.
3. Claimant has failed to establish by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits.
4. All remaining issues are moot.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

ISSUES

- I. Has Claimant, by clear and convincing evidence, overcome the DIME opinion of Dr. Beatty on the issue of Maximum Medical Improvement?
- II. Has Claimant shown, by a preponderance of the evidence, that she is entitled to medical benefits, in the form of epidural steroid injections, as proposed by Dr. Agarwala?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant's March 20, 2013 Injury and Ongoing Treatment

1. This is an admitted claim. In a prior admitted claim, involving the same Employer, on March 20, 2013, Claimant, a driving instructor at the time, injured her neck while administering a driving examination. According to Claimant's testimony at hearing, the driver hit a cement pole with "extreme" force, causing her "to jolt backwards." (Ex. 1).
2. Claimant initially treated for her 2013 neck injury with Dr. Wayne Hudson, DO, including physical therapy, massage, medications and steroid injections.
3. On August 19, 2013, Claimant had a MRI of her cervical spine. There were mild degenerative changes at C4-5, and minimal degenerative changes at C3-4, C6-7, and T2-3. There was "minimal, if any, stenosis" detected. (Ex. N, p. 193).
4. On January 29, 2014, Claimant had a cervical fusion at C5-6 performed by Dr. Amit Agarwala. (Ex. K, Deposition transcript). The Claimant was told after the fusion that if her symptoms returned the disc below would be "at fault." (Ex. L, p. 154).
5. After her 1/29/2014 surgery, the Claimant continued to treat her cervical pain with muscle relaxers and opioids.
6. On May 14, 2014, Claimant was placed at MMI for her 2013 injury with a 23% impairment rating for her cervical spine. (Ex. M, p. 177, Ex. 1).
7. On September 21, 2015, Claimant had a cervical MRI performed because she was having a recurrence of her pre-fusion symptoms. The MRI showed mild

degenerative changes from C2-3 to C4-5, and at C6-7. There was now noted to be evidence of stenosis at C6-7. Of the changes at C6-7, the radiologist stated: "The degenerative changes at this level are slightly worse than the previous exam." (Ex. N, p. 189).

8. On September 24, 2015, Claimant saw Dr. Hudson. She reported that her pain was not getting any better, even with physical therapy. The TINS unit provided no relief, and pain was noted with sudden weather changes. (Ex. L, p. 162).
9. On October 29, 2015, Claimant returned to Dr. Hudson. She stated that she had been "hurting for two and a half years." She stated that her pain got better for eight months after her January 2014 surgery, but then it started to come back to its pre-surgery levels. The benefits of physical therapy lasted about a week. (Ex. L, p. 160).
10. On December 10, 2015, Claimant saw Dr. Hudson for her neck pain and asked about getting epidural injections. (Ex. L, pp. 157, 159).
11. On January 14, 2016, Claimant saw Dr. Hudson with symptoms of a ruptured disc "again." Dr. Hudson diagnosed a ruptured disc on this date. Dr. Hudson's notes state: "PT claim was closed and has only maint[enance] now. She was referred back to Dr. Agarwala. (Ex. L, p. 154).
12. On February 5, 2016, Claimant saw Dr. Sandell. She complained of numbness and weakness in both her arms, particularly when she drove, did anything with her arms at shoulder level, or did any type of reaching with her arms. Claimant also complained at this time of cervical pain, particularly with extension, and associated dizziness. Dr. Sandell conducted an EMG test, and diagnosed Claimant with right carpal tunnel syndrome. There was no cervical radiculopathy. (Ex. J, pp. 38-41).
13. On February 9, 2016, the Claimant consulted Dr. Argawala, and complained of "constant" cervical pain. (Ex. K, p. 55).
14. On February 16, 2016, Claimant returned to Dr. Hudson, complaining of the "same pain pattern....crying that she can't live this way...played basketball for half hr yesterday and can hardly move today." (Ex. L, p.150).
15. On May 12, 2016, Claimant returned to Dr. Hudson, complaining of having a headache for one week that extended from her cervical area up into her head. (Ex. L, p. 140).
16. At hearing, Claimant testified that on June 7, 2016 she underwent bariatric surgery. With the bariatric surgery Claimant also began an exercise regime which she testified included walking six days a week and going to the gym four days a week. She testified that by the time she suffered her workers'

compensation injury in 2016, she was walking up to five miles a day. With the surgery and exercise, Claimant lost 110 pounds. Claimant testified that after the October 2016 injury she canceled her gym membership because her pain kept her from doing more than five minutes of exercise. She also noted that she had to limit her walking to about a mile per day, which was still painful.

17. On August 23, 2016, Claimant saw Dr. Hudson complaining of pain in her neck and hands. Her chief complaint was “*Work Comp follow-up. DOI 3/20/2013. Neck Injury*” She thought it was due to water aerobics. Dr. Hudson diagnosed cervicalgia, myalgia, muscle weakness and neuropathy. Dr. Hudson prescribed oxycodone on this date for Claimant’s pain and requested that she follow up in two months. (Ex. L, pp.136-37)(emphasis added).

18. At hearing, Claimant testified that there was no event which she could identify that had caused her condition to worsen during this period prior to her second accident [of 10/12/2016].

Claimant’s October 12, 2016 Injury and Ongoing Treatment

19. On October 12, 2016, Claimant was again administering a driving test. At hearing, Claimant testified that the driver “came back with full force again and actually jumped on top of [the stop stick] – it’s, like, a curb height, and then...we bounced back off of it.”

20. In her Employee Injury Report, Claimant indicated that “Employees inside were able to hear the hit.” (Ex. A, p. 4). Claimant also testified at hearing that conservative self-treatment was ineffective, so she went to the emergency room.

21. Claimant testified that the symptoms she experienced after the 10/12/2016 accident were the same as those she experienced after her 2013 injury, including numbness and weakness in her arms and headaches.

22. On December 13, 2016, Claimant saw PAC Bewley from Dr. Hudson’s office. PAC Bewley determined that Claimant had plateaued after completing physical therapy. (Ex. L, p. 134).

23. On February 14, 2017, Claimant saw PAC Bewley again, and reported almost a complete resolution of her stiffness after a massage. *PAC Bewley placed the Claimant at MMI on this date.* (Ex. L, pp. 130-31).

24. On March 28, 2017, Claimant saw Dr. Hudson and asked him to reopen her claim. Claimant opined that PAC Bewley had closed her case prematurely. (Ex. L, p.126). Dr. Hudson then filed a WC164 on that same date, indicating that Claimant’s “MMI date is unknown at this time because..WANTS TO REOPEN CLAIM.” (Ex. L, p. 129)(emphasis supplied).

25. On May 7, 2018, Dr. Scott Primack, DO, performed an Independent Medical Exam on behalf of Respondents. He is Level II accredited, and practices Occupational Medicine. Claimant stated to Dr. Primack that she was told {by persons unidentified} "it was not even technically an accident," although the car went over this curb stop "with great force." She also reported that there was not much damage to this vehicle.
26. Dr. Primack recommended a new cervical MRI to compare to those taken prior to this accident. (Ex. M, p. 178). Assuming nothing remarkable were revealed by this imaging, he would recommend that Claimant be placed at MMI with no impairment. *Id*
27. According to Dr. Primack's IME report, on May 11, 2018, Claimant had the cervical MRI he had recommended. (Ex. M, p. 172).
28. On May 28, 2018, Dr. Primack authored an addendum report to his IME. He stated that he had reviewed the imaging from the new cervical MRI compared with the September 21, 2015 MRI. He concluded that the Claimant suffered no new injury to her spine as a result of the accident.
29. At C6-7 specifically, Dr. Primack found only a worsening of her stenosis, which was not related to any acute injury. He agreed with PAC Bewley's assessment of MMI on February 14, 2017. He found no permanent impairment. He also determined that no maintenance treatment was necessary as a result of the 10/12/2016 work injury. (Ex. M, p. 172).
30. On March 4, 2019, the Claimant saw Dr. Agarwala. Dr. Agarwala's report indicated that Claimant "hit a cement pole head on" on October 12, 2016. Claimant complained of neck pain, bilateral shoulder pain, dizziness, headaches and muscle weakness. Dr. Agarwala's diagnosis included osteoarthritis of the spine, with radiculopathy, and degenerative disc disease of the cervical spine. Dr. Argawala stated, "If she does want to consider surgery would recommend a ACDF C6-7". (Ex. K, pp. 43, 46-47).
31. On March 5, 2019, Dr. Hudson diagnosed degenerative joint disease of the cervical spine and under his assessment, stated:

Intervertebral disc degeneration
Chronic tension-type headache without intractable headache
Nausea
Photophobia
Taking long-term analgesics
DID C SPINE CEPHALGEA NAUSEA PHOTOPHOBIA. THIS IS
BWC RELATED ON THE CLOSED CLAIM. (Ex. L, p. 84).

DIME Exam by Dr. Beatty

32. On March 20, 2019, Claimant was examined by Dr. Brian Beatty, DO for the DIME. After reviewing the medical history and examining Claimant, Dr. Beatty agreed with PAC Bewley that Claimant was at MMI as of February 14, 2017 for this incident. Dr. Beatty assigned a 1% impairment rating, after apportioning Claimant's prior impairment rating. Dr. Beatty concluded that Claimant had no physical restrictions from this work incident, and no need for further treatment. His diagnosis was 1. Cervical Strain, 2. Cervical disc disease. (Ex. O, pp. 209-210).
33. On December 11, 2019, Dr. Primack examined Claimant for a second time. Dr. Primack also reviewed the medical records since his last report, including Dr. Beatty's DIME report. Dr. Primack agreed with Dr. Beatty that Claimant reached MMI on February 14, 2017 for the Accident. Dr. Primack agreed with Dr. Beatty's causation analysis, his apportionment of permanent impairment, and his opinion that treatment was no longer needed for the Accident. (Ex. M, p. 170).

Deposition of Dr. Amit Agarwala

34. On May 20, 2020, the parties took the evidentiary deposition of Dr. Amit Agarwala, MD. Dr. Agarwala is an orthopedist, specializing in spine surgery, who had performed the C5-6 fusion on 1/29/2014. He is not Level II accredited.
35. Dr. Agarwala testified that his focus with regard to Claimant is treatment. "When I see a patient, my primary concern is diagnosis and to offer treatment options. I really don't focus on causation." (Deposition, p. 9).
36. Dr. Agarwala did not investigate causation in Claimant's case. He testified that he did not have enough information about this incident to determine if it caused the C6-7 changes resulting in Claimant's current symptoms.
37. When asked if Claimant's MRI findings would have required a significant amount of force, he replied:

No. You can get a disc herniation of advanced disk bulging with – you can sneeze. I had a disk herniation when I was 25. I don't even know what I did to cause it. (Deposition, p. 9).

38. Dr. Agarwala also testified that the changes at C6-7 he plans to target could be a natural progression of the Claimant's 2013 injury. He explained:

Well, first, disks that tend to degenerate and bulges happen even without injury, so *anybody can have an MRI and show those same changes without being in any sort of acute injury.*

Second, once you have a spinal fusion, *it is even more likely that there are increased stresses on the adjacent disk*, and you are more likely to develop degenerative or bulging-type changes that are similar to what we view on her MRI.

So both the natural progression in aging and the increased risk associated with previous surgery could all increase the chances that you would see those changes on an MRI *even if she hadn't had a second car accident*. (Deposition, pp. 12-13) (emphasis added).

39. Dr. Agarwala was asked if he had any disagreements with Dr. Primack's report. He replied:

No, I don't disagree with his review. Again, he talks a lot about some of the different evaluations around pain behaviors that certainly are concerning for this patient. There's nothing on the report that I disagree with, I don't think. (Deposition, p. 27).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The ALJ finds that while Claimant may have testified sincerely, her constellation of symptoms as time progressed has not provided the ALJ with sufficient information to overcome the findings of the DIME physician.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968). In this instance, the only expert to actually testify, Dr. Agarwala, was careful, and to his credit, not to overstate his qualifications to opine on causation. In fact, he has no disagreement with the IME report, not the DIME report.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Overcoming the DIME Opinion on MMI, Generally

F. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*; *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 189-190 (Colo. App. 2002); *Sholund v. John Elway Dodge Arapahoe*, W.C. No. 4-522-173 (ICAO October 22, 2004); *Kreps v. United Airlines*, W.C. Nos. 4-565-545 and 4-618-577 (ICAO January 13, 2005). The MMI determination requires the DIME physician to assess, as a matter of diagnosis, whether the various components of a claimant's medical condition are casually related to the injury. *Martinez v. ICAO*, No. 06CA2673 (Colo. App. July 26, 2007). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding the cause of a particular component of a claimant's overall medical impairment, MMI or the degree of whole person impairment, "there must be

evidence establishing that the DIME physician's determination is incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).

G. "Maximum medical improvement" is defined in Section 8-40-201(11.5), C.R.S. as:

A point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. The requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement.

H. This enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appeals Office, supra*. Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries*, WC 4-712-812 (ICAO November 21, 2008).

I. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

Overcoming the DIME on MMI, as Applied

J. Claimant's symptoms from her 3/20/2013 work injury began to reappear in late 2014 or 2015. In September 2015, Claimant had a MRI of her cervical spine taken because she was having a recurrence of her pre-fusion symptoms. In particular, the presence of stenosis and degenerative changes at C6-7 were worse when compared with the pre-fusion MRI from 2013. Claimant's condition continued to worsen during the end of 2015 and beginning of 2016. By February 2016, Claimant was complaining of

“constant” cervical pain and even broke down in tears, telling Dr. Hudson that she could not “live this way.” Then, on August 23, 2016 (less than two months before this Incident), Claimant saw Dr. Hudson for her cervical pain and extremity weakness. He prescribed her oxycodone, and requested that she follow up with him in two months. Before that follow-up appointment was set to occur, however, Claimant was involved in this incident.

K. The symptoms and limitations Claimant currently complains of largely mirror those she expressed in the months leading up to the 10/12/2016 work incident. Claimant’s complaints to Dr. Sandell in February, 2016 are remarkably similar to her hearing testimony regarding her current symptoms. Her symptoms as described to Dr. Hudson on 8/23/2016 were noted by him to be related to her 3/20/2013 claim. Claimant indicated to Dr. Primack that {in someone’s opinion} what occurred on October 12, 2016 wasn’t forceful enough to even be considered an accident. Dr. Primack concurred in this assessment.

L. In the end, PAC Bewley, Dr. Primack, and the DIME all concur that Claimant was at MMI by 2/14/2017. Claimant was assessed with a cervical strain by the DIME physician, from which she has long recovered. While it is unclear what Dr. Hudson’s position currently is on Claimant’s MMI status for the 10/12/2016 work incident, to the extent he is now advocating for continued treatment for this second injury, it is insufficiently persuasive.

M. Perhaps even more supportive of the DIME’s findings, and those of Dr. Primack, is the testimony of Dr. Agarwala himself. Dr. Agarwala is not Level II accredited, and steered far clear from opining on causation. However, he made it clear that Claimant’s current symptomatology was more likely the result of adjacent disc disease, which would directly result from the 3/20/2013 injury. No acute injury would even be necessary to cause Claimant’s MRI results – it could even be from a sneeze – or of unknown etiology altogether. And Dr. Agarwala had no disagreement with *any* of Dr. Primack’s conclusions.

N. The evidence in this case is wholly insufficient for the ALJ to conclude, by clear and convincing evidence, that the DIME opinion on the date of MMI is highly probably incorrect. Instead, the evidence shows that Claimant has suffered the continuing effects of her first injury - for which she has received a 23% whole person impairment – along with degenerative conditions in her cervical spine.

Medical Benefits / Related to the 10/12/2016 Work Incident

O. While Dr. Agarwala’s recommendation for epidural steroid injections might indeed be reasonable to possibly diagnose and treat Claimant’s current condition, *such treatment is not related* to Claimant’s 10/12/2016 work incident, and the ALJ so finds. Claimant was at MMI for this incident as of 2/14/2017, after a minor cervical strain. Claimant is encouraged to seek such treatment outside the Workers Compensation system.

ORDER

It is therefore Ordered that:

1. The DIME opinion of Dr. Beatty has not been overcome. Claimant was at MMI effective February 14, 2017.
2. Claimant's request for medical benefits as proposed by Dr. Agarwala is denied and dismissed.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: July 30, 2020

Colorado Springs, Colorado 80906

ISSUES

The issues set for determination included:

- Did Claimant suffer a compensable industrial injury while working for Employer?
- If Claimant suffered a compensable injury, is he entitled to medical benefits to cure and relieve the effects of the injury?

PROCEDURAL POSTURE

The undersigned issued a Summary Order on May 13, 2020. Respondent filed a timely Request for Specific Findings of Fact and Conclusions of Law on June 5, 2020. Claimant filed amended proposed Findings of Fact and Conclusions of Law, which was received on June 16, 2020. Respondent filed amended proposed Findings of Fact and Conclusions of Law. This Order follows.

FINDINGS OF FACT

1. Claimant works as a city driver for Employer. In this capacity, he drove a truck and made deliveries for Employer.
2. Claimant's medical history was significant in that he suffered a previous injury to his low back in 2015. No medical records related to this injury were admitted at hearing. Claimant testified that the symptoms he experienced were in the low back, not the right hip. He said his symptoms related to this injury resolved. No evidence which controverted this statement was introduced at hearing.
3. On September 17, 2018, Claimant was making a delivery and suffered a compensable injury. He testified he was making a hazardous material stop, which was about a 12,000-pound delivery. The material was on pallets and each pallet weighed approximately 1700 pounds. Claimant testified he was using a fork lift and was pushing a pallet toward the tail end of the lift gate when it hit a bump and pulled him off his feet.
4. Claimant testified he tried to break his fall, but was slammed down on his right side. The ALJ inferred that, given the weight of the pallet and the fact that it pulled Claimant off his feet, this exerted forces on Claimant's body, including Claimant's right side where he landed. Claimant was a credible witness when describing how the accident occurred.
5. Claimant said he felt right shoulder stiffness, lightheadedness, as well as pain in the hip and right side.

6. Claimant was evaluated in the same day by Emily Kuper, FNP-C at Advanced Urgent Care, the designated provider for Employer. Claimant completed a pain diagram, which showed pain on both sides of the right shoulder, arm (including scapula) and neck, but did not reference hip pain. FNP-C Kuper examined Claimant's shoulder, which had limited range of motion ("ROM") on flexion/extension and Claimant was unable to lift his arm above his head. Claimant testified he told FNP-C Kuper that his hip was tight at the first visit, but there was no reference to any hip complaints. FNP-C Kuper did not examine Claimant's neck despite the report of symptoms on the pain diagram.

7. FNP-C Kuper's assessment was: shoulder strain-right. X-rays were taken, which were negative for fracture and Claimant was begun on a course of physical therapy ("PT").

8. Claimant completed an employee statement dated September 18, 2018, and the description was consistent with his hearing testimony. (Claimant thought he completed this on the day of the injury). Claimant related that he was using the jack and got under the third pallet. He turned around pushed the pallet onto the lift gate. Claimant stated he was lowering the pallet down onto the plate and the valve was slowly releasing the air. He continued to squeeze the lever and attempted to slow down the speed of the pallet when his feet slipped out from underneath him. He attempted to break his fall with his right hand, to no avail and his right shoulder slammed with force into the trailer floor.

9. Over the next couple of days, Claimant testified he felt pain and tightness in various areas of his body, including his neck, right side and hip. Claimant specifically described tightness in the neck, trapezius and hip, saying it felt like he had been hit on the right side.¹ The ALJ found Claimant to be a credible witness both with regard to the severity of the impact and his pain complaints.

10. On October 9, 2018, Claimant was evaluated by Julie Parsons, M.D. at Advanced Urgent Care. Claimant reported muscle aches and joint pain, but no swelling. On examination, Dr. Parsons noted Claimant had tenderness and limited ROM, plus drop which presumably related to the right shoulder. The ALJ noted that this description of the musculoskeletal examination, with very little variation, was reproduced by Dr. Parsons every time she examined Claimant.²

11. Dr. Parson's assessment was: full thickness rotator cuff tear and right and she referred Claimant to an orthopedic surgeon.

¹ Hearing Transcript, p. 20:20-25.

² This description of the musculoskeletal examination was: "**Musculoskeletal**: Motor Strength and Tone: normal and normal tone. Joints, Bones, and Muscles: no contractures, malalignment, or bony abnormalities and **tenderness** and **limited ROM**; **+1 drop**. Extremities: no cyanosis, edema, or palpable cord". [emphasis added]

12. Claimant testified that he thought he mentioned hip symptoms to Dr. Parsons on this appointment, as it hurt to sit on a forklift and he experienced pain while using a broom on modified duty. Claimant said the focus of his treatment was on his shoulder and the ALJ found this was borne out by the initial treatment records.

13. Claimant returned to Dr. Parsons on November 20, 2018, at which time he reported muscle aches and joint pain. At that time, he complained of right hip and low back pain that went into the right groin. On examination, the musculoskeletal portion stated: Musculoskeletal: Motor Strength and Tone: normal and normal tone. Joints, Bones, and Muscles: no contractures, malalignment, or bony abnormalities and tenderness and limited ROM; Extremities: no cyanosis or edema. There was no indication that Dr. Parsons examined Claimant's hip. Dr. Parsons did not offer an opinion whether Claimant's hip pain was related to the work injury.

14. Dr. Parsons' assessment/plan was: full thickness rotator cuff tear-right. The ALJ noted the focus of this evaluation was on Claimant's shoulder. Dr. Parsons did not include a diagnosis even after Claimant complained of hip pain.

15. On November 28, 2018, Claimant underwent an arthroscopic rotator cuff repair on his right shoulder. The procedures included right shoulder arthroscopy, with rotator cuff repair, decompression, AC joint debridement, biceps tenotomy. The surgery was performed by Douglas Foulk, M.D.

16. After shoulder surgery, Claimant was evaluated by Dr. Parsons on December 12, 2018. He reported muscle aches and joint pain, but no swelling. In the musculoskeletal evaluation, Claimant had no contractures, malalignment, tenderness or bony abnormalities, with limited ROM. AROM was not tested. Dr. Parsons' assessment was: full thickness rotator cuff tear – right; postoperative visit.

17. Claimant returned to Dr. Parsons on January 10, 2019, at which time the same complaints were noted and he had just begun PT. Dr. Parsons' assessment/plan Also included pain of the right shoulder joint and muscle weakness of limb. There was no indication that there was a discussion of Claimant's hip or an evaluation by Dr. Parsons of this area of the body on January 10th. Dr. Parsons did not evaluate Claimant's hip at this appointment.

18. In the evaluation of February 28, 2019, Claimant reported muscle aches and joint pain, as well as neck and right hip pain. Dr. Parsons' musculoskeletal assessment was the same as the prior appointment, as was the assessment/plan. Dr. Parsons noted Claimant was again reporting right hip pain, as well as neck pain and headaches. The ALJ noted Dr. Parsons did not examine Claimant's hip and did not provide a diagnosis. Dr. Parsons noted, "I explained that I am only authorized to treat the shoulder".³ The ALJ inferred Dr. Parsons made no treatment recommendations for the hip because of her belief she was not authorized to treat this part of the body.

³ Exhibit 1, p.16; Exhibit B, p. 54.

19. When Claimant returned to Dr. Parsons on April 8, 2019, no hip pain was specifically documented and the musculoskeletal evaluation referred only to tenderness and limited ROM, which presumably related to the shoulder. Likewise, on June 10, 2019, Claimant was noted to be losing ROM and PT was just approved. The description of the musculoskeletal examination was nearly identical to the prior appointments, to wit: **Musculoskeletal:** Motor Strength and Tone: normal and **abnormal**. Joints, Bones, and Muscles: no contractures, malalignment, or bony abnormalities and **limited ROM**; Extremities: no cyanosis or edema or palpable cord.

20. On June 14, 2019, Claimant underwent an IME, which was performed by J. Raschbacher, M.D., requested by Respondent. Claimant reported his right hip and right low back got stiff on the way back to the terminal when he was injured. His right hip worsened when he was on light duty. On examination, Dr. Raschbacher noted some right shoulder infraspinatus muscle atrophy. Claimant also had right shoulder impingement sign. Claimant's gait was normal and tenderness was found at the right SI joint. The right lumbar quadrant test caused right joint SI pain. These were symptoms referable to the hip/SI joint/low back.

21. Dr. Raschbacher's assessment was: right shoulder rotator cuff tear, status post repairs; current complaints of low back pain.

22. Dr. Raschbacher noted Claimant belatedly reported low back discomfort or his hip discomfort. His current examination appeared to suggest SI joint as a pain generator, if a pain generator was present. Claimant did not report pain until quite some time after the injury claim date. Dr. Raschbacher opined that a hip/SI joint injury should have been apparent within the first day or two after the injury. He recommended not accepting liability for treatment of the lumbar or hip pain complaints.

23. Dr. Raschbacher testified as an expert in Occupational Medicine and is Level II accredited pursuant to the WCRP. Dr. Raschbacher found there was no work-relatedness to Claimant's hip and low back complaints. This was because he did not initially report the complaints of pain to Advanced Urgent Care. Dr. Raschbacher opined Claimant would have developed symptoms by the next day.

24. Dr. Raschbacher testified that for a medical provider not to document all of a patient's complaints is very uncommon. He said failing to document symptoms reported by a patient would put that medical provider at medicolegal risk and more importantly is simply not the right thing to do. He thought it was unlikely that two medical providers would not have listed hip complaints. Dr. Raschbacher believed that the first time when Claimant's complaints appeared on November 20, 2018 was the first day Dr. Parsons or other providers had heard about them. The ALJ noted Dr. Raschbacher's analysis did not include an analysis whether Claimant's fall to the ground could have caused a hip/low back injury, nor did he offer an opinion as to the cause of those complaints.

25. When Claimant returned to Dr. Parsons on July 9, 2019, the musculoskeletal examination description was **Musculoskeletal: Motor Strength and Tone: normal and abnormal; 4/5**. Joints, Bones, and Muscles: no contractures, malalignment, or bony abnormalities and **limited ROM**; Extremities: no cyanosis or edema or palpable cord. The description was the same on the July 30, 2019 evaluation. No diagnosis related to the hip was provided by Dr. Parsons. Dr. Parsons' treatment plan did not change.

26. Dr. Parsons responded to questions submitted by Respondent's counsel on or about August. 13, 2019. She stated Claimant was not at MMI and needed to finish PT to reach MMI. Dr. Parsons was not asked about Claimant's hip and this correspondence had no information concerning that injury.

27. Claimant testified his hip continues to hurt. He said the pain was in the front and back of the hip.

28. No ATP has provided treatment for Claimant's hip.

29. Claimant proved that he suffered an injury to his hip while working on September 17, 2018.

30. Respondent is required to provide medical benefits to cure and relieve the effects of the injury to Claimant's hip.

31. No evidence was submitted as to what treatment Claimant requires for his hip.

32. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Compensability

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment and that the alleged injury was proximately caused by the performance of such service. §§ 8-41-301(1)(b) & (c), C.R.S. (2019). The question of whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). The ALJ found Claimant suffered a compensable injury to his hip on September 17, 2018. (Finding of Fact 29). The rationale for the ALJ's determination was first based upon the mechanism of injury and Claimant's testimony. As determined in Findings of Fact 3-4, Claimant was pulled off his feet by a pallet that weighed approximately 1700 pounds and slammed to the ground.). The ALJ was persuaded that it was more probable than not that the force of the impact caused an injury to Claimant's hip or SI joint. The ALJ credited Claimant's testimony vis a vis the mechanism of injury and his subsequent complaints. (Finding of Fact 4).

Second, a review of the medical evidence led the ALJ to conclude that Claimant's ATP, Dr. Parsons was focused on treatment for the shoulder. Dr. Parsons did not examine the hip, nor she include a diagnosis related to the hip, even after Claimant complained of hip pain. (Finding of Fact 14). Neither she, FNP-C Kuper examined Claimant's neck, even though he complained of pain at the outset. As found, in the subsequent appointments, the physical examination records document Dr. Parsons never examined Claimant's hip. The records of Dr. Parsons examination were focused on the shoulder and the examination descriptions were reproduced with little variation. As found, Dr. Parsons did not evaluate or perform causation analysis of the hip injury during any of her subsequent evaluations of Claimant. (Findings of Fact 14, 17-19, 25).

In coming to this conclusion, the ALJ considered Respondent's argument that Claimant did not initially report hip symptoms, including on the drawing of his initial pain complaints or in his statement. Respondent argued Claimant did not report right hip pain during the initial medical visit at Advanced Urgent Care or at the two subsequent visits. Respondent asserted the delay in reporting hip/low back symptoms was evidence that no injury occurred. Respondent also cited Dr. Raschbacher's opinion to support the conclusion Claimant would have complained of hip symptoms much earlier, if he had injured his hip on September 17, 2018.

The ALJ considered Dr. Raschbacher's opinions, including his expert testimony. On balance, the ALJ was persuaded that while there was a delay in reporting the

symptoms, this delay does not obviate the fact that Claimant suffered an injury to the hip. As found, Dr. Raschbacher's opinion was premised on the fact that Claimant did not report hip pain within the first couple of days, however, the record shows Claimant was evaluated the day after the accident and then not examined by a physician until three weeks after the injury occurred. His next appointment with Dr. Parsons was almost six weeks later and there was no evidence Dr. Parsons examined his hip at that time.

As noted, *supra*, given the reproduction of the nearly same text/description in her medical reports (musculoskeletal section), the ALJ could not conclusively discern what Dr. Parsons was told by Claimant and what she found on examination. Even when Claimant reported the hip symptoms, Dr. Parsons did not evaluate the hip, as she said she was not authorized to do so. (Finding of Fact 18). As found, the focus of Dr. Parson's treatment was on Claimant's shoulder and she never performed an analysis of whether Claimant's hip was injured on September 17, 2018. In the absence of a causation analysis of the etiology of Claimant's hip condition by Dr. Parsons, who was the ATP, the ALJ could not credit Dr. Raschbacher's conclusion that the delay in reporting hip symptoms meant the work injury did not include a hip injury. Also, Dr. Raschbacher did not analyze the mechanism of injury, nor the potential cause of the hip/SI joint complaints when he performed the IME. Based upon a totality of the evidence, the ALJ was persuaded that Claimant sustained an injury to the hip as a result of the work injury.

Medical Benefits

In the case at bar, Claimant suffered an injury to his hip on September 17, 2018 arising out of his employment. Respondent was therefore liable under the Act to provide treatment to cure and relieve the effects of the injury to Claimant's hip. Section 8-42-101(1)(a), C.R.S. Respondents are required to provide medical benefits to cure and relieve the effects of the work injury. (Finding of Fact 30).

By this decision, ALJ makes no findings as to the type of treatment Claimant requires, or indeed, if he requires any treatment. There was no evidence in the record as to a diagnosis or treatment of for his hip/SI joint. (Finding of Fact 31). As such, while this ALJ finds the hip condition to be related to the work injury, it is noted that no specific medical treatment, procedures, medications, or requests were made by the Claimant at the hearing. No specific medical benefits will be awarded by virtue of this Order.

ORDER

It is therefore ordered:

1. Claimant proved by a preponderance of the evidence that he sustained a compensable injury to his hip on September 17, 2018.
2. Respondent shall provide medical benefits to cure and relieve the effects of the injury to Claimant's hip.

3. All matters not determined herein are reserved for future determination.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-117-351-001**

ISSUES

Whether the respondents have demonstrated, by a preponderance of the evidence, that they are entitled to collect an overpayment of benefits from the claimant in the amount of \$18,699.17.

FINDINGS OF FACT

1. On July 25, 2018, the claimant was involved in a motor vehicle accident (MVA) while performing her duties for the employer. The employer admitted liability for the July 25, 2018 MVA. The claimant's average weekly wage (AWW) for this claim is \$752.27. Following the MVA, the claimant underwent medical treatment that included physical therapy, chiropractic treatment, and massage therapy.

2. On June 20, 2019, Dr. William Faragher determined that the claimant had reached maximum medical improvement (MMI). As Dr. Faragher is not Level II accredited, the claimant was referred to Dr. Craig Stagg to assess a permanent impairment rating.

3. On September 11, 2019, the claimant was seen by Dr. Stagg. At that time, Dr. Stagg agreed that the claimant reached MMI on June 20, 2019. With regard to permanent impairment, Dr. Stagg assessed zero impairment for the claimant's right knee, 11 percent whole person impairment for the claimant's cervical spine, and eight percent for the claimant's right upper extremity. Dr. Stagg noted that this resulted in a total impairment of 15 percent whole person.

4. On September 30, 2019, the respondents filed a Final Admission of Liability (FAL) admitting for the MMI date of June 20, 2019 and a permanent impairment rating of 11 percent whole person and eight percent for the claimant's right upper extremity. In addition, the FAL indicated that the respondents began paying the claimant permanent partial disability (PPD) benefits as of June 20, 2019.

5. On October 18, 2019, the claimant filed an Objection to Final Admission and requested a Division-sponsored independent medical examination (DIME).

6. The claimant testified that she believed that her PPD benefits would not be impacted by objecting to the FAL. The claimant also testified that if she had known that by objecting to the FAL she could jeopardize her PPD benefits, she would not have filed the objection.

7. On December 16, 2019, the claimant attended the DIME with Dr. Nicholas Kurz. In connection with the DIME, Dr. Kurz reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his DIME

report, Dr. Kurz agreed that the claimant reached MMI on June 20, 2019. However, Dr. Kurz determined that the claimant had no permanent impairment.

8. On January 6, 2020, the respondents filed an FAL indicating the opinions of Dr. Kurz and noting an overpayment of PPD benefits in the amount of \$18,699.17. The claimant did not object to the January 6, 2020 FAL.

9. On February 10, 2010, the respondents filed an Application for Hearing on the issue of collecting the overpayment.

10. The claimant testified that as of the date of the hearing she continues working for the employer. The claimant also testified that after paying her monthly expenses, she has “a couple hundred dollars” remaining from her wages.

11. In the respondents’ position statement, they have requested that if the overpayment is found to be collectable, the claimant should be ordered to make monthly payments of \$500.00. In the claimant’s position statement, she has requested that (if the overpayment is collectable) she be ordered to pay \$97.80 per month.

12. After consideration of all evidence and testimony presented at hearing, the ALJ finds that the claimant received permanent partial disability (PPD) benefits that she was not entitled to receive. The DIME physician, Dr. Kurz, assessed no permanent impairment. Therefore, the ALJ finds that the overpayment of \$18,699.17, shall be repaid by the claimant.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. Typically, a claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). However, in the present case it is the respondents’ burden, by a preponderance of the evidence, to prove that they are entitled to collect on an overpayment of benefits.

2. The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

3. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

5. Section 8-40-201(15.5), C.R.S. provides, in pertinent part, that an overpayment "means money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive. . ." Section 8-42-113(1)(c) C.R.S., provides that an insurer may seek an order for repayment of an overpayment. Section 8-43-207(1)(q), C.R.S. provides that the ALJ has the authority to order repayment of an overpayment. In addition, the ALJ has the authority to set the rate of repayment. See *Turner v. Chipotle Mexican Grill*, WC 4-893-631-07 (ICAO February 8, 2018).

6. The claimant asserts that the difference between Dr Stagg's and Dr. Kurz's impairment ratings is based upon a difference of opinion. The claimant points to *City and County of Denver v. ICAO*, 58 P.3d 1162 (Colo. App. 2002) in support of this argument. That case involved claimant, Michelle Felix, and is referred to as the *Felix* case. The ALJ differentiates that case from the current matter in that in *Felix* the claimant applied for hearing disputing the FAL that relied upon a lower impairment rating. However, in the current case, although the claimant contested the first FAL and requested a DIME, she did not contest the later FAL that addressed the overpayment. The ALJ finds that if the claimant believed that the overpayment was incorrect, the remedy available to her was to object to the January 6, 2020 FAL. The claimant did not do so.

7. As found, the respondents have demonstrated, by a preponderance of the evidence that the claimant received PPD benefits that she was not entitled to receive. Repayment of the \$18,699.17 overpayment is appropriate in this matter.

8. The ALJ has considered the testimony of the claimant regarding her income and expenses and orders that she pay the insurer \$100.00 per month until the overpayment is paid in full.

ORDER

It is therefore ordered:

1. The claimant shall pay the insurer \$100.00 per month until the overpayment is paid in full.

2. All matters not determined here are reserved for future determination.

Dated this 3rd day of August 2020.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Did Claimant prove his case should be reopened for additional medical treatment based on a change of condition?
- If the claim is reopened, is Claimant entitled to designation of a new ATP in Washington where he currently lives?
- If Claimant establishes entitlement to the new ATP, the parties agreed the new provider will be Dr. Edward Davila.

FINDINGS OF FACT

1. Claimant suffered an admitted neck injury on June 7, 2017 when he slipped on some stairs. He caught himself with his right arm to prevent falling, but “jerked” his neck.

2. He was initially treated at Integrity Urgent Care with primary complaints of neck pain radiating down the left arm.

3. A cervical MRI on July 3, 2017 showed an “acute/subacute” disc herniation at C5-6 compressing the left C6 nerve root, degenerative changes at C6-7 causing mild neural canal and neural foraminal narrowing but no nerve root impingement, and muscle spasm.

4. Claimant started treating at the UC Health occupational medicine clinic in October 2017. Dr. Walter Larimore became Claimant’s primary ATP in December 2017.

5. Claimant was referred to a surgeon, Dr. David Ou-Yang, because of persistent severe neck pain and left arm radiculopathy. He ultimately underwent artificial disc replacement surgery at C5-6 and C6-7 in March 2018.

6. Claimant continued to complain of severe pain and functional limitations after surgery. For example, on August 8, 2018, Claimant told Dr. Larimore his neck pain was “unchanged” with significantly limited range of motion. He described lateral posterior headaches “throughout the day,” ongoing left arm paresthesias, intermittent left arm tremors, and difficulty swallowing. He said he was in bed “60-70% of the day” because of pain. At the time, Claimant was seeing Dr. Stephen Sparr, who thought his persistent symptoms were related to myogenic thoracic outlet syndrome and cervical facet dysfunction triggering mild fasciitis, cervicogenic headaches and occipital neuralgia, and myogenic thoracic outlet syndrome. Dr. Sparr recommended aggressive manual therapy occluding deep tissue work for the cervical and parascapular muscles, weekly trigger point injections, bilateral occipital nerve blocks, and medications. Dr. Larimore concurred with and ordered the treatment recommended by Dr. Sparr.

7. Respondents obtained video surveillance of Claimant on August 11 and August 12, 2018. The video depicts Claimant performing various activities including washing his vehicle and carrying boxes with no apparent difficulty. Respondents forwarded the video to Dr. Larimore for his review.

8. Dr. Larimore viewed the video on August 29, 2018 and noted Claimant was,

[M]oving with no pain behavior whatsoever. Range of motion of the neck appears full (at least FLEX, ROT, SB). . . . At one point he spends 10-15 minutes detailing the wheel of a truck while seated with repetitive scrubbing using both arms above 90° flexion with significant repetitive movement and no experience of pain. During the same time he is turning frequently to talk to a female, laughing, and again, demonstrating no pain behavior. At the storage facility he is seen opening a truck door when a box falls. He reacts instantly by grabbing the box with both hands and lifting it up with no apparent pain. He is seen opening the truck door and closing it with no apparent lack of neck ROM or pain. This video is in my opinion incongruent and inconsistent with his presentation at multiple visits and his history of pain severe enough to keep him in bed or on the sofa up to 60-80% of the day and his history of being [un]able to sit or stand for any significant period of time without worsening severe pain. This videotape is not consistent with [Claimant's] prior representations to me regarding his physical abilities that formed the basis of my opinion to keep him off work completely.

9. Dr. Larimore spoke with Dr. Sparr regarding his impressions of Claimant. Dr. Sparr indicated Claimant had some improvement with occipital injections, but his lack of range of motion during exams appeared inconsistent with reports from the physical therapist describing full and pain-free passive range of motion.

10. Claimant saw Dr. Sparr on August 31, 2018. Dr. Sparr noted, “objectively [he] has shown tremendous improvement. Subjectively there is only 10% improvement. . . . [T]he objective findings do not match the subjective complaints with cervical myofascial tightness decreased dramatically from earlier evaluations.” He thought additional trigger points were not justified since Claimant perceived no benefit, nor did he recommend any other injections.

11. Claimant followed up with Dr. Larimore on September 5, 2018. Claimant again reported “minimal improvement.” The medications prescribed by Dr. Sparr helped briefly but Dr. Sparr stopped the medications because they “quit working.” The occipital injections provided mild pain relief for only about 30 minutes. Claimant said his left arm numbness, tingling, and tremors were “about 50% better.” Dr. Larimore brought up the surveillance video, which Claimant said was obtained on days he was “feeling improved.” Dr. Larimore “again discussed his pre-existing and significant, non-work-related, chronic degenerative disease” including multilevel cervical DDD and DJD, osteophytes, and multilevel foraminal stenosis. Dr. Larimore opined “almost all of his residual symptoms are in the upper half of the cervical spine and most likely relate to non-work-related

degenerative changes.” He put Claimant at MMI with no permanent work restrictions and referred him to Dr. Nicholas Kurz for an impairment rating.

12. Dr. Larimore further addressed the video and opined,

[It] appears . . . incongruent with [Claimant’s] reported symptoms and limitations. In fact, the video surveillance was quite surprising given how [Claimant] repeatedly presented to me complaining of pain so severe that it required him to be at bed or sofa rest, supine, 60-80% of the day. What I would have expected to see was [Claimant] being very protective of his neck with limited to no ROM and significant limitations with use of either arm (particularly left arm), and evidence of pain behavior and/or discomfort. What I saw was an individual and no apparent discomfort and with no apparent functional limitation of the neck or either upper extremity. The video showed this individual walking, driving, stooping, standing, lifting and catching a box, getting in and out of a truck multiple times, driving the truck at least once, and vigorously washing, scrubbing, and detailing a truck with no apparent pain behavior nor limitation and cervical range of motion. Again, at no time did he appear to be limited, hesitant in movement, functionally limited, or appear to be in pain.

13. Claimant saw Dr. Kurz for an impairment rating on September 14, 2018. Dr. Kurz assigned a 14% whole person cervical spine rating. He opined Claimant required no further injury-related treatment and should follow up with his PCP for any ongoing issues related to his “pre-existing, non-work-related, degenerative cervical issues.”

14. Claimant followed up with Dr. Ou-Yang on October 31, 2018. Dr. Ou-Yang opined, “the etiology of his left upper extremity pain is unclear. I have a low clinical suspicion for peripheral neuropathy or radiculopathy given his negative EMG. Regarding his axial neck pain, I continue to think his symptoms may be related to spondylo-arthritis with facet arthritis at multiple levels.” Dr. Ou-Yang recommended a physiatry consult to determine if Claimant was a candidate for radiofrequency ablation.

15. Claimant had an IME with Dr. Timothy Hall at his counsel’s request on November 16, 2018. Claimant reported multiple ongoing symptoms, including headaches “pretty much every day,” “constant” neck pain with electrical sensations shooting into his arms when he turned his head, numbness and tingling in an ulnar distribution in both hands, weakness and tremors in the left hand and difficulty gripping objects, episodes of lightheadedness and dizziness when turning his head, and impaired sleep. On physical examination, Claimant did “very poorly” on vestibular testing, demonstrated “marked” cervical range of motion, had tenderness and reduced oral range of motion on examination of the TMJ, “exquisite tenderness” on examination of the scalene muscles, active trigger points throughout the parascapular area and upper trapezius, immediate symptoms in an ulnar distribution of the left hand with palpation of Erb’s point on the left, and decreased pinprick sensation in an ulnar distribution bilaterally, and weakness of the intrinsic muscles of the hand. Dr. Hall opined Claimant “remains very symptomatic” and was not at MMI. He thought Claimant’s upper extremity symptoms were primarily related

to thoracic outlet, which had not been adequately treated. He recommended “therapies geared at the marked spasm, adhesions, and trigger points through the cervicothoracic and parascapular area. This could be accompanied by trigger point injections and/or Botox injections.” He also recommended treatment for TMJ dysfunction, which he thought was perpetuating Claimant’s headache and muscle spasm. Finally, Dr. Hall calculated a 23% whole person cervical spine rating.

16. Claimant attended a Division IME with Dr. John Douthit on December 17, 2018. He reported ongoing symptoms similar to those he described to Dr. Hall. Dr. Douthit agreed Claimant was at MMI as of September 5, 2018 as determined by Dr. Larimore. He opined,

[Claimant] had extensive and largely ineffective treatment which generated a 6-inch stack of medical records. . . . His MRI revealed a C5-C6 disc herniation of the left, which could explain radiating neck and left-sided arm pain. In March 2018, he underwent a two-level disc replacement from which he alleges not to have benefited. He continues to have posterior arm and neck pain complaints and many other complaints unrelated to the neck pathology. . . . He had weakness on grip, but no measurable atrophy. He has no measurable neurological loss in the left arm, although he does have intermittent radiating pain, which subjectively is a radiculopathy. . . . He has a myriad of other symptoms that appear unrelated and unexplained.

17. Dr. Douthit agreed with Dr. Hall’s 23% rating. He adopted Dr. Hall’s cervical ROM measurements because the measurements at the DIME were unreliable due to “extreme guarding.” Dr. Douthit opined Claimant would not benefit from any additional medical treatment.

18. Respondents filed a Final Admission of Liability based on Dr. Douthit’s report, and Claimant requested a hearing to challenge the DIME. In discovery, Claimant indicated he was seeking the treatment recommended by Dr. Hall. Claimant subsequently withdrew his application for hearing and the hearing scheduled in August 2019 was vacated.

19. Claimant concedes the claim is closed, subject to statutory reopening.

20. Claimant obtained a new position with Employer and relocated to the Seattle area in January 2019. The new position is primarily sedentary desk work.

21. Claimant sought no further treatment for any injury-related condition until September 9, 2019, when he went to the CHI Franciscan Health emergency department in Tacoma, Washington. He stated his neck pain was “progressively worse” and he could not sleep. He also reported tingling in his left 4th and 5th fingers. Examination showed muscle spasms and significant ROM deficits. He was diagnosed with an “exacerbation” of “chronic neck pain” and cervical radiculopathy. He was prescribed medications including muscle relaxers, NSAIDs, and steroids.

22. Claimant followed up with Dr. Edward Davila at CHI Franciscan Health on September 19, 2019. He said the muscle relaxer and NSAIDs did not help. He had been off work for a few days but felt “60-70%” better and was ready to return to work.

23. Claimant returned to Colorado on February 10, 2020 for a one-time the evaluation with Dr. Larimore. Claimant described “slowly worsening neck pain (left greater than right), left upper back pain, and pain radiating down the left arm from the anterior left shoulder to the lateral left elbow to the left fourth and fifth fingers.” In his deposition, Dr. Larimore testified “there was not much difference” in the physical exam findings compared to his last visit in September 2018. Dr. Larimore concluded,

Given Dr. Ou-Yang’s opinion that “his symptoms may be related to spondylo-arthrosis with facet arthritis at multiple levels,” Dr. Staudenmayer’s opinion that “he is not a good candidate to benefit from psychological intervention,” an inconsistent exam, evidence of significant pre-existing non-work-related degenerative changes, and my video surveillance report of 2018, it is my opinion that this case should not be reopened and that closure should be maintained at 09/05/2018 with no [permanent work restrictions].

24. Claimant was re-evaluated by Dr. Hall the same day he saw Dr. Larimore. Claimant said his neck pain was worse, but his arm symptoms were not as constant or extreme as they had been. His left shoulder was “quite a bit worse.” The physical examination findings were largely identical to Dr. Hall’s previous IME in November 2018. Claimant “again” did poorly with vestibular testing, neck range of motion was still “markedly limited,” the TMJ exam showed reduced motion, diffuse tenderness and active trigger points, Tinel’s was “still” positive at Erb’s point, and reduced sensation in an ulnar distribution “persist[ed].” The main difference from the November 2018 IME was severe pain and markedly limited range of motion of the left shoulder. Dr. Hall affirmed his opinion Claimant is not at MMI. He reiterated his prior recommendations regarding evaluation and treatment for TMJ, “aggressive therapies geared at the soft tissue findings including active trigger points and intractable spasm,” and Botox injections. The only new recommendation was a left shoulder MRI “since this has been worsening over time.”

25. Dr. Larimore testified in a deposition on May 21, 2020 to expand upon the opinions expressed in his reports. He reiterated Claimant requires no further treatment for his work-related injury, and any worsened symptoms are related to the natural progression of his pre-existing degenerative condition.

26. Dr. Larimore’s opinions, observations, and conclusions reflected in his reports and deposition testimony are credible and persuasive.

27. Claimant failed to prove his injury-related condition has worsened or changed in any meaningful way since he was put at MMI and his claim closed. The symptoms and limitations he is currently reporting are basically the same as those documented around the time of MMI. Dr. Hall’s findings and recommendations are largely unchanged from November 2018 to February 2020. The only significant change relates

to Claimant's left shoulder, but there is no persuasive evidence that any worsened shoulder symptoms are causally related to the work injury.

CONCLUSIONS OF LAW

Section 8-43-303 authorizes an ALJ to reopen any award on the grounds of error, mistake, or a change in condition. The opportunity to request reopening reflects a "strong legislative policy" that the goal of achieving a fair and just result overrides the interests of litigants in obtaining final resolution of their dispute. *Padilla v. Industrial Commission*, 696 P.2d 273, 278 (Colo. 1985). Thus, a "final" award means only that the matter has been concluded subject to reopening if warranted under the applicable statutory criteria. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). The authority to reopen a claim is permissive, and whether to reopen a claim if the statutory criteria have been met is left to the ALJ's discretion. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005). The party requesting reopening bears the burden of proof. Section 8-43-304(4).

A "change in condition" refers to a change in the condition of the original compensable injury or a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission*, 714 P.2d 1328 (Colo. App. 1985). If a claimant's condition is shown to have changed, the ALJ should consider whether the change represents the natural progression of the industrial injury, or results from some other cause. *Goble v. Sam's Wholesale Club*, W.C. No. 4-297-675 (May 3, 2001).

As found, Claimant failed to prove his injury-related condition has worsened or changed in any meaningful way since he was put at MMI and his claim closed. Dr. Larimore's opinions are credible and persuasive. Dr. Larimore's longitudinal perspective as the primary ATP puts him in the best position to determine whether Claimant's condition has changed and whether any change is related to the original injury. There is no persuasive objective evidence of any change in Claimant's condition, and the ALJ is not inclined to give significant weight to Claimant's subjective reports given the inconsistencies documented by Dr. Larimore and shown on the video. In any event, the symptoms and limitations Claimant currently reports are basically the same as those documented around the time of MMI. Dr. Hall's most recent findings and recommendations are largely unchanged from November 2018, when he opined Claimant was not at MMI. The only substantial change relates to Claimant's left shoulder, but there is no persuasive evidence that any worsened shoulder symptoms are causally related to the work injury.

Moreover, even if we accept that Claimant's injury-related symptoms are somewhat more intense than before his claim closed, that does not automatically mean the claim should be reopened. Reopening is only appropriate if additional benefits will be awarded. *Richards v. Industrial Claim Appeals Office*, 996 P.2d 756 (Colo. App. 2000). Claimant has received no meaningful benefit from multiple treatment modalities including therapy, medications, injections, and surgery. Given his lack of response to prior

interventions, there is little reason to expect he will benefit from any other treatment that might be offered. Accordingly, the preponderance of persuasive evidence fails to show additional treatment is reasonably necessary.

Because Claimant's petition to reopen his claim has been denied, authorization of a new ATP in Washington is moot.

ORDER

It is therefore ordered that:

1. Claimant's petition to reopen his claim for additional medical treatment is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

Office of Administrative Courts

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that the Brostrom-type lateral ankle stabilization surgery requested by Authorized Treating Physician (ATP) Eric C. Kuhlman, DPM, is reasonable, necessary and causally related to his admitted September 10, 2019 left ankle injury.

FINDINGS OF FACT

1. Claimant is a 37 year old male who works for Employer as a Wireline Operator. His job duties involve assembling and carrying equipment, setting tools and driving company vehicles. On September 10, 2019 Claimant was carrying a setting tool with a co-worker when he rolled his left ankle.

2. On September 14, 2019 Claimant visited Platte Valley for medical treatment. Radiographs of Claimant's left ankle revealed some lateral soft tissue swelling, but no acute osseous abnormalities.

3. On September 16, 2019 Claimant was evaluated by Respondents designated provider Advanced Urgent Care. He was examined by Physician's Assistant (PA) Sarah Kleinschmidt. Claimant reported he had visited Platte Valley where he was told he did not have a fracture, but needed to use a walking boot and crutches. Claimant's symptoms included a gait disturbance/imbalance and joint pain. PA Kleinschmidt diagnosed Claimant with a sprain of an unspecified ligament of the left ankle.

4. On September 30, 2019 Claimant returned to Advanced Urgent Care and was evaluated by Authorized Treating Physician (ATP) Julie Parsons, M.D. Dr. Parsons noted that Claimant was having "bruising off and on in different spots Mid-Saturday felt another pop in ankle." Upon physical examination, Dr. Parsons noted tenderness, limited range of motion, significant pain over the distal fibular and talar tilt. Dr. Parsons confirmed the diagnosis of sprain of an unspecified ligament of the left ankle and "other instability of left ankle." She referred Claimant for a left ankle MRI.

5. On September 30, 2019 Claimant underwent an MRI of the left ankle without contrast. The MRI revealed a full-thickness ligamentous injury in the lateral aspect of the ankle and severe flexor hallucis longus tenosynovitis. The tendons were intact and there was no acute bony injury.

6. On October 1, 2019 Claimant visited ATP Eric C. Kuhlman, DPM for an examination. Dr. Kuhlman diagnosed Claimant with a grade-3 sprain of the ATFL and CFL. He discussed both conservative and surgical treatment options for Claimant's left ankle. Dr. Kuhlman noted that conservative treatment options included "protected

weight bearing in an ankle brace/CAM boot, physical therapy, edema control with anti-inflammatory medications, if worsened to go completely nonweightbearing in a cast.” He remarked that “a surgical option does exist for this, which would include a Brostrom type lateral ankle stabilization.”

7. On October 17, 2019 Respondents filed a General Admission of Liability (GAL). The GAL acknowledged medical benefits and ongoing Temporary Total Disability (TTD) benefits.

8. On November 18, 2019 Claimant returned to Dr. Parsons for an evaluation. Claimant had limited ambulation with a slight limp. Upon physical examination, Dr. Parsons noted tenderness and restricted range of motion of the left ankle with limited talar tilt.

9. On November 19, 2019 Claimant visited Dr. Kuhlman for an examination. He reported that his instability, swelling and range of motion had all improved. His pain level remained at 1/10. Dr. Kuhlman noted that most patients with a grade 3 ankle sprain heal without surgical intervention. Nevertheless, he commented that Claimant could undergo a Brostrom-type lateral ankle stabilization or arthroscopy of the left ankle. However, Dr. Kuhlman remarked that the procedure would be necessary only if Claimant still experienced ligament laxity or difficulty with uneven terrain following conservative therapy.

10. On November 26, 2019 Claimant returned to Dr. Kuhlman. He reported difficulty with left ankle flexion. Claimant noted that it felt like there was something in the front of his ankle that was preventing it from flexing like his right ankle. However, his pain level remained at 1/10. Upon physical examination, Claimant’s left ankle ligaments felt stable. Dr. Kuhlman determined that Claimant should move forward with aggressive physical therapy. If that failed, he would attempt a steroid injection. Dr. Kuhlman remarked that, if the injection also failed, they would proceed to the arthroscopy procedure.

11. On December 2, 2019 Claimant visited Dr. Parsons for an evaluation. She noted that Claimant had decreased left ankle range of motion. However, she determined that Claimant exhibited stability without dislocation, subluxation or laxity of the left ankle. Claimant also had normal left ankle strength and talar tilt. Dr. Parsons diagnosed Claimant with a left ankle sprain, instability of the left ankle joint, an antalgic gait and ankle joint pain.

12. Claimant returned to Dr. Kuhlman on December 17, 2019. He reported his left ankle pain had improved significantly, though he did have lateral instability that caused him to feel unsteady. Based on a physical examination, Dr. Kuhlman determined that Claimant’s left ankle ligaments remained stable.

13. On January 14, 2020 Claimant again visited Dr. Kuhlman for an examination. Claimant reported continued instability and that physical therapy had not improved his left ankle symptoms. Dr. Kuhlman recounted that Claimant completed a

few sessions of physical therapy without improvement in his lateral ankle instability. He remarked that, if Claimant still noticed “ligament laxity or difficulty with uneven terrains we could then discuss surgical intervention if needed. At this time the ankle ligaments do feel stable.” Dr. Kuhlman concluded that “the patient has now failed two months of physical therapy, we will consider this a chronic lateral ankle instability, according to the workers’ compensation guidelines, the patient is now appropriate for surgical correction.”

14. On January 20, 2020 Claimant visited Michael Alday, M.D. for an examination. Claimant exhibited limited ambulation and wore an ankle brace for support. Dr. Alday noted decreased range of motion on physical examination. However, similar to Dr. Parsons he remarked that Claimant exhibited stability without dislocation, subluxation or laxity of the left ankle. Claimant also had normal left ankle strength and talar tilt.

15. On January 22, 2020 Orthopedic Surgeon Wallace K. Larson, M.D. performed a medical records review. He determined that Claimant did not have a specific intra-articular disorder that would likely respond favorably to an arthroscopic procedure. Furthermore, Dr. Larson explained that the medical records did not support a lateral ankle reconstruction because they did not reflect any left ankle laxity. He also noted that functional limitation alone was insufficient to establish that the recommended arthroscopic procedure was necessary. Dr. Larson explained that the Colorado Division of Workers’ Compensation *Medical Treatment Guidelines (Guidelines)* reflect that surgery is rarely necessary for an ankle sprain. He detailed that “if the proposed surgical procedure is a ligament reconstruction, ligamentous laxity should be demonstrated clinically.” Because the medical records did not demonstrate that Claimant had left ankle ligament laxity, Dr. Larson concluded that Dr. Kuhlman’s proposed surgery was not reasonable, necessary or causally related to Claimant’s September 10, 2019 work injury.

16. On January 23, 2020 Claimant was scheduled for a Brostrom-type lateral ankle stabilization based upon ATP Kuhlman’s opinion. However, Claimant testified that Respondents cancelled the procedure.

17. Claimant returned to Dr. Parsons on February 6, 2020. He reported mild pain with movement. Dr. Parsons again noted stability without dislocation, subluxation or laxity, and normal strength. However, Claimant exhibited instability with the talar tilt.

18. On February 24, 2020 Dr. Larson performed a second medical records review. He specifically considered records from Claimant’s visits with Dr. Kuhlman on January 14, 2020 and February 11, 2020. Dr. Larson noted that Claimant had a sense of instability, but no increase in lateral tilt on stress and a negative drawer test. Moreover, on physical examination Claimant did not demonstrate laxity. Dr. Larson thus concluded that it was unlikely ligamentous reconstruction would impact Claimant’s sense of instability. In the absence of demonstrable ligamentous laxity, Dr. Larson reiterated that Dr. Kuhlman’s proposed arthroscopy procedure was not recommended.

19. On June 3, 2020 the parties conducted the pre-hearing evidentiary deposition of Dr. Larson. Dr. Larson initially explained that the *Guidelines* require at least two months of participation in a non-operative therapy program with continued instability. He also commented that the *Guidelines* “seem to reference laxity.” Dr. Larson thus distinguished between “laxity” and “instability” He specified that “instability” is a “symptom of something giving out” while “laxity is looseness of ligaments.” The record reveals that Claimant frequently reported symptoms of left ankle instability. However, when physicians tested ligamentous integrity, there was no laxity. Specifically, Claimant had negative anterior drawer and talar tilt tests. Dr. Larson summarized that, because Claimant did not exhibit loose ligaments, he probably did not have mechanical instability. He commented that the proposed ligament reconstruction surgery would not be effective in the absence of loose ligaments. Notably, the *Guidelines* do not recommend ankle surgery to reconstruct normal ligaments. Accordingly, Dr. Larson maintained that Dr. Kuhlman’s proposed Brostrom-type lateral ankle stabilization surgery was not reasonable, necessary or causally related to Claimant’s September 10, 2019 left ankle injury.

20. Claimant has demonstrated that it is more probably true than not that the Brostrom-type lateral ankle stabilization surgery requested by ATP Dr. Kuhlman is reasonable, necessary and causally related to his admitted September 10, 2019 left ankle injury. Initially, on September 10, 2019 Claimant was carrying a setting tool with a co-worker when he rolled his left ankle. Claimant was diagnosed with a sprain of an unspecified ligament of the left ankle and instability. A September 30, 2019 MRI revealed a full-thickness ligamentous injury in the lateral aspect of the ankle and severe flexor hallucis longus tenosynovitis. The tendons were intact and there was no acute bony injury. On October 1, 2019 Dr. Kuhlman specifically diagnosed Claimant with a grade-3 sprain of the ATFL and CFL. He discussed both conservative and surgical treatment options for Claimant’s left ankle. By January 14, 2020 Claimant reported continued instability and that physical therapy had not improved his left ankle symptoms. Dr. Kuhlman explained that Claimant had “failed two months of physical therapy, we will consider this a chronic lateral ankle instability, according to the workers’ compensation guidelines.” Claimant was thus scheduled for a Brostrom type lateral ankle stabilization surgery but Respondents cancelled the procedure.

21. In contrast to Dr. Kuhlman’s surgical recommendation, Dr. Larson maintained that the proposed Brostrom-type lateral ankle stabilization surgery was not reasonable, necessary or causally related to Claimant’s September 10, 2019 left ankle injury. Dr. Larson initially explained that the *Guidelines* require at least two months of participation in a non-operative therapy program with continued instability. He also commented that the *Guidelines* “seem to reference laxity.” He thus distinguished between “laxity” and “instability” Dr. Larson specified that “instability” is a “symptom of something giving out” while “laxity is looseness of ligaments.” Although Claimant frequently reported symptoms of left ankle instability, physical examinations did not reveal left ankle ligament laxity. Specifically, Claimant had negative anterior drawer and talar tilt tests. In fact, during his course of treatment Dr. Parsons determined that Claimant exhibited stability without dislocation, subluxation or laxity of the left ankle. Dr.

Larson thus summarized that, because Claimant did not exhibit loose ligaments, the proposed surgery would not be effective in improving his condition.

22. Despite Dr. Larson's opinion, the record reflects that the Brostrom-type lateral ankle stabilization surgery requested by ATP Kuhlman to address Claimant's "chronic lateral ankle instability" is reasonable, necessary and causally related to his September 10, 2019 admitted left ankle injury. The medical records consistently reflect that Claimant has deficits "due to ankle instability and difficulty walking on uneven surfaces." Physical therapy and other measures have failed and there is no remaining conservative treatment to address Claimant's left ankle pain and instability. Dr. Larson's distinction between laxity and instability is not persuasive in considering whether the proposed surgery is reasonable. ATP Kuhlman explained that Claimant had failed two months of physical therapy and suffers from chronic left ankle instability. Based on Dr. Kuhlman's considerable treatment of Claimant and reasonable application of the *Guidelines*, Claimant is an appropriate surgical candidate. Accordingly, Claimant's request for left ankle stabilization surgery is granted.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994).

A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier*, W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

5. The *Guidelines* specifically provide, in relevant part:

There is no conclusive evidence that surgery as opposed to functional treatment for an uncomplicated Grade 1, 2, or 3 ankle sprain improves patient outcome. . . . Chronic indications are functional problems, such as recurrent instability remaining after at least 2 months of active participation in a non-operative therapy program including balance training.

See Rule 17, Exhibit 6 Lower Extremity Injury Guidelines, pp. 32-33.

6. As found, Claimant has demonstrated by a preponderance of the evidence that the Brostrom-type lateral ankle stabilization surgery requested by ATP Dr. Kuhlman is reasonable, necessary and causally related to his admitted September 10, 2019 left ankle injury. Initially, on September 10, 2019 Claimant was carrying a setting tool with a co-worker when he rolled his left ankle. Claimant was diagnosed with a sprain of an unspecified ligament of the left ankle and instability. A September 30, 2019 MRI revealed a full-thickness ligamentous injury in the lateral aspect of the ankle and severe flexor hallucis longus tenosynovitis. The tendons were intact and there was no acute bony injury. On October 1, 2019 Dr. Kuhlman specifically diagnosed Claimant with a grade-3 sprain of the ATFL and CFL. He discussed both conservative and surgical treatment options for Claimant's left ankle. By January 14, 2020 Claimant reported continued instability and that physical therapy had not improved his left ankle symptoms. Dr. Kuhlman explained that Claimant had "failed two months of physical therapy, we will consider this a chronic lateral ankle instability, according to the workers' compensation guidelines." Claimant was thus scheduled for a Brostrom type lateral ankle stabilization surgery but Respondents cancelled the procedure.

7. As found, in contrast to Dr. Kuhlman's surgical recommendation, Dr. Larson maintained that the proposed Brostrom-type lateral ankle stabilization surgery was not reasonable, necessary or causally related to Claimant's September 10, 2019 left ankle injury. Dr. Larson initially explained that the *Guidelines* require at least two months of participation in a non-operative therapy program with continued instability. He also commented that the *Guidelines* "seem to reference laxity." He thus distinguished between "laxity" and "instability" Dr. Larson specified that "instability" is a "symptom of something giving out" while "laxity is looseness of ligaments." Although Claimant

frequently reported symptoms of left ankle instability, physical examinations did not reveal left ankle ligament laxity. Specifically, Claimant had negative anterior drawer and talar tilt tests. In fact, during his course of treatment Dr. Parsons determined that Claimant exhibited stability without dislocation, subluxation or laxity of the left ankle. Dr. Larson thus summarized that, because Claimant did not exhibit loose ligaments, the proposed surgery would not be effective in improving his condition.

8. As found, despite Dr. Larson's opinion, the record reflects that the Brostrom-type lateral ankle stabilization surgery requested by ATP Kuhlman to address Claimant's "chronic lateral ankle instability" is reasonable, necessary and causally related to his September 10, 2019 admitted left ankle injury. The medical records consistently reflect that Claimant has deficits "due to ankle instability and difficulty walking on uneven surfaces." Physical therapy and other measures have failed and there is no remaining conservative treatment to address Claimant's left ankle pain and instability. Dr. Larson's distinction between laxity and instability is not persuasive in considering whether the proposed surgery is reasonable. ATP Kuhlman explained that Claimant had failed two months of physical therapy and suffers from chronic left ankle instability. Based on Dr. Kuhlman's considerable treatment of Claimant and reasonable application of the *Guidelines*, Claimant is an appropriate surgical candidate. Accordingly, Claimant's request for left ankle stabilization surgery is granted.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for Brostrom-type lateral ankle stabilization surgery as requested by Dr. Kuhlman is granted.
2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative

Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: August 3, 2020.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-921-243-001**

ISSUE

1. Whether Claimant's June 5, 2019 Petition to Reopen should be dismissed with prejudice.

FINDINGS OF FACT

1. Claimant sustained a work-related injury on June 5, 2013. On December 10, 2014, the parties entered into a Stipulation resolving the outstanding matters, and Claimant's claim was closed, subject to statutory reopening. Respondents filed a Final Admission of Liability on December 16, 2014. (Ex. C).
2. On June 5, 2019, Claimant, through counsel, filed a Petition to Reopen citing a change in Claimant's medical condition. Claimant's Petition to Reopen indicates Claimant's mailing address was 4650 Otis Street, Wheat Ridge, CO 80003. Claimant did not request a hearing related to his Petition to Reopen. (Ex. G). Claimant's Petition to Reopen was filed on the six-year deadline set forth in § 8-43-303(1), C.R.S.
3. On January 10, 2020, the Division of Workers' Compensation (Division), granted Claimant's attorney's request to withdraw from the case. (Ex. C & Ex. G). Claimant's former counsel submitted a "Written Notification of Service" advising that "official papers or documents shall be made at the Claimant's last known mailing address of 4650 Otis Street, Wheat Ridge, CO 80003." (Ex. C). Since Claimant's former counsel's withdrawal, no attorney has entered an appearance on behalf of Claimant.
4. On January 24, 2020, Respondents' counsel sent Claimant a letter to Claimant's last known mailing address of 4650 Otis Street, Wheat Ridge, CO 80003 conferring regarding a setting a hearing and a potential motion to dismiss. (Ex. C).
5. On April 10, 2020, Respondents filed an Application for Hearing with the Office of Administrative Courts. The certificate of mailing for Respondents' Application for Hearing certifies that a copy of the Application was mailed to Claimant at 4650 Otis Street, Wheat Ridge, CO 80003. (Ex. D).
6. Claimant did not file a response to the Application for Hearing.¹

¹The Court "may take judicial notice of its own records and adopt factual findings from a previous case as long as the previous case involved the same parties and the same

7. Respondents' Application for Hearing was set for hearing on July 30, 2020. The Office of Administrative Courts mailed a copy of the Notice of Hearing to Claimant's address on file -- 4650 Otis Street, Wheat Ridge, CO 80003), on May 26, 2020. The OAC has no email address on file for Claimant.
8. On April 28, 2020, a prehearing conference was held before Prehearing Administrative Law Judge (PALJ) David Gallivan pursuant to § 8-43-207.5, C.R.S. Notice of the April 28, 2020 prehearing conference was sent to Claimant's address of record (i.e., 4650 Otis Street, Wheat Ridge, CO 80003). Claimant did not appear, and the PALJ placed a call to Claimant at the phone number indicated in the Division's files, but Claimant did not answer. (Ex. E).
9. Following the April 28, 2020 prehearing conference, PALJ Gallivan issued an order permitting Respondents to engage in discovery with a self-represented (pro se) claimant. A copy of the April 28, 2020 Order was mailed to Claimant at 4650 Otis Street, Wheat Ridge, CO 80033. (Ex. E).
10. Respondents served discovery on Claimant at 4650 Otis Street, Wheat Ridge, CO 80003 on May 6, 2020. The post office returned the discovery requests to Respondents marked "return to sender." (Ex. F).
11. Respondents then scheduled a prehearing conference to address Claimant's failure to respond to the May 6, 2020 discovery requests. A prehearing conference was held on June 22, 2020 before PALJ Michael J. Barbo to address Claimant's failure to respond to discovery. Claimant did not attend the prehearing conference and the court's efforts to contact Claimant at his identified telephone number were unsuccessful. PALJ Barbo issued an order requiring Claimant to respond to Respondents' discovery requests on or before July 6, 2020. A copy of the July 22, 2020 Order was mailed to Claimant at 4650 Otis Street, Wheat Ridge, CO 80003. (Ex. F).
12. When Claimant did not respond to Respondents' discovery requests on or before July 6, 2020, Respondents scheduled a prehearing conference regarding Respondents' motion to dismiss or close claim for failure to participate in ordered discovery. On July 7, 2020, a prehearing conference was held before PALJ Susan D. Phillips pursuant to § 8-43-207.5, C.R.S. Respondents indicated to PALJ Phillips that notice of the July 7, 2020 prehearing conference was sent to the address on file, confirmed with the Division, but was returned by the U.S. Postal Service as undeliverable. Claimant did not appear at the hearing, and PALJ Phillips made two attempts to call the Claimant by phone at the number in the

issue." *In re C.A.B.L.*, 221 P.3d 433, 442 (Colo App. 2009); *Dauwe v. Musante*, 122 P.3d 15, 20 (Colo. App. 2004)

Division file and left two messages requesting a return phone call. Claimant did not return the phone call. (Ex. G).

13. The PALJ issued an order denying Respondents' motion to dismiss without prejudice, and imposing sanctions on Claimant for failure to respond to discovery, including prohibiting Claimant from presenting evidence at the July 30, 2020 hearing and from opposing Respondents' request to dismiss and close Claimant's workers' compensation case. (Ex. G).
14. The ALJ relies upon exhibits entered into evidence and finds that the Respondent has demonstrated that Claimant has failed to take any substantive action regarding his Petition to Reopen and has, effectively, abandoned the Petition to Reopen.

CONCLUSIONS OF LAW

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Claimant's Petition To Reopen

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the ground of, *inter alia*, change in condition. The claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S.; *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission*, 714 P.2d 1328 (Colo. App. 1985). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office*, 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.*, 765 P.2d 1033 (Colo. App. 1988).

The question of whether the claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan*, *supra*. Similarly, the question of whether the disability and need for treatment were caused by the industrial injury or by an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office*, *supra*.

Claimant did not appear at the July 30, 2020 hearing on Respondent's Application for Hearing and presented no evidence in support of his Petition to Reopen. As a result, there is no persuasive evidence in the record to demonstrate any mitigating circumstances that would have resulted in Claimant's failure to prosecute his Petition to Reopen, appear for prehearing conferences, or comply with prehearing orders. The ALJ finds and concludes that the Claimant failed to prove it more likely than not that any grounds for reopening his claim exist.

Dismissal With Prejudice

Dismissal with prejudice of Claimant's Petition to Reopen is appropriate for several reasons. First, Claimant has failed to pursue his claim or otherwise take any action in furtherance of his Petition to Reopen. Although the record indicates that some documents sent to Claimant's address of record were returned as undeliverable/return to sender. This is the result of Claimant's failure to update his address as required by O.A.C.R.P. 6(C), which provides: "Parties not represented by attorneys shall inform the OAC and all other parties of their current address, telephone numbers, facsimile numbers and e-mail addresses, and of any changes to said information during the course of the proceedings within 10 business days." Claimant has not provided an updated address or other contact information to the OAC. At least through July 7, 2020, Division files reflect that Claimant's last known address is 4650 Otis Street, Wheat Ridge, CO 80003. Claimant's telephone number on file with the Division has also not been updated.

Second, Claimant was sanctioned for failing to comply with discovery orders. The ICAO has held that a claimant's failure to comply with orders is grounds for dismissing a claim with prejudice. See *Muragara v. Manitou & Pikes Peak Railway*, W.C. No. 4-698-365-07 (July 8, 2014) (The claim was properly dismissed with prejudice, based on claimant's failure to comply with discovery orders.)

Finally, the time for reopening of Claimant's claim based a change in condition has expired. Pursuant to § 8-43-303(1), C.R.S., a claim may be reopened within six years after the date of injury based on a change in condition. More than six years have elapsed since Claimant's June 5, 2013 injury. Consequently, Claimant's claim may not be reopened for any ground other than fraud or mutual mistake of material fact. *Id.*

The Claimant's failure to comply with discovery orders, combined with his failure to attend prehearing conferences, failure to attend the July 30, 2020 hearing, failure to take action in furtherance of his Petition to Reopen, and the expiration of the reopening period, justify dismissal with prejudice of Claimant's Petition to Reopen. Other than

initially filing his Petition to Reopen, Claimant has failed to pursue his Petition. Claimant's Petition to Reopen is dismissed with prejudice.

ORDER

It is therefore ordered that:

1. Claimant's June 5, 2019 Petition to Reopen is dismissed with prejudice.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

ISSUES

- I. Has Claimant shown, by a preponderance of the evidence, that she is entitled to a general award of post-MMI Maintenance Medical Benefits, as a result of her admitted July 17, 2017 work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant's History of Neck Pain and Treatment Before this Injury

1. Claimant has a long-standing history of neck pain and symptoms dating back to 1991. (Ex. I, pp. 158, 186; see also Ex. K). Claimant's symptoms were associated with both non-work injuries to her neck and previous Workers' Compensation claims. Claimant underwent a cervical disk replacement surgery with Dr. Jatana in 2006. (Ex. J).
2. To address her neck injuries, from 2009 through 2016 Claimant has undergone four Independent Medical Examinations (IMEs) with Dr. Rachel Basse. (Ex. C). Dr. Basse's IME reports summarize Claimant's extensive medical history and treatment for her neck. Her summary of Claimant's medical records show Claimant has continuously complained of pain symptoms in her neck, radiating down into her trapezius and shoulder girdles, with headaches since at least 1994. (Ex. C).
3. In 2013, Claimant was diagnosed with chronic cervicotrpezial myofascial pain syndrome by DIME Dr. Castrejon. (Ex. I, p. 168) Dr. Castrejon found that any maintenance medical care was attributable to her March, 2007 auto accident *Id at 169*. In 2014, Claimant was diagnosed with degeneration of cervical intervertebral disc, acquired spondylolisthesis, and kyphosis. (Ex. J, p. 190). In 2015, a CT of Claimant's cervical spine was reported to note "multilevel degenerative changes with minimal anterolisthesis of C3 on C4 and C4 on C5" and "severe right facet arthropathy at C3-4 and moderate left foraminal narrowing" with "mild narrowing at other levels." (Ex. C, p. 93).
4. Prior to this work injury of 7/17/2017, Claimant has reported neck pain ranging 3-9/10:
 - 4/14/09 - Claimant reported right greater than left cervical region symptoms of numbness and aching, "constant, waxing and waning in severity involve more the lateral cervical musculature, into the

sternocleidomastoid anteriorly and the upper mid-trapezius. High pain ratings are 8/10, low 4/10..." (Ex. C, pp. 31).

- 7/10/09 – “She continues with bilateral cervical pain, although also complains of upper cervical pain and headaches.” (Ex. J, p. 197). “Ms. West presented with 6-7/10 left and 5/10 right cervical pain with extension/rotation ipsilaterally.” *Id*
- 1/15/13 – “Ms. West completes a pain diagram shading in the entire anterior posterior aspect of the head, neck and upper shoulder girdle.” (*Id at 51*). “Her pain is 3/10 at the least, 7/10 at the worst...” *Id*.
- 5/29/13 – “She describes a daily average pain of anywhere from 3/10 up to 7/10.” (Ex. H, p. 154). “Maybe 3-4 times a month, she will need to call in sick because of the pain.” *Id*.
- 9/7/13 – “Her pain is 7/10, low pain is 3-4/10...” (Ex. C, p. 79).
- 10/8/13 – “...does still complain of some axial symptoms in the mid to upper cervical area...Pain scale today ranges anywhere from 3-7 out of 10.” (Ex. J, p. 192).
- 12/5/13 – “Regarding her neck the claimant describes a constant aching and stabbing pain that extends to her shoulders and results in headaches...She describes her condition as ‘worse’ with a pain level of 6-7/10...” (Ex. I, p. 161).
- 7/22/14 – “Pain: 4/10 currently, 7/10 at worst” (Ex. D, p. 116).
- 7/30/14 – “has noted increased neck symptoms, tightness, and near daily headaches. Occasionally she notes a stabbing posterior neck pain...” (Ex. J, p. 189). “Pain scales today range anywhere from 4-7/10.” *Id*.
- 3/29/16 – “Her primary discomfort is anterior and posterior cervical, shoulder girdle, and headache symptoms, constant waxing and waning in severity, primarily achy in quality, 7/10 at the worst, 3/10 at the least...” (Ex. C, p. 89).

Claimant Sought Medical Maintenance Care 6 Months Prior to 7/17/2017

5. Six months before the work injury in the present case, Claimant sought medical maintenance care for a Workers’ Compensation claim with a date of injury of August 30, 2007, for which the parties stipulated would also include any symptoms/injuries due to subsequent work incidents on October 5, 2007, October

29, 2007, and March 6, 2008. (Ex. K, p. 217, Finding of Fact #9 in ALJ Order dated 3/27/2017).

6. According to the ALJ's March 27, 2012 order, at hearing Claimant testified that she continued to be plagued by neck and low back symptoms at work. *Id. at 220*. She stated prolonged sitting necessary to write reports aggravates her neck pain. She also reported daily headaches. *Id. at 221*. Claimant also reported taking the following medications: Mobic for arthritis; Lyrica for nerve pain; Cymbalta for depression and nerve pain; Fioricet and Topamax for headaches; and Ambien and Trazadone to improve her sleep pattern/duration. Claimant testified that without these medications she could not function and would be unable to work. *Id.*

Work Injury of July 17, 2017

7. Claimant sustained a work injury on July 17, 2017 when she hit her head on a shelf while assisting a patient. Claimant was able to finish the remainder of her shift following the work incident.
8. Claimant testified she was unable to go to the ER immediately after the work incident because of a shortage at work and was required to stay until the end of her shift.
9. However, Claimant reported to Dr. Basse during the January 23, 2018 IME, that she drove home after her shift was over and went to work the following day, at which time she had been instructed by her employer to go to the ER. (Ex. C, p. 103).
10. According to the Final Admission of Liability filed in connection with this case, Claimant did not sustain any wage loss as a result of the July 17, 2017 work injury. (See Ex. 1).
11. At hearing, Claimant testified she wants to be able to return to the doctor if she feels she has a "flare-up". She stated she wanted to continue to work at the level she is currently working, she did not want to be stopped by "pain" or "concentration issues."

Medical Maintenance Care / Medically Reasonable or Necessary

12. Claimant treated for her July 17, 2017 work injury with the ATP, Dr. Zaremba, at Emergicare. On August 1, 2018, Dr. Zaremba opined Claimant was at maximum medical improvement (MMI) with no maintenance care required. (Ex. A, p. 6).
13. Claimant obtained a Division IME (DIME) with Dr. Jack Rook on December 3, 2018. (Ex. B, pp. 16-29). His report notes that Claimant had previously been diagnosed with fibromyalgia and possible Sjogren's syndrome vs. another connective tissue

disorder. *Id at 18*. Dr. Rook opined that Claimant was not at MMI. Instead, he recommended physical therapy, massage therapy and consideration for trigger point injections.

14. Claimant received the treatment recommended by the DIME, and was once again placed at MMI by Dr. Zaremba on August 12, 2019. Dr. Zaremba once again opined no maintenance care was required. (Ex. A, p. 2).
15. Claimant returned to Dr. Rook for a follow-up DIME on September 30, 2019. (Ex. B, pp. 10-14). Dr. Rook noted that Claimant “did not derive benefit from physical therapy” and the “massage therapy also did not help much.” *Id at 11*. Claimant reported her neck pain was about the same bilaterally. Dr. Rook opined that Claimant had reached MMI as of August 7, 2019. (*Id. at 14*). Dr. Rook did not recommend any maintenance care; only an independent exercise program. *Id.* Neither party challenged the MMI opinion of the DIME.

Maintenance Care / Related to the Work Injury

16. Prior to the July 17, 2017 work injury, Claimant had been recommended to undergo and received many different types of treatment for her ongoing pre-existing neck symptoms and headaches including:
 - Disk replacement surgery (Ex. J)
 - Cervical facet injections (Ex. C, p. 62; Ex. J, p. 190, 193, 195)
 - Cervical medial branch blocks (Ex. C, p. 62-63; Ex. J, p. 195)
 - Cervical epidural steroid injections (ESIs) (Ex. C, pp. 67, 68, 69, 70,; Ex. I, p. 179)
 - Cervical rhizotomy (Ex. C, p. 66)
 - Botox injections (Ex. C, p. 47)
 - Trigger point injections (Ex. C, p. 67)
 - Physical therapy (Ex. E, p. 121; Ex. J, p. 196)
 - Numerous medications (Ex. C, p. 44, 95; Ex. D, p. 116; Ex. E, p. 123; Ex. F, pp. 128-129).
 - Independent exercise program (Ex. C, p. 47, 92, 99)
17. In 2013, Claimant reported she was paying out of her own pocket for regular treatment of massage, acupuncture, and chiropractic. (Ex. H, p. 154; Ex. C, p. 78).

18. On March 30, 2017, Claimant presented to Dr. Sandell, and requested a referral for physical therapy for both her cervical and thoracic spines. (Ex. E, p. 121). Dr. Sandell's impression was *chronic* cervical pain and *persistent* increase in muscle tone and chronic daily headaches. It was noted authorization would be obtained for both physical therapy and Botox. *Id.* The medical records do not show whether Claimant actually received the physical therapy prescribed at the March 30, 2017 visit.
19. On July 10, 2017, (seven days before the work injury), Claimant presented to her primary care physician (PCP) Dr. Khosla. (Ex. F, pp. 126-133). Claimant reported that she has been seeing Dr. Sandell, who has helped her with her neck and back pain. Claimant requested a referral back to Dr. Sandell as she has chronic pain managed by him. *Id at 132.* In the review of systems, Claimant was noted to be positive for back pain and neck pain. Claimant's current medications were noted to be: Fioricet, Cymbalta, Lyrica, Mobic, Topamax, trazadone, and Ambien.
20. At hearing, Claimant testified that in the last three weeks she has had new left sided neck pain and 'cramping' that she never experienced before. Claimant also testified that she had right sided "chronic" tightness and aching in her trap[ezius] that she associates with her July 17, 2017 work injury.

Claimant's Testimony regarding the 2007 (non-work-related) Motor Vehicle Accident

21. When asked about her prior neck injuries, Claimant testified that the (non-work-related) 2007 motor vehicle accident was a minor incident in which she "bumped" into the back of a vehicle going approximately 10 mph.
22. However, medical opinions of numerous different physicians, including two prior DIME physicians (Drs. John Sacha and Miguel Castrejon), as well as, Claimant's treating surgeon, Dr. Jatana, and IME physician Dr. Basse, all support that the March 13, 2007 motor vehicle accident caused an exacerbation of her pre-existing cervical problem. Both DIMEs had opined that treatment provided after March 13, 2007 should have been done under Claimant's private insurance as being related to that motor vehicle accident. (Ex. C, p. 101; Ex. G, p. 148-149; Ex. I; see Ex. J, p. 203).
23. According to Dr. Castrejon's DIME report dated 12/5/2013:

The Claimant states she was at a full stop. She recalls reaching down to put away some tea at which time she let go of the brake and rear ended the vehicle ahead of her *She estimated the speed at impact of 20 mph.* (Ex, I, p. 159)(emphasis added).
24. However, in his March 27, 2017 Order, ALJ Lamphere found:

On March 12, 2007, Claimant was involved in a third motor vehicle accident where she rear-ended a *truck* while travelling at approximately *45 mph*. (See also Ex. I, p. 184). *This incident caused a marked increase in her neck pain* and an accompanying decrease in functioning. (Ex. K, p. 216, Finding of Fact #3)(emphasis added).

25. Claimant had similar complaints in her neck prior to the July 17, 2017 incident:

- 8/22/12 – “She notes she continues to experience headaches on a pretty frequent basis...She is also complaining of a sharp stabbing pain in the right shoulder as well as sharp pains in the posterior cervical spine that occur with particular movements. However, there is no clear pattern to the symptoms.” (Ex. J, p. 194).
- 5/28/13 – “She has daily neck pain. She feels stiff in the morning and the pain can be from her occiput down to the cervicothoracic junction...Over the past couple of years, she describes a worsening pain with rotation of her neck. There is stabbing discomfort, right worse than left.” (Ex. H, p. 153). She was diagnosed with “chronic neck pain, multifactorial” “components of myofascial pain and potentially some underlying structural discomfort” and “cervicogenic headaches”. *Id. at 155*.
- 9/7/13 – “Primary discomfort remains the cervical area...The cervical pain is stabbing and constant, minimally waxing and waning in nature.” (Ex. C, p. 79).
- 12/5/13 – “Regarding her neck the claimant describes a constant aching and stabbing pain that extends to her shoulders and results in headaches.” (Ex. I, p. 161). “She describes her condition as ‘worse’...” *Id.*
- 3/29/16 – “She is tender in most all musculature about the neck, anterior and posterior...She is tender over the right greater than left clavicle and spine of the scapula.” (Ex. C, p. 96).
- 1/12/17 – Claimant testified that she had difficulty concentrating and has occasional trouble with word finding. (Ex. K, p. 220). It was noted that Dr. Jenks had provided Claimant with a 25% impairment rating on August 6, 2013. (*Id.*). The ALJ notes that this is the same impairment rating found by Dr. Rook in the present case, before apportionment. (See Ex. B, p. 14).
- 2/7/17 – “She continues to have chronic cervical pain with daily headaches. This radiates into the bilateral upper trapezius and is resultant of some reduction in range of motion.” (Ex. E, p. 123).

26. In her January 23, 2018 IME report addressing the July 17, 2017 incident, Dr. Basse opined that the moderate to severe degenerative changes noted in the July 3, 2015 CT scan of Claimant's cervical spine "medically probably account for Claimant's ongoing cervical spine region pain symptoms." (Ex. C, p. 114). She opined that "these findings have their own natural course that can progress with time." She also noted that based on medical records, Claimant's symptoms have not significantly changed over the years." *Id.*

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1)*. Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. *Section 8-43-201, C.R.S.* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*.

B. In determining credibility, the Administrative Law Judge should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil 3:16*. The Administrative Law Judge, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Trumbull, 802 P.2d 1182, 1183 (Colo. App. 1990)*.

C. In this instance, the Administrative Law Judge finds that Claimant has, unfortunately, suffered a number of injuries through the years, some compensable, some not. More often than not, such injuries have had some effect on her cervical region, involving pain, loss of function, or both. Assuming, arguendo, that Claimant has been sincere in each of her recollections at any point in time, her testimony in this case is at odds with her longstanding medical history. In but one example, Claimant has now downplayed the significance of her March, 2007 car accident, with impact speeds ranging from negligible, up to hitting a truck at 45 mph. Taken as a whole, Claimant's ongoing role as a historian is simply not one of reliability. Given the timing of some of these events, the ALJ cannot rule out issues of

secondary gain in seeking Grover Medical Benefits in connection with this particular episode.

D. In accordance with *Section 8-43-215, C.R.S.*, this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the Administrative Law Judge has made credibility determinations, drawn plausible inferences from the record and resolved essential conflicts in the evidence. See *Davidson v. Industrial Claim Appeals Office, 84 P.3d 1023 (Colo. 2004)*. This decision does not address every item contained in the record, instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc., v. Industrial Claims Appeals Office, 5 P.3d 385, (Colo. App. 2000)*.

Medical Treatment, Generally

E. Respondents are liable for medical treatment reasonably necessary to cure or relieve the effects of an industrial injury. *Section 8-42-101*. Even if the Respondents admit liability, they retain the right to dispute the reasonable necessity or relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the Administrative Law Judge to approve all requested treatment. *Snyder v. City of Aurora, 942 P.2d 1337 (Colo. App. 1997)*; *McIntyre v. KI, LLC., W.C. No. 4-805-040 (July 2, 2010)*. The Claimant must prove that an injury directly and proximately caused the condition for which she seeks treatment, and that the treatment is reasonably necessary. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office, 989 P.2d 251 (Colo. App. 1999)*; *Snyder v. Industrial Claim Appeals Office, 942 P.2d 1337 (Colo. App. 1997)*.

Post MMI-Maintenance Medical Care, Generally

F. The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission, 759 P.2d 705 (Colo. 1988)*; *Hanna v. Print Expeditors Inc., 77 P.3d 863, 865 (Colo. App. 2003)*; *Hobirk v. Colorado Springs School District #11, W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012)*. An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office, 992 P.2d 701 (Colo. App. 1999)*; *Hastings v. Excel Electric, W. C. No. 4-471-818 (ICAO, May 16, 2002)*. The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc., 865 P.2d 915 (Colo. App. 1993)*; *Mitchem v. Donut Haus, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015)*. An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expeditors Inc., 77 P.3d 863 (Colo. App. 2003)*; *Anderson v. SOS Staffing Services, W. C. No. 4-543-730, (ICAO, July 14, 2006)*.

Post MMI-Maintenance Medical Care, Reasonable and Necessary, as Applied

G. There is currently no physician who has recommended any continued or ongoing medical maintenance care for Claimant's July 17, 2017 work injury. Dr. Zaremba has not, nor does the DIME physician, Dr. Rook. Nor is it recommended by Dr. Basse. Claimant argues that, since she received an Impairment Rating for this 7/17/2017 work injury, it must, ipso facto, follow that Grover Medical Benefits are necessary to maintain her condition. The ALJ does not concur with this reasoning, and finds that Grover Medical Benefits are *not reasonable and necessary* to maintain Claimant's post-MMI condition.

Post MMI-Maintenance Medical Care, Related to Work Injury, as Applied

H. The ALJ is persuaded by the medical opinion of Dr. Basse that Claimant's symptoms are more likely related to her pre-existing degenerative condition documented in July 2015, which can progress with time. The ALJ also finds that this opinion is supported by the medical records, which document a long history of neck pain and symptoms along with related ongoing treatment, prior to the July 17, 2017 work incident. Claimant now reports new left-sided neck symptoms ("cramps"), which Claimant testified she did not experience until three weeks prior to the hearing. If this is so, this cannot be causally connected to the July 17, 2017 work injury, almost three years after the fact. Even the recommendation for an independent exercise program pre-dates the July 17, 2017 work injury, as it had been recommended by Dr. Basse on numerous occasions before the July 17, 2017 incident. Therefore, and assuming arguendo that any such maintenance medical care is reasonable and necessary (which the ALJ does not so find), the ALJ further finds that any such care is *not related* to Claimant's 7/17/2017 work injury.

ORDER

It is therefore Ordered that:

1. Claimant's request for Post-MMI Maintenance Medical Care is denied and dismissed.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: August 3, 2020

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-124-692-001**

ISSUES

1. Whether Respondents have demonstrated by a preponderance of the evidence that Dean L. Prok, M.D. is an Authorized Treating Physician (ATP).
2. Whether Respondents have proven by a preponderance of the evidence that they may suspend Claimant's Temporary Disability (TTD) benefits pursuant to §8-42-105(2)(c), C.R.S. and WCRP 6-1(A)(5).

FINDINGS OF FACT

1. On December 2, 2019 Claimant sustained an admitted industrial injury to his left ankle. Claimant was walking to work when he slipped on ice, fell and broke his left ankle in three places.
2. Claimant was transported to the UCHealth Emergency Room. An x-ray of the left ankle revealed a posterior lateral ankle dislocation and a displaced trimalleolar fracture. After the initial triage, Claimant was treated by orthopedic surgeon, Melissa Ann Gorman, M.D. and Alisha Marie Meserve, PA-C. They placed his ankle in a splint.
3. On December 7, 2019 Claimant completed a Rule 8 letter and selected The University of Colorado Hospital, Anschutz Pavilion (UCHealth) as his medical provider. The letter provided that Claimant could seek treatment at a hospital for after hours care, but did not address whether he could see another provider after selecting UCHealth.
4. Dr. Gorman diagnosed Claimant with a closed trimalleolar fracture of the left ankle. On December 11, 2019 Dr. Gorman performed an open reduction and internal fixation of Claimant's left ankle fracture.
5. On December 13, 2019 Respondents filed a General Admission of Liability (GAL). Respondents acknowledged Claimant was entitled to receive medical benefits and ongoing Temporary Total Disability (TTD) benefits starting on December 3, 2019.
6. On approximately December 13, 2019 Claimant informed Nurse Case Manager Deborah L[Redacted] that he did not want to follow-up with his treating occupational health provider at UC Health. Instead, he sought treatment with a provider who was closer to his residence. Pursuant to Claimant's request, Ms. L[Redacted] reached out to him to coordinate an authorized treating provider closer to his home.
7. Ms. L[Redacted] provided Claimant with three options for continued treatment. The Claims Notes from December 22, 2020 specifically reflect that Claimant should "contact either one of the three clinics that I gave him or another if he had a preference. He stated he would call SCL as they were closest to his house after he talked

to Vicki and would call me back to tell me when his appointment is scheduled so I can set up transport with MTI.”

8. Claimant chose to visit Dean L. Prok, M.D. at SCL Health Medical Group Front Range and would call his office to schedule an appointment. The Claim Notes created December 31, 2019 specifically reveal that Claimant “is going to call Dr. Prok’s office and see when he can get in there as it is closest but he may go to Dr. Fox if he can be seen sooner. He will let me know after he has made the appointment.” Ms. L[Redacted] attempted to follow up with Claimant but she was unable to reach him and left a message with a woman on the phone. Ms. L[Redacted] subsequently scheduled an appointment for Claimant to visit Dr. Prok’s office on January 6, 2020 at 10:15 a.m. The December 31, 2019 Claim Notes also reflect that Ms. Lewinsky spoke to Claimant “after texting him and requesting he answer his phone.” She informed him that a car would pick him up at 9:15 a.m. on January 6, 2020 to transport him to the appointment.

9. On January 6, 2020 Claimant visited Dr. Prok for an examination. Dr. Prok diagnosed Claimant with a closed ankle fracture with routine healing. He discussed Claimant’s treatment options, including decreasing his usage of narcotics as well as physical therapy. Dr. Prok noted that Claimant would be seen again in a couple weeks to assess the progress of his recovery and implement ongoing recommendations from his orthopedic specialist Dr. Gorman. He estimated that Claimant would reach Maximum Medical Improvement (MMI) within three to four months. Dr. Prok requested Claimant’s medical records from his treatment with Dr. Gorman. Claimant scheduled a follow-up appointment for January 22, 2020.

10. Claimant testified about whether he had spoken to Ms. L[Redacted] about treating at a facility closer to his home. He noted that Ms. L[Redacted] contacted him and discussed some information about doctors. Claimant explained that he wanted to remain with UCHealth, but preferred a UCHealth facility closer to his home.

11. After Claimant’s January 6, 2020 appointment and before his next scheduled appointment Claimant retained McDivitt Law Firm for representation. Claimant testified that he spoke to his attorney about whether he should attend the second appointment.

12. Although a follow-up appointment with Dr. Prok had been scheduled for January 22, 2020, Claimant failed to attend. Claimant called Dr. Prok’s office on January 21, 2020 and informed his office that he would not be returning for treatment. Dr. Prok’s office contacted the claims adjuster about the missed appointment.

13. Respondents sent Claimant a letter dated January 24, 2020 stating that he missed his appointment with Dr. Prok, and therefore scheduled a demand appointment for February 5, 2020. The letter further stated, “[F]ailure to attend this appointment may affect your benefits.”

14. On February 5, 2020 Claimant returned to Dr. Prok for an evaluation. Claimant reported minor, gradual improvement in his left ankle symptoms. He noted that

he had started physical therapy based on Dr. Gorman's instructions. Dr. Prok reviewed Claimant's medical history and conducted a physical examination. Based on Claimant's history and mechanism of injury, Dr. Prok determined that Claimant's left ankle injury was greater than 50% likely caused by his work activities and assigned work restrictions. Dr. Prok also discussed Claimant's follow-up care and recommended continued physical therapy. He noted he would see Claimant again in a few weeks after an orthopedic evaluation.

15. Claimant testified that he returned to Dr. Prok because he had received the demand letter. He specifically remarked that he attended the February 5, 2020 appointment "because I received a letter stating that I needed to go."

16. On February 26, 2020 Claimant returned to Dr. Prok for an evaluation. Claimant reported gradual, slow improvement and that he was no longer wearing a walking boot. Dr. Prok referred Claimant for additional physical therapy sessions. He noted that Claimant would return in about two weeks and implement any recommendations offered by Dr. Gorman. Claimant was scheduled to visit Dr. Prok on March 11, 2020.

17. Claimant missed the March 11, 2020 appointment. He testified that he followed-up with Dr. Prok solely because he could not risk losing his benefits. He specifically remarked "Yes, due to the fact that I had received the demand letter, and I couldn't go without my – my benefits." Claimant subsequently ceased visiting Dr. Prok.

18. Based on the missed appointment, Respondents sent Claimant a letter on March 16, 2020. The letter specified that the failure to attend the demand appointment might affect Claimant's benefits. Respondents scheduled the demand appointment with Dr. Prok for March 30, 2020 at 3:45 p.m.

19. On April 4, 2020 SCL Health sent a letter to Claimant stating that he had missed his March 11, 2020 appointment. The appointment had been cancelled "by patient off automated reminder system."

20. On April 4, 2020 SCL Health sent a letter to Claimant stating that he had missed his March 30, 2020 appointment. Despite missing his demand appointments, Claimant testified that he has not lost any benefits to date.

21. Respondents filed a Petition to Terminate Compensation on April 14, 2020 after Claimant missed two demand appointments. Respondents specifically sought to terminate Claimant's TTD benefits based on the missed appointments.

22. Claimant filed an Objection to the Petition to Terminate Compensation on April 21, 2020. He asserted that he did not choose Dr. Prok as his ATP. Claimant further noted the right of selection had passed to him and whether Dr. Prok was an ATP is a question of fact.

23. On June 11, 2020 the parties conducted the pre-hearing evidentiary deposition of Dr. Prok. In addressing how he came to evaluate Claimant on January 6,

2020 Dr. Prok responded, “[m]y understanding is that he had already had significant treatment by Dr. Gorman as he presented to our office, and I don’t know why he chose to do so....” Dr. Prok remarked that he took Claimant’s history “to some degree” because he was already treating with Dr. Gorman and had an established plan of care. He sought Dr. Gorman’s medical records because he would become a treating provider “along with the recommendations of Dr. Gorman.” Dr. Prok explained that, because Claimant had undergone a major procedure with Dr. Gorman, she was “driving the care at this point.” Nevertheless, he was planning “to work with them and follow their recommendations.”

24. Respondents have demonstrated that it is more probably true than not that Dr. Prok is an ATP. Initially, on December 2, 2019 Claimant sustained an admitted industrial injury to his left ankle. On December 7, 2019 Claimant completed a Rule 8 letter and selected UC Health as his medical provider. On December 11, 2019 Dr. Gorman performed an open reduction and internal fixation of Claimant’s left trimalleolar ankle fracture.

25. On approximately December 13, 2019 Claimant informed Ms. L[Redacted] that he did not want to follow-up with his occupational health provider at UC Health. Instead, he sought treatment with a provider who was closer to his residence. In contrast, Claimant explained that he wanted to remain with UC Health, but preferred a facility closer to his home. Ms. L[Redacted] subsequently provided Claimant with three options for continued treatment. The Claims Notes from December 22, 2020 specifically reflect that Claimant should “contact either one of the three clinics that I gave him or another if he had a preference. He stated he would call SCL as they were closest to his house.” The Claim Notes created December 31, 2019 specifically reveal that Claimant “is going to call Dr. Prok’s office and see when he can get in there as it is closest but he may go to Dr. Fox is he can be seen sooner.”

26. The totality of the record reflects that Claimant sought treatment from a provider closer to his residence and selected Dr. Prok at SCL Health. Although he only visited Dr. Prok on three occasions and attended two of the appointments because he was concerned about losing his benefits, the persuasive evidence demonstrates that Claimant selected Dr. Prok for treatment. The Claim Notes specifically reflect that Claimant communicated with Ms. L[Redacted] about scheduling an appointment with Dr. Prok and attended the initial appointment on January 6, 2020. Claimant has thus demonstrated by his words or conduct that he chose Dr. Prok at SCL Health for treatment. Furthermore, Dr. Prok explained that he sought Dr. Gorman’s medical records because he would become a treating provider “along with the recommendations of Dr. Gorman.” He explained that, because Claimant had undergone a major procedure with Dr. Gorman, she was “driving the care at this point.” While recognizing that Dr. Gorman had performed surgery and was driving Claimant’s care, Dr. Prok nevertheless examined Claimant, reviewed medical records and prescribed additional physical therapy. Because Claimant chose Dr. Prok and visited him for purposes of examination, diagnosis, and treatment, he became an ATP.

27. Respondents have proven that it is more probably true than not that they may suspend Claimant’s TTD benefits. Initially, on April 14, 2020 Respondents filed a

Petition to Terminate Compensation after Claimant missed two demand appointments. Respondents specifically sought to terminate Claimant's TTD benefits based on the missed appointments. However, Claimant testified that, despite missing appointments, he has continued to receive TTD benefits. Respondents thus now seek a suspension of benefits and a credit for all TTD benefits that have been paid to Claimant since March 30, 2020 against future indemnity benefits until he returns to Dr. Prok for an examination.

28. The record demonstrates that after his January 6, 2020 visit with Dr. Prok, Claimant scheduled a follow-up appointment for January 22, 2020. However, Claimant missed the January 22, 2020 appointment. On January 24, 2020 Respondents sent Claimant a letter scheduling a demand appointment with Dr. Prok for February 5, 2020. The letter stated, "[F]ailure to attend this appointment may affect your benefits." Claimant attended the February 5, 2020 appointment as well as a follow-up visit on February 26, 2020. Dr. Prok referred Claimant for additional physical therapy sessions and noted Claimant would return in about two weeks. Claimant testified that he followed-up with Dr. Prok solely because he could not risk losing his benefits. However, he missed another appointment on March 11, 2020. On March 16, 2020 Respondents sent Claimant another letter scheduling a demand appointment with Dr. Prok for March 30, 2020. The letter specified that the failure to attend the demand appointment might affect Claimant's benefits. Nevertheless, Claimant failed to attend the March 30, 2020 appointment.

29. The record reflects that Claimant was notified that he missed scheduled appointments with Dr. Prok on two occasions. Both of the letters noted that Claimant's failure to attend the demand appointments might affect his benefits. Based on Claimant's failure to attend demand appointments with ATP Dr. Prok, Respondents are permitted to suspend his TTD benefits. However, Respondents continued to pay Claimant TTD benefits after March 30, 2020, but could have suspended payments without a hearing under 8-42-105(2)(c), C.R.S. The relevant statute and case law only permit the suspension of benefits and not the termination or retroactive recovery of benefits. Accordingly, Respondents' only remedy is to suspend benefits effective on the date of this Order until Claimant returns to Dr. Prok for an examination.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. See *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *CJI*, Civil 3:16 (2007).

Authorized Treating Physician

4. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). The term “select,” as it appears in the predecessor to §8-43-404(5)(a)(I)(A) is unambiguous and should be construed to mean “the act of making a choice or picking out a preference from among several alternatives.” *Squitieri v. Tayco Screen Printing, Inc.*, W.C. No. 4-421-960 (ICAO, Sept. 18, 2000); see *In re Loy*, W.C. No. 4-972-625-01 (ICAO, Feb. 19, 2016). Thus, a claimant “selects” a physician when she “demonstrates by words or conduct that [she] has chosen a physician to treat the industrial injury.” *Williams v. Halliburton Energy Services*, W.C. No. 4-995-888-01, (ICAO, Oct. 28, 2016); *Tidwell v. Spencer Technologies*, W.C. No. 4-917-514 (Mar. 2, 2015) The question of whether the claimant selected a particular physician as the ATP is one of fact for determination by the ALJ, and the ALJ’s resolution must be upheld if supported by the record. *Squitieri v. Tayco Screen Printing, Inc.*, W.C. No. 4-421-960 (ICAO, Sept. 18, 2000).

5. Authorization for treatment refers to a medical provider’s legal authority to provide medical treatment to the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office*, 914 P.2d 501 (Colo. App. 1995). Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Office*, 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, W.C. No. 5-044-948-01 (ICAO, Oct. 16, 2018).

6. An insurer or employer may refer a claimant to a medical provider without the provider becoming authorized to “treat” the claimant. The referrals may occur when the purpose of the examination is limited to issuing an impairment rating or obtaining an opinion relevant to pending litigation. See §8-43-404(1), C.R.S. However, if a claimant is

referred to a physician for the purposes of examination, diagnosis, and treatment the physician becomes authorized to “treat” the claimant. See *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002) (concluding that specialist was “an authorized treating physician” under §8-42-107(8)(b), C.R.S. because he examined the claimant “not in anticipation of litigation or simply for purposes of providing a disability rating, but to determine whether additional surgery was needed to alleviate claimant’s pain”).

7. As found, Respondents have demonstrated by a preponderance of the evidence that Dr. Prok is an ATP. Initially, on December 2, 2019 Claimant sustained an admitted industrial injury to his left ankle. On December 7, 2019 Claimant completed a Rule 8 letter and selected UC Health as his medical provider. On December 11, 2019 Dr. Gorman performed an open reduction and internal fixation of Claimant’s left trimalleolar ankle fracture.

8. As found, on approximately December 13, 2019 Claimant informed Ms. L[Redacted] that he did not want to follow-up with his occupational health provider at UC Health. Instead, he sought treatment with a provider who was closer to his residence. In contrast, Claimant explained that he wanted to remain with UC Health, but preferred a facility closer to his home. Ms. L[Redacted] subsequently provided Claimant with three options for continued treatment. The Claims Notes from December 22, 2020 specifically reflect that Claimant should “contact either one of the three clinics that I gave him or another if he had a preference. He stated he would call SCL as they were closest to his house.” The Claim Notes created December 31, 2019 specifically reveal that Claimant “is going to call Dr. Prok’s office and see when he can get in there as it is closest but he may go to Dr. Fox if he can be seen sooner.”

9. As found, the totality of the record reflects that Claimant sought treatment from a provider closer to his residence and selected Dr. Prok at SCL Health. Although he only visited Dr. Prok on three occasions and attended two of the appointments because he was concerned about losing his benefits, the persuasive evidence demonstrates that Claimant selected Dr. Prok for treatment. The Claim Notes specifically reflect that Claimant communicated with Ms. L[Redacted] about scheduling an appointment with Dr. Prok and attended the initial appointment on January 6, 2020. Claimant has thus demonstrated by his words or conduct that he chose Dr. Prok at SCL Health for treatment. Furthermore, Dr. Prok explained that he sought Dr. Gorman’s medical records because he would become a treating provider “along with the recommendations of Dr. Gorman.” He explained that, because Claimant had undergone a major procedure with Dr. Gorman, she was “driving the care at this point.” While recognizing that Dr. Gorman had performed surgery and was driving Claimant’s care, Dr. Prok nevertheless examined Claimant, reviewed medical records and prescribed additional physical therapy. Because Claimant chose Dr. Prok and visited him for purposes of examination, diagnosis, and treatment, he became an ATP.

Suspension of Benefits

10. Section 8-42-105(2)(c), C.R.S. addresses the suspension of benefits for failure to attend a medical appointment. The statute provides, in relevant part:

If an employee fails to appear at an appointment with the employee's attending physician, the insurer or self-insured employer shall notify the employee by certified mail that temporary disability benefits may be suspended after the employee fails to appear at a rescheduled appointment. If the employee fails to appear at a rescheduled appointment, the insurer or self-insured employer may, without a prior hearing, suspend payment of temporary disability benefits to the employee until the employee appears at a subsequent rescheduled appointment.

§8-42-105(2)(c), C.R.S. The statute specifies that the respondents may suspend, but not terminate, a claimant's benefits for failure to appear at an appointment "with the employee's attending physician." without a prior hearing. See *also* WCRP 6-1(A)(5).

11. In *Sigala v. Atencio's Mkt.*, 184 P.3d 40, 46-47 (Colo. 2008) the Colorado Supreme Court stated "the term 'suspend' as it is used in the temporary total disability benefits provision means to stop temporarily and not to bar or exclude." The Court reasoned "that a suspension of benefits, even if temporary, provides an adequate incentive for the claimant to cooperate with the employer to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers." *Id.* at 46. Because the term "suspend" as it is used in the temporary total disability benefits provision means to stop temporarily and not to bar or exclude, a claimant is entitled to receive the benefits withheld by his employer during the period of suspension. *Id.*

12. As found, Respondents have proven by a preponderance of the evidence that they may suspend Claimant's TTD benefits. Initially, on April 14, 2020 Respondents filed a Petition to Terminate Compensation after Claimant missed two demand appointments. Respondents specifically sought to terminate Claimant's TTD benefits based on the missed appointments. However, Claimant testified that, despite missing appointments, he has continued to receive TTD benefits. Respondents thus now seek a suspension of benefits and a credit for all TTD benefits that have been paid to Claimant since March 30, 2020 against future indemnity benefits until he returns to Dr. Prok for an examination.

13. As found, the record demonstrates that after his January 6, 2020 visit with Dr. Prok, Claimant scheduled a follow-up appointment for January 22, 2020. However, Claimant missed the January 22, 2020 appointment. On January 24, 2020 Respondents sent Claimant a letter scheduling a demand appointment with Dr. Prok for February 5, 2020. The letter stated, "[F]ailure to attend this appointment may affect your benefits." Claimant attended the February 5, 2020 appointment as well as a follow-up visit on February 26, 2020. Dr. Prok referred Claimant for additional physical therapy sessions and noted Claimant would return in about two weeks. Claimant testified that he followed-up with Dr. Prok solely because he could not risk losing his benefits. However, he missed another appointment on March 11, 2020. On March 16, 2020 Respondents sent Claimant

another letter scheduling a demand appointment with Dr. Prok for March 30, 2020. The letter specified that the failure to attend the demand appointment might affect Claimant's benefits. Nevertheless, Claimant failed to attend the March 30, 2020 appointment.

14. As found, the record reflects that Claimant was notified that he missed scheduled appointments with Dr. Prok on two occasions. Both of the letters noted that Claimant's failure to attend the demand appointments might affect his benefits. Based on Claimant's failure to attend demand appointments with ATP Dr. Prok, Respondents are permitted to suspend his TTD benefits. However, Respondents continued to pay Claimant TTD benefits after March 30, 2020, but could have suspended payments without a hearing under 8-42-105(2)(c), C.R.S. The relevant statute and case law only permit the suspension of benefits and not the termination or retroactive recovery of benefits. Accordingly, Respondents' only remedy is to suspend benefits effective on the date of this Order until Claimant returns to Dr. Prok for an examination.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Dr. Prok is an ATP.
2. Respondents' may suspend Claimant's TTD benefits effective on the date of this Order until he returns to Dr. Prok for an examination.
3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative

Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at <http://www.colorado.gov/dpa/oac/forms-WC.htm>.*

DATED: August 6, 2020.

**OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-129-281-001**

ISSUE

1. Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury arising out of and in the course of employment with Employer on or about February 3, 2020.
2. Whether Claimant established by a preponderance of the evidence entitlement to temporary total disability (TTD) benefits from the date of injury until February 26, 2020.

RESPONDENTS' MOTION FOR DIRECTED VERDICT

OACRP 2(B) provides that the Colorado Rules of Civil Procedure apply to Workers' Compensation hearings unless they are inconsistent with the OACRP rules and the provisions of the Workers' Compensation Act. Because neither the Act nor the OACRP prohibits or limits the ability to resolve a case as a matter of law, the C.R.C.P. related to directed verdicts, and specifically, C.R.C.P. 50, is applicable to workers' compensation hearings.

A "motion for a directed verdict admits the truth of the adversary's evidence and of every favorable inference of fact which may legitimately be drawn from it." *Western-Realco Ltd. v. Harrison*, 791 P.2d 1139 (Colo. App. 1989). Every factual dispute must be resolved in favor of the non-moving party and the "strongest inferences reasonably deducible from the most favorable evidence should be indulged in his favor." *Gossard v. Watson*, 221 P.2d 353, 355 (Colo. 1950). "A motion for directed verdict should be granted only in the clearest of cases when the evidence is undisputed, and it is plain no reasonable person could decide the issue against the moving party." *Evans v. Webster*, 832 P.2d 951, 954 (Colo. App. 1991).

C.R.C.P. 50 permits a party to move for a directed verdict at the close of the evidence offered by an opponent or at the close of all the evidence. Respondents moved for directed verdict upon the conclusion of Claimant's case-in-chief. This required the Court to review the evidence admitted at that time, drawing every reasonable inference in favor of the Claimant. The Court took Respondents' motion under advisement, reserving ruling on the motion until this order. Because the Court finds, based on the complete record, that Claimant has failed to meet her burden of establishing a compensable injury arising out of and in the course of employment with Employer, Respondents' motion for directed verdict is denied as moot.

FINDINGS OF FACT

1. Claimant is a 52-year-old female who is employed by Employer as a nurse practitioner. Claimant has been employed by Employer since September 28, 2015.
2. The Parties stipulate that Claimant is a maximum wage earner for the purposes of average weekly wage.
3. On February 3, 2020, Claimant was preparing to go to work for Employer when she walked outside to warm up her car at her home. Claimant slipped and fell on ice on the sidewalk outside of her home. Claimant suffered an injury to her hip as a result of the fall. As the result of her injury, Claimant missed time from work from February 3, 2020 until and including February 26, 2020. Claimant returned to work at full duty on February 27, 2020.
4. Claimant testified she was leaving for work earlier than usual because she was required to be at a facility in Boulder, Colorado by 9:00 a.m. to complete discharge paperwork for a patient. Claimant testified that normally, when there are reports of poor road and weather conditions, she does not leave for work until later.
5. It is common for Claimant's start time to vary. On some days she is required to be at work earlier than on other days.
6. Employer's Human Resources and Payroll manager, Deain A[Redacted], testified that Claimant's job duties include going to assigned facilities to see patients. But Claimant was not contractually obligated to drive a vehicle to work. Ms. A[Redacted] testified that Claimant is contractually obligated to get to her assigned facilities. On the date in question, Claimant was working at a facility in Boulder, Colorado. Ms. A[Redacted] testified it would be acceptable for Claimant to use other forms of transportation to get to work such as public transit, Lyft, or Uber.
7. Ms. A[Redacted] testified that the facilities coordinate with Claimant to determine what time she is required to arrive to work based on a patient's needs. Ms. A[Redacted] testified it is common for facilities to require providers to arrive at different times. Ms. A[Redacted] testified that arriving at 9:00 a.m. is not unusually early for a nurse practitioner to begin working.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. See § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The

facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, ... performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove her injury arose out of the course and scope of her employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; see *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641.

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. See *Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market*, W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work

does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equipment Company*, W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

Generally, injuries sustained by employees while they are traveling to or from work are not compensable because such travel is not considered the performance of services arising out of and in the course of employment. *Madden v. Mountain West Fabricators*, 977 P.2d 861, 863 (Colo. 1999). However, injuries incurred while traveling are compensable if “special circumstances” exist that demonstrate a nexus between the injuries and the employment. *Id.* at 864. In ascertaining whether “special circumstances” exist the following factors should be considered:

- Whether travel occurred during working hours;
- Whether travel occurred on or off the employer's premises;
- Whether travel was contemplated by the employment contract; and
- Whether obligations or conditions of employment created a “zone of special danger” out of which the injury arose.

Id. In considering whether travel is contemplated by the employment contract the critical inquiry is whether travel is a substantial part of service to the employer. *See id.* at 865.

“Special circumstances” may be found where the employment contract contemplates the employee’s travel, or the employer delineates the employee’s travel for special treatment as an inducement. *See Staff Administrators Inc. v. Reynolds*, 977 P.2d 866, 868 (Colo. 1999). “Special circumstances” may also exist when the employee engages in travel with the express or implied consent of the employer and the employer receives a special benefit from the travel in addition to the employee’s mere arrival at work. *See National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259, 1260 (Colo. App. 1992). The essence of the travel status exception is that when the employer requires the claimant to travel beyond a fixed location to perform her job duties the risks of the travel become the risks of the employment. *Breidenbach v. Black Diamond, Inc.*, W.C. No. 4-761-479 (ICAO, Dec. 30, 2009).

In considering whether travel was contemplated by the employment contract, case law reflects that the exception applies when a claimant is required by an employer to come to work in an automobile that is then used to perform job duties. The vehicle confers a benefit to the employer beyond the employee’s mere arrival at work. *See Whale Communications v. Osborn*, 759 P.2d 848 (Colo. App. 1988). As explained in 1 A. Larson, *Workmen’s Compensation Law*, §17.50 (1985), “[t]he rationale for this exception is that the travel becomes a part of the job since it is a service to the employer to convey to the premises a major piece of equipment devoted to the employer’s purposes. Such a requirement causes the job duties to extend beyond the workplace and makes the vehicle a mandatory part of the work environment.” *See In re Rieks*, W.C. No. 4-921-644 (ICAO Aug. 12, 2014) (where employer required the claimant to come to work in an automobile to attend appointments and meet with customers, transport of car was contemplated by the employment contract and the claimant’s motor vehicle accident on the way to work occurred in the course of and arose out of his employment); *Norman v. Law Offices of*

Frank Moya, W.C. No. 4-919-557 ICAO, Apr. 23, 2014) (where attorney was required to use car to travel from work to courthouse and was injured in motor vehicle accident while she was driving to her first court appearance of the day, injuries were compensable because travel was contemplated by employment contract and conferred benefit to employer beyond mere arrival at work); *Lopez v. Labor Ready*, W.C. 4-538-791 (ICAO, Sept. 26, 2003) (where the claimant's job required her to spend large parts of her day in her personal vehicle and she was injured in a motor vehicle accident while driving home for lunch, claim was compensable because it conferred a benefit to the employer beyond the claimant's mere arrival at work).

Claimant has failed to meet her burden to establish by a preponderance of the evidence that her February 3, 2020 injury arose out of and in the course of employment with Employer. The Claimant's injury did not occur on the Employer's premises or during working hours. Claimant was not injured while traveling or while performing job duties. Instead, Claimant was injured when she fell on an icy sidewalk located at her home, while walking outside to warm up her car. Accordingly, Claimant's injury, sustained at her home, before work hours, not performing a job-related duty, did not occur "in the course" of her employment.

Similarly, Claimant's injury sustained while walking to her car at her own home did not have its origin in work-related functions and cannot be considered part of the Claimant's service to Employer. As such, her injury did not "arise out of" her employment. That Claimant felt it necessary to leave her home earlier than she otherwise would have does not alter the conclusion that her injury did not arise out of and in the course of her employment.

The record does not contain evidence of "special circumstances" from which the Court could conclude that Claimant's injury arose out of her employment. Claimant's employment contract only contemplates travel insofar as Claimant is required to get to work at an assigned location, and the use of her personal vehicle (or any specific mode of transportation) not required by her employment contract.

Claimant has not established by a preponderance of the evidence that she sustained a compensable work-related injury on February 3, 2020. Her claim is denied and dismissed.

Temporary Total Disability Benefits

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. See Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning

capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)).

Because Claimant has failed to establish that she sustained a compensable work-related injury on February 3, 2020, her request for temporary total disability benefits is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable work-related injury on February 3, 2020. Her claim is denied and dismissed.
2. Claimant has failed to establish by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits.
3. All remaining issues are moot.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://>

DATED: August 5, 2020

Denver, Colorado, 80203

ISSUES

- I. What is Claimant's Average Weekly Wage?
- II. Is Claimant entitled to Temporary Total Disability Payments from November 27, 2019 through January 4, 2020?

STIPULATIONS

The parties stipulated that Claimant would be entitled to Temporary Partial Disability from September 26, 2019, through November 26, 2019, and again from January 5, 2020 through March 24, 2020.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Work Injury and Initial Treatment

1. This is an admitted claim. On September 25, 2019, a co-worker dropped a pair of pliers, which fell onto Claimant's head from a raised platform.
2. Claimant began treating with Dr. Thomas Centi, as the authorized treating provider on September 27, 2019. Dr. Centi did not assign any work restrictions pertaining to light (light sensitivity was not noted at this appointment) or sound at Claimant's initial appointment. MMI was anticipated as of 10/18/2019. (Ex. A, pg. 3). He did assign work restrictions addressing lifting, carrying, pushing, and pulling, as well as sitting 50% of the time and no standing or walking greater than 30 minutes out of an hour. Claimant returned to work. *Id.*

Work Restrictions Regarding Bright Light

3. On October 9, 2019, Dr. Centi assigned work restrictions of "*No bright light exposure*" due to Claimant's complaints of photosensitivity. (Resp. Ex. A, pg. 10). The notes do not reflect whether Claimant asked for clarification from Dr. Centi as to what constituted *bright light*. According to payroll records, Claimant worked Monday through Friday, from 6:30 a.m. to 3:00 p.m. Claimant returned to work with the restriction of *no bright light exposure*. At hearing, Claimant testified that she ran errands during this time and thus she would have been exposed to bright light.

Modified Duty as Prescribed and Offered

4. Employer provided Claimant a modified job offer on October 30, 2019 as 'Administrative Light Duty'. As outlined in the letter, Claimant was already working this position. (Ex. B, pg. 49). According to the job description, Claimant would be located in the front foyer/reception area in the administrative building and the fluorescent lights could be turned off. (Resp. Ex. B, pg. 48). This job offer was approved by Dr. Centi and satisfied his assigned restrictions of "no bright light exposure" as well as the sitting and standing restrictions.

5. The job offer by Employer, dated 10/23/2019, contained five duty descriptions. On each of the five duty descriptions, Dr. Centi checked the box noting his approval. The final box (also checked off by Dr. Centi) read as follows:

Inventory office items (involves *walking, climbing stairs*, and standing; involves some reaching and gripping as well as recording data with pen and paper. *Id at 48* (emphasis added).

6. On 11/1/2019, Claimant returned to Dr. Centi, whereupon Claimant's light sensitivity continued to be noted. For the first time since treatment began, he added a 4th diagnosis of "Other peripheral vertigo, bilateral". (Ex. A, p. 16). The work restriction remained at "*No bright light exposure.*" *Id.*

Work Restrictions Regarding Fluorescent Lights

7. Claimant returned to Dr. Centi on November 26, 2019, with similar symptoms and diagnoses noted. However, on this visit, Dr. Centi changed Claimant's restriction from "no bright light exposure" to "no fluorescent light exposure". MMI was now anticipated for 1/10/2020. Claimant was scheduled for follow up with Dr. Centi on December 13, 2019. (Ex. A, p. 20). (There are no reports of any visit by Claimant to Dr. Centi for the scheduled visit of December 13, 2019 – it was apparently missed).

8. Claimant subsequently informed her employer that she could not return to work because of the no fluorescent light exposure restriction. Claimant also for the first time questioned the meaning of the sitting and standing/walking restrictions. Claimant did not report for work at all between November 26, 2019, and January 4, 2020.

9. Because Claimant refused to return to work despite the modified job offer already in place, Employer sent a letter to Dr. Centi on December 9, 2019 to address Claimant's questions regarding her restrictions pertaining to the fluorescent light exposure and the sitting, standing and walking restrictions. Specifically, Employer requested Dr. Centi review, for him to check the box, some additional duty descriptions/clarifications.

10. Those clarifications were:

Please acknowledge that Michelle is able to walk to her work area *through an area with fluorescent lights*, is able to walk to the

restroom/lunchroom *through an area with fluorescent lights*, is able to use a restroom *with fluorescent lights* during her work day. Michelle may use her work area for her break/lunch area in order for the fluorescent lights to be turned off.

Please acknowledge that the work restriction of “sitting 50% of time” actually means that Michelle may sit 50%-100% of her working hours.

Please acknowledge that “No standing/walking . 30 minutes/hour” does not mean that we are required to provide a standing / walking period for Michelle during her working hours. (emphasis added).

Dr. Centi checked off all three of those additional descriptions on 12/20/2019. (Ex. C, p. 52). A letter outlining this to Claimant was sent by Employer on 1/2/2020. (Ex. B, p. 51).

11. At hearing, Claimant testified that she clarified with Dr. Centi at her November 26, 2019 appointment about how the *no fluorescent light* exposure work restriction impacted her job as modified. Claimant testified that Dr. Centi indicated she could not be exposed to any fluorescent lighting, as it was more impactful than bright lights. (As noted, two weeks later, Dr. Centi clarified and approved, in writing, Claimant’s exposure to fluorescent lighting to walk to her work station, walk to the bathroom and lunchroom and to use the restroom. Dr. Centi also acknowledged that the sitting, walking and standing restrictions were given their plain and ordinary meaning).

12. Claimant returned to Dr. Centi on January 13, 2020. (Ex. A, pg. 23). The same diagnoses and work restrictions remained in place. MMI was now anticipated for 2/10/2020.

13. At her 2/12/2020 follow-up visit, Claimant still described light sensitivity to fluorescent lights, but Dr. Centi noted Claimant’s surveillance videos, as detailed below. All of Claimant’s medically-related work restrictions (including any reference to light exposure) were lifted, leaving only a prohibition on safety sensitive positions. MMI now anticipated 3/4/2020.

14. According to Dr. Centi’s records, Claimant was surveilled in December of 2019 while she was not working. The surveillance was subsequently provided to Dr. Centi. He commented that Claimant was videoed walking outdoors, into buildings, driving without sunglasses, and no appearance of photophobia. (Resp. Ex. A, pg. 26). One of the buildings Claimant was in was apparently a post office. At hearing, Claimant admitted that she went grocery shopping and ran errands during this time.

15. Claimant’s work restrictions re: light exposure never went back in to effect. After subsequent visits, she was placed at MMI, with no restrictions, and no permanent impairment, on 5/1/2020 (Ex. A, pp. 42-45).

16. In a subsequent Interrogatory thereafter, Dr. Centi clarified that: “Fluorescent light is clearly not as powerful as direct sunlight.” (Ex. A, p. 46).

Average Weekly Wage

17. The ALJ has reviewed wage records for the twelve weekly pay periods immediately preceding the week wherein Claimant was injured. The average weekly number of total hours worked for those 12 weeks is 41.8333 (Ex. C, pp 54-65). Beginning on the pay period of 9/1/2019, Claimant’s hourly pay rate was raised from \$12.6846 to \$13.2659. *Id* at 63. The corresponding hourly overtime rate after this pay raise was \$19.8988. *Id* at 64.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers’ Compensation Act of Colorado (Act), Sections 8-40101, C.R.S. 2007, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers’ compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing the weight, credibility and sufficiency of evidence in a Workers’ Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo.

1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

4. In this instance, the ALJ is not persuaded by Claimant's testimony. Her testimony regarding Dr. Centi's instructions on November 26, 2019 is not consistent with the available medical records. There has been no viable explanation for the missed appointment in December, whereupon any misunderstandings of her restrictions could have been spelled out for her at the ATP's office. Further, as noted by Dr. Centi in subsequent reports, he not only removed her light restrictions upon viewing the video; he was prompted to reference that fact specifically in his report. The ALJ could reasonably infer from this that Dr. Centi felt like he had been 'played'.

Average Weekly Wage, Generally

5. The average weekly wage of an injured employee is the basis upon which to compute compensation payments. C.R.S. § 8-42-102(2) provides that a claimant's average weekly wage is determined based on her earnings at the time of injury. A judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of the injury. *Pizza Hut . ICAO*, 18 P.3d 867, 869 (Colo. App. 2001). However, C.R.S. § 8-42-102(3) authorizes a judge to exercise discretionary authority to calculate an average weekly wage in another manner if the prescribed methods will not fairly calculate the average weekly wage based on the particular circumstances of the case. *Campbell v. IBM Corp.*, 867 P.2d 77, 88 (Colo. App. 1993).

6. The objective in calculating an average weekly wage is to arrive at a fair approximation of a Claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, C.R.S. § 8-42-102(3) grants a judge substantial discretion to modify the average weekly wage if the statutorily prescribed method will not fairly compute a claimant's wages based on the circumstances. *In re Broomfield*, W.C. No. 4-651-471 (ICAO, March 5, 2007).

Average Weekly Wage, as Applied

7. The ALJ finds that Claimant's new hourly rate of \$13.2659 (and corresponding overtime rate of \$19.8988) best represents her hourly rate of pay as of the date of injury. Her weekly, non-overtime, pay is therefore \$530.67 [$\13.2659×40 hours. = \$ 530.636] (rounded to \$530.67).

8. Claimant averaged 1.8333 hours of overtime during the preceding 12 weeks. Her average overtime pay, per week, therefore is \$36.48 [$\19.8988×1.83333 hours = \$36.48].

9. Adding her average weekly overtime pay (\$36.48) to her regular weekly pay (\$530.67) yields an Average Weekly Wage of **\$567.15**.

Temporary Total Disability, Generally

10. To prove entitlement to temporary total disability (“TTD”) benefits, the Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). C.R.S. § 8-42-103(1)(a), requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The term “disability” as used in workers’ compensation connotes two distinct elements. The first element is “medical incapacity” evidenced by loss or restriction of bodily function. The second element is loss of wage-earning capacity as demonstrated by the claimant’s inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999) *Hendricks v. Keebler Co.*, W.C. No. 4-373-392 (June 11, 1999).

11. The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

12. Under section 8-42-105(3)(d)(I), the term “modified employment” means employment within the restrictions established by the attending physician. See *Flores-Arteaga v. Apple Hills Orchard Juice Co.*, W.C. No. 3-101-024 (ICAO Feb. 15, 1996). If there is a conflict in the record regarding a claimant’s release to return to work, the ALJ has discretion to resolve the conflict. *Imperial Headware Inc. v. Indus. Claim Appeals Office*, 15 P.3d 295, 296 (Colo. App. 2000).

13. The modified employment must be reasonably available to the injured worker under an “objective standard.” *Ragan v. Temp Force*, W.C. No. 4-216-579 (ICAO June 7, 1996). An injured worker’s subjective beliefs about his ability to perform a modified job are legally irrelevant, and do not provide a basis to refuse to begin modified employment. *Burns v. Robinson Dairy*, 911 P.2d 661, 663 (Colo. App. 1995) (“[A]ny evidence concerning claimant’s self-evaluation of his ability to perform his job was irrelevant.”). See also: *Alex Willhoit v. Maggie’s Farm*, WC No. 5-054-125-01 (ICAO July 23, 2018).

14. WCRP 6 – 1(A)(4) provides that an insurer may terminate temporary disability benefits without a hearing when a modified job offer is provided to the claimant and claimant does not attend work.

Temporary Total Disability, as Applied

15. Claimant was working modified duty as of November 26, 2019 based on the October 30, 2019 modified job offer. She had been working a modified job since the date of injury. Claimant's restrictions changed (from bright light to fluorescent light) on November 26, 2019, but no reasonable interpretation of that restriction would mean it became more restrictive. Claimant expressed no questions or concerns with returning to work under a *no bright light* exposure restriction. She was able to perform her modified job without issue. Claimant continued to run personal errands, apparently without incident, in the daytime during this period.

16. In fact, the original restrictions (put in place by Dr. Centi, clarified in writing by his check marks, and conveyed to Claimant on 10/30/2019) spelled it out, in pertinent part, to Claimant :

Inventory office items (involves *walking, climbing stairs*, and standing; involves some reaching and gripping as well as recording data with pen and paper. *Id at 48* (emphasis added).

17. The ALJ finds that it was patently, and objectively, unreasonable for Claimant to assume, *sua sponte*, that she could not be exposed to fluorescent lights **at all**, while walking around and climbing stairs in the process of performing her modified duties away from her work station. Claimant knew where she worked. She knew, at minimum, she would have to walk to and from her own work station. If there were fluorescent lamps in the employee bathrooms (as there likely were), she also knew about that already. It was, and remains, an objectively unreasonable interpretation that the ATP would send her back to work on a full-time basis, *but forbid her from entering the company bathrooms all day*. Simply stated, the ATP (based, of course, upon what Claimant had told him) wanted Claimant to avoid working around fluorescent lights *all day long* while performing her modified job duties. Staying out of the sun all day long would not doubt have been a good protocol as well for someone displaying mild post-concussive symptoms.

18. As noted, Claimant had no questions or concerns when her restrictions were "no bright light exposure," and she continued to work without incident in a modified position. Claimant's subsequent alleged confusion about her restrictions makes little sense when she had no concerns about the meaning and impact of the *no bright light* exposure. Any argument that Claimant was simply following the specific restriction is blunted by the fact that during December 2019, she was apparently seen running errands, in daylight, and likely entering buildings that employ fluorescent lamps. Thus, if Claimant were truly attempting to now adhere to her restriction of no fluorescent lighting, she would not have been running errands during this time and subjecting herself to fluorescent lighting. So even her *textualism ad absurdum* argument fails.

19. Claimant's restrictions were accommodated by the Employer, and Claimant had been working without issue. Claimant chose not to return to work after

November 26, 2019 and only returned to work on January 5, 2020 when it became readily apparent that Claimant's interpretation dispute regarding her restrictions lacked any credibility, and could continue to result in non-payment of wages. Claimant further compounded her own problems by missing, without apparent explanation, her December appointment with her ATP, who to that point had been quite attentive to her symptoms. Claimant ran errands, while declining to obtain clarification of which job duties she could perform.

20. Employer has shown, by a preponderance of the evidence, that Claimant's wage loss was not the result of her disability; instead, it was Claimant's unreasonable refusal to report to work and perform her modified duty, which had been presented to her in writing by the ATP and Employer.

ORDER

It is therefore Ordered that:

1. Claimant's Average Weekly Wage is \$567.15.
2. Claimant's claim for Temporary Total Disability payments is denied and dismissed.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

ISSUES

➤ Whether Respondent has proven by a preponderance of the evidence that they should be allowed to withdraw their General Admission of Liability ("GAL") that admitted for workers' compensation benefits?

FINDINGS OF FACT

1. Claimant was employed with Employer as a Senior Park Ranger at Ridgeway State Park ("State Park"). Claimant is trained as an emergency medical responder and has law enforcement training. Claimant testified his job duties include responding to emergencies inside the state park, patrolling the park, supervising another full-time ranger, enforces rules and regulations regarding boating, fishing, swimming and boating and helping the public in any way he can.

2. Claimant was injured on June 18, 2017. Claimant was scheduled to work from 7:00 a.m. to 3:30 p.m. Claimant testified he left his home in Montrose, Colorado and drove his personal vehicle, a green Ford F-150 pickup truck, south on US Highway 550 toward the State Park. Claimant testified he carries in his personal truck while traveling to work his emergency medical response ("EMR") bag, his duty belt and police band radios. Claimant passed the northern entrance to the State Park (Pa-Co-Chu-Puk) and was proceeding to the southern entrance to the State Park (Dutch Charlie) which was his normal course of travel to work. Claimant testified that normally when he arrives at work, he would park his personal vehicle and use a park ranger truck that has insignia on the truck identifying claimant as a park ranger. Claimant was traveling on US Highway 550 adjacent to the State Park when another vehicle crossed the center lane and stuck claimant's truck in a head on collision. According to the police report, the motor vehicle accident at milepost 109 at 7:29 a.m. Claimant testified he was approximately 1-2 miles away from the visitor center when the accident occurred.

3. Following the head on collision, claimant was tended to by members of the public who were the first individuals on the scene. Claimant was later tended to by state patrol officers who arrived on the scene and was taken by ambulance to the hospital before being transported by flight-for-life to St. Mary's Hospital in Grand Junction, Colorado. While still at the scene of the accident, the state patrol contacted claimant's supervisor, Officer Kristin C[Redacted], who was not on duty, and advised her of the accident. Officer C[Redacted] testified at hearing that upon learning of claimant's accident, she proceeded to the accident scene that was located between the first and second entrance to the State Park and was able to speak to claimant. Officer C[Redacted] testified claimant told her he was going to be late to work. Officer C[Redacted] testified claimant was scheduled to work the shift from 7:00 a.m. to 3:30 p.m. on the day of the accident.

4. Officer C[Redacted] testified she was contacted regarding the motor vehicle accident approximately 7:20 to 7:30 a.m. Officer C[Redacted] testified claimant's truck was on its side and claimant was still in the truck when she arrived. Officer C[Redacted] testified that claimant was not asked to survey the park while driving into the park and was not performing any work duties for employer at the time of the accident to her knowledge. Officer C[Redacted] also testified that Park Rangers will assist with regard to motor vehicle accidents that occur on Highway 550 in the vicinity of the State Park.

5. Officer C[Redacted] testified employees are required to be in their uniform at the start of the shift, but not required to wear their uniforms to work. Officer C[Redacted] testified claimant's presence on Highway 550 prior to the accident did not provide a benefit to employer beyond claimant's arriving at work. Officer C[Redacted] testified the claimant is not paid mileage for travel in his personal vehicle. Officer C[Redacted] testified that the area where the accident occurred is not on State Park property. Officer C[Redacted] testified that the area next to the highway is a private ranch that abuts up to the State Park.

6. Officer C[Redacted] testified that Park Ranger will respond to Highway 550 and have made arrests on Highway 550. Officer C[Redacted] testified that law enforcement operations are fluid around the State Park. Officer C[Redacted] testified she will wear a duty belt at all times when traveling to and from the State Park. Officer C[Redacted] testified that the duty belt carries handcuffs, a taser, a tourniquet, a weapon and ammunition, and a leatherman knife. Officer C[Redacted] testified that she does not want Park Rangers to leave the duty belts at the State Park.

7. Officer C[Redacted] testified as to state business that may be performed by Park Rangers when traveling into work, including picking up supplies. Claimant testified he was not picking up supplies on the day of the motor vehicle accident. Officer C[Redacted] testified that the State Park was short one Park Ranger in June 2017.

8. Officer C[Redacted] testified that she would have expected for claimant to call in and provide assistance for any motor vehicle accident he would have seen while traveling on Highway 550 outside the State Park. Officer C[Redacted] testified that claimant would have a duty to respond to any crimes he would witness while off duty.

9. Claimant testified that he normally wears his uniform to work when driving each day. Claimant testified after the motor vehicle accident, his first concern was to secure the weapons he had in the truck. Claimant testified he was not wearing his duty belt at the time of the accident, but the duty belt was in his vehicle. Claimant testified he requested Officer C[Redacted] be notified as he was concerned about the State Park and he knew Officer C[Redacted] would notify his family. Claimant testified that if the motor vehicle accident had not involved his vehicle, and he had simply come upon the accident, he would have responded to the accident.

10. On rebuttal, Officer C[Redacted] testified claimant is not required to carry his EMR bag in his personal vehicle. Officer C[Redacted] testified Park Rangers are not assigned to patrol Highway 550, as the Colorado State Patrol has primary jurisdiction over this area if there is a motor vehicle accident. Officer C[Redacted] did confirm, however, that the State Parks would have legal authorization to respond to emergencies on Highway 550, including medical emergencies.

11. Following the accident, respondent admitted liability for the injury and paid workers' compensation benefits to claimant.

12. The issues in this case involve whether claimant was in the course and scope of his employment at the time of the work injury. There are a number of factors working in favor of claimant in this case. Claimant was in uniform with necessary belongings from work that his supervisor wanted employees to carry with them (the duty belt) in his personal vehicle and had passed an entrance to the State Park at the time of the motor vehicle accident. The injury occurred during claimant's scheduled work shift, although claimant had not actually arrived at the State Park when the accident occurred.

13. Conversely, there are a number of factors working against claimant in this case. Claimant had not yet arrived on the State Park property (although he had passed one entrance that did not lead to where his office was located), claimant was not in a vehicle provided by employer, his travel was not reimbursed, and claimant was not in a zone of special danger at the time of the injury.

14. Complicating matters in this case, respondent admitted liability for the claim and therefore, the burden of proof in this case rests with respondent.

15. The ALJ finds the testimony of claimant and Officer C[Redacted] to be credible in this case and finds very little conflict between the testimony of the two witnesses. The only area in which there was any significant conflict between the testimony of claimant and Officer C[Redacted] involved whether a Park Ranger would be required to respond to an emergency if the Park Ranger was off duty and available (Officer C[Redacted] testified a Park Ranger would not be required to respond and claimant testified he felt he would be required to respond if he was available). Insofar as this testimony was irrelevant to the fact scenario involving claimant's injury, the ALJ does not give any weight to either side with regard to this testimony.

16. When considering the totality of the circumstances, claimant's motor vehicle accident occurred during claimant's scheduled shift and on an area of the highway, between two of the entrances to the State Park, in which the Park Rangers would answer calls involving emergencies. Claimant was carrying his duty belt in his vehicle and was in uniform. Under the circumstances of this case, the ALJ finds that respondent has failed to establish that claimant was not in the course and scope of his employment at the time of the motor vehicle accident.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2016. A party seeking to modify an issue decided by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. To qualify for recovery under the Workers’ Compensation Act of Colorado, a claimant must be performing services arising out of and in the course of his employment at the time of the injury. *See* Section 8-41-301(1)(b), C.R.S. For an injury to occur “in the course of” employment, the claimant must demonstrate that the injury occurred within the time and place limits of the employment and during an activity that had some connection with the work-related function. *See Triad Painting Co. v. Blair*, 812 P.2d 638 641 (Colo. 1991). The “arising out of” requirement is narrower than the “in the course of” requirement. *See Id.* For an injury to arise out of employment, the claimant must show a causal connection between the employment and injury such that the injury has its origins in the employee’s work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Id.* at 641-642.

4. In general, a claimant who is injured while going to or coming from work does not qualify for recovery because such travel is not considered to be performance of services arising out of and in the course of employment. *See Madden v. Mountain West Fabricators*, 977 P.2d 861 (Colo. 1999); citing *Industrial Commission v. Lavach*, 165 Colo. 433, 437-438, 439 P.2d 359, 361 (1968); *Berry’s Coffee Shop, Inc. v. Palomba*, 161 Colo. 369, 373 423 P.2d 2, 4-5 (1967). This principle is known as the “going to and from work” rule. *See Berry’s Coffee Shop, Inc.*, 161 Colo. At 373, 423 P.2d at 4-5. However, the Supreme Court has recognized many exceptions to the rule to account for varying and unusual circumstances that create a causal connection

between the employment and an injury that occurred while the employee is going to and from work. *Madden, supra*, at 863-864; *see also Lopez v. Boulder County*, W.C. No. 4-594-294 (Industrial Claim Appeals Office, August 31, 2004) (finding that injury resulting from travel to and from work was compensable when it occurred during claimant's scheduled shift and claimant had permission to leave with the expectation that claimant would immediately return to the jail if requested to do so by a radio transmission).

5. In an attempt to categorize these exceptions, the Supreme Court in *Madden v. Mountain West Fabricators, supra*. has laid out four factors to consider whether there is a sufficient causal relationship between the travel and employment such that resulting injuries may be found compensable. These factors include: (1) whether the travel occurred during work hours, (2) whether the travel occurred on or off the employer's premises; (3) whether the travel was contemplated by the employment contract, and (4) whether the obligations or conditions of employment created a "zone of special danger". *Id. at 864*.

6. Generally, the burden of proof for establishing a compensable injury is on the claimant. However, because an admission of liability has been filed in this case, respondent must demonstrate that claimant was not in the course and scope of his employment and that the injury did not arise out of his employment.

7. As found, the injury in this case occurred during claimant's scheduled shift as claimant was scheduled to work from 7:00 a.m. to 3:30 p.m. and the injury occurred at 7:29 a.m. according the State Patrol report. As found, the injury occurred in an area of US Highway 550 that is between the two entrances to the State Park. Although the injury did not occur on an area of land within the State Park, it did occur on an area of the highway that runs adjacent to the State Park and, as testified to by Officer C[Redacted], an area that Park Rangers may respond to when medical emergencies or other emergencies occur. While claimant's travel was not necessarily contemplated by the employment contract (claimant was in a personal vehicle and was not reimbursed for his travel), Officer C[Redacted] did testify that claimant would have been expected to respond to any emergencies or accidents he may have witnessed along this stretch of the US Highway 550.

8. As found, respondents have failed to prove by a preponderance of the evidence that claimant's injury is not compensable under the Colorado Workers' Compensation Act.

ORDER

It is therefore ordered that:

1. Respondents request to withdraw the general admission of liability is denied and dismissed.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. . **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

DATED: August 10, 2020

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- I. Whether Claimant overcame the opinion of the DIME physician, Dr. Kawasaki, that Claimant is at maximum medical improvement.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant suffered an admitted work injury on March 13, 2018. Claimant injured his lumbar spine when he lifted a 100 to 120-pound hose full of oil overhead. As he lifted the hose Claimant felt a pop in his back and experienced pain in his left low back.
2. Claimant testified that in May 2018 he began experiencing symptoms which ran down his left leg to his foot. He described the symptoms as numbness, tingling, pain, and his toes twitching. *Hearing Transcript, p. 12, l. 11-18.*
3. Claimant began treatment with Julie Parsons, M.D. of Advanced Urgent Care. During the first two months of treatment, Claimant's symptoms mostly involved left sided low back pain. Claimant's care mainly involved lidocaine patches and medical massage. Claimant reported the massage was helping the back pain. *Claimant's Ex. 5, p. 28.* Claimant continued to work full duty but reported that lifting, twisting, and bending caused more pain. *Id.* at 41.
4. An MRI of the lumbar spine was ordered with a notation that the need for the MRI was for lumbar radiculopathy. *Id.* at 43. The MRI was performed on June 30, 2018. It found Claimant had suffered disc herniations at L4-L5 and L5-S1 with the protrusion at L4-L5 impinging on the left foramen and the L5-S1 protrusion impinging on the S1 nerve root. *Id.* at 176.
5. Claimant was seen on July 25, 2018 and it was noted that he had numbness into his left calf. Dr. Parsons referred Claimant to Dr. Anderson-Oeser for a psychiatry consultation for consideration of injections. *Id.* at 89.
6. Dr. Roberta Anderson-Oeser first saw Claimant on August 8, 2018. On that date, Claimant continued to complain of left low back pain as well as numbness and tingling down the posterior of his left leg. *Claimant's Ex. 8, p. 178.* On physical examination, Dr. Anderson-Oeser noted palpable spasms as well as a positive straight leg raise. Part of her diagnosis included left lumbar radiculopathy. *Id.* at 179. She recommended left L5-S1 transforaminal epidural steroid injections.
7. Before receiving the injections, Claimant was seen at Advanced Urgent Care by Shasta Van Sickle, PA-C who noted radicular symptoms into the left calf and documented a positive straight leg raise on the left side. *Claimant's Ex. 8, p. 186.*

8. Claimant underwent the L5-S1 epidural steroid injection on August 20, 2018 performed by Dr. Anderson-Oeser. He reported significant improvement of both his low back and left leg symptoms. *Claimant's Ex. 8, p. 188*. Dr. Anderson-Oeser referred Claimant for OMT treatments and encouraged Claimant to maintain an active stretching routine. Unfortunately, the improvement from the injections was short-term. Claimant returned to Dr. Anderson-Oeser in September and reported some increase in symptoms and reported that he had numbness in the toes of his left foot but no numbness in his left leg. On examination she noted some spasms but documented a negative straight leg raise. *Id.* at 192.
9. Dr. Brooks Conforti first evaluated Claimant for OMT treatment on October 3, 2018. He noted that on examination he found evidence of a recurrent left sided lumbar radiculopathy. He arrived at this conclusion based on his finding of radicular symptoms which appeared at about 40 degrees of the straight leg raise. *Claimant's Ex. 8, p. 196*. Dr. Conforti notes that he reported his findings to Dr. Anderson-Oeser who requested a second set of epidural steroid injections. *Id.* Claimant returned to Dr. Conforti on October 17, 2018. Claimant reported that he felt the injection had worn off but noted that his symptoms were less intense than before. *Id.* at 199.
10. Claimant underwent a second set of epidural steroid injections at L5-S1 on October 29, 2018. He returned to Dr. Conforti on November 14, 2018 and reported that the injections worked but not as well as the first set. He reported that his left leg symptoms continued despite the injection. *Claimant's Ex. 8, p. 206*. Physical examination showed a straight leg raise suggestive of radiculopathy on the left side. *Id.* Dr. Conforti noted that an EMG had been recommended but not yet performed. *Id.* at 207.
11. Dr. Anderson-Oeser saw Claimant in follow up on November 21, 2018. Claimant reported that he had fallen recently because of his left leg giving out on him but that his symptoms were improved based on the injection. She noted spasms as well as increased muscle tone on the left side of Claimant's low back and she documented equivocal straight leg raise on the left side. *Claimant's Ex. 8, p. 209*. Based on her findings and Claimant's symptoms, she again recommended an EMG study. *Id.* at 210.
12. On December 19, 2018, Claimant returned to Dr. Anderson-Oeser. At this visit, she noted that Claimant's pain complaints had decreased. Claimant rated his current pain level at a 0-1/10 with a maximum pain level of 2/10. But despite decreasing pain levels, Claimant still had radicular symptoms involving his left leg. The radicular symptoms included:
 - Paresthesia in his left leg.
 - Tingling in his left foot.
 - Burning and aching into the buttocks region.
 - Pins and needles sensation in the left lower extremity in an L5 distribution.

For his neuropathic and chronic pain, Dr. Anderson-Oeser advised Claimant to continue using the lidocaine topical ointment. For his pain and inflammation, she directed Claimant to continue using the diclofenac topical gel.

Dr. Anderson-Oeser also noted Claimant stated that his symptoms were gradually improving with the passage of time. Dr. Anderson-Oeser concluded by indicating Claimant had an excellent response to the injections. *Claimant's Ex. 8, pp. 216, 217.*

13. Despite the improvement in Claimant's pain during December 2018, he still had radicular symptoms. As a result, Dr. Anderson-Oeser performed an EMG study. She concluded that the study was abnormal and that it suggested, but did not meet the strict criteria for, a left lumbar radiculopathy. She recommended Claimant finish OMT with Dr. Conforti and continue with a home exercise program. She also stated that Claimant would be a candidate for future epidural steroid injections if his symptoms flared up. Despite Claimant's improvement in pain, but because Claimant continued to have radicular symptoms, she kept Claimant on modified work duty. *Claimant's Ex. 8, p. 219.*
14. On January 16, 2019, Claimant returned to Dr. Anderson-Oeser. She noted similar symptoms to those reported previously by Claimant. She again documented spasms, increased tone and equivocal straight leg raise on examination. At this visit, Claimant stated that the numbness and tingling in his left lower extremity and the pain in his leg was significantly improved. As a result, she felt Claimant might be at MMI at the next visit. She also recommended a trial return to full duty but did not modify his work restrictions at that time. But she again stated that Claimant could return as needed for injections in case of any flare ups. *Claimant's Ex. 8, p. 222.*
15. On April 24, 2019, after Claimant completed his work hardening program, Dr. Anderson-Oeser evaluated Claimant for placement at MMI. At this appointment, Claimant was still having pain in his left low back and buttocks. It was also noted that his symptoms waxed and waned based on his activity level. She also noted Claimant was still having occasional numbness and burning in his left foot. Dr. Anderson-Oeser performed straight leg testing bilaterally and it was negative. It is not clear whether Dr. Anderson-Oeser realized Claimant's pain level – when compared to his last visit in January - had doubled. His current pain level had increased from a 0-1/10 to a 2-3/10. Moreover, his maximum pain level had increased from 2/10 to 4/10. Despite Claimant's persistent back pain, which was increasing, and his concurrent radicular symptoms, Dr. Anderson-Oeser placed Claimant at MMI. She also assessed Claimant for an impairment rating and determined Claimant's permanent impairment was 14% of the whole person. Based on Claimant's work injury and ongoing symptoms, she concluded Claimant would require maintenance medical treatment in the form of physician follow ups and lumbar injections for any flare ups. And despite her recommendation in January that Claimant try a trial return to full duty, it appears she abruptly returned Claimant to full duty at this appointment. *Claimant's Ex. 8, p. 228.*
16. As a result, Dr. Anderson-Oeser placed Claimant at MMI at a time when he had increasing pain complaints and ongoing radicular symptoms. And, despite

completing his work hardening program, it was unknown whether Claimant could handle the physical requirements of full duty work.

17. Upon being placed at MMI and being provided an impairment rating, Respondents filed a final admission of liability and admitted for the impairment rating and date of MMI assigned by Dr. Anderson-Oeser. The Respondents also admitted for maintenance medical treatment.
18. After being placed at MMI, Claimant requested a DIME to address MMI and impairment. Dr. Robert Kawasaki was selected to perform the DIME.
19. On June 26, 2019, and before the DIME, Claimant returned to Dr. Anderson-Oeser for a maintenance care. At this visit, his maximum pain level was still at 4/10. His physical findings were like previous visits with some palpable spasms and an equivocal straight leg raise on the left. Dr. Anderson-Oeser did prescribe tizanidine for his spasms but said Claimant could not drive while taking the medications. She concluded her appointment by allowing Claimant to remain at full duty work without restrictions. She did, however, state she would see Claimant on an as needed basis and that future treatment might include injection therapy, osteopathic manipulation, and medication management. *Claimant's Ex. 8, p. 233.*
20. Despite Dr. Anderson-Oeser placing Claimant at MMI on April 24, 2019, and returning Claimant to full duty, Claimant's symptoms had not stabilized. Claimant's symptoms continued getting worse. Although it may have appeared to Dr. Anderson-Oeser that Claimant's increase in his maximum pain level when she placed him at MMI was a temporary spike, such was not the case. Instead, Claimant's symptoms continued to increase. In retrospect, on April 24, 2019, Claimant had not reached a plateau – where his pain and radicular symptoms waxed and waned from a level of 0/10 to no more than 2/10. Instead, his symptoms were increasing and progressing in an upward trend which continued.
21. After Claimant's June 2019 appointment with Dr. Anderson-Oeser, his symptoms continued to get worse. Because of his increasing pain and radicular symptoms, Claimant was prescribed another series of epidural steroid injections.
22. On October 7, 2019, due to his increasing symptoms, Claimant underwent his third round of bilateral S1 transforaminal epidural steroid injections. *Respondents' Ex. F, p. 115.*
23. According to the Medical Treatment Guidelines (*Guidelines*), epidural steroid injections provide short-term relief by reducing pain and inflammation. The *Guidelines* provide that:

The purpose of spinal injections is to facilitate active therapy by providing short-term relief through reduction of pain and inflammation.¹

¹ See 7 C.C.R. § 1101-3:17 Exhibit 1, Low Back Pain, Medical Treatment Guidelines, p. 20.

24. The *Guidelines* also state that for the treatment of radicular symptoms, injections are not expected to provide long-term reduction in symptoms. The *Guidelines* provide:

Regarding short term benefits from injections, there is strong evidence that epidural steroid injections have a small average short-term benefit for leg pain and disability for those with sciatica.

Regarding long term benefit from injections, there is strong evidence that epidural steroid injections (ESI) do not, on average, provide clinically meaningful long-term improvements in leg pain, back pain, or disability in patients with sciatica (lumbar radicular pain or radiculopathy).²

25. On October 18, 2019, just eleven days after receiving his epidural steroid injections – to reduce his pain, inflammation, and radicular symptoms - Claimant underwent a DIME with Dr. Kawasaki. As noted in Dr. Kawasaki's report, before the injections, Claimant's pain had increased from a maximum level of 4/10 up to 7-8/10. And, according to the *Guidelines*, Claimant's reduction in pain and radicular symptoms would be short-lived.

26. Dr. Kawasaki described Claimant's response to the recent injections. Dr. Kawasaki noted that at first, the injections did not provide Claimant any relief. Then, shortly after the injections, Claimant had an increase in pain. But, at the time of the DIME appointment with Dr. Kawasaki, Claimant had a decrease in pain. Dr. Kawasaki also noted that on the day of the DIME, Claimant did not have any radicular symptoms into his legs. And, according to Claimant, he thought his recent improvement stemmed from the recent injections performed by Dr. Anderson-Oeser. (*Respondents' Ex. F, p. 118.*)

27. Even though Dr. Anderson-Oeser had yet to make a referral to a surgeon, Dr. Kawasaki also addressed surgical options. He stated that surgical intervention is unlikely to be helpful when there is axial back pain – without radicular symptoms. Dr. Kawasaki concluded that because Claimant was not having any radicular symptoms - that day - Claimant was not a surgical candidate and was therefore at MMI.

28. Dr. Kawasaki's conclusion that Claimant was at MMI was premised mainly on a lack of radicular findings on the day of the DIME. Yet Dr. Kawasaki did not have the most recent medical records for review. For example, he did not have the June 26, 2019, report from Dr. Anderson-Oeser. Nor did he have any records documenting Claimant's increasing symptoms that ultimately led to Claimant undergoing a third set of bilateral epidural steroid injections shortly before the DIME. Dr. Kawasaki also failed to address why he thought the most recent reduction in Claimant's pain and radicular symptoms after the injections would be long-term, when the *Guidelines* state the opposite.

29. Thus, Dr. Kawasaki failed to address in his report the waxing and waning nature of Claimant's radicular symptoms and how that played into his determination that

² *Id.* at 44.

Claimant was at MMI. Dr. Kawasaki took a very myopic view in assessing whether Claimant was at MMI. As a result, Dr. Kawasaki erred by focusing mainly on Claimant's symptoms and his findings during his examination and not historically. Dr. Kawasaki also erred by overlooking the expected short-term effects of the injections. Such errors caused Dr. Kawasaki to miss the trend of Claimant's worsening symptoms that started before Dr. Anderson-Oeser prematurely placed Claimant at MMI in April 2019.

30. On November 13, 2019, Claimant returned to Dr. Anderson-Oeser. By this time, Claimant reported that the injection he had shortly before the DIME appointment provided no significant improvement of his radicular leg symptoms. Claimant's symptoms were also causing him to work less. At this visit, Claimant was having the following radicular symptoms:
- Numbness and tingling in both feet, left greater than right.
 - Left sided numbness, tingling, and burning of his toes.
 - Balance problems.
31. At this follow up visit, Dr. Anderson-Oeser noted Claimant used the countertop in her office to move from a seating to standing position. She also noted palpable spasms in the left lumbar paraspinals as well as positive straight leg raise on the left. Based on Claimant's history and objective findings on examination, she referred Claimant to Dr. Bryan Castro for a spine surgery consultation to determine the extent of Claimant's work injury and to determine whether surgery was reasonable and necessary to cure Claimant from the effects of his work injury. *Claimant's Ex. 8, pp. 235-238.*
32. Claimant attended the consultation with Dr. Castro on January 17, 2020. Dr. Castro's physical examination revealed a negative straight leg raise, but Dr. Castro noted Claimant's subjective reports of radicular symptoms. Dr. Castro concluded that he did not think it was likely Claimant would be a surgical candidate but, considering Claimant's increasing radicular symptoms, he recommended Claimant undergo a repeat MRI to assess any progressive neural encroachment. He asked to see Claimant again once the MRI was completed to determine whether Claimant was a surgical candidate. *Claimant's Ex. 11, p. 260.* As a result, the MRI and follow up appointment with Dr. Castro have a reasonable prospect of diagnosing or defining Claimant's condition and suggesting a course of further treatment.
33. At the request of Respondents, Dr. John Raschbacher performed a records review to assess whether the repeat MRI was reasonably necessary. Dr. Raschbacher, without citing the Medical Treatment Guidelines, concluded that because Dr. Castro doubted surgery would be recommended, the repeat MRI was not reasonably necessary. Dr. Raschbacher referenced the DIME report recommending against surgical consult but failed to acknowledge this hinged on Dr. Kawasaki's finding that Claimant had no radicular symptoms on the day of the examination – which appears to have been an isolated finding due to the short-term effects of the injections. He also disregarded the radicular symptoms found by Dr. Anderson-Oeser that justified her referral to Dr. Castro. Finally, his opinion relied on the fact that Claimant's ATP's

position on maintenance treatment in April 2019 did not include an MRI. This of course ignored the obvious fact that one of Claimant's ATP's, Dr. Anderson-Oeser, made the referral to Dr. Castro for a surgical evaluation. Thus, the ALJ does not find Dr. Raschbacher's opinions to be credible or persuasive.

34. Dr. Raschbacher also testified by deposition. He testified consistent with his reports. During, his deposition, it appeared Dr. Raschbacher sought to confirm MMI rather than determine whether Claimant was appropriately placed at MMI. And when pressed about how he would assess a patient with the findings documented by Dr. Anderson-Oeser and described by Claimant, Dr. Raschbacher became evasive. He also discounted data that did not support his conclusions. For example, he was asked whether he had any reason to believe that Dr. Anderson-Oeser did not find spasms on her physical examination of Claimant on November 13, 2019. In response, Dr. Raschbacher stated:

No. She may well have found them or thought she found them. (*Deposition Transcript*, p. 20.)

Dr. Raschbacher again demonstrated his predilection to exclude or discount data that did not support his conclusion by stating that Dr. Anderson-Oeser really did not find the spasms she said she found.

35. In other parts of his testimony, he also seemed to focus on certain information, but take it out of context. For example, he testified that his opinion was supported because Claimant was still released to full duty. (*See Deposition pp. 14-15.*) That said, merely being released to full duty work does not mean Claimant can perform full duty work. And, in this case, Claimant reported to Dr. Anderson-Oeser that his symptoms were causing him to work less and that he could not perform the full duties of his job during an entire workday. (*Claimant's Ex. 8, p. 235.*) Plus, there was no credible and persuasive evidence presented to even support a contention that Claimant was not accurately reporting his symptoms and limitations to Dr. Anderson-Oeser or anyone else. Thus, the ALJ does not find Dr. Raschbacher's opinions and conclusions in his deposition testimony to be credible or persuasive.
36. Dr. Hughes conducted a medical record review at Claimant's request. Dr. Hughes concluded that the surgical consultation recommended by Dr. Anderson-Oeser was appropriate under the Medical Treatment Guidelines. Dr. Hughes also concluded that Dr. Castro's recommendation for the repeat MRI was reasonable to make an informed decision about surgical intervention. He finally concluded that Dr. Raschbacher's opinion that the MRI should be denied was not based on any accepted medical standard. (*Claimant's Exhibit 13.*)
37. Dr. Hughes also testified by deposition. Dr. Hughes testified that the weight of the objective and subjective findings by several physicians supported a surgical consultation as performed by Dr. Bryan Castro on January 20, 2020. Dr. Hughes testified that the EMG study was abnormal. He testified that while the findings did not meet the strict criteria for left lumbar radiculopathy, it was not a normal examination. *Deposition Transcript*, p. 16, ll. 9-14. He testified that the abnormality documented by Dr. Anderson-Oeser was "muscular denervation" which he stated

was “fairly specific for a neuropathic or radiculopathic process.” *Id.* at p. 16, ll. 19-24.

38. Dr. Hughes testified that the referral to a spine surgeon was reasonable given the results of objective testing as well as findings by different providers on physical examination. Dr. Hughes testified that the Colorado Medical Treatment Guidelines for the treatment of the lower back support the recommendation for a referral to a spine surgeon. The Medical Treatment Guidelines outline three factors which should be met to consider lumbar surgery. Those criteria are: (1) radicular symptoms or symptoms of neurogenic claudication, often with clinical evidence of radiculopathy that correlates with the patient’s pain and findings; (2) evidence of nerve root compressions proven by MRI or CT myelogram; and (3) failure of non-surgical care. *Deposition Transcript*, pp. 24-26.
39. Dr. Hughes testified that Claimant met the first criteria based on examination findings both objective and subjective. *Deposition Transcript*, pp. 24-25.
40. Dr. Hughes also concluded that Claimant met the second criteria for surgical consultation. He testified that the MRI study previously performed revealed nerve root compression. He also agreed with Dr. Castro’s recommendation for a follow-up MRI to assess any progression of any neural impingement prior to recommending for or against surgical intervention. *Deposition Transcript*, p. 25.
41. Dr. Hughes also testified that Claimant met the third criteria. He testified that Claimant had plateaued in his improvement after the epidural steroid injections and Claimant had “maximized the benefit of nonsurgical care.” *Deposition Transcript*, p. 26.
42. Dr. Hughes stated that Dr. Raschbacher repeatedly mischaracterized medical records in a way that seemed to be deliberate. According to Dr. Hughes, Dr. Raschbacher appeared to have selectively omitted – or cherry picked – the records and data used to support his conclusion. For example, he noted Dr. Raschbacher mischaracterized the EMG findings as not finding any evidence of lower extremity radicular findings. He also noted that Dr. Raschbacher mischaracterized Dr. Castro’s conclusions by omitting the history documented by Dr. Castro that Claimant’s radicular symptoms were getting worse - particularly in his leg. *Deposition Transcript*, pp. 27-29.
43. Dr. Hughes testified that in his opinion Dr. Kawasaki’s opinion was not based on complete information. Dr. Hughes testified that considering all the medical evidence he disagreed with Dr. Kawasaki’s opinion that Claimant was at MMI.
44. The medical history used by Dr. Hughes aligns with the medical record and Claimant’s testimony at hearing. Dr. Hughes’ testimony and opinions are also consistent with, and supported by, the Colorado Medical Treatment Guidelines. Lastly, the ALJ agrees with Dr. Hughes’ conclusion that Dr. Raschbacher mischaracterized Claimant’s medical records. As a result, the ALJ finds Dr. Hughes’ testimony to be credible, well founded, and highly persuasive.
45. At hearing Claimant testified on his behalf. Claimant testified that he had experienced very consistent pain in his left low back from the beginning of the claim.

He testified that a couple of months after the accident he started to develop pain, numbness, and tingling into his left leg. He testified that he received three injections in his low back. He testified the first provided almost complete relief of the left leg symptoms, the second provided some relief from the leg symptoms and that the third did provide some relief from this left leg symptoms.

46. Claimant testified that while he continued to work during his claim, he was never really pain free. He testified that he had to pick and choose job tasks to perform and sometimes needed to ask for help to lift heavy objects. He testified that he experiences pain with activities as simple as mowing his grass and that he has had to avoid activities he used to enjoy as a sportsman.
47. Claimant testified that he reported the symptoms in his low back as well as symptoms into his left toes to Dr. Kawasaki. He also testified that he did talk about the periodic radicular pain he would feel in his left leg. He testified those problems, the low back and left foot, were constant problems that never really went away. Finally, he testified that he wants to undergo the repeat MRI to find out if there is another treatment option which will provide him relief.
48. The ALJ finds Claimant's testimony to be reliable, credible, and persuasive.

CONCLUSIONS OF LAW

Based on these findings of fact, the Judge draws these conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). But, when attempting to overcome a finding of MMI, Claimant shoulders the burden of overcoming a finding of MMI by clear and convincing evidence. C.R.S. § 8-42-107(8)(b)(III). Clear and convincing evidence is highly probable and free from serious or substantial doubt. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness’s testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJ1, Civil 3:16 (2007). A workers’ compensation case is decided on its merits. C.R.S. § 8-43-201.

Medical Treatment Guidelines

When determining whether Claimant is in need of additional medical treatment – before being placed at MMI - the ALJ may consider the provisions of the Medical Treatment Guidelines because they represent the accepted standards of practice in workers’ compensation cases and were adopted pursuant to an express grant of statutory authority. However, the *Guidelines* are not dispositive and the ALJ need not give them any more weight than he determines they are entitled to considering the totality of the evidence. See *Cahill v. Patty Jewett Golf Course*, WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services*, WC 4-535-290 (ICAO November 21, 2006).

I. Whether Claimant overcame the opinion of the DIME physician, Dr. Kawasaki, that Claimant is at maximum medical improvement.

MMI exists at the point in time when “any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition.” Section 8-40-201(11.5), C.R.S. A DIME physician’s finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Eng’g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Kamakele v. Boulder Toyota-Scion*, W.C. No. 4-732-992 (ICAO, Apr. 26, 2010).

MMI is primarily a medical determination involving diagnosis of the claimant’s condition. *Berg v. Indus. Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Monfort Transp. v. Indus. Claim Appeals Office*, 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant’s medical condition are causally related to the industrial injury. *Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Sch.* W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). A

finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Indus. Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Indus. Claim Appeals Office*, 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.*, W.C. No. 4-320-606 (ICAO, Mar. 2, 2000). Similarly, a finding that other diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management*, W.C. No. 4-356-512 (ICAO, May 20, 2004).

The party seeking to overcome the DIME physician's finding on MMI bears the burden of proof by clear and convincing evidence. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, *supra*. "Clear and convincing evidence" is evidence that establishes that it is "highly probable" the DIME physician's finding is incorrect. See *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect, and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of opinion - between well reasoned medical opinions - does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.*, W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). It is, however, the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Indus.*, WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

The Industrial Claim Appeals Panel has repeatedly held that diagnostic procedures constitute a compensable medical benefit which must be provided before MMI if such procedures have a "reasonable prospect" of diagnosing or defining the claimant's condition so as to suggest a course of further treatment. Section 8-42-101(1)(a), C.R.S. 2001; *Villela v. Excel Corp.*, W.C. No. 4-400-281 (February 1, 2001); *Hatch v. John H. Garland Co.*, W.C. No. 4-368-712 (August 11, 2000); cf. *Merriman v. ICAO*, 120 Colo. 400, 210 P.2d 448 (1949); *Reynolds v. ICAO*, 794 P.2d 1080 (Colo. App. 1990). In addition, there is no requirement that a treating or DIME physician render an opinion that a recommended diagnostic procedure is "likely" to indicate a course of treatment. *Nelson v. Fitzgerald's Casino*, W.C. No. 4-374-519 (Nov. 15, 2001). In *Nelson*, the Panel stated:

A physician may well conclude that various diagnostic procedures are advisable prior to placing the claimant at MMI so as to rule out the possibility of dangerous conditions or diseases. This is true even if the physician believes it is more probable than not that the claimant does not suffer from the dangerous condition or disease.

Nelson v. Fitzgerald's Casino, *supra*.

The ALJ finds and concludes that Claimant overcame Dr. Kawasaki's opinion on MMI by clear and convincing evidence. As found, the totality of the medical evidence, including the highly credible and persuasive opinion of Dr. Hughes, established Claimant has yet to reach MMI for his work injury.

As found, Claimant's back pain and radicular symptoms waxed and waned. On April 24, 2019, Dr. Anderson-Oeser evaluated Claimant for placement at MMI. At this appointment, Claimant was still having pain in his left low back and buttocks. Claimant was also having radicular symptoms that included occasional numbness and burning in his left foot. At this appointment, however, Claimant's pain level – when compared to his last visit in January - had doubled. Claimant's current pain level had increased from 0-1/10 to 2-3/10. Moreover, his maximum pain level since his last visit had increased from 2/10 to 4/10. Despite Claimant's persistent and increasing back pain, combined with his radicular symptoms, Dr. Anderson-Oeser placed Claimant at MMI. And despite her recommendation in January 2019 that Claimant attempt a trial return to full duty, it appears she also abruptly returned Claimant to full duty. As a result, Dr. Anderson-Oeser placed Claimant at MMI at a time when his condition was not stable as evidenced by his increasing pain and continuing radicular symptoms. As shown by the progression of his symptoms, Claimant needed additional diagnostic and medical evaluations to define the extent of his injury and to determine whether surgery is reasonable and necessary to cure Claimant from the effects of his work injury.

On June 26, 2019, before the DIME, Claimant returned to Dr. Anderson-Oeser for more medical treatment. At this visit, Claimant's maximum pain level was still 4/10 and Dr. Anderson-Oeser's physical findings were much like previous visits with some palpable spasms and an equivocal straight leg raise on the left. But because of an increase in spasms, Dr. Anderson-Oeser prescribed tizanidine. She concluded her appointment by allowing Claimant to remain working full duty work without restrictions. She did, however, state that future treatment might include injection therapy, osteopathic manipulation, and medication management.

After Claimant's June 2019 appointment with Dr. Anderson-Oeser, his symptoms continued to get worse. Based on his increasing pain and radicular symptoms, Claimant was prescribed a third round of epidural steroid injections.

On October 7, 2019, due to his increasing symptoms, Claimant underwent his third round of bilateral S1 transforaminal epidural steroid injections. But, according to the *Guidelines*, epidural steroid injections only provide short-term relief by reducing pain and inflammation. The *Guidelines* provide:

The purpose of spinal injections is to facilitate active therapy by providing short-term relief through reduction of pain and inflammation.”³

The *Guidelines* also state that for the treatment of radicular symptoms, injections are not expected to provide long-term reduction in symptoms. The *Guidelines* provide:

Regarding short term benefits from injections, there is strong evidence that epidural steroid injections have a small

³ 7 C.C.R. § 1101-3:17 Exhibit 1, Low Back Pain, Medical Treatment Guidelines, p. 20.

average short-term benefit for leg pain and disability for those with sciatica.

Regarding long term benefit from injections, there is strong evidence that epidural steroid injections (ESI) do not, on average, provide clinically meaningful long-term improvements in leg pain, back pain, or disability in patients with sciatica (lumbar radicular pain or radiculopathy).⁴

On October 18, 2019, just eleven days after receiving his epidural steroid injections – which were administered to reduce his pain, inflammation, and radicular symptoms - Claimant underwent a DIME with Dr. Kawasaki. As noted in Dr. Kawasaki's report, before the most recent injections, Claimant's pain had increased from a maximum level of 4/10 up to 7-8/10.

Dr. Kawasaki described Claimant's response to the injections. Dr. Kawasaki noted that at first the injections did not provide Claimant any relief. Then, shortly after the injections, Claimant had an increase in pain. But at the time of the DIME appointment, Claimant had a decrease in pain. Despite Claimant testifying that he told Dr. Kawasaki that he was still having radicular symptoms, Dr. Kawasaki noted that on the day of the DIME, Claimant did not have any radicular symptoms into his legs. But Dr. Kawasaki did note that Claimant thought his recent improvement stemmed from the recent injections performed by Dr. Anderson-Oeser.

Even though Dr. Anderson-Oeser had yet to make a referral to a spine surgeon, Dr. Kawasaki addressed surgical options. He stated that surgical intervention is unlikely to be helpful when there is axial back pain – without radicular symptoms. Dr. Kawasaki concluded that because Claimant was not having any radicular symptoms - that day - Claimant was not a surgical candidate and was therefore at MMI.

In reaching his conclusion that Claimant was at MMI, which was premised mainly on a lack of radicular findings the day of the DIME, Dr. Kawasaki did not have the most recent medical records for review. For example, he did not have the June 26, 2019, report from Dr. Anderson-Oeser. Nor did he have any records documenting Claimant's increasing pain and radicular symptoms that ultimately led to Claimant undergoing a third set of bilateral epidural steroid injections shortly before the DIME.

Dr. Kawasaki also erred by overlooking the short-term nature of the injections and that Claimant's decrease in symptoms would most likely be temporary and short-lived. Dr. Kawasaki also failed to address in his report the waxing and waning nature of Claimant's radicular symptoms and how that played into his determination that Claimant was at MMI. As a result, Dr. Kawasaki took a very myopic view in assessing whether Claimant was at MMI. By focusing mainly on Claimant's symptoms during his examination, and not historically, Dr. Kawasaki erred and missed the worsening trend of Claimant's symptoms that started shortly before Dr. Anderson-Oeser prematurely placed Claimant at MMI. Dr. Kawasaki also failed to consider that based on the *Guidelines*, Claimant's symptoms would likely reemerge shortly after the injections.

⁴ *Id.* at p. 44.

Plus, Dr. Kawasaki failed to document and address Claimant's report of ongoing radicular symptoms – even if they were improved by the recent injections.

As found, and consistent with the *Guidelines*, the epidural steroid injections performed just 11 days before the DIME provided only short-term relief. As a result, the upward trend regarding Claimant's worsening symptoms that began shortly before he was prematurely placed at MMI by Dr. Anderson-Oeser continued.

On November 13, 2019, after the DIME, Claimant returned to Dr. Anderson-Oeser. By this time, Claimant reported that the injection he had shortly before the DIME appointment provided no significant improvement of his radicular leg symptoms. Claimant's symptoms were also causing him to work less. At this visit, Claimant was having the following radicular symptoms:

- Numbness and tingling in both feet, left greater than right.
- Left sided numbness, tingling, and burning of his toes.
- Balance problems.

At this follow up visit, Dr. Anderson-Oeser noted Claimant used the countertop in her office to move from a seating to standing position. She also noted palpable spasms in the left lumbar paraspinals as well as positive straight leg raise on the left. Based on Claimant's history and objective findings on examination, she referred Claimant to Dr. Bryan Castro for a spine surgery consultation. Claimant attended the consultation with Dr. Castro on January 17, 2020. Dr. Castro's physical examination revealed a negative straight leg raise, but Dr. Castro noted Claimant's subjective reports of radicular symptoms. Dr. Castro concluded that he did not think it was likely Claimant would be a surgical candidate but, considering Claimant's increasing radicular symptoms, he recommended Claimant undergo a repeat MRI to assess any progressive neural encroachment. He asked to see Claimant again once the MRI was completed to determine whether Claimant was a surgical candidate.

Dr. Anderson-Oeser's referral to Dr. Castro was made to determine the extent of Claimant's injury and to determine whether more treatment, in the form of surgery, might be reasonable and necessary to cure Claimant from the effects of his work injury. And the MRI recommended by Dr. Castro was prescribed to determine the extent of Claimant's work injury and the nature of additional treatment that might be reasonable and necessary to cure Claimant from the effects of his injury. And, as found, the referral to Dr. Castro and the MRI have a reasonable prospect of diagnosing or defining Claimant's condition so as to suggest a course of further treatment to cure Claimant from the effects of his work injury. As a result, such finding is inconsistent with a finding of MMI.

Dr. Kawasaki's also failed to consider the *Guidelines* in relation to assessing surgical options for the lumbar spine and failed to address the objective and subjective findings of radiculopathy as evidenced in Claimant's medical records. Throughout Claimant's course of treatment, he consistently complained of radicular symptoms radiating down his left leg and into his left foot. More importantly, both objective examinations, the MRI, and EMG study, found evidence consistent with radiculopathy.

Claimant's testimony also bolsters the argument that Dr. Kawasaki ignored symptoms consistent with radiculopathy in concluding that Claimant was at MMI. Claimant testified that he reported radicular symptoms to Dr. Kawasaki at the DIME. Claimant's testimony is credible on this point because even though the radicular symptoms improved temporarily because of the injections, it fits with essentially all the medical records before and after the DIME appointment. For example, in the last documented appointment with Dr. Anderson-Oeser on June 26, 2019, Claimant reported several symptoms consistent with ongoing left lumbar radiculopathy including paresthesia in his left leg as well as equivocal straight leg raise test. Then, on October 7, 2019, just eleven days before the DIME, Claimant underwent another epidural steroid injection performed by Dr. Anderson-Oeser. Given that Dr. Anderson-Oeser had always couched the need for more injections in terms of "flare-ups", it is reasonable to conclude that she noted worsened symptoms and for that reason recommended the injection.

Based on Claimant telling Dr. Kawasaki that he still had radicular symptoms, Dr. Kawasaki also erred by failing to follow the recommendations of the *Guidelines*. At the time of the DIME, Claimant arguably met all of the criteria for consideration of lumbar surgery. The first criteria, "radicular symptoms...with clinical evidence of radiculopathy that correlates with the patient's pain and findings" is met given Claimant's MRI and EMG findings as well as his reported symptoms to multiple providers. The findings described in the MRI report meet the second criteria, "evidence of nerve root compressions proven by MRI." Again, these records were available for Dr. Kawasaki to review and address in his report. Finally, the medical records as well as Dr. Hughes' testimony reveal that nonsurgical treatment options have provided no lasting relief of his symptoms.

In Claimant's examination with Dr. Anderson-Oeser just after the DIME appointment, she again identified several findings consistent with left lumbar radiculopathy including decreased pinprick response in an S1 dermatomal pattern, positive straight leg raise test and Claimant continued to complain at that time of ongoing symptoms into his left lower extremity. Claimant would probably not complain of symptoms sufficient to justify a third injection just prior to the DIME appointment as well as just after the DIME and not complain of radicular symptoms at the DIME. But to the extent that he did not, it is more than reasonable to accept Claimant's radicular symptoms were temporarily alleviated because of the injections. This explanation, while reasonable, does not justify Dr. Kawasaki's failure to address this finding given the overwhelming evidence of radicular symptoms in the medical records.

The opinions and conclusions of Dr. Hughes are found to be more credible than those offered by Dr. Kawasaki or Dr. Raschbacher. The ALJ also finds Dr. Hughes' opinions and conclusions to be highly persuasive. Dr. Hughes' opinions and conclusions fit with the weight of the medical evidence and reasonably rely upon the Colorado Medical Treatment Guidelines. Dr. Raschbacher's opinions and conclusions are not credible. As found, Dr. Raschbacher cherry-picked portions of the medical records to support his contention without taking account for the physical examination findings and objective testing which was inconsistent with his opinions and conclusions.

The ALJ finds and concludes Claimant overcame the opinion of Dr. Kawasaki regarding MMI by clear and convincing evidence. Claimant was not at MMI on April 24,

2019. Moreover, Claimant has still not reached MMI because another diagnostic test – the MRI - has been recommended by an authorized treating physician, Dr. Castro, and has not been performed. Plus, Dr. Castro must review the MRI to determine treatment options, such as surgery, to cure Claimant from the effects of his work injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant is not at MMI.
2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>.

DATED: August 13, 2020.

Denver, CO 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that his 16% upper extremity Impairment Rating should be converted to the Whole Person?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant injured his right shoulder when he tripped on a bent piece of rebar at a work site on February 14, 2019, and fell to the ground (Ex. G, p. 165). He fell on his right shoulder (Ex. A, p. 10). Claimant went to Memorial Hospital for urgent treatment on February 14, 2020, where he had an x-ray of his right shoulder, which was read as normal (Ex. A, pp. 12-13). The physical exam done on the date of injury at the emergency room at Memorial Hospital revealed, “[S]ignificant tenderness to palpation of the right anterior lateral shoulder.”
2. Claimant’s clavicle was not noted to be tender, and he had no tenderness in his cervical spine or thoracic spine regions. His right shoulder had decreased range of motion due to pain (Ex. A, p. 12). Claimant’s neck was, “[S]upple with no midline tenderness.” Claimant was discharged from the hospital’s emergency room on February 14, 2020, and refused the offered sling (Ex. A, p. 13).
3. Claimant had medical treatment for his right shoulder before this work injury occurred. On December 18, 2018, he saw John Ho Pak, M.D., an orthopedic surgeon in Colorado Springs, for evaluation of four weeks of right shoulder symptoms that arose when he was doing yard work. There was no specific injury tied to his symptoms. Claimant said he had sharp, aching, and burning pain, and felt popping and weakness. He reported minimal symptom relief with over the counter ibuprofen, and icing. Claimant said it was difficult for him to lift and do his activities of daily living.
4. Dr. Pak diagnosed Claimant with right shoulder impingement bursitis, and administered a cortisone injection. (Ex. A, pp. 1-5). Dr. Pak saw Claimant again on January 15, 2019. Dr. Pak felt Claimant had, “[A] little posterior capsular tightness” He recommended stretching. (Ex. A, pp. 6-9).
5. Claimant returned to Dr. Pak’s office, seeking treatment of his right shoulder the day after this work injury. Dr. Pak’s nurse practitioner, Trisha Finnegan, saw Claimant February 15, 2019. NP Finnegan’s Plan noted the following:

Patient comes to clinic today for evaluation of his right shoulder. Patient has been previously treated for right shoulder bursitis. He underwent a

right shoulder subacromial cortisone injection on 1/15/2019. He did respond well to the injection therapy; however *he reports over the last couple weeks he has had recurrence of pain and difficulty* his home exercise program secondary to his pain. Patient *also* sustained a mechanical fall yesterday landing on the lateral aspect of the right shoulder onto concrete.....*Prior to his fall his shoulder symptoms have continued to impede his ability to work.* (Ex. A, p. 15)(emphasis added).

6. Claimant stated, "His pain is mostly about the anterior and lateral aspect of the shoulder(s) [sic]." (Ex. A, p. 16). Ms. Finnegan compared Claimant's February 14, 2019, x-ray to his December 18, 2018, right shoulder x-ray and saw no changes. She recommended claimant have an MRI of the right shoulder. Ms. Finnegan examined claimant's neck at this appointment. She stated that his range of motion was normal, and that there was, "[N]o neck tenderness on palpation." (Ex. A, p. 19).
7. The right shoulder MRI done February 19, 2019 showed a full-thickness anterior distal supraspinatus tendon tear, with mild retraction and underlying bursitis. There was also, "Complete biceps tendon disruption with retraction to the upper arm. There appears to be subtle distal superior subscapularis partial tearing. Complex superior labral tearing." Ms. Finnegan and Dr. Pak reviewed these findings, and physical exam findings that confirmed these findings, on February 19, 2019 (Ex. A, p. 25).
8. Dr. Pak diagnosed Claimant with a rotator cuff tendon tear and proximal bicep tendon rupture. Claimant elected to have surgery as suggested by Dr. Pak (Ex. A, p. 26). Dr. Pak examined Claimant's neck at this visit, and found, as before, "Normal range of motion and neck supple." (Ex. A, p. 29) Dr. Pak's neck exam revealed:

Neck lateral bend left is normal. Neck lateral bend right is normal. Able to extend neck normally. Able to flex neck normally. There is no neck tenderness on palpation. There is abnormality of the bicep consistent with proximal bicep rupture. *Id.*

Dr. Pak and Ms. Finnegan never diagnosed Claimant with a cervical spine injury, upper back or scapula injury, or found that Claimant had symptoms above his arm at the shoulder.

9. Claimant selected HealthQuest Medical Services, where Frank Polanco, M.D. practices, as his designated provider. Dr. Polanco saw Claimant for the first time on February 20, 2019, and referred Claimant to Dr. Pak for the surgery he had already elected to undergo (Ex. B, p. 64). Dr. Polanco did a physical examination at this appointment. Claimant said his pain was in his right shoulder, radiating down the biceps (Ex. B, p. 62). Dr. Polanco examined claimant's neck, and (consistent with Dr. Pak's and Ms. Finnegan's exams) found:

Head/Neck Exam:

Normocephalic. PERRLA. EOMs are intact. There are no areas of

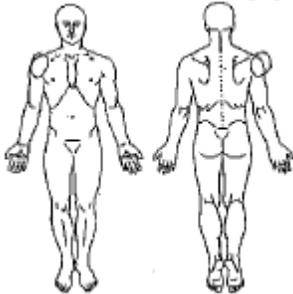

bruising or abrasions about the head or neck. There is good range of motion with normal stability. Strength and muscle tone are within normal limits. Neck is supple with no thyroid enlargement.

Cervical Spine Exam:

Patient demonstrates normal alignment of the cervical spine. There is full and fluid motion for flexion, extension, rotation, and lateral bending....bony palpation is unremarkable and soft tissue palpation demonstrates *normal muscular tone with no evidence of muscular spasm or tenderness...*(Ex. B, pp. 62, 63)(emphasis added).

10. Dr. Polanco examined Claimant's right shoulder, and found a normal clavicle, and no symptoms in the scapulae when palpated. There was tenderness along Claimant's bicipital groove and biceps head with 'pop-eye' deformity. (Ex. B, p. 63) Dr. Polanco diagnosed Claimant with a right proximal biceps tear, right supraspinatus tear, and right labral tear Claimant completed a questionnaire himself at this appointment. When asked, "Where is the location of your pain?" Claimant wrote, "Right shoulder." He circled the area of his pain on a body diagram:

Please draw a circle around area on graph below:

(Ex. B, pg. 67).

11. Dr. Pak performed a right shoulder arthroscopic debridement, subacromial decompression with acromioplasty along with rotator cuff repair and an open biceps tenodesis on 2/27/2019. He noted that Claimant had sustained a large rotator cuff tear involving supraspinatus with retraction, and that his subacromial space showed abundant bursitis. (Ex. 1, pp. 12-13). The surgery was uneventful, and Claimant made what the Division IME provider John Hughes, M.D. termed, "[A] good functional recovery." (Ex. D, p. 128) Claimant attended physical therapy, was diligent about his home exercise program, and by August 9, 2019, told Dr. Polanco that he felt as though, "He's made great improvement." (Ex. B, p. 102).

12. Claimant saw Dr. Polanco on March 21, April 4, April 11, April 26, June 21, and July 19, 2019. At each of these visits, Dr. Polanco examined his neck, upper back, and right shoulder region. At each of those appointments, Dr. Polanco found Claimant's neck was normal, supple, with full and fluid motion. There was no neck region muscle spasm or tenderness. Claimant's scapula was normal without pain to palpation. Claimant consistently told Dr. Polanco that his pain was confined to his right shoulder. Claimant never complained of pain above his right arm at the shoulder. (See Ex. B, pp. 72-73;

77-78; 82-83; 87-88; 92-93; 97-98).

13. On Claimant's April 4, 2019 follow-up with Dr. Polanco, Dr. Polanco reported that Claimant had only a mild decrease of range of motion in his right arm and that physical therapy was going well. On his intake form, Claimant reported that he was experiencing pain with overhead reaching and activities of daily living such as reaching behind to clean his back in the shower. (Ex. B, pp. 81-82).
14. On April 9, 2019 Laura Rodholm, MSPT, reported that Claimant was experiencing tenderness in his upper trapezius upon palpation (Ex. 5, p. 41).
15. On April 11, 2019 Claimant reported on his pain diagram that he was experiencing pain in his right shoulder and circled his right shoulder and bicep. Once again, he did not indicate anywhere beyond the shoulder. He stated that raising his right arm causes pain (Ex. 5, p. 42).
16. On May 17, 2019, the physical therapist reported that Claimant was having pain in his upper trapezius and levator scapula, along with tenderness upon palpation at his right upper trapezius and right levator scapula (Ex. 5, p. 44).
17. On June 21, 2019 Dr. Polanco changed work restrictions to include limiting lifting and carrying to no more than 20 pounds, avoiding reaching overhead and limiting repetitive movements with right upper extremity (Ex. 4, p. 29).
18. On July 19, 2019 Claimant reported to Dr. Polanco that his pain worsened with lifting greater than 25 pounds, trying to tuck in his shirt in the back, and reaching overhead for too long. He also reported pain washing his back, putting on shirts, or trying to pull his shirt overhead, as well as reaching to high shelves. (Ex. 4, p. 30).
19. Claimant had his final physical therapy appointment on September 16, 2019, at which he reported he was feeling pain in his "right shoulder area" and experienced pain with lifting and pulling the cord to start his lawn mower. (Ex. 5, p. 49).
20. At each of these visits with Dr. Polanco, Claimant completed a questionnaire himself. In every questionnaire Claimant completed, he wrote that his pain was located in his right shoulder or right bicep muscle. He never wrote that he had pain or symptoms in his neck, or upper back, or above his right arm at the shoulder. Claimant circled his right arm at the shoulder in the pain diagram portion of those questionnaires he completed at these appointments. He never circled or endorsed symptoms above his right arm at the shoulder in those pain diagrams (Ex. B, pgs. 70; 76; 80; 85; 90; 95; 100). These questionnaires, and Claimant's statements to Dr. Polanco remained consistent throughout his treatment.
21. Claimant also continued to see Dr. Pak after his February 27, 2019, surgery. On April 1, 2019, Dr. Pak noted that Claimant stated he had neck pain (Ex. A, p. 47). This is the only such notation in the records where Claimant complained of neck pain. Claimant

did not tell Dr. Pak or other providers at Dr. Pak's office in those subsequent visits that he had symptoms above his right arm at the shoulder. Claimant continually described his symptoms as being at and below his right arm at the shoulder (Ex. A, pp. 41-61). Claimant last saw Dr. Pak on July 16, 2019, and said his right shoulder, "[I]s doing well. He states he only has pain with over use." Claimant did not say he had symptoms in his neck, back, scapula, or any body part or area above his right arm at the shoulder (Ex. A, p. 58).

22. Claimant attended 16 physical therapy appointment at HealthWorks Rehabilitation from June 14 through August 27, 2019 (Ex. C). The notes from those visits do not mention any symptoms above Claimant's arm at the shoulder, in the neck, upper back, or scapula regions. A May 17, 2019, physical therapy report, (Ex. 5, p. 44), shows that Claimant stated he was tender in his trapezius. This visit was more than three months before claimant reached MMI. At no subsequent visit to this or any other provider is this symptom noted once again.
23. On August 9, 2019, Claimant told Dr. Polanco that his pain was a "1" on a 10-point pain scale, increasing to 3/10 with heavy lifting, or trying to tuck the back of his shirt into his pants. (Ex. B, p. 102). Claimant said his symptoms were, "[A] dull ache in the right shoulder." Claimant told Dr. Polanco, "[H]e feels as though, 'He's made great improvement.'" Dr. Polanco found normal range of motion in claimant's neck, no tenderness in claimant's scapulae, and did not mention any symptoms above the arm at the shoulder. (Ex. B, pp. 102-103).
24. Dr. Polanco placed Claimant at MMI on September 16, 2019. He found Claimant had no range of motion deficits or impairment, and could work without restrictions. He gave claimant a 10% rating of his shoulder for joint crepitation. Dr. Polanco did not document or discuss any symptoms in Claimant's neck, trapezius/rhomboid muscles, or upper back. He released Claimant to work without restrictions. Claimant, on the 9/16/2019 diagram, did not indicate any symptoms above his arm at the shoulder, and again wrote that his pain was located in his right shoulder (Ex. B, pp. 106-107).
25. On October 18, 2019, Respondents filed a Final Admission of Liability, accepting Dr. Polanco's MMI date, and impairment rating (Ex. I). Claimant objected to that admission, and requested a DIME. Claimant, in that DIME Application, requested that Dr. Hughes evaluate his right shoulder, and cervical spine.
26. John Hughes, M.D. saw Claimant on January 6, 2020, for the DIME. Claimant told Dr. Hughes he was pleased with how he healed after surgery, saying his surgery, "Got everything back where it needed to be." (Ex. D, p. 129) Weather changes, Claimant said, made his shoulder ache. His right shoulder pops and cracks. Reaching behind his back with his right hand was difficult. Dr. Hughes noted Claimant denied neck injury after his fall on February 14, 2019 *Id* at 127. Dr. Hughes compared Claimant's symptoms at this appointment to the symptoms endorsed in the pain diagrams he had completed for Dr. Polanco, and found them similar *Id* at 129. Claimant did not tell Dr. Hughes that he had symptoms in his neck or in his upper back, and stated his

symptoms were in his right shoulder.

27. Dr. Hughes, pursuant to Claimant's request in the Division IME application, stated he would examine Claimant's cervical spine. He did range of motion measurements of Claimant's neck, and wrote that he found those reduced. However, he opined that these limitations were, "[W]ithout a clear relationship to injuries Mr. Skattum sustained when he fell on February 14, 2019." He continued, "There is no evidence that he sustained a cervical spine injury when he fell on February 14, 2019. Findings of examination today are consistent with cervical spondylosis with reduced ranges of motion but I do not believe that Mr. Skattum meets the criteria for an impairment rating of the cervical spine in accordance with Table 53 of the AMA Guides." (Ex. D, p. 131)
28. Dr. Hughes did find that Claimant had range of motion limitations in his right shoulder and (consistent with Dr. Polanco's opinion), found an impairment for residual crepitation of the right shoulder. Dr. Hughes found Claimant's total right upper extremity impairment was 16%, converting to a 10% whole-person impairment. By this time, Claimant had a light duty job with a new employer, and was able to do all aspects of that job without pain, restrictions, symptoms, or accommodations. Dr. Hughes also said claimant did not require maintenance medical treatment *Id* at 132.
29. Claimant has not returned to Dr. Polanco, or Dr. Pak, or his physical therapists for additional care after Dr. Polanco found Claimant had attained MMI.
30. Claimant had sustained previous work-related injuries to his neck resulting in medical treatment and evaluations before this work injury occurred. On November 26, 2007, Claimant told Dr. Delos Carrier that he had aching and pain in his neck (Ex. E, p. 147). Dr. Carrier found Claimant had a possible injury to his disc at the C5-C6 level, and recommended an MRI. That MRI, done November 29, 2007, showed "[D]isk [sic] degeneration at C3-C4, C4-C5, and C5-C6 with moderate to large central to right-sided disk [sic] protrusion indenting the dural sac on the anterior margin and a minimal central right paracentral disk [sic] protrusion at the C6-C7 level and a minimal impression on the dural sac anterior margin at C7-T1 region." *Id* at 149.
31. Claimant still reported neck pain when he saw Dr. Carrier on December 31, 2007 (Ex. E, p. 151). Dr. Carrier, on February 28, 2008, found claimant had cervical spondylosis (Ex. E, p. 154). He stated that diagnosis and disc degeneration and disc pathology was not related to the work injury for which he was treating Claimant. When Claimant returned to Dr. Carrier on May 28, 2008, with continued pain in his neck, Dr. Carrier told Claimant to see treatment for those symptoms and right-sided disc pathology with his personal physician (Ex. E, p. 156).
32. In 2014, Claimant stated he had peripheral neuropathy to his hands (Ex. F, p. 157). On December 8, 2014, claimant said he had neck pain, and was referred to a cervical spine x-ray (Ex. F, pg. 164). Claimant complained of neck pain to Dr. Henley on February 17, 2015 (Ex F, pg. 168).

33. Claimant testified at hearing. He explained that he already had an existing relationship with Dr. Pak from December, 2018. “On December when I went in, I had a shoulder problem *that just never got better.*” (Transcript, p. 19)(emphasis added). Claimant noted that as of July of 2019, he was having trouble washing his back, putting on shirts overhead, and reaching high shelves. He described the pain as occurring “Basically, between the shoulder area and the neck area....” *Id* at 26. He would avoid doing anything unless he “absolutely had to.” Even as of today, he described cramping and muscle problems in the shoulder, which caused sleep issues as well.
34. He testified that he had “actually ..very little pain, if any, between...the last time I saw Dr. Pak and the accident itself. It basically got to the point of very little pain ever doing anything.” *Id* at 20. When asked by Dr. Polanco to describe the location of his pain, Claimant testified that he told Dr. Polanco that it was “my shoulder area between my shoulder and my neck area.” *Id* at 25. He did not have an explanation why Dr. Polanco did not note this. Dr. Polanco did not palpate this area either.
35. Claimant was asked why, if his trapezius region was hurting, he did not circle that on his pain diagrams. He replied: “I guess because they were mainly working on the right shoulder trying to get it loosened up, not thinking about that particular muscle.” *Id* at 35.

Q Were you ever asked by Dr. Polanco where did it hurt when you performed your daily activities?

A He asked me, and I said basically it was *between the shoulder and the neck area it hurt the most.* *Id* at 36 (emphasis added).

.....

Q ...Did they ask you, when you were pushed on or palpated, where it hurt?

A Yes

Q And did you tell them where it hurt?

A Basically, when they were pushing it on it, it was between the shoulder and neck area on that—on the trapezius muscle and the point in between.

Q And that was your answer to their question?

A That was my answer to their question.

36. On cross-examination, Claimant acknowledged that he had had neck pain and neck symptoms for many years prior to this 2/14/2019 work injury, but it was “Not the same.” *Id* at 41. He did not recall ever being told by previous medical providers that he had degenerative disc changes in his cervical spine. *Id.* He was confident he had provided the most accurate information to his medical providers when asked about the location of his symptoms.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers’ Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). A Workers’ Compensation case is decided on its merits. Section 8-43-201, C.R.S.

Permanent Partial Disability / Conversion, Generally

4. Section 8-42-107, C.R.S., sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and subsection (8) provides for whole person ratings. The threshold issue is application of the schedule and this is a determination of fact based upon a preponderance of the evidence. The question of whether the Claimant sustained a whole person medical impairment compensable under § 8-42-107(8), C.R.S., is one of fact for determination by the ALJ. Claimant must prove a whole person impairment by a preponderance of the evidence. The application of the schedule depends upon the “situs of the functional impairment” rather than just the situs of the original work injury. The term “injury” as used in § 8-42-107(1)(a)-(b), C.R.S., refers to the part or parts of the body which have been impaired or disabled, not the situs of the injury itself or the medical reason for the ultimate loss. *Langton v. Rocky Mountain Health Care Corp.*, 937 P.2d 893 (Colo. App. 1996); *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996).

5. “Functional impairment” is distinct from physical (medical) impairment under the *AMA Guides* and as noted above, the site of functional impairment is not necessarily the site of the injury itself. The site of functional impairment is that part of the body

which has been impaired or disabled. *Strauch, supra*. Physical impairment relates to an individual's health status as assessed by medical means. Disability or functional impairment, on the other hand, pertains to a person's ability to meet personal, social, or occupational demands, and is assessed by non-medical means. Consequently, physical impairment may or may not cause "functional impairment" or disability. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656, 658 (Colo. App. 1998). Physical impairment becomes a disability only when the medical condition limits the claimant's capacity to meet the demands of life's activities. *Id.* "Functional impairment" need not take any particular form. See *Nichols v. LaFarge Construction*, W.C. No. 4-743-367 (October 7, 2009); *Aligaze v. Colorado Cab Co.*, W.C. No. 4-705-940 (April 29, 2009); *Martinez v. Alberston's LLC*, W.C. No. 4-692-947 (June 30, 2008). In fact, "referred pain from the primary situs of the industrial injury may establish proof of functional impairment to the whole person." *Hernandez v. Photronics, Inc.*, W.C. No. 4-390-943 (July 8, 2005). Nonetheless, symptoms of pain do not automatically rise to the level of a functional impairment. To the contrary, there must be evidence that such pain limits or interferes with Claimant's ability to use a portion of his body to be considered functional impairment. See *Mader v. Popejoy Construction Co., Inc.*, W.C. No. 4-198-489 (August 9, 1996), *aff'd Popejoy Construction Co., Inc.*, (Colo. App. No. 96CA1508, February 13, 1997) (not selected for publication).

6. Permanent disability benefits are determined at the time Claimant reaches MMI. "This is true because the Claimant's condition has become stable and the permanent effects of the injury are ascertainable. Section 8-40-201(11.5), C.R.S.; *Golden Animal Hospital v. Horton*, 897P.2d 833, 838 (Colo. 1995)." *Olivas-Soto v. Genesis Consolidated Services*, W.C. No. 4-518-876 (2005).

Conversion to Whole Person, as Applied

7. Claimant reported no pain, symptoms, or diagnosis of any injury, above his right arm at the shoulder, for weeks beyond February 14, 2019. The one occasion where Claimant did complain of symptoms about his right arm at the shoulder was on May 17, 2019. This was months before he was placed at MMI, and he did not repeat these symptoms at subsequent visits. Claimant's extensive medical records from multiple providers and physical therapists does not document that Claimant sustained an impairment above his right arm at the shoulder. Had Claimant experienced such an impairment, the ALJ finds that it would be documented in the medical records from these various providers and voiced by Claimant. While Claimant testified at hearing that he told his providers, including the physical therapist and Dr. Polanco, that his trapezius was painful, the ALJ finds otherwise. It is the role and function of the ATP to document pain and lack of function when it is complained of, so treatment may then be tailored. The ALJ cannot conclude that the medical providers ignored his complaints, because they were focused on his shoulder joint only.

8. Claimant wrote on every pain questionnaire given before he saw Dr. Polanco for care that his pain and symptoms were at his right shoulder, and consistently stated in the body pain diagram in those questionnaires that his symptoms were at his right

arm at the shoulder. Nothing above the glenohumeral joint was ever marked by Claimant. Claimant's providers did not find, nor did the DIME, that Claimant had any symptoms or impairment above his right arm at the shoulder. While Claimant now complains of certain limitations on his activities of daily living, the evidence falls short that his whole person is affected. Pain and soreness at the glenohumeral joint, and not above, can still interfere with activities of daily living, much in the same way a painful elbow can. It is further noted that, to the extent Claimant could argue that his symptoms at MMI compromised the Whole Person, he was already complaining to Dr. Pak of similar symptoms in the weeks *before* the work injury.

9. Claimant has not met his burden of proof here. Claimant's impairment causally related to this claim will remain on the schedule of impairments, and is 16% of his right upper extremity as found by the DIME Dr. Hughes.

ORDER

It is therefore Ordered that:

1. Claimant's request to convert his 16% upper extremity Impairment Rating to the Whole Person is denied and dismissed.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: <http://www.colorado.gov/dpa/oac/forms-WC.htm>. In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.

DATED: August 13, 2020

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

- I. Whether Claimant established by a preponderance of the evidence that he sustained a compensable industrial injury on January 2, 2020.
- II. Whether Claimant established by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment.
- III. Whether Claimant established by a preponderance of the evidence that Banner Health and Dr. Mackintosh are authorized treating providers.
- IV. Whether Claimant established by preponderance of the evidence that he is entitled to temporary total disability benefits.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is employed with Employer. Claimant's job requires him to process animal feed at Employer's feed processing plant.
2. Before the alleged injury, Claimant reported problems with his back that prevented him from working in June 2019. (*Hearing TR*, p. 43. 21-25).
3. Claimant also complained of being harassed by coworkers in December 2019. (*Hearing TR*, p. 43. 15-18; *Respondents' Exhibit H*, p. 76).
4. On January 2, 2020, Claimant was working in the course and scope of his employment with Employer.
