23. Claimant presented to Dr. Timothy O'Brien for a Respondent requested Independent Medical Exam (RIME) on May 24, 2021. Claimant informed Dr. O'Brien that she was injured while carrying paint to another job across the street. According to Dr. O'Brien's RIME report, Claimant indicated that she slipped while descending a downhill grade on a wet driveway. Claimant stated it was the end of the day so she did not seek medical attention. Claimant also stated she thought her pain would get better but it did not. Claimant said she contacted and informed her boss of her injury. Claimant reported that she gave up walking and standing for too long as well as carrying heavy items. Claimant reported difficulty dressing, getting out of bed, emptying garbage, mowing the lawn, washing clothes, driving, changing shoes, cleaning her house, and vacuuming. Claimant's pain was reported as an 8/10 in intensity. Claimant's pain diagram showed pain that was diffuse on the right and left of the midline from the mid-thoracic level to just below the buttock, involving the entire back and buttock area.

24. After obtaining the above referenced history and reviewing Claimant's medical records, including Claimant's March 22, 2021 MRI, Dr. O'Brien opined that Claimant suffered a minor lumbosacral strain/sprain/contusion, a minor cervicothroacic spine strain/sprain and a minor left elbow contusion all of which had resolved as a result of her February 4, 2021 slip and fall. According to Dr. O'Brien, Claimant's work related incident was "minor" as supported by the fact that she "did not seek medical attention urgently or emergently and the fact that she "did not have immediate pain but rather noted an onset of symptoms hours after the incident." Dr. O'Brien went on to state that Claimant's MRI was "normal" for her age and did not demonstrate any evidence of acute injury.

25. Dr. O'Brien opined that Claimant reached an end of healing on or before March 22, 2021. He concluded that a "significant" portion of Claimant's pain was being driven by nonorganic factors "typically" associated with "secondary gain issues inherent to a workers' compensation claim." Dr. O'Brien wrote that Claimant's injury was self-limiting and self-healing. He suggested that Claimant needed to be informed that her pain is not harmful to her and more so that a significant component of her pain was not traceable to an organic source. According to Dr. O'Brien, whatever organic source of pain that persists for Claimant is a "personal health issue and is not in any way the result of her body's failure to heal." Dr. O'Brien stated the use of an epidural steroid injection to treat Claimant's persistent pain following her February 4, 2021 slip and fall, as administered by Dr. Finn was not warranted because an end of healing had already been reached. (Respondent Submissions- Bate# 001- 011)

Claimant's Prior Medical Treatment

26. Claimant was seen by PA Michael Miller on August 3, 2018 with complaints of abdominal pain and low back pain with right sciatica. Claimant reported lower abdominal and pelvic pain on the right side for the previous 10 days. Claimant indicated she has a history of a fall 20 years ago that left her with low back pain which became painful in the last week without known injury. This pain radiated into her right buttock, leg, and foot. There was no reported tingling or numbness. Physical exam showed no tenderness to

palpation over the lumbar spine or paraspinal musculature. Previous treatment was listed as none. Claimant was referred for CT scan of the right abdominal and pelvic pain. Claimant was given medication for her low back pain. An x-ray of the lumbosacral spine was unremarkable. (Respondents' Submissions- Bate# 014- 023).

27. Claimant was taken by ambulance to Memorial North ED after a fall from a ladder on January 17, 2019. Claimant reported pain in the hip and SI joint. (Respondents' Submissions- Bate# 056- 059).

28. Claimant was seen by Dr. Laurel Verant for hip pain on January 17, 2020. Claimant reported her left hip pain started in the hips and radiates into the buttock along with deep groin pain. Claimant reported low back pain as well with posterior radiation down the left and numbness in the thigh and lower leg. Assessment included low back pain and lumbar radiculopathy. Claimant was referred to physical therapy and an MRI was ordered. (Respondents' Submissions- Bate# 031- 039).There are no records evidencing Claimant had this MRI.

29. Claimant reported to physical therapy for right hip and low back pain on February 3, 2020. Claimant indicated her pain began about two months ago when she fell while working as painter. Claimant had a second physical therapy visit on February 13, 2020. Claimant reported limitations in hamstring and glute flexibility. Claimant reported no change overall in pain. (Respondents' Submissions- Bate# 047- 055)

Employer Documentation

30. A first report of injury was prepared by the owner of Modern Painting Services, Blas R[Redacted], on February 17, 2021. Mr. R[Redacted] indicated, "[Claimant] was walking and slid on driveway being frozen." Mr. R[Redacted] noted that Claimant worked 5 days a week for 8 hours each day. Claimant's pay rate was noted as $16/hour. (Claimant's Submissions- Bate# 000119)

31. Blas R[Redacted] issued a check to Claimant for $272 on March 2, 2021. (Respondents' Submissions- Bate# 000121)

Expert Testimony

32. Dr. Finn testified via deposition on July 6, 2021, as an expert in physical medicine and rehabilitation, pain medicine, and pain management. (Deposition Transcript Pg. 6). Dr. Finn testified that he initially saw Claimant on March 29, 2021, for a lower back injury. Dr. Finn stated Claimant's history indicated a traumatic event described as a slip and fall. Dr. Finn testified that Claimant had numbness and tingling in an L5 and S1 pattern, which correlated to the MRI findings that showed a right-side predominance of a disc protrusion that might be irritating or impinging on the traversing S1 nerve root. Dr. Finn opined that the traumatic event and symptoms correlated with structural testing and that Dr. Peterson's request for an epidural steroid injection was reasonable. Dr. Finn testified that he conducted a physical exam of Claimant, which revealed decreased

sensation in the right L4-L5 and S1 patterns with moderately limited range of motion. Dr. Finn testified that although sensation testing is subjective, it did correlate to the disc abnormalities of the L4-5 and L5-S1. Dr. Finn testified he recommended a right hip MRI that was denied by the insurance carrier. (Deposition Transcript, Pg. 7-16). Dr. Finn testified that Claimant's current symptoms are probably, meaning more likely than not, related to her February 4, 2021, work injury. Dr. Finn further testified that Claimant's mechanism of injury was consistent with her reported symptomatology and that a slip and fall from ground level would have caused an acute injury to her lower back and right hip. Dr. Finn also stated that Claimant's injury mechanism more likely than not caused the lumbar spine pathology identified in the March 22, 2021, MRI. (Deposition Transcript, Pg. 16-17). Dr. Finn asserted that the right hip MRI is reasonable and necessary to treat Claimant's injuries stemming from her February 4, 2021 injury at work. Dr. Finn stated that all medical treatment received by Claimant since February 4, 2021, was causally related to her slip and fall. Dr. Finn testified that all of Claimant's medical treatment to date was reasonable and necessary. Dr. Finn stated that one of the reasons for ordering the right hip MRI was Claimant's lower back condition was not improved and he wanted to continue to investigate the anatomic basis for her ongoing symptoms. (Deposition Transcript, Pg. 17-18). Dr. Finn testified he reviewed prior medical records for Claimant. Dr. Finn asserted that Claimant had prior issues with her back and leg but that any prior condition was more likely than not aggravated by this traumatic event. Dr. Finn clarified that if it had not been for this injury, he would not have seen her. Dr. Finn stated that Claimant had a documented traumatic event, a slip and fall onto her back and hip, which precipitated her need for care. (Deposition Transcript, Pg. 18-22). Dr. Finn testified that he reviewed the IME report from Dr. O'Brien and that he disagreed with Dr. O'Brien's assessment stating Claimant's lumbosacral spine strain/sprain resolved because Claimant had ongoing symptoms. (Deposition Transcript, Pg. 22). Dr. Finn disagreed with Dr. O'Brien that the work incident in question was minor and he pointed out that Claimant sought medical treatment within 24 hours. (Deposition Transcript, Pg. 23). Dr. Finn disagreed with Dr. O'Brien's report suggesting Claimant's slip and fall was minor because it was from ground level. Specifically, Dr. Finn stated a slip and fall from a standing position could cause relatively significant trauma. (Deposition Transcript, Pg. 25-26). Dr. Finn further disagreed with Dr. O'Brien's IME report, which stated Claimant's injury healed expeditiously. Dr. Finn indicated that Claimant was still symptomatic when he examined her and Claimant had not improved despite conservative measures including a trial of physical therapy and medication. (Deposition Transcript, Pg. 28).

33. On cross examination, Dr. Finn was asked if Claimant's subjective symptoms were related to a prior injury or condition. Dr. Finn stated that Claimant's symptoms could be longstanding but based on the documentation; Claimant had a very clear traumatic event described as a slip and fall that may have aggravated that prior condition. (Deposition Transcript, Pg. 45-46). On redirect, Dr. Finn clarified that more likely than not Claimant experienced an acute on chronic injury. Dr. Finn testified that Claimant's physical therapy treatment in February 2020 was not extensive and did not change his opinion regarding the etiology of Claimant's current symptoms. (Deposition Transcript, Pg. 48).

34. Dr. O'Brien testified at hearing as retired board certified orthopedic surgeon with an expertise in orthopedic medicine, including orthopedic surgery. Dr. O'Brien is Level II accredited. Dr. O'Brien reiterated his opinion that Claimant's injury was not severe because she did not seek treatment immediately. Dr. O'Brien testified that Claimant had lower back, right hip and lower extremity symptoms prior to her February 4, 2021, fall. Dr. O'Brien said there appeared to be a hiatus in care after February 2020 and that it was difficult without ongoing documentation to say what level of symptoms Claimant had after she stopped going to physical therapy.

35. Dr. O'Brien testified that the findings on Claimant's March 22, 2021 MRI were not related to the fall in this case and were normal for her age. According to Dr. O'Brien, the MRI findings were probably present prior to February 4, 2021.

36. Dr. O'Brien testified that Claimant current complaints are related to non-organic factors and driven by the claim itself. Regardless of what is driving Claimant current symptoms, Dr. O'Brien testified that whatever occurred on February 4, 2021, had healed by the date of the MRI. Dr. O'Brien stated it was appropriate for Claimant to have sought medical attention on February 5, 2021 and that he would have encouraged her to utilize over the counter anti-inflammatories and a home fitness regimen in an effort to reduce her pain. Dr. O'Brien testified that Claimant did not suffer an aggravation of a pre-existing condition because there was no objective evidence of tissue yielding. He also questioned Claimant's report of 8/10 pain at the RIME because Claimant appeared comfortable and able to participate in the examination. According to Dr. O'Brien there were no objective findings to support Claimant's subjective report of 8/10 pain.

37. During cross-examination, Dr. O'Brien testified that Claimant sustained a lumbosacral sprain and cervical thoracic spine sprain as a consequence of her February 4, 2021 fall. He also reiterated that Claimant reached end of healing on or before March 22, 2021, 46 days after her injury. He echoed his assertion as documented in his RIME report that a fall on the back from an icy or slippery surface is a minor mechanism of injury. Nonetheless, he did concede that significant injuries can occur from slip and falls at ground level.

38. Dr. O'Brien stated that he did not agree with the MRI report from March 2021 that stated there was disc herniation at the L4-5 and L5-S1 level because the disc displacement was 4 mm. According to Dr. O'Brien, such displacement would be indicative of a disc bulge rather than a herniation. Dr. O'Brien testified that disc herniations are not normal in a 37-year-old female but that he would not consider the MRI report to show a disc herniation.

39. The Court asked Dr. O'Brien to confirm if it was his opinion that Claimant suffered a minor sprain/strain as a consequence of her slip and fall on February 4, 2021 and Dr. O'Brien confirmed that was accurate. The Court also asked if it was Dr. O'Brien's opinion that this minor sprain/strain was self-healing and that Claimant reached maximum healing by March of 2021, which Dr. O'Brien also confirmed. Lastly, the Court asked if it was Dr. O'Brien's opinion that Claimant's ongoing symptoms were claim driven, which he

confirmed.

Employer Testimony

40. Blas R[Redacted] testified at hearing. Mr. R[Redacted] testified he is the owner of
Modern Painting Services, which has been in operation since 2014. Mr. R[Redacted] testified his company currently employs five people. Mr. R[Redacted] testified that Claimant was hired on February 3, 2021 at an hourly rate of $16. Mr. R[Redacted] stated that Claimant was hired at the same time as another woman (Carmen) to do the same job. Mr. R[Redacted] stated that this other woman continued to work after Claimant was injured and that she worked 61 hours in the two weeks following Claimant's injury. Mr. R[Redacted] testified that Claimant was supposed to work 40 hours a week, which was considered the base number of hours, but that hours can vary significantly. Mr. R[Redacted] stated he was made aware that Claimant injured herself on February 4, 2021, when he received a call saying she had fell. Mr. R[Redacted] said he told Claimant to go to the clinic to get checked out and that he called the insurance company the next day, after the fall, to get a list of medical information for Claimant. Mr. R[Redacted] testified that Claimant reported to him that she would be released to work on February 9, 2021 but that she was still in pain. Mr. R[Redacted] testified that this presented a "tricky situation" as he was reluctant to have Claimant return to work since she was in pain.

41. On cross-examination, Mr. R[Redacted] indicated he remembered filling out a first
report of injury for Claimant. Mr. R[Redacted] stated that this first report of injury indicated Claimant was to work 5 days a week, for 8 hours a day, at a rate of $16/hour. Mr. R[Redacted] testified that Claimant worked 2 days before her injury and she was paid $272. Mr. R[Redacted] indicated that in those 2 days, Claimant worked over 8 hours a day. Mr. R[Redacted] stated that he has hired two people at the same time before and that these people don't always get the same amount in their check specifying, "It's different for everybody."

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

B. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

C. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

D. A “compensable injury” is one which requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable “injury.” *Romero*, supra; § 8-41-301, C.R.S. To sustain her burden of proof concerning compensability, Claimant must establish that the condition for which she seeks benefits was proximately caused by an “injury” arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff’d Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

E. The phrases "arising out of” and "in the course of" are not synonymous and a claimant must meet both requirements before an alleged injury will be determined to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 552 P.2d 1033, 1036 (1976). Based upon the evidence presented, there is little question that Claimant's alleged injuries occurred during the time and place limits of her relationship with Employer and during an activity connected to her job-related functions as a painter, namely carrying a bucket of paint down a driveway to supply a different job site. Accordingly, the ALJ concludes that Claimant has proven that she was in the course of her employment at the time of her February 4, 2021 fall. While Claimant has established that she was in the course of her employment when she fell, the question of whether her alleged injuries arose out of her work duties must be answered before compensability can be determined.

F. The term "arises out of" refers to the origin or cause of an injury. *Deterts v.Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.* In this regard, there is no presumption that an injury that occurs in the course of a worker's employment, also arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); *see also, Industrial Commission v. London & Lancashire Indemnity Co.,* 135 Colo. 372, 311 P.2d 705 (1957) (*mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that the fall arose out of employment*). Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2013; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

G. In this case, Respondents contend that Claimant failed to establish a causal connection between her work duties and her back/hip pain. In support of their contention, Respondents argue that the medical records associated with the February 4, 2021 incident do not support a conclusion that she suffered an "injury" as a result of her fall because the records do not document that Claimant experienced pain at the time of or shortly after she fell. Simply put, Respondents assert that because the emergency room (ER) records document that Claimant began feeling tightness into her neck, low back, and both of her hips (without mention of pain) approximately two hours after the fall, which worsened the following morning, she failed to present sufficient evidence that she sustained a traumatic injury requiring treatment or causing disability. In contending as much, Respondents rely on the testimony of Dr. O'Brien to suggest that feeling "pain" is necessary to establish the existence of an acute injury. The ALJ is not convinced. Rather, the ALJ credits Claimant's testimony to find and conclude that the discomfort caused by the increased pressure (tightness) she felt in her neck, low back and hips after her fall likely represents a symptom associated with an acute injury to the structures that make up these body parts, including the soft tissues and intervertebral discs. The symptoms a person might experience following a low back/hip injury can vary greatly and may include numbness, tingling, burning, muscle spasm/tightness, aching, throbbing, shooting pain, stabbing pain, sharp pain, soreness and/or stiffness. (See generally, Claimant's Exhibits 2, 3, 4 and Respondents Exhibit A, p. 2). While "tightness" does not conform to the traditional definition of pain, it is clear in this case that Claimant's "tightness" caused an abnormal sensation of discomfort sufficiently distressing to prompt her to present to the emergency room for treatment.

H. Here, Claimant's testimony and the emergency room records document that she presented to the hospital because of a fall that caused tightness, "musculoskeletal pain" and tenderness to palpation (TTP) about the neck, the right lower anterior ribs, the "L-spine" and left elbow prominence requiring x-rays and an injection of pain medication (Toradol). As found, the ALJ credits this evidence to find and conclude that Claimant has presented sufficient proof that she suffered physical trauma caused by unexpectedly slipping on ice and falling to the pavement while carrying a bucket of paint triggering her need for medical treatment. Simply put, she sustained injuries arising out of her employment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, § 8-40-201 (2). Dr. O'Brien recognized this when he concluded, both in his RIME report and during his hearing testimony, that Claimant suffered injuries in the form of a lumbosacral strain/sprain/contusion, a cervicothroacic spine strain/sprain and a left elbow contusion regardless of his concerns concerning the severity of these injuries.

I. Respondents' remaining arguments in relation to Claimant's credibility, including the suggestion that she lied about, and then tried to minimize, her previous injury history, symptoms, and medical treatment of the same body parts involved in this claim have been carefully considered and are rejected as unpersuasive. Similarly, the intimation that Claimant's current symptoms represent the natural and probable progression of a pre-existing condition caused by an injury 20-years ago or alternatively following a fall from a ladder in 2019 is equally unconvincing. While Claimant has had some preexisting episodes of back pain, the evidence presented supports a conclusion that her back became significantly more symptomatic, in terms of the intensity, frequency and duration of her pain after the February 4, 2021 fall. Accordingly, the ALJ credits Dr. Finn's opinion that Claimant more likely than not experienced an acute on chronic injury. Based upon a totality of the evidence presented, the ALJ concludes that Claimant has established the requisite causal connection between her work duties and her low back/hip, neck and left elbow injuries. Given the parties' stipulations and the fact that Claimant has established the compensable nature of her injuries, this order does not address her entitlement to medical or temporary disability benefits.

Average Weekly Wage

J. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp., 867 P.2d 77 (Colo. App. 1993); National Fruit Prod. v. Crespin, 952 P.2d 1207 (Colo. App. 1997).*

K. Section 8-42-102(3), C.R.S., permits the ALJ discretion in the method of calculating the average weekly wage if the nature of the employment or the fact that the injured employee has not worked a sufficient length of time, has been ill or self-employed, or if for any other reason, the specific methods do not fairly compute the average weekly wage. *Benchmark/Elite Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Avalanche Industries, Inc. v. Clark*, 198 P.3d 589 (Colo. 2008); *Campbell v. IBM Corp.,* supra.

L. In this case, Claimant testified she was hired to work 8 hours a day, Monday through Friday, at a rate of $16 an hour. These hours and the hourly wage are corroborated in the first report of injury filled out by Claimant's supervisor Blas R[Redacted]. Claimant's supervisor also testified that Claimant was supposed to work 40 hours a week, which he characterized as a base number of hours subject to change. Respondents contend that Claimant's wages should be calculated based on the number of hours worked by another woman who was hired at the same time as Claimant. However, Mr. R[Redacted] testified that paychecks for individuals hired at the same time vary and that employees' checks are all different. Based upon the evidence presented, the ALJ finds that Claimant had a reasonable expectation that she would be working 40 hours per week. Moreover, although Claimant only worked two days before she was injured, she was paid $270 for her work, which covers approximately 16.875 hours or approximately eight hours per day. The evidence presented persuades the ALJ that Respondents reliance on a co-workers hours and earnings over a two-week period to calculate Claimant's average weekly wage amounts to a speculative methodology that is unlikely to result in a fundamentally fair figure representing Claimant's earnings over time. Consequently, the ALJ concludes that the most fair computation of Claimant's AWW is to consider the hours and hourly wages that were in place at the time she was injured. In this case, $16 an hour, multiplied by 8 hours a day, multiplied by 5 days a week, for an average weekly wage of $640.

ORDER

It is therefore ordered that:

1. Claimant's has established the compensable nature of her neck, back, and left elbow injuries.

2. Per the parties' stipulation, the medical treatment provided to Claimant by Concentra Medical Centers and by any providers to whom Claimant was referred to by Concentra or after February 19, 2021 is deemed reasonable, necessary, and causally related to Claimant's alleged February 4, 2021 injuries. Moreover, Claimant's evaluation and treatment in the emergency room at St. Francis Medical Center on February 5, 2021 is deemed reasonable, necessary and related to her February 4, 2021 accident.

3. Per the parties approved stipulation, Respondents shall pay TTD benefits beginning February 5, 2021, and continuing until such time that Claimant reaches MMI or can be terminated by operation of law.

4. Claimant's average weekly wage is $640.00.

5. All matters not determined herein are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable work injury to her right hand or finger on or about January 31, 2020?

II. If Claimant suffered a compensable work injury, to what medical benefits is she entitled?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Incident, as Reported

1. Claimant was employed with Hospital Housekeeping Services since July 1, 2019, working a regular 40-hour day shift. (Ex. F, p. 97).

2. Claimant filed a Worker's Claim for Compensation on February 18, 2021. (Ex. 1). Claimant alleges that on January 31, 2020, she was by a ramp in the basement of her work, carrying with one hand UV light tubes when she felt a sharp pull in her hand.

3. Claimant presented to Dr. Emily Burns, MD on 3/4/2020 at UCHealth. Claimant was following up for a left shoulder work injury that had occurred on 8/5/2019. At this visit, Claimant then mentioned that she had hurt her right hand at work.

> She hurt her R hand-so *they had her go home because of the right hand, not because of the shoulder* that is part of this injury. The R hand-should be workers comp but they told her to let me know that it happened. She reports that the right hand injury *happened on 1/31/2020* and I verified this date with her several times as I did see her on 2/5/2020 and she did not mention the right hand. (Ex. D, p. 42). (emphasis added).

4. In a follow-up visit dated 3/25.2020, Claimant then mentioned issues to Dr. Burns with her hand, and the mechanism of injury being: "Carrying heavy tubes downhill with a coworker on the other end when her right hand was pulled forward by the tubes and she felt sharp pull in the dorsum of her hand and upper forearm," with pain in right hand, specifically the middle and little finger. *Id* at 48. In the narrative report, Dr. Burns then listed the date of injury as 2/7/2020. *Id.*

5. However, In Dr. Burns' Physician's Report of Workers' Compensation Injury dated March 25, 2020, Claimant's description of accident/injury was "R hand injury while carrying tubes

and having hand pulled." *Id* at 52. However, Dr. Burns noted the date of injury was: "3/4/2020" *Id*.

6. Meanwhile, During a March 23, 2020, Rehab Therapy Evaluation with April Bryan, OT, Claimant reported she had an injury at work in *February*. (Ex. E, p. 89) (emphasis added). On March 30, 2020, (one week later) it was noted Claimant was 7.5 weeks post *February 7, 2020*, injury to extensor tendons of her right hand. *Id* at 92 (emphasis added). Claimant reported ongoing edema, pain, and loss of PIP extension of her right ring finger and middle finger. *Id*.

7. During this March 30, 2020, appointment, Claimant reported that she is "worried that she will never be able to straighten *her two middle fingers again,* and that it is still too painful. (Ex. E, p. 93) (emphasis added).

8. [At hearing, Claimant testified that she has type 2 diabetes. (Hrg. Tr. p. 41). She testified that she has been diagnosed with a polyarthritis type condition, an arthritic type condition. *Id.*]

Claimant's Prior Medical Complaints

9. On April 9, 2018, Claimant had presented to Jessica Sena, NP, with Peak Vista Community Health Centers She reported severe, bilateral carpal tunnel symptoms, including pain in Claimant's fingers and hand[s] and a sense of weakness in her hand[s]. (Ex. C, p. 25).

10. On April 19, 2018, Claimant then presented to Leann Murphy, PA-C, at Davita Medical Group, wherein she complained of bilateral hand pain over the course of 5 years. (Ex. B, p. 17). Claimant reported experiencing bilateral numbness and tingling, and that when she grips something her hands become extremely numb, to the point where she cannot feel them. *Id*. Claimant reported her right hand is worse than her left. *Id*. Claimant's *Active Problems* were noted as "hand pain." (Ex. B, p. 18).

11. On July 3, 2018, Claimant presented to Dr. Elisa Knutsen, MD reporting a several year history of bilateral hand numbness, worse on the right than the left. (Ex. D, p. 32). Claimant also reported pain in her right *ring* finger, which sometimes locks and get stuck in flexion. Claimant elected to proceed with carpal tunnel release surgery, and Dr. Knutsen also discussed the origin and possible treatment options for Claimant's trigger finger. This included observation, corticosteroid injection, or surgical release. *Id* at 34. Claimant elected to proceed with trigger finger treatment surgically at the same time that her carpal tunnel syndrome was addressed. *Id.*

12. [At hearing, Claimant testified that, since this surgery, she no longer had trouble with her hand. (Hrg. Tr., p. 40).]

13. However, on August 14, 2018, Claimant returned to Dr. Knutsen for a surgical follow-up. *Id*. at 38. At that follow-up, Claimant reported continued numbness in her fingers. *Id*.

Additionally, the physical examination performed during this appointment noted Claimant had limited range of motion in all of her fingers. *Id.*

14. Also, during an August 30, 2018, Rehab Therapy Evaluation with Kim Cridelich, OT, at UCHealth Physical Therapy and Rehabilitation Clinic, Claimant "asks if she could get disability for her hand." (Ex. E, p. 65). Claimant reported at this appointment that while her hand was stiff prior to surgery, she still complained of numbness and tingling in all of her fingertips. *Id*. Claimant was listed at this visit as 'currently not working." *Id.*

15. Finally, during an October 2, 2018, Rehab Therapy Treatment with OT Cridelich, Claimant reported continued intense pain in her right hand at times, including numbness in her "right IF, MF, and radial RF". (Ex. E, p. 82).

Dr. Lawrence Lesnak's Deposition Testimony regarding his IME

16. Dr. Lawrence Lesnak, DO, performed an independent medical evaluation of Claimant for Respondents. He also issued a written report dated July 28, 2021. (Ex. A).

17. Dr. Lesnak testified that he performed a physical examination of Claimant during this appointment, specifically focused on her right fingers, and especially her right middle finger. (Lesnak Depo., p. 14). He testified that during his physical examination, Claimant demonstrated the ability to make a full fist with her right hand, including her middle finger. She also had the ability to fully extend all of her fingers, including her right middle finger. (Lesnak Depo., p. 15). He noted that Claimant had no evidence of any nodules in the palm of her fingers, there was no swelling, skin color changes, or locking of her fingers, with passive or active range of motion. *Id* at 15.

18. He testified that Claimant did report significant tenderness when he gently brushed over the skin overlying her right middle finger PIP joint. However, he opined that this was a nonphysiologic finding. *Id.* He testified that, based on his examination of Claimant, there were no objective findings that would explain Claimant's subjective complaints related to her right hand and fingers. *Id* at 16.

19. Dr. Lesnak opined in his report that, based on the information provided him and to a reasonable degree of medical probability, Claimant did not sustain any type of injury related to any type of incident that may have occurred during work hours on January 31, 2020. (Ex. A, p. 11).

20. Dr. Lesnak testified that Claimant's reported mechanism for injury - pushing a 'large-wheeled' light fixture down a ramp - is not an activity that is going to cause or aggravate any type of trigger finger. (Lesnak Depo., p. 31).

21. Dr. Lesnak testified that his opinion – that Claimant did not sustain any sort of injury on January 31, 2020 – is further bolstered by the fact that Claimant has reportedly chronic, right more so than left, hand pain, weakness, numbness and tingling dated back to approximately 2013. Even following a right carpal tunnel release and right ring finger trigger release in early July 2018, she continued to have limited range of motion. *Id.*

22. Dr. Lesnak further stated that there was no evidence of any acute injury or trauma-related pathology identified by Dr. Burns on March 4, 2020 involving Claimant's right middle finger. Claimant had also failed to mention any sort of symptoms to her right middle finger during an evaluation that occurred February 5, 2020, just five days after the alleged incident. *Id* at 31. He opined that, given the absence of any medical evidence supporting an injury, Claimant required no treatment. *Id* at 32.

23. Dr. Lesnak also opined in his report that Claimant most likely has symptomatic polyarthritis throughout joints in her body, including her hands and fingers, but that her reported polyarthritis is not in any way related to the work duties she was performing while she was employed as a housekeeper at the Memorial Hospital in Colorado Springs, Colorado. (Ex. A, p. 11).

24. Finally, Dr. Lesnak testified that if Claimant had sustained a soft tissue work-related injury related to the alleged January 31, 2021, incident, then Claimant's range of motion documented during her March 25, 2020, appointment appears to be, if anything, even better than it was as compared to her August 2018 appointment. (Lesnak Depo., p. 33). Therefore, if Claimant did sustain a work injury, she would have been at MMI no later than March 25, 2020. (Lesnak Depo., p. 33).

Claimant Testifies at Hearing

25. Claimant testified that she arrived at work on the alleged date of injury and was filing documents in an office due to being on work restrictions. (Hrg. Tr., p 21). Claimant testified that Rosa contacted her and asked her to go to a floor with her to work in a room. *Id.* She testified that Rosa requested she go with her to bring UV lights to be placed in the rooms that were dirty. *Id.*

26. Claimant then testified that she picked up the lights with Rosa to take the lights to the basement because that is where they were stored. She stated that there was a ramp leading to the basement. *Id.*

27. Claimant then testified that while taking the UV lights to the basement, she was holding the lights in her right hand and that they are in a pipe-form device. She testified that she felt severe pain in her right hand while holding the UV lights in her right hand. Claimant testified that they then stored the lights, put them away, and she left work and went home. *Id* at 21, 22.

28. Claimant later testified that her injury occurred when Rosa came to her office and asked her to help take lights somewhere, and that she went with Rosa and was pulling the cart her right hand. (Hrg. Tr., p. 65). Claimant testified the next day was when her fingers were stiff. *Id.*

29. Claimant testified that she reported a finger injury to Mr. P[Redacted] (her supervisor) on February 28, 2020, at 8:40 in the morning. (Hrg. Tr., p. 64). She testified that she told Mr.

P[Redacted] that her hand was hurting and that she injured it, and went on to describe the incident with Rosa with the lights.

30. Clamant testified that her understanding of why she was terminated from employment is because Employer did not want her to continue injuring her hand, and that they did not have any light duties for her, including lifting less than 10 pounds. (Hrg. Tr., p. 32). However, Claimant then admitted that it was true her restrictions at the time of her termination were related to her left shoulder injury, which is a separate workers' compensation claim. Id at 33.

31. Claimant testified that the issue she experienced with her *ring* finger in 2018 was that it would lock in place. (Hrg. Tr., p. 42). However, Claimant testified several times that she has never had problems with her *middle* finger that she alleged was injured on January 31, 2020. (Hrg. Tr. p. 25; p. 44).

32. Claimant also acknowledged that she has had problems with her hands for many years. (Hrg. Tr., p. 42). She testified that she obtained treatment in 2018 for her hands, and that she had been having problems with both of her hands for five years before that. *Id*.

33. Claimant testified that the day after her alleged work incident, Saturday, February 1, 2020, around 6:30 a.m., she began feeling very strong pain in her hand and numbness in her fingers. (Hrg. Tr., p. 22). She testified that she went in the bathroom and rubbed alcohol on her fingers, massaging them because they were stiff. *Id* at 22. She testified that she was able to massage four of her fingers into straightening, but that one of her fingers remained bent. *Id.*

34. Claimant testified that her issue with her middle finger is that it gets locked into place and she cannot bend it or straighten it. *Id* at 43. Claimant testified that she is no longer having problems with her ring finger. *Id* at 38, 39. She testified that the only finger she now has issues with is her middle finger. *Id* at 39.

Miguel P[Redacted] Testifies at Hearing

35. Miguel P[Redacted], assistant director of the EVS Department, testified that when Claimant reported her alleged injury, she reported she was on a break from her restricted-duty office work, which consisted of watching training videos, putting up job descriptions, and mailbox-type deals. (Hrg. Tr., pp. 51, 52). He testified that Claimant reported she was on one of her breaks when she saw Rosa pushing UV tower light systems used to disinfect rooms. Claimant reported that she "pretty much just said she went with her" and that she never stated anyone asked her to do so. D at 52. He testified that Claimant reported to him that she saw Rosa struggling, so she attempted to help her. *Id* at 52.

36. Mr. P[Redacted] testified that they are three sets of towers, maybe six feet, that they are on wheels usually maneuvered by one person, and that moving them is not a two-person job. (Hrg. Tr., p. 52). [Contrary to Claimant's representation to Dr. Lesnak at her IME,

Mr. P[Redacted] testified that the wheels on these towers are smooth, regular rubber, and 'real little'- about the size of a shopping cart. *Id* at 52.]

37. Mr. P[Redacted] testified that, prior to February 5, 2020, Rosa never indicated that Claimant had injured her middle finger on her right hand. (Hrg. Tr. pp. 48, 49). He further testified that, as of February 5, 2020, Claimant made no indication to him that she had injured her right hand or made any mention of right-handed issues. *Id.*

38. Mr. P[Redacted] testified that Claimant did not report her alleged incident and injury on February 28, 2020. (Hrg. Tr., p. 67). He further testified that the conversation she had earlier testified to on February 28, 2020, did not occur. Instead, he found out about her reported incident and injury after her medical appointment in March. *Id.*

39. Mr. P[Redacted] testified that he was first made aware of Claimant's alleged right hand injury on or about March 25, 2020. Before this date, Claimant never reported a right hand injury to him. (Hrg. Tr., pp. 49, 50). He testified that he filed paperwork associated with this appointment with corporate, but within a day or two corporate contacted him, because the purpose of the March 25, 2020, appointment was not for her right shoulder, but for a right hand injury. *Id.*

40. Mr. P[Redacted] testified that when Claimant was placed at 'maximum improvement' for her *shoulder,* corporate had contacted Mr. P[Redacted] and Willy about letting Claimant go, instead of having her come in to the hospital, particularly because COVID had started. (Hrg. Tr., p. 50). He testified that once COVID became more serious, there was a need to send people home who did not need to be in the hospital. *Id* at 54. He testified that his understanding was that he was sending her home because of her shoulder injury, but nothing related to her finger. *Id*. He testified that Claimant was not terminated. *Id*.

Willie N[Redacted] testifies at Hearing

41. Willie N[Redacted], regional director for HHS, Hospital Housekeeping Systems, testified that he performed an investigation into whether Claimant's claim was reported timely, and that his investigation into the matter found that Claimant did not report her claim timely. (Hrg. Tr. pp. 60, 61).

42. Mr. N[Redacted] testified that he was unsure whether Claimant was terminated or not, but that if Claimant was terminated, he was unsure why. *Id* at 65. He further testified that Claimant only had work restrictions for her shoulder. *Id* at 63.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability, Generally

D. According to C.R.S. § 8-43-201, "a claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers' compensation case shall be decided on its merits." *Also see Qual-Med, Inc. v. Indus. Claim Appeals Off.,* 961 P.2d 590, 592 (Colo. App. 1998) ("The Claimant has the burden of proving an entitlement to benefits by a preponderance of the evidence."); *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App. 1993) ("The burden is on the claimant to prove his entitlement to benefits by a preponderance of the evidence.").

E. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.,*104 P.3d 273, 275 (Colo. App. 2004).

F. For an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Off.,* 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. *See Schepker, supra.* "In the course of" employment refers to the time, place, and circumstances of the injury. *Id.* There is no presumption that an injury arises out of employment merely because an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm'n,* 165 Colo. 106, 108-09, 4437 P.2d 542 (1968).

G. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1)(c) C.R.S.*; Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner,* 12 P.3d at 846.

H. Colorado's Workers' Compensation Act creates a distinction between the terms "accident" and "injury". The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." *See* §8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. In other words, an "accident" is the cause and an "injury" is the result. *City of Boulder v. Payne,* 426 P.2 194 (1967). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." A compensable injury is one which requires medical treatment or causes a disability.

I. It is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between her employment and her injuries. An ALJ might reasonably conclude the evidence is so conflicting and unreliable that the claimant has failed to meet the burden of proof with respect to causation. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 191 (Colo. App. 2002) (weight to be accorded evidence on question of causation is issue of fact for ALJ). *See also, In the Matter of the Claim of Tammy Manzanares, Claimant*, W. C. Nos. 4-517-883 and 4-614-430, 2005 WL 1031384 (Colo. Ind. Cl. App. Off. Apr. 25, 2005).

Compensability, as Applied

J. The persuasive evidence establishes that Claimant has pre-existing history of bilateral hand pain, finger numbness and stiffness, limited range of motion in her right hand fingers, carpal tunnel syndrome, and trigger finger syndrome. Claimant has undergone treatment over a considerable period of time, including a carpal tunnel surgery, accompanied by a trigger release. While the medical records indicate these treatments may have been of some benefit, it is equally clear that Claimant's condition did not fully resolve with the surgery. At one point in her treatment, in 2018, Claimant even inquired about receiving disability for her hand condition.

K. Claimant did not help her own case, with her varying accounts of the alleged mechanism of injury, as recounted as hearing, versus what was recounted to other medical providers along the way. Her alleged date of injury is at odds with what she told other medical providers at different points. Claimant failed to inform Dr. Burns – who was actively treating Clamant for a separate work injury – when she first had the opportunity. Perhaps sensing a potential communication issue, Dr. Burns even went to great lengths to clarify Claimant's position. The timing of her reporting of this injury at work is at odds with the recall of Mr. P[Redacted], as well as Mr. N[Redacted], both of whom the ALJ finds to be credible and reliable. The mechanism of injury as reported to Mr. P[Redacted] does not entirely square with what she recounted at hearing. The ALJ finds that Claimant has been, at best, an unreliable medical historian.

L. The ALJ further credits the opinion of Dr. Lesnak that, to the extent Claimant sustained a soft tissue strain (which the ALJ does *not* find herein), her condition as of March 25, 2020, was, if anything, more improved than her August 2018 symptoms. Accordingly, the ALJ finds that Claimant has failed to prove that her ongoing condition is causally related to the work injury. Instead, the ALJ is persuaded by Dr. Lesnak that even accepting Claimant's reported mechanism of injury, it would not have resulted in the trigger finger symptoms she now complains of. In fact, it would not have resulted in any trigger finder symptoms even absent her history of persistently symptomatic trigger finger issues involving at least two, arguably three different fingers on Claimant's hand. Further, the ALJ does not find sufficient evidence that this alleged incident, if it even occurred, would have been sufficient to aggravate her preexisting medical condition to the point where it required medical treatment as a result.

M. The ALJ concludes that Clamant did not suffer a compensable injury to her right hand or fingers, either on 1/31/2020, or in any of the weeks following. Therefore, Claimant is not entitled to any medical benefits as a result of this alleged incident.

ORDER

It is therefore Ordered that:

1. Claimant did not suffer a compensable work injury. Her claim for medical benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is* ***highly recommended*** *that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

ISSUES

1. Whether Claimant established by a preponderance of the evidence that left shoulder surgery recommended by Armodios Hatzidakis, M.D., is reasonably necessary to cure or relieve the effects of Claimant's July 14, 2016 work injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following specific findings of fact:

1. Claimant is a 42-year-old man who sustained an admitted injury to his left shoulder arising out of the course of his employment with Employer on July 14, 2016. On that day, Claimant was moving a 4' x 8', 1/2-inch-thick acrylic panel weighing approximately 100-120 pounds. Claimant grasped the acrylic sheet with one hand on either side of the four-foot width and tipped it, so his left arm was bearing the majority of the weight. Claimant felt a pain in his left shoulder and felt his left arm give out. Clamant reported the injury to Employer, but did not seek medical attention for approximately two weeks.

2. Claimant credibly testified that he had no prior injuries to his left shoulder, and that generally his work did not require a large amount of physical labor, other than carrying lights, and other items necessary for television production.

3. On July 28, 2016, Claimant saw Sadie Sanchez, M.D., at Denver Health for his shoulder condition. Claimant reported when he attempted to turn the acrylic panel sideways to place it in a cart, he felt he overextended his shoulder and felt "a twinge" in his shoulder. Claimant continued to work but later in the day felt stiffness and pain in his left shoulder. It was noted that Claimant had minor decrease in range of motion and pain at extremes of range of motion. Dr. Sanchez' differential diagnosis was likely AC joint impingement vs. labral tear of the shoulder joint. Dr. Sanchez referred Claimant for physical therapy and was advised to take ibuprofen as needed. He was not assigned any work restrictions. (Ex. 1).

4. Claimant participated in physical therapy at Denver Health for approximately six weeks, without resolution of his left shoulder symptoms. He was then referred for an orthopedic evaluation. (Ex. 1). On October 19, 2016, Claimant saw Benjamin Sears, M.D., at Western Orthopaedics. Based on his examination, Dr. Sears opined that Claimant's left shoulder pain was consistent with a biceps labral complex injury, and ordered an MRI of the left shoulder. (Ex. B).

5. An MRI was completed on November 22, 2016, and was interpreted as showing a tear of the superior and posterior labrum including a full-thickness detachment of the

posterior labrum. It was also noted that Claimant had moderate to high-grade chondral thinning along the posterior rim of the glenoid that rapidly tapered to normal cartilage thickness and posterior translation of the humeral head relative to the glenoid. (Ex. 11).

6. Claimant returned to Dr. Sears on December 21, 2016. Dr. Sears's impression was a "left shoulder large posterior superior labral tear with continued pain." Dr. Sears recommended an arthroscopic evaluation and labral repair with possible tenodesis. (ex. 2)

7. On January 31, 2017, Dr. Sears performed a left shoulder arthroscopic posterior superior labral tear repair. (Ex. 2). Following surgery, Claimant continued to experience pain in his left shoulder and developed an infection which necessitated the placement of a PICC line. A second surgery was performed on January 9, 2018, which included a revision labral repair and debridement with a long head of the biceps tenodesis. (Ex. 2).

8. Claimant continued to experience pain and weakness in his left shoulder for the following year. On January 8, 2019, Dr. Sears performed a left shoulder posterior capsular and labral reconstruction. (Ex. 2). Following the Claimant's third surgery he again had an infection and was on antibiotics for two months. The third-surgery did not resolve Claimant's left shoulder pain and he continued to experience difficulty with range of motion, pain, and weakness in the left shoulder.

9. On November 8, 2019, Dr. Sears referred Claimant to Armodios Hatzidakis, M.D., for a second opinion. Dr. Hatzidakis noted that Claimant had a constant ache in his left shoulder and a decreased range of motion with numbness and tingling in his ulnar nerve distribution. He also noted that Claimant dropped things frequently. An earlier EMG demonstrated an ulnar neuropathy. (Ex. 7).

10. At his January 21, 2020 visit, Dr. Hatzidakis recommended that Claimant continue conservative measures, including anti-inflammatories, topical pain gel and physical therapy. He indicated that Claimant's glenohumeral arthritis was a contributing factor to his pain. He also indicated that if Claimant failed conservative care, surgical intervention, was a possibility. Claimant continued with conservative measures without significant improvement in his symptoms. On September 1, 2020, Dr. Hatzidakis submitted a request for authorization to Insurer for a fourth surgery. The proposed surgery was a left shoulder arthroscopic debridement with lysis resection and manipulation under anesthesia. (Ex. 7).

11. On November 4, 2020, Insurer denied based on an independent medical examination performed by Timothy O'Brien, M.D. (Ex. 7).

12. Claimant underwent independent medical examinations performed by Dr. O'Brien, on July 29, 2019, and October 22, 2020. Dr. O' The parties stipulated to Dr. O'Brien's admission as an expert in orthopedic surgery. Dr. O'Brien testified that, while he was engaged in active practice, his primary field was treatment of the lower extremities. He testified he has experience treating and evaluating shoulders, although the experience was limited to taking call in emergency rooms. Dr. O'Brien testified he believed Claimant

sustained a “minor” shoulder strain/sprain as the result of his work injury. He asserted that a labral tear is typically the result of a shoulder dislocation, which did not occur here. Although he did not review the Claimant’s radiological imaging films, and relied entirely on the radiologist’s reports, Dr. O’Brien opined that “everything we see on that MRI scan is degenerative and chronic.” In his July 27, 2019 report, Dr. O’Brien indicated Claimant’s left labrum was “degenerative and desiccated” and was not amenable to being reconstructed. Dr. O’Brien opined Claimant’s report to Dr. Sanchez of feeling a “twinge” was “not the behavior of a person who sustained a significant injury, but rather the behavior of a person who sustained an innocuous self-limiting and self-healing injury.” He also opined the surgery proposed by Dr. Hatzidakis was not related to his July 14, 2016, work injury because, in his opinion, the “original injury was minor, it was self-limiting and self healing. So a minor injury doesn’t require surgery to get it to heal. Minor injuries heal on their own. And I believe [Claimant’s] injury healed on its own.” Dr. O’Brien’s opinions are neither credible nor persuasive.

13. Respondents presented the testimony of William Ciccone, M.D., through deposition in lieu of live testimony. The parties stipulated to Dr. Ciccone’s admission as an expert in orthopedic surgery. Dr. Ciccone is a shoulder specialist and performed a record review at Respondents’ request to review Dr. O’Brien’s IME. Dr. Ciccone testified that he reviewed the Claimant’s medical records, including radiologist reports, but did not review MRI or other imaging films directly. Dr. Ciccone testified that he did not need to review the photos Dr. Sears took during surgery because he could “imagine in [his] mind’s eye exactly what it looked like while he was in there.” Dr. Ciccone agreed that the surgery proposed by Dr. Hatzidakis is reasonable and necessary, but disagrees that the need for surgery is related to Claimant’s work injury. In summary, Dr. Ciccone opined that Claimant’s mechanism of injury was inconsistent with a posterior labral tear, and that Claimant likely sustained a “minor” acromioclavicular strain as the result of his work injury. Dr. Ciccone also noted the Claimant’s use of the term “twinge” to describe his initial injury as part of the basis of his opinions. Dr. Ciccone concluded that Claimant’s need for surgery is not related to his work injury. Dr. Ciccone’s opinions were not persuasive.

14. Dr. Sears testified at hearing and was admitted as an expert in orthopedic surgery. Dr. Sears is fellowship-trained in shoulder and elbow surgery, and specializes in performing shoulder and elbow procedures. On May 21, 2021, Dr. Sears authored a letter to Claimant’s counsel offering his opinion regarding the IME reports of Dr. O’Brien and Dr. Ciccone. As relevant to the issues before the ALJ, Dr. Sears indicated that Claimant’s presentation is consistent with an acute, or acute on chronic labral lesion, rather than a chronic condition such as arthritis, as posited by Drs. O’Brien and Ciccone. He also indicated that a pull from a heavy object is a known mechanism for a posterior labral tear.

15. He indicated that the Claimant’s left shoulder tissue was generally consistent with that typically seen in a 37-year-old patient, in that it was not significantly degenerated. He also indicated that, contrary to Dr. O’Brien’s opinion, “there was certainly not ‘substantial arthritis that existed in the posterior aspect of the glenoid.” (Ex. 2). Dr. Sears has reviewed the Claimant’s imaging films, as well as the reports, performed surgery on the Claimant and has reviewed photos taken during surgery. Dr. Sears testified (and wrote) that he agreed with Dr. Hatzidakis’ proposed surgery. Additionally, Dr. Sears testified that

Claimant's reported mechanism of injury was consistent with a labral tear, and given the fact that Claimant had no history of left shoulder issues, he reasonably believed that Claimant's left shoulder symptoms and labral tear are the result of his work injury on July 14, 2016.

16. Dr. Hatzidakis' testimony was presented by deposition in lieu of live testimony. The parties stipulated that Dr. Hatzidakis is an expert in orthopedic. Dr. Hatzidakis specializes in treatment of the shoulder, and has done so for approximately twenty years. He has reviewed the Claimant's imaging studies, including CT scans and MRI, and ordinarily reviews the films as part of his practice. Dr. Hatzidakis opined that Claimant's described mechanism of injury could have caused a labral tear, and that causation cannot be determined based on an MRI alone. Dr. Hatzidakis credibly testified that patients with labral tears experience a variety of pain levels, symptoms, and dysfunction, and that patients manifest symptoms from pathology differently.

17. Alisa Koval, M.D., was admitted as an expert in occupational medicine and testified at hearing. Dr. Koval assumed Claimant's care at Denver Health after Dr. Sanchez stopped working there in early 2018, and saw Claimant more than 30 times between March 2018 and May 2021. Dr. Koval opined that Claimant's reported mechanism of injury was consistent with a labral tear. She further testified that since March 2018, she saw no evidence that Claimant had become asymptomatic or had returned to normal function. Dr. Koval also testified that, given the timing of Claimant's MRI, one cannot tell whether the Claimant' labral tear is chronic or acute.

18. Drs. Koval, Sears and Hatzidakis are each authorized treating physicians within the chain of referral.

19. The parties stipulated that the surgery recommended by Dr. Hatzidakis is reasonable and necessary given the current anatomy of Claimant's shoulder, but disagree that the need for the surgery is related to Claimant's admitted work injury.

20. The ALJ finds the surgery proposed by Dr. Hatzidakis is reasonable and necessary to address Claimant's shoulder anatomy, including the torn labrum sustained on July 14, 2016, and the sequela of that injury and the three surgeries he had undergone to address that condition.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SPECIFIC MEDICAL TREATMENT AT ISSUE

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002)." *In the Matter of the Claim of Bud Forbes, Claimant*, No. W.C. No. 4-797-103, 2011 WL 5616888, at *3 (Colo. Ind. Cl. App. Off. Nov. 7, 2011). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist. No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transp. Dist.,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009).

Claimant has established by a preponderance of the evidence that the surgical procedure recommended by Dr. Hatzidakis is related to his July 14, 2016 work injury. Drs. Sears, Hatzidakis, and Koval each testified that Claimant's reported mechanism of injury was consistent with a posterior labral tear. Although Claimant has undergone three surgeries to date, he has remained symptomatic and has not returned to his prior function. Drs. Sears, Hatzidakis, and Ciccone each agree that the proposed surgery is reasonable and necessary given the Claimant's current anatomy. The testimony of Claimant's treating physicians was credible and persuasive that Claimant's torn labrum was, more likely than not, caused by his work injury on July 14, 2016. The opinions of Dr. O'Brien and Dr. Ciccone that Claimant's need for surgery is unrelated to his work injury are not credible or persuasive. Because the surgery recommended by Dr. Hatzidakis is intended to address the Claimant's left shoulder injury, and the sequela of the subsequent surgeries performed to address this condition, it is causally related to that injury. Consequently, Respondents are liable for the surgery recommended by Dr. Hatzidakis.

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of surgery recommended by Dr. Hatzidakis on September 1, 2020, is granted.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 8, 2021

Denver, Colorado, 80203

ISSUES

I. Determination of a just and equitable allocation of death benefits between Claimant's minor dependents.

FINDINGS OF FACT

1. Decedent died on May 27, 2021 as the result of injuries sustained arising out of and during the course of his employment with Employer.

2. At the time of his death, Decedent was the father of four minor children: J.R.S. (DOB June 5, 2013); L.G.S. (DOB September 22, 2014); T.P.S. (DOB April 19, 2016); and A.E.S. (DOB July 28, 2017). These four children are dependents of Decedent and are Decedent's only known children.

3. On June 29, 2021, Respondents filed an Application for Hearing endorsing the issues of determining the division of death benefits among Decedent's minor dependents.

4. Decedent's ex-wife, V.E., is the mother of Decedent's four minor children. V.E. testified at hearing. She testified that she is only claiming death benefits for Decedent's children and not herself. V.E. is the legal guardian of the four aforementioned minor children and provides all care to the children and handles their financial affairs. She requests that Decedent's death benefits be allocated 25% to each minor dependent. V.E. testified she will manage the death benefits in the best interest of the children to provide for their needs.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Allocation of Death Benefits

Section 8-42-121, C.R.S. provides that death benefits shall be paid to such one or more of the dependents of the decedent, for the benefit of all the dependents entitled to such compensation, as may be determined by the director, who may apportion the benefits among such dependents in such manner as the director may deem just and equitable. A just and equitable distribution will depend upon the facts of each case, and the ALJ may consider the "actual dependence" of the claimants as well as the relative incomes and circumstances of the claimants. *Spoo v. Spoo*, 145 Colo. 268, 358 P. 2d 870 (1961).

The ALJ concludes allocating Decedent's death benefits equally between each of Decedent's minor dependents represents a just and equitable allocation of the benefits. Accordingly, as requested by the dependents' mother, Decedent's death benefits will be allocated 25% to each of the four dependent children. As each dependent is a minor child and incapable of currently managing his or her own funds, V.E. shall receive the funds on behalf of each dependent.

ORDER

1. Decedent’s death benefits shall be equally allocated between Decedent’s four minor children as follows: 25% to J.R.S. (DOB June 5, 2013); 25% to L.G.S. (DOB September 22, 2014); 25% to T.P.S. (DOB April 19, 2016); and 25% to A.E.S. (DOB July 28, 2017).
2. The death benefits as ordered shall be paid to the mother of the dependent children, V.E.
3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 5, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-163-355-001

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he was injured in the course and scope of his employment with Employer on January 15, 2021.

II. Whether Dr. Kenneth Keller is an authorized treating physician.

III. Whether Claimant has proven by a preponderance of the evidence that he is entitled to reasonably necessary medical benefits related to the January 15, 2021 injury, including the right knee arthroplasty.

PROCEDURAL HISTORY

On March 16, 2021 Claimant filed an Application for Hearing with the Greeley Office of Administrative Courts (OAC) on issues of compensability, reasonable, necessary and related medical benefits, authorization of medical provider Dr. Keller, average weekly wage, and temporary disability benefits. Respondents filed a Response to Application for Hearing on April 15, 2021 listing issues of termination for cause, responsible for termination and offsets, if applicable. Respondents conceded that an incident took place on January 15, 2021 but continued to allege that no compensable injuries or disability occurred as a result of the work related incident.

STIPULATION

The parties stipulated that the issues of average weekly wage, temporary disability benefits, termination for cause, responsibility for termination and offsets were reserved by the parties.

FINDINGS OF FACT

Based on the evidence presented, the ALJ enters the following findings of fact:

1. Claimant is a 61 years old (60 at the time he testified) maintenance mechanic who was hired by Employer to fix broken mechanical equipment at the Employer's plant. Claimant testified that the job requires him to use multiple different heavy tools, reach into mechanical equipment to repair them, reach into areas that are dangerous and hard to access, walk on high catwalks and bridges (over the plant area where the production occurs), climb ladders, climb stairs, crawl around and under equipment, move and pull equipment on carts, use straps to arrange or move heavy

equipment, work in darkened, greasy areas of the plant, and generally around dangerous heavy equipment. In essence, anything that was broken or did not function appropriately, the mechanics would fix to keep the plant running.

2. Prior to Claimant's employment with Employer, he always worked heavy duty jobs, including maintenance mechanic jobs, without limitations or impairments. He stated that he worked heavy duty jobs his whole life, including on oil rigs. When Claimant began his employment some months prior to the accident, and to the date of the incident, he had no problems performing his heavy-duty job. He initially took a job as a renderer, which required shoveling, climbing up and down high areas. However, shortly thereafter, Claimant took a test and was given the maintenance mechanic job.

3. The kill floor and rendering maintenance Superintendent (hereinafter Superintendent) stated that Claimant was first hired in general rendering maintenance but that his production general foreman stated that Claimant had experience working as a mechanic in the oil fields and the Superintendent gave him a chance to move to the position of maintenance mechanic after he took a test. The Superintendent stated that the plant was shorthanded and needed the help, and because he was a recent hire, he did not have to go through the steps of having Claimant bid for the job, he was just able to shuffle him into the new position.

4. On Friday, January 15, 2021, in the early morning hours, Claimant and a co-worker were instructed by their supervisor to adjust a trolley chain. The co-worker rigged up a strap to the trolley chain motor, with Claimant taking the larger front end with a come-along, or hoist, which was hooked up to the strap, and the co-worker took the smaller back end. As the coworkers was inserting a pin to stabilize the motor, the strap broke. It was sometime around 1:30 to 2:00 a.m. when it happened. Claimant was pulling the come along with a lot of tension. Claimant slipped backwards very fast into a panel on the left side of the catwalk, then to the catwalk surface. In the Employee Statement, he described the motion as flying backward into the guardrail. The catwalk is surrounded by square tubing to hold the catwalk up. The area was very dim and Claimant was using a hard hat light to see, as there was no lighting above the catwalk, only below the catwalk, above the kill floor.

5. Claimant stated that he fell in such a manner that if the guardrails were not there, he would have plummeted to the plant floor as his hard hat did. Claimant felt immediate pain in his right leg, knee and his whole body was in pain, throbbing, and Claimant had redness and swelling in his knee.

6. Claimant reported the injury to his supervisor right away and continued working his regular shift but did not perform any more heavy work that day by his supervisor's orders, as he was instructed to "take it easy." He saw the onsite nurse at the plant the next shift.[1] Thereafter, he saw the onsite nurse many times for several months. The following Monday, on January 18, 2021, he completed the Employee Statement and

[1] The Claimant worked from Monday through Saturday (if the Plant was open on Saturdays) and this ALJ infers from the evidence that when Clamant states the next day, it is to Claimant the next shift as he left at 8:08 a.m. and returned at 9:53 p.m.

stated his injuries were to his back, neck, shoulder, and right knee. At the time of the accident, Claimant was using the required safety equipment, including his hardhat, safety glasses, face shield, earplugs, and steel boots.

7. Employer's Workers' Compensation Coordinator completed the Employers' First Report of injury on January 20, 2021. The document states that they were notified of the incident on January 18, 2021, that "as the EE was moving a motor with a hurst [sic.][2] the strap broke causing him to fly backward striking a pole. EE suffered strain to neck, back, shoulder and knee, unknown if medical treatment is being sought."

8. On January 18, 2021 Claimant was provided with a designated prover list, which included Anne Manchester, M.D. and Kenneth Keller, M.D. It also provided the name of the Workers' Compensation (WC) Coordinator for Employer and the third party administrator.

9. Claimant was first seen by Dr. Carlos Cebrian at the Cargil Meat Solutions Occupational Health clinic on January 19, 2021[3] by telehealth. Claimant provided a history of the incident including that he fell so fast he was not sure how exactly he landed but that he had swelling of the chest, bruised his posterior RIGHT ribs, and caused pain and instability in his right knee. He also reported difficulty raising his right arm. Dr. Cebrian documented that Claimant continued to work, through he modified what he was doing. He denied any prior problems with his right knee and right shoulder, though had a prior left knee replacement. On physical exam (by video), Dr. Cebrian found bruising over the LEFT [sic.][4] posterior chest, abrasion on the right knee, with pain on movement of the right shoulder, back and knee. He assessed pain in the right shoulder, posterior chest on the RIGHT and right knee. He was provided restrictions of 10 pounds lifting, no activity above shoulder level and sitting fifty percent of the time. He was provided ibuprofen and referred for X-rays of the right knee, RIGHT shoulder, RIGHT ribs and chest.

10. Claimant was moved to the day shift to perform light duty work, folding gloves. The Superintendent for Employer stated that moving him to the day shift was necessary to keep Claimant out of the danger zone. The Superintendent agreed that Claimant's job of maintenance mechanic was physically demanding and intensive. He testified that Claimant made no complaints of being unable to perform his job prior to the January 15, 2021 incident and was provided no restrictions prior to the injury. The Superintendent did not work the night shift with Claimant so he was not privy to watching Claimant work but he would see him in passing in the mornings when Claimant would leave work. The Superintendent agreed that Claimant's supervisor did report that Claimant had been in an accident and that the supervisor sent Claimant to the plant nurse for evaluation. The Superintendent also received a report from the nurse.

[2] This ALJ infers that the WC Coordinator meant a "hoist."

[3] Neither party provided the nursing records for the clinic.

[4] This ALJ infers that, since Claimant complained of right rib bruising, Dr. Cebrian simply misdocumented the rib bruising side Claimant had injured, as he completed the exam by video, ordered right side x-rays and did not personally examine Claimant.

11. The January 27, 2021MRI[5] report stated they had the January 20, 2021 plain films[6] for comparison. Findings were read by Dr. Jamie Colonnello and showed complex tearing of the body and the posterior horn of the medial meniscus, moderate to severe medial compartment predominant tricompartmental osteoarthritis of the right knee, complex tearing of the body and posterior horn of the right knee medial meniscus, inner margin and vertical longitudinal tearing of the posterior horn of the latera meniscus near the posterior root attachment and joint effusion.

12. The next record from Dr. Cebrian is a referral to Dr. Hsin with a diagnosis of right knee meniscus tear, dated January 28, 2021.

13. Claimant was evaluated by Dr. Joseph Hsin on February 5, 2021. Dr. Hsin noted Claimant's mechanism of injury including that Claimant twisted his right knee during the fall. Claimant complained that he had constant right knee pain, worse with walking, turning, and inactivity in addition to the knee giving out frequently. On exam he noted a trace effusion over the right knee medial joint. He also noted genu varum[7] on the right and that Claimant denied any prior problems with the right knee. He assessed arthritis, drained and injected the joint with cortisone, provided lidocaine patches, and provided medication. He stated that Claimant had moderately severe osteoarthritis along with meniscal tearing in the right knee and an "aggravation of the preexisting arthritis." He recommended that Claimant follow-up with his joint replacement specialist at Loveland to discuss right knee replacement.

14. Dr. Cebrian authored a report on February 10, 2021. This was also a telehealth visit. He stated that they did an MRI of the right knee as it was Claimant's primary complaint. He documented that Dr. Hsin opined that Claimant had severe osteoarthritis in the right knee and recommended that he be treated outside the workers' compensation system. On physical exam, Dr. Cebrian noted that Claimant was wearing a brace on the right knee, moved slowly, had decreased thoracic spine movement and pain and swelling of the right knee. He assessed severe osteoarthritis in the right knee, past history of knee replacement of the left knee and thoracic spine pain. Dr. Cebrian explained that Claimant needed to be seen outside the WC system as he had preexisting problems that may require a knee replacement. He noted that Dr. Hsin advised he go back to the same surgeon that performed his prior left knee surgery. He stated that they would continue with nursing treatment primarily on the back.

15. Claimant stated that his prior surgeon, Dr. Hale, was based out of Fort Collins and Claimant had moved to Weldona, Colorado, nearer to the plant. Claimant does live close to Fort Morgan, where Dr. Keller is located. Claimant's wife would generally take Claimant to and from work, and to and from medical appointments, as they only had one vehicle.

16. On April 7, 2021 Claimant was attended by Dr. Kenneth Keller, who took a history of Claimant being thrown back against an electrical panel. He stated that Claimant

[5] Magnetic resonance imaging.

[6] Not in evidence.

[7] Bow-legged.

had been seen by another occupational medicine physician associated with their group[8] who ordered x-rays and MRI. He reviewed these x-rays and MRI which showed osteoarthritis and meniscal tears. He noted that Claimant was wearing a double neoprene brace on his right knee, had a varus configuration of the right knee, small effusion, good active range of motion with slight crepitance in the patellofemoral joint, with pain along the medial side of the knee as well as a positive McMurray's test.[9]

17. Dr. Keller documented that Claimant has a long history of performing heavy-duty work and noted Claimant had excellent muscle development in the extremities.[10] He opined that Claimant's pain is coming from both advanced trlcompartmental osteoarthritis and complex tearing of the menisci. He provided a medical opinion that, while the tricompartment osteoarthritis was not caused by the January 2021 work related injury, the accident was a large exacerbating factor in the onset of his pain and possible meniscal tearing. He specifically stated "[T]his is a difficult scenario in that the knee was functional but arthritic prior to the injury but now has been rendered dysfunctional and intolerable." He recommended a total knee replacement.

18. Claimant followed up with Dr. Keller on April 21, 2021. He documented that Claimant was able to carry out a fairly complicated heavy duty work prior to the injury of January 2021, and following the injury he had become extremely limited, including being unable to work in any other kinds of jobs due to the injury. Claimant discussed proceeding with the total knee replacement at that time. They had a long discussion regarding the condition of Claimant's right knee and the knee replacement. Claimant understood the risks, especially having gone through major complications when he had the left total knee replacement. Dr. Kelly reported that Claimant did not feel like he had a choice as he wanted to continue working and having a quality life.

19. On April 29, 2021 Dr. Keller issued his operative report from Colorado Plains Medical Center. He documented that "This is a 60-year-old active male with apparent progressive osteoarthritis of the right knee. Recently injured his knee where he simply had never really regained the ability to ambulate comfortably, indicated for knee arthroplasty." During the surgery, Dr. Keller noted that there was a moderate joint effusion present. He was discharged on May 1, 2021 in good condition and anxious to go home. On May 3, 2021 Dr. Keller reevaluated Claimant due to problems with excessive drainage and not enough pain control. On May 7, 2021 he was again evaluated in the ED, however there was no active drainage, the incision looked well and no suggestion of effusion in the knee but DVT[11] in the lower leg around the ankle.

20. On May 6, 2021 Claimant was evaluated by J. Tashof Bernton, an independent medical examination scheduled by Respondents, only a week after his total knee replacement took place. Dr. Bernton took a history of the mechanism of injury noting that Claimant fell backwards into an electrical panel and then hit the ground, where his

[8] Presumably Dr. Cebrian

[9] Test to assess tearing of the lateral meniscus.

[10] This ALJ infers from this information that Claimant had well developed muscle tone and was generally muscular.

[11] Deep vein thrombosis

legs got "tangled up." He noted the work related injury of January 15, 2021. He had available the original x-ray reports, including of the right knee which showed small effusion. Dr. Bernton recited portions of Respondents' letter to Dr. Bernton, including several medical records that were and were not sent to him. Among the medical records not sent to Dr. Bernton, but described in, were multiple Employer Clinic nurse notes. Dr. Bernton recited a portion of Dr. Keller's report pursuant to counsel's letter. It is undetermined if the letter from counsel was actually relied upon by Dr. Bernton in reaching his conclusions.

21. On exam, Dr. Bernton noted that Claimant had normal range of motion of the shoulder and no paraspinals muscle tension in the low back. Dr. Bernton noted Claimant had degenerative changes in the chest and AC joints, and joint space narrowing of the right knee. He noted good range of motion of the shoulder and that the right knee was somewhat swollen post operatively. He noted that there was no dorsalis pedis pulse and was concerned about thrombosis or infection. With regard to the January 15, 2021 accident he opined that Claimant "had a contusion of the shoulder and contusion and twisting of the right knee." He stated that the menisci tears could either be degenerative or could potentially be acute. Dr. Bernton further opined that "[T]reatment of the right knee acute injury is appropriate on a work-related basis, but treatment of the underlying advanced osteoarthritis, which would require knee replacement is, as noted by Dr. Cebrian and Dr. Hsin, non-work related."

22. During the May 17, 2021 follow up with Dr. Keller, he documented that post op care was complicated by edema and a calf DVT but seemed to be improving. Claimant complained of pain, more in the back of his upper calf, but the swelling had gone down significantly, he was ambulating with a walker but he could easily ambulate around the room without it. The incision was completely healed and there was no drainage or surrounding erythema and good range of motion.

23. By June 9, 2021 Claimant was progressing well functionally though somewhat frustrated with his pain and progress. Dr. Keller stated that he was doing quite well and may be doing too much at this stage as he could ambulate without assistive device. He recommended cold packs, physical therapy for quad strengthening and range of motion, though the ROM was excellent.

24. Claimant was first evaluated by Dr. Sander Orent on June 11, 2021. Dr. Orent document the Claimant's mechanism of injury, including that when Claimant was thrown backwards by the force of the breaking/snapping cable, he hit the electrical panel and twisted his knee under the railing on the catwalk. He had immediate pain in his right knee, particularly the medial and lateral side. Claimant reported to Dr. Orent that he was asymptomatic prior to the work injury but after the pain did not abate. He also reported that, initially he had neck and back pain, but by the time he saw Dr. Orent, the neck and upper back problems had resolved but that he continued to have low back pain that radiated to the right lower extremity, into the calf, all the way to the later aspect of his foot. Claimant reported he was given Lyrica, which helped the pain going down his leg but he continued to have back problems. On physical exam, Dr. Orent documented that Claimant had tense paraspinals muscles with loss of range of motion and marked

dorsiflexion weakness of the right foot. The right knee, post operatively, looked really good with no swelling, improving range of motion though some pain with extension. He reviewed the x-rays of the knee, ribs and shoulder, as well as the MRI and medical records.

25. Dr. Orent opined that Claimant was “clearly and without doubt injured in the course and scope of his work.” He stated that the accident occurred and that Claimant clearly described the incident to his providers, despite the fact that they stated that the knee arthroplasty is not work related. He noted that Claimant was completely asymptomatic for both the right knee and the lumbar spine prior to the work related injury. He highlighted the fact that Claimant was asymptomatic and had an excellent work record. He suggested that the primary and only reason for Claimant to have a total knee replacement on the right side was the injury that occurred during the January 2021 accident while working for Employer.

26. Dr. Orent was also concerned that the lumbar spine injury was completely ignored, especially considering the motor weakness of the right foot, needed an MRI of the lumbar spine and an evaluation by an orthopedist. Dr. Orent diagnosed complex meniscal tears, in the setting of osteoarthritis of the knee necessitating arthroplasty because of the acute injury. He also diagnosed lumbar strain with radiculopathy and motor weakness as a direct result of being thrown back into the electrical panel when the strap snapped.

27. Sander Orent, M.D. testified at hearing on September 10, 2021 and was accepted as an expert in occupational medicine, environmental medicine, internal medicine, and critical care as well as a Level II accredited physician. He testified that he received the same history as told at hearing with the exception of striking the right knee on the railing, twisting it and getting stuck under the railing. He reported Claimant relayed that the knee seemed to be on fire and crunchy, that it swelled. He stated that the mechanism of injury, the fact that he flew backwards, hitting his back and then twisting and falling, getting his knee caught under the rung, can rip a menisci free. He had an extruded menisci on the MRI, it was a complex tear and acute in nature with significant edema, a sign that Claimant had an acute injury.

28. Dr. Orent stated that if Claimant had an extruded complex torn meniscus prior to the injury, he would not have been able to perform the heavy, difficulty work he did for Employer, especially the climbing, fixing equipment, working in low light situations in a full duty capacity. Dr. Orent acknowledged that Claimant did have preexisting osteoarthritis of the right knee but that it was asymptomatic and Claimant could perform his full duty job without limitations. While Dr. Orent agreed that the MRI does not reveal the age of the edema, it does show that it was recent. Dr. Orent further testified that the event of January 15, 2021 was very fast, that not even Claimant knew exactly how the incident happened after the exertion he was placing and after the strap broke, but it is clear that Claimant was not having physical symptoms before the accident and that after he was unable to function freely. He was unequivocal, that despite what forces were applied to Claimant’s body and knee, that the January 15, 2021 accident caused Claimant’s right knee symptomology.

29. Respondents attempted to impeach Dr. Orent by stating that Claimant had never seen an onsite nurse as the records were not available for his review. However, the maintenance Superintendent testified that he had received a report from the nurse that Claimant had been injured in an accident. He believed that he received it on Monday January 18, 2021, when the nurse came in.

30. A kill floor maintenance worker also testified that he was a Union Steward and served as a mediator between Employer and workers that are written up. The Union Steward stated that he had worked with Claimant regarding some write-ups when Claimant was on light duty. He also had worked a little with Claimant when Claimant was doing maintenance work. He testified that it was common for the mechanics to either use flashlights or headlights to perform their work.

31. Lastly, at hearing, the Employer's WC coordinator testified regarding her job, being a liaison between the employee and Employer, submitted workers' compensation claims, worked with the third party administrator, scheduled Claimant's medical appointments, scheduled and assisted with transportation, translation, restricted duty walk-throughs, and light duty jobs. She testified that she instructed all new hires to report to their supervisor of any accident within 24 hours of the incidents. She described what the Employer's First Report of Injury stated. She described the nursing staff in the health services department, a full-on nursing staff, with a medical assistant during the days, Mondays through Saturday (if the plant was working), and Dr. Cebrian on Tuesdays. She disclosed that the nursing staff stays only as long as the kill floor is working, to around 1:30 a.m.

32. The WC coordinator stated that she believed that Claimant continued in his full time position until he was changed to the warehouse folding gloves, due to his restrictions. She did not see what work he was doing prior to being changed to the day shift. She recalled scheduling the appointment with Dr. Hsin for Claimant but does not know how Claimant was able to attend the appointment. She received a call from Claimant after Dr. Hsin's appointment and he advised that Dr. Hsin told him to see Dr. Hale. She testified she received a call from Dr. Hale's office, did speak with Dr. Hale's office and stated that Dr. Hale's staff indicated he did not wish to see Claimant. She further testified that she was not aware whether Claimant notified his supervisor within the required 24 hours because he did not immediately fill out any paperwork as required.

33. Claimant testified on rebuttal with regard to clarifying that his right leg got stuck between the beam and the rail and the floor. He stated that when he fell, he tried to prevent himself from falling and that his hardhat fell to the kill floor, many feet below. He advised that he had completed two different forms. The first he gave to his direct supervisor, the second he turned in to the WC coordinator. A couple of weeks after the incident he received a call from his supervisor to remind him to turn in another report. His supervisor was no longer working for Employer, as his parents were ailing; he was in Arizona and did not respond to Claimant's inquiry regarding testifying. Claimant also testified that his supervisor was no longer working for Employer.

34. Dr. Orent's testimony was also taken by deposition on July 7, 2021 by Respondents. At that time, Dr. Orent stated that "The fact that a piece of the meniscus has extruded, usually is pretty acute because that would cause the knee to lock up and cause people to have a great deal of difficulty ambulating. So an extruded fragment is much more likely, in my opinion, to be acute." Questioning in this deposition about Dr. Orent not being present with Claimant is unhelpful in reference to Claimant having difficulty prior to the work injury. The Superintendent, the WC coordinator and Claimant all testified that Claimant was performing his work well before the accident and no records were provided to this ALJ that Claimant had any preexisting medical problems with regard to the right knee. Therefore, this ALJ infers from the totality of the record that Claimant was asymptomatic with regard to his preexisting osteoarthritis.

35. Dr. Carlos Cebrian testified on August 20, 2021 and was accepted as an expert in occupational medicine and a Level II accredited physician. Dr. Cebrian stated that Claimant had a fall where he did injure his knee, he had pain complaints, some swelling and bruising of the knee. He stated that it was possible that there may have been a small meniscal tear that occurred as a consequence of the January 15, 2021 incident as there was swelling and an abrasion of the right knee, but opined that the underlying pathology was preexisting. Dr. Cebrian stated that there was no way to separate out the meniscal tear that occurred on January 15, 2021 from the preexisting pathology. This is not relevant in cases where there is an aggravation of a preexisting condition caused by a work related accident. He stated that the combination of a contusion with swelling that he was having could have put increased pressure on his joint, which caused some discomfort in the joint itself because of the presence of the osteoarthritis. Dr. Cebrian further stated that [Claimant] may have had a knee injury or contusion, abrasion and swelling but that conservative care only was reasonable, not a total knee replacement. He agreed that Claimant suffered a work related injury and needed only conservative treatment. He agreed that Claimant had no medical care for his right knee prior to the accident of January 15, 2021.

36. Claimant's coworker testified on September 22, 2021, that he was with Claimant at the time of the incident of January 15, 2021. The coworker was placing a pin in the motor to secure it and turned around when Claimant was sitting up already. He did not observe the fall until he turned around and saw Claimant sitting on the catwalk surface. He saw that he was lengthwise on the catwalk that was approximately four to five feet wide. He did not regularly work with Claimant, other than occasionally but never saw that Claimant had any problems before the incident. He did observe him one day, hanging plastic while on a ladder or stairs in the basement, but did not observe him walking. The witness did not specify when this occurrence actually happened. This ALJ is uncertain about whether the witness was talking about stairs or an actual ladder, as there were problems with the interpreter's interpretation, including multiple interruptions for explanations. It is unlikely that the witness was talking about ladders because, ladders generally do not have "landings" on two levels.

37. Dr. J. Tashof Bernton, Respondents' expert, testified on September 27, 2021 as an expert in occupational and internal medicine. He stated that the osteoarthritis was preexisting. However, he stated that, if the mechanism of injury is correct as

described by Claimant, there was a “sudden injury, acute onset of pain, and sudden functional decrement; in other words, he couldn't do things. And his functional status changed immediately after the injury. Presuming that those things occurred, then the meniscal component is presumed to be work related.” However, in further questioning, if there was an assumption that Claimant was working his regular job, continued to be high functioning without limitations, then Dr. Bernton opined that the meniscal tears were not probably acute or caused by the work related injury.

38. Here, as found, Claimant did sustain a work related injury, causing him pain, disability, and restrictions, which he did not have prior to his work related accident. This is supported by the Claimant’s testimony, which is credible. Claimant reported the accident to his supervisor, which is what he had been instructed to do by the WC Coordinator. He stated that his supervisor advised him to take it easy but continue working, which is what he did. The following day or shift, Claimant went to the nurse (per the WC coordinator the nurses only stay until approximately 1:30 a.m.). The nurse reported to the Superintendent that Claimant was involved in an accident.

39. Also persuasive is the fact that the Monday following the Friday incident, Claimant completed a written incident report regarding the accident, which specifically described the mechanism of the accident, where the strap broke and sent him flying backwards. He reported that he injured his neck, back, shoulder and knee. This is supported by the medical records. Whether he hit the electrical panel first or second or the pipe first or second is not significantly material to the fact that Claimant was, in fact, involved in an accident which cause injuries. Dr. Cebrian, an ATP who only saw Claimant through telemedicine, agreed that Claimant was involved in an accident that cause an abrasion, swelling and contusions. The doctors all have slightly different versions of how the mechanics of the accident happened and whether there was a twisting of the knee or not. However, Dr. Hsin documented in his February 5, 2021 report that Claimant twisted his right knee during the fall. This ALJ finds that the complicated nature of the accident, the high velocity of the fall caused by the broken strap that was under high pressure and the technically specific use of tools or equipment may not have been well understood by any of the providers that were documenting the mechanism of injury. This does not detract from the fact that Claimant was involved in a highly intensive falling backward, slipping on grease incident, while on a very elevated narrow catwalk above a production floor many feet below, only protected by guardrails. This would have caused any worker to be flailing about to attempt to catch themselves before going off the side and falling all the way down, including twisting his body and knee. Claimant’s explanation of the twisting mechanism of hitting and twisting his right knee is credible.

40. Claimant clearly had a preexisting condition. None of the medical providers disagreed with this fact. What is also clear is that prior to the January 15, 2021 accident, Claimant was performing his work, which Claimant and the Superintendent agreed was heavy work. He would fix heavy equipment, had to move and lift heavy tools to repair the machinery in the plant, he would move heavy equipment around in order to fix them, he would go up and down ladders and stairs with his tools, he would crawl under and around the equipment. He performed this work for over four months without restrictions or disability or need for medical attention. Claimant testified that he did heavy equipment

mechanic work in the oil fields prior to his work with Employer. Neither party submitted any medical records that documented that Claimant had an active prior symptomatic condition. Dr. Kelly stated that he had good muscle tone in his upper and lower limbs. All of which are indications that Claimant was performing his heavy work without difficulties. The facts above support that Claimant had an aggravation of his preexisting osteoarthritis when he fell backwards, hitting and twisting his right knee and went to the ground, on the greasy narrow catwalk that was many feet above the plant floor, where Claimant's hard hat ended up falling.

41. The persuasive medical records and medical testimony also support this conclusion that Claimant sustained work related injuries as a consequence of the accident. Dr. Cebrian agreed that Claimant had swelling, abrasion and contusions that were cause by the work related incident. Dr. Keller, Dr. Bernton and Dr. Orent stated that Claimant had an aggravation of his preexisting conditions caused by the work related event. Any evidence to the contrary is found unpersuasive. Claimant has proven by a preponderance of the evidence that he had a compensable accident that caused compensable injuries on January 15, 2021.

42. Claimant was instructed by both Dr. Hsin and Dr. Cebrian to return to Dr. Hale to address his right knee condition. The WC Coordinator scheduled the patient medical appointments. The WC Coordinator spoke with Dr. Hale's office and they advised her Dr. Hale did not wish to see Claimant. No evidence was provided by either party that might indicate, after the coordinator had notice Dr. Hale would not see Claimant, that Claimant was given any new medical provider or given another appointment with either Dr. Cebrian or Dr. Hsin. Therefore, the right of selection passed to Claimant. It is coincidental that Dr. Keller is within the same medical group as Dr. Cebrian and that he was a listed designated provider by the Employer.

43. Whether the right knee arthroplasty/total knee replacement is reasonably necessary and related to the injury is irrefutably a question of fact. In this matter, Dr. Kelly and Dr. Orent's opinions are more persuasive than Dr. Cebrian and Dr. Bernton. The accident of January 15, 2021 caused the Claimant's symptoms, aggravating his underlying osteoarthritis and meniscal tears. While there may have been pathology than long preexisted the accident, these conditions were dormant, not causing Claimant disability, impairment or restrictions. Claimant was able to perform his activities of daily living, including heavy work prior to the January 15, 2021 accident. Since an employer takes a claimant as they find him, the fact that Claimant had a preexisting condition does not negate the fact that all of the physicians, including Dr. Keller, Dr. Hsin, and Dr. Orent state that the arthroplasty was reasonably necessary. Even Dr. Cebrian and Dr. Bernton state that, considering Claimant's advanced osteoarthritis, a total knee arthroplasty was appropriate. As found, the persuasive medical records and testimony lead this ALJ to determine that Claimant's total knee replacement was reasonably necessary and related to the January 15, 2021 accident.

CONCLUSIONS OF LAW

Based on these findings of fact, the Judge draws the following conclusions of law:

A. General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.. The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the claimant's rights nor in favor of the rights of the respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S..

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office (ICAO)*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Burden of Proof

The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. Sections. 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000; *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979; *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004).

"Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

C. Compensability

A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. Section 8-41-301(1)(b), C.R.S. (2020); *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course" of employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *Horodyskyj v. Karania*n, 32 P.3d 470, 475 (Colo. 2001).

There is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). Rather, it is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. Section 8-43-201, C.R.S.; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989). The determination of whether there is a sufficient nexus or causal relationship between a Claimant's employment and the injury is one of fact and one that the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996). When a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *H & H Warehouse v. Vicory, supra.*

A preexisting condition or susceptibility to injury does not disqualify a claim if the work related injury aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). However, the mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005).

Here, as found, the January 15, 2021 accident caused injury to Claimant's neck, back and right shoulder and substantially aggravated and accelerated the Claimant's right knee underlying pathology, requiring the need for medical care. Claimant was working on a high, narrow, greasy catwalk when a high tension strap, holding a motor broke, causing Claimant to fly backward, hitting his back, neck and right shoulder, and causing him to land in such a way that caused a twisting and injury to his right knee. While Claimant may not recall exactly each and everything that occurred during the fall, he did recall that he landed in such a way that he tried to prevent himself from falling from the catwalk. His co-worker did not see exactly how Claimant landed because he was placing a pin in the motor to secure it and turned around when Claimant was sitting up already. There were no other witnesses. Claimant reported the injury to his supervisor, who advised him to continue working but take it easy, which Claimant did. Claimant went to the onsite nurse the following shift. Claimant is found credible, especially with regard to his mechanism of injury.

Claimant's claim of compensability is supported by Claimant's testimony and Dr. Keller's determination that, while Claimant had underlying osteoarthritis, the work related accident aggravated his underlying condition causing the need for treatment. Dr. Orent's opinion that Claimant's right knee condition was aggravated by the January 15, 2021 event at work is also persuasive. It is particularly persuasive in light of the fact that Claimant had an extruded meniscus with complex tearing, which would have caused significant problems with walking and causing pain and none of the witnesses stated that Claimant had any problems performing his job prior to the work accident of January 15, 2021. Any contrary opinions of Dr. Cebrian and Dr. Hsin are unpersuasive and overcome by the opinion of Dr. Keller, and Dr. Orent's opinion with regard to the aggravation of the right knee condition. As found from the totality of the evidence, Claimant has proven by a preponderance of the evidence that Claimant had an accident on January 15, 2021 in the course and scope of his employment with Employer which caused injury to the neck, mid back, right shoulder and right knee, which required the need for medical care to cure and relieve Claimant from the effects of the work injury.

When expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); *Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992). As found, Dr. Orent's opinion is not found persuasive with regard to the lumbar spine. The records from Dr. Cebrian, Dr. Keller and Dr. Hsin make little mention of the lumbar spine condition. Dr. Bernton specifically found no palpable increased tone in the lumbar spine on May 6, 2021. This is found persuasive. Claimant has failed to show by a preponderance of the evidence that he has a lumbar spine condition or aggravation related to the January 15, 2021 work injury.

D. Authorized Medical Provider

"Authorization" refers to the physician's legal authority to treat the injury at the respondents' expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Section 8–43–404(5), C.R.S.2011, gives employers or insurers the right to choose treating physicians in the first instance in order to protect their interest in overseeing the course of treatment for which they could ultimately be held liable. The initial right to select a treating physician is an obligation that must be met forthwith upon notice of an injury, *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381, 383 (Colo.App.2006), and if medical services are not timely tendered by the employer or insurer, the right of selection passes to the employee, *Andrade v. Indus. Claim Appeals Office*, 121 P.3d 328, 330 (Colo.App.2005).

Here, employer properly designated an ATP when Claimant reported the January 15, 2021 incident. However, the record substantially supports Claimant's account that both Dr. Hsin and Dr. Cebrian, the designated ATP, referred Claimant to his own orthopedic specialist, Dr. Hale. However, Dr. Hale's office advised the WC Coordinator that Dr. Hale would not see Claimant. This provided Employer with notice that Claimant required a new designation. Respondents' failure to act caused the right to select a new physician to pass to Claimant. Claimant selected Dr. Keller, who was also on Respondents' list of providers. The evidence does not indicate that when Employer received the notice from Dr. Hale's office they instructed Claimant to return to the ATP or otherwise authorized treatment with the ATP. Instead, according to the uncontradicted testimony of Employer's WC Coordinator and Claimant, Employer took no action.

Under these circumstances, the ALJ reasonably infers that Employer did not provide treatment in a timely manner and that the right of selection passed to Claimant. See *Bunch*, *supra* at 383 (an employer is deemed notified of an injury when it has some knowledge of facts connecting the injury or illness with the employment and indicating to a reasonably conscientious manager that a potential compensation claim may be involved). Employer's challenge to the compensability of the claim or the right knee condition did not excuse its obligation to tender timely treatment. See *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228, 229 (Colo.App.1999) (employer has right to select treating physician although it contests liability); see also *Andrade,* 121 P.3d at 330 (initial right of selection of treating physician passes to employee where medical services are not timely tendered by employer or insurer). Further, the ATP directly refused to treat Claimant for his knee condition. This ALJ infers from this information that the ATP discharged Claimant from care as the WC Coordinator failed to provide any further appointments in follow up, which she stated was her job.

The circumstances presented here demonstrate that it would have been a useless formality for Claimant to have directly sought additional treatment with the ATP or Dr. Hsin, given the medical records that show that both Dr. Hsin and Dr. Cebrian opined that the continuing right lower extremity problems were unrelated to the January 15, 2021 accident and Claimant's testimony that the WC Coordinator, who advised him she would not schedule an appointment with Dr. Hale.

This ALJ also considered the potential argument that section 8–43–404(5)(a)(I)(A), C.R.S.2021, limited an Employer's obligation to selecting the ATP after Claimant's initial injury on January 15, 2021. The Court in *Bunch* does not equate the statutory phrase "in the first instance" with the phrase "at the time of injury." Rather, those phrases are independent. Thus, when, as here, Claimant experienced a condition that the ATP opined was not related and referred Claimant to his own physician, and Employer had notice, this did not relieve Employer from making a new designation to provide to Claimant. Because Claimant followed the procedure here, advising the WC Coordinator of the referrals and requesting she schedule the appointment, without success, the right to select his treating physician properly passed to Claimant. *Loofbourrow v. Indus. Claims Appeals Office of State*, 321 P.3d 548 (Colo. App. 2011)

A referral in the normal progression of authorized treatment allows for the authorized treatment provided by the doctor accepting the referral. *Greager v. Industrial Commission,* 701 P.2d 168 (Colo. App. 1985). When the referral reveals it is based on the independent medical judgment of the referring doctor, it may be construed as an authorized referral. *City of Durango v. Dunagan*, 939 P.2d 496, 500 (Colo. App. 1997). Dr. Hsin's initial report specifically found that Claimant had moderately severe osteoarthritis along with meniscal tearing in the right knee and an "aggravation of the preexisting arthritis." He recommended that Claimant follow-up with his joint replacement specialist at Loveland to discuss right knee replacement. This indicates some measure of urgency that the knee surgery is reasonably necessary. Reflecting that urgency, the Claimant testified he inquired of the WC Coordinator what his options were when she refused to schedule the appointment with Dr. Hale. Claimant testified that he attempted to continue working but was having difficulty, missing days from work, which caused him to lose his job.

The ALJ resolved that the Claimant's determination that he needed to proceed with his surgery on his own, was a reasonable path, including the subsequent determination to select Dr. Keller to perform the right knee arthroplasty. Therefore, because Claimant selected Dr. Keller, following the ATP's referral to a personal care provider, Dr. Keller became an authorized treating physician in this claim. This is also the case because Dr. Cebrian declined to treat Claimant for non-medical reasons and advised Claimant to seek treatment elsewhere. Respondents denied treatment by refusing to authorize any further care for the right knee injury, which included the need for surgery. When a designated physician refuses to treat for non-medical reasons, the Respondents must either designate a new physician or else the ability to choose an authorized treating doctor passes Claimant. *Ruybal v. University of Colorado Health Sciences Center*, 768 P.2d 1259 (Colo. App. 1988). Claimant then, chose Dr. Keller as an authorized physician due to the refusal of Dr. Cebrian to treat for non-medical reasons. *In re Claim of Morin,* I.C.A.O., WC No. 4-906-748-04 (May 6, 2014). Claimant has proven by a preponderance of the evidence that Dr. Keller is an authorized treating physician.

E. Medical Benefits that are Reasonably Necessary and Related

The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301, C.R.S. See *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986).

Section 8-42-101(1)(a), C.R.S., provides that Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Snyder v. Industrial Claim Appeals Office*, *supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *In re Claim of Foust*, I.C.A.O, WC, 5-113-596 (COWC October 21, 2020).

Section 8-42-101(6), C.R.S. states as follows:

> (6) (a) If an employer receives notice of injury and the employer or, if insured, the employer's insurance carrier, after notice of the injury, fails to furnish reasonable and necessary medical treatment to the injured worker for a claim that is admitted or found to be compensable, the employer or carrier shall reimburse the claimant, or any insurer or governmental program that pays for related medical treatment, for the costs of reasonable and necessary treatment that was provided. An employer, insurer, carrier, or provider may not recover the cost of care from a claimant where the employer or carrier has furnished medical treatment except in the case of fraud.
>
> (b) If a claimant has paid for medical treatment that is admitted or found to be compensable and that costs more than the amount specified in the workers' compensation fee schedule, the employer or, if insured, the employer's insurance carrier, shall reimburse the claimant for the full amount paid. The employer or carrier is entitled to reimbursement from the medical providers for the amount in excess of the amount specified in the worker's compensation fee schedule.

Claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying preexisting condition. See *Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 448 (1949); *Abeyta v. Wal-Mart Stores*, W.C. No. 4-669-654 (January 28, 2008).

The issue of whether medical treatment is necessary for the compensable aggravation or a worsening of Claimant's pre-existing condition is also one of fact for resolution by the ALJ based upon the evidentiary record. See *University Park Care Center v. Industrial Claim Appeals Office,* 43 P.3d 637 (Colo. App. 2001); *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970); *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985).

Expert medical opinion is not needed to prove causation where circumstantial evidence supports an inference of a causal relationship between the injury and the claimant's condition. *Savio House v. Dennis,* 665 P.2d 141 (Colo. App. 1983). Where conflicting expert opinion is presented, it is for the ALJ as fact finder to resolve the conflict. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). However, the ALJ is not held to a crystalline standard in articulating her findings. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

The Medical Treatment Guidelines (MTGs) are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook V. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide "All health care providers shall use the Medical Treatment Guidelines adopted by the Division." In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011). While the Guidelines may carry substantial weight, and provide substantial guidance, the ALJ is not bound by the Guidelines in deciding individual cases or the principles contained therein alone. Indeed, Section 8-43-201(3), C.R.S. specifically provides:

> It is appropriate for the director or an administrative law judge to consider the medical treatment guidelines adopted under section 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease. *The director or administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations.* (*Emphasis added*).

Pursuant to W.C.R.P. Rule 17-1(A), the statement of purpose of the guidelines is as follows:

> In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost.

W.C.R.P. Rule 17-5(C) provides "The treatment guidelines set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

It is appropriate for an ALJ to consider the guidelines while weighing evidence, but the Medical Treatment Guidelines are not definitive. *Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); *aff'd Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication); *Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the medical treatment guidelines were not shown to be present, ICAO was not persuaded that such a determination would be definitive). Concerning the issue presented, the MTG's indicate that "[t]here is some evidence that the ALJ may decide the weight to be assigned the provisions of the *Guidelines* upon consideration of the totality of the evidence. *See Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006). As found in this case, while the MTGs provide for conservative preoperative surgical care, including physical therapy, injections or other treatment before proceeding with a total knee arthroplasty, Dr. Hsin and Dr. Keller, both orthopedic specialist stated Claimant's knee condition, in light of the existing osteoarthritis, would likely need the arthroplasty. As found, Dr. Keller's opinion is found persuasive that Claimant's need for the total knee replacement was a reasonable course of care, despite other non-operative measures that could have been undertaken. Opinions to the contrary are not found persuasive. Claimant has proven by a preponderance of the evidence that Claimant's right knee surgery was reasonable, necessary and related to the January 15, 2021 work related accident.

ORDER

IT IS THEREFORE ORDERED THAT:

1. Claimant has proven by a preponderance of the evidence that he sustained compensable injuries to his neck, right shoulder, mid-back and right lower extremity, including an aggravation of his right knee osteoarthritis, in the course and scope of his employment on January 15, 2021.

2. Dr. Kenneth Keller is an authorized treating physician.

3. Respondents shall pay medical benefits that are reasonably necessary and related to the accidental injuries of January 15, 2021, including for the right total knee replacement recommended and performed by Dr. Keller, in accordance with the Colorado Medical Fee Schedule and pursuant to Section 8-42-101(6), C.R.S.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge' s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the address below for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: 11/8/2021

Elsa Martinez Tenreiro
Administrative Law Judge
Office of Administrative Courts
1525 Sherman St 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove he suffered a compensable injury to his left shoulder on April 5, 2021?

- If the claim is compensable, did Claimant prove he is entitled to TTD benefits commencing April 12, 2021?

- Did Claimant prove treatment he received from University Medical Center, Dr. Jennifer Fitzpatrick, and Parkview Medical Center was authorized?

- The parties stipulated to an average weekly wage of $773.22.

- The parties stipulated that if the claim is compensable, the treatment provided by and on referral from Southern Colorado Clinic and Dr. Terrance Lakin, was recently necessary, related, and authorized.

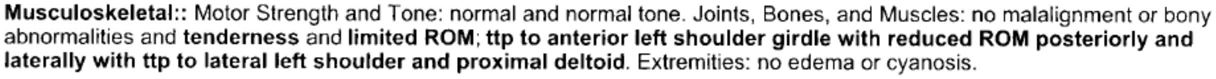
FINDINGS OF FACT

1. Claimant worked for approximately 20 years as cleaner in Employer's environmental services department. The job is physically demanding and requires frequent lifting and carrying of heavy items, including soiled linens and trash.

2. Claimant has a history of progressive left shoulder pain since 2018. Initially it was "just soreness . . . nothing major." He managed the pain with OTC ibuprofen, approximately once per week. He sought no other specific treatment, although he periodically mentioned the pain during visits with his PCP, Veronica Ritchey, FNP-C.

3. The pain gradually worsened and became more frequent. By 2020, he was taking ibuprofen approximately twice a week.

4. On March 1, 2021, Claimant complained to Ms. Ritchey of left shoulder pain with reduced range of motion and weakness in the left arm. Ms. Ritchey noted, "[he] has had chronic left shoulder pain that has progressed." Claimant testified he thought the pain was from "too much lifting" at work. Examination of Claimant's left shoulder showed"



Musculoskeletal:: Motor Strength and Tone: normal and normal tone. Joints, Bones, and Muscles: no malalignment or bony abnormalities and **tenderness** and **limited ROM**; **ttp to anterior left shoulder girdle with reduced ROM posteriorly and laterally with ttp to lateral left shoulder and proximal deltoid**. Extremities: no edema or cyanosis.

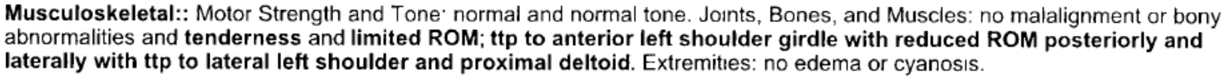
5. Confusingly, despite the reported symptoms and clinical findings, Ms. Ritchey provided no shoulder diagnosis and recommended no additional workup or treatment.

6. Claimant testified that on or about April 5, 2021, he had to clean a bathroom that was flooded by a backed-up drain. An unknown individual had attempted to soak up the water with several blankets. Claimant testified he placed the wet blankets in bags, loaded them into a laundry cart, and took them to the laundry room.

7. Claimant testified he experienced minor pain in his left shoulder while lifting the blankets. He continued working and finished his shift. Claimant did not report the incident to anyone because no one was around and because he "didn't think it was going to be that bad," and "figured it would go away."

8. Claimant worked his regular duties for several more days. He testified, "I didn't have any problems with it," until his shift on April 11, 2021. On that date, Claimant testified his left shoulder became very painful after two hours of work. He told his supervisor, Loretta Maddux, he could not keep working because of the shoulder pain and needed to go home. Claimant did not mention any accident or work injury to Ms. Maddux.

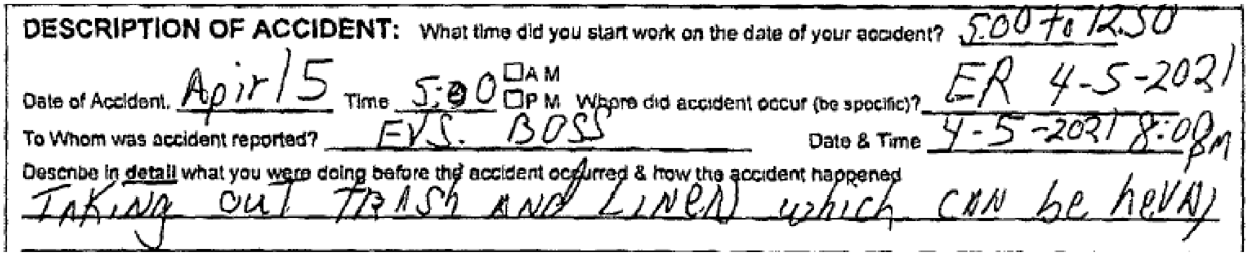
9. Claimant saw Ms. Ritchey on April 12, 2021. Ms. Ritchey documented, "pt in for pain in the left shoulder that he has had intermittently for the past few years, but over the past week it has progressed to severe with inability to use the LUE or pick it up laterally without the use of the right hand and he has tingling in the fingers of the left hand . . . . He has pain in the left shoulder, and ***denies injury*** although he does work in custodial work and sweeps, mops, and carries heavy objects." (Emphasis added). There was no mention of any incident involving wet blankets. Ms. Ritchey's examination findings were identical to those she had documented at Claimant's appointment on March 1, 2021:



Musculoskeletal:: Motor Strength and Tone: normal and normal tone. Joints, Bones, and Muscles: no malalignment or bony abnormalities and **tenderness** and **limited ROM; ttp to anterior left shoulder girdle with reduced ROM posteriorly and laterally with ttp to lateral left shoulder and proximal deltoid**. Extremities: no edema or cyanosis.

10. Ms. Ritchey diagnosed "pain of the left shoulder joint - with progressive pain that persists over the last several years with NSAIDs, although severe in the past week." She ordered an MRI and referred Claimant to Dr. Jennifer Fitzpatrick for a surgical evaluation. Ms. Ritchey also restricted Claimant to no lifting more than 10 pounds and no use of the left arm.

11. On April 13, 2021, Claimant reported the shoulder symptoms to Debra G[Redacted], a registered nurse in Employer's employee health department. Claimant said he had seen his doctor for shoulder pain but could not afford surgery. Claimant told Ms. G[Redacted] he thought the shoulder pain caused by his years of work for Employer. He said his shoulder had been painful for several years but had recently gotten worse. Ms. G[Redacted] explained she needed a specific date for the accident report, and asked if Claimant could recall any incident or activity that caused the injury. Claimant "didn't give me anything specific." Claimant completed the accident report, on which he stated the injury occurred on April 5, 2021. The form contains two sections that asked Claimant to describe how he was injured. He wrote:



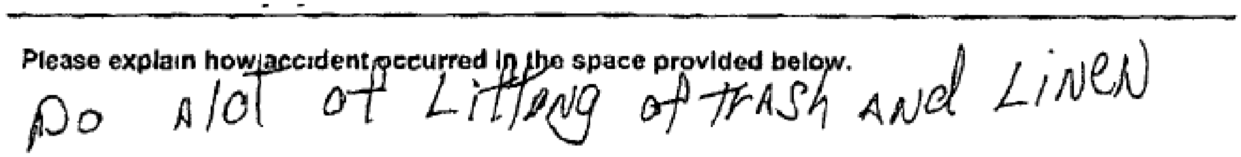
DESCRIPTION OF ACCIDENT: What time did you start work on the date of your accident? 500 to 1250

Date of Accident. Apir 15 Time 5:00 □A M □P M Where did accident occur (be specific)? ER 4-5-2021

To Whom was accident reported? EVS. BOSS Date & Time 4-5-2021 8:00 pm

Describe in detail what you were doing before the accident occurred & how the accident happened

TAKING OUT TRASH AND LINEN which CAN be heVAY



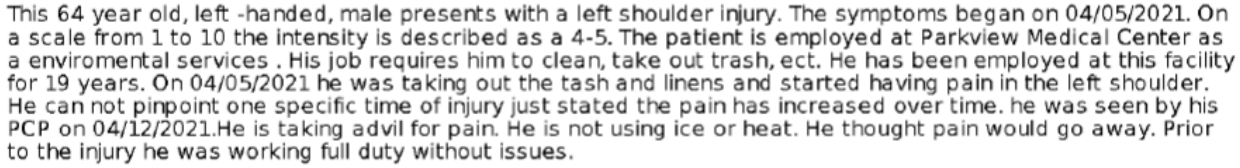
Please explain how accident occurred in the space provided below.

DO A lot of Lifting of TRASH AND LINEN

12. There was no mention of any flooded bathroom or wet blankets. Although Claimant referenced lifting heavy linen, the ALJ interprets this as was referring to his typical work activities rather than a specific accident. This interpretation is consistent with his inability to pinpoint any specific incident while discussing the matter with Ms. G[Redacted].

13. Ms. G[Redacted] gave Claimant a list of designated providers, and Claimant chose the Southern Colorado Clinic.

14. Claimant was evaluated by Terry Schwartz, PA-C at Southern Colorado Clinic on April 13, 2021. Claimant completed an intake form on which he described the accident/injury as "taking out trash in ER Dept." Mr. Schwartz documented the history as,



This 64 year old, left -handed, male presents with a left shoulder injury. The symptoms began on 04/05/2021. On a scale from 1 to 10 the intensity is described as a 4-5. The patient is employed at Parkview Medical Center as a enviromental services . His job requires him to clean, take out trash, ect. He has been employed at this facility for 19 years. On 04/05/2021 he was taking out the tash and linens and started having pain in the left shoulder. He can not pinpoint one specific time of injury just stated the pain has increased over time. he was seen by his PCP on 04/12/2021.He is taking advil for pain. He is not using ice or heat. He thought pain would go away. Prior to the injury he was working full duty without issues.

15. Mr. Schwartz further noted, "**left shoulder is progressively getting more painful with use. Left-handed. No specific injury or incident that precipitated this.**" (Bold in original). Physical examination showed tenderness of the anterior shoulder capsule and reduced range of motion. Impingement and rotator cuff tests were negative, except the lift off test, which was "comparable to right [shoulder]." Mr. Schwartz opined,

> Patient appears to have a progressive, degenerative situation. Cannot identify a specific event or injury related to onset. Discussed findings with patient. He had seen his PCP and was told he possibly has a tear but to pursue private insurance was going to be costly, so since it hurts at work, thought he should have evaluated through WC. I don't believe that this is a specifically WC injury or valid claim, so will open and close this case w/o impairment or maintenance established. Referred back to his employee health department.

16. Claimant took the paperwork he received from Southern Colorado Clinic back to Ms. G[Redacted]. She explained that because the designated provider determined the condition was not work-related, Employer would need an FMLA certification from his personal provider.

17. Claimant saw Ms. Ritchey on April 15, 2021 to complete the FMLA paperwork. Ms. Ritchey documented, "he has had persistent pain in the left shoulder as he is a housekeeper . . . and he mops, sweeps, and the left shoulder has progressed to the point that it hurts to use it, to do sweeping, mopping, or any repetitive movements." There is no mention of any incident with wet blankets. Ms. Ritchey completed the FMLA form, stating Claimant could not work his regular job until the results of the MRI were known and he had been evaluated by an orthopedist.

18. The left shoulder MRI was completed on April 30, 2021. It showed a full thickness supraspinatus tendon tear with adjacent tendinopathy, osteophytes at the margins of the AC joint impinging on the supraspinatus musculotendinous junction, small subchondral cysts in the lateral humeral head, thinning of articular cartilage in the superior glenoid, and effusion in the subacromial bursa.

19. Dr. Fitzpatrick performed left shoulder arthroscopic surgery on June 18, 2021. She performed a rotator cuff repair, distal clavicle excision, and extensive glenohumeral joint debridement. The operative report documents a large rotator cuff tear, a subacute traumatic labral tear, evidence of a prior biceps tendon rupture, minimal glenohumeral joint changes, significant AC joint arthrosis, significant synovitis in the subacromial space and anteriorly along the subscapularis, and a Type II acromion impinging on the rotator cuff. Dr. Fitzpatrick also noted significant AC joint arthrosis with associated soft tissue inflammation surrounding the AC joint.

20. Claimant saw Dr. Miguel Castrejon for an IME at his counsel's request on August 16, 2021. Claimant described cleaning up wet blankets on April 5, 2021, and stated, "at one point, he recalls lifting several blankets and throwing them forward onto the cart. As he did so, he experienced a pulling sensation within the left shoulder." Claimant told Dr. Castrejon the pain progressively worsened over the next several days to the point that he could not move his arm.[1] Claimant reported "occasional" shoulder pain before April 5, 2021 that improved with rest and did not limit his day-to-day activities. Dr. Castrejon disagreed with Mr. Schwartz's rationale for finding the shoulder symptoms are not work-related. Dr. Castrejon noted there was no documentation of any specific diagnosis, treatment recommendations, or shoulder-related disability before April 2021. Dr. Castrejon noted a pre-existing condition does not preclude workers' compensation coverage if an accident at work aggravates or accelerates the pre-existing condition. He pointed to Dr. Fitzpatrick's description of the labral tear as "subacute" as evidence of a "fairly" recent injurious event. Dr. Castrejon concluded Claimant's shoulder condition caused by the activity he described on April 5, 2021.

[1] This conflicts with Claimant's testimony that he "didn't have any problems with" the shoulder for several days after the alleged injury until April 11, 2021.

21. David S[Redacted] is the operations manager in Employer's environmental services department. Mr. S[Redacted] has known Claimant for many years. They are friendly with each other but do not have a close relationship because they work on different shifts. Mr. S[Redacted] testified to a brief conversation with Claimant in the break room. Claimant stated his shoulder was bothering him, and Mr. S[Redacted] said something to the effect of "boy, this getting old is for the birds, isn't it?" They chuckled and went their separate ways. Claimant said nothing about having hurt the shoulder at work. Mr. S[Redacted] could not recall the exact date of the conversation, but testified it was March or April 2021.

22. The testimony of Ms. G[Redacted] and Mr. S[Redacted] was credible and persuasive.

23. Claimant's testimony is not persuasive because it conflicts with his prior statements to Ms. Ritchey, Mr. Schwarz, and Ms. G[Redacted].

24. Mr. Schwartz's causation opinions are credible and more persuasive than the contrary opinions offered by Dr. Castrejon.

25. Claimant failed to prove he suffered a compensable injury to his left shoulder on April 5, 2021.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). A pre-existing condition does not disqualify a claim for compensation if a work accident aggravates, accelerates, or combines with the underlying condition to cause disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The mere fact an employee experiences symptoms at or after work does not automatically establish a compensable injury. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (October 27, 2008); *Garamella v. Paul's Creekside Grill, Inc.*, W.C. No. 4-519-141 (March 6, 2002). The claimant must prove entitlement to benefits by a preponderance of the evidence. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is evidence that leads the ALJ to find a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). Put another way, the standard is met when the existence of a contested fact is "more probable than its nonexistence." *Industrial Commission v. Jones*, 688 P.2d 1116, 1119 (Colo. 1984). The facts in a workers' compensation case are not interpreted liberally in favor of either the claimant or the respondents. Section 8-43-201.

As found, Claimant failed to prove he suffered a compensable injury to his left shoulder on April 5, 2021. Claimant's testimony that he injured his shoulder lifting wet blankets on April 5, 2021 conflicts with his own written statements on the accident report and the intake form at Southern Colorado Clinic. It also conflicts with his closely contemporaneous oral statements to Ms. Ritchey, Mr. Schwartz, and Ms. G[Redacted].[2] Claimant has repeatedly referenced his years of physically demanding work for Employer as potentially causative, but said nothing about any specific incident until many months later at the IME with Dr. Castrejon.

As for the opinion evidence, Mr. Schwartz's conclusions are credible and more persuasive than Dr. Castrejon's contrary opinions. Mr. Schwartz appropriately relied on the fact that Claimant did not report any specific incident but "just stated the pain has increased over time." He told Ms. Ritchey and Ms. G[Redacted] essentially the same thing. Ms. Ritchey has not explicitly stated she believes the condition is work-related, but to the extent she has addressed causation, she has repeatedly referenced Claimant's work activities in general, rather than any accident or specific incident. Although many years of manual labor could have contributed to the development of Claimant's shoulder pathology, this is not a claim for an occupational disease. This is a claim for an accidental injury caused by a discrete activity on a specific date.

Claimant had a documented history of progressive shoulder pain for several years before the alleged accident. Examinations by Ms. Ritchey shortly before and shortly after the alleged accident showed identical findings. Dr. The worsening of Claimant's pain April 2021 probably reflects the natural progression of Claimant's underlying condition as opposed to any work injury. Claimant failed to prove his left shoulder condition was caused or aggravated by his work activities on April 5, 2021.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email

[2] Mr. Salazar thought the conversation took place in March or April 2021. Neither date is helpful for Claimant's case. If the conversation occurred in March, it means the shoulder was already bad enough to mention during a brief conversation with an acquaintance before the alleged incident. If the conversation was after the alleged injury, it provides yet another example of Claimant not referencing a specific incident when describing his shoulder problems.

address, it need n will only ot also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: November 8, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

The parties endorsed a number of issues for the November 4, 2021 hearing. However, as an initial matter, the ALJ considered the claimant's motion to return to Dr. Caroline Gellrick for completion of range of motion measurements as part of the Division sponsored independent medical examination (DIME) process. The ALJ heard arguments on the motion and now issues this order granting the motion.

As a result of the ALJ's present order, all other endorsed issues are held in abeyance pending the completion of the DIME process.

FINDINGS OF FACT

1. The claimant suffered a work injury on November 28, 2018. The respondents have admitted liability for the claimant's injury.

2. On May 16, 2020, the claimant attended a Division sponsored independent medical examination (DIME) with Dr. Caroline Gellrick. Following the DIME, Dr. Gellrick issued her DIME report. In that report, Dr. Gellrick noted that the range of motion (ROM) measurements could not be validated at the time of the DIME. Dr. Gellrick recommended the claimant undergo a psychiatric evaluation and then return to her for ROM measurements.

3. On July 11, 2020, the claimant was seen by Dr. Robert Kleinmann for a psychiatric evaluation.

4. After her review of Dr. Kleinmann's report, on September 12, 2020, Dr. Gellrick amended her DIME report. In that report, Dr. Gellrick stated that she was willing to see the claimant to complete ROM measurements.

5. On November 24, 2020, the Division of Workers' Compensation DIME Unit issued a letter to the parties. That letter instructed the claimant to return to Dr. Gellrick for repeat ROM measurements.

6. The claimant returned to Dr. Gellrick on February 2, 2021 for completion of the ROM measurements. However, it was on that date, that Dr. Gellirck learned that the claimant had undergone surgery of her lumbar spine on December 29, 2020. Dr. Gellrick noted in her February 2, 2021 report that she was unable to complete the ROM measurements because the claimant was under orders from her spine surgeon not to bend.

7. Although lumbar spine ROM measurements were not completed by Dr. Gellrick, on March 9, 2021, the DIME Unit issued a notice that the DIME process in this case had concluded.

8. On March 10, 2021, the respondents filed a Final Admission of Liability (FAL) relying upon Dr. Kleinmann's July 11, 2020 report.

9. It is the opinion of the ALJ that completion of the lumbar spine ROM measurements is necessary to complete the DIME process in this case. Therefore, the ALJ finds that good cause exists for the claimant to return to Dr. Gellrick for completion of the ROM measurements addressed in the Division's November 24, 2020 letter. Furthermore, until such ROM measurements are complete, and Dr. Gellrick amends her DIME report to reflect the same, the DIME process will not be complete.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Section 8-43-502(3), C.R.S., provides, in pertinent part:

> Whenever the director or an administrative law judge deems it necessary to assist in resolving any issue of medical fact or opinion, the director or administrative law judge shall cause an employee to be examined by a physician or physicians from the medical review panel.

5. Here, the ALJ concludes that there is an issue involving a medical fact, namely, the lack of completion of ROM measurements. Therefore, the ALJ further concludes that the DIME process is not yet complete in this matter because Dr. Gellrick has been unable to complete ROM measurements as directed by the Division's

November 24, 2020 letter. Dr. Gellrick has attempted multiple times to complete ROM measurements, but has been unable to do so. The ALJ finds that it is necessary for the DIME physician to have the opportunity to complete the necessary ROM measurements and opine with regard to any related impairment rating. Therefore, the ALJ finds that good cause exists for the claimant to return to Dr. Gellrick for these ROM measurements.

ORDER

It is therefore ordered:

1. The DIME process is not yet complete in this matter.

2. The claimant shall return to Dr. Gellrick for the range of motion measurements (ROM) addressed in the Division's November 24, 2020 letter.

3. Dr. Gellrick shall complete range of motion measurements and update her DIME report to reflect these measurements and any related impairment rating.

4. The parties shall keep the DIME Unit apprised of the claimant's appointment date and any additional developments regarding the same.

5. All issues endorsed for the November 4, 2021 hearing are held in abeyance pending the completion of the DIME process.

Dated this 9th day of November 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that his 16% extremity rating for his left shoulder should be converted to that of the whole person?

II. Disfigurement

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Admitted Work Injury, and Subsequent Treatment

1. Claimant sustained an admitted injury to his left shoulder region at work on April 16, 2019. (Ex. 1, p. 1). He initially reported having left shoulder pain after living a 50-pound bag of rice while at work. He was diagnosed with biceps tendinitis and a left trapezius strain. (Ex. C, pp. 1, 7-12). According to the initial progress note from April 17, 2019, the specific points of pain, as shown on a diagram, were over the left shoulder/biceps region, and also approximately where the scalene muscles attach from the cervical spine down to the upper two ribs. *Id* at 11. This area includes the trapezius and other muscles and tendons proximal to the shoulder joint. The note further states:

> Patient notes he is experiencing parasthesias and numbness in his left hand, pain with gripping and grasping. *Patient notes he has developed stiffness in his left neck and upper back.” Id.* at 8. (emphasis added).

Claimant’s initial physical therapy was specifically prescribed to target both the left shoulder *and* the left trapezius strain. *Id* at 22.

2. In a UCHealth progress note dated 7/8/2019 by PA Terry Westbrook, it was noted: “On exam, the patient does have reproducible numbness to the left arm with palpation above the *clavicle.* There is *no* reproducible left arm pain with movement of the neck or palpation of the *neck*.” Id at 27. (emphasis added).

3. Claimant returned to UC Health on August 21, 2019 for continued treatment. (Ex. 2, p. 55). The pain diagram points both to the shoulder and to approximately where the scalene muscles attach from the cervical spine. *Id* at 56. Dr. Burns performed a physical examination of the shoulder on September 19, 2019, stating:

> “moderate pain with *resisted cervical rotation to the left, the side of the pain….” Id.* at 59. She stated that Claimant’s primary finding on exam is *pain with resisted cervical rotation to the left,* pain is anterior, just above the medial clavicle.” *Id.* at 60. (emphasis added).

Shoulder Surgery by Dr. Duffey

4. Claimant failed conservative treatment and the surgery was performed by Dr. James Duffey on August 27, 2020. (Ex. 5). Claimant followed up with Dr. Duffey on October 2, 2020. Dr. Duffey states that, “[Claimant] feels like he is getting better week by week. The sore spot in his shoulder is anterior. He has some trapezial pain as well*. Id* at 109.

5. In Dr. Duffey’s post-surgical progress note dated 10/2/2020, Dr. Duffey noted: “Gradual progress following subacromial decompression, biceps tenodesis, labral debridement and distal clavicle resection. Will progress to resistive exercise at this point for his biceps and will continue with cuff rehab. He is still having some *trapezoidal pain* which is *likely related to his cervical spine issues.”* (Ex. 5, p. 109 (emphasis added).

6. Dr. Duffey continued: “He feels like he is getting better week by week. The sore spot in his shoulder is anterior. *He has some trapezial pain as well. I am reminded that he has a history of cervical spondylosis with radiculopathy.* He is not having *as many* radicular symptoms currently”. Id. (emphasis added).

7. Claimant underwent more physical therapy after his surgery. He attended his sixth post-surgical appointment on October 5, 2020. (Ex. 3, p. 87). It was noted that the shoulder itself was still not the primary functionally limiting factor: “[There is] Still pain in [left] upper shoulder/neck rather than [the] shoulder.” *Id.* Manual therapy was targeted at Claimant’s upper trapezius muscles and scalene muscles. *Id* at 88.

IME by Dr. Castrejon

8. Before being placed at MMI, Claimant underwent an independent medical examination with Dr. Miguel Castrejon on March 3, 2020. (Ex. 4). Dr. Castrejon performed an examination of Claimant’s under left upper quadrant. He noted tenderness along the superior aspect of the trapezius and along the left sternocleidomastoid distally onto the insertion of the clavicle. *Id.* at 96. He noted that the sternocleidomastoid muscle is located at the base of the skull and connects distally into the insertion of the clavicle. Claimant was experiencing muscle hypertonicity and spasm in this area. It was noted that these symptoms reduced Claimant’s cervical extension by approximately 50% of normal. *Id.*

Claimant placed at MMI by Dr. Burns / Impairment Rating Assigned

9. Claimant was placed at MMI by Dr. Burns on January 14, 2021 with a 16% scheduled rating. (Ex. 1, p. 12). Claimant was provided 10% for the distal clavicle resection and 7% for range of motion loss, which combined to 16% per the *AMA Guides.* The 16% percent scheduled rating would convert to a 10% whole person rating.

10. During her physical exam of Claimant, Dr. Burns noted, under Left Shoulder: "Palpation- mildly tender over the anterior shoulder/biceps tendon, no clavicle tenderness, no lateral tenderness or significant posterior tenderness to palpation. *He does not have any upper trap or left cervical tenderness". Id* at 11. (emphasis added).

11. Under her Assessment and Plan, she noted three items:

    1. *Strain* of left trapezius muscle, subsequent encounter
    2. Impingement syndrome of left shoulder
    3. Status post arthroscopy of left shoulder

    She then discussed with Claimant his issues with overhead lifting, and that they had agreed to note this as a permanent work restriction, even though he currently had a desk job. *Id* at 11, 12.

Claimant Testifies at Hearing

12. Claimant testified at hearing. He recalled the mechanism of injury, stating he was putting away a 50lb bag of rice under a counter when he heard a pop in his shoulder. This led to immediate pain in the "shoulder, neck, [and] down the arm." He was clear that "a lot of it was in the shoulder and the neck and in the back." (Transcript, pp. 13-14). He further stated he would have pain and tightness in his trapezius muscle. *Id* at 14-15.

13. Claimant testified that he underwent surgery for his shoulder in August of 2020. The surgery made the pain in and down the arm better, but he still continues to have the pain in his neck, the shoulder, and now headaches. *Id* at 16. Claimant stated that his physical therapy included the therapist working specifically on the trapezius and scalene muscles, because they would tighten up. It would also cause the headaches. *Id* at 17.

14. Claimant testified that he remains functionally limited in ways that impact his activities of daily living. Attempting to perform said activities leads to more tightness, soreness, and pain. Claimant attempted to demonstrate where the symptoms were located, stating "Throughout the whole shoulder right here, into the neck, and down the back into the – like, shoulder blade." *Id* at 19.

15. Claimant testified that he sustained four arthroscopic scars from his surgery. The ALJ had difficulty seeing the arthroscopic scars over the Google Meet platform, but was able to verify their existence. The ALJ accepted, through Counsel, that Claimant's arthroscopic

scars were "typical" of what you would see from this routine surgery, i.e., no extensive discoloration, keloid scarring, etc.

Dr. Scott's IME / Hearing Testimony

16. Dr. Douglas Scott performed an IME of Claimant on December 29, 2019. (Ex. B, pp. 7-13). Dr. Scott's report documented Claimant's complaints were "Left lateral neck pain" and pain radiating down his left upper shoulder into his left arm. *Id.* at 8. Dr. Scott discussed Claimant's mechanism of injury:

> [Claimant] describes the initiation of a forceful adduction/internal rotation of his left shoulder. This movement involves the subscapularis muscle with descending trapezius stabilization of the scapula. The descending trapezius muscle also bends the head to the ipsilateral side. *Id.*

17. Dr. Scott noted palpable muscle spasm over that portion of the trapezius on examination. *Id.* at 11. He acknowledged that the mechanism involved the descending trapezius that work to stabilize the scapula. Dr. Scott disagreed that the symptoms were work related.

18. Dr. Scott was asked:

> Q Did the Claimant have an injury from April 16 of 2019 that went beyond the shoulder?
> A Well, a strain of the trapezius muscle – the location of the strain is proximal to the left shoulder." (Transcript at 49).

Dr. Scott then opined, however, there was no indication of any functional impairment beyond the upper extremity. He stated that the ATP did not provide an impairment rating for the neck, therefore she felt that the injury was to the left shoulder. *Id* at 49-50. In the final analysis, Dr. Scott felt that Claimant had experienced a *strain* of his trapezius from the work injury, but the neck pain due to spondylosis was not due to the work injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). While the ALJ finds that Claimant has testified sincerely regarding his treatment and ongoing symptoms, and reported his symptoms to all medical providers, it is noted that Claimant has no expertise in issues of causation, nor could he be expected to.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, the ALJ has heard the IME opinions of two medical experts, both of whom are sincere in their opinions regarding the evidence at issue herein. Further, the ALJ has reviewed the medical opinions of Claimant's ATPs, as expressed through their written reports.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Conversion to Whole Person, Generally

F. Whether the Claimant sustained a "loss of an arm at the shoulder" within the meaning of § 8-42-107 (2) (a), C.R.S., or a whole person medical impairment compensable under § 8-42-107 (8), C.R.S. is one of fact for determination by the ALJ. In resolving this question, the ALJ must determine the situs of the Claimant's "functional impairment," and the situs of the functional impairment is not necessarily the location of the injury itself. Langton v. Rocky Mountain Health Care Corp., supra; Strauch v. PSL Swedish HealthcaSystem, supra. Because the issue is factual in nature, we must uphold the ALJ's determination if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; Walker v. Jim Fuoco Motor Co., 942 P.2d 1390 (Colo. App. 1997). This standard of review requires us to defer to the ALJ's resolution of conflicts in the evidence, credibility determinations, and plausible inferences drawn from the record. Metro Moving and Storage Co. v. Gussert, 914 P.2d 411 (Colo. App. 1995).

G. Whether the Claimant has sustained an "injury" which is on or off the schedule of impairment depends on whether the claimant has sustained a "functional impairment" to a part of the body that is not contained on the schedule. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Functional impairment need not take any particular impairment. Discomfort which interferes with the claimant's ability to use a portion of his body may be considered "impairment." *Mader v. Popejoy Construction Company, Inc.*, W.C. No. 4-198-489, (ICAO August 9, 1996). Pain and discomfort which limits a claimant's ability to use a portion of his body may be considered a "functional impairment" for determining whether an injury is on or off the schedule. *See, e.g., Beck v. Mile Hi Express Inc.*, W.C. No. 4- 238-483 (ICAO February 11, 1997).

Conversion, as Applied

H. In this case, the ALJ finds that Claimant injured his left trapezius, and injured his shoulder joint as well, while lifting the bag of rice at work. The claim was properly admitted as compensable, since Claimant suffered a work injury to both regions which required medical treatment. In this case, the ALJ finds that the treatment for his shoulder injury was appropriate, to wit: the subacromial decompression, biceps tenodesis, labral debridement, and distal clavicle resection as performed by Dr. Duffey on 8/27/2020. Claimant's physical therapy and aftercare was also appropriately rendered, resulting in him being placed at MMI by this ATP, Dr. Burns, for his impingement syndrome. The ALJ further finds that Dr. Burns applied the proper criteria in assigning an impairment rating of 16%, limited to the schedule. Per the AMA Guides, Dr. Burns also performed the ministerial, numerical act of converting from extremity to the whole person, but did not make this a recommendation or finding.

I. The ALJ concurs with Dr. Burns, and the subsequent opinion of Dr. Scott that this injury should not be converted – not because Claimant does not continue to have symptoms as he describes, but because Claimant suffered only a *strain* to his trapezius. He was properly placed at MMI for this trapezius strain when he was rated. In so doing, Dr. Burns found that this strain was not of a *permanent* nature; thus it did not warrant a *permanent* impairment rating. At the final exam, in fact, she noticed no *tenderness* with the trapezius. The strain had resolved. The ALJ concurs. In this instance, there is record support that Claimant's ongoing trapezius issues are due instead to Claimant's cervical spondylosis. This was noted by Dr. Duffey in his reports. Such finding is also consistent with PA Westbrook's notes of 7/8/2019, wherein Claimant's *arm* troubles (not his trapezius) were consistent with the impingement syndrome – which as appropriately addressed by Dr. Duffey's surgery. In fact, Claimant's *arm* issues largely resolved from the surgery.

J. There is no medical evidence that Claimant's cervical spondylosis (the source of his *ongoing* trapezius pain) was in any way *caused* by lifting the bag of rice. This degenerative condition already existed at the time of the injury. There is also insufficient evidence in the record that such lifting incident *caused* Claimant's latent spondylosis to become symptomatic, requiring medical treatment. Certainly neither Drs. Burns, Duffey, nor Scott so opined. The ALJ notes that while Dr. Castrejon no doubt made sincere observations about Claimant's trapezius complaints at the time of his IME exam, such exam was performed 10 months *before* Claimant was placed at MMI. Thus, in the interim, the *strain* component that Dr. Castrejon observed had resolved. Further, at no point did Dr. Castrejon opine (that the ALJ can discern) that any symptoms of spondylosis were *caused by* the lifting incident – thus leading to Claimant's *ongoing* trapezius complaints. To the extent that Dr. Castrejon did so opine, the ALJ is more persuaded by Drs. Duffey, Burns, and Scott.

K. In summary, while Claimant may have made a colorable claim that his ongoing trapezius complaints affect functioning proximal to the shoulder joint, he has not shown that such complaints are *causally related* to the work injury. Claimant has not shown in this instance that his scheduled rating should be converted to the whole person.

Disfigurement

L. The ALJ finds and concludes that as a result of his 4/16/2019 work injury, Claimant has a visible disfigurement to the body consisting of four arthroscopic surgical scars surrounding his left shoulder. As found, those four scars are typical of what one might observe from such procedure, with no observable swelling, and no significant skin discoloration or alteration of texture beyond the small incisional scars. Nonetheless, Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation. Section 8-42-108 (1), C.R.S. The ALJ Orders that Insurer shall pay Claimant $500 for that disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

ORDER

It is therefore Ordered that:

1. Claimant's request to convert his extremity rating to that of the whole person is denied and dismissed.

2. Respondents shall pay disfigurement benefits in the amount of $500.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is **highly recommended** that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NOS. 5-111-973-005

ISSUES

The issues set for determination were:

- Is Claimant entitled to penalties for Respondent's failure to pay the settlement proceeds agreed to by the parties' Stipulation and approved by the Order dated March 11, 2020?

PROCEDURAL STATUS

At the outset of the hearing on June 9, 2021, the Court heard argument on Respondent's Opposed Motion for Extension of Time to Commence Hearing, filed on May 25, 2021. The ALJ reviewed the Motion, Claimant's Response (filed on June 7, 2021) and heard oral argument. Claimant objected to the requested continuance, as he relied on the Stipulation that Respondent would make settlement payments in accordance with the Stipulation and Order.

That Motion was denied, as the ALJ found there were significant delays from the date on which the hearing was originally set in March 26, 2020. Further, Respondent failed to show good cause for an Order granting the Opposed Motion for Extension of Time to Commence Hearing. The case then proceeded to hearing on June 9, 2021.

Respondent then filed a Motion for Additional Time to Respond and Order For Additional Time to Respond on June 25, 2021. This Motion requested additional time to August 2, 2021 to respond. The Motion for Additional Time to Respond was denied on July 1, 2021.

Respondent filed written submissions in response to the July 1, 2021 Order. In this filing, Respondent alleged that it was not responsible for the payment of benefits to Claimant because he had died while before all payments were made pursuant to the settlement agreement.

FINDINGS OF FACT

1. Claimant alleged he was injured at work on June 12, 2019 and that Respondent Kiowa Auto Repair, as well as its principal, Harland Rognmoe was uninsured at the time.

2. The parties reached a settlement agreement whereby Respondent agreed to pay Claimant a total of $20,000 in settlement of Claimant's workers' compensation claim.[1]

[1] Exhibit 2.

3. The settlement agreement provided that a $5,000.00 payment was to be made on or before March 26, 2020, with the remaining $15,000.00 to be paid before May 27, 2020.

4. The Stipulation and Settlement Agreement was approved by Order on March 11, 2020.

5. Claimant deferred going to hearing on the issues of compensability, wage and medical benefits in reliance on the settlement agreement.

6. Respondent made one payment on or about May 26, 2020, but failed to make any further payments.[2]

7. Respondent failed to abide by the settlement agreement when it did not pay the remaining amount of $15,000.00.

8. Claimant was harmed by Respondent's failure to pay the settlement proceeds.

9. The failure to make the remaining settlement payment was a violation of the Order approving the Stipulation and Settlement Agreement.

10. The violation of the Order approving the Stipulation was a violation of § 8-43-304(1) C.R.S.

11. Claimant died in the interim and his attorney of record filed an Application for a Hearing on February 26, 2021 on the issue of penalties.

12. Respondent offered no evidence in defense of the penalty claim.

13. There was no evidence in the record which showed Respondent's conduct was reasonable.

14. Claimant is entitled to recover penalties for Respondent's violation of the March 11, 2020 Order.

15. The ALJ has determined that penalties in the amount of $200.00 per day are warranted to punish Respondent's violation of § 8-43-304(1) C.R.S.

16. The $200.00 per day penalty (out of a potential $1000 per day penalty) is proportionate and reasonable given the violation of the Order in this case.

17. There are 378 days between May 27, 2020 and June 9, 2021.

[2] Exhibit 4.

18. Respondent is assessed penalties at the rate of $200 per day for 378 days for a total of $75,600.00 for its failure to comply with the March 11, 2020 Order.

19. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Penalties-Violation of An Order

Whether statutory penalties may be imposed under § 8-43-304(1) C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to $1000 per day where the insurer "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel…"

This provision applies to orders entered by a PALJ. Section 8-43-207.5, C.R.S. (order entered by PALJ shall be an order of the director and is binding on the parties); *Kennedy v. Industrial Claim Appeals Office,* 100 P.3d 949 (Colo. App. 2004). A person fails or neglects to obey an order if he or she leaves undone that which is mandated by an order. A person refuses to comply with an order if she withholds compliance with an order. *See Dworkin, Chambers & Williams, P.C. v. Provo,* 81 P.3d 1053 (Colo. 2003).

In cases where a party fails, neglects or refuses to obey an *order* to take some action, penalties may be imposed under § 8-43-304(1), even if the Act imposes a specific violation for the underlying conduct. *Holliday v. Bestop, Inc.,* 23 P.3d 700 (Colo. 2001); *Giddings v. Industrial Claim Appeals Office,* 39 P.3d 1211 (Colo. App. 2001). Thus, the ALJ must first determine whether Respondent's conduct constitutes a violation of the Act, a rule, or an order.

In the case at bar, the undisputed evidence established the fact that Respondent violated the order issued by PALJ Clisham. (Finding of Fact 9). In particular, Respondent failed to make the agreed-upon payments pursuant to the agreement it had made with Claimant. (Findings of Fact 6-7). The Colorado Worker's Compensation Act requires settlement payments to be made in accordance with the agreement. The failure to make the settlement payments constitutes both a violation of the Act, as well as the Order approving the settlement. (Findings of Fact 9 and 10). Nothing in the record refutes the conclusion that the violation occurred. Accordingly, the first prong of the analysis as to whether penalties are appropriate was met in this case.

Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* W.C. No. 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

The question of whether the insurer's (or Respondent's) conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see also Paint Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *Pioneers Hospital v. Industrial Claim Appeals Office, supra*. If Claimant makes such a prima facie showing, the burden of persuasion shifts to the Respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra, Human Resource Co. v. Industrial Claim Appeals Office,* 984 P.2d 1194 (Colo. App. 1999).

Turning to the second part of the analysis, the ALJ concluded Respondent offered no explanation for its failure to make the payments it had agreed to at the time the case was settled.[3] (Finding of Fact 11). There was no evidence before the Court which provided any explanation for Respondent's conduct. *Id.* In fact, the record was bereft of any information or evidence provided by Respondent to explain the failure to pay what they had agreed to under the circumstances. Thus, there was no evidence that Respondent's conduct was reasonable under the circumstances. (Finding of Fact

[3] In this case, Respondent's conduct was evaluated on the issue of penalties, since it was legally obligated to make the payments under the agreement.

12). Accordingly, using the objective test, the ALJ concluded that this unreasonable conduct subjected Respondent to penalties under the Act.

As found, Claimant deferred going to hearing, relying instead on the settlement with Respondent. (Finding of Fact 5). Claimant was harmed by Respondent's failure to pay pursuant to the settlement agreement. (Finding of Fact 8). The ALJ determined penalties in the amount $200 per day for each day against Respondent was warranted in this case. Since Respondent failed to pay pursuant to the agreement made with Claimant, Respondent will be penalized a total of $75,600.00 for the 378 days it failed to pay.

Respondent cited *Estate of Huey ex rel Huey v. J.C. Trucking*, 837 P.2d 1218 (Colo. 1992) for the proposition that Claimant's death extinguished Respondent's duty to pay pursuant to the settlement agreement. Said reliance is misplaced, as the facts (and the penalty allegations are) distinct in the instant case. *Estate of Huey ex rel Huey v. J.C. Trucking* involved the question of whether Claimant's estate could recover benefits after his death. In *Estate of Huey ex rel Huey v. J.C. Trucking,* Claimant was injured when he fell from the cab of a truck. He required medical treatment and lost time from work as a result of his injuries. Claimant subsequently died and the case went to hearing. The ALJ found the claim compensable and ordered benefits to be paid to his estate.

On appeal, the issue was whether the benefits were "accrued and unpaid" (and therefore recoverable) despite Claimant's death. The Industrial Claim Appeals Panel ("Panel") reversed the ALJ's order and denied all benefits on the grounds that the ALJ did not have authority to order workers' compensation benefits after Claimant's death. The Colorado Court of Appeals affirmed the Panel's decision. The Colorado Supreme Court reversed and remanded with directions to return the case to the Panel for a review of the ALJ's determination that Claimant's injury occurred while he was performing services arising out of and in the course of his employment. The Court determined that the terms "accrued and unpaid" (and therefore recoverable) meant "due and payable" to Claimant's dependents, as the conditions for recovery under the Act were met because Claimant suffered a compensable injury. The Court found the ALJ's order awarding benefits was proper. *Id.* at 1221-1222

In the case at bar, the issue is not what benefits are due and payable, but rather whether the conduct of Respondent violated the statute and the Order which approved the settlement. Claimant is not seeking payment of the settlement proceeds, but rather penalties for Respondent's violation. The ALJ has determined that the issue of imposition of penalties is separate from the question of whether Claimant's estate can recover the settlement proceeds. It is undisputed that Respondent failed to comply with the lawful Order issued by the PALJ in this case. As found, Respondent was legally responsible to pay the settlement proceeds to Claimant and the failure to do so violated the Order approving the settlement. (Findings of Fact 9 and 10). Under these facts, where Respondent violated both the Act and an Order, the ALJ determined that penalties are properly imposed. The rationale for imposing a penalty for a violation of an Order was articulated by Justice Erickson in *Giddings v. Industrial Claim Appeals Office, supra*, 39 P.3d at 1214:

> "This interpretation of the penalty provision in § 8-48-304(1) furthers the legislative intent of the Act, which is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. 2001. The Act is intended to compensate injured workers, while controlling costs and minimizing claim delays. *Dep't of Labor & Employment v. Esser*, 30 P.3d 189 (Colo.2001). Allowing the imposition of penalties for the disobedience of an ALJ's order furthers this underlying policy by allowing full compensation and would likely compel insurers to comply with lawful orders. See *Arenas v. Industrial Claim Appeals Office*, 8 P.3d 558, 562 (Colo.App.2000) [purpose of penalty is to deter misconduct].

In this case, Respondent offered no evidence in defense of the violation of the statute and the failure to pay pursuant to the Order approving the settlement. There was no evidence in the record that Respondent attempted to cure the violation. The failure to abide by the settlement order directly harmed the Claimant, who did not have the benefit of the settlement he negotiated with Respondent. Accordingly, penalties are properly imposed in this case.

ORDER

IT IS HEREBY ORDERED:

1. Respondent shall pay the amount of $75,600.00 in penalties for its failure to pay the settlement proceeds when due.

2. Of the $75,600.00 assessed in penalties, Respondents shall pay 75% ($56,700.00) to Claimant and his attorney of record and 25% ($18,900.00) shall be paid to the uninsured employer fund.

3. Issues not expressly decided herein are reserved for future determination.

DATED: November 10, 2021

Timothy L. Nemechek
Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether Claimant has established by a preponderance of the evidence that the surgery recommended by an authorized treating physician is reasonable, necessary and related to the July 12, 2020 admitted work injury.

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on July 19, 2021 on issues of medical benefits that are reasonably necessary and related to the injury, including authorization for surgery.

Respondents filed a Response to Application for Hearing dated August 18, 2021 challenging the reasonable necessity, relatedness and causation of the surgery. At the time of the hearing Respondents withdrew the issues of waiver, estoppel and latches.

STIPULATIONS

The parties stipulated that the Claimant's date of injury is July 12, 2020, as shown on the General Admission of Liability dated August 25, 2020, despite multiple references in the records to an alternative date.

The parties further stipulated that Michael A. Gallizzi, M.D. of Ortho One at Sky Ridge is an authorized treating physician.

FINDINGS OF FACT

Based on the evidence and testimony presented, the ALJ enters the following findings of fact:

1. Claimant started working for Employer on or about July 10, 2020 as a nurse. She has a degree as a Licensed Practical Nurse (LPN) and has been working as a nurse off and on since she was in her teens. Claimant is currently 73 years old and was 72 when she was injured in the course and scope of her employment with Employer.

2. Employer is a long-term care facility, who hired Claimant as a temporary nurse through a temporary agency, as Employer was short staffed. Employer's temporary agency places nurses in different facilities when there is a shortage of staff. Claimant was placed at the long-term care facility, where she was injured a few days later.

3. On July 12, 2020 a Certified Nurses' Assistant (CNA) was attempting to lift a patient from the floor where the patient had slid off her reclining chair. The CNA was unable to lift the patient on her own and called for assistance. Claimant answered the call for assistance. The room where the patient had slid from the reclining chair to the ground was small and crowded by the bed, the chair, the patient and CNA. The CNA, who was using a gait belt, was behind the patient, and Claimant bent at the knees and forward to hold onto the gait belt from in front of the patient. Claimant aligned her feet and knees with those of the CNA so that they could both attempt lifting the patient, using the gait belt strap. In the process of pulling the patient upward, not realizing that the patient was not assisting and was dead weight, Claimant felt a sharp twinging pain in her low back that immediately wrapped around her abdomen with a ripping sensation.

4. Both Claimant and the CNA placed the patient back on the floor. Claimant sat on the patient's bed for a few minutes and a third individual came to assist in lifting the patient. Claimant then continued to work the rest of her shift, despite the pain. The following day, July 13, 2020, was Claimant's day off and she rested her back including taking medication, laying down and using a hot tub to try and relax the muscles of her back. However, by July 14, 2020, Claimant was in such extreme low back pain that she requested that her husband take her to be seen by a medical provider or assist her in obtaining medical care.[1] Claimant testified that, by then, the pain in her buttocks progressed and she was having problems standing or walking.

5. Claimant was first evaluated at HealthOne CareNow Urgent Care on July 17, 2020 by Kayla Fisk, NP. The medical records indicate a history consistent with the Claimant's description of the incident, where she was lifting a dead weight patient from the floor. The nurse described that the CNA was behind the patient and Claimant was in front of the patient, and when Claimant bent over to assist with the lift, she felt an immediate sharp pain in her low back that wrapped around her abdomen. Nurse Fisk reported that Claimant was already on Etodolac for Osteoarthritis (OA), which she continued taking until she was seen at CareNow, as well as resting, avoiding standing, applying Bengay, and sitting in the hot tub up to three times daily, without relief.

6. Nurse Fisk reported that Claimant did not complain of any radicular pain to the lower extremities, other than the buttocks pain. Claimant reported to Nurse Fisk that she had no prior medical history involving problems with her low back. Claimant did report that she had had knee replacements. On exam, Nurse Fisk noted Claimant had reduced range of motion (ROM) of the low back, abnormal gait and posture, including a hunched forward posture, muscular abnormalities, paraspinals spasming of the lumbar muscles, tenderness of the lumbar spine, and abnormal deep tendon reflexes of the right lower extremity. Claimant was diagnosed with sprain of the ligaments of the lumbar spine and provided restrictions and a muscle relaxer.

[1] The parties did not provide any medical records of an emergency visit, so this ALJ is assuming none exists, and that the request for assistance from Claimant's husband was to contact the employer to obtain the referral and/or authorization.

7. Claimant returned to Urgent Care on July 24, 2020 and Dr. Travis Bellville examined Claimant. Dr. Bellville has the exact same history paragraph as Nurse Fisk, word for word, so will not be repeated. Medical exam was significantly similar. Dr. Bellville ordered physical therapy (PT), advised to stop the Medrol Pak and continue with the muscle relaxer, though he noted improvement. The pain diagram shows complaints of pain across the low back and into the lower abdomen, with pain in the right upper buttocks area.

8. Claimant started physical therapy on August 10, 2020 at Rocky Mountain Spine and Sport Physical Therapy due to acute right-sided low back pain with right-sided sciatica and strain of the lumbar spine. Claimant reported low back pain that started on July 12, 2020 when she was helping a coworker get a patient off the floor and heard a pop in her back and strain along her abdomen. The next day she could barely move at home. She reported a sharp pain while moving around, only able to walk, sit, and stand for up to 30 minutes at a time. The records document that Claimant was barely able to walk longer than 70 feet at home and in community without pain in low back. Claimant reported that she had radiating pain into her buttock and an antalgic gait. She had not had any previous injuries like this before. Therapist Tylor Bennett noted that Claimant had difficulty with all activities due to pain, except for flexion, and had moderate tightness in the bilateral lumbar paraspinals muscles. They recommended treatment including dry needling, manual therapy, joint mobilization and manipulation of soft tissue, myofascial release and passive/assisted range of motion techniques, use of ice/heat and TENs unit, neuromuscular reeducation, and therapeutic exercises to increase mobility and strength.

9. On August 14, 2020 Claimant was seen by Jessica Leitl, M.D. History was again duplicated from the first visit. She continued to note reduced ROM, reduced flexion, abnormal gait and posture. Dr. Leitl noted Claimant had increased pain with position changes. She also documented muscular abnormalities as well as tenderness of the sacral muscles, right greater than left SIJs[2] and buttocks pain. She recommended Claimant speak with her therapist to include response to deep tissue massage and trial of different modalities, stating that the SIJs appear to be the primary pain generator. She ordered a trial of lidocaine patches, and continued PT. The pain diagram showed Claimant's low back problems and pain in her buttocks and groin area.

10. Respondents filed a General Admission of Liability (GAL) on August 25, 2021, admitting to medical benefits that are reasonably necessary and related to the July 12, 2021 accident, as well as to temporary total disability benefits beginning July 16, 2021.

11. Dr. Bellville again saw Claimant on August 26, 2021. He noted that Claimant's symptoms were similar to those identified by Dr. Leitl with tenderness of the sacral muscles, right greater than left SIJs and buttocks pain. Claimant advised she would like to be seen by a spine specialist and Dr. Bellville referred Claimant to Dr. Michael Gallizzi, an orthopedic surgeon, as he noted that Claimant was not improving

[2] Sacroiliac joints

with the PT. He continued the PT and medications. Claimant's pain diagram now showed progressing problems from the low back to the lower buttocks, abdomen and upper thighs, as well as bilateral knee pain.

12. Claimant had X-Rays performed on September 1, 2020 pursuant to Dr. Gallizzi's referral. The films were interpreted by Dr. Eduardo Seda of Health Images, Castle Rock, as showing degenerative disc and joint changes with moderate L4-5 spondylolisthesis.[3]

13. Michael A. Gallizzi, M.D. evaluated Claimant on September 2, 2020. He took a history that is consistent with the history provided at hearing, specifically that she was assisting with lifting a dead weight patient off the floor and felt immediate back pain. Claimant advised that she had not had back pain prior to the July 12, 2020 accident. He reviewed the X-rays and found that Claimant had a moderate 6 mm L4-5 degenerative spondylolisthesis on flexion, with mildly narrowed disc heights at the L4-5 and L5-S1. Gallizzi ordered medial branch blocks bilaterally to see if that would assist with treating Claimant's work-related pain complaints. He stated that if they provided greater than 50% relief of symptoms that she would be a candidate for endoscopic medial branch transection.

14. On September 16, 2020 Claimant returned to Dr. Gallizzi's office to advise that her symptoms had not improved since her prior visit, and she had not yet had the medial branch blocks recommended due to prior authorization difficulties. Adam Welker, PA-C, reported she continued to have difficulty with activities of daily living, such as washing dishes, doing laundry, making the bed. After any period of activity, her pain was drastically increasing. Claimant was encouraged to work with Mountain View Pain Center to schedule the injections and keep a pain log to document the effectiveness of the pain relief, especially immediately after the procedures. Mr. Welker counselled Claimant that the medial branch blocks would likely relieve Claimant's gluteal pain.

15. On October 1, 2021 Claimant was evaluated by Shaun Gabriel, M.D. of Mountain View Pain Center. Claimant reported significantly difficulty tolerating her daily living activities and managing her pain. Claimant was referred by Dr. Gallizzi for lumbar medial branch blocks (LMBBs) and possible radiofrequency ablations (RFA), if appropriate. Claimant reported pain in her low back bilaterally, radiating into the buttocks with left and right pelvic pain. She had burning sensation, aching pain, sharp and throbbing pain that was always present. She reported that her pain was worse when stooping, bending, lifting, and turning. She reported some relief when lying down, with heat, relaxation and taking medications.

16. On exam, Dr. Gabriel noted that Claimant had an antalgic gait and was limping. He noted she had tenderness along the posterior vertebral bodies at L4-L5 and extreme tenderness and ropiness along the paraspinals muscles at L3-L5. Straight leg raise was positive bilaterally. Facet loading test was positive bilaterally. Hip internal

[3] Vertebral slippage or malalignment.

rotation was positive bilaterally for pain. Dr. Gabriel assessed abnormal range of motion with pain. Diagnoses were lumbar spondylolysis, low back pain, lumbar strain, and muscle spasm of the back. After considerations of conservative measures, he recommended she pursue lumbar medial branch blocks leading to endoscopic RFAs if appropriate. He also recommended an MRI.[4]

17. Dr. Gabriel recommended the MBBs from L2-L5 and requested prior authorization on October 6, 2021.

18. John Keeling, PA-C attended Claimant on October 7, 2020 documenting that Claimant had loss of ROM of the lumbar spine, abnormal muscular exam, abnormal gait and posture, with axial pain that radiates to the buttocks. He also noted that Claimant was extremely frustrated and depressed at this point by her lack of improvement and lack of mobility. Claimant was also extremely frustrated that she had not yet been able to return to her work as a nurse, as she had been an active nurse for years, causing adjustment problems. He continued to diagnose lumbar spine sprain but also a major depressive disorder. He referred Claimant to Rocky Mountain Physical Therapy and to Dr. Kevin Reilly for psychological evaluation. He continued Claimant's restrictions of 10 lbs. lifting and carrying and limited walking and standing to 2 hours per day.

19. The MRI results were interpreted by Dr. James Piko of Resilience Imaging, which was performed on October 14, 2020. Most significantly, the MRI showed L4-L5, a posterior disc bulging of 4-5 mm. Dr. Pike noted that the posterior articular facets and ligamentum flavum had pronounced hypertrophic changes contributing to high-grade central canal stenosis with a canal width measuring 4 mm, high-grade lateral recess narrowing and moderate bilateral foraminal stenosis. At the L5-S1, Dr. Pike commented that there was disc bulging and a superimposed right central 4 mm focal disc protrusion with annular perforation indenting the thecal sac and impinging the right S1 nerve root. Other disc bulges were seen at the T12 through L3.

20. On October 27, 2020 Dr. Gabriel reexamined Claimant finding that she continued to have significant bilateral lumbar axial pain with radiation into her buttocks and hips, with constant pain worsened with forward bending and rotation. He stated that exam, and imaging, were consistent with facet-mediated lumbar pain in addition to some disc-mediated components as well. Dr. Gabriel noted that Claimant's pain was worse during this exam and stated he was awaiting insurance authorization to proceed with the MBBs.

21. Claimant was evaluated initially by Dr. Annie Richardson of NBRPS Neurobehavioral and Rehabilitation Psychology Services on October 19, 2020. Dr. Richardson took a history that Claimant was in her usual state of health until her on the job injury, while working as a nurse. She recounted a mechanism of injury substantially the same as testified by Claimant at hearing. She reported to Dr Richardson that she was experiencing significant symptoms of depression related to her pain, work

[4] Magnetic resonance imaging.

restrictions, and limited activity. She had decreased motivation, self-care, lack of interest, and engagement in activities. Claimant reported feeling worthless and had increased negative thoughts. Claimant conveyed that she had concerns about being unable to work, and had weight gain caused by the injury.

22. Claimant reported to Dr. Richardson that the pain in her lower back is predominantly on the left side. She rated her pain as a 5/10 on a visual analog scale (VAS), with her lowest pain rating at 2 and her worst pain an 8. Claimant reported that her pain does vary over the course of a usual day, though she did not notice any consistent patterns, other than when she switches positions or walks more than a short distance, which aggravates her pain. Sitting, lying down, using heating pads, and muscle relaxants help to alleviate her pain. Dr. Richardson diagnosed Claimant with somatic symptom disorder with chronic pain as well as an adjustment disorder with depressed mood related to the work injury. She recommended psychological counselling, including cognitive behavioral therapy, counselling focused on chronic pain coping strategies, and biofeedback or relaxation therapies with William Beaver, M.A. She also advised she should consider antidepressant medication.

23. Claimant had multiple telemedicine therapy sessions with Dr. Richardson focusing on stress management, pain management and identifying meaningful activities that Claimant should engage in, including light household chores, stretching and movement. Claimant also had multiple visits with Mr. Beaver for biofeedback.

24. Dr. Gabriel proceeded with a right L2, L3, L4 Lumbar Medial Branch and L5 Dorsal Ramus Blocks on November 2, 2020. Dr. Gabriel noted that following the injection Claimant reported increased ROM and 60-80% pain and symptom relief. On November 6, 2020 Dr. Gabriel proceeded with a left L2, L3, L4 Lumbar Medial Branch and L5 Dorsal Ramus Blocks. Dr. Gabriel noted that following the injection Claimant reported increased ROM and 100% pain and symptom relief.

25. On November 5, 2020 Mr. Keeling examined Claimant again, making similar findings. He ordered more PT, stated that psychological care was going well, needed to follow up with the orthopedic surgeon and he documented the MRI findings. Mr. Keeling referred Claimant back to biofeedback and injections with the pain clinic.

26. Dr. Gabriel performed a second set of right L2, L3, L4 Lumbar Medial Branch and L5 Dorsal Ramus Blocks on November 9, 2020 and a second set of left blocks on November 12, 2020. Dr. Gabriel noted that following the injection Claimant reported increased ROM and 60-80% pain and symptom relief for both sets of injections.

27. Claimant returned to consult with Dr. Gallizzi regarding the results of the medial branch blocks on November 18, 2020. Dr. Gallizzi's physician assistant, Mr. Adam Welker reviewed the MRI with Claimant and went over the images that show significant spinal stenosis in the L4-L5 region, measuring approximately 5 mm. Claimant reported that the medial branch blocks did provide some hours of significant, greater than 50%, relief of her back pain. Claimant reported she was able to do things that she wanted to do

without significant discomfort. Her main concern was that the injections provided only a "temporary fix" and she asked to discuss all options for her current condition.

28. Claimant reported to Mr. Welker that she leans forward on a shopping cart when shopping but stated that it was difficult for her to assess any lower extremity symptoms because of the overwhelming back pain. However, she did report that she gets fatigued with prolonged walking and has to sit and rest. They discussed the endoscope medial branch transection and lumbar fusion procedures, the risk/benefits associated with each and the recovery process following each procedure, but Claimant wanted to discuss all surgical options to repair her underlying abnormalities. Due to her significant spinal stenosis at the L4-5 region, approximately 5 mm thecal sac diameter, Mr. Welker advised Claimant to return to consult with Dr. Gallizzi to discuss options at her follow up visit.

29. On November 23, 2020 Ms. Laura Storage, a physical therapist, noted that Claimant continued to progress with core and lower extremity strengthening but Claimant complained of low back pain standing and walking. She had difficulty with transfers from sitting to prone position due to pain. She noted that Claimant had moderate tone in the right lumbar paraspinals, which improved with soft tissue mobilization. On November 25, 2020 Sarah Tangen noted that Claimant continued to still be very limited with standing and gait tolerance, lifting, and carrying.

30. On December 1, 2020 Ms. Tangen wrote that Claimant seemed to be getting worse, not better and that her legs gives out on her, even though she was giving good effort during physical therapy treatment. Taylor Bennet documented on December 2, 2020 that, while Claimant continued to have benefit of therapy, she continued to worsen as Claimant reported she was having difficulties with activities of daily living, lifting and navigating stairs, and continued to demonstrate an antalgic gait patter during walking.

31. Dr. Bellville assessed Claimant's progress on December 4, 2020 noting Claimant was complaining of symptoms of numbness and tingling, and weakness in the lower extremities. He reported Claimant had muscle pain, back pain, continuing with abnormal gait and posture, and reduced range of motion of the back. He continued the PT prescription and stated that Claimant was anticipating exploring surgical intervention options.

32. Claimant returned to consult with Dr. Gallizzi on December 9, 2020. On exam he found that Claimant had limited range of motion of the lumbar spine and that Claimant's pain would increase with hyperextension. She was tender to palpation in the lumbar spine. From a seated position, with the left and right leg fulling extended and then flexed at the hip with foot dorsiflexion, caused significant pain down to the calf. Dr. Gallizzi diagnosed spinal stenosis of the lumbar region with neurogenic claudication, spondylosis of lumbar spine, spondylolisthesis at L4-L5 level and spondylosis of lumbosacral region.

33. Dr. Gallizzi noted that, unfortunately, Claimant's work injury caused the symptoms that precipitated Claimant's rapid decrease in function. He noted that she had had no improvement with physical therapy, as she now uses a cane in her right hand to

be able to ambulate, Claimant's function continued to decrease due to her injury and she had spinal instability as well as neuroforaminal stenosis. Dr. Gallizzi recommended a staged L4-S1 anterior posterior lumbar interbody fusion to reduce the spondylolisthesis improve the neuroforaminal height at L5-S1 and improve her sagittal alignment. Dr. Gallizzi requested authorization to perform a L4-S1 360 anterior and posterior fusion.

34. Michael Janssen, D.O. a Physician Advisor for Insurer, specializing in spine surgery, issued an opinion on December 23, 2020 in response to the request for prior authorization for surgery for an anterior posterior reconstruction of the spine spanning L4-S1. Dr. Janssen provided a history that Claimant was "helping a co-worker lift a patient from the floor to reposition a chair and had some nonspecific low back pain." Dr. Janssen also stated that "the information states that the patient has highly suggestive of a long-standing pain, but the pain has not been "this severe."" This is not consistent with the medical records that report Claimant had never had the kind of pain she was experiencing following the work injury, even following either of her total knee replacements surgeries. Neither is this consistent with the Claimant's testimony.

35. Dr. Janssen goes on to state that "From review of this, it does not appear that this is consistent with the treatment guidelines since this is a pre-existing long-standing chronic anatomical condition that does not appear to be exacerbated (from an anatomical standpoint), caused by, or a direct relationship to this debilitating condition. Indeed, the patient may have had myofascial symptomatology as she was lifting something, but that in itself is not an indication for surgical intervention."

36. David Frank, M.D. of Urgent Care examined Claimant on January 7, 2021 and ordered further aquatic therapy at CACC Physical Therapy and referred Claimant to Hatch Chiropractic for dry needling, acupuncture and chiropractic care. He stated that Claimant appeared uncomfortable, had abnormal range of motion, with abnormal gait and posture, walking with a walker. Dr. Frank specifically stated that Claimant had intractable bilateral lower extremity pain, intractable lumbar spine pain, spinal stenosis, HNP[5] and facet arthrosis. Dr. Frank noted Claimant was using a walker and had "probable work-related aggravation of preexisting back pathology."

37. Dr. Gallizzi wrote a letter regarding Claimant's need for surgery, dated January 13, 2021, stating as follows:

> Ms. [Claimant] DOB 1/8/1948 has been under my care since September 2020. She is undergone extensive nonoperative treatment including physical therapy for greater than 3 months without any improvement. She does have spondylolisthesis of at least 5 mm with concomitant severe neuroforaminal stenosis at L5-S1. She also has a superimposed right central 4 mm focal disc protrusion annular tearing impinging the right S1 nerve root.

[5] Herniated nucleus pulposus.

> Due to her rapidly deteriorating ambulatory ability, most recently presenting to the office using a cane for ambulation, I do believe that the proposed staged L4-S1 360 fusion would be the best chance for her to get her ambulatory ability back before she deteriorates any further. I do not think delaying this patient's surgery in any way will benefit her return to work. *While she may have had some pre-existing issues, her injury at work precipitated a rapid increase in her disability causing her to now have to use assistive devices for daily function.* With the structural abnormalities and instability noted on her MRI etc., I do not think a decompression alone would help this patient. She needs to have the instability, and neuroforaminal stenosis addressed which in my hands is best treated with the proposed surgery of L4-S1 anterior lumbar interbody fusion with subsequent pedicle screw instrumentation and posterior spinal fusion. We do this in a staged fashion in order to decrease the morbidity of a formal open decompression. We use robotic assistance to improve the accuracy, and based on this patient's pathology I believe that this would be the ideal operation to address their [sic.] issues. (*Emphasis added*.)

38. On January 14, 2021 Dr. Gallizzi faxed the request for reconsideration of the denial for the surgery as previously recommended.

39. Dr. Janssen wrote a response to Dr. Gallizzi’s letter on January 20, 2021, stating that following his review he continued to be of the opinion that the Claimant’s findings were incidental and age related only, not compensable. Dr. Janssen does not provide any further medical record review. As found, Dr. Janssen is not credible or persuasive.

40. Dr. Frank noted similar symptoms and problems on February 4, 2021 as found on prior examinations, stating that Claimant’s lawyer was fighting for the surgery. He ordered continued treatment and an EMG[6].

41. Claimant started therapy at CACC Physical Therapy on February 9, 2021. Richard Wagner documented that Claimant presented with chronic low back pain consistent diagnosis of lumbar stenosis and a work-related injury occurring when patient was assisting a resident at the long-term care facility which had slid out of a recliner. He noted that Claimant was very limited during evaluation due to pain with minimal movement for ROM screening as well as prolonged weight bearing for balance testing, marked hypersensitivity to light palpation of surrounding musculature and recommended skilled PT services to address impairments and maximize recovery. Claimant continued with aquatic therapy through at least May 24, 2021.

42. Records from Hatch Chiropractic start as of February 11, 2021. Dr. Kelly Tonning diagnosed segmental and somatic dysfunction and recommended treatment for four weeks. On February 20, 2021 Claimant advised that the first adjustment helped her low back symptoms but continued with a sharp pain in her buttocks, which was more

[6] Abbreviation for “electromyography” test used to determine nerve dysfunction, muscle dysfunction or problems with nerve-to-muscle signal transmission.

frequent. On February 23, 2021 Claimant advised that the buttocks pain was now a constant sharp and shooting pain compared to prior to the beginning of chiropractic care, which was intermittent and only while engaging in activities. This did not change in subsequent treatment dates through March 6, 2021.

43. On March 4, 2021 Dr. Frank notes that the EMG was abnormal showing severe bilateral radiculopathy at the L5-S1 level and was awaiting surgery. Exam was essential unchanged other than Claimant's ability to walk was difficult for Claimant as she leaned to the left and needed assistance, including the walker. She was to continue aquatic therapy. He continued to diagnose the following:

- Spondylolisthesis, site unspecified (M43.10)
- Other intervertebral disc displacement, lumbosacral region (M51.27)
- Other intervertebral disc displacement, thoracolumbar region (M51.2S)
- Spinal stenosis, lumbar region without neurogenic claudication (M48.061)
- Elevated blood pressure reading, without diagnosis of hypertension (R03.0)
- Illness, unspecified (R69)
- Insomnia (G47.0)
- Low back pain (M54.S)
- Major depressive disorder, single episode, unspecified (F32.9)
- Other hyperlipidemia (E78.4)
- Other intervertebral disc displacement, lumbosacral region (M51.27)
- Other intervertebral disc displacement, thoracolumbar region (MS1.25)

44. On March 22, 2021 Dr. Michael Rauzzino evaluated Claimant at Respondents' request for an independent medical examination (IME). He took the a history regarding Claimant's pain which included tht she had pain in her back going down her legs with some weakness in her legs that cause her legs to give oust sometimes. She reported that she had pain in her buttocks and the pain was worse with ambulation. He reported that she uses a quad-walker and sometimes a cane.

45. Dr. Rauzzino wrote that the patient intake reflected the following:

> Ms. [Claimant] reports that she was injured on 07/11/20 [sic.]. She describes the mechanism of injury "Lifting a patient, went dead weight, injured back." She states that she did not have similar symptoms prior to this. She describes her current symptoms as "pain lower back, extending down L&R buttocks".
>
> On the pain diagram, she indicates axial low back pain that does not extend beyond the buttocks. She rates her pain 8/10. She endorses aggravation of her pain with standing, sitting, driving, going up/down stairs, walking, coughing and sneezing. It is not aggravated by lying down or sleeping. She relates 50% back pain and 50% buttock pain symmetrically. She perceives weakness of her posterior thighs. She reports no numbness in her legs.

46. Dr. Rauzzino provided an opinion that Claimant may have suffered a myofascial strain, but Dr. Gallizzi is recommending complex spinal reconstruction for a spinal deformity which is preexisting. Because of her rapid progression of symptoms over

time in the absence of any ongoing structural aggravation, it is much more likely than not that the surgery proposed by Dr. Gallizzi is not in any way occupationally related to the single lifting event.

47. He further stated:

> It is my opinion that none of these conditions were aggravated or accelerated or made symptomatic by the work injury. I believe the work injury resulted simply in myofascial strain. The basis for that opinion is the mechanism of injury, her initial presentation, and the nature of her symptomatology as well as the rapid progression of her symptoms in the absence of any continued occupational injury.
> …
>
> If Dr. Gallizzi feels that this needs to be decompressed and reconstructed, that would certainly be a reasonable thing to do, but the need for such a surgery is related to her underlying degenerative spinal condition and not to a single relatively minor lifting incident that occurred in July 2020. While this surgery could be done to treat [Claimant]'s current reported symptomatology, her current severe symptomatology is not relatable to the occupational injury she reported in July 2020; therefore, while the surgery may be reasonable and appropriate, it is not occupationally related.

48. Dr. Frank document some improvement with physical therapy in his note of April 1, 2021. Claimant continued under Dr. Frank's care on April 5, 2021. Physical exam and diagnosis remained the same. Dr. Frank requested that she continue with aquatic therapy to work on gait, strengthening and unloading as well as chiropractic care. Claimant stated she was unstable without the use of her walker and was trying not to do anything to aggravate her symptoms.

49. On May 6, 2021 Dr. Frank indicated that Claimant's symptoms were only radiating to her buttocks, but that other exam remained the same. He reviewed the IME physicians' report that stated that he did not feel surgery was indicated under the workers' claim. Claimant revealed that her lawyer was appealing the determination. Dr. Frank continued aquatic therapy and chiropractic care, as they seemed to be helping Claimant, and stated that he would await the legal outcome of the case. He also added further pain management treatment with the psychologist.

50. Claimant returned to Dr. Frank on June 3, 2021. Dr. Frank noted Claimant reported some tingling into her feet and shin area. Claimant was still using a walker. Claimant reported she had plateaued with the conservative care.

51. On September 2, 2021 Dr. Frank indicated that Claimant's situation had not changed, that she was having problems ambulating and her pain continued the same as well as her exam. He stated that he was holding off on the "IRE"[7] for now as the claim

[7] This ALJ infers that "IRE" refers to "impairment rating evaluation."

continued to be in litigation relating to the back surgery and that the MMI date was unknown or to be determined.

52. Claimant testified she had no prior lower back injuries, treatment, or restrictions, before her work injury. She stated that she has been working in multiple types of work, including as a nurse and other activities like retail. Claimant testified that the pain she is currently feeling is the worst pain she has ever felt. She stated that she has had knee replacement surgeries and she has never experienced pain like she is with her back and buttock pain. She currently has low back pain with shooting pain down her buttocks with tingling in her feet.

53. Claimant testified that the pain in her back began immediately after the lifting incident, with the pain in her buttock developing a couple of days after the initial injury. Claimant reported constant lower back pain and that moving or changing position causes shooting pain into her buttocks. Claimant testified she is now getting tingling in her lower legs and especially in her feet. Claimant testified that her current buttock pain gets as bad as the pain in her back with movement. Claimant testified that since her injury she really is limited in what she can perform.

54. Claimant testified she has difficulty with walking more than a few steps without getting pain shooting into her buttocks, standing up for long periods of time, or doing basic household activities like washing dishes. She states that she was able to do her activities of daily living prior to her industrial injury without any breaks or difficulties. She now must take breaks frequently.

55. Claimant testified she uses a walker to get around. Claimant reported her back pain increases with movement, and she has a sharp shooting pain when she is moving or changing positions. Claimant denied having any issues with her back, buttock, or her legs prior to her work injury. Claimant is found credible.

56. Dr. Rauzzino testified at hearing in this matter as an expert neurosurgeon specializing in brain and spine surgery and as a Level II accredited physician. Dr. Rauzzino stated he obtained a history and reviewed the medical records in the preparation of his report. He stated that the mechanism of injury was consistent with the Claimant's testimony at hearing. However, he testified that it was a "simple lifting" incident that caused only myofascial complaints and did not cause any aggravation or acceleration of the Claimant's underlying asymptomatic degenerative disc disease or spinal stenosis. He stated that the Claimant's initial presentation is consistent with simple muscle pain, not pain that is neuropathic or radicular.

57. Dr. Rauzzino opined that it is more likely than not that Claimant's myofascial conditions had resolved, and the increasingly progressive symptoms Claimant was experiencing were a component of Claimant's underlying degenerative process. He viewed the Claimant's symptoms as reported to him to be exaggerated and not consistent with the original symptoms reported to the providers at the beginning of the claim. He further opined that the fact that Claimant has a lack of neurological findings, including

weakness, numbness and tingling or radicular pain down the legs at the beginning of the claim, are indicia that there was no aggravation of the preexisting asymptomatic degenerative condition and stenosis.

58. Dr. Rauzzino testified that stenosis refers to when the sac containing nerves narrows due to compression from either the disc or the bone, which results in nerve compression and symptoms radiating down the legs and into the feet. He stated that Claimant had a space of 4 mm while it would normally be between 10 and 12 mm, indicating that Claimant has severe stenosis.

59. As found, Dr. Janssen's opinion is not found credible. This ALJ is unaware of what Dr. Janssen was provided as background documentation to review, but the exhibits provided at hearing are not consistent with his opinions with regard to history, mechanism of injury, preexisting pain complaints prior to the date of injury or the medical records provided at hearing that were available at the time of his evaluation. Dr. Janssen is not credible in his opinion with either the mechanism of injury or opinion with regard to causation.

60. As found, specifically Dr. Rauzzino is not credible in his opinion with regard to the mechanism of injury, that the forces applied upon Claimant were minimal and could not cause the Claimant's condition. Neither is Dr. Rauzzino's opinion regarding causation and the speculation with regard to the myofascial nature of the injury. The lack of medical records showing any kind of preexisting symptoms, restrictions or limitations is persuasive in this matter. Claimant was a 73-year-old nurse. Claimant testified that she had no problems prior to this injury, and this is credible. Claimant worked as a nurse for many years prior to the injury.

61. As found, the mechanism of the injury was awkward, where both Claimant and the CNA were exerting force upward to lift a patient from the floor in a limited amount of room, which caused the lifting incident to be ungainly. This caused unexpected strain for Claimant's back, as she was unaware and unprepared to lift the patient from a dead weight. This may have been a simple act, but it was not a minor or simple lifting incident. It is the trigger and cause of the admitted work-related injury, which aggravated Claimant's underlying asymptomatic condition. This aggravation in turn caused Claimant to require treatment, also causing disability and wage loss. As found, Claimant's testimony is credible.

62. As found, Dr. Gallizzi's opinion that Claimant's need for the surgery as related to the July 12, 2020 accident is more credible than the contrary opinions of Dr. Rauzzino and Dr. Janssen. Dr. Gallizzi, Claimant's authorized treating surgeon, opined the industrial injury caused Claimant's rapid decline in her condition and the recommended L4-S1 fusion surgery is reasonably necessary and related. The totality of the evidence shows the work injury of July 12, 2020 caused the Claimant's disability and need for treatment. Claimant has shown by a preponderance of the evidence, that it is more likely than not, that she sustained an aggravation of her asymptomatic preexisting

condition, and the subsequent need for medical care. As found, Claimant continued to develop progressive symptoms caused by the original work injury of July 12, 2020

63. As found, the July 12, 2020 industrial injury permanently aggravated Claimant's underlying lumbar condition and is the proximate cause of her need for the lumbar surgery recommended by Dr. Gallizzi. The ALJ finds Claimant's July 12, 2020 industrial injury aggravated, accelerated, and combined with her preexisting lumbar condition to cause an injury and need for treatment, including the lumbar surgery recommended by Dr. Gallizzi. The ALJ finds Claimant proved by a preponderance of the evidence the lumbar surgery recommended by Dr. Gallizzi is reasonable, necessary, and related to her July 12, 2020 industrial injury.

CONCLUSIONS OF LAW

A. General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the claimant's rights nor in favor of the rights of the respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office (ICAO)*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Burden of Proof

The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. Sections. 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000; *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979; *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

C. Medical Benefits that are Reasonably Necessary and Related

The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301, C.R.S. See *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986).

Section 8-42-101(1)(a), C.R.S., provides that Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Snyder v. Industrial Claim Appeals Office*, *supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *In re Claim of Foust*, I.C.A.O, WC, 5-113-596 (COWC October 21, 2020).

Claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying preexisting condition. See *Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 448 (1949); *Abeyta v. Wal-Mart Stores*, W.C. No. 4-669-654 (January 28, 2008).

The issue of whether medical treatment is necessary for the compensable aggravation or a worsening of Claimant's pre-existing condition is also one of fact for resolution by the ALJ based upon the evidentiary record. See *University Park Care Center v. Industrial Claim Appeals Office,* 43 P.3d 637 (Colo. App. 2001); *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970); *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). The Act places full responsibility on the employer for benefits as a result of a work injury when there is an aggravation of an underlying dormant condition. *United Airlines, Inc. v. ICAO*, 993 P.2d 1152 (Colo. 2000). Expert medical opinion is not needed to prove causation where circumstantial evidence supports an inference of a causal relationship between the injury and the claimant's condition. *Savio House v. Dennis,* 665 P.2d 141 (Colo. App. 1983). Where conflicting expert opinion is presented, it is for the ALJ as fact finder to resolve the conflict. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). When expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); *Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992).

As found, Dr. Gallizzi's opinions that the work-related accident caused the need for the surgery is credible and more persuasive than the contrary opinions of Dr. Janssen and Dr. Rauzzino. This is reinforced by the records of Nurse Fisk. At the very first visit with Nurse Fisk Claimant complained of back pain, and Nurse Fisk found "reduced range of motion (ROM) of the low back, abnormal gait, and posture, including a hunched forward posture, muscular abnormalities, paraspinals spasming of the lumbar muscles, tenderness of the lumbar spine, and *abnormal deep tendon reflexes of the right lower extremity." (Emphasis added.)*

As found, Claimant continued to complain of back pain and buttock pain during her care with her medical providers, including difficulty standing and walking. The medical records show a consistent deterioration of function and decline from the date of the admitted July 12, 2020 injury. The EMG, as reported by Dr. Frank, showed that Claimant has an abnormal severe bilateral radiculopathy at the L5-S1 level. The reports of Dr. Gallizzi, Dr. Frank, Nurse Fisk and other ATPs are more persuasive than the contrary opinions of Dr. Janssen and Dr. Rauzzino. This is further bolstered by the credible testimony of Claimant that she was a 73-year-old nurse, with a long history in the nursing industry and that she did not have any problems with her low back or lower extremities immediately prior to the lifting incident of July 12, 2020. The lack of prior medical records showing a history of back or buttock complaints is also a material fact considered by this ALJ and is additionally persuasive. Claimant has no prior history of back problems.

A found, the awkward and ungainly way the Claimant and the CNA were attempting to lift the dead weigh patient from the floor caused the injuries to Claimant's back, which in turn caused the need for medical care. Had it not been for the lifting incident, Claimant may have continued to work as a nurse despite the preexisting degenerative condition of her back as she had been prior to the admitted work injury.

Ultimately it is found that the Claimant's need for the surgery as recommended by Dr. Gallizzi is proximately caused by the work injury of July 12, 2020 and is reasonably necessary to address the work-related injury and aggravation of Claimant's previously asymptomatic degenerative condition.

Respondents argue that Dr. Gallizzi did not follow the recommendations of The Medical Treatment Guidelines (MTGs). The MTGs are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook V. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide "All health care providers shall use the Medical Treatment Guidelines adopted by the Division." In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011). While the Guidelines may carry substantial weight, and provide substantial guidance, the ALJ is not bound by the Guidelines in deciding individual cases or the principles contained therein alone. Indeed, Section 8-43-201(3), C.R.S. specifically provides:

> It is appropriate for the director or an administrative law judge to consider the medical treatment guidelines adopted under section 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease. *The director or administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations.* (*Emphasis added*).

Pursuant to W.C.R.P. Rule 17-1(A), the statement of purpose of the guidelines is as follows:

> In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost.

W.C.R.P. Rule 17-5(C) provides "The treatment guidelines set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

It is appropriate for an ALJ to consider the guidelines while weighing evidence, but the MTGs are not definitive. *Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); *aff'd Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication); *Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the medical treatment guidelines were not shown to be present, ICAO was not persuaded that such a determination would be definitive). Concerning the issue presented, the MTG's indicate that "[t]here is some evidence that the ALJ may decide the weight to be assigned the provisions of the Guidelines upon consideration of the totality of the evidence. See *Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006).

As found in this case, while the MTGs may provide for specific findings of radiculopathy to be present immediately following the injury, require specific care and have certain indications pursuant to W.C.R.P. Rule 17, Exhibit 1(G), Claimant has shown by a preponderance of the evidence that she suffered an aggravation of her preexisting underlying stenosis, complained of buttock pain within two days of the incident, and subsequent lower extremity problems, including tingling and numbness into her feet. Dr. Gallizzi has indicated that Claimant continues to deteriorate without the surgery at this point and this ALJ infers from the records that there is some urgency to proceed with the surgery. Claimant was a 73-year-old nurse assigned to work in a care facility where it is expected that she might need to assist with invalids and patients that cannot care for themselves. Claimant had significant immediate pain in her low back which developed to buttock pain and later to numbness and tingling going down her lower extremities into her feet. This is considered to be the natural progression of the work-related injury which aggravated the stenosis and accelerated the need for the surgery. This ALJ has considered the experts opinions and testimony with regard to the MTGs and has rejected the opinions of Dr. Rauzzino and Dr. Janssen in reference to the presence and requirement of radicular symptomology immediately following the July 12, 2020 work injury. Dr. Gallizzi has opined that, but for the July 12, 2020 lifting incident, Claimant's functional decline and subsequent need for surgery would not have been accelerated. Claimant has shown by a preponderance of the evidence that the July 12, 2020 accident precipitated Claimant's complaints of back, buttock and leg symptoms aggravating her underlying asymptomatic degenerative condition and proximately caused the need for the surgery proposed by Dr. Gallizzi. Claimant has shown by a preponderance of the evidence that the lumbar spine surgery proposed by Dr. Gallizzi is reasonably necessary and related to the July 12, 2020 injury.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents shall authorize and pay for the surgery recommended by Dr. Michael Gallizzi as it is reasonably necessary and related to the admitted July 12, 2020 work injury.

2. Any payment for medical benefits is subject to the Division of Workers' Compensation Medical Fee Schedule.

3. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

Denver, CO 80203

ISSUE

Whether Claimant has established by a preponderance of the evidence that he should be permitted to reopen his November 29, 2015 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S.

FINDINGS OF FACT

1. Claimant is a 47 year-old Firefighter Captain for Employer. On November 29, 2015 Claimant suffered an admitted industrial injury while working for Employer. Specifically, Claimant developed back pain while attempting to control a dog during an investigation.

2. Claimant subsequently received a course of physical therapy. However, because physical therapy was unsuccessful, he underwent surgical repair with Chad J. Prusmack, M.D. on March 30, 2016. Dr. Prusmack performed a right L5/S1 microdiscectomy that specifically involved the removal of the lateral lamina and medial facet to expose the S1 nerve root.

3. Claimant noticed almost immediate improvement after surgery. On July 11, 2016 Kirk Nelson, D.O. determined Claimant had reached Maximum Medical Improvement (MMI) with a 16% whole person impairment rating for his November 29, 2015 industrial injury. In August 2016 Claimant returned to his regular work duties with no restrictions.

4. Claimant subsequently suffered sporadic back pain. He specifically remarked that he experienced "fairly consistent stiffness and soreness" in his back. Claimant continued with core strengthening exercises and sought to improve his flexibility.

5. By early 2020 Claimant's symptoms began to increase. In March 2020 he began working with athletic trainers and physical therapists in Employer's Wellness Bureau.

6. On March 16, 2020 Claimant visited Employer's athletic trainer Brian Crouser, LAT for an evaluation. Claimant recounted that when performing kettle bell swings while working out at Employer's Wellness Bureau he experienced tightness in the left lumbar spine area. LAT Crouser assessed Claimant with a lumbar disc irritation at L5-S1 and muscle tightness. By June 26, 2020 Claimant reported improvement and no radicular symptoms. He noted that performing a house project that required him to carry 100-125 pound boulders to build a retaining wall "actually made his back feel better."

7. Claimant performed his regular job duties on January 17-18, 2021 without any symptoms. On January 19, 2021 he attended a sit-down meeting at Employer's firehouse for about four hours and did not recall any episodes of pain.

8. While at home on January 21, 2021 Claimant suffered a large sneeze. He immediately experienced severe right lower leg pain that was worse than his initial work-related injury on November 29, 2015.

9. Claimant sought medical treatment through Concentra Medical Centers. On January 28, 2021 he visited Carrie Burns. M.D. for an examination. Claimant recounted that about five years earlier he suffered a lower back injury at work and underwent an L5-S1 microdiscectomy. He was out of work for eight months but then returned to regular duty employment. Claimant experienced occasional soreness but suffered a sneeze at home on January 21, 2021 that caused pain from his right hip down to his ankle. He did not return to work after the sneezing incident. Dr. Burns assessed Claimant with a history of a microdiscectomy and a lumbar sprain. She determined that Claimant's condition was not work-related and remarked "he had healed from previous injury; sneezing is a ubiquitous activity of daily living." Dr. Burns summarized that, based on a physical examination, a review of the records and consideration of the mechanism of injury, "it does not appear that the presenting complaint arose out of" Claimant's job duties. She released Claimant to full duty employment.

10. Claimant subsequently visited personal provider John Geraghty, M.D. for an evaluation. On February 1, 2021 Dr. Geraghty referred Claimant for an MRI of the lumbar spine. The MRI revealed the following: (1) a L5-S1 right central 1.4 cm disc herniation; (2) L5-S1 severe central canal stenosis; and (3) suspected right hemilaminectomy at L5-S1.

11. On February 8, 2021 Claimant visited David Whatmore, PA-C for an evaluation. PA-C Whatmore recounted that Claimant underwent a right L5-S1 microdiscectomy in March 2016 and "successfully recovered from the procedure." Claimant recently had an increase in radiculopathy into the right leg with additional back pain. He then underwent an MRI as directed by his primary care physician. PA-C Whatmore commented that the MRI revealed "a large multilobular herniated disk, most likely a recurrent disk on the right at the L5-S1 level." He noted that Claimant's original need for surgery was related to his November 29, 2015 industrial injury. Therefore, Claimant's "potential need for upcoming surgery would still be associated with his original Workers' Compensation claim." PA-C Whatmore planned to discuss the matter with Dr. Prusmack.

12. On February 9, 2021 Claimant visited the emergency room based on worsening pain and was admitted to the hospital. He underwent emergency surgery with Dr. Prusmack. In describing the surgery, Dr. Prusmack remarked that the procedure was required because Claimant "had failed conservative care, now causing recalcitrant radiculopathy and stabbing pain." The surgery specifically consisted of a "right re-exploration laminectomy for discectomy at L5-S1 and resection of recurrent herniated disc." Claimant's pre-operative and post-operative diagnoses included the following: (1) acute recurrent large disc herniation at L5-S1; (2) leg weakness; and (3) stenosis. The surgery was successful and Claimant returned to regular duty employment with Employer in July 2021.

13. On September 13, 2021 Claimant underwent an independent medical examination with Nicholas K. Olsen, M.D. Dr. Olsen also testified at the hearing in this

matter. At the independent medical examination Claimant recounted that he suffered a work injury on November 29, 2015 when he was in a crowded position, bent over and felt back pain. After unsuccessful physical therapy he underwent back surgery on March 30, 2016. Claimant resumed his full work duties in August 2016. However, over time Claimant's back was "typically sore and stiff." He worked with physical therapists and athletic trainers to improve his condition. On January 21, 2021 Claimant suffered a large sneeze at home that immediately caused right lower leg pain that was more severe than his initial injury of November 29, 2015. After undergoing an MRI, Dr. Prusmack performed a discectomy/laminectomy on February 9, 2021.

14. After reviewing Claimant's medical records and performing a physical examination, Dr. Olsen determined that Claimant's need for surgery on February 9, 2021 was not causally related to his work activities for Employer. He explained that, when Claimant had the large sneeze on January 21, 2021, he suffered "another separate and specific disk herniation on the right side at the L5-S1 disk causing radiculopathy." Dr, Olsen specified that, if someone is bending at his waist and improperly lifting weight, he is increasing pressure on the disc "similar to the way an increase Valsalva response with a sneeze increases pressure on the disk." Notably, a Valsalva response is when an individual increases internal pressure while bearing down.

15. Dr. Olsen summarized that Claimant performed his work duties for approximately four and one-half years after his initial injury. He was building a rock wall in 2021 while carrying 100-125 pound boulders, had completely recovered from his original surgery and did not have a radiculopathy. Dr. Olsen detailed that Claimant maintained a high level of function while working as a firefighter, performed yard work, did not have any reason to return to a physician and was benefiting from core exercises until the sneezing event. He reasoned that Claimant's large sneeze on January 21, 2021 triggered the onset of new right lower extremity radiculopathy and the necessity for a repeat surgery. He agreed with Dr. Burns that Claimant's need for surgery on February 9, 2021 was not related to any events at work, but instead to the sneezing incident at home on January 21, 2021.

16. Claimant has failed to establish that it is more probably true than not that he should be permitted to reopen his November 29, 2015 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. initially, on November 29, 2015 Claimant suffered an admitted back injury while working for Employer when attempting to control a dog during an investigation. After unsuccessful physical therapy he underwent back surgery on March 30, 2016 with Dr. Prusmack. Claimant noticed almost immediate improvement in his condition. On July 11, 2016 Dr. Nelson determined Claimant had reached MMI with a 16% whole person impairment. In August 2016 Claimant returned to his regular work duties with no restrictions. Claimant subsequently experienced "fairly consistent stiffness and soreness" in his back. Nevertheless, by June 26, 2020 Claimant reported improvement with no radicular symptoms. He noted that performing a house project that required him to carry 100-125 pound boulders to build a retaining wall "actually made his back feel better." However, while at home on January 21, 2021 Claimant suffered a large sneeze and immediately experienced severe right lower leg pain that was worse than his initial work-related injury on November 29, 2015. On February 9, 2021 Claimant underwent emergency surgery with Dr. Prusmack in the form of a discectomy/laminectomy at the L5-S1 level.

17. Relying on the opinions of Dr. Prusmack and PA-C Whatmore, Claimant asserts that the necessity for a repeat surgery on February 9, 2021 constituted a worsening of condition that was causally related to his November 29, 2015 admitted work injury. Dr. Prusmack commented that Claimant required a second surgery on February 9, 2021 because he “had failed conservative care, now causing recalcitrant radiculopathy and stabbing pain.” Furthermore, Dr. Prusmack’s assistant PA-C Whatmore remarked that an MRI had revealed “a large multilobular herniated disk” that was likely a recurrent disk on the right at the L5-S1 level. He reasoned that Claimant’s original need for surgery was related to his November 29, 2015 industrial injury. Therefore, Claimant’s “potential need for upcoming surgery would still be associated with his original Workers’ Compensation claim.”

18. However, the persuasive medical evidence reflects that the sneezing incident on January 21, 2021 constituted an intervening event that severed the causal connection to Claimant’s original November 29, 2015 work-related injury. Approximately one week after the sneezing event Claimant visited Dr. Burns at Concentra for an examination. Dr. Burns assessed Claimant with a lumbar sprain. She persuasively determined that Claimant’s condition was not work-related and remarked “he had healed from previous injury; sneezing is a ubiquitous activity of daily living.” Dr. Burns summarized that, based on a physical examination, a review of the records and consideration of the mechanism of injury, “it does not appear that the presenting complaint arose out of” Claimant’s job duties. Moreover, after reviewing Claimant’s medical records and performing a physical examination, Dr. Olsen persuasively determined that Claimant’s need for surgery on February 9, 2021 was not causally related to his work activities for Employer. He summarized that Claimant performed his work activities for approximately four and one-half years after his initial injury, was functioning at a very high level, had completely recovered from his original surgery and did not have a radiculopathy. Dr. Olsen reasoned that Claimant’s large sneeze on January 20, 2021 triggered the onset of new right lower extremity radiculopathy and the necessity for a repeat surgery.

19. Based on the medical records and persuasive opinions of Drs. Burns and Olsen, the January 21, 2021 sneezing incident constituted an intervening event that severed the causal connection to Claimant’s original November 29, 2015 work-related injury. The intervening event triggered the onset of new right lower extremity radiculopathy and the necessity for Claimant’s second surgery on February 9, 2021. Accordingly, Claimant has failed to establish that he suffered a worsening of his lower back condition that is causally related to his admitted work injury. Accordingly, Claimant’s request to reopen his November 29, 2015 Workers’ Compensation claim based on a change in condition is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of

the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-43-303(1), C.R.S. provides that a workers' compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and that he is entitled to benefits by a preponderance of the evidence. *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAO, Oct. 25, 2006). The determination of whether a claimant has sustained his burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAO, July 19, 2004).

5. The existence of a weakened condition is insufficient to establish causation if the new injury is the result of an efficient intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187, 1188 (Colo. App. 2002); *In Re Lang,* W.C. No. 4-450-747 (ICAO, May 16, 2005). No liability exists when a later accident occurs as the direct result of an intervening cause. *Vargas v. United Parcel Service*, W.C. No. 4-325-149 (ICAO, Aug. 29, 2002). However, the intervening event does not sever the causal connection between the injury and the claimant's condition unless the disability is triggered by the intervening event. *See Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970); *Vargas v. United Parcel Service*, W.C. No. 4-325-149 (ICAO, Aug. 29, 2002). If the need for medical treatment occurs as the result of an independent intervening cause, then the subsequent treatment is not compensable. *Owens,* 49 P.3d at 1188. The new injury is not compensable "merely because the later accident might or would not have happened if the employee had retained all his former powers." *In Re Chavez,* W.C. No. 4-499-370 (ICAO, Jan. 23, 2004). The determination of whether an injury resulted from an efficient intervening cause is a question of fact for the ALJ. *Id.*

6. As found, Claimant has failed to establish by a preponderance of the evidence that he should be permitted to reopen his November 29, 2015 Workers' Compensation claim based on a change in condition pursuant to §8-43-303(1), C.R.S. initially, on November 29, 2015 Claimant suffered an admitted back injury while working for Employer when attempting to control a dog during an investigation. After unsuccessful physical therapy he underwent back surgery on March 30, 2016 with Dr. Prusmack. Claimant noticed almost immediate improvement in his condition. On July 11, 2016 Dr. Nelson determined Claimant had reached MMI with a 16% whole person impairment. In August 2016 Claimant returned to his regular work duties with no restrictions. Claimant subsequently experienced "fairly consistent stiffness and soreness" in his back. Nevertheless, by June 26, 2020 Claimant reported improvement with no radicular symptoms. He noted that performing a house project that required him to carry 100-125 pound boulders to build a retaining wall "actually made his back feel better." However, while at home on January 21, 2021 Claimant suffered a large sneeze and immediately experienced severe right lower leg pain that was worse than his initial work-related injury on November 29, 2015. On February 9, 2021 Claimant underwent emergency surgery with Dr. Prusmack in the form of a discectomy/laminectomy at the L5-S1 level.

7. As found, relying on the opinions of Dr. Prusmack and PA-C Whatmore, Claimant asserts that the necessity for a repeat surgery on February 9, 2021 constituted a worsening of condition that was causally related to his November 29, 2015 admitted work injury. Dr. Prusmack commented that Claimant required a second surgery on February 9, 2021 because he "had failed conservative care, now causing recalcitrant radiculopathy and stabbing pain." Furthermore, Dr. Prusmack's assistant PA-C Whatmore remarked that an MRI had revealed "a large multilobular herniated disk" that was likely a recurrent disk on the right at the L5-S1 level. He reasoned that Claimant's original need for surgery was related to his November 29, 2015 industrial injury. Therefore, Claimant's "potential need for upcoming surgery would still be associated with his original Workers' Compensation claim."

8. As found, however, the persuasive medical evidence reflects that the sneezing incident on January 21, 2021 constituted an intervening event that severed the causal connection to Claimant's original November 29, 2015 work-related injury. Approximately one week after the sneezing event Claimant visited Dr. Burns at Concentra for an examination. Dr. Burns assessed Claimant with a lumbar sprain. She persuasively determined that Claimant's condition was not work-related and remarked "he had healed from previous injury; sneezing is a ubiquitous activity of daily living." Dr. Burns summarized that, based on a physical examination, a review of the records and consideration of the mechanism of injury, "it does not appear that the presenting complaint arose out of" Claimant's job duties. Moreover, after reviewing Claimant's medical records and performing a physical examination, Dr. Olsen persuasively determined that Claimant's need for surgery on February 9, 2021 was not causally related to his work activities for Employer. He summarized that Claimant performed his work activities for approximately four and one-half years after his initial injury, was functioning at a very high level, had completely recovered from his original surgery and did not have a radiculopathy. Dr. Olsen reasoned that Claimant's large sneeze on January 20, 2021 triggered the onset of new right lower extremity radiculopathy and the necessity for a repeat surgery.

9. As found, based on the medical records and persuasive opinions of Drs. Burns and Olsen, the January 21, 2021 sneezing incident constituted an intervening event that severed the causal connection to Claimant's original November 29, 2015 work-related injury. The intervening event triggered the onset of new right lower extremity radiculopathy and the necessity for Claimant's second surgery on February 9, 2021. Accordingly, Claimant has failed to establish that he suffered a worsening of his lower back condition that is causally related to his admitted work injury. Accordingly, Claimant's request to reopen his November 29, 2015 Workers' Compensation claim based on a change in condition is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request to reopen his November 29, 2015 Workers' Compensation claim based on a change in condition is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Did Claimant prove an L5-S1 fusion surgery recommended by Dr. Roger Sung is reasonably necessary to cure and relieve the effects of his admitted work injury?

FINDINGS OF FACT

1. Claimant works for Employer as an appliance repair technician. The job is physically demanding and requires lifting and moving heavy home appliances.

2. Claimant suffered an admitted low back injury on October 2, 2019 in a rear-end motor vehicle accident. The air bags did not deploy but the rear of his van was sufficiently damaged that the doors could not be opened.

3. Claimant has a history of low back problems dating to an injury in 2011 in the military. Claimant received lumbar epidural steroid injections at Evans Army Hospital, and then was deployed for an extended period. He returned to Colorado Springs in 2015 and underwent another set of injections. The injections were helpful and allowed him to work on core strengthening, which slowly helped reduce his pain.

4. Claimant's last treatment for the pre-existing back issues was a round of physical therapy in 2018. He was seen at Joint Effort on January 15, 2018 complaining of chronic low back pain. The pain at the time was a 6 out of 10, with the worst being 8 out of 10. He also reported numbness into his left glute and decreased sensation in his toes. Claimant's goals were to decrease his pain, get back to working out, and get back to running. Examination showed decreased sensation in the left L1-3 dermatomes. Lumbar spine ROM was reduced limited in all planes. The intake paperwork showed some degree of disability in all 10 categories on the Modified Oswestry Disability Scale as of January 6, 2018. The therapist recommended 1-2 PT sessions per week over 12 weeks.

5. Claimant responded fairly quickly to treatment, and reported significant improvement within a couple of weeks. The March 9, 2018 discharge report shows Claimant had a "good response [and] . . . sig[nificantly] less pain since starting P.T." The therapist noted improvement in strength, sciatic tests, and straight leg raise testing. Claimant still had "slight" tenderness to palpation around L5-S1. He was starting a new job with Dish Network and was concerned the pain might return because he would have to carry heavy ladders and perform satellite installations. The therapist recommended he continue his home exercise program and advised Claimant could return to PT if necessary for flares.

6. Claimant sought no further treatment for his low back until the MVA on October 2, 2019. He worked without difficulty for Dish for approximately a year until he

went to work for Employer in early 2019. There is no persuasive evidence to suggest Claimant's low back impeded his ability to perform his job or engage in any other activities before the MVA.

7. After the MVA on October 2, Claimant was taken by ambulance to the Memorial Hospital emergency department. His chief complaint was "neck and back pain after MVA." The provider documented, "Patient does have a history of chronic back pain but states this is different." Examination showed midline tenderness from the cervical area through the lumbar area. Lumbar x-rays showed "chronic findings around L5-S1 that he was aware of," including 13mm of anterolisthesis of L5 on S1. There was no fracture or other acute bony pathology. Claimant was diagnosed with a lumbar strain. The ER physician prescribed Flexeril and advised Claimant to follow up with his PCP.

8. Claimant saw Dr. Robi Baptist at DaVita Medical Group on October 7, 2019. He reported intermittent headaches, neck pain, low back pain, and radiating left leg numbness "ever since" the accident. Claimant reported a "distant" history of a low back pain from an injury while he was in the military. Dr. Baptist diagnosed a cervical myofascial strain and lumbar radicular pain. She planned to refer Claimant for physical therapy, but ultimately discharged him because "told by Sedgwick he must go to Concentra."

9. Claimant's initial appointment at Concentra took place on October 9, 2019 with PA-C Tianna Voros. His neck pain had improved since the accident but his low back symptoms had not. Claimant explained he had a previous low back injury in the military "but he did PT through the VA and his back pain was relieved." He was diagnosed with cervical and lumbar strains and referred to physical therapy.

10. At the initial PT evaluation on October 9, 2019, Claimant advised the therapist about his prior low back injury and known DDD. He said he had done PT "which was helpful." The therapist noted "patient reports no functional restrictions prior to this episode of care."

11. Claimant saw Dr. Daniel Peterson on October 16, 2019, who has been Claimant's primary ATP since then. Dr. Peterson documented that Claimant's primary care physician was of the opinion that the motor vehicle accident worsened his underlying spondylolisthesis at L5-S1. Claimant was still having significant low back pain and could not stand up straight. He also described intermittent numbness and tingling in the left leg. Examination of the low back showed palpable bilateral muscle spasms. Lower extremity examination showed normal strength, but some decreased sensation in the left leg in an L5 or more likely S1 distribution.

12. Claimant underwent EMG/NCV testing with Dr. Kathy McCranie in November 2019. It showed L5-S1 radiculopathy.

13. On November 21, 2019, Claimant met with Dr. Peterson to review the electrodiagnostic testing results. Dr. Peterson noted Claimant was still having leg symptoms "consistent" with the EMG findings. He referred Claimant to Dr. Mark Meyer for epidural steroid injections.

14. Claimant saw Dr. Larson for an IME at Respondents' request on January 28, 2020. Dr. Larson concluded Claimant suffered no significant injury in the MVA. Dr. Larson opined Claimant's lower extremity symptoms were "non-dermatomal" and his overall presentation was "non-physiologic." Dr. Larson concluded any low back symptoms were related to a pre-existing condition. He though Claimant was at MMI as of his initial appointment with Dr. Baptist on October 7, 2019.

15. Dr. Peterson subsequently reviewed Dr. Larson's report and strongly disagreed with it. He stated, "[Claimant] clearly had an injury event in the MVA and onset of symptoms after MVA." Dr. Peterson noted that Dr. McCranie "did a detailed unbiased medical evaluation. I strongly respect her evaluation and trust her independence whereas Dr. Wally Larson is well-known to write reports that are skewed in favor of the insurance companies."

16. Claimant saw Dr. Meyer on March 24, 2020. He reported ongoing left lower back pain with numbness and coldness in his left leg from the motor vehicle accident. Claimant told Dr. Meyer about his prior 2011 back injury from approximately 2011. Claimant said his back bothered him for several years but he received treatment through Evans Army Hospital that eventually alleviated his symptoms. After a series of injections, core strengthening, and physical therapy, "the back pain was essentially resolved for a couple years." He was pain free while working for Dish and when he began his employment with the Employer, and remained pain free until the MVA.

17. Dr. Meyer diagnosed L5-S1 spondylolisthesis, possible dynamic instability, and L5-S1 radiculopathy. Dr. Meyer opined, "[It is] my medical opinion the patient's symptoms are all typically related to the motor vehicle accident in question and his history demonstrates that he had resolution of his pre-existing back pain for 18 months prior to the Workers' Comp. injury, although there likely were some chronic L5-S1 changes." Dr. Meyer recommended 1-2 left L5-S1 ESIs, and flexion-extension x-rays to evaluate instability.

18. Claimant had an IME with Dr. Timothy Hall at his counsel's request on April 28, 2020. Dr. Hall reviewed Claimant's prior history of low back problems and documented, "he has had problems with his low back from the military. He went to Joint Effort after being released and did very well. For over two years prior to this MVA, he was working out in the gym. He was in no therapies, in no pain, and taking no medications. He had no consequences or disability or impairment." Dr. Hall diagnosed injury-related lumbar trauma resulting in worsening spondylolisthesis and potential left-cited radiculopathy, piriformis syndrome, and myofascial pain. He opined, "[Claimant's] symptoms fit very neatly with his trauma and findings on imaging. To me, it seems like a very straightforward case. This appears to be the consensus other than with Dr. Wally Larson. I disagree with pretty much everything he has to say." Dr. Hall recommended neuromuscular soft tissue treatment. He did not think Claimant was a surgical candidate.

19. Claimant underwent a left L5-S1 ESI with Dr. Meyer on June 9, 2020. On July 20, 2020, Claimant reported to Dr. Meyer he had over 50% improvement including

some improvement with the temperature of his leg. A repeat injection was performed. Unfortunately, Claimant received no measurable benefit from the 2nd injection.

20. Dr. Peterson referred Claimant to Dr. Roger Sung, an orthopedic surgeon, on August 14, 2020.

21. Claimant initially saw Dr. Sung's PA-C, Philip Falender. Claimant reported his prior medical history consistent with the medical record. X-rays taken in the office showed 12 mm of spondylolisthesis at L5-S1. They discussed surgery, but wanted an updated MRI first. Mr. Falender suggested a fusion would be required "due to the instability at L5-S1."

22. Claimant had the MRI, and returned to see Dr. Sung on September 23, 2020. Dr. Sung noted the flexion-extension x-rays showed 12 mm of spondylolisthesis. He reviewed the MRI images and saw L5-S1 spondylolisthesis with "significant neural foraminal stenosis." Dr. Sung recommended an L5-S1 anterior-posterior fusion. Although Claimant has some degeneration above L5-S1, Dr. Sung opined a single level fusion was most appropriate.

23. Dr. Peterson noted in his October 16, 2020 record that surgery was initially approved and then denied "and now he is being sent to see Dr. Wally Larson on 11/25! He is a hand surgeon and not a spinal surgeon and I have called the adjuster to register my protest that a second opinion should be with another spinal surgeon and not a hand surgeon." On November 17, 2020, Dr. Peterson noted the IME still had not occurred, and it made no sense to him why Respondents were sending Claimant to a hand surgeon for a second opinion regarding a spinal fusion. Dr. Peterson stated Dr. Larson is "well known to render opinions that favor insurance adjusters and is likely why the IME referral was made to him."

24. Claimant had the IME with Dr. Larson on December 23, 2020. Claimant's primary complaints were low back pain and left leg pain, numbness, and coldness. Dr. Larson documented a largely normal lumbar spine examination. He reviewed the x-rays and the MRI and noted grade 1 L5-S1 spondylolisthesis. He identified no nerve root compression. Dr. Larson opined Claimant had "multiple nonphysiologic symptoms" that "cannot be explained on the basis of any objective findings." Dr. Larson opined all of Claimant's symptoms were related to preexisting spondylolisthesis at L5-S1 and DDD of the lumbar spine, and "are not the result of an occupational injury." He thought it "very unusual" for such a minor MVA to cause any long-term or permanent subjective symptoms. He opined the MVA did not aggravate Claimant's preexisting spondylolisthesis. Dr. Larson also stated Claimant is a poor surgical candidate and "is at very high risk for increased reported symptoms and increased reported disability following any surgical procedure."

25. In his March 2, 2021 report, Dr. Peterson wrote that "I am in agreement with [Dr. Sung] that this WC injury exacerbated his underlying spinal instability and that his injury is compensable and to return him to his preinjury function he needs to proceed with spinal fusion."

26. Claimant had a second IME with Dr. Hall on June 24, 2021. Dr. Hall reviewed Claimant's pre-injury history again and documented, "It is quite clear that he had symptoms in the military. We discussed the interventions and that he had done quite well and was physically active prior to the motor vehicle collision. He has had symptoms ever since the collision. He was in no therapies. He was taking no medications. He had no injections for many months prior to the date of the collision." Dr. Hall reiterated his belief that Claimant's back and leg symptoms were causally related to the October 2, 2019 MVA. He opined, "even though it was not a high-impact collision . . . It would not take a great deal to worsen his underlying spondylolisthesis and radiculopathy."

27. Dr. Larson testified via deposition on August 11, 2021, consistent with his reports. He reiterated that the L5-S1 lumbar fusion is not reasonably necessary or causally related to the MVA. Dr. Larson testified it would be "almost impossible" for the very minor trauma associated with the MVA to cause any additional slippage in Claimant's underlying spondylolisthesis. Dr. Larson testified Claimant reported numerous "nonphysiologic" findings that cannot be explained by spondylolisthesis. He did not believe Claimant satisfied the criteria in the MTGs regarding indications for spinal fusion surgery, including adequate identification of all pain generators and completion of a physical medicine and manual therapy interventions. He testified the best treatment is a home exercise program with core strengthening.

28. Dr. Sung testified via deposition on August 11, 2021. When asked about his rationale for the proposed surgery, Dr. Sung explained,

> [Claimant] has compression on his nerves at L5-S1. And . . . that segment of his spine has become unstable. L5 is shifting in relation to S1, and – there's a dynamic component to his situation that makes this not a simple surgery were you just go in and trim out some space for the nerves or trim out some disc. You actually need to provide stability and alignment to that segment of the spine.

29. Dr. Sung testified the flexion extension x-rays showed "definite instability" in Claimant's spine. Regarding causation, Dr. Sung opined,

> I think that there is a component of underlying degeneration that was there before this current injury, and that has been with the patient for a period of time. The injury is what made his symptoms as bad as they are and created the leg pain. And that's why we were talking about doing the surgery at this point.

30. Dr. Sung disagreed with Dr. Larson's characterization of Claimant's symptoms as "nonphysiologic." In his estimation, Claimant's reported leg symptoms were consistent with his demonstrated pathology. Dr. Sung emphasized that the proposed surgery is confined to the L5-S1 level, which was aggravated by the MVA: "This is the level that is symptomatic. This is the level that's causing his leg symptoms. This is the level we are fixing. We're not chasing every bit of wear in his spine."

31. Dr. Sung’s deposition testimony is credible and highly persuasive.

32. The opinions and conclusions of Dr. Sung, Dr. Peterson, and Dr. Hall are more persuasive than the contrary opinions offered by Dr. Larson.

33. Claimant’s hearing testimony was credible and persuasive.

34. Claimant proved the L5-S1 fusion surgery proposed by Dr. Sung is reasonably needed to cure and relieve the effects of his admitted work injury.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). Where the respondents dispute the claimant’s entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must also prove that the requested treatment is reasonably necessary, if disputed. Section 8-42-101(1)(a). The claimant must prove entitlement to medical benefits by a preponderance of the evidence.

The existence of a preexisting condition does not disqualify a claim for medical benefits where an industrial injury aggravates, accelerates, or combines with a preexisting condition to produce the need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). A claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy to prove an aggravation. A purely symptomatic aggravation is sufficient for an award of medical benefits if it the symptoms were triggered by work activities and caused the claimant to need treatment they would not otherwise have required. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-066-531-002 (May 7, 2019). But the mere fact a claimant experiences symptoms after an incident at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). The ALJ must determine if the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant proved the L5-S1 fusion surgery is reasonably needed to cure and relieve the effects of his work injury. Claimant became symptomatic immediately after the MVA and has remained so through the date of the hearing. As Dr. Sung explained, his back and leg symptoms are reasonably consistent with the underlying pathology. Claimant has been candid about his prior low back problems from day one. And he has been equally consistent that his post-accident symptoms are “different” than before. Claimant did well with physical therapy in 2018, and sought no additional treatment until after the MVA. He also performed physically demanding work without difficulty. Claimant’s pre-existing spondylolisthesis probably made him more susceptible to injury from a relatively “minor” accident than might otherwise be expected. Claimant’s treating providers believe the work accident aggravated his underlying condition and caused the need for surgery. Dr. Hall agrees. Dr. Larson’s contrary opinions are outliers and are not persuasive.

ORDER

It is therefore ordered that:

1. Insurer shall cover the L5-S1 fusion surgery recommended by Dr. Sung.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ’s order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 2864 S. Circle Drive Ste. 810, Colorado Springs, CO 80906	
In the Matter of the Workers' Compensation Claim of: **[REDACTED],** Claimant, v. **S[REDACTED],** Employer, and **SELF-INSURED, c/o[REDACTED],** Insurer/Respondent Employer, and regarding, **M[REDACTED-MEDICAL PROVIDER],** Medical Provider, Respondent Hospital System.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-156-972-001**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

A hearing in the above captioned matter was held on September 23, 2021, before Administrative Law Judge (ALJ), Richard M. Lamphere. Because of COVID-19 related restrictions, the hearing was conducted remotely via video/teleconference. The hearing was digitally recorded on the Google Meets platform between 9:00 and 10:58 a.m.

Claimant was present and represented [Redacted], Esq. H[Redacted] was represented by [Redacted], Esq. Respondent Employer did not appear or otherwise participate in the hearing. Testimony was taken from Claimant, [Claimant], Catherine H[Redacted] and Aaron F[Redacted]. In addition to the testimony of the aforementioned witnesses, the ALJ admitted the following exhibits (including supplements) into evidence: Claimant's Hearing Exhibits 1-5 and Respondents Hearing Exhibits A-C as relabeled by the ALJ and Supplemental Exhibit D.

Following the presentation of evidence, the ALJ held the record open through October 13, 2021, to allow counsel time to file position statements in lieu of closing argument. The parties' position statements have been received. Consequently, the matter is ready for an order.

In this order, Benjamin Sandoval will be referred to as "Claimant"; S[Redacted] will be referred to as "Employer" and H[Redacted] will be referred to alternatively as the Respondent-Hospital" or the "Hospital". All others shall be referred to by name.

Also in this order, "Judge" or "ALJ" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes (2020); "OACRP" refers to the Office of

Administrative Courts Rules of Procedure, 1 CCR 104-1, and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

ISSUE

I. Whether Claimant established, by a preponderance of the evidence, that penalties should be assessed against the Respondent-Hospital pursuant to C.R.S. § 8-43-304, for the Hospital's alleged violation of § 8-42-101(4), C.R.S.[1]

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. On December 1, 2020, Claimant sustained injuries in a work-related motor vehicle accident. Shortly after his accident, Claimant was treated at a facility operated by H (H[REDACTED]).

2. On December 21, 2020, Claimant's employer admitted liability for Claimant's injuries. Accordingly, Claimant's employer was obligated to cover the cost of his treatment at H[REDACTED]. *See* Exhibit 5.

3. Claimant testified that he advised the treating providers at H[REDACTED] that his injuries were work related and verified that all billing associated with treatment of his work-related injuries should/would be sent to his employer's workers' compensation insurance carrier.

4. Billing for Claimant's treatment related services, including an MRI was prepared by personnel at H[REDACTED] and forwarded to Broadspire, Employer's third party administrator for payment. *See generally*, Exhibit 4, p. 15. Claimant's treatment related charges totaled $2,897.21. Broadspire paid $1,092.06 of the service related expenses leaving an unpaid balance of $1,805.15. *Id.*

5. Claimant testified that he received a billing invoice from H[REDACTED] in the amount of $1,805.15 in March 2021. He testified that he forwarded this invoice to his attorney to address because there were no details explaining why he was billed and he was under the impression that his employer's workers' compensation carrier was obligated to cover the costs of his injury related treatment.

[1] Although Claimant's application for hearing references a claim for penalties for "repeated violations of Section 8-42-101(4), C.R.S. (2020) at a rate of $1,000 per day", Claimant clarified at hearing that he was seeking penalties at a rate of $1,000 per bill sent, not per day. *See*, Ex. 1, p. 3 ¶ 1; *see also*, *Delta Cty. Mem. Hosp. v. Indus. Claim Appeals Office*, 2021 COA 84 (2021). As Claimant alleged he was sent four separate billing invoices in violation of § 8-42-101(4), he asserted a maximum penalty of $4,000. Accordingly, the ALJ advised the parties that there was no further need to further address the maximum penalty amount sought in their post hearing position statements.

6. Careful review of the exhibits admitted into evidence supports a finding that a billing invoice was sent to Claimant as the “Responsible Party” for a debt of $1,805.15 on March 24, 2021. Exhibit 4, p. 13. This invoice was prepared on H[REDACTED] letterhead and directs Claimant to remit payment, in full, to SLV Health at: P.O. Box 780, Longmont, CO 80502-0780 by April 13, 2021.

7. Claimant testified that he received similar invoices requesting payment of $1,805.15 from H[REDACTED] in April and May 2021. The documentary evidence includes a billing invoice sent to Claimant by H[REDACTED] on May 27, 2021. Again, Claimant is listed as the “Responsible Party” for a debt of $1,805.15. Exhibit 4, p. 14. This invoice included an attachment outlining a description of the service rendered to Claimant along with the cost of that service. *Id.* at p. 15. The May 27, 2021 invoice is similar to the March 24, 2021 invoice in that it requests Claimant to pay $1,805.15 to H[REDACTED] by June 16, 2021. However, the May 27, 2021 invoice differs from the March 24, 2021 in that it clearly indicates that this invoice represents H[REDACTED]’s final attempt to secure payment of the outstanding debt before resorting to additional collection efforts. Indeed, the invoice contains the following language:

> FINAL NOTICE. You have not responded to our efforts to resolve the outstanding balance of your account. This unpaid balance is your responsibility and must be paid. YOUR ACCOUNT MAY BE REFERRED TO A COLLECTION AGENCY IF PAYMENT IS NOT RECEIVED WITHIN 30 DAYS FROM THE DATE OF THIS LETTER.
>
> We are reluctant to send any account to a collection agency, but when an account remains unresolved there is no other alternative. Services were provided in good faith, and we expect you to meet your obligation as well. We urge you to send your payment today so further collection efforts will not be necessary.

Id. at p. 14.

8. Although Claimant testified that he received a billing invoice from H[REDACTED] in April 2021, no such invoice was included in the exhibits submitted to the ALJ for inclusion in the evidentiary record.

9. In addition to the invoices Claimant testified he received in March, April and May, he testified that he received a billing invoice from H[REDACTED] for an outstanding balance of $30.11 in July 2021 for services rendered in connection with his December 1, 2020 industrial injuries. Exhibit 4, p. 16-17.

10. During cross-examination, Claimant conceded that he was unaware if the billing invoices had been turned over to any creditors. He also testified that, to date, there appeared to be no adverse effect on his credit from the various billing statements in question. He testified that outside of the written billing statements he has not received any verbal demands or other written demands for payment. Finally, he testified that he has not received any further billing statements from H[REDACTED] after July 2, 2021.

11. Andy L[Redacted] testified as the paralegal for Claimant's attorney of record, Lawrence D. Saunders. Mr. L[Redacted] testified that as the paralegal assigned to Claimant's workers' compensation case, he is the primary point of contact for Claimant. According to Mr. L[Redacted], Claimant contacted him in March 2021 about a bill he received from H[REDACTED]. Mr. L[Redacted] testified that he instructed Claimant to text him a screen shot of the bill in question. Mr. L[Redacted] testified that Claimant then sent him an image of the March 24, 2021 billing invoice sent to him by H[REDACTED]. *See* Exhibit 4, p. 13.

12. Mr. L[Redacted] testified that upon receipt of the March 24, 2021 billing statement from Claimant, he called the number located in the second paragraph of the invoice to inquire why Claimant was receiving billing statements. According to Mr. L[Redacted], he dialed 719-587-6364 and spoke with a female about the claim on March 30, 2021. He was unable to recall the name of the person with whom he spoke. Mr. L[Redacted] testified that during this conversation, he confirmed that the treatment forming the basis of the March 24, 2021 billing statement was related to Claimant's work-related injuries and rendered after the General Admission of Liability (GAL) was filed by Respondent insurance carrier in this case. *See*, Exhibits 4, p. 15 & 5, p. 18.

13. Upon confirming that the treatment associated with the March 24, 2021 billing invoice was related to Claimant's industrial injuries and rendered after Respondent's GAL was filed, Mr. L[Redacted] testified that he advised the H[REDACTED] representative that because liability for Claimant's injuries had been admitted, it was contrary to Colorado law to bill Claimant directly for the treatment connected to the March 24, 2021 billing statement. He testified that he asked that H[REDACTED] cease sending billing statements to Claimant and instead bill the insurance carrier. He testified that he then provided the name, phone number and email address to the adjuster assigned to the claim.

14. Mr. L[Redacted] testified that despite his conversation with a H[REDACTED] representative in March, Claimant contacted him around April 28, 2021 about receiving a second billing statement similar to the first he received in March. Mr. L[Redacted] testified that he immediately called the same 719-587-6364 number as listed on March 24, 2021 billing invoice and again spoke with a female advising her that he was calling a second time to ask that H[REDACTED] contact the adjuster for payment and cease sending additional invoices to Claimant. Although Mr. L[Redacted] was unable to recall the name of the person he spoke with, he confirmed that the representative had the adjuster's contact information.

15. Mr. L[Redacted] testified that Claimant received a third billing invoice from H[REDACTED] and presented it to his attorney in person on June 14, 2021, as he was traveling through Pueblo. As found, the evidence presented supports a finding that a billing statement was sent to Claimant on May 27, 2021, which statement advised that if payment in the amount of $1,805.15 was not received within 30 days, Claimant's account was subject to referral to a collection agency.

16. Mr. L[Redacted] testified that the May 27, 2021 billing invoice was handed to him by Claimant's attorney and that he immediately dropped what he was doing so he follow-up with a representative from H[REDACTED]. Mr. L[Redacted] testified that he called the number for H[REDACTED] on June 14, 2021 and once connected to a representative asked to speak with a supervisor regarding H[REDACTED]'s continued billing of Claimant. According to Mr. L[Redacted], he spoke with a supervisor during which conversation he asked if H[REDACTED] was going to stop sending billing statements to Claimant for his work-related injury treatment. Mr. L[Redacted] testified that he was then transferred to Brett R[Redacted], an attorney for BC[Redacted][2]. According to Mr. L[Redacted], he was advised that H[REDACTED] needed to be paid so they were going to stand by the prior billing and send the matter to collections. Mr. L[Redacted] testified that he then advised BC[Redacted] that Claimant would seek penalties against H[REDACTED] due to the bills the Claimant received.

17. Mr. L[Redacted] testified that because the previous telephone calls he placed had failed to resolve the matter and Claimant was still being billed for treatment associated with his compensable workers' compensation injuries, an Application for Hearing seeking penalties was filed on June 15, 2021. Exhibit 1, pp. 1-4.

18. Mr. L[Redacted] testified that sometime after June 15, 2021 and before July 22, 2021, an additional conversation was had with Brett R[Redacted], who purportedly told Mr. L[Redacted] that no further billing statements would be sent to Claimant.

19. Mr. L[Redacted] suggested that Attorney R[Redacted] mislead him as a fourth billing statement dated July 2, 2021 was sent to Claimant in the amount of $30.11 for services rendered in connection with his workers' compensation treatment. See, Exhibit 4, pp. 16-17.

20. Claimant texted a screen shot of the July 2, 2021, billing invoice to Mr. L[Redacted] on July 22, 2021. Upon receipt of this invoice, Mr. L[Redacted] testified that he attempted to reach Attorney R[Redacted] by phone. According to Mr. L[Redacted], Attorney R[Redacted] rebuffed his phone call because he (Mr. L[Redacted]) was an endorsed witness on the penalty application filed June 15, 2021. Accordingly, Mr. L[Redacted] testified that Attorney R[Redacted] advised him that he would not speak to him and hung up the phone. Claimant then filed a second Application for Hearing endorsing penalties on August 2, 2021. Exhibit 1, pp. 5-8.

21. Claimant's June 15, 2021 and August 2, 2021 Applications for Hearing were consolidated by Order of Prehearing ALJ Craig Eley on August 19, 2021 following a Prehearing Conference. Exhibit 3, pp. 10-12.

22. During cross-examination, Mr. L[Redacted] testified that he works part time from home due to Covid-19 pandemic. Mr. L[Redacted] testified that when working from

[2] BC Services is a third-party company retained by SLVH to prepare and send out billing statements for care rendered by SLVH and its providers to patients seen at their treatment facilities.

home, he uses his personal cell phone, assigned phone number 505-400-2882, to make work-related calls. He also testified that the Seckar Law Firm has 3-4 separate phone lines assigned to their office. The main number associated with the Seckar Law Firm is listed as 719-543-8636. While all incoming phone calls are made to the main number, the number assigned to outgoing calls from one of the firm's ancillary lines will differ from the main number if the main line is in use. Simply put, not all outgoing calls from the Seckar Law Firm originate from 719-543-8636.

23. Mr. L[Redacted] testified that he was working from the Law Firm's offices on March 30, 2021 and June 14, 2021. Conversely, he was working from home on April 28, 2021.

24. Catherine K[Redacted] testified as a "Patient Access Manager" for H[REDACTED]. Ms. K[Redacted] testified that she has worked in this capacity for approximately one year. As H[REDACTED] Patient Access Manager, Ms. K[Redacted] testified that she is in charge of in-patient admissions. She also supervises the health systems financial counselors who typically deal with billing questions. As the Patient Access Manager, Ms. K[Redacted] testified that she routinely addresses patient escalation questions, which revolve around serious queries or concerns about care or billing.

25. Ms. K[Redacted] testified that patients presenting to the emergency room (ER) are triaged and only after this is done and they are stable is insurance information obtained. According to Ms. K[Redacted], Claimant presented to the ER for treatment during which time he advised that the billing for services rendered should be sent to his employer's workers' compensation insurance carrier. She also testified that Employer's workers' compensation insurance was verified. Consequently, she testified that H[REDACTED] did not expect payment from Claimant.

26. Ms. K[Redacted] testified that BC[Redacted] is a billing vendor for H[REDACTED] and that she has almost daily contact with representatives from this company. According to Ms. K[Redacted], all calls coming in from 719-587-6364 are routed to financial counselors for H[REDACTED]; however, representatives from BC[Redacted] relay information to H[REDACTED] about patients who have called them over billing concerns.

27. Ms. K[Redacted] testified that H[REDACTED] maintains call logs tracking all incoming and outgoing calls pertaining to patient accounts. Ms. K[Redacted] identified Exhibit A, p.1 as "a" call log of H[REDACTED]'s entire phone system tracking all incoming and outgoing calls associated with Claimant's account. Per Ms. K[Redacted], there was only one outgoing call, placed May 7, 2021, that related to billing for Claimant's account and that was to secure additional services for Claimant.

28. Ms. K[Redacted] identified Exhibit B, p. 2 as the call log of all incoming and outgoing calls from or to the telephone number associated with the Seckar Law Firm, specifically identified as 719-543-8635. According to Ms. K[Redacted], H[REDACTED]

only received one call associated with the number pinned to the Seckar Law Firm between March 29, 2021 and June 17, 2021 and that call did not pertain to billing. Rather, the call was related to increasing the number of physical therapy visits for Claimant and was in follow-up to the outgoing May 7, 2021 call by a H[REDACTED] representative.

29. Ms. K[Redacted] testified that the billing invoices were mistakenly sent to Claimant by BC[Redacted] because H[REDACTED] had changed to a new automated billing system that failed to catch the fact that Claimant's treatment was covered under his employer's workers' compensation insurance policy. According to Ms. K[Redacted], the setting to prevent a billing statement from going to Claimant failed prompting the electronic system used by BC[Redacted] and H[REDACTED] to generate a billing invoice in Claimant's name.

30. Ms. K[Redacted] testified that once H[REDACTED] learned that Claimant was receiving billing invoices, immediate efforts were made to correct the problem. Ms. K[Redacted] testified that H[REDACTED] learned that Claimant was getting billing invoices from BC[Redacted] on June 15, 2021 when they (H[REDACTED]) received an emailed copy of Claimant's hearing application seeking penalties. She testified that H[REDACTED] was unaware of the problem surrounding Claimant receiving billing statements from BC[Redacted] before June 15, 2021, because Claimant allegedly did not contact H[REDACTED] prior to this date. Because Claimant did not notify H[REDACTED] about receiving billing statements before June 15, 2021, Ms. K[Redacted] testified that H[REDACTED] was unaware of the system failure and no steps were taken to fix the problem prior to this date.

31. Ms. K[Redacted] testified that as soon as H[REDACTED] learned that Claimant was receiving billing statements, changes were made to the billing program, which she assumed fixed the problem.[3] According to Ms. K[Redacted], changes were made to the system on June 17, 2021, which were focused on preventing Claimant and others similarly situated from receiving bills for their workers' compensation related treatment.

32. Despite H[REDACTED]'s efforts to fix its system so that the Claimant would not receive additional bills, the automated billing program generated yet another statement for Claimant on July 2, 2021. *See,* Exhibit 4, p. 16-17. When H[REDACTED] learned about the July 2, 2021 bill, it took additional steps to correct the error in the system and ensure that the Claimant did not receive any additional bills. According to Ms. K[Redacted], H[REDACTED] was able to correct the glitches, which caused the system to generate billing to Claimant on July 26, 2021.

33. During cross-examination, Ms. K[Redacted] conceded that it is never appropriate to direct a billing invoice to a workers' compensation claimant for treatment expenses related to their industrial injuries. She testified that there was never any intent

[3] Ms. K[Redacted] testified that she assumed the billing program had been fixed because she did not receive any complaints that Claimant or any other workers' compensation patient had been billed for treatment related to their industrial injuries after June 17, 2021 until July 2021.

to bill Claimant for the services rendered in connection with his work-related injuries. Rather, she reiterated that a computer problem failed to recognize that Claimant's treatment was related to a work injury and thus, the billing statements were sent to him automatically. According to Ms. K[Redacted], BC[Redacted] generates thousands of billing statements per day and H[REDACTED] does not track individual statements to assure accurate billing.

34. Ms. K[Redacted] testified that billing statements are generated roughly every thirty days leading Claimant to suggest that there must have been a bill generated and sent to Claimant in April, between the March 24 and May 27, 2021 billing statements because the amount requested in both those statements was the same. Ms. K[Redacted] testified that while statements are generated about 30 days apart, there is no guarantee that an invoice will be generated in a given month because activity on the account may preclude a statement from being generated.

35. Aaron F[Redacted] testified as a Senior Account Manager for BC[Redacted]. Mr. F[Redacted] testified that he acts as a lead liaison between BC[Redacted] and H[REDACTED] and that he communicates information from calls BC[Redacted] receives regarding patient accounts to representatives at H[REDACTED]. According to Mr. F[Redacted], all calls to BC[Redacted] are tracked and recorded.

36. Mr. F[Redacted] testified he became aware of Claimant's allegations that billing invoices were being sent to him inappropriately on June 14, 2021. According to Mr. F[Redacted], he was approached by Senior Account Supervisor, Kim D[Redacted] who reported to him that she had received a call during which the caller hung up on her. As all calls are recorded, Mr. F[Redacted] testified he was able to listen to the audio from the June 14, 2021 call to Ms. D[Redacted] and has done so "many times". He identified the caller as Andy L[Redacted] and testified that after listening to the audio recording and realizing there was an attorney involved he informed H[REDACTED] about the issues raised and then "escalated" the call to Attorney Brett R[Redacted] for action. Mr. F[Redacted] testified that Mr. L[Redacted] was not transferred to Attorney R[Redacted] nor was he told he would be transferred.

37. Mr. F[Redacted] testified that the inbound call placed to BC[Redacted] by Mr. L[Redacted] on June 14, 2021 was captured by the company's call log software. The information regarding this call was subsequently retrieved, printed and made part of H[REDACTED]'s exhibit packet. *See*, Exhibit C, p. 3. Mr. F[Redacted] testified that all calls associated with specific account numbers are captured by and documented on the company's call log tracking screens. Information contained on the call log screen includes the date of the call and the telephone number from whence the call came. Exhibit C, p. 3.

38. Mr. F[Redacted] testified that BC[Redacted] did not receive any phones calls from 719-543-8636 prior to June 14, 2021.

39. According to Mr. F[Redacted], H[REDACTED] requested that all billing to Claimant be stopped as of June 17, 2021 and that while prior billing went out, Claimant's account was not turned over to collection, nor was it identified as a delinquent or bad debt.

40. During cross-examination, Mr. F[Redacted] testified that any calls made to the 719-587-6364 number listed on the billing invoice would not ring into BC[Redacted]. Rather, he testified that that is the patient account number for H[REDACTED]. Mr. F[Redacted] clarified that the number to call to speak to a representative at BC[Redacted] is 719-937-4466 or toll free to 844-706-8740. Mr. F[Redacted] admitted that he would have no knowledge of whether Mr. L[Redacted] tried to call the patient account number for H[REDACTED] at 719-587-6364, as those calls would ring directly to H[REDACTED].

41. Mr. F[Redacted] also testified that he was aware that Attorney R[Redacted] attempted to reach Mr. L[Redacted] and that this attempt may have occurred on June 14, 2021. He also conceded that Mr. L[Redacted] and Attorney R[Redacted] might have spoken at some point.

42. The ALJ clarified with Mr. F[Redacted] that BC[Redacted] initiates the billing of patients of H[REDACTED] based upon information that is passed to them by the Hospital.

43. The ALJ has carefully listened to H[REDACTED] Exhibit D in its entirety. Exhibit D consists of a 10 minute 32 second audio recording of a telephone call between Mr. L[Redacted] and Ms. D[Redacted]. *See*, Exhibit D. During the call, Mr. L[Redacted] identifies himself and states that he is calling as a courtesy to inform Ms. D[Redacted] that Claimant would be filing an Application for Hearing seeking penalties because BC[Redacted] was continuing to bill Claimant for treatment associated with a compensable workers' compensation claim. Mr. L[Redacted] advises Ms. D[Redacted] that his call constitutes the third time he has had to address the situation and as such, Claimant was filing the application. Ms. D[Redacted] then informs Mr. L[Redacted] that she will "escalate" the information to the accounting team prompting Mr. L[Redacted] to ask for Ms. D[Redacted]'s supervisor and an email address where he can direct the application. Ms. D[Redacted] is unable to find an email address and places Mr. L[Redacted] on hold 3 minutes and 35 seconds into the conversation. Ms. D[Redacted] returns to the line at the 9 minute and 27 second mark of the phone call at which time she provides Mr. L[Redacted] an email address where the application can be sent. Mr. L[Redacted] then expresses that his office was attempting to get BC[Redacted] to back off from billing the Claimant and since that was not happening the application was going to be filed. He then abruptly terminates the call before Ms. D[Redacted] can respond.

44. Based on the evidence presented, the ALJ is persuaded that Mr. L[Redacted] probably called H[REDACTED] on March 30, 2021 to advise them Claimant was being billed for[Redacted] connected to his workers' compensation injuries. While H[REDACTED] suggests that no such call was made and cites to the H[REDACTED] call logs as proof, the ALJ notes that the call log marked as Exhibit A begins by documenting

a call on April 21, 2021, which is 22 days after the date Mr. L[Redacted] testified he called and many months after Claimant's admitted injury. Although Ms. K[Redacted] testified that Exhibit A constitutes a call log maintained by H[REDACTED], she did not testify that the call log constituted ***all*** calls to the Hospital associated with Claimant's account. The ALJ is simply not convinced that there were no calls to H[REDACTED] by anyone prior to April 21, 2021. Consequently, the ALJ questions the completeness of the call log marked as Exhibit A. Moreover, the ALJ is not convinced that H[REDACTED] would capture all calls from the Seckar Law Firm given the fact that not all calls coming from that office would be identified as originating from 719-543-8636.

45. Based upon the evidence presented, the ALJ finds that Claimant called BC[Redacted] on June 14, 2021 to alert them Claimant was still being billed for treatment expenses related to his admitted industrial injuries. While Mr. L[Redacted] suggested he called the number for patient accounts on this date, it is clear he is mistaken. The ALJ credits the testimony of Mr. F[Redacted] to find that Mr. L[Redacted] probably called 719-937-4466, which rang into BC[Redacted] where upon he had a conversation with Ms. D[Redacted].

46. While there are inconsistencies between Mr. L[Redacted]'s testimony and the balance of the evidentiary record, the ALJ resolves those inconsistencies in favor of Claimant to find that Mr. L[Redacted] probably made telephone calls to both an account representative at H[REDACTED] and a representative for BC[Redacted].

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Claimant's Penalty Claim

A. Section 8-43-304(4), C.R.S., provides that in "any application for hearing for a penalty pursuant to subsection (1) of this section, the applicant shall state with specificity the grounds on which the penalty is being asserted." The failure to state the grounds for penalties with specificity may result in dismissal of the penalty claims. *In re Tidwell*, WC 4-917-514-03 (ICAO, Mar. 2, 2015).

B. The purposes of the specificity requirement are to both: (1) provide notice of the basis of the alleged violation so the putative violator can have an opportunity to cure the violation and (2) provide notice of the legal and factual bases of the claim for penalties so that the violator can prepare its defense. *See Major Medical Insurance Fund v. Industrial Claim Appeals Office*, 77 P.3d 867 (Colo. App. 2003); *Davis v. K Mart,* WC 4-493-641 (ICAO, Apr. 28, 2004). The notice aspect of the specificity requirement is designed to protect the fundamental due process rights of the alleged violator to be "apprised of the evidence to be considered, and afforded a reasonable opportunity to present evidence and argument in support of" its position. *In re Tidwell*, WC 4-917-514-03 (ICAO, Mar. 2, 2015). Nevertheless, the statute does not prescribe a precise form for pleading penalties and an ALJ may consider the circumstances of the individual case to ascertain whether the application for hearing was sufficiently precise to satisfy the statute. *See Davis v. K Mart*, WC 4-493-641 (ICAO Apr. 28, 2004). Based upon the evidence presented, the ALJ concludes Respondent is on notice as to the legal and factual basis for concerning Claimant's asserted penalties in this matter. Indeed, Claimant's Statement of Specificity specifically alleges that Respondent is subject to penalties for a violation of Section 8-42-101(4), C.R.S. (2020) at a rate of $1,000 per day. As noted, Claimant amended his claim for penalties at hearing, without objection, to indicate that he was not seeking a per day penalty but rather a per incident penalty consistent with the holding in *Delta Cty. Mem. Hosp. v. Indus. Claim Appeals Office*, 2021 COA 84 (2021). While the evidence establishes that Claimant has complied with the statutory notice requirements in pleading her penalty, the question of whether statutory penalties may be imposed under § 8-43-304(1) C.R.S. requires a two-step analysis before penalties can be levied.

C. First, the ALJ must first determine whether a party's conduct constitutes a violation of the Act, a rule or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* WC 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

D. The question of whether the alleged violator's conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see Paint Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). In this case, Claimant contends that H[REDACTED] violated the Act, specifically, C.R.S. § 8-42-101(4) which provides: "Once there has been an admission of liability or the entry of a final order finding that an employer or insurance carrier is liable for the payment of an employee's medical costs or fees, a medical provider ***shall under no circumstances*** seek to recover such costs or fees from the employee (emphasis added). The ALJ reads the legislature's use of the language "shall" and "under no circumstances" to clearly state the intent that a medical provider shall cease all efforts to collect the cost of work related injury treatment from a claimant once there has been an admission of liability filed or a final order issued.

E. As one of Claimant's authorized medical providers, the ALJ finds and concludes that the Hospital is subject to the provisions of the Act. Therefore, the Hospital can be found to be in violation or in compliance with the Act.

F. In this case, Claimant's statement of penalty claim makes clear that he is seeking penalties for the Hospital's alleged violation of Section 8-42-101(4) for continuing to seek payment from the Claimant for treatment associated with his compensable workers' compensation injuries. The evidence presented persuades the ALJ that the Hospital continued to send billing invoices to Claimant for medical treatment related to his work injuries after the filing of a General Admission of Liability was filed. Indeed multiple billing statements were sent to Claimant in an attempt to collect an outstanding debt of

$1,805.15 and $30.11 directly from him as the party responsible for the debt. Here the evidence supports a conclusion that H[REDACTED] directed BC[Redacted] to issue billing statements to Claimant on March 24, 2021, May 27, 2021 and July 2, 2021. Concerning the alleged April billing statement, the ALJ credits the testimony of Ms. K[Redacted] and the totality of the record, as a whole, to find and conclude that Claimant has failed to establish that an April billing statement was actually mailed to him. Nonetheless, the ALJ concludes that H[REDACTED]s attempts to collect payment from Claimant, through their outside vendor, based upon the billing invoices dated March 24, 2021, May 27, 2021 and July 2, 2021 constitute separate violations of the clear language of C.R.S. § 8-42-101(4).

G. While Respondents may have cured the violation within twenty days of Claimant's applications for hearing[4], the evidence presented supports a conclusion that Claimant has established by clear and convincing evidence that H[REDACTED] knew or reasonably should have known that their continued efforts to collect payment from Claimant were in violation of the law and objectively unreasonable. Indeed, Ms. K[Redacted] testified that it was never appropriate to bill injured workers for treatment associated with compensable industrial injuries. She admitted she was aware of the law precluding such billing. Despite acknowledging that it was improper to bill the Claimant for his injury related treatment, Ms. K[Redacted] suggested that penalties should not be imposed simply because the billing statements were sent out by "mistake" due to a computer glitch. Because the evidence supports a conclusion that H[REDACTED] clearly and convincingly knew or should have known that their continued efforts to collect payment from Claimant for his injury related treatment was in contravention of the Act, the cure provision provides no safe harbor for H[REDACTED].

H. The fact that the billing statements may have been sent to Claimant by "mistake", as testified to by Ms. K[Redacted], also does not negate the violation. "Negligence, as opposed to recklessness or other standards of conduct, connotes an objective standard measured by the reasonableness of the offending party's action and does not require knowledge that the conduct was unreasonable." *CCIA v. ICAO,* 907 P.2d 676, 678 (Colo. App. 1995). Ms. K[Redacted]'s justification for the continued billing of Claimant simply consisted of an excuse that computer problems, which she assumed were fixed by June 17, 2021, caused the billing statements to issue by "mistake". Similar to the situation where an adjuster's "mistaken beliefs" and poor claims handling procedures are not predicated on a rational argument based on law or fact, and thus are not reasonable, H[REDACTED]'s justification that computer problems excuse their violation of the Act for the continued billing of Claimant is equally unreasonable. (*Diversified Veterans Corporate Center v. Hewuse,* 942 P.2d 1312, 1314 (Colo. App. 1997), The ALJ finds the articulated argument against the imposition of penalties in this matter analogous to that presented in *Arnhold v. UPS,* W.C. No. 4-979-20802 (ICAO Feb. 24, 2017). In *Arnhold*, respondents were ordered to pay back-due TTD within fifteen days of the order. The adjuster testified she miscalculated the due date mandated by order. The ALJ concluded this was a "human error," was not unreasonable, and declined to award penalties.

[4] Pursuant to section 8-43-304(4), C.R.S., if the violator cures the violation within twenty days of an application for hearing and the party seeking such penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed.

The Industrial Claims Appeals Office (ICAO) reversed. The Panel noted, “Respondents cannot be both negligent in miscalculating the date the TTD payment was due and also be deemed reasonable in doing so.” *Arnhold* *4. *See also Kerr v. Costco,* W.C. No. 5-076-601 (ICAO June 2, 2021). In Kerr, respondents were required by W.C.R.P. 5-6(c) to timely issue PPD benefits. The ALJ found respondents violated the rule, but declined to issue penalties. The ALJ found that respondents forgot to update claimant’s address; “inadvertently” mailed the check to a wrong address, and concluded that this “clerical error” was not unreasonable. Again, ICAO reversed, noting, “A late payment due to a ‘clerical error’ and ‘inadvertence’ does not denote the conduct of a reasonable employer or insurer. That is the conduct of a negligent employer or insurer.” *Kerr* *8. The Panel remanded to the ALJ for assessment of penalties. Under the circumstances presented, the ALJ concludes that the conduct of H[REDACTED] is equally negligent and unreasonable. Thus, penalties must be assessed.

I. The Colorado Supreme Court has adopted the “gross disproportionality” test for determining whether a regulatory fine violates the Excessive Fines Clause. *Colorado Dept. of Labor & Empl. v. Dami Hospitality, LLC*, *supra* (hereinafter *Dami Hospitality*). In Concluding that corporations were protected from the imposition of excessive fines pursuant to the Eighth Amendment, the Court provided:

> In sum, we hold that the Eighth Amendment does protect corporations from punitive fines that are excessive. The appropriate test to apply in assessing whether a regulatory fine violates the Excessive Fines Clause is the “gross disproportionality” test. In assessing proportionality, a court should consider whether the gravity of the offense is proportional to the severity of the penalty, considering whether the fine is harsher than fines for comparable offenses in this jurisdiction or than fines for the same offense in other jurisdictions. In considering the severity of the penalty, the ability of the regulated individual or entity to pay is a relevant consideration. And the proportionality analysis should be conducted in reference to the amount of the fine imposed for each offense, not the aggregated total of fines for many offenses.

Dami Hospitality, *Id.* at 103.

J. Concerning the penalties (fine) imposed in this case, the ALJ is mindful that C.R.S. § 8-43-304 provides that, "Any employer or insurer or any officer or agent of either, or any employee, or any other person who violates articles 40 to 47 of this title 8 . . . shall be subject to such order being reduced to judgment by a court of competent jurisdiction and shall also be punished by a fine of not more than one thousand dollars per day for each offenses. . . ” The statute specifically authorizes an ALJ to assess up to $1,000 per day in penalties against any party who violates articles 40-47 of the Act. Here, Claimant urges the ALJ to assess monetary penalties at the maximum rate of $1,000.00 per billing incident consistent with the decision announced in *Delta Cty. Mem. Hosp. v. Indus. Claim Appeals Office*, 2021 COA 84 (2021) for a maximum penalty of $4,000.

K. H[REDACTED] correctly notes that the ALJ has discretion regarding the amount of any penalty assessed. However, "[t]he imposition of penalties under § 8-43-304(1) is mandatory if there has been a violation of the Act and the violation was not reasonable under an objective standard." *Castro v. FBG Service Corporation*, W.C No. 4-739-748(ICAO Dec. 31, 2008). *See also, Armbruster v. Rocky Mountain Cardiology,* W.C. No. 4-447-502 (ICAO Feb. 24 2003). *aff'd by Rocky Mountain Cardiology v. ICAO,* 94 P.3d 1182 (Colo. App. 2004). Based upon the evidence presented, the ALJ concludes that the imposition of penalties are appropriate in this matter. While there has been a clear statutory violation associated with H[REDACTED] attempts to collect payment from the Claimant based upon the billing statements dated March 24, 2021, May 27, 2021 and July2, 2021, the ALJ is not convinced that Claimant's cited hardships justify the imposition of the maximum penalty allowed for by statute. While the May 27, 20921 billing invoice notes that if payment was not received within 30 days from the date of the statement and Claimant was clearly frustrated by receipt of the aforementioned billing statements, he testified that he did not pay the bills, none of the bills were sent to collection, and the his credit was not harmed because of the bills. Ms. K[Redacted] and Mr. F[Redacted] corroborated much of this testimony.

L. The purpose of penalties is to address and dissuade similar ongoing conduct. Based upon the evidence presented, the ALJ finds and concludes that the Hospital's billing of Claimant in this case results from unintentional, yet unreasonable conduct, which was quickly rectified following the July 2, 2021 billing. Nonetheless, it is actionable. In this case, the ALJ concludes that the harm caused by Respondents decision to bill Claimant for treatment associated with his admitted workers' compensation injuries warrants a penalty to deter future like violations. Based upon the totality of the evidence presented, the ALJ finds/concludes that a penalty of $400 per bill for the three instances a bill was sent to Claimant, i.e. March 24, May 27, and July 2, 2021 is not grossly disproportionate to the harm or risk of harm caused by H[REDACTED]'s failure to comply with C.R.S. § 8-42-101(4). Simply put, the fine is proportional to the offending conduct and appropriate under the circumstances presented.

ORDER

The remaining contentions of H[REDACTED] have been considered and are rejected as unpersuasive. Accordingly, it is ordered that:

1. Respondent-Hospital shall pay Claimant penalties in the amount of $400 for the violation of C.R.S. § 8-42-101(4) occurring on March 24, May 27 and July 2, 2021 for a total penalty assessment of $1,200.

2. All matters not determined are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-151-060-001

ISSUE

1. Whether Claimant has overcome the Division IME ("DIME") physician's Maximum Medical Improvement ("MMI") determination by clear and convincing evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 76 year-old woman who worked as a kitchen manager for Employer. Claimant worked full time until the date of her admitted industrial injury. Claimant has not worked since the date of her injury.

2. On February 28, 2018, Claimant tripped over a box of lemons, fell on a concrete floor, and was unable to get up. Claimant was taken by ambulance to Lutheran Hospital. At the hospital, x-rays revealed that Claimant suffered a right intertrochanteric displaced hip fracture.

3. On March 1, 2018, Karre Kolstadt, M.D., operated on Claimant to repair her right intertrochanteric fracture. The surgical procedure included fixation of her fracture with a Titanium Fixation Nail. (Ex. K).

4. On March 5, 2018, Claimant transferred to Brookdale Rehabilitation Center ("Brookdale"), where she stayed until March 23, 2018. (Ex. C).

5. After Claimant was released from Brookdale, she was evaluated by Authorized Treating Provider ("ATP"), Hiep Ritzer, M.D., for follow-up care. Claimant reported having right leg and calf pain, with ankle swelling. (Ex. C).

6. Dr. Ritzer coordinated Claimant's care with other specialists. He also arranged Claimant's diagnostic tests, treatment management, and medication management. (Ex. C).

7. On April 25, 2018, Claimant's pain was seven out of ten, and the Tramadol was not helping. Dr. Ritzer referred Claimant to Yusuke Wakeshima, M.D. for a physiatry/pain management consultation. (Ex. A).

8. Dr. Wakeshima evaluated Claimant on May 11, 2018. Claimant complained of right hip, thigh and low back pain. She reported a pain level of six out of ten. Dr. Wakeshima prescribed an electric stimulation unit. (Ex. A.).

9. On August 1, 2018, Dr. Wakeshima referred Claimant to Joel Cohen, Ph.D., for a pain psychology evaluation. Claimant told Dr. Cohen she was concerned about reinjuring

herself, and that she was having bad dreams about falling. Dr. Cohen and Claimant also discussed her history of depression. (Exs. A and E.)

10. Dr. Wakeshima ordered an EMG study of Claimant's right lower extremity. The August 28, 2018 study was normal, including no evidence of sural, superficial peroneal, or peroneal tibial neuropathy. There was also no evidence of lumbar radiculopathy. (Ex. D).

11. On October 24, 2018, Claimant told Dr. Ritzer that her depression was worsening, and her pain was six out of ten. (Ex. C).

12. Dr. Cohen saw Claimant on November 5, 2018, and noted that Claimant had indications for suicidal ideation. He recommended urgent psychiatric consultation. (Ex. D).

13. John Disorbio, Ed.D, is an expert in clinical psychology, and he took over the care of Claimant following the retirement of Dr. Cohen. (Tr. 50:22-51:12). He referred Claimant to Stephen Moe, M.D. for a psychiatric evaluation. (Tr. 52:23-25).

14. On December 7, 2018, Claimant saw Dr. Moe. He noted that Claimant was emotionally dependent on her walker due to her intense fear of falling. He diagnosed Claimant with Major Depressive Disorder (severe), anxiety disorder (not otherwise specified with elements of adjustment disorder and a specific phobia of falling). (Ex. H).

15. Claimant continued to experience pain, particularly in her right hip, so she had an orthopedic consultation with Jeffery Arthur, M.D. On April 19, 2019, Dr. Arthur performed a total hip arthroplasty via a posterior approach, with a right hip hardware removal. (Ex. K).

16. Following surgery, Claimant was transferred to Encompass Health Rehabilitation Hospital where she stayed from April 23, 2019 to May 24, 2019. (Ex. A).

17. In May 2019, Claimant reported to her providers that her pain was improved with the total hip replacement. (Ex. A).

18. Claimant's pain levels fluctuated slightly between five out of ten and seven out of ten for approximately a year, from April 2019 to March 2020, during her continued treatment. During this time, Claimant engaged in physical therapy, both land and aquatic. She also received dry needling and massage therapy. Claimant received multiple epidural steroid and trigger point injections, but they did not provide significant or lasting relief. (Ex. D).

19. On February 17, 2020, Dr. Wakeshima indicated that no further referrals were necessary and no further injections would likely benefit Claimant. He opined that Claimant was approaching MMI. (Ex. E).

20. Dr. Ritzer referred Claimant to Giancarlo Barolat, M.D., to see if she would be a good candidate for a peripheral nerve stimulator. Dr. Barolat is an expert in neurological

surgery with an emphasis in neurostimulation, implants, and chronic pain. (Tr. 30:23-31:1). He is not Level II accredited. (Tr. 36:8-9).

21. Dr. Barolat evaluated Claimant on March 12, 2020, and concluded that she suffered from a chronic, severe, and likely permanent, pain condition affecting her right hip and thigh. He concluded it was neuropathic because it was present 24 hours per day. He noted that her pain had some distribution of the L4 nerve root. Dr. Barolat recommended a peripheral nerve stimulator trial and if that did not work, then a spinal stimulator for the L4 nerve root. Dr. Barolat stated a successful trial would result in greater than 50% improvement. (Ex. G).

22. Bart Goldman, M.D., conducted an Independent Medical Examination ("IME") of Claimant at the request of Respondents. He issued his IME report on June 4, 2020. Dr. Goldman opined that no objective neuropathic pain generator had been established in Claimant. (Ex. B.)

23. Dr. Goldman concluded that Claimant reached MMI as of June 4, 2020. (Ex. B)

24. Dr. Moe concluded that Claimant reached MMI from a psychiatric perspective as of June 4, 2020. (Ex. H).

25. On March 3, 2021, Claimant presented to Linda Mitchell, M.D., for a Division IME. Dr. Mitchell reviewed Claimant's medical records and conducted a physical examination of Claimant. She concluded that Claimant's pain was myofascial in nature. Claimant's OHS score had varied little throughout her course of treatment with the various treatment modalities. (Ex. A).

26. Dr. Mitchell concluded that under Rule 17, Exhibit 19 of the Medical Treatment Guidelines ("MTGs"), Claimant was not a candidate for peripheral nerve stimulation, nor was she a candidate for spinal cord stimulation based on the lack of evidence of radiculopathy related to the work condition, and her psychological contraindications.

27. Dr. Mitchell noted that Claimant's EMG was normal as of August 28, 2018, and Claimant had not responded to multiple epidural steroid injections. Additionally, Claimant's psychological evaluation from March 18, 2019, indicated she was a poor candidate for invasive procedures. Finally, Dr. Mitchell relied on the fact that even when Claimant reported a reduction in her pain from prior treatments, her functional status did not change, and it was unlikely that this would be the case with neurostimulation. (Ex. A).

28. Dr. Mitchell determined claimant reached MMI as of June 4, 2020. (Ex. A).

29. Claimant credibly testified that she has pain in her right hip and leg 24 hours a day, seven days a week, and would like to proceed with the trial stimulator. (Tr: 20:1-7, 25:9-14).

30. Dr. Disorbio credibly testified that if Claimant is denied the stimulator or if it does not provide relief, he is concerned about an increased risk for Claimant being a danger to

herself. (Tr. 56:20-57:2). He further testified that there could be contraindications to the neurostimulation, and cited Claimant's cognitive problems and depression. (Tr. 59: 9-21).

31. Dr. Barolat is a treating physician, not a workers' compensation expert. Dr. Barolat testified that he does not follow the MTGs when making decisions about trial stimulators and implantations, but recommends what is right for the patient. (Tr. 36:10-37:14).

32. Dr. Barolat credibly testified that stimulators do not address musculoskeletal or myofascial pain. (Tr. 40:13-16). Despite Claimant's negative EMG, Dr. Barolat believes that Claimant's chronic pain is due to a nerve injury. (Tr. 43:14-23). He further testified that chronic pain is complex and there is no sure way to determine if a person's pain is myofascial/musculoskeletal or neuropathic. (Tr. 45:15-46:3).

33. Dr. Goldman credibly testified that Claimant's pain generator is predominantly myofascial. (Tr. 70:14-17).

34. There is a disagreement between the physicians in this case regarding the source of Claimant's pain generator.

35. The ALJ finds Dr. Barolat's conclusion that Claimant's pain is due to a nerve injury to be speculative. She finds the opinions of Drs. Mitchell and Goldman that Claimant's pain is myofascial in nature to be persuasive.

36. Dr. Barolat testified that Claimant is not at MMI because "she has not had all of the treatments that are available." He further testified that if the stimulator does not help Claimant, then "maybe" Claimant would then be at MMI. (Tr. 35:4-14)

37. The ALJ does not find Dr. Barolat's testimony persuasive, as his definition of MMI is flawed. MMI is defined as "a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." § 8-40-201(11.5), C.R.S.

38. Dr. Mitchell credibly and persuasively opined that a trial stimulator is not reasonably expected to improve Claimant's condition, and she confirmed MMI.

39. The ALJ finds that Claimant did not overcome Dr. Mitchell's opinions on MMI by clear and convincing evidence.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the

evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

DIME Physician's MMI and Impairment Findings

The party seeking to overcome the DIME physician's opinion bears the burden of proof by clear and convincing evidence. *Id.* Clear and convincing evidence is evidence that demonstrates that it is highly probable the DIME physician's opinion is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge,* WC 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., WC 4-476-254 (ICAP, Oct. 4, 2001).

In this case, the DIME physician, Dr. Mitchell, determined that Claimant reached MMI on June 4, 2020. (Finding of Fact ¶ 28). This finding was consistent with that of Dr. Goldman, who completed an IME, on June 4, 2020. (*Id.* at ¶ 23). Dr. Mitchell's opinion must be overcome by clear and convincing evidence.

Dr. Barolat opined that Claimant is not at MMI because she has not had all of the treatments available to her. (*Id.* at ¶ 36). MMI, however, is defined as the point in time when any medically determinable physical or mental impairment as a result of an injury has become stable, and when no further treatment is reasonably expected to improve the situation. § 8-40-201(11.5), C.R.S.

Dr. Barolat offered an opinion regarding Claimant's pain generator that differs from the opinions of Drs. Mitchell and Goldman. (*Id.* at ¶¶ 24 and 31-33). There is no evidence, however, that Dr. Mitchell's opinion regarding Claimant's date of MMI is incorrect. Claimant did not introduce sufficient evidence to meet her burden of proof to overcome Dr. Mitchell's findings regarding MMI.

ORDER

It is therefore ordered that:

1. Claimant has failed to prove by clear and convincing evidence that the DIME physician's finding of MMI is incorrect.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-095-685-005

ISSUES

1. Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury arising out of the course of her employment with employer on May 4, 2018.

2. Whether Claimant established an entitlement to a general award of medical benefits.

3. Whether Claimant established that the treatment she received after May 4, 2018 was reasonably necessary to cure or relieve the effects of a compensable industrial injury.

4. Whether Claimant established by a preponderance of the evidence an entitlement to temporary disability benefits from May 4, 2018 and ongoing until terminated by statute.

5. Claimant's average weekly wage.

6. Whether Respondents established by a preponderance of the evidence that Claimant was responsible for termination of her employment and the resulting wage loss from her termination.

FINDINGS OF FACT

1. Claimant is a 52-year-old woman who has worked for Employer since February 2016. Employer is a meat packing company located in Fort Morgan, Colorado. Claimant was employed as a shackle remover and bung stuffer in Employer's plant. Claimant's job duties required her to stand on her feet and place paper in the anus of cattle carcasses using a metal tool. A video of another worker performing the Claimant's bung stuffer duties was admitted as Exhibit C. The video demonstrates that the job requires the employee performing the position to stand and move constantly over an area of approximately 3-4 feet.

2. Claimant has limited proficiency in English and primarily speaks Spanish.

3. On Friday, May 4, 2018, while performing her job duties, Claimant testified she was walking backwards while holding the tail of a cow and experienced a cramp in her right leg by the hip. When she moved forward, her knee "popped a lot" and her foot folded. Claimant continued to work the remainder of her shift and went home for the weekend. Over the course of the weekend, Claimant's right knee became swollen, and she had an increase in pain. Claimant returned to work on Monday, May 7, 2018, and worked her entire shift, although she testified that she worked with pain.

4. On Tuesday, May 8, 2018, Claimant completed an injury report form for Employer. Claimant's primary language is Spanish, and Claimant completed the form in Spanish. An English translation was included on the document. The English translation reads: "As I was working pushing my right knee popped in the bone then my foot kind of twisted." (Ex. M).

5. On May 8, 2018, Claimant was seen by Cecilia Marquez, R.N., in Employer's on-site clinic. Ms. Marquez indicated Claimant had pain and swelling of the right knee/back of knee and calf, and ambulated with difficulty. Ms. Marquez's record, indicates Claimant reported that her right knee popped at work, and that it was sore "like if it was twisted." (Ex. E., p. 37). Ms. Marquez was apparently concerned about the possibility of a deep vein thrombosis (DVT), and advised Claimant to be evaluated for that potential condition. (Ex. 6).

6. Later that day, Claimant was seen at the Colorado Plains Medical Center (CPMC) emergency department by Jeff Cook, M.D. Claimant reported hearing a "pop" in her knee on Friday, May 4, 2018, and that she experienced increased pain and swelling in the knee and popliteal fossa over the weekend. Claimant also reported one similar episode in 2017. On examination, Dr. Cook noted joint effusion, pain, and limited range of motion of the right knee. He noted pain with palpation of the popliteal fossa, and a questionably positive McMurray's test. (McMurray's test evaluates a patient's meniscus).[1] Homan's sign (a test for DVT) was negative. A right lower extremity venous ultrasound was also performed and no DVT (or other abnormality) was identified. Based on his evaluation, Dr. Cook noted that he suspected a meniscal injury and discussed symptomatic management and advised Claimant to follow up with her physician. (Ex. 6).

7. On May 18, 2018, Claimant had a right knee x-ray performed at East Morgan County Hospital for right knee pain and swelling. The x-ray was interpreted as showing no evidence of an acute osseous or joint space injury. No soft tissue edema was seen. (Ex. 7).

8. On May 22, 2018, Claimant saw Kathleen D'Angelo, M.D., at Employer's on-site Clinic. Dr. D'Angelo, was admitted as an expert in occupational medicine, and testified by deposition in lieu of live testimony. Dr. D'Angelo documented an examination of the Claimant's right knee, and noted no swelling and no tenderness of the joint lines of the knee. (Ex. 8). Claimant testified that Dr. D'Angelo did not touch her knee during her examination.

9. During her visit with Claimant on May 22, 2018, Ms. Marquez, who speaks Spanish and English, served as an "interpreter." No evidence was presented to indicate whether Ms. Marquez is qualified to provide reliable Spanish-to-English interpretation other than the fact that she is bilingual. Dr. D'Angelo testified that she, herself, is not proficient in Spanish. Given the lack of evidence concerning the qualifications of the nurse to serve as an interpreter, and Dr. D'Angelo's limited proficiency in Spanish, the ALJ finds

[1] *See* Lower Extremity Injury Medical Treatment Guidelines, Rule 17, Ex. 6, pp. 9 & 90.

evidence of what Claimant reported to Dr. D'Angelo to be unreliable and of limited evidentiary value.

10. In her May 22, 2018 report, Dr. D'Angelo indicated Claimant's ER paperwork from the May 8, 2018 CPMC visit "suggested a differential diagnosis of cyst, gout or Infection." (Ex. 8). In her deposition, Dr. D'Angelo testified she believed the ER physician mentioned "gout, Baker's cyst," in his records. Claimant's May 8, 2018 ER record admitted into evidence does not mention gout, Baker's cyst, cyst, or infection as potential diagnoses. (Ex. 6).

11. Dr. D'Angelo indicated she watched a video of Claimant's job duties with Claimant and that Claimant's job "required minimal if any movement to her lower extremities." Claimant testified that she did not watch any video with Dr. D'Angelo. Dr. D'Angelo's assessment of Claimant's job requirements is not consistent with the video admitted into evidence (Ex. C) which shows the position being performed while standing and with constant movement of the legs. Dr. D'Angelo's deposition testimony indicates she may have seen a different video than that admitted into evidence.

12. Dr. D'Angelo's assessment of Claimant was "[s]pontaneous onset of knee pain." She indicated that Claimant's complaints were not work-related, released Claimant at MMI, and indicated that Claimant may perform regular job duties at that time.

13. Dr. D'Angelo testified that the horizontal and complex tears of the right meniscus shown on Claimant's right knee MRI were degenerative tears. Dr. D'Angelo testified that the mechanism of injury Claimant reported (i.e., taking a step) would not be consistent with a meniscal tear. But a meniscus tear could occur "with twisting." Dr. D'Angelo also testified that at her examination, two weeks after the alleged injury, Claimant did not have swelling or inflammation that would be expected with an acute meniscus tear. She opined that Claimant did not need work restrictions.

14. On June 11, 2018, Claimant saw Eric Becker, PA-C, at Marathon Health for multiple issues, including pre-existing diabetes that was not well-controlled. Claimant reported right knee and ankle pain after falling at work. Mr. Becker noted that Claimant's knee x-ray was normal, and her ankle x-ray showed mild arthritic changes. Examination showed full active range of motion of the knees, with negative testing and no swelling noted. Claimant did have pain to palpation at the right lateral knee. Mr. Becker made no diagnosis of Claimant's right knee. Mr. Becker also noted that Claimant requested a translator for the visit, but had communicated well in English in the past without the need for an interpreter. (Ex. H).

15. On June 20, 2018, Claimant was seen again by Mr. Becker for continued right knee pain. Claimant reported that she was injured at work while walking and holding a cow's tail, and that she fell to her knee as it gave way. Claimant reported pain in the medial and anterior aspects of the right knee, and reported a catching sensation. She also reported difficulty with stairs. On examination, Mr. Becker noted that Claimant's right knee was swollen compared to the left knee, with reduced flexion, and catching sensation with release was felt with flexion. He noted a positive McMurray's test for right medial meniscal

tear. Mr. Becker indicated that he advised Claimant to return to occupational health to re-examine her knee as he felt it was work-related. He indicated if it was determined not to be work-related, he would order a right knee MRI. In the event the MRI showed a meniscal tear, he noted that he would "refer her back to occupational health as it would be very suspicious for workplace injury." (Ex. 9).

16. On July 6, 2018, Claimant again saw Mr. Becker. Claimant reported that she continued to experience catching, locking and crepitus in her knee with severe pain. Mr. Becker noted mild swelling in the right knee compared to the left, and ordered a right knee MRI. (Ex. 9).

17. On July 13, 2018, Claimant underwent a right knee MRI, ordered by Mr. Becker. The MRI was interpreted as showing a horizontal tear of the body and posterior horn of the right knee medial meniscus and a complex tear of the body and anterior horn of the right knee lateral meniscus. (Ex. 10).

18. On July 18, 2018, Mr. Becker completed a work restriction form in which he indicated "R knee meniscal tear appear to be due to work injury that occurred on 5/4/18. Pt. will need following restrictions: No prolonged standing greater than 2 hours. Avoid use of stairs. Please refer pt. back to if this is found to not work-related." (Ex. 11).

19. Claimant continued to work for Employer after May 4, 2018, but Claimant did not return to work for Employer after July 18, 2018. (Ex. B and 19).

20. In late October 2018, Claimant was hospitalized for a shoulder condition and infection, and saw Mr. Becker on October 31, 2018. (Ex. J). On November 12, 2018, Mr. Becker noted that Claimant had been hospitalized for approximately one week due to sepsis and an abscess. (Ex. J).

21. Due to unrelated medical conditions, Claimant was not seen again for her right knee until June 20, 2019, when she was seen at Banner Health by Sandra Boone, NP. Claimant reported that she believed her knee injury was work-related but "they said that her knee is due to her diabetes." (Ex. 13, p. 36). Ms. Boone noted that Claimant had grinding of her right knee and was wearing a brace. She indicated she would refer Claimant for a right knee evaluation.

22. On December 9, 2020, Claimant was seen by Allison Fall, M.D. for an independent medical examination ("IME") at the request of Respondents. Dr. Fall testified at hearing and was admitted as an expert in physical medicine and rehabilitation. At the December 9, 2020 examination, Claimant reported that she took a few steps and her knee popped. While Dr. Fall agrees that Claimant has medial and lateral meniscal tears in her right knee, she opined that the condition is not causally related to a work-related event. Dr. Fall indicated that "merely stepping forward would not cause medial and lateral meniscus tears." She opined that Claimant "had intermittent pain and swelling in her knees as a result of underlying meniscus tears of unknown etiology but likely contribution from her obesity."

23. Dr. Fall testified that it is unlikely that both medial and lateral meniscal tears would be caused by one event, and that they are not consistent with the Claimant's report to her of stepping and her knee popping. The ALJ finds credible Dr. Fall's testimony that it is unlikely that Claimant sustained medial and lateral meniscal tears on May 4, 2018.

24. On March 17, 2021, Claimant saw John Hughes, M.D., for an independent medical examination at Claimant's request. (Ex. 16). Dr. Hughes described in his report that the history provided by Claimant was "impoverished" due to a language barrier. He reported, however, that Claimant indicated she "twisted, feeling sudden onset of a pop in her right leg in the area of the knee, and notes that her right leg gave out." Given the acknowledged language barrier, the ALJ finds what Claimant reported to Dr. Hughes to be unreliable and of limited evidentiary value.

25. Dr. Hughes indicated a "meniscus tear may have a natural course of waxing and waning over time, particularly over the early course of this injury," and opined that this explained the inconsistent reports of swelling and range of motion observed between Dr. D' Angelo and Mr. Becker on May 22, 2018, June 11, 2018 and June 20, 2018. He also noted that Claimant reported a fall down the stairs at work in 2018. Based on his examination and review of records, Dr. Hughes concluded that Claimant had a "work-related right sprain/strain with medial and lateral meniscus tears sustained May 4, 2018, with persistence of right knee arthritis meriting orthopedic surgical evaluation." Dr. Hughes opined that Claimant was not at maximum medical improvement and needs an orthopedic evaluation. (Ex. 16).

26. Claimant testified that she was employed at [Redacted] for approximately three years, working 38-40 hours per week. Her job duties entailed working on the kill floor, putting papers in the buttocks of cows, which required her to move both up and down and sideways.

27. She testified she was injured on Friday, May 4, 2018, around 9:00 at night. She was walking backwards while holding the tail of a cow and got what she thought was a cramp in her right leg by the hip. When she moved forward, her knee popped a lot and her foot folded.

28. Claimant testified that after her injury, she did not work the weekend and returned to work on the following Monday. She worked all day Monday. On Tuesday, Claimant went to the on-site medical clinic at [Redacted]. She received ice for her knee and was sent home, with instructions to go to the hospital for an ultrasound because of concern she may have a blood clot due to her diabetes.

29. Claimant testified that when she saw Dr. D'Angelo, she only spoke to the nurse who was acting as an interpreter. Claimant further claims that Dr. D'Angelo did not exam or touch her knee at this appointment.

30. On February 11, 2020, Claimant was terminated by Employer for failure to complete a Final Accommodation Review process.

31. Exhibits B, 19 and 20 purport to be wage and payroll information from Employer, and Exhibit 20 is identified as “Wage Table.” Neither party offered testimony explaining the information shown on the documents or how to calculate Claimant’s average weekly wage based on the information provided. The ALJ infers from Exhibits B and 19, that as of May 4, 2018, Claimant earned $15.55 per hour. Exhibits B and 19 indicate Claimant worked and was paid for work from the week of May 4, 2018 until the week of July 22, 2018. Claimant testified that prior to her injury, she worked 38 to 40 hours per week, which would equate to an average weekly wage of $590.90 to $622.00.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers’ compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers’ compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm’n.*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng’g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY AND MEDICAL TREATMENT

A claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S. A claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result nor natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Constr. v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Med. Ctr.,* W.C. No. 4-727-439 (ICAO Aug. 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO Aug. 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Claimant has established by a preponderance of the evidence that she sustained a compensable injury to her right knee arising out of the course of her employment with Employer on May 4, 2018. The ALJ credits Dr. Hughes' opinion that Claimant sustained a sprain/strain of her right knee on May 4, 2018, but not that Claimant sustained tears to her meniscus arising out of her employment. The ALJ credits Dr. Fall's testimony that Claimant's medial and lateral meniscal tearing is likely degenerative and was not caused by her employment, and that her described mechanism of injury is inconsistent with an acute meniscal tear. Claimant credibly testified that she experienced pain and a pop in her knee arising out of the course of her employment on May 4, 2018. The ALJ finds that Claimant's ability to work the remainder of her shift on May 4, 2018 and also to work on May 7, 2018 is not consistent with an acutely torn meniscus, but is consistent with a strain/sprain of the knee. When Claimant was seen on May 8, 2018, she exhibited objective signs of injury, including swelling that was documented by both the on-site clinic and Dr. Cook in the emergency room. Contrary to Dr. D'Angelo's opinion, there was no credible evidence that Claimant's pain was the result of a cyst, gout, or infection.

With respect to medical treatment, because Claimant has established a compensable injury, Claimant has also established by a preponderance of the evidence that she is entitled to a general award of medical benefits. The treatment Claimant received for her right knee sprain/strain is reasonably necessary to cure or relieve the effects of Claimant’s work injury.

TEMPORARY DISABILITY BENEFITS

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-103(1)(g), 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) of the Colorado Revised Statutes requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). Impairment of wage-earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Indus. Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant’s testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Claimant has failed to establish an entitlement to TTD benefits. The evidence demonstrates that Claimant worked without restrictions following her injury until July 18, 2018. On July 18, 2018, Claimant received restrictions from physician assistant, Eric Becker. However, those restrictions were due to Claimant’s non-work-related meniscal tears, not the sprain/strain injury sustained on May 4, 2018. Claimant has failed to establish that she had a disability caused by a work-related injury that resulted in loss of earnings after July 18, 2018. Consequently, Claimant’s claim for TTD is denied.

AVERAGE WEEKLY WAGE

Section 8-42-102(2) of the Colorado Revised Statues requires the ALJ to base the claimant's Average Weekly Wage (AWW) on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867

P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.* Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply § 8-42-102(3), C.R.S. and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Campbell v. IBM Corp.*, *supra*.

Because Claimant has failed to establish an entitlement to TTD benefits, determination of Claimant's average weekly wage is moot.

RESPONSIBILITY FOR TERMINATION

The Act prohibits a claimant from receiving TTD benefits if the claimant is responsible for termination of the employment relationship. *Gilmore v. Indus. Claim Appeals Office*, 187 P.3d 1129, (Colo. App. 2008); §§ 8-42-103(1)(g), 8-42-105(4)(a), C.R.S. The termination statutes provide that where an employee is responsible for his or her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006).

"Under the termination statutes, sections 8-42-103(1)(g) and 8-42-105(4), an employer bears the burden of establishing by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment." *Gilmore*, 187 P.3d at 1132. "Generally, the question of whether the claimant acted volitionally, and therefore is 'responsible' for a termination from employment, is a question of fact to be decided by the ALJ, based on consideration of the totality of the circumstances." *Gonzales v. Indus. Comm'n*, 740 P.2d 999 (Colo. 1987); *Windom v. Lawrence Constr. Co.*, W.C. No. 4-487-966 (November 1, 2002). *In re Olaes*, WC. No. 4-782-977 (ICAP, April 12, 2011). Implicit in the termination statutes is a requirement that Respondents prove Claimant committed an "act" which formed the basis for his or her termination. Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Apex Transp., Inc. v. Indus. Claim Appeals Office*, 321 P.3d 630, 632 (Colo. App. 2014).

Because Claimant has failed to establish an entitlement to TTD benefits, the issue of responsibility for Claimant's termination is moot.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury to her right knee arising out of the course of her employment on May 4, 2018.

2. Respondents shall pay for medical treatment reasonably necessary to cure or relieve the effects of her industrial injury.

3. Claimant is not entitled to temporary total disability benefits.

4. All other matters identified as issues for hearing are moot.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 15, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to a change of physician.

FINDINGS OF FACT

1. On July 28, 2020, the claimant was working for the employer as the head saw filer. On that day, the claimant climbed on a conveyor belt to remove a board that had become stuck. The claimant testified that he jumped down from the conveyor to the concrete floor and immediately had pain in his right knee. The claimant testified that this was from a height of approximately five and a half feet.

2. Following his report of the incident to the employer, the claimant began receiving medical treatment at Peak Professionals (Peak). The claimant has seen Dr. Joseph Adragna and Isaac Klostermann, PA at Peak. Dr. Adragna is the claimant's authorized treating physician (ATP) for this claim.

3. The claimant was first seen at Peak on August 5, 2020. On that date the claimant was seen by both PA Klostermann and Dr. Adragna. In the medical record of that date, the claimant was diagnosed with suprapatellar bursitis of the knee. In addition, PA Klostermann noted that the condition of the claimant's right knee was not work-related. The reasoning regarding causation was based upon the claimant's report of the incident. Specifically, the August 5, 2020 medical record indicates that the claimant reported stepping out of the conveyor, approximately one foot down.

4. As a result of this initial opinion, the claim was denied. Despite the denial, the claimant continued to seek treatment with PA Klostermann and Dr. Adragna at Peak. These visits included knee aspirations and injections.

5. Subsequently, a magnetic resonance image (MRI) of the claimant's right knee showed a complex tear of the medial meniscus. Based upon the MRI results, Dr. Adragna referred the claimant to Dr. Vineet Singh for a surgical consultation.

6. On December 23, 2020, the claimant returned to Peak and was seen by both PA Klostermann and Dr. Adragna. On that date, the claimant presented paperwork regarding the July 28, 2020 incident. Based upon information that the claimant had jumped from the conveyor belt, PA Klostermann and Dr. Adragna opined that the claimant's mechanism of injury was work-related.

7. On December 28, 2020, PA Klostermann authored a letter in which he reiterated that based upon the information that the claimant jumped at the time of his injury, the injury was likely work-related.

8. Subsequently, in response to a May 12, 2021, letter from the respondents' attorney, Dr. Adragna indicated that he does not believe that the claimant's right knee injury is work-related.

9. Despite the changing opinions from Peak providers regarding causation, on June 30 2021, the respondents filed a General Admission of Liability (GAL) for the claimant's July 28, 2020 right knee injury.

10. The claimant has requested a change of physician. The claimant testified that he does not trust Dr. Adranga. The claimant also testified that he prefers the way Dr. Singh drains his knee, over Dr. Adragna's method.

11. Dr. Adragna testified that his treatment of the claimant's right knee condition has not and will not change based upon the cause of that condition.

12. Based upon the testimony and evidence presented at the hearing, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that he should be permitted to change physicians. The ALJ recognizes that the claimant is displeased with his providers changing their opinions regarding whether his injury is work-related. However, the claimant's personal dissatisfaction with Dr. Adragna does not rise to the level of making a "proper showing" to permit a change of physician.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Section 8-43-404(5)(a), C.R.S. permits the employer or insurer to select the treating physician in the first instance. Once the respondents have exercised their right to select the treating physician, the claimant may not change the physician without the insurer's permission or "upon the proper showing to the division." Section 8-43-404(5)(a), C.R.S.; *In Re Tovar,* W.C. No. 4-597-412 (ICAO, July 24, 2008). Section 8-43-404(5)(a), C.R.S. does not define "proper showing". Therefore, the ALJ has discretionary authority to determine whether the circumstances warrant a change of physician. *Jones v. T.T.C. Illinois, Inc.,* W.C. No. 4-503-150 (ICAO, May 5, 2006), *Loza v. Ken's Welding,* WC 4-712-246 (ICAO January 7, 2009); *Pedro Gutierrez Lopez v. Scott Contractors*, W.C. No. 4-872-923-01, (ICAO Nov. 19, 2014). The ALJ's decision regarding a change of physician should consider the claimant's need for reasonable and necessary medical treatment while protecting the respondent's interest in being apprised of the course of treatment for which it may ultimately be liable. *Id.* An ALJ is not required to approve a change of physician for a claimant's personal reasons including "mere dissatisfaction." *In Re Mark*, W.C. No. 4-570-904 (ICAO, June 19, 2006).

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he is entitled to a change of physician. As found, the claimant's personal dissatisfaction with Dr. Adragna does not rise to the level of making a "proper showing" to permit a change of physician.

ORDER

It is therefore ordered that the claimant's request for a change of physician is denied and dismissed.

Dated this 17th day of November 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-108-386-002

ISSUES

1. Whether Claimant established by a preponderance of the evidence that her claim should be reopened for a worsening condition.

2. Whether Respondent established by a preponderance of the evidence that Claimant received an overpayment of temporary total disability benefits in the amount of $3,645.45.

STIPULATION

The parties stipulated that Claimant received an overpayment of temporary total disability benefits in the amount of $3,645.45.

FINDINGS OF FACT

1. On May 8, 2019, Claimant sustained an admitted injury arising out of the course of her employer while helping unload a truck. Claimant was initially seen outside the workers' compensation system at Kaiser Permanente. Over the course of several months, Claimant was evaluated and treated for right sided back pain radiating down her right leg, and was diagnosed with lumbar radiculopathy. An MRI taken on May 20, 2019, demonstrated degenerative changes and "advanced spinal canal stenosis" at the L4-5 level. (Ex. 3 and July 16, 2021 AFCLO).[1]

2. Following her injury on May 8, 2019, Claimant was seen at SCL Health on several occasions reporting lower back pain with pain radiating down her right leg with associated numbness and tingling. Claimant also reported lower abdominal pain into her groin. She was diagnosed with acute right-sided low back pain with right-sided sciatica and spinal stenosis of the lumbar region without neurogenic claudication. (Ex. E)

3. Between July 30, 2019, and August 28, 2019, Claimant was seen at Concentra for the May 8, 2019 injury, and diagnosed with low back pain, low back strain, and lumbar radiculopathy. In August 2019, Claimant complained of pain in her lower back and hip area, described by the treating physician, Brendan Matus, M.D., as lower back pain, and leg pain between the pelvic bones. (Ex. 3 and July 16, 2021 AFCLO).

[1] Ex. 3 is the Findings of Fact, Conclusions of Law and Order issued in WC 5-130-079-001, regarding Claimant's December 7, 2019 work injury. On July 16, 2021, the ALJ issued an Amended Findings of Fact, Conclusions of Law, and Order (July 16, 2021 AFCLO) in the same matter. The ALJ took judicial notice of the July 16, 2021.

4. On September 12, 2019, Claimant saw Christopher Hicks, M.D., at Kaiser Permanente. Claimant reported pain in her right hip radiating between the hip and back. At that time, Claimant was using a walker for assistance with ambulation. (Ex. 3 and July 16, 2021 AFCLO).

5. On September 23, 2019, Claimant received a right hip steroid and anesthetic injection at Kaiser due to degenerative joint disease. Claimant did not receive medical care for her hip or back between September 23, 2019, and December 10, 2019. (Ex. 3 and July 16, 2021 AFCLO).

6. On December 7, 2019, Claimant was performing her duties for Employer and sustained an injury to her right hip. (Ex. 3 and July 16, 2021 AFCLO). Following the December 7, 2019 injury, Claimant received treatment for both the right hip injury sustained in that incident, and the back injury sustained on May 8, 2019.

7. Between May 4, 2020, and August 13, 2020, Claimant saw Dr. Ogden or other providers at Workwell eight times. At these visits, Claimant reported that no treatment improved her right-sided lower back pain. Claimant also reported numbness in her leg, and difficulty walking and sleeping. Claimant reported pain levels between 8 and 10 during this time, and noted her pain was worse with walking, driving, and up and down motions. (Ex. D).

8. On August 13, 2020, Claimant's authorized treating physician Paul Ogden, M.D., at Workwell, placed her at MMI for her May 8, 2019 work injury. Dr. Ogden later clarified that Claimant did not sustain any impairment related to the May 2019 work injury, as he felt that any impairment was due to Claimant's December 7, 2019 injury. (Ex. D).

9. On December 2, 2020, Claimant underwent a Division independent medical examination (DIME) with Matthew Brodie, M.D. At the time of the DIME, Claimant was using crutches to walk. Claimant initially reported her lower back pain level as 10/10. After Dr. Brodie explained that 10/10 pain equated to incapacitation, she revised her pain description to 8/10. Dr. Brodie indicated Claimant exhibited "substantial gestures, pain projection, occasional outcries of pain, and demonstrations of unsteady station and balance." Dr. Brodie attempted to perform lumbar range of motion measurements three times. However, because Claimant displayed substantial pain mannerisms, ratcheting, and jerking motions, and was unable to perform some measurements unassisted, range of motion measurements were not considered valid. (Ex. B).

10. He diagnosed Claimant with multi-level lumbar spine spondylosis with multilevel canal and neural foraminal stenosis, and opined there was "an improbable causal association between the development of lumbar spine or pelvis/hip-related degenerative disk or joint diseases, and [Claimant's] work activities, including the work activity on May 8, 2019." Dr. Brodie placed Claimant at MMI as of May 4, 2020. He did not assign a permanent impairment and did not recommend maintenance medical care. (Ex. B).

11. On December 8, 2020, in a call with Dr. Hicks, Claimant reported continuing pain in her back. Dr. Hicks' progress note indicated "MRI shows worsening L4-L5 spinal stenosis progression from mild-moderate … to severe on MRI from 5/19 to 12/20." Dr. Hicks recommended a neurosurgery referral to consider a lumbar epidural steroid injection (LESI) vs. surgery. Dr. Hicks' report does not indicate that the progression in Claimant's spinal stenosis or the referrals for neurosurgery were causally-related to her May 8, 2019 work injury. (Ex. G).

12. Dr. Ogden evaluated Claimant on January 4, 2021, at Workwell, reporting continued lower back pain which she rated as a "10." Claimant reported she felt she was getting worse. Claimant also saw providers at Workwell on January 25, 2021, February 15, 2021, March 25, 2021, and April 15, 2021. During this time, Claimant continued to report the same or similar symptoms that she reported since May 2019. (Ex. D).

13. On January 18, 2021, Respondent filed a Final Admission of Liability (FAL), consistent with Dr. Brodie's DIME report. (Ex. 1). Claimant did not challenge the FAL or the DIME report within 30 days of the FAL. Consequently, Claimant's claim closed on February 17, 2021.

14. On January 21, 2021, Claimant saw Brian Mcintyre, D.O., at Kaiser. Claimant reported radiating pain from the right buttock through the right leg, into the foot and great toe area. (Claimant also reported similar symptoms at a Kaiser visit on June 4, 2019). (Ex. G). Dr. Mcintyre ordered a right transforaminal S1 epidural injection "to help ease selling/inflammation about the never roots, and decrease extremity symptoms." (E. H).

15. On January 25, 2021, Dr. Ogden recommended Claimant receive further treatment at Kaiser. Dr. Ogden diagnosed the Claimant as suffering low back pain, radiculopathy in the lumbosacral region, sciatica on the right side and unilateral primary osteoarthritis of the right hip. He indicated the injections Claimant had received had not provided relief. (Ex. 7).

16. On February 5, 2021, Claimant underwent a lumbar MRI at the Medical Center of Aurora, which showed, among other things, moderate to severe bilateral neural foraminal narrowing with abutment of bilateral exiting nerve roots, with no central canal stenosis. (Ex. J).

17. On February 11, 2021, Claimant had a telemedicine visit with Dr. Hicks at Kaiser. Claimant reported right leg pain with standing and any twisting or lifting. He noted that Claimant had an injection on January 28, 2021, which provided no relief. (Ex. G).

18. On February 15, 2021, Claimant saw Dr. Ogden at Workwell, and reported lower back pain rating a 10, as well as pain in the right groin. Claimant also noted numbness and tingling in her right leg, but not constant. (Ex. D)

19. Claimant continued to treat with Kaiser and Kaiser Neurosurgery between February 2021 and April 2021.

20. On March 11, 2021, Claimant saw Benjamin Rubin, M.D. at Kaiser. Claimant's primary complaint was right anterior groin pain and pain radiating into her right leg. Claimant indicated she had a recent epidural steroid injection which provided no relief. Dr. Rubin reviewed Claimant's December 7, 2020 MRI and noted that the findings did not fully explain her symptoms. He also noted that the "exact etiology of the pain is unclear, and she is essentially neurologically intact on exam with the exception of pain limited weakness in the right leg and positive SI joint provocative testing on the right side." Dr. Rubin offered no opinion on the cause of Claimant's symptoms or whether they related to her May 8, 2018 work injury. (Ex. G).

21. On April 16, 2021, Claimant underwent a right SI joint injection. (Exs. G and H)

22. On April 25, 2021, Claimant went to the emergency room at the Medical Center of Aurora, reporting worsening lower back pain radiating down her right leg. Claimant's complaints were substantially similar to those reported since May 2018. (Ex. J).

23. On April 25, 2021, Claimant had a lumbar MRI which showed multilevel degenerative changes; moderate to severe bilateral foraminal narrowing at L4-5; and moderate central canal stenosis at L3-4. (Ex. J). The reading radiologist indicated the degenerative changes were not significantly changed from the February 5, 2021 MRI. (Ex. J).

24. On April 28, 2021, Claimant underwent an L4-S1 lumbar fusion surgery performed by Colin Buchanan, M.D., at the Medical Center of Aurora. The pre- and post-operative diagnoses were lumbar spondylolisthesis, lumbar spondylosis with radiculopathy, and lumbar instability. (Ex. 5). Following her lumbar fusion surgery, Claimant continued to report similar symptoms as before the surgery.

25. At hearing, Claimant testified that in April 2021, she was experiencing severe back pain, and went to the emergency room. Claimant did not testify as to the cause of the back pain or whether any specific event was associated with the back pain. Claimant testified that post-surgery she continues to experience significant pain in her low back, but with some functional improvement.

26. Lawrence Lesnak, M.D., performed an independent medical examination of Claimant at Respondent's request on August 11, 2021. Dr. Lesnak was admitted as an expert in physical medicine and rehabilitation. Dr. Lesnak testified that based on his review of records and his examination, he did not note objective evidence that Claimant's condition had worsened between May 4, 2020, and her April 28, 2021 surgery. He also opined that Claimant's lumbar fusion surgery was not causally related to her May 8, 2019 work injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

REOPENING FOR CHANGE IN CONDITION

Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving her condition has changed and that she is entitled to benefits by a preponderance of the evidence. *Berg v. Indus. Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Indus. Comm'n*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Indus. Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A “change in condition” pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAO Oct. 25, 2006). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Indus. Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Constr. Co.,* 765 P.2d 1033 (Colo. App. 1988). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAO July 19, 2004).

Claimant has failed to establish by a preponderance of the evidence that she sustained a change in condition causally connected to her original work injury of May 8, 2019. Claimant’s claim was closed pursuant to the Final Admission of Liability filed on January 18, 2021. Following closure of Claimant’s case, she continued to report the same symptoms at the same pain levels as she had reported since her date of MMI – May 4, 2020. None of Claimant’s treating physicians have opined that Claimant’s symptoms after MMI, after the December 20, 2020 DIME, or after her case closure were causally-related to the injury she sustained on May 8, 2019. Claimant’s April 28, 2021 lumbar fusion surgery was to address lumbar spondylolisthesis, lumbar spondylosis with radiculopathy, and lumbar instability. No credible evidence was presented indicating that the diagnoses addressed by the surgery were causally related to Claimant’s May 8, 2019 work injury. The ALJ finds credible Dr. Brodie’s opinion that Claimant’s development of lumbar spine pathology was not likely caused by her work activities. Claimant has not established that the April 2021 lumbar fusion surgery was causally related to her May 8, 2019 work injury. Because Claimant has failed to meet her burden of establishing a change in condition causally related to her May 8, 2019 work injury, the ALJ finds no basis for reopening Claimant’s claim.

ORDER

It is therefore ordered that:

1. Claimant’s request to reopen her claim based on a worsening of condition is denied and dismissed.

2. Claimant received an overpayment of temporary total disability benefits in the amount of $3,645.45.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 18, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that her sternoclavicular arthritis and chest abscess are related to her compensable work injury?

II. Has Claimant shown, by a preponderance of the evidence, that she is entitled to medical benefits for her sternoclavicular arthritis and chest abscess?

III. Has Claimant shown, by a preponderance of the evidence, that she is entitled to Temporary Partial Disability payments?

IV. Has Claimant shown, by a preponderance of the evidence, that she is entitled to Temporary Total Disability payments?

STIPULATIONS

The parties have stipulated that Claimant's Average Weekly Wage is $1,429.38.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant's Work Injury, and Subsequent Diagnosis and Treatment

1. Claimant has been a registered nurse (RN) for 33 years. on November 13, 2020, she was working as an RN Case Manager. Her job duties included start-of-care evaluations and discharges for patients who receive home health care. She also oversaw the LPNs' care of the patients. She was responsible for communication and problem solving between the medical team and the patients. Claimant also performed medical evaluations, wound assessments, education for patients regarding their care, and assessments to help the patients transition from the hospital or rehab to home.

2. On November 13, 2020, Claimant testified that she had performed wound care on the coccyx area of a stroke patient, and then had to move the patient back to the middle of the bed. While moving the patient back, Claimant felt a pop and immediate aching sensation in her left shoulder. She was able to finish her documentation with that patient, then see one more patient, just to provide medications, and then went home.

3. Claimant testified that, once home, she took 800 milligrams of Motrin and iced her shoulder. The next morning, she could not move her shoulder or arm. She needed to

use her right arm to move her left arm. Her left shoulder/arm started to swell and she experienced sharp pains and a deep muscle ache.

4. Claimant testified that she called her supervisor and reported the shoulder problem. They made a plan that she would rest and ice the shoulder over the weekend. However, the pain worsened over the weekend, and Claimant went to the emergency room on November 19, 2020. (Ex. 5). At the ER, Claimant received an x-ray, three days' worth of Tramadol, and a referral to orthopedics. At this visit, it was noted that Claimant denied any redness of the skin, bruising, fever, or chills. (Ex. 5, pp. 9-13). She was diagnosed at that visit with acute pain of the left shoulder and pectoralis muscle strain, and received a differential diagnosis that included "clavicle fracture" and "septic joint." *Id.* at 12. She was also provided with a sling to use over the following few days, and told not to move her arm. She was put on light duty work, so that she could not lift or perform patient care. *Id* at 12, 17.

5. Claimant was then seen by orthopedist Charles A. Hanson, M.D., on November 25, 2020. (Ex. 6, p. 19). Dr. Hanson also performed x-rays, along with a physical evaluation. (Ex. 6, p. 21). According to Claimant's interpretation at hearing, Dr. Hanson believed there was inflammation on the chest wall; she had a small mass that was near where her shoulder injury was, about the size of a walnut. By this point, her shoulder and chest both hurt, all the way from her elbow up over into her chest wall; her pain was listed at 8/10, despite the 800 milligrams of Motrin she had continued taking.

6. In this report, Dr. Hanson noted "mild swelling and mild to moderate tenderness in [Claimant's] *left sternoclavicular joint*." He noted "persistent post traumatic aching over the superior, anterior and posterior superior aspects of the shoulder as well as the *left sternoclavicular joint* in association with limitation of motion and weakness of the shoulder and arm *probably due to* grade 1 sprain of the rotator cuff as well as *grade 1 strain of the left sternoclavicular joint."* (Ex. 6, pp. 20-21)(emphasis added). Dr. Hanson wrote a referral for an MRI of the left sternoclavicular joint and left shoulder. However, Claimant testified that she had to wait for the referral to be approved, because it had to go through Workers' Compensation. (*see also*, Ex. 6, p. 23).

7. Claimant then went to CCOM on December 1, 2020. (Ex. 7, p. 25). Brandon Madrid, N.P., noted on his physical exam that Claimant had a limited range of motion in her shoulder, and that she had mild *swelling* to the left side chest area just distal to the *left clavicle* with mild to moderate point tenderness in the left side chest. No redness or bruising was noted. *Id* at 26. NP Madrid also ordered an MRI*. Id.*

8. Claimant testified that her pain was "a constant 10 out of 10." "The redness and swelling were increasing, coming across [her] chest wall from [her] shoulder, the AC

joint area, and came across [her] chest, and the swelling now was about the size of a baseball." (Transcript, p. 21).

9. Claimant next saw NP Madrid at CCOM on December 8, 2020. (Ex. 8). NP Madrid stated that Claimant was still complaining of swelling and moderate tenderness to the left side chest area, including stabbing pain, and discomfort with movement of her left arm. (Ex. 8, p. 29). [Claimant was still waiting on Workers' Compensation for approval of the requested MRI]. NP Madrid's inspection of the chest showed "a palm sized mass." *Id.* His *Review of Systems* for *Musculoskeletal* was: "positive for joint pain, joint stiffness, joint swelling, and muscle pain. Negative for joint redness." *Id.*

10. NP Madrid added a referral to the MRI for imaging of the "chest due to increased swelling and mass present to the left side chest." *Id.* NP Madrid provided the diagnoses of strain of muscle and tendon of the rotator cuff of the shoulder, strain of other muscles at left shoulder and upper arm, and strain of muscle and tendon of front wall of thorax. *Id.* He then opined that all of the diagnoses were related to work activities. *Id.*

11. Under COMMENTS for this December 8, 2020 visit, NP Madrid noted:

> I did get x-rays of the AP and lateral views of the chest x-ray of the C-spine due to I am (sic) masslike presentation to the left side upper chest.
>
> *On the initial exam the patient did complain of radiating pain that radiated to her left side chest to her lower shoulder. *She did complain of left-sided chest discomfort on the initial visit* (emphasis added). [ALJ Note* Claimant's initial visit with NP Madrid was December 1, 2020].

12. Claimant eventually received the MRI on December 10, 2021. (Ex. 9). [Claimant testified at hearing that she had to drive to Colorado Springs to get it, despite imaging services available in Pueblo. The ALJ infers that this was likely some sort of cost containment measure]. The MRI showed a partial articular surface tearing of the subscapularis tendon, as well as "significant inflammatory change involving the left sternoclavicular joint with complex collection extending superficial to the left sternoclavicular joint. Findings are worrisome for septic arthritis and abscess." *Id* at 37.

13. Claimant testified that by December 12, 2020, the pain was so severe at work that Claimant asked her supervisor about going to the ER. She then returned to the ER on December 13, 2020. The ER physician ordered a CAT scan, which showed sepsis in her chest. (Transcript, p. 22, 23) An orthopedist also evaluated her shoulder, and stated that she would need a rotator cuff repair, and to follow up with an orthopedic specialist after her treatment for the sepsis. (Transcript at 25); (*see also* Ex. 10 at 40, 162).

14. Claimant was admitted to the hospital, and on December 16, 2020, she underwent surgery with cardiothoracic surgeon John Dugal, M.D. Dr. Dugal cleaned out the abscess in the chest wall and put a wound vac into it. (Ex. 10 at 63, 42). The surgeon also diagnosed osteomyelitis, a bone infection arising from sepsis. He therefore cut out Claimant's entire clavicle. (Ex. 10, p. 63). Claimant then underwent a second surgery on December 18, 2020, to clean the chest again, sew the muscle layers back, put a JP drain, and suture the incision. *Id* at 63, 71, 84-85; (Transcript at 23). She remained in the hospital for eight days due to the surgeries and IV antibiotics. *Id*. At hearing, Claimant testified she has had no personal medical history of diabetes, cellulitis, significant bacterial infection, previous sepsis, or swelling of her chest.

15. Claimant was asked at hearing if she had ever treated a patient who had sustained an injury, and then developed sepsis:

A Yes. ...when I first started doing home health, I had a patient that developed an infection in his hip. He had a traumatic injury where he twisted his hip and leg when he fell, and they thought it was a fracture and bursitis, which is just swelling of the joint, and the doctor did an aspiration where he stuck a needle in and withdrew fluid, and it turned out to be pus... And the patient never had any kind of hip injury or anything like that. In fact, he was in his 40s.

Q Do he had a leg injury that developed into a sepsis joint?

A Correct, in the hip.

Q Okay. Now was that similar or different than your injury?

A No, it was similar to mine. I mean, you know, a young guy, never had any kind of major medical problems, no drug use or anything to cause, you know, sepsis, and fell, injured the hip, and it developed into sepsis.

They call it sterile abscess because it occurs in a traumatic area, and there are no open wounds in the skin or blood vessels that can—bacteria can enter. (Transcript, pp. 30, 31)

16. After Claimant's discharge, she was on IV antibiotics and home health care for six weeks, and was unable to work. (Transcript, pp. 25-25)(*see* Ex. 10, 12). NP Madrid noted that "Patient states that the abscess was formed from the left shoulder injury. She denies any injections or autoimmune disorders such as rheumatoid arthritis or lupus. She states that she did get her flu shot but that was in her right shoulder. She was told by the cardiothoracic surgeon that the abscess developed from the left shoulder." (Ex. 12, p. 405).

17. On the WC-164, dated 12/29/2020, NP Madrid again stated that the diagnoses were consistent with a work-related mechanism. (Cl's Ex. 12, p. 408). At her next

appointment NP Madrid noted that Claimant was in for her “follow-up visit status post left shoulder strain and abscess to the left side chest,” and that “[t]he cause of this problem is related to work activities. (Ex. 13, pp. 409-10).

18. Claimant testified that as of the date of hearing, her bills from the hospital, radiology, Dr. Seema [Mehta Steinke, M.D., the infectious disease doctor]; and Paragon Infusion for the medications and supplies for the IV antibiotics have not been paid. (Transcript, p. 26). The bills totaled around $150,000. *Id.*

19. After Claimant completed her six weeks of home IV antibiotic treatment, she saw Shannon Constantinides, NP, at the Colorado Center of Orthopaedic Excellence for her left shoulder. NP Constantinides independently interpreted the MRI of 12/10/20, and determined that Claimant had “high-grade partial-thickness tearing of the subscapularis tendon. The biceps tendon appears intact although there is quite a bit of fluid within the groove and evidence of longitudinal tearing. (Ex. 15, p. 418). NP Constantinides noted she would benefit from surgery “in the form of left shoulder arthroscopy with subacromial decompression, rotator cuff repair, and possible biceps tenodesis.” *Id* at 419. David Weinstein, M.D., and orthopedic surgeon requested the surgery, which was approved by Respondents. (Ex. 16*,* p. 421).

20. Thomas Centi, M.D., saw Claimant on March 16, 2021 at CCOM. He agreed with NP Madrid regarding the diagnoses and stated “[t]he cause of this problem is related to work activities.” (Ex. 17, p. 424).

21. On March 25, 2021, Dr. Weinstein performed a rotator cuff repair. (Ex. 18, p. 429) Claimant also testified: “The supraspinatus was totally tor[n]; the infraspinatus muscle, the one on the back of the shoulder, was partially tor[n], and they had to move the biceps tendon and screw it into my humerus, my upper arm bone.” (Transcript at 27). Since then, Claimant has been in physical therapy. (Ex. 18, p. 432).

IME by Dr. Larson

22. Orthopedist Wallace Larson, M.D., performed an independent medical exam of Claimant on February 11, 2021, to opine whether Claimant’s sternoclavicular septic arthritis was related to her work injury. (Ex. C, pp. 78-81). In his report, he noted that in Claimant’s 11/24/2020 visit at CCOM, “…x-rays were done *due to swelling in the front of her chest*” *Id* at 78 (emphasis added). In his own IME report, he noted that on 11/25/2020, “His [Dr. Hansen’s] Impression was *left sternoclavicular joint strain*. Left clavicle examination revealed *increased warmth with mild swelling and mild to moderate tenderness of the left sternoclavicular joint*…” *Id* at 80 (emphasis added).

23. The records made available to Dr. Larsen that he reviewed began on 11/19/2020, and ended with a record at CCOM dated 1/5/2021. He does not reference a CCOM record dated 12/8/2020.

24. In his written IME report, Dr. Larson opined that Claimant's "reported history of shoulder strain is unrelated to the septic arthritis of the sternoclavicular joint and subsequent treatment. It is likely the MRI indication of a *partial subscapularis tear* is a *coincidental* finding and is *not related to trauma* or the reported strain." *Id* at 81. When asked to 'Obtain an appropriate treatment plan', he responded: *"The patient does not require* ***any*** *treatment at this time."* Id at 81 (emphasis added).

Dr. Larson's Deposition

25. Dr. Larson's deposition was taken on August 3, 2021. He stated: "It's very clear that those were two separate issues. The sternoclavicular arthritis was completely unrelated to anything that would have happened at work. There was no evidence of any penetrating injury or anything that would have caused an infection in that joint." (Depo. Larson, pp. 9-10). He believed it was "basically a coincidence" that the septic arthritis occurred after Claimant's injury. (Depo. Larson, p. 19). He stated, the "sternoclavicular joint is not close to the shoulder joint . . . It's quite remote," (Depo. Larson, pp. 18-19). He testified that the common cause of sepsis is attempts at IV drug abuse, or some type of an open wound, and occurs when bacteria comes from the bloodstream and gets into a joint and causes an infection. However, he never saw any signs of IV drug abuse when he examined Claimant. *Id.*

26. When offering his opinion, both in his written report and while testifying, Dr. Larson did not have all of Claimant's medical records following her injury, including Claimant's December 8, 2020 visit at CCOM, [which included the diagnosis of "strain of muscle and tendon of front wall of thorax" and also noted that her chest had a palm sized mass]. (Depo. Larson, pp. 12-14). He was purportedly unaware of the existence of said report, and no explanation was provided why he did not have it. He was also unaware that Dr. Weinstein had diagnosed Claimant with a series of work-related injuries, having not seen any of those reports. He was only aware of this fact because *Claimant had told him* during the IME exam that "she had some surgery" that Respondents had apparently authorized.

27. Dr. Larson opined that none of Claimant's injuries were work-related. He did acknowledge that Claimant did not have a history of diabetes, prior cellulitis or sepsis, or significant previous bacterial infections. *Id.* at 17:7-15. Dr. Larson noted that he had "never seen like this" as an orthopedic surgeon, having never seen anything in the medical literature indicating that such an infection was possible without a penetrating wound.

28. Dr. Larson also stated: "…Also, to be clear, *there's no evidence that she had an injury to her sternoclavicular joint* either, so I think that his [Dr. Hughes'] conclusions were things that are certainly not supported by scientific literature." (Depo. Larson, p. 16)(emphasis added).

IME by Dr. Hughes

29. John S. Hughes, M.D., is Level II accredited for the Colorado Division of Workers' Compensation; board certified in preventative medicine and occupational medicine; and acts as a clinical assistant professor for the University of Colorado School of Medicine in the Department of Environmental and Occupational Health, where he also has served on the residency advisory committee. (Ex. 19, pp. 438-39). Dr. Hughes has periodically been an instructor for the Level II certification course for the Colorado Division of Workers' Compensation, and has sat on a variety of the task forces, as well as the medical care advisory team for the Division. *Id.*

30. Dr. Hughes performed a record review on behalf of Claimant in this case, dated 7/27/2021. He reviewed Claimant's medical records from the date of injury through her hospital stay to address the septic arthritis. He opined that Claimant had "Work-related sprain/strain of the left shoulder including a sprain/strain of the left sternoclavicular joint." *Id* at 436. This then developed into "Progressive septic arthritis, meriting surgical and postsurgical treatment as outlined in the medical records." *Id.*

31. Dr. Hughes noted that Dr. Larson had previously concluded that Claimant's left sternoclavicular septic arthritis was unrelated to a work-related injury of November 13, 2020. In response, he stated:

> I disagree with Dr. Larson's conclusion regarding a lack of work-relatedness. [Counsel for Claimant] represents to me by way of an e-mail that he sent on July 13, 2021 that Ms. [Claimant] has no history of diabetes, prior cellulitis or sepsis, or significant bacterial infections other than a sinus infection several years previously. Given the information currently available to me, I cannot find an alternate medical explanation for development of left sternoclavicular septic arthritis other than Ms. [Claimant]*'s* (sic) work-related left shoulder injury.
>
> It is common in injury cases for joint swelling to attract blood and other nutrients suitable for development of septic arthritis. This is commonly seen in the elbow and knee joints. I believe in Ms. [Claimant]'s case that she sustained an occupational injury to her left sternoclavicular joint that subsequently attracted a bacterial infection. In this way, it is my opinion that the septic arthritis of Ms. [Claimant]'s left sternoclavicular joint is a manifestation of a work-related injury. (Ex. 19, pp. 436-37).

TPD/TTD Benefits

32. Claimant testified that she has either been on light duty or totally off work since her initial injury, and she has still not been released to full duty. While on light duty, she has been unable to work as a case manager, so she has not received her full pay, because she is working "just 8:00-5:00 pay with the, you know, lunch breaktime in

there. When I worked as a case manager, I would get more pay than this." (Transcript, p. 29).

33. "PDO" on Claimant's paystubs means paid days off; it is vacation, sick time, and holiday time all rolled into one. (Transcript at 30). Respondents did not provide TTD during Nurse [Claimant]'s hospital stay and her treatment afterward, as well as TPD when she has had to miss work for physical therapy, orthopedic, and physician appointments. *Id* at 28. As a result, Nurse [Claimant] has had to use her PDO time, as reflected on her paystubs.

34. As a part of her pay, like all the employees for Employer, Claimant also received 60 hours of additional PDO time during the COVID crisis. She was forced to use those 60 hours for her time off due to this injury. *Id* at 35.

35. Respondents paid TTD benefits from 11/17/20 – 11/22/20; 11/25/20 – 12/1/20; and 3/25/21 – 3/28/21. (Ex. 1, p.1). Respondents did not pay benefits in December and January when Claimant had to see physicians for her injury, and when she was in the hospital or receiving home health care afterwards. Respondents did pay TTD while Clamant was off of work for her shoulder surgery (4 days in March of 2020), but did not pay TPD when she was unable to earn her full wages following the surgery, nor when she had medical appointments related to the authorized surgery. Claimant was forced to use her PDO time to cover her time off for medical treatment, but even the PDO did not cover all of her wage loss. (Ex. 23, p. 459).

36. From November 20, 2020 until June 26, 2020, Claimant testified that she used 150-160 hours of PDO time for her medical care related to her admitted workers' compensation injury, amounting to $7,588.80. (Transcript, p. 30). Although the pay stubs in the hearing exhibits stop at June 26, 2020, Claimant testified at hearing that she has continued to use PDO time for related medical appointments*. Id.* In sum, based on the stipulated average weekly wage, the wage records reflect that Nurse [Claimant] is owed $14,166.81 in TTD/TPD (which includes the reimbursement for her PDO) from the time of her admitted injury until 6/26/21. (Cl's Ex. 22, 23 at 459).

37. Respondents filed a General Admission of Liability for Claimant's claim on April 13, 2021. This General Admission of Liability shows Claimant was paid Temporary Total Disability from November 17, 2020 through November 22, 2020, November 25, 2020 through December 1, 2020, and March 25, 2021 through March 28, 2021 (Ex. A-3). The GAL also states that Claimant was paid an overpayment of TTD from March 29, 2021 through April 7, 2021 in the amount of $1,247.04 which will be credited against any future indemnity benefits. The amounts of TTD paid to Claimant pursuant to the April 13, 2021 General Admission of Liability were based on an Average Weekly wage of $1,309.92 (Respondents' Exhibit A-3).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In this instance, the ALJ finds Claimant to be sincere in recounting what occurred. Claimant has remained consistent with describing her mechanism of injury. She has, to the best of her abilities, described her symptoms to her treating providers, and the IME, in a sincere effort to get better. It is abundantly clear from the record that Claimant wanted, as is not uncommon, to just 'shake it off' in the beginning, but her circumstances became increasingly dire. Further delay in receiving imaging and emergent treatment could have proven catastrophic. Further, given her extensive experience as a nurse, the ALJ does credit her experience, and ability to articulate, the case of sterile abscess she recounted of the patient who had injured his hip.

D. The ALJ further finds that the medical experts in this case have all rendered sincere medical opinions, but as is not infrequent, such opinions differ. In final analysis, the ALJ must decide who is more *persuasive* (as opposed to *credible*, per se), in light of their respective expertise and access to all pertinent information. In this instance, the ALJ finds that, despite a rather brief analysis, Dr. Hughes has the more persuasive argument.

E. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability, Generally

F. A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Indus. Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

G. An aggravation of a preexisting condition is compensable. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. 1990). If there is a direct causal relationship between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Indus. Claim Apps. Office*, 107 P.3d 999 (Colo. App. 2004). However, there must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Indus. Comm'n*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show merely that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation.

H. The Workers' Compensation Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* WC 4-650-711 (ICAO February 15, 2007).

I. The mere fact that a claimant experiences pain at work does not necessarily require a finding of a compensable injury. In *Miranda v. Best Western Rio Grande Inn,* WC 4-663-169 (ICAO April 11, 2007), the panel stated "pain is a typical symptom caused by the aggravation of a pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable injury."

Compensability, as Applied

J. One can see from the start of the medical records on 11/19/2020, through her surgery in December, that Claimant suffered injuries to her left shoulder, as well as her sternoclavicular joint. And it is clear from the records that Claimant became increasingly septic with the passage of time, with the first signs becoming apparent when she was given a differential diagnosis of septic joint on 11/19/2020- six days after the work injury. Dr. Hansen focused on the sternoclavicular joint at his first visit (11/25/2020), diagnosing a strain to that joint, while noting swelling and tenderness in that location. Such swelling was noted by NP Madrid, along with *point* tenderness in that area as early as 12/1/2020. By 12/8/2010, Claimant was showing a palm-sized mass in this same area. He also noted that Claimant had in fact complained of *chest discomfort* at her initial 12/1/2020 visit. The fears were confirmed by the 12/10/2020 MRI, and by December 12 the race was on. Even then, Claimant lost her clavicle in the process, due in no small part to the delays in getting a simple MRI approved when requested by her own ATP.

K. Dr. Larson opines that the sepsis Claimant suffered from was purely' coincidental' to Claimant's shoulder injury. He emphasized the physical distance from Claimant's shoulder joint to the sternoclavicular joint, and then doubled down in his deposition by stating "there's **no evidence** that she had an *injury* to her sternoclavicular joint." Some weight might have been afforded his opinion had he at least acknowledged the strain to this joint, but he denied *any evidence of it at all*, despite all medical records to the contrary. This is disappointing. For reasons unclear, he did not have all the reports at his disposal, including the 12/8/2020 report from NP Madrid. In fact, he reviewed nothing past 1/5/2021. He only had *awareness* that Dr. Weinstein had requested, and performed shoulder surgery (as approved by Respondents) for Claimant in March, 2021 *because Claimant told him.* And yet he still opined that *none* of Claimant's injuries were work related. He also stated that he was unaware of any instances of such septic infections without a penetrating wound to facilitate the entry of bacteria into the bloodstream. The ALJ takes him at his word that he is truly unaware.

L. Dr. Hughes, on the other hand, seemed quite aware of this possibility, so far as to state that it is commonly seen in the elbow and knee joints. Even Claimant was familiar with this phenomenon. While greater detail would have been of greater value, Dr. Hughes sufficiently described the mechanics of such an infection, even absent an identified entry point, to show that such infections can occur in such fashion. The ALJ finds this persuasive. It stands to reason that injured joints, which are more highly vascularized (and now inherently vulnerable) while the body heals itself, could be less able to fend off endemic bacteria in the bloodstream. Comparatively rare, yes. Impossible, no. And once it gains a foothold, bad things happen quickly.

M. The ALJ further finds Dr. Hughes' conclusion persuasive that it was indeed *this injury to Claimant's sternoclavicular joint that led directly to Claimant's septic infection.* This was no coincidence-it was a clear cause-and-effect relationship. The ALJ concludes that Claimant's suffered a compensable work injury, *including her sternoclavicular sepsis.* Her condition was then greatly aggravated by delays in getting imaging done timely. The ALJ further concurs with Dr. Weinstein (presumably a moot point, since Respondents admitted for the shoulder surgery) that Claimant's shoulder surgery, and all aftercare, was reasonable, necessary, and related to her original compensable work injury.

Medical Benefits, Generally

N. Once a Claimant has established the compensable nature of his work injury, he is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission,* 759 P .2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office,* 797 P. 2d 777 (Colo. App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his need for medical treatment. *Merriman v. Indus. Comm'n,* 210 P. 2d 622 (197); *Standard Metals Corp.* V. *Ball,* 172 Colo. 510,474, P. 2d 622 (1970); *Section 8-41-301(1)(c), C.R.S.* Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of employment. *Snyder v. City of Aurora,* 942 P. 2d 1337 (Colo. App. 1997). Stated differently, occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball, supra.*

O. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Al/right Colorado, Inc.,* W.C. No. 4-117-758 (!CAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission,* 682 P. 2d 513 (Colo. App. 1984).

Medical Benefits, as Applied

P. In this case, the ALJ has concluded that all of Claimant's complaints, from her first visit to the ER, through and including all aftercare for her shoulder surgery, are due to compensable injuries. The ALJ now finds that all medical care rendered to date has been reasonable, necessary, and related to Claimant's compensable work injury. Respondents are responsible for paying for this treatment, limited of course to the applicable fee schedules as established.

Temporary Disability Payments

Q. Whether a claimant's industrial disability has caused or contributed to his reduced earnings is a question of fact. *Montoya v. Indus. Claim Appeals Off.,* 2018 COA 19, ¶ 14. Pursuant to § § 8-42-103 and 8-42-105, C.R.S., a claimant is entitled to an award of temporary disability benefits if: (1) the injury causes disability; (2) the injured employee leaves work as a result of the injury; and (3) the temporary disability lasts more than three regular working days. *See Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). To prove entitlement to temporary disability the claimant must prove the industrial injury caused a "disability." § 8-42-103(1), C.R.S. The term "disability," as used in workers' compensation cases, connotes two elements. The first is "medical incapacity" evidenced by loss or impairment of bodily function. The second is temporary loss of wage earning capacity, which is evidenced by the claimant's inability to perform his or her prior regular employment. *Culver v. Ace Electric,* 971 P.2d 641 (Colo. 1999). This element of "disability" may be evidenced by showing a complete inability to work, or by physical restrictions, which impair the claimant's ability effectively to perform the duties of his or her regular job. *See Ortiz v. Charles J. Murphy & Co.,* 964 P.2d 595 (Colo. App. 1998). A claimant is not required to prove both components to establish entitlement to disability benefits under the Workers' Compensation Act. *Montoya v. Industrial Claim Appeals Office,* 2018 COA 19 (Colo. App. 2018). Medical and therapy appointments to treat a work-related injury that cause a reduction in a claimant's earnings entitles a claimant to temporary partial disability. *Id.* at ¶¶ 14, 15. Medical appointments "implicitly impose" medical restrictions that preclude an injured worker from performing his regular work on the day of the appointment, since claimants cannot be in two places at once, and are subject to sanctions for failure to attend medical appointments. *See* Colo. Rev. Stat. §§8-42-105(2)(c) & §8-43-404(3); *Boddy v. Sprint Express Inc*.; WC No. 4-408-729 (August 15, 2000).

R. Claimant has either been on light duty or totally off work since her initial injury, and she has still not been released to full duty. The ALJ finds that all diminished wage earnings suffered by Claimant is due to her compensable work injuries. While on light duty, Claimant has been unable to work as a case manager, and has not received her regular pay. Further, she has been forced to use PDO time for her time off or medical appointments which the ALJ has found are all related to her admitted injury.

S. Claimant only received temporary benefits from 11/17/20 – 11/22/20; 11/25/20 – 12/1/20; and 3/25/21 – 3/28/21, even though she has been on light duty since her initial injury of 11/13/20, and has not earned her average weekly wage since then. Claimant is entitled to TPD from 11/23/20 – 11/24/20, 12/2/20 – 12/26/20, & 1/24/20 – ongoing. She is entitled to TTD from 12/27/20 – 1/23/21, in connection with her hospital stay and home health treatment as a result of her left sternoclavicular sepsis.

T. Vacation and sick benefits paid to the claimant cannot be deducted from, or credited against, the temporary disability benefits to which the claimant is entitled. *See,* COLO. REV. STAT. § 8-42-124(2); *Pub. Serv. Co. of Colo. v. Johnson*, 789 P.2d 487, 489 (Colo. App. 1990). Section 8-42-124(2) of the Act "reflects a legislative determination that an injured employee should not be required to sacrifice earned benefits in order to obtain statutorily mandated workmen's compensation benefits. Indeed, it is generally recognized that vacation and sick pay are benefits earned by virtue of past services rendered and that, as such, these 'earned' benefits should not be impaired by the employee's work-related injury. *See* 2 A. Larson, *Workmen's Compensation Law* § 57.46 at 10–164.53 (1989)." *Pub. Serv. Co. of Colo. v. Johnson*, 789 P.2d 487, 489 (Colo. App. 1990) (discussing the former statute 8-52-107(2)&(4), with the same language as the current section COLO. REV. STAT. 8-42-124). If the employer has charged the employee with any earned vacation leave, sick leave, or other similar benefit for any reason when the employee was entitled to receive an award of temporary partial or total disability, then the reduced benefits "shall be reinstated." COLO. REV. STAT. § 8-42-124(4).

U. Employer required Claimant to use her earned PDO time for medical appointments and time off related to her work injuries. Therefore, Claimant shall be reimbursed $7,588 for her PDO time. Any argument by Respondents that Claimant should not be reimbursed for her 60 hours of PDO for COVID crisis pay is in contradiction to the § 8-42-124(4). Claimant has worked throughout the COVID crisis as a nurse and should not lose the benefit of the COVID PDO time because of a Workers' Compensation injury.

V. Since the parties have now stipulated that Claimant's Average Weekly Wage is $1,429.38, all TPD and TTD calculations shall be made accordingly.

ORDER

It is therefore Ordered that:

1. Claimant's sternoclavicular arthritis and chest abscess are the result of her compensable work injury.

2. Respondents shall pay all medical treatment in connection with said condition, as well as all treatment as ordered by Dr. Weinstein.

3. Respondents shall pay Temporary Partial Disability payments to Claimant consistent with this Order.

4. Respondents shall pay Temporary Total Disability payments to Claimant consistent with this Order.

5. Claimant's Average Weekly Wage is $1,429.38.

6. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is **highly recommended** that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: November 18, 2021

Colorado Springs, Colorado 80906

ISSUES

1. Whether Claimant's request for an exercise bike is reasonably necessary to cure or relieve the effects of Claimant's work injury.

2. Whether nail therapy for Claimant's left hand is reasonably necessary to cure or relieve the effects of Claimant's work injury.

FINDINGS OF FACT

1. On November 2, 2019, Claimant sustained multiple admitted injuries arising out of the course of his employment with Employer when a bull trampled him.

2. Following the injuries, an ambulance took Claimant to Colorado Plains Medical Center. Claimant later transferred to UC Health, then Medical Center of the Rockies, and later to a rehab unit at Poudre Valley Hospital on November 12, 2019. Claimant then transferred to an inpatient rehabilitation program where he remained until May or June 2020. (Ex. H, p. 57). After discharge, Claimant resides at his home in Brush, Colorado.

3. On the day of Claimant's injuries, he was examined at Colorado Plains Medical Center and an assessment was performed. The Assessment Summary from November 2, 2019, under the heading "Normal Findings" lists multiple body parts, including the fingers of Claimant's left hand. No abnormalities of any finger were noted. (Ex. K, p. 243). The ambulance report also documents an examination of Claimant's upper extremities with no issues identified. (Ex. K, p. 247). Medical records from Colorado Plains Medical Center also note the placement of IVs in Claimant's left hand. (Ex K, p. 255, 256, 294).

4. On June 1, 2020, following discharge from the inpatient rehabilitation program, Claimant began seeing Kristin Mason, M.D., at Rehabilitation Associates of Colorado, who serves as his authorized treating physician. Between June 1, 2020 and December 10, 2020, Claimant saw Dr. Mason ten times. During these visits, Claimant did not complain of issues with the nails or nailbeds of his left hand. (Ex. H).

5. On January 7, 2021, Claimant saw Dr. Mason and reported a deformity of the nailbeds on the third and fourth digits of his left hand. Claimant reported that his nails had not been adherent to their beds since his work injury, and that he trimmed them short to keep them from snagging on things. Claimant indicated he thought the bull might have stepped on his hand at the time of his injury. Dr. Mason noted Claimant had not previously reported issues with his nails. (Ex. K, p. 110). Dr. Mason diagnosed Claimant with a deformity of the fingernails on the left hand "likely posttraumatic" and referred Claimant for evaluation with Dr. Morry Olenik for evaluation. (Ex. K, p. 110).

6. On January 12, 2021, Jeffrey Raschbacher, M.D., reviewed Claimant's request for an evaluation for his left digits on behalf of Insurer. Dr. Raschbacher opined that Claimant's nail deformities are not likely posttraumatic and that the issue was not raised until more than a year after Claimant's injury. He also opined that "[p]resumably, a treating physician would have noted the presence of this abnormality previously or the absence of it previously." (Ex. F).

7. Dr. Raschbacher testified at hearing and was admitted as an expert in occupational medicine. Dr. Raschbacher also performed an independent medical examination of Claimant on October 23, 2020. He testified that Claimant did not report any nail bed issues at that IME. Dr. Raschbacher testified that if Claimant had trauma to his left hand, it is likely that medical personnel would have inserted IVs into his opposite hand. Dr. Raschbacher opined that there are multiple possible causes of Claimant's nail bed issues, but he does not know what caused Claimant's condition. Dr. Raschbacher concluded that it is unlikely Claimant's nail bed issues are traumatic in origin.

8. On January 27, 2021, Claimant saw Morry Olenik, M.D. Dr. Olenik ordered an x-ray of Claimant's left hand on January 27, 2021, which showed mild degenerative joint disease of the fingers, and no evidence of acute or remote bony injury. (Ex. I, p. 56). Dr. Olenik's impression was "nail plate irregularity, left long and ring." Dr. Olenik wrote that he would "be happy to review the original medical records to make an opinion as to whether or not there is causality association." However, the parties offered no evidence indicating Dr. Olenik performed the referenced causation analysis. Dr. Olenik's records do not indicate he made any determination as to the cause of Claimant's nailbed issues, or arrived at a definitive diagnosis. (Ex. 2).

9. Claimant testified at hearing that he first noticed nail bed deformities after discharge from residential rehabilitation in 2020. Claimant also testified that he does not know what happened to his left hand when the bull trampled him.

10. Between November 2, 2019 and January 7, 2021, Claimant's admitted medical records contain no indication that Claimant had issues with the nailbeds of his left hand or other similar issues .

11. Occupational therapy records from June 2020 indicate Claimant reported left hand pain, and difficulty with grip strength in his left hand, but no indication of nail bed deformities. Claimant received occupational therapy through September 2020, during which, Claimant participated in therapeutic activities including fine motor coordination exercise involving both hands, such as using buttons, manipulation of objects in his hands, and sorting objects. The occupational therapy records do not indicate any issues with Claimant's nails. (Ex. K).

12. On March 29, 2021, Dr. Mason recommended an exercise bike for Claimant, which she indicated would be an alternative to a health club membership, which would require transportation due to the distance Claimant lived from the nearest health club. (Ex. 1).

13. On April 26, 2021, Claimant saw Dr. Mason and reported that the request for an exercise bike was denied. Claimant then requested a gym membership, which Dr. Mason indicated would benefit Claimant to use “at least a couple of times a week.” Dr. Mason wrote a prescription for a six-month gym membership. Dr. Mason opined that gym activities will help Claimant improve functionally. (Ex. H).

14. On July 1, 2021, Insurer authorized a gym membership for Claimant and transportation services to transport Claimant to and from his home to a gym to permit Claimant to have access to an exercise bike. (Ex. E).

15. At his August 5, 2021 appointment, Claimant reported that he would have preferred to have a stationary bike out of concerns that he could fall and reinjure himself. Dr. Mason encouraged Claimant to try the gym and see how things go. Dr. Mason stated that Claimant will need to be careful and aware of his environment, as he would be anywhere else. *(Ex. H).*

16. Claimant testified that he has balance issues and that he is fearful that if he goes to a gym to use an exercise bike he may fall and sustain injuries.

17. The parties stipulated that the driving time from Claimant’s home to relevant gym facilities is approximately 13-16 minutes.

18. Daniel B[Redacted], the adjuster assigned to Claimant’s claim by insurer testified at hearing. Mr. B[Redacted] testified that Insurer has authorized transportation to take Claimant from his home to a gym with 72-hours’ notice, and also that Insurer would reimburse Claimant for other transportation such as Uber or Lyft. Although Mr. B[Redacted] is not aware if Uber or Lyft had a presence in Brush, Colorado, where Claimant resides.

19. As of the date of hearing, Claimant had not attempted to go to a gym to use an exercise bike.

20. The parties stipulated that Claimant answered interrogatories submitted by Respondent as follows:

> Interrogatory No. 6: Describe in detail what medical care you are seeking which has not been provided.
>
> Response: I would like the gym membership to be authorized, I will need transportation to and from the gym OR to have the exercise bike authorized.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See*

§ 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

AUTHORIZATION OF SPECIFIC MEDICAL TREATMENT

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002); *Hobirk v. Colorado Springs School Dist. #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). When respondents challenge a claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist.*

No.11, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Trans. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

Treatment for Nail Issues.

Claimant has failed to establish that treatment for his nailbed issues is reasonably necessary to cure or relieve the effects of his industrial injury. While treatment for Claimant's nails may be reasonable, Claimant has failed to establish that the nailbed issues are the result of his industrial injury. No physician has credibly opined that Claimant's injuries are the result of his work injury. The admitted evidence and medical records do not Dr. Mason's opinion that Claimant's nail condition is post-traumatic. No credible evidence shows Claimant sustained a traumatic injury to his left hand which could have caused the issues he reported on January 7, 2021. Claimant does not know what happened to his left hand when the bull hit him. Had Claimant's left hand sustained a traumatic injury, it is probable Claimant's medical providers would have noted such in his medical record. However, Claimant's left hand was examined on the date of accident, and found to be normal. During his hospitalization, IVs were inserted into his left hand. Later, Claimant participated in occupational therapy which required the use of his left hand to perform fine motor activities. None of these records note any issues with the nails on Claimant's left hand. Moreover, even if Claimant had sustained a traumatic injury to his left hand, no credible evidence explained how Claimant's nail bed issues would have been the sequela trauma or otherwise caused by his work injury.

Authorization Of Home Exercise Bike

Respondent has provided Claimant a gym membership and transportation to and from the gym. Both of which he has failed to avail himself. Claimant's primary concern is that he has balance issues and may injure himself, apparently walking into a gym, not concerns about the types of bikes available to him. Claimant offered no credible evidence to indicate how the use of a stationary bike located at Claimant's home, versus one located at a gym would reduce the risks associated with Claimant's balance issues. Claimant has failed to establish that the purchase of an exercise bike is reasonably necessary to cure or relieve the effects of his industrial injury, especially given that a gym membership has been authorized, and is currently available for Claimant's use.

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of treatment for his left-hand nail issues is denied and dismissed.

2. Claimant's request for authorization for purchase of an exercise bike is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 19, 2021

Denver, Colorado, 80203

ISSUES

I. Whether Respondents has proven by a preponderance of the evidence that they are entitled to withdraw the admission for maintenance care admitted pursuant to the Final Admission of Liability dated March 4, 2008 terminating benefits.

II. Whether Claimant has proven by a preponderance of the evidence that maintenance medical care continues to be reasonably necessary and related to the admitted March 6, 2004 work injury.

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on June 25, 2021 on the issue of medical benefits that are reasonably necessary under maintenance care, including Hydrocodone prescribed by an authorized treating physician. Respondents filed a Response to the Application for Hearing dated July 20, 2021 on additional issues of causation, necessity, relatedness, intervening injury or condition. Respondents added that they were seeking to cut off liability for all maintenance medical treatment, withdraw the general maintenance admitted pursuant to the March 4, 2008 Final Admission of Liability and modify the admission pursuant to Sec. 8-43-201(1), C.R.S.

The parties disclosed that the medical benefits currently being provided and paid for are Hydrocodone, Gabapentin and Methocarbamol. However, Respondents continue to deny that medications currently prescribed by the authorized treating provider are reasonably necessary or related to the injury.

FINDINGS OF FACT

Based on the evidence and testimony presented, the ALJ enters the following findings of fact:

1. Claimant is 66 year old and was born on January 1, 1955 in Pakistan. Claimant was injured in the course and scope of his employment as an ice cream server at a fast food restaurant with Employer on March 16, 2004, when he slipped and fell twice while working.

2. Just prior to the time of the accident, Claimant had no problems with either his low back or his lower extremities. He had no restrictions or limitations at that time.

Claimant was first seen by several providers at Concentra. He was referred by Concentra to Dr. Aschberger.

3. Claimant was first evaluated by Dr. John Aschberger on June 11, 2004 following his work related injury. Dr. Aschberger reported that Claimant was a 48 year old man who reported slipping on a wet floor and landing on his back and buttock. He experienced pain across the low back and persistent irritation. He presented to Concentra for evaluation. Initial x-rays were negative. Claimant was reporting continued irritation without overall improvement in pain. However, Claimant did admit to some improvement in terms of motion. Claimant continued to complain of constant pain across the low back and radiating into the buttocks without distal symptomatology of pain, numbness, tingling or weakness. On exam, Dr. Aschberger found mild tightness at the right lumbar paraspinal musculature but good extension with complaints of tightness and negative straight leg raise also with results of back pain. Dr. Aschberger noted that Claimant was on an anti-inflammatory, a muscle relaxant and narcotics for pain, which he advised was reasonable since Claimant complained of significant pain and was continuing to work, so long as Claimant continued to take narcotics responsibly, the medications should be continued.

4. Dr. Aschberger examined Claimant on July 9, 2004 and found tenderness at the sacral sulcus and the piriformis bilaterally, tight at the lumbar levels, with good lumbosacral flexion which included tightness and pain but good motor strength and a Patrick's[1] test resulting in irritation bilaterally, at the lower lumbar levels worse on the right than the left. At that time Dr. Aschberger referred Claimant to Dr. Robert Kawasaki for SI joint injections. On November 3, 2004 Claimant did not show improvement so he order an MRI.[2]

5. An MRI of the lumbar spine performed on November 5, 2004 showed facet joint osteoarthritis at L4-5 and L5-S1, with minimal protrusion of the L2-3 level with a slight thecal sac deformity. At L4-5, there was moderate left-sided facet joint osteoarthritic changes and mild right-sided facet joint osteoarthritic changes. There was minor buckling and hypertrophy of the ligamentum flavum. Both L5-S1 facet joints showed mild facet joint osteoarthritic changes, left greater than right.

6. Claimant retuned to see Dr. Aschberger on November 19, 2004. Claimant's findings of SI irritation and dysfunction did not respond to SI injections, though overall Claimant seemed to be somewhat improved but subjectively had persistent irritation. On exam Claimant had mildly tight lower lumbar paraspinal levels, more extensive pain with extension and rotation and suspected facet treatment would be necessary, including facet blocks with Dr. Kawasaki.

7. On December 27, 2004 Claimant reported to Dr. Aschberger that he had symptoms of numbness and sharp pain in the low back. The blocks showed good response to the lumbar facet irritation but not helpful long term. Claimant had persistent

[1] Patrick's test is performed to assess or evaluate pathology of the hip or sacroiliac joint pathology.
[2] Magnetic resonance imaging.

radiated pain to the right gluteal area, with spasm on exam, as well as tenderness at the right sacral sulcus and an anterior pelvic compression resulting in posterior irritation on the right. He recommended additional osteopathic manipulation for the sacrum and pelvis as well as an exercise program. He recommended maintenance care after an impairment rating evaluation.

8. Dr. Aschberger performed the impairment rating on January 21, 2005. On exam Dr. Aschberger found Claimant tight on palpation at the lower lumbar paraspinal musculature, the piriformis musculature, and lateral thigh musculature. Straight leg raising results complaints of tightness in the hamstring and back without distal symptoms. He provided a 5% for table 53IIB specific disorder of the spine and a 2% for loss of range of motion for a combined total of 7% whole person impairment in accordance with the *AMA Guidelines to the Evaluation of Permanent Impairment*, 3rd Edition, *Revised*. He recommended maintenance care of osteopathic sessions as needed, repeat injections and follow up in one month.

9. Claimant was placed at maximum medical improvement initially by Dr. Laura Caton on March 22, 2005, which relied upon an impairment rating provided by Dr. John Aschberger of 7% whole person impairment rating. At that time, Dr. Caton recommended maintenance medical care, including a narcotic, possible repeat injections and several additional osteopathic manipulation therapy treatments.

10. Claimant challenged the MMI determination and requested a Division of Workers' Compensation Independent Medical Examination (DIME), which took place on February 8, 2006 with Dr. Edwin Healey. Dr. Healey stated that Claimant was not at MMI for the lumbar spine conditions that were related to the March 16, 2004 injury. He noted that Claimant was complaining of significant pain in his low back and going into his buttock.

11. Dr. Healey diagnosed an aggravation of his underlying degenerative facet disease at the L4-L5 and L5-S1 levels and a superimposed lumbar quadratus lumborum iliocostal myofascial pain syndrome. He recommended medial branch blocks for the aggravation of Claimant's facet injury and trigger point injections for the lumbar myofascial injury. He stated at that time that Claimant was on both narcotics and muscle relaxers for the lumbar spine injuries. He suggested that if the treatment was unsuccessful, that Claimant may require maintenance treatment for the chronic conditions caused by the work related injury.

12. Respondents filed a General Admission of Liability (GAL) on March 6, 2006 admitting to the DIME physician's not at MMI determination.

13. Claimant testified that, during this time, he was complaining of low back pain and leg pain going all the way down to the ankle, greater on the left than the right. He stated that the symptoms into his legs would come and go and were not constant. He stated that he had multiple injections with Dr. Kawasaki for his condition. Claimant testified that the injections did help take away his pain and that he was pleased with the

relief provided by the procedures performed by Dr. Kawasaki as he achieve a point where he had no pain, but that the pain came back.

14. On September 12, 2007 Claimant underwent a follow-up DIME with Dr. Healey. At that time, Dr. Healey stated that he agreed with Dr. Aschberger that Claimant was at MMI with regard to his chronic facet arthropathy and chronic pain syndrome with both physical and psychological factors. Dr. Healey noted that Claimant had a gradual return of the same type of sharp, shooting and aching low back pain aggravated by standing, walking and extension that he had previous to undergoing the radiofrequency rhizotomies with Dr. Kawasaki. Dr. Healey recommended that Claimant continue on maintenance medical care including an opioid medication (a morphine extended release) with a rapid acting opioid for breakthrough pain, together with Lidoderm patches,[3] a muscle relaxant and an anticonvulsant like Lyrica for the neuropathic component to the chronic lumbar pain.

15. On October 19, 2007 Respondents filed a Final Admission of Liability (FAL) denying liability for maintenance medical care after MMI, though admitted to the rating provided by the follow-up DIME evaluation by Dr. Healey.

16. Claimant objected to the FAL with regard to the maintenance care only on October 24, 2007.

17. On January 25, 2008 Claimant followed up with Dr. Aschberger for a maintenance evaluation. Dr. Aschberger found that Claimant was stiff and had tightness in the paraspinal musculature. He renewed Claimant's medications including Opana 10 mg twice per day and Vicodin, which Claimant was taking for breakthrough pain. On February 22, 2008 Claimant remained status quo. Dr. Aschberger continue to assess chronic low back pain with facet irritation and stated he would continue his medication regimen.

18. On March 4, 2008 Respondents amended the FAL to admit to reasonable and necessary medical benefits after MMI, attaching the September 12, 2007 DIME report.

19. Dr. Aschberger reevaluated Claimant on March 21, 2008 stating that Claimant had been taking Opana ER 10 mg twice per day and Vicodin about once per day, occasionally twice a day. Functionally he was working. He still had difficulty with motion, bending, and lifting. On exam, he was very tight at the paraspinal musculature, predominantly the quadratus lumborum, and the mid lumbar paraspinals. He continued to assess chronic persistent low back pain, documenting that Claimant had been on maintenance narcotics. He also noted Claimant was functionally doing okay with that, although still had a lot of irritation. At that point, Dr. Aschberger increased Claimant's narcotic medications.

20. On September 12, 2008 Dr. Aschberger noted that he continued on chronic pain medications and renewed them. On November 14, 2008 he also noted that Claimant

[3] Patches with lidocaine, an anesthetic used for nerve pain.

was handling chiropractic sessions well, as well as finding the Skelaxin helpful and continued on the Opana ER 15 mg twice per day.

21. Claimant returned to Dr. Aschberger on December 12, 2008. He noted Claimant had pain at the L5 and S1 levels with rotation on extension and at L4-L5 level. He was tight in the paraspinal musculature throughout the lumbar region. He assessed chronic low back pain and facet irritation. Dr. Aschberger acknowledge that Claimant was on chronic pain management. He ordered flexion-extension X-Rays to rule out instability, which were negative. He recommend an MRI scan for comparative purposes. If there was no deterioration, he would warrant continued maintenance medication intervention and possibly some periodic chiropractic.

22. Dr. Bao Nguyen interpreted the MRI of December 24, 2008 as showing lower lumbar spondylosis (with facet predominance) resulting in moderate-severe bilateral neural foraminal stenosis at L4-5 and moderate bilateral neural foraminal stenosis at L5-S1.

23. Dr. Aschberger interpreted the MRI findings on December 26, 2008 as having facet arthrosis at the L4-5 and L5-S1 with disc bulging extending into the neural foramina at both levels, with moderate foraminal stenosis. However, on exam, he had intact reflexes and no radicular symptoms. Dr. Aschberger stated that Claimant continued to have consistent complaints through the course of his treatment, with continued maintenance care for the chronic low back pain. Claimant continued to work and had no changes in his level of function.

24. During his January 16, 2009 follow-up with Dr. Aschberger, Claimant was not interested in further types of treatments as he continued to function with his maintenance care program.

25. On March 20, 2009 Dr. Aschberger again evaluated Claimant without much change. He assessed low back pain with degenerative changes and facet degeneration but continued without much radicular symptoms and continued to function, looking well. Dr. Aschberger continued Claimant’s opioid and muscle relaxer.

26. The following exam took place on June 25, 2009 and Claimant was doing fairly well on his medication regime, looking much better overall. Dr. Aschberger discussed possibly tapering Claimant’s maintenance medications.

27. On August 21, 2009 Claimant had an increase in symptoms but exam was consistent to prior exams. On October 16, 2009 he was doing pretty well though had some up and downs with his back symptoms from his chronic low back pain. Due to secondary effects, Dr. Aschberger determined to taper him off the opioid and consider other medications as needed. Claimant returned the following week and surrendered his narcotics and was provided with a lower dose to determine if the secondary effects were caused by the medication.

28. During his October 30, 2009 follow-up Claimant reported doing fairly well with the level of pain on the reduced dose and it was again reduced. By November 6,

2009 his symptoms were ameliorated but not gone. Dr. Aschberger determine to keep him on the reduced dose and make a final decision during his follow-up evaluation.

29. On November 20, 2009, Claimant was reporting increased back pain and he reported that he had obtained medication from his primary care physician. Claimant was counselled that he could not obtain medications from two physician or his care would be terminated. Claimant continued with chronic low back pain and had symptom flare up on the reduced levels of medication, so Dr. Aschberger increased the medication dose.

30. On December 31, 2009 Claimant was reporting more stability at the higher dose, with less side effects. He had less tightness in the paraspinals musculature and excellent flexion and good extension. He was on Opana ER 50 mg b.i.d.[4] and was taking Naproxen and Skelaxin twice a day.

31. Dr. Aschberger attended Claimant on February 19, 2010 in follow-up. Clamant was reporting some symptoms in the left leg but had no response to provocative maneuvers. Claimant also tapered down his Opana ER to 15 mg once per day and doing well. He discussed possibly tapering it further to only 10 mg.

32. Claimant returned to Dr. Aschberger on May 28, 2010 reporting that he was stable with the medications. He had gone from Opana ER 50 mg once per day to Opana ER 10 mg twice per day. He was tolerating that better and reported good symptomatic relief. Chemistry panel performed came back completely normal. Dr. Aschberger reported that Claimant's assessment of chronic low back pain and facet irritation remained the same and that Claimant was compliant with medication per the PDMP.[5]

33. On July 23, 2010 Claimant returned for a maintenance recheck. Claimant reported to Dr. Aschberger that he had been doing fair. He had recurrent back pain with up and down symptoms. Functionally, the medication was helpful in terms of allowing daily activity, though with some increased flares on an intermittent basis. On exam he was tight at the quadratus lumborum bilaterally, with excellent lumbosacral flexion but limitation with extension. Neuromuscular examination of the lower extremities was intact. Dr. Aschberger did not change his diagnosis and continued to prescribe Claimant with Opana ER, Skelaxin and Naproxen, an anti-inflammatory.

34. On October 1, 2010 Claimant reported that the pharmacy could not refill his narcotic medication and he was out for a couple of days, exacerbating his pain symptoms. However, on exam his findings remained the same. Lab testing of October 28, 2010 showed positive for opioid mediation. Claimant followed up on November 12, 2010, reporting up and down symptoms. The drug screen performed at the evaluation came back consistent with maintenance medications. On exam there was muscular

[4] B.I.D. is the medical abbreviation for "twice a day."

[5] Prescription Drug Monitoring Program.

tightness and Dr. Aschberger prescribed some maintenance deep tissue release. He continued to refill the Opana ER, Skelaxin and Naproxen on November 26, 2010.

35. Claimant retuned on March 4, 2011 reporting good benefit with the massage therapy with improving range of motion. He reported lessening pain with improving activity tolerance and less irritation by the end of the workday. Dr. Aschberger continued to note chronic low back pain with facet irritation and degenerative changes. He discussed tapering the Opana to 5 mg twice per day and renewed the Skelaxin, and ordered dry needling.

36. On June 3, 2011 Claimant continued to report improvement, diminishing reports of pain and continued functional gains. Dr. Aschberger provide a prescription for the Opana ER 5 mg to start the tapering process. However, on August 5, 2011 Claimant retuned to Dr. Aschberger discouraged by increasing low back pain and gradual worsening of his symptomology. On exam Claimant had irritation with facet loading and tightness in lumbar paraspinals muscles. Dr. Aschberger reordered dry needling to see if Claimant could be kept at the current dosage or if they would need to go back to the prior prescription of narcotic levels.

37. By September 9, 2011 Dr. Aschberger's examination showed findings of myofascial irritation and facet irritation. He noted that they had cut back on the Opana ER and he had hoped to keep Claimant at the lower level. Because of Claimant's persistent difficulties, however, Dr. Aschberger placed him back on Opana ER 10 mg twice per day.

38. Claimant was doing and looking better by the following visit on October 14, 2011. Dr. Aschberger found on exam less muscle spasm and good motion. He did note some myofascial irritation along Claimant's thigh and discussed stretching and icing. On December 9, 2011 Claimant was still concerned with the thigh symptoms though Dr. Aschberger found no neurological problems, but noted he was tight at the lower extremity, with tenderness at the right iliopsoas and along the lateral thigh. He continued the Opana, Skelaxin and Ibuprofen. The December 13, 2011 labs showed consistent opioid testing.

39. Dr. Aschberger evaluated Claimant on May 11, 2012. He stated that Claimant had missed one of his appointments as he was taking care of his sick mother but his urine test showed good compliance with this medications. He continued to diagnose chronic low back pain with facet irritation and recurrent myofascial pain. He ordered maintenance massage and refilled his Opana, Naproxen and Skelaxin. Lab work of the same day showed positive and consistent testing for opioid use.

40. On August 17, 2012 Dr. Aschberger noted that Claimant continued overall the same. He changed Claimant's prescription from Opana to Kadian, a different morphine narcotic, in order to determine if other medication could be tapered or cut off since Claimant had been on the same medications for a significant amount of time. On October 12, 2012 he changed Claimant to Limbrel, increased his Kadian and renewed

his Gabapentin and Metaxalone medications, stating he would like to monitor meds every 4 weeks due to the changes in prescriptions.

41. Claimant returned to see Dr. Aschberger on November 30, 2012. He noted that the Kadian at 20 mg has been of some limited benefit, Claimant continued with tightness in the back which has been significant, and difficulty sleeping at night. On exam, Claimant was significantly tight throughout the thoracolumbar paraspinal levels, though had good lumbosacral flexion and extension was still limited with increased low back pain. Otherwise the exam was negative. Claimant reported that due to gastrointestinal problems, he had to temporarily discontinue the naproxen and anti-inflammatories so he had significant recurrent myofascial irritation. Dr. Aschberger increased the dose of Kadian and prescribed further massage therapy to keep Claimant's muscle tightness under control. On December 7, 2012 Dr. Aschberger wrote that lab work related to Claimant's long-term maintenance showed consistent use of prescribed medications.

42. On February 1, 2013 Dr. Aschberger reported the same assessment as before, stated that Claimant was doing well on his increased dose of medication, was functional without aggravation, and refilled his medications.

43. Dr. Aschberger noted on August 9, 2013 that Claimant was tolerating the Kadian better than the Opana, with adequate symptomatic control, and working, tolerating activity. Claimant reported he had missed work and follow-ups due to an illness with his mother who had been hospitalized. He continued to assess chronic low back pain, and previous findings of facet irritation. Claimant reported some increased symptoms into the buttock and posterior thigh, but Dr. Aschberger did not identify any neuromuscular deficits. He continued Claimant's maintenance medication and prescribed continued massage therapy.

44. On December 13, 2013 Dr. Aschberger continued Claimant's maintenance medications as they kept Claimant functional. He continued diagnosing the facet and myofascial irritation with soreness in the buttock and posterior thigh.

45. Pursuant to an inquiry from Insurer, on March 14, 2014 Dr. Aschberger noted that Claimant has had facet and myofascial irritation since his injury, requiring maintenance medications, including the Kadian, which is at a much lower dose than when Claimant was on Opana. He also stated that the occasional massage therapy helps keep down the excessive tightness in the lumbar spine related to the injury and has allowed the tapering of medication. Dr. Aschberger wrote a follow up on March 21, 2014 that emphasized that Claimant has had consistent findings throughout his course of treatment, including the facet irritation and myofascial irritation related to the aggravation of the facet injury. He noted that the massage therapy keeps Claimant functioning the same as his medications.

46. On April 25, 2014 Dr. Aschberger reported that Claimant continued on Kadian, Limbrel and Skelaxin with up and down symptomology. He had not had any massage therapy recently and had worsening symptoms, with tightness and tenderness

upon palpation of the lumbar spine. He again determined to reduce his medication levels. He followed up on June 27, 2014 and reported an increase in symptoms with the lower dose of medication. At that time he was taking Kadian 30 mg in the morning and 20 mg at night. Lab work from the same date listed Claimant was prescribed Kadian, and was positive and consistent for opioid use.

47. On July 18, 2014 Claimant returned to consult with Dr. Aschberger. Claimant had worsening symptoms but reported some confusion with regard to the doses he was to be taking. They reviewed his medication and schedule.

48. On September 5, 2014 Dr. Aschberger reviewed the PDMP, which showed Claimant to be compliant. Claimant reported that the maintenance program is keeping him functional and active. Dr. Aschberger renewed medications.

49. On December 19, 2014 Claimant reported some ups and downs as expected. Dr. Aschberger confirmed compliance of medications with the PDMP again, and noted that prescriptions were keeping Claimant functional.

50. On February 27, 2015 Claimant was reporting increasing pain in the back and radiation of symptoms to both lower extremities, though he reported no new trauma or injury, stating that it was a progressive worsening. He was on Kadian, Limbrel, and Metaxalone. Dr. Aschberger assessed chronic low back pain with previous findings of facet irritation. He stated that increased symptoms of radiculitis would warrant follow-up radiological evaluation, but if Claimant has new findings or injury that would be unrelated to the Workers' Compensation incident. He referred Claimant for therapy to go over some mobilization and stability exercises for reinforcement. The February 27, 2015 lab work detected the use of morphine.

51. Dr. Aschberger reported on March 13, 2015 that the urine screening showed compliance with medications and so did the PDMP. On March 27, 2015 Claimant was reporting less symptoms and good response from therapy.

52. When Claimant returned to see Dr. Aschberger on May 1, 2015, he reported up and down symptoms. He had continued pain in the back and radiating pain in the buttock and posterior thigh. Facet loading was positive. He recommended a follow up MRI and consideration of follow-up facet joint injections including medial branch blocks.

53. The May 18, 2015 MRI showed anterolisthesis of L4 on L5 with moderate canal stenosis and bilateral lateral recess and foraminal stenosis, with contact of bilateral descending L5 nerve roots and exiting L4 nerve roots. 2. L3-L4 disc degeneration with broad-based disc bulge causing mild bilateral lateral recess and foraminal stenosis without nerve root deformity. 3. L5-S1 disc degeneration with broad-based disc bulge and bilateral lateral recess and foraminal stenosis without nerve root deformity.

54. Dr. Aschberger examined Claimant on June 5, 2015 and stated that there was progressive degenerative changes. Claimant reported that there was inadequate

pain management with medication and Dr. Aschberger referred Claimant to Dr. Kawasaki for MBBs at the L4-S1 levels.

55. On September 11, 2015 Dr. Aschberger reported that Claimant had good symptom relief from the MBBs two weeks prior, with no pain post injection and continued significant benefit. He recommended a repeat second confirmatory injection if symptoms returned, which was ordered on October 2, 2015.

56. Claimant returned to Dr. Aschberger on November 6, 2015 following the second MBBs with a zero over ten pain rating. Dr. Aschberger discussed possible rhizotomy. On November 13, 2015 Dr. Aschberger sent Claimant for the rhizotomy.

57. On January 22, 2016 Claimant reported to Dr. Aschberger that he had excellent symptomatic results from the rhizotomy with Dr. Kawasaki as he had 2 weeks without pain, though some increased irritation since then. Dr. Aschberger ordered additional therapy to help with the mild tightness.

58. Claimant returned to consult with Dr. Aschberger on March 4, 2016 who assessed continuing chronic low back pain and facet irritation, with a nice diagnostic response to medial branch blocks and rhizotomy. Claimant was reporting worsening symptoms since then. His examination, however, was still significantly improved over his pre-procedure findings.

59. Dr. Aschberger reevaluated Claimant on April 29, 2016 stating that he continued with chronic low back pain, associated myofascial irritation and opioid medication management including Kadian 20 mg twice per day. He renewed Claimant’s medications and massage therapy and added Lidoderm patches for the superficial tenderness at the sacral sulcus bilaterally.

60. On June 3, 2016 Dr. Aschberger documented that Claimant only had very mild tightness because he had just had massage therapy. Claimant’s pain level had increased to 4 or 5/10. The prior appointment Claimant was at zero to 1/10. On July 29, 2016 Claimant was doing fairly well but had exhausted his massage therapy due to some confusion, but it was keeping him functional and cutting down on his opioid intake.

61. The October 14, 2016 documented Claimant had missed a couple of appointments as he was taking care of his ill mother. The lab work of the same day detected use of morphine consistent with prescriptions. Claimant continued with maintenance medications and had a consistent urine screen on November 11, 2016. Dr. Aschberger continued medications and massage therapy as of December 23, 2016, demonstrating ups and downs but consistent exams throughout 2016.

62. On March 24, 2017 Dr. Aschberger assessed chronic low back pain and previous indications of facet irritation. There was lot of myofascial restriction and tightness, chronically identified. Medications were renewed. Claimant had been receiving maintenance massage that helps minimize medication use. On exam he presented with no new neurological deficits. He did report that he was dealing with

stress as his mother was gravely ill. He had soreness in the back with pain in the buttock and proximal thighs.

63. By May 26, 2017 Claimant's symptoms increases to the level prior to the last rhizotomy. Dr. Aschberger noted that Claimant had about 5-6 months of symptomatic benefit and had a nice diagnostic response to medial branch blocks. He discussed with Claimant repeat facet rhizotomy in order to potentially cut back on medication utilization. He put in a referral with Dr. Kawasaki.

64. Dr. James Ogsbury, an Insurer physician advisor, performed a record review on June 21, 2017 following a request for authorization of the repeat medial branch blocks. Dr. Ogsbury recommended the injections be denied pending Dr. Aschberger's reevaluation of the patient and an analysis and development of a long term maintenance program to determine if rhizotomies are reasonable.

65. On September 1, 2017 Claimant attended an appointment with Dr. Aschberger during which Claimant stated that he had taken his Kadian medication but the PDMP only showed intermittent use of his medications. On exam he showed he was pretty tight once again at the upper lumbar paraspinal musculature, with mild tenderness. He had good forward flexion of 80 degrees with good reversal and mild tightness, with extension increasing his pain at L5-S1. However, reflexes and lower extremity strength were intact and pelvis was level. He assessed chronic low back pain, myofascial tightness and opioid management. He anticipated being able to taper medications given use for symptom management only but stated that Claimant continued to be a candidate for rhizotomy given good results in the past. Claimant reported he was currently working and was also looking after his ailing mother. Lab work for the same day detected the use of prescribed morphine medication.

66. Respondents scheduled Claimant for an Independent Medical Evaluation (IME) with Dr. Michael Rauzzino, which took place on October 30, 2017. The questions asked of Dr. Rauzzino relate to the need and relatedness of future rhizotomies to maintain maximum medical improvement. Dr. Rauzzino reviewed the 13 years of medical records emphasizing that Dr. Healey, the DIME physician, in 2007 did not recommend further rhizotomy as they were of limited benefit and duration. He went on to explain that Claimant's underlying degenerative process of his spine was unrelated to the 2004 claim as the natural course of degeneration had overcome any aggravation that had been caused by the work related slip and fall accident. Dr. Rauzzino goes on to state that Claimant was no longer working, as he was taking care of his ill mother, no longer working and there was really no documentation of improved functional capacity with or without the medication except as related to the subjective complaint of pain. He stated that all other modalities provided very temporary relief and then he would returns to his baseline pain and could not be weaned off narcotics. Dr. Rauzzino went on to opine that since these adjuvant therapies were not leading to an improved functional outcome and have not been linked to a decrease in his use of medication, there would be no reason to continue these through the workers' compensation program even if they were maintenance treatment.

67. Claimant followed up with Dr. Aschberger on November 10, 2017 noting that Claimant had persistent back pain that was up and down in terms of severity with no overall change in exam and renewed medications.

68. On December 13, 2017 Dr. Rauzzino performed a record review, upon receipt of additional medical records, and stated that they did not change his original opinion.

69. On January 26, 2018 Claimant returned to see Dr. Aschberger in distress following the IME with Dr. Rauzzino and the death of his mother. Dr. Aschberger noted that Dr. Rauzzino recommended taking Claimant off medications. He reviewed Claimant's medical history including that Claimant had a document aggravation of his lumbar spine causing chronic facet irritation, with good response to MBBs and rhizotomy and controlled pain complaints with maintenance medications. He recognized that Claimant was not always consistent in taking his medications but has consistently taken them as needed to control the symptoms. He also recognized that there had been some missed appointments due to Claimant having to care for his mother during her illness. His exam was consistent with prior exams with 80 decrees flexion and 20 degrees extension with lumbar pain, tightness at the lower paraspinal muscles and positive facet loading with intact strength and reflexes. At that time Dr. Aschberger agreed it was reasonable to go ahead and try to taper Claimant from the morphine, substituting Hydrocodone three times per day and follow up back in 4 weeks.

70. The next ATP medical record is from April 13, 2018 documenting that Claimant travelled to Pakistan related to his mother's passing. He received PT there but the quality of the care was not the same, though helpful. Claimant continued with chronic persistent back pain with no radicular radiation of symptoms, with symptoms up and down. Diagnosis remained the same. He mentioned a *Samms* conference when they discussed the need for repeat facet procedures but not immediately necessary as symptoms seemed to be diminished. Dr. Aschberger reported Claimant was taking Hydrocodone, and he replaced the Skelaxin for Robaxin.

71. On June 22, 2018 Claimant reported doing well though had some numbness in his legs though no weakness. He reviewed his home exercise program and recommended Claimant walk daily. He was on Hydrocodone and Robaxin. On exam he found Claimant to be "status quo" with good flexion. He continued to provide maintenance management.

72. Claimant moved up his follow up appointment with Dr. Aschberger to July 13, 2018, concerned with increasing pain in the back radiating to the buttock and posterior thighs bilateral, left worse than right. Claimant denied any new trauma and did not report any localized weakness. He reported some tightness on exam and decrease in flexion, a positive straight leg raise with pain in the thigh and calf with passive ankle dorsiflexion. Dr. Aschberger noted that a radicular abnormality was unlikely related to the workers' compensation claim and ordered an MRI. He provided Gabapentin for additional symptom management.

73. The MRI of July 24, 2018 showed degenerative disc and joint changes superimposed on developmentally narrow bony canal at the L4-5 level with stable moderate dural sac narrowing with mild changes in the cauda equina and stable foraminal right L4 the root sleeve and dorsal root ganglion deformity. The left L5 dorsal ganglion deformity was stable however there is a small new left foraminal synovial cyst.

74. On August 3, 2018 Dr. Aschberger stated that the increased symptomology of radiculitis at the time of his examination was likely related to the additional findings on MRI.

75. However, by October 5, 2018 Dr. Aschberger reported that Claimant's radiating symptoms had resolved, and he continued opioid management, refilling Claimant's prescriptions for his continuing work related conditions.

76. On January 18, 2019 Dr. Aschberger documented that Claimant was doing well though had low back soreness without significant radicular symptoms. He also noted that Claimant was functioning well and working. He reported Claimant was taking Hydrocodone twice a day with good symptom control, but lab work performed on the same day showed no prescribed medications in his system.

77. Claimant returned to Dr. Aschberger on April 5, 2019 with some increase in symptoms with recurrent numbness into the lower extremities, which only occurs with sitting and no radicular symptoms. Claimant has been able to continue working as a cashier being able to lift and pivot without issue. Claimant was tight on exam but had forward flexion of 90 degrees without any radiated symptoms, full extension and no increased symptoms with sustained extension. Current medications included Gabapentin 300 mg one per day, Hydrocodone 5/325 mg twice a day which he finds to be helpful in terms of activities of daily living (ADLs). He was also on Methocarbamol. Naproxen was renewed although Dr. Aschberger asked him to discuss that with his cardiologist regarding continued use of Naproxen.

78. On May 15, 2019 Dr. Aschberger answered an inquiry from Insurer stating that Claimant was under a narcotics contract, stating that Claimant is taking his medication as needed for maintenance care, has decreased his narcotic medications significantly over time and will discontinue them if Claimant continues to test negative for narcotic use, noting that the PDMP shows Claimant to be compliant with infrequent refills, on a less than daily schedule.

79. On June 21, 2019 Claimant reported to his ATP increasing pain into his legs but findings were consistent with prior exams. He again explained that Claimant had simply run out of his medication and had problems with the pharmacy refilling them. Dr. Aschberger noted that Claimant had significantly decreased his narcotic pain medication use over the years and has remained functional and working with the current dose to help maintain him.

80. Claimant retuned for maintenance recheck on August 30, 2019 with Dr. Aschberger. He reports right lumbosacral pain but the previous report of radiated

symptomology had settled down nicely. He was not having much in way of distal radiation. He continued on medication management, Hydrocodone twice per day and Methocarbamol. He assessed chronic low back pain with initial issues of significant facetogenic pain and an improved physical exam.

81. Claimant returned to see Dr. Aschberger on November 15, 2019 with current medications of occasional Hydrocodone, Methocarbamol, and Gabapentin. He has had pain at the low back, buttock, and proximal posterior thighs. Pain levels have waxed and waned. He continues to work and tolerates that well. Dr. Aschberger noted that Claimant was concerned with change in symptomology but reassured Claimant that they were myofascial in nature.

82. The next ATP record is from July 9, 2020 noting Claimant had persistent irritation in the back. It has been waxing and waning in severity. Claimant reported he did have an illness suspicious for COVID-19 though tested negative. Dr. Aschberger noted that Claimant's prior increased irritation had settled down and was back to MMI baseline. He continued to assess chronic low back pain with opioid management and refilled Hydrocodone, Gabapentin and Methocarbamol.

83. Claimant continued with maintenance care with Dr. Aschberger on October 20, 2020. Claimant reported up and down symptoms in the back as always. There had been some radiation to the gluteal musculature, but no distal pain down the legs. He reported good functional activity with medication intervention. He was taking Hydrocodone twice a day and Methocarbamol once as needed. Dr. Aschberger noted that Claimant was doing well overall.

84. On June 17, 2021 Claimant reported corning down with COVID-19 for a second time. He was in fact hospitalized and brought in records regarding his hospitalization. He received a prescription for oxycodone for his headache symptomatology back in March, and also had a prescription of guaifenesin/codeine provided to him. He reported significant body pain, headaches, and weakness all of which had settled down for him. He had returned to work, though Claimant did report increased soreness of the back, without any no new trauma. On exam, Claimant had low back tightness but good movement. Dr. Aschberger reported Claimant to be compliant with medications per the PDMP and the medical record Claimant brought in. He renewed Claimant's medications at that time.

85. Claimant returned to see Dr. Aschberger on July 15, 2021 stating Claimant was back to baseline, taking Hydrocodone twice a day. He renewed Claimant's Hydrocodone, Gabapentin and Methocarbamol.

86. On September 20, 2021 Dr. F. Mark Paz issued an IME report at Respondents' request. He examined Claimant on August 24, 2021. Dr. Paz documented that Claimant continued to work as a cashier at a liquor store, which does not involve any lifting or stocking. Dr. Paz opined that none of the current care is related to the 2004 work related injury but to the subsequent findings on MRI.

87. Claimant testified at hearing he currently works for a liquor store ordering supplies, doing price changes, and cashiering, where he does not lift any significant weight, or perform any work that requires frequent bending. He stated his current employer has accommodated his limitations as they know about his back injury and allow him to sit on the job. He has been there for approximately 15 years. If he is standing too long, his pain will increasing but has never had any other accidents or injuries after the work related slip and falls. He further testified he would not have been able to perform his job without his medications. Claimant stated that without the medications that Dr. Aschberger is prescribing he would not be able to function, including his ADLs and working.

88. He stated that Dr. Aschberger has changed his medications multiple times to decrease them and then increase them when he was unable to function or the medications he was currently taking were not as helpful.

89. Claimant stated that his symptoms over the years, since his injury, have varied, going up and down. When the pain was high he would take up to three pills in the morning and three in the evening. When he was hospitalized the second time he contracted COVID-19, he was instructed to stop his medications as they were going to provide other medications that addressed the severe headaches related to the virus symptoms. Sometime after he was released in 2021, he returned to his maintenance care program. He stated that he has also had times when the Insurer was not authorizing medications and he ran out until they would get authorization to fill the prescription. Claimant testified he wishes to continue with his medications in order to continue to function and work.

90. Dr. Paz testified at hearing as an expert in occupational medicine, internal medicine and as a Level II accredited physician. Dr. Paz testified regarding his evaluation on August 24, 2021. He opined that the continued medical care Claimant was receiving is not medically probable to be related to the March 16, 2004 injuries or reasonable and necessary for the work injury.

91. Dr. Paz testified that Claimant was diagnosed by the DIME physician, Dr. Healey as arthropathy. He explained that arthropathy is arthritis that can include sliding of the facets, and narrowing of the space where the nerves pass. The facet arthropathy was a preexisting condition that was aggravated by the March 2004 injury according to Dr. Healey and Dr. Aschberger. Dr. Paz stated that the current pain generator is not the same as the original 2004 pain generator. He did not deny that Claimant continues to have pain but stated that the pain now is due to the natural progression of the degenerative problem that are preexisting and agreed with Dr. Rauzzino that the degeneration is overcome the prior work injury aggravation. He stated that the sequential MRIs, concluding with the 2018 MRI findings show the arthropathy to have progressed from mild to moderately severe compared to the prior ones.

92. Dr. Paz stated that Claimant has conditions related to the arthropathy, which is a general chronic low back pain, with predominant back pain of 90% compared to general leg pain, that only represents 10% of Claimant's pain complaints. Dr. Paz

testified that the symptoms of numbness into the legs could be related to the facet irritation and were not indicative of radicular symptoms. He further stated that only the left sided L4-5 and L5-S1 facets were aggravated by the work injury according to Dr. Healey. Further, Dr. Paz described the progression of the degenerative process and stated that following the MRI in 2015 Claimant proceeded with injections and rhizotomies at the L4-S1 level, which he perceived as not being successful.

93. The Low Back Pain Medical Treatment Guidelines are considered to represent reasonable care in appropriately selected cases. W.C.R.P. Rule 17, Exhibit 1, Sec. B (13). However, the Low Back MTG state at Sec. B (14) as follows:

> MMI should be declared when a patient's condition has plateaued to the point where the authorized treating physician no longer believes further medical intervention is likely to result in improved function. However, some patients may require treatment after MMI has been declared in order to maintain their functional state. The recommendations in this guideline are for pre-MMI care and are not intended to limit post-MMI treatment.

94. The appropriate MTG to consider in this matter are the Chronic Pain Disorder, W.C.R.P. Rule 17, Exhibit 9, which have a section that addresses maintenance care. Sec. (I) states I pertinent part as follows:

> Successful management of chronic pain conditions results in fewer relapses requiring intense medical care. Failure to address long-term management as part of the overall treatment program may lead to higher costs and greater dependence on the health care system. Management of CPD continues after the patient has met the definition of maximum medical improvement (MMI). MMI is declared when a patient's condition has plateaued and an authorized treating physician believes no further medical intervention is likely to result in improved function. When the patient has reached MMI, a physician must describe in detail the maintenance treatment.

95. W.C.R.P. Rule 17, Exhibit 9, Sec. (I) (5) states in pertinent part:

> In some cases, self-management of pain and injury exacerbations can be handled with medications, such as those listed in the Medication section. Physicians must follow patients who are on any chronic medication or prescription regimen for efficacy and side effects. Laboratory or other testing may be appropriate to monitor medication effects on organ function.

96. W.C.R.P. Rule 17, Exhibit 9, Sec. (I) (6) specifically states that "scheduled opioids may prove to be the most cost effective means of ensuring the highest function and quality of life." The rule goes on to state that "The medications should be clearly linked to improvement of function, not just pain control. … Examples include the abilities to perform: work tasks, … participate in normal family and social activities."

97. As found, Dr. Healey's original diagnosis was chronic mechanical low back pain with evidence of lumbar spondylosis and degenerative lumbar facet disease at L4-L5, L5-S1 with superimposed lumbar quadratus lumborum iliocostal myofascial pain pursuant to the February 2006 report. Pursuant to the subsequent September 2007 report, Dr. Healey diagnosed chronic mechanical low back pain secondary to

chronic facet arthropathy post fall. This is interpreted and inferred as the same diagnosis. Based on Dr. Paz's this mistaken recollection of Dr. Healey's diagnosis, Dr. Paz is not found credible.

98. As found, neither party provided the records from Dr. Kawasaki. However, as further found, on September 11, 2015 Dr. Aschberger reported that Claimant had good symptom relief from the MBBs, with no pain post injection and continued significant benefit. He recommended a repeat second confirmatory injection. On November 6, 2015 Dr. Aschberger stated that the second MBBs achieved a zero over ten pain rating. On November 13, 2015 Dr. Aschberger sent Claimant for the rhizotomy. Finally, as found, on January 22, 2016 Claimant reported to Dr. Aschberger that he had excellent symptomatic results from the rhizotomy with Dr. Kawasaki as he had 2 weeks without pain. Dr. Aschberger's interpretation of the injection results was a positive symptomatic relief and is found to be more credible than Dr. Paz's independent interpretation. Based on Dr. Paz's mistaken interpretation of symptomatic relief of the injections from 2015, Dr. Paz is not found credible.

99. As found, Dr. Rauzzino's opinion that the "adjuvant therapies" were not leading to an improved functional outcome is not credible. The medical records clearly document, throughout the years from when Claimant reached MMI in 2007, that Claimant has had increases and decreases of medication, some of which have been significant. When he was placed at MMI he was on very high doses of narcotic medications including Opana and Vicodin. For example in 2010 Claimant was taking Opana ER 50 mg twice a day and Vicodin 10 mg for breakthrough pain. From April 5, 2019 and through the time of the hearing, Claimant was only taking Hydrocodone 5/325 mg up to twice a day[6] to manage his pain. Claimant has decreased his medications and even taken them intermittently when Claimant is able to handle his ADLs and work without the pain medication. He has disclosed this to his authorized treating physician, Dr. Aschberger, who has continued to manage Claimant's care. Dr. Aschberger is found credible.

100. As found, the purpose of maintenance care is to maintain Claimant at a baseline. Over the years, Claimant has had waxing and waning of the level of his pain caused by the work related aggravation of his underlying degenerative facet injury and the myofascial component of his work related injury. This is to be expected of any chronic medical condition. As found, in 2007 the DIME physician, Dr. Healey, recommended long term care to include medications such as narcotics (Hydrocodone),[7] anti-inflammatory (Skelaxin) and muscle relaxants (Methocarbamol) as well as an anticonvulsant (Gabapentin).

101. As found, Dr. Aschberger has managed Claimant's complaints by prescribing multiple therapeutic treatments, including medications, massage and physical therapy, as well as injections. While the maintenance care may not have long

[6] Opana ER 50 mg d.i.b is a 300 Morphine Milligram Equivalent (MME), while Hydrocodone 5/325 mg d.i.b is a 10 MME. Chronic Pain Disorder MTG, W.C.R.P. Rule 17, Exh. 9 Sec. I (6) states that there is good evidence that optimal MME for maintenance care is approximately 50 MME or less.

[7] The medications in parenthesis is what Claimant was taking at the time of the hearing.

lasting effect, the nature of maintenance care, as stated above, is to maintain Claimant stable and at a status quo.

102. As found, Dr. Aschberger has documented the times that treatment has significantly help keep Claimant functioning both with ADLs and working, and when the treatments have been decreased, when Claimant has had temporary worsenings that were again stabilized by the use of the ongoing maintenance care. Dr. Aschberger, who has been Claimant's ATP for more than 17 years, and Dr. Healey, the DIME physician, are more credible than Dr. Rauzzino and Dr. Paz. Claimant has proven by a preponderance of the evidence that he requires continuing maintenance care related to the facet irritation of the lumbar spine and the myofascial injury from the March 16, 2004 admitted work related injury.

CONCLUSIONS OF LAW

A. General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the claimant's rights nor in favor of the rights of the respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office (ICAO)*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Burden of Proof

The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. Sections. 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000; *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205 (Colo. App. 2012).

However, where an insurer seeks to terminate benefits that have been admitted, they must prove by a preponderance of the evidence that Claimant requires no additional post-MMI treatment. See § 8-43-201(1), C.R.S.

A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979; *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

C. Medical Benefits that are Reasonably Necessary and Related

Respondents are liable for authorized medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a), C.R.S.; *Sims v. Indus. Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover* v. *Indus. Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc*., 77 P.3d 863 (Colo. App. 2003). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

Here, Respondents admitted by Final Admission of Liability dated March 4, 2008 with a general award of medical benefits that are reasonably necessary and related to the claim after the maximum medical improvement determination. Claimant continued to receive post-MMI care from 2007 through the date of the hearing on October 13, 2021. However, as of the date of the hearing, Respondents alleged that the medical care that Claimant is currently receiving from his ATP is no longer reasonable, necessary or related to the March 16, 2004 injury. Respondents contested continuing medical care, and stated that it is Claimant's burden to prove that the care continues to be reasonable, necessary and related to the injury.

In essence, Respondents seeks to withdraw the "admission" for medical treatment after MMI on the theory that no further care is reasonably necessary or causally related to the March 2004 admitted injury. While, Claimant must prove initial entitlement to disputed medical benefits by a preponderance of the evidence to establish care, the Act was amended in 2009[8] to place the burden of proof on the party seeking to modify an issue determined by a previous admission or order. Therefore, where Respondents' seek to terminate previously admitted maintenance benefits, Respondents must prove by a preponderance of the evidence that treatment is no longer reasonably necessary or causally related to the injury. Section 8-43-201(1); *Salisbury v. Prowers County School District RE2*, W.C. No. 7-702-144 (June 5, 2013); *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (October 1, 2013).

As found, causation was established at the time the DIME physician, Dr. Healey, diagnosed Claimant's injuries including chronic mechanical low back pain with evidence of lumbar spondylosis and degenerative lumbar facet disease at L4-L5, L5-S1 with superimposed lumbar quadratus lumborum iliocostal myofascial pain related to the March 2004 injury, pursuant to the February 2006 report. Dr. Healey issued a subsequent report in September 2007 and diagnosed chronic mechanical low back pain secondary to chronic facet arthropathy post fall. This ALJ interprets and infers the diagnoses in the two reports as the same diagnoses and equivalent. Respondents filed a General Admission following the first report and a Final Admission following the second DIME report, accepting the causation determination.

As found, at the time of MMI, Dr. Healey recommended long term care post MMI to include medications such as narcotics, anti-inflammatory, muscle relaxants and an anticonvulsant. Since the 2007 DIME opinion, Claimant's ATP, Dr. Aschberger, has been prescribing some sort of narcotics, anti-inflammatory, muscle relaxants and/or an anticonvulsant, which have changed over time in prescription and dosage, in addition to other therapeutic treatments such as massage and other therapies. This was in addition to follow-up injections to maintain Claimant at MMI or return Claimant to his status quo or to the baseline established at the time of MMI. As found, Dr. Aschberger has further ordered diagnostic testing in order to determine if care continued to be reasonably necessary and related to the 2004 work injury. As concluded, the care provided by Dr. Aschberger has been reasonably necessary and related to the March 16, 2004 injuries to maintain Claimant at MMI.

As found, Claimant continues to take Hydrocodone (narcotic medication), Methocarbamol (muscle relaxant) and Gabapentin (anticonvulsant) to maintain the status quo and to keep Claimant functional. Dr. Aschberger has continued to keep Claimant functional or to return Claimant to baseline when there have been exacerbations of the chronic pain. Dr. Aschberger documented that Claimant has been able to continue working and able to perform his activities of daily living because of the maintenance care he has been provided. As found, Dr. Aschberger's opinions are overwhelmingly

[8] See Sec. 8-43-201(2), C.R.S. "The amendments made to subsection (1) of this section by Senate Bill 09-168, enacted in 2009, are declared to be procedural and were intended to and shall apply to all workers' compensation claims, regardless of the date the claim was filed."

persuasive and credible, over the contrary opinions of Dr. Paz and Dr. Rauzzino, whose opinions are not persuasive. Also as found, Claimant's testimony that his medications have been able to keep him working and allow him to perform his activities of daily living is credible as well. The ALJ concludes that all post-MMI care as recommended by Dr. Aschberger to date was reasonable, necessary, and related to Claimant's admitted 2004 work injuries. The ALJ further concludes that Claimant continues to require the narcotic, muscle relaxant and anticonvulsant/neuropathic pain medications to maintain Claimant at MMI for his March 16, 2004 work related injuries.

Respondents argue that Claimant's continuing problems are related to the progressive degenerative problems as demonstrated by the 2015 and 2018 MRI findings and the opinions of Dr. Paz and Dr. Rauzzino. However, these arguments are not persuasive. Nothing has changed with regard to Claimant's symptoms other than the occasional lower leg symptoms that are intermittent at best, as documented by Dr. Aschberger. As far back as the inception of the claim Claimant complained of buttock and upper thigh pain. When Dr. Aschberger evaluated Claimant initially for an impairment rating in 2005 (before MMI) Claimant complained of symptoms in the lower lumbar paraspinal musculature, the piriformis musculature, and lateral thigh musculature. Further, Dr. Paz testified that the symptoms of numbness into the legs could be related to the facet irritation and were not indicative of radicular symptoms. Claimant aggravated the L4-S1 facets as well as had myofascial low back injuries caused by the 2004 accident, and the chronic facet irritation has been well documented over the years since 2004 to the present. The type of care being recommended by Dr. Aschberger is the same as was prescribed at the time of MMI. The findings on the diagnostic testing, while they may show further degeneration on imaging, this does not equate to changing the chronic facet irritation that Claimant was experiencing in 2004 at the time of his injury or in 2007 when he was placed at MMI. The diagnostic testing in 2008 (the second MRI), and subsequent MRIs, including 2018 only show imaging, they do not show symptomology. As found and is concluded, Claimant's symptoms have not significantly changed in origin throughout his course of treatment.

As found, when Claimant was placed at MMI Claimant was taking multiple narcotics. Before Claimant was placed at MMI in 2007 by the DIME physician, on June 11, 2004 Dr. Aschberger noted that Claimant was on an anti-inflammatory, a muscle relaxant and narcotics for pain, which should be continued so long as Claimant continued to take narcotics responsibly, and on March 22, 2005 Dr. Caton recommended maintenance medical care, including narcotics, possible repeat injections and additional osteopathic manipulation therapy treatments. In 2010 Claimant was taking opioids as high as Opana ER 100 mg per day and Vicodin for breakthrough pain. At the time of the hearing, in 2021, Claimant was only taking Hydrocodone 10 mg per day. This is a change from 300 MME in 2010 down to 10 MME in 2021. As found, Dr. Rauzzino's opinion that the "adjuvant therapies" were not leading to an improved functional outcome is not credible. The medical records clearly document, throughout the years from when Claimant reached MMI in 2007, that Claimant has had increases and decreases of medication, some of which have been significant. When he was placed at MMI he was on very high doses of narcotic medications including Opana and Vicodin. Claimant has decreased his medications and even taken them intermittently when Claimant is able to handle his ADLs and work without the pain medication. He has disclosed this to his authorized treating physician, Dr. Aschberger, who has continued to manage Claimant's care and has kept Claimant functional. This ALJ concludes this is a significant decrease in pain medication controlling his symptoms of facet irritation caused by the aggravation of his underlying facet irritation related to the 2004 admitted injury. This ALJ concludes that the difference also shows that Dr. Aschberger has optimized Claimant's maintenance care program to address keeping Claimant at MMI and at what he calls "status quo." Respondents have failed to show that the causation or the reasonable need for maintenance treatment for the March 16, 2004 injury has changed.

Respondents bore the burden of proving by a preponderance of the evidence that the medications Dr. Aschberger currently prescribes are no longer reasonably necessary and causally related to the 2004 work injury. The *Guidelines* provide, in relevant part, that "medications should be clearly linked to improvement of function, not just pain control." Furthermore, the *Guidelines*, specify that, "examples of routine functions include the ability to perform work tasks, … or participate in normal family and social activities." WCRP 17, Exhibit 9(I)(6). As concluded, Dr. Aschberger has documented such improvement on a frequent basis as listed above.

Respondents have failed to established by a preponderance of the evidence that Claimant's maintenance treatment is no longer reasonably needed, or that the maintenance treatment is no longer related to Claimant's work injury. The record is replete with evidence that Claimant continues to suffer chronic pain in the low back with frequent tightness and limited range of motion, and lifting restrictions because of his 2004 work injury. This ALJ concludes that Respondents have failed to show by a preponderance of the evidence that the proximal cause for the need for treatment prescribed by ATP Dr. Aschberger has changed. Respondents have failed to show by a preponderance of the evidence that Claimant no longer needs the maintenance care prescribed by Dr. Aschberger to Claimant related to the March 16, 2004 claim.

In fact, as found above, Claimant has established by a preponderance of the evidence that he needs maintenance care, which include medications and regular medical evaluations by a physician. It is through these regular medical evaluations that specific medications and medical treatment can be prescribed to maintain Claimant at MMI and prevent his condition from deteriorating. The medications currently include Hydrocondone, Methocarbamol and Gabapentin. However, it will be up to the physician to determine what appropriate maintenance medical treatment at each evaluation is. Medications and future medical care may change from time to time and Respondents will continue to be entitled to challenge the reasonable necessity and relatedness of any new type of treatment. However, as concluded, Claimant established by a preponderance of the evidence the need for future treatment to relieve the effects of his industrial injuries, and proved a sufficient causal nexus between his ongoing symptoms and the admitted work accident. As Concluded, Claimant has proven by a preponderance of the evidence that he continues to have facet irritation and myofascial low back pain that required ongoing maintenance care, including Hydrocodone, Methocarbamol and Gabapentin as well as regular follow-up care with Dr. Aschberger related to the March 16, 2004 injuries.

ORDER

IT IS THEREFORE ORDERED:

1. Respondents shall continue to authorize and pay for the narcotic, muscle relaxant and anticonvulsant/neuropathic pain medications prescribed by Dr. John Aschberger as reasonably necessary and related to the March 16, 2004 injuries.

2. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on March 6, 2021, she suffered an injury arising out of and in the course and scope of her employment with the employer.

2. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment she has received at Grand River Medical is reasonable, necessary, and related to the work injury.

3. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that the spine surgery recommended by Dr. Brian Witwer is reasonable, necessary, and related to the work injury.

4. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to temporary total disability (TTD) benefits and/or temporary partial disability (TPD) benefits.

5. The endorsed issue of average weekly wage (AWW) is held in abeyance as ordered by PALJ Laura Broniak in a Pre-Hearing Order issued on October 13, 2021.

FINDINGS OF FACT

1. The claimant began working for the employer as a hairstylist in 2007. The claimant testified that on March 6, 2021, her salon received several boxes from a neighboring salon. On that date, the claimant attempted to lift a box of hair product and move it to the back room. The claimant testified that as she lifted the box, she felt a stabbing pain in her back.

Treatment prior to March 6, 2021

2. Prior to the 2021 box lifting incident, the claimant suffered a back injury in 2014 while she was employed with the employer. In that instance, the claimant was moving a salon chair and felt pain in her back.

3. On June 2, 2014, the claimant underwent a left sided L5-S1 hemilaminectomy, mesial facetectomy, foraminotomy, and microdiscectomy.

4. On October 15, 2014, a magnetic resonance image (MRI) of the claimant's lumbar spine showed a broad based disc bulge, with mild canal and neural foraminal narrowing at the L4-L5 and L5-S1 levels. In addition, the MRI showed mild degenerative facet arthropathy at various levels, but increased at the left L5-S1 level.

5. The claimant was placed at maximum medical improvement (MMI) for the 2014 injury on April 10, 2015, and was assigned permanent impairment of 15 percent,

whole person. At that time, the claimant reported ongoing left hip and left lower extremity pain.

6. The claimant testified that following the 2014 injury and related surgery, she fully recovered. The claimant also testified that in the years, days, and hours leading up to the March 6, 2021 box lifting incident, she did not have pain in her back.

Treatment beginning March 6, 2021

7. Following the feeling of pain in her back on March 6, 2021, the claimant went home to rest. While at home, the claimant applied ice and heat to her back. However, the claimant continued to experience pain and she sought treatment in the emergency department at Grand River Medical Center on March 8, 2021.

8. At the emergency department, the claimant was seen by Dr. Elizabeth Casner. The claimant was diagnosed with a lumbar back strain and provided with pain medication. The claimant was instructed to follow up with her primary care physician.

9. In the interim, the respondents referred the claimant to Mark Quinn, PA-C as her authorized treating provider (ATP) for this claim. PA Quinn practices at Grand River Medical Clinic. The claimant was first seen by PA Quinn on March 9, 2021. At that time, PA Quinn diagnosed a lumbar sprain and recommended pain medication and stretching exercises.

10. On March 15, 2021, the claimant returned to PA Quinn and reported severe stabbing pain in her chest and upper back. PA Quinn diagnosed subluxation of costovertebral joints and performed rib head reductions with osteopathic manipulative treatment (OMT). The claimant reported pain relief following this treatment. On that date, PA Quinn recommended no heavy lifting. In a WC 164 form dated March 16, 2021, PA Quinn assigned work restrictions of no lifting, carrying, pushing, or pulling over five pounds.

11. On April 26, 2021, the claimant returned to PA Quinn. At that time, PA Quinn changed the claimant's work restrictions to no lifting, carrying, pushing, or pulling over 10 pounds.

12. On May 24, 2021, a magnetic resonance image (MRI) of the claimant's lumbar spine was performed. The MRI showed moderate spinal canal stenosis at L5-S1, with a moderate posterior disc bulge and superimposed moderate left disc protrusion (causing severe narrowing of the lateral recess). The MRI also showed a central posterior annular tear at the L4-L5 level.

13. On June 23, 2021, the claimant was seen by Dr. Brian Witwer for consultation. At that time, the claimant reported sharp and burning back pain that radiated into her left leg. Dr. Witwer noted that the MRI results showed a disc herniation at the L4-5 level. Dr. Witwer recommended that the claimant undergo a microlumbar discectomy.

14. On August 11, 2021, the claimant attended an independent medical examination (IME) with Dr. Brian Reiss. In connection with the IME, Dr. Reiss reviewed the claimant's medical records, obtained a history from the claimant, and performed a

physical examination. In his IME report, Dr. Reiss opined that the claimant's current symptoms are due to an aggravation of her pre-existing condition. Dr. Reiss further opined that the claimant needs further diagnostic testing. With regard to the surgery recommended by Dr. Witwer, Dr. Reiss opined that such a surgery is not reasonable or necessary treatment of the claimant's condition.

15. Dr. Reiss' deposition testimony was consistent with his written report. Dr. Reiss testified that the claimant may not have a herniated disc, but rather scar tissue surrounding that level. Dr. Reiss also testified that the claimant "tweaked her midback, and her chiropractic treatment, . . . irritated her lower back and left lower extremity making it probably related." Dr. Reiss reiterated his opinion that the surgery recommended by Dr. Witwer would not be beneficial in treating the claimant's current symptoms. Dr. Reiss also testified that he compared the 2014 and 2021 MRIs and determined that the same soft tissue surrounding the S1 nerve root is present in both scans. Dr. Reiss further testified that this indicates that the claimant's condition is a continuation of scar tissue and not a recurrent disc herniation.

16. While employed with the employer, the claimant also worked part-time for a liquor store, Spirits of New Castle. The claimant testified that prior to March 6, 2021, she worked approximately 23 hours per week for the employer and 11 hours per week for Spirits of New Castle.

17. Wage records entered into evidence demonstrate that the claimant worked for the employer approximately 25 hours per week in April 2021. In addition, the claimant worked approximately seven hours per week for the liquor store in April 2021. The ALJ finds no significant change between the claimant's wages before and after the March 6, 2021 incident.

18. The ALJ credits the claimant's testimony regarding the March 6, 2021 lifting incident and her resulting symptoms. The ALJ also credits the medical records and finds as true that the lifting incident on March 6, 2021 was the event that caused the aggravation to the claimant's pre-existing low back condition. Therefore, the ALJ finds that the claimant has demonstrated that it is more likely than not that on March 6, 2021, her work activities led to an aggravation of her pre-existing back condition, resulting in the need for medical treatment. The ALJ also notes that in his IME report, Dr. Reiss opined that the claimant experienced an aggravation of her pre-existing back condition.

19. The ALJ credits the claimant's testimony regarding the March 6, 2021 incident and the medical records and finds that the claimant has demonstrated that it is more likely than not that the medical treatment she has received at Grand River Medical is reasonable, necessary, and related to the March 6, 2021 work injury.

20. The ALJ credits the opinion of Dr. Reiss regarding the reasonableness and necessity of the recommended surgery. The ALJ also credits the medical records on this issue. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the surgery recommended by Dr. Witwer is reasonable and necessary treatment of the claimant's back condition, absent additional diagnostic testing.

21. The ALJ credits the wage records entered into evidence and finds that the claimant has failed to demonstrate that it is more likely than not that she is entitled to TTD or TPD benefits. As noted above, the ALJ finds no significant change between the claimant's wages before and after the March 6, 2021 work injury.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has demonstrated by a preponderance of the evidence, that on March 6, 2021, she suffered an injury arising out of and in the course and scope of her employment with the employer. More specifically, the ALJ concludes that the lifting incident on March 6, 2021 caused an aggravation of the claimant's pre-existing condition, resulting in the need for medical treatment. As found, the claimant's testimony, the medical records, and Dr. Reiss's opinion that an aggravation occurred are credible and persuasive.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

7. As found, the claimant has demonstrated by a preponderance of the evidence, that medical treatment she has received at Grand River Medical is reasonable, necessary, and related to the work injury. As found, the claimant's testimony and the medical records are credible and persuasive on this issue.

8. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the spine surgery recommended by Dr. Brian Witwer is reasonable, necessary, and related to the work injury. As found, the medical records and the opinion of Dr. Reiss are credible and persuasive on this issue. Specifically, the ALJ credits the opinion of Dr. Reiss that the surgery is not reasonable or necessary, absent additional diagnostic testing.

9. To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by a claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that a claimant establish physical disability through a medical opinion of an attending physician; a claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

10. To prove entitlement to temporary partial disability (TPD) benefits, a claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). TPD payments ordinarily continue until either claimant reaches maximum medical improvement or an attending physician gives claimant a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment. *See* 8-42-106, C.R.S.

11. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that she is entitled to TTD and/or TPD benefits. As found, the wage records show no significant change between the claimant's wages before and after the March 6, 2021 work injury.

ORDER

It is therefore ordered:

1. The claimant suffered a work injury on March 6, 2021.

2. The respondents shall pay for treatment the claimant has received from Grand River Medical, pursuant to the Colorado fee schedule.

3. The claimant’s request for spine surgery, as recommended by Dr. Witwer, is denied and dismissed.

4. The claimant’s request for TTD and TPD benefits, is denied and dismissed.

5. The issue of AWW is held in abeyance pursuant to PALJ Broniak’s order.

6. All matters not determined here are reserved for future determination.

Dated this 22nd day of November 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-162-593-001

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he sustained a compensable work injury on November 20, 2020.

II. Whether Claimant established by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment that is related to his compensable injury.

III. Whether Claimant established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from December 9, 2020, through ongoing.

IV. Determination of Claimant's average weekly wage (AWW).

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is a 27-year-old male who worked for Employer, a masonry company, as a brick layer. Claimant's job duties for Employer included grouting and laying brick.
2. Claimant has worked for Employer for various periods of time over the years:
   - He began working for Employer in 2012 when he was 18 years old. Then, he quit in 2014.
   - He was rehired in February 2016 and quit again in November 2016.
   - Claimant was rehired again in December 2016 and then he was fired in December 2017 due to attendance issues.
   - Claimant was rehired in May 2018, by his father Arturo G[Redacted], who works as a foreman for Employer.
   - Claimant was fired on December 9, 2020, for no call no show at work.
3. Claimant alleges he injured his back on November 20, 2020. Claimant, however, has long standing preexisting back problems which required medical treatment and were disabling.
4. In 2001, Claimant injured his back while training for boxing. (Ex. I, BS 47)
5. On March 1, 2019, Claimant went to Innovative Chiropractic for pain in his mid-back, lower back, and pain going down his right leg all the way to his ankle. Claimant stated the problem started 8 years ago. Claimant also complained of tingling and numbness going down his right leg. At this appointment, he rated his

current pain at 10/10 and his average pain at 8/10. He also stated that the pain was present all day long. In addition, Claimant indicated that exercise and working out made his symptoms worse. He did not, however, say that working made his symptoms worse. At his March 2019 chiropractic visit, the chiropractor noted Claimant was found to have a positive straight leg test, positive Kemp's test, and positive toe walk and heel walk. Claimant also had x-rays taken that demonstrated narrowed disc space at L4-L5 and L5-S1 as well as encroachment of the neuroforamina at the L5-S1 level. (Ex. I, BS 47-50)

6. Claimant testified and acknowledged that he has had long standing back issues. Claimant also testified that between December 2019 and December 2020, he missed about 23 days of work due to back pain.

7. Claimant had back problems when he first started working for Employer. Claimant's preexisting back problems caused him to have about 2 bad workdays per week for the last seven years. For example, Mr. Ricardo "Rico" D[Redacted], a coworker, credibly testified that he would notice Claimant having problems walking from his car – due to his prior back injury.

8. Claimant testified that there was not a specific event that caused his back pain on November 20, 2020. Instead, Claimant testified that his back just slowly got worse. He also testified that as his pain progressed and got worse – it was different than before.

9. Claimant's testimony that his worsening back pain developed gradually at work is inconsistent with his Worker's Claim for Compensation. On February 3, 2021, Claimant completed his Worker's Claim for Compensation. Rather than stating that his back pain came on gradually over time, Claimant stated that he injured his back lifting a bucket of gravel. Claimant specifically stated, "2 herniated discs upon lifting a bucket of gravel up to a shoulder height P felt pain in the lumbar." (Ex. B, BS 2)

10. Claimant's testimony on direct examination about the gradual onset of his alleged injury is also inconsistent with his answers to discovery. Rather than describing the gradual onset of back pain, Claimant again described injuring his back during a single event which consisted of lifting a bucket of gravel. In his answers to interrogatories, Claimant stated:

    > On November 20, 2020, when I lifted one of the buckets full of grout to shoulder height, I felt a sharp stabbing pain that made me fall on my knees in excruciating pain. I let the pain subside a bit until I was able to get back up and stand.

11. On his Worker's Claim for Compensation, Claimant listed two witnesses to his alleged accident. Claimant listed Julio and Steven. But in his answers to discovery, Claimant did not state that Julio witnessed the accident. Instead, he listed Gabriel and Steven.

12. Claimant stated in his answers to interrogatories that he reported his work injury to his boss, Ricardo "Rico" D[Redacted], who knew Claimant had been in pain for quite a while. Claimant testified that he does not think it was taken seriously.

13. Mr. D[Redacted] testified at hearing. Mr. D[Redacted] credibly testified that he was

not supervising Claimant on the day of Claimant's alleged accident. He also credibly testified that Claimant did not report his injury – or any back problems - to him on November 20, 2020.

14. After his alleged injury, Claimant continued working full duty for Employer until he was terminated. Claimant was terminated for his failure to show up on a particular job. The owner of the company, Gregg S[Redacted], had promised a client that he would have a full crew on a particular job on December 8, 2020. Claimant was supposed to be one of the crew members. Claimant, and one other co-worker, did not show up for the December 8, 2020, job. Therefore, Mr. S[Redacted] decided to terminate both Claimant and the other employee. As a result, he told Matthew M[Redacted], the project foreman, to terminate Claimant if he showed up again. Claimant showed up the next day, December 9, 2020, and Mr. M[Redacted] terminated him.

15. In his answers to discovery, Claimant set forth the basis for his claim for temporary disability benefits starting December 9, 2020, and continuing. In support of his claim for temporary disability benefits since his termination, Claimant alleged he had not worked for anyone since being terminated by Employer. Claimant stated:

> I have not been able to work as a result of severe back pain and I have not received any income since being fired on December 9, 2020. I have not received any compensation because you denied my work injury claim.
>
> I have not returned to work since being terminated from C Morgan Masonry.
>
> (Ex. D)

16. However, during cross-examination, Claimant admitted his answers to interrogatories were not true. Claimant admitted during cross-examination that he started working for another employer after his termination.

17. On December 21, 2020, after being terminated, Claimant completed an Employment Application for Bighorn Plastering. On the same date, Claimant also underwent a preemployment medical evaluation at Concentra. Claimant underwent the evaluation to determine whether he could perform the physical duties of the new job for which he was applying. As set forth in the preemployment evaluation, Claimant affirmed that he could perform the requirements of the job that required:

- Lift – Carry. Claimant stated that he could lift and carry 80 pounds from a vertical lift from the floor and place it on one shoulder and horizontally transfer it 50 feet and place it on a shelf that was 4 feet from the ground.
- Climb. Claimant stated that he could ascend and descend a step with a height of 7 inches from the floor and do that 30 times in 3 minutes. Claimant also stated that he could ascend and descend 4 rungs on a ladder 10 times in 2 minutes.

18. Along with Claimant stating that he could perform the above physical tasks, he was

also tested to see if he could perform the tasks. As stated in the Concentra medical report, Claimant passed each of the physical requirement tests set forth above. (Ex. K, BS 81)

19. From about December 21, 2020, to January 20, 2021, Claimant worked for Big Horn Plastering. During his employment with Big Horn Plastering, Claimant's back pain got worse and caused him to seek medical treatment with Dr. Bainbridge.

20. From about January 5, 2021, through January 12, 2021, Claimant missed work at Big Horn Plastering due to an increase in his back pain. (Ex. J, BS 52)

21. On January 13, 2021, Claimant was evaluated by Dr. Bainbridge. At this appointment, Claimant completed a Spine Health History. Claimant was specifically asked whether a specific injury caused his symptoms and whether it was a job injury. Claimant responded "no" to such question. (Ex. J, BS 57)

22. Claimant told Dr. Bainbridge that he had passed out the prior evening due to taking a friend's muscle relaxer – and was taken to the emergency room. Claimant also told Dr. Bainbridge that he had participated in physical therapy at Wells PT for the last two weeks, but his pain was getting worse.

23. Rather than telling Dr. Bainbridge that he injured his back in November 2020 working for Employer, Claimant told Dr. Bainbridge that his back pain had been persistent for the last four years. (Ex. J, BS 52) Dr. Bainbridge assessed Claimant as suffering from a possible wedge compression fracture of the first vertebra, due to Claimant's fall, lumbar disc degeneration, a lesion of the ulnar nerve, and a lumbar disc protrusion with radiculopathy. (Ex. J, BS. 53)

24. On January 20, 2021, Claimant was examined by Monica Gordon, PA (Ex. J, BS 60) PA Gordon noted Claimant's history of four years of lower back pain that had gotten "much worse." It was also noted that imaging had been conducted and it revealed severe L4-5 central canal stenosis due to a large disc protrusion with questionable impingement of the cauda equina. It also showed L4-5 severe lateral recess stenosis bilaterally, and a large disc protrusion with severe central canal stenosis completely effacing the CSF from around the cauda equina at the L4-5 level with severe bilateral lateral recess stenosis and mild bilateral neural foraminal narrowing. PA Gordon recommended bilateral L3-4 and L5-S1 transforaminal epidural steroid injections. (*Id.* at BS 61-62) Claimant again did not allege that he suffered a work-related injury working for Employer during this appointment.

25. On August 16, 2021, PA Gordon issued a letter about this claim. PA Gordon stated in her letter that Claimant sustained a "recent injury" in the fall of 2020. She wrote that Claimant was lifting heavy buckets of grout in October 2020, when he began having low back pain. The pain increased "substantially" in November 2020, resulting in Claimant leaving his job early on average once per week due to pain. PA Gordon also stated that:

> Disc injuries are usually caused by increasing tension on the disc until it cannot withstand the tension and it protrudes. In some cases, causes compression of traversing or exiting nerve roots, and causing significant pain along the path of the affected nerve. Because nerves

> supply both sensation and motor function, there can also be significant weakness of the muscles innervated by the nerve. [Claimant's name Redacted] exhibits both sensory and motor function deficits.
>
> (Clmnt's Ex. 37-38)

26. PA Gordon Concluded that Claimant's current symptoms are the more likely the result of Claimant's "current job." (Clmnt's Ex. 36-37) PA Gordon does not, however, address Claimant's prior statements to her, and Dr. Bainbridge, saying his back pain had been persistent for four years and that it had gotten worse while working for his subsequent employer - Bighorn Plastering – and caused him to seek treatment from Dr. Bainbridge.

27. On September 13, 2021, Albert Hattem, M.D., was retained by Respondents to review the evidence in this claim. He issued a report with his opinions. (Resp. Ex. M) Dr. Hattem reviewed the records from Dr. Bainbridge, PA Gordon, Concentra Health, Innovative Chiropractic, and a statement written by Mr. D[Redacted]. Based on this information, Dr. Hattem concluded that Claimant's "current low back pain/condition is not causally related to an event that occurred at work on November 20, 2020, but is instead due to a preexisting condition." In support of his opinion, Dr. Hattem cites Claimant's statements to Innovative Chiropractic that he had severe, chronic, low back pain, present for at least 10 years before the alleged date of injury. Dr. Hattem also noted that Claimant never described a work injury to any provider for over three months after the alleged incident, and that the lumbar MRI conducted by Denver Back Pain Specialists demonstrated only chronic degenerative changes without evidence of acute injury. (*Id.* at pgs. 5-6) The ALJ finds Dr. Hattem's opinions credible and persuasive because they are fairly consistent with the underlying medical record regarding Claimant's preexisting condition and the testimony of Claimant's co-workers/supervisors.

28. In his answers to discovery, Claimant also stated that when he missed work on December 8, 2020, his dad told Claimant's supervisor – Mike – that Claimant would not be in that day and that his supervisor said, "no problem." However, Claimant's supervisor Mike S[Redacted] testified at hearing. Mr. S[Redacted] credibly testified that he did not speak with Claimant's dad on December 8, 2020, about Claimant being unable to come into work that day. As a result, he testified that he never told Claimant's dad that it was "no problem" that Claimant did not show up for work that day.

29. Claimant also stated in his answers to discovery that he told the foreman - Ricardo "Rico" D[Redacted] - about his back injury on November 20, 2020. However, Mr. D[Redacted] testified at hearing. Mr. D[Redacted] credibly testified that he was not even supervising Claimant on the day of the alleged accident. He also testified that Claimant never discussed any back condition with him on November 20, 2020. He did, however, testify that Claimant has had back problems for years and that it bothered Claimant approximately 2 or more days a week. He also testified that he could tell when Claimant was having a bad day because he would have problems just walking from his car. The ALJ finds Mr. D[Redacted]'s testimony to be credible

and persuasive because it is consistent with Claimant’s medical records as to Claimant’s preexisting back problems.

30. Based on Claimant’s inconsistencies regarding the manner of his injury, and his misrepresentations contained in his answers to discovery, Claimant is not found to be credible.

31. The ALJ finds the testimony of Respondents’ witnesses more credible and persuasive than Claimant’s testimony.

32. The ALJ finds that Claimant did not suffer an injury on November 20, 2020, while working for Employer.

33. The ALJ also finds that Claimant did not suffer an aggravation of a preexisting condition while working for Employer.

34. The ALJ finds the great weight of the evidence supports a finding that Claimant has not carried his burden of proving a compensable claim by a preponderance of the evidence.

35. Claimant failed to prove it is more probable than not he suffered a compensable industrial injury arising out of his employment with Employer.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers’ Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers’ compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers’ compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ’s factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng’g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that he sustained a compensable work injury on November 20, 2020.

Claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant testified that there was not a specific event that caused his back pain on November 20, 2020. Instead, Claimant testified that his back just slowly got worse. He also testified that as his pain progressed and got worse – it was different than before. However, as found, Claimant's testimony that his worsening back pain developed gradually at work is inconsistent with his Worker's Claim for Compensation. On February 3, 2021, Claimant completed his Worker's Claim for Compensation. Rather than stating that his back pain came on gradually over time, Claimant stated that he injured his back lifting a bucket of gravel. Claimant specifically stated, "2 herniated discs upon lifting a bucket of gravel up to a shoulder height P felt pain in the lumbar."

In addition, Claimant's testimony on direct examination regarding the gradual onset of his alleged injury also conflicts with his answers to discovery. Rather than describing the gradual onset of back pain, Claimant again described a specific event in which he injured his back on November 20, 2020, while lifting a bucket of gravel.

Claimant also stated in his answers to discovery that he had not worked since being terminated on December 9, 2020. However, as testified to by Claimant, that answer was not true. Claimant did work for Bighorn Plastering after he was terminated by Employer.

Plus, Claimant did not seek medical treatment for his alleged back injury right after it allegedly happened in November. In fact, Claimant continued working full duty until he was terminated on December 9, 2020. Then, after he was terminated, he did not seek medical treatment until after he started working for another employer – and his symptoms got worse.

In addition, when Claimant presented to Dr. Bainbridge, he did not say that his back pain was caused by his prior job with Employer. Instead, he stated that he has had chronic back pain for the last four years - which got worse while working for a subsequent employer – Bighorn Plastering.

Claimant also indicated that he told Mr. D[Redacted] that he was having back problems on November 20, 2020. Mr. D[Redacted], however, credibly testified that Claimant said nothing to him about his back on November 20, 2020.

Based on all the inconsistencies found above, the ALJ does not find Claimant to be credible. Whether Claimant suffered a compensable injury greatly depends on the credibility of Claimant. As found, Claimant's contention that he injured himself at work is not found to be credible. While the ALJ is mindful that Claimant's job involved heavy lifting, Claimant's lack of credibility is too great to find that he suffered a compensable injury while working for Employer.

The ALJ has also considered the August 16, 2021, letter from PA Gordon. While PA Gordon contends Claimant's current symptoms are related to Claimant's heavy lifting at work, she did not address the Claimant's preexisting back problems which started approximately 9-10 years earlier and caused Claimant to miss work on a fairly regular basis. Moreover, her conclusions are based upon the history provided by Claimant - and the ALJ has found that Claimant's testimony and prior statements are not found to be credible.

As a result, the ALJ finds and concludes that Claimant has not carried his burden of proving a compensable injury by a preponderance of the evidence. The ALJ finds and concludes that Claimant has failed to establish by a preponderance of the evidence that he injured his back on November 20, 2020, due to a distinct injury, or that he suffered an aggravation of a preexisting condition.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to prove by a preponderance of the evidence he sustained a compensable industrial injury.
2. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 22, 2021.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that her claim should be reopened pursuant to Section 8-43-303, C.R.S. due to a worsening of her condition.

2. If the claimant's claim is reopened, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment she has received from Dr. Michael Campian and Ivy Chalmers, PA-C is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

3. If the claimant's claim is reopened, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment she has received from Dr. Campian and PA Chalmers is authorized.

4. If the claimant's claim is reopened, whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to temporary total disability (TTD) and/or temporary partial disability (TPD) benefits beginning July 16, 2021 and ongoing.

FINDINGS OF FACT

1. The claimant works for the employer as a room attendant. The claimant's job duties involve cleaning guest rooms at the employer's resort.

2. On June 3, 2019, the claimant suffered an injury at work when she slipped and fell to the ground. The claimant testified that when she fell she landed on the side of her right leg.

3. The claimant first sought treatment in the emergency department at Aspen Valley Hospital. Dr. Catherine Bernard noted the claimant's report that she slipped on a wet floor at work resulting in right hip and hamstring pain. An x-ray of the claimant's pelvis showed no fracture or malalignment. Dr. Bernard diagnosed muscle strains of the claimant's right hip and hamstring. The claimant was instructed to take over the counter pain medication.

4. Thereafter, the claimant's authorized treating provider (ATP) for the June 3, 2019 injury was Dr. Bruce Lippman, Jr. with Glenwood Medical Associates.

5. On July 8, 2019, the respondents filed a General Admission of Liability (GAL) admitting for medical benefits and temporary total disability (TTD) benefits.

6. On September 12, 2019, Dr. Lippman released the claimant to full duty, with no restrictions.The claimant has worked her normal job duties, without restrictions from September 12, 2019 to the date of hearing.

7. On November 14, 2019, Dr. Lippman determined that the claimant had reached maximum medical improvement (MMI). Dr. Lippman assessed no permanent impairment and recommended no maintenance medical treatment.

8. Relying on Dr. Lippman's November 14, 2019 report, the respondents filed a Final Admission of Liability (FAL) on December 5, 2019.

9. On January 15, 2021, the claimant sought treatment at Roaring Fork Family Practice[1] and was seen by Ivy Chalmers, PA-C. At that time, the claimant reported that she had slipped in a bathroom she was cleaning on November 1 and strained her right leg. The claimant also reported that she had a similar injury on her left side that never improved. PA Chalmers listed the claimant's diagnoses as right hip muscle strain, neuropathy, and sciatica. PA Chalmers released the claimant to full duty, with no work restrictions. In addition, she referred the claimant to Dr. Michael Campion for consultation.

10. On April 21, 2021, the claimant was seen by Dr. Campion. At that time, the claimant reported that she had fallen two years prior and injured her right hip. The claimant also reported that after her "second fall", she began to have leg numbness and knee pain. Based upon the medical record of that date, it appears that Dr. Campion referred to an initial fall in 2019, and a second fall on November 1, 2020. Dr. Campion recommended a magnetic resonance image (MRI) of the claimant's lumbar spine.

11. The claimant testified that after she was placed at MMI, her right hip condition became worse. The claimant also testified that she did not return to Dr. Lippman about her hip symptoms because Dr. Lippman died. The ALJ takes administrative notice of the Post Independent newspaper which reported that Dr. Lippman passed away on September 25, 2020.

12. However, the medical records entered into evidence demonstrate that the claimant did return to Dr. Lippman, and other providers at Glenwood Medical associates for other concerns.

13. On February 21, 2020, the claimant was seen by Dr. Lippman for bilateral shoulder and left foot issues. The claimant did not report worsening right hip symptoms at that time.

14. On March 3, 2020, the claimant was seen by a podiatrist, Dr. Noel Armstrong. In the medical record of that date, Dr. Armstrong thanks Dr. Lippman for his referral of the claimant. The claimant reported that her left foot became tangled in the cord of a lamp, causing pain in her great toe. Dr. Armstrong noted that the claimant had some degenerative changes in her left foot. He identified a hallux valgus and bunion on the left, as well as a sprain of the left foot.

15. On April 3, 2021, the claimant was seen at Glenwood Medical Associates by Dr. Sarah Rieves. At that time the claimant had complaints of rapid weight loss and

[1] Roaring Fork Family Practice is part of the Valley View Hospital system.

concerns about her diabetes. The claimant did not report worsening right hip symptoms at that time.

16. On May 25, 2021, the claimant returned to Dr. Rieves for an annual physical. The claimant did not report worsening right hip symptoms at that time.

17. On the issue of a worsening right hip condition, the ALJ does not find the claimant's testimony to be credible or persuasive. The ALJ credits the medical records and finds that the claimant did not report any worsening of her condition to her medical providers. The claimant began to report new symptoms when she saw PA Campion in January 2021. However, at that time, the claimant related her issues to an incident that occurred on November 1, 2020. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she has experienced a worsening of her right hip condition, necessitating the reopening of her claim.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Section 8-43-303(1) provides that "any award" may be reopened within six years after the date of injury "on the ground of fraud, an overpayment, an error, mistake, or a change in condition." Reopening for "mistake" can be based on a mistake of law or fact. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). A claimant may request reopening on the grounds of error or mistake even if the claim was previously denied and dismissed. *E.g., Standard Metals Corporation v.*

Gallegos, 781 P.2d 142 (Colo. App. 1989); *see also Amin v. Schneider National Carriers*, W.C. No. 4-81-225-06 (November 9, 2017). The ALJ has wide discretion to determine whether an error or mistake has occurred that justifies reopening the claim. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Travelers Ins. Co. v. Industrial Commission*, 646 P.2d 399 (Colo. 1981).

5. A change in condition refers to "a change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition which can be causally connected to the original compensable injury." *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 222 (Colo. App. 2008). The ALJ is not required to reopen a claim based upon a worsened condition whenever an authorized treating physician finds increased impairment following MMI. *Id.* The party attempting to reopen an issue or claim shall bear the burden of proof as to any issues sought to be reopened. Section 8-43-303(4), C.R.S.

6. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that her claim should be reopened due to a worsening of her condition. All remaining endorsed issues are dismissed as moot.

ORDER

It is therefore ordered that the claimant's request to reopen her claim related to a June 3, 2019 injury is denied and dismissed.

Dated this 23rd day of November 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment on March 9, 2021 while working at a construction site located at 4343 South Picadilly Street in Aurora, Colorado.

2. Whether Claimant was an independent contractor pursuant to §8-40-202(2) C.R.S. on March 9. 2021.

3. If Claimant was not an independent contractor, whether B[Redacted] or R[Redacted]. was his Employer liable for his March 9, 2021 industrial injuries.

FINDINGS OF FACT

1. Claimant asserts that he was injured on March 9, 2021 working at a construction site located at 4343 South Picadilly Street in Aurora, Colorado. The work site was referred to as the "Capitalist" project.

2. R[Redacted] was hired by general contractor C[Redacted], to coordinate the framing and siding of a multifamily housing and apartment building at the Capitalist site. Rick Rosenkranz worked for C[Redacted] and was the superintendent on the Capitalist project. As the project coordinator, R[Redacted] hired subcontractors for every part of the building's construction because its employees do not perform any physical labor. R[Redacted] carries Workers' Compensation insurance for its employees through Pinnacol Assurance.

3. President of R[Redacted] Francisco Javier D[Redacted] testified that subcontractors B[Redacted] and L[Redacted] worked for R[Redacted] on the Capitalist project. Mr. D[Redacted] specified that R[Redacted] hired B[Redacted] to provide labor, materials, and perform construction carpentry work on the 4343 Piccadilly job site. R[Redacted] used L[Redacted] for the exterior siding work. He noted that sometimes R[Redacted] needs to use more than one subcontractor to build the structure. In those cases, R[Redacted] uses Otra Ves and Garcias Construction in addition to B[Redacted] to complete the structure. Mr. D[Redacted] commented that there were 20-30 workers on the Capitalist project from B[Redacted] and/or L[Redacted] and they were paid by their respective companies.

4. B[Redacted] is a subcontractor in the business of framing, siding and general carpentry. The company carries Workers' Compensation insurance for its employees through National Liability & Fire Insurance. B[Redacted] executes agreements with subcontractors for framing, siding and carpentry projects.

5. The record reveals that B[Redacted] executed Subcontractor Agreements with some workers during March-May, 2020. The Agreements specify that individuals would “furnish nails and/or staples and/or house wrap” to perform carpentry work according to plans and specifications to the satisfaction of B[Redacted] for all projects. The Subcontractor Agreements specified that individuals were not required to work exclusively for B[Redacted], did not establish a quality standard for the work performed and workers would be paid at a fixed or contract rate instead of a salary or hourly rate. Furthermore, B[Redacted] could not terminate the work during the contract period unless the individual violated or did not produce work within the specifications of the Agreement. The company would provide only minimal training, would not supply tools and would not dictate the time of performance or combine its business with the business of the worker. Despite the presence of several Subcontractor Agreements in the record, there is none specifically for Claimant.

6. Mr. D[Redacted] detailed that R[Redacted] hired B[Redacted] as a subcontractor for the Capitalist project to perform carpentry work. He commented that B[Redacted] provided laborers for the interior work of structures including walls, floors and ceilings. Mr. D[Redacted] remarked that R[Redacted] contracted with B[Redacted] and set project prices based on the square footage of the buildings. B[Redacted] then handled payment of its workers. Mr. D[Redacted] noted that B[Redacted] is not required to work exclusively for R[Redacted].

7. On January 29, 2020 and April 7, 2021 R[Redacted] and B[Redacted] executed Independent Contractor Agreements. Mr. D[Redacted] and President of B[Redacted] Donald S[Redacted] signed the Agreements. The Agreements specify that B[Redacted] would provide services on projects for a term of one year. Claimant’s accident at the Capitalist project occurred between the dates of the Agreements on March 9, 2021. Nevertheless, the record reveals that R[Redacted] and B[Redacted] effectively operated pursuant to the Agreements on the Capitalist project. Furthermore, the Agreements are consistent with the testimony of Mr. D[Redacted] regarding the business relationship of the parties.

8. The Independent Contractor Agreements specified that R[Redacted] would pay B[Redacted] in exchange for carpentry services performed on projects. The services specifically included labor, tools, insurance, taxes, meals, lodging, overtime, profit and overhead. The Agreements also expressly noted that B[Redacted] would provide all tools, equipment and materials for the projects. The Independent Contractor Agreements also required B[Redacted] to carry and furnish Workers’ Compensation and general liability insurance. Finally, the Agreements noted that B[Redacted] was an independent contractor and not an employee of R[Redacted].

9. R[Redacted] requires all of its subcontractors to possess their own general liability and Workers’ Compensation insurance policies. R[Redacted] is the certificate holder for B[Redacted]’ certificates of insurance on projects. B[Redacted]’ Certificate of Insurance states it is a carpentry business. B[Redacted] also submitted the insurance

documents to general contractor C[Redacted] as required of subcontractors on the jobsite at 4343 South Picadilly Street in Aurora, Colorado.

10. Carlos T[Redacted] was R[Redacted]'s Capitalist project site foreman overseeing the work performed by B[Redacted] and L[Redacted]. In March of 2021 Claimant was working full-time as a carpenter at the Capitalist project. His regular hours were from 7:00 a.m. to 5:00 p.m. Monday through Friday and from 7:00 a.m. until 12:00 p.m. on Saturday. Claimant worked closely with Rogelio RL[Redacted] on the construction site. Both he and Mr. RL[Redacted] would report to Mr. T[Redacted] at 7:00 a.m. to receive work assignments. Claimant remarked that he checked in with Mr. T[Redacted] in the morning and checked out with him after finishing work each day.

11. Mr. T[Redacted]' job duties and actual job performance did not involve supervision of the B[Redacted] workers. Although Mr. T[Redacted] was in charge of the subcontractors at the job site, R[Redacted] had no authority or control over Claimant or the other subcontracted workers. R[Redacted] could only provide Claimant the plans for the jobsite. R[Redacted] could not hire or fire Claimant, did not train Claimant or tell him how to do the work, did not control Claimant's wages or pay him and did not set Claimant's schedule.

12. At the time of the March 9, 2021 accident Claimant had worked on the Capitalist project for about nine months. Claimant commented that he was hired by Mr. T[Redacted]. Mr. T[Redacted] explained that Claimant would earn $21.00 per hour for his work on the project. Mr. RL[Redacted] was also paid by the hour for his work on the Capitalist project. Both he and Claimant reported daily hours worked on the project at the end of their shifts to Mr. T[Redacted].

13. On March 9, 2021 Claimant and Mr. RL[Redacted] arrived at the Capitalist job site at 7:00 a.m. and met with Mr. T[Redacted] to obtain their job assignments. Mr. T[Redacted] sent the men to work in a specific building and both proceeded to the structure. At about 7:30 a.m. Claimant fell on ice located at the entrance to the building. Claimant remarked that five other individuals, including Mr. T[Redacted], also fell on the ice. Claimant immediately experienced pain and symptoms in his back, neck and left leg as a result of the fall.

14. Claimant reported his injury to Mr. T[Redacted] and noted that was unable to work. However, Claimant commented that Mr. T[Redacted] required him to stay at the site. Mr. T[Redacted] then referred Claimant to a massage therapist for treatment. Nevertheless, Claimant chose to pursue chiropractic treatment for his injuries.

15. Claimant emphasized that he was not permitted to set his own hours and was not paid by the project. He never claimed the status of an independent contractor or worked for others while completing the Capitalist project. Claimant noted that tools and supplies were available at the job site. He only brought a saw and nail gun to the project. Claimant received weekly checks from B[Redacted] that were distributed by Mr. T[Redacted].

16. Claimant did not receive a paycheck from R[Redacted]. Every paycheck he received while working on the Capitalist project for his nine-month period was made out to him personally and issued by B[Redacted]. Claimant also never received cash for his services on the Capitalist project. Mr. T[Redacted] handed Claimant a paycheck once each week. Claimant also did not pay any other workers out of the checks he received. Finally, Claimant was not reimbursed for any costs and/or expenses on the project.

17. Claimant considers his normal and customary occupation to be a construction worker. During the nine-month period Claimant performed work on the Capitalist project he did not work elsewhere. Moreover, Claimant never held himself out as an independent contractor performing carpentry work or other services. Claimant emphasized he was an employee and not an independent contractor while performing carpentry work on the Capitalist job site.

18. Claimant brought hand tools for his personal use to 4343 South Picadilly Street in Aurora, Colorado. However, the tools merely consisted of a nail gun and a saw. Mr. T[Redacted] would lend Claimant and any other workers larger tools and other equipment they required. Many of the tools were located in a large four foot by three foot tool box on the site that was maintained and controlled by Mr. T[Redacted]. Furthermore, materials that Claimant needed to perform carpentry work were provided at the job site.

19. Mr. T[Redacted] provided Claimant with a yellow safety vest to wear while working on the Capitalist construction site. The vest had R[Redacted]'s name on it, but Claimant did not receive a uniform or any other personal protective equipment for use on the Capitalist job site. The general contractor encouraged Claimant and all workers to wear safety vests.

20. On March 17, 2021 Claimant presented to Michael Sanders, D.C. with complaints of constant lower back and neck pain after his "slip and fall on the ice" that was affecting his construction work duties. Dr. Sanders diagnosed Claimant with segmental and somatic dysfunction of his cervical, thoracic, lumbar and sacral regions. Claimant received chiropractic adjustments to the affected body parts. Dr. Sanders provided adjustments to Claimant on March 18, 19, 20, 23, 25, 26, and 30, 2021.

21. On May 7, 2021 Claimant visited Paul Ogden, M.D. at Workwell Occupational Medicine and reported constant neck, back and left leg pain. Dr. Ogden diagnosed him with cervical, thoracic and lumbar strains and limited his work to lifting, pushing or pulling no greater than 20 pounds. He referred Claimant to physical therapy. Based on his reported history of slipping and falling on ice while walking on the job site, Dr. Ogden noted the symptoms appeared to be work-related. Dr. Ogden also determined that Claimant's objective findings were consistent with a work-related mechanism of injury.

22. On May 13, 2021 Claimant returned to Dr. Ogden for an evaluation. Claimant appeared to be "markedly worse" and reported pain in his neck that radiated into his left upper extremity as well as his posterior left leg. Work restrictions remained unchanged. Dr. Ogden recommended MRIs of Claimant's cervical and lumbar spine. He

also referred Claimant for a psychological evaluation and treatment if necessary. However, the recommended treatment never occurred because it was not authorized.

23. On August 27, 2021 Claimant underwent an independent medical examination with Ranee Shenoi, M.D. Claimant reported that he was injured while working at a construction site on March 9, 2021. He commented that he was walking with his tools and slipped on ice while approaching a building at the site. He specifically noted he did not see the ice and touched the ground with his buttocks when he slipped. Claimant detailed that "his head hit the floor and his helmet went flying when it touched the ground." When Claimant attempted to stand up after the fall he felt pain in his back, neck and left leg. Claimant reported that five others fell on the ice while approaching the building.

24. Based upon Claimant's mechanism of injury, a review of his medical records and a physical examination, Dr. Shenoi determined that Claimant sustained both cervical and lumbar spine strains/sprains. The symptoms were associated with left L4-5 radiculitis or radiculopathy from nerve irritation as a result of his fall on March 9, 2021. Dr. Shenoi noted that Claimant had not reached Maximum Medical Improvement (MMI) and determined that further conservative care was necessary for Claimant's cervical and lumbar spine injuries. She also referred Claimant to a neurologist for evaluation of possible post-concussive disorder as well as headache management. Finally, Dr. Shenoi suggested a psychological evaluation for Claimant's reactive issues and/or mood disorder.

25. Claimant has demonstrated that it is more probably true than not that he suffered compensable injuries during the course and scope of his employment on March 9, 2021 while working at the Capitalist construction site located at 4343 South Picadilly Street in Aurora, Colorado. Initially, on March 9, 2021 Claimant arrived at the Capitalist job site at 7:00 a.m. and met with Mr. T[Redacted] to obtain his job assignment. As Claimant proceeded to his assigned location, he fell on ice located at the entrance to the building. Claimant credibly testified that he immediately experienced pain in his back, neck and left leg as a result of the fall. On March 17, 2021 Claimant presented to chiropractor Dr. Sanders with complaints of constant lower back and neck pain after his "slip and fall on the ice." Dr. Sanders diagnosed Claimant with segmental and somatic dysfunction of his cervical, thoracic, lumbar and sacral regions. Claimant subsequently underwent chiropractic adjustments with Dr. Sanders on March 18, 19, 20, 23, 25, 26, and 30, 2021.

26. On May 7, 2021 Claimant visited Dr. Ogden at Workwell and reported constant neck, back and left leg pain. Dr. Ogden diagnosed Claimant with cervical, thoracic and lumbar strains and limited his work to lifting, pushing or pulling no greater than 20 pounds. Based on Claimant's reported history of slipping and falling on ice while walking at a job site, Dr. Ogden noted the symptoms appeared to be work-related. Dr. Ogden also persuasively determined that Claimant's objective findings were consistent with a work-related mechanism of injury. Furthermore, in an August 27, 2021 independent medical examination with Dr. Shenoi, Claimant again reported that he slipped on ice while approaching a building at a job site. Based on Claimant's mechanism of injury, a review

of his medical records and a physical examination, Dr. Shenoi persuasively determined that Claimant sustained both cervical and lumbar spine strains/sprains. The symptoms were associated with left L4-5 radiculitis or radiculopathy from nerve irritation as a result of his fall on March 9, 2021.

27. Based on Claimant’s credible testimony, the consistent accounts in the medical records and the persuasive opinions of Drs. Ogden and Shenoi, Claimant suffered compensable industrial injuries while working on the Capitalist project on March 9, 2021. The record reveals that Claimant consistently reported he slipped on ice while approaching a building on the Capitalist job site and immediately suffered symptoms in his back, neck and left leg. Drs. Ogden and Shenoi persuasively concluded that Claimant’s injuries were consistent with his described mechanism of injury on March 9, 2021. Claimant’s work activities thus aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. Accordingly, Claimant suffered compensable industrial injuries to his neck and back with radiating symptoms into his left leg during the course and scope of his work activities at the Capitalist project on March 9, 2021.

28. Claimant was not an independent contractor while working at the Capitalist project on March 9, 2021. The record reveals that Claimant was not engaged in an independent trade, occupation, profession or business and not free from control and direction in the performance of his services at the Capitalist job site. Specifically, Claimant’s actual working relationship while performing duties on the Capitalist project reflects that he was not an independent contractor. Accordingly, Claimant was an employee when he suffered compensable injuries on March 9, 2021.

29. Initially, the record reveals that B[Redacted] executed Subcontractor Agreements with some workers during March-May, 2020. The Agreements specify that individuals would “furnish nails and/or staples and/or house wrap” to perform carpentry work according to plans and specifications to the satisfaction of B[Redacted] for all projects. Despite the presence of several Subcontractor Agreements in the record, there is none for Claimant. Therefore, there is no rebuttable presumption of an independent contractor relationship between Claimant and B[Redacted].

30. In March of 2021 Claimant was working full-time as a carpenter at the Capitalist project. His regular hours were from 7:00 a.m. to 5:00 p.m. Monday through Friday and from 7:00 a.m. until 12:00 p.m. on Saturday. Claimant would report to Mr. T[Redacted] at 7:00 a.m. to receive work assignments. He checked in with Mr. T[Redacted] in the morning and checked out with him after finishing work each day.

31. Claimant considers his normal and customary occupation to be a construction worker. At the time of the March 9, 2021 accident Claimant had worked on the Capitalist project for about nine months. Claimant earned $21.00 per hour and reported his daily hours to Mr. T[Redacted] at the end of each shift. Claimant emphasized that he was not permitted to set his own hours and was not paid by the project. He never claimed the status of an independent contractor or worked for others while completing the

Capitalist project. Claimant noted that tools and supplies were available at the job site. He received weekly checks made out to him personally from B[Redacted] that were distributed by Mr. T[Redacted].

32. Claimant brought hand tools for his personal use to 4343 South Picadilly Street in Aurora, Colorado. However, the tools merely consisted of a nail gun and a saw. Mr. T[Redacted] would lend Claimant and any other workers larger tools and other equipment they required. Many of the tools were in a large four foot by three foot tool box located on site that was maintained and controlled by Mr. T[Redacted]. Furthermore, materials that Claimant needed to perform carpentry work were provided at the job site.

33. Claimant did not receive a paycheck from R[Redacted]. Every paycheck he received while working on the Capitalist project over a nine-month period was made out to him personally and issued by B[Redacted]. Claimant also never received cash for his services. He did not pay any other workers out of the checks he received from B[Redacted]. Finally, Claimant was not reimbursed for any costs and/or expenses on the project.

34. Considering the totality of the circumstances and the nature of Claimant's working relationship at the Capitalist job site reveals that he was not an independent contractor. Claimant did not operate a separate business in the field. Specifically, Claimant did not have an independent business card, listing, address or telephone contact. He also did not have a financial investment so that there was a risk of suffering a loss on the Capitalist project. Claimant only provided hand tools and thus did not supply his own materials or equipment on the project. Furthermore, Claimant did not set the price for performing the work, did not employ others to complete the project and did not carry liability insurance. Accordingly, Claimant was an employee when he suffered compensable injuries while working at a construction site located at 4343 South Picadilly Street in Aurora, Colorado on March 9, 2021.

35. The record reflects that B[Redacted] was Claimant's Employer liable for his March 9, 2021 industrial injuries. General contractor C[Redacted] hired R[Redacted] to coordinate the framing and siding of a multifamily housing and apartment building at the Capitalist site. As the project coordinator, R[Redacted] hired B[Redacted] and other specialty subcontractors to perform this work. Mr. D[Redacted] credibly detailed that R[Redacted] specifically hired B[Redacted] to provide laborers for the interior work of structures including walls, floors and ceilings. Mr. D[Redacted] remarked that R[Redacted] contracted with B[Redacted] and set project prices based on the square footage of the buildings. B[Redacted] then handled payment of its workers.

36. On January 29, 2020 and April 7, 2021 R[Redacted] and B[Redacted] executed Independent Contractor Agreements. The Agreements specified that B[Redacted] would provide services on projects for a term of one year. Claimant's accident at the Capitalist project occurred between the dates of the Agreements on March 9, 2021. Nevertheless, the record reveals that R[Redacted] and B[Redacted] effectively operated pursuant to the Agreements on the Capitalist project. Furthermore, the

Agreements are consistent with the testimony of Mr. D[Redacted] regarding the business relationship of the parties. The Independent Contractor Agreements specified that R[Redacted] would pay B[Redacted] in exchange for carpentry services performed on projects. The services specifically included labor, tools, insurance, taxes, meals, lodging, overtime, profit and overhead. The Agreements also expressly noted that B[Redacted] would be responsible for all tools, equipment and materials on projects. Finally, Claimant was not paid by R[Redacted] but received a monthly paycheck from B[Redacted] made out to him personally for his duration of work on the Capitalist project.

37. R[Redacted] required all of its subcontractors to possess their own general liability and Workers' Compensation insurance policies. Specifically, R[Redacted] is the certificate holder for B[Redacted]' certificates of insurance. B[Redacted] also submitted the insurance documents to general contractor C[Redacted] as required of subcontractors on the jobsite at 4343 South Picadilly Street in Aurora, Colorado.

38. The preceding evidence demonstrates that Claimant was an employee of B[Redacted] and was not employed by R[Redacted]. The credible testimony of Mr. D[Redacted] in conjunction with the documentary evidence in the record reveals that B[Redacted] was an insured subcontractor of R[Redacted] performing interior carpentry services on the Capitalist project. B[Redacted] specifically provided labor, tools and materials to complete the work. Because B[Redacted] had its own Workers' Compensation insurance policy through National liability & Fire Insurance, Claimant cannot reach "upstream" to impose liability on R[Redacted] as the statutory employer. Accordingly, B[Redacted] was Claimant's Employer who is liable for his March 9, 2021 industrial injuries while working on the Capitalist project.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. The provision of medical care based on a claimant’s report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician

provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms. It does not follow that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *cf. Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment on March 9, 2021 while working at the Capitalist construction site located at 4343 South Picadilly Street in Aurora, Colorado. Initially, on March 9, 2021 Claimant arrived at the Capitalist job site at 7:00 a.m. and met with Mr. T[Redacted] to obtain his job assignment. As Claimant proceeded to his assigned location, he fell on ice located at the entrance to the building. Claimant credibly testified that he immediately experienced pain in his back, neck and left leg as a result of the fall. On March 17, 2021 Claimant presented to chiropractor Dr. Sanders with complaints of constant lower back and neck pain after his "slip and fall on the ice." Dr. Sanders diagnosed Claimant with segmental and somatic dysfunction of his cervical, thoracic, lumbar and sacral regions. Claimant subsequently underwent chiropractic adjustments with Dr. Sanders on March 18, 19, 20, 23, 25, 26, and 30, 2021.

9. As found, on May 7, 2021 Claimant visited Dr. Ogden at Workwell and reported constant neck, back and left leg pain. Dr. Ogden diagnosed Claimant with cervical, thoracic and lumbar strains and limited his work to lifting, pushing or pulling no greater than 20 pounds. Based on Claimant's reported history of slipping and falling on ice while walking at a job site, Dr. Ogden noted the symptoms appeared to be work-related. Dr. Ogden also persuasively determined that Claimant's objective findings were consistent with a work-related mechanism of injury. Furthermore, in an August 27, 2021 independent medical examination with Dr. Shenoi, Claimant again reported that he slipped on ice while approaching a building at a job site. Based on Claimant's mechanism of injury, a review of his medical records and a physical examination, Dr. Shenoi persuasively determined that Claimant sustained both cervical and lumbar spine strains/sprains. The symptoms were associated with left L4-5 radiculitis or radiculopathy from nerve irritation as a result of his fall on March 9, 2021.

10. As found, based on Claimant's credible testimony, the consistent accounts in the medical records and the persuasive opinions of Drs. Ogden and Shenoi, Claimant suffered compensable industrial injuries while working on the Capitalist project on March 9, 2021. The record reveals that Claimant consistently reported he slipped on ice while approaching a building on the Capitalist job site and immediately suffered symptoms in his back, neck and left leg. Drs. Ogden and Shenoi persuasively concluded that

Claimant's injuries were consistent with his described mechanism of injury on March 9, 2021. Claimant's work activities thus aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. Accordingly, Claimant suffered compensable industrial injuries to his neck and back with radiating symptoms into his left leg during the course and scope of his work activities at the Capitalist project on March 9, 2021.

Independent Contractor

11. Pursuant to §8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the services, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent . . . business related to the service performed." Moreover, pursuant to §8-40-202(2)(b)(I), C.R.S. independence may be demonstrated through a written document.

12. A necessary element to establish that an individual is an independent contractor is that the individual is customarily engaged in an independent trade, occupation, profession or business related to the services performed. *Allen v. America's Best Carpet Cleaning Services,* W.C. No. 4-776-542 (ICAO, Dec. 1, 2009). The statutory requirement that the worker must be "customarily engaged" in an independent trade or business is designed to assure that the worker, whose income is almost wholly dependent upon continued employment with a single employer, is protected from the "vagaries of involuntary unemployment." *In Re Hamilton,* W.C. No. 4-790-767 (ICAO, Jan. 25, 2011).

13. The "employer" may also establish that the worker is an independent contractor by proving the presence of some or all of the nine criteria enumerated in §8-40-202(2)(b)(II), C.R.S. *See Nelson v. ICAO,* 981 P.2d 210, 212 (Colo. App. 1998). The factors in §8-40-202(2)(b)(II), C.R.S. suggesting that a person is not an independent contractor include whether the person is paid a salary or hourly wage rather than a fixed contract rate and is paid individually rather than under a trade or business name. Conversely, independence may be shown if the "employer" provides only minimal training for the worker, does not dictate the time of performance, does not establish a quality standard for the work performed, does not combine its business with the business of the worker, does not require the worker to work exclusively for a single entity, does not provide tools or benefits except materials and equipment, and is unable to terminate the worker's employment without liability. *In Re of Salgado-Nunez,* W.C. No. 4-632-020 (ICAO, June 23, 2006). Section 8-40-202(b)(II), C.R.S. creates a "balancing test" to ascertain whether an "employer" has overcome the presumption of employment in §8-40-202(2)(a), C.R.S. The question of whether the "employer" has presented sufficient proof to overcome the presumption is one of fact for the Judge. *Id.*

14. Section 8-40-202(2)(b)(IV), C.R.S. provides that If the parties use a written document specifying the existence of the nine factors referenced in §8-40-202 (2)(b)(II), C.R.S. the document can create a rebuttable presumption of an independent contractor relationship. The document must advise in larger or bold type that the individual is not

entitled to Workers' Compensation benefits and must pay his own federal and state income tax on any moneys earned.

15. In *Industrial Claim Appeals Office v. Softrock Geological Services*, 325 P.3d 560 (Colo. 2014), the Colorado Supreme Court expanded the analysis for determining whether a worker is an employee or an independent contractor beyond the factors enumerated in §8-70-115(1)(c), C.R.S. The *Softrock* decision addressed the evidence necessary to establish that a worker is customarily engaged in an independent trade or business in the context of unemployment insurance benefits. The Court reasoned that the nine factors listed both in §8-70-115(1)(c) and (2), C.R.S. (involving unemployment benefits) and §8-40-202(2)(a) and (b), C.R.S. (pertaining to Workers' Compensation), were relevant to the assessment of the maintenance of an independent business. However, the Court also determined none of the preceding criteria, by themselves, were exhaustive of the inquiry. The Court noted that the status of the claimant must include consideration of the totality of the circumstances and examination of "the nature of the working relationship." *Id*. at 565. The decision pointed to indicia that would normally accompany the performance of an ongoing separate business in the field. Considerations included whether the worker used an independent business card, listing, address, or telephone; had a financial investment such that there was a risk of suffering a loss on the project; used his or her own equipment on the project; set the price for performing the project; employed others to complete the project; and carried liability insurance. *Id*.

16. The question whether *Softrock* applied in the Workers' Compensation context was open until the court of appeals decision in *Pella Windows & Doors, Inc. v. Industrial Claim Appeals Office*, 458 P.3d 128 (Colo. App. Div. 2 2020). In *Pella Windows* the court concluded that the factors articulated in *Softrock* also apply to Workers' Compensation cases. *See Id.* at 136 ("We therefore conclude that the [p]anel did not err when it determined that [the administrative law judge] . . . should have considered the *Softrock* factors in weighing whether claimant's business was independent of Pella.").

17. As found, Claimant was not an independent contractor while working at the Capitalist project on March 9, 2021. The record reveals that Claimant was not engaged in an independent trade, occupation, profession or business and not free from control and direction in the performance of his services at the Capitalist job site. Specifically, Claimant's actual working relationship while performing duties on the Capitalist project reflects that he was not an independent contractor. Accordingly, Claimant was an employee when he suffered compensable injuries on March 9, 2021.

18. As found, initially, the record reveals that B[Redacted] executed Subcontractor Agreements with some workers during March-May, 2020. The Agreements specify that individuals would "furnish nails and/or staples and/or house wrap" to perform carpentry work according to plans and specifications to the satisfaction of B[Redacted] for all projects. Despite the presence of several Subcontractor Agreements in the record, there is none for Claimant. Therefore, there is no rebuttable presumption of an independent contractor relationship between Claimant and B[Redacted].

19. As found, in March of 2021 Claimant was working full-time as a carpenter at the Capitalist project. His regular hours were from 7:00 a.m. to 5:00 p.m. Monday through Friday and from 7:00 a.m. until 12:00 p.m. on Saturday. Claimant would report to Mr. T[Redacted] at 7:00 a.m. to receive work assignments. He checked in with Mr. T[Redacted] in the morning and checked out with him after finishing work each day.

20. As found, Claimant considers his normal and customary occupation to be a construction worker. At the time of the March 9, 2021 accident Claimant had worked on the Capitalist project for about nine months. Claimant earned $21.00 per hour and reported his daily hours to Mr. T[Redacted] at the end of each shift. Claimant emphasized that he was not permitted to set his own hours and was not paid by the project. He never claimed the status of an independent contractor or worked for others while completing the Capitalist project. Claimant noted that tools and supplies were available at the job site. He received weekly checks made out to him personally from B[Redacted] that were distributed by Mr. T[Redacted].

21. As found, Claimant brought hand tools for his personal use to 4343 South Picadilly Street in Aurora, Colorado. However, the tools merely consisted of a nail gun and a saw. Mr. T[Redacted] would lend Claimant and any other workers larger tools and other equipment they required. Many of the tools were in a large four foot by three foot tool box located on site that was maintained and controlled by Mr. T[Redacted]. Furthermore, materials that Claimant needed to perform carpentry work were provided at the job site.

22. As found, Claimant did not receive a paycheck from R[Redacted]. Every paycheck he received while working on the Capitalist project over a nine-month period was made out to him personally and issued by B[Redacted]. Claimant also never received cash for his services. He did not pay any other workers out of the checks he received from B[Redacted]. Finally, Claimant was not reimbursed for any costs and/or expenses on the project.

23. As found, considering the totality of the circumstances and the nature of Claimant's working relationship at the Capitalist job site reveals that he was not an independent contractor. Claimant did not operate a separate business in the field. Specifically, Claimant did not have an independent business card, listing, address or telephone contact. He also did not have a financial investment so that there was a risk of suffering a loss on the Capitalist project. Claimant only provided hand tools and thus did not supply his own materials or equipment on the project. Furthermore, Claimant did not set the price for performing the work, did not employ others to complete the project and did not carry liability insurance. Accordingly, Claimant was an employee when he suffered compensable injuries while working at a construction site located at 4343 South Picadilly Street in Aurora, Colorado on March 9, 2021.

Liable Employer

24. An employee is a person who "performs services for pay for another." §8-40-202(2)(a), C.R.S. Section 8-41-401(1)(a), C.R.S. creates a statutory employment relationship when a company contracts out part or all of its work to any subcontractor. Under these circumstances, the contracting company "shall be liable" to pay compensation for injuries to employees of subcontractors. The purpose of the statute is to prevent employers from "avoiding responsibility under the workers' compensation act by contracting out their regular business to uninsured independent contractors." *Finlay v. Storage Technology Corp*., 764 P.2d 62 (Colo. 1988); *Trujillo v. United Medical Group*, W.C. No. 4-537-815 (ICAO, Mar. 12, 2004).

25. However, §8-41-401(2), C.R.S. prevents an injured employee from reaching "upstream" to impose liability on another contractor if the subcontractor has procured insurance that covers the injury. *In Re Noyola*, WC 4-969-386 (ICAO, Sept. 19, 2017) *citing Finlay v. Storage Technology Corp.,* 764 P.2d 62 (Colo. 1988). The statutory exemption created by §8-41-401(2), C.R.S., is an affirmative defense to the contracting employer's liability regarding the statutory employer. *Postlewait v. Industrial Claim Appeals Office,* 905 P.2d 21 (Colo.App. 1995); *see Stampados v. Colorado D & S Enterprises, Inc.,* 833 P.2d 815 (1992) (whether claimant is an independent contractor is an affirmative defense on which the employer bears the burden of proof). Nevertheless, in the absence of proof that the subcontractor was also an insured employer, the statutory employer remains solely liable for the work-related injuries of the employees of the subcontractor. *See Buzard v. Super Walls Inc.,* 681 P.2d 520 (Colo. 1984); *City and County of Denver v. Industrial Claim Appeals Office,* 58 P.3d 1162 (Colo. App. 2002). Importantly, in order to obtain the immunity conferred by §8-41-401(2), C.R.S., the statutory employer is obligated to establish not only that the subcontractor purchased a policy of Workers' Compensation insurance, but that the policy covered the claimant at the time of the injury. *In Re Noyola*, WC 4-969-386 (ICAO, Sept. 19, 2017).

26. As found, the record reflects that B[Redacted] was Claimant's Employer liable for his March 9, 2021 industrial injuries. General contractor C[Redacted] hired R[Redacted] to coordinate the framing and siding of a multifamily housing and apartment building at the Capitalist site. As the project coordinator, R[Redacted] hired B[Redacted] and other specialty subcontractors to perform this work. Mr. D[Redacted] credibly detailed that R[Redacted] specifically hired B[Redacted] to provide laborers for the interior work of structures including walls, floors and ceilings. Mr. D[Redacted] remarked that R[Redacted] contracted with B[Redacted] and set project prices based on the square footage of the buildings. B[Redacted] then handled payment of its workers.

27. As found, on January 29, 2020 and April 7, 2021 R[Redacted] and B[Redacted] executed Independent Contractor Agreements. The Agreements specified that B[Redacted] would provide services on projects for a term of one year. Claimant's accident at the Capitalist project occurred between the dates of the Agreements on March 9, 2021. Nevertheless, the record reveals that R[Redacted] and B[Redacted] effectively operated pursuant to the Agreements on the Capitalist project. Furthermore, the Agreements are consistent with the testimony of Mr. D[Redacted] regarding the business relationship of the parties. The Independent Contractor Agreements specified that

R[Redacted] would pay B[Redacted] in exchange for carpentry services performed on projects. The services specifically included labor, tools, insurance, taxes, meals, lodging, overtime, profit and overhead. The Agreements also expressly noted that B[Redacted] would be responsible for all tools, equipment and materials on projects. Finally, Claimant was not paid by R[Redacted] but received a monthly paycheck from B[Redacted] made out to him personally for his duration of work on the Capitalist project.

28. As found, R[Redacted] required all of its subcontractors to possess their own general liability and Workers' Compensation insurance policies. Specifically, R[Redacted] is the certificate holder for B[Redacted]' certificates of insurance. B[Redacted] also submitted the insurance documents to general contractor C[Redacted] as required of subcontractors on the jobsite at 4343 South Picadilly Street in Aurora, Colorado.

29. As found, the preceding evidence demonstrates that Claimant was an employee of B[Redacted] and was not employed by R[Redacted]. The credible testimony of Mr. D[Redacted] in conjunction with the documentary evidence in the record reveals that B[Redacted] was an insured subcontractor of R[Redacted] performing interior carpentry services on the Capitalist project. B[Redacted] specifically provided labor, tools and materials to complete the work. Because B[Redacted] had its own Workers' Compensation insurance policy through National liability & Fire Insurance, Claimant cannot reach "upstream" to impose liability on R[Redacted] as the statutory employer. Accordingly, B[Redacted] was Claimant's Employer who is liable for his March 9, 2021 industrial injuries while working on the Capitalist project.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered compensable injuries to his neck and back with radiating symptoms into his left leg during the course and scope of his employment on March 9, 2021 while working at the Capitalist construction site located at 4343 South Picadilly Street in Aurora, Colorado.

2. Claimant was not an independent contractor when he was injured on March 9, 2021.

3. B[Redacted] was Claimant's Employer and is liable for his March 9, 2021 industrial injuries while working on the Capitalist project.

4. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-126-991-001

ISSUES

I. Whether the occupational therapy (OT) ordered by Dr. Pulikkottil is reasonable, necessary, and related to Claimant's work-related injury.

II. Whether the scalene muscle block, pectoralis minor muscle block, carotid bilateral duplex, and brain MRI without contrast ordered by Dr. Annest are reasonable, necessary, and related to Claimant's work-related injury.

III. Whether the trigger point injections, greater occipital nerve block, and transforaminal epidural steroid injections at C7-T1 ordered by Dr. Burke are reasonable, necessary, and related to Claimant's work-related injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. In July 2019, Claimant was employed by [Employer's name Redacted] (Employer) as a field locator. (Hr'g Tr. p. 14).
2. Claimant's job duties included locating and marking underground utilities, mapping the utility locations, and providing the mapped utility location to the surveyors. (Hr'g Tr. p. 14).
3. The Employer has employees in Colorado and Montana. (Hr'g Tr. p. 17).
4. On December 19, 2019, Claimant was scheduled by Employer to drive the company's Ford F-150 pickup from Brighton, Colorado to Buffalo, Wyoming. An employee from the Montana office was to drive a company van from Montana to meet Claimant in Buffalo, Wyoming, where the van would be exchanged for the company's Ford F-150 pickup. Claimant would then drive the van back to Brighton, Colorado. (Hr'g Tr. p. 14-15).
5. About halfway between Casper and Buffalo, Wyoming, an animal ran onto North bound I-25 in front of Claimant. (Hr'g Tr. P. 15). Claimant was driving at interstate speeds. (Cl. Ex. 4, p. 20). Claimant swerved to miss the animal, but lost control of the truck and it rolled down an embankment. (Hr'g Tr. p. 15).
6. It was estimated that the truck rolled somewhere between 3 and 7 times before it came to rest on the roof. (Cl. Ex. 10, p. 222); (Hr'g Tr. p. 17-18).
7. Claimant testified, "I remember the first time when I saw dirt against the window, and my head hit it and shattered it. I remember the second time my arm flew out, and I

grabbed my arm with my right hand to try to pull it back in. And it was crushed between the top of the truck in the ground. I remember the third . . .. The last thing I remember I woke upside down on the feeder road." (Hr'g Tr. p. 17-18).

8. As a result of the high-speed rollover accident, Claimant suffered a severe degloving injury from her left elbow to the knuckles of her left arm; a torn rotator cuff; a broken first rib, which is impinging on the brachial plexus; two herniated disks in her neck; a traumatic brain injury; and possible TIAs. (Hr'g Tr. p. 15-16).

9. The degloving injury resulted in muscle and tendons being torn from Claimant's left arm. (Hr'g Tr. p. 16).

10. Claimant was transported to Wyoming Medical Center by Life Flight with severe trauma. (Cl. Ex. 4, p. 24). Claimant underwent several diagnostic imaging studies including a CT scan of her head which revealed a contusion with petechial hemorrhage at the median aspect of the left cerebral hemisphere. (Cl. Ex. 4, p. 27). Claimant was intubated and placed in ICU. (Cl. Ex. 4, p. 23).

11. Claimant was also diagnosed with a concussion, degloving injury of the left arm down to the tendons and nerves, extensor tendon laceration of the left wrist with open wound, left radial fracture, and a left ulnar fracture, (Cl. Ex. 4, p. 25, 27).

12. Claimant underwent several reconstructive procedures in Wyoming for fixation of her radius and ulna fracture, as well as skin and soft tissue reconstruction for the degloving injury of her left arm. (Cl. Ex. 5, p. 29).

13. Joseph Pulikkottil, M.D., is the primary surgeon who treated Claimant's degloving injury after she returned to Colorado. (Cl. Ex. 5, p. 29). Dr. Pulikkottil performed several procedures and skin grafts to her left upper extremity, including: an open reduction and internal fixation (ORIF); application of Integra (skin graft), closed manipulation of left hand, internal neurolysis of femoral nerve with repair of femoral nerve, laser scar revisions, and adipofascial ALT free flap. (Hr'g Tr. p. 24-25); (Cl. Ex. 5, p. 138).

Dr. Pulikkottil's Request for 6 Occupational Therapy Visits.

14. Claimant has received significant occupational therapy pursuant to Dr. Pulikkottil's orders and is making functional gains. (Hr'g Tr. p. 28). At her occupational therapy appointments, the therapist would apply heat to loosen the joints, manipulate the joints in both hands, measure her range of motion, teach Claimant home exercises, and adjust Claimant's arm splints. However, due to her injuries, Claimant cannot manipulate the joints in her hands or adjust the splints independently without the aid of the occupational therapist. (Hr'g Tr. p. 25-26; Cl. Ex. 23).

15. Claimant uses about eleven different arm splints, each has a different purpose, to assist her with increasing the function of her severely injured left upper extremity. (Hr'g Tr. p. 26-20; Cl. Ex. 23).

16. Because of her severe left upper extremity injury, Claimant has undergone a significant amount of occupational therapy. Such therapy has, however, provided Claimant functional gains in the form of increased range of motion and strength in her left hand.

17. On June 30, 2021, Claimant was reevaluated by Dr. Pulikkottil. At this appointment, Claimant presented for a post-operative follow up appointment for her October, November, and December 2020 procedures. It was noted that Claimant stated that she has continued using the stat-a-dyne splint and is seeing a hand therapist "which the patient has noticed significant improvement with." Cl. Ex. 5, p. 141) After examining Claimant, Dr. Pulikkottil concluded:

> I discussed the situation with the patient. At this time upon evaluation and examination of the patient's condition, the patient demonstrates significant improvement with OT for hand therapy as well as utilization of stat-a-dyne and will continue to make improvement at this rate. I strongly recommend the patient continue formal hand therapy and use of stat-a-dyne.

Cl. Ex. 5, p. 143)

On July 15, 2021, and based on Dr. Pulikkottil's recommendations for formal hand therapy, Amy Nguyen, P.A., under the supervision of Dr. Pulikkottil, requested 12 occupational therapy visits over a six-week period. (Cl. Ex. 5, p. 145).

18. In response to the request for 12 additional occupational therapy visits, the Insurer requested a peer review to determine medical necessity and certification. The peer reviewer, Mahdy Flores, D.O., Level 1 Accredited, stated that:

> Although, claimant has undergone multiple rounds of OT, this is a claimant who has undergone extensive surgery and has had objective improvement with past OT and recently underwent laser treatment for scar management, so continued OT is warranted, but the request is excessive. Modify to OT 1 x 6 left hand only.
>
> (Cl. Ex. 3, p. 19).

19. Peer-reviewer Flores specifically listed 14 procedures that were performed on Claimant's left upper extremity, which included a surgery in December 2020 and a scar revision procedure in July 2021. (Cl. Ex. 3, p. 18). Dr. Flores did not, however, persuasively and in sufficient detail, set forth the basis of her opinion that only 6 more visits were reasonable and necessary – but yet 6 were not.

20. Dr. Sander Orent, who was qualified as an expert in internal medicine and is Level II Accredited, reviewed the matter. After reviewing Dr. Flores' modified approval of the occupational therapy visits, Dr. Orent could not determine the basis for the peer reviewer's modified approval. Dr. Orent testified, "There is no rationale here other than the fact that doctors say that the continued OT is warranted, but the request is excessive." The peer review does not provide a reasonable reason as to why he thinks 6 additional OT visits are excessive. (Cl. Ex. 3, p. 19). Moreover, Dr. Flores never

spoke with the physician that ordered the OT to discuss the basis for the additional OT. (Cl. Ex. 3, p. 19).

21. As testified to by Dr. Orent, Claimant recently had surgery to her hand as well as fractional CO2 laser treatment. In addition, Dr. Orent stated that the ordering physician strongly recommended that Claimant continue in therapy. (Hr'g Tr. p. 61).

22. Dr. Orent concluded that after taking one look at Claimant's arm, the occupational therapy requested is more than reasonable. In addition, Dr. Orent also found the OT requested was reasonably necessary and related to treat Claimant from the effects of her work-related high-speed rollover accident. In the end, Dr. Orent concluded that the peer reviewer's failure to provide full approval was absurd. (Hr'g Tr. p. 62).

23. Claimant has made significant functional gains with the OT increasing her grip from 2 pounds to 10 pounds. Claimant would like to have the requested OT so that she has the chance to continue to make functional gains and get her arm back, i.e., increase her function. (Hr'g Tr. p. 31).

24. Based on the medical records, the testimony of Claimant and the opinions of Dr. Orent, the 12 OT therapy treatment sessions are found to be reasonably necessary to treat Claimant from the effects of her work injury.

Dr. Annest's request for scalene muscle blocks, pectoralis minor muscle block, MRI of the brain without contrast, and a carotid artery duplex ultrasound.

25. Claimant was seen by Dr. Griggs for the treatment of her torn rotator cuff. Claimant underwent an MRI on February 16, 2021. The MRI showed an abnormal left brachial plexus at the junction of the first rib. (Cl. Ex., p. 126) Based on the abnormal findings regarding Claimant's left brachial plexus, Dr. Griggs referred Claimant to Dr. Annest to evaluate and treat her brachial plexus injury. (Cl. Ex. 10, p. 221); (Hr'g Tr. p. 17).

26. Claimant's brachial plexus injury produces stabbing pain of 5 out of 10 on a good day and 10 out of 10 on a bad day. Claimant has more bad days than good. (Hr'g Tr. p. 18).

27. Dr. Annest determined that Claimant required surgery of the brachial plexus. (Cl. Ex. 10, p. 218). At the same time, because Claimant hit her head and suffered a TBI and because of the possibility that she was having 'mini strokes,' Dr. Annest requested a carotid bilateral duplex ultrasound, and brain MRI without contrast, as a precautionary measure. Dr. Annest was concerned that Claimant may suffer a stroke during surgery. In the meantime, Dr. Annest ordered a scalene muscle block and pectoralis minor muscle to help Claimant with the pain until the carotid bilateral duplex ultrasound and brain MRI were completed and surgery could commence. (Hr'g Tr. pp. 19, 20.); (Cl. Ex. 10, p. 222)

28. After Dr. Annest requested authorization for the scalene muscle block, pectoralis minor muscle block, carotid bilateral duplex, and brain MRI without contrast, the Insurer obtained a peer review from Siva Ayyar, M.D., who is Level 1 accredited. (Cl. Ex. 1, p. 2). The peer-reviewer issued a report in which he found all of Dr. Annest's requested treatment not reasonably necessary. (Cl. Ex. 1).

Scalene and Pectoralis Muscle Blocks

29. In response to the request for scalene muscle blocks, the May 20, 2021, peer review report referenced the Colorado Treatment Guides treatment recommendations for the diagnosis of acromioclavicular joint sprains and dislocations, as the basis for his opinion that the scalene muscle blocks ordered by Dr. Annest were not medically necessary. (Cl. Ex. 1, p. 3).

30. Although the peer-review concluded that Dr. Annest did not provide a clear compelling rationale for a scalene block, the peer-reviewer did not speak with Dr. Annest about his rationale for the scalene blocks. About two and a half days after the first attempt to reach Dr. Annest, the peer reviewer filed the report not recommending the requested treatment. The peer-reviewer never evaluated Claimant and never spoke to Dr. Annest about the requested treatment and his rationale for the scalene blocks. (Cl. Ex. 1, p. 4).

31. The peer-reviewer stated that Dr. Annest's decision to pursue the scalene block flies "in the face of the unfavorable Colorado position on the same." (Cl. Ex. 1, p. 3). However, the "unfavorable Colorado position" the peer-reviewer incorrectly relies on in his report to withhold certification of the scalene blocks, is based on Colorado medical treatment guides recommendations for acromioclavicular joint sprains and dislocations. As Dr. Orent pointed out at hearing, Dr. Annest's diagnosed Claimant with brachial plexus entrapment not acromioclavicular joint sprains. As a result, the peer reviewer's reliance on the treatment recommendations for acromioclavicular joint sprains and dislocations is improper. Dr. Orent redresses peer reviewer's error by clarifying that Claimant's injury is so unusual and rare it is not addressed in the guidelines. (Hr'g Tr. p. 49).

32. Dr. Orent, who is a level II accredited physician, also pointed out that the peer-reviewer did not provide a reasonable medical reason for not recommending the scalene muscle block. (Hr'g Tr. p. 47-48).

33. The peer-reviewer concluded that the pectoralis minor muscle block is also not medically necessary. The peer-reviewer opined:

> [I]t was unclear as to what is sought. It is unclear what is suspected. The attending provider failed to set forth a clear or compelling rationale or theory of pain referable to pectoralis minor muscle. The attending provider's concomitant request for both pectoralis minor and scalene muscle blocks suggests that the injections in question are, in fact, ordered indiscriminately, without a clear diagnosis in mind.

(Cl. Ex. 1., p. 4).

34. Essentially, the peer-reviewer, without ever evaluating Claimant or speaking to the treating provider, concluded that Dr. Annest is ordering blocks in a way that does not show any care or judgment. That said, the peer-reviewer does not provide a reasonable and persuasive rationale as to why the blocks would not be reasonable to treat Claimant's condition.

35. Contrary to the peer-reviewer's opinion, Dr. Orent testified that the scalene muscle block and pectoralis minor muscle block ordered by Dr. Annest are reasonable. (Cl. Ex. 1, p. 4); (Hr'g Tr. p. 45-46). The muscle blocks will help the surgeon determine whether Claimant's pain is coming from the obstructed brachial plexus or the shoulder. (Hr'g Tr. p. 45-46). Dr. Orent testified that determining the pain generator can be very difficult, however the blocks will assist in the diagnostic challenge and provide Claimant pain relief in the interim while she is awaiting surgery. (Hr'g Tr. p. 46). This is consistent with Dr. Annest's report that states, Claimant "has on MRI impingement by the left first rib of the brachial plexus . . . Part of the reason for her visit to me is to determine contribution of brachial plexus entrapment to her [symptoms]." (Cl. Ex. 10, p. 221).

36. Finally, the peer reviewer's statement that Dr. Annest failed to provide a theory of pain referable to pectoralis minor muscle is incorrect. Dr. Annest's May 3, 2021, medical report documents the pain related to the pectoralis minor muscle, "Pec Minor Eval: Left Forward position causes anterior shoulder pain, retraction causes pain in the supraclavicular fossa." (Cl. Ex. 10, p. 223).

37. Based on the medical records of Dr. Annest, and the opinions of Dr. Orent, the ALJ finds the scalene and pectoralis muscle blocks to be reasonable and necessary to treat Claimant from the effects of her work injury.

MRI of the Brain without Contrast

38. The peer-reviewer also considered Dr. Annest's request for an MRI and recommended non-certification. The peer-review agrees that the Colorado Mild Traumatic Brain Injury Medical Treatment Guidelines acknowledges:

> MRI scans are also useful to assess transient or permanent changes, to determine the etiology of subsequent clinical problems, and to planned treatment,' here, however, it is unclear what is sought. It is unclear what is suspected. It is unclear why a repeat brain MRI was needed so soon after the claimant had reportedly had a prior study in August 2020. There is no record of any acute deterioration or decompensation in the claimant's neurological presentation which would potentially have made a case for the repeat study in question. There is no mention of how (or if) the MRI at issue would influence or alter the treatment plan.

(Cl. Ex. 1, p. 4).

39. Claimant testified that about eight years ago she was diagnosed with a seizure disorder. At that time, her treaters could not identify the cause of the seizures. Claimant was prescribed Depakote and her seizures stopped around four years before the work-related accident in this case. Further, about two years ago Claimant stopped the seizure medication. Claimant has had no seizures for the two years before the work-related high-speed rollover accident. (Hr'g Tr. p. 18).

40. Since the high-speed rollover accident, Claimant testified that she has had about 3 or 4 seizures. (Hr'g Tr. p. 18). Claimant testified that she had one seizure at the primary physician's office, which was witnessed by the nurse case manager; one seizure at

Vibra Rehabilitation Hospital of Denver; and one or two seizures at home. (Hr’g Tr. p. 19).

41. On December 26, 2019, Benson Joseph Pulikkottil, M.D. documented that Claimant “states that she has been having increased number of seizures since her head injury.” (Cl. Ex. 5, p. 29).

42. On February 7, 2020, Claimant was admitted to Vibra Rehabilitation Hospital of Denver for gait and mobility deficits secondary to traumatic brain injury and severe degloving of the left upper extremity. (Cl. Ex. 6, p.153). The Vibra medical record documents that Claimant has a history of seizures and was placed on Keppra. (Cl. Ex. 6, p. 156). It is also noted that Claimant has a traumatic brain injury with post-concussion syndrome and is experiencing headaches. Gareth Shemesh, M.D. requested speech and language, as well as cognitive deficit assessments. (Cl. Ex. 6, p. 157).

43. Dr. Annest’s May 3, 2021, medical report documents that 3 days after the car crash Claimant had left body weakness, which was ongoing for 2 days. Claimant was evaluated and found to have a couple of mini strokes. (Cl. Ex. 10, p. 222).

44. Haley Burke, M.D.’s June 10, 2021, medical report documents “3 episodes of ‘mini strokes’ in the hospital and is now using ASA. Reports transient facial droop and speech difficulty.” It further documents that Claimant was also having headaches since the motor vehicle accident and that she may have 1-4 headaches each week, which may last hours to two and a half days. It also documents that Claimant may also be having sensitivity to light and sound, in addition to nausea. (Cl. Ex. 11, p. 228).

45. Claimant described the symptoms of the seizures/TIAs/mini strokes, as becoming very confused; difficulty speaking; dizziness; and nausea. (Hr’g Tr. p. 22).

46. Although Claimant did have an MRI of her cervical spine on July 30, 2020, Claimant does not recall receiving an MRI, for her brain, at that time. Claimant could only recall the MRI of her neck and brachial plexus. (Hr’g Tr. p. 74-75).

47. Dr. Orent testified that the brachial plexus surgery recommended by Dr. Annest is “a pretty invasive procedure.” Before clearing Claimant for surgery, it is reasonable to request an MRI of the brain giving Claimant’s history of possible strokes and seizures. The surgery that is being recommended is in the area that is vascularized by the structures that carry blood to the brain. Thus, Dr. Orent concluded that it is reasonable to request the MRI of the brain so that the surgeon would know the pathology of the brain, i.e., is Claimant having strokes, is she having seizures, is there an epileptic focus that can be seen on the MRI because of the scar in her brain, before performing the surgery. (Hr’g Tr. p. 41-43).

Carotid Duplex

48. The peer-reviewer referenced the Colorado Mild Traumatic Brain Injury Medical Treatment Guidelines and acknowledged that: “Vascular imaging tests reveal arterial or venous abnormality is in the chest, neck, head, or extremities (e.g., thrombosis, dissection, spasm, emboli, or tearing).” (Cl. Ex. 1, p. 4). However, the peer-reviewer then recommended non-certification of carotid duplex that Dr. Annest ordered. The

peer-reviewer states, “it is unclear what was sought. It is unclear what is suspected. A clear differential diagnosis was not furnished.” (Cl. Ex. 1, p. 4).

49. Dr. Orent testified that a carotid duplex is an ultrasound study of the carotid arteries. The test reveals if there is a thickening of the interlining of the artery which is an early sign of vascular disease; if there is development of atherosclerotic plaque (deposition of cholesterol, clot, fat, and inflammatory tissue); is that hemodynamically significant (is there enough obstruction so that she is at risk for stroke should anything interfere further with an already obstructed carotid artery. Dr. Orent testified that in his expert opinion the test is important, simple, inexpensive, and reasonable to do prior to Claimant’s surgery. Further, Dr. Orent testified the carotid duplex is related to the treatment of Claimant’s work-related injuries. (Hr’g Tr. p. 44-45).

50. Based on the Claimant’s medical records, the credible and persuasive testimony of Claimant and Dr. Orent, combined with Dr. Annest’s medical report, the scalene muscle block, pectoralis minor muscle block, carotid bilateral duplex, and the brain MRI are found to be reasonable and necessary to treat Claimant from the effects of her work injury.

Dr. Burke’s request for trigger point injections, greater occipital nerve block, and transforaminal epidural steroid injections at the C7-T1 level.

51. Dr. Cava referred Claimant to Dr. Burke for Claimant’s neurological complaints. (Hr’g Tr. p. 20); (Cl. Ex. 11, p. 227).

52. On June 10, 2021, Dr. Burke evaluated Claimant and diagnosed her with intractable chronic post-traumatic headaches, cervical radiculitis, neuropathic pain, and poor short-term memory.

53. Claimant describes her headaches as sharp and throbbing to the point that some days she has to sit in a dark room to calm down. Claimant rated her headache pain as 4 or 5 out of 10 on a good day and 8 or 9 out of 10 on a bad day. (Hr’g Tr. p. 24). Claimant testified that she has 3 to 4 headaches each week. (Hr’g Tr. p. 23).

54. Claimant also described her neck pain has 4 or 5 out of 10 on a good day and about 8 or 9 out of 10 on a bad day. Claimant testified that she seldom has a week without pain. (Hr’g Tr. p. 21).

55. Dr. Burke concluded that Claimant may benefit from an occipital nerve block and cervical trigger point injections. Further it was noted that Claimant is having some notable cervical radicular symptoms with pain radiating to the fourth and fifth digits on the left-hand. Claimant also has neuropathic/sympathetic type nerve symptoms along the ulnar wrist. Dr. Burke concluded that Claimant would be a reasonable candidate for a cervical epidural injection. (Cl. Ex. 11, pp. 229, 230)

Greater Occipital Nerve Block and Trigger Point Injections

56. Dr. Burke ordered a greater occipital nerve block and trigger point injections in 3+ muscles to treat Claimant’s chronic post-traumatic headaches. In addition, a left C7-T1 transforaminal epidural steroid injection (ESI) was ordered to address Claimant’s cervical radiculitis. (Cl. Ex. 11, p. 229-230); (Hr’g Tr. p. 20).

57. Dr. Orent testified that he reviewed Dr. Burke’s medical record and concluded that the requested treatment is reasonable and necessary. Dr. Orent stated that when a patient has intractable headaches it is challenging to determining whether the headaches are posttraumatic migraines or occipital myalgia from the muscle spasm in the back of the neck. The requested greater occipital nerve block and trigger point injections can be both diagnostic and therapeutic in patients with chronic headaches. (Hr’g Tr. p. 55).

58. Dr. Orent also stated that trigger point injections help the physician determine the pain generator. If the physician believes that the pain is coming from the posterior side of the of the neck, then the trigger point injections would be reasonable. (Hr’g Tr. p. 55-56).

59. Dr. Orent also concluded that the epidural steroid injection is also reasonable and necessary as Claimant is having radicular symptoms. Dr. Burke diagnosed Claimant with radiculitis and therefore a reasonable intervention for radiculitis or radiculopathy is a corticosteroid injection into the epidural space. (Hr’g Tr. 56).

60. The Insurer requested a peer review of the occipital nerve block, trigger point injections, and epidural steroid injection requested by Dr. Burke. Diana Hussain, M.D., a Level 1 Accredited physician conducted the peer review. (Cl. Ex. 2).

61. The peer reviewer denied all the injections recommended by Dr. Burke. (Cl. Ex. 2, 14).

62. The peer-reviewer’s basis for the denial of the trigger point injections in 3+ muscles states:

> The documentation submitted for review did not include information to indicate that the claimant was actively participating in active therapy. In addition, the current request does not include the specific muscles that were to [be] injected. Therefore, the current request does not meet Guideline recommendations. Furthermore, the documentation submitted for review did not include subjective or objective findings to indicate that trigger point injections were medically necessary.

(Cl. Ex. 2, p. 14).

63. The peer-reviewer’s own report references the Colorado Medical Treatment Guidelines stating that trigger point injections are generally accepted treatments to relieve myofascial pain. (Hr’g Tr. p. 57); (Cl. Ex. 2, p. 8).

64. Dr. Orent also pointed out that the peer-review also denies the trigger point injections because the specific muscles that were to be injected were not identified. Dr. Orent considered this an absurd reason for denial. Dr. Orent credibly and persuasively explained that physicians often do not know which muscles will be injected until they start the procedure. The muscles that are to be injected is based on the patient’s

presentation, what is tender, and the patient's reaction to the injection. (Hr'g Tr. p. 58). Dr. Orent's opinion is consistent with Dr. Burke's request for 3+ trigger point injections. The number of injections requested is more than 3. It can be inferred that Dr. Burke is certain that she will need 3 or more trigger point injections, as her request does not provide a specific number of injections. The request leaves open the option for more than three injections, depending on Claimant's presentation, as Dr. Orent testified.

65. In response to the peer-reviewed denial of the trigger point injections because Claimant was not actively seeking therapy, Dr. Orent pointed out that the peer-reviewer is incorrect as Claimant is participating in active therapy through her home exercises. (Hr'g Tr. p. 58).

66. When asked about the occipital nerve block, Dr. Orent testified that this is a common procedure. Dr. Orent points out that the Medical Treatment Guidelines are simply guidelines. If a Claimant has headaches as described in Dr. Burke's medical records and the physician believes the nerve blocks will help Claimant then the peer-reviewer, at minimum, should have a conversation with the physician ordering the treatment to discuss the treatment. (Hr'g Tr. p. 59-60).

67. In this case, the peer-reviewer made only two attempts to contact Dr. Burke. The first attempt was made on June 15, 2021, at 11:33 AM Central time. The second attempt was made, the next day, on June 16, 2021, at 12:18 PM Central time. Neither attempt was successful, and a message was left for Dr. Burke. The peer-reviewer's report was dated June 16, 2021, and faxed the same day at 4:36 PM. The peer-reviewer's report was provided to the Insurer before Dr. Burke had a reasonable opportunity to respond to the peer-reviewer's message. (Cl. Ex. 2, p. 14-15).

68. The ALJ finds that based on Claimant's medical records, Dr. Burke's medical records, Claimant's testimony, and Dr. Orent's opinions – which are found to be highly persuasive - the greater occipital nerve block and trigger point injections are found to be reasonable and necessary to treat Claimant from the effects of her work injury.

C7-T1 TFESI

69. The peer-reviewer also denied certification of the C7-T1 TFESI. The peer-review cited the Colorado Medical Treatment Guidelines stating that:

> [E]pidural steroid injections are not recommended for non-radicular cervical pain. . .. However, the documentation submitted for review did not provide clear rationale as to why the current request is medically necessary. In addition, guidelines do not recommend cervical epidural injections for patients with non-radicular cervical pain. Therefore, the current request does not meet guideline recommendations.

(Cl. Ex. 2, p. 14).

70. As Dr. Orent pointed out, the peer-reviewer is wrong in denying the C7-T1 TFESI, based on non-radicular cervical pain. Dr. Burke diagnosed Claimant with "cervical radiculitis." (Cl. Ex. 11, p. 229). As stated *supra.* "[Claimant] also is having some notable cervical radicular symptoms with pain radiating to the fourth and fifth digit on

the left hand." Dr. Orent questioned the peer-reviewer's unfounded basis for determining that the Claimant does not have a diagnosis of radiculitis, in the face of Dr. Burke's diagnosis of radiculitis, without ever examining Claimant. (Hr'g Tr. p. 60).

71. Dr. Orent found that the C7-T1 TFESI, ordered by Dr. Burke is reasonable, necessary, and related to Claimant's work-related high-speed rollover accident. (Hr'g Tr. p. 60).

72. As a result, the ALJ finds that based on Claimant's testimony and medical records, which includes the medical records of Dr. Burke, combined with the credible and persuasive opinions of Dr. Orent, the C7-T1 TFESI is reasonable and necessary to treat Claimant from the effects of her work injury.

Credibility of Claimant

73. Overall, the ALJ finds Claimant's statements to her medical providers as well as her testimony to be credible because both are consistent with one another. Moreover, her testimony about her symptoms is consistent with the extent of her high-speed motor vehicle accident and the severity of her injuries - which are well documented in her medical records.

Credibility of Dr. Orent

74. The ALJ also finds Dr. Orent's opinions and testimony to be credible and highly persuasive for many reasons. First, his opinions are consistent with Claimant's underlying medical records. Second, his opinions are consistent with Claimant's testimony about her accident, her symptoms, and her understanding of the basis for the treatment that has been prescribed. Third, his reasoning seems logically supported by the fact that Claimant was involved in a high-speed motor vehicle accident which is also documented in Claimant's underlying medical records.

Lack of Persuasiveness of Peer Review Reports

75. The ALJ does not find the opinions of the peer-reviewers to be credible or persuasive for many reasons. First, it appears to this ALJ that each peer-reviewer focused primarily on trying to deny each prescribed treatment based on an application of the Colorado Medical Treatment Guidelines in a vacuum – and without considering – in a sufficient and persuasive manner - the Claimant's unique circumstances and the extent of her injuries. Second, missing from each report is a credible and persuasive application of their own medical judgement in determining whether the treatment is reasonable and necessary based on Claimant's injuries and unique circumstances. For example, rather than set forth their entire clinical rationale for denying all of the treatment, each provider reserved providing such by stating: "The clinical rationale used in making this non-certification determination is available upon written request." On the other hand, Dr. Orent used and set forth his clinical rationale for the treatment at issue. Third, at the end of each report they acknowledge that the ultimate responsibility for treating Claimant remains with the treating provider, by stating: "The treating medical provider(s) remain responsible for the medical care and treatment of the injured worker." In other words, they contend that the treatment is not reasonable and necessary, but yet take no responsibility for the consequences of their decisions and the impact it might have on the Claimant's medical condition. Fourth, none of the peer-reviewers examined Claimant in person.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

When determining whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the Medical Treatment Guidelines because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the Medical Treatment Guidelines is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the Guidelines such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008).[1]

I. Whether the occupational therapy (OT) ordered by Dr. Pulikkottil is reasonable, necessary, and related to Claimant's work-related injury.

Due to her severe left upper extremity injury, Claimant has undergone several surgeries and has also undergone a significant amount of occupational therapy. The occupational therapy has, however, provided Claimant functional gains in the form of increased range of motion and strength in her left hand.

Due to her left upper extremity injury, Claimant uses about eleven different arm and hand splints. Each splint has a different purpose in helping Claimant increase the function of her severely injured left upper extremity.

At her occupational therapy appointments, the therapist applies heat to loosen her joints, manipulates the joints in both hands, measures her range of motion, and adjust Claimant's arm splints. However, because of her injuries, Claimant cannot manipulate the joints in her hands or adjust the splints independently without the aid of the occupational therapist.

On June 30, 2021, Claimant was reevaluated by Dr. Pulikkottil. At this appointment, Claimant presented for a post-operative follow up appointment for her October, November, and December 2020 procedures. It was noted that Claimant stated that she has continued using the stat-a-dyne splint and is seeing a hand therapist and that Claimant noticed significant improvement. After examining Claimant, Dr. Pulikkottil concluded:

> I discussed the situation with the patient. At this time upon evaluation and examination of the patient's condition, the patient demonstrates significant improvement with OT for hand therapy as well as utilization of stat-a-dyne and will continue to make improvement at this rate. I strongly recommend the patient continue formal hand therapy and use of stat-a-dyne.

[1] Based on the severity of Claimant's injuries, the uniqueness of her case, and the totality of the evidence, the ALJ does not find the Colorado Medical Treatment Guidelines to be persuasive as to whether the treatment at issue is reasonable and necessary in this particular case.

On July 15, 2021, and based on Dr. Pulikkottil's recommendations for formal hand therapy, Amy Nguyen, P.A., under the supervision of Dr. Pulikkottil, requested 12 occupational therapy visits over a six-week period.

In response to the request for 12 additional occupational therapy visits, the Insurer requested a peer review to determine medical necessity and certification. The peer reviewer, Mahdy Flores, D.O., Level 1 Accredited, stated that:

> Although, claimant has undergone multiple rounds of OT, this is a claimant who has undergone extensive surgery and has had objective improvement with past OT and recently underwent laser treatment for scar management, so continued OT is warranted, but the request is excessive. Modify to OT 1 x 6 left hand only.

Peer-reviewer Flores specifically listed 14 procedures that were performed on Claimant's left upper extremity, which included a surgery in December 2020 and a scar revision procedure in July 2021. Dr. Flores did not, however, set forth in sufficient detail, or persuasively, the basis of her opinion that only 6 more visits were reasonable and necessary – but yet 6 were not.

Dr. Sander Orent, who was qualified as an expert in internal medicine and is Level II Accredited, reviewed the matter. After reviewing Dr. Flores' modified approval of the occupational therapy visits, Dr. Orent could not determine the basis for the peer reviewer's modified approval. Dr. Orent testified, "There is no rationale here other than the fact that doctors say that the continued OT is warranted, but the request is excessive." The peer review does not provide a reason as to why he thinks 6 additional OT visits are excessive. Moreover, Dr. Flores never spoke with the physician or P.A. that ordered the OT to discuss the basis for the additional OT.

As testified to by Dr. Orent, Claimant recently had surgery to her hand as well as fractional CO2 laser treatment. In addition, Dr. Orent stated that the ordering physician strongly recommended that Claimant continue in therapy. Dr. Orent concluded that after taking one look at Claimant's arm, the occupational therapy requested is more than reasonable. In addition, Dr. Orent also found the OT requested was reasonably necessary and related to treat Claimant from the effects of her work-related high-speed rollover accident. In the end, Dr. Orent concluded that the peer reviewer's failure to provide full approval was absurd.

Claimant has made significant functional gains with the OT increasing her grip from 2 pounds to 10 pounds. Claimant would like to have the requested OT so that she is able to continue to make functional gains and get her arm back, i.e., increase her function. Based on the evidence presented, it is reasonable to expect that additional OT will provide Claimant the opportunity to continue to improve her functioning.

The ALJ finds and concludes that based on the totality of the evidence, Claimant has established by a preponderance of the evidence that the 12 visits of OT prescribed is reasonably necessary to treat Claimant from the effects of her work injury.

II. Whether the scalene muscle block, pectoralis minor muscle block, carotid bilateral duplex, and brain MRI without

contrast ordered by Dr. Annest are reasonable, necessary, and related to Claimant's work-related injury.

Claimant underwent an MRI on February 16, 2021. The MRI showed an abnormal left brachial plexus at the junction of the first rib. Based on the abnormal findings, Claimant was referred to Dr. Annest to evaluate and treat Claimant's brachial plexus injury.

Claimant's brachial plexus injury produces stabbing pain of 5 out of 10 on a good day and 10 out of 10 on a bad day. Unfortunately, Claimant has more bad days than good.

Dr. Annest determined that Claimant required surgery of the brachial plexus. However, because Claimant hit her head and suffered a TBI and because of the possibility that she was having 'mini strokes,' Dr. Annest requested a carotid bilateral duplex ultrasound, and a brain MRI without contrast, as a precautionary measure. As credibly and persuasively testified to by Dr. Orent, there was a concern that Claimant may suffer a stroke during surgery.

But before Claimant could undergo brachial plexus surgery, Dr. Annest ordered a scalene muscle block and pectoralis minor muscle block to help Claimant with the pain until the carotid bilateral duplex and brain MRI were completed and surgery could commence.

Dr. Orent credibly and persuasively concluded that the scalene muscle block and pectoralis minor muscle block were reasonable and necessary to treat Claimant's pain from her brachial plexus injury.

Dr. Orent also credibly and persuasively explained that the carotid bilateral duplex ultrasound and brain MRI were also reasonable and necessary – before proceeding with surgery – to determine whether Claimant has had any strokes and whether she has atherosclerotic plaque in her carotid arteries that could result in complications during surgery such as a stroke.

The ALJ has considered the peer review report of Dr. Ayyar. The ALJ does not, however, find Dr. Ayyar's conclusions to be persuasive for many reasons. First, it is not clear which medical records Dr. Ayyar reviewed and which records he did not review. Second, Dr. Ayyar did not discuss the matter with Dr. Annest. Third, while Dr. Ayyar is critical of Dr. Annest's report that recommends such treatment, it does not appear that Dr. Ayyar used his own clinical judgement – in a persuasive manner - to evaluate whether the tests were reasonable and necessary under the unique circumstances of this case – as did Dr. Orent. In this case, Dr. Orent provided clear and cogent reasons for why such tests are warranted in this case. Dr. Ayyar, on the other hand, did not. Dr. Ayyar merely resorted to the Medical Treatment Guidelines and did not seem to take into consideration the specifics of this case and the extent of Claimant's injuries and global nature of her symptoms.

Based on the totality of the evidence, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that the scalene and pectoralis muscle blocks, carotid bilateral duplex ultrasound, and brain MRI are reasonable and necessary to treat Claimant from the effects of her work injury.

III. Whether the trigger point injections, greater occipital nerve block, and transforaminal epidural steroid injections at C7-T1 ordered by Dr. Burke are reasonable, necessary, and related to Claimant's work-related injury.

Dr. Burke evaluated Claimant and diagnosed her with intractable chronic post-traumatic headaches, cervical radiculitis, neuropathic pain, and poor short-term memory.

Claimant described her headaches as sharp and throbbing to the point that some days she has to sit in a dark room to calm down. Claimant rated her headache pain as 4 or 5 out of 10 on a good day and 8 or 9 out of 10 on a bad day. Claimant has 3 to 4 headaches each week.

Claimant also described her neck pain as 4 or 5 out of 10 on a good day and about 8 or 9 out of 10 on a bad day. Claimant seldom has a week without pain.

Dr. Burke concluded that Claimant may benefit from an occipital nerve block and cervical trigger point injections. Further it was noted that Claimant is having some notable cervical radicular symptoms with pain radiating to the fourth and fifth digits on the left-hand. Claimant also has neuropathic/sympathetic type nerve symptoms along the ulnar wrist. Dr. Burke concluded that Claimant would be a reasonable candidate for a cervical epidural injection.

Greater Occipital Nerve Block, Trigger Point Injections, and C7-T1 TFESI

Dr. Burke ordered a greater occipital nerve block and trigger point injections in 3+ muscles to treat Claimant's chronic post-traumatic headaches. In addition, a left C7-T1 transforaminal epidural steroid injection (ESI) was ordered to address Claimant's cervical radiculitis.

Dr. Orent credibly and persuasively testified that he reviewed Dr. Burke's medical record and concluded that the requested treatment is reasonable and necessary. Dr. Orent stated that when a patient has intractable headaches it is challenging to determine whether the headaches are posttraumatic migraines or occipital myalgia from the muscle spasm in the back of the neck. The requested greater occipital nerve block and trigger point injections can be both diagnostic and therapeutic in patients with chronic headaches.

Dr. Orent also stated that trigger point injections help the physician determine the pain generator. If the physician believes that the pain is coming from the posterior side of the of the neck, then the trigger point injections would be reasonable.

Dr. Orent also concluded that the epidural steroid injection is also reasonable as Claimant is having radicular symptoms. Dr. Burke diagnosed Claimant with radiculitis and therefore a reasonable intervention for radiculitis or radiculopathy is a corticosteroid injection into the epidural space.

The Insurer requested a peer review of the occipital nerve block, trigger point injections, and epidural steroid injection requested by Dr. Burke.

Diana Hussain, M.D., a Level 1 Accredited physician conducted the peer review. Dr. Hussain denied all the injections recommended by Dr. Burke. Dr. Hussain's basis for the denial of the trigger point injections in 3+ muscles states:

> The documentation submitted for review did not include information to indicate that the claimant was actively participating in active therapy. In addition, the current request does not include the specific muscles that were to [be] injected. Therefore, the current request does not meet Guideline recommendations. Furthermore, the documentation submitted for review did not include subjective or objective findings to indicate that trigger point injections were medically necessary.

The peer-reviewer's own report references the Colorado Medical Treatment Guidelines stating that trigger point injections are generally accepted treatments to relieve myofascial pain.

Dr. Orent also pointed out that the peer-review also denies the trigger point injections because the specific muscles that were to be injected were not identified. Dr. Orent considered this an absurd reason for denial. Dr. Orent explained that physicians often do not know which muscles will be injected until they start the procedure. The muscle to be injected is based on the patient's presentation, what is tender, and the patient's reaction to the injection. Dr. Orent's opinion is consistent with Dr. Burke's request for 3+ trigger point injections. The number of injections requested is more than 3. It can be inferred that Dr. Burke knows that she will need more than three trigger point injections, as her request does not provide a specific number of injections. The request leaves open the option for more than three injections, depending on Claimant's presentation, as Dr. Orent testified.

In response to peer-reviewed denial of the trigger point injections because the patient was not actively seeking therapy, Dr. Orent pointed out that the peer-reviewer is incorrect as Claimant is participating in active therapy through her home exercises.

When asked about the occipital nerve block, Dr. Orent testified that this is a common procedure. Dr. Orent pointed out that the Medical Treatment Guidelines are simply guidelines. If a Claimant has headaches as described in Dr. Burke's medical records and the physician believes the nerve blocks will help Claimant then the peer-reviewer, at minimum, should talk to the physician ordering the treatment to discuss the treatment.

The peer-reviewer also denied certification of the C7-T1 TFESI. The peer-review cited the Colorado Medical Treatment Guidelines stating that:

> [E]pidural steroid injections are not recommended for non-radicular cervical pain. . .. However, the documentation submitted for review did not provide clear rationale as to why the current request is medically necessary. In addition, guidelines do not recommend cervical epidural injections for patients with non-radicular cervical

> pain. Therefore, the current request does not meet guideline recommendations.

As Dr. Orent pointed out, the peer-review is wrong in denying the C7-T1 TFESI, based on non-radicular cervical pain. Dr. Burke diagnosed Claimant with “cervical radiculitis.” Further, it was noted that “[Claimant] also is having some notable cervical radicular symptoms with pain radiating to the fourth and fifth digit on the left hand.” Dr. Orent questioned the peer-reviewer’s unfounded basis for determining that the Claimant does not have a diagnosis of radiculitis, in the face of Dr. Burke’s diagnosis of radiculitis, without ever examining Claimant.

Dr. Orent found that the C7-T1 TFESI, order by Dr. Burke is reasonable, necessary, and related to Claimant’s work-related high-speed rollover accident.

Based on the totality of the evidence, which includes the credible and persuasive opinions of Dr. Orent, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that the greater occipital nerve block and trigger point injections are reasonable and necessary to treat Claimant from the effects of her work injury. The ALJ also finds and concludes that Claimant has established by a preponderance of the evidence that the C7-T1 TFESI is reasonable and necessary to treat Claimant from the effects of her work injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay for the twelve occupational therapy visits, of which only 6 are in dispute.

2. Respondents shall pay for the scalene muscle block, pectoral minor muscle block, carotid bilateral duplex, and brain MRI without contrast prescribed by Dr. Annest.

3. Respondents shall pay for the trigger point injections, greater occipital nerve block, and transforaminal epidural steroid injections C7-T1 prescribed by Dr. Burke.

4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 24, 2021.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts

Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence that her left shoulder injury caused functional impairment not listed on the schedule?

- If Claimant proved whole person impairment, did Respondents overcome the DIME's 15% whole person rating by clear and convincing evidence?

- Did Claimant prove by a preponderance of the evidence that ongoing use of Nucynta prescribed by and through Dr. Kenneth Finn is reasonably needed to relieve the effects of her work injury and prevent deterioration of her condition?

FINDINGS OF FACT

1. Claimant was a production worker in Employer's packaging department. Employer provided on-site massages for its employees as a benefit of employment. Claimant suffered admitted injuries on December 13, 2017 while receiving a massage at work. She was lying face down on a massage table when the table collapsed, causing her to fall to the ground. She landed primarily on her left shoulder.

2. Claimant was seen at the UC Health emergency department after the accident complaining of neck pain, left shoulder pain, and left elbow pain. She was diagnosed with a left shoulder "sprain" and multiple contusions.

3. Employer referred Claimant to Dr. Cynthia Schafer, who has been the primary ATP throughout the claim. At her initial appointment, Claimant stated the elbow and neck pain were resolving, but the left shoulder remained severely painful. Dr. Schafer prescribed Percocet, Flexeril, and NSAIDs.

4. Claimant saw Dr. James Duffey, an orthopedic surgeon, on January 26, 2018. Examination showed marked limitations with range of motion and questionable instability. Dr. Duffey suspected Claimant dislocated her shoulder and may have torn her labrum. He recommended an MR arthrogram and referred Claimant to physical therapy "to start mobilizing the shoulder to gain whatever flexibility and strength she can" and hopefully "avoid developing a frozen shoulder."

5. On February 2, 2018, Claimant told Dr. Schafer she had been experiencing dizziness with head movement since the accident.

6. The MR arthrogram was completed on February 12, 2018. It was interpreted as showing a possible labral tear.

7. Claimant followed up with Dr. Duffey on March 2, 2018. He reviewed the arthrogram images and saw a superior labral tear and a biceps tendon tear. Claimant's

left shoulder remained severely painful with marked range of motion deficits. She was not making progress with PT, and Dr. Duffey recommended surgery.

8. On March 22, 2018, Dr. Duffey performed an arthroscopic biceps tenodesis, tendon and labral debridement, and a subacromial decompression.

9. Claimant followed up with Dr. Schafer on April 3, 2018. She explained that a few days ago, she felt lightheaded and reached out to catch herself with her left arm. This caused immediate severe pain in the left shoulder. She went to the emergency room and was prescribed fentanyl and Dilaudid to try to bring the pain under control.

10. Claimant returned to Dr. Schafer on April 12, 2018. She was taking Percocet every 4-5 hours in addition to the "max dose" of ibuprofen. Dr. Schafer noted that Claimant disliked the nausea and dizziness she has on Percocet but could not tolerate the pain without it. Claimant stated she would really like to get off the narcotics if possible because she knew about the risk of addiction.

11. Claimant had a repeat left shoulder MRI on May 25, 2018. It showed AC joint DJD and subacromial/subdeltoid bursitis. The proximal head of the biceps tendon could not be visualized, and the radiologist opined it might be torn and mildly protracted.

12. Dr. Duffey reevaluated Claimant and reviewed the MRI on May 29, 2018. He did not recommend additional surgery even if the tenodesis was not intact. Claimant was trying to wean off Percocet, but was finding it difficult because of the severe ongoing pain. Dr. Duffey agreed Claimant should try to wean off the Percocet, but noted she might need some help with chronic pain management. He gave Claimant a subacromial injection, which was not helpful.

13. On May 31, 2018, Dr. Schafer documented Claimant was taking only one quarter tablets of the Percocet plus the maximum dose of ibuprofen. Claimant explained she had previously used Norco for several years because of an unrelated condition, but had weaned off it on her own approximately 10 years ago. As a result, "she is not concerned about getting off narc[otics], but is unable to tolerate any motion of the shoulder without them." Claimant was tearful and worried about "being left with the shoulder that does not function well." Claimant agreed to a second opinion after Dr. Schafer "convinced her it would not hurt Dr. Duffey's feelings, whom she respects." Dr. Schafer referred Claimant to Dr. Christopher Jones. She also started Claimant on gabapentin.

14. Claimant saw Dr. Jones on July 12, 2018. She described ongoing pain and severe limitation in use of her left arm. Dr. Jones noted marked restriction in the left shoulder range of motion. He diagnosed postoperative adhesive capsulitis. He injected the shoulder and advised Claimant to perform gentle stretching for the next few weeks.

15. Claimant had an initial pain management consultation with Dr. Kenneth Finn on August 1, 2018. She described diffuse left shoulder pain with some radiation toward the neck and down the left biceps to the elbow. Dr. Finn diagnosed chronic pain syndrome and uncomplicated opioid dependence. In his deposition, Dr. Finn explained he used the term "uncomplicated" because Claimant had been on Percocet for a long time and was

probably dependent on it, but was not misusing or abusing the medication. He opined Claimant probably had adhesive capsulitis and recommended she consider manipulation under anesthesia (MUA). He recommended she stop the Percocet “because it does not appear to be very helpful.” He started a trial of Nucynta ER 100 mg every 12 hours and Nucynta IR 50 mg 2-3 times per day for breakthrough pain.[1] Dr. Finn reviewed the PDMP, which raised no concerns, and had Claimant sign an opioid contract. He also increased the gabapentin dosage.

16. Dr. Jones’ August 24, 2018 note documents the first injection provided no pain relief. However, Dr. Jones noted a slight improvement in range of motion, so he wanted to try another injection and wait a bit longer before considering MUA.

17. Claimant saw Dr. Finn’s nurse practitioner, Sonja Griffith, on September 4, 2018. She said increasing the gabapentin had been helpful and the Nucynta was “quite effective for pain. She notices her pain average has reduced from 8/10 to 5/10 and this is considered a tolerable level for her.” Ms. Griffith stated, “[the] medication is working well and is tolerated, no changes will be made.”

18. A pain diagram dated September 6, 2018 shows Claimant was experiencing pain in the shoulder radiating up the trapezial ridge to the neck and down the arm. She also noted pain in the left upper back around the scapula, and in the left chest around the pectoral muscles.

19. Claimant returned to Dr. Jones on September 24, 2018. She explained the second injection did not help and she was still having severe pain. Dr. Jones recommended an arthroscopic MUA and debridement of scar tissue.

20. Dr. Jones performed the surgery on November 28, 2018. He observed “obvious significant scarring adhesions” throughout the shoulder. He performed extensive debridement and release of adhesions.

21. On December 13, 2018, Dr. Jones documented “she had an episode in PT were her shoulder popped and she has had a lot of pain. Before then she felt like it was doing quite well. Now her pain level is really high again.” Dr. Jones noted definite improvement in range of motion, and encouraged Claimant to continue with PT. Claimant asked if she could return to Dr. Finn for pain management, and Dr. Jones agreed this was a good idea because he was not comfortable prescribing large doses of pain medication.

22. Claimant saw Ms. Griffith on December 18, 2018. She reported the PT was painful but her ROM was slowly improving. Claimant explained Dr. Jones had given her Percocet after surgery, which caused vomiting. She wanted to go back on Nucynta. Ms. Griffith reinitiated Nucynta after reviewing the PDMP. She notified Dr. Jones office that “we are taking over medications again.”

[1] Nucynta ER is the “extended release” version, and Nucynta IR means “immediate release.”

23. PT notes from December and January show treatment was directed to areas around the shoulder including the scapula, left upper trapezius, left scalenes, and pectoral minor.

24. Claimant saw Dr. Jones' PA-C, Sara Beauchamp, on January 14, 2019. She stated, "She is back in pain management and feels that Nucynta is working better than Percocet did. Her pain is 6-7 out of 10. She feels she is some better but still has pain."

25. Claimant followed up with Dr. Jones on February 4, 2019. He noted her pain continued to escalate and she was "losing ground" with range of motion.

26. Dr. Jones performed a second MUA on February 12, 2019. He confirmed intraoperatively that mobility of the shoulder was severely limited but was able to mobilize the shoulder and release some of the scar tissue.

27. Claimant followed up with Ms. Beauchamp on March 4, 2019. She reported ongoing left shoulder pain and neck pain. Ms. Beauchamp spoke with Dr. Jones, who recommended evaluation of Claimant's neck.

28. Dr. Schafer's March 5, 2019 report shows passive ROM was better but the left shoulder pain was worse or the same. She documented Claimant's pain went up into the lateral posterior neck on the left side. Dr. Schafer referred Claimant to Dr. Brian Polvi, a chiropractor.

29. Claimant started treatment with Dr. Polvi on March 28, 2019. According to the pain diagram, Claimant had issues in the left paracervical, superior trapezius, left shoulder, and throughout the left upper extremity region. Dr. Polvi's note also reflects increased pain with dressing, bathing, household cleaning, sweeping/mopping, vacuuming, meal preparation/cooking, lifting above shoulder, lifting from floor, reaching, pulling and sleeping. Physical examination showed decreased ROM in the left shoulder and tenderness with associated hypertonicity and trigger point formations throughout the left shoulder region including the thoracic and cervical spines. Dr. Polvi performed acupuncture directed to the left scapula, neck, and left shoulder.

30. Claimant treated with Dr. Polvi on multiple occasions through April 15, 2019. He repeatedly documented tenderness with trigger points in the thoracic and cervical muscles, left shoulder, and left scapula.

31. A pain diagram dated April 16, 2019 shows pain in the entire left shoulder region to include the trapezius radiating up toward the neck and down the arm. It also shows pain in the front of the shoulder including the clavicle, pectoral muscles, and axilla. This pain diagram is corroborated by Dr. Schafer's physical examination, which found tenderness in the left shoulder, left trapezius, axilla, and cervical spine.

32. Claimant was evaluated by Nathan Carpenter, an orthopedic PA-C, on April 17, 2019. Claimant described pain from the base of her neck, across her shoulder, under her scapula, and to her left shoulder. She rated the pain in her neck as mild and her left

shoulder as “severe to worst ever.” Cervical spine examination showed decreased ROM and tenderness across the trapezius.

33. Dr. Schafer’s examination on June 11, 2019 showed tenderness in the left shoulder joint line, trapezius and posterior axilla.

34. On June 18, 2019, Ms. Griffith noted that Claimant “is having fairly good results with Nucynta IR and ER” and refilled her medications.

35. Claimant had a cervical MRI on July 8, 2019. It showed straightening of the cervical lordosis but no other abnormalities. Based on the MRI findings, Mr. Carpenter opined Claimant’s symptoms are not coming from her neck and recommended she continue treatment for the shoulder.

36. A repeat shoulder MRI on September 13, 2019 showed multiple abnormalities, including one or more tears. Dr. Jones opined the findings were consistent with a frozen shoulder. He did not think additional surgery would be helpful.

37. Dr. Schafer put Claimant at MMI on October 15, 2019. She assigned a 27% upper extremity rating, which converts to 16% whole person. The rating was comprised of 17% for ROM deficits and 12% under Table 17 for moderate crepitus. Dr. Schafer opined the ROM rating alone “does not adequately reflect the level of dysfunction related to this injury.” She also assigned a 5% psychological rating based on limitations relating to social functioning and maintaining attention and concentration. She recommended maintenance care with Dr. Finn, “including any support required to wean medications.”

38. Claimant saw Ms. Griffith on December 9, 2019, who documented “further surgery for LUE is not advisable and symptoms will continue.” Ms. Griffith noted Claimant’s best pain level was 8/10, so she recommended increasing the Nucynta ER dose to “hopefully provide better consistency with pain control.”

39. Claimant followed up with Ms. Griffith on June 11, 2020. Claimant continued to have “decent” pain control with Nucynta and gabapentin. She noted Claimant had failed nortriptyline and amitriptyline in the past and did not respond to Lyrica. She stated “so far, Nucynta has offered most effect. Trade other opiate medications for pain but this did not address neuropathic pain well.” Ms. Griffith concluded “Nucynta is the best choice for neuropathic pain and is reasonable for her to remain with this medication. Will alter her gabapentin dose upward to see if this will help further control pain.”

40. According to a “Pain Self Evaluation” form dated July 20, 2020, Claimant has had headaches, neck pain, and left arm pain since her injury. The diagram reflects pain in the left shoulder, left trapezius, left side of cervical spine, radiating down the left arm. When asked what aspect of her pain Claimant feels is most bothersome, Claimant wrote “[s]ome days my shoulder pain is worse and sometime the neck is really bad.” Claimant also wrote that she gets headaches and stiff neck with the shoulder pain.

41. Dr. L. Barton Goldman performed an IME for Respondents on August 31, 2020. Dr. Goldman agreed Claimant was at MMI but disagreed with Dr. Schafer’s rating.

He calculated a 15% rating based on ROM deficits, which converts to 9% whole person. He did not appreciate any crepitus, and opined the crepitus rating provided by Dr. Schafer was "[not] a consistent finding on multiple examinations." Dr. Goldman also assigned a 2% psychological rating.

42. Dr. Goldman opined ongoing use of narcotics is not reasonable because it is not improving Claimant's function or decreasing her numerical pain score in a clinically meaningful fashion. Dr. Goldman noted the medication "only" decreased Claimant's typical pain from 8/10 to 7/10 but she still maintained a very restricted lifestyle and reported lying down during the day to manage her symptoms. Dr. Goldman cited the Chronic Pain MTGs which state that long-term ascription of opioids is generally only appropriate in "very selective cases" and must be "clearly linked to improvement of function, not just pain control." He opined Claimant's current medication regimen meets neither criteria. He concluded Claimant should be weaned off Nucynta, and opined she should consider different medications such as Suboxone, or Trazadone in conjunction with pool therapy, basic strength training, optimal treatment of her sleep issues, and/or pool therapy.

43. Insurer filed a Final Admission of Liability (FAL) dated November 20, 2020, admitting for the 5% psychological impairment and the 27% scheduled upper extremity ratings provided by Dr. Schafer.

44. Claimant attended a DIME with Dr. William Watson on February 16, 2021. Dr. Watson's significant exam findings included pain in neck and left trapezius when turning her head to the left, markedly positive impingement signs, tenderness over the acromioclavicular joint, and mild atrophy of the supraspinatus, infraspinatus, and deltoid muscles. He noted that Claimant "hikes" her scapula with the trapezius muscle when she tries to abduct her shoulder. Dr. Watson provided an impairment rating very similar to Dr. Schafer's rating. He calculated 17% for shoulder ROM deficits. He found no crepitus on examination, so did not provide a rating for crepitus. Dr. Watson agreed with Dr. Schafer "that the [ROM] rating does not give credence to the severity of her injury and current problems." Therefore, he added 10% for the "two surgical interventions in the subacromial space." Dr. Watson cited the Division's Impairment Rating "Tips," which allow discretion to provide up to 10% for a subacromial decompression when the examiner concludes "loss of range of motion alone [does] not adequately represent the extent of the impairment." The combined rating was 25% upper extremity, which converts to 15% whole person. He also adopted the 5% psychological rating assigned by Dr. Schafer. Dr. Watson agreed with Dr. Goldman that Claimant should be weaned off Nucynta because "even with the medication she is having severe pain and discomfort. This would be the rationale for her continuing to see Dr. Kenneth Finn on a regular basis and perhaps he could initiate this over the next two to three years."

45. Dr. Finn testified via deposition on July 8, 2021. He explained Nucynta is an atypical opioid and is safer with less potential for abuse than medications such as oxycodone (Percocet). He testified there is no indication Claimant has misused or abused her medication. He conceded Claimant is on a high dose of Nucynta, but believes it is justified given her severe pain and poor response to other medications. Dr. Finn does not

like his patients to be on long term opioids but if they allow a patient to "function with little to no side effects and are reasonably controlling their pain it would not be unreasonable for the patient to continue." Dr. Finn opined other treatment modalities such as PT, biofeedback, or acupuncture would only provide short term relief and would be a waste of time, energy, and money. Dr. Finn testified that weaning Claimant off all narcotics "would be a godsend if we could do that . . . But given her history, I think she would probably do poorly with a medication taper." He testified there is no medication that will reduce Claimant's pain level to zero, and his overall goal is to bring it down to a level that is tolerable for her. He acknowledged that Claimant reports high levels of pain and restricted activities even with Nucynta but opined that "if we tapered her, her pain levels would go up and her poor functioning would be even more poor." Dr. Finn opined there was probably not any significant long-term health risk from Nucynta. Dr. Finn indicated he would discuss other medication options with Claimant at her next appointment.

46. Claimant saw Dr. Finn on August 5, 2021. He noted she had previously tried multiple pain medications including oxycodone, hydrocodone, and Tylenol 3 without relief. She found Nucynta to be the most helpful medication but unfortunately experiences some associated sedation. Dr. Finn recommended changing her medication to Belbuca (buprenorphine) "to see if this can afford better pain relief without the sedation."

47. Claimant called Dr. Finn on August 24, 2021 to discuss her response to the Belbuca. Claimant explained, "I am on day 8 with it and I'm not having really any pain relief. My pain is staying up around 9-10. It makes me even more sleepy than my Nucynta and I'm nauseous all day with dry heaves." Based on Claimant's poor response, Dr. Finn discontinued Belbuca and restarted Nucynta.

48. Dr. Watson testified via deposition on September 30, 2021. Dr. Watson opined Claimant's shoulder injury affects multiple structures proximal to her arm, such as the trapezius, scapula, infraspinatus, supraspinatus, pectoral muscles, serratus, and neck. He confirmed he had observed scapular dyskinesia with shoulder movement and atrophy of the supraspinatus and infraspinatus muscles from "not moving her shoulder." He testified scapular and trapezial pain are "pretty typical" and "fairly common" with shoulder injuries. He opined Claimant's reported pain levels and significant ROM deficits were consistent with the "severe, severe scar tissue formation" and "extensive" debridement documented by Dr. Jones. Dr. Watson explained that he "normally" does not give an extra rating for subacromial decompression surgery, but thought it justified in this case considering Claimant's well-documented severe pathology and significant functional impairment following multiple surgeries.

49. Dr. Goldman testified at hearing consistent with his report. Dr. Goldman discussed the difference between pain and suffering, and opined it is improper to treat suffering with opioid medications. He discussed the evolution of his philosophy for treating chronic pain over the years away from reliance on opioids. Dr. Goldman advocates a "more functional approach" to chronic pain management, focused on cognitive behavioral therapy, reprogramming, antidepressant medications, sleep hygiene, activity desensitization, and mindfulness. Dr. Goldman cited the Chronic Pain Medical Treatment Guidelines, which stated that long-term prescription of opioids is generally only

reasonable in "very selective cases" and must be "clearly linked to improvement of function, not just pain control." Dr. Goldman noted Claimant lives a very restricted lifestyle and believes the Nucynta provides insufficient functional benefit to justify its ongoing use. He recommended weaning Claimant from Nucynta (probably with the assistance of Suboxone), and transitioning to "different approaches with less risk that are more effective to deal with the suffering" from her chronic pain.

50. Dr. Goldman testified shoulder surgery tends to be "one of the most difficult surgeries to rehabilitate" because of the complexity of the shoulder joint. He agreed that Claimant's injury affects the whole shoulder girdle to include the serratus, trapezius, pectoralis minor, supraspinatus, infraspinatus and deltoid. Furthermore, Dr. Goldman explained that pain and stiffness in the trapezius can impact movement of the cervical spine. However, he opined the ultimate functional impairment was limited to use of Claimant's left arm, and therefore the extremity rating should not be "converted" to whole person.

51. Dr. Goldman opined Dr. Watson erred by including the additional 10% based on Claimant's surgeries. He testified Claimant had a run-of-the-mill subacromial decompression that does not justify an extra rating beyond range of motion. He conceded the Rating Tips do not establish specific criteria for the additional 10%, and each physician must use their best clinical judgment when deciding whether to give the extra rating.

52. Dr. Watson's opinions regarding permanent impairment are credible and more persuasive than the contrary opinions offered by Dr. Goldman.

53. Dr. Finn's opinions regarding the ongoing prescriptions for Nucynta are credible and more persuasive than the contrary opinions offered by Dr. Goldman.

54. Claimant credibly testified she continues to experience pain and stiffness in her left shoulder, neck, trapezius, and left scapular area. Claimant further testified that temperature changes increases symptoms in her neck and left shoulder to include her trapezial ridge. Claimant also testified that the pain in her neck, trapezius, and left shoulder is exacerbated by activities such as doing the laundry, washing her hair, bathing, cooking, vacuuming, and donning certain items of clothing. Claimant has sleep issues, in part, due to her shoulder pain.

55. Claimant proved by a preponderance of the evidence her shoulder injury caused functional impairment not listed on the schedule.

56. Respondents failed to overcome Dr. Watson's 15% whole person shoulder rating by clear and convincing evidence.

57. Claimant proved the ongoing prescriptions for Nucynta are reasonably needed to relieve the effects of her injury and prevent deterioration of her condition.

CONCLUSIONS OF LAW

A. Whole person impairment

When evaluating whether a claimant has a scheduled or whole person impairment, the ALJ must determine “the situs of the functional impairment.” This refers to the “part or parts of the body which have been impaired or disabled as a result of the industrial accident,” and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of “an arm at the shoulder.” Section 8-42-107(2)(a). If the claimant has a functional impairment to part(s) of his body other than the “arm,” they have suffered a whole person impairment and must be compensated under § 8-42-107(8).

There is no requirement that functional impairment take any particular form, and “pain and discomfort which interferes with the claimant’s ability to use a portion of the body may be considered ‘impairment’ for purposes of assigning a whole person impairment rating.” *Martinez v. Albertson’s LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant’s testimony regarding pain and reduced function. *Olson v. Foley’s*, W.C. No. 4-326-898 (September 12, 2000).

Pain and limitation in the trapezius or scapular area can functionally impair an individual beyond the arm. *E.g. Steinhauser v. Azco, Inc.*, W.C. No. 4-808-991 (January 11, 2012) (pain and muscle spasm in scapular and trapezial musculature warranted whole person impairment); *Franks v. Gordon Sign Co.*, W.C. No. 4-180-076 (March 27, 1996) (supraspinatus attaches to the scapula, and is therefore properly considered part of the “torso,” rather than the “arm”); *Martinez v. Albertson’s LLC*, W.C. No. 4-692-947 (June 30, 2008) (pain affecting the trapezius and difficulty sleeping on injured side supported ALJ’s finding of whole person impairment). Limitations on overhead reaching can also consitute functional impairment beyond the arm in appropriate cases. *E.g*., *Brown v. City of Auror*a, W.C. No. 4-452-408 (October 9, 2002); *Heredia v. Marriott*, W.C. No. 4-508-205 (September 17, 2004). However, the mere presence of pain in a part of the body beyond the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021).

As found, Claimant proved she suffered functional impairment not listed on the schedule. The surgery performed by Dr. Duffey was directed to anatomical structures proximal to the “arm,” including a subacromial decompression. Additionally, Dr. Jones documented extensive scar tissue throughout the entire shoulder. Although the anatomic location of the injury is not dispositive, it is a legitimate factor to consider when determining whether a claimant has a scheduled or whole person impairment. *See, e.g., Martinez v. Albertson’s LLC*, W.C. No. 4-692-947 (June 30, 2008) (“The [claimant’s] subacromial decompression was done at the acromion and the coracoacromial ligament in order to relieve the impingement, which is all related to the scapular structures above the level of the glenohumeral joint"); see also *Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021). Dr. Watson objectively observed functional limitation of Claimant's scapula and trapezius, and atrophy of the rotator cuff muscles. Claimant credibly described pain in areas proximal to her arm such as the scapula, trapezius, and pectoral muscle. This pain affects her ability to engage in various activities, including overhead reaching. Dr. Goldman agreed the injury affects Claimant's "whole shoulder girdle." The preponderance of persuasive evidence shows Claimant has functional impairment in parts of her body beyond the arm at the shoulder.

B. Overcoming the DIME's impairment rating

A DIME's determination of whole person impairment is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(c). The party challenging a whole person rating must show it is "highly probable" the DIME is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME rating is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

As found, Respondents failed to overcome Dr. Watson's rating by clear and convincing evidence. The Division's Impairment Rating Tips, Desk Aid #11 (rev. July 2020) provide,

> In general, subacromial arthroplasty (a term used to describe acromioplasty and subacromial decompression) should be rated using range of motion. There are some situations when loss of range of motion alone may not adequately represent the extent of the impairment following subacromial arthroplasty. In those cases, up to 10% sign upper extremity impairment may be assigned. Make sure the rationale is provided in the report.

Dr. Watson explicitly relied on this provision of the Rating Tips. He persuasively explained that he did not think a strictly range of motion-based rating would adequately capture the full extent of Claimant's impairment. Dr. Schafer was of the same opinion. Dr. Goldman conceded the Rating Tips did not contain precise criteria for the additional diagnosis-based rating, and the decision is largely left to the rating physician's judgment. Dr. Watson's decision to give an additional 10% rating is well-supported and appropriate in this case. Claimant's initial surgery led to the development of severe scar tissue and necessitated a major debridement and a subsequent MUA. Dr. Goldman's testimony reflects a mere difference of medical opinion and does not rise to the level of clear and convincing evidence.

C. Nucynta prescriptions

The respondents are liable for medical treatment reasonably needed to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a). Medical benefits can continue after MMI if necessary to relieve the effects of the injury and prevent deterioration of the claimant's condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Even if the respondents admit liability, they retain the right to dispute the reasonable necessity of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). The claimant must prove entitlement to specific medical benefits by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

Claimant proved the ongoing prescriptions for Nucynta are reasonably needed to relieve the effects of her injury and prevent deterioration of her condition. Claimant suffers severe shoulder pain despite extensive treatment and multiple surgeries. Dr. Goldman and Dr. Finn agree chronic pain is difficult to manage, and reasonable physicians can disagree about the best approach for their patients. Dr. Goldman has a well-developed philosophy of chronic pain treatment and makes a strong case for the regimen he would implement if Claimant were his patient. But she is not his patient. While Claimant is certainly free to request a change of physician to Dr. Goldman should she desire, in the meantime, Dr. Finn is driving the bus regarding her care. Despite the well-publicized health risks and negative societal consequences from indiscriminate overprescription of narcotic medications, they remain one of the few tools available to manage chronic pain patients. Dr. Finn is mindful of the potential issues related to narcotics but is confident Claimant uses the medication appropriately. Nucynta is more effective in reducing Claimant's severe pain than numerous other medications she has tried. Although the numerical pain scale reduction may not appear significant to Dr. Goldman, the level of relief is substantial *for Claimant*. Her dosing is relatively stable and below the maximum allowable level. She takes the medication as prescribed with no persuasive evidence of any misuse or abuse. Dr. Finn and his associates regularly check the PDMP and administer urine drug screens, all of which Claimant has passed. There is no persuasive evidence Claimant has suffered any adverse health impact because of Nucynta, notwithstanding the potential risks. While Nucynta is undeniably expensive, there is no persuasive evidence of an equally efficacious, lower-cost alternative.[2] Under the circumstances, the continued use of Nucynta is reasonable.

ORDER

It is therefore ordered that:

[2] Respondents' Medication Therapy Cost Analysis report recommended switching Claimant to morphine sulfate. Although morphine sulfate is far cheaper than Nucynta, changing to a typical opioid would entail greater risks and be entirely inconsistent with Dr. Goldman's recommendations.

1. Insurer’s request to overcome the DIME’s 15% whole person rating is denied and dismissed.

2. Insurer shall pay Claimant PPD benefits based on the 15% whole person physical rating and the 5% psychological rating assigned by the DIME. Insurer may take credit for PPD benefits previously paid to Claimant in connection with this claim.

3. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

4. Insurer shall cover the Nucynta ER and IR prescribed by and through Dr. Finn.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ’s order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

WORKERS' COMPENSATION NO. WC 4-975-232-005

ISSUES

1. Whether Claimant established by a preponderance of the evidence the existence of mistake or fraud warranting reopening her claim to deem her admitted work injury non-compensable.

FINDINGS OF FACT

Claimant's Injuries

1. Claimant worked for Employer as a part-time EMT on ski patrol and also as a part-time ski instructor.

2. On February 4, 2015, Claimant was volunteering at [Redacted] and was not working for Employer. Claimant was skiing when another skier came at her out of control. Claimant tried to immediately react and stopped quickly on the downhill edge of her right ski to avoid a collision. Claimant felt a snap on the inside of her right knee. Her knee was weak and swollen. (R. Ex. D).

3. On February 8, 2015, Claimant worked her scheduled shift for employer and felt her knee was good enough to work. Claimant had no issues working that day. (R. Ex. D).

4. On February 9, 2015, Claimant was working her scheduled shift for Employer at [Redacted]. Claimant unclipped from her skis and was in her ski boots unloading fencing supplies from the basket of a snow cat. Claimant twisted to throw fencing out of the basket and felt a snap across her right knee and her right knee gave way a little bit. (R. Ex. D).

5. Claimant did not fall and was able to finish unloading the fencing and was able to ski down the hill. Claimant advised her supervisor about her knee issues and that she would most likely not be able to work the next day. (R. Ex. D).

6. On February 13, 2015, Employer filed an Employer's First Report of Injury (FROI). (Cl. Ex. A-2). The FROI lists the date of injury as February 4, 2015, but also includes a narrative which explained Claimant was initially injured while working as a volunteer at [Redacted] (incorrectly noting the date as February 3, 2015). The FROI narrative indicates Claimant injured her knee again on February 9, 2015 while unloading spectator fencing in the course while working for Employer. The FROI notes Claimant initially indicated the original injury occurred at [Redacted] and did not think it would be a workers' compensation claim. The FROI further indicates that after her February 9, 2015 injury, Claimant reported her knee continued to be painful and swollen "and [w]hen [Claimant's] pain and swelling did not subside, she approached the Worker's Comp Department." (Cl. Ex. A-2).

7. In a February 18, 2015 email to Employer's Occupational Health Specialist, Claimant reported that her injury for Employer happened on February 9, 2015, and was not the same injury as on February 4, 2015. Claimant reported that both injuries involved the right knee but that the mechanism of injury was different and that different parts of the knee were injured in each incident. (R. Ex. D).

Overview Of Medical Treatment

8. Following her injury, Claimant's authorized treating physician, Frederick Scherr, M.D., referred Claimant to Peter Janes, M.D., of Vail Summit Orthopaedics who performed right knee surgeries on March 3, 2015, and June 16, 2015. (R. Ex. D & H).

9. On February 19, 2015, Claimant saw Lucia London, CNP, at Vail Valley Medical Center. Claimant reported both the February 4, 2015 and February 9, 2015 injuries. Claimant reported the February 9, 2015 injury likely worsened her prior injury. Claimant had already made an appointment with Vail Summit orthopedics for the following day. (Cl. Ex. B-3).

10. In his report related to his February 20, 2015 examination, Dr. Janes indicated Claimant sustained two different injuries, one on February 4, 2015 and the second on February 9, 2015. Dr. Janes' description of the mechanism of injury was consistent with the Claimant's testimony and her reports to other providers. (Cl. Ex. B-4).

11. After Claimant continued to report issues with her knee, Dr. Janes referred Claimant to two additional orthopedic surgeons for evaluation – Dr. Sterett, and Dr. Laprade. All three orthopedic surgeons agreed Claimant would benefit from additional surgical intervention if conservative treatment failed. (R. Ex. D and H).

12. In April 2016, Claimant returned to Dr. Scherr requesting a referral for a fourth surgical opinion. Dr. Scherr believed three concurring opinions were sufficient. He noted Claimant did not desire another surgery and observed that her knee was functional. Based on Claimant's reluctance to undergo additional surgery, Dr. Scherr placed Claimant at maximum medical improvement (MMI) as of April 26, 2016, and assigned a 22% permanent impairment rating for the lower extremity. (R. Ex. A & F).

13. On October 7, 2016, Claimant underwent a Division independent medical examination (DIME) with Stephen Lindenbaum, M.D. Dr. Lindenbaum was aware of the facts and circumstances of both of Claimant's accidents. He opined it was more likely that Claimant sustained an anterior-cruciate ligament injury on February 4, 2015 than on February 9, 2015. Dr. Lindenbaum apparently believed both Claimant's injuries occurred while working for Employer, and found no basis for apportionment. Dr. Lindenbaum placed Claimant at MMI effective April 26, 2016 with a 19% right lower extremity impairment rating. (R. Ex. B & Cl. Ex. A-3).

14. After MMI, Claimant sought treatment with Dr. Gottlob and Axis Physical Therapy, and treated with these providers between April 24, 2016, and December 30, 2016. (R. Ex. H).

Procedural History

15. On November 10, 2016, Respondents filed a Final Admission of Liability (FAL) with respect to Claimant's injury consistent with Dr. Lindenbaum's MMI and impairment opinions. The FAL incorrectly lists Claimant's date of injury as February 4, 2015. Respondents admitted for medical treatment to date, post-MMI medical treatment; temporary total disability (TTD), temporary partial disability (TTD), and permanent partial disability (PPD). According to the FAL, Respondents had paid $61,879.60 in medical expenses, $3,524.95 in TTD benefits; $556.46 in TPD benefits; and Claimant was entitled to $10,948.23 in PPD with an offset of $169.84 for overpayment. Respondents admitted to an average weekly wage (AWW) of $99.08. (R. Ex. C).

16. In December 2016, Claimant filed an Application for Hearing (AFH), which was designated as WC 4-975-232-**01**.[1] On April 6, 2017, the parties participated in a hearing before ALJ Michelle E. Jones, to address the issues of whether Claimant was entitled to change ATPs; whether Claimant had overcome DIME physician Dr. Lindenbaum's MMI opinion; determination of Claimant's PPD impairment rating; and determination of Claimant's AWW. In that hearing, Claimant contended that she was not at MMI on April 26, 2016, and that Dr. Lindenbaum's impairment rating should be adjusted to include a rating for a surgery performed in November 2016. (R. Ex. D).

17. In her April 27, 2017 Order, ALJ Jones denied Claimant's request to designate a new ATP, and also found Claimant failed to meet her burden to overcome DIME Physician Dr. Lindenbaum's opinions with respect to MMI and 19% lower extremity impairment rating. ALJ Jones found that Claimant's AWW at the time of injury was $400.00. (R. Ex. D.).

18. On May 22, 2017, the parties entered into a "Stipulation Resolving Temporary Disability Benefits," that PALJ John Sandberg approved on May 26, 2017. (R. Ex. E). Through the Stipulation, Respondents agreed to pay Claimant an additional $3,548.07 for temporary disability benefits from February 9, 2015 through April 26, 2016 (the date of MMI). Claimant agreed "Respondents need not file a new FAL." The parties also agreed the Stipulation resolved ALJ Jones' orders with respect to overcoming the DIME, PPD and AWW, but Claimant could appeal of ALJ Jones' ruling regarding Claimant's ATP. (R. Ex. E).

19. Claimant then sought review of ALJ Jones' denial of her request to change ATPs. On October 17, 2017, the Industrial Claim Appeals Office (ICAO) issued a Final Order affirming ALJ Jones' April 27, 2017 Order. (R. Ex. F). Claimant appealed the ICAO's October 17, 2017 Final Order, and the Colorado Court of Appeals affirmed on November 1, 2018. (R. Ex. I).

20. The parties then participated in a hearing on January 18, 2018, before ALJ Margot W. Jones in WC 4-975-232-**02**. In the hearing, Claimant requested that Respondent be

[1] Claimant has filed 8 Application for Hearing, which are designated in OAC records as WC 4-975-232-01; 4-975-232-02; 4-975-232-001; 4-975-232-002; 4-975-232-003; 4-975-232-004; 4-975-232-005; and 4-975-232-006.

held financially responsible for medical treatment Claimant received from Dr. Gottlob and Axis Physical Therapy after reaching MMI. In a Summary Order dated March 18, 2018, ALJ Jones denied Claimant's requested relief. (R. Ex. G). ALJ Jones then issued a Findings of Fact, Conclusions of Law, and Order dated April 30, 2018, also denying Claimant's requested relief. (R. Ex. H). Claimant sought review of ALJ Jones' April 30, 2018 Order, and the ICAO issued a Final Order affirming on December 24, 2018. (R. Ex. J). Claimant appealed the ICAO's December 24, 2018 Final Order, and the Colorado Court of Appeals affirmed on November 27, 2019. (R. Ex. N).

21. On May 6, 2019, Claimant filed an AFH designated as WC 4-975-232-**001**. In that AFH, Claimant endorsed the issues of Compensability, and Petition to Reopen Claim. Under "Other issues to be heard at this hearing are," Claimant indicated "Mistake of fact, mistake of law, conclusion in a DIME."[2] (OAC File, AFH WC 4-975-232-001). The matter was originally scheduled for a hearing on August 29, 2019, and later continued to October 29, 2019.

22. On June 18, 2019, at Claimant's request, the parties participated in a prehearing conference before PALJ Sandberg in which Claimant raised multiple issues, including Claimant's petition to reopen, a "motion to address the compensability of the claim," a motion to compel production of a claim file and other issues. Because the matter had already been set for hearing at the OAC, PALJ Sandberg denied Claimant's requested relief. (R. Ex. K).

23. After the August 29, 2019 hearing was rescheduled for October 29, 2019, the parties appeared at a prehearing conference before PALJ David W. Gallivan. In addition to discovery issues, PALJ Gallivan held that the October 29, 2019 hearing would be limited to "Claimant's contention that this claim is not compensable and that she did not sustain an injury while in the course and scope of her employment." (R. Ex. L).

24. On October 3, 2019, the parties appeared at another prehearing conference in which Claimant objected to the medical releases Respondent requested she sign. Claimant also requested an order from the PALJ determining who was the ATP for her claim, and clarification of the issues for hearing. In an order dated October 4, 2019, PALJ Gallivan denied Claimant's requested relief. (R. Ex. M). Ultimately, for reasons that are not apparent from the record or OAC files, the scheduled October 29, 2019 hearing related to WC 4-945-232-001 did not take place and the case was closed within the OAC.

25. On October 23, 2019, Claimant filed another AFH with the OAC designated as WC 4-975-232-**002**. In that AFH, Claimant endorsed issues including medical benefits, authorized provider, and petition to reopen. In the AFH, Claimant also stated

[2] Although not included in the evidentiary record submitted by the parties, the ALJ takes judicial notice of the Office of Administrative Courts' files related to this claim. *See Habteghrigis v. Denver Marriott Hotel*, W.C. No. 4-528-385 (ICAO March 31, 2006) ("A court can take judicial notice of its own records and files."). References to pleadings contained in the Office of Administrative Courts' files are designated as "OAC File").

"Respondents liable for medical treatment due to worsening of condition for admitted injuries." The hearing was scheduled for February 18, 2020. (R. Ex. O).

26. Claimant then filed another AFH on November 25, 2019, designated as WC 4-975-232-**003**, in which she endorsed compensability, petition to reopen, and "Mistake of Fact, Mistake of Law, Conclusion in DIME." The matter was scheduled for hearing on March 12, 2020. (R. Ex. O).

27. On January 22, 2020, PALJ Michelle S. Sisk issued an order consolidating WC 4-975-232-002 and 003 for hearing. (R. Ex. O). The matter proceeded to a hearing before ALJ Peter J. Cannici on February 18, 2020, which addressed two issues: (1) Claimant's request for reimbursement of medical costs related to right knee treatment; and (2) Claimant's request to find her claim not compensable." (R. Ex. Q). After the hearing, the parties entered into a stipulation through which Respondent agreed to reimburse Claimant $6,911.15 for a September 6, 2019 right knee surgery, and to file a FAL reflecting the additional $6,911.15 in the FAL's column noted "medical to date." The parties further stipulated this would "be the only change to the most recent FAL filed on November 10, 2016." (Emphasis added). ALJ Cannici approved the Stipulation on March 18, 2020. (R. Ex. P).

28. On March 25, 2020, ALJ Cannici granted Claimant's unopposed motion to dismiss the issue of compensability (*i.e.*, Claimant's request to find her claim not compensable), and dismissed the issue without prejudice. (R. Ex. O).

29. Consistent with the parties' March 18, 2020 Stipulation, Respondent filed a new FAL on April 23, 2020, reflecting the additional $6,911.15 paid for medical benefits. (R. Ex. R).

30. On May 22, 2020, Claimant filed another AFH designated as WC 4-975-232-**004**. In this AFH, Claimant endorsed "Omissions and calculation errors on final admission of liability dated 4/23/20." (OAC File, AFH WC 4-975-232-004). Respondent filed a Response to Claimant's AFH, in which it stated: "Issued endorsed by claimant are closed; issues are not ripe for hearing." (OAC File, Response WC 4-975-232-004). The parties then attended a prehearing conference before PALJ Gallivan in which Respondent moved to strike Claimant's AFH. PALJ Gallivan found there were no ripe issues on the AFH, and granted Respondent's motion to strike. (R. Ex. U).

31. On September 3, 2020, the parties attended a prehearing conference before PALJ Craig Eley in which Claimant sought an order compelling Respondent to file an amended FAL correcting allegedly inaccurate information. Specifically, Claimant indicated the April 23, 2020 FAL listed an incorrect AWW, resulting in an incorrect statement of temporary benefits paid. Claimant did not contend she was not paid the correct benefits, but sought to require Respondent to file a new, corrected FAL reflecting the benefits actually paid. Respondent objected to the request, presumably "because doing so may give rise to an objection period and additional litigation." (R. Ex. V).

32. Relying on the parties' May 2017 Stipulation and ALJ Cannici's March 18, 2020 Order, PALJ Eley denied the motion by order dated September 4, 2020. (R. Ex. V). Claimant then sought review of the order by the Division, and PALJ Gallivan dismissed the motion to review noting that dismissal "will permit Claimant to seek review before the Office of Administrative Courts." (R. Ex. W).

33. On November 12, 2020, the parties attended another prehearing conference in which Claimant moved "to void the admission of liability for post-MMI care." PALJ Gallivan granted Claimant's motion, ordering "The admission for post-MMI medical benefits is void and withdrawn. Respondent is no longer obligated to provide any medical treatment in this case absent reopening pursuant to § 8-43-303. This order does not otherwise disturb the final admission of liability." (R. Ex. X).

34. On December 1, 2020, the parties attended another prehearing conference before PALJ Sandberg, in which Claimant moved "to void endorsement of medical maintenance benefits on Final Admission of Liability," to "allow" Respondents to amend the April 23, 2020 FAL "not subject to new objection or reopening of previously closed issues by Final Admission of Liability or by ALJ order" and to "reinstate/change/correct date of injury based on alleged material errors." (R. Ex. Y). PALJ Sandberg denied Claimant's motions. (R. Ex. Y).

35. On February 4, 2021, Claimant filed the present AFH (designated as WC 4-975-232-**005**, which includes only a petition to reopen "for Mutual mistakes, Errors and/or Fraud, Date of Injury, Computation and Omission Errors on FAL, Claim Adjusting Errors Claim will remain closed for any and all changes/awards of Worker's Comp benefits and closed for any medical treatment." (Capitalization original).

36. On March 2, 2021, Respondent filed its Response to the present AFH, noting "Claim is closed; matter is barred by the reopening statute of limitations, Section 8-43-303." Respondents' Response does not seek repayment of any previously paid benefits.

Claimant's Testimony

37. At hearing, Claimant testified she initially injured her right knee while volunteering for the Vail Valley foundation on February 4, 2015. She testified she did not tell anyone she was injured, but took a couple of days off work. On February 9, 2015, Claimant worked most of the day for Employer and was unloading supplies from a snowcat. While moving a roll of fencing while wearing ski boots, Claimant experienced pain in her right knee. Claimant reported her knee pain to Employer and indicated she was not able to work further because of her knee pain.

38. Claimant testified that on February 11, 2015, she contacted Employer's human resources department and was advised to complete a First Report of Injury (FROI). The following day, Claimant's supervisor, Mark C[Redacted], completed the form with Claimant's assistance, and the FROI was filed. Claimant testified that Mr. C[Redacted] incorrectly stated the date of her February 4, 2015 injury as February 3 2015, but agreed this was a harmless error. Claimant testified that with the exception of this incorrect date,

the description of events on the FROI is accurate. Claimant further testified she was sent to Employer's health clinic, and mistakenly believed she was being sent for drug testing following her February 9, 2015 injury. She testified the employer-designated provider requested she sign a consent for treatment. Claimant testified she informed the health clinic she did not wish to be treated by anyone on behalf of employer.

39. Claimant testified she believes multiple mistakes were made the course of her claim. Most significantly, Claimant testified she believes the injuries to her knee were not related to her work for Employer and were, instead, related to her February 4, 2015 injury while volunteering at [Redacted]. In substance, Claimant testified her injuries should not have been treated as a workers' compensation injury.

40. Claimant testified she believes her benefits were calculated incorrectly and Insurer paid her more benefits that she was entitled. Additionally, Claimant testified the amount of medical and temporary total disability benefits stated on the Final Admissions of Liability are incorrect and do not correspond to the amounts paid.

41. Claimant testified she first saw Dr. Scherr in July 2015, and that she did not believe Dr. Scherr was aware of her February 4, 2015 injury. She also testified she believed there were irregularities in her medical records, including Dr. Scherr's signature being "rubber stamped" on medical records. Claimant believes the DIME physician's mistaken belief that Claimant's February 4, 2015 and February 5, 2015 injuries were sustained while working for the same employer constitutes "fraud."

42. Claimant further testified Insurer mistakenly paid her TTD benefits after Claimant informed Insurer she had a job and was earning a living in Autumn 2015. On cross examination, Claimant testified she is not seeking any additional medical or indemnity benefits from Respondents.

43. Claimant did not testify or present evidence that due to any of the alleged errors she was underpaid benefits, nor did Claimant testify or present evidence that she is seeking additional benefits, or is otherwise entitled to additional benefits.

44. Respondent did not endorse repayment of benefits as an issue at hearing.

Testimony of Frederick Scherr, M.D.

45. Claimant conducted the post-hearing deposition of Frederick Scherr, M.D. Dr. Scherr was employed as the medical director at the Avon Occupational Health Clinic (now Vail Health Clinic) from March 2015 to September 2017, and served as Claimant's authorized treating provider during that time period. Dr. Scherr testified he treated Claimant for an ACL tear. He testified his April 26, 2016 report lists only February 9, 2015 as the date of injury, and that Claimant was injured while throwing a bale of fencing. He testified that, based on the previous history in the record, it is unlikely Claimant' ACL treat was caused on February 9, 2015, although he also testified there was no way to objectively determine what happened to Claimant's knee on February 4, 2015 because MRIs were not taken until after February 9, 2015. Dr. Scherr noted that the

contemporaneous medical report noted the February 9, 2015, incident likely worsened any injury that may have occurred on February 4, 2015.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Claimant's Petition To Reopen

Claimant's petition presents a unique issue because Claimant seeks reopening to have the claim deemed non-compensable, presumably *ab initio*. Respondents do not seek repayment of any benefits. Claimant contends the parties mistakenly attributed her knee injury to her employment and thus her claim was never compensable. Claimant also alleges multiple “mistakes” in the course of her claim, including being over-paid TTD benefits, and the inclusion of incorrect information on Final Admissions of Liability. Claimant also alleges fraud, although the basis of the alleged fraud is vague. Claimant has failed to establish by a preponderance of the evidence sufficient grounds to justify reopening of her claim.

Once a case has been closed, the issues resolved by a Final Admission of Liability are not subject to litigation unless they are reopened pursuant to § 8-43-303, C.R.S. § 8-43-203 (2)(d), C.R.S.; *see also Berg v. Indus. Claim Appeals Office*, 128 P.3d 270, 272 (Colo. App. 2005); *Webster v. Czarnowski Display Serv., Inc*., W.C. No. 5-009-761-03 (ICAO, Feb. 4, 2019). Section 8-43-303(1) C.R.S., allows an ALJ to reopen any award within six years of the date of injury on a several grounds, including error, fraud, or mistake. *Heinicke v. Indus. Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008). Reopening of a closed claim may be granted based on any mistake of fact that calls into question the propriety of a prior award. Section 8-43-303(1), C.R.S.; *Richards v. Indus. Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Standard Metals Corp. v. Gallegos*, 781 P.2d 142 (Colo. App. 1989). When a party seeks to reopen based on mistake the ALJ must determine "whether a mistake was made, and if so, whether it was the type of mistake which justifies reopening." *Travelers Ins. Co. v. Indus. Comm’n*, 646 P.2d 399, 400 (Colo. App. 1981). When determining whether a mistake justifies reopening the ALJ may consider whether it could have been avoided through the exercise of available remedies and due diligence, including the timely presentation of evidence. *See Indus. Comm’n v. Cutshall*, 433 P.2d 765 (Colo. 1967); *Klosterman v. Indus. Comm’n*, 694 P.2d 873 (Colo. App. 1984).

The power to reopen is permissive, and is therefore committed to the ALJ's sound discretion. Further, the party seeking to reopen bears the burden of proof to establish grounds for reopening. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Barker v. Poudre School Dist.*, W.C. No. 4-750-735 (ICAO, Mar. 7, 2012).

Claimant’s Petition to Reopen due to Mistakes

Claimant has failed to present credible evidence indicating that any mistake occurred which would justify reopening her claim, and has therefore failed to meet her burden of proof. Claimant’s primary claim is that Respondents mistakenly deemed her right knee injury a compensable injury. The credible evidence demonstrates that Claimant, Respondents, and her treating physicians were, from the beginning, aware of the circumstances of Claimant’s injuries on February 4, 2015, and February 9, 2015. Throughout her claim, Claimant clearly communicated to Respondents and her health care provider that two incidents occurred. Claimant assisted Employer in filing a First Report of Injury, and actively sought and accepted workers’ compensation benefits.

The only putative “mistake” identified in the record is DIME physician Dr. Lindenbaum’s apparent belief that both the February 4, 2015 and February 9, 2015 injuries occurred in the course of Claimant’s employment with Employer. To the extent this was erroneous, no credible evidence was presented to indicate Claimant’s February 9, 2015 injury was not compensable. To the contrary, Claimant reported to her providers that the February 9, 2015 injury worsened her prior injury which would render the claim compensable as an aggravation for a pre-existing injury. She also reported to Employer that her February 9, 2015 injury was a different injury, which would also render the injury compensable. Thus, the ALJ concludes Dr. Lindenbaum's mistaken belief that the two February 2015 incidents occurred in the course of her employment with Employer does not call into question the propriety of the Claimant's award of PPD or other workers' compensation benefits.

Notwithstanding, if, as Claimant now contends, Dr. Lindenbaum's attribution of her impairment to her employment was in error, Claimant had a remedy available to her by filing an AFH to challenge the DIME's impairment rating. Although, Claimant did file an AFH in December 2016 challenging the DIME opinions in WC 4-975-232-01, she did not contend the DIME erred in attributing her impairment to her employment. Instead, Claimant sought to increase her impairment rating and obtain additional benefits. At the time, Claimant was aware of the DIME physician's opinion and the facts related to the two February 2015 incidents. Thus, to the extent the DIME physician's opinion was in error, Claimant could have remedied any mistake by requesting that the DIME's attribution of her impairment to her employment be deemed incorrect, and presenting evidence supporting that position. Claimant elected not to do so.

Even after her initial DIME challenge, Claimant sought, pursued, and accepted significant benefits over a period of years. As of November 10, 2016, Respondents paid - and Claimant accepted - $61,879.60 in medical benefits and $15,029.64 in combined TTD, TPD and PPD benefits. Over the next three years, Claimant filed multiple actions affirmatively pursuing additional workers' compensation benefits for her injuries, ultimately obtaining an additional $3,548.07 in temporary disability benefits. Clamant did not contend her injury was not compensable until May 2019. Even after that, Claimant continued to pursue workers' compensation benefits. For example, on October 23, 2019, in WC 4-975-232-002, Claimant sought to hold Respondent liable for "medical treatment due to worsening of condition for admitted injuries." Claimant then accepted reimbursement of an additional $6,911.15 in medical benefits from Respondent in March 2020. Throughout this time, Claimant, Respondents, and her treating physicians were aware of the circumstances of her injuries on February 4, 2015, and February 9, 2015, as well as Dr. Lindenbaum's opinion. The ALJ concludes that Claimant has failed to demonstrate grounds for reopening her case for a mistake.

At hearing Claimant contended the April 23, 2020 FAL contains incorrect information and seeks to require Respondent to file a new FAL correcting the alleged errors. To the extent Claimant asserts that information in FAL constitutes a "mistake" justifying reopening of her claim, the ALJ finds no grounds to reopen Claimant's claim.

The initial FAL from November 10, 2016 did contain an incorrect date of injury. However, after ALJ Michelle Jones ruled in Claimant's favor of increasing her AWW from $99.08 to $400.00, Claimant expressly agreed that Respondent did not need to file a new FAL. As part of the March 18, 2020 Stipulation, Claimant and Respondent expressly agreed that Respondent would file a new FAL which would reflect the additional $6,911.15 in the FAL's "medical to date" column, and that "This will be the **only** change on the most recent FAL filed on November 10, 2016." (R. Ex. P (emphasis added)). Respondent complied with this agreement when it filed the April 23, 2020 FAL. Accordingly, with respect to the content of the April 23, 2020 FAL, Claimant received what she negotiated. Moreover, to the extent the information contained on the April 23, 2020 FAL is inaccurate, the inaccurate information constitutes ministerial errors which have no substantive impact on Claimant's claim, and do not justify reopening of her claim.

Claimant's Petition to Reopen for Fraud

Claimant has also failed to establish by a preponderance of the evidence the existence of any fraud by Respondents. The elements of fraud or material misrepresentation are well-established in Colorado law. The elements are: (1) A false representation of a material existing fact, or a representation as to a material fact with reckless disregard of its truth; or concealment of a material existing fact; (2) Knowledge on the part of one making the representation that it is false; (3) Ignorance on the part of the one to whom the representation is made, or the fact concealed, of the falsity of the representation or the existence of the fact; (4) Making of the representation or concealment of the fact with the intent that it be acted upon; (5) Action based on the representation or concealment resulting in damage. *Arczynski v. Club Mediterranee of Colorado, Inc.*, W.C. No. 4-156-147 (ICAO Dec. 15, 2005), *citing Morrison v. Goodspeed*, 68 P.2d 458, 462 (Colo. 1937). "Where the evidence is subject to more than one interpretation, the existence of fraud is a factual issue for resolution by the ALJ." *Arczynski, supra.*

Claimant has failed to prove by a preponderance of the evidence that Respondents committed any fraud. Claimant has failed establish by credible evidence that either Employer or Insurer knowingly made any false representation or knowingly concealed any material existing fact. Thus, Claimant has failed to establish the first two elements of fraud. Claimant has failed to establish the third element of fraud, because the evidence established that including Claimant was aware, at all material times, of the facts surrounding Claimant's injuries on February 4, 2015 and February 9, 2015, as well as Dr. Lindenbaum's DIME opinion. Claimant has also failed to establish the fourth and fifth elements of fraud because she presented no credible evidence that she took any action based on any alleged material misrepresentation or concealment, or that she suffered any resulting damage.

Claimant has not articulated any cogent rationale for reopening her claim and has not met her burden of proof of establishing either a mistake or fraud. The ALJ finds and concludes that no grounds exists for Claimant to reopen her claim to have it deem non-compensable.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen her claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 29, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, -Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-979-611-002

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that PA-C Teresa Turgeon and Fit Physical Therapy (a.k.a. Fyzical Therapy & Balance Centers) are authorized providers.

II. Whether Respondents have proven by a preponderance of the evidence that the admission with regard to reasonably necessary and related maintenance medical benefits may be withdrawn and whether the February 22, 2013 claim may be closed.

III. Whether Claimant has proven by a preponderance of the evidence that Claimant is entitled the post-maximum medical improvement (MMI) benefits provided by Fit Physical Therapy for the period between October 8, 2019 and July 30, 2020.

IV. Whether Claimant has proven by a preponderance of the evidence that Claimant is entitled to reasonable and necessary medical benefits after MMI, including for the period between July 31, 2020 through the present and continuing.

STIPULATIONS

The parties stipulated that Insurer no longer insures Employer since December 31, 2017.

PROCEDURAL MATTERS

Claimant filed an Application for Hearing on June 11, 2021 on issues of medical benefits that are authorized, reasonably necessary and related to the February 22, 2013 claim, including physical therapy with Fit Physical Therapy.

Respondents filed a Response to Application for Hearing on June 16, 2021 denying that physical therapy is reasonably necessary and related to the injury. Respondents questioned whether Fit Physical Therapy is an authorized treating provider.

The parties agreed that Panorama Orthopedics is one of Claimant's authorized medical providers, but Respondents are disputing the reasonable necessity of physical therapy, which was prescribed by a physician assistant and not a physician.

Claimant was involved in a second work related event on January 20, 2017, which is the subject matter of W.C. No. 5-073-253, involving a neck injury. This claim was accepted by Insurer and Claimant received physical therapy for the neck until 2019.

The parties also agreed that, after Insurer's liability was terminated in 2017, Claimant was involved in a third work related accident. This is the subject of W.C. No. 5-

108-379 and was a neck injury. Both neck injury cases were consolidated, and the claims were settled. An order in the consolidated matters was approved on January 22, 2020.

The Respondents conceded that *Grover* medical benefits were admitted by Final Admission of Liability following a determination of MMI and admitted for a 10% whole person impairment.

Respondents requested that this ALJ take administrative notice of the Low Back Medical Treatment Guidelines, specifically pages 3, 63, and pages 83 through 91; and also take administrative notice of W.C.R.P. Rule 16. In their position statement Respondents requested that this ALJ also take administrative notice of the Level I Accreditation Curriculum.

FINDINGS OF FACT

1. Claimant was born on August 17, 1973 and was 48 years old at the time of the hearing. Claimant has been a consulting engineer for the past 24 years.

2. Claimant had a prior disc replacement surgery at the L4-5 and L5-S1 levels in 2011. This resulted as a consequence of an injury involving his son. Following the surgery he was off work for a period of approximately six weeks, following which he returned to part time work for a couple of months. After this recovery period, Claimant returned to work full time. He stated that he did not have any significant problems or limitations for some time before his 2013 accident.

3. Claimant was injured in the course and scope of his employment with Employer on February 22, 2013, injuring his low back. Claimant was representing Employer for a client on the north side of Denver. He was walking toward an on-site trailer, across the parking lot, when he slipped on ice, falling hard, aggravating his preexisting low back condition. It has affected his low back and bilateral lower extremities.

4. He was seen by Dr. Karen Knight, of Panorama Orthopedics and Spine for the aggravation and has not recovered from that incident. Dr. Knight placed Claimant at maximum medical improvement in 2015. He continued to be treated by Dr. Knight after MMI and she would regularly prescribe therapy to maintain MMI.

5. Claimant stated that, as a consultant, he would take time off work to attend his medical appointments but had to make up the time and was working full time following the work-related accident of 2013. He had physical therapy first at Panorama but after he was placed at MMI, he was transferred to Fit Physical Therapy on or about June, 2015. Panorama declined to continue to see him in PT as he was at MMI, so they provided a list of places he could continue his maintenance PT. Claimant chose Fit Physical Therapy as it was closest to his work.

6. On February 25, 2015 Dr. Roberta Anderson Oeser noted that she was seeing Claimant pursuant to a referral from Karen Knight, M.D. to perform the impairment rating in this case. Dr. Anderson took a history, noting that Claimant had had a prior disc surgery and a subsequent slip and fall on ice in 2013 while at work, aggravating his

preexisting underlying condition. Dr. Anderson stated that, despite all treatment rendered on the claim, Claimant continued to have ongoing symptoms. At the time Claimant advised that dry needling tends to decrease his symptoms in his low back, which was effective with controlling his symptoms, and should continue with independent exercise and stretching programs. She noted that Claimant was on Horizant to manage his neuropathic type pain and he was more active with the medicine. She noted that Claimant was quite frustrated by the fact that his symptoms have not resolved. On physical exam, Dr. Anderson found minor increase in lumbar paraspinal tone, tenderness in the low back, the PSIS and gluteal muscles. She diagnosed lumbago, lumbar radiculitis, history of surgery, lumbar spondylosis and degenerative disc disease of the lumbar spine. Dr. Anderson performed an impairment rating evaluation and concluded Claimant had a 10% whole person impairment related to the February 22, 2013 claim. He was sent back to Dr. Knight for continuation of medications and dry needling. Claimant was also encouraged to continue with his independent stretching and exercise program. Lastly, she stated that Claimant continued to work without restrictions and should continue in that capacity.

7. On March 18, 2015 Dr. Karen Knight issued a Physician's Report of WC Injury diagnosing degenerative disc disease of the thoracic and lumbar spine, stating that Claimant was at maximum medical improvement. Dr. Knight also stated Claimant required maintenance care. Claimant's treatment plan included medication (Horizant) and physical therapy once to twice a month of dry needling and medical massage. Dr. Knight provided no restrictions.[1]

8. Respondents filed a Final Admission of Liability on April 21, 2015 admitting that Claimant was at maximum medical improvement as of March 18, 2015. Respondents further admitted to maintenance medical care that is reasonably necessary and related to the injury and in accordance with Dr. Knight's assessment.

9. On May 1, 2015 Dr. Knight prescribed 12 additional visits for physical therapy for the lumbar spine condition, including exercise, myofascial release, spine neutral core endurance, modalities as needed, home exercises, back biomechanics education and dry needling. A notation on the prescription noted that the visits were authorized per Brandon on June 23, 2015.

10. Claimant was first seen at Fit Physical Therapy (Duncan YMCA-Arvada) on June 17, 2015 by Lisa Chevalier. The prescription related to his ongoing bilateral leg pain and lumbar pain pursuant to Dr. Karen Knight's referral. Claimant provided a history of being better while on medication, was having difficulty sleeping and had to change positions. Ms. Chevalier noted Claimant benefited from dry needling in the past. She also documented Claimant was a regular exerciser and was compliant with his home exercise program. They established a plan that would include: Therapeutic Exercises (ROM, Strength, Endurance, Stability), Therapeutic Activity (Work Specific), Neuromuscular Rehabilitation (Balance/Proprioception Training, Muscle Re-Education), Manual Therapy (Soft Tissue Mobilization, Joint Mobilization, Spinal Mobilization, Myofascial Release,

[1] Neither party submitting into evidence a copy of Dr. Knight's final report.

Muscle Energy Techniques, Manual Resistive Exercise, Dry Needling/Intramuscular Manual Therapy, (Graston or ASTYM Techniques).

11. On June 24, 20215 Claimant proceeded with his first treatment with Fit Physical Therapy, which included neuromuscular re-education with e-stim, including dry needling, massage therapy in the lower thoracic and lumbar areas, as well as the gluteals and hips, and therapeutic and kinetic stretches. They noted that Claimant had a good home program of core stabilization but needs low level contraction with LE movement.

12. On July 1, 2015 Ms. Chevalier documented that Claimant was doing well, working on lumbar stabilization. Claimant understood the importance of lumbar stabilization with lower extremity movement and did better with bent knee fall out (BKFO) and prone knee flexion. Claimant continued in PT for multiple dates with therapeutic exercises, neuromuscular re-education and massage throughout 2016.

13. On December 29, 2015 Dr. Knight issued a prescription for another 12 visits of lumbar spine physical therapy to include myofascial release, core endurance, modalities and dry needling. A notation on the prescription documented that the 12 visits were approved by Brandon from [Insurer] on January 12.[2]

14. Dr. Knight issued a subsequent prescription for physical therapy on December 21, 2016 for 12 visits of physical therapy for the continuing lumbar radiculopathy for gentle myofascial release, spine neutral core endurance program with emphasis on dynamic motor control.

15. The Claimant was, however, not seen by Dr. Knight on December 21, 2016, but by her physician assistant, Christina Lee, PA-C., who acknowledged Claimant was seen for his continuing lumbar spine pain with symptoms of tension and spasm. They discussed treatment option and was given the prescription for physical therapy, advised to continue activity as tolerated as well as a home exercise program daily and return to clinic as needed. They also discussed medications, which Claimant declined. The report stated that the patient was discussed with Dr. Knight who concurred with the plan.

16. Claimant was provided a new 12 visit physical therapy prescription by Dr. Knight on October 12, 2017 to address his low back pain. It specified gentle range of motion, myofascial release, core endurance, modalities as needed and back biomechanics education. This prescription was again renewed by Dr. Knight on October 17, 2018.[3]

17. On August 8, 2019 Dr. Knight changed the format of the prescription. This prescription notes that the ordering diagnosis is for cervicalgia and noted primary

[2] This ALJ infers that this was dated January 12, 2016.
[3] No corresponding reports of evaluations were admitted into evidence for these dates, just the prescriptions.

insurance as Aetna Insurance[4]. It ordered the same kind of care, and does specify that the body part location for therapy is both the lumbar spine and the cervical spine.

18. On August 7, 2019 Claimant was seen by Jennifer Morton of Fit PT. Claimant continued to complain of bilateral leg pain and lumbar pain. It noted that the low back was tight but had been working on more stretching of his hips and ITBand. The week before he had bent over and got a catch in his low back on the right side but it had already eased up since. Ms. Morton noted that Claimant greatly benefited from monthly physical therapy to address impairments and allow him to maintain physical activity, reduce pain, reduce need for any medications, continue working in full without limitations, and continue an active lifestyle. She noted that Claimant responded very well to manual therapy and needling and had significant pain reduction.

19. On September 17, 2019 the therapist, Patricia M McNutt, PT, documented that Claimant continued to treat for the low back pain. It stated that Claimant continued to complain of bilateral leg pain and lumbar pain, had tightness in the low back and had been working on more stretching on hips and ITband as he could not fully exercise related to his neck complaints. They worked on neuromuscular re-education from T2-S1, with e-stim, low back massage therapy as well as the gluteals and hips. The therapist stated that Claimant greatly benefited from monthly therapy to address impairments and allow him to maintain physical activity, reduce pain, reduce need for medications, continue working out as he is able and continue with his lifestyle.[5]

20. On November 21, 2019 Claimant returned to Fit PT, noting he was tight across the low back and noted right quad differences. He complained of bilateral leg pain and lumbar pain. He proceeded with neuromuscular reeducation and massage. Ms. McNutt stated that Claimant greatly benefits from monthly physical therapy visits to address impairments and allow him to maintain physical activity, reduce pain, reduce need for any medications, continue working out (as he is able) and continue an active lifestyle.

21. On February 17, 2020 Jennifer Morton of Fit PT stated that Claimant "greatly benefits from bi-monthly physical therapy visits to address impairments and allow him to maintain physical activity, reduce pain, reduce need for any medications, continue working out (as he is able) and continue an active lifestyle." The therapist noted that Claimant "had a little groin pull with squats but feeling better now." The physical therapy's note further states that his "[L]ow back is a little tight but has been working on more stretching of hs[6] (sic.) and ITB[7] as he cannot exercise right now with his neck" injury. They also specifically recommended that Claimant continue with therapy as he responded very well to manual therapy and DN with pain reduction. They discussed his exercise program and recommended he increase squats, deadlifts, lunges, and carries to improve lower extremity and core stability and strength to improve his low back.

[4] This ALJ infers that this was Claimant's personal insurance.

[5] The therapist also addressed some issues related to the neck which are not relevant to this claim.

[6] This ALJ infers this means "hips"

[7] This ALJ infers ITB is iliotibial band.

22. On July 31, 2020 Claimant returned to Panorama Orthopedics and Spine Center. He was evaluated by Dr. Knight's physician assistant, Ms. Teresa Turgeon, PA-C, via telehealth[8]. She noted that Claimant presented with low back pain and was requesting continuation of his physical therapy to address the low back tightness as the dry needling helps to keep it tolerable. She noted that most of his pain is axial back and with forward flexion, documented that activity seemed to exacerbate the pain but that he lives with it because he has to continue with life. Claimant reported that he does a lot of activity modification to avoid stress on his back and takes meloxicam, if he needs it for the pain. On evaluation claimant had decreased forward flexion, extension, and lateral rotation in the extremes of range, shifts from right to left caused reproduction of pain on both the right and the left sides, pain with motion reproduced during the exam with forward flexion and return to extension across the low back in the L4-5 facet pain area. Following instructions to palpate, Claimant had tenderness in the lumbar paraspinals and a positive facet load. They discussed continuing therapy and a prescription was to be sent to the patient. Other treatment options were discussed as well. Claimant was also advised to continue activity as tolerated and continue with his home exercise program daily.[9]

23. On August 10, 2020 Fit Physical Therapy submitted to Insurer a written request for prior authorization for an additional 12 physical therapy visits related to his February 22, 2013 claim to Insurer.

24. Dr. Marc Steinmetz issued an independent medical evaluation upon Respondents' request dated April 27, 2021. Dr. Steinmetz reviewed records provided which included records from Fit Physical Therapy, a Job Demands Analysis, the settlement documents in the 2017 claim, the Final Admission of Liability in the 2013 claim as well as medical records from Dr. Knight and the impairment rating issued by Dr. Roberta Anderson Oeser[10]. The report makes multiple credibility determinations. He noted that there are several notations in the medical records with regard to Claimant engaging in training for a triathlon such as cycling, swimming, hiking, that tighten up his back. He also had records stating that Claimant engaged in snow shoeing, which also tightened up his back. Dr. Steinmetz confirmed during his evaluation that Claimant continued to use his bicycle during the summer on occasion and his stationary bike as well as snow shoeing and hiking. Claimant advised Dr. Steinmetz that he had not recently been swimming because the gyms were closed because of the pandemic. He advised that Panorama would provide him with prescriptions every year for physical therapy and obtained meloxicam from his general practitioner. Claimant advised Dr. Steinmetz that his back would flare up when sitting too long at work.

25. Dr. Steinmetz noted on exam that Claimant's low back was tender at the paraspinal muscles but had no appreciable spasms. Claimant also complained of tenderness in the gluts and hamstrings. Dr. Steinmetz stated that Claimant had normal range of motion, had good reflexes and strength, no atrophy in the legs or palpable trigger

[8] This ALJ takes judicial notice that Colorado was under COVID-19 pandemic statewide restrictions beginning March 2020 through the end of 2020 and telehealth was a common practice during the period.
[9] Neither party provided a copy of the therapy prescription issued on this date.
[10] Other records are mentioned involving the neck injury, which are not relevant here, including a report from Dr. Steinmetz from 2019.

points. He noted that Claimant had waxing and waning of low back symptoms but could not appreciate what this was due to other than Claimant's mentions of prolonged sitting at work. He opined that Claimant no longer required treatment related to the 2013 low back injury. He stated that the physical therapy may be reasonably necessary but related to other temporary exacerbations caused by Claimant's activities and work.

26. Claimant had multiple physical therapy visits between the first evaluation with Fit Physical Therapy on June 17, 2015 and the last report submitted into evidence for December 21, 2020. Additional physical therapy records from PT Physical therapy addressed the cervical spine complaints, which are not relevant to this matter, covering periods from April 11, 2018 to March 23, 2021. [Exhibit I, bates 145-241.]

27. The payment log shows that there were 64 payments made to Fit Physical Therapy for the period of June 17, 2015 through October 8, 2019 by Respondents under the low back claim, which would represent a little more than once per month or 1.23 per month. Nothing in the payment log certifies that all payments made were related to the 2013 claim, but they correspond with the records submitted into evidence. While Claimant continued with PT after October 8, 2019, some of the records document it was for the cervical spine condition unrelated to the low back claim and some address the 2013 claim.

28. Claimant testified he continued to see Dr. Knight after MMI, who recommended a course of maintenance treatment, including physical therapy, a home exercise program, dry needling and other therapies to maintain his function and diminish his low back pain. Claimant testified he would not always specifically request the continued PT though he discussed treatment options. Sometimes Fit PT would contact Dr. Knight's office to get a prescription for continued maintenance when the prescriptions would run out. This has continued since 2015.

29. Claimant testified that he would typically be seen by physical therapy once a month to diminish tightness and maintain mobility of his lumbar spine. Claimant stated when he does not see the therapist, that he has an increase in stiffness and pain in his lower back area. He stated that Insurer would pay for his care and he did not hear about any denial of therapy until approximately 2020. Claimant has continued with PT as it has assisted him in maintaining a baseline.

30. Claimant stated that he has continued pain in his low back and persistent muscular tightness and dysfunction for which he gets the dry needling treatment. Claimant testified that he does exercise but that he does nothing that is too intense. He primarily sees the therapist for his low back but they do sometimes address neck problems.

31. Claimant had been involved in a motor vehicle accident in 2008, for which he was not injured and sought no medical care. He was involved in a second very low velocity motor vehicle accident in approximately 2009, for which he had no injuries and sought no medical care.

32. Claimant had been involved in organized sports when he was a teen, like rugby and soccer, but it had been a very long time since he had engaged in those organized types of activities. He also used to do mountain biking and trail biking but that was also some time ago, before his 2011 surgery. He stated that he has kicked a soccer ball with his son but has not engaged in organized soccer for some time. He stated that he has not engaged in any triathlons, but he did do the Pike's Peak marathon but mostly walked though it was a timed event. He also goes snow shoeing approximately twice a year, but only takes easy trails as the poling affects his neck. He does bike on occasion on a standard bike. He stated that he cannot use a racing bike any longer as he is unable to handle the pressure on his neck since his 2017 neck injury. He testified that he gave his racing bike to his son as he could no longer use it due to his neck injury. He has not had any incidents or intervening events since the 2013 injury affecting his low back. In fact, Claimant stated that he has now curtained any activities that might exacerbate or flare his lower back symptoms, and needs the therapy to keep him active.

33. The Regional General Adjuster (Adjuster) for Insurer testified that she has worked for Insurer, managing workers' compensation claims, which include indemnity and medical benefits. She took over the January 20, 2017 claim for the neck injury in W.C. No. 5-073-253 from the beginning of the claim. She became involved with the low back claim after it had already been on a final admission. She stated that the February 22, 2013 claim was handled initially by Brandon (Prior Adjuster). She reviewed both claim files before the hearing.

34. Adjuster stated that she had never authorized any medical care on the 2013 claim personally. She noted that the Prior Adjuster had authorized and paid care at Fit Physical Therapy under the low back claim of 2013. She received a call from the therapist at Fit Physical Therapy to authorize ongoing physical therapy for Claimant around August 2020. Adjuster responded that she did not understand why the physical therapist was requesting authorization since the neck claim was closed. The therapist then gave the Adjuster the correct claim number for the open low back claim. However, the claim was under an old system, she did not have access to it and advised she would not authorize care. The therapist contacted Insurer multiple other times, though others within the insurance company took those calls.

35. Adjuster testified that she looked at the payment log, noting that physical therapy was paid on the low back claim through October 8, 2019. She did not understand why the provider was billing on this claim. However, Adjuster stated that physical therapy was authorized and paid for by Insurer through October 8, 2019.

36. Adjuster testified that there was a report received by Insurer from Dr. Knight's office recommending the physical therapy but that she believed it was for the neck, not the back. However, a proper request for prior authorization pursuant to Rule 16 was not received according to Adjuster, just the report prescribing it. She further stated that the report of July 31, 2020 was from a physician assistant at Panorama, not the doctor. Adjuster testified that since she had not technically received a Rule 16 request, no formal denial had been issued and she had verbally denied any authorization for physical therapy.

37. On August 14, 2020 Adjuster wrote to Fit Physical Therapy that they would not be authorizing any treatment on the lumbar spine claim because they had not received a proper Rule 16 request. They additionally stated that they would have Claimant undergo an independent medical examination to determine causation of the ongoing treatment.

38. Dr. Marc Steinmetz testified on October 26, 2021 during a post hearing deposition. Dr. Steinmetz was qualified as an expert in occupational medicine. He authored two separate independent medical evaluations on behalf of Respondents. The first was dated March 27, 2019 involving the 2017 neck injury claim. The second was dated April 27, 2021 involving the low back claim. Dr. Steinmetz documented that there were several mentions of physical activities like hiking and swimming, Claimant engaged in, that would temporarily aggravate his low back, specifically in 2016. He also mentioned that Claimant was engaged in exercises including squats that would tighten his groin and low back. Dr. Steinmetz indicated that Claimant had temporary aggravations engaging in travelling and sitting at work. Dr. Steinmetz mentions repeatedly that Claimant mentioned that he had had a groin pain or strain from squats. His ultimate opinion is that the low back injury of 2013 did not cause the need for physical therapy but that Claimant's activities did, and he found Claimant not credible in his recounting of those physical activities, stating that the subsequent new job may have been the cause for Claimant's need for continuing physical therapy.

39. As found, Dr. Steinmetz is not credible. The February 17, 2020 report from Fit Physical Therapy states specifically that Claimant "had a little groin pull with squats but feeling better now." The physical therapy note further states that his low back is a little tight but has been working on more stretching of hips and iliotibial band as he cannot exercise due to his neck injury. At the time of MMI in 2015, Dr. Knight continued to recommend medications as well as continuing physical therapy. Dr. Anderson Oeser encouraged Claimant to continue his independent exercise program to maintain MMI and to return to Dr. Knight for follow up including dry needling. Throughout the record, both the providers at Panorama as well as the therapists at Fit Physical Therapy kept encouraging Claimant to exercise and maintain his level of activity in order to continue in a stable condition. This included recommendations for continued therapy and exercise. This ALJ infers from all the prescriptions for physical therapy that this was needed to provide Claimant the ability to keep at his baseline MMI status without further actual aggravation. As found, the fact that medical records document that Claimant continued to attempt various endeavors to maintain that level of physical activity is indicative that he was trying to follow the directions of his providers. The evidence fails to show that Claimant's normal activities of daily living, including his daily exercise, activities and work aggravated Claimant's condition. Claimant continued to require physical therapy to maintain his low back condition.

40. As found, Claimant's testimony is more credible than Dr. Steinmetz's, despite Dr. Steinmetz's multiple attempts to discredit Claimant remarks and testimony. Claimant is found credible. Respondents have failed to prove by a preponderance of the evidence that they are entitled to withdraw the admission for reasonable and necessary maintenance care related to the February 22, 2013 low back injury claim.

41. As found, Panorama Orthopedics and Spine, Dr. Knight and her physician assistants, Christina Lee, PA-C. and Teresa Turgeon, PA-C are authorized medical providers. Respondents admitted that Panorama and Dr. Knight was were authorized medical providers. In fact, Ms. Lee recommended physical therapy and Respondents authorized the therapy in 2016. As found, Ms. Turgeon is within the chain of referral and an authorized medical provider. Claimant has proven by a preponderance of the evidence that Ms. Turgeon is an authorized treating provider in the February 22, 2013 claim.

42. As found, Fit Physical Therapy is an authorized provider. Claimant testified that Panorama would no longer provide maintenance care at the Panorama physical therapy department and was provided a list of therapy clinics by Dr. Knight's staff. Claimant selected Fit Physical Therapy as it was closest to Employer's location. Claimant started physical therapy shortly after MMI on June 17, 2015 with Fit Physical therapy. The initial record from Fit Physical Therapy noted that Dr. Knight made the referral. Claimant and the records from Fit Physical Therapy are found credible in this matter. Further, the records showed that from June 17, 2015 through October 8, 2019 Respondents continued to make payment to Fit PT. It is inferred from these actions that Respondents acknowledge and accepted the referrals from Dr. Knight and Ms. Lee to Fit Physical Therapy. The chain of referral was preserved. Claimant has proven by a preponderance of the evidence that Fit Physical Therapy is authorized to treat Claimant as an authorized treating provider.

43. Ms. Turgeon issued a recommendation for physical therapy as Claimant continued to have back pain as a result of his 2013 low back injury. As found, Claimant has proven by a preponderance of the evidence that Claimant continues to be entitled to physical therapy as prescribed by Ms. Turgeon on July 31, 2020.

44. Also as found, Claimant has failed to show by a preponderance of the evidence that Dr. Knight appropriately recommended treatment specifically for the low back condition on August 8, 2019. She changed the format of the prescription, and the ordering diagnosis is for cervicalgia. While she may have intended to provide a prescription for both the 2013 and the 2017 injuries at the same time as she noted treatment of the spine location for therapy was both for the lumbar spine and the cervical spine, it is not clearly noted and not sufficient evidence to show that the treatment ordered was for the 2013 low back injury claim.

CONCLUSIONS OF LAW

A. General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the claimant's rights nor in favor of the rights of the respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office (ICAO)*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Burden of Proof

The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. Sections. 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000; *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205 (Colo. App. 2012).

However, where an insurer seeks to terminate benefits that have been admitted, they must prove by a preponderance of the evidence that Claimant requires no additional post-MMI treatment. See § 8-43-201(1), C.R.S. By filing an admission of liability, the employer or insurer has "admitted that the claimant has sustained the burden of proving entitlement to benefits," to which Respondents have admitted. *City of Brighton v. Rodriguez*, 318 P.3d 496, 507 (Colo. 2014).

A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo.

306, 592 P. 2d 792 (1979; *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

C. Authorized Medical Provider

"Authorization" refers to the physician's legal authority to treat the injury at the respondents' expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Section 8–43–404(5), C.R.S.2011, gives employers or insurers the right to choose treating physicians in the first instance in order to protect their interest in overseeing the course of treatment for which they could ultimately be held liable. The initial right to select a treating physician is an obligation that must be met forthwith upon notice of an injury, *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381, 383 (Colo.App.2006), and if medical services are not timely tendered by the employer or insurer, the right of selection passes to the employee, *Andrade v. Indus. Claim Appeals Office*, 121 P.3d 328, 330 (Colo.App.2005). Further, a claimant "may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion." *Greager v. Industrial Commission*, 701 P.2d 168, 170 (Colo. App. 1985); see also, Brickell v. Business Machines, Inc., 817 P.2d 536. Lastly, an insurer may, by their conduct, waive the right to object that the medical provider was not an authorized provider. *Wielgosz v. Denver Post Corporation*, W. C. No. 4-285-153, (ICAP, December 3, 1998).

Here, Respondents have conceded that Dr. Karen Knight of Panorama Orthopedics and Spine was an authorized treating physician by their actions in filing a Final Admission of Liability on April 15, 2015, noting Respondents' position regarding medical benefits after MMI. The FAL specifically stated that Insurer "will admit to pay reasonable, necessary, and related treatment recommended by Dr. Karen Knight." Clearly Dr. Knight is an authorized treating physician.

Further, it is clear that Claimant was treated at of Panorama Orthopedics and Spine by other providers in addition to Dr. Knight. For example, on December 21, 2016 Christina Lee, PA-C. was the provider to examine Claimant. However, the prescription for therapy for the same day for 12 visits for the continuing lumbar radiculopathy for gentle myofascial release, spine neutral core endurance program with emphasis on dynamic motor control was issued directly by Dr. Knight. This implies that other providers within Panorama were authorized.

As found, Panorama Orthopedics and Spine, Dr. Knight and her physician assistants, Christina Lee, PA-C. and Teresa Turgeon, PA-C are authorized medical providers. As found, Ms. Turgeon is within the chain of referral and an authorized medical provider. Claimant has proven by a preponderance of the evidence that Ms. Sturgeon is an authorized treating provider.

A referral in the normal progression of authorized treatment allows for the authorized treatment provided by the medical provider accepting the referral. *Greager v. Industrial Commission,* 701 P.2d 168 (Colo. App. 1985). When the referral reveals it is based on the independent medical judgment of the referring doctor, it may be construed as an authorized referral. *City of Durango v. Dunagan*, 939 P.2d 496, 500 (Colo. App. 1997). Dr. Knight, Ms. Lee and Ms. Turgeon all work for the same clinic at Panorama Orthopedics. The ALJ infers from this information that Dr. Knight requested that the PA-Cs examine and treat Claimant for his work related February 22, 2013 injury. In fact, Ms. Lee confirmed that she had consulted with Dr. Knight and she confirmed that she agreed to proceed with the referral to physical therapy.

As found, Fit Physical Therapy is an authorized provider. Claimant testified that Panorama would no longer provide maintenance care at the Panorama physical therapy department and was provided a list of therapy clinics by Dr. Knight's staff. Claimant selected Fit Physical Therapy as it was closest to Employer's location. Claimant started physical therapy shortly after MMI on June 17, 2015 with Fit Physical therapy. The very first report from Fit Physical Therapy notes that Dr. Knight made the referral. Claimant is found credible in this matter.

Further, the records show that from June 17, 2015 through October 8, 2019 Respondents continued to make payment to Fit Physical therapy. It is inferred from these actions and conduct that Respondents acknowledged and accepted the referral from Dr. Knight and the PA-Cs to Fit Physical therapy. Therefore, the chain of referral was preserved. Claimant has proven by a preponderance of the evidence that Fit Physical Therapy (a.k.a. Fyzical Therapy & Balance Centers) is authorized to treat Claimant as an authorized treating provider.

D. Termination of Grover medical benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a), C.R.S.; *Sims v. Indus. Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover* v. *Indus. Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc*., 77 P.3d 863 (Colo. App. 2003). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

Here, Respondents admitted by Final Admission of Liability dated April 21, 2015 with a general award of medical benefits that are reasonably necessary and related to the claim after the maximum medical improvement determination. Claimant continued to receive post-MMI care from 2015 through October 8, 2019. However, after the date Claimant received physical therapy on October 8, 2019, Respondents alleged that the medical care that Claimant was receiving from his ATP, Fit Physical Therapy was no longer reasonable, necessary or related to the February 22, 2013 injury. Respondents contested continuing medical care and stated that it is Claimant's burden to prove that the care continues to be reasonable, necessary and related to the injury.

In essence, Respondents seeks to withdraw the "admission" for medical treatment after MMI on the theory that no further care is reasonably necessary or causally related to the February 22, 2013 admitted injury. While Claimant must prove initial entitlement to disputed medical benefits by a preponderance of the evidence to establish care, the Act was amended in 2009[11] to place the burden of proof on the party seeking to modify an issue determined by a previous admission or order. Therefore, where Respondents seek to terminate previously admitted maintenance benefits, Respondents must prove by a preponderance of the evidence that treatment is no longer reasonably necessary or causally related to the injury. Section 8-43-201(1); *Salisbury v. Prowers County School District RE2*, W.C. No. 7-702-144 (June 5, 2013); *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (October 1, 2013).

Respondents rely on the reports and testimony of Dr. Marc Steinmetz for the proposition that the physical therapy as well as the care he receives under Panorama Orthopedics, while it may be reasonably necessary, is no longer related to the claim. As found, Dr. Steinmetz is not credible. He relies on the fact that almost thirty years after Claimant engaged in the organized sports, like rugby and soccer, when Claimant was in his teens, triggered the underlying pathology that caused the required ongoing physical therapy treatment. He further relies on the fact that Claimant has had exacerbations following activities that he engaged in the years following reaching MMI, including swimming, hiking and biking. As found, Dr. Steinmetz is not credible. The February 17, 2020 report from Fit Physical Therapy states specifically that Claimant's his low back is a little tight but has been working on more stretching of hips and iliotibial band. At the time of MMI in 2015, Dr. Knight continued to recommend medications as well as continuing physical therapy. At the time of the hearing, Claimant stated that he had not been taking medications and depended on the physical therapy to keep him as functional and active as he was able. Dr. Anderson Oeser encouraged Claimant to continue his independent exercise program to maintain MMI. Throughout the record, both the providers at Panorama as well as the therapists at Fit Physical Therapy kept encouraging Claimant to exercise and maintain his level of activity in order to continue in a stable condition. This included recommendations for continued therapy and exercise. This ALJ infers from all the prescriptions for physical therapy that this was needed to provide Claimant the ability to keep at his baseline MMI status without further actual aggravation. The fact that medical records document that Claimant continued to attempt various endeavors to maintain that level of physical activity is indicative that he was trying to follow the directions of his providers. This ALJ infers from the record that the occasional exacerbations from engaging in activities such as swimming, hiking, snow shoeing and biking as well as work as an engineer, are all activities contemplated by the providers as Claimant's normal activities. As found, Claimant was instructed by his medical providers, that he continue his normal activities as he was able and was given no restrictions. As

[11] See Sec. 8-43-201(2), C.R.S. "The amendments made to subsection (1) of this section by Senate Bill 09-168, enacted in 2009, are declared to be procedural and were intended to and shall apply to all workers' compensation claims, regardless of the date the claim was filed."

found, those activities may have exacerbated the low back by causing tightness but did not aggravate his February 22, 2013 work related low back injury.

As found, Claimant's testimony is more credible than Dr. Steinmetz's, despite Dr. Steinmetz's multiple attempts to discredit Claimant's remarks and testimony. Claimant is found credible. Respondents have failed to prove by a preponderance of the evidence that they are entitled to withdraw the admission for reasonable and necessary maintenance care related to the February 22, 2013 low back injury claim.

As found, Claimant was encouraged by Dr. Anderson Oeser to engage in an independent exercise program and released Claimant without restrictions as did Dr. Knight. Claimant was frequently encouraged to be active by his therapists, as shown in the September 17 and November 21, 2019 notes. The persuasive evidence in this matter is that Claimant was placed at MMI with no restrictions advised to remain as active as possible, which he did, as he was able. It is concluded that Respondents failed to show that there has been an intervening event that might have terminated benefits or prove by a preponderance of the evidence that they are entitled to withdraw the admission of liability regarding continuing maintenance care.

E. Medical Benefits that are Reasonably Necessary and Related

The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301, C.R.S. See *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986).

Section 8-42-101(1)(a), C.R.S., provides that Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Snyder v. Industrial Claim Appeals Office*, *supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *In re Claim of Foust*, I.C.A.O, WC, 5-113-596 (COWC October 21, 2020).

Claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying preexisting condition. See *Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 448 (1949); *Abeyta v. Wal-Mart Stores*, W.C. No. 4-669-654 (January 28, 2008).

The issue of whether medical treatment is necessary for the compensable aggravation or a worsening of Claimant's pre-existing condition is also one of fact for resolution by the ALJ based upon the evidentiary record. See *University Park Care Center v. Industrial Claim Appeals Office,* 43 P.3d 637 (Colo. App. 2001); *Standard Metals Corp.*

v. Ball, 172 Colo. 510, 474 P.2d 622 (1970); *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). The Act places full responsibility on the employer for benefits as a result of a work injury when there is an aggravation of an underlying condition. *United Airlines, Inc. v. ICAO*, 993 P.2d 1152 (Colo. 2000). Expert medical opinion is not needed to prove causation where circumstantial evidence supports an inference of a causal relationship between the injury and the claimant's condition. *Savio House v. Dennis,* 665 P.2d 141 (Colo. App. 1983). Where conflicting expert opinion is presented, it is for the ALJ as fact finder to resolve the conflict. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). Further, when expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); *Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992). Lastly, Rule 16 prior authorization process provides a mechanism for providers to seek advance approval and guarantee their charges, but it imposes no substantive limitation on a claimant's entitlement to medical treatment that is otherwise reasonably needed and causally related to the work accident. The fact that Claimant's provider did not respond to Respondents' request for a formal request for authorization pursuant to Rule 16 does not preclude Claimant from seeking to have the treatment covered by Respondents at hearing. *Garcia v. McDonalds Corp*., W.C. No. 4-862-853-01 (June 19, 2014); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990) ("when medical treatment results from a referral by an authorized treating physician, such treatment is considered part of the normal progression of authorized treatment and the express consent of the employer is not required.")

The Medical Treatment Guidelines (MTGs) are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook V. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide "All health care providers shall use the Medical Treatment Guidelines adopted by the Division." In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011). While the Guidelines may carry substantial weight, and provide substantial guidance, the ALJ is not bound by the Guidelines in deciding individual cases or the principles contained therein alone. Indeed, Section 8-43-201(3), C.R.S. specifically provides:

> It is appropriate for the director or an administrative law judge to consider the medical treatment guidelines adopted under section 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease. *The director or administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations.* (*Emphasis added*).

Pursuant to W.C.R.P. Rule 17-1(A), the statement of purpose of the guidelines is as follows:

> In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost.

W.C.R.P. Rule 17-5(C) provides "The treatment guidelines set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

W.C.R.P. Rule 17, Exhibit 1, Low Back Pain MTG, Section B(14) addresses care beyond MMI. They were effective March 30, 2014. While there is a proposed new Exhibit 1 MTG, they are not yet effective. Respondents specifically point to pages 3, 63 and 86 through 91. However, Exhibit 1 is only for care prior to MMI. Section B(14) of the Low Back Medical Treatment Guidelines specifically state:

> MMI should be declared when a patient's condition has plateaued to the point where the authorized treating physician no longer believes further medical intervention is likely to result in improved function. However, some patients may require treatment after MMI has been declared in order to maintain their functional state. The recommendations in this guideline are for pre-MMI care and are not intended to limit post-MMI treatment.

As found, Claimant was placed at MMI on March 18, 2015 by Dr. Karen Knight and Respondents admitted to this date of MMI in the Final Admission of Liability dated April 21, 2015.

In dealing with post MMI care for a patient that has not recovered, continues to have chronic pain, and required continuing care, the Chronic Pain Disorder Medical Treatment Guidelines are more instructive. W.C.R.P. Rule 17, Exhibit 9, CDP MTG Section G addresses the appropriateness of Therapeutic Procedures that are non-operative, including dry needling under Subsection 19(n), which specifically states in pertinent part:

> The goal of dry needling is to improve overall function and disability by decreasing pain and improving range-of-motion, strength, and/or muscle firing patterns. It is a technique that is utilized in conjunction with other physical therapy treatments including therapeutic exercise, manual therapy, stretching, neuromuscular re-education, postural education, and pain neuroscience education.
>
> Indications: Trigger point dry needling is indicated when myofascial trigger points are identified in muscles in conjunction with decreased range-of-motion, decreased strength, altered muscle firing patterns, and/or pain which negatively affect a patient's overall function.

W.C.R.P. Rule 17, Exhibit 9, CDP MTG Section (I) specifically addresses maintenance management of ongoing care and states in pertinent part:

> Successful management of chronic pain conditions results in fewer relapses requiring intense medical care. Failure to address long-term management as part of the overall treatment program may lead to higher costs and greater dependence on the health care system. Management of CPD continues after the patient has met the definition of maximum medical improvement (MMI). MMI is declared when a patient's condition has plateaued and an authorized treating physician believes no further medical intervention is likely to result in improved function. When the patient has reached MMI, a physician must describe in detail the maintenance treatment.
>
> …
>
> Maintenance care will be based on principles of patient self-management. When developing a maintenance plan of care, the patient, physician, and insurer should attempt to meet the following goals:
>
> ● Maximal independence will be achieved through the use of home exercise programs or exercise programs requiring special facilities (e.g., pool, health club) and educational programs;
>
> ● Modalities will emphasize self-management and self-applied treatment;
>
> ● Management of pain or injury exacerbations will emphasize initiation of active therapy techniques and may occasionally require anesthetic injection blocks.
>
> ● Dependence on treatment provided by practitioners other than an authorized treating physician will be minimized;
>
> ● Reassessment of the patient's function must occur regularly to maintain daily living activities and work function;
>
> ● Patients will understand that failure to comply with the elements of the self-management program or therapeutic plan of care may affect consideration of other interventions.

W.C.R.P. Rule 17, Exhibit 9, (I)(7)& (8) provide some guidance of the type of care and maintenance duration of the management of therapy and dry needling. The *Guidelines* further provide, in relevant part, that "medications should be clearly linked to improvement of function, not just pain control." Furthermore, the *Guidelines*, specify that, "examples of routine functions include the ability to perform work tasks… or participate in normal family and social activities." WCRP 17, Exhibit 9(I)(6).

As found, Claimant has benefited from the maintenance care prescribed by Panorama Orthopedics through Dr. Knight and her physician assistants in order to keep Claimant functioning, working, able to carry out his activities of daily living and exercising in order to remain at a baseline established at the time he was placed at MMI.

It is appropriate for an ALJ to consider the guidelines while weighing evidence, but the MTGs are not definitive. *Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); *aff'd Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1,

2007) (not selected for publication); *Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008). Concerning the issue presented, the MTG's indicate that "[t]here is some evidence that the ALJ may decide the weight to be assigned the provisions of the *Guidelines* upon consideration of the totality of the evidence. See *Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006).

As found in this case, the totality of the evidence presented supports a conclusion that Claimant has required maintenance care in the form of physical therapy which include active therapy, exercise, myofascial release, spine neutral core endurance, modalities as needed, independent exercises, back biomechanics education and dry needling according to Dr. Knight's report of May 1, 2015. The care Claimant received from June 17, 2015 through October 8, 2019 and paid for by Respondents was reasonable, necessary, and related to the February 22, 2013 low back injury.

On August 8, 2019, Dr. Knight specifically changed the format of the prescriptions she had previously issued, and the ordering diagnosis is for cervicalgia. While she may have intended to provide a prescription for both the 2013 and the 2017 injuries at the same time, this is not persuasive. Dr. Knight noted that the treatment of the spine location for therapy was both for the lumbar spine and the cervical spine. However, it is not clearly noted and not substantial evidence to show that the treatment ordered was for the 2013 low back injury claim for the 12 weeks of therapy after October 8, 2019 through July 30, 2020. As found, Claimant has failed to show by a preponderance of the evidence that Dr. Knight appropriately recommended treatment specifically for the low back condition on August 8, 2019, which would cover therapy beginning October 9, 2019 through July 30, 2020.

As found, on September 17, 2019 the therapist, Patricia McNutt, PT, from Fit Physical Therapy documented that Claimant continued to treat for the low back pain. It stated that Claimant continued to complain of bilateral leg pain and lumbar pain, had tightness in the low back and had been working on more stretching on hips and ITband. They worked on neuromuscular re-education from T2-S1, with e-stim, low back massage therapy as well as the gluteals and hips. The therapist stated that Claimant greatly benefited from monthly therapy to address impairments and allow him to maintain physical activity, reduce pain, reduce need for medications, continue working out as he is able and continue with his lifestyle. Dr. Knight and the physical therapists from Fit Physical Therapy are credible and more persuasive than the contrary opinion of Dr. Steinmetz, who is found not persuasive.

Ms. Turgeon of Panorama Orthopedics and Spine issued a recommendation for physical therapy as Claimant continued to have low back pain as a result of his February 22, 2013 low back injury. As found, Claimant has proven by a preponderance of the evidence that Claimant continues to be entitled to physical therapy as prescribed by Ms. Turgeon on July 31, 2020.

ORDER

IT IS THEREFORE ORDERED THAT:

1. Respondents have failed to prove by a preponderance of the evidence that maintenance medical care should be terminated and the February 22, 2013 claim closed.

2. Insurer shall pay for the authorized reasonably necessary and related treatment of Claimant from Panorama Orthopedics and Spine, including but not limited to the maintenance care prescribed by authorized treating providers, Dr. Karen Knight and Teresa Turgeon, PA-C from October 8, 2019 and continuing as maintenance care.

3. Insurer shall pay for the physical therapy provided by authorized provider, Fit Physical Therapy (now Fyzical Therapy & Balance Centers) that is reasonably necessary and related to the Claimant's February 22, 2013 low back work injury, including pursuant to the recommendations of Ms. Turgeon on July 31, 2020.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge' s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 29th day of November, 2021.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-140-043-001

ISSUES

I. Whether Claimant has established that Prehearing Administrative Law Judge John Sandberg's May 7, 2021, Order denying her request for a disfigurement award was in error and should be reversed.

II. If Claimant establishes Judge Sandberg erred, the amount of disfigurement benefits to which Claimant is entitled.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant suffered an admitted injury on May 6, 2020.
2. Claimant testified that she suffered what was categorized as a second degree burn after burning her arm on a fryer. (T 12:11; 19:22).
3. On May 19, 2020, Claimant was placed at maximum medical improvement. (Rs' Ex. A at 9).
4. On June 11 ,2020, Respondents filed a Final Admission of Liability (FAL) admitting to $0 disfigurement and stating that "benefits not admitted are specifically denied." The FAL has a completed certificate of mailing dated June 11, 2020. Claimant's name has a check mark next to it, and her address is listed as 526 Villa Dr., Apt 1504, Castle Pines, CO 80108. (Rs' Exhibit A at 2). The FAL, and its attachments, encompasses 8 pages. (Rs' Exhibit A at 2-9). Page 8 of the FAL also has a stamp dated June 11, 2020, which says "copies of this document mailed to the following" with check marks next to "Clmt." *Id*. at 9.
5. Claimant testified that when she lived in Colorado her address was 526 Villa Dr., Apt 1504, in Castle Pines, Colorado. (T 40:15-17). This was her address until she moved to California in August 2021. (T 41:19-25).
6. Claimant testified that she received the FAL. (T 43:6-25; 44:1-11).
7. Claimant had 30 calendar days, from the date of mailing, to object to the FAL and file a Notice and Proposal for a DIME and/or an Application for Hearing for disfigurement benefits.
8. Claimant did not file an objection to the FAL within 30 days of the June 11, 2020, FAL.
9. Claimant did not file a Notice and Proposal for a DIME and/or an Application for Hearing requesting disfigurement benefits within 30 days of the June 11, 2020, FAL.
10. On April 23, 2021, nearly a year after the June 11, 2020, FAL was filed and mailed to Claimant, Claimant filed a Request for Disfigurement Award, including photos of her

disfigurement. The Request for Disfigurement Award was received on April 30, 2021. (Rs' Ex B at 18). She listed her address as the Villa Drive address in Castle Pines. (T 46:1-3).

11. Claimant testified that her April 23, 2021, Request for Disfigurement Award was the first date she filed a request for disfigurement benefits. (T 39:10-17). She also testified that she was not rejecting the FAL. *Id*.

12. Respondents filed an Opposed Motion to Strike Claimant's April 23, 2021, Request for Disfigurement Award. Respondents opposed motion was granted by Prehearing Administrative Law Judge (PALJ) John Sandberg who denied Claimant's request for disfigurement benefits in his May 7, 2021, Order. PALJ Sandberg held that Claimant's request for disfigurement benefits was untimely and therefore denied, citing the Industrial Claim Appeals Office's holding in *Vasquez Cruz v. Lancelot,* W.C. 5-040-419 (ICAO 5/17/18). (Rs' Ex C at 20-21). Claimant testified that she did receive this Order by mail to her 526 Villa Dr., Apt 1504 address in Castle Pines. (T 42:13-18).

13. Claimant subsequently filed an undated Application for Hearing, appealing PALJ Sandberg's Order. (Rs' Ex D at 24). The endorsed issues were clarified in a pre-hearing conference held on June 29, 2021. PALJ Marcus Zarlengo clarified that the relief Claimant was seeking consisted of disfigurement benefits and an appeal of PALJ Sandberg's May 7, 2021, Order. (Rs' Ex E at 29).

14. At hearing, Claimant testified that PALJ Sandberg's Order was in error because the scar pictures were taken timely - six months after her date of injury. (T 35:2-4).

Tisha R[Redacted]

15. Tisha R[Redacted] is a data administrative support supervisor for CCMSI and has worked in that position for 22 years. (T 49:13-19).

16. Ms. R[Redacted] testified that she assisted with mailing the FAL in this claim to the Claimant. (T 50:2-4). She testified that the adjuster gave the FAL to an administrative assistant to prepare for mailing, and that Ms. R[Redacted] then mailed the original to the Claimant, making a copy for the file to show it was sent to the Claimant. (T 50:25; 51:1-3). Ms. R[Redacted] testified she mailed the FAL to Claimant at 526 Villa Dr., Apt 1504, Castle Pines, CO 80108 on June 11, 2020, with adequate prepaid postage. (T 52:18-25; 53:1). Ms. R[Redacted] made a record of the mailing on the FAL with checkmarks on the FAL and also by making claims note documenting the mailing. (T 51:16-25; 52:1-4). Ms. R[Redacted] testified she also stamped the FAL documenting the mailing. (T 52:12-15).

17. The ALJ finds Ms. R[Redacted] 's testimony to be credible and persuasive.

18. Based on the certificate of mailing on the FAL as well as the testimony of Ms. R[Redacted] , the ALJ finds that the FAL, and its attachments, were mailed to Claimant, with proper postage, to her proper address on June 11, 2020.

19. Based on the testimony of Claimant and Ms. R[Redacted] , plus the Respondents' Exhibits, the ALJ finds Claimant received the FAL in a timely manner, i.e., within the 30-day time period to contest the FAL and file an Application for Hearing.

20. Claimant failed to establish that she filed an objection to the FAL within 30 days of the FAL being mailed on June 11, 2020. Claimant also failed to establish that she filed an

Application for Hearing requesting disfigurement benefits within 30 days of the FAL being mailed on June 11, 2020.

21. Claimant failed to overcome any presumption that she received the June 11, 2020, FAL shortly after it was mailed and in time to object and file an Application for Hearing.

22. Claimant did not establish that the time to object to the FAL and file a Notice and Proposal for a DIME and/or Application for Hearing should be extended because she did not receive actual notice, via receipt of the June 11, 2020 FAL, in a timely manner. For example, Claimant did not establish that she did not receive the FAL until after the 30-day time period to object and file an Application for Hearing had run.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established that Prehearing Administrative Law Judge John Sandberg's May 7, 2021, Order denying her request for a disfigurement award was in error and should be reversed.

A. Claimant's appeal of PALJ Sandberg's Order is denied as Claimant failed to establish any legal basis to overturn the order.

PALJ John Sandberg held that Claimant's April 23, 2021, request for a disfigurement award was not timely because she failed to object to the June 11, 2020, FAL which admitted to $0 in disfigurement and apply for a hearing withing 30 days. PALJ Sandberg cites the holding in *Vasquez Cruz v. Lancelot* W.C. 5-040-419 (ICAO 5/17/18) to establish that if an FAL is filed, a claimant can object and pursue disfigurement regardless of the date of injury, and the 6-month time frame is inapplicable. Since no objection to the FAL was lodged, PALJ Sandberg ordered that the request for disfigurement was denied.

Claimant alleges PALJ Sandberg was in error because she did take photographs timely after 6 months. This is the sole allegation of error made by Claimant. The timing of Claimant's photographs is irrelevant to the ruling of PALJ Sandberg on whether a timely objection to the FAL was made. In fact, PALJ Sandberg noted the 6-month time period was irrelevant given the filing of the FAL. Accordingly, the ALJ finds that Claimant failed to meet her burden to establish that PALJ Sandberg's order was in error.

B. Claimant's appeal of PALJ Sandberg's Order is denied as there was not a timely objection to the FAL and Application for a Hearing for Disfigurement Benefits.

Pursuant to C.R.S. §8-43-203(2)(b)(II)(A) a case will be automatically closed as to the issues admitted in the final admission if the claimant does not, within thirty days after the date of the final admission, contest the final admission in writing and request a hearing on any disputed issues that are ripe for hearing. Case law holds that a claimant waives their right to litigate issues not raised on an application for hearing challenging a FAL. *See Olivas-Soto v. Genesis Consolidated,* W.C. 4-518-876 (November 2, 2005); affirmed 143 P.3d 1178 (Colo. 2005).

As found, the June 11, 2020, FAL was mailed to Claimant and timely received by Claimant. As a result, Claimant had 30 days from June 11, 2020, to file an objection to the FAL and File an Application for Hearing for disfigurement benefits. In this case, Claimant did not object to the FAL and did not file an Application for Hearing within 30 days of mailing of the June 11, 2020, FAL.

Moreover, Claimant admitted to receiving the June 11, 2020 FAL. She also admitted that the first "objection" and request for disfigurement was not filed until April 2021. Based on her testimony, and the evidence submitted at hearing, the PALJ's Order denying her request for a disfigurement award was proper given her failure to timely object to the June 11, 2020, FAL and apply for a hearing. As a result, the case closed on the FAL.

Yet even had Claimant not admitted to receiving the FAL, receipt is presumed based on the testimony of Tisha R[Redacted] and the evidence of proper mailing. The Industrial Claims Appeals Office has held that receipt through mail may be presumed as received by its addressee “when there is proper evidence of its mailing to a named person at a correct address, with adequate prepaid postage,” and that a properly executed certificate of mailing may create a presumption that a notice was received by the Claimant. *Munford v. Bowlen and Colorado Compensation Insurance Authority*, WC No. 3-889-101; 3-920-806; 3-966-582; 4-003-898; 4-205-807, 5-6 (ICAO July 14, 1995). This presumption is met in this case. Ms. R[Redacted] testified that she mailed the FAL to Claimant’s address with proper postage, contemporaneously documenting the mailing in multiple locations. The address Ms. R[Redacted] mailed the FAL to is the same Castle Pines address Claimant testified as living at during her time in Colorado, and testified that she received other orders, such as PALJ Sandberg’s Order denying her disfigurement benefits. As such, receipt of the FAL is presumed.

Whether through the presumption of receipt or through Claimant’s own admissions of receipt at hearing, it is established that Claimant received the June 11, 2020, FAL in a timely manner. It is also established that Claimant did not file any objection or other document until her April 2021, request for a disfigurement award with photos. This request was beyond the 30 days allowed and was not timely. Pursuant to the established law, this claim closed on the FAL. The ALJ finds and concludes that this claim closed as to the admitted issues – which includes disfigurement benefits - pursuant to the June 11, 2020, FAL on June 11, 2020.

II. Whether Claimant has proven by a preponderance of the evidence that she is owed a disfigurement award.

As set forth above, Claimant’s case closed on June 11, 2020, as to the admitted benefits set forth in the June 11, 2020, FAL – which included disfigurement benefits. Therefore, Claimant is not entitled to a disfigurement award.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Prehearing Administrative Law Judge John Sandberg’s May 7, 2021, Order is upheld.

2. The June 11, 2020, Final Admission of Liability is final.

3. Claimant’s request for disfigurement benefits is denied and dismissed with prejudice.

4. Any issues not addressed in this Order are reserved.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 29, 2021.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Respondent produced clear and convincing evidence to overcome the impairment rating opinions of Dr. Thomas Higginbotham.

- If Respondents overcame the impairment rating determinations of Dr. Higginbotham, what is the correct percentage of impairment associated with Claimant's May 4, 2019 industrial injuries.

- Whether Claimant established, by a preponderance of the evidence, that she is entitled to an award for disfigurement.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a former veterinarian assistant of Employer. Claimant suffered admitted injuries to her face after being bitten by a large dog on May 4, 2019. According to the medical record,[1] Claimant was attempting to weigh a large pit bull dog when a door unexpectedly slammed shut. The noise from the slamming door spooked the dog, which lunged toward Claimant, biting her in the face. The dog's upper teeth penetrated the left upper aspect of Claimant's cheek and the teeth in the lower jaw penetrated her right lower cheek and jawline. Claimant reported a torqueing of her lower jaw when the dog clasped its jaws.

2. Claimant was able to free herself from the dog's mouth after which she proceeded to a Fire Station next door to Employer's offices for treatment. Claimant was triaged at the firehouse and advised to proceed to the emergency department (ED) at the local community hospital.

3. Claimant proceeded to the ED at Castle Rock Adventist Hospital where it was discovered that, in addition to the lacerations to her face and jaw, Claimant had superficial lacerations to her neck. Her wounds were sutured and she was given a prescription for antibiotics and a DPT booster shot prior to being discharged.

4. Claimant returned to the ED the next day with severe left-sided facial swelling. She was unable to open her jaw and had difficulty eating. Claimant was

[1] Neither party submitted any of Claimant's treatment records for review by the ALJ. Rather, the pertinent medical information cited in this order comes from review of the impairment rating report of Dr. Samuel Chan, the Independent Medical Examination Reports of Dr. Michael Maher and Dr. Kathleen D'Angelo and the Division Independent Medical Examination (DIME) report of Dr. Thomas Higginbotham.

diagnosed with facial cellulitis and admitted to the hospital for placement of a peripherally inserted central catheter (PICC) line for infusion of intravenous antibiotics for a suspected multi-microbial infection. Claimant was discharged from the hospital after one week but continued with IV antibiotic through the PICC line on an outpatient basis.

5. Despite efforts to prevent a deep vein thrombosis (DVT), Claimant developed "pain and abnormal sensations" in her left upper extremity at the site of her PICC line. An ultrasound performed shortly after the May 4, 2019 dog bite confirmed the presence of a superficial venous thrombosis in the left basilic vein. Claimant was anticoagulated so that the PICC line could be retained in order to complete her course of antibiotic treatment. Upon completion of her infusion therapy, the PICC line was removed.

6. Despite removal of the PICC line, Claimant developed recurrent tingling and swelling of the left arm around July 2019, prompting a repeat ultrasound. The ultrasound demonstrated a non-occlusive DVT in the subclavian vein extending to the brachial vein. Anticoagulation treatment was initiated with Lovenox but Claimant did not tolerate it well. Consequently, her blood thinner was switched to Xarelto. With anticoagulation, Claimant's DVT appeared to resolve as demonstrated by ultrasound performed October 22, 2019.

7. Claimant subsequently developed pain in her left arm around April 2020. An ultrasound of the left upper extremity performed April 9, 2020 demonstrated a new occlusive DVT in the proximal left basilic vein. By this time, Claimant was seeing a psychologist to whom she reported that she was adjusting to the recent recommendation of her hematologist regarding her need to take blood-thinners for the rest of her life because the PICC line had caused scarring of her veins creating a susceptibility to develop repeat blood clots.

8. Along with her left shoulder problems, Claimant continued to experience facial pain, migraine headaches, jaw pain and difficulty chewing, swallowing and yawning. She reportedly had trouble chewing solid foods and therefore restricted her diet to soft or semisolid foods only. She saw a neurologist who diagnosed her with trigeminal neuralgia and recommended an evaluation with a temporomandibular joint (TMJ) specialist. Claimant underwent treatment for TMJ syndrome. She was also evaluated by a dentist who noted that the nerves to four of her teeth had "died" prompting the need for multiple root canals.

9. As referenced above, Claimant began treatment with psychologist, Dr. John Disorbio shortly after the May 4, 2019 incident. The medical record supports a finding that Claimant was seen on multiple occasions to address Claimant's development of an adjustment reaction with depressed mood and anxiety following her May 4, 2019 dog bite.[2]

[2] See the IME report of Dr. Maher at Claimant's Exhibit 3, pp. 54-68.

10. Claimant was placed at maximum medical improvement (MMI) by Dr. Robert Broghammer on November 11, 2020. Dr. Broghammer noted that Claimant "qualified" for an impairment rating which he requested be completed by Dr. Samuel Chan. Dr. Chan completed the requested impairment rating on December 7, 2020. In his impairment rating report, Dr. Chan references that Claimant had "been treated for a possibility of TMJ" and had "been seen by Dr. Disorbio from a psychological standpoint". He diagnosed Claimant with neurogenic thoracic outlet syndrome, trigeminal neuralgia, brachial neuritis, and atypical facial pain and provided 5% whole person impairment for persistent trigeminal neuralgia symptoms and 10% scheduled impairment for Claimant's left upper extremity condition. In reaching his opinions regarding impairment, Dr. Chan stated:

> As per AMA Guides to the Evaluation of Permanent Impairment, Third Edition (Revised). There are 2 areas that would be related to the injury. One is her facial pain, as she sustained a dog bite. She has been given a diagnosis of trigeminal neuralgia. As per Chapter 4, page 111, under Table 2 under trigeminal nerve, the patient has an atypical facial neuralgia and this is involving mostly the maxillary nerve on the left side. Thus, the patient is therefore given a total of 5% whole-person impairment for her persistent symptoms due to trigeminal neuralgia that requires ongoing medication usage.
>
> The 2nd aspect is that the patient developed cellulitis, which required for the patient to have a PICC line for IV antibiotics. Because of the PICC line, the patient then developed deep vein thrombosis of the left upper extremity, and unfortunately, she has to be on anticoagulation indefinitely. Because the fact that the patient still requires medication usage for the ongoing issue, impairment rating should be given. This is based on Chapter 3; page 47 Table 16 of the guidelines. Even though the patient does have pain complaint subjectively, there is no edema noted and there is no vascular damage evidenced by any kind of amputation or Raynaud phenomenon. Thus, the patient would fit into category 2, where the patient will be given a total of 10% upper extremity impairment.

(Claimant's Exhibit 1, pp. 9-10).

11. Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Chan's opinions on January 8, 2021. (Claimant's Exhibit 1). Claimant objected to the FAL and requested a DIME.

12. Dr. Thomas Higginbotham was selected as the examining physician. He completed the requested evaluation on April 5, 2021 and issued a report outlining his opinions on April 17, 2021. (Claimant's Exhibit 2, pp. 13-35). During the DIME, Claimant described "fiery and unspeakable" pain about the left side of her face. She reported that she had "difficulty . . . opening her mouth fully and [when] doing so she incurs a click and

pop about the left temporomandibular joint which fires off her facial pain". She reported that "nothing seems to make her facial pains better. She also reported daily headaches with occasional migraines causing blurred vision and dizziness.

13. In addition to the above, Claimant described "constant pain about the lateral shoulder, biceps and axilla". She reported shooting pain down to the third, fourth and fifth fingers of the left hand affecting her grip. She described sensory changes and swelling of the left hand along with an occasional "grayish-purplish" discoloration of the hand when the pain in her left arm worsens. Claimant reported that her ongoing left upper extremity and hand sequela comprised her ability to complete work activities and disrupted her sleep. Finally, Claimant reported depressed and anxious moods and a sense of "tension and pain" in the lateral left aspect of the neck.

14. Dr. Higginbotham agreed with Dr. Broghammer's date of MMI, but assigned Claimant 10% whole person impairment for trigeminal neuralgia, 13% whole person impairment for temporomandibular joint dysfunction, 14% whole person impairment for cervical spine range of motion loss and 10% scheduled impairment for Claimant's left upper extremity condition. While he recognized that Claimant had undergone psych treatment for adjustment disorder with depressed and anxious moods, Dr. Higginbotham did not assign any mental impairment. Dr. Higginbotham's combined whole person impairment rating is 37%. (Respondents do not contest the 10% upper extremity rating assigned by Dr. Higginbotham as it is the same as Dr. Chan's rating. Moreover, they agree with Dr. Higginbotham's assignment of a 0% impairment for mental/behavioral conditions, which neither party raised at hearing. See FN 4).

15. With regard to his trigeminal neuralgia rating, Dr. Higginbotham agreed with Dr. Chan's finding based upon Table 2 of the Values for Impairment of the Cranial Nerves, Claimant's range of impairment for her atypical facial neuralgia was 0-20%. Citing from the *AMA Guides to the Evaluation of Permanent Impairment*, Third Edition (Revised) (hereinafter the "AMA Guides"), Dr. Higginbotham noted that "[i]mpairment from the pain of 'atypical trigeminal neuralgia" is to be made on the basis of how much the neuralgia interferes with daily activities of the patient." Noting that Claimant required "constant" medication for her neuralgia, which was "ever present" and occasionally prevented and frequently interfered with activities, Dr. Higginbotham elected to assign 10% impairment per the aforementioned range. This represents an increase of 5% above what Dr. Chan assigned for impairment related to Claimant's atypical facial neuralgia.

16. With regard to his whole person impairment for temporomandibular joint dysfunction, Dr. Higginbotham broke the 13% he assigned into two components. First, he noted that Claimant had an "incisor-to-incisor" opening of 18 mm, which was far less than the normal opening of 50 mm. Relying on an article attached to his impairment rating report that provided a methodology for rating TM joint dysfunction based upon range of motion loss, Dr. Higginbotham assigned 8% whole person impairment.[3] He assigned this

[3] Assuming that a 50 mm opening (from incisal edge of maxillary teeth to incisal edge of mandibular teeth) to be normal, Claimant's opening of 18 mm would fall into the 10 to 20 mm opening range or 40% of a normal opening, which would entitle her to 8% whole person impairment.

impairment despite his acknowledgment that the AMA Guides do not provide for a TM joint rating based upon range of motion loss. Second, Dr. Higginbotham noted that Claimant's TMJ dysfunction precluded her from opening her mouth for biting all but modest portions of food. He also observed that Claimant could not chew foods that required extensive mastication as that aggravated her TM joint pain as well as her trigeminal neuralgia. Accordingly he assigned 5% whole person impairment per Section 9.3b on page 180 of the AMA Guides based upon Claimant's need to restrict her diet to soft or semisolid foods. Dr. Higginbotham then combined the impairment for range of motion loss of the TM joint with Claimant's impairment based upon her need to restrict her diet to reach the aforementioned 13% whole person impairment.

17. Dr. Higginbotham also assigned 14% whole person rating for range of motion loss of the cervical spine despite acknowledging that Claimant's "neck was not injured in itself as part of this injury claim." While he conceded that assigning a Table 53 specific disorder rating would be inappropriate, Dr. Higginbotham nonetheless assigned 14% impairment for range of motion loss on the basis that Desk Aid #11, issued by the Division of Workers' Compensation indicated that an isolated cervical range of motion impairment could be given if it is well justified by the clinician. Neither Claimant nor Respondents submitted those portions of the AMA Guides or the Desk Aids cited by the various clinicians who have evaluated Claimant. Although not submitted by either party, the ALJ takes administrative notice of the AMA Guides to the Evaluation of Permanent Impairment *Third Edition (Revised)* and the Rating Tips (Desk Aids) as materials officially promulgated by the Director of the Division of Workers' Compensation.

18. Per Dr. Higginbotham, 14% impairment for cervical range of motion loss was justified on the basis that Claimant's "temporomandibular neuralgia, temporomandibular dysfunction and deep vein thrombosis of the left upper extremity proximal vein systems [caused] significant splinting and guarding of the neck and upper torso musculatures [to occur] in reaction to these pain generators."

19. While he documented that "[s]car disfigurement [was] at the discretion of the administrative process, Dr. Higginbotham noted: "[Claimant] has an upper left cheek mark related to the dog bite. It is well healed and noticeable, but not disfiguring. She has a notable dog bite scar about the right submandibular area that is slightly disfiguring. The dimpling of the right mandible area was appreciated when she mimicked neck strain of jaw movement."

20. Respondents asked Dr. Chan to review Dr. Higginbotham's impairment rating report and comment on whether he believed that Dr. Higginbotham's ratings were clearly erroneous. In a letter dated September 23, 2021, Dr. Chan responded by indicating that his "original opinion as to [Claimant's] impairment ratings that were previously assessed in December of 2020 [had] not changed." He then noted that Dr. Higginbotham's ratings differed from his in "two categories"- the cervical spine and temporomandibular joint dysfunction.

21. With regard to the cervical spine, Dr. Chan assumed that Dr. Higginbotham's rating was based upon Claimant's subjective complaints. Dr. Chan noted that the cervical spine was not an original body part that was injured and that none of the multiple treating providers had concerns or noted an underlying pathology regarding the cervical spine. Dr. Chan stated that pursuant to the AMA guides, under Appendix B, "chronic pain is perceptual and cannot be validated objectively or quantitated. Therefore, little if any, impairment exists in most circumstances. Thus, [an] impairment rating should not be given based on subjective pain alone."

22. With regard to the temporomandibular dysfunction rating. Dr. Chan noted that Claimant had considerable treatment under the guidance of a dentist and her TMJ problem had been "adequately addressed." He concluded that there was "no specific permanent sequela to her current symptoms" and that a rating, again, "should be based on a permanent pathology rather than subjective symptoms alone."

23. Dr. Kathleen D'Angelo performed an Independent Medical Examination (IME) of the Claimant for Respondents on October 8, 2021. Claimant reported to Dr. D'Angelo "weird general neck pain" which surprised Dr. D'Angelo as the medical records did not document this symptom. She noted that Claimant had no treatment directed to problems with her cervical spine and had full range of motion at Dr. Chan's examination on August 14, 2020 and December 7, 2020. Moreover, Dr. D'Angelo noted that Claimant's EMG studies from September 24, 2020 were within normal limits.

24. During Dr. D'Angelo's examination, Claimant reported pain in her neck but described it as diffuse and poorly localized. Dr. D'Angelo was unable to appreciate any spasm, trigger points or hypertonicity about the paraspinal musculature of the neck and Claimant reportedly never complained of localized pain or tenderness with palpation. Finally, while it appears that Dr. D'Angelo never completed range of motion testing, she indicated that Claimant had full range of motion (FROM) in her cervical spine without pain complaints. Dr. D'Angelo opined that if Claimant had "sustained a cervical spine injury during the dog bite incident on May 4, 2029; it is anticipated she would have findings of such an injury on EMG/NCV by September 2020.

25. Dr. D'Angelo also reported that Claimant was able to open her mouth without apparent pain when speaking and showing the teeth that underwent root canal treatment. According to Dr. D'Angelo, there was no discernable crepitus or clicking noted to either TMJ with opening and closing of the mouth. She also noted that while Claimant asserted an inability to talk and eat, there was no documented evidence of sustained weight loss or any objective evidence of dysarthria.

26. With regard to disfigurement, Dr. D'Angelo noted Claimant had facial scars but no swelling at the TMJ regions or asymmetry at the zygomatic arch.

27. Dr. D'Angelo addressed Claimant's mental health status by indicating simply that Claimant was "alert and answered all questions appropriately". She assigned no rating for mental impairment.

28. Dr. D’Angelo agreed with Dr. Chan that Claimant’s facial pain complaints were due to trigeminal neuralgia. She noted that Claimant’s examinations and complaints during her visits with Dr. Chan were not indicative of TMJ abnormalities, but related to trigeminal neuralgia. She concluded that Claimant’s facial pain was appropriately rated by Dr. Chan and found that the additional impairment for TMJ assigned by Dr. Higginbotham was inappropriate and in error.

29. Dr. D’Angelo concluded that Dr. Higginbotham provided Claimant with “redundant impairments for the same medical issues and/or included impairments for [Claimant’s] subjective complaints, which were inconsistent with her documented medical injuries and/or objective diagnostic findings”. Accordingly, she opined that Dr. Higginbotham’s impairment rating decisions were inconsistent with the AMA Guides and the Level II accreditation training courses.

30. Claimant was also evaluated by Dr. Michael Maher on September 24, 2021. Similar to Drs. Higginbotham and D’Angelo, Dr. Maher took a history from Claimant, reviewed medical records, including extensive psychological reports outlining symptoms of psychological distress consistent with anxiety and PTSD. He also completed a physical examination. Following his evaluation, Dr. Maher assigned the following ratings per the AMA guides:

> Trigeminal Neuralgia: Section 4.2, Table 2: 0-20% WP for atypical facial neuralgia. I would rate this at 15% WP.
>
> Temporal Mandibular Joint Dysfunction: Section 9.3b: 5-10% for a diet that is limited to semi-solid or soft foods. I would rate this at 10% WP.
>
> Thoracic Outlet Syndrome: Section 3.1i, Table 16: The Patient fits into category 2 (10-35% UE impairment) due to intermittent claudication on severe usage of the UE. U/S confirmed thickened arteries and recurrent DVT thus she qualifies in my opinion for vascular damage. I would rate this at 15% UE. This converts to 9% WP.
>
> Mental/Behavioral System: The Permanent Work-Related Mental Impairment Rating Report Worksheet was used from the Division’s website. Please see the attached sheet for description of assessment. I rate her at a 23% WP impairment.[4]
>
> I cannot justify a cervical ROM impairment.

[4] Neither party raised the issue of overcoming Dr. Higginbotham’s determination that Claimant reached maximum medical improvement without mental impairment related to the aftermath of her dog bite injuries. Consequently, this order does not address whether Dr. Higginbotham may have erred in this regard.

> Using the Combined Values Table: Combining largest to smallest: 23%; 15%; 10%; 9% for combined total of with (sic) 47% whole person.

31. While Dr. Maher did not comment on the appropriateness of the various ratings assigned by Dr. Higginbotham, he too assigned impairment for many of the same conditions Dr. Higginbotham included in his DIME report with some modification.[5] Accordingly, the ALJ finds that Dr. Maher found it "appropriate" and in keeping with the AMA Guides to include a rating for TM joint dysfunction, mental impairment and the vascular component of Claimant's UE condition when calculating her overall impairment.

32. Based upon the evidence presented, the ALJ finds that Dr. Higginbotham erred in concluding that Claimant was entitled to impairment for cervical range of motion loss. The ALJ is convinced that Dr. Higginbotham misapplied Desk Aid 11 when he concluded that Claimant's pain in combination with the "splinting and guarding" of the muscles in the neck and upper torso qualified her to receive an impairment for range of motion loss given that she did not suffer a direct injury to the neck or qualify for a Table 53 rating.

33. The ALJ also finds that Dr. Higginbotham clearly erred when he opined that Claimant was entitled to an additional 8% WP impairment for range of motion loss of the jaw based upon her TMJ diagnosis. While the article attached to his impairment rating outlines a process by which the impairing effects of TMJ dysfunction can be measured, Dr. Higginbotham failed to present evidence that the methodology delineated therein has been adopted by the Colorado Division of Workers' Compensation. Indeed, Dr. Higginbotham conceded that the AMA Guides do not provide for a TMJ rating based on range of motion loss. Nonetheless, Dr. Higginbotham correctly recognized that the AMA Guides provide for TMJ impairment when chewing has been compromised prompting a restricted diet. Consequently, the ALJ finds Dr. Higginbotham's assignment of 8% WP impairment for range of motion loss of the jaw contrary to the AMA Guides and highly probably incorrect.

34. While Dr. Higginbotham may have strong feelings about Claimant's cervical spine and TM joint range of motion loss, the ALJ is persuaded that the foundation for his opinion that such loss qualifies Claimant for additional impairment rests upon a misinterpretation of Desk Aid 11 and the principles set forth in the AMA Guides. As presented, the evidence convinces the ALJ that Dr. Higginbotham's opinions regarding impairment concerning the cervical spine and the TM joint have been overcome.

35. Claimant is seeking a disfigurement award for scarring associated with her dog bite. As noted, Claimant attended the hearing via video conference during which the ALJ visually inspected the scarring associated with the May 4, 2019 incident. Per request

[5] Dr. Maher gave a higher percentage of impairment for trigeminal neuralgia (15%), a lower TMJ rating, (10%), a higher UE rating for thoracic outlet syndrome, no cervical spine rating and a 23% mental health rating when compared to Dr. Higginbotham's impairment rating report.

of the ALJ, Claimant also submitted photographs as part of the evidence in this case. The ALJ accepts the photos and enters them into evidence as Claimant's Exhibits 4 – 8.

36. The ALJ finds that as a result of her admitted dog bite, Claimant has a visible disfigurement to the body consisting of three (3) visible scars about the face/neck. There is an approximately 10 mm Keloid scar on the left lateral aspect of the neck. This scar is pink to red in color and as noted is raised when compared to the contour of the surrounding skin. (See Claimant's Exhibits 5 & 8). There is a scar of similar length located in the middle of the left lower jaw line. The wound associated with this scar healed to reveal a lightly pigmented and depressed scar akin to a pockmark on the left cheek. (See Claimant's Exhibits 6 & 8). Finally, there is an approximately 12 mm long scar located on the frontal aspect of the right cheek, between the nose and mouth. This scar is pink in color and slightly depressed when compared to the surrounding skin.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

B. Assessing the weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow*

Chemical Co. v. Industrial Claim Appeals Office, 843 P.2d 122 (Colo.App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary opinion).

Overcoming the DIME Opinion of Dr. Higginbotham Regarding Permanent Impairment

C. A DIME physician's findings concerning causation and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning impairment is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding impairment the party challenging the DIME must demonstrate that the physicians determinations in this regard is highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

D. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert, supra*; *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The determination of impairment under the AMA Guides inherently requires the rating physician, when diagnosing the claimant's condition, to evaluate and identify all losses caused by the industrial injury. The AMA Guides, Section 1.2 provides as follows: "The key to an effective and reliable evaluation of impairment is review of the office and hospital records maintained by the physicians who have provided care since the onset of the medical condition." Section 2.1 further states that, "When a medically sufficient evaluation is carried out, the current clinical status of the individual will be documented accurately." In this case, Respondents contend that Dr. Higginbotham erred in assigning impairment for cervical range of motion loss when Claimant did qualify for a specific disorders rating per Table 53 of the AMA Guides since she did not sustain any injury to the neck itself. The ALJ concurs.

E. As found, the evidence presented supports a conclusion that Dr. Higginbotham clearly erred in giving a rating for the cervical spine. Dr. Higginbotham, himself, acknowledged that the neck was not directly injured in the dog bite. As Dr. Chan and Dr. D'Angelo noted none of the multiple treating physicians indicated a concern or provided treatment for it. Moreover, as Dr. Chan noted, Dr. Higginbotham's cervical spine rating is largely based on subjective pain alone, which is contrary to the principles of the AMA Guides. *See* C.R.S. § 8-42-101(3.7); AMA Guides to Evaluation of Permanent impairment, third edition, Appendix B.

F. In support of his contention that Claimant is entitled to impairment for cervical range of motion loss, Dr. Higginbotham relies upon the exception to using Table 53 of the Guides contained in Desk Aid #11 – Impairment Rating Tips for providing an impairment rating when not using Table 53 of the Guides. However, application of the exception is reserved for "unusual cases with established severe shoulder pathology accompanied by treatment of the cervical musculature" and only then, if the clinician provides sound justification for the inclusion of such impairment. See Desk Aid 11. Otherwise, there are no exceptions to the requirement for a corresponding Table 53 rating. Purported justification for inclusion of impairment for cervical range of motion loss was cited by Dr. Higginbotham as "splinting and guarding" of the paraspinal muscles caused by her other diagnoses as well as Claimant's propensity to develop DVT's following placement of her PICC line. As found, the ALJ is persuaded that Dr. Higginbotham misapplied the principles of Desk Aid 11 in this case. Here, the evidence presented fails to demonstrate that Claimant suffered either a neck injury or severe shoulder pathology[6] which necessitated treatment directed to the cervical spine. Based upon the evidence presented, the ALJ finds Dr. Higginbotham's justification for inclusion of a cervical spine range of motion loss rating unpersuasive and contrary to the AMA Guides and Desk Aid 11. Consequently, Dr. Higginbotham's rating for cervical range of motion loss is unjustified and highly probably incorrect.

G. Respondents also contend that Dr. Higginbotham's rating for TMJ dysfunction is erroneous because Claimant's facial pain emanates from trigeminal neuralgia rather than the TM joint. Because Dr. Higginbotham considered and rated Claimant's facial pain, Respondents contend that the rating for TM joint dysfunction is duplicative and redundant. While the ALJ agrees with Respondents, that part of Dr. Higginbotham's rating for TM joint dysfunction is contrary to the AMA guides and redundant in nature, the ALJ is not convinced that the entire TMJ rating is highly probably incorrect. As found, the record supports a conclusion that Claimant had to restrict her diet to soft or semi-solid foods following the development of jaw pain and difficulty chewing after the dog bite in question. While both Dr. Chan and Dr. D'Angelo found no specific permanent sequela related to Claimant's current TMJ symptoms and indicated that the TM joint rating was based upon subjective complaints of pain only, the record supports a conclusion that Claimant's jaw function was compromised as evidenced by her limited ability to open her mouth and chew food. Based upon the evidence presented, the ALJ finds that Dr. Higginbotham's 5% TMJ rating is based upon function of the TM joint and Claimant's need to restrict her diet rather than facial pain. The ALJ is not convinced that this rating is duplicative as suggested by Drs. Chan and D'Angelo. To the contrary, the record supports a conclusion that Dr. Higginbotham correctly recognized that interference of mastication typically results in the imposition of dietary restrictions, which can form the basis for assignment of permanent impairment. Careful review of the record persuades the ALJ that Dr. Higginbotham's assignment of 5% WP impairment is supported by the record and in keeping with the AMA Guides. Accordingly, Respondents have failed to

[6] While placement of the PICC line caused changes to the vascular structures of Claimant's left upper extremity, leading to recurrent DVT's and thoracic outlet syndrome, the ALJ is not convinced that these changes/conditions constitute the type of "severe" pathology contemplated by Desk Aid 11.

present clear and convincing evidence that this portion of Dr. Higginbotham's impairment rating is highly probably incorrect.

H. While the ALJ concludes that there is record support for Dr. Higginbotham's assignment of 5% WP impairment based upon Claimant restricting her diet to soft or semi-solid foods, his decision to assign an additional 8% WP impairment based upon range of motion loss of the TM joint appears contrary to the AMA Guides. Claimant failed to establish that the cited methodology for assessing impairment of the TM joint by measuring range of motion of the jaw has been adopted by the Colorado Division of Workers' Compensation or referenced in the AMA Guides. Indeed, Dr. Higginbotham conceded that the AMA Guides do not provide for a rating based upon such range of motion loss. Nonetheless, he justified including 8% range of motion loss of the TM joint in Claimant's overall rating because, as with other joint conditions, the AMA Guides permit specific disorders (Claimant's impaired mastication) to be combined with range of motion loss to determine the overall impairment. The revised third edition of the AMA Guides allow for a rating of jaw function based upon the Table outlined at Section 9.3, without contribution from range of motion loss. It is reasonable to infer from the AMA Guides that motion loss of the TM joint has been subsumed and otherwise considered in the Table located at Section 9.3 of the AMA Guides. Adding an additional 8% impairment for range of motion loss of the TM joint is redundant and contrary to the AMA Guides as it greatly enhances the risk of artificially increasing Claimant's impairment by including a rating factor already accounted for in Section 9.3 of the AMA Guides. Accordingly, the ALJ finds the inclusion of an additional 8% WP impairment for range of motion loss of the TM joint highly probably incorrect. Nonetheless, Claimant is entitled to a 5% whole person impairment rating based on the compromised function of her TM joint as supported by her need to restrict her diet to soft or semi-solid foods.

I. Where the ALJ determines that the DIME physician's opinion has been overcome, the question of the claimant's correct medical impairment rating then becomes a question of fact for the ALJ. The only limitation is that the ALJ's findings must be supported by the record and consistent with the AMA Guides and other rating protocols. *Jacob Niedzielski v. Target Corp.*, W.C. No. 5-036-773-001. Thus, once the ALJ determines that the DIME's opinion has been overcome in any respect, the ALJ is free to calculate the claimant's impairment rating based upon the preponderance of the evidence. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1151, 1153 (Colo. App. 2003) (once the DIME is overcome "the ALJ was free to consider the other medical evidence concerning claimant's permanent medical impairment"); *Paredes v. ABM Industries*, W.C. No. 4-862-312 (April 14, 2014); *DeLeon v. Whole Foods Market*, W.C. No 4-600-477 (November 16, 2006); *Garlets v. Memorial Hospital*, W.C. No. 4-336-566 (September 5, 2001). In this case, the ALJ concludes that the following impairments are supported by the record. They therefore constitute the correct rating associated with Claimant's May 4, 2019 work injuries:

> Trigeminal Neuralgia: The ALJ adopts Dr. Higginbotham's percentage of impairment for atypical facial neuralgia of 10% WP. While it is clear that Drs. Chan and D'Angelo assigned a lower percentage of impairment (5%)

and Dr. Maher assigned a higher degree (15%) of impairment for this condition, the variability in placement of Claimant on Table 2 of Section 4.2 of the AMA Guides represents a difference of opinion between the evaluators in this case. A mere difference of opinion between physicians fails to constitute error. *See Gonzales v. Browning Farris Indust. of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000). Consequently, Respondent has failed to prove that Dr. Higginbotham's 10% impairment for atypical facial neuralgia is highly probably incorrect and Dr. Higginbotham's 10% WP rating stands.

Thoracic Outlet Syndrome: Because neither party challenged Dr. Higginbotham's rating of 10% scheduled upper extremity rating for damage to the left shoulder vascular system, that rating shall stand.

Temporal Mandibular Joint Dysfunction: As noted above, Dr. Higginbotham's assignment of 8% WP impairment for range of motion loss of the TM joint is highly probably incorrect. Consequently, that portion of Dr. Higginbotham's TMJ impairment rating is set aside. Nonetheless, Dr. Higginbotham's assignment of 5% WP impairment for TM joint dysfunction based on difficulty with mastication and Claimant's need to restrict her diet to soft or semi-solid foods is supported by the record and consistent with the tenants of the AMA Guides. Accordingly, that impairment rating shall stand. The contrary opinions of Dr. D'Angelo are unpersuasive.

Cervical Spine: As noted above, Dr. Higginbotham's assignment of impairment for cervical range of motion loss is highly probably incorrect and therefore set aside. There is no impairment associated with the cervical spine.

Disfigurement

J. In *Arkin v. Industrial Commission*, 145 Colo. 463, 358 P.2d 879 (1961), the Court held that the term "disfigurement" as used in the statute, contemplates that there be an "observable impairment of the natural person." As found at Finding of Fact, ¶ 39, Claimant has suffered a "disfigurement", i.e. facial/neck scarring as a consequence of the May 4, 2019 dog attack. The ALJ concludes that this scarring constitutes an observable alteration in the natural appearance of the structure and skin covering the face and neck. Accordingly, the ALJ concludes that Claimant has suffered a visible disfigurement entitling her to additional benefits pursuant to Section 8-42-108 (1), C.R.S.

ORDER

It is therefore ordered that:

1. Respondent's request to set aside the impairment rating of Dr. Higginbotham is GRANTED IN PART. The ALJ sets aside Dr. Higginbotham's assigned 14% WP cervical spine impairment in its entirety. The ALJ also sets aside the 8% WP impairment

assigned by Dr. Higginbotham for TM joint range of motion loss as neither the cervical spine rating nor the rating for range of motion loss of the TM joint are supported by the AMA Guides or the Desk Aids issued by the Division of Workers' Compensation. Accordingly, the Respondents shall pay permanent partial disability (PPD) benefits consistently with the combined rating associated with 10% WP for atypical facial neuralgia and 5% WP for temporal mandibular joint dysfunction. Respondents shall also pay PPD benefits in conjunction with Claimant's 10% scheduled left upper extremity impairment.

2. Insurer shall pay Claimant $1,750.00 for the above-described disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

3. All matters not determined herein are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 2, 2021

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that his right knee arthroplasty from April 15, 2021 was reasonable, necessary, and causally related to his admitted work injury of April 28, 2014? Alternatively, has Claimant shown sufficient evidence to warrant a reopening of his claim based upon a worsening of his condition?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Procedural Background

1. Claimant was employed as a firefighter for the Respondent from 2004 until he was medically retired on occupational disability by the Fire and Police Pension Association (FPPA) in 2015.

2. On behalf of Claimant, orthopedist Tyler Bron, MD, had sought authorization from Respondents for (yet another) right knee medial menisectomy. After an IME at Respondents' request by orthopedist William Ciccone, MD., Respondents denied said authorization in a letter to Dr. Bron dated 4/30/2020 (Ex. QQ, p. 165).

3. Claimant's condition continued to deteriorate. In a consult with Dr. Bron on 4/6/2021, Dr. Bron noted "Patient has *previously been seen and diagnosed with osteoarthritis* and we have discussed treatment options extensively in the past….Unfortunately his pain has continued to progress and he is interested in proceeding forward with a total knee arthroplasty." (Ex. 9, p. 209)(emphasis added).

4. Following this latest request for surgery, which Respondent's denied, a right knee arthroplasty was nonetheless performed by Dr. Bron on 4/15/2021. (Ex. 9, pp. 212—214). Claimant now seeks a finding that this surgery was reasonable, necessary, and causally related to an admitted work injury which occurred on April 28, 2014.

Claimant's Preexisting Right Knee Symptoms and Treatment

5. Prior to the admitted injury of April 28, 2014 to Claimant's right knee (and the subject of the current claim) Claimant had a previous non-work-related injury to his right knee. On an intake note with orthopedist Christopher Jones, MD, dated 8/16/2012, Dr. Jones stated: "The patient is a 47-year-old fireman here today to evaluate the right knee. *He reports an atraumatic knee effusion*….Exam today, he does have 2++ effusion.

…*ROM and otherwise physical exam is very difficult* *because of pain.* (Ex. RR, p. 167)(emphasis added).

6. Claimant then underwent surgical intervention by Dr. Jones on September 26, 2012. Prior to that surgery, Dr. Jones had reviewed the MRI, which he found to be unremarkable except for some joint effusion. On August 16, 2012 Dr. Jones initially thought that the joint effusion might have been due to a flare up of gout.

7. Claimant, however, did not improve. On September 26, 2012, Dr. Jones performed surgery on Claimant. His *preoperative diagnosis* was "right knee pain with chondromalacia patella." However, his *postoperative diagnosis* was 1. Grade 3 chondromalacia patella involving predominately the lateral facet and trochlear groove. 2. *Chondromalacia medial femoral condyle with large flap lesion with grade 3 lesion* measuring approximately 10 mm squared." (Ex. TT, p. 170)(emphasis added).

8. There are no reported issues in the available medical records between this surgery and the admitted injury of April 28, 2014.

The Admitted Work Injury of April 28, 2014

9. On April 28, 2014, Claimant was assigned as a driver-engineer. CSFD received a medical alert from a nursing home facility concerning a patient that had fallen. Due to the configuration of the narrow driveway, Claimant had to park the truck such that when he got out, he had to walk across an unstable substrate of 6-8" rocks. Upon returning to the truck after this call, he twisted his right knee negotiating these rocks.

10. Claimant and his team finished that call, but he indicated that he did not report the injury at that time. Instead, they got another call about a very heavy patient having fallen. During that call, while helping that patient, Claimant also injured his back and shoulder (not subject to this claim at issue).

11. Claimant reported the injury to his right knee to his supervisor when the supervisor returned from a meeting out of the station. Claimant estimated that he reported it to his supervisor about 5:00 pm on April 28, 2014.

Treatment for the April 28, 2014 Admitted Injury

12. Claimant initially went to Respondent's occupational clinic, and was examined by Susan Dern, D.O. The first reported is dated May 8, 2014. (Ex. E, pp. 25-27). Her note indicates that Claimant twisted his right knee on rocks when he was getting back in the fire engine after the call. Knee was reported to be 'uncomfortable' and Claimant felt it was mildly unstable. Pain 4/10. Physical examination indicated slight swelling medially. Claimant indicated that he continued to follow up with the occupational clinic without improvement in his pain complains or functional capabilities.

13. Dr. Miguel Castrejon took over as Claimant's ATP. Dr. Castrejon issued a progress report on June 30, 2014. He ordered an MRI of the right knee, which was performed on July 2, 2014. That MRI showed a horizontal tear of the medial meniscal posterior horn with a parameniscal cyst, and mild to moderate patellofemoral and mild *medial compartment chondromalacia* (Ex 7, p. 100)(emphasis added).

14. Since Dr. Jones had previously performed surgery on his right knee, Claimant was referred by the occupational clinic to Dr. Jones for evaluation and treatment. Claimant initially saw Dr. Jones on July 3, 2014. Claimant's history given to Dr. Jones was that he got out of the truck, had to walk across an uneven surface, twisted his knee, and felt a sharp pain. Dr. Jones' preliminary assessment was of a tear of the medial meniscus. (Ex. 9, p. 168).

15. Dr. Jones performed surgery on Claimant's right knee on July 15, 2014. The procedures performed were a right knee arthroscopic partial medial meniscectomy and a right knee arthroscopic chondroplasty of the patellofemoral joint. The post operative diagnosis of the meniscectomy damage was that it was a "complex tear of the posterior horn medial meniscus", as well as *"Chondromalacia of patella grade 2 and 3."* (Ex. 9, p 172)(emphasis added).

16. On August 28, 2014, Claimant underwent a second MRI of the right knee. It was read to show complex tear of the medial meniscus, posterior horn in mid-point. Chondromalacia of the lateral patella femoral joint. Mild articular cartilage thinning, posterior medial tibial condyle. Moderate joint effusion. (Ex. G, p. 32).

17. After Claimant indicated in follow-ups that his 7/15/2014 procedure did not correct his issues, Dr. Castrejon then referred Claimant to orthopedist David Walden, MD. A third MRI was performed on October 30, 2014.

18. Dr. Walden reviewed this MRI, and on November 4, 2014, his *Impression* was "Right knee chronic persistent pain *possibly* secondary to a recurrent medial meniscus tear versus *medial compartment overload* and *underlying osteoarthritis* of the patella." (Ex. 8, p. 116)(emphasis added).

19. On November 12, 2014, Dr. Walden performed a right knee arthroscopic partial medial meniscectomy and an arthroscopic chondroplasty of the femoral trochles and medial femoral condyle. In his operative report, Dr. Walden noted that the indications for surgery were "[t]he patient was 49 years old with history of prior arthroscopy of the knee. He had continued symptoms and therefore underwent two subsequent MRI scans, both of which seemed to show possibility of recurrent posterior horn tear of the medial meniscus. *The patient was made aware that symptoms could also be coming from arthritis and may or may not improve and this [the surgery] may or may not improve his overall situation.* With full knowledge of these limitations . . . the patient signed consent form in which to proceed." (Ex. J, p. 45)(emphasis added).

20. Dr. Walden's surgical notes from this procedure noted as a *Preoperative Diagnosis:* 1. Right knee possible recurrent medial meniscus tear, 2. Right knee osteoarthritis. His *Postoperative Diagnosis* was: 1. Right knee recurrent posterior horn tear of medial meniscus, 2. *Right knee osteoarthritis*. *Grade 3 chondral damage*, femoral trochlea and *grade 3 chondral damage* weightbearing surface of medial femoral condyle. (Ex. 8, p. 121) (emphasis added).

21. After the 11/12/2014 surgery by Dr. Walden, Claimant's knee condition did not improve according to expectations. Claimant had multiple aspirations of the knee, significant swelling, and reported a difficult time walking.

22. In a follow-up with Dr. Walden on 6/20/2017, for example, Claimant had failed to progress as expected. Under *Plan,* Dr. Walden stated: "I talked to the patient about following through with a referral to a joint arthroplasty specialist to discuss the recovery, the longevity, and activity restrictions with regard to this type of surgery. He has been medically retired from the city….From my perspective, it is unlikely that additional arthroscopy would be beneficial since previous arthroscopies have not been overly helpful. I discharge him from my care at this point with follow-up on an as-needed basis. (Ex. 8, p. 163).

Claimant Testifies at Hearing

23. Claimant testified that between his 2012 surgery and his 4/28/2014 work injury, not only was he assigned to the basic duties of firefighting operations but also to the hazmat program of the CSFD which required a lot of Level A suit entry, a lot of kneeling, and a lot of crawling. He also testified that he spent long hours on the fire lines on the Waldo Canyon and Black Forest fires, without incident and had no restrictions or pain.

24. However, Claimant testified that his 2012 injury was also work-related., (Transcript, pp. 14-15).

25. Claimant never returned to full duty with the fire department after the injury of April 28, 2014. He performed some light duty work with the CARES program for approximately three weeks, but was unable to perform even that work, due to the issues with his knee and his back.

26. Claimant testified that after the surgery by Dr. Walden in November of 2014, he continued to have protracted pain. In addition to the injections, he attempted physical therapy, purchased workout equipment for his use at his residence, took medications, had seven or eight aspirations of his knee to remove fluid, and received steroid and PRP injections.

27. Claimant testified that by 2020, he could not tolerate the pain and significant reduction in the quality of life. He went back to see Dr. Castrejon, who referred him to Dr.

Bron for evaluation and treatment. Dr. Bron recommended either an additional medial meniscectomy, or a total knee replacement. By letter to Dr. Bron of April 30, 2020, Respondent denied any additional treatment for the right knee, for not being reasonably necessary and causally related.

28. Claimant further testified that he had no additional injuries to his right knee between April 28, 2014 and the time of the total knee replacement of April 15, 2021.

Dr. Castrejon Testifies at Hearing

29. Dr. Castrejon testified as an expert in physical medicine and rehabilitation. He is Level II accredited. Dr. Castrejon was the ATP for the duration of the care and treatment of Claimant's right knee injury of April 28, 2014.

30. Dr. Castrejon testified that he had reviewed all of the clinical records of the ongoing care and treatment that claimant has received, and has reviewed the reports of Respondent's expert, Dr. Ciccone. He disagrees with Dr. Ciccone regarding the relationship between the April 28, 2014, injury and the need for the total knee replacement. Dr. Castrejon testified that there is a seven-fold increased risk of osteoarthritis following a partial meniscectomy. The weakness in Claimant's knee, and its inflammatory condition, aggravated and accelerated the osteoarthritis process leading to the need for the total knee arthroplasty.

31. In critiquing Dr. Ciccone's analysis, Dr. Castrejon noted:

> A ….Dr. Ciccone did not take into consideration that at the time…of the 2012 surgery that was performed by Dr. Jones, there was no evidence of a meniscal tear; *there was evidence of arthritic changes.* Dr. Jones performed a chondroplasty. *There is an association of chondroplasty and a 17-fold increase in development of osteoarthritis*….(Transcript, p. 38)(emphasis added)..

32. In further opining that Dr. Ciccone had 'insufficient evidence' to support a natural progression [of preexisting osteoarthritis] Dr. Castrejon stated:

> When you look at the actual pathology of what actually occurred to this gentleman as of 2012, and if the medical file is actually reviewed, *the patient also sustained work-related injuries to his right knee on October 29, 2004, and November 5, 2004. So the history of injuries is actually going back a little bit more than the initial 2012 that we have a record of.* (Transcript, p. 40)(emphasis added).

33. Dr. Castrejon testified that Claimant's need for the knee replacement was a result of a progressively worsening condition of the knee, brought on by the 4/28/2014 work injury, and the surgical procedures that he underwent. He testified that "there is no

doubt in my mind that the event … is responsible for the treatment that this patient went on to require.” (Transcript, p. 40).

34. Dr. Castrejon also compared the contralateral knee, which also has osteoarthritis, but has not required surgeries. The difference is that the right knee has had the multiple surgeries, which have permanently aggravated the underlying condition.

35. After Dr. Ciccone testified, Dr. Castrejon testified in rebuttal. When asked if he concurred with Dr. Ciccone’s causation analysis, Dr. Castrejon responded:

> A *I do not feel that Dr. Ciccone has provided enough substantial evidence* as to why the event of April 28, 2014, did not result in an aggravation of a preexisting condition when the medical record is very clear in terms of delineating a progression ongoing for years of knee pain that went on the require multiple injections, treatment, PRP, all evidence of treatment, until finally functionally and emotionally this gentleman needed the finality of treatments that consisted of a total knee replacement. (Transcript, p. 88)(emphasis added).

Jane M[Redacted] Testifies at Hearing

36. Jane M[Redacted] has been a Worker’s Compensation claims adjuster for the [Employer] for about six years. She is familiar with Claimant’s claim file, and has met with him in her office. In reviewing Claimant’s entire claim file, she has no record of a claim for a 2011 or 2012 right knee injury for Claimant. Nor does she have anything regarding any work-related right knee injuries dating to 2004.

Dr. Ciccone Testifies at Hearing

37. Dr. Ciccone testified as an expert in the field of orthopedic surgery. He is Level II accredited. Dr. Ciccone testified that he performed multiple records reviews of Claimant’s April 28th injury, but did not examine him.

38. Dr. Ciccone testified that the MRIs from Claimant’s treatment showed basically degenerative changes in his right knee. Regarding the tears of the medial meniscus, Dr. Ciccone indicated that he could not tell whether the meniscal tears were chronic or acute in nature. He characterized chondromalacia as a thinning, early degeneration of the [knee] cartilage. He further described Grade 3 chondromalacia [dating to 2012] as “almost complete exposure of the bone and loss of cartilage.” (Transcript, pp. 64-65).

39. Dr. Ciccone’s interpretation of Dr. Walden’s 11/14/2014 surgery on Claimant was that Dr. Walden was himself unclear of whether Claimant’s pain was coming from the torn meniscus vs. arthritis in this knee. He also opined that “..arthritis doesn’t occur rapidly. So if you have arthritis on imaging studies, it’s usually ben there for years.” (Transcript, p. 78). He also noted that “Most of the time….degenerative changes

in joints are not related to each other. So that being said, most people if they get joint replacements, they'll get one knee done and never need the other knee done…..So you cannot use another joint as a guide to assess the progression in an opposite joint." (Transcript, p. 77).

40. Dr. Ciccone opined that Claimant's need for the total knee replacement surgery was as a result of having knee problems for a long period of time, and was as a result of the natural progression of degenerative changes in the knee.

41. When asked about Dr. Castrejon's opinion that statistically, menisectomies greatly increase the likelihood of arthritis, Dr. Ciccone explained the nuances in more detail:

> A ….and there's no question, the more meniscus you lose, the higher your risk of arthritis. But it all is dependent upon the degree of meniscus loss. There's plenty of studies that show *small menisectomies have no effect on the progression of arthritis in knees;* we know that the old-fashioned complete menisectomies have significant effect on arthritis occurring within knees.
>
> So there's not a general number if you have a knee scope and a meniscectomy that you're at whatever percentage risk for – it's all variable.
>
> Now, in this case it's even more variable because the meniscus tear is likely degenerative and unrelated to any injury. So the reality of it all is—and Dr. Walden speaks to this in his operative note---is *that doing an arthroscopy and removing the meniscus may have zero effect on the patient's complaint* because—especially in the area of degenerative change not secondary to the meniscal tear. And *that's why he didn't do well following the surgery*. (Transcript, pp. 68-69)(emphasis added).

42. Dr. Ciccone also noted: "You can't even tell where their pain's coming from. So….this is the thing that Dr. Walden was getting at in his operative note. You cannot tell on an MRI scan in someone with degenerative change whether or not their pain is coming from the meniscus or from the arthritis. (Transcript, p. 81)

43. Explaining the cause and effect relationship of meniscal tears and arthritis, Dr. Ciccone stated: "If you don't have arthritis, it's likely that a trauma caused your meniscus tear. *When you do have arthritis, it is unknown whether or not a trauma would have caused the meniscus tear."* (Transcript, pp 80-81)(emphasis added).

44. Dr. Ciccone concurred that another medial menisectomy was not appropriate at this time. However, regarding the total knee replacement, he stated:

> A ….in a patient who's 55 with complaints of knee pain and swelling starting back in 2012, with degenerative changes noted already on

> arthroscopy, yeah, potentially. ...I think you're walking the line for an indication for knee replacement already. (Transcript, p. 79)

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this case, while the ALJ has some reservations after Claimant's testimony that his 2012 knee injury was work-related [it clearly was not], it is possible that things just 'ran together' for him, given his long and painful history with his right knee. Overall, the pain that Claimant was feeling and describing was very real, and consistent with the medical evidence. However, Claimant's reported symptoms do not bear on the forensic matter of causation. He just knows when it hurts.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this case, the ALJ finds that both medical experts testified sincerely, and according to their best interpretation of the medical literature and evidence. Thus, their opinions are to be weighted according to their *persuasiveness,* as opposed to *credibility*, per se.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Aggravation of a Preexisting Condition, Generally

F. A Claimant sustains a compensable on-the-job injury if work activities, activate, cause, aggravate, accelerate or combine with nonindustrial factors to result in disability or need for medical treatment. The employer takes the employee as he is, on the date of the compensable injury, and compensation is not dependent on the state of an employee’s health or his freedom from constitutional weakness or latent tendency. *Peter Kiewit Sons’ Co. v. Industrial Commission*, 124 Colo. 217, 236 P.2d 296 (1951). Compensation in aggravation cases is well developed in the appellate case law in a variety of cases which involve the principle. The preexisting condition can be manifest but not yet disabling or as in this situation can be latent until manifested by the work injury. *See*, *Subsequent Injury Fund v. Devore*, 780 P.2d 39 (Colo. App. 1989; *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986) or can accelerate the natural course of a preexisting condition. *H H Warehouse v. Vicory*, 805 P. 2d 1167 (Colo. App. 1990).

Medical Treatment, Generally

G. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. The right to workers’ compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. ICAO,* 12 P.3d 844, 846 (Colo. App. 2000).

Reasonable and Necessary, as Applied

H. The ALJ finds, by a preponderance of the evidence, that the right knee arthroplasty performed by Dr. Bron on April 15, 2021 was reasonable and necessary to cure Claimant of the effects of his medical condition. Conservative care had failed Claimant for years, despite his sincere efforts at physical therapy, vitamin therapy, and several menisectomies along the way. Not only did his pain not abate, it got progressively worse. This procedure was suggested as least as early as 2017 by Dr. Walden, but there is nothing in the record that Claimant sought it at that time. He finally has done so. In the final analysis, even Dr. Ciccone conceded that, given the state of his arthritis, this could well be "walking the line" as the next step to take.

Causally Related to the Work Injury, as Applied

I. Claimant had a longstanding issue with grade 3 chondromalacia in his right knee at least two years before this admitted injury in 2014. While not in the medical records before the ALJ, Dr. Castrejon (from whatever source) referenced some sort of work injury (from whatever employer) from 2004 to Claimant's right knee. Even leaving that aside, Claimant's atraumatic, yet painful, symptoms began to show as early as 2012. The ALJ is persuaded by Dr. Ciccone that the degenerative process likely began well before that, and is further persuaded that one may not look to the contralateral knee as a reliable indicator that such degeneration must have been caused by trauma-although it certainly remains possible.

J. Further, the ALJ is not persuaded that the incremental removal of Claimant's meniscus fragments in two surgeries from 2014 led directly to his arthritis, when the better evidence suggests that the arthritis Claimant now suffers from [or at least did, prior to his arthroplasty] would have been set further in motion from his chondroplasty by Dr. Jones in 2012. And, as noted by Dr. Ciccone, Claimant just knows his knee really hurts, but he cannot be expected to pinpoint exactly where within his medial compartment the pain generator resides.

K. In the final analysis, perhaps Dr. Castrejon, quite unintentionally, said it best when he stated that Dr. Ciccone did not provide "*enough substantial evidence* as to why the event of April 28, 2014 *did not result* in an aggravation of [Claimant's] preexisting [knee] condition." If Respondents were seeking to overcome a DIME on causation today, perhaps Dr. Castrejon might have a point. But they aren't saying that. Respondents are saying that Claimant's need for his right knee arthroplasty has not been proven, by a preponderance of the evidence, to have been causally related to his work injury from seven years prior. The ALJ concurs in this assessment.

L. The ALJ instead finds Dr. Ciccone's analysis to be more persuasive. Claimant, likely through no fault of his own, has just suffered from a bad knee for years; at least since 2012, and quite possibly years before that. This is why the partial menisectomies from 2014 did not fix the underlying problem - *nor did they create the need for the arthroplasty.* The ALJ further notes that, *at most*, the torn posterior horn repaired on 7/15/2014 would have been *directly* due to stepping on the rocks. Claimant has not shown that his 4/28/2014 work injury aggravated his preexisting arthritis, such that he now needs a total knee replacement. Nor has he shown sufficient evidence to now warrant a reopening due to a worsening. Hopefully this latest procedure will provide him the relief he deserves however, it will remain outside the Workers Compensation system.

ORDER

It is therefore Ordered that:

1. Claimant has not shown that his right knee arthroplasty was causally related to his admitted work injury. His request for reimbursement for this procedure is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is* ***highly recommended*** *that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-106-555-003

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

[Redacted],

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on January 5, 2021, in Denver, Colorado. The hearing was recorded by Google Meets (reference: 1/5/21 Google Meets, beginning at 8:30 AM, and ending at 11:00 AM).

The Claimant was virtually present in person and represented by [Redacted], Esq. Respondents were represented by [Redacted], Esq.

Hereinafter [Redacted] shall be referred to as the "Claimant." [Redacted] shall be referred to as the "Employer." All other parties shall be referred to by name.

Claimant's Exhibits 1 through 4 were admitted into evidence, without objection. Respondents' Exhibits A through MX, S and T were admitted into evidence, without objection. The transcripts of the evidentiary depositions of Daniel Possley, D.O., John Raschbacher, M.D. and Brian Reiss, M.D. were admitted into evidence in lieu of their testimony during the hearing

At the conclusion of the hearing, the ALJ ruled from the bench in favor of the Respondents, referring preparation of a proposed decision to counsel for the Respondents, which was submitted on January 8, 2021, and giving the Claimant two working days within which to file objections thereto. No timely objections having been filed, the matter was submitted for decision on January 13, 2021.

ISSUES

The issue to be determined by this decision is whether Respondents can terminate the post maximum medical improvement (MMI) general maintenance medical admission under their December 5, 2017 Final Admission of Liability, (FAL), pursuant to. § 8-43-201, C.R.S.

Respondents bear the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant is a 37 year old man with a work related back injury of January 24, 2014.

2. As a result of the work-related injury, the Claimant underwent a partial laminecetomy and discectomy at L5-S1 on December 23, 2014. It is undisputed that the Claimant had degenerative changes throughout his spine at the time of the work injury. *Ex. N, Bate 306-308.* The Claimant received treatment under the claim for his L5-S1 until MMI was determined by 24-month DIME Dr. Franklin Shih. *Ex. C.* Dr. Shih found MMI as of July 13, 2016 and provided a 15% whole person impairment rating for the L5-S1 level of the lumbar spine (Respondents' *Exhibit. C, bates 52*).

3. Respondents filed a Final Admission of Liability (FAL), based upon the opinion of Franklin Shih, M.D.. The FAL was dated December 5, 2017, and noted, "We admit for reasonable and necessary and related medical treatment and/or medications after MMI.

4. It is undisputed that the Claimant left work with the Employer and became a self-employed carpenter/handyman after his work injury (Respondents' *Exhibit. D, bates 57*). The evidence establishes that the Claimant has since worked in a full duty capacity as a self-employed carpenter and that job requires heavy labor. The heavy labor done during the self-employment caused symptoms and complaints in the low back. During his treatment, Dr. Keith Graves, D.C., indicated that the Claimant was making poor progress, and stated: "Lasting functional relief from his symptomatology and any change in physical examination have not occurred primarily due to his

continued labor intensive workloads as a self employed general contractor (Respondents' *Exhibit D, bates 67*). "He has increased lumbar spine/lumbosacral junction pain/symptomatology with labor-intensive workloads as a general contractor" (Respondents' *Exhibit. D, bates 61*). On November 17, 2015, Chiropractic Dr. Graves's notes reflected a flare of symptoms while loading his residence without much help (Respondents' *Ex. D ,bates 61*). Chiropractor Graves also said, "Most of the patient's continued flare-ups occur with his work as a self-employed general contractor" (Respondents' *Exhibit. D, bates 72*). Dr. Graves repeated this thought throughout his treatment.

5. The Claimant has received maintenance medical treatment under this claim since the FAL was filed. In November of 2018, Daniel Alan Drennan, M.D. became the authorized treating physician (ATP) providing maintenance treatment to the Claimant (Respondents' *Exhibit. F, bates* 83)

6. On March 10, 2020, the Claimant appeared for follow up with Dr. Drennan. The Claimant reported a pain score of 6/10 with medication. He described a constant sharp ache that was not relieved by anything (Respondents' *Exhibit F, bates 141*). Dr. Drennan prescribed morphine 15 mg, Butrans 20 mcg/hour transdermal patch, and Baclofen 10 mg. He recommended a bilateral L4/5 L5/S1 transforaminal epidural steroid injection, a Spinal Q Vest, a surgical evaluation, and noted that the Claimant may benefit from a referral to behavioral medicine for depression, anxiety and coping Respondents' *Exhibit F, bates 142-143*).

7. The Claimant's activities were captured on video on March 10, 2020. He is seen in this video arriving at his March 10, 2020 appointment with Dr. Drennan. The Claimant is in a pick up truck with a construction trailer attached. The truck is parked and another individual waits in the truck while the Claimant attends his appointment. Following the appointment, the two proceed to Home Depot. The video then shows the Claimant repeatedly loading framed doors into the construction trailer. The person with him and the Home Depot employee near him watch the Claimant as he bends, lifts, and carries the doors into the trailer. There is no visible hesitation in his movement while he is doing this. He is not assisted by the others in his lifting.

8. The video was presented to Dr. Drennan, and he was asked whether his recommendations for treatment would change based upon the video. Dr. Drennan replied that it did not, and stated, "He does have a labor intensive job. I have back pain and problems as well, but still work on my farm, lifting heavy items that make me hurt. However, the work still has to be done, regardless of the pain it causes (Respondents' *Exhibit F, bates 147*).

9. In the September 8, 2020 appointment with the Claimant, Dr. Drennan noted continued low back complaints. He also noted that the Claimant's neck popped

and clicked and there was occasional pain and tingling in his arms and hands “that has not been addressed” (Respondents’ *Exhibit. F, bates 160*). Dr. Drennan prescribed voltaren gel for the knees and requested a right knee MRI (magnetic resonance imaging) and a right lateral genicular knee nerve block. He repeated his recommendations for spinal injections, a Spinal Q Vest and a spinal surgical evaluation. He refilled the Claimant’s medication, including morphine, buprenorphine, and baclofen (Respondents’ *Ehibitx. F, bates 161-163*).

10. The Claimant took the evidentiary deposition of Dr. Possley, orthopedic surgeon. Dr. Possley last saw the Claimant for treatment on March 6, 2020, a few days prior to the video of March 10, 2020. During that appointment, the Claimant represented that his condition had gotten worse six weeks prior to that appointment. He reported that he was having trouble working, with activities of daily living and with self care. (*Possley Depo. p. 15, Claimant’s Exhibit. 2, bates* 10)7*.* Dr. Possely recommended injections. Dr. Possley felt that the Claimant’s current symtoms were from a herniation at L4-5 and bone spurs at L5-S1. He stated that the need for treatment at these levels was a combination of acute and chronic issues (*Possley Depo. p. 16*)*.* He agreed that he had not done a causation analysis and that his opinion was not specific to a work diagnosis. *Id., p. 22.* Dr. Possley’s opinion was only based upon what the Claimant had told him about his back feeling worse. Dr. Possely admitted that he had not reviewed all of the Claimant’s MRI reports, and could not comment on whether these showed a difference in the spinal condition since MMI. He testified that he had not done a causation analysis, and had not reviewed the Dr. Shih’s DIME (Division Independent Medical Examination) report. Dr. Possely’s opinion was advanced as his recommendation for treatment of the Claimant’s present complaints, without consideration of causation, and without the benefit of the medical records or the March 10, 2020 video. The ALJ finds that Dr. Possley’s opinion is not found to include a determination of whether his recommendations are related to the work injury of January 24, 2014.

11. Dr. Reiss testified by deposition. Dr. Reiss is also an orthopedic spinal surgeon. Dr. Reiss had performed a face-to-face evaluation with the Claimant on July 5, 2017. He also performed an updated records review addressing the question of the reasonableness, necessity, and relatedness of continued maintenance treatment under this claim. He provided a summary of all medical records (Respondents’ *Exhibit. A*). In comparison with the pre-MMI MRI (Respondents *Exhibit. B, bates 14; Exhibit. N and Reiss Depo p. 14*)*.* Dr. Reiss concluded that it was not reasonable or necessary to repeat epidural injections at this point in time, given the limited benefit from injection therapy in the past (Respondents’ *Exhibit. A, Bates 14*)*.* He noted, “It must be remembered that [Claimant] was having significant lower back and left lower extremity pain prior to the minor work incident. [The Claimant’s] symptomatology was irritated by his activating including work which is no different than his probable condition right now.” *Id.* Dr. Reiss was of the opinion that the Claimant was back to his pre-injury **baseline** and that the need for treatment is related to his pre-existing ongoing condition

(Respondents' *Exhibit A, bates 15; Reiss Depo p. 12-16*) . Dr. Reiss testified that the bilateral knees are not related to the work injury of January 24, 2014.

12. Dr. Raschbacher testified by deposition. Dr. Raschbacher conducted independent medical examinations (IMEs) of the Claimant on May 1, 2014, March 8, 2016, and July 28, 2017. He provided physician staffing opinions regarding requested medical treatment, and he performed a medical records review and provided a report addressing the reasonableness, necessity, and relatedness of ongoing maintenance medical treatment dated June 22, 2020 (Respondents' *Exhibit.B).* Dr. Raschbacher was of the opinion that continued treatment, including Dr. Drennan's current recommendations, is not reasonable, necessary, or causally elated to the workers' compensation claim of January 24, 2014 (Respondents' *Exhibit. B, bates 47*)*.* Consistent with Dr. Reiss, he was of the opinion that any aggravation of the Claimant's back symptoms at this time are from his current self-employed work related activities, as illustrated by the March 10, 2020 video (Respondents' *Exhibit. B, bates 47; Raschbacher Depo. P. 29*)*.* According to Dr. Raschbacher continued maintenance treatment is not reasonable, necessary or causally related to the work injury (*Raschbacher Depo p. 30.* Dr. Raschbacher testified that neither the bilateral knees nor the neck are related to the original work injury (*Raschbacher Depo p. 39, 42*).

Ultimate Findings

13. The ALJ finds the opinions of Drs. Reiss and Raschbacher highly credible ,*i.e.,* that Claimant's present back condition is not causally related to the admitted work-related injury of January 24, 2014, nor is there any indication of work-relatedness in their opinions. Further, Dr. Possley was unable to express an opinion concerning work-relatedness. In fact, only ATP Drennan implies work relatedness of the admitted back injury. The ALJ rejects Dr. Drennan's implied opinion as inadequately founded or expressed. Therefor, the ALJ finds his opinion lacking in credibility to support work-relatedness.

14. Between conflicting opinions and testimony, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Drs. Reiss and Raschbacher, which do not support work-relatedness of the January 24, 2014 admitted claim and to reject the implied opinion of work-relatedness, expressed by ATP Dr. Drennan.

15. The Respondents have established that the Claimant's current post-MMI medical maintenance treatment is **not** causally related to the admitted injury of January 24, 2014.

16. Respondents have proven, by a preponderance of the evidence that the Claimant's current post-MMI medical maintenance treatment is **not** causally related to the January 24, 2014 back injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

b. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Drs. Messenbaugh and Feldman were most credible for what they did not express, *i.e.,* there is no indication of work-relatedness in their opinions. On the other hand, the opinions of Drs Kuklo and Hughes regarding work-relatedness are not credible because they relied entirely upon what the Claimant told them; and, the Claimant's history of the work-related "falling from the Tree' incident and the consequences thereof was not credible.

Substantial Evidence

c. ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions and testimony, the ALJ made rational choice, based on substantial evidence, to accept the opinions of Drs. Messenbaugh and Feldman and what is not in those opinions; and, to reject the opinions of Drs. Kuklo and Hughes, as well as the Claimant's testimony, for the reasons herein above specified.

Compensability—Aggravation/Acceleration of Pre-Existing Conditions

d. A compensable injury is one that arises out of and in the course and scope of employment. § 8-41-301 (1) (b), C.R.S. The "arising out of test is one of causation. As found, the Claimant has failed to adequately causally connect his present medical problems to the alleged "tree-falling" incident. The alleged "tree-falling" incident only satisfies the "course and scope" test. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment isa compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). If the employment-related activities aggravate, accelerate, or combine with a pre-existing condition to cause disability, a compensable phenomenon has occurred. § 8-41-301 (1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. Pp. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). *Also see* § 8-41-301 (1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998] *Witt v. James J. Kell, Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant failed to establish that he sustained aggravating or accelerating injuries arising out of his employment for the Employer on December 13 or 18, 2018, as alleged. Thus, the Claimant failed to establish a compensable injury.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to sustain his burden on the issue of compensability.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits are hereby denied and dismissed.

DATED this 7th day of December 2020.

DIGITAL SIGNATURE

EDWIN L. FELTER, JR.
Administrative Law Judge

ISSUES

1. Whether the ALJ has jurisdiction to address Claimant's request for medical maintenance benefits because Respondents' October 30, 2020 Final Admission of Liability (FAL) closed the claim and Claimant has not filed a petition to reopen.

2. If Claimant's claim for medical maintenance benefits remains open, whether Claimant has proven by a preponderance of the evidence that medical maintenance benefits in the form of massage therapy, acupuncture, and physical therapy are reasonable and necessary to relieve the effects of her January 2, 2018 industrial injury or prevent further deterioration of her condition.

3. Whether Claimant has established by a preponderance of the evidence that she is entitled to reimbursement for mileage expenses for authorized visits to medical appointments during the period February 11, 2021 through June 23, 2021.

FINDINGS OF FACT

1. Claimant worked for Employer as a Stage Production Manager. On January 2, 2018 she stepped off an elevated stage and fell onto a concrete floor. Claimant commented that the accident felt like a body slam because she missed a step and fell straight down on her shoulders, hands and knees. She initially experienced total body pain, but her primary symptoms involved her right shoulder, left hand, neck and knees.

2. On January 3, 2018 Claimant visited Physician's Assistant Hanna Bodkin at Authorized Treating Physician (ATP) Concentra Medical Centers for an examination. PA Bodkin referred Claimant to Yani C. Zinis, D.O. for pain management.

3. On February 16, 2018 Claimant began treatment with Dr. Zinis. Claimant had previously treated with Dr. Zinis in 2005-2006 and 2010-2011. However, she had not received care from Dr. Zinis between 2011 and her injury on January 2, 2018.

4. During her course of treatment Claimant was also referred to neurologist Steven H. Shogan, M.D. for an evaluation. Dr. Shogan has recommended that Claimant return every six months to evaluate her neurological status and the stability of her neck.

5. Throughout her care Claimant has been prescribed lidocaine patches, Medrol, Oxycodone, Percocet, Xanax, and Ativan. She has also undergone treatment in the form of physical therapy, massage therapy and acupuncture.

6. Claimant testified at the hearing in this matter. She explained that the combination of physical and massage therapy treatments have decreased her use of pain medications. The treatment modalities have also improved her function. Specifically, the therapy has allowed her to be more mobile and continue working a limited schedule.

7. On October 8, 2020 Claimant underwent a 24-month Division Independent Medical Examination (DIME) with Stephen D. Lindenbaum, M.D. Dr. Lindenbaum conducted a physical examination and reviewed Claimant's medical records. He determined that Claimant reached Maximum Medical Improvement (MMI) on September 18, 2019. Dr. Lindenbaum reasoned that Claimant had received a significant number of treatment modalities, including acupuncture, physical therapy and massage therapy, over a period of two years. She has experienced a waxing and waning of symptoms and diagnostic studies have revealed that surgical intervention was not appropriate. Therefore, MMI was appropriate when all testing was completed on September 18, 2019. He assigned the following permanent impairment ratings: (1) a 10% extremity rating for the left knee; (2) a 3% extremity rating for the right shoulder; and a 23% whole person rating for the cervical spine. Dr. Lindenbaum recommended work restrictions including the following: (1) lifting not to exceed 25-30 pounds; (2) lifting of weight above chest height restricted to 10-15 pounds on the right side; and (3) no repetitive kneeling and squatting.

8. Dr. Lindenbaum explained that Claimant was entitled to limited medical maintenance treatment. In specifically addressing post-MMI medical benefits, Dr. Lindenbaum suggested follow-up visits with Dr, Zinis to monitor cervical spine complaints and maintain treatment medications. He noted that Claimant did not require supervised treatment modalities of acupuncture, massage therapy or physical therapy. Dr. Lindenbaum commented that there might be an "occasional episode" where Claimant would require 6-8 sessions of massage or physical therapy each year. Nevertheless, he reasoned that the preceding modalities should not be used excessively as they had been in the past. Dr. Lindenbaum also suggested quarterly visits with Dr. Zinis over the following year. Finally, he recommended two visits over the ensuing year with Dr. Shogan for neurological monitoring.

9. On October 30, 2020 Insurer filed a Final Admission of Liability (FAL) consistent with Dr. Lindenbaum's MMI and impairment determinations. The FAL also recounted Dr. Lindenbaum's medical maintenance recommendations. Specifically, the FAL limited future medical benefits to the following:

> Dr. Zinis should follow her cervical spine complaints and Rx. She does not need acupuncture, PT or MT. There may be an occasional episode where the patient will have exacerbation where she would need up to 6-8 sessions combined per year of these treatments. She should be seen on a quarterly basis. Ancillary massage therapy and PT could be decided by Dr. Zinis but certainly should not be excessively used such as in the past, 6-8 visits a year. Another visit from Dr. Shogan should be allowed twice over the next year for neurological monitoring.

The record reveals that Claimant never objected to the FAL or filed a petition to reopen the claim.

10. Claimant explained that subsequent to the DIME appointment she has repeatedly followed up with Drs. Zinis and Shogan, The physicians have recommended

continued physical therapy, acupuncture and massage therapy. Claimant remarked that the conservative treatments have been recommended to avoid surgery, keep her off pain medications and maintain her function.

11. On April 26, 2021 Claimant visited Dr. Shogan for an evaluation. Claimant recounted that she has suffered chronic neck pain, but her January 2018 industrial injury increased her symptoms. Dr. Shogan noted that Claimant had attended physical therapy, massage therapy and acupuncture. He commented that Claimant would continue with conservative treatment modalities.

12. On September 13, 2021 the parties conducted the pre-hearing evidentiary deposition of Dr. Lindenbaum. He elaborated on his medical maintenance treatment recommendations as detailed in his DIME report. Dr. Lindenbaum acknowledged that the medical records revealed Claimant had received in excess of 40 massage therapy sessions, in excess of 100 physical therapy visits and 48 acupuncture sessions. He explained that continuing with the preceding treatment modalities was no longer appropriate. Based on Rule 17 of the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*), Dr. Lindenbaum noted that Claimant suffers from chronic pain. The maximum number of massage therapy, physical therapy and acupuncture visits is limited unless there is "documented, objective evidence" that the therapy is providing a benefit. Dr. Lindenbaum remarked that individuals are roughly limited to a total of 15-16 physical therapy sessions over a maximum of eight weeks. Acupuncture is limited to about 15 visits and massage therapy includes 8-10 visits each year. He reasoned that, aside from Dr. Zinis' opinion that Claimant was improving with conservative care, the medical records lacked adequate objective documentation to support referrals for additional conservative treatment.

13. On October 7, 2021 Claimant visited Dr. Zinis for an examination. In addressing Claimant's conservative treatment, he summarized that medical massage, acupuncture, and physical therapy all have been considerably helpful in maintaining her chronic neck pain and allowed her to minimize the use of pain medications. However, Claimant has suffered worsening symptoms over the past several weeks because she was unable to access her treatment providers for massage therapy, acupuncture and physical therapy. Dr. Zinis summarized that Claimant had improved through the combination of maintenance treatments "with regards to the extent of persistent pain and neck stiffness, and much worse since these have been denied by insurance, in spite of previous documentation that these be maintained to keep her at MMI."

14. At the time of her industrial injury Claimant listed her residence as 2685 South Dayton Way #302, Denver, Colorado, 80231. After her January 2, 2018 work accident Claimant received medical treatment from Concentra and Dr. Zinis. Claimant also underwent physical therapy and massage therapy. Claimant traveled the following mileage from her home address in 2018 to her treatment providers:

- Concentra- 19.4 miles round trip
- Dr. Zinis- 13.4 miles round trip
- Physical Therapy- 11 miles round trip
- Massage Therapy- 15.8 miles round trip

15. At some point in 2018 Claimant relocated her residence to 4479 Tierra Alta Drive, Castle Rock, Colorado. The move increased her mileage to and from medical appointments to the following:

- Concentra- 46 miles round trip
- Dr. Zinis- 50.8 miles round trip
- Physical Therapy- 43.8 miles round trip
- Massage Therapy- 47.6 miles round trip

16. Claimant testified she received a prescription for acupuncture therapy sometime after her move to Castle Rock. She chose acupuncture treatment at the same location as her massage therapy provider or 47.6 miles round trip from her Castle Rock home.

17. In October of 2020 Claimant sent a mileage reimbursement request to Respondents. She sought payment in the amount of $8,655.96 for travel mileage to and from her appointments. The dates for reimbursement extended from January 2, 2018 until July of 2020. Claimant acknowledged that she was reimbursed for the preceding travel expenses.

18. On June 23, 2021 Claimant submitted a mileage reimbursement request for a total amount of $1,194.40. The amount requested covered 2253.6 miles at the rate of $0.53 per mile. The mileage requests involved travel during the period February 11, 2021 and June 23, 2021. Claimant testified that the mileage reimbursement requests she has submitted are accurate and she attended each of the claimed appointments. She commented that she tries to schedule multiple appointments on the same day to minimize her mileage. Claimant remarked that she desires to continue treating with her providers to assure continuity of care. Nevertheless, Claimant explained that she has been denied additional mileage reimbursement from February 11, 2021 through June 23, 2021. On the Application for Hearing in this matter Respondents challenged the preceding reimbursement request because it was not reasonable.

19. The ALJ lacks jurisdiction to address Claimant's request for medical maintenance benefits because Respondents' October 30, 2020 FAL closed Claimant's claim and she has not filed a petition to reopen. Initially, although §8-42-107, C.R.S. places an affirmative duty upon the respondents to admit for future medical benefits in a FAL, the statute only applies when "there is no contrary medical opinion in the record." Here, the medical records reflect that Dr. Lindenbaum provided a contrary medical opinion to ATP Dr. Zinis regarding medical maintenance benefits. Specifically, Dr. Lindenbaum explained that treatment modalities including massage therapy, acupuncture and physical therapy were no longer appropriate for Claimant. He reasoned that, aside from Dr. Zinis' opinion that Claimant was improving with conservative care, the medical records lacked adequate objective documentation to support referrals for additional conservative treatment. Respondents' were thus not required to admit future medical benefits in the October 30, 2020 FAL pursuant to §8-42-107, C.R.S.

20. The FAL specifically recounted Dr. Lindenbaum's medical maintenance recommendations. Notably, the FAL acknowledged that Dr. Zinis should follow Claimant's cervical spine complaints, but stated that Claimant did not need acupuncture, physical therapy or massage therapy except for "an occasional episode" during an exacerbation "where she would need up to 6-8 sessions combined per year of these treatments." Moreover, Claimant could visit Dr. Shogan twice in the ensuing year for neurological monitoring. Based on Dr. Lindenbaum's DIME report, Respondents acted reasonably when they limited the admission of medical maintenance benefits. However, Claimant failed to object to the FAL within 30 days. The issue of medical maintenance benefits thus closed pursuant to statute and Claimant has not filed a petition to reopen the claim. Accordingly, the ALJ lacks jurisdiction to address Claimant's request for medical maintenance benefits.

21. Claimant has established that it is more probably true than not that she is entitled to reimbursement for mileage expenses for authorized visits to medical appointments during the period February 11, 2021 through June 23, 2021. Initially, in October of 2020 Claimant sought payment in the amount of $8,655.96 for travel mileage to and from her medical appointments. The dates for reimbursement extended from January 2, 2018 until July of 2020. Claimant acknowledged that she was reimbursed for the preceding travel expenses. However, Claimant explained that she has been denied additional mileage reimbursement for the period February 11, 2021 through June 23, 2021. On the Application for Hearing in this matter Respondents challenged the preceding reimbursement request because it was not reasonable.

22. On June 23, 2021 Claimant submitted a mileage reimbursement request for a total amount of $1,194.40. The amount requested covered 2253.6 miles at the rate of $0.53 per mile. The mileage requests involved travel during the period February 11, 2021 through June 23, 2021. Claimant timely submitted the mileage reimbursement requests and verified in her testimony that the mileage was related to her attendance at appointments with her authorized treating providers. Nevertheless, Respondents contend that, because Claimant moved from Denver to Castle Rock during her medical treatment, her mileage expenses are no longer reasonable. Specifically, Claimant's round trip mileage requests increased from 19.4 to 46 miles for her visits to Concentra, 13.4 to 50.8 miles for her appointments with Dr. Zinis, 11 to 43.8 miles for her physical therapy sessions and 15.8 to 47.6 miles for her massage therapy visits.

23. Claimant's change of residence required her to travel substantially further distances to obtain medical treatment. However, the record reflects that Claimant incurred reasonable and necessary mileage expenses for travel to and from her medical appointments during the period February 11, 2021 through June 23, 2021. Claimant credibly testified that the requests she has submitted are accurate and she attended each of the claimed appointments. She commented that she tries to schedule multiple appointments on the same day to minimize her mileage. Claimant remarked that she desires to continue treating with her providers to assure continuity of care. The record thus reveals that Claimant's mileage expenses were reasonable and incidental to obtaining necessary medical treatment. Claimant's request for mileage reimbursement for the period February 11, 2021 and June 23, 2021 is thus compensable. Accordingly,

Respondents shall reimburse Claimant in the amount of $1,194.40 for mileage expenses incidental to obtaining medical treatment for the period February 11, 2021 through June 23, 2021.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Jurisdiction

4. Section 8-43-203(2)(b)(II), C.R.S. provides that a claim will automatically close after the date of the FAL unless the claimant contests the FAL in writing and requests a hearing on any disputed issues that are ripe for hearing including selection of a DIME. *See Stefanski v. Indus. Claim Appeals Off.,* 128 P.3d 282 (Colo. App. 2006) (noting that “any pleading that adequately notifies the employer that the claimant does not accept the FAL constitutes substantial, if not actual, compliance with the statutory obligation to provide written objection”). The statutory automatic closure provisions are designed to “promote, encourage, and ensure prompt payment of compensation to an injured worker without the necessity of a formal administrative determination in cases not presenting a legitimate controversy.” *Dyrkopp v. Indus. Claim Appeals Off.,* 30 P.3d 821, 822 (Colo. App. 2001). Once a claim is closed by an FAL, issues resolved by the FAL are not subject to further litigation unless reopened under §8-43-303, C.R.S. *Leewaye v. Indus. Claim Appeals Off.,* 178 P.3d 1254 (Colo. App. 2007). The overall statutory scheme is designed to provide a method to determine the claimant’s medical condition,

afford the claimant an opportunity to contest a medical determination, close all undisputed issues and permit reopening on appropriate grounds. *See Peregoy v. Indus. Claim Appeals Off.,* 87 P.3d 261 (Colo. App. 2004).

5. By its plain language, the reopening statute applies to the reopening of "any award." §8-43-303(1). *City and County of Denver v. Indus. Claim Appeals Off.*, 2021 COA 146, ¶ 25. An "award" has been interpreted broadly under the Act to include "[a]n order, whether resulting from an admission, [an] agreement, or a contested hearing, which addresses benefits and which grants or denies a benefit." *Bolton v. Indus. Claim Appeals Off.*, 2019 COA 47, ¶ 23 (quoting *Burke v. Indus. Claim Appeals Off.*, 905 P.2d 1, 2 (Colo. App. 1994)); *see also Safeway, Inc. v. Indus. Claim Appeals Off.*, 968 P.2d 162, 164 (Colo. App. 1998) ("An order resulting from an admission which addresses the granting or denial of a particular benefit is an award which must be reopened if additional or different benefits are sought.").

6. Where limitations on post-MMI medical benefits are contained in a FAL, rather than an order, the limitations are binding, unless objected to by the claimant within the time provided by §8-43-203(b) (II), C.R.S. and §8-42-107.2, C.R.S. As noted in *Anderson v. SOS Staffing Services*, W.C. No. 4-543-730 (ICAO July 14, 2006), a claim may be closed by a "final award" resulting from an admission or order after a contested hearing. *See Burke v. Indus. Claim Appeals Off.*, 905 P2d 1 (Colo. App. 1994). Thus, unless an "award" of benefits expressly reserves other issues for future determination, the "award" closes the claim and requires the parties to satisfy the reopening requirements of §8-43-303 C.R.S. before litigation of any further issues. *Hanna v. Print Expediters*, Inc. 77P.2d 863 (Colo. 2003); see *Brown and Root, Inc. v. Indus. Claim Appeals Off.*, 833 P.2d 780, 784 (Colo. App 1991).

7. As found, the ALJ lacks jurisdiction to address Claimant's request for medical maintenance benefits because Respondents' October 30, 2020 FAL closed Claimant's claim and she has not filed a petition to reopen. Initially, although §8-42-107, C.R.S. places an affirmative duty upon the respondents to admit for future medical benefits in a FAL, the statute only applies when "there is no contrary medical opinion in the record." Here, the medical records reflect that Dr. Lindenbaum provided a contrary medical opinion to ATP Dr. Zinis regarding medical maintenance benefits. Specifically, Dr. Lindenbaum explained that treatment modalities including massage therapy, acupuncture and physical therapy were no longer appropriate for Claimant. He reasoned that, aside from Dr. Zinis' opinion that Claimant was improving with conservative care, the medical records lacked adequate objective documentation to support referrals for additional conservative treatment. Respondents' were thus not required to admit future medical benefits in the October 30, 2020 FAL pursuant to §8-42-107, C.R.S.

8. As found, the FAL specifically recounted Dr. Lindenbaum's medical maintenance recommendations. Notably, the FAL acknowledged that Dr. Zinis should follow Claimant's cervical spine complaints, but stated that Claimant did not need acupuncture, physical therapy or massage therapy except for "an occasional episode" during an exacerbation "where she would need up to 6-8 sessions combined per year of these treatments." Moreover, Claimant could visit Dr. Shogan twice in the ensuing year

for neurological monitoring. Based on Dr. Lindenbaum's DIME report, Respondents acted reasonably when they limited the admission of medical maintenance benefits. However, Claimant failed to object to the FAL within 30 days. The issue of medical maintenance benefits thus closed pursuant to statute and Claimant has not filed a petition to reopen the claim. Accordingly, the ALJ lacks jurisdiction to address Claimant's request for medical maintenance benefits.

Mileage Reimbursement

9. Section 8-42-101(1)(a), C.R.S. requires the respondents to pay for expenses that are incidental to obtaining reasonable and necessary medical treatment. Specifically, mileage expenses are compensable if "incidental" to obtaining medical treatment. *Country Squire Kennels v. Tarshsis*, 899 P.2d 362 (Colo. App. 1995); *Sigman Meat Co. v. Indus. Claim Appeals Off.*, 761 P.2d 265 (Colo. App. 1988). Similarly, Colorado Division of Workers' Compensation (DOWC) Rule of Procedure 16-10(G) specifies that "payers shall reimburse injured workers for mileage expenses as required by statute or provide written notice of the reason(s) for denying reimbursement within 30 days of receipt." Finally, DOWC Rule of Procedure 18-7(E) provides that "[t]he Payer shall reimburse the injured worker for reasonable and necessary mileage expenses for travel to and from medical appointments. The injured worker shall submit a request to the Payer showing the date(s) of travel and mileage, and explain any other reasonable and necessary travel expenses incurred or anticipated."

10. As found, Claimant has established by a preponderance of the evidence that she is entitled to reimbursement for mileage expenses for authorized visits to medical appointments during the period February 11, 2021 through June 23, 2021. Initially, in October of 2020 Claimant sought payment in the amount of $8,655.96 for travel mileage to and from her medical appointments. The dates for reimbursement extended from January 2, 2018 until July of 2020. Claimant acknowledged that she was reimbursed for the preceding travel expenses. However, Claimant explained that she has been denied additional mileage reimbursement for the period February 11, 2021 through June 23, 2021. On the Application for Hearing in this matter Respondents challenged the preceding reimbursement request because it was not reasonable.

11. As found, on June 23, 2021 Claimant submitted a mileage reimbursement request for a total amount of $1,194.40. The amount requested covered 2253.6 miles at the rate of $0.53 per mile. The mileage requests involved travel during the period February 11, 2021 through June 23, 2021. Claimant timely submitted the mileage reimbursement requests and verified in her testimony that the mileage was related to her attendance at appointments with her authorized treating providers. Nevertheless, Respondents contend that, because Claimant moved from Denver to Castle Rock during her medical treatment, her mileage expenses are no longer reasonable. Specifically, Claimant's round trip mileage requests increased from 19.4 to 46 miles for her visits to Concentra, 13.4 to 50.8 miles for her appointments with Dr. Zinis, 11 to 43.8 miles for her physical therapy sessions and 15.8 to 47.6 miles for her massage therapy visits.

12. As found, Claimant's change of residence required her to travel substantially further distances to obtain medical treatment. However, the record reflects that Claimant incurred reasonable and necessary mileage expenses for travel to and from her medical appointments during the period February 11, 2021 through June 23, 2021. Claimant credibly testified that the requests she has submitted are accurate and she attended each of the claimed appointments. She commented that she tries to schedule multiple appointments on the same day to minimize her mileage. Claimant remarked that she desires to continue treating with her providers to assure continuity of care. The record thus reveals that Claimant's mileage expenses were reasonable and incidental to obtaining necessary medical treatment. Claimant's request for mileage reimbursement for the period February 11, 2021 and June 23, 2021 is thus compensable. Accordingly, Respondents shall reimburse Claimant in the amount of $1,194.40 for mileage expenses incidental to obtaining medical treatment for the period February 11, 2021 through June 23, 2021.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. The ALJ lacks jurisdiction to address Claimant's request for medical maintenance benefits.

2. Respondents shall reimburse Claimant in the amount of $1,194.40 for mileage expenses incidental to obtaining medical treatment during the period February 11, 2021 through June 23, 2021.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. Whether Claimant has overcome the Division of Workers' Compensation Independent Medical Examination (DIME) physician's opinion by clear and convincing evidence.

II. If Claimant proves he has overcome the DIME's physician's opinion, whether Claimant has proven that he is entitled to further permanent partial impairment related to the mild traumatic brain injury (mTBI), cosmetic disfigurement and/or the nonreactive pupil in accordance with the *AMA Guides to the Evaluation to Permanent Impairment*, Third Edition, (*Revised).*

III. If Claimant proves he has overcome the DIME's physician's opinion, whether Claimant is entitled to medical benefits regarding the disputed mTBI and headaches (HAs) by preponderance of the evidence as reasonable, necessary and related to the admitted injury of September 1, 2017.

PROCEDURAL HISTORY

On May 28, 2020, Claimant filed an Objection to Final Admission of Liability dated May 6, 2020, and an Application for Hearing on the same date listing the issues of medical benefits, permanent partial disability benefits, non-Payment of treating physician, mileage reimbursement, interest at 8% per statute and overcoming the April 15, 2020 DIME opinion of Michael Striplin, M.D. On October 28, 2020 Claimant filed an Amended Application for Hearing adding issues of penalties. On March 11, 2021 the OAC issued an Order Granting the Unopposed Motion to Withdraw the Application for Hearing and Refile without prejudice. On April 14, 2021 Claimant filed a new Application for Hearing on the identical issues.

On July 20, 2021 Prehearing Administrative Law Judge David W. Gallivan issued a Prehearing Conference Order granting Claimant's motion for an extension of time to commence the hearing and Respondent's motion for a prehearing deposition of Dr. Carlos Cebrian.

On May 14, 2020 Respondents filed a Response to the April 14, 2020 Application for Hearing on issues that include causation, relatedness, reasonably necessary medical benefits, ripeness, and stated that Claimant must overcome the DIME by clear and convincing evidence preliminary to or in conjunction with issues endorsed for appeal. On November 18, 2020 Respondents filed a Response to Claimant's October 28, 2020 AFH and on April 28, 2021 Respondents filed a Response to Claimant's April 14, 2021 Application for Hearing on similar issues but added penalties and attorney fees as well as overpayment.

On October 4, 2021 Respondents provided notice that they had scheduled the post-hearing deposition of Dr. Carlos Cebrian to take place on October 7, 2021.

Claimant argued previously that Respondents' were not entitled to a Division Independent Medical Examination as Claimant was placed at maximum medical improvement by his authorized treating physician prior to the DIME taking place. This issue was previously addressed by ALJ Glen Goldman on September 30, 2020 in and Order Granting Respondents' Motion for Summary Judgement and will not be revisited here.

STIPULATIONS

The issue of payment of authorized treating physician, Dr. Spinossi, is withdraw by Claimant.

The issue of mileage is reserved by Claimant with the condition that, if further payment of mileage is to be paid on mileage already submitted to Insurer, Claimant waives the right to any interest due on payments that might be due from the date of hearing, September 14, 2021 and forward.

At the commencement of the continued hearing on October 18, 2021, the parties indicated that the issues of penalties and attorney fees were withdrawn with prejudice, including Exhibits B, C, G, H, I, and J. Respondents also conceded that there was no overpayment currently being asserted, only a lien for child support pursuant to statute.

FINDINGS OF FACT

Based on the evidence presented, the ALJ enters the following findings of fact:

A. Claimant's Testimony:

1. Claimant was born on April 21, 1961, and was 60 years old at the time of the hearing. He attended school in the Netherlands where he worked for his father's dairy. Claimant moved to the United States in 1988 and owned a dairy in California. Due to a debt his ex-wife owed and failed to pay her ex-father-in-law, Claimant failed to pay child support and the courts ordered a child support lien. Claimant has significantly reduced the lien and continues to pay for child support for a disabled middle child, despite reaching the age of majority.

2. Claimant stated that Employer runs a dairy company, producing approximately 300,000 lbs. of milk, as well as beef and compost. Claimant was a dairy farm worker for Employer, performing activities such as heard health and corral maintenance. Prior to the work injury, Claimant was employed by Employer for approximately two years. He obtained the job as he had a long history of experience. He would perform these duties early in the morning for a few hours and another few hours late in the afternoon or evenings. During the day, Claimant had a job as a real estate broker.

3. On September 1, 2017 Claimant was running a tractor with a hydraulic box scraper and lift to clean out the manure from the corral. A steel hose and metal fitting was connected from the tractor to the box in order to operate the hydraulic lift. It would allow the lift to be moved upward from the ground to move the manure from the corral into a pile. The hose was under pressure and broke. The hose held about 3700 PSI of pressure in order to work. When the hose broke, the hose whiplashed with extreme force into the cab of the tractor, striking Claimant in the head and right eye with the metal fitting at the end of the pressurized hose.

4. Claimant felt immediate excruciating pain, disorientation, dizziness, nausea, slurred speech, could not think effectively and was bleeding. Also his face and eye swelled up. A co-worker witnessed the event and immediately called the General Manager (GM) and owner of the dairy. Claimant advised the GM that he would wait to see how he was doing before he sought medical care. Initially Claimant was still out of it, and confused, thought that the swelling would go down and heal on its own. But he attempted to return to work and the light caused incredible eye pain, headaches and he could not think straight.

5. On the day of and the days following, Claimant continued to have blurred vision in the right eye, nausea, dizziness, disorientation, slurred speech, and severe headaches. He attempted to continue working but the light caused him to have excruciating pain and nausea, and he was unable to continue to work. He requested that the GM send him to a medical provider.

6. The GM took Claimant himself to Banner Occupational Health Clinic, at Northern Colorado Medical Center, for medical care on September 7, 2017, when the symptoms did not abate. Claimant stated that he had not experience any of these symptoms before the accident other than the occasional headache caused by a cold or flu, which did not interrupt his activities of daily living (ADLs) or his work.

7. Claimant was evaluated by James A. Hebard, M.D. Claimant reported to Dr. Hebard that since the accident he continued to experience fatigue, trouble sleeping, difficulty seeing, loss of vision, eye pain, blurred vision, eye trauma, inflamed eyes, dizziness, nose bleeds, and head and facial trauma, nausea, vomiting, difficulty walking, difficulty speaking, difficulty concentrating, headaches, and loss of memory.

8. Claimant testified that since the accident he has continued to experience pain in the right eye, blurred vision and vision loss in the right eye, problems with the left eye, dizziness, disorientation, problems with balance and bumping into things or people, depth perception, and light sensitivity. However, one of the worst problems are the continuing headaches. He also stated that he had loss of balance, he stumbles around, has inconsistent work performance, does not have a social life, nor recreational life, and cannot drive at night. He does engage in some exercises at home but not at a gym or outside because of the light sensitivity, stating that it was just not worth the pain it would cause.

9. Claimant testified that he has two distinct types of headaches. The first is a headache that begins above the right eye on the socket ridge and following to the side

of his head along his right temple. These headaches occur approximately four to five times a week and are primarily caused by light sensitivity, and vary in intensity from a four to a seven and a half on a visual analog scale (VAS) of zero to ten. The second is a pain that feels like a hot knife stabbing into the brain that goes from his forehead inward deep into his brain, to the back of his head. They generally cause him to have nausea and pain with the sensation of almost passing out. This will typically be pain of almost a ten, the worst pain possible. This occurs approximately three times in a four to five week period.

10. Claimant has been unable to return to his work as a real estate agent as this job requires him to utilize computers and drive clients to showings. Claimant is unable to stare at a computer screen as the screen's light will cause neurological feedback that causes severe headaches the same way the sun or bright lights will do. He also cannot drive clients around due to liability of being vision impaired. Claimant is forced to avoid exposure to bright lights and the outdoors. He no longer goes to parties or social gatherings due to being awkward in movement, bumping into people, and being off balance. Claimant used to be an avid hiker and liked to take long walks, which he no longer does. He is unable to return to exercise at a gym also due to the lighting. He does do some moderate exercise at home, depending on his status, as he has difficulty with balance and spatial awareness about his surroundings due to balance problems caused by the injury. Claimant denied having had any of those symptoms prior to the work accident of September 1, 2017. He also stated that he had no problems performing his job duties for either the Employer or in his work as a real estate agent prior to the injury.

11. Approximately one year ago (from the time of the hearing) and three years following the injury, Claimant returned to work for Employer in a limited capacity. He is unable to use the power equipment or machinery, like the tractor upon which he was injured. He is restricted to working in dimmer lighting situations, has inconsistent work performance, and difficulties with balance. He has a significant problem with depth perception. Claimant also has difficulties driving at nighttime. He is limited when he has severe headaches. He attempts to work a few hours every day, both in the morning and in the evening but no more than approximately four and a half hours each day. While he is working under restrictions, Claimant feels lucky to have survived his accident, fortunate that he has been able to return to some work and grateful to his employer of injury.

12. Claimant specifically recalls his evaluation with Dr. Striplin. Dr. Striplin's staff attempted to perform some testing but some of the equipment they were using was not working, so they were unable to complete the testing. Dr. Striplin looked at his right eye with a flashlight but did not perform any other specific testing. Claimant remembered that he answered Dr. Striplin's precise questions, but he was not asked if he had problems driving, just if he could drive. Claimant does not have a choice and must drive as he is divorced, and his children are adults living away. He has been divorced for over twenty years. Claimant was not invited to expand on his answers to Dr. Striplin and was not asked open ended questions. He was asked some generic question of whether he could perform activities of daily living but was not ask how his ADLs were limited by his sight and impairments related to his mild traumatic brain injury or headaches. He was not asked about the facts that limited his ability to perform his activities of daily living (ADLs) or hobbies. Claimant no longer enjoys the outdoors or socializing as these activities are affected by his vision problems and the headaches

caused by either the photophobia or mTBI. In fact, Claimant does not recollect being asked any questions by Dr. Striplin regarding the effect his headaches have on his life.

13. Claimant discussed his ongoing needs for medical care with both his authorized treating physicians (ATPs), Dr. Cathy Smith, Dr. Bradley Martin, and Dr. Micah Rothstein. He understood that he will require medications, both Gabapentin and steroid eye drops for the rest of his life, in order to continue functioning independently. He testified that he had undergone five surgeries to his right eye and that as a consequence of problems with his right eye, he now has problems with vision in his left eye, caused by sequelae related to his right eye blindness. Claimant's testimony is credible.

14. Claimant's right eye has a demonstrable difference in the eye pupil, which includes a pupil that does not respond to light. The left eye pupil retracted while the right eye pupil remained dilated and approximately twice the size of the left eye pupil when the light was turned on and Claimant approached the video screen. The pupil was oddly shaped and irregular, not round, almost completely obliterating the iris.[1]

B. Medical Records

15. On September 7, 2017 Dr. Hebard examined Claimant and documented that Claimant had a myriad of symptoms since the accident. Claimant reported experiencing fatigue, trouble sleeping, difficulty seeing, loss of vision, eye pain, blurred vision, eye trauma, inflamed eyes, dizziness, nose bleeds, and head and facial trauma, nausea, vomiting, difficulty walking, difficulty speaking, difficulty concentrating, headaches, loss of memory. Claimant reported the accident consistent with his hearing testimony.

16. On initial evaluation, Dr. Hebard stated that Claimant reported immediate swelling of his face, which closed his right eye shut and Claimant self-treated his injury with ice, flushing out the eye and over the counter analgesics. On exam his right infraorbital[2] area had a 1 cm healing laceration with local swelling and his periorbital[3] area was moderately sore and moderately tender to palpation; his right eye exam using loupes showed injected sclera and conjunctiva, and a cloudy cornea with possible cornea abrasions. He was taken off work; referred for a stat ophthalmology consult after which he would be triaged to the NCMC ER for evaluation to include a Head and Periorbital CT; and was to return to Dr. Hebard for follow up. Dr. Hebard diagnosed right periorbital contusion, blurred vision, and postconcussive symptoms.

17. William Benedict, M.D. of Eye Care Center in Longmont, performed a virectomy and lensectomy procedure of the right eye on September 7, 2017, the first of five right eye surgeries. On September 27, 2017 Dr. Benedict performed surgery consisting of peeling of preretinal membranes and silicone oil placement of the right eye.

[1] These observations were performed by the ALJ during the October 18, 2021 hearing.
[2] The structures below the orbit of the eye.
[3] The structures around the eye.

18. On September 26, 2017 Claimant followed up with Dr. Hebard who stated that a physical exam of the eye was not possible since Claimant's right eye was patched up following surgery, and Claimant was instructed to keep his head down and forward until his ophthalmology follow-up. Dr. Hebard diagnosed right periorbital contusion, blurred vision, postconcussive symptoms and status post right eye vitrectomy and lensectomy by Dr. Benedict.

19. Dr. Hebard reported on October 10, 2017 that Claimant continued to have right eye pain, continued light sensitivity and 3-4/10 headaches that are not as often but when they occur the pain can shoot through the middle of his head. Claimant reported that the bridge of his nose is not sore at rest but significantly tender with firm touching. On exam he was wearing dark glasses due to light sensitivity; his right eye was mildly injected, the pupil round but slightly larger than his left pupil, the cornea appeared clear, and Claimant reported his vision was very fuzzy.

20. Claimant was evaluated by Dr. Hebard again on October 24, 2017 reporting he felt better with reduced frequency of headaches but continued 8/10 pain intensity when they do occur and 4/10 pain after he takes the pain meds; he reported that the Ophthalmologist informed him he had optic nerve damage from the high glaucoma intraocular pressures caused by the trauma. Dr. Hebard noted that Claimant continued wearing dark glasses due to light sensitivity; his right eye was mildly injected, the pupil round but still larger than his left pupil, the cornea appeared clear, and he reported his vision was more fuzzy.

21. Claimant attended Dr. Henry Poon on December 19, 2017. He noted Claimant had persistently worsening headache that makes him unable to sleep. On neurologic exam Dr. Poon noted mild slurring of speech and Claimant was not fully oriented to time and event (vagueness), had difficulty with tandem walk with abnormal gait as he would fall to the side and his diagnosis remained the same including postconcussive syndrome. He reported that Claimant had made little progress, needed case management and mental health counseling as he was unable to work and could not manage his symptoms while at home.

22. Micah Rothstein, M.D., performed a transscleral cyclophotocoagulation of the right eye on December 26, 2017.

23. Dr. Cathy Smith at Banner Occupational Health Clinic took over Claimant's care on January 2, 2018. She reported that Claimant had right-sided facial and ocular trauma with traumatic glaucoma, now four months status post the injury. Claimant reported he continued with eye pain and headaches, which he reported were constant in nature. He completed laser surgery the prior week and reported that the pressure did decrease to 16 following the procedure. However, since the procedure, Claimant had increased tearing and light sensitivity, worse than before surgery. He had "burning" pain of the "eyeball," was wearing dark glasses and was asking to sit in a dark room. Dr. Smith diagnosed contusion of the right eyelid and periocular areas, visual disturbance, postconcussive syndrome, and stated that both an ENT and a neurology evaluation were pending.

24. On January 11, 2018 Dr. Micah Rothstein, the eye specialist, documented that following blunt trauma to Claimant's right eye, he was diagnosed with severe traumatic glaucoma and he had an immediate surgical procedure on September 1, 2017. Dr. Rothstein reported that Claimant continued to have tearing of his right eye two weeks after surgery, as well as severe headaches, pain and burning, with stable but poor vision.

25. On January 22, 2018, Dr. Benedict performed a vitrectomy and silicone removal of the right eye. On March 13, 2018, Dr. Rothstein performed a right eye intraocular lens placement surgery.

26. Claimant was evaluated by Dr. Smith on April 12, 2018 reporting he had undergone five right eye surgeries to date, the last one on March 13, 20218, stating a shunt was placed to control the pressure and a lens was implanted. Claimant reported being extremely light sensitive, had to use dark glasses even inside to control the light exposure, was having difficulty driving at night as the pain increased when the oncoming traffic light hit him. Dr. Smith found Claimant had no vision in the right eye, was having problems bumping into objects due to the loss of vision and depth perception. Claimant continued with light sensitivity and right-sided headaches, frontal scalp musculature spasms, irritation to the supraorbital nerve, and depth perception when walking and driving. Dr. Smith recommended he should probably not drive at night and if driving during the day, drive only short distances in light traffic and recommended use of a cane to help with depth perception.

27. Chester Roe, M.D. conducted an ophthalmology Independent Medical Examination (IME) at Respondents' request on September 24, 2018. He fully examined Claimant's binary vision and determined that Claimant did not have any loss of vision of he left eye after corrected vision assessment. He assessed that Claimant had complete vision impairment of the right eye, which provided at 25% for vision field impairment which converted to a 24% whole person impairment. He further provided a cosmetic right pupil abnormality impairment of 2% whole person impairment. Dr. Roe determined that the final rating for the right eye injury was at 26% whole person impairment of the visual system.

28. Dr. Roe stated that the right eye had an irregular pupil with glare symptoms and currently controlled glaucoma with topical medications. He assessed chronic macular edema that was being treated, but not eliminated, by topical steroid drops and periocular steroid injections. Dr. Roe noted that Claimant had variable pain and headaches around his right eye, exacerbated by bright light. He stated that left eye problems should be considered linked to the right eye injury due to left eye symptomatic ophthalmia inflammation[4] caused by the right eye injury.

29. Dr. Roe opined that Claimant's ophthalmologic care had been necessary and appropriate. Dr. Roe opined that Claimant would require ongoing maintenance care for his right eye for the rest of his life due to the work-related injury. Dr. Roe further opined that ophthalmic treatment for ongoing treatment for glaucoma, including topical eye drops and future changes of his topical medications, continuing periocular injections or other

[4] Sympathetic ophthalmia is a bilateral inflammation of the uvea, which includes the iris, and follows penetrating injury or surgery to one eye.

treatment for intraocular inflammation, retinal treatments as well as additional surgeries for glaucoma, laser treatments, may include right eye corneal transplantation, or surgery and possible enucleation if the right eye progressed to phthisis.[5] Dr. Roe also recommended yearly complete dilated bilateral eye exams, frequent retinal and glaucoma subspecialty follow-ups every one to two months with periodic ancillary testing, such as OCT[6] or ultrasound of the retina or optic nerve of the right eye.

30. Lastly, Dr. Roe recommended Claimant not drive professionally due to decreased right visual field and decreased stereo vision and depth perception, not be working at exposed heights or operating heavy machinery, using power tools or sharp tools for near work, use of safety lens prescription glasses at all walking times and recommended use of more specific eye protection, for specific on-the-job task or activities of daily living.

31. On September 27, 2018 Dr. Smith reported Claimant continued to have severe pain and headaches if exposed to bright light, with the "good eye" being more sensitive at times than his "bad eye." She stated that Claimant’s vision was unchanged in the right eye, his light sensitivity and depth perception difficulties continued to affect all his activities of daily living, was using the cane more to help with balance, and his right eye remained dilated. Dr. Smith advised that Claimant needed a driving evaluation and psychological care with Dr. Bruns.

32. Dr. Rothstein reported, on October 8, 2018, that Claimant was having problem with chronic migraines, head pain that he feels are caused by light, and he can no longer go outside. Claimant requested to know what could be done about this.

33. Dr. Smith responded to a questionnaire sent by Respondents on October 22, 2018 stating that Claimant was not at maximum medical improvement (MMI), needed care with Dr. Bruns, including for anxiety and depression due to the work related injury, further ophthalmology evaluations to improve vision as well as consideration for eye removal to decrease light sensitivity, headaches, and reduce pain.

34. Claimant returned to Dr. Smith on January 10, 2019 with right and left eyes unchanged, with hypersensitivity to bright fight bilaterally and headaches, peripheral vision and depth perception defects, which interfered with ADLs. Claimant continued to use dark glasses and a hat when outside, rated the pain at a 5/10 in intensity, while in a partially darkened room. He reported he recently had tried to force himself to spend more time in bright light and "try to get used to it," but it only increased headaches and incapacitated him for 24 hours. He reported inability to sleep and felt the loss of sleep and fatigue were contributing to his pain and dysfunction.

35. On February 11, 2019 Dr. Rothstein summarized Claimant’s ocular injury as a ruptured globe that developed into severe traumatic glaucoma, with a complex retinal detachment and severe traumatic aniridia[7], with a permanent shunt in the right eye.

[5] Denotes shrinkage or disorganization of the eye with functional loss.

[6] Optical Coherence Tomography.

[7] Traumatic aniridia caused the pupil to partly or fully cover the iris, the pupil frequently is abnormally large and may be oddly shaped.

Because of the trauma and severe traumatic aniridia, Claimant developed severe light sensitivity with absence of an iris in the right eye, which also affected his left eye sensitivity. Dr. Rothstein describes the sequelae of the trauma as having a "severely dilated pupil of the right eye with early-stage cataract on the left. He stated that the condition would require continuing medical care, chronic medication therapy, special prescription glasses and would need to see Claimant every four months. On exam the same day, Dr. Rothstein noted an irregular right pupil with no reaction with an abnormal afferent pupillary defect. The diagram of the pupils also showed an irregular pattern of the right pupil. Dr. Rothstein diagnosed severe stage traumatic glaucoma OD,[8] cystoid macular edema, history of retinal detachment, and sympathetic photophobia in the OS.[9]

36. Dr. Smith, now at UCHealth Occupational Medicine Clinic, evaluated Claimant on May 28, 2019, reporting that Claimant continued with blurred vision, photophobia and discharge as well as headaches, with a right pupil that remains dilated and nonreactive, and decreased peripheral vision on the right side. She continued to diagnose postconcussive syndrome and contusion of the right periocular region. On June 29, 2019 Dr. Smith referred Claimant to a neurologist to investigate possible medications to control his postconcussive headaches.

37. On July 23, 2019 Dr. Smith discussed that Claimant continued to use over the counter pain medications, which was affecting his GI problems, but Claimant reported that he needed to control the level of his headaches, which had increased. He had seen the neurologist, who suggested to Claimant he was experiencing migraines in light of the nausea, starting Claimant on Nortriptyline and Gabapentin. The headaches caused Claimant to feel "scatterbrained." On exam Dr. Smith noted that Claimant was squinting significantly with the right eye due to light exposure in his regular glasses, and had a positive Romberg test[10]. Claimant continued to have daily headaches with severe headaches significantly increased over the last 2 weeks. The headaches were generally right-sided over the frontal area and can extend to include severe pain on the left side. Dr. Smith observed that Claimant's headaches had a migraine component, and he would be more functional if his headaches were under better control.

38. On August 28, 2019 Dr. Bradley Martin, from the UCHealth Neurology Clinic, specializing in neurology, diagnosed Claimant with post traumatic headaches and traumatic brain injury. Claimant reported having headaches every day, explaining two different kinds of headaches. The first started behind the right eye and goes back past the right ear. Claimant described the second type of headaches as a sharp pain across the middle of his head. Triggers included sunlight and florescent lights. These episodes typically last for multiple hours and can last up to 1.5 days. Associated symptoms include photophobia and vomiting. To alleviate these symptoms, he tried anti-inflammatory pain medications (NSAIDs), aspirin (ASA), and acetaminophen. However, he reported hospitalization due to GI bleed and was advised to discontinue these medications. Dr. Martin prescribed both Nortriptyline and Gabapentin for post-traumatic headaches.

[8] OD is an abbreviation for "oculus dextrus," Latin for the "right eye."

[9] OS is an abbreviation for "oculus sinister," Latin for the "left eye."

[10] Measures sense of balance based on visual, inner ear and positional system during neurologic exam.

39. On October 15, 2019, Dr. Smith evaluated Claimant's cognitive sequelae immediately following his head injury, which seemed to improve as expected over time. However, when questioned more closely Claimant stated that for quite some time he had been having to "write myself more sticky notes than usual to help me remember things". He stated that he now has sticky notes "all over my house." He was unsure whether "this has been going on since the time of his accident or whether increased problems with short-term memory began when he started decreasing his use" of medications. At this point, Dr. Smith recommended Claimant undergo neuropsychological testing to evaluate cognitive sequalae related to his concussion.

40. Dr. Smith reevaluated and counseled Claimant on November 12, 2019 regarding multiple future care, including visual therapy with Dr. Spinossi, improvements Claimant was making with tracking and visual acuity and continuing consistent daily visual independent exercise program. She reviewed the neurology visit and recommendation for increasing Gabapentin to 300 mg three times per day to see if this would continue to improve his headaches but also his sleep. Dr. Smith also reviewed expectations for neuropsychological testing, advising that testing on two different days may be necessary because of the significant left eye fatigue.

41. On December 2, 2019 Dr. Martin reported that Claimant medications are helping his headaches overall, especially with regard to the intensity of the pain. He diagnosed both post-traumatic headaches and TBI, with an "Etiology likely related to TBI 2017."[11] Dr. Martin increased Claimant's Gabapentin dosage.

42. On January 28, 2020 Dr. Smith reported that there had been some changes since their last evaluation, including headaches that continue to be more intense with increased exposure to bright light, sunlight, and glare when driving, even when wearing dark glasses and wearing a brimmed hat, he gets "sick headaches" associated with nausea approximately 4 times per week. Pain levels are described as fluctuating. He had tried wearing a patch over his right eye but did not find it to be helpful.

43. On April 1, 2020 Dr. Smith placed Claimant at maximum medical improvement. She examined Claimant noting that Claimant had a permanently dilated right pupil that was unresponsive to light, inability to distinguish anything beyond light and dark in the right eye. She continued to diagnose contusion of the right periocular region, visual disturbance, and post-concussion syndrome.

44. Dr. Smith opined that Claimant had impairment due to the work-related injuries and assessed Claimant under the *AMA Guides to the Evaluation of Permanent Impairment*, Third Edition*, Revised (AMA Guides)*. She agreed with Dr. Roe's assessment of the ocular impairment of the right and left eyes, specifically the 26% whole person impairment of the visual system. In addition, Dr. Smith opined that impairment was required due to chronic sequelae related to mTBI injury, specifically postconcussive migraines and vertigo. She determined that these conditions were best evaluated under

[11] Miscited or mistranscribed in the Hearing Transcript, September 14, 2021, page 89, line 5, hereinafter p. 89:5, wherein it states "Ideology." However, the audio of the hearing and the medical report clearly states "Etiology."

Table 1, page 109 under Episodic Neurologic Disorders. Dr. Smith determined that postconcussive migraine headaches mildly interfered with activities of daily living and assigned a 17% whole person. She determined that continuing vertigo was under control as Claimant could perform most of his activities of daily living. Dr. Smith assigned a 10% whole person impairment for this. Per the AMA *Guides* the largest value had to be used to represent the impairment for both, and therefore, the 17% whole person was determined to be the impairment for episodic neurologic disorders. The 26% whole person impairment for eye trauma was combined with the 17% episodic disorders impairment, for a total impairment of 39% whole person.

45. Dr. Smith documented that she sent Claimant for a neuropsychological testing evaluation with Dr. Thwaites, who evaluated Claimant on March 6, 2020.[12] The records indicated that Claimant completed neuropsychological testing with Dr. Thwaites and that he reviewed the results with him a week later. Dr. Thwaites opined that current neuropsychological testing reflected a pattern of cognitive impairment he would not expect to see in the natural recovery following a concussion. He felt Claimant's significant visual spatial and constructural defects most likely were related to his monocular vision. Otherwise auditory verbal learning and memory scores were normal. Dr. Thwaites further opined that Claimant's "cognitive" profile reflected good effort, but was not reflective of residual impairment from a concussion. Dr. Smith indicated that since Dr. Thwaites did not feel neuropsychological testing indicated evidence of cognitive sequelae related to his head injury additional impairment for cognition was not indicated.

46. Dr. Smith opined Claimant would require at least yearly complete dilated eye exams, frequent retinal and glaucoma specialty follow-up every 2 to 6 months, periodic ancillary testing of the retina or optic nerve of the right eye. He would also require maintenance medications to include Gabapentin and lab work at least twice a year, and neurology follow-up every 3 to 6 months to monitor postconcussive migraines. She recommended Claimant have access to maintenance vision therapy up to 4 sessions per year, as well as optometry evaluations for yearly prescription transitional lenses and safety glasses. Dr. Smith agreed with Dr. Roe in regard to work restrictions due to decreased stereovision and depth perception.

47. Respondents requested a 24-Month Division Independent Medical Examination (DIME) pursuant to Section 8-42-107(8)(b)(II), C.R.S., which was performed by Dr. Michael Striplin on April 15, 2020.

48. Dr. Striplin stated that he was asked to address psychological problems, traumatic brain injury, the face and the visual system. He took a history that Claimant has no functional vision in the right eye, almost daily headaches, lasting from one to three days, which are triggered by bright light, and a problem with glare emanating from his left eye. He concurred with Dr. Smith's date of maximum medical improvement of April 1, 2020. Dr. Striplin assigned a 25% impairment for the visual field, which converts to a 24% whole person impairment of the visual system based on Table 6 of the *AMA Guides.*

[12] As neither party submitted a copy of Dr. Thwaites' neuropsychological report, but multiple experts refer to the report, summaries of the reports are being included in the order as reported by the experts.

He stated that additional cosmetic impairment for the irregular right pupil was not warranted, and that apportionment did not apply.

49. Dr. Striplin provided a rationale for his decision with regard to his assessment. He stated that Claimant denied any psychological sequelae related to the work injuries, including problems with activities of daily living or problems with driving. With regard to consideration of the traumatic head injury Dr. Striplin stated that since Claimant did not suffer from loss of consciousness, retrograde amnesia or antegrade amnesia, and the imaging studies were normal, as well as the neuropsychological evaluation performed by Dr. Thwaites, that Claimant did not warrant an impairment for a TBI. He further stated that no impairment was appropriate for the continuing headaches as they were subjective, and the temporal coincidence did not establish a cause and effect relationship between the headaches and the work related accident. He stated that there was no evidence of residual facial trauma "other than to the right eye" and provided no impairment for the face.

50. Dr. Striplin documented that Gregory A. Thwaites, Ph. D, sent a letter to Cathy Smith, M.D. indicating that a psychological evaluation was conducted. Dr. Striplin summarized, in pertinent part, as follows: Dr. Thwaites noted that the accident at work did not involve any loss of consciousness, no retrograde amnesia, and no posttraumatic amnesia. The patient did report some slowing of processing speed and some forgetfulness but that the patient had been experiencing forgetfulness for quite some time and that cognitive sequelae after the accident improved as expected over time. The patient reported a stable mood, and denied any symptoms of depression, anxiety, or PTSD but mentioned a referral to Dr. Bruns for a consultation. With regard to neurological testing, some impairments were noted which were not expected to occur as a result of a concussion but may be affected by problems with his eye, other medical conditions, or may be preexisting. He acknowledged the patient suffered a mild concussion related to the injury at work, that he required no cognitive treatment related to the accident, and that the patient; within a reasonable degree of medical probability, did not have residual cognitive symptoms related to the accident at work.

51. Dr. Striplin recommended maintenance medical care with regard to the right eye and stated that Claimant required no maintenance medical care for psychological problems, traumatic brain injury (including headaches), or his face, recommending that Claimant continue to follow-up through his personal physician for further evaluation and treatment if his headaches persisted or worsened.

52. Respondents filed a Final Admission of Liability consistent with Dr. Striplin's DIME report on May 6, 2020, admitting to maintenance medical care after MMI.

53. Carlos Cebrian, M.D performed a medical records review at Respondents' request on May 20, 2020, though he indicated that a prior medical record review was performed.[13] Dr. Cebrian stated that he reviewed new records but that he incorporated the prior review by reference. The report states that Dr. Cebrian was asked to comment

[13] Not submitted by either party into evidence, but part of Exhibit J, which was withdrawn by Respondents.

on Dr. Smith's recommendations for maintenance care. He diagnosed multiple issues as not related to the work injury, and only identified one work related diagnosis of the right ruptured globe with traumatic glaucoma. He opined that Claimant may have reached MMI as early March 31, 2019. He indicated that Claimant required maintenance medical care including annual eye exams, glasses replacements, quarterly follow-ups with his ophthalmologist and neurologist, continued gabapentin and eye drop medications, vision therapy, lab workups, and other treatment as recommended by his providers if his condition worsens. With regard to the gabapentin, Dr. Cebrian stated that Claimant's medical providers should attempt to wean Claimant from the medication for the postconcussive headaches. He did not provide an impairment rating report.

54. Dr. Cebrian documented that Claimant completed neuropsychological testing with Dr. Thwaites on March 6, 2020 and that Dr. Thwaites opined that current neuropsychological testing reflected a pattern of cognitive impairment he would not expect to see in natural recovery following a concussion. He felt Claimant's significant visual spatial and constructural defects most likely were related to his monocular vision. Otherwise, auditory verbal learning and memory scores were normal. Dr. Thwaites further opined that Claimant's cognitive profile reflected good effort but was not reflective of residual impairment from a concussion[14].

55. On August 4, 2021 Sander J.H. Orent, M.D. provided a record review and conducted a telephone interview of Claimant at Claimant's request. He is an expert in internal medicine, occupational medicine and a Level II physician. He took a history of the event consistent with the Claimant's testimony and documented that Claimant had severe periorbital pain, local pain, blurred vision, significant headaches, memory loss, confusion and fatigue. Dr. Orent provided a summary of the medical records reviewed. He was asked to comment on Dr. Striplin's DIME report and opinions. Dr. Orent opined that Dr. Striplin was substantially in error regarding the postconcussive headaches and the cosmetic defect of the pupil. He criticized Dr. Striplin's assessment that the headaches were subjective and could not be quantified by any objective measure. He stated that all headaches are subjective and cannot be measured but they can definitely be assessed for impairment according to the *AMA Guides*. He stated that Claimant continued with headaches and characterized them as postconcussive in nature, which clearly required a rating.

56. Dr. Orent documented that Claimant's headaches are quite severe, they occur on the right side, and he is intensely photophobic, with headaches occurring two to three times a week, depending on triggers. He described the impact of the headaches and noted that Claimant has to go to a dark room for up to two days, which is profoundly impacting Claimant. He is also limited in using a computer due to the lighting of the screen. Dr. Orent provided an additional 12% whole person impairment related to the injury under the Episodic Neurologic Disorders section of the *AMA Guides*. He related this to his assessment of the impact headaches have on Claimant's activities of daily living. He agreed with Dr. Roe's assessment that Claimant has 24% due to visual disturbance, the 2% for the cosmetic defect of the pupil, and combined them with the 12% for a 34% whole person impairment rating. Dr. Orent specifically stated that Dr. Striplin

[14] This summary of Dr. Thwaites' evaluation may be redacted from Dr. Smith's April 1, 2020 report.

was substantially in error based on both the intent and the clear direction of both the *Guides* and the Level II accreditation course.

57. Dr. Orent also had Dr. Thwaites' report of March 6, 2020. He stated that Dr. Thwaites felt that Claimant was moderately impaired in visual spatial task. This was due to his eye trauma. He had low average range of working memory and processing speed, mild impairment in visual naming, story recall was poor, other difficulties were noted and "taken together these scores suggest that intact auditory verbal learning and memory but significantly impairment visual memory that cannot be solely accounted for by his visual impairment alone." His impression was that the patient had a concussion, but this was a "very slight concussion" according to Dr. Thwaites. He stated that Claimant had a couple of weeks of altered consciousness. The testing was not impacted by any poor efforts or anything of that nature. He felt that the patient sustained a work-related minor concussion. He did not, however, discuss the postconcussive headaches in his report anywhere that Dr. Orent could perceive and Dr. Thwaites provided primarily a behavioral analysis.

C. Hearing Testimony of Dr. Cathy Smith

58. Dr. Smith is an expert in occupational medicine and is a Level II accredited physician. Dr. Smith testified that she has been Claimant's ATP since January 2018 to the present. When she took over Claimant's care, she reviewed the medical records of her predecessor, Dr. Hebard, to make her own assessment with regard to causation. She diagnosed contusion of the right eyelid and periocular areas, visual disturbance and postconcussive syndrome. To the day of the hearing, Dr. Smith stated that these diagnoses continue to be accurate and appropriate, which is supported by Claimant's ongoing problem list and symptoms.

59. Dr. Smith stated she is very familiar with the Medical Treatment Guidelines (MTG), regularly uses them in her routine practice with regard to injured workers. She also regularly uses the *AMA Guides*, as well as the Division Desk Aids[15]. She defined traumatic brain injury as an injury to the head or brain caused by externally inflicted trauma and opined that the history and medical records reflect that this is what happened to Claimant. She stated that she diagnosed postconcussive syndrome or concussion, which is defined under the MTG as a mild traumatic brin injury. Further, she stated that Claimant continues to exhibit signs and symptoms from the mTBI.

60. She testified that the MTG, specifically Rule 17, Exhibit 2A for Mild Traumatic Brain injury, does not require a finding on diagnostic testing, amnesia or loss of consciousness to diagnose mTBI. The MTG state that altered mental state within twenty-four to seventy-two hours following the injury are sufficient to document the mTBI.[16] Claimant exhibited fatigue, trouble sleeping, dizziness, and head and facial trauma, nausea, vomiting, difficulty walking, difficulty speaking, difficulty concentrating, headaches and loss of memory, all of which indicate an mTBI. Since then, Claimant has

[15] Division of Workers' Compensation Desk Aids are on multiple topics including Apportionment Spinal of Range of Motion (Desk Aid #10); impairment rating tips (DK #11); Scheduled Impairment Chart (DK #13); Apportionment Calculation Worksheet (DK #14).
[16] MTG, Rule 17, Exh. 2A, p. 10, Section C.1.a.

had a complex recovery, which is a risk factor when a patient is over 40 years old and sustained a soft tissue injury, such as to the eye as Claimant suffered.[17] Further, the symptoms were documented in multiple reports after the first two weeks as Claimant continued to complain of headaches, dizziness, nausea, photophobia, attention and memory problems, feeling foggy, and fatigue.[18]

61. Dr. Smith explained that Claimant has two separate and distinct types of headaches. One is caused by the right eye injury because he does not have a defense mechanism that most individuals have where the pupil constricts to protect the eye from excessive light being introduced. Claimant has a nonreactive pupil that is continuously dilated, and the light causes nerve pain, which in turn causes him headaches. The second is a "sick" headache associated with nausea, which is one of the diagnostic criteria for migraine headaches. At the beginning, Claimant had these headaches approximately twice a week, until after he was evaluated by neurology and now the frequency is approximately three times a month with the medications he is taking. She agreed with the quote from the MTG that "[I]n approximately 10-25% of patients, chronic symptoms requiring treatment are associated with mTBI… but functional changes occur beyond one year."[19]

62. Dr. Smith also discussed that she was not able to make active treatment recommendations for the mTBI until after his last eye surgery, and then there were delays in obtaining authorization for the psychological, neurological, vision therapy, and vestibular therapy, which were the active treatment Claimant required to achieve functional improvement before he could be placed at MMI. She stated that "Dr. Martin concurred that he was suffering from a mTBI injury, and that he did have post-traumatic headaches from that mTBI injury. And it was Dr. Martin who suggested treatment" for the post traumatic headaches with Nortriptyline and Gabapentin. And now Claimant required treatment to maintain that status as recommended by the MTG.[20]

63. Dr. Smith explained that Dr. Thwaites, as a psychologist, is not Level II accredited and only performed a neuropsychological evaluation that will test for Complex cerebral dysfunction related to TBI, not for traumatic brain injury itself. Under both the *AMA Guides* and the Level II accreditation course materials, Dr. Smith further clarified that postconcussive headaches are to be evaluated for impairment under the Episodic Neurologic Disorder Section, which does not state or require objective findings with regard to the headaches or any particular measurements.

64. When Dr. Smith evaluated Claimant's ADLs at the time she placed Claimant at MMI, she reviewed how his ADLs were being affected and determined that they were, therefore, requiring her to determine if a rating was appropriate. She specifically found that light sensitivity was limiting his ability to go outside in the sunlight, interfered with his driving, and being on a computer. She also assessed, when he had a migraine, he is severely limited and they require him to remain in a dark room, though both types of HAs

[17] MTG, Rule 17, Exh. 2A, p. 10, Section D.1.
[18] MTG, Rule 17, Exh. 2A, p. 10, Section D.2, 9/14/2021 Hrg. Tr., p. 80:3-22.
[19] MTG, Rule 17, Exh. 2A, p. 25, Sec. D.8.
[20] MTG, Rule 17, Exh. 2A, pp. 63-68, Sec. F.1.

have improved over time with the treatment provided by Dr. Spinossi, Dr. Bruns, Dr. Drennan, and Dr. Martin.

65. With regard to the rating, Dr. Smith agreed with Dr. Roe's visual impairment and cosmetic impairment. However, in recent re-review of the *AMA Guides*, Dr. Smith identified that the Claimant's nonreactive pupil was a functional problem, not only a cosmetic problem, as it does contribute to daily headaches since his pupil is not able to constrict when he is in bright light. She opined that a 10% for the nonreactive pupil was appropriate as a consequence of the frequent headaches cause by light exposure that disrupt his activities of daily living. She quoted from the Guides that "[T]o the extent that any ocular disturbance causes impairment not reflected in visual acuity, visual fields, or ocular motility with diplopia, the impairment *must* be evaluated by the physician *and* be added to the impairment of the visual system." [*Emphasis added*].[21] She combined the 24% for vision loss of the right eye, the mTBI neurological impairment caused by the post concussive headaches of 17%, the nonreactive pupil impairment of 10% with the 2% cosmetic impairment to reach a 44% whole person impairment rating.[22]

66. Dr. Smith stated that Dr. Striplin committed a critical error when he did not provide a review of particular systems in accordance with the Level II accredited curriculum requirements including the effect the Claimant's headaches were having on his activities of daily living. Both Dr. Striplin and Dr. Roe, failed to appreciate and assess the nonreactive pupil's functional impairment as the *AMA Guides* require by the use of the word "*must"* and therefore, their opinions are in error. Dr. Smith agreed with Dr. Orent that Dr. Striplin was substantially in error for his failure to rate both the cosmetic defect of the nonreactive pupil and the postconcussive headaches.[23]

D. Hearing Testimony of Dr. Michael R. Striplin

47. Dr. Striplin was accepted as an expert in occupational medicine and as a Level II accredited physician. He described the mechanism of the injury, which was consistent with Claimant's hearing testimony. He also described other history involving Claimant's ADLs and driving, which was inconsistent with Claimant's testimony as well as Dr. Smith's testimony, including that Claimant did not have problems driving or with ADLs. Dr. Striplin described the irregular pupil and the fact that the pupil was non-responsive, that Claimant wore dark glasses in his office and that upon examination, Claimant was sensitive to the light.

48. Dr. Striplin explained the rating and stated that the 25% for the visual system is a complete loss of vision in the right eye that is equivalent to 24% of the whole person. He stated that the headaches were problematic for him because he did not know if Claimant was having neurological headaches, specifically because he was not familiar with migraines that would last up to three days, or if the headaches were caused by pain related to the eye injury. In fact, he stated I don't know why Claimant had headaches and that the temporal relationship of the inception of the headaches was not sufficient to

[21] Hearing Transcript, September 14, 2021, pp. 99-100; AMA Guides p. 161, Claimant's Exh. 8, p. 194.
[22] Hearing Transcript, September 14, 2021, p. 101:7-14.
[23] Hearing Transcript, September 14, 2021, p. 104:21-25 & p. 1051-2.

establish causation. Dr. Striplin asserted that it was his discretion, as a DIME physician, whether to rate the subjective headaches or not, and he was not required to do so by the rules or the *AMA Guides*. He also stated that whether he assigned a cosmetic impairment for the pupil deformity was also within his discretion as a DIME and he understood that cosmetic impairments were reserved for only significantly disfiguring injuries like burns or amputations.

49. In addressing maintenance care, Dr. Striplin reiterated what he had previously stated in his report, that maintenance for the ophthalmological problems related to the right eye was appropriate but stated that any treatment related to the headaches was not appropriate because he did not know whether they were caused by the right eye damage or some other problem but he was completely unconvinced that Claimant was experiencing migraines from neurological problems, a concussion or from a mild traumatic injury. He also stated that he was not experienced in the use of Gabapentin for migraines and since, in his mind, Claimant was not experiencing migraines, the use of Gabapentin was not reasonable maintenance care.

50. Dr. Striplin stated that he was not an expert in either psychological issues or traumatic brain injuries, and he had advised the Division that he was not available to address those issues. He deferred to the ophthalmologist regarding further medical care for Claimant. He also stated that he deferred to Dr. Roe about assessment of permanent impairment of the right eye.[24]

51. Dr. Striplin opined that Claimant's headaches were totally subjective and cannot be quantified, despite the records that show that from the first date he was treated until the present and that he continued to have headaches. He disagreed with other providers that it was appropriate to rate the headaches under the episodic neurological disorders or whether they were traumatic in origin.[25] He agreed that there were neither medical records nor history of Claimant experiencing preexisting medical history of headaches or traumatic brain injury prior to the work-related injury.

52. When assessing whether Claimant had a traumatic brain injury, Dr. Striplin relied on Dr. Thwaites' psychological report and failed to ask Claimant what had happened to him immediately following the accident including the disorientation, feeling dazed, confused, in extreme pain, and having severe headaches. He also stated that he was unfamiliar with the Medical Treatment Guidelines with regard to Traumatic Brain injuries as it had been a while since he had reviewed them.[26] He was not aware of how often symptoms persisted following immediate recovery of a TBI or the percentages of individuals with TBI that continue with complex issues such as headaches.[27] Dr. Striplin did not complete the mental impairment worksheet in this matter.[28] He further conceded

[28] Required by W.C.R.P.Rule 12-5(C).

that he had not looked at the MTG for traumatic brain injury in a while and was simply relying on Dr. Thwaites' psychological testing.

53. Dr. Striplin conceded that he was not an ophthalmologist or psychiatrist, he does not include in his inventory for DIME purposes an expertise in psychological issues or traumatic brain injury, and was limiting his practice not to include psychological or traumatic brain injury.

E. Deposition Testimony of Dr. Carlos Cebrain

67. Dr. Cebrian testified as an expert in occupational medicine and as a Level II accredited physician. Dr. Cebrian testified that Dr. Striplin[29] provided the 24% whole person impairment rating and did not commit any errors. Dr. Cebrian opined that Claimant did suffer from a mild traumatic brain injury as it was well documented. He stated that there was overlap in the symptoms that occurred since the mTBI that are difficult to assess. He stated that "there are mechanisms in place when determining whether an impairment rating should be assigned for additional problems such as a mTBI in addition to any other previous problems and that Claimant's ongoing symptoms four years after the injury cannot specifically be related to the mTBI. Dr. Cebrian quotes from the MTG, p. 10 that the guideline definitions apply to "[T]he initial severity of impairment and do not necessarily define or describe the degree of subsequent impairment or disability."[30]

68. Dr. Cebrian couched Dr. Striplin's report and testimony as not having a sequela of symptoms at the time he evaluated Claimant, not that he never had a mTBI.[31] Dr. Cebrian specifically stated the MTG specified "An individual with a mild traumatic brain injury would be somebody who has either a short loss of consciousness, post-injury confusion, anterograde or retrograde amnesia that occur with a head injury. And so utilizing that, you make the determination whether a patient met that kind of minimum threshold for a mild traumatic brain injury."[32]

69. Dr. Cebrian testified as follows:

> Now, if you separate outside the eye and you're just addressing headaches from a neurological basis, the way that we're instructed to evaluate those is related to page 109 under the brain injury component, and then specifically additional information for headaches is given in impairment rating tips for episodic neurological disorders.

[29] The Deposition transcript refers to "Dr. Strickland" but this ALJ simply considers this a transcription error and should read "Dr. Striplin." Depo page 5 line 10 (hereinafter p. 5:10). There is also an error where the deposition reads "Dr. Warren" instead of "Dr. Orent." Depo. p. 5:16.

[30] This reference is to the distinction that an initial diagnosis of mild versus moderate or severe TBI does not reflect the severity of the subsequent impairment or disability. This ALJ interprets this to mean that a patient originally assigned a diagnosis of mild traumatic brain injury may later be re-diagnosed with a moderate or severe TBI diagnosis, or vice versa.

[31] Dr. Cebrian Deposition Transcript, page 13, lines 2 through19, whereinafter Depo. p.13:2-19.

[32] Cebrian Depo. p. 7:1-7.

> And I think one of the key components for all the impairment ratings that have performed in this is that you have to avoid as an examiner having overlap in impairments that may be addressed in other systems. And in the impairment rating tips on page 2, under headaches, one of the things that is stressed is that the rater must be very careful not to rate the activities of daily living deficits in both impairment areas. And that means that there are other areas where there may be activities of daily living that lead to an impairment, and so you have to be certain as an examiner that what you're assigning an impairment for is specifically related to that specific problem and not overlapped from another medical condition.[33]

70. Dr. Cebrian also states that cosmetic defects impairment are appropriate if there is no other alteration of ocular function.[34]

F. Rebuttal Testimony of Dr. Cathy Smith

71. Dr. Smith testified that Dr. Striplin erred in his assessment of impairment in his Division IME report. In particular, she opined that there was a critical error when Dr. Striplin stated that he did not feel that there was a diagnosis of a mild traumatic brain injury because there was no loss of consciousness, amnesia, and that imaging studies were normal, as stated on page 7, under number 2 of his report.

72. She clarified that the Medical Treatment Guidelines for mild traumatic brain injury are clear on page 10 and 12. They state that to make a diagnosis for mild traumatic brain injury, you do not have to have any of these requirements. In particular, on page 10 it states that you have to have one of the following symptoms within 24 to 48 hours after the injury, and those symptoms include an altered mental state, or feelings of being dazed or disoriented, confused, or focal neurologic deficits. Dr. Smith stated that clearly, according to the extensive medical records, Claimant did have altered mental state where he was dazed, disoriented and confused following his injury and still evident up to six days later. Dr. Smith disputed Dr. Striplin's opinion on that, according to page 12 of the treatment guidelines, a patient must have CT exam findings or MRI findings to make a diagnosis of mild traumatic brain injury. She stated that, according to the MTG, abnormal imaging studies are only required for a moderate traumatic brain injury diagnosis. Dr. Smith disputed the DIME physician’s statement that the frequency of headaches and migraine headaches, was questionable as the medical records clearly shows otherwise. Claimant’s migraine headaches have been present since the very beginning and all through his medical record they have been documented by multiple treating physicians, including the neurology specialist who treated Claimant for the migraines.

73. Dr. Smith also opined that Dr. Striplin made a critical error when he stated that “where there appears to be a temporal relationship between headache and work injury on 9/1/17, this temporal relationship alone does not establish a medical probable cause and effect.” Dr. Smith stated, in pertinent part

> Again, the medical record does not substantiate this. Postconcussive migraines are well-documented throughout the history, there is no past history of headache, specifically

[33] Cebrian Depo. pp. 14:21-15:16.
[34] Cebrian Depo. pp. 21:3-22:2.

> migraine headaches. These types of headaches are very typical of what we see following head injury, especially mild traumatic brain injury, and clearly the medical record supports a greater than 50 percent probability that these migraine headaches are related to his traumatic brain injury.

74. Dr. Smith opined that Dr. Striplin's position exhibited a critical error that his reason to not rate the headaches was that headaches are totally subjective and cannot be quantified. She stated that all headaches are subjective, and the intent and the direction of the *AMA Guides* and the Level II accreditation course is to rate post-traumatic headaches using the Episodic Neurologic Disorders table under Chapter 4 for The Nervous System.

75. Dr. Smith agreed with Dr. Cebrian that Claimant clearly had a mild traumatic brain injury, which was diagnosed from the beginning and agreed that 75 to 90 percent of patients that suffer from mTBI fully recover as stated in the MTG, but those that do not may continue to report symptoms for several months or years. Dr. Smith emphasized that Claimant falls within the second category as his symptoms have persisted. Dr. Smith testified that the DIME physician had not even looked at the MTG for TBI when he determined his opinion, which is a critical requirement when determining diagnosis the severity of a TBI, which is a critical error.

76. Dr. Smith stated that both Dr. Cebrian and the DIME physician committed critical errors in failing to consider the MTG to determine diagnosis in order to assess whether there is an impairment or not, and appropriately apply the *AMA Guides*. Dr. Smith vehemently disagreed with Dr. Cebrian in regard to his statement that the ongoing headache symptoms Claimant continued to suffer from could not be related to the work injury. Dr. Smith opined that the MTG clearly state that 10 to 25 percent of patients with mTBI continue to have complications related to the mTBI for years. She clarified that complex headache problems, specifically postconcussive migraine headaches, are more likely associated with mTBI than moderate or severe brain injury cases. She stated that Claimant has been diagnosed with these headaches, he's received treatment for these headaches, and they aren't benign headaches. She stated that Claimant has responded to treatment, that the frequency of the migraine headaches have decreased, as expected, over time, but they have not resolved, which entitles Claimant to an impairment rating under the *AMA Guides*.

77. Dr. Smith also stated that the medical records documented that Clamant was not the only one to document the initial symptoms. The history was also from his supervisor and coworker that reported Claimant was confused, he had an altered state, he was disoriented, he had difficulty walking, and he had difficulty speaking as well as weakness and photophobia, several of the symptoms that are used to diagnose or that you find with mild traumatic brain injury/postconcussive headaches. Now, cognitive symptoms, disorientation, all of those kinds of things, those initial symptoms that he had, did decrease and eventually resolve, which is what you would expect with mild traumatic brain injuries. The one symptom that did not resolve was his postconcussive headaches, and this is a fairly typical history that a physician would receive from people when they have a documented mild traumatic brain injury. Dr. Smith opined that Claimant had, without a doubt, a mild traumatic brain injury and because the DIME physician failed to

diagnose the mTBI, he committed a critical error in his assessment of impairment of the mTBI.

78. Dr. Smith stated that when looking at impairment under the *AMA Guides*, you rate the sequelae of diagnosis, not the diagnosis itself, because, it is not the mTBI in and of itself that caused the impairment but the consequences that continue to affect the Claimant that causes the need to address impairment. However, the DIME physician committed a critical error in misapplying the MTG, and failing to provide the mTBI diagnosis and consequently, not addressing impairment of the sequelae of the mTBI, specifically the residual postconcussive migraine headaches that are well documented and diagnosed throughout the Claimant's records, including by the neurology specialist, since the accident to the time of the hearing.

79. Dr. Smith reaffirmed that Claimant did not have a psychological overlay, and that the eye specialists' notations that symptoms were out of proportion regarding the right eye condition failed to consider or document the mTBI symptoms that Claimant was experiencing or that there were physiological explanations for the symptoms Claimant was experiencing, specifically as documented by Dr. Roe with regard to the left eye sympathetic ophthalmia, which occurs after injury or surgery to the other eye.

80. Dr. Smith opined that the "sick"[35] headaches that cause Claimant nausea are the postconcussive migraine headaches. Though Claimant also suffers a second type of daily headaches, due to the nonreactive pupil that cause the pupil to allow in too much light, and in turn causes nerve pain and subsequent headaches.

81. Dr. Smith agreed with Dr. Cebrian that, pursuant to the *AMA Guides*, one should not overlap impairments. However, in this case, Claimant has two separate systems that cause him impairment. The first is the damage to the pupil, and has nothing to do with his vision impairment, but due to light sensitivity, which causes headaches that require Claimant to use dark glasses, sit in darkened rooms and this is a completely different and separate mechanism than the migraines headaches caused by the mTBI postconcussive syndrome, including nausea.

82. Dr. Smith quoted the *AMA Guides* specifically with regard to the "Introduction" under the "The Visual System" of Chapter 8, found at p.161, which states the visual field and the nonreactive pupil as well as the cosmetic defect should be considered and rated separately. Dr. Smith stated that the activities of daily living that are affected by Claimant's daily headaches are different than the activities of daily living that are affected by his migraine headaches. She opined that there is no double-dipping or overlapping impairments here as the nonreactive pupil and postconcussive headaches are two different problems. The first is a functional problem with the pupil that results in daily headaches, and the second is the mild traumatic brain injury postconcussive migraine headaches that also result in symptoms, such as nausea and severe headaches every week or two.

[35] Hearing Transcript for October 18, 2021 hearing at pp. 35:14 & 36:13 state "stick" headaches but the audio and this ALJ's hearing notes clearly state "sick' headaches.

83. Dr. Smith opined that the daily headaches should be rated under the visual system under the *AMA Guides*, p. 161[36] for the nonreactive pupil, which states there is an additional 5 to 10% impairment, and that would cover not only other problems that might result from the nonreactive pupil, but also the problems with the filtering of light, which causes the significant symptoms on a daily basis.

84. Dr. Smith stated that Dr. Striplin committed another critical error in not addressing the Claimant's paroxysmal positional vertigo problems caused from the traumatic brain injury, which are not addressed by the vision impairment.

85. Dr. Smith also agreed with Dr. Roe that Claimant would continue to require further maintenance care for the continuing visual problems but also stated that Claimant would continue to require medications and follow up for his ongoing postconcussive migraines. She also emphasized that, while Claimant is currently driving, it does not mean that he is safe to drive and still requires a driving test to assess whether there should be any limitations on his driving caused by the visual impairments.

86. Dr. Smith ultimately opined that the correct impairment rating for all of Claimant's September 1, 2017 work-related conditions is as follows: The final impairment included 24% whole person impairment for the visual system due to total loss of vision of the right eye, 2% whole person for the cosmetic defect for the pupil, 10% for the nonreactive pupil and 17% whole person for the episodic disorder caused by the postconcussive migraines related to the mTBI, which all combine to a 44% whole person impairment rating.

87. Lastly, Dr. Smith reaffirms that the DIME physician, Dr. Striplin, committed critical errors in failing to diagnose the mTBI and consider an impairment for the cosmetic pupil defect, the impairment for the nonreactive pupil and for the mTBI as he failed to consider the substantial documentation of the problems related to the significant injuries and sequelae caused by the work-related accident of September 1, 2017 to Claimant's face, eye and head.

G. Other Resources

88. The Workers' Compensation Rules of Procedure, Desk Aids promulgated by the Division, the Medical Treatment Guidelines, and the *AMA Guides* were resources quoted by both parties and bear quoting in order to analyze the experts' interpretations.

89. W.C.R.P. Rule 12-5, 7 CCR 1101-3, addresses permanent mental and behavioral disorders and state, in pertinent part:

> (A) Any physician determining permanent mental or behavioral disorder impairment shall:
>
> (1) Limit such rating to mental or behavioral disorder impairments not likely to remit despite medical treatment; and
>
> (2)Use the instructions contained in the AMA Guides giving specific attention to:

[36] Dr. Smith actually states page 160 in error, which is the blank page prior to The Visual System Chapter 8, 10/18/2021 Hrg. Tr. p. 39:20-25; p. 43:8-23; p. 44:2-6; p. 63:17-25; & p. 64:1-9

(a) Chapter 4, "Nervous System"; and

(b) Chapter 14, "Mental and Behavioral Disorders"; and

(3) Complete a full psychiatric assessment following the principles of the AMA Guides, including:

…

(C) The permanent impairment report shall include a written summary of the mental evaluation and the work sheet incorporated herein as part of this rule (Division form WC-M3-PSYCH). The impairment rating shall be established using the "category definition guidelines" set forth in this rule, and which shall supplement the related instructions in the AMA guides. When appropriate, the physician shall address apportionment.

93. The Division Desk Aid No. 11 (DK11 Rev 07/20) addresses the Impairment Rating Tips. While these are simply tips and not a requirement, they provide a guideline for DIME physicians to follow and state in pertinent pat:

General Principles.

1. Impairment Ratings Based on Objective Pathology: Impairment ratings are given when a specific diagnosis and objective pathology is identified. (Reference: C.R.S. §8-42-107(8)(c)). In cases with multiple symptoms, the clinician must determine whether separate diagnoses are established which warrant an impairment rating OR the impairment rating provided for a specific diagnosis incorporates the accompanying symptoms of the patient.

   …

2. Impairment Rating for Workers Who Have Undergone an Invasive Treatment Procedure: The rating physician should keep in mind the AMA Guides, 3rd Edition (rev.) definition for impairment: "The loss of, loss of use of, or derangement of any body part, system, or function." Given this definition, one may assume any patient who has undergone an invasive procedure that has permanently changed any body part has suffered a derangement. Therefore, the patient should be evaluated for an impairment by a Level II Accredited Physician. Although the rating provided may be zero percent, it is essential that the physician perform the necessary tests, as outlined in the AMA Guides, 3rd Edition (rev.) for the condition treated, in order to justify the zero percent rating.

   …

5. Worksheets: Make sure to attach all applicable worksheets to the narrative report and include this information to all legally concerned parties.

   …

10. Headaches: Headaches that qualify for a separate work-related impairment rating should be rated using the Episodic Neurological Disorders section in Table 1- Section B (Chapter 4, p. 109). It is important to remember that if the individual has a closed head injury the highest applicable rating from this table is the only rating used. If the headache rating is to be combined with another body part, the rater must be very careful not to rate the activities of daily living deficits in both impairment areas.

DIME Panel Physician Notes:

2. IME Physicians Must Perform Complete Assessments and Exams, including All Applicable Measurements: As a Division Independent Medical Examiner you are required to perform your own examination of the claimant and ensure that all required measurements are performed and documented on the appropriate worksheets. If another medical professional (such as a physical therapist) performs range of motion measurements or other specialized tests and assessments (such as an audiogram), it is the responsibility of the physician to ensure that the medical professional performs the assessments in accordance with the AMA Guides and other professional standards. After completing the evaluation, in rare occurrences, you may decide that another physician's impairment rating better reflects the condition being evaluated. Examples include instances where you find another physician's range of motion more physiologically credible than the measurements you have obtained or when another physician has more training in a particular area than you do, such as a psychiatrist. If you then decide to adopt another physician's rating, you should discuss in your report your own findings and clearly justify the reasons for using another physician's rating. If you do not provide such a discussion your report will be returned as incomplete.

7. Declaring Condition is Not Related to Injury: Division Independent Medical Examiners may declare a condition is not work-related. This may occur despite the fact a payer has accepted a body part or diagnosis as part of the claim, treatment has occurred, and MMI has been declared by the authorized provider. If this situation arises, an impairment rating must be provided in the report or as an addendum to the DIME report.
...

93. The MTG under W.C.R.P. Rule 17, Exhibit 2 for Traumatic Brain Injury specifically state, in pertinent part, as follows:

C. **Introduction to traumatic brain injury** (TBI)

C.1. Definitions of TBI:

Before a diagnosis of TBI is made, the physician should assess the level of trauma exposure to the individual using available objective evidence. According to the Institute of Medicine of the National Academies, TBI is an injury to the head or brain caused by externally inflicted trauma.The Department of Defense defines TBI as a "traumatically induced structural injury and/or physiological disruption of brain functions as a result of an external force." TBI may be caused by a blow to the head from an object or by striking an object, by acceleration or deceleration forces without impact, or by blast injury or penetration to the head that disrupts the normal function of the brain.

A diagnosis of TBI is based on acute injury parameters and should be determined by the criteria listed below. Severity of initial impairment following TBI is subdivided into two major categories, mild TBI (mTBI) and moderate/severe TBI (M/S TBI). These definitions apply to the initial severity of impairment and do not necessarily define or describe the degree of subsequent impairment or disability.

C.1.a Mild TBI (mTBI)

mTBI is a traumatically induced physiological disruption of brain function, as manifested by at least one of the following, documented within 24 to 72 hours of an injury:

> - any loss of consciousness
> - any loss of memory for events immediately before or after the injury
> - any alteration of mental status at the time of the injury (e.g., feeling dazed, disoriented, or confused)
>
> ….
>
> D.1 Prognosis and risk factors
>
> In general, 75–90% of people with mTBI fully recover in less than 90 days. Those who suffer an mTBI may continue to report symptoms for several months or years.
>
> A number of factors appear to increase the risk for symptom prolongation:
>
> - Glasgow Coma Scale score of less than 15 at 2 hours post-injury;
> - work risk factors, such as very demanding or stressful vocations or being employed in the current job for a short period oftime;
> - age above 40years;
> - injury complicated by the presence of intracranial lesions, current orprevious;
> - history of prior brain injury, cognitive impairment, learning disabilities, ordevelopmental delay;
> - associated orthopedic, soft tissue, or organ injuries;
> - pre-injury issues with general health or psychosocial well-being;
> - psychological factors such as depression, post-traumatic stress disorder, or anxiety (see evidence statement below);
> - pre-injury history of migraines or other recurrent headaches.
>
> CT or MRI findings that do not necessitate surgery nor result in significant initial neurologic findings on physical exam may still result in a complex recovery.

90. The *AMA Guides* also provides multiple provisions that are applicable in this matter. The first is under Chapter 4, The Nervous System. Section 4.1, which addresses the brain functions, pursuant to the Desk Tips suggests that headaches should be addressed under the Episodic Neurological Disorder table. This includes *AMA Guides* page 106 for Episodic Neurological Disorders and Table 1 on page 109. Section 4.1a for "The Brain," Chapter 4 of the *AMA Guides* also specifies as follows:

> More than one category of impairment may result from brain disorders. In such cases the various degrees of impairment from the several categories are not added or combined, but the largest value, or greatest percentage of the seven categories of impairment, is used to represent the impairment for all of the types.

91. Chapter 8, The Visual System, Section 8.0 states in pertinent part:

> To the extent that any ocular disturbance causes impairment not reflected in visual acuity, visual fields, or ocular motility with diplopia, the impairment ***must*** be evaluated by the physician ***and*** be added to the impairment of the visual system.
>
> ***One or more other*** ocular impairments, such as vitreous opacities, a ***nonreactive pupil***, and light scattering disturbances of the cornea or other media, ***may*** be calculated as an additional 5% to 10% impairment of the involved eye. Permanent deformities of the orbit,

> scars, and ***cosmetic defects that may not alter ocular function should be considered individually as an additional factor*** that can cause up to 10% impairment of the whole person. [*Emphasis added*.]

92. Section 8.5, Table 6 provides that total loss of vision in one eye provides a 24% whole person impairment rating.

96. Additionally, Section 8.6 addresses "Other Conditions," and states:

> Up to an additional 10% impairment may be combined with the impairment of the whole person caused by the visual system for such conditions as permanent deformities of the orbit, scars, and other cosmetic deformities that do not otherwise alter ocular function.

H. Credibility Analysis of the Findings of Fact

93. As found, Dr. Striplin's true opinion is that Claimant only has an impairment rating of the visual field. Dr. Striplin is not credible. Firstly, Dr. Striplin stated that impairment of the visual field provided by Dr. Roe of 25% accounts for all the impairments Claimant has for the right eye because if Claimant had lost the whole eye, he would receive the 25% for loss of vision in one eye. The critical error is that there would be other considerations, including clear deformity by loss of the eyeball, and potentially other impairments caused by the loss of the eye. Here, this ALJ finds Dr. Striplin not credible and Dr. Smith's analysis to be correct.

94. Ocular function is of the visual field only. In this case Claimant lost 100% of the visual field of the right eye pursuant to the *AMA Guides.* A 25% impairment of the visual field, which converts to a 24% whole person impairment of the visual system. This was assigned by all rating physicians, including Dr. Striplin and Dr. Cebrian.

95. A scar or deformity does not affect the visual field but may be considered for disfigurement pursuant to the *AMA Guides* under Sections 8.0 and 8.6. If, as interpreted by Dr. Striplin, Claimant was not entitled to this impairment because he had a visual field loss, then the paragraph under Sections 8.0 and 8.6 would be rendered meaningless and would never entitle a patient that has a visual impairment to a disfigurement or scar impairment. Under the analysis of *Gonzales and ICAO v. Advanced Component Systems*, 949 P.2d 569 (Colo. 1997), the Colorado Supreme Court found that a patient may have both an impairment of the function of the eye as well as a disfigurement or cosmetic defect. Therefore, Dr. Striplin's analysis and explanation is incorrect and not credible.

96. Dr. Smith credibly testified that an impairment rating of 2% for the cosmetic deformity for the irregular pupil was appropriate under the *AMA Guides*, and this was a rating also provided by both Dr. Roe and Dr. Orent. Claimant has a clearly visible malformed pupil, which is irregular in shape, not round, and is permanently dilated, covering the majority of the iris, as observed by this ALJ during the hearing. Dr. Striplin was clearly in error in interpreting the *AMA Guides* in this matter and is found not credible in regard to the cosmetic deformity impairment.

97. Secondly, Dr. Cebrian and Dr. Striplin both stated that Claimant did not have an impairment for the nonreactive pupil of the right eye because he had already been compensated for the total loss of vision in the right eye. While the main purpose of the eye is vision, there are other issues that must be addressed according to the *AMA Guides*. In this case there are symptoms and sequelae caused by the damage to the eye. Dr. Smith explained that the right eye no longer dilates. This causes introduction of light into the eye causing an effect of stimulating the nerve, which causes daily headaches, and is well documented by multiple providers, including Dr. Smith, Dr. Martin, Dr. Rothstein, Dr. Hebard, Dr. Poon and Dr. Orent. Even Dr. Cebrian and Dr. Striplin acknowledged that Claimant has continued to have ongoing headaches related to the permanently dilated right eye.

98. Dr. Cebrian justified his failure to address the nonreactive pupil impairment by stating that, if the eye had been enucleated, this problem would not exist. However, this is not what happened to Claimant. As found, Dr. Smith credibly explained that the eye is still part of Claimant's body and Claimant suffers the effect of the continual introduction of light that triggers a nerve response, which causes daily headaches and affects Claimant's activities of daily living, including inability to work on a computer or perform activities outside without protection of dark glasses and a hat. Under the *AMA Guides,* it is appropriate to consider an impairment if the symptoms impact the Claimant's activities of daily living. As found, Dr. Striplin was incorrect in not addressing an impairment for the nonreactive pupil and assessing whether claimant had an impairment caused by the nonreactive pupil affecting Claimant's activities of daily living. Claimant was credible that Dr. Striplin never asked how his nonreactive pupil was affecting him.

99. Dr. Cebrian and Dr. Striplin were of the opinion that Section 8.0, the Introduction of The Visual System's description meant that it was one or the other, an impairment of the visual field or the nonreactive pupil impairment. This ALJ finds that the *AMA Guides* state that to the extent that any ocular disturbance causes impairment not reflected in visual fields, the impairment "must" be evaluated by the physician "and" added to the impairment of the visual system. The *AMA Guides* goes on to state that "One or more other ocular impairments, such as … a nonreactive pupil, …, may be calculated as an additional 5% to 10% impairment of the involved eye." As found, Dr. Striplin was incorrect in the reading of the *AMA Guides* and the reference to "one or more" indicates that there can be multiple visual system impairments, including loss of vision field, a nonreactive pupil and/or a cosmetic defect, as testified by Dr. Smith, who is found credible in this matter.

100. The *AMA Guides* go on to state that "Permanent deformities of the orbit, scars, and cosmetic defects that *may* not alter ocular function should be considered individually as an additional factor…" [*Emphasis added*.] The word "may" is interpreted here as either does or does not. Which means that just because the nonreactive pupil may affect function, this does not mean that a separate disfigurement is inappropriate.

101. Dr. Cebrian quotes from the MTG, p. 10 that the guideline definitions apply to "[T]he initial severity of impairment and do not necessarily define or describe the degree of subsequent impairment or disability." This reference is to an initial diagnosis of mild versus moderate or severe TBI that does not reflect the severity of the subsequent

impairment or disability. This ALJ interprets this to mean that a patient originally assigned a diagnosis of mild traumatic brain injury may later be re-diagnosed with a moderate or severe TBI diagnosis, or vice versa, or neither. As found Dr. Cebrian is not credible or persuasive in this regard.

102. Dr. Striplin clearly stated that he did not reach a diagnosis of a mild traumatic brain injury and, therefore, did not have to go through the steps to make a determination whether Claimant had any ongoing symptoms that required impairment under the *AMA Guides*. Dr. Striplin failed to consider the mild traumatic brain injury which causes the postconcussive headaches. As found, it is clear from the medical records that Claimant suffered an mTBI. Claimant reported to Dr. Hebard on September 7, 2017 that he had symptoms of dizziness, nose bleeds, and head and facial trauma, nausea, vomiting, difficulty walking, difficulty speaking, difficulty concentrating, headaches, and loss of memory. Dr. Henry Poon on December 19, 2017 noted on neurologic exam a mild slurring of speech and Claimant was not fully oriented to time and event (vagueness), had difficulty with tandem walk with abnormal gait as he would fall to the side and his diagnosis included postconcussive syndrome. As found, Dr. Striplin was incorrect in failing to address the Claimant's diagnosis of mTBI and postconcussive syndrome. Dr. Striplin committed an error when concluding that Claimant did not have an mTBI and is not credible in his assessment of the Claimant's permanent impairment.

103. Dr. Striplin stated that he did not feel that there was a diagnosis of a mild traumatic brain injury because there was no loss of consciousness, amnesia, and that imaging studies were normal. This is not how this ALJ interpreted the causation analysis as provided by the MTG. Dr. Smith credibly testified that Dr. Striplin made a critical error because, to diagnose an mTBI there only needs to be a determination of any alteration of mental status at the time of the injury (e.g., feeling dazed, disoriented, or confused), which are documented in the records. Over three months after the accident medical providers were noticing Claimant continued with symptoms of mTBI. Claimant continued to have headaches that were "sick" headaches, causing nausea. Dr. Smith's opinion that these were migraine headaches caused by the sequelae of the mTBI and the postconcussive syndrome are credbile. Dr. Smith and other ATPs documented Claimant's ongoing headaches from the beginning of his injury to the date of maximum medical improvement. Dr. Smith also testified that she continued to treat Claimant following MMI and he continued with the same symptoms despite ongoing care, though the care Claimant had received did ameliorate the frequency of the migraine headaches. Dr. Striplin is incorrect in failing to consider the mTBI as related to the September 1, 2017 claim and failing to rate the impairment caused by the postconcussive headaches. As found, Claimant has shown that Dr. Striplin was incorrect on multiple levels, including failing to address the diagnosis of mTBI related to the work related injury, failing to properly rate Claimant's impairments and failing to appropriately review, consider and misapplying the MTG and the *AMA Guides*.

104. Dr. Striplin failed to comply with W.C.R.P. Rule 12-5(C), which requires a full evaluation and completion of the mental impairment work sheet. Further, Dr. Striplin failed to comply with the cautions of Desk Aid 11 which states that as "a Division Independent Medical Examiner you are required to perform your own examination of the claimant and ensure that all required measurements are performed and documented on

the appropriate worksheets." This creates an additional burden on a DIME physician and a higher standard of care. DK 11 goes on to state that a DIME Examiner "may declare a condition is not work-related." However, "[I]f this situation arises, an impairment rating must be provided in the report or as an addendum to the DIME report." However, Dr. Striplin simply makes a conclusory statement that Claimant has no ratable psychological, TBI or face conditions, without going through the steps as required by the heightened burden of a DIME physician. As found, Dr. Striplin is not credible.

105. As found, Dr. Smith is credible in her determination that Claimant has a mTBI that causes ongoing migraine headaches which affect Claimant's activities of daily living, including being confined to a dark room for one up to three days at a time, due to the intensity of the migraines. During these disruptions Claimant is unable to carry out his activities of daily living. Dr. Smith is persuasive that the Claimant has an impairment under the Episodic Neurological Disorder (END) Table 1 at p. 109 of the *AMA Guides*, which provides a 17% whole person impairment for the residual migraine headaches caused by the ongoing mTBI symptoms, as well as a 10% for the continuing vertigo, also under Table 1. However, the *AMA Guides* also state that only one impairment could be used under the END and the 17% was the larger amount.

106. As found, Claimant continues to have postconcussive migraine headaches as well as a nonreactive pupil causing headaches that continue to be treated by his authorized treating provider. Both of these types of headaches are proximately caused by the September 1, 2017 admitted work related injury and require ongoing care in order to maintain Claimant at maximum medical improvement. Dr. Smith is persuasive in this regard.

107. The *AMA Guides* also state under Chapter 8 that the physician must consider the effect other impairments have on a patient's vision system other than the loss of vision function itself, including a nonreactive pupil. In considering this, Dr. Smith provided an additional 10% impairment for the nonreactive pupil as it interferes with Claimant's ADLs. However, there is an overlap as Claimant continues to have headaches related to the nonreactive pupil and the migraine headaches that both result in disruptions in Claimant's activities of daily living. As found, the disruptions include loss of ability to perform activities outside in the sunlight, must wear dark glasses, including inside medical offices, uses both dark glasses and a hat when outside, is unable to do more than limited exercises in his home related to both the vertigo and too many lights in a gym, no longer engages in social activities like parties because of balance problems and lighting, is unable to engage in activities like hiking and is unable to perform computer work as Claimant cannot look at a screen for extended periods of time, cutting off his ability to work as a real estate agent. Because there are overlap in the activities of daily living caused by the mTBI sequelae and the ADLs caused by the nonreactive pupil, this ALJ finds that it is important, pursuant to the *AMA Guides,* that the headache conditions be address as one component and not be duplicative of Claimant's impairments. As found, the END impairment is the greatest rating that causes an effect on Claimant's activities of daily living, the 17% shall be combined with the 24% whole person due to the loss of vision in the right eye and the 2% for the cosmetic defect for a total combined rating of 39% whole person impairment assigned to the September 1, 2017 work related accident.

CONCLUSIONS OF LAW

A. Generally

The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness’s testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers’ compensation case is decided on its merits. C.R.S. § 8-43-201.

B. Overcoming the DIME Physician:

Here, Claimant argues that the DIME physician, Dr. Striplin, was incorrect in multiple opinions with regard to Claimant’s work related impairment ratings. Claimant must prove that the DIME physician’s determination of causation and impairment were incorrect by clear and convincing evidence. Section 8-42-107(8)(C), C.R.S. *Wilson v. Indus. Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003); *In re Claim of Lopez*, 102721 COWC, 5-118-981 (Colorado Workers' Compensation Decisions, 2021). Clear and convincing evidence must be “unmistakable and free from serious or substantial doubt.” *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME’s conclusions must demonstrate it is “highly probable” that the impairment rating is incorrect. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *Qual-*

Med, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).). A “mere difference of medical opinion” does not constitute clear and convincing evidence. *Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016). Therefore, to overcome the DIME physician’s opinion, the evidence must establish that it is incorrect. *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002).

The DIME physician must assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. See *Qual-Med, Inc. v. Industrial Claim Appeals Office*, *supra*. Consequently, when a party challenges the DIME physician’s impairment rating, the Colorado Court of Appeals has recognized that a DIME physician’s determination on causation is also entitled to presumptive weight. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *In re Claim of Singh*, 060421 COWC, 5-101-459-005 (Colorado Workers' Compensation Decisions, 2021). However, if the DIME physician offers ambiguous or conflicting opinions concerning his opinions, it is for the ALJ to resolve the ambiguity and determine the DIME physician's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, *supra*. Further, deviations from the *AMA Guides* do not mandate that the DIME physician’s impairment rating is incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician’s findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008); *In re Claim of Pulliam*, 071221 COWC, 5-078-454-001 (Colorado Workers' Compensation Decisions, 2021).

A DIME physician's finding consists not only of the initial report, but also any subsequent opinions given by the physician. See *Andrade v. ICAO*, 121 P.3d 328 (Colo. App. 2005). Thus, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. ICAO*, 984 P.2d 656, 659 (Colo. App. 1998); *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *Andrade v. Industrial Claim Appeals Office, supra*. Once the ALJ determines the DIME physician's true opinion, if supported by substantial evidence, then the party seeking to overcome that opinion bears the burden of proof by clear and convincing evidence to overcome that finding of the DIME physician’s true opinion. Section 8-42-107(8)(b), C.R.S.; see *Leprino Foods Co. v. ICAO*, *34 P.3d 475 (Colo. App. 2005), In re Claim of Licata*, W.C. No. 4-863-323-04, ICAO, (July 26, 2016) and *Magnetic Engineering, Inc. v*. ICAO, *supra*.

The Act requires DIME physician to comply with the *AMA Guides* in performing impairment rating evaluations. Sec. 8-42-101(3)(a)(I) & Sec. 8-42-101 (3.7), C.R.S.; *Gonzales v. Advanced Components,* 949 P.2d 569 (Colo. 1997). Further, pursuant to 8-42-101 (3.5)(II), C.R.S. the director promulgated rules establishing a system for the determination of medical treatment guidelines, utilization standards and medical impairment rating guidelines for impairment ratings based on the *AMA Guides.* In determining whether the physician’s rating is correct, the ALJ must consider whether the physician correctly applied the *AMA Guides* and other rating protocols. *Wilson v. Industrial Claim Appeals Office*, *supra*. The determination of whether the physician correctly applied the *AMA Guides* is a factual issue reserved for the ALJ. *McLane W., Inc.*

v. Indus. Claim Appeals Office, 996 P.2d 263 (Colo. App. 1999); *In re Claim of Pulliam*, *supra*. The question of whether the DIME physician's rating has been overcome is a question of fact for the ALJ to determine, including whether the physician correctly applied the *AMA Guides*. *Metro Moving and Storage Co. v. Gussert, supra*.

Where a physician has failed to follow established medical guidelines for rating a claimant's impairment in a DIME, the DIME's opinion has been successfully overcome by clear and convincing evidence. See, e.g., *Am. Comp. Ins. Co. v. McBride*, 107 P.3d 973, 981 (Colo. App. 2004) (DIME physician's deviation from medical standards in rating the claimant's injury constituted error sufficient to overcome the DIME); *Mosley v. Indus. Claim Appeals 11 Office*, 78 P.3d 1150, 1153 (Colo. App. 2003) (DIME physician's impairment rating overcome by clear and convincing evidence where DIME physician failed to rate a work related impairment). Similarly, when a DIME physician's opinion is contrary to the Act, it is grounds for overcoming the DIME because the DIME report is legally incorrect. See *In re Claim of Lopez*, *supra*. Lastly, where an ALJ finds a claimant's description of his present symptoms credible, this is sufficient to overcome the DIME physician's opinion. *In re Claim of Conger*, 100521 COWC, 4-981-806-001 (Colorado Workers' Compensation Decisions, 2021).

Dr. Smith credibly testified that Dr. Striplin erred in his assessment of Claimant's impairment. In particular, there were some critical errors when Dr. Striplin assessed his impairment in his Division IME report, specifically in that he failed to provide a diagnosis of a mild traumatic brain injury because there was no loss of consciousness, amnesia, and that imaging studies were normal, as stated on page 7, under number 2 of his report. Dr. Smith, Dr. Cebrian and Dr. Orent all credibly opined that Claimant clearly had a mild traumatic brain injury, which was diagnosed from the beginning, and while the majority of mTBI patients fully recover, as stated in the MTG, those that do not may continue to report symptoms for several months or years. Dr. Smith credibly opined that it was a critical error for the DIME physician to have failed to look at the MTG when he examined Claimant and provided his opinion, as it is a critical requirement when determining diagnosis and severity of a TBI. Claimant testified and the medical records exhaustively document Claimant's mTBI and postconcussive headaches. As found and concluded, Claimant falls within the second category as his symptoms have persisted and the mTBI should have been diagnosed and rated by the DIME physician. Dr. Striplin was incorrect in his findings. Dr. Smith and the multiple medical records by Dr. Martin, Dr. Hebard, Dr. Poon and Dr. Orent provide proof that is unmistakable and free from serious or substantial doubt. As found and concluded this is evidence that it is highly probable the DIME physician was incorrect, not merely a difference of medical opinion.

The MTG for mild traumatic brain injury are clear on page 10 and 12 that to make a diagnosis for mild traumatic brain injury, you do not have to have any of the requirements that Dr. Striplin stated. In particular, on page 10 it states that you have to have one of the symptoms listed within 24 to 48 hours after the injury, and includes altered mental state, which means dazed or disoriented, confused, or findings of focal neurologic deficits. As found and concluded, clearly the extensive medical records reveal Claimant had an altered mental state where he was dazed and disoriented and confused following his September 1, 2017 work related injury. That was immediately evident as testified by

Claimant, and was still evident six days later when he was evaluated by Dr. Hebard. It was still present when Claimant was evaluated by Dr. Poon on December 16, 2017, who found, on neurologic exam, mild slurring of speech, Claimant was not fully oriented to time and event (vagueness), had difficulty with tandem walk with abnormal gait as he would fall to the side, and diagnosed Claimant with postconcussive syndrome. Claimant has proven by clear and convincing evidence that Dr. Striplin was incorrect in the fact that he failed to review the MTG for purposes of determining a diagnosis. As found and concluded Dr. Striplin was incorrect in his assessment that the continuing mTBI was not related to the work related injury of September 17, 2017, including the postconcussive headaches that were caused by the mTBI. As found and concluded Dr. Striplin was clearly incorrect in not considering the diagnosis of mTBI for purposes of providing an impairment rating. In fact, he relied upon the psychologist's determination that Claimant did not have a cognitive psychological disorder to state that a rating under mTBI was inappropriate. Dr. Smith credibly testified that the psychologist's evaluation only assessed for psychological impairments and cognitive impairments, not neurological deficits. Dr. Striplin is also not credible when he stated that the frequency of headaches, migraine headaches, was questionable. Clearly the medical record shows otherwise. As found and concluded Claimant's migraine headaches have been present since the very beginning and all through his medical records. It's been documented by multiple treating physicians, including providers specializing in neurology who have treated him for the migraines. Dr. Smith's credible testimony that the postconcussive migraines were well-documented throughout the history, there was no past history of headache, specifically migraine headaches, that Claimant's headaches are very typical of what she would see following head injury, especially mild traumatic brain injury, and clearly the medical record supports in this case that the migraine headaches are related to Claimant's traumatic brain injury. This is clear and convincing evidence that the postconcussive headaches are proximately caused by the Claimant's September 1, 2017 traumatic injury to head. Dr. Striplin clearly committed an error in finding otherwise.

Dr. Smith credibly opined that Dr. Striplin's statements regarding headaches exhibited a critical error as his reason to not rate the headache was that headaches are subjective and cannot be quantified. Dr. Smith and Dr. Orent credibly opined that all headaches are subjective, and the intent and the direction of the *AMA guides* and the Level II accreditation course is to rate post-traumatic headaches using the episodic neurologic disorders table under Chapter 4 under the nervous system. This is supported by the Desk Aids as quoted above. Claimant has proven by clear and convincing evidence that the causally related trauma to the head caused the mTBI, which in turn proximately caused migraine headaches which disrupted Claimant's ADLs on almost a weekly basis as fully supported by the medical records, and is not a psychological condition, but a neurological diagnosis and condition.

Lastly, Dr. Striplin was clearly incorrect in his application and interpretation of the *AMA Guides* in reviewing Chapter 8, Section 8.0, regarding the nonreactive pupil and cosmetic disfigurement. The *AMA Guides* are clear in that, to the extent that any ocular disturbance causes impairment not reflected in the Claimant's visual field, the impairment *must* be evaluated by the physician *and* be added to the impairment of the visual system, as well as that o*ne or more other* ocular impairments, such as a *nonreactive pupil, may* be considered for additional impairment*.* Here, Claimant has shown by clear and convincing evidence that he has both. First, Claimant's nonreactive pupil, causes light to be introduced that produces a reaction of the nerve, causing severe headaches which daily interferes with his activities of daily living, including light sensitivity, not being able to work outdoors without significant protection or for extended time periods, or work with computer screens. The second is that Claimant has a clear disfigurement of the pupil, which is always dilated, irregular in shape and almost fully obliterates the iris by observation of this ALJ as well as documented in the medical records. While there is no requirement that the DIME physician rate the irregularity of the pupil as a disfigurement under the *AMA Guides*, Dr. Striplin made a clear error in that he failed to consider that the *AMA Guides* state that *cosmetic defects that may not alter ocular function should be considered individually as an additional factor.* This means that the disfigurement of the pupil should have been at least considered for an award but Dr. Striplin considered only extreme disfigurements as meriting an award for disfigurement. Claimant has additionally proven by clear and convincing evidence that Dr. Striplin committed an error in his interpretation of the *AMA Guides* as credibly testified by Dr. Smith.

C. Permanent partial disability benefits

Once the DIME's rating has been overcome in any respect, the ALJ is to calculate the claimant's impairment rating based upon the preponderance of the evidence. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1151, 1153 (Colo. App. 2003) (once the DIME is overcome "the ALJ was free to consider the other medical evidence concerning claimant's permanent medical impairment"); *Paredes v. ABM Industries,* W.C. No. 4-862-312 (April 14, 2014*); DeLeon v. Whole Foods Market,* W.C. No 4-600-477 (November 16, 2006); *Garlets v. Memorial Hospital*, W.C. No. 4-336-566 (September 5, 2001). *Destination Maternity v. Burren*, 2020 CO 41, at ¶ 28, 463 P.3d 266, at 274 (Colo. 2020).

Dr. Smith credibly opined that both Dr. Cebrian and the DIME physician committed critical errors in failing to consider the mTBI MTG to determine diagnosis in order to assess whether there is an impairment or not, and that Dr. Striplin failed to appropriately apply the *AMA Guides* correctly. Dr. Smith credibly opined that Claimant falls in the 10 to 25 percent of patients with mTBI, as the MTG specify, he continues to have complications related to the mTBI and he has a complex headache problem, specifically postconcussive migraine headaches, associated with his mTBI injury.

Dr. Smith credibly opined that when looking at impairment under the *AMA Guides*, you rate the sequelae of diagnosis, not the diagnosis, because, it is not the mTBI in and of itself that causes the impairment, but the consequences that continue to affect the Claimant that causes the need to address impairment. As found and concluded by this ALJ, the DIME physician committed a critical error in misapplying the MTG and *AMA Guides.* Claimant has proven by a preponderance of the evidence that Claimant has impairments of the visual field, causing a 24% whole person impairment as agreed upon by all providers who considered Claimant for a rating. Dr. Smith also credibly testified, which was supported by Drs. Roe (Respondent IME) and Dr. Orent (Claimant IME) that Claimant has a cosmetic defect, which entitles him to a 2% whole person impairment in accordance with the *AMA Guides* pursuant to Sec. 8.0 and 8.6. These combine for a 26% whole person impairment of the visual system.

Next, Claimant has ongoing postconcussive migraine headaches due the mTBI, vertigo and a nonreactive pupil, all of which cause impairments to the Claimant's activities of daily living. Dr. Smith credibly testified that there were three different and distinct impairment ratings in this regard. She assessed that the paroxysmal positional vertigo could be rated both under The Ear, Nose, Throat and Related Structures section of the *AMA Guides* (Chapter 9, Sec. 9.1C) or under Chapter 4, under The Nervous System. She made a rational decision to rate it under the nervous system of the brain because then she could select whether the vertigo or the postconcussive headaches impairment would be included in the rating, as only one of them could be added to the final impairment rating. In this case she assessed that the vertigo caused a 10% whole person impairment. She assessed that the postconcussive migraine headaches caused a greater impact on Claimant's activities of daily living, and assessed a 17% whole person impairment. As the *AMA Guides*, under Sec. 4.1a states that only the largest of the impairment should be included in the impairment, Dr. Smith combined the 17% whole person impairment to the visual system's 26% whole person impairment to obtain a 39% whole person impairment. This is impairment rating is credible and persuasive. Claimant has proven by a preponderance of the evidence that the 39% whole person impairment rating is appropriate in this matter.

Claimant is asserting that the amount of impairment to be assigned for the nonreactive pupil condition should be added to the prior impairments. Dr. Smith testified that Claimant was entitled to an additional 10% whole person impairment due to the nonreactive pupil impairment, which caused impairments in daily living. However, while Claimant showed by clear and convincing evidence that Dr. Striplin failed to appropriately apply the *AMA Guides* in this regard, Claimant failed to show how the activities of daily living which were affected by the paroxysmal positional vertigo, migraine headaches and the nonreactive pupil were different. Claimant testified that headaches caused by infiltration of light were affecting his ability to use a computer, perform outdoor activities and engage in social activities but this is no different from the activities interrupted by the migraine headaches and the vertigo. Both Dr. Smith and Dr. Cebrian credibly testified that both the *AMA Guides* and the Level II accreditation course materials indicated that rating physicians needed to be cautious about duplicative impairment ratings and not overlapping the ratings affecting another medical condition. And while this ALJ agrees that Dr. Smith applied the *AMA Guides* correctly by considering the nonreactive pupil under Sec. 8.0 of Chapter 8, and the paroxysmal positional vertigo under Chapter 4, providing a rating for both of them, there is no clear guideline or detailed list of which activities of daily living are affected by each of the three impairments. Therefore, Claimant has failed to show by a preponderance of the evidence that Claimant is entitled to the additional impairment for the nonreactive pupil.

D. Reasonably necessary and related medical benefits.

The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301, C.R.S. See *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986).

Section 8-42-101(1)(a), C.R.S., provides that Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Snyder v. Industrial Claim Appeals Office*, *supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *In re Claim of Foust*, I.C.A.O, WC, 5-113-596 (COWC October 21, 2020). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover* v. *Indus. Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc*., 77 P.3d 863 (Colo. App. 2003). The claimant must prove entitlement to post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

Claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities. See *Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 448 (1949); *Abeyta v. Wal-Mart Stores*, W.C. No. 4-669-654 (January 28, 2008). Expert medical opinion is not needed to prove causation where circumstantial evidence supports an inference of a causal relationship between the injury and the claimant's condition. *Savio House v. Dennis,* 665 P.2d 141 (Colo. App. 1983). Where conflicting expert opinion is presented, it is for the ALJ as fact finder to resolve the conflict. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). Further, when expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); *Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992).

It is appropriate for an ALJ to consider the guidelines while weighing evidence, but the MTGs are not definitive. *Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); *aff'd Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication); *Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008). See also Sec. 8-43-Concerning the issue presented, the MTG's indicate that "[t]here is some evidence that the ALJ may decide the weight to be assigned the provisions of the *Guidelines* upon consideration of the totality of the evidence. See *Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006).

Respondents admitted by Final Admission of Liability dated May 6, 2020 with a general award of medical benefits that are reasonably necessary and related to the claim after the maximum medical improvement determination. However, as of the date of the hearing, Respondents alleged that the medical care that Claimant is currently receiving from his ATP for the postconcussive headaches and nonreactive pupil impairment is no longer reasonable, necessary or related to the September 1, 2017 admitted injury. Here, given that Claimant has shown by clear and convincing evidence that the DIME physician’s causation analysis of the mTBI was incorrect and that the mTBI and its sequelae are proximally caused by the work related trauma of September 1, 2017, it must be determined whether the ongoing medical care for the headaches and migraines is reasonably necessary and related to the injury.

Claimant has had ongoing care by the neurology department at UCHealth, under Dr. Martin, including the follow up evaluations and prescriptions such as Gabapentin, which have reduced the degree and amount of the ongoing migraine headaches. Dr. Smith noted in her January 28, 2020 report that Claimant gets “sick headaches” associated with nausea approximately 4 times per week, yet at the time of MMI on April 1, 2020 and of the hearing Claimant’s migraines were reduced to only once every week or every other week. Dr. Smith credibly testified that Claimant requires the ongoing care for the mTBI and the frequent ongoing headaches. Claimant has shown by a preponderance of the evidence that the ongoing care for the postconcussive migraine headaches as well as headaches for the nonreactive pupil is reasonably necessary and related to the September 1, 2017 work trauma.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant has overcome Dr. Striplin’s opinion by clear and convincing evidence. Claimant’s postconcussive migraine headaches are related to the admitted and compensable workers’ compensation injuries caused by the traumatic brain injury of September 1, 2017.

2. Respondents shall pay Claimant the permanent impairment rating of 39% whole person related to the loss of the visual field, cosmetic deformity and all neurological disorders related to the September 1, 2017 admitted injury.

3. Respondents shall be entitled to assert any lien as specified by law.

4. Respondents shall pay for all reasonable, necessary and related medical treatment for Claimant’s headaches both due to the mild traumatic brain injury postconcussive syndrome and the nonreactive pupil as outlined and prescribed by the authorized treating physician, Cathy Smith, M.D.

5. Respondents shall pay Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts due, which were not paid when due.

6. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 7th day of December, 2021.

Denver, CO 80203

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that his claim should be reopened on the basis of fraud or mutual mistake.

In his July 20, 2021 Application for Hearing, the claimant also endorsed compensability, disfigurement, and permanent total disability (PTD) benefits. At hearing, the parties agreed to hold those additional issues in abeyance pending the resolution of the claimant's request to reopen his claim.

FINDINGS OF FACT

1. On July 5, 2014, the claimant was injured at work while employed with the employer. The respondents admitted liability for July 5, 2014 injury.

2. During his claim, the claimant attended a Division sponsored independent medical examination (DIME) with Dr. Shimon Blau. The body parts Dr. Blau was to address during the DIME process were the claimant's neck and bilateral shoulders. In his DIME report, Dr. Blau indicated that the claimant reached maximum medical improvement (MMI) on September 25, 2015. Dr. Blau assessed permanent impairment of 10 percent for the claimant's left upper extremity. Dr. Blau noted that the claimant was evaluated by three different orthopedic surgeons that agreed that surgery was not warranted. In addition, Dr. Blau opined that other pain symptoms the claimant had, including those in his neck, were not related to the claimant's work injury.

3. On March 21, 2016, the respondents filed an Amended Final Admission of Liability (FAL). In that FAL, the respondents relied upon Dr. Blau's report and admitted for the 10 percent impairment rating for the claimant's left upper extremity.

4. On April 8, 2016, the claimant filed an objection to the FAL. Thereafter, the parties agreed to a full and final settlement. The settlement was approved by the Director of the Division of Workers' Compensation on December 21, 2016.

5. Paragraph 4 of the Settlement Agreement provides: "[t]he parties stipulate and agree that this claim will never be reopened except on the grounds of fraud or mutual mistake of material fact."

6. Paragraph 6 of the Settlement Agreement provides:

> Claimant realizes that there may be unknown injuries, conditions, diseases or disabilities as a consequence of these alleged injuries or occupational diseases; including the possibility of a worsening of the conditions, In return for the money paid or other consideration provided in this settlement, Claimant rejects, waives and FOREVER gives up the right to make any kind

> of claim for workers' compensation benefits against Respondents for any such unknown injuries, conditions, diseases, or disabilities resulting from the injuries or occupational diseases, whether or not admitted, that are the subject of this settlement, The Claimant and Respondents agree that this settlement, when approved by the Division of Workers' Compensation or by an administrative law judge from the Office of Administrative Courts, ends FOREVER the Claimant's right to receive any further workers' compensation money and benefits even if the Claimant later feels that Claimant made a mistake in settling this matter or later regrets having settled.

7. On July 20, 2021, the claimant filed the Application of Hearing that has resulted in the present hearing.

8. The claimant asserts that prior to the July 5, 2014 injury, he was injured multiple times while working for the employer. The claimant also asserts that these prior injuries were to his neck, back, and legs. The claimant testified that the employer knew about these prior injuries.

9. The claimant also testified that prior to the settlement, Dr. Evans opined that in addition to his shoulder, the claimant’s neck was injured. The claimant asserts that his attorney knew of this opinion, but proceeded with the settlement without addressing it. Finally, the claimant asserts that his attorney forced him to enter into the settlement.

10. The ALJ has considered all evidence and testimony presented at hearing and finds that the claimant has failed to demonstrate that it is more likely than not that there was fraud or mutual mistake in his case. While the ALJ understands the claimant’s disagreement of the body parties included in his claim, the DIME physician, Dr. Blau, specifically addressed the issue of the claimant’s neck complaints. It was Dr. Blau’s opinion that the claimant’s neck symptoms were not related to the July 5, 2014 work injury. Any dispute regarding the opinions of the DIME physician was resolved when the parties entered into a full and final settlement. Furthermore, the ALJ is not persuaded that the claimant was forced or coerced into entering the settlement in this case. The ALJ finds no persuasive evidence of fraud or mutual mistake in this matter.

CONCLUSIONS OF LAW

1. The purpose of the Workers’ Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Section 8-43-303(1) provides that "any award" may be reopened within six years after the date of injury "on the ground of fraud, an overpayment, an error, mistake, or a change in condition." Reopening for "mistake" can be based on a mistake of law or fact. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). The ALJ has wide discretion to determine whether an error or mistake has occurred that justifies reopening the claim. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Travelers Ins. Co. v. Industrial Commission*, 646 P.2d 399 (Colo. 1981).

5. The doctrine of mutual mistake has three primary criteria. *England v. Propane*, 395 P.3d 766, 771 (Colo. 2017). First, the mistake must be mutual, meaning "both parties must share the same [factual] misconception." *Cary v. Chevron*, 867 P.2d 117, 118 (Colo.App. 1993). Second, the mistaken fact must be material, meaning that it is a fact that goes to "the very basis of the contract." In other words, the mistake of fact must relate to a material aspect of the contract such that, but for the mistake, the party seeking rescission would not have entered the contract. *England*, 395 P.3d at 771. A material fact is one which relates to a basic assumption on which the contract was made. It must have a material effect on the agreed upon exchange, and the mistake must not be one concerning which the party seeking relief bears the risk. *In re Claim of Matus*, WC 4-740-062-01 (ICAO, Mar. 20, 2018). Third, the mistaken fact must be a past or present existing one, as opposed to a fact that develops in the future. *England*, 395 P.3d at 771.

6. Where the evidence is subject to more than one interpretation, the existence of fraud is a factual determination for the ALJ. *In re Arczynski,* WC 4-156-147 (ICAO, Dec. 15, 2005).

7. Here, the claimant entered into a full and final settlement regarding his July 5, 2014 injury. Pursuant to Section 8-73-303, C.R.S., the only options available to the claimant to reopen his claim are fraud or mutual mistake. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that his claim should be reopened on the basis of fraud or mutual mistake. As noted above, the ALJ finds no persuasive evidence of fraud or mutual mistake in this matter.

ORDER

It is therefore ordered:

1. The claimant's request to reopen his claim is denied and dismissed.

2. All remaining endorsed issues are dismissed as moot.

Dated this 9th day of December 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-113-514-002

ISSUES

1. Whether Respondents established by a preponderance of the evidence grounds to reopen Claimant's case and withdraw Respondents' December 9, 2020, Final Admission of Liability ("FAL") based on fraud.

2. Whether Respondents established by a preponderance of the evidence grounds for repayment of temporary total disability ("TTD") and temporary partial ("TPD") disability benefits and medical benefits Insurer paid to Claimant and third-parties after November 3, 2019, based upon Claimant's alleged fraudulent misrepresentations.

FINDINGS OF FACT

1. Claimant sustained an admitted injury on July 16, 2019, when she fell in the course of her employment with Employer. Bystanders reported to emergency medical personnel that Claimant struck the back of her head on the floor. It was also reported that after being helped to a chair, Claimant slumped and lost consciousness. Upon arrival, EMS personnel indicated Claimant responded easily to stimuli and woke easily. (Ex. Y).

2. Claimant was taken to the Swedish Medical Center emergency department, where she reported pain in her head, neck, back and left hip. No other complaints were noted. Imaging studies of Claimant's head, cervical spine, lumbosacral spine, left hip, and chest were performed. The ER Physician noted that Claimant's imaging studies did not show evidence of injury. (Ex. RR & JJ).

3. The following day, Claimant went to SCL Health and saw Nicole Hoffman, D.O. Claimant reported to Dr. Hoffman that she had fallen and struck her head rendering her unconscious for 6-7 minutes, and that landed so her left arm was beneath her. Claimant reported pain in her left lower back, radiating to the left leg, occipital headaches, bruising and on her arms, legs and left hip area back pain when she walked or stood, and tenderness in the neck and shoulder. Dr. Hoffman assigned work restrictions and scheduled Claimant to see Heip Ritzer, M.D., the following week. (Ex. FF). Thereafter, Dr. Ritzer was Claimant's authorized treating physician (ATP).

4. Claimant saw Dr. Ritzer on July 23, 2019, and reported dizziness, headache, neck pain, upper back numbness, lower back pain, left arm pain, including the shoulder, elbow, wrist. and hand, left hip pain, left knee pain, and left foot swelling. Claimant also complained of blurred vision. (Ex. FF).

5. From July 17, 2019 until July 23, 2019, Claimant was subject to Dr. Hoffman's modified work restrictions of no lifting over 10 pounds, no crawling, kneeling, squatting, or climbing. (Ex. FF, p. 204). On July 23, 2019, Dr. Ritzer modified Claimant's work

restrictions and indicated Claimant was unable to work. (Ex. FF, p. 214). The total work restriction remained in place until October 8, 2019, after which time Dr. Ritzer imposed work restrictions of including a ten-pound lifting, carrying, and pushing restriction, no reaching overhead, and no bending/twisting of the back. Additionally, Dr. Ritzer limited Claimant to 50% seated duty. (Ex. FF, p. 293). These restrictions remained in place until January 16, 2020, when Dr. Ritzer returned Claimant to full duty. (Ex. FF, p. 318 & 328).

6. Between August 1, 2019 and October 8, 2019, Claimant saw Dr. Ritzer six times. At these visits, Claimant reported various symptoms including dizziness and lightheadedness when standing, significant difficulty turning her head, headaches, neck pain, back pain, memory deficits, confusion, left shoulder pain, and left elbow pain. (Ex. FF).

7. Between August 12, 2019 and October 7, 2019, Claimant saw Sean Griggs, M.D., for left shoulder pain on referral from Dr. Ritzer. Dr. Griggs noted that Claimant had a left shoulder MRI that showed a labral injury and partial rotator cuff tear, which could be treated nonoperatively. Claimant also complained of right shoulder and neck pain, and left-hand numbness. At her October 7, 2018 visit, Claimant reported she was continuing to have pain in the paraspinal muscles and numbness and tingling in her left middle finger.

8. On August 20, 2019, Respondents filed a General Admission of Liability admitting for medical benefits and temporary total disability benefits beginning July 17, 2019, with an average weekly wage of $510.00.(Ex. J).

9. Between August 23, 2019 and October 28, 2019, Claimant saw Yusuke Wakeshima, M.D, at Mile High Sports and Rehabilitation Medicine, on referral from Dr. Ritzer. During this time, Claimant reported experiencing headaches, neck pain, upper back pain, bilateral shoulder pain, bilateral clavicular region pain, left rib pain and upper lumbar pain, all of which she attributed to her July 16, 2019 injury. Additionally, Claimant reported blurred vision, balance problems, and numbness in her left middle finger. At Claimant's October 28, 2019 visit, she reported he was continuing to experience pain in the left lower periscapular area and lower thoracic spine, and continued memory issues. Claimant reported to Dr. Wakeshima that she was no longer having issues with neck pain, lower back pain, clavicular pain, or numbness. (Ex. KK).

10. In October 2019, Claimant saw David Mirich, Ph.D., at Paths Center for a neuropsychological evaluation which took place over three days. Claimant reported headaches, insomnia, depression, anxiety, anger, confusion and forgetfulness, problems with thinking lack of concentration and fatigue. Dr. Mirich note that, based on Claimant's medical records, she appeared to be getting worse since her work accident.[1] Dr. Mirich diagnosed Claimant with a mild neurocognitive disorder due to traumatic brain injury, adjustment disorder with depression, and multiple physical problems. (Ex. SS).

[1] In his report, Dr. Mirich indicates that Claimant's condition is related to an "MVC" - typically an abbreviation for Motor Vehicle Collision. The context of the report, however, indicates that Dr. Mirich used the abbreviation to reference Claimant's July 16, 2019 work incident.

11. On November 3, 2019, Respondents conducted video surveillance of Claimant while she was at the 4G Family Laundry (hereinafter the "laundromat"). The surveillance was conducted by Coburn Investigative Agency and place over the course of 10 ½ hours. (Ex. NN). Respondents' exhibit NN includes three minutes of video from November 3, 2019, during which Claimant performed multiple tasks throughout the laundromat inconsistent with her then-existing work restrictions. Claimant climbed on top of washing machines, lifted a partially full laundry basket with her right arm extended above her head, wiped surfaces with a rag with both hands, removed laundry from a washer or dryer, mopped the floor, swept, and use her left arm above her head to hold a metal top panel of a washer or dryer. Claimant was able to perform these tasks without apparent difficulty. (Ex. NN). At hearing, Claimant testified that she is the person shown in the video.

12. On November 23 and 24, 2019, Respondents again conducted video surveillance on Claimant. The video from these dates shows Claimant again climbing on washing machines several times, bending, kneeling on the floor, lifting multiple full laundry baskets, mopping floors, and walking around the laundromat, all without apparent difficulty. (Ex. NN).

13. Respondents also conducted video surveillance of Claimant on February 21, 2020. The video from that date shows Claimant climbing on washing machines, carrying a large bag of trash with her right arm, and climbing and carrying a step-stool to access the top of washers or dryers, again, all without apparent difficulty. (Ex. NN).

14. Respondents also conducted video surveillance of Claimant on multiple other dates between November 3, 2019 and February 21, 2020. The video for these dates was not offered or admitted into evidence. The investigation report describes the videos as showing Claimant performing activities similar to those demonstrated on the admitted videos. (Ex. NN).

15. The activities Claimant performed at the laundromat, as demonstrated by the admitted surveillance videos, were inconsistent with the significant reports of pain, and functional limitations she described to her health care providers, and demonstrated that the work restrictions imposed by her health care providers were unnecessary.

16. After November 3, 2019, Claimant continued to see her health care providers, including Dr. Ritzer, Dr. Wakeshima, Dr. Griggs and Haley Burke, M.D. At visits with these providers, Claimant complained of numerous issues, including significant back pain, neck pain, shoulder pain, limitations of shoulder movement, numbness in her hands, and balance issues. Claimant's representations to these health care providers were inconsistent with the conduct and activities shown on surveillance videos.

17. On November 7, 2019, Claimant saw Dr. Ritzer, and an interpreter was used during the visit. Claimant reported worsening back pain at a level of 6/10. She also reported intermittent memory issues. Claimant reported she had returned to modified work duty. Dr. Ritzer noted Claimant was not complying with her restrictions "at work" and was standing most of the day. (The ALJ infers that Dr. Ritzer's reference to "at work" is a

reference to Claimant's employment with Employer, given that Claimant had not disclosed her work at the laundromat.)

18. On November 14, 2019, Claimant saw Dr. Griggs. Claimant complained of thoracic spine pain, pain in the neck and trapezius, ongoing numbness in her hand, and neck pain radiating to her arm. Claimant reported working at modified duty. Dr. Griggs noted Claimant had been referred for an EMG nerve conduction study due to complaints of ongoing numbness and tingling, and that the study was read as normal. Dr. Griggs' diagnosis was "left shoulder sprain with MRI findings inconsistent with her present complaints of neck and thoracic spine pain." He indicated he would not recommend surgical management of her shoulder. (Ex. AA).

19. John H[Redacted], a senior investigator for Insurer, testified that Claimant's claims adjuster, Zoraida J[Redacted], assigned him to investigate allegations that Claimant was working while collecting TTD payments from Insurer. On December 8, 2019, Mr. H[Redacted] visited the laundromat. Mr. H[Redacted] credibly testified that he observed Claimant for approximately 10-15 minutes and saw her climb on top of numerous machines, pull and push laundry baskets, walk around, check machines and do some of the same things observed on the November 3, 2019 surveillance video. Mr. H[Redacted] then spoke with Claimant. Claimant told Mr. H[Redacted] she worked at the laundromat, and that she could wash, dry and fold laundry for him at the price of $10 per level laundry basket, and $10 per item for larger items such as blankets. After Mr. H[Redacted] identified himself, Claimant indicated she was not paid for her work at the laundromat, and had only worked there one time. Mr. H[Redacted] provided Claimant with a "C-500 form," (in both Spanish and English) used by Insurer to confirm whether an injured worker had returned to work. Claimant signed the form and provided it to Mr. H[Redacted], who provided the form to Ms. J[Redacted].

20. Ms. J[Redacted] testified she became suspicious that Claimant was working when before November 3, 2019, because Claimant had informed Insurer she could not be scheduled for appointments on certain days, when Insurer knew Claimant was not working for Employer. As a result, Insurer began its investigation and determined Claimant was working at the laundromat. Ms. J[Redacted] also testified she had not received documentation or verbal confirmation from Claimant that Claimant earned money during the time Insurer paid temporary disability benefits. Ms. J[Redacted] testified that she did not believe Insurer could terminate Claimant's medical benefits or temporary disability benefits until obtaining an opinion regarding MMI and permanent impairment from an ATP or DIME physician, and could not file a final admission of liability until after Dr. Dillon's DIME report.

21. On December 9, 2019, Claimant saw Haley Burke, M.D., an interventional neurologist, on referral from Dr. Wakeshima. Dr. Burke's notes indicated that surveillance demonstrated that Claimant had a second job. Claimant denied having a second job to Dr. Burke. Dr. Burke noted that Claimant has "no neurologic necessity for work restrictions." Dr. Burke diagnosed Claimant with intercostal neuralgia and post-concussion syndrome. She recommended an intercostal nerve block. (Ex. KK).

22. On December 11, 2019, Claimant saw Dr. Wakeshima, who noted that video surveillance had shown Claimant performing activities outside her work restrictions, but that he had not reviewed the video. Claimant reported her symptoms had decreased in some respects, but also reported current pain levels of 6/10 for her left posterior rib, left neck, left upper back, and intermittent left arm numbness. She indicated her low back pain and right shoulder pain had resolved, and headaches had decreased. Claimant also claimed she did not work at the laundromat, but that she was "helping her son at that laundromat." She further reported she went to the laundromat to "sit and walk around." (Ex. KK).

23. On December 12, 2019, Claimant saw Dr. Ritzer. Claimant reported a pain level of 7/10 with pain in the mid back, left shoulder with paresthesias into the left hand. Dr. Ritzer noted she was unable to view Claimant's surveillance video, and would wait for Dr. Wakeshima's recommendations after he reviewed the video. Claimant again reported that she was helping her son at the laundromat. (Ex. FF).

24. Claimant saw Dr. Ritzer again on January 16, 2020, reporting constant pain in her left shoulder and left back, with numbness in her left hand, and headaches with light sensitivity. Dr. Ritzer opined that Claimant was at maximum medical improvement, and released Claimant to full wok duty without restrictions. (Ex. FF).

25. On December 16, 2019, Respondents filed a second General Admission of Liability, admitting for medical benefits, temporary total disability benefits from July 17, 2019 through November 7, 2019 in the amount of $3,192.00, and for temporary partial disability benefits beginning November 8, 2019, based on Claimant's release to modified duty. (Ex. J).

26. On December 17, 2019, David Orgel, M.D., a physician advisor for Insurer provided a report to Mr. J[Redacted]. Dr. Orgel reviewed videos of Claimant from November 2, 8, and 10, 2019, showing Claimant performing various tasks, as described above. Dr. Orgel indicated it was his understanding Claimant was working 12 hours per day, 4 days per week at the laundromat. Dr. Orgel stated: "It is clear that this case should be closed. She either has a factitious disorder and/or malingering. There is no evidence from the video to suggest any functional disturbance at all." He recommended that Claimant's designated provider (Dr. Ritzer) and Dr. Wakeshima "close her claim as well and not provide any additional treatment." (Ex. EE).

27. On December 24, 2019, Respondents filed a third General Admission of Liability, updating the temporary total disability payments made from July 17, 2019 through November 7, 2019 to $5,537.14, without revising Respondents' admission of TPD benefits. (Ex. J).

28. On January 14, 2020, Claimant saw Lupe Ledezma, Ph.D., for a psychological evaluation. Dr. Ledezma diagnosed Claimant with adjustment disorder with adjustment disorder with mixed anxiety and depressed mood, psychological factors affecting other medical conditions and mild neurocognitive disorder. Claimant saw Dr. Ledezma eleven times between January 14, 2020 and June 4, 2020. During these visits, in addition to

psychological issues, Claimant continued to report ongoing pain in her shoulder and back, without significant changes in pain levels or physical functioning. (Ex. QQ).

29. On January 15, 2020, Dr. Wakeshima saw Claimant and noted the video surveillance demonstrated Claimant performing increased activities and performing increased activities. He therefore placed her at maximum medical improvement for her neck, upper back and shoulder. He noted that based on the video, Claimant should be able to return to work without restrictions and no further treatment was indicated for her left shoulder. He indicated the video surveillance did not permit assessment of Claimant's mental and cognitive function and that he could not comment on whether Claimant was maximum medical improvement (MMI) with respect to her psychiatric/psychological condition. He indicated Claimant should continue treatment with Dr. Ledezma and also recommended additional maintenance care to include acupuncture. (Ex. EE).

30. On January 23, 2020, Respondents filed a fourth GAL, terminating Claimants temporary partial disability benefits based on Dr. Ritzer's release to full duty on January 16, 2020. Respondents asserted a right to $454.86 for overpayment. (Ex. J).

31. On January 28, 2020, Dr. Wakeshima indicated he disagreed with Dr. Orgel's assessment of factitious disorder or malingering. However, he agreed Claimant was at MMI from a physical perspective and opined that psychological MMI was yet to be determined. Dr. Wakeshima argued that although the surveillance video did demonstrate Claimant performing activities outside her work restrictions, he did not observe the Claimant using her left arm "fully overhead [or] demonstrating full flexion or abduction of the left shoulder." Dr. Wakeshima also indicated that based on the Claimant's left shoulder MRI and her self-report that Claimant had limitations in flexion and abduction of her shoulder, she would warrant an impairment rating." (Ex. KK). Dr. Wakeshima continued to see Claimant approximately monthly until December 16, 2020.

32. On February 12, 2020, Insurer sent Dr. Ledezma a copy of the surveillance video, who addressed the video surveillance in her note on February 26, 2020. Dr. Ledezma indicated the video did not affect her diagnosis of adjustment disorder with mixed anxiety and depressed mood, psychological factors affecting other medical conditions and mild neurocognitive disorder. (Ex. QQ).

33. Between February 20, 2020, and May 8, 2020, Claimant saw Stephen Moe, M.D., for psychiatric evaluation. Claimant reported she expected her treatment to terminate due to the video surveillance. Dr. Moe opined that Claimant had depressive symptoms sufficient to detract from her quality of life and impacting her function, and that she would benefit from medication. His impression was that Claimant suffered from adjustment disorder with depression and anxiety and may benefit from anti-depressant medication, and prescribed Cymbalta. On May 8, 2020, Dr. Moe placed Claimant at MMI from a psychiatric perspective, and indicated he would assign a 3% whole person mental impairment rating. (Ex. DD).

34. On March 13, 2020, Claimant underwent an independent medical examination with Jeffrey Raschbacher, M.D. Claimant reported that she was "always in pain" but that pain

was alleviated by a pain patch. Claimant also reported shoulder pain, neck pain, left sided back pain, and numbness in her left arm. As part of his IME, Dr. Raschbacher reviewed a one-hour surveillance video from November 3, 2019 and November 8, 2019. Based on his observation, he indicated Claimant was able to use her upper extremities normally and spontaneously, without apparent discomfort on the video. Based on his review of medical records, surveillance video, and examination of Claimant, Dr. Raschbacher opined that Claimant should not receive an impairment rating for her shoulder. He opined that it was not likely Claimant was accurately reporting her symptomatology, and that more likely there was no symptomatology present. He recommended case closure, and opined that Claimant was at MMI on July 16, 2019.

35. Respondents presented Dr. Raschbacher's testimony by deposition in lieu of live testimony. Dr. Raschbacher was admitted as an expert in occupational medicine. Dr. Raschbacher testified that there was no objective evidence that Claimant sustained an injury on July 16, 2019, and that Claimant's most accurate medical diagnosis was malingering. He also opined that Claimant did not require medical treatment because the purported need for treatment was based on subjective complaints, which he did not believe were truthful. (Ex. VV).

36. On July 7, 2020, the parties conducted a Samms conference with Dr. Griggs at which he reviewed video surveillance of Claimant. Dr. Griggs issued a report dated July 7, 2020 following the conference. In that report, he indicated that during each of his visits with Clamant, she showed significant guarding with any examination of the upper extremities and "would wince in pain [and] state that she had severe pain." He indicated Claimant complained she could not do normal activities during his examinations, and that she complained of pain using a computer to fill out paperwork. He stated Claimant's exams were not consistent with the shoulder pathology shown on her MRI.

37. Dr. Griggs opined that Claimant's presentation on the video surveillance was inconsistent with her presentation and symptoms described during his examinations. He noted that the videos demonstrated Claimant using her arm without any significant guarding or apprehension which was "completely inconsistent with her complaints." Dr. Griggs stated that the significant inconsistency between his examinations and Claimant's actions on the video "would lead me to be concerned that the diagnosis would be malingering." Based on his review of the video surveillance and his prior examinations of Claimant, Dr. Griggs opined that Claimant was at maximum medical improvement on November 3, 2019, that she had no permanent impairment, required no work restrictions and did not require maintenance care. (Ex. AA).

38. On August 5, 2020, Claimant saw Suzanne Kenneally, Psy.D., after being referred by Respondents' counsel for a neuropsychological assessment. The examination was conducted through an interpreter. Claimant now reported she did not lose consciousness following her July 16, 2019 injury. Claimant reported then-existing symptoms of left shoulder pain, neck pain, left leg pain, blurry vision, low back pain and ear issues. Claimant also reported cognitive symptoms including being confused in the emergency room following the incident and not recognizing her daughter. Dr. Kenneally noted that Claimant's performance on neuropsychological testing which included initially failing tests

and then improving on subsequent trials was consistent with depression rather than indicative of intentionally poor effort. (Ex. CC).

39. Dr. Kenneally found Claimant's psychological testing was valid and indicated a preoccupation with physical symptomatology and the translation of psychological distress into physical and psychological symptoms. She also noted that Claimant was at risk of poor recover due to erratic compliance with medical regimens. Neuropsychological testing demonstrated no permanent cognitive impairment from Claimant's work injury. Dr. Kenneally diagnosed Claimant with somatic symptoms disorder, generalized anxiety disorder, and sleep disorder. Dr. Kenneally opined that Claimant's then-current psychological stats was not attributable to the July 16, 2019 work injury, and appeared to be chronic based on personal, situational, and psychological factors. (Ex. CC).

40. Throughout Claimant's claim, Insurer assigned a nurse case manager to Claimant's claim. The nurse case manager, Teresa Kahler, RN, attended Claimant's medical visits with Claimant, and prepared detailed, monthly reports which she submitted to Insurer. Ms. Kahler's reports describe Claimant's interactions with her health care providers, including Claimant's reports of symptoms and limitations, and Ms. Kahler's observations of Claimant. In Ms. Kahler's November 15, 2019 report, she described how the Claimant's demeanor changed significantly during an appointment with Dr. Wakeshima on October 28, 2019. Ms. Kahler reported that "once in the exam room with [Dr. Wakeshima], [Claimant's] demeanor changed so that she breathed differently, as if in pain; sighing frequently, sitting on her right buttock only, stating that it hurts to sit on the left buttock (she appeared to be sitting on both sitting bones in the waiting room." (Ex. LL, p. 555).

41. On September 15, 2020, Claimant underwent a Division Independent Medical Examination (DIME) with Jade Dillon, M.D., which was to address Claimant's left shoulder and neuropsychological issues. On examination, Dr. Dillon noted that Claimant moved slowly, and appeared to be in pain with frequent grimacing and limitation of motion. Dr. Dillon opined that Claimant had complaints of severe left shoulder pain and left arm dysfunction without any significant underlying causative pathology. She noted that although Claimant had a labral tear on MRI, it was not necessarily the cause of her pain or dysfunction. She determined Claimant did not have a ratable shoulder condition or mental/psychological impairment. Dr. Dillon noted that although she did not review Claimant's video surveillance, reports of multiple providers made "it obvious that [Claimant] was using her upper extremities without evidence difficulty and certainly in a manner completely inconsistent with what she was reporting to medical providers." Based on her examination of review of records, Dr. Dillon placed Claimant at MMI effective November 3, 2019, without maintenance care or work restrictions. (Ex. F).

42. On November 3, 2020, Dr. Dillon performed a follow-up DIME examination, which included evaluation of cervical, thoracic and lumbar spine and traumatic brain injury, which were not addressed in the previous DIME examination. Dr. Dillon found that Claimant' symptoms were "well out of proportion" to the minimal objective finding, nonspecific complaints of memory and balance issues. She opined that there was no evidence that her symptoms were causally related to Claimant's work injury, and assigned

no permanent impairment. Dr. Dillon reiterated her MMI date of November 3, 2019. (Ex. H).

43. On December 9, 2020, Respondents filed a Final Admission of Liability admitting for medical benefits to date of $38,842.79, TTD of $5,294.29, denying liability for permanent partial disability benefits and post-MMI medical treatment, and asserting an overpayment of $2,629.71. In the FAL, Respondents noted that on November 11, 2020, DIME physician Dr. Dillon placed Claimant at MMI effective November 3, 2019, with no permanent impairment. (Ex. J).

44. On April 27, 2021, Respondents filed the AFH in the present matter.

45. After November 3, 2019, Claimant continued to receive medical treatment from multiple providers. During this time, Insurer paid for transportation and interpretation services in conjunction with Claimant's medical treatment. Ms. J[Redacted] testified Insurer paid $18,399.78 for Claimant's medical benefits after November 3, 2019. (Ex. X). Between July 17, 2019 and November 2, 2019, Insurer paid Claimant $5,294.29 in TTD benefits. After November 3, 2019, Insurer paid Claimant an additional $2,629.71 TTD and TPD benefits.

46. Claimant testified at hearing that she did perform services at the laundromat, and that Mr. H[Redacted] accurately testified as to their conversation on December 8, 2019. Claimant. Claimant testified that she had spoken with the owner of the laundromat and that he had told her how much to charge. At the same time, Claimant testified that she was working at the laundromat, but asserted that she did not collect any money for the work performed. Claimant's testimony that she did not receive money for working at the laundromat was not credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Withdrawal Of Admission For Fraud Or Overpayment

After an admission of liability has been filed, an insurer may not unilaterally withdraw its admission, but rather must continue to make payments consistent with admitted liability until the ALJ enters an order allowing revocation in full or in part. § 8-43-203(2)(d), C.R.S.; *H.L.J. Mgmt. v. Kim*, 804 P.2d 250 (Colo. App. 1990). Once a case has been closed, the issues resolved by a Final Admission of Liability are not subject to litigation unless they are reopened pursuant to § 8-43-203 (2)(d), C.R.S. *See also Berg v. Indus. Claim Appeals Office*, 128 P.3d 270, 272 (Colo. App. 2005); *Webster v. Czarnowski Display Serv., Inc*., W.C. No. 5-009-761-03 (ICAO, Feb. 4, 2019). Section 8-43-303(1) C.R.S., allows an ALJ to reopen any award within six years of the date of injury on a several grounds, including fraud and overpayment. *Heinicke v. Indus. Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008). The ALJ has authority to remedy either fraud or overpayment by requiring a claimant to repay benefits already received. *Cody v. ICAO,* 940 P.2d 1042 (Colo. App. 1996). In the case of medical benefits paid to third-parties, the ALJ possesses independent authority to remedy fraud even by ordering repayment by Claimant to Insurer for all medical benefits paid to third parties as a result of Claimant's fraudulent misrepresentations. *Stroman v. Southway Services, Inc.,* W.C. No. 4-36-989 (ICAO August 31, 1999).

The power to reopen is permissive, and is therefore committed to the ALJ's sound discretion. Further, the party seeking to reopen bears the burden of proof to establish grounds for reopening. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Barker v. Poudre School Dist.*, W.C. No. 4-750-735 (ICAO, Mar. 7, 2012).

Respondents, as the party seeking to withdraw their FAL and obtain repayment, bear the burden of proving the elements of fraud by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The elements of fraud or material misrepresentation are well-established in Colorado law. The elements are: (1) A false representation of a material existing fact, or a representation as to a material fact with reckless disregard of its truth; or concealment of a material existing fact; (2) Knowledge on the part of one making the representation that it is false; (3) Ignorance on the part of the one to whom the representation is made, or the fact concealed, of the falsity of the representation or the existence of the fact; (4) Making of the representation or concealment of the fact with the intent that it be acted upon; (5) Action based on the representation or concealment resulting in damage. *Arczynski v. Club Mediterranee of Colorado, Inc.*, W.C. No. 4-156-147 (ICAO Dec. 15, 2005), *citing Morrison v. Goodspeed*, 68 P.2d 458, 462 (Colo. 1937). "Where the evidence is subject to more than one interpretation, the existence of fraud is a factual issue for resolution by the ALJ." *Arczynski, supra.*

Overpayment Of Temporary Disability Benefits

The ALJ finds that Respondents have established by a preponderance of the evidence that Claimant received an overpayment of temporary disability benefits in the amount of $2,629.71, paid between November 3, 2019 and January 20, 2020, and that Insurer is entitled to repayment. "Overpayment" means money received by a Claimant that exceed the amount that should have been paid, of which the Claimant was not entitled to receive. § 8-40-201 (15.5) C.R.S. Under § 8-42-105 (3), and 8-42-106 (2), C.R.S., temporary disability benefits terminate when a claimant reaches maximum medical improvement. In her October 5, 2020 report, the DIME physician, Dr. Dillon placed Claimant at maximum medical improvement effective November 3, 2019. Respondents had paid Claimant temporary disability benefits from November 3, 2019 through January 21, 2020, and terminated the benefits based on Dr. Ritzer's release to full duty on January 16, 2020. From November 3, 2019 to January 16, 2020, Respondents paid Claimant $2,629.71 in benefits. Because these benefits were paid after Claimant reached MMI when she was not entitled to receive temporary disability benefits, Respondents have established an overpayment, and Insurer is entitled to repayment of those benefits. Claimant is ordered to repay to Insurer for such benefits in the amount of $2,629.71.

Recovery Of Temporary Disability Benefits Paid Between July 17, 2019 and November 2, 2019

Respondents also seek repayment of temporary disability benefits paid between July 17, 2019 and November 2, 2019. During this period, Insurer paid claimant $5,294.29 in TTD benefits. Respondents contend Claimant fraudulently obtained such benefits by misrepresenting her employment status, or concealing from Respondents that she was working and earning income from working at the laundromat, and by fraudulently representing her ability to work.

Respondents have failed to establish by a preponderance of the evidence that Claimant fraudulently induced the payment of TTD benefits from July 17, 2019 to

November 2, 2019. No credible evidence was admitted indicating when or how often Claimant worked at the laundromat between July 17, 2019 and November 2, 2019, or the amount she earned during this time. The evidence established that Claimant informed Mr. H[Redacted] she charged $10 per load of laundry and $10 each for bulky items. Claimant's admitted average weekly wage was $510 per week, which would correspond to 51 load of laundry per week, or approximately 10 per day. Given that Claimant was filmed working at the laundromat on November 3, 2019, the ALJ finds it likely she worked at the laundromat at some point prior to November 3, 2019, and earned some income, prior to that date. Claimant's testimony that she was not paid for working at the laundromat is not credible. However, the evidence presented is insufficient to determine when Claimant worked prior to November 3, 2019, how often, and amounts earned during the relevant time period. Similarly, the evidence is insufficient to permit the ALJ to draw a reasonable inference as to the amounts earned or dates worked. Accordingly, Respondents have failed to establish by a preponderance of the evidence an entitlement to repayment for the period of July 17, 2019 to November 2, 2019.

Recovery Of Medical Benefits Paid After MMI

Respondents have failed to establish by a preponderance of the evidence that Claimant induced either Respondents' Final Admission of Liability or the payment of medical and other benefits by fraud. Respondents have established the first and second elements of Fraud, but have failed to establish the third element – ignorance on the part of the party to whom the representation was made. The evidence clearly establishes that Claimant made false representations of material fact or concealed material existing facts by materially misrepresenting her medical condition, symptoms, and functional abilities to Insurer and to Claimant's health care providers. The surveillance video demonstrates that Claimant was not experiencing the symptoms she reported to her medical providers. Claimant's ability to function was demonstrated by surveillance, and was markedly different than her presentation to providers and the representations made to providers regarding her condition. The ALJ finds that Claimant made these misrepresentations, or concealed her abilities knowingly.

However, neither Insurer nor Claimant's health care providers were ignorant of these facts after November 3, 2019. Insurer became aware that Claimant's reports of pain and limited functional ability were likely untrue by at least November 2019. Insurer conducted multiple days of surveillance beginning on November 3, 2019, during which Claimant was fully functional, in contrast to her representations to her providers. Insurer recognized that the video surveillance was inconsistent with Claimant's reports, and provided the surveillance to multiple health care providers beginning in December 2019. Respondents provided the video to Drs. Ritzer and Wakeshima in December 2019, and to Dr. Ledezma in February 2020, indicating that Insurer recognized the significance of the videos, and believed the evidence served as a basis for terminating or curtailing Claimant's medical benefits. Insurer conducted an internal review with Dr. Orgel who indicated Claimant's claim should be closed on December 17, 2019. In addition, Insurer assigned a nurse case manager to Claimant's claim, and received monthly reports which explain, in detail, Claimant's interactions with health care providers, ad her symptoms, behavior and demeanor both before and during provider visits. Thus, Insurer was, or should have been aware of what Claimant was reporting to her health care providers. Because Insurer was aware that Claimant's observed function on video surveillance was markedly inconsistent with Claimant's representations to her health care providers and Insurer's nurse case manager, the ALJ finds that Insurer was not ignorant that Claimant was either making material misrepresentations or concealing material facts.

Respondents contend, however, they could not close Claimant's claim or terminate benefits until a DIME was obtained. Respondents' position does not negate Insurer's knowledge. While it is accurate that Respondents could not unilaterally terminate Claimant's benefits or close her case, Respondents were not without recourse. The Act and WCRP permit Respondents to file with the Director motions for case closure and disputes regarding medical payment, and also authorize Respondents to file applications for hearing regarding any dispute or controversy under the Act. *See generally*, WRCP 7-1(A), 9-3 (A)(5) and (9), § 8-43-201, § 8-43-207(1) C.R.S. Thus, Respondents could have sought an order closing Claimant's case, or disputing her entitlement to medical benefits, Respondents elected not to avail themselves of those remedies. Instead, Insurer continued to pay benefits, and ultimately filed the December 9, 2020 Final Admission of Liability, with the knowledge that Claimant had materially misrepresented or concealed her condition since at least November 3, 2019.

Because Insurer was aware of Claimant's material misrepresentations and concealment, the ALJ concludes that, after November 3, 2019, Respondents' decision to pay benefits to and on behalf of Claimant were not induced by Claimant's misrepresentations and concealment. Because Respondents have failed to establish an essential element of fraud, Respondents have failed to establish grounds to withdraw its admission for medical benefits contained in the December 9, 2020 Final Admission of Liability.

Repayment Terms

In *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev'd on other grounds*, *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010), the Colorado Court of Appeals held that with regard to overpayments, the ALJ has discretion to fashion a remedy. Further, the ALJ has the authority to determine the terms of repayment and the ALJ's schedule for recoupment will not be disturbed absent an abuse of discretion. See *Louisiana Pacific Corp. v. Smith*, 881P.2d 456 (Colo. App. 1994). Claimant did not present credible evidence regarding her ability to repay. Because no credible evidence exists in the record from which the ALJ can determined whether any payment schedule is appropriate, the ALJ orders that Claimant shall repay Insurer $2,629.71 within 60 days of the date of this Order.

ORDER

It is therefore ordered that:

1. Respondents are entitled to recover temporary disability benefits after Claimant reached MMI. Claimant is ordered to

pay Respondents $2,629.71 within sixty days of the date of this order.

2. Respondents request to reopen and withdraw its Final Admission of Liability for fraud is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 10, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

WORKERS' COMPENSATION NO. 4-929-166-005

ISSUES

The issues set for determination included:

- Did Claimant establish by a preponderance of the evidence that she is permanently and totally disabled ("PTD") as a result of her work injury.

PROCEDURAL HISTORY

After the first day of hearing there were multiple motions filed and several procedural orders were issued. As noted, *supra,* the hearing took place over several days and the record was closed after expert depositions were taken and the transcripts filed with the Court. The ALJ issued a Summary Order on August 3, 2021, which was mailed August 5, 2021. Claimant requested a full Order and Respondent submitted amended proposed Findings of Fact, Conclusions of Law and Order on August 24, 2021. This Order follows.

FINDINGS OF FACT

1. Claimant worked for Employer as a driver. At the time she was injured, Claimant drove the route from DIA to Boulder. Claimant testified this job required her to lift 50–65 pounds of luggage.

2. There was no evidence in the record Claimant suffered an injury to her low back before 2013, nor was there evidence that she required treatment for her low back before her work injury. Claimant testified she was able to perform all aspects of her job. She stated as a driver for Employer, she was required to lift up to 75 pounds. The record contained no evidence of work restrictions before 2013.

2. On September 9, 2013, Claimant injured her low back while working for Employer when she lifted some heavy luggage.

3. Claimant was evaluated by Lori Long, M.D. on September 9, 2013. On examination, she had tenderness to palpation to the paralumbar muscles on the right side of her back, with severe restriction of mobility, with minimal flexion and extension. Dr. Long's impression was lumbar strain, with lumbar radiculopathy symptoms. Dr. Long oversaw Claimant's treatment from 2013-2014.

4. On September 17, 2013, Claimant underwent an MRI of the lumbar spine, which was ordered by Dr. Long. The films were read by Wayne Miller, M.D. Dr. Miller's impression was: L4-5 and L5-S1 degenerative disc disease accompanied by bilateral facet arthropathy, with mild to moderate central canal narrowing. There was disc desiccation and broad-based posterior bulging of each of those discs, but no focal disc herniations or definite root impingements. No other disc disease was evident in the lumbar region and there were no fractures or other bony abnormalities.

5. Claimant initially received conservative treatment and that care was overseen by Dr. Long. Claimant was evaluated by Andrew Castro, M.D. on September 30, 2013 for low back pain.

6. Claimant was also treated by Leif Sorenson, M.D. starting on October 16, 2013. Dr. Sorenson treated Claimant's low back and leg pain, including prescribing pain medications. On April 14, 2014, Dr. Sorenson performed a lumbar interlaminar L5-S1 ESI, which gave her 80% lower extremity pain relief. Claimant took Dilaudid as needed. On April 28, 2014, Dr. Sorenson took over Claimant's pain management, including gabapentin, Flexeril, and Dilaudid. Dr. Sorenson continued to treat Claimant in 2014. Claimant received continuous work restrictions issued by her ATP-s in 2013-14.

7. On October 2, 2014, a Final Admission of Liability ("FAL") was filed on behalf of Respondent. The FAL admitted for the 19% whole person medical impairment rating issued by Dr. Long.

8. Sander Orent, M.D. at Arbor Occupational Medicine took over Claimant's medical treatment from Dr. Long on February 4, 2015. He evaluated her at least 22 times between February 4, 2015, and July 13, 2016. When Claimant was evaluated by Dr. Orent on February 4, 2015, she complained of bilateral sciatica with pain radiating down both legs. Dr. Orent opined that, while Claimant had been receiving maintenance care, her claim probably needed to be reopened.

9. On March 10, 2015, Claimant underwent a DOWC Independent Medical Examination ("DIME"), which was performed by Jade Dillon, M.D. At that time, Claimant complained of constant central low back pain, with minimal waxing and waning. Claimant said she experienced exacerbations with most activities and also with sitting, especially sitting in the car. Dr. Dillon's impression was that Claimant had not reached MMI and was now a candidate for surgery. She had a documented occupational injury, with perspective assistant low back pain and sciatica. Dr. Dillon provided a provisional rating and stated Claimant had no evidence of mental/psychological impairment.

10. On March 31, 2015, Claimant underwent a lumbar decompression, which was performed by Dr. Castro. Dr. Castro followed Claimant after the surgery. Claimant underwent rehabilitation following surgery and had continuous work restrictions after the surgery.

11. Dr. Orent also treated Claimant after the first surgery. On September 16, 2015, Dr. Orent placed Claimant at MMI, and provided a permanent medical impairment rating of 31% whole person, consisting of an 8% Table 53 II-C rating for 2-level rhizotomy and 23% whole person for loss of range of motion. Dr. Orent opined Claimant had permanent restrictions of maximum lifting of 15 lbs. and no crawling or climbing.

12. On September 16, 2015, Claimant underwent a follow-up DIME, which was performed by Dr. Dillon. Dr. Dillon concurred with Dr. Orent that Claimant reached MMI on September 16, 2015. On examination, there was no significant tenderness in the low back. Neurovascular function in the lower extremities was intact, with strength adequate and symmetric proximally and distally, normal muscle bulk and tone, normal sensation throughout, normal hair growth, color, temperature, and capillary refill. Dr. Dillon's impression was: low back injury, failure of conservative treatment and persistent symptoms subsequent to single level lumbar laminectomy and discectomy.

13. Dr. Dillon concluded Claimant suffered a permanent medical impairment pursuant to the AMA Guides to the Evaluation of Permanent Impairment ("AMA Guides"). She rated Claimant on specific disorders of the spine (Table 53) as follows: laminectomy/discectomy L4/5-5% W.P.; radio frequency ablation L4-2% WP; radio frequency ablation L3, L4-2% WP. For loss of range of motion ("ROM"), Dr. Dillon found Claimant had a 18% whole person impairment rating and her total rating was 25% W.P.

14. On December 10, 2015, Respondent filed a FAL, admitting for the 25% whole person medical impairment rating issued by Dr. Dillon. The FAL admitted for Grover medical benefits.

15. Claimant continued to experience low back pain and required treatment at the end of 2015. On December 23, 2015, Claimant returned to Dr. Orent complaining of pain in her lower back and into the legs. Dr. Orent prescribed Dilaudid and referred Claimant for an MRI with contrast. He took her off work, noting that he might need to rescind his previous MMI.

16. On January 4, 2016, Claimant saw Dr. Sorensen complaining of a new pain down the left leg and foot which had come on in the previous 1 ½ months. On exam, he found positive lumbar facet loading bilaterally, decreased sensation over the

bilateral legs and feet, spinal muscle spasm, decreased strength with right knee flexion and ankle dorsiflexion, and abnormal sensation. His diagnoses were myalgia and myositis, lumbar spondylosis (spinal osteoarthritis complication), chronic pain syndrome, lumbar degenerative disc disease, and lumbar radiculitis. Dr. Sorensen prescribed p.r.n. Dilaudid for her severe pain

17. Claimant also underwent an MRI on January 4, 2016, MRI. The MRI showed: L3-4 stable minimal diffuse disc bulging asymmetric to the left and mild bilateral facet arthropathy resulting in mild left neural foraminal narrowing. L4-5 diffuse disc bulging, small superimposed central disc protrusion and mild-moderate bilateral facet arthropathy resulting in mild-moderate bilateral neural foraminal narrowing including slight abutment of the bilateral exiting L4 nerve roots along with the traversing right L5 nerve root. L5-S1 stable diffuse disc bulging, small superimposed central disc extrusion and moderate bilateral facet arthropathy resulting in stable mild-moderate bilateral neural foraminal narrowing including stable slight abutment of the bilateral exiting L5 nerve roots, more pronounced on the right.

18. An issue arose concerning a positive drug screen in January 2016. Dr. Sorenson noted on January 14, 2016 that he would no longer prescribe opioids. Claimant testified that she had a made a mistake on New Year's Eve, but was not using other opioids or illicit drugs. Nonetheless, Dr. Sorensen performed bilateral L5-S1 transforaminal epidural steroid injections on January 20, 2016 to treat Claimant's low back and leg pain. Dr. Orent stated Claimant was unable to work.

19. Dr. Orent stated Claimant was not longer at MMI status in January 2016. On February 10, 2016, Dr. Orent found Claimant had positive straight leg raising (SLR) bilaterally and definite paraspinous tightness, especially just distal and proximal to the surgical site. He diagnosed a disc extrusion causing bilateral radiculopathy, with which Dr. Sorensen agreed. Both Drs. Orent and Sorensen referred her to Dr. Castro for a surgical consultation.

20. On May 3, 2016, Claimant underwent a spinal fusion at L4-5, which was performed by Dr. Castro. The post-surgery medical records reflected an improvement in Claimant's symptoms. When Claimant returned to Dr. Castro on November 9, 2016, he released Claimant to all activities and stated: "She may perform all of her normal activities without limitation from her surgery"

21. Claimant returned to Dr. Orent on June 15, 2016 and noted she was off pain medications, but took used a muscle relaxer at night. On July 13, 2016, Dr. Orent placed restrictions of no lifting and primarily seated work.

22. On August 10, 2016, Sara Kornely PA-C in Dr. Castro's office advised that Claimant's activities could be increased "as tolerated".

23. On November 9, 2016, Claimant saw Sara Kornely, complaining of an inability to remain in one position for more than 15 minutes at a time, after which she needed to move. If she was in one position too long, her back bothered her and she was limited in doing any activities. She needed to "change positions frequently and cannot tolerate any prolonged sitting, standing, or walking." Ms. Kornely wrote, "she may perform all of her normal activities without limitations from her surgery. She went on to state, "(W)e do not anticipate any need for further surgery or treatments except activities as tolerated and stretching".

24. David Orgel, M.D. evaluated Claimant on November 29, 2017, for an impairment rating for her work-related injury on September 9, 2013. Dr. Orgel noted Claimant's complaints as low back pain status post two surgeries, the first one-level lumbar decompression and the second a one-level lumbar fusion. placed Claimant at MMI. Dr. Orgel opined Claimant had a 28% whole person impairment rating, consisting of 10% from Table 53 2-E plus an additional 2% from Table 53 2-G for the second surgery, and 18% whole person for loss of range of motion. Dr. Orgel said Claimant did not require maintenance medical treatment.

25. On January 2, 2018, an Amended FAL was filed on behalf of Respondent. The FAL was based upon Dr. Orgel's November 29, 2017 report and admitted for the 28% W.P. rating. The FAL denied liability for maintenance medical benefits.

26. Claimant did not return to work at Employer after she reached MMI.

27. On April 4, 2018, Claimant underwent an independent medical examination with Wallace Larson, M.D., at the request of Respondent. She reported pain in the back, hips and legs, along with difficulty standing and walking. The pain was greater on the left rather than the right side, which goes to her feet. At that time, her medications included Dilaudid (4 mg. three times daily), Trazodone (six mg. every 3–4 hours), Ambien (10mg at night), Gabapentin (600 mg/ morning and afternoon) and Gabapentin 1200 mg. in the evening. Claimant also took Zoloft (150 mg. daily) and an inhaler for asthma.

28. On examination, Claimant subjectively reported severe tenderness to palpation of the skin and subcutaneous issues of the lumbar spine and down into both legs. Palpation of the lateral thigh and the right/side resulted in reports of pain extending down the legs. Straight leg raising was negative in the sitting position and was positive in the supine position at 20° on either side. Passive hip flexion to 40° and either right or

left side resulted in reports of severe low back pain. Claimant was noted to ambulate slowly and have a great deal of pain behavior.

29. Dr. Larson‘s diagnoses included: a history of low back pain, which was related to her occupational exposure. Claimant had symptoms out of proportion to any objective findings and had multiple non-physiologic findings. With regard to work restrictions, Dr. Larson stated it was not likely Claimant could return to repetitive lifting of luggage weighing up to 50 pounds. Considering her multiple issues of age, gender, deconditioned status, and history of two surgical procedures to her lumbar spine, Dr. Larson opined restrictions against repetitive bending or twisting was reasonable. A weight limit of lifting 30 pounds occasionally and 15 pounds frequently were also reasonable. These permanent restrictions were also confirmed by Dr. Larson in his deposition. Dr. Larson concluded Claimant did not require further active medical treatment.

30. Dr. Larson concluded Claimant sustained a permanent medical impairment in accordance with the AMA Guides. He said the impairment based on ROM should be seen as an upper limit of impairment rather than a definitive impairment rating. This was due to truncal obesity which limited ROM measurements. Claimant had a 10% impairment of the lumbar spine, plus an additional 2% for the second surgical procedure yielding 12% impairment for specific disorders. ROM impairment included 11%, which yielded a 22% impairment from the combined values chart.

31. On October 12, 2018, Claimant underwent an MRI of the lumbar spine. The films were read by Kimberly Wright, M.D., whose impression was: interval postsurgical changes following L4-L5 posterior fusion and discectomy, without evidence of complication; small left foraminal disc protrusions at L3-L4 and L4-L5, resulting in minimal left neural foraminal narrowing rain, without nerve root displacement. There was a small disc protrusion superimposed on a broad-based disc bulge at the lumbosacral junction, abutting the left S1 nerve root, without appreciable displacement, unchanged.

32. Claimant returned to Dr. Castro on October 17, 2018. Dr. Castro‘s assessment was: bilateral lumbar radiculopathy, which he described as back pain recent flare. Dr. Castro opined that a small far lateral disc herniation at L3-L4 could be causing her symptoms and he recommended a transforaminal epidural injection at L3-L4.

33. On November 12, 2018, at a follow-up evaluation, Ashish Narendra Chavda, M.D., a pain medicine specialist from Dr. Sorensen’s office, took Claimant’s medical history, performed a physical examination, and reviewed the medical chart in Dr. Sorensen’s record (Claimant had at least 30 visits with Sorensen). Claimant

reported that the May 3, 2016, L4-5 fusion surgery improved her overall back pain and bilateral leg numbness and tingling and pain. However, approximately two (2) months prior to this examination, due to no inciting event, she started having pain down the left buttock to the foot and big toe. Claimant complained of limitations in her ability to walk, perform routine daily activities, and sleep. She also complained of stress urinary incontinence.

34. Claimant is fifty (50) years old and her highest level of education is a G.E.D. Claimant had a commercial driver's license, but no longer has that license. The majority of Claimant's work experience was a driver. She drove a truck, as well as a school bus. Claimant testified she was not able to return to work after her 2013 work injury. She could not return to work for Employer because of the lifting required. The ALJ concluded Claimant's education, work experience and symptoms limited her access to the labor market.

35. Other than her experience as a driver, she has worked as hairdresser. Claimant testified she did not believe she would be able to stand for the long periods of time required by this job and the ALJ credited this testimony.

36. Claimant's current work restrictions (based upon the evaluation conducted by Dr. Larson) were: lifting 30 pounds occasionally and 15 pounds frequently. The ALJ concluded Claimant could not return to her former job with Employer due to her restrictions.

37. Donna Ferris conducted a vocational evaluation of Claimant at the request of Respondent and prepared a report, dated May 7, 2018. Her written report was admitted into evidence. When she met with Claimant, the latter reported leg pain and numbness. Claimant said she was unable to vacuum, do laundry or do any cooking. She now has a regular driver's license, as she gave up her commercial driver's license. She has difficulty driving and sitting in a car for greater than approximately 15 minutes.

38. Ms. Ferris conducted labor market research considering Claimant's vocational background and physical abilities. Ms. Ferris noted Claimant had transferable job skills which included driving and working with the public. Ms. Ferris identified numerous full and part-time driving positions not requiring a commercial driver's license for which Claimant had prior experience. There were also full and part-time light production positions that generally required a high school diploma or GED. These positions did not require prior experience and were available in the local labor market. Ms. Ferris opined that Claimant remained capable of earning wages despite her work related injury and subsequent medical care.

39. Claimant reviewed jobs within Ms. Ferris' vocational expert report. She testified she could not perform any of the jobs identified by Respondent's expert. More particularly, Claimant testified she could not do the following jobs and gave the following reasons why:

A. Denver Metro Statistics: Crewmember: she cannot stand for the eight hours required; she is not allowed to work with her pain medication;

B. Cashier: she cannot stand the eight hours required, no unscheduled breaks are allowed; she is not allowed to work with her pain medication;

C. Target: Guest Service Team Member, Cashier: she cannot stand the number of hours required without a break, she is not allowed to work with pain medication;

D. Boston Market: Cashier: she could not be on her feet for the entire shift, not allowed to work with pain medication;

E. Airport Parking: Cashier: unable to drive and be on her feet the entire shift, work or drive on pain medications;

F. The Parking Spot: Cashier: requires some driving which she cannot do legally because of her pain medications, no as-needed breaks, on feet for many hours, not allowed to work on her pain medications;

G. Assembler I: requires repetitive lifting of up to 25 pounds;

H. Production Associate Warehouse: on feet for too long, requires lifting up to 20 pounds;

I. Craft Tea Production Associate: standing on feet for long periods of time;

J. Food Prep Production: require standing eight hours at a time, no unscheduled breaks, no pain meds allowed;

K. Condor Snack Foods: Second Shift Packer: on feet for hours at a time, lifting boxes continually; no pain meds allowed;

L. Driver Easy Delivery: Thompson: drive more than seven hours, would not be able to be on pain medications, unable to lift;

M. Bicycle Courier/Delivery Driver/Customer Service: unable to drive long periods of time, unable to drive bicycle;

N. Uber Eats Part: Time Delivery Driver: driving all day, lifting more than 10 pounds, no medication allowed;

O. Door Dash Delivery Driver: continuous driving, in and out of the car, unable to drive on medications;

P. Denver Post Delivery Driver: in car for long periods of time, cannot load car with papers, lifting more than 10 lbs., unable to drive on medications;

Q. Homework Club Deliver Driver: does not have education to teach children, cannot drive for long periods, cannot pass physical exam, cannot drive on medications;

R. Shuttle Driver: cannot perform the physical requirements of lifting, sitting, standing, bending, stooping, kneeling, crouching; requires Class B in order to carry passengers, cannot drive on medications, cannot pass physical for Class B license;

S. Car Porter/Shuttle Driver: requires Class B in order to carry passengers, cannot drive on medications, cannot pass physical required for Class B license;

T. Manheim Denver Auction Driver: continuous driving without breaks, no meds allowed, cannot pass physical required for Class B license;

U. Fleet Valet Driver: cannot pass physical, no meds allowed;

V. Family Auto Collision Driver: cannot lift the required minimum 10 lbs., cannot drive long periods of time, will not allow days off as needed, cannot drive on meds;

W. Avis Budget Group Driver: cannot drive long periods, no meds allowed;

X. Hertz Transporter: cannot drive long periods, no meds allowed.

40. Claimant testified she would not be able to return to work as a hairdresser as it requires standing for long periods of time. Claimant stated she currently has constant hip and low back pain, for which she takes Dilaudid and Tizanidine. She

believed this limited her ability to work. The ALJ found Claimant's description of her pain to be credible.

41. Claimant is still able to drive, although she testified she experienced pain when sitting for long periods of time.

42. Donna Ferris testified as an expert in vocational rehabilitation at the April 28, 2020, hearing. Ms. Ferris was present during Claimant's testimony and reviewed the depositions of Drs. Orgel and Larson. In preparing for her testimony, Ms. Ferris prepared by focusing on Claimant's testimony related to labor market survey.

43. Ms. Ferris testified that when preparing an opinion regarding a workers' ability to earn wages she focuses on both the permanent work restrictions assigned by treating physicians, IME physicians, and DIME physicians and the workers' vocational background. Regarding Dr. Castro, Ms. Ferris testified that based on her review of the records he was a longstanding treating physician, performing multiple surgeries. Based on his opinion that Claimant could return to all normal activities, Ms. Ferris testified that Claimant maintained the ability to earn wages. Ms. Ferris observed that Dr. Orgel provided the same opinion.

44. Regarding Dr. Larson, Ms. Ferris testified that he assigned a 50-pound restriction related to the work injury, but 30-pound lift occasionally and 15 lift frequently based on Claimant's age and condition. When preparing her opinion, Ms. Ferris relied upon the more stringent restriction.

45. Ms. Ferris opined that Claimant's continued Dilaudid use was not a bar to employment for several reasons. First, multiple physicians had opined that continued use of Dilaudid was not reasonable, necessary, and related to the industrial injury. Second, with the exception of one, none of the jobs identified by Ms. Ferris required drug testing. Third, notwithstanding her use of Dilaudid, Claimant does operate her motor vehicle. The driving positions identified by Ms. Ferris did not require a CDL.

46. Ms. Ferris said Claimant's use of Dilaudid would not preclude such employment. Ms. Ferried identified driving positions with DoorDash, Uber Eats, and Grub Hub which comply with Dr. Larson's restrictions. Ms. Ferris identified positions as a shuttle driver and newspaper delivery. She located a position which involves simply moving cars within a parking lot. The ALJ credited Ms. Ferris' opinion that these positions were available in the Denver labor market.

47. Regarding non-driving positions, Ms. Ferris testified that Claimant misinterpreted a number of jobs during her testimony. For example, Claimant testified that the cashier positions at DIA would involve luggage handling; Ms. Ferris testified

these jobs did not involve lifting or driving. Additionally, Ms. Ferris testified that food production jobs were available as well, such as packing loose tea leaves into packages, a snack company, and a clerk position at Target. Ms. Ferris concluded by restating her opinion that Claimant maintains the ability to earn wages.

48. Claimant did not retain a vocational expert and did not offer expert testimony to specifically rebut Ms. Ferris's expert opinions. The ALJ credited Ms. Ferris' testimony that there were jobs in the Denver labor market within Claimant's restrictions. This included jobs within the sedentary work category. The ALJ concluded Claimant could be hired in one of these jobs, retain her employment and earn wages.

49. Claimant's testimony, while raising the question about whether she could do some of the specific jobs identified by Ms. Ferris, did not rebut the conclusion there were jobs in the labor market in which she could earn wages.

50. Claimant retained access to the labor market, although this was limited by her work injury. The ALJ found Claimant could earn wages.

51. Claimant did not prove she was permanently and totally disabled as a result of her work injury.

52. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Permanent Total Disability

To prove her claim that she is permanently and totally disabled ("PTD"), Claimant shoulders the burden of proving by a preponderance of the evidence that she is unable to earn any wages in the same or other employment. Sections 8-40-201(16.5)(a) and 8-43-201, C.R.S. (2003). Claimant must also prove the industrial injury was a significant causative factor in the PTD claim by demonstrating a direct causal relationship between the injury and the PTD. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001); *Wallace v. Current USA, Inc.* W.C. No. 4-886-464 (ICAO, Dec. 24, 2014).

The term "any wages" means more than zero wages. *Lobb v. Industrial Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997). In weighing whether Claimant is able to earn any wages, the ALJ may consider various human factors, including Claimant's physical condition, mental ability, age, employment history, education, and availability of work that Claimant could perform. *Weld County School Dist. Re-12 v. Bymer*, 955 P.2d 550 (Colo. 1998).

The ALJ may also consider Claimant's ability to handle pain and the perception of pain. *Darnall v. Weld County,* W.C. No. 4-164-380 (I.C.A.O. April 10, 1998). The critical test is whether employment exists that is reasonably available to Claimant under his or her particular circumstances. *Weld County School Dist. Re-12 v. Bymer*, *supra*. The question of whether Claimant proved inability to earn wages in the same or other employment presents a question of fact for resolution by the ALJ. *Best-Way Concrete Co. v. Baumgartner,* 908 P.2d 1194 (Colo. App. 1995).

Claimant asserted she was permanently and totally disabled as a result of the work injury because her residual pain and restrictions, as well as the narcotic medications she took prevented her from earning wages. She argued that her testimony and Exhibit 1 (her response to specific jobs identified by Ms. Ferris) supported for the claim the for PTD benefits. There was no evidence in the record that Claimant earned wages since her injury and the issue was whether she can currently obtain/retain employment and earn wages. Respondents relied upon the expert testimony of Ms. Ferris and the restrictions issued by treating physicians. Respondent averred there were open jobs in the Denver labor market and Claimant retained the ability to earn wages.

As a starting point, the ALJ found Claimant‘s work injury resulted in extensive medical treatment, including back surgeries. As determined in Findings of Fact 2-24, Claimant received extensive treatment from the date of injury in 2013 through 2018. Claimant did not return to work for Employer after she reached MMI. (Finding of Fact 26). The ALJ also found Claimant could not return to work for Employer because of the lifting required. (Finding of Fact 34). In addition, the ALJ found Claimant what is a credible witness when describing her low back and leg pain, as well as crediting her testimony that this limited her activities. (Finding of Fact 40).

The ALJ also considered various human factors when deciding whether Claimant could "earn wages". *Weld County School Dist. Re-12 v. Bymer*, *supra*, 955 P.2d 555-556. As found, Claimant obtained her GED, but had no education beyond that. (Finding of Fact 34). The majority of Claimant's work experience was as a driver. After the injury, she no longer had a commercial driver's license, which limited her ability to work as a driver. *Id.* However, there were driving jobs that Claimant could perform that did not require a commercial driver's license. (Finding of Fact 46).

Claimant had worked as a hairdresser, but subjectively reported that she did not believe she could stand for the long periods of time this job required. (Finding of Fact 34). The ALJ concluded that although the work injury limited Claimant‘s access to the labor market, she retained the ability to earn wages. (Finding of Fact 50). In this regard, the ALJ credited Ms. Ferris‘ testimony that there were jobs Claimant could perform in the labor market, even with restrictions. (Findings of Fact 46-47). The ALJ found Ms. Ferris to be credible when, in her expert opinion, she concluded Claimant could earn wages in several of these positions. *Id.* In addition, the ALJ found Ms. Ferris‘ expert testimony was not rebutted, although Claimant disputed some of her conclusions. The ALJ concluded Claimant could be hired in one of the jobs identified by Ms. Ferris, retain her employment and earn wages. (Finding of Fact 48).

Based upon a totality of the evidence, the ALJ determined Claimant could earn wages and was not entitled to receive permanent total disability benefits.

ORDER

IT IS HEREBY ORDERED:

1. Claimant's claim for permanent total disability benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

- Did Claimant overcome the DIME's determination regarding MMI by clear and convincing evidence?

- If Claimant overcame the DIME regarding MMI, did Claimant prove entitlement to a triple phase bone scan, QSART testing, and thermography by a preponderance of the evidence?

- If Claimant is at MMI, did she prove she suffered a whole person impairment to her left shoulder?

- The parties stipulated Respondents make take credit of $19,344 for PPD benefits previously paid against any additional PPD benefits awarded in this Order.

FINDINGS OF FACT

1. Claimant works in the housekeeping department at Employer's nursing home. She suffered a compensable injury on July 1, 2018, when she hit her left elbow on a wall-mounted fire extinguisher while mopping floors.

2. Claimant had previously injured her left elbow in June 2016 while working for Employer. In that incident, she hit her elbow on the inside of a dryer while removing clothes. She was diagnosed with traumatic olecranon bursitis and triceps tendinitis. She ultimately had surgery with Dr. Michael Morley on December 1, 2016 to remove the bursa sac in the left elbow.

3. Claimant had an IME with Dr. Dwight Caughfield on February 21, 2017. She was still symptomatic, with 7/10 "stabbing/burning" pain in the left elbow and forearm. She said the area swelled frequently with activity and turned purple approximately once or twice a month. The pain worsened "with any pressure or something rubbing over the forearm." She had forearm numbness in a posterior antebrachial cutaneous distribution, and a positive Tinel's over the bursectomy area. Dr. Caughfield diagnosed right posterior antebrachial cutaneous neuropathy, either from the initial injury or from the surgery. He recommended a trial of amitriptyline, with consideration of medications such as Neurontin, Lyrica, or Topamax if the amitriptyline was not helpful. He recommended physical therapy for desensitization and scar mobilization. If she did not improve with therapy, Dr. Caughfield recommended up to three nerve blocks. Dr. Caughfield recommended no work restrictions other than being careful to protect the elbow from further trauma. Dr. Caughfield issued an addendum report on March 1, 2017, to clarify that Claimant was not at MMI because "her neuropathic pain may improve with medical management."

4. Respondents' expert, Dr. Burris, testified at hearing that patients typically recover from a bursectomy relatively quickly and pain typically recedes within 1-2 months.

He would not expect 7/10 pain three months post-op for that procedure, which suggests an additional problem. This is consistent with Dr. Caughfield's diagnosis of "neuropathic pain."

5. Claimant did not pursue the treatment recommended by Dr. Caughfield. Instead, she settled her claim on a full and final basis in April 2017. She received no further treatment or evaluations relating to her elbow until after the July 1, 2018 work accident that is the subject of this claim.

6. Claimant testified her left elbow was "good" and she had no symptoms between the time she saw Dr. Caughfield and the July 1, 2018 work accident.

7. After the July 1, 2018 accident, Claimant underwent an MRI of the left elbow. The MRI showed a non-displaced olecranon fracture, ulnar neuritis, and a partial triceps tendon tear.

8. Claimant saw Dr. Kobayashi, an upper extremity surgeon, on October 25, 2018. X-rays showed the olecranon fracture had healed. Dr. Kobayashi diagnosed a high-grade partial triceps tendon rupture and left ulnar neuropathy/cubital tunnel syndrome. Dr. Kobayashi recommended a left triceps tendon repair and a left ulnar nerve transposition. He gave Claimant an elbow brace that limited elbow movement from 30° to 100°. She understood she was to wear the brace "at all times, except for at bedtime."

9. The surgery was denied based on an IME from Dr. Frederick Scherr, who agreed the surgery was reasonably necessary but was not causally related to the work accident. Dr. Scherr opined the accident was too minor to have caused a fracture or triceps tendon tear.

10. Dr. Miguel Castrejon performed an IME for Claimant and opined the olecranon fracture, ulnar neuritis, and triceps tendon tear were caused by the July 1, 2018 accident. He recommended Claimant proceed with surgery under the workers' compensation claim.

11. The parties proceeded to hearing before the undersigned ALJ on March 21, 2019. The ALJ found Claimant proved a compensable injury, and that the proposed surgery was reasonably necessary and causally related to the work accident. Respondents were ordered to cover the surgery in a final order dated May 1, 2019.

12. Claimant had worn the splint Dr. Kobayashi gave her for several months while the claim was under denial and in litigation. Although Dr. Kobayashi likely did not intend Claimant to remain splinted for such a prolonged period, she understood his instructions as wear the splint at all times unless she was sleeping. Claimant thereafter could not go back to Dr. Kobayashi because her claim has been denied. Having received no further instruction, she dutifully followed his last instructions to wear the brace. Because of prolonged immobilization related to the elbow injury, Claimant's injuries ultimately expanded to include the adhesive capsulitis of left shoulder.

13. Dr. Kobayashi performed a left ulnar nerve transposition and left triceps tendon repair on May 31, 2019.

14. Claimant remained significantly symptomatic after the surgery. On August 27, 2019, Dr. Kobayashi documented ongoing severe elbow pain and hypersensitivity despite postoperative therapy. Claimant was also having neck pain. Physical examination showed trigger points in the left trapezius. Claimant only tolerated gentle shoulder range of motion. Dr. Kobayashi noted, “Clinical findings demonstrate evidence of significant hypersensitivity adjacent to the surgical wound site. Continue to work on desensitization. We will start Neurontin, lidocaine patch, as well as Voltaren gel.”

15. On January 13, 2020, Dr. Kobayashi documented Claimant still had severe pain despite ongoing therapy. Claimant also reported neck pain. Examination showed trigger points over the trapezius and over the posterior aspect of the shoulder. Neck and shoulder range of motion were slightly limited, and elbow range of motion was substantially limited. Dr. Kobayashi noted significant hypersensitivity of the elbow and the forearm. He opined Claimant “has had a poor response to surgery. This was thoroughly discussed with the patient.” He thought Claimant’s clinical presentation was consistent with possible complex regional pain syndrome, so he referred her to Dr. Timothy Sandell for nerve conduction studies and a possible stellate ganglion block. He also recommended a cervical MRI.

16. Dr. Scherr performed a record-review IME for Respondents on January 22, 2020. Dr. Scherr opined a cervical MRI was not causally related to the July 1, 2018 work accident. He further opined Claimant did not meet the diagnostic criteria set forth in the Medical Treatment Guidelines (MTGs) for Complex Regional Pain Syndrome (CRPS) and therefore should not proceed with the nerve block or nerve conduction studies. He opined to the extent Claimant had symptoms suggestive of CRPS, the symptoms were not causally related to the July 1, 2018 accident.

17. Dr. Kobayashi reevaluated Claimant on March 28, 2020. He noted his request for evaluation of CRPS was denied. He stated:

> Clinical findings are very concerning for possible complex regional pain syndrome. The patient does meet the Budapest diagnostic criteria for complex regional pain syndrome. This was thoroughly discussed with the patient. Further workup to include imaging includes three-phase bone scan, thermography, as well as nerve conduction studies. I am also concerned about possible relationship to the cervical spine. Occasionally, nerve injuries can be related to complex regional pain syndrome (CRPS type 2).

18. Claimant’s primary authorized provider has been Doug Miller, FNP at Rocky Ford Family Health. Because he is not Level II accredited, Mr. Miller referred Claimant to Dr. Terrence Lakin to assess MMI and impairment.

19. Dr. Lakin evaluated Claimant on April 24, 2020. The accompanying pain diagram includes aching pain on the top and back of the left shoulder, extending to the

trapezius and upper scapula. Dr. Lakin documented significant range of motion deficits at the left elbow and left shoulder. Dr. Lakin observed left arm mottling in a reticular pattern from the mid upper arm down to her fingers, and the left arm was “markedly cooler” than the uninjured right arm. Claimant had little to no hair on either arm. There was no significant nail deformity. There was some sensitivity to light touch throughout the left arm but no hypersensitivity. She was hypersensitive to palpation around the left cubital tunnel and ulnar transposition area. Dr. Lakin “highly suspected” CRPS of the left upper extremity. He opined Claimant was not at MMI and recommended a shoulder MRI to evaluate adhesive capsulitis. He also recommended a formal CRPS evaluation by a specialist, to include thermogram, QSART, and nerve conduction testing. He thought she might also warrant sympathetic ganglion blocks. After the CRPS evaluation was completed, he wanted Claimant returned to Dr. Kobayashi to discuss surgical intervention for the shoulder and/or elbow. Despite concluding Claimant was not at MMI, Dr. Lakin provided an advisory impairment rating of 12% for the elbow, 21% for the shoulder, and 9% whole person for CRPS.

20. Dr. Scherr issued a supplemental report on June 1, 2020 based on a record review. He disagreed with the CRPS rating assigned by Dr. Lakin. He opined Claimant met only one of the four required vasomotor symptoms required by the MTGs. Dr. Scherr opined Claimant’s symptoms are better explained by her poor response to surgery instead of CRPS. He opined Claimant was at MMI.

21. Claimant saw Dr. Mallikarjuna Nallegowda, a pain management specialist, on July 16, 2020. She reported discoloration and pain in the left arm and lack of elbow motion. Examination showed mild tenderness and range of motion loss in the neck and left shoulder. The left upper extremity had a bluish discoloration, decreased temperature, muscle atrophy, forearm hair loss and allodynia. Dr. Nallegowda opined Claimant met the Budapest criteria for CRPS type I.

22. Claimant had a left shoulder MRI on August 5, 2020, which showed a full thickness rotator cuff tear, with no significant retraction or muscle atrophy.

23. Dr. Charles Wenzel performed a DIME on August 28, 2020. Dr. Wenzel concluded Claimant was not at MMI and needed additional workup and consideration for shoulder manipulation under anesthesia and/or possible surgical debridement of adhesions. Dr. Wenzel opined that if Claimant were found not to be a surgical candidate for her shoulder, then she would be at MMI as of August 28, 2020. Dr. Wenzel opined Claimant’s possible CRPS was pre-existing and not caused by the 2018 work injury. In support of this conclusion, he relied on Dr. Caughfield’s February 21, 2017 report that documented “symptoms similar to her current symptoms,” including burning pain around the elbow and forearm, frequent swelling, purple discoloration, and severe pain with light touch. Dr. Wenzel also noted the inconsistency of Claimant’s report to him that she was “100% pain free after the surgery in 2016” when compared to Dr. Caughfield’s evaluation.

24. Claimant returned to Dr. Lakin on November 12, 2020 to review the DIME report. Dr. Lakin noted Claimant faced a “clinical dilemma” regarding the need for treatment and the diagnosis of CRPS. He continued to believe Claimant has CRPS based

on his clinical findings. Dr. Nallegowda agreed with the diagnosis based on similar findings. Part of Claimant's dilemma is that she "has not had formal work up under Workers' Compensation department [of] labor guidelines for CRPS. For that, she would need nerve conduction studies, bone scan, and referral to Dr. [Schakaraschwili]. [She] would then need thermogram and QSART testing for formal diagnosis." Dr. Lakin thought Claimant's elbow and shoulder would benefit from surgical treatment, but she would need to get control of her CRPS before she could purse surgery. He also stated, "she might have a potential argument for CRPS exacerbation in the Workers' Compensation [injury]." Dr. Lakin commented Claimant had undergone cervical x-rays that showed DDD, which is "obviously" not related to the work injury.

25. Claimant saw Dr. Kobayashi on December 22, 2020. He noted he had not seen Claimant in nearly a year. At her last appointment, he was concerned about CRPS and tried to refer her to pain management. Claimant still had significant contracture of the left elbow and reported severe anterolateral shoulder pain. He reviewed the recent shoulder MRI that showed a full-thickness rotator cuff tear. Dr. Kobayashi recommended an updated MRI of the left elbow and an EMG study. He opined "given her significant poor response to surgery on her elbow we [would use] extreme caution when proceeding with further surgical intervention."

26. Dr. Katherine Leppard performed an EMG on February 8, 2021. It showed mild left ulnar neuropathy and mild left carpal tunnel. There was no electrodiagnostic evidence of cervical radiculopathy.

27. Also on February 8, 2021, Dr. Scherr issued an addendum records review report. He agreed with Dr. Wenzel that Claimant's possible diagnosis of CRPS was pre-existing and was not aggravated or accelerated by the July 1, 2018 work accident. He recommended any further evaluation of Claimant's "possible and pre-existing CRPS should be performed outside of the Workers' Compensation system."

28. Claimant met with Dr. Lakin on February 19, 2021. Dr. Lakin had spoken with Dr. Kobayashi by phone and "Dr. Kobayashi does not believe that she is any type of surgical candidate for shoulder [or] elbow. He believes with her element of pain and Budapest criteria for CRPS, that high likelihood she would have [a] poor outcome. [Claimant] reports that Dr. Kobayashi told her same." Because Claimant had been determined not to be a surgical candidate, Dr. Lakin opined she was at MMI and should return to the DIME.

29. Claimant saw Dr. Wenzel for a follow-up DIME on April 2, 2021. He determined she had reached MMI as of August 28, 2020 because Dr. Kobayashi had ruled out additional surgery. To the extent Claimant may qualify for the diagnosis of CRPS, Dr. Wenzel again opined the condition was pre-existing and not causally related to the 2018 work accident. Dr. Wenzel adopted the range of motion measurements previously obtained by Dr. Lakin. He assigned a 21% extremity rating for the shoulder and a 12% extremity rating for the elbow, for an overall combined upper extremity rating of 30%.

30. Insurer filed a Final Admission of Liability on May 6, 2021 admitting for 30% scheduled impairment for the left arm.

31. Dr. Castrejon performed an IME for Claimant on July 22, 2021. Claimant described ongoing pain in the left elbow and shoulder area. She also reported pain at the base of her neck extending to the left shoulder. Physical examination showed tenderness and trigger points along the trapezius, AC joint, and the anterior capsule. There was also tenderness and hypertonicity of the left cervical paraspinal muscles and rhomboids. Shoulder range of motion was significantly reduced and rotator cuff strength was 4-/5. Examination of the elbow showed mild swelling laterally, limited range of motion, and localized allodynia around the olecranon and triceps insertion. Dr. Castrejon appreciated no specific color or temperature asymmetries, or hair or nail changes. He noted a slight increased sweat response. He stated his examination was “borderline” for CRPS. He opined the rotator cuff tear shown on the recent MRI must have occurred “relatively recently” because there was no evidence of muscle atrophy or retraction. He thought Claimant would benefit from surgical intervention to her shoulder and possibly elbow but she needs additional testing first to definitively “rule in or out the diagnosis of CRPS.” If testing confirmed CRPS, surgery would not be appropriate. In that case, he would recommend treatment for the myofascial component of her condition including physical therapy, acupuncture, massage therapy, and trigger point injections. He opined, “improvement of her myofascial condition would contribute to improvement in both cervical, scapular, and shoulder range of motion.” Dr. Castrejon opined Claimant cannot be put at MMI until a “definitive diagnosis” is established regarding CRPS.

32. Dr. Castrejon issued a supplemental report dated September 18, 2021 after reviewing Dr. Wenzel’s follow-up DIME report. Dr. Castrejon agreed the symptoms and clinical findings documented in Dr. Caughfield’s February 2017 report were “suggestive” of CRPS. But he emphasized the lack of formal testing to rule in or out the diagnosis of CRPS. In Dr. Castrejon’s view, Claimant is being unfairly prevented from obtaining treatment for the shoulder and elbow because of a presumed diagnosis of CRPS, without the testing to determine whether she actually has the condition. He stated if CRPS were confirmed, he would agree with Dr. Wenzel’s determination of MMI.

33. Dr. John Burris performed an IME for Respondents on September 28, 2021. He determined that Claimant does not meet the clinical requirements for a diagnosis of CRPS under the MTGs. He opined that Claimant’s continued pain is more likely related to the “poor outcome from the left elbow surgery, prolonged immobilization, and disuse,” an opinion he maintained in his testimony. Dr. Burris agreed with Dr. Wenzel that Claimant is at MMI. He relied on Dr. Kobayashi’s statement that Claimant is not a candidate for additional treatment, regardless of whether or not the diagnosis of CRPS is ruled out. Dr. Burris opined that based on Claimant’s extreme pain response to her last surgery, she would be at risk for increased pain complaints and increased scar tissue if further surgery was performed. Thus it is reasonable for Dr. Kobayashi not to proceed with further surgical intervention. Dr. Burris testified there are no current surgical recommendations from any authorized provider that would warrant a reversal of MMI. Dr. Burris opined the functional impairment related to the shoulder injury is confined to Claimant’s arm, and therefore the shoulder rating should not be converted to whole person.

34. Dr. Castrejon testified at hearing consistent with his reports. He reiterated that Claimant's clinical presentation is "borderline" for CRPS, and she should have formal testing to determine objectively if she has CRPS or not. If the testing is negative, she should be referred back to Dr. Kobayashi and to a shoulder specialist.

35. Claimant failed to overcome the DIME's determination of MMI by clear and convincing evidence. Dr. Wenzel's causation determination regarding Claimant's potential CRPS is a plausible inference from Dr. Caughfield's February 2017 report. Dr. Wenzel's conclusions are supported by the opinions of Dr. Scherr and Dr. Burris. The finding of MMI is also supported by Dr. Kobayashi's determination Claimant is not a candidate for any additional surgery. Dr. Castrejon's contrary opinions do not rise to the level of clear and convincing evidence.

36. Dr. Wenzel's impairment rating includes a 21% upper extremity rating for the left shoulder. According to the *AMA Guides*, the 21% upper extremity rating converts to 13% whole person.

37. Dr. Castrejon persuasively testified Claimant's shoulder injury causes functional impairment extending beyond her arm. He cited his examination findings of tenderness around the shoulder, along the trapezius, and into the rhomboids and cervical musculature. He also appreciated hypertonicity and trigger points in those areas. Dr. Castrejon noted similar findings had been documented by other providers and had been treated in physical therapy. He opined these proximal symptoms are distinct from any symptoms related to Claimant's nonwork-related cervical spondylosis and potential facet pain. Specifically, Dr. Castrejon opined:

> [T]ypically, when you have facet joint pain, it expresses itself in a dermatomal distribution. But it's expressed by pain. In this particular case, this individual had muscular hypertonicity, trigger points, decrease in the scapular movement of the shoulder joint, which led me to . . . believe that the muscle attachments that – will be termed the shoulder girdle muscles, that run from the shoulder to the neck are being affected. And in my mind, this is secondary to the prolonged immobilization, hence the lack of adequate use of that limb that [ ] resulted in that adhesive nature.

38. Claimant proved she suffered functional impairment not listed on the schedule, independent of any limitations potentially related to cervical spondylosis or facet pain.

CONCLUSIONS OF LAW

A. Overcoming the DIME

A DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). "Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment because of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. The party challenging the DIME's conclusions must show it is "highly probable" the determination of MMI is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

Claimant's challenge to MMI hinges on testing to determine whether she has CRPS. A need for additional diagnostic procedures can support a finding that a claimant is not at MMI if such procedures have a reasonable prospect of diagnosing the claimant's condition and suggesting further treatment. *E.g.*, *Watier-Yerkman v. Da Vita, Inc*., W.C. No. 4-882-517-02 (January 12, 2015); *Soto v. Corrections Corp. of America*, W.C. No. 4-813-582 (February 23, 2012). But there are two major problems with Claimant's argument in this context. First, Dr. Wenzel opined Claimant's possible CRPS is pre-existing and not causally related to the July 2018 work accident. Assessing causation is an "inherent" aspect of the DIME's determination of MMI and impairment. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1988). Therefore, the DIME's determination that a particular condition is or is not related to the industrial injury is binding unless overcome by clear and convincing evidence. *Id*. Claimant failed to overcome Dr. Wenzel's causation determination by clear and convincing evidence. Dr. Wenzel's conclusion is a plausible inference from Dr. Caughfield's February 2017 report. His conclusion is also supported by the opinions of Dr. Scherr and Dr. Burris. Dr. Castrejon's contrary opinions do not rise to the level of clear and convincing evidence. Likewise, Dr. Lakin's lukewarm supposition that Claimant "might" have a "potential" argument the work accident exacerbated pre-existing CRPS is insufficiently persuasive to overcome Dr. Wenzel's causation determination using an aggravation theory.

Second, Claimant failed to prove that CRPS testing is reasonably likely to produce additional treatment recommendations for Claimant's elbow or shoulder. Dr. Castrejon thinks Dr. Kobayashi will change his mind about surgery if CRPS is definitively ruled out. The ALJ does not share that interpretation of Dr. Kobayashi's position. Dr. Kobayashi did not decline further surgery merely because he thinks Claimant has CRPS. Rather, he cited the poor result from prior surgery and ongoing neuropathic pain *symptoms*. Those factors will remain salient regardless of whether they are shown to be from CRPS or another neuropathic pain process. In this regard, the specific diagnostic label assigned to her condition is immaterial.

No doubt, Claimant's medical situation is unfortunate. But the question of whether anything else can be done to improve her condition is an issue about which reasonable physicians can disagree. Dr. Wenzel initially afforded Claimant the opportunity to go back to Dr. Kobayashi and see if he had anything else to offer her. Dr. Kobayashi concluded additional surgery is unlikely to help Claimant and may make her worse. Dr. Wenzel reasonably accepted that decision and put Claimant at MMI. Although Dr. Castrejon makes a cogent argument for the path he would follow if Claimant were his patient, his opinions do not rise to the level of clear and convincing evidence. At most, Claimant has shown a “mere difference of medical opinion” regarding MMI, which is insufficient to overcome the DIME.

B. Specific medical benefits

Claimant’s request that Respondents be ordered to cover the CRPS testing is moot because that request was expressly contingent on a finding she was not at MMI.

C. Whole person impairment

When evaluating whether a claimant has sustained scheduled or whole person impairment, the ALJ must determine “the situs of the functional impairment.” This refers to the “part or parts of the body which have been impaired or disabled as a result of the industrial accident,” and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of “an arm at the shoulder.” Section 8-42-107(2)(a). If the claimant has a functional impairment to part(s) of his body other than the “arm,” they have suffered a whole person impairment and must be compensated under § 8-42-107(8).

There is no requirement that functional impairment take any particular form, and “pain and discomfort which interferes with the claimant’s ability to use a portion of the body may be considered ‘impairment’ for purposes of assigning a whole person impairment rating.” *Martinez v. Albertson’s LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant’s testimony regarding pain and reduced function. *Olson v. Foley’s*, W.C. No. 4-326-898 (September 12, 2000).

Pain and limitation in the trapezius or scapular area can functionally impair an individual beyond the arm. *E.g. Steinhauser v. Azco, Inc.*, W.C. No. 4-808-991 (January 11, 2012) (pain and muscle spasm in scapular and trapezial musculature warranted whole person impairment); *Franks v. Gordon Sign Co.*, W.C. No. 4-180-076 (March 27, 1996) (supraspinatus attaches to the scapula, and is therefore properly considered part of the “torso,” rather than the “arm”); *Martinez v. Albertson’s LLC*, W.C. No. 4-692-947 (ICAO, June 30, 2008) (pain affecting the trapezius and difficulty sleeping on injured side supported ALJ’s finding of whole person impairment). Limitations on overhead reaching can also consitute functional impairment beyond the arm in appropriate cases. *E.g.*, *Brown v. City of Aurora*, W.C. No. 4-452-408 (October 9, 2002); *Heredia v. Marriott*, W.C. No. 4-508-205 (September 17, 2004). However, the mere presence of pain in a part of the body beyond the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021).

As found, Claimant proved she suffered functional impairment not listed on the schedule. The adhesive capsulitis affects Claimant's entire shoulder girdle region, and it not merely limited to her arm. Dr. Castrejon's analysis of the factors supporting whole person conversion is credible and persuasive.

Dr. Wenzel's impairment rating includes a 21% upper extremity rating for the left shoulder. Although his report does not specify the equivalent whole person rating, that information can be easily ascertained from the *AMA* Guides. According to Table 3, p. 16, a 21% upper extremity rating converts to 13% whole person. The ALJ disagrees with Respondents' argument that Claimant had to submit a copy of the *AMA Guides* rating conversion table at hearing to obtain an award of whole person PPD benefits. While that may have been the rule several years ago, the courts have appropriately abandoned that position. *E.g*., *Serena v. SSC Pueblo Belmont Op Co. LLC*, W.C. No. 4-922-344-01 (December 1, 2015). The *AMA Guides* have been the mandatory basis for impairment ratings in Colorado for over 30 years. They are well known to participants in the workers' compensation system, and not reasonably subject to dispute. Review of pertinent portions of the AMA Guides is "part of a judge's inherent duty and power to find and apply the law." *Id*. In that regard, a party is no more obligated to submit copies of the AMA Guides than they are portions of the Act, case law, rules of procedure, or any other authority routinely relied on in Workers' Compensation hearings.

ORDER

It is therefore ordered that:

1. Claimant's request to overcome the DIME regarding MMI is denied and dismissed.

2. Claimant's request for diagnostic testing for CRPS, including a triple phase bone scan, QSART testing, and thermography, is denied and dismissed.

3. Insurer shall pay Claimant PPD benefits based on the DIME's 13% whole person shoulder rating and 12% scheduled elbow rating. Insurer may take credit for $19,344 of PPD benefits previously paid to Claimant.

4. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

5. The issue of disfigurement is reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-150-066-003

ISSUE

1. Did the Claimant prove by a preponderance of the evidence that he sustained a compensable work-related injury?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 34 year-old male who worked part-time for Employer as a package handler. Employer hired Claimant on July 21, 2020. (Ex. D)

2. On August 20, 2020, Claimant was involved in an altercation with another employee while at work. Employer suspended Claimant pending an investigation. Based upon the investigation, Employer concluded that Claimant violated its Security, Acceptable Conduct, and Workplace Violence policies. Employer terminated Claimant. According to Claimant's employment records, the last day he worked was August 21, 2020, and he was terminated on August 25, 2020. (Ex. D).

3. On August 26, 2020, Claimant contacted Employer's human resources department. Claimant reported he had injured his back and needed to go to the hospital. Claimant did not provide a date of injury. Human resources advised Claimant that he was to notify his manager of all injuries.

4. Employer representative, Shanna R[Redacted], credibly testified that Claimant received training in reporting workers' compensation matters, safe lifting practices, and the consequences of workplace violence.

5. Claimant went to Concentra the afternoon of August 26, 2020, and Nate Adams, P.A., evaluated him. Claimant, who speaks French, reported through a professional interpreter that he injured himself two weeks prior, when he picked up a heavy package at work and felt a pain in his low back. This would place Claimant's injury at or about August 12, 2020.

6. At the hearing, Claimant testified that his injury occurred seven days prior to reporting the injury to human resources on August 26, 2020. This would place Claimant's injury at or about August 19, 2020.

7. Claimant testified that after he injured his back, he wanted to see if he could handle the pain. After seven days, however, the pain around his spine was bad and he felt he needed to go to the doctor so he contacted human resources. Claimant testified that human resources told him he needed to notify his manager of the injury.

8. Claimant never notified his manager, Kyle P[Redacted], of his injury. When Mr. P[Redacted] suspended Claimant and took his badge, Claimant never mentioned anything regarding an injury. (Ex. G).

9. At Claimant's initial Concentra appointment on August 26, 2020, he told Mr. Adams that two weeks prior he picked up a heavy package and felt a pain in his lower back. Claimant then told Mr. Adams that he was able to lift 300 pounds, and that if that weight was available, he would be happy to demonstrate that he could lift it. (Ex. C). The ALJ finds that this statement is inconsistent with Claimant allegedly suffering from back pain.

10. Mr. Adams diagnosed Claimant with a low back strain. He ordered physical therapy for Claimant and did not prescribe any medications. Claimant was able to return to modified duty with a temporary restriction of lifting up to 50 pounds frequently. (Ex. C).

11. Claimant returned to Concentra on August 31, 2020 for a follow-up appointment with Scott Richardson, M.D. Claimant reported experiencing brief pain in the midline area of his lower back. He rated his pain as one out of ten. Claimant had not yet started physical therapy. Dr. Richardson prescribed Naproxen and Acetaminophen, and instructed Claimant on using a heating pad, and a Hot/Cold compress. Claimant was given a work restriction of lifting up to 10 pounds constantly, 25 pounds frequently, and 40 pounds occasionally. Additionally, he could push/pull up to 20 pounds constantly, 50 pounds frequently, and 80 pounds occasionally. (Ex. C).

12. Dr. Richardson evaluated Claimant on September 8, 2020. Claimant reported having brief midline lower back pain. Claimant, on occasion, took his prescribed medications, and he was not using the heat or ice. Claimant reported that he was not working at Employer given his restrictions. (Ex. C.) Employer, however, terminated Claimant approximately two weeks prior, on August 25, 2020. (Ex. D).

13. Claimant returned for a follow-up appointment on September 22, 2020. Dr. Richardson noted that Claimant had no tenderness in his lumbosacral spine, and had full range of motion. Claimant reported that he was still not back to work for Employer, but was working at another job. Dr. Richardson released Claimant to full-duty work and maximum medical improvement (MMI) was anticipated for October 2, 2020. According to the medical records, Dr. Richardson noted that Claimant would need another recheck prior to discharge. Claimant did not return for a recheck appointment. (Ex. C)

14. From August 31, 2020 to October 6, 2020, Claimant attended seven physical therapy appointments and four massage therapy appointments. (Ex. C.).

15. On November 12, 2020, while working for a different employer, Claimant fell off a concrete door step while delivering a package. Claimant sustained a left knee tibial plateau fracture. In February 2021, Claimant was referred for chiropractic care for neck and back pain. While receiving chiropractic care, Claimant "noted a previous work related incident with neck pain while working for [Employer]. He notes this more recent incident aggravated this neck pain and also caused back pain." (Ex. E.).

16. At the request of Respondent, Claimant saw Kathy McCranie, M.D., for an Independent Medical Evaluation (IME) on April 1, 2021. Claimant told Dr. McCranie that his date of injury was August 25, 2020. (Ex. B). This is the same date of injury, August 25, 2020, that Claimant listed on his Application for Hearing. The last day Claimant worked for Employer, however, was August 21, 2020. (Ex. D).

17. Dr. McCranie credibly testified at the hearing that if Claimant sustained an injury while working for Employer, it was a back strain. She further testified that Claimant was at MMI as of early October 2020, and any injury had resolved with no impairments or restrictions. This testimony was consistent with Dr. McCranie's April 1, 2021, IME report. (Ex. B).

18. In July 2021, ATP, Lawrence Lesnak, D.O., performed a musculoskeletal and neurologic examination of Claimant that included an evaluation of his lumbar spine. Dr. Lesnak reviewed Claimant's cervical, thoracic and lumbar MRI scans, noting diffuse degenerative findings. He opined that "[t]here is absolutely no evidence of any injury or trauma-related pathology identified whatsoever on his cervical, thoracic, and lumbar spine MRIs." Dr. Lesnak recommended that Claimant begin physical therapy to focus on strength training and lower extremity strengthening. (Ex. E.).

19. Claimant's various statements with respect to his injury were inconsistent and unreliable. Claimant testified at the hearing that he was injured on or about August 19, 2020. He told Mr. Adams, when he first went to Concentra, he was injured on August 12 or 13, 2020. Claimant told Dr. McCranie he was injured on August 25, 2020 even though his last day of work for Employer was August 21, 2020. Claimant reported to his ATP that he was not working for Employer due to the work restrictions, when in fact, he had been terminated from his employment. Finally, Claimant did not report his alleged injury until after he had been suspended due to a workplace altercation. Because of these inconsistencies and inaccuracies, Claimant's testimony was not credible.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v.*

Indus. Claim Appeals Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

The claimant is required to prove by a preponderance of the evidence that at the time of the injury both he and the employer were subject to the provisions of the Act, he was performing a service arising out of, and in the course of, his employment and the injury was proximately caused by the performance of such service. §§8-41-301(1)(a)-(c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The ALJ concludes that Claimant failed to meet his burden of proof. He did not present credible evidence to prove he suffered a compensable injury while working for Employer. The ALJ considered the evidence Claimant presented regarding his injury. Claimant alleged he injured his back lifting a heavy package, sometime in August 2020. A review of Claimant's and Respondent's exhibits indicate that Claimant was diagnosed with a low back strain on August 26, 2020. He attended seven physical therapy and four massage therapy appointments, and was given modest work restrictions. Based upon the medical records, and Dr. McCranie's opinion, Claimant had an uneventful and expected response to the treatment he received. His anticipated date of MMI was October 2, 2020, but he never returned for his recheck appointment where he was expected to be discharged. Most recently, in July 2021, Dr. Lesnak, Claimant's current ATP, reviewed Claimant's cervical, thoracic and lumbar MRI scans and concluded that there was no evidence whatsoever of any injury.

As found, Claimant gave multiple dates for his date of injury. One reported date of injury, August 25, 2020, was several days after the last day Claimant worked for Employer. Claimant's testimony and evidence with respect to the date of his injury were inconsistent, and not credible. (Finding of Fact ¶ 18). Claimant received training with respect to timely reporting of work injuries, but Claimant failed to timely report his injury. *Id.* at ¶¶ 3-4. The first time Claimant reported the alleged work injury was after he received a disciplinary action resulting in his termination for cause. *Id*. at ¶¶ 2-3. Claimant's evidence regarding his injury was not credible, and he failed to meet his burden of proving compensability. The ALJ concludes that Claimant failed to present credible evidence to prove a compensable injury by a preponderance of the evidence.

In the Application for Hearing, Claimant endorsed, in addition to compensability, medical benefits, authorized provider, reasonably necessary, average weekly wage, and temporary total benefits from 8/26/20 to TBD. In light of the ALJ's finding that Claimant did not meet his burden of proving compensability, these additional issues are moot.

ORDER

It is therefore ordered that:

1. Claimant did not sustain a compensable work injury and his claim is dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 13, 2021

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury, due to an electrocution, on September 21, 2020?

II. If Claimant suffered a compensable injury on said date, what medical benefits are reasonable, necessary, and related to his work injury?

STIPULATIONS

Respondents' Exhibits 2, A through K, were admitted without objection. They represent 13 prior Workers Compensation claims made by Claimant. However, Respondents concurred that they were not offered as evidence of propensity; rather, they are offered as evidence that current medical complaints by Claimant were also listed as similar medical complaints in the past. The ALJ accepted this stipulation.

Respondents also stated that from the alleged date of injury, Claimant's extensive medical bills (consisting largely of diagnostics, rather than actual treatment) were paid by Respondents, without admitting compensability. Only when the IME report from Dr. Brumworth was completed, did Respondents issue a Notice of Contest, and refuse further medical treatment. Hearing no credible evidence to the contrary, ALJ accepted this representation.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant's Prior Injuries and Claim History

1. Claimant has a lengthy and varied injury and Workers Compensation claim history stretching decades over several states. [The ALJ notes that such records were not received for the purpose of showing a propensity for being injured on the job, or filing claims thereafter; rather said records might provide insight into Claimant's prior reported symptoms and preexisting conditions].

2. On May 2, 2006, after six months of employment with SOS staffing as an install technician, Claimant reported a fall from a ladder in which he reported injury to his left ankle, low back and wrist. (CO Claim 4-685-594; Ex. 2D, Dr. Patton IME Ex. 3G, p. 320).

3. For the first time in available medical records, Claimant was diagnosed with severe degenerative disc disease at the L4-5 level. His *left ankle was diagnosed with swelling* and a corticated ossific density. (Ex. 3G, p. 321).

4. After his May 2, 2006, claim was closed, Claimant reported to Dr. Larry Welling, on November 10, 2006, with a report of *persistent right eye pain*. (Ex. 3G, p. 322-23).

5. In 2007, while working for Solitare Homes, Claimant suffered two injuries: one to his left upper extremity while using a power tool, and another trip and fall injury where he reported pain to his bilateral lower extremities**,** right ankle**,** right knee**,** neck and lower back. (NM Claim 08-51688, Ex. 2F; Ex. 3G 323-328).

6. While treating for his right wrist pain, Claimant was diagnosed with cervical radiculopathy extending from C6 in his neck to his left extremity. (Ex. 3G p. 324).

7. On April 1, 2008, while treating for his 2007 work injuries, Claimant reported new issues of left gluteal pain, neck pain and vertigo. He was diagnosed with adjustment disorder, vertigo, and cervical herniation with radiculopathy, along with strains to his right knee and ankle. (Ex. 3G p. 330).

8. Two weeks later on April 15, 2008, Claimant reported to San Juan Regional Medical Center reporting numbness to the entire right side of his bod**y** and dizziness for an hour every day after previously experiencing dizziness 80-90% of the time following his October 29, 2007, injury. (Ex. 3G. p. 330).

9. On April 23, 2008, Claimant's injury complaints expanded yet again, with complaints of radiating pain into the back of his legs with swelling in his arms. Given these complaints, Claimant was referred for a spinal surgical evaluation asap. (Ex. 3G p. 332).

10. Two days after being referred for an "asap" spinal surgical evaluation, Claimant began working at Building Specialties Store Inc. (Co WC No. 4-776617, Ex. 2E).

11. While working for Building Specialties, Claimant continued to treat for his 2007 New Mexico injuries, despite substantial restrictions including limits of 20 pounds lifting, 10 pounds repetitive lifting, and no pushing, pulling or repetitive use of his upper extremities as of July 31, 2008. (Ex. 3G p. 332-33).

12. On August 6, 2008, Claimant reported pain swallowing and sore left throat and was recommended for further evaluation for dysphagia. (Ex. 3G, p. 333-334).

13. While still on work restrictions for his 2007 New Mexico trip and fall claim, Claimant was working alone on a job for Building Specialties at the Durango Airport when he walked head first into a beam on November 6, 2008. As a result, Claimant was diagnosed with a cervical strain and concussion, at which time he reported blurry vision. (Ex. 3G p. 335-36).

14. Two months later, on December 5, 2008, Claimant's injury complaints expanded to include head, neck, shoulder and back pain with muscle spasm, which resulted in a diagnosis of head injury, nausea and dizziness. (Ex. 3G p. 335-36).

15. By December 12, 2008, Claimant was complaining of right sided facial spasms, and by December 19, 2008, Claimant complaints included back spasms. (Ex. 3G p. 337).

16. On December 23, 2008, Claimant was seen at Four Corners Neurosurgical Services where he reported constant pain 100% of the time which prevented him from working or doing recreational activities. Further, he reported pain across both shoulders, down the front and back of both arms, pain in his right leg and pain in both knees. He reported dizzy spells, severe headache, chronic heartburn, constipation, weight gain, excessive thirst, arthritis, bladder infections, frequent urination, tremors, loss of coordination, and nerve disorder/nerve troubles. (Ex. 3G, p. 337).

17. Claimant continued to treat for his open Workers Compensation injuries from New Mexico in 2007, and Colorado in 2008, and by April 3, 2009, he was still complaining of vertigo and spasms in his eyelids. (Ex. 3G, p. 343).

18. On April 6, 2009, Claimant underwent a lumbar MRI which demonstrated a significant herniated disc at L5-S1. (Ex. 3G p. 344).

19. More than a year after his 2008 injury, Claimant was complaining of hypersensitivity in both arms and mild weakness in both grips. (Ex. 3G, p. 345).

20. Claimant underwent his first spinal surgery on July 13, 2009, when he had a C5-6 fusion. (Ex. 3G, 348).

21. In early October 2009, Claimant returned to his surgeon for an unscheduled visit, now complaining of dizziness and lightheadedness that resulted in a fall. In following up with Dr. Ken Stradling, Claimant was complaining of difficulty swallowing and pain in the left side of his neck when swallowing. Claimant was again recommended for a swallowing study. (Ex. 3G, p. 357-58).

22. On October 14, 2009, Claimant reported to a physical therapist symptoms of left ear pain, bilateral eye fluttering, trouble thinking, trouble swallowing, loss of balance and dizziness. (Ex. 3G p. 358).

23. Given consistent complaints of vertigo, Claimant underwent a neurology consultation with Dr. Richard Breeden on October 29, 2009, at which time he was complaining of pain in both upper extremities with “arm pain that has been so severe it has prevented him from doing any kind of activity.” (Ex. 3G p. 359).

24. Despite reporting no pain or numbness immediately after his surgery, by his follow up with his surgeon, Dr. Jim Youssef, on December 2, 2009, Claimant was reporting problems in his left arm, vision problems, thinking problems, difficulty communicating, difficulty swallowing, weight loss and weight gain, loss of appetite, nausea and vomiting, coordination problems, and weakness. Prior to his December 2, 2009, follow up, Claimant reported pain of 9/10 on several occasions to his physical therapist as well. (Ex. 3G, p. 362).

25. As a result of his extremely varied complaints, Dr. Youssef stated, "I have told him he has to come to grips with the fact that *multiple studies have failed to evaluate or determine the etiology between all of his symptomatology and complaints."* (Ex. 3G, p. 363) (emphasis added).

26. Despite a release at MMI from his surgeon on February 2, 2010, Claimant reported 9/10 pain to his physical therapist as of February 24, 2010, with pain in his jaw, ear, neck and both shoulders. (Ex. 3G, p. 369-370).

27. On March 21, 2010, on his 50th physical therapy visit, he reported pain of 1-2 of 10, but reported pain of 10/10 the day prior with varied symptoms including neck pain, and shoulder-blade pain. (Ex. 3G p. 372).

28. On March 18, 2010, Claimant underwent a psychological examination with Dr. Ed Cotgageorge. At this time, Claimant reported several facts that were directly contradicted by, or absent from prior medical records including, loss of consciousness, light sensitivity, no hearing problems, sexual dysfunction, and taste and smell issues. (Ex. 3G, p. 375).

29. Dr. Cotgageorge concluded, "his current presentation is significant for over focusing on pain, and he perceives himself as extremely disabled. He also has a very low pain tolerance." He found that Claimant had substantial indicators of a poor outcome including *low levels of activity, high pain behaviors, and over reporting of symptoms*." (Ex. 3G, p. 376).

30. After further diagnostics, Claimant was ultimately released at MMI for his November 2008 injury. On August 2, 2010, received a rating report from Dr. Randal Jernigan which found, after apportionment for Claimant's 2007 (still ongoing) New Mexico claim, Claimant had a 29% whole person disability rating for spinal impairment and cognitive dysfunction. Dr. Jernigan noted that Claimant's neck injury allowed him to perform sedentary activity, but his emotional and thinking aspects were significant enough that Dr. Jernigan was not sure if Claimant could do significant amounts of work, concluding, "He certainly cannot do construction work." (Jernigan Rating Report Ex. 3E, p. 180).

31. On August 13, 2010, after Dr. Jernigan's rating report, Dr. Ken Stradling released Claimant with permanent 5 pound lifting restrictions, with 2-4 hour walking and standing restrictions, and no ladders. (Ex. 3G, p. 378).

32. Clamant settled his 2008 Colorado Workers Compensation claim on September 30, 2010, and promptly returned to construction work less than a week later, on October 5, 2010. (Ex. 2E; NM W.C. Claim 11-50087, Ex. 2 G.).

33. Just over one month after returning to construction as a garage door installer with EE Newcomer Enterprises, Claimant reported a back strain on November 29, 2010, while lifting a garage door. (Ex. 2G; Ex. 3G, p. 378).

34. On December 3, 2010, Claimant reported numbness and tingling into his fingertips and the tops of his feet, while reporting pain in his mid-thoracic area with the feeling like his skin is on fire in his hands, feet and upper arms. The evaluating medical professional noted that *Claimant's reports were not anatomically correlated.* (Ex. 3G, p. 379).

35. On December 14, 2010, Claimant saw Dr. Camille Rivera for his November 2010 lifting injury. She noted Claimant's expanded complaints of pain in the right mid and low back, as well as bilateral upper extremities, primarily in the joints, in his mid and low back, and bilateral lower extremities. Dr. Rivera also noted *5/5 Waddell's* signs, and full range of motion in the lumbar spine. (Ex. 3G, p. 379-380).

36. One month later, Claimant was treating with Chad Silseth D.C, who found Claimant reporting 8 to 9/10 pain and severely limited range of motion. (Ex. 3G, p. 382).

37. Claimant returned to Dr. Rivera on January 25, 2011, where she again found 5/5 Waddell's signs, and noted Claimant's lower back complaints were not in relation to the November 2010 lifting injury. Dr. Rivera found *Claimant's symptoms were expanded* with new complaints of urinary incontinence, and groin numbness and tingling. (Ex. 3G, p. 383).

38. On March 3, 2011, Claimant settled his 2007 New Mexico claim. (Ex. 2F).

39. Despite prior severe restrictions and ongoing pain complaints requiring monthly refills of Percocet, Claimant returned to work as a pipefitter with PESCO on February 20, 2012, where he promptly incurred his first of two Workers Compensation claims on April 5, 2012, upon striking the ring finger on his right hand with a hammer. (NM Clam 12-01330, Ex. 2H).

40. After treating briefly for the hammer strike, on May 4, 2012, Clamant reported that he hit his head against a pipe causing him to hyperextend his neck, resulting in pain complaints in his neck and upper back as of May 7, 2012. He also complained of a headache and pain radiating into both arms. (Dr. Stradling Reports, Ex. 3D, p. 185).

41. Claimant was referred for chiropractic care and as of May 14, 2012, Dr. Silseth stated, "One thing of notation is *my objective findings do not correlate with his subjective complaints* at this point." (Ex. 3D, p. 193) (emphasis added).

42. One day later, Claimant returned to Dr. Stradling at which time his complaints expanded to include worsening neck pain, intense mid back pain, numbness and tingling in his right leg, along with headaches and nausea. (Ex. 3D p. 200).

43. Given ongoing complaints, Claimant was referred to Spine Colorado where he was examined by Dr. Cyril Boachevsky. When describing the incident, Claimant stated, "He was moving around to look at some pipes when he suddenly hit his head against the pipe . . . he did not hit the ground because his co-workers caught him." Dr. Boachevsky noted Claimant presented with diffuse pain complaints, accompanied by

exaggerated pain behaviors, overreaction, and psychological factors. Claimant reported stabbing pain through his neck and arm pain on both sides. Given the reports of lower back pain, Dr. Boachevsky recommended a lumbar MRI. (Spine Colorado Report, Ex. 3B, p. 164).

44. On June 24, 2012, Claimant drove himself to the San Juan Regional Medical Center in Farmington, where he complained of neck and back pain, with 10/10 pain in his lower back and numbness in his right leg. (Ex. 3E, p. 258).

45. The following day, Claimant returned to Dr. Stradling who noted the curious addition of new symptoms when addressing Dr. Boachevsky's MRI referral stating, "I do not have any mention of lower back pain in his previous visits and I am not sure how this came to be." The following paragraph notes,

> The *patient seems to be continually adding new symptoms* to this complaint. The patient also mentions some shoulder pain, which again I cannot relate to as he described his injury. I think the patient is *exaggerating some of his symptoms* at this point of time, especially when he states he hurts from the top of his neck all the way down to his tailbone. I do believe there are some psychological factors as well…(Ex. 3D, p. 228) (emphasis added).

46. By July 17, 2012, Dr. Stradling's physician assistant Doug Shaffer, who had been treating Claimant with Dr. Stradling for many years, expressed concern. PA Shaffer noted, "*patient's symptom list seems to grow each time we talk.*" He went on to note, "Once again the patient's mechanism seems rather simple compared with the magnitude and multitude of symptoms this patient currently presents with." Concluding, "*I am concerned about possible malingering in this case … it is difficult to ascertain where the true symptoms are versus malingering issues.*" (Ex. 3D p. 245) (emphasis added).

47. By August of 2012, Claimant complained of chest pain that radiated into his throat. (Ex. 3D, p. 247).

48. As of November 2012, Claimant was complaining of blackouts which resulted in him crashing his truck into a ditch. (Ex. 3G, p. 398).

49. Given the allegations of blacking out, Claimant underwent an EEG, which returned normal results. (Ex. 3G, p. 400).

50. On January 13, 2013, Claimant returned to see Dr. Youssef, who noted Claimant had a, "10 year history of problems with his left ear, vision problems, thinking problems… coordination problems and weakness." Dr. Youssef diagnosed Claimant with, 1) C6-7 disk herniation, 2) L4-5 disk herniation, 3) disk degeneration at L4-5, 4) obesity, 5) history of diabetes, 6) history of multiple traumatic brain injuries with postconcussive symptomatology and postconcussive seizure disorder. Dr. Youssef recommended lumbar surgery to address the most pressing issues, noting that an extension of the prior cervical fusion would be a secondary recommendation. (Ex. 3B, p. 173-174).

51. Given Claimant's substantial claims history, his May 2012 New Mexico claim was contested, went through an IME, depositions, and was ultimately settled November 12, 2013. (Patton IME, Ex. 3G, NM 12-57245, Ex. 2i). (The actual settlement document, dated 11/21/2013, was tendered at the time of Respondent's Position Statement; while corroborative, the ALJ will not consider it, although the contents of the Patton IME have been admitted.)

52. Shortly thereafter, despite a pending recommendation for a cervical fusion extension and lumbar spine surgery, Claimant moved to Colorado Springs where he began employment with GWD Inc. d/b/a American Overhead Door as a commercial garage door technician. (Co WC No. 4-968-334, Ex. 2J).

53. Within months of beginning work for American Overhead Door, Claimant reported two successive Workers Compensation injuries on February 26, 2014, and April 22, 2014. (Ex. 2J; CO WC No. 4-948-380, Ex. 2K).

54. On February 26, 2014, Claimant asserted that he was pulling a large box from a truck when the box broke and he fell backwards on the ground. Claimant was evaluated a week later with reports of back pain. (Report of Dr. Henry Roth, Ex. 3K, p. 848).

55. Despite previous complaints of debilitating back pain noted in January of 2013, a pending recommendation for lumbar surgery, and a recent fall on his back, Claimant returned to work with American Overhead Door, when on April 22, 2014, he was ratcheting a garage door spring when the ratchet slipped out of his hands hitting his face. (E. 2K, Ex. 3K, p. 848).

56. As a result of the April 22, 2014, injury, Claimant reported neck pain and shocking sensations in his right arm. (Ex. 3K, p. 848).

57. In exploring the root of Claimant's bilateral upper extremity pain, he underwent an EMG on June 10, 2014, which found mild bi-lateral cubital tunnel and carpal tunnel syndrome, but no evidence of a right or left cervical radiculopathy. (Ex. 3K, p. 848).

58. Claimant underwent a psychological evaluation with Dr. David Hopkins on June 24, 2014, which echoed prior findings while noting that patients like Claimant with high levels of cognitive dysfunction and depression over-reported emotional symptoms and tend to respond catastrophically with small changes in symptoms. Dr. Hopkins diagnosed Claimant with concussive and post-concussive disorder, cognitive disorder, and pain disorder with psychological and physical factors. (mirroring diagnoses from prior claims), (Ex. 3K, p. 849).

59. By July 3, 2014, Claimant reported 10 of 10 pain with complaints including visual disturbances, *headaches*, confusion, *memory loss,* neck pain, *as well as numbness, tingling and weakness in his arms.* (Ex. 3K, p. 850).

60. Similar to his reports from 2010 with Dr. Cotgageorge, in August of 2014, Claimant reported reduced smell and taste. (Ex. 3K, p. 851).

61. By September of 2014, Dr. Michael Rauzzino performed a cervical fusion extension up to C4-5. (Ex. 3K, p. 851).

62. The September 2014 fusion extension appears to have done little to improve Claimant's condition, as he continued to report severe headaches, neck pain, and arm pain. (Ex. 3K, p. 851-852).

63. By January of 2015, Claimant's pain drawing had expanded indicating he was experiencing pain circumferentially in the upper torso, across his upper extremities, and from the waist down. (Ex. 3K, p. 853).

64. On February 12, 2012, Claimant underwent an IME with Dr. Albert Hattem, who found that Claimant's consistent lumbar complaints were not related to his employment, given Claimant's substantial pre-existing lower back problems documented from 2006 through 2014. (Ex. 3K, p. 853-54).

65. By March 22, 2015, Dr. Hopkins found that a neuropsychological evaluation was not warranted, given "too many intervening factors and complications." (Ex. 3K, p. 854).

66. After a revision surgery on his neck, Claimant underwent a Functional Capacity Evaluation which found again that he had permanent lifting restrictions of 5 pounds constantly, and up to 20 pounds infrequently. (Ex. 3K, p. 855-56)

67. After the FCE, Claimant was referred by his authorized treating physician for an impairment rating conducted by Dr. Henry Roth on October 29, 2015, who found:

> Mr. [Claimant] reports that pre-4/22/14 he was fully recovered from his prior conditions and was working full time without limitation or difficulty. *Mr. [Claimant] subjective report does not conform to the medical record reviewed*…
>
> It is not reasonable to anticipate that further medical attention will result in any sustained benefit in terms of comfort, function or impairment. His mental and cognitive status cannot be improved upon… His chronic pain syndrome cannot be improved upon. His behavioral aberrations are not new to the claim date of 4/22/14 …
>
> The prognosis for Mr. [Claimant] is very poor… As a result of Mr. [Claimant]' pre-existing, inherent behavioral health deficiencies, chronic inflammatory metabolic conditions, pre-existing ischemic cerebral disease, and hypersensitivity to bodily sensations, Mr. [Claimant] is not likely to ever feel well… He will continue to experience cervical, brachial, mid back, low back and extremity discomfort of waxing and waning intensity. (Ex. 3K, p. 860) (emphasis added).

68. After accounting for apportionment of two prior claims (2007 and 2008), Dr. Roth released Claimant at MMI with an additional 7% whole person rating, solely relating

to cervical surgeries, while noting that Claimants documented and ongoing pre-existing cognitive disorders, headaches, and low back pain. (Ex. 3K, 859-860).

69. After Dr. Roth's rating report, Claimant continued to treat with Dr. Rauzzino. By January 5, 2016, Claimant was reporting "worsening symptoms in his left arm," 7 of 10 pain in his "neck and down his arms bi-laterally," and "loosing strength in his hand grip." (Sky Ridge/Rauzzino Reports Ex. 3L, p. 867).

70. Three months later, in April of 2016, Claimant reported that his neck and arm symptoms were about 75% better, but that he was now complaining of a *"left swollen and painful ankle,"* which was about the same since surgery. Claimant also noted for the first time that he was complaining of a swollen left eye as a result of the revision surgery in September. (Ex. 3L, p. 869).

71. As a result of his left ankle complaints, on April 14, 2016, Claimant underwent an x-ray and ultrasound. The ultrasound was negative, while the x-rays showed arthritis of the ankle with small ossicles around the margin of the joint "probably due to an old avulsion injury," along with an osteophyte and narrowing of the interphalangeal joints. (Imaging, Ex. 3i, p. 469-471).

72. Two days after his left ankle imaging, on April 16, 2016, Dr. Rauzzino performed another surgery to extend Claimant's fusion to the C6-7 level (which was recommended by Dr. Youssef back in 2013). (Ex. 3L, p. 872-73).

73. By May 24, 2016, Claimant was reporting, "he is now doing worse with pain in his shoulders associated with numbness, tingling, and weakness. *He feels like his shoulders are coming out of their sockets."* He rated his pain as 8 of 10 with pain radiating into both arms to his hands. (Ex. 3L, p. 876) (emphasis added).

74. After Claimant had objected to Dr. Roth's rating, he was again released at MMI on September 26, 2016, and provided a 12% whole person rating. (Ex. 2K; Ex. 3L p. 878.)

75. Claimant settled his 2014 claims on November 28, 2016. (Ex. 2K).

76. The day after the settlement order issued on his 2014 claims, on November 29, 2016, Claimant returned to Dr. Rauzzino whose report states, "He continues to have sharp, stabbing aching throbbing pain in the back of his neck. It is constant and going 9/10. It goes all the way down his hands into his fingers bilaterally. He feels that he has had this for months and it is not getting any better." "He feels he cannot work due to this." Dr. Rauzzino referred Claimant for an EMG and for evaluation with a physiatrist. (Ex. 3L, p. 878-879).

77. Claimant testified at hearing that he did not receive any further treatment or evaluation for neck or bilateral arm pain between Dr. Rauzzino's report of November 29, 2016, and the alleged injury which forms the basis of this claim.

78. Sometime after November 29, 2016, Claimant underwent a lumbar fusion surgery. (PA Mychael Scott Letter, Cl. Ex. 6).

Current Claim

79. Despite claiming 9 of 10 pain for months preceding his release at MMI in November of 2016, indicating that he could not work due to the pain, (and admittedly receiving no treatment for claimed neck and arm pain), Claimant returned to work, when he began his employment with A1 Garage Door Specialists in August of 2020.

80. Ryan M[Redacted], the owner of Respondent Employer, testified at hearing that he specifically asked Claimant if he would be able to perform the functions of the job, which included heavy lifting and frequent use of ladders. Despite multiple physicians dating back decades stating that Claimant was restricted in lifting to 5 pounds consistently, with no use of ladders, Claimant did not indicate any physical restrictions limiting his ability to work.

81. After working as a garage door technician for six weeks, Claimant now alleges that he was injured on the job with Respondent Employer on September 21, 2020. (Online Claim Report, Cl. Ex. 2).

82. Claimant was assigned to install a new garage door and side mount opener at Lenz Electric, located at 3514 E. St. Vrain St, Unit A, Colorado Springs, Colorado. (Job Ticket, Ex. 4).

Jonathan G[Redacted] Testifies at Hearing

83. Claimant's co-worker, Jonathan G[Redacted], a current firefighter in the Colorado Springs area and a trained Emergency Medical Technician, testified at the hearing.

84. Mr. G[Redacted] testified that as a firefighter, he is trained in emergency medical response, and further that he was trained in combat casualty care as a firefighter in the national guard. Mr. G[Redacted] clarified that he was trained as an EMT prior to working at A1 Garage Door Specialists, but that his license had lapsed while in the military.

85. Mr. G[Redacted] noted that he had a conversation with Claimant on the date of the alleged injury in which Claimant stated to him that he had sought additional insurance coverage prior to his alleged accident. Mr. G[Redacted] found the discussion of insurance strange.

86. Claimant had requested assistance on the job, and Mr. G[Redacted] arrived at the jobsite after completing an earlier job. Mr. G[Redacted] noted that when he arrived, Claimant had not set up the worksite and hadn't unloaded anything.

87. Claimant stated to Mr. G[Redacted] that they were to remove the existing overhead opener. Mr. G[Redacted] then proceeded to set up a fiberglass step-ladder, with aluminum steps and rubber feet, to access the existing overhead garage door opener.

88. Upon climbing the ladder and removing the metal panel to access the electrical connections to the opener, Mr. G[Redacted] found that the opener was directly wired. Given his inexperience with direct wiring, he stated that he was uncomfortable disconnecting the existing overhead opener.

89. Mr. G[Redacted] testified that despite Claimant's stated ability to test the connection with a volt-o-meter, Claimant ascended the ladder without testing the existing motor's electrical connection.

90. Mr. G[Redacted] noted that he had not received any electrical shock when touching the metal opener, or when opening the access panel to the motor's electrical connections.

91. [The existing opener was a metal-encased garage door motor. The motor specifically states that it is a 1/3 horsepower motor operated by a 115 volt connection]. (Ex. 4).

92. After Mr. G[Redacted] came off the ladder, Claimant climbed the ladder to complete the disconnection of the overhead door. Claimant was wearing gloves, which he described as "Gorilla Gloves," which were noted to be cloth gloves that were rubberized from the fingers to the palms. Claimant was also wearing rubber-soled work boots at the time of the alleged accident. (See also Claimant's Prehearing Position Statement p. 3).

93. As Mr. G[Redacted] had his back turned to walk to get some water, he heard Claimant exclaim "Oh, fuck, I think I got electrocuted," which caused him to turn around, where he saw Claimant draped over the top of the ladder with his chest and abdomen parallel with the rungs of the ladder.

94. Mr. G[Redacted] testified that after Claimant stated he was 'electrocuted', he was still able to speak coherently, and was able to climb down the ladder. Mr. G[Redacted] noted, that as a trained EMT, Claimant was not exhibiting any signs of a traumatic high voltage electrocution. Although he did not take Claimant's vitals, Claimant did not lose consciousness and was able to clearly speak and walk.

95. Mr. G[Redacted] did not hear any popping, cracking or electrical discharge; did not see any arcing, lightening or smoke; and did not smell any acrid or metallic scent of electricity.

96. Mr. G[Redacted] also noted that Claimant's symptoms appeared to dramatically change as soon as an ambulance arrived.

Claimant Testifies at Hearing

97. Claimant offered photographs of the location of the alleged injury, [marked and admitted generally as C-1] and stated that they had been taken immediately ***prior*** to the occurrence, because his boss wanted him to take before-and-after photos of each job. [The ALJ notes that this claim was not corroborated by the owner of A1 Garage Door].

98. Claimant testified that he was required to stand on the absolute top rung of the ladder in order to access the overhead motor. Despite this allegation, Claimant testified that after this alleged electric shock, he found himself 'waking up', and draped (presumably at his midsection) over the top rung of the ladder.

99. Claimant asserted that while wearing rubberized gloves, before he had even finished unscrewing a single wire cap, he received a substantial electrical shock with lighting going off in front of his face. Claimant testified that he smelled burning hair and skin at that time. He theorized that the electricity went 'up his left ankle'.

100. Claimant estimated that he had worked for Employer for approximately six months. Claimant was then asked about a number of Facebook postings [marked generally as Respondent's Ex. 5, and none of which Claimant denied posting] depicting him narrating fishing trips in the weeks and months following his alleged injury. He was further asked about his postings regarding panning for gold in the mountains during this time frame, and operating a 'sluice box' he had purchased and set up at his home to separate the gold.

101. Claimant was evasive in his answers to these questions, each time minimizing the extent of his activities [despite none of his postings making any note of any limitations he allegedly suffered from]. Claimant claimed he was unable to even operate the 'sluice box' he had set up to separate the gold; rather, it was just set up 'to see how it worked'. The ALJ finds Claimant's explanations and rationalizations to be duplicitous.

102. Despite complaints on the date of injury limited to his right arm, and left ankle, Claimant now asserts that the alleged incident has caused issues including but not limited to, dementia, problems swallowing, low back pain, seizures, facial tremors, pulmonary hypertension, breathing problems, and cardiac problems.

Claimant is transported by Ambulance

103. Claimant insisted that he be transported by ambulance. After Claimant was transported, Mr. M[Redacted] and Mr. G[Redacted] both witnessed the electrical line being tested at standard residential socket level of 110-120 volts. They also noted that the breaker to which the overhead door was attached had not been tripped.

104. Mr. M[Redacted] testified that when he completed the disconnection of the overhead door, there were no wires exposed inside the electrical panel of the motor.

105. Claimant arrived by ambulance at Memorial Hospital in Colorado Springs where he was evaluated. While in triage, he complained of right arm pain at 10 out of 10, asserted that he was starting to get a migraine, and informed the triage nurse that he was shocked by an estimated *460 volts of electricity*. (UC Health Records, Ex. 3J, p. 503).

106. Despite Claimant's allegation of a '460 volt' shock, the triage nurse examined Claimant's skin, "thoroughly", *finding no sign of an exit wound or thermal burn*. (Ex.

3J, p. 496). Claimant reported, “He feels like his shoulder is dislocated.” (Ex. 3J, p. 497). Claimant reported that he believed he lost consciousness. *Id.*

107. Further, when reporting diffuse right arm pain up in the shoulder, Claimant denied any significant past medical history. *Id.*

108. Claimant was evaluated by Dr. Jason Murphy, who stated:

> Concern that patient is large voltage may have actually caused some significant internal damage that we cannot evaluate he could be at risk for compartment syndrome especially with how much pain he is having there is probably also a muscle spasm component. We had the patient evaluated by the trauma surgeon who will take him to their service overnight for evaluation and monitoring. *His EKG did not show any acute abnormalities on my interpretation. Id* at 502. (emphasis added).

109. Despite Claimant’s reports of a high voltage injury, Dr. Murphy noted, *“No significant external injury appreciated entire length of his right arm right shoulder and bilateral lower extremities or in the rest of his body. Heart exam is unremarkable.”* Given Claimant’s subjective pain complaints, and (highly exaggerated) allegations of a high voltage 460 volt electrocution, Claimant was nonetheless admitted for observation. *Id.* (emphasis added).

110. When subsequently interviewed by Dr. Brian Leininger in the Memorial Hospital emergency department, Claimant again repeated that he “touched a ‘live’ 460 V motor while up on a ladder,” and further stated that he briefly lost consciousness. Despite these allegations, Dr. Leininger found that *Claimant’s hand “does not have any cutaneous lesions indicative of surface burns.”* Though Claimant’s left ankle was swollen, imaging only revealed a “calcaneus deformity which appears *chronic* in nature.” *EKG was found to be normal* with no acute myocardial ischemia and no arrhythmias. *Id* at 554. (emphasis added).

111. After an overnight stay, and re-evaluation in the early morning of September 22, 2020, Claimant was discharged, noting sensory intact, good pulses, soft compartments, normal electrolytes, decreased CPK levels, and a normal initial EKG. Given these findings, the burn unit in Denver indicated that transfer was unnecessary. *Id* at 570.

112. Before being discharged, Claimant underwent a cognitive evaluation which found, mild cognitive deficits. At the time Claimant reported new onset of word finding difficulties and short term memory impairments. *Id.*

113. [Contrary to Claimant’s reports to the treating provider on September 22, 2020, Claimant had been diagnosed with substantial ongoing cognitive defects well before his alleged electrical injury].

Claimant is discharged from Hospital, then Returns

114. Eight days later, Claimant returned to the hospital, now complaining of right shoulder pain, headaches and dizziness. He denied neck pain and back pain. Claimant underwent a head and neck CT scan, which did not demonstrate significant or acute findings. (Ex. 3J, p. 738).

115. After this hospital discharge, Claimant saw both his primary care physician, and an Authorized Treating Physician (which Respondents approved, despite a pending Notice of Contest).

116. Claimant's November 6, 2020, report from his NP Coram at his primary care physician' s office states, "He has been following up with neurology for multiple issues with sensation, pain, and weakness… the *doctors 'think he may have MS,"* they have multiple concerns that appear to have developed *within the last year* including balance, memory, and general health." (Ex. 3M, p. 882) (emphasis added).

117. In accordance with Respondents approval of an ATP, Claimant reported to Dr. McNulty with Optum on November 19, 2020. At his initial telehealth appointment, Claimant reported that he was electrocuted by *240 volts*, and had experienced neuropathy in his right arm and left foot since the date of injury. Claimant was, [for the first-time] reporting, "3 days of *right eye pain* and blurry vision and visual disturbances."

118. Despite the appointment being a telehealth visit, Dr. McNulty concluded "visual abnormalities supposedly related to that electrocution, extensive degree of muscle and nerve damage in his right arm through is left leg which was the exit point." (Ex. 3N, p. 891). This conclusion appears solely based on Claimant's subjective reports and inaccurate recitation.

119. In addition to reporting new right eye pain on November 19, 2020, Claimant also reported new symptoms of dysphagia (problems swallowing). (Ex. 3N, p. 892).

Claimant Returns to the Emergency Room

120. On November 20, 2020, Claimant returned to the emergency room complaining of right eye pain and vision problems, worsening over the last 4 days. Despite any notation or allegation of such pain in records from the date of accident, Claimant reported that this symptom had been ongoing since "electrocution over a month ago." (Ex. 3J, 792).

121. On January 17, 2021, Claimant appeared for a follow up telehealth visit at which time Dr. McNulty again found, "He is experienced consistent headaches, dysphagia, neuropathic pain at the entry and exit points of his electrocution." (Ex. 3N, p. 894). Again, Dr. McNulty's findings are based solely on Claimant's subjective reports, as the

record indicates no physical exam was done, and he fails to cite hospital records indicating no evidence of an entry or exit wound.

IME with Dr. Brunworth

122. On February 4, 2021, Claimant underwent an Independent Medical Examination with Dr. Gretchen Brunworth. Dr. Brunworth performed a physical examination of the Claimant, and also had access to Claimant's available and disclosed medical history. Claimant's reported history to Dr. Brunworth included only two prior injuries (2009 and 2013) with a full recovery and no restrictions from both.

123. During the Claimant's *History,* as he related to Dr. Brunworth, Claimant stated:

> ….He grabbed onto a nut with his right hand and undid the cover. *His hand then got stuck to the cover.* He reports that he was being electrocuted. He could not move his hand. Fortunately, he fell over the ladder and did not fall off the ladder. *When he came to, he could not speak.* Eventually he was able to slowly climb down the ladder and ask for help…..*He could not think or speak….* He reports that he was on the trauma burn intensive care unit for three days….*He had a burn on his right foreman(sic) and wrist* in a lot of pain in his left foot. After treating in the ICU *it was recommended that he go to the Denver Health Burn Unit.* Unfortunately, he never went. He was ultimately discharged because he had no insurance. (Ex. O, p. 897) (emphasis added).

124. During Claimant's *Current Complaints*, he reported constant bilateral neck pain, as though his neck were *'fractured'* again. His muscles felt 'weak and broken', with burning, numbness and tingling in both arms. He reported 'pounding headaches', and 'it feels like his right eye is being pushed out', with occasional blurred vision. "On a pain scale of zero to 10 with zero being no pain and 10 being pains so severe *one would faint*, the patient reports that at its worst, his pain is a level of 10, at its best it is a 7, and *today it is a 10*. *Id* (emphasis added).

125. Under *Occupational History*, Dr. Brunworth noted: *"He has worked as a garage door specialist for 28 years.*" *Id* at 898.

126. In her *Assessment*, Dr. Brunworth concluded: "There are multiple inconsistencies between the patient's report and the records. There is no objective evidence that the patient sustained an electrocution injury significant enough to cause all his symptoms." *Id* at 913.

127. [At hearing, and in his reports to Dr. Brunworth, Claimant continued to assert that he had burn wounds on his right arm. As noted in Dr. Brunworth's report, this is inconsistent with medical records].

Dr. Brunworth Testifies at Hearing

128. Dr. Brunworth testified at hearing and was admitted as an expert with specialties in physical medicine and rehabilitation, over Claimant's repeated objections.

129. Dr. Brunworth testified that pursuant to her review of available medical records, and physical examination of Claimant, that there was no objective evidence that he sustained an injury attributable to an electrical event. Dr. Brunworth noted that all objective testing including physical examination, EKG, imaging and bloodwork was completed.

130. Dr. Brunworth testified that all of Claimant's symptoms of which he was currently complaining, were found throughout available medical records from his prior medical encounters. Dr. Brunworth concluded that Claimant did not suffer a compensable injury requiring care.

131. Over Respondents' objections, the ALJ entered a November 3, 2021, letter from PA Mychael Scott, which states: "*per Mr. [Claimant]'s report* he was completely asymptomatic prior to this electrocution injury." The letter then notes that an MRI found severe stenosis at the L3-4 level, for which a subsequent surgery was performed. (CL. Ex. 6).

132. In differentiating the stenosis finding, PA Scott notes that an EMG was performed which demonstrated evidence of a distal injury to the left sciatic nerve, then in quotes noted that such finding, "*could conceivably* be due to an electric injury." *Id.* (emphasis added).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). The ALJ does adopt the findings and conclusions of Dr. Brunworth as being accurate. She made a thorough medical records review, took a (highly suspect, but accurately documented) medical history from Claimant, and drew an appropriate conclusion that there is no objective or reliable medical evidence to support Claimant's central claim that he suffered an electrocution injury.

E. The ALJ finds that Jonathan G[Redacted] testified both credibly and knowledgeably. Mr. G[Redacted] has no axe to grind with anyone. And by happenstance, he has a background in emergency medical response; thus was better equipped than the average individual to observe and evaluate a person purporting to be in distress. He also made accurate observations about Claimant's unusual statement before the alleged incident that he had taken out extra insurance, and that Claimant was indeed wearing rubber tipped gloves, rubber soled boots, and worked on a fiberglass ladder with rubber feet. Further, the ALJ finds him credible in recounting his own, non-dramatic, experience on the ladder, the lack of any signs of an electrical accident in the workplace, and the lack of apparent symptoms that Claimant was exhibiting-until the ambulance arrived. The ALJ also finds Mr. M[Redacted]'s testimony, brief though it was, to be credible and accurate in every respect.

F. As will be discussed in more detail, infra, Claimant has displayed a lengthy history of not merely extreme symptom magnification, but symptom fabrication. This pattern has carried into the instant case with equal mendacity. The ALJ finds nothing that Claimant has said to any of his numerous medical providers through the years to be reliable or truthful. Nothing that Claimant testified to this tribunal was truthful, reliable, or supportable by any extrinsic evidence. The most charitable interpretation of Claimant's gross exaggerations and outright fabrications is that he suffers from a severe somatoform disorder. The more likely explanation is that Claimant has found that Workers Compensation can be lucrative.

Compensability, Generally

F According to C.R.S. § 8-43-201, "a claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers' compensation case shall be decided on its merits." *Also see Qual-Med, Inc. v. Indus. Claim Appeals Off.,* 961 P.2d 590, 592 (Colo. App. 1998) ("The Claimant has the burden of proving an entitlement to benefits by a preponderance of the evidence."); *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App. 1993) ("The burden is on the claimant to prove his entitlement to benefits by a preponderance of the evidence.").

G. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.,*104 P.3d 273, 275 (Colo. App. 2004).

H. For an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Off.,* 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. *See Schepker, supra.* "In the course of" employment refers to the time, place, and circumstances of the injury. *Id.* There is no presumption that an injury arises out of employment merely because an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm'n,* 165 Colo. 106, 108-09, 4437 P.2d 542 (1968).

I, Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1)(c) C.R.S.*;* *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner,* 12 P.3d at 846.

J. Colorado's Workers' Compensation Act creates a distinction between the terms "accident" and "injury". The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." *See* §8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. In other words, an "accident" is the cause and an "injury" is the result. *City of Boulder v. Payne,* 426 P.2 194 (1967). No benefits flow to the victim of an industrial accident unless the accident results in a compensable “injury.” A compensable injury is one which requires medical treatment or causes a disability.

K. It is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between her employment and her injuries. An ALJ might reasonably conclude the evidence is so conflicting and unreliable that the claimant has failed to meet the burden of proof with respect to causation. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 191 (Colo. App. 2002) (weight to be accorded evidence on question of causation is issue of fact for ALJ). *See also, In the Matter of the Claim of Tammy Manzanares, Claimant*, W. C. Nos. 4-517-883 and 4-614-430, 2005 WL 1031384 (Colo. Ind. Cl. App. Off. Apr. 25, 2005).

Was there an Electrical ‘Accident’ of any sort?

L. The only corroboration that Claimant *could have possibly* been shocked, however briefly, was that the opener he was going to take down was direct wired. However, Mr. G[Redacted] was not shocked when he took a look by opening the access panel. Nor was Mr. M[Redacted] when he looked after the fact. Mr. G[Redacted] heard nothing to indicate any sort of event occurred-other than Claimant’s ‘exclamation’. The breaker supporting this connection was not tripped. There were no exposed wires upon inspection. Clamant was wearing the proper protective equipment, standing on a fiberglass ladder with rubber feet. *The ALJ finds and concludes that no such electrical accident, however brief, occurred at all-regardless of the voltage.*

Did Claimant Suffer an ‘Injury’ from any Electrical Accident?

M. The ALJ finds that he did not. Even assuming, arguendo (which the ALJ emphatically does *not* in this instance) that Claimant suffered a momentary shock while grabbing one of the leads, it was plainly fed with a 115 volt connection-which is ordinary household current. Claimant is experienced in installing garage doors (although his claim to Dr. Brunworth of 28 years in the business is demonstrably false). He knew full well what he was working on. It was right in front of him. Yet, after the fact, he repeated his fabricated claim that he endured 460 volts. He had to make that number up, in order to support the symptoms he was claiming. [The ALJ notes that 115 multiplied by 4 comes out to the nice, round, fictitious number of 460]. He later lowered this claim to 240 volts to Dr. McNulty, which was still a knowing falsehood.

Did Claimant ‘Stage’ this entire event before the fact?

N. The ALJ concludes that it is entirely plausible that he did so, as opposed to just opportunistically making it all up as he went along. Claimant made the highly unusual statement to Mr. G[Redacted] *before the fact* about taking extra insurance. Claimant took photos of the alleged injury location *before the fact*, citing a reason unsupported by the record. Claimant waited until he had a ‘witness’ to this incident (who didn’t turn out so well for him at hearing) before ascending the ladder, then waited until Mr. G[Redacted]’s back was turned, before issuing his ‘exclamation’. He then conveniently ‘draped’ himself over the top rung of the ladder-instead of falling off, as one would expect an unconscious person to do. Falling of the ladder might have actually hurt. Given Claimant's experience, he knew to use a volt meter to test to see if the unit were still 'hot'. He did not do so. Before Mr. G[Redacted] arrived to assist, there is ample reason to believe Claimant himself could have made sure the unit was still 'hot' (with 115 only, as he well knew) before the arrival of his 'witness'. And, of course, his grossly exaggerated symptoms upon the arrival of the (insisted-upon) ambulance are suggestive of pre-planning.

Were any of Claimant's Alleged Symptoms Even Real?

O. Assuming, arguendo (which the ALJ emphatically does *not* in this case), that Claimant were sincere (due to some somatoform disorder) in his symptomatology, there is zero objective evidence in support thereof. In fact, the available objective evidence contradicts Claimant's claims. His EKG was normal. His bloodwork was normal. His physical exam was normal. While rarely oiccurring, range of motion deficits can be faked. Subjective complaints of pain, headaches, and visual disturbances can be faked-and they were in this case-repeatedly. Claimant was never ***treated*** for an electrical injury during his stay at Memorial. Instead, he underwent extensive *testing and evaluation,* which always came up zeros. When there was no actual *treatment* to offer him, he was appropriately discharged. Then, Claimant went back to the well again, with new 'symptoms', which numerous medical providers dutifully investigated, lest they be accused of malpractice.

P. Be it noted that to the extent *any* medical provider (such as Dr. McNulty, or PA Scott) stated *any potential* support at all for an electrical injury, said providers were relying *solely* upon Claimant's uncorroborated complaints to them. And, of course, being in the business of helping persons with their medical complaints, their preliminary reliance was not unreasonable. Physicians initially take things at face value, as they trust their patients will act in their own best interests in providing good medical histories. Then, they test and investigate. In this case, such testing and investigation was done, ad nauseam, by others. To the extent that any medical reports could be interpreted in favor of Claimant's claim, the ALJ finds that such interpretations are vastly outweighed by the credible and reliable evidence in contradiction thereof.

Q. Unencumbered by a conscience, Claimant milked the entire system, until the IME report put a stop to it. His constellation of reported complaints (which the ALJ finds were knowingly fabricated in this case) resemble, to a remarkable degree, symptoms he has complained of in the past- and for which sometimes he was handsomely rewarded by the Workers Compensation systems in at least two states. While outright Workers Compensation fraud is a comparatively rare occurrence, the ALJ finds this one to be precisely the case.

Medical Benefits

R. Claimant did not suffer a compensable injury. His claim for any medical benefits is denied and dismissed.

ORDER

It is therefore Ordered that:

1. Claimant did not suffer a compensable work injury. His claim for Workers Compensation benefits of any sort, including medical benefits, is denied and dismissed.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is **highly recommended** that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: December 13, 2021

Colorado Springs, Colorado 80906

ISSUES

Has the respondent overcome, by clear and convincing evidence, the opinion of the Division sponsored independent medical examination (DIME) physician that the claimant's lumbar spine was injured as part of the admitted July 1, 2017 work injury, resulting in an impairment rating for the lumbar spine?

FINDINGS OF FACT

1. The claimant suffered an injury at work on July 1, 2017. The injury occurred when the claimant was attempting to push a bookshelf with her left leg and felt a pop in her left hip. During this claim, the claimant's authorized treating physician (ATP) has been Dr. Vanessa McClellan with Western Valley Family Practice.

2. The claimant underwent a magnetic resonance image (MRI) arthrogram of her left hip on August 1, 2017. The MRI showed an acetabular labral tear involving the superior and posterior acetabulum

3. On October 5, 2017, Dr. Peter Scheffel performed arthroscopic left hip surgery. The procedure included arthroscopic synovectomy, minimal labral debridement, and iliopsoas tenotomy.

4. The ALJ notes that throughout this time period, the claimant completed pain diagrams when seen by Dr. McClellan. The ALJ further notes that the notations/marks made on these pain diagrams are substantially consistent before and after the hip surgery.

5. On March 22, 2018, the claimant returned to Dr. Scheffel. At that time, the claimant reported ongoing left hip pain, with low back pain, and left foot numbness. Dr. Schedffel recommended an evaluation of the claimant's spine.

6. On April 12, 2018, the claimant was seen by Dr. McClellan. At that time, Dr. McClellan noted that it was Dr. Scheffel's opinion that the claimant's pain was coming from her back. Dr. McClellan also noted that she agreed with Dr. Scheffel's referral to Dr. Larry Tice. In that same medical record, it was noted that the claimant was eight weeks pregnant.

7. On April 23, 2018, the claimant was seen by Dr. Tice. At that time, Dr. Tice referenced the claimant's hip injury. In addition, he noted that the claimant's pain could be coming from the sacroiliac (SI) joint. As a result, he recommended an MRI of the claimant's pelvis. In that same medical record, it is noted that the claimant did not experience back pain with a prior pregnancy.

8. On June 13, 2018, the claimant attended an independent medical examination (IME) with Dr. Tashof Bernton. In connection with the IME, Dr. Bernton reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Bernton noted that the claimant's mechanism of injury would be consistent with a labral tear. However, he also noted that during the arthroscopic procedure, the tear was deemed minimal. Dr. Berton recommended that the claimant undergo a repeat left hip MRI and a rheumatologic evaluation. With regard to the claimant's low back symptoms, Dr. Barton opined that these were related to the claimant's pregnancy. Therefore, he recommended that any treatment or evaluation of the claimant's SI joint and back symptoms should be pursued outside the workers' compensation claim.

9. On July 5, 2018, Dr. McClellan noted that the claimant's low back pain existed prior to the claimant's pregnancy. Dr. McClellan noted her disagreement with Dr. Bernton and stated that it is her opinion that the claimant's low back pain is not related to the claimant's pregnancy. Dr. McClellan reiterated her opinion in a September 4, 2018 medical record in which she stated "the low back pain was present long before [the claimant] became pregnant".

10. On June 19, 2018, the claimant was seen by Dr. Scheffel. At that time, the claimant reported that the pain in her groin and intraarticular hip joint had improved. However, she had increased pain along her trochanteric iliotibial band. Dr. Scheffel recommended evaluation of the claimant's SI joint, but no further treatment for her hip.

11. Following the birth of her child, on March 7, 2019, the claimant underwent the MRI previously recommended by Dr. Tice. The MRI showed degenerative disc disease at L5-S1 level with a disc bulge resulting in right lateral recess stenosis and mild right neural foraminal stenosis.

12. On January 22, 2019, the claimant attended a second IME with Dr. Bernton. At that time, Dr. Bernton noted that the claimant was experiencing "pain in the left SI [joint] with both piriformis and Patrick's testing."

13. On March 27, 2019, the claimant returned to Dr. McClellan. At that time, Dr. McClellan reviewed the recent MRI results and noted that these results did not correlate with the claimant's left low back symptoms. Dr. McClellan opined that the claimant's left hip was likely the source of the claimant's ongoing pain. As a result, she recommended a repeat MRI of the claimant's left hip.

14. On March 29, 2019, the claimant underwent the recommended left hip MRI. The MRI showed no evidence of a labral tear and no clear etiology of the claimant's left sided symptoms.

15. On May 6, 2019, the claimant returned to Dr. McClellan. On that date, Dr. McClellan noted that the claimant had ongoing left sided hip and low back pain. Dr. McClellan noted that the claimant "continues to struggle with this pain that happened right after the original injury."

16. On September 25, 2019, Dr. McClellan determined that the claimant had reached maximum medical improvement (MMI). At that time, Dr. McClellan noted that the claimant would need an impairment rating. In addition, Dr. McClellan recommended maintenance medical treatment of physical therapy and dry needling.

17. On October 23, 2019, the claimant was seen by Dr. Ellen Price for an impairment rating. On that date, Dr. Price noted that the claimant “started having back pain” after she became pregnant. Dr. Price assessed a 14 percent impairment rating for the claimant’s left hip. Dr. Price did not assess an impairment for the claimant’s back.

18. On March 24, 2020, the claimant attended a telehealth appointment with Dr. Price. On that date, Dr. Price noted that it was likely that the claimant’s low back complaints were work related. Dr. Price also noted that the claimant had undergone physical therapy and dry needling for her low back. Dr. Price determined that the claimant would return to her for range of motion measurements of the claimant’s low back to assess permanent impairment.

19. On April 7, 2020, the parties went to hearing before ALJ Keith Mottram on the issue of converting the scheduled left lower extremity impairment to a whole person impairment.

20. On April 8, 2020, the claimant returned to Dr. Price. At that time, Dr. Price assessed permanent impairment for the claimant’s lumbar spine of 10 percent. She then added this to the lower extremity rating, for a total whole person impairment rating of 15 percent.

21. On April 30, 2020, ALJ Mottram issued Findings of Fact, Conclusions of Law and Order[1] in which he found that conversion of the claimant’s left lower extremity to a whole person impairment was appropriate.

22. On May 8, 2020, the respondent filed a revised Final Admission of Liability (FAL) to reflect ALJ Mottram’s order regarding conversion of the scheduled left lower extremity impairment to a whole person impairment.

23. On September 8, 2020, the parties attended a hearing before ALJ Mottram on the issue of reopening this claim. At the outset of the hearing, the parties stipulated that if the claimant was successful in reopening her claim, the respondent would have the opportunity to request a Division sponsored independent medical examination (DIME).

24. At the September 8, 2020 hearing, the claimant testified that the October 25, 2017 surgery improved her hip joint pain, but that the pain across the back part of her body remained.

25. In an order dated October 19, 2020 (and issued October 20, 2020), ALJ Mottram granted the claimant’s petition to reopen the claim. In his order, ALJ Mottram

[1] A Corrected Order was issued by ALJ Mottram on May 13, 2020 to address clerical errors in the April 30, 2020 order. The substance of the order was unchanged regarding conversion.

found that Dr. Price made a mistake when she failed to include an impairment rating for the claimant’s lumbar spine on October 23, 2019.

26. Thereafter, the respondent filed a Petition to Review (PTR) and the matter proceeded to the Industrial Claim Appeals Office (ICAO). In a Final Order dated April 1, 2021, the ICAO dismissed the respondent’s PTR, without prejudice, for lack of a final order. The ICAO found that ALJ Mottram’s order only reopened the claimant’s case, and did not order any specific benefits. As a result, the ICAO determined that the order was not final and ICAO could not review it.

27. Subsequently, the respondent requested a DIME, and on June 4, 2021, the claimant attended a DIME with Dr. Thomas Moore. In connection with the DIME, Dr. Moore reviewed the claimant’s medical records, obtained a history from the claimant, and performed a physical examination. In his DIME report, Dr. Moore noted that the body parts involved in this claim are the claimant’s left hip and lumbar spine. Dr. Moore also noted the claimant’s report that she had ongoing left hip pain and pain in her left lower spine. In his report, Dr. Moore further noted that the claimant pointed to her SI joint when reporting her lower back symptoms. Dr. Moore identified the claimant’s diagnoses as left hip labral pathology, chronic hip pain, and chronic low back pain. Dr. Moore agreed that the claimant reached MMI on September 25, 2019.

28. Dr. Moore specifically noted:

> Although there was no identified specific injury to her lumbar spine from her on-the-job occurrence, Dr. Tice related her symptoms could be related to her lumbar spine and therefore ordered the MRI on 3/7/2019. If [the claimant’s] lumbar spine is included as part of her job related injury then the permanent impairment determined is related to her on-the-job injury.

29. Dr. Moore performed range of motion testing on the claimant’s left hip, and assessed a scheduled impairment of six percent. In addition, he assigned a five percent whole person impairment for the claimant’s lumbar spine for a specific disorder and a six percent whole person impairment for loss of lumbar spine range of motion. This resulted in a permanent impairment rating of 13 percent, whole person.

30. At the request of the respondent, Dr. Bernton reviewed additional records in the claimant’s case. This review included Dr. Moore’s DIME report. In his September 23, 2021 report, Dr. Bernton opined that Dr. Price’s assessment of an impairment rating for the claimant’s lumbar spine “was based on a factual error”. Specifically, it is Dr. Bernton’s opinion that Dr. Price did not independently review the claimant’s medical records to determine that her low back complaints existed since the beginning of the claim. Dr. Bernton further opined that Dr. Moore erred when he included the claimant’s lumbar spine in the impairment rating. Dr. Bernton noted that Dr. Moore used a conditional statement in the DIME report regarding the relatedness of the claimant’s lumbar spine to the work injury. Dr. Bernton stated that this statement fails to rise to the level of a reasonable medical probability.

31. Dr. Bernton's testimony was consistent with his written reports. Dr. Bernton testified that Dr. Moore erred when he included the claimant's low back as a related body part. Dr. Bernton further testified that the claimant developed back symptoms after she became pregnant. Therefore, it remains his opinion that the claimant's low back symptoms are not related to the work injury, but rather caused by her pregnancy.

32. The ALJ credits the medical records and finds that the claimant was experiencing low back pain from the time of her injury. Specifically, the ALJ credits the May 6, 2019 medical record in which Dr. McClellan noted that the claimant's left hip and low back pain "happened right after the original injury." The ALJ also specifically credits the pain diagrams completed by the claimant throughout this claim that consistently demonstrate the existence of both hip and low back symptoms. The ALJ further credits Dr. Moore's statement that if the claimant injured her low back in the work injury, then the permanent impairment to her low back is related to the work injury. The ALJ also finds that the claimant's low back was appropriately included in the impairment ratings assessed by Drs. Price and Moore. The ALJ further finds that the difference between the opinion of Dr. Bernton and that of Drs. Price and Moore is merely a difference of opinion. Based upon all of the foregoing findings, the ALJ finds that the respondent has failed to overcome the opinion of the DIME physician that the claimant's lumbar spine was injured as part of the admitted July 1, 2017 work injury, resulting in an impairment rating for the lumbar spine.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias,

prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probable that the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000). The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. As found, the respondent has failed to overcome, by clear and convincing evidence, the opinion of the DIME physician that the claimant's lumbar spine was injured as part of the admitted July 1, 2017 work injury, resulting in an impairment rating for the lumbar spine. As found, the medical records and the opinions of Drs. Price and Moore are credible and persuasive.

ORDER

It is therefore ordered:

1. The respondent's request to overcome the opinion of the DIME physician is denied and dismissed.

2. All matters not determined here are reserved for future determination.

Dated this 14th day of December 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable right shoulder injury during the course and scope of his employment with Employer on June 5, 2020.

2. Whether Claimant has established by a preponderance of the evidence that the right shoulder surgery recommended and performed by Authorized Treating Physician (ATP) Adam Joseph Seidl, M.D. at the Steadman Hawkins Clinic on August 19, 2021 was reasonable, necessary and causally related to his June 5, 2020 injury.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period August 19, 2021 until terminated by statute.

4. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. On February 24, 2020 Claimant began working for Employer as a firefighter. Prior to commencing work, Claimant underwent a physical examination and was cleared for full-duty employment. He had previously retired from the Denver Fire Department after 25 years of service.

2. In June 2020 Claimant was a recruit in the Academy for the [Redacted] (District). Lieutenant Brian D[Redacted] was a recruit training officer for the District. He testified that the Academy was open from February 2020 through early June 2020. There were two locations for the Academy. One was the Joint Services Facility (JSF) and the other was the Troy Jackson Training Center (TJTC). Claimant was assigned to the JSF.

3. Claimant testified that on June 5, 2020, as part of his training at the Academy, he was throwing 24-foot and 16-foot ladders for a vent, enter and search scenario. During the exercise he experienced pain in his right shoulder.

4. Claimant explained that he immediately reported the injury to Lieutenant D[Redacted]. He noted that Lieutenant D[Redacted] directed him to start treatment at Employer's Wellness Facility. However, Lieutenant D[Redacted] testified that Claimant never advised him of an on-the-job injury.

5. The record reveals that Claimant has a prior history of right shoulder symptoms. Claimant began receiving treatment for his right shoulder condition in May 2011. Specifically, on May 3, 2011 Claimant visited personal physician Heather A. Shull, M.D. at Kaiser Permanente for an examination. Claimant explained that he had injured

his right shoulder six months earlier while putting on a pack at work. Dr. Shull diagnosed Claimant with rotator cuff syndrome and administered an injection

6. On October 20, 2015 Claimant's underwent a right shoulder MRI. The MRI revealed a SLAP tear and a partial thickness rotator cuff tear.

7. On November 16, 2015 Claimant visited orthopedic surgeon David Gerhardt for an examination. Following the assessment, Dr. Gerhardt documented that he had a long discussion with Claimant regarding potential treatment options. He noted that surgical intervention was an option and specified that the surgery would "include biceps tenotomy with an open subpectoral biceps tenodesis and possible superior labrum anterior, posterior repair versus debridement and associated rotator cuff debridement versus repair." However, Claimant was "not particularly symptomatic and has declined injections." Dr. Gerhardt remarked that Claimant would continue to function as tolerated and follow up on an as-needed basis.

8. Subsequent to the June 5, 2020 incident, Claimant emailed Employer's Wellness Director Trae Tashiro on June 16, 2020. He requested an appointment but was uncertain about how to obtain one. Claimant specifically sought treatment for his right shoulder and right hip. Mr. Tashiro testified that he was uncertain whether Claimant's e-mail suggested he had suffered a work injury.

9. On June 16, 2020 Claimant received an e-mail from Employer's athletic trainer Brian Crouser. Mr. Crouser noted that Mr. Tashiro had forwarded Claimant's e-mail and was available "to assist you with scheduling a time to evaluate your shoulder/hip."

10. On July 7, 2020 Claimant commenced treatment at Employer's Wellness facility. The medical provider maintained a record of treatment on a document titled "Injury Record [Employer] Injury Stats." The record provided that Claimant's right shoulder was improving but he was still experiencing weakness. Claimant continued to undergo physical therapy at Employer's Wellness facility through March 4, 2021.

11. On November 25, 2020 Claimant visited Employer's designated surgeon Authorized Treating Physician (ATP) Adam Joseph Seidl, M.D. Dr. Seidl recorded that Claimant had been "dealing with right shoulder pain for the past couple years it has really increased over the past 6 months." Claimant denied a specific traumatic event, but complained of pain and weakness. After performing a physical examination and reviewing diagnostic studies, Dr. Seidl determined that, because conservative treatment modalities had failed, he would proceed with an MRI of Claimant's right shoulder.

12. On December 4, 2020 Claimant underwent a right shoulder MRI. The imaging revealed several findings including moderate to severe tendinosis of the supraspinatus tendon with large partial tear at the footprint as well as a SLAP-type labral tear.

13. On December 11, 2020 Claimant returned to Dr. Seidl for an examination. Dr. Seidl recounted that Claimant suffered from “a high-grade partial thickness bursal sided tear of the rotator cuff.” After discussing treatment options, Dr. Seidl determined that Claimant would require surgery for the rotator cuff tear.

14. On December 18, 2020 Claimant sent an e-mail to Wellness Manager for the District Chris Macklin. He specifically stated that “[i]n mid-May, during Academy, I started having significant weakness in my right shoulder during overhead press movement.”

15. In a January 11, 2021 e-mail to Claimant Mr. Macklin responded that he was unable to locate a First Report of Injury from May 2020 referencing the injury that Claimant described in his December 18, 2020 e-mail. Claimant responded in a January 11, 2021 e-mail that he would like to proceed with a Workers’ Compensation claim. He noted that, because he was not aware of an injury until he underwent the MRI, he sought to use the MRI date as the date of his work injury.

16. On January 26, 2021 Lisa C[Redacted], who works with Employer on processing Workers’ Compensation injuries, e-mailed Claimant inquiring “what is the injury date listed on the first Report of Injury form that was submitted to your shoulder injury.” Claimant responded:

> I’m not sure one has been created yet. I reported the injury during the academy to Lt. D[Redacted] and Coach Yoon. Coach Yoon coordinated with wellness to modify my workouts and provide rehab work. Following the academy I met with Wellness weekly and had a home program. While I had significant improvement over the following six months, I was still not improving in two specific ranges of motion. I then had an MRI done through Dr. Siedl and he discovered two tears that will need surgical repair.

In subsequent e-mail exchanges with Ms. C[Redacted] on January 26, 2020 Claimant initially reported that he injured his right shoulder “throwing ladders” at the Academy on April 24, 2021 but later corrected the date to June 5, 2021.

17. On February 6, 2021 Lieutenant Jeff M[Redacted] completed a First Report of Injury. The Report reflected that Claimant had informed Lieutenant D[Redacted] on June 5, 2020 he “was carrying and throwing the 24 ft and 16ft ladders for a vent, enter, search scenario by himself when he felt a pain in his right shoulder followed by a persistent dull ache.”

18. Lieutenant D[Redacted] testified that Claimant never reported any kind of injury on June 5, 2020. He explained that, if a recruit suffers an injury while performing tasks through the Academy, protocol requires him to immediately complete a First Report of Injury and provide a designated provider list. Furthermore, Lieutenant D[Redacted] remarked that, on or about February 6, 2021, Lieutenant M[Redacted] did not contact him to discuss whether Claimant had reported the injury on June 5, 2020. He remarked that

it was not until sometime during the summer of 2021 that someone approached him inquiring about whether Claimant had reported a shoulder injury on June 5, 2020.

19. After the First Report of Injury was filed, Employer provided Claimant with a designated provider form. Claimant selected Stephanie Chu, SMFR Wellness at 9195 East Mineral Avenue, Centennial, Colorado 80112.

20. On March 10, 2021 Claimant visited Dr. Chu for an examination. Dr. Chu noted that Claimant continued to work with Wellness and rehabilitation but obtained minimal pain relief. She recommended an injection during the following week and an evaluation of Claimant's response. Dr. Chu was awaiting surgical recommendations and the timing of the procedure.

21. On May 25, 2021 Claimant underwent an independent medical examination with Nicholas K. Olsen, D.O. Claimant explained that on June 5, 2020 he injured his right shoulder while he was "throwing ladders at the Academy." He commented that "throwing ladders" consists of taking ladders from a simulated fire truck, carrying them to the side of a building and putting them up. Claimant specifically experienced pain while setting up a 28 foot extension ladder during the drill. He remarked that his right shoulder symptoms improved through strength and conditioning exercises at physical therapy.

22. Dr. Olsen reviewed Claimant's medical records and performed a physical examination. He diagnosed Claimant with: (1) chronic right shoulder tendonosis; and (2) a chronic SLAP tear that was first diagnosed during a 2011 MRI. Dr. Olsen concluded that, while raising a ladder overhead could cause a rotator cuff tear, Claimant had symptoms "great enough to warrant a possible surgical intervention in 2015." He reasoned that many of the findings on Claimant's 2020 MRI had dated back to the initial 2011 MRI.

23. On August 19, 2021 Claimant underwent right shoulder surgery with ATP Dr. Seidl and has not returned to work. He remains on temporary work restrictions and is currently receiving unemployment benefits in the amount of $700.00 per week. Claimant remarked that at the time of the June 5, 2020 incident he was earning an Average Weekly Wage (AWW) of $1,695.22. An AWW of $1,695.22 constitutes a fait approximation of Claimant's wage loss and diminished earning capacity.

24. On October 13, 2021 Dr. Seidl drafted a letter stating that Claimant's right shoulder rotator cuff tear was unrelated to his prior SLAP tear. He specified that there were no degenerative changes to his joint cartilage surface at the time of his recent arthroscopy.

25. Dr. Olsen testified at the hearing in this matter. He maintained that Claimant's right shoulder symptoms were not causally related to the June 5, 2020 industrial incident. Dr. Olsen remarked that the December 4, 2020 MRI demonstrated a large partial tear in the rotator cuff as well as a SLAP tear. The MRI did not show any evidence of an acute rotator cuff tear. He detailed the following:

> There is a partial tear in 2015, and there is a partial tear in 2020. If there was an acute tear, you would expect that the partial tear was converted to a complete tear, and it clearly has not converted to a complete tear as of December 4, 2020.

26. Dr. Olsen compared the 2015 MRI with the 2020 MRI and noted that the 2020 MRI did not show any evidence of a tear. Rather, Claimant had a partial rotator cuff tear in the 2015 MRI, and he continued to have a partial rotator cuff tear in the 2020 MRI. Dr. Olsen testified that, if Claimant had suffered some injury in 2020, then it is very likely that the 2015 partial tear would have become a complete tear. Dr. Olsen remarked that the 2020 MRI findings most likely represented nothing more than the natural progression of Claimant's right shoulder problems over the years. The 2020 MRI findings could easily have occurred in the absence of trauma. Dr. Olsen summarized that it is more probable than not that the 2020 MRI findings constitute the natural progression of Claimant's underlying right shoulder condition.

27. Dr. Olsen acknowledged that Claimant's August 19, 2021 right shoulder surgery was reasonable and necessary but disagreed that the procedure was causally related to the June 5, 2020 work incident. Dr. Olsen reasoned that the surgery was not causally related to the June 5, 2020 incident based on Claimant's medical records from May 3, 2011 that referenced shoulder pain and November 16, 2015 that mentioned shoulder pain and the possible necessity of surgery. Nevertheless, Dr. Olsen agreed that, at no time prior to Claimant's right shoulder surgery on August 19, 2021, had he been placed on temporary work restrictions. Moreover, Dr. Olsen recognized that there were no medical records referencing Claimant's right shoulder between May 3, 2011 and November 16, 2015 as well as from November 16, 2015 until July 7, 2020. Finally, Dr. Olsen acknowledged that Claimant's activity of raising a ladder overhead on June 5, 2020 could certainly have caused a rotator cuff injury. However, he maintained that, because shoulder surgery was recommended in 2015, the need for surgery in 2021 constituted a natural progression of Claimant's pre-existing condition.

28. Claimant has demonstrated that it is more probably true than not that he suffered a compensable right shoulder injury during the course and scope of his employment with Employer on June 5, 2020. Initially, Claimant explained that, as part of his training at the District's Academy on June 5, 2020, he was throwing 24-foot and 16-foot ladders for a vent, enter and search scenario. During the exercise he experienced pain in his right shoulder. Notably, he had not experienced pain in his right shoulder since 2015 and had been cleared for duty prior to commencing work for Employer in February 2020. Subsequent to the June 5, 2020 incident, Claimant emailed Employer's Wellness Director on June 16, 2020. He specifically sought treatment for his right shoulder and right hip.

29. Despite conflicts in the testimony regarding Claimant's reporting of a work injury, he began physical therapy at Employer's Wellness facility on July 7, 2020. The

records titled “Injury Records [Employer] Injury stats from July 7, 2020 through March 4, 2021,” contradict the testimony of Lieutenant D[Redacted] that Claimant had not reported an injury. The title of the documents as “Injury Record,” consistent references to the right shoulder and a lengthy period of physical therapy to bring Claimant to his baseline condition, reveal that Claimant was receiving treatment for the June 5, 2020 work accident. Moreover, although the records reflect that Claimant has suffered from a pre-existing right shoulder condition since 2011, the June 5, 2020 incident caused the need for medical care and eventual surgery with Dr. Seidl on August 19, 2021. Accordingly, Claimant’s work activities on June 5, 2020 aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. Thus, Claimant suffered a compensable right shoulder injury during the course and scope of his employment with Employer on June 5, 2020.

30. Claimant has established that it is more probably true than not that the right shoulder surgery performed by ATP Dr. Seidl at the Steadman Hawkins Clinic on August 19, 2021 was reasonable, necessary and causally related to his June 5, 2020 injury. Initially, Claimant’s right shoulder MRI on December 4, 2020 revealed several findings including moderate to severe tendinosis of the supraspinatus tendon with a large partial tear at the footprint as well as a SLAP-type labral tear. Claimant had previously undergone a right shoulder MRI on October 20, 2015 that revealed a SLAP tear and a partial thickness rotator cuff tear. After conservative treatment modalities failed, Claimant underwent right shoulder surgery with ATP Dr. Seidl on August 19, 2021.

31. Dr. Olsen maintained that Claimant’s right shoulder symptoms were not causally related to the June 5, 2020 industrial incident. He compared the 2015 MRI with the 2020 MRI and noted that the 2020 MRI did not show any evidence of a tear. Rather, Claimant had a partial rotator cuff tear in the 2015 MRI and he continued to have a partial rotator cuff tear in the 2020 MRI. Dr. Olsen testified that, if Claimant had suffered some injury in 2020, then it is very likely that the 2015 partial tear would have become a complete tear. He remarked that the 2020 MRI findings most likely represented nothing more than the natural progression of Claimant’s right shoulder problems over the years. The 2020 MRI findings could easily have occurred in the absence of trauma. Dr. Olsen summarized that it is more probable than not that the 2020 MRI findings constitute the natural progression of Claimant’s underlying right shoulder condition.

32. Despite Dr. Olsen’s opinion, the record reveals that Claimant’s previous SLAP tear did not cause the need for surgery on August 19, 2021. Instead, Claimant suffered an aggravation of his pre-existing right shoulder condition on June 5, 2020. Dr. Seidl persuasively determined that the need for surgery was unrelated to the pre-existing SLAP tear. He specifically noted that there were no degenerative changes to his joint cartilage surface at the time of his recent arthroscopy. Furthermore, Dr. Olsen acknowledged that Claimant’s August 19, 2021 right shoulder surgery was reasonable and necessary but disagreed that the procedure was causally related to the June 5, 2020 work incident. He also agreed that at no time prior to Claimant’s right shoulder surgery on August 19, 2021 had Claimant been placed on temporary work restrictions. Moreover, Dr. Olsen recognized that there were no medical records referencing Claimant’s right

shoulder between May 3, 2011 and November 16, 2015 as well as from November 16, 2015 until July 7, 2020. Therefore, based on the medical records and persuasive opinion of ATP Dr. Seidl, Claimant's work activities on June 5, 2021 aggravated or accelerated his pre-existing right shoulder condition. Accordingly, Claimant's August 19, 2021 right shoulder surgery was reasonable, necessary and causally related to his June 5, 2021 work incident.

33. Claimant has proven that it is more probably true than not that he is entitled to receive TTD benefits for the period August 19, 2021 until terminated by statute. On August 19, 2021 Claimant underwent surgery with ATP Seidl and has not returned to work. He remains on temporary work restrictions and is currently receiving unemployment benefits in the amount of $700.00 per week. Claimant has suffered an impairment of earning capacity based on his inability to resume his prior work. He has thus proven that his June 5, 2020 industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. Accordingly, Claimant shall receive TTD benefits for the period August 19, 2021 until terminated by statute subject to Employer's right to an offset for unemployment benefits.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a pre-existing condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *see Snyder v. Indus. Claim Appeals Off.*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory

supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable right shoulder injury during the course and scope of his employment with Employer on June 5, 2020. Initially, Claimant explained that, as part of his training at the District's Academy on June 5, 2020, he was throwing 24-foot and 16-foot ladders for a vent, enter and search scenario. During the exercise he experienced pain in his right shoulder. Notably, he had not experienced pain in his right shoulder since 2015 and had been cleared for duty prior to commencing work for Employer in February 2020. Subsequent to the June 5, 2020 incident, Claimant emailed Employer's Wellness Director on June 16, 2020. He specifically sought treatment for his right shoulder and right hip.

9. As found, despite conflicts in the testimony regarding Claimant's reporting of a work injury, he began physical therapy at Employer's Wellness facility on July 7, 2020. The records titled "Injury Records [Employer] Injury stats from July 7, 2020 through March 4, 2021," contradict the testimony of Lieutenant D[Redacted] that Claimant had not reported an injury. The title of the documents as "Injury Record," consistent references to the right shoulder and a lengthy period of physical therapy to bring Claimant to his baseline condition, reveal that Claimant was receiving treatment for the June 5, 2020 work accident. Moreover, although the records reflect that Claimant has suffered from a pre-existing right shoulder condition since 2011, the June 5, 2020 incident caused the need for medical care and eventual surgery with Dr. Seidl on August 19, 2021. Accordingly, Claimant's work activities on June 5, 2020 aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. Thus, Claimant suffered a compensable right shoulder injury during the course and scope of his employment with Employer on June 5, 2020.

Medical Benefits

10. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a pre-existing condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Indus. Claim Appeals Off.*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

11. Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Indus. Claim Appeals Off.,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Indus. Claim Appeals Off.,* 21 P.3d 866 (Colo. App. 2001).

12. As found, Claimant has established by a preponderance of the evidence that the right shoulder surgery performed by ATP Dr. Seidl at the Steadman Hawkins Clinic on August 19, 2021 was reasonable, necessary and causally related to his June 5, 2020 injury. Initially, Claimant's right shoulder MRI on December 4, 2020 revealed several findings including moderate to severe tendinosis of the supraspinatus tendon with a large partial tear at the footprint as well as a SLAP-type labral tear. Claimant had previously undergone a right shoulder MRI on October 20, 2015 that revealed a SLAP tear and a partial thickness rotator cuff tear. After conservative treatment modalities failed, Claimant underwent right shoulder surgery with ATP Dr. Seidl on August 19, 2021.

13. As found, Dr. Olsen maintained that Claimant's right shoulder symptoms were not causally related to the June 5, 2020 industrial incident. He compared the 2015 MRI with the 2020 MRI and noted that the 2020 MRI did not show any evidence of a tear. Rather, Claimant had a partial rotator cuff tear in the 2015 MRI and he continued to have a partial rotator cuff tear in the 2020 MRI. Dr. Olsen testified that, if Claimant had suffered some injury in 2020, then it is very likely that the 2015 partial tear would have become a complete tear. He remarked that the 2020 MRI findings most likely represented nothing more than the natural progression of Claimant's right shoulder problems over the years. The 2020 MRI findings could easily have occurred in the absence of trauma. Dr. Olsen summarized that it is more probable than not that the 2020 MRI findings constitute the natural progression of Claimant's underlying right shoulder condition.

14. As found, despite Dr. Olsen's opinion, the record reveals that Claimant's previous SLAP tear did not cause the need for surgery on August 19, 2021. Instead, Claimant suffered an aggravation of his pre-existing right shoulder condition on June 5, 2020. Dr. Seidl persuasively determined that the need for surgery was unrelated to the pre-existing SLAP tear. He specifically noted that there were no degenerative changes to his joint cartilage surface at the time of his recent arthroscopy. Furthermore, Dr. Olsen acknowledged that Claimant's August 19, 2021 right shoulder surgery was reasonable and necessary but disagreed that the procedure was causally related to the June 5, 2020 work incident. He also agreed that at no time prior to Claimant's right shoulder surgery on August 19, 2021 had Claimant been placed on temporary work restrictions. Moreover, Dr. Olsen recognized that there were no medical records referencing Claimant's right shoulder between May 3, 2011 and November 16, 2015 as well as from November 16, 2015 until July 7, 2020. Therefore, based on the medical records and persuasive opinion of ATP Dr. Seidl, Claimant's work activities on June 5, 2021 aggravated or accelerated his pre-existing right shoulder condition. Accordingly, Claimant's August 19, 2021 right

shoulder surgery was reasonable, necessary and causally related to his June 5, 2021 work incident.

Temporary Total Disability Benefits

15. To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §8-42-105, C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Off.,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (*citing Ricks v. Indus. Claim Appeals Off.*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

16. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive TTD benefits for the period August 19, 2021 until terminated by statute. On August 19, 2021 Claimant underwent surgery with ATP Seidl and has not returned to work. He remains on temporary work restrictions and is currently receiving unemployment benefits in the amount of $700.00 per week. Claimant has suffered an impairment of earning capacity based on his inability to resume his prior work. He has thus proven that his June 5, 2020 industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. Accordingly, Claimant shall receive TTD benefits for the period August 19, 2021 until terminated by statute subject to Employer's right to an offset for unemployment benefits.

Average Weekly Wage

17. Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of

injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed method will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993); *see In re Broomfield,* W.C. No. 4-651-471 (ICAO, Mar. 5, 2007). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell,* 867 P.2d at 82. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine whether fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability instead of the earnings on the date of the injury. *Id.*

18. As found, Claimant credibly remarked that at the time of the June 5, 2020 incident he was earning an AWW of $1,695.22. An AWW of $1,695.22 constitutes a fait approximation of Claimant's wage loss and diminished earning capacity.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. On June 5, 2020 Claimant suffered a compensable right shoulder injury during the course and scope of his employment with Employer.

2. The surgery performed by ATP Seidl on August 19, 2021 to repair Claimant's rotator cuff was reasonable, necessary and causally related to his June 5, 2020 injury.

3. Claimant shall receive TTD benefits for the period August 19, 2021 until terminated by statute subject to Employer's right to an offset for unemployment benefits.

4. Claimant earned an AWW of $1,695.22.

5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For* *further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: December 17, 2021.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable injury to his left knee on November 11, 2020?

II. If compensable, are Respondents liable for Claimant's medical treatment for the injury to his left knee?

III. If compensable, has Claimant shown that the treatment rendered to date for his left knee is reasonable, necessary, and causally related to his work injury, thus entitling him for reimbursement for said medical expenses?

IV. If compensable, who will be designated as Claimant's ATP?

V. Has Claimant shown, by a preponderance of the evidence, that he is entitled to Temporary Total Disability payments?

STIPULATIONS

At the outset of the hearing, the parties stipulated to an Average Weekly Wage of $945.98. The ALJ accepted this stipulation.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant's Hearing Testimony

1. Claimant is a 45-year-old employee of Affordable Plumbing & Heat, Inc. in Colorado Springs, Colorado. Claimant has been employed as a plumber for Employer since May 2020.

2. Claimant testified that he served in a similar capacity while in the US Navy from 2002 to 2007. Part of his job duties includes cleaning out sewer lines. He described the device he used for Employer as a 'snake' or an 'auger', weighing about 200-250 pounds altogether. His job duties included pulling this device, as well as other equipment, on and off the [service] van 'all day long', and also involved a lot of crouching and kneeling.

3. Claimant described his mechanism of injury at hearing:

A ….I was in the basement [of the customer]. I had accessed the main sewer line, cast iron…going out to the street. Removed the clean-out cap,

> starting snaking the line. Got all the way out, started pulling my cable back, when it became hung on something. You know, when you're in that situation, you use the machine to kind of run it in reverse, push out, push back…Nothing I was doing was working. I started yanking on it, pulling on it...you're wrestling with an anaconda at this point. [I] Started pulling on it.
>
> And at one point I was in a kneeling position and went to stand, and I yanked on it, and I felt this pop in my knee, and it felt like somebody literally stabbed me on the inside of my knee. (Transcript, pp. 16-17).

4. Claimant stated that he was using 'fairly extreme force' when trying to extract the cable, but it did not come out "until a couple of other guys actually came to help me." *Id* at 17.

5. Claimant stated that he contacted Employer's HR department that day and was referred for medical treatment. (Claimant earlier remembered seeing Frankie V[Redacted] earlier that morning, who had noticed that Claimant appeared sort of 'stiff', due to the cold weather, and that Frankie had made some joke to the effect of "hey, old man, how you doing?" (Transcript, p. 33). Claimant then told Frankie "I'm good.") *Id.*

6. Claimant was asked how long before November 11, 2020, that he had experienced symptoms in his knees. He responded that for a couple years he has had pain in both knees. He also stated that both of his knees were stiff on the morning of the alleged injury.

7. Claimant testified that a couple weeks passed by since the injury, and that his knee was not doing any better. An MRI was ordered on December 1, 2020 by Claimant's ATP, Dr. Peterson. The MRI was denied, because Respondents filed a Notice of Contest on November 24, 2020. (*see* Ex. F). Since the MRI was not authorized by Workers' Compensation, Claimant retained Dr. Peterson as his PCP, who in turn referred him to orthopedist Michael Simpson, MD.

8. Dr. Simpson referred Claimant to undergo an MRI of his left knee. The MRI was performed on January 13, 2021. Arthroscopic surgery was then recommended. The surgery was performed on March 16, 2021.

9. Claimant testified that he missed approximately two and a half months of work following the surgery. He was not able to resume full duties immediately; instead, "for the first week or two…they had me on not-as-strenuous jobs. I wasn't going down in crawl spaces. I wasn't…lifting machinery." (Transcript, pp. 22-23).

10. Instead, Claimant stated that he was involved in training younger guys, watching them. "I think they wanted to make sure that I was okay. That went on for the first couple of weeks and then I slowly eased back into it [his former position]".

(Transcript, p. 23).

11. At hearing, Claimant stated that this knee “ironically, it was kind of achy this morning…honestly…I ache and hurt a lot” *Id.* The knee “clicks and pops every now and then.” *Id.* “But…it’s functioning. I can do my job.” *Id.*

Claimant’s Initial Course of Treatment with Concentra

12. On November 11, 2020, Claimant presented to Concentra for an evaluation for left knee pain. (Ex. 5, p. 16). PA-C Tianna Voros noted: “Christopher was snaking a line and twisted *his knee* slightly outwards *when he felt severe sharp pain* in his medial knee. The pain is now aching but it was 7/10 and very sharp. *He is limping.* He took 800mg Motrin this morning before the injury because his knee was feeling a little stiff this morning when he woke up. He normally has some aching *in both knees* when the weather is cold.” *Id*. (emphasis added).

13. Under the physical exam, she noted: “There is tenderness in the pes anserine bursa, over the *medial* joint line and diffusely over the *medial* knee, but *not* over the lateral tibial plateau and not in the medial tibial plateau. *Id* at 17 (emphasis added). Limited range of motion in all planes with pain. *Id.* There were no significant X-ray findings. *Id.* Initial assessment was knee strain. *Id.*

14. Claimant returned to PA-C Voros on November 16, 2020, who now noted: “The pain is much less but he has noticed a sharp *painful* clicking *when he extends his knee.”* *Id* at 21 (emphasis added). Claimant was placed on work restrictions of sitting 85% of the time, no squatting, no kneeling. *Id* at 23.

15. Claimant next saw Daniel Peterson, MD at Concentra on November 24, 2020, who noted that Claimant had already been to physical therapy 5 times, but feels pain at the medial joint line. “Feels something moving under his finger at the medial proximal tibia. Has painful popping but no locking. No prior major left knee injuries were noted. *Id* at 24. Dr. Peterson noted: *exam and MOI suggestive of medial meniscus injury* was well as pes anserine bursa. If not progress in PT will get MRI. *Id* at 25 (emphasis added).

16. On December 11, 2020, Claimant again saw PA-C Voros, whose report that there had been a physician referral by Dr. Peterson for a left knee MRI on December 1, 2020 to r/o [rule out] meniscal tear. *Id* at 28. Claimant’s symptoms remained essentially unchanged.

Notice of Contest is Lodged / Claimant Seeks Care Privately

17. On December 22, 2020, Claimant returned to PA-C Voros, who noted that Clamant reported that his knee had gotten worse over the past few weeks. Claimant

recounted to her that the MRI had been denied because the adjuster had called him that someone had seen him limping earlier in the day prior to the injury, so they believed his injury was actually pre-existing. *Id* at 32. Under her *assessment,* she noted that Claimant "still needs MRI". *Id* at 34.

18. The MRI (after denial by Insurer) was performed on January 13, 2021 (which is noted to be over two months after the injury). The *IMPRESSIONS* were:

1. *Complex tear medial meniscus* with mild overlying bursitis and adjacent bony *edema.*
2. Mild chondromalacia of the patellofemoral compartment.
3. Small knee joint *effusion.* (Ex. 6, p. 38) (emphasis added).

19. Orthopedist Michael Simpson, MD saw Claimant on January 14, 2021, wherein he noted: Chris has symptomatic medial meniscus tear. I reviewed his MRI…In all likelihood, at some point, he is going to require meniscal surgery. Either partial meniscectomy or meniscal repair. (Ex. 7, pp. 45-46).

20. Dr. Simpson next noted on February 3, 2021 that, while Claimant was doing better after a steroidal injection, "We discussed treatment options…I think the most rapid return to function for him would actually be a partial medial meniscectomy. At 44 with a *rather extensive horizontal cleavage tear*, I think predictability of meniscal repair is uncertain and may only result in more prolonged recovery with the possibility of requiring additional revision surgery in the future. *Id* at 56. (emphasis added).

21. Dr. Simpson performed this surgery on March 16, 2021. The surgical notes indicated:

> …the medial tibial plateau was spared. The patient had a very tight medial compartment. There was a complex tear of the posterior horn of the medial meniscus *with a flap component interposed in the joint. This was resected.* At this point, the *degenerative* posterior horn of the medical meniscus was resected back to a stable rim…The repair was not felt to be indicated given the *degenerative* nature of the tear and also the tightness of the joint. (Ex. C, p. 36) (emphasis added).

22. Claimant's post-operative visit on March 17, 2021 was uneventful, although pain was noted, he was noted to have full range of motion. He was to start PT right away. (Ex. C. p. 44).

23. The final report in evidence is dated April 14, 2021, with PA-C Kimberly Shenuk with Centura Orthopedics. (Ex. C, p. 51). Claimant at that time expressed his concern to her that despite the pain, he was concerned that he would have to be able to kneel and squat to keep his job and maintain his health insurance. It was noted that he did now have full range of motion. *Id.*

Two of Claimant's Co-Workers Sign Statements

24. Frankie V[Redacted], one of Claimant's coworkers, signed a typewritten statement (Ex. E, p. 77), undated, stating the *Date of Injury Reported: 11/11/2020 @ 12:45 p.m.* In its entirely, it reads:

> Incident Report: Arrived at 4951 Webb Dr. Wallace Strickle. Upon arrival I saw that *Chris was holding his knee* when I was trying to help remove cable from the main line. When I was talking to him *he got a jolt of pain and could not put pressure on his knee.* He stated he had tweaked it *at this job* and was hurting him.
>
> That same morning I saw Chris limping into the plumbers meeting. After the meeting I asked what was up and he said he had tweaked his knee and it was bothering him. I stated that sucked and to let me know if he needed anything to let me know. I never asked more questions and went about my day. (emphasis added).

25. Bill B[Redacted], Claimant's manager, also signed an undated, typewritten statement (Ex. E, p. 78) addressed *To Whom It May Concern*, reading, in its entirety:

> I witnessed Chris this morning limping when he came into the shop for the meeting. I didn't get a chance to ask what happened.

IME by Dr. Steinmetz

26. Dr. Marc Steinmetz performed an IME of Claimant on August 5, 2021. (Ex. A). Dr. Steinmetz opined that Claimant's left knee problems are a result of his "progressive pre-existing ongoing non-work-related degenerative problems in his left knee." *Id* at 6. Multiple factors went into his reasoning, such as Claimant was taking ibuprofen for bilateral knee pains, including the date of the alleged injury. Claimant was limping the morning of the alleged injury, and the preoperative MRI showed 'completely pre-existing' degenerative arthritic changes in the meniscal surface, joint surface, bony articulation, and cartilage areas. *Id*. at 5.

27. Dr. Steinmetz further opined that no acute traumatic problems from kneeling or twisting are noted in the MRI. The act of *temporarily kneeling* is not aggravating of pre-existing osteoarthritis in the knee per the Colorado Level 2 Guidelines. *Id*.

28. Finally, Dr. Steinmetz opined that the degenerative nature of the meniscal findings both in the MRI and the operation notes, are not consistent with any acute tear from a twisting injury. *Id*. In support, the operative note from March 16, 2021, stated, "The degenerative posterior horn of the medial meniscus was resected back to a stable rim…The repair was not felt to be indicated given the degenerative nature of the tear and also the tightness in the joint. A repair would not have been technically possible." (*see* Ex. C, p. 19).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met their burden of proof, the ALJ is empowered “to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence.” *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

D. In this instance, the ALJ finds that Claimant effectively reported his injury in real-time to his co-worker, was referred to Concentra, then accurately described his symptoms to his treatment providers all along the way, in a sincere effort to get better. Further, the ALJ finds that Claimant testified credibly, and in a forthright manner at hearing. While neither of the co-workers who signed the written statements were available for cross-examination and clarification, the ALJ finds that their statements are not materially inconsistent with Claimant's hearing testimony.

E. Lastly, it is noted that while Dr. Steinmetz did not testify, the ALJ finds that he rendered his IME opinion in good faith, based upon the evidence available to him at the time. However, as will be noted, *infra*, the ALJ does not find his ultimate conclusions to be sufficiently persuasive.

Compensability, Generally

F According to C.R.S. § 8-43-201, "a claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers' compensation case shall be decided on its merits." *Also see Qual-Med, Inc. v. Indus. Claim Appeals Off.,* 961 P.2d 590, 592 (Colo. App. 1998) ("The Claimant has the burden of proving an entitlement to benefits by a preponderance of the evidence."); *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App. 1993) ("The burden is on the claimant to prove his entitlement to benefits by a preponderance of the evidence.").

G. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.,*104 P.3d 273, 275 (Colo. App. 2004).

H. For an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Off.,* 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. *See Schepker, supra.* "In the course of" employment refers to the time, place, and circumstances of the injury. *Id.* There is no presumption that an injury arises out of employment merely because an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm'n,* 165 Colo. 106, 108-09, 4437 P.2d 542 (1968).

I, Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1)(c) C.R.S.*; Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner,* 12 P.3d at 846.

J. Colorado's Workers' Compensation Act creates a distinction between the terms "accident" and "injury". The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." *See* §8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. In other words, an "accident" is the cause and an “injury” is the result. *City of Boulder v. Payne,* 426 P.2 194 (1967). No benefits flow to the victim of an industrial accident unless the accident results in a compensable “injury.” A compensable injury is one which requires medical treatment or causes a disability.

K. It is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between her employment and her injuries. An ALJ might reasonably conclude the evidence is so conflicting and unreliable that the claimant has failed to meet the burden of proof with respect to causation. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 191 (Colo. App. 2002) (weight to be accorded evidence on question of causation is issue of fact for ALJ). *See also, In the Matter of the Claim of Tammy Manzanares, Claimant*, W. C. Nos. 4-517-883 and 4-614-430, 2005 WL 1031384 (Colo. Ind. Cl. App. Off. Apr. 25, 2005).

Preexisting Condition, Generally

L. The mere fact that a Claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the preexisting condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a preexisting condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying preexisting condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). The claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a preexisting condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

Did Claimant Have a Preexisting, Degenerative Meniscus?

M. The ALJ finds that sufficient evidence exists to show that Claimant suffered from some degree of degenerative condition in his knees prior to the work incident. Claimant testified consistent with this finding. While this is not a claim for an occupational disease, it is likely at least some of the degenerative conditions were wrought by performing similar work in the Navy, followed by about 13 more years performing this type of occasionally arduous work. The operative report from Dr. Simpson appears to confirm that his meniscal defects had at least some degenerative component, which predated this work incident. The written statements from Claimant’s co-workers are also consistent with Claimant having difficulty with his knees hours before the ‘snaking’ incident.

Did the ‘Snaking’ Incident Cause Claimant’s Preexisting Degenerative Condition to Become Symptomatic, Requiring Medical Treatment?

N. What is significant is that prior to Claimant’s ‘snaking’ incident, he had issues in *both knees*-neither of which had ever required medical treatment. On the very same date of the incident, he told PA-C Voros that “he normally has some aching in *both knees* when the weather is cold.” – which it apparently was that day. This explains the observations of his co-workers that morning, and before he could even begin to somehow concoct an after-the-fact explanation (which Respondents do not allege) for his earlier limping. But now Claimant, with record support, complained-in real time-of a severe, sharp pain in the left medial compartment. He had never sought medical attention prior to this.

O. Claimant had never before reported a painful *clicking* upon extension of this knee. While MRIs are an essential diagnostic tool (which the ALJ finds was prematurely denied by the adjuster, based upon insufficient information), there is nothing quite like actually having a look inside. And Dr. Simpson found a *flap component* *interposed in the joint**-which had to be* *resected**,* along with some other parts of the meniscus which could not be repaired. The ALJ finds that, at a minimum, this 'snaking' incident aggravated Claimant's partially degenerated meniscus, by loosening this flap, and interposing it into the joint. Pain was the inevitable symptom, which could not be alleviated without this surgery. This finding is entirely consistent with the statement of Mr. V[Redacted], which (while lacking in much detail) noted that Claimant was merely l*imping* in the morning, but right after the incident, *got a jolt of pain,* and could not put pressure on his knee. Never before in the record had Claimant reported such pain; he previously just experienced sore knees on occasion.

P. The ALJ makes the following observations about the IME report. While the co-worker's statements were no doubt sincere, the adjuster jumped the gun in denying care based upon them. By denying the MRI-which was ordered by the very ATP supplied by Respondents-the forensic value to determine acute vs. chronic was diminished. This should not disadvantage Claimant, but it did. All Dr. Steinmetz had to look at was an MRI taken over two months post injury. Even then, there was a small amount of both *edema* and *effusion*—both at least consistent with an earlier traumatic event. While Dr. Steinmetz noted [consistent with Level 2 Guidelines] that the mere act of temporarily kneeling would not aggravate preexisting arthritis, this was not the mechanism of injury recounted by Claimant. On the same date of injury, Claimant told PA-C Voros that he *twisted his knee slightly outwards.* This is entirely consistent with stressing the medial meniscus. At hearing, Claimant not only described arising from a kneeling position; he also yanked on the cable, and felt a pop and immediate pain.

Q. A healthy knee likely would have withstood the forces applied to Claimant's knee on the date of this incident. And given the delicate state of Claimant's knees, maybe something like this was inevitable. Maybe he would have twisted his knee playing with his dogs, or hiking, or working in the yard. But he didn't. He twisted his left knee, just the wrong way, *while on the job*, struggling with a stuck cable. His knee became immediately symptomatic. It required immediate medical treatment, which the ALJ finds was initially provided, then wrongfully withheld by the Insurer. This in turn caused unnecessary delays in getting needed medical treatment. Claimant has shown, by a preponderance of the evidence, that this is a compensable injury.

Medical Benefits, Generally

R. A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003).

Medical Benefits, as Applied

S. Since this is a compensable injury, Claimant is entitled to a general award of medical benefits to cure him from the effects thereof. The ALJ finds, by a preponderance of the evidence, that the MRI and surgery, as performed by Dr. Simpson, was reasonable, necessary, and causally related to Claimant's work injury. Respondents are responsible for reimbursing Claimant and/or Concentra and/or Dr. Simpson for all treatment rendered on his behalf, limited to compensation in accordance with the Fee Schedule.

Authorized Treating Providers/Right of Selection

T. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

U. Respondents (apparently) initially supplied Claimant with appropriate options for an ATP. Claimant timely chose Concentra, and was assigned Dr. Peterson, who the ALJ finds provided appropriate and timely recommendations for Claimant's care. Then, however, Insurer effectively told Claimant he was on his own. Fortunately, Claimant had the means to seek the care he needed through Employer's health insurance. The ALJ has already found that such care was reasonable, necessary, and related to Claimant's work injury. Respondents have now forfeited further control over who will provide any further treatment for this knee injury. Hopefully, this surgery already performed will be the last needed treatment, but the ALJ now finds that Dr. Simpson- or his designee-will now remain Claimant's ATP until this case is concluded.

Temporary Total Disability

V. To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)).

W. Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

X. In this case, while Claimant (lacking an ATP until this Order) has not been placed at MMI, the ALJ finds his testimony persuasive that he was unable to return to work for approximately *two and a half months*, whereupon he was returned to light duty for a 'couple of weeks', then returned to full duty. There is no evidence that his pay was diminished during this light duty, although it is likely he did not earn commission until returned to the field full-time. However, Claimant supplied no exhibits or testimony in support. Respondents' supplied *Employer's Records suggest* some ongoing, but greatly diminished, pay through 12/4/2020 (then the records end). However, there is no explanation or testimony on this issue; rather, Respondents essentially rely on their compensability argument. The ALJ will not impute any income to Claimant during this period without more substantial evidence. The ALJ finds, therefore, that Claimant has shown that he is entitled to TTD payments for *two and a half months* from the date of injury, at the AWW rate previously stipulated by the parties.

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable injury to his left knee. Claimant is entitled to a general award of medical benefits to cure him of the effects of this work injury.

2. All treatment rendered to date for Claimant's knee injury is reasonable, necessary, and causally related to the work injury. Respondents are responsible for reimbursement for all such medical expenses rendered to date, in accordance with the Fee Schedule.

3. Dr. Simpson, or his designee, shall remain Claimant's ATP.

4. Clamant is entitled to two and a half months of TTD payments.

5. Claimant's Average Weekly Wage is $945.98.

6. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: December 17, 2021

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

STIPULATION

Prior to the presentation of evidence, the parties stipulated to an average weekly wage of $1,653.14. The stipulation was approved.

REMAINING ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she is entitled to temporary total disability (TTD) benefits from December 14, 2018, to December 27, 2018.

II. Whether Claimant established, by a preponderance of the evidence, that she is entitled to temporary partial disability (TPD) benefits between January 3, 2020, and January 18, 2021.

III. Whether Claimant established, by the preponderance of the evidence, that she is entitled to a disfigurement award and if so, the amount of that disfigurement benefit.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant works as a Systems Engineer for Employer. On August 29, 2018, she was testing some computer terminals when she sustained an admitted injury to her right ankle. According to Claimant, she was walking between two terminal stations when she "stepped wrong on [a] cable cover" inverting her right ankle. Claimant's injury occurred while she was on assignment in San Diego, California.

2. As a result of her injury, Claimant has been evaluated and treated by a variety of healthcare providers, including John Seddon, M.D., Melissa Strike, D.O., Martin Verhey, M.D., Walter Larimore, M.D., Scott Primack, D.O. and David Reinhard, M.D. She has also received a substantial amount of physical therapy (PT) treatment through Action Potential.

3. Claimant's right ankle injury failed to respond to rest and conservative care. Consequently, on December 14, 2018, she was taken to the operating room (OR) by Dr. Seddon who performed a right ankle arthroscopic debridement and mircofracture surgery along with a lateral ligament stabilization with internal brace augmentation procedure.

4. Claimant returned to Dr. Seddon for a follow-up appointment on December 26, 2018. During this encounter, Claimant reported that she had been shopping two days prior to her scheduled appointment when someone pushing a shopping cart struck her on

the lateral aspect of the right leg. Claimant reported increased pain in the lateral portion of the right lower leg and ankle that gradually improved with time. (Claimant's Exhibit 2, p. 13). Claimant also reported that she was elevating her leg "as much as possible" and had been compliant with her non-weight bearing status.

5. During her December 26, 2018 appointment, Claimant's sutures were removed and she was placed in a cam boot. Claimant was instructed to continue her non-weight bearing status for the next two weeks followed by an increase in weight bearing as tolerated while wearing her cam boot. Post-operative physical therapy was to start at the end of the two-week non-weight bearing period. Dr. Seddon imposed no other restrictions, indicating instead that he would reevaluate Claimant with weight bearing x-rays in four weeks. (Claimant's Exhibit 2, p. 13).

6. Claimant's testified that her job requires her to sit, stand, walk, stoop, bend, climb ladders and crawl under computer terminals. She testified to an average of 2-3 hours of walking per day. A copy of Claimant's job description containing a list of the physical demands necessary required of the position indicates that during an eight-hour day, a system engineer is expected to sit 6 hours, stand one hour and walk one hour. Moreover, occasional bending/stooping, squatting/crouch, crawling, climbing, kneeling twisting, pushing/pulling and reaching above shoulder height is required as part of the position. (Respondents' Exhibit B, p. 14).

7. Claimant continued to have right ankle pain and instability following her December 14, 2018 surgery and post-operative physical therapy. Consequently, Dr. Seddon returned her to the OR on January 3, 2020, where she underwent surgery to the right ankle consisting of a repeat debridement and a revision of her lateral ligamentous stabilization with peroneus longus and peroneus brevis debridement and tenosynovectomy. (Claimant's Exhibit 4, p. 28). In the case of her peroneus brevis, Dr. Seddon performed an excision of low-lying muscle belly. (Id.). Claimant was placed in a short leg case and assigned weight-bearing restrictions (non-weight bearing) throughout the right lower extremity.

8. Claimant presented to Dr. Seddon in follow-up on January 21, 2020. During this encounter, she reported compliance with her non-weight bearing status. She also reported that she was elevating her right leg as much as possible. Dr. Seddon removed her surgical sutures without incident. Claimant was once again placed in a cam boot and instructed to "slowly" progress her weight bearing over the next 2 weeks as tolerated. (Claimant's Exhibit 6, p. 42).

9. During a follow-up visit on February 18, 2020, Claimant reported that she was weight bearing as tolerated while in her cam boot. She reported symptoms consistent with complex regional pain syndrome (CRPS) along the distal aspect of her medial toes. Thus, she was referred to a pain management physician for further discussion of treatment options related to CRPS. She was also advised that she could transition out of her cam boot and was fitted with a lace up ankle brace. PT was to continue. (Claimant's Exhibit 6, pp. 43-44). Claimant also reported that she was going

to Australia later in the week prompting Dr. Seddon to advise her to wear compression socks during the long flight and to continue with her daily exercises while there. (*Id*. at p. 44).

10. Claimant was evaluated for her CRPS like symptoms on February 18, 2020, by Dr. Melissa Strike. During this examination, Claimant reported intermittent discoloration of the first and second toes of the right foot and stabbing pain in the right ankle since her January 3, 2020 surgery. Dr. Strike noted that while Claimant's EMG was normal, she was experiencing persistent pain that was accompanied by skin changes. Accordingly, she referred Claimant to Dr. Martin Verhey for additional evaluation. (Claimant's Exhibit 9, p. 164).

11. Claimant was evaluated by Dr. Verhey on February 19, 2020. Dr. Verhey noted that Claimant had "ischemic" looking changes on her toes and other symptoms very consistent with CRPS. He recommended a series of sympathetic lumbar blocks. Claimant's first block would be cancelled because of the Covid-19 pandemic. (Claimant's Exhibit 10, p. 173).

12. Claimant returned to Dr. Strike for follow-up on April 6, 2020. She reported that she did travel to Australia at the end of February 2020. According to Dr. Strike's April 6, 2020 report, Claimant described engaging in a "great deal of hiking" while in Australia. Claimant added that at the end of a long day of activity, she would experience severe swelling of the right ankle. Finally, she described persistent discoloration of the right toes for which she was hoping to get an injection by Dr. Verhey. (Claimant's Exhibit 9, p. 167).

13. Claimant returned to Dr. Seddon on April 8, 2020. During this appointment, she reported that she had completed her post-operative PT, had discontinued the use of her lace up ankle brace. She also reported persistent "minimal" pain with everyday ambulation. (Claimant's Exhibit 7). Nonetheless, Claimant had increased pain with rotational type movements of the ankle and with prolonged periods of ambulation or "being on her feet." (Id. at p. 45). Dr. Seddon concluded by indicating that Claimant was doing "fairly well." He expected that she would "continue to improve as she performs her home exercises and increases her activity level." (*Id*. at p. 46). He did not have any "specific" restrictions for Claimant.

14. Dr. Verhey administered a series of lumbar sympathetic blocks to treat Claimant's suspected CRPS on May 28, 2020, August 25, 2020 and September 15, 2020 with mixed results. (See generally, Claimant's Exhibit 10). Dr. Seddon also administered a cortisone injection into the right ankle on June 22, 2020. (Claimant's Exhibit 6, p 48).

15. During a September 22, 2020 follow-up with Dr. Seddon, Claimant reported persistent right ankle pain, which was affecting her activities of daily living. (Claimant's Exhibit 6, pp. 52-53). While discussion was had regarding the potential for a second cortisone injection, Claimant declined the shot opting instead for additional PT. (*Id*. at p. 53).

16. As noted, Claimant has undergone an extensive amount of PT. Review of the available records supports a finding that Claimant has been referred to PT on multiple occasions and has attended numerous PT sessions over several months. (See generally, Claimant's Exhibit 8). Indeed, between January 24, 2020 and April 14, 2020, Claimant attended 69 separate PT appointments. (Claimant's Exhibit 8, pp. 112-146).

17. Claimant was evaluated by Dr. Walter Larimore on September 30, 2020 for a transfer of care and establishment of an authorized treating provider (ATP) as part of her workers' compensation claim. (Claimant's Exhibit 11). While Claimant reported persistent right ankle pain, Dr. Larimore did not observe any gait alteration, i.e. antalgia. He also noted that prior to her visit, Claimant had returned to work "full duty." After obtaining a history and reviewing the available medical records, Dr. Larimore discussed the case with his partner, Dr. Elizabeth Bisgaard. (*Id*. at p. 215). Following that consultation it was decided that Dr. Larimore's office did not have the resources to "provide delayed recovery care" for Claimant as her ATP. No work restrictions were provided.

18. Claimant presented to the emergency department (ED) at Grandview Hospital at 5:36 p.m. on October 14, 2020, seeking an evaluation related to an elevated blood pressure reading of 138/94. (Claimant's Exhibit 7, p. 88). She was evaluated by Dr. Eric Wu at 6:37 pm. (*Id*. at p. 91). During this encounter, Claimant was advised that her hypertension "may" be related to her use of Cymbalta, or alternatively to an increase in her thyroid medication. According to Claimant's testimony, she left work around lunchtime on this date. Careful review of the available records fails to convince the ALJ that there has been a definitive statement concerning the causal connection between Claimant's hypertension and her work related ankle injury.

19. Claimant was referred to Dr. Scott Primack as an ATP to determine whether she had reached maximum medical improvement (MMI) after Dr. Larimore declined to assume treatment. She would see Dr. Primack several times. The initial evaluation with Dr. Primack occurred on November 16, 2020, for what is described in the record as "ongoing right ankle discomfort." (Claimant's Exhibit 12). After taking a history and completing a physical examination, Dr. Primack opined that Claimant's symptoms were out of proportion to her examination. He was hesitant to recommend additional surgery. Rather, he recommended that Claimant undergo an autonomic test battery to include a thermogram and sonographic analysis in an effort to help delineate whether her persistent ankle pain represented a case of CRPS or was mechanical in nature. (*Id*. at p. 225). Dr. Primack referred Claimant to Dr. David Reinhard for the autonomic testing.

20. Dr. Reinhard completed the requested testing battery on December 14, 2020. (Claimant's Exhibit 13). The results of Claimant's autonomic battery and stress thermography were negative for CRPS. (*Id*. at pp. 252-272). With two negative test results, Claimant did not meet the Colorado Division of Workers' Compensation criteria for confirmed CRPS, leading Dr. Reinhard to conclude that Claimant's persistent pain was most likely mechanical in nature. (*Id*. at p. 252).

21. Claimant was reevaluated by Dr. Primack on January 18, 2021. At the conclusion of this appointment, Dr. Primack placed Claimant at MMI with 10% lower extremity impairment. (Claimant's Exhibit 12, p. 244). He did not assign work restrictions.

Claimant's Testimony

22. Claimant testified that following her December 14, 2018 and January 3, 2020 surgeries she was non-weight bearing for six weeks. She testified that she missed time from work following her surgeries because she was restricted and because she needed to attend medical appointments related to her right ankle injury or the complications caused thereby. She also testified that when she was able to work she could not perform the full range of duties associated with her position as a systems engineer.

23. Claimant testified that she compiled a list of all dates and time she was unable to work due to her ankle injury. (Claimant's Exhibit 15). While Claimant began tracking her lost time from work on August 31, 2018[1], she testified that she was not seeking TTD benefits for the period extending August 31, 2018 through December 13, 2018. Rather, Claimant asserts entitlement to TTD benefits beginning December 14, 2018 and ending December 27, 2018. Consequently, this order does not address Claimant's entitlement to temporary disability benefits prior to December 14, 2018.

24. Claimant's Exhibit 15 reveals that she did not work December 14, 2018. This is supported by medical records, which establish that Claimant underwent surgery on this date. The spreadsheet also reflects that she did not work December 17, 2018. She worked remotely for 6.5 hours on December 18, 2018, but did not work at all the next day, December 19, 2018. Claimant again worked remotely from home for 4 hours on December 20, 2018. According to her lost time log, Claimant did not work any hours between December 21 and December 31, 2018. Nevertheless, at the outset of the hearing Claimant's counsel indicated that Claimant was only seeking TTD benefits through December 27, 2018 and Claimant reiterated this during her hearing testimony.

25. Although Claimant's log supports a finding that she missed 61.5 hours of work between December 14, 2018 and December 27, 2018, she testified that she received her full wages because she used personal time off (PTO) and "comp time" to make up for her lost work hours. According to Claimant, PTO is earned on a weekly basis and can be cashed in, up to a certain amount, at the end of the year. Claimant went on to testify that comp time was given to her in lieu of overtime. For example, if Claimant worked 42 hours, she would get 2 hours of comp. time. The comp time policy as explained by Claimant is corroborated by Employers "Time Keeping Procedures." (Respondents' Exhibit B, p. 12).

26. Claimant returned to work on January 2, 2019. She testified that she was able to get a ride to/from work and that her co-workers would assist her in completion of

[1] According to Claimant's compilation of lost time, she missed 265 hours from work between in 2018 as a consequence of her injury. (Claimant's Exhibit 15, p. 313).

duties she was unable to perform at work. Nonetheless, Claimant testified that she continued to miss time from work due to attendance at medical appointments to obtain treatment for her right ankle.

27. Claimant's lost time log supports a finding that she missed 333.5 hours of time from work in 2019, because of the ongoing symptoms associated with her right ankle injury or to attend various medical appointments related to treatment directed to her right ankle injury, including physical therapy. Nonetheless, the evidence presented, including Claimant's Application for Hearing (Respondents' Exhibit A), the statements of counsel and her testimony persuades the ALJ that Claimant is not seeking temporary disability benefits for the period beginning December 28, 2018 and ending January 2, 2020. Accordingly, this order does not address Claimant's entitlement to temporary disability benefits for this time period.

28. Claimant testified that following her January 3, 2020 surgery, she was again restricted to a non-weight bearing status for six to eight weeks. She testified that she was instructed to remain out of work for two weeks following her surgery. Although Claimant testified that she was excused from work for two weeks after surgery, she admitted that she did not follow this advice. Instead, she testified that she returned to work January 6, 2020.

29. Claimant's lost time log (Exhibit 15) reflects that she did not work January 3, 2020. The reason for not working is listed as "Ankle Surgery." As found, Dr. Seddon's records support a finding that he performed right ankle surgery on January 3, 2020. Accordingly, the ALJ finds that Claimant's lost time log consistent with and supported by the available medical records for this date.

30. Claimant's lost time log also reflects that she returned to work "Half Days" on January 6-7, 2020. Claimant returned to full work, i.e. eight-hour days on January 8, 2020. Nonetheless, she testified and the medical records support that she continued to experience lost time due to her need to attend medical appointments related to her right ankle injury. The lost time log compiled by Claimant supports a finding that between January 3, 2020 and May 28, 2020, she lost 114.5 hours of work time due to the persistent symptoms associated with her right ankle injury or because her had to attend a medical appointment related to her right ankle condition.[2] There are no entries on the lost time log after May 28, 2020. (Claimant's Exhibit 15, p. 313). While there are no entries reflected on the lost time spreadsheet after May 28, 2020, the wage records admitted into evidence demonstrate that Claimant regularly used PTO and/or "Workcomp Leave" after this date to make up hours she lost attending medical appointments related to her right ankle injury. (Claimant's Exhibit 14).

31. Based upon the totality of the evidence presented, the ALJ is sufficiently persuaded that the majority of Claimant's spreadsheet entries are accurate and that much of the lost time reflected on the spreadsheet was compensated using PTO, comp time,

[2] See Claimant's Exhibit 15, p. 323 consisting of a compilation of dates Claimant attended medical appointments for her right ankle injury.

or Workcomp Leave. While the ALJ is convinced that the majority of the lost time referenced on Claimant's spreadsheet is probably related to her inability to work due to symptoms associated with her right ankle injury or her attendance at medical appointments, several entries to the spreadsheet raise concerns for the ALJ.

32. As noted, the medical records support a finding that Claimant traveled to Australia at the end of February 2020. The record evidence substantiates that Claimant saw Dr. Seddon on February 18, 2020, after which appointment Dr. Seddon documented that Claimant would be traveling to Australia "later" in the week. Claimant then saw Dr. Strike on February 18, 2020, who referred her to Dr. Verhey for additional evaluation. As found, Claimant was seen by Dr. Verhey on February 19, 2020. The lost time spreadsheet contains entries for February 18-19, 2020 consistent with these visits. Moreover, Claimant's physical therapy records demonstrate that she attended a PT appointment on February 19, 2020 during which she reported that she was "leaving for work for three weeks and [would] return to PT after." (Claimant's Exhibit 8, p. 131). Following this physical therapy session, there is a gap in Claimant's treatment until March 9, 2020 when she returned to physical therapy reporting that her ankle "swelled a lot while hiking." (Claimant's Exhibit 8, p. 133). The lost time spreadsheet supports a finding that Claimant is not claiming any lost time to attend medical appointments between February 20, 2020 and March 9, 2020, which the ALJ finds consistent with the hiatus in treatment during this same period. Consequently, the ALJ finds it reasonable to infer that Claimant was probably out of the country and in Australia for this period. While Claimant testified that she would "go out to teach for two weeks at a time" and the February 19, 2020, physical therapy record reflects that she was leaving for work for three weeks, the evidence presented strongly supports that Claimant's increased ankle symptoms and swelling were due to substantial amounts of hiking while in Australia. While it is possible that Claimant traveled to Australia for business, she did not testify as such nor did she indicate that hiking was part of her work duties while in Australia if she had. As presented, the evidence fails to persuade the ALJ that the time Claimant purports to have lost from work on February 24, 2020, March 2, 2020 or March 3, 2020, per the lost time spreadsheet was actually time lost from work.

33. The ALJ also finds Claimant's assertion that she lost time from work on October 14, 2020 unpersuasive. While it is possible that Claimant's trip to the ED on October 14, 2020 for high blood pressure was related to medications used to treat the effects of her work injury, the report associated with this visit indicates that it is equally likely that the visit was necessitated by a change in the dosage of her non-work related thyroid medication. The ALJ finds Claimant's testimony concerning the relatedness of this visit to her right ankle injury speculative and unconvincing. Accordingly, the ALJ is not persuaded that the lost time associated with Claimant's October 14, 2020 ED treatment is related to her right ankle injury.

34. Finally, the evidence presented fails to convince the ALJ that Claimant's use of 80 hours of PTO time from December 21, 2020 to January 3, 2021 is related to her work injury. There are no medical records to substantiate the use of this time nor did Claimant record or otherwise testify that the effects of her injury precluded her from

working during this period. Based upon the payroll record associated with this pay period, the ALJ finds that Claimant probably cashed in or used 80 hours of PTO time and that the use of this time was unrelated to her right ankle injury.

35. Claimant is seeking a disfigurement award for the scarring related to her right ankle injury and subsequent surgeries. As noted, Claimant attended the hearing via video conference during which the ALJ visually inspected the disfigurement associated with her August 29, 2018 right ankle injury. The ALJ finds that as a result of her admitted right ankle injury, Claimant has an approximately 4 inch long by ⅛ - ¼-inch wide surgical scar located on the lateral aspect of the right ankle. This scar is slightly raised and lightly pigmented. However, the skin adjacent to this scar appears discolored (mottled) making the disfigurement associated with this scar appear much more conspicuous. In addition to the aforementioned scar, Claimant has two small, lightly pigmented, ¼ inch in diameter, semi-circular arthroscopic scars located on the right ankle. There is mild swelling of the right ankle compared to the left, especially around the lateral malleolus. In addition to the above described scarring and swelling, Claimant ambulates with a slight but perceptive limp favoring the right leg.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002).

Claimant's Entitlement to Temporary Disability Benefits

D. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that she left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions, which impair the Claimant's ability effectively, and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998); *Jefferson County Schools v. Headrick*, 734 P.2d 659 (Colo. App. 1986). A claimant is not required to prove both components to establish entitlement to disability benefits under the Workers' Compensation Act. *Montoya v. Industrial Claim Appeals Office*, 488 P.3d 314 (Colo. App. 2018). Rather, it is sufficient if Claimant proves that he/she sustained a loss of wages as a result of her industrial injury to be entitled to temporary disability benefits. (*Id.*)

E. Temporary total disability (TTD) benefits are designed to compensate an injured worker for wage loss while the employee is recovering from his/her work-related injury. *Pace Membership Warehouse, Div. of K-Mart Corp. v. Axelson*, 938 P.2d 504 (Colo. 1997); *Eastman Kodak Co. v. Industrial Commission of State of Colorado*, 725 P.2d 107 (Colo. App. 1986). In the case of TTD, the injured employee "shall receive sixty-six and two-thirds percent of [his/her] average weekly wage so long as the disability is total, not to exceed a maximum of ninety-one percent of the state average weekly wage per week." C.R.S. § 8-42-105(1). As noted above, the claimant in a workers' compensation claim bears the burden of establishing three conditions before qualifying for TTD benefits: (1) that the industrial injury caused the disability; (2) that claimant left work because of the injury; and (3) the disability is total and last more than three working days. *City of Colorado Springs v. ICAO*, 954 P.2d 637 (Colo. App. 1997).

F. In this case, the ALJ credits Claimant's testimony to conclude that she was medically incapacitated and unable to perform the full range of her regular employment following her December 14, 2018 right ankle surgery.[3] Here, the evidence presented supports a finding that Dr. Seddon restricted Claimant's weight bearing status and imposed a further restriction of having to elevate her right leg post surgery causing her to lose time and therefore, wages from work. Based upon the evidence presented, including Claimant's testimony, it is reasonable to infer that she was unable to work as effectively or as efficiently as she had prior to her admitted right ankle injury. Consequently, the ALJ is convinced that Claimant has proven that she is "disabled" within the meaning of section 8-42-105, C.R.S. See *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (ICAO, June 11, 1999). While the ALJ is persuaded that Claimant's work-related right ankle injury caused a disability and that she left work because of this injury, a question remains as to whether her disability was "total" for the entire period of requested TTD extending from December 14, 2018 through December 27, 2018.

G. It is undisputed that Claimant returned to work on Tuesday, December 18, 2018, albeit in a modified capacity for 6.5 hours from home. While she was unable to work December 19, 2018, Claimant again worked remotely for 4 hours on December 20, 2018. Per C.R.S. § 8-42-105(3)(b), TTD benefits shall continue until "[t]he employee returns to regular or modified employment." Accordingly, the ALJ concludes that Claimant's lost time from work on December 18, 2018 and December 20, 2018 is appropriately characterized as temporary partial disability. Conversely, Claimant's December 14, 20218, December 17, 2018, December 19, 2018 and December 21, 2018 – December 27, 2018 lost time could be considered total. However, because Claimant had returned to work, the ALJ concludes that the hours Claimant lost from work between December 18, 2018 and December 27, 2018 is also best characterized as temporary partial disability in this case. Because the period of total disability did not last longer than two weeks from the day Claimant left work as a consequence of her work related injury, she is not entitled to recovery from the day she left work. C.R.S. § 8-42-103(1)(b). Based upon the evidence presented, the ALJ is persuaded that after excluding the first three regular working days, i.e. 24 hours, Claimant is entitled to payment of 37.5 hours of temporary disability benefits for her lost work time between December 18, 2020 and December 27, 2020 (61.5 hours of lost time – 24 hours (when accounting for the first three regular work shifts) = 35.7 hours of temporary partial disability).[4]

H. In the case of temporary partial disability (TPD), an injured employee "shall receive sixty-six and two-thirds percent of the difference between the employee's average weekly wage at the time of the injury and the employee's average weekly wage during the continuance of the temporary partial disability, not to exceed a maximum of ninety-

[3] A medical opinion is not a prerequisite to establishing entitlement to temporary disability benefits. To the contrary, a claimant's testimony, if credited, is sufficient to prove causation and the inability to work. Lymburn v. Symbios Logic, 952 P.2d 831 (Colo. App. 1997),

[4] Based upon the evidence presented, the ALJ finds Respondents suggestion that Claimant is not entitled to TTD for December 24, 2018, because she went shopping unpersuasive. To the contrary, the ALJ is convinced that Claimant's shopping probably occurred after working hours and that she was unable to work as reflected on the lost time spreadsheet. (Claimant's Exhibit 15, p. 308).

one percent of the state average weekly wage per week. Temporary partial disability shall be paid at least once every two weeks." C.R.S. 8-42-106 (1).

I. As noted above, Claimant specifically asserts entitlement to TPD benefits between January 3, 2020 and January 18, 2021 for time she lost from work due to ongoing symptoms associated with her right ankle injury or because of attendance at medical appointments to cure and relieve her of the effects of her right ankle injury. As found, the ALJ credits Claimant's testimony and the majority of the lost time spreadsheet to conclude that she lost time from work to attend medical appointments or simply because she could not work on occasion due to the ongoing symptoms associated with her work related right ankle injury. Respondents contend that "[t]here is no explanation as to why [Claimant] is entitled to a year of TPD benefits following the January 2020 surgery when she had similar treatment and recommendations following the 2018 surgery." The ALJ disagrees as the medical records demonstrate that Claimant lost time either, because of ongoing symptoms related to her work injury or because she had to attend medical appointments to cure and relieve her of these symptoms. Moreover, the ALJ is persuaded that Claimant used PTO, comp time or work comp leave to make up for those lost hours from her wages.

J. C.R.S. § 8-42-124 (4) provides that if the employer pays less than the benefits to which the injured worker is entitled or charges the Claimant with earned vacation or sick leave, the Claimant is still entitled to receive temporary disability benefits. Vacation and sick pay "are benefits earned by virtue of past services rendered," and such earned benefits may not be impaired by the employees work related injury. *Public Service Co. V. Johnson*, 789 P.2d 487, 488 (Colo. App. 1990). It follows that PTO and comp time are similarly earned benefits. In this case, Respondents paid no temporary disability benefits in spite of Claimant's entitlement to such benefits. Rather, Claimant used her PTO and comp time in order to ensure she received full wages while disabled.

K. In keeping with the holding announced in *Public Service Co. of Colorado v. Johnson*, 789 P.2d, 487 (Colo. App. 1990) the ALJ concludes that Claimant is entitled to receive TTD and TPD for the above referenced periods of time. As noted in the *Public Service Co.* decision, such payment does not constitute double compensation because vacation, sick and other similar benefits, i.e. "comp time" are earned by past services unrelated to the occupational injury. The Court concluded that the legislative determination of § 8-42-124(4) "reflects a legislative determination that an injured employee should not be required to sacrifice earned benefits in order to obtain statutorily mandated workmen's compensation benefits." *Public Service Co., supra.* Thus, just as the employer in *Public Service Co.* was required to pay both the claimant's sick and vacation time and full TTD, Respondent-Employer in the instant case is obligated to pay Claimant for the required PTO, comp time and work comp leave she depleted from these accounts in addition to TTD/TPD.

Claimant's Entitlement to Disfigurement Benefits

L. In *Arkin v. Industrial Commission*, 145 Colo. 463, 358 P.2d 879 (1961), the Court held that the term “disfigurement” as used in the statute, contemplates that there be an “observable impairment of the natural person.” As found at Finding of Fact, ¶ 32 above, Claimant has suffered a “disfigurement”, i.e. surgical scarring and mild swelling about the right ankle in addition to a slight limp, which the ALJ concludes, constitutes an observable alteration in Claimant’s gait pattern and the natural appearance of skin covering the right knee. Accordingly, the ALJ concludes that Claimant has suffered a visible disfigurement entitling her to additional benefits pursuant to Section 8-42-108 (1), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant has proven that she is entitled to a period of temporary disability benefits. Respondent-Insurer shall pay Claimant temporary disability benefits for her lost time from work for the following dates:[5]

- Beginning December 18, 2018 for 1.5 hours and all subsequent lost time thereafter, as documented in Exhibit 15, through December 27, 2018.

- Beginning January 3, 2020 and running through February 19, 2020, for lost time caused by persistent symptoms precluding Claimant’s ability to work or for lost time related to her attendance at medical appointments as documented in Exhibit 15.

- Claimant’s request for lost time claimed in association with a January 11, 2020 appointment to the ED at Grandview Hospital is expressly denied as the ALJ takes administrative notice that January 11, 2020 was a Saturday and Claimant failed to prove that she lost time from work for this appointment nor did she claim it in Exhibit 15.

- Beginning March 9, 2020 and running through May 28, 2020, for lost time caused by persistent symptoms precluding Claimant’s ability to work or for lost time related to her attendance at medical appointments as documented in Claimant’s Exhibit 15.

- Beginning May 29, 2020 and running through October 13, 2020, for lost time in association with Claimant’s attendance at medical appointments as documented in Claimant’s Exhibit 15, p. 323.

[5] During hearing, Claimant clarified that he was simply asking the ALJ to determine Claimant’s entitlement to temporary disability benefits for the requested periods rather than the specific amount of TT and TPD benefits, noting further that the parties expected to work out the exact amount of time and value of any temporary disability benefits awarded.

- Claimant’s request for payment of temporary disability benefits in association with lost time for a claimed date of medical service on October 14, 2020 is denied as dismissed as Claimant failed to prove the requisite causal connection between her industrial injury and the need for treatment on this date.

- Beginning October 15, 2020 and running through December 20, 2020, for lost time associated with Claimant’s attendance at medical appointments on November 4, 9, 11, 16, 17, 20, 23, 25, and December 7 and 14, 2020, as documented in Claimant’s Exhibit 15, p. 323.

- Claimant’s request for payment of temporary disability benefits in association with lost time between December 21, 2020 and January 3, 2021, is denied and dismissed as Claimant failed to carry her burden of proof to establish that her use of PTO time for this period was related to her work related right ankle injury.

- Beginning January 4, 2021 and January 18, 2021, for time associated with attending medical appointments on January 13, 2021, January 15, 2021 and January 18, 2021 as documented in Claimant’s Exhibit 15, p. 323.

2. Claimant’s AWW for purposes of her employment with Respondent-Employer is determined to be $1,653.14 per the approved stipulation of the parties.

3. Insurer shall pay Claimant $2,250.00 for the above-described disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. What is Claimant's impairment rating for his right knee?

II. What is Claimant's impairment rating for his left ankle?

III. Whether the TENS unit supplies are reasonable, necessary, and related medical treatment.

IV. Whether Claimant must reimburse Respondent for the cancellation fee for the Respondent requested independent medical examination with Dr. O'Brien on July 15, 2021, that did not occur.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant sustained an admitted right knee injury while working for Respondent on October 11, 2018.
2. An MRI of Claimant's right knee, obtained on October 12, 2018, indicated a high-grade partial thickness tear in the proximal patellar tendon, MCL sprain, chondromalacia, and moderate joint effusion. Claimant was referred for surgery.
3. A second MRI, obtained on April 4, 2019, indicated patella tendinopathy, and a stable superficial chondral fissure of the patellar ridge with preservation of the remaining patellofemoral articular cartilage.
4. A third MRI, obtained on August 12, 2019, indicated chronic degenerative changes in the patella.
5. On September 10, 2019, Claimant underwent right knee surgery. The operation was performed by Justin Newman, M.D, and included diagnostic arthroscopy, chondroplasty of the patella and medial femoral condyle, medial meniscus repair with bone site techniques, and medial patella femoral ligament reconstruction with allograft. The postoperative diagnoses included:
   - Right knee lateral patellar instability.
   - Grade III chondromalacia of the medial patellar facet over an area of 8/10 mm with diffuse grade II chondromalacia over the medial and lateral patella facets.
   - Diffuse grade II chondromalacia with delaminated cartilage in the medial femoral condyle.
   - Medial meniscal tear.

6. Claimant then underwent post-operative rehabilitation. As part of his treatment, Claimant was prescribed a TENS unit. Claimant used the unit and it provided relief to his right knee.

7. During his recovery from surgery, Claimant used crutches to ambulate. In late October or early November 2019, one of Claimant's crutches slipped while he was using it and he suffered a left ankle injury.

8. MRI of the left ankle was obtained on January 16, 2020, which revealed an ankle sprain and tear of the peroneus brevis. Claimant was referred for left ankle surgery.

9. Respondent admitted liability for Claimant's left ankle injury.

10. On September 18, 2020, Claimant underwent left ankle surgery. The surgery was performed by Scott Resig, M.D., and included arthroscopy, debridement, modified Brostrom procedure, peroneus brevis repair, and peroneal tenosynovectomy.

11. Claimant then underwent post-operative rehabilitation. As part of his treatment, Claimant continued to use the prescribed TENS unit for pain relief, and it provided pain relief for his left ankle and right knee.

12. In January 2021, Claimant's authorized treating physician, Edwin Baca, M.D., requested replacement electrodes and batteries for the TENS unit.

13. On January 28, 2021, Mahdy Flores, M.D., reviewed the request for TENS unit supplies. Dr. Flores, M.D., concluded that the request for TENS unit supplies should not be approved. As part of his review, Dr. Flores did not discuss with Claimant whether the TENS unit was providing pain relief. The primary basis for Dr. Flores' recommendation to deny authorization of the TENS unit supplies was that the medical records did not document objective improvement or decrease in pain as shown by a visual analog scale (VAS) with specific use of Claimant's TENS unit. However, despite Dr. Flore's finding that there was a lack of evidence in the medical records that Claimant was getting pain relief from the TENS unit, Claimant credibly testified at hearing that he gets pain relief from the TENS unit.

14. On April 16, 2021, Claimant was referred to Scott Primack, D.O., for a comprehensive consultation / impairment rating for his right knee and left ankle injury. Dr. Primack obtained a history, reviewed Claimant's medical records, and performed a physical examination. He concluded Claimant reached MMI as of April 16, 2021. During his examination of Claimant's lower extremities Dr. Primack noted evidence of "a brown discoloration, which could be from pooling of fluid at the lower extremities bilaterally." Based on his evaluation of Claimant, Dr. Primack's diagnoses of Claimant's work-related conditions for his right knee included:

    (a) Ligament tearing and meniscal fraying,

    (b) Post meniscectomy,

    (c) Ongoing achiness.

    (d) Residual loss of motion.

    As to his left ankle, Dr. Primack's diagnoses include:

(a) Post ankle surgery.

(b) Residual pulling/swelling secondary to his postoperative treatment course.

(c) Residual pain

(d) Residual laxity and stiffness.

15. Dr. Primack provided Claimant an impairment rating for his knee and ankle injury. Dr. Primack assigned an 18% scheduled impairment rating to Claimant's right knee, and a 17% scheduled impairment rating to his left ankle. The 18% impairment assigned to Claimant's right knee was based on 4% range of motion ("ROM") loss per Table 39 and 15% for specific disorders per Table 40 for having a meniscal tear and undergoing surgery – which he classified as a meniscectomy. The 17% impairment assigned to Claimant's left ankle was based on 11% ROM loss per Table 37 and 6% ROM loss per Table 38.

16. Dr. Primack also concluded that Claimant required maintenance medical treatment due to his work injury. At the time of his evaluation, he concluded Claimant required Jobst stockings due to the bilateral swelling – which might also reduce Claimant's pain. He also stated that the Jobst stockings should be custom fitted to Claimant. He said the Jobst stockings should be:

> [F]itted to him. This will require high pressures distally with less pressures proximally, so he will have a lesser propensity of pulling/swelling.

17. On April 21, 2021, Claimant was assessed by Dr. Baca – who treated Claimant during his claim. Dr. Baca agreed Claimant had reached MMI. He also agreed Claimant sustained permanent impairment. Dr. Baca did not, however, recommend any maintenance medical treatment.

18. Respondent objected to Dr. Primack's impairment ratings and filed an Application for Hearing regarding permanent partial disability benefits. Claimant also filed an application for hearing and endorsed the issue of medical benefits. The applications were consolidated to be heard at one hearing.

19. On April 27, 2021, Dr. O'Brien performed a records review IME. He disagreed with the prescription for ongoing use of a TENS unit. According to Dr. O'Brien, there is a lack of scientific evidence to support the use of a TENS unit to support healing. (But Claimant is requesting the TENS unit for pain relief, not "healing.") Dr. O'Brien also stated that there was also no Level I or II accredited scientific treatise that supported the use of a TENS unit as an effective modality following surgery. But the Medical Treatment Guidelines state that a TENS unit is effective treatment for pain relief. As set forth by Dr. Hughes - A TENS unit is specifically outlined in the Colorado Division of Worker's Compensation Lower Extremity Injury Medical Treatment Guidelines. The Lower Extremity Medical Treatment Guidelines specifically provide that:

> Transcutaneous Electrical Nerve Stimulation (TENS): is a generally accepted treatment. TENS should include at least one instructional session for proper application and use. Indications include muscle spasm, atrophy, and decreased

> circulation and pain control. Minimal TENS unit parameters should include pulse rate, pulse width and amplitude modulation. Consistent, measurable functional improvement must be documented prior to the purchase of a home unit.
>
> - Time to Produce Effect: Immediate.
> - Frequency: Variable.
> - Optimum Duration: 3 sessions.
> - Maximum Duration: 3 sessions. If beneficial, provide with home unit or purchase if effective. Due to variations in costs and in models, prior authorization for home units is required.

Colorado Lower Extremity Medical Treatment Guidelines, p. 185.

Thus, based on Dr. Hughes' opinion, the language set forth in the Guidelines, and the fact that Claimant is using the TENS unit for pain relief - and not "healing" - the ALJ does not find Dr. O'Brien's opinions about the TENS unit to be persuasive.

20. On July 15, 2021, Claimant was scheduled to undergo an independent medical examination (IME) with Timothy O'Brien, M.D., at the request of Respondent's counsel. Before Claimant attended the IME, he was not advised that his wife, or anyone else, would not be allowed to attend the IME with him. Claimant and his wife, Shana P[Redacted] , presented at Dr. O'Brien's office on time, prepared to be seen. Claimant filled out to the intake paperwork including the consent form required by the Division of Workers' Compensation (DOWC). Claimant submitted the paperwork to Dr. O'Brien's office before the appointment. But the examination did not occur. Claimant requested that his wife attend the appointment with him, as she had done with several prior appointments with other providers. But Dr. O'Brien refused. Dr. O'Brien informed Claimant he would not evaluate him if Claimant wanted his wife to attend the appointment. Thus, Dr. O'Brien would not perform the IME with Claimant's wife present. As result of not letting his wife attend the IME, Claimant left without undergoing the evaluation. Claimant did not, however, violate an order compelling him to attend the IME. Claimant did not attend the IME because he wanted to have his wife attend with him – like she had done at prior appointments with other providers – and Dr. O'Brien would not accommodate Claimant's request.

21. Despite the IME not proceeding, the Respondent was charged $898.00 – a cancellation fee - for the IME that did not take place. The fee consisted of $374.00 for file review, $374 for the scheduled IME time, and $150.00 for a facility fee.

22. Ms. P[Redacted] credibly testified she and Claimant made multiple requests for Dr. O'Brien to allow her to attend the appointment with Claimant so the appointment could move forward on July 15, 2021, but yet Dr. O'Brien refused their requests.

23. Ms. Christi Gleason testified via deposition. Ms. Gleason credibly testified that she is the person working the front desk of Dr. O'Brien's office when Claimant and his wife arrived for the July 15, 2021, IME. She testified that Dr. O'Brien would not allow Ms. P[Redacted] to attend the IME because it is his office policy to have the injured worker attend the IME alone. She also testified, that in the past, Dr. O'Brien has allowed a

chaperone to attend an IME when the injured worker was a minor. That said, he did not adjust his office policy for Claimant. She also testified that after Claimant was advised that his wife could not attend the IME, Claimant left and was not evaluated by Dr. O'Brien.

24. On July 21, 2021, Claimant underwent an IME with John Hughes, M.D., at the request of Claimant's counsel. Dr. Hughes obtained a detailed history from Claimant, reviewed his medical records, and performed a physical examination. Dr. Hughes detailed each surgical procedure Claimant underwent for his right knee. The procedures consisted of:

    - Chondroplasty of the patella and medial femoral condyle.
    - Medial meniscus repair.
    - Medial patellofemoral ligament reconstruction with allograft.

25. Dr. Hughes did the same thing for Claimant's left ankle surgery. He noted that Claimant underwent the following procedures:

    - Modified Brostrom procedure with peroneus brevis repair.
    - Peroneal tenosynovectomy.
    - Extensive debridement of the left ankle.

26. Dr. Hughes assessment included the following:

    - Work-related fall with complex right knee injuries sustained October 11, 2018.
    - Traumatic grade 3 chondromalacia of the right medial patellar facet along with lateral patellar instability with residual patellofemoral arthritis, post arthroscopic chondroplasty of the patella and medial femoral condyle done September 10, 2019.
    - Traumatic medial meniscus tear, post medial meniscus repair done September 10, 2019.
    - Right medial patellofemoral ligament tear, post reconstruction done September 10, 2019.
    - Left ankle sprain/strain sustained as a result of a fall, with a peroneus brevis tear and instability of the left ankle.
    - Left ankle arthritis, post open modified Brostrom procedure, peroneus brevis repair, peroneal tenosynovectomy, and extensive debridement done September 18, 2020.
    - Bilateral lower extremity venous insufficiency secondary to bilateral traumatic injuries and surgeries.

27. Dr. Hughes concluded that in addition to Claimant's range of motion deficit to his right knee, Claimant is also entitled to additional impairment for the meniscal injury and for the swelling of both of his lower extremities. As a result, Dr. Hughes concluded

Claimant has a 33% scheduled impairment to his right knee and a 24% scheduled impairment to his left ankle. The 33% impairment assigned to Claimant's right knee was based on 12% ROM loss per Table 39, 15% for specific disorders per Table 40, and 10% for vascular impairment. Dr. Hughes specified that the impairment per Table 40 was 5% for the meniscal tear and surgery, and 10% for chondral injuries that equate to arthritis. The 24% impairment to Claimant's left ankle was based on 9% ROM loss per Table 37, 7% ROM loss per Table 38, and 10% for vascular impairment.

28. Dr. Hughes' impairment rating is consistent with the AMA Guides. For example, along with providing Claimant an impairment rating for his decrease in range of motion of his right knee, Dr. Hughes also provided Claimant a 5% scheduled impairment for the meniscal tear and surgery as well as an additional 10% scheduled impairment for the chondral injuries which he equated to arthritis. A review of Table 40 of the AMA Guides indicates that a "torn meniscus, meniscectomy, or partial meniscectomy" results in a 0-10% impairment. And Dr. Hughes applied the Guides and provided Claimant a 5% impairment for his torn meniscus. Second, Table 40 also provides that arthritis due to any cause, including trauma or chondromalacia can be provided a 0-20% rating. And, Dr. Hughes, provided Claimant 10% impairment for the chondral injury – arthritis – involving Claimant's knee. Third, Table 52 of the AMA Guides provides for a 10-35% impairment for intermittent claudication on walking at least 100 yards at an average pace or for persistent edema of a moderate degree, incompletely controlled by elastic supports. Dr. Hughes concluded that the pain and swelling in Claimant's legs is due to vascular impairments caused by Claimant's injuries and subsequent surgeries. This conclusion is consistent with Dr. Primack, who also concluded Claimant's edema bilateral edema was work related and recommended Jobst stockings. As a result, Dr. Hughes used Table 52 and provided Claimant a 10% rating for claudication and/or persistent edema for each lower extremity.

29. The ALJ finds Dr. Hughes' calculation of Claimant's impairment rating to be credible and persuasive because it is consistent with Claimant's complaints, consistent with the underlying medical records, and consistent with a reasonable interpretation and application of the AMA Guides.

30. On August 10, 2021, a prehearing was held. The prehearing was held to address Respondent's motion to compel Claimant to undergo an IME with Dr. O'Brien without his wife present and their motion to endorse reimbursement for Claimant missing Dr. O'Brien's IME. The motions were granted. Claimant was therefore compelled to attend the IME with Dr. O'Brien on September 10, 2021, and further ordered that his wife could not attend and witness the IME. Moreover, the issue for reimbursement for the cost associated with Claimant's refusal to attend the IME without his wife was added as an issue to be heard at hearing.

31. On September 10, 2021, and pursuant to the order to compel, Claimant attended the IME with Dr. O'Brien without his wife.

32. On September 24, 2021, Dr. O'Brien issued a report. As stated in his report, Dr. O'Brien obtained a history, reviewed Claimant's medical records, and performed a physical examination. Based on his physical examination, he noted Claimant had bilateral pitting edema in the distal two-thirds of his legs. He also noted hemosiderin

staining of both legs. He did not, however, provide a rating for Claimant's edema – swelling - as did Dr. Hughes. Nor did he explain why he did not provide a rating for the swelling. Dr. O'Brien also measured Claimant's range of motion regarding his right knee and left ankle. He did not, however, provide any worksheets setting forth his range of motion measurements. Based on his assessment, he concluded that under the AMA Guides, Claimant has a 2% impairment to his right knee and 12% impairment to his left ankle. As for Claimant's right knee, he did not provide any impairment for Claimant's meniscal injury which required surgery. According to Dr. O'Brien, it was his opinion that the AMA Guides does not provide a mandatory disability rating for a meniscal tear and repair – which Claimant had. He also noted that while Claimant underwent surgery, the surgery "does not constitute a disabling surgical intervention but rather a health restoring surgical intervention." Thus, in his opinion, he did not think that Claimant should be provided an impairment rating just because the meniscal repair was performed. He also supported his decision to not provide Claimant a rating for his torn meniscus and surgical repair because he concluded that Claimant had an excellent surgical outcome. Dr. O'Brien's conclusion that Claimant had "an excellent surgical outcome" is not supported by the history Claimant provided Dr. O'Brien. For example, Claimant told Dr. O'Brien that he still has symptoms in his right knee. These symptoms included 1-9/10 pain, locking, and occasional catching. Thus, there mere fact that Dr. O'Brien concludes that Claimant had an excellent surgical outcome is not supported by Claimant's ongoing complaints. The ALJ therefore does not find Dr. O'Brien's conclusion that Claimant had an excellent result from the knee surgery to be credible or persuasive.

33. Dr. O'Brien also testified in this matter. His testimony largely reflected the opinions expressed in his report. Dr. O'Brien testified that a meniscectomy is the removal of meniscal tissue. He also testified that Claimant did have meniscal tissue removed as part of his right knee surgery, but that he did not have enough tissue removed to qualify as a meniscectomy that would justify impairment per Table 40 of the AMA Guides. Dr. O'Brien tried to make sense of his contradictory testimony by stating that while Claimant did have meniscal tissue removed as part of his surgery, he did not have enough meniscal tissue removed to qualify as a meniscectomy. The ALJ does not, however, find his rationale to be credible or persuasive.

34. Dr. O'Brien further concluded that Claimant did not warrant any impairment per Table 40 for the meniscal tear or chondral injuries as opined to by Dr. Hughes. Dr. O'Brien also testified that Claimant does suffer from swelling in his lower extremities, but he does not believe Claimant should receive claim related impairment ratings for this condition.

35. Overall, the ALJ does not find Dr. O'Brien's opinions to be credible or persuasive.

36. Claimant testified that he continues to have issues with his right knee and left ankle from his work injury. He testified that both his lower extremities become swollen after he is on his feet for an hour to an hour-and-a-half. That his right lower extremity began to swell after his right knee surgery, and that his left lower extremity began to swell after his left ankle surgery. He also testified that he never had issues with his lower extremities swelling prior to undergoing the surgeries to his right knee and left ankle. Claimant testified that he continues to treat his work injuries. Since being placed at

MMI he has received a specialized knee brace for his ongoing right knee issues, and specially fitted Jobst stockings for the swelling in his lower extremities. Claimant also testified that the TENS unit relieves his knee and ankle pain.

37. Claimant's testimony is consistent with the findings set forth by Drs. Primack and Hughes. As a result, the ALJ find Claimant's testimony to be credible and persuasive.

38. The ALJ finds that Claimant continues to have pain involving his knee and ankle and continues to have swelling involving his lower extremities that was caused by his work injuries.

39. The ALJ also finds that the TENS unit relieves Claimant from the effects of his work injury by reducing his knee and ankle pain.

Ultimate Findings

40. Claimant's impairment rating of his right knee is 33% scheduled as set forth by Dr. Hughes.

41. Claimant's impairment rating of his left ankle is 24% scheduled as set forth by Dr. Hughes.

42. The TENS unit supplies are reasonably necessary to relieve Claimant from the effects of his work injury. As a result, the electrodes and batteries are found to be reasonable, necessary, and claim related treatment.

43. Claimant did not violate an order compelling his attendance at the IME with Dr. O'Brien because there was not an order compelling Claimant to attend the July 15, 2021, IME. Nor did Claimant commit a discovery violation when the July 15, 2021, IME did not occur because the failed appointment resulted from a reasonable disagreement about Dr. O'Brien's office policies and Claimant's desire to have his wife present during the IME.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. What is Claimant's impairment rating for his right knee?

II. What is Claimant's impairment rating for his left ankle?

Typically, when an injured worker is placed at MMI and assigned permanent impairment by the authorized treating physician the process to challenge the impairment rating is to file for a Division Independent Medical Examination ("DIME"). However, the Act does not afford an absolute right to a DIME as a prerequisite to hearing in cases that clearly involve only scheduled injuries. *See Delaney v. Indus. Claim Appeals Off*., 30 P.3d 691, 693 (Colo. App. 2000). Where the impairment is subject to scheduled awards in § 8-42-107(2) the clear and convincing burden of proof does not apply and the usual preponderance burden of proof applies for the claimant to prove entitlement to benefits, which is a factual issue to be determined by an ALJ. *See Burciaga v. AMB Janitorial Services, Inc*., W.C. No. 4-777-882 (Colo. Ind. Cl. App. Off. Nov. 5, 2010).

This is because scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. In particular, the procedures of § 8-42-107(8)(c), which states that a DIME finding as to permanent impairment can be overcome only by clear and convincing evidence and that such finding is a prerequisite to a hearing on permanent impairment, have been recognized as applying only to non-scheduled impairments. *See Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo.App.1998).

As found, per Dr. Hughes, Claimant's right lower extremity impairment is 33% scheduled, and his left lower extremity impairment is 24% scheduled.

As for the right lower extremity, Dr. Primack, Dr. Hughes, and Dr. O'Brien all found Claimant suffers ROM loss in his right knee. Claimant's right knee condition remains symptomatic and has worsened to the point he was fitted for a specialized knee brace after being placed at MMI on April 16, 2021. The main dispute about the impairment to Claimant's right knee is whether he should be assigned additional impairment for specific disorders per Table 40. Both Dr. Primack and Dr. Hughes believe that Claimant should.

In assigning his impairment to Claimant's right knee, Dr. Primack made a clerical error in his impairment rating. Dr. Primack assigned a 15% impairment per Table 40 Disorder 2 (i.e., meniscal tear and/or meniscectomy). However, Table 40 Disorder 2 specifies that when there is only one meniscal tear and/or meniscectomy, like Claimant had, the additional impairment rating should only be up to 10%. Despite this clerical error, Dr. Hughes credibly explained that Claimant should still be assigned the 15% impairment per Table 40 because Claimant (1) suffered a meniscal tear and/or underwent a meniscectomy that warrants an additional 5% impairment per Table 40 Disorder 2, and (2) suffered a chondral injury that is tantamount to arthritis which warrants a 10% impairment per Table 40 Disorder 5.

Dr. Hughes' opinions on the application of Table 40 are credible because they are supported by the MRIs and surgical report. The MRIs indicate injury to Claimant's patella joint and tendon. The operative report indicates injury to Claimant's meniscus that required surgical repair, and injury to patella cartilage that required Chondroplasty of the patella and medial femoral condyle. These findings are consistent with the additional impairment available under Table 40 Disorder 2 and 5.

The only provider that does not believe Claimant should be awarded the additional impairment for specific disorders per Table 40 is Dr. O'Brien. Dr. O'Brien opined the meniscal injury and surgery are not debilitating enough to warrant the additional impairment despite acknowledging Claimant has ROM loss and continued symptomology in the right knee. Dr. O'Brien testified that Claimant should not be awarded impairment per Table 40 Disorder 2 for undergoing a meniscectomy because Claimant underwent a meniscal repair, not meniscectomy. Dr. O'Brien testified that a meniscectomy is the removal of meniscal tissue. He added that Claimant did have some meniscal tissue removed as part of his surgery. Dr. O'Brien then tried to make sense of his contradictory testimony by stating that while Claimant did have meniscal tissue removed as part of his surgery, he did not have enough meniscal tissue removed to qualify as a meniscectomy. Dr. O'Brien's testimony is simply not credible.

Dr. O'Brien acknowledged Claimant's meniscus was torn, but opined Table 40 does not apply to Claimant because he had a meniscal repair rather than a removal and therefore Claimant should be provided a 0% as set forth in Table 40. Dr. O'Brien's opinions about application of Table 40 to the facts here are not found to be credible or persuasive.

Dr. Hughes' ROM findings regarding Claimant's right knee appear to be more consistent with Claimant's current and permanent ROM loss. When Dr. Primack conducted his ROM testing in April 2021, Claimant was still treating. Since then, Claimant's treatment, such as physical therapy, has stopped and it reasonable to conclude that his range of motion has decreased. Thus, the discrepancy between Dr. Primack's ROM testing in April 2021 and Dr. Hughes' in July 2021, makes sense because Claimant's right knee condition now requires a specialized knee brace while in April 2021 he did not.

As for Claimant’s left ankle impairment, Dr. Primack, Dr. Hughes, and Dr. Primack all agree Claimant suffers ROM loss. The disagreement is to what degree. The ROM findings by Dr. Primack and Dr. Hughes are very similar with Dr. Primack’s being 11% per Table 37 and 6% per Table 38, and Dr. Hughes’s being 9% per Table 37 and 7% per Table 38. The outlier in regard to the ROM findings to the left ankle is Dr. O’Brien. His findings are essentially half that of Dr. Primack and Dr. Hughes. Dr. O’Brien’s findings simply are not credible, nor did he submit impairment worksheets showing his findings like both Dr. Primack and Dr. Hughes did. The major difference between Dr. Primack and Dr. Hughes’ left ankle ratings concern the vascular impairment assigned by Dr. Hughes.

Dr. Hughes credibly opined Claimant suffers a vascular injury to his lower extremities as a result of his injuries and surgeries. Claimant credibly testified that the swelling in his right lower extremity began after his right knee surgery, and the swelling in his left lower extremity began after his left ankle surgery. At the time of MMI, on April 16, 2021, Dr. Primack recommended Claimant be fitted for Jobst stockings to address the swelling in his lower extremities. The swelling persists to this day, and Dr. Hughes’ decision to provide a rating under the AMA Guides is a reasonable interpretation and application of the AMA Guides for this ongoing claim related condition.

As a result, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that he suffered a 33% scheduled impairment of his right knee and a 24% impairment of his left ankle.

III. Whether the TENS unit supplies are reasonable, necessary, and related medical treatment.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ*. Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

As found, the electrodes and batteries are reasonable and necessary medical care that is related to Claimant’s admitted work injury. The TENS unit was prescribed to Claimant by his authorized treating physician as claim related treatment. Claimant credibly testified that he used the TENS unit and it provided pain relief. Dr. Hughes credibly stated that the TENS unit is recommended care under the Colorado Division of Worker's Compensation Lower Extremity Injury Medical Treatment Guidelines. Further, that since the TENS unit is being provided for home use, all of the attendant supplies should be considered reasonable, necessary, and related to Claimant’s work-related injury. In sum, the TENS unit was authorized, claim related treatment. Claimant used the TENS unit throughout his course of treatment per his provider recommendation to relieve his pain. The ALJ did not find the opinions of Drs. Flores and O’Brien persuasive on this issue. Thus, Claimant has established by a preponderance of the evidence that the TENS unit supplies – the electrodes and batteries - are found to be reasonable, necessary, and claim related treatment to relieve Claimant from the effects of his work injury.

IV. Whether Claimant must reimburse Respondent for the cancellation fee for the Respondent requested independent medical examination with Dr. O'Brien on July 15, 2021, that did not occur.

Section 8-43-404(1)(a) states that: "If in case of injury the right to compensation under articles 40 to 47 of this title exists in favor of an employee, upon the written request of the employee's employer or the insurer carrying such risk, the employee shall from time to time submit to examination by a physician or surgeon or to a vocational evaluation, which shall be provided and paid for by the employer or insurer, and the employee shall likewise submit to examination from time to time by any regular physician selected and paid for by the division." The IME guidelines are also outlined in WCRP 8-8. However, neither 8-43-404(1)(a) or Rule 8-8 require a Claimant to pay for cancellation fees associated with a missed or cancelled IME. *See Newton v. Broadcom*, W.C. No. 5-095-589-002 (Colo. Ind. Cl. App. Off. July 8, 2021).

Instead, Rule 8-8 mandates that the employer or insurer shall ensure the IME physician is provided with written notice that describes the requirements relating to recording the exam. It also requires the IME physician to provide both parties with a written medical report of the exam.

This issue has been addressed twice by the ICAO Panel, in *In re* Claim of Fahler, W.C. No. 5-111-049 (Aug. 17, 2020) and *Newton, supra. Fahler, supra* held as follows:

> Here, we agree with the ALJ that § 8-43-404(1)(b)(II), C.R.S. does not require the claimant to reimburse the respondents for the $917.50 cancellation fee associated with a missed IME appointment. To interpret § 8-43-404(1)(b)(II), C.R.S. as the respondents are proposing, would require us to read words into the statute. However, we are precluded from reading nonexistent provisions into the Act. *Archuletta v. Industrial Claim Appeals Office*, 381 P.3d 374, 377 (Colo. App. 2016). The clear intent of § 8-43-404(1)(b)(II), C.R.S. is to allow the employer or insurer to recover the advanced expenses made specifically to the claimant for his or her lodging, travel, and hotel costs associated with attending an IME, when the claimant misses such IME.

As found, Claimant is not responsible to pay the cancellation fee stemming from the July 15, 2021, IME that was scheduled but did not occur. As stated above, there is nothing in the Act or WCRP that requires Claimant to reimburse Respondent for the costs of the missed IME.

Nor is there any discovery violation per Colorado Rules of Civil Procedure Rule 37. Similar to the situation in *Newton, supra*, the July 15, 2021 IME did not occur because of Dr. O'Brien's policy which conflicted with Claimant's desire to have his wife attend the IME with him. Respondent provided Claimant with the required notice before the IME. Nothing in those documents stated Claimant must attend the IME alone. Furthermore, Respondent did not provide Claimant with Dr. O'Brien's office policy that nobody is allowed to attend the appointment with the injured worker. Claimant cannot know Dr. O'Brien's office policy about who can attend the IME when Respondent did not communicate Dr. O'Brien's policy to Claimant before Claimant sat in his lobby with his wife.

Additionally, who can and cannot attend an IME with an injured worker is not addressed by the Act or the WCRP. The closest thing to addressing this issue is § 8-43-404(2)(a), which states: "The employee shall be entitled to have a physician, provided and paid for by the employee, present at any such examination. If an employee is examined by a chiropractor at the request of the employer, the employee shall be entitled to have a chiropractor provided and paid for by the employee present at any such examination." However, this section addresses a situation in which an injured worker elects to have a medical professional attend the IME with him or her. It is not an exhaustive list of who can and cannot attend an IME. Further, it cannot be an interpreted as an exhaustive list because it does not address the issue of when a minor is injured at work and is subject to an IME. If this were an exhaustive list of who can and cannot attend an IME, it would be interpreted such that an injured worker who is a minor, possibly 15 or 16 years old, could not, by law, have his or her parent attend the IME. That is not the intent of § 8-43-404(2)(a). Thus, it must be interpreted as addressing the narrow issue of allowing a medical professional to attend the IME with the injured worker at the injured worker's expense, not an exhaustive list of who can and cannot attend the IME. Thus, as found, there is no discovery violation that subjects Claimant to the repayment of the cancellation fee.

Moreover, Section 8-43-207(1)(p) provides that an ALJ can only impose sanctions if a party violates an order. Section 8-43-207(1)(p) provides that an ALJ may:

> Impose the sanctions provided in the Colorado rules of civil procedure, except for civil contempt pursuant to rule 107 thereof, for willful failure to comply with any order of an administrative law judge issued pursuant to articles 40 to 47 of this title.

There is no order compelling Claimant to attend the July 15, 2021, IME with Dr. O'Brien. Therefore, based on Section 8-43-207(1)(p), an ALJ lacks the authority to impose a monetary sanction for Claimant's failure to complete the IME with Dr. O'Brien since Claimant did not violate an order.

As a result, Respondents have failed to establish that Claimant should be ordered to pay the cancellation fee.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's impairment to his right lower extremity is 33% scheduled.
2. Claimant's impairment to his left lower extremity is 24% scheduled.

3. The TENS unit electrodes and batteries are reasonable, necessary, and claim related treatment. Therefore, Respondent shall pay for the TENS unit supplies.

4. Claimant is not responsible for the cancellation fee stemming from the IME that was scheduled for, but did not occur, on July 15, 2021.

5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 21, 2021.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he sustained compensable injuries on March 9, 2021 arising out of and in the course of his employment with Employer.

II. Whether Claimant proved by a preponderance of the evidence that he is entitled to authorized medical benefits that are reasonably necessary and related to the March 9, 2021 accident.

III. If Claimant proved he is entitled to medical benefits, whether Claimant is entitled to reimbursement for medical benefits Claimant paid directly to the providers.

IV. What is Claimant's average weekly wage.

PROCEDURAL ISSUES

Claimant filed a Contested Motion for Expedited Hearing on September 3, 2021 with supporting documentation that included a letter from the Division instructing that Claimant may file for an expedited hearing on whether the employer should be held liable for Claimant's injuries. The Division's July 12, 20221 letter also advised Claimant that he would be required to attend a hearing, be awarded benefits, and file an Application to the Colorado Uninsured Employer Fund to qualify for CUE Fund Benefits.

This ALJ issued an order granting the motion on September 21, 2021. Counsel for Claimant indicated that the CorVel Representative for the Colorado Uninsured Employer Fund declined to participate in the hearing after being provided the pleadings in the matter.

Claimant filed an Application for Expedited Hearing on July 27, 2021 and an Application for Hearing on August 18, 2021 on issues that include compensability, medical benefits, average weekly wage and temporary disability benefits.

Employer failed to file any responsive pleadings in this matter and failed to appear at the hearing. This ALJ confirmed the Notice of Hearing was sent to Employer at the same address as the tax records that were sent to Claimant for 2020. Therefore, Employer is presumed to have received the pleadings in this matter and had notice of the hearing.

Claimant acknowledged, at the beginning of the hearing, that he had only missed three days of work and withdrew the issues of temporary total and partial disability benefits.

FINDINGS OF FACT

Based on the evidence provided at hearing the ALJ finds as follows:

1. Claimant was 37 years old at the time of the hearing. Claimant has worked for Employer, located in La Salle, Colorado, for approximately the last 2 years. He was employed to perform heard processing, which involves processing cows into corrals.

2. On March 9, 2021 he was processing cows in a corral, when one of the cows separated from the heard and had to be processed again. The cow became angry and charged Claimant. Claimant was standing close to the fence when this occurred. He jumped up on to one of the rungs of the fence. The fence was approximately four and a half to five feet tall. The cow charged the fence, where Claimant had jumped up. The cow crashed into the fencing and the impact caused Clamant to slip and be thrown to the other side of the fence, where he landed on the left side of his body. Claimant injured his left arm and wrist as well as his left knee and foot from the impact with the ground. Claimant had significant visible bruising of his left arm. He testified that his arm immediately swelled up and was red and numb. Coworkers had to help him take off his boot and help him up.

3. Several of his female coworkers saw the incident and Claimant requested that one of them call their employer so that he may report the accident. Claimant also contacted his wife to come for him, to take him to the emergency room. Mr. [Redacted], Claimant's supervisor, arrived at the accident cite and Claimant advised him that he needed to seek medical attention. Claimant's supervisor advised Claimant that he would contact the insurance company to let them know Claimant was injured and would provide him the insurance information. The supervisor agreed Claimant could seek care at the emergency room. Claimant's wife took him to the closest emergency room at UCHealth Hospital.

4. Claimant was attended by Jerold D. Goehring, P.A.-C at the emergency room at UCHealth Hospital on March 9, 2021. Mr. Goehring ordered an X-Ray of Claimant's left elbow, provided a sling for the left arm as well as medication, and temporary restrictions directing Claimant not to use his left arm until released by the workers' compensation provider. Claimant testified he was directed to the Clinic close to the hospital, by the hospital staff.

5. Claimant advised his supervisor that he had been seen at the emergency room, that they took an x-ray and that they were requesting insurance information. Again, Claimant was advised that his supervisor would call the insurance company, but Claimant did not know if that ever happened.

6. Claimant was next evaluated by Eric A. Hofmann, PA-C on March 25, 2021, who works under Oscar Sanders, M.D. Mr. Hofmann diagnosed a contusion of the left elbow, stating that the strain of the left knee had resolved. Mr. Hofmann prescribed continuing use of the left elbow sling, topical ice and Naproxen. He provided work restrictions of 15 lbs. maximum lifting and provided a follow up visit of April 8, 2021.

7. Claimant credibly testified he was seen several more times and was prescribed physical therapy for his arm, but he was unable to attend the appointment as the clinic contacted him, advising that his employer had not provided the correct insurance information. The clinic advised Claimant that he could rescheduled when he was able to "fix" the problem with the insurance and obtain a claim number.

8. Claimant was unable to continue with care as he could not afford to pay out of pocket for the medical expenses to cover his work related medical care. Claimant stated that he continued to require medical care with regard to his arm and requested that medical care be approved so that he may return for care at the clinic.

9. Claimant received multiple billing statements from UCHealth for the ER treatment and the treatment at the Clinic, as well as from Advanced Medical Imaging Consultants. The providers were demanding payment as Employer had failed to provide current insurance information.

10. Division sent a letter to Employer on June 10, 2021 providing Employer with a copy of the claim for compensation, advising that employers are required to have workers' compensation insurance. It requested that Employer provide Division with the information regarding Employers' insurer. It also advised that it was Employer's obligation to file a Notice of Contest or an Admission of Liability within 20 days of the letter.

11. Claimant advised that Employer had been unresponsive to his requests to pay the medical expenses in this matter. Claimant negotiated a payment plan with the providers that had seen him to date and started making payments for the outstanding bills.

12. Claimant testified that the provider advised that the employer was unresponsive, documenting the conversations with the provider by sending text messages to the employer of the employers' failure to respond to the providers.

13. Claimant provided multiple check stubs of payments by Employer. However, none of the check stubs were consecutive, containing only two checks between January 2021 and the date of the injury on March 9, 2021. Therefore, the tax information for 2020 was used to calculate the Claimant's average weekly wage. In 2020 Claimant earned a total of $37,563.26, which represents an average weekly wage of $722.37. Claimant has proven by a preponderance of the evidence that his average weekly wage is $722.37.

14. Claimant has proven by a preponderance of the evidence that he suffered a compensable injury on March 9, 2021 arising out of and in the course and scope of his employment as a heard processor with Employer.

15. Claimant has proven by a preponderance of the evidence that Employer had notice of the injury and that he failed to provide insurance information as requested by both Claimant and the medical provider. As found, Employer was uninsured at the time of the compensable injury.

16. Claimant has proven by a preponderance of the evidence that the treatment at UCHealth Hospital, by Dr. Sanders, Mr. Goehring, Mr. Hoffmann and Advanced Medical Imaging Consultants was reasonably necessary medical treatment for the compensable injury.

17. Claimant has proven by a preponderance of the evidence that the ongoing care recommended, including physical therapy, is reasonably necessary to cure and relieve Claimant from the effects of his injury of March 9, 2021.

18. Claimant has proven by a preponderance of the evidence that he has paid multiple bills to the emergency and the medical providers. The billing statements show that there were either payments by Claimant or adjustments/discounts by the providers, as well as an agreement for Claimant to pay up to $50.00 per month until the total bills were paid. Receipts of payments were not provided.

CONCLUSIONS OF LAW

Based on these findings of fact, the Judge draws the following conclusions of law:

A. General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.. The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the claimant's rights nor in favor of the rights of the respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S..

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office (ICAO)*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Compensability

A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Indus. Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident and includes disability. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, §8-40-201(2). Consequently, a "compensable" injury is one which requires medical treatment or causes disability. *Id*.; *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO Sept. 24, 2004). No benefits are payable unless the accident results in a compensable "injury." § 8-41-301, C.R.S.

As found, the medical records, the claimant's testimony, and the opinions of Dr. Sanders and PA-Cs Hofmann and Goehring are credible and persuasive. Also as found, Claimant has demonstrated by a preponderance of the evidence that he suffered injuries to his left upper extremity and left knee arising out of and in the course and scope of his employment with Employer on March 9, 2021 and that the injuries are proximately caused by the March 9, 2021 accident.

C. Medical Benefits

Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim*

Apps. Office, 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). Respondents are liable for emergency treatment without regard to the right of selection or prior authorization. *Sims v. Industrial Claim Appeals Office*, supra. Once the employer has exercised its right of selection, the claimant may not unilaterally change physicians without prior approval from the respondents or an ALJ. Such permission may be express or implied, and a physician becomes authorized if the "employer has expressly or impliedly conveyed to the employee the impression" that he has permission to treat with the physician. *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

Respondents have the right to make the initial selection of medical provider. As found in this case, Respondents agreed that Claimant should be taken to the emergency room. UCHealth Hospital in Greeley was the closest provider. There was no evidence to indicate that Respondents exercised their right to select a provider in this matter. Therefore, the ALJ finds, Claimant proved by a preponderance of the evidence, that Claimant's authorized treating provider is Dr. Oscar Sanders and the PA-Cs in his clinic.

Claimant has further proven by a preponderance of the evidence that he is entitled to all reasonable and necessary medical treatment for this work injury. As found, Claimant has proven by a preponderance of the evidence that the treatment Claimant received from Dr. Sanders and PA-Cs Hofmann and Goehring of UCHealth was reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. As found, Claimant has proven by a preponderance of the evidence that the physical therapy recommended by his authorized treating providers is reasonable medical treatment related to Claimant's left upper extremity injury.

D. Reimbursement of Medical Benefits

Section 8-42-101(6)(a) states in pertinent part as follows:

> If an employer receives notice of injury and the employer … after notice of the injury, fails to furnish reasonable and necessary medical treatment to the injured worker for a claim that is admitted or found to be compensable, the employer or carrier shall reimburse the claimant …that pays for related medical treatment, for the costs of reasonable and necessary treatment that was provided.

Additionally, W.C.R.P. Rule 16-10(H) states:

> An injured worker shall never be required to directly pay for admitted or ordered medical benefits covered under the Workers' Compensation Act. In the event the injured worker has directly paid for medical treatment that is then admitted or

> ordered under the Workers' Compensation Act, the payer shall reimburse the injured worker for the amounts actually paid for authorized treatment within 30 days of receipt of the bill.

Claimant has proven by a preponderance of the evidence that Claimant has paid for reasonably necessary medical benefits that are related to the March 9, 2021. While the billing statements do show both adjustments and credits, it is not clear what Claimant actually paid out of pocket, though Claimant credibly testified that he had made multiple payments toward the total bill to UCHealth Hospital. Therefore, Respondents must reimburse Claimant, pursuant to statute and rule, for compensable medical treatment he paid directly from his own pocket within 30 days of Claimant submitting to Employer both the billing statements and the receipts of payment.

E. Average Weekly Wage

Section 8-42-105(1), C.R.S., provides that a claimant's TTD rate is sixty-six and two-thirds percent of his average weekly wage (AWW). Section 8-42-102(2), C.R.S., requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. But under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, Sec. 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine Claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

Based on a totality of the evidence presented at hearing, and the unique facts of this case, the ALJ finds and concludes Claimant has established by a preponderance of the evidence that his AWW is $722.37 under Sec. 8-42-102(3), C.R.S. The ALJ finds and concludes that the AWW of $722.37 is a fair approximation of Claimant's wage loss and diminished earning capacity because of his March 9, 2021 work injury. As a result, Claimant's TTD rate is $481.58. However, in this matter, Claimant conceded that he had only missed three days from work, so is not entitled to any TTD or TPD benefits at this time.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's claim for workers' compensation benefits in W.C. No. 5-174-113, for date of injury of March 9, 2021 is compensable.

2. Employer shall cover all reasonably necessary treatment from authorized providers to cure or relieve the effects of Claimant's compensable injury, including but not limited to the charges from UCHealth Hospital, Dr. Sanders and the PA-Cs at Dr. Sanders' clinic, and Advanced Medical Imaging.

3. Respondent shall reimburse Claimant for any payments made to UCHealth Hospital, UCHealth Clinic, Dr. Sanders, Mr. Hoffman, Mr. Goehring, and Advanced Medical Imaging physician bills within 30 days of Claimant tendering to Employer the bills and receipts of the payments made by Claimant to his providers.

4. Claimant's average weekly wage is $722.37 and Claimant's TTD rate is $481.58.

5. Respondent shall pay interest at the rate of 8% on all amounts due pursuant to Sec. 8-43-410(2), C.R.S. (2021).

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Denver OAC via email at oac-dvr@state.co.us.**

DATED this 21st day of December, 2021.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-122-646-001

ISSUES

I. Whether Claimant has established by a preponderance of the evidence that he suffered a compensable injury on October 15, 2019, and is entitled to reasonable, necessary, and related medical treatment.

II. Whether Claimant has established by a preponderance of the evidence that he is entitled to Temporary Total Disability (TTD) benefits for the period November 1, 2019, through December 17, 2019.

STIPULATIONS

- The parties stipulated to an average weekly wage of $809.64 with the corresponding TTD rate of $539.76.
- The parties also stipulated that if the Claim is found to be compensable, Dr. Warncke is an authorized provider.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Employer is an auto broker. Claimant works for Employer as a shop helper. Claimant's duties include changing tires on automobiles and trucks.

2. On October 15, 2019, Claimant was working for Employer. At the direction of Employer, Claimant installed four different sets of "after-market" tires and wheels, each tire and wheel weighing 65 to 80 pounds, on a Chevy Tahoe that had been modified with a 7.5-inch lift kit. The first three sets did not fit correctly. On a test drive, the tires rubbed the bumper, fender lining or brake calipers or had inadequate turning radius. (Tr.: p. 12, l. 10 – p. 13, l. 10)

3. The tires were pre-mounted on the wheels and were very heavy, weighing 65 to 80 pounds. The vehicle was on floor jacks about 8 to 12 inches from the floor. Claimant had to install them in a crouching position and use his muscles in his back, legs and knees to put each tire on the Chevy Tahoe. (Tr.: p. 13, 1. 11; p. 14, ll. 4 – 25; p. 22, ll. 3 – 9; p. 22, l. 17 – p. 25, l. 7)

4. As Claimant was lifting the last wheel and tire of the fourth set, halfway through his lift he felt a very sharp, searing, excruciating pain in his right groin. He dropped the tire and fell forward onto his knees and placed his hands on his testicles trying to catch his breath. Claimant thought he had torn his groin. He managed to stand up, using the vehicle as a support, and reported his injury to his Employer right away. He described what he had been doing and told him he thought he had torn his right groin. Claimant remained at

work, did some sweeping, and tried to vacuum a car but could not bend over. He did, however, finish his workday. (Tr.: p. 12, l. 7 through p. 15, l. 4) (Tr.: p. 25, ll. 8 – 22) (Tr.: p. 27, l. 15 – 21)

5. When Claimant woke up the next day, his right testicle was swollen and painful. Claimant went to work and again reported his condition to Employer, who instructed Claimant to take it easy. Claimant did some light cleaning that day. On the third day after his injury when he woke, his right testicle was swollen "approaching the size of a papaya." Claimant tried to walk it off, soaked in hot water and Epsom salts, took Tylenol but nothing worked. He went to work and showed Employer the size of his testicle through his clothing and Employer instructed Claimant to go to see his doctor. Employer recommended Claimant see Dr. Warncke, his urologist. (Tr.: p. 15, l. 6 – p. 16, l. 2) (Tr.: p. 27, l. 15 – 21)

6. On October 30, 2019, Claimant presented to Dr. Warncke. At this appointment, the medical records note that Claimant stated:

> [A]bout two months ago he was lifting a heavy tire and felt a pop in his right groin. The next day he had right scrotal swelling. He has been having right testicle pain since that time. He has intermittent right testicular swelling. He tries ice.

(Ex. 3, p. 86)

7. Based on Claimant's presentation, Dr. Warnke diagnosed Claimant with a right sided hydrocele in Claimant's right testicle and ordered an ultrasound to confirm the diagnosis. Dr. Warncke also concluded that if the ultrasound confirmed a hydrocele, that surgery, in the form of a hydrocelectomy, would be recommended. (Ex. 3, p. 85)

8. On cross-examination, Claimant was asked whether he had related to Dr. Warncke an onset of pain from lifting a heavy tire two months before the October 30, 2019, visit. Claimant testified that after his worker's comp claim was denied, he reviewed the medical records and had brought to Dr. Warncke's attention that his entry that his injury had occurred two months before the visit was incorrect as he had reported the injury occurred two weeks before the visit. The doctor had agreed to correct it, but Claimant did not have a copy of the corrected record. (Tr.: p. 29, ll. 2 – 19) (Claimant's Exhibit 6, p. 80, 86)

9. On November 1, 2019, Claimant was taken to UC Health Greeley Hospital by ambulance from work for severe right testicular and inguinal pain. The record first states that the injury had been present for "several weeks" but at discharge the History documents his pain "over the past two weeks." (Claimant's Exhibit 4, pp. 93 – 94, 107) On cross-examination, Claimant was asked what he was doing at work before he was transported by ambulance to the ER. He testified that he always got there early to open the shop. He turned on the air, the lights and moved the vehicles. He tried to get up on an F-150 that was lifted and as he raised his right leg, his pain was unbelievable, and he felt like throwing up. His employer arrived at work and instructed him to go sit down but the pain did not allow him to sit. He testified he went to his toolbox to get some Tylenol and the next thing he remembered he was talking to emergency personnel who had been called by his Employer. He denied having experienced a new injury. (Tr.: p. 30, l. 20 – p. 32, l. 24) (Claimant's Exhibit 4, pp. 93 - 102)

10. On November 4, 2019, Claimant returned to Dr. Warncke who recommended surgery as the most effective option for his condition and Claimant agreed. Asked whether the surgery was an elective procedure, Claimant said he did not have any choice. His scrotum was so enlarged he could not even put on a pair of jeans. Claimant credibly testified that Dr. Warncke asked Claimant if he could stay home from work and Claimant told him that his Employer had told him to stay home from work. (Tr.: p. 17, l. 20 – p. 18, l. 19) Consistent with Claimant's testimony that Dr. Warncke told him to stay home from work is Dr. Warncke's statement in his November 4, 2019, medical report that he prescribed oxycodone, rest, Tylenol and Ibuprofen. (Claimant's Exhibit 3, p. 74). As a result of his hydrocele, and being unable to perform his job duties, Claimant stayed home from work and did not return to work until after having surgery for his hydrocele.

11. On November 7, 2019, Mr. C[Redacted], Claimant's employer, completed an Employer's First Report of Injury. In the Employer's First Report of Injury, Mr. C[Redacted] confirmed that Claimant had a lifting injury to his groin on October 15, 2019, and that Claimant reported his injury the same day.

12. On November 19, 2019, Claimant underwent surgery for his hydrocele. After his surgery, his pain subsided. He had a good result. But there was the normal after surgery discomfort. Claimant was instructed to walk 20 minutes per hour. It took about three or four weeks for him to be able to walk without discomfort and after two to three months, by February or March of 2020, his right testicle returned to normal size. Claimant returned to work light duty on December 17, 2019, and as of the date of the hearing, remained employed by Employer. On cross-examination, Claimant was asked what problems he was still experiencing, Claimant testified that when he moves something really heavy, he feels a twinge in his testicle. (Tr.: p. 18, l. 20 – p. 19, l. 23) (Tr.: p. 39, l. 11 – 14)

13. Based on his injury, and the subsequent surgery, Claimant could not perform his regular job duties and could not work, and did not work, from November 2, 2019, through December 16, 2019. Claimant did, however, return to work performing light duty on December 17, 2019.

14. Claimant testified that because his workers' compensation claim was denied, he sought the opinion of Dr. Dru, whom he considered an expert in hydroceles, to get a second opinion about the cause of his hydrocele and need for medical treatment. Claimant testified that Dr. Dru concluded that his injury, the enlargement of the hydrocele, was a "no brainer" and that it was caused by trauma from lifting. On cross-examination, counsel pointed out that Claimant's appointment with Dr. Dru had been a tele-health visit. On re-direct examination, Claimant testified that he had seen Dr. Dru twice—first by tele-health and second by office examination. Claimant also testified that while the tire did not cause any direct trauma to his testicle, Dr. Dru described the lifting that had precipitated the enlargement as trauma. (Tr.: p. 19, l. 24 – p. 20, l. 22)(Tr.: p. 40, ll. 12 – 16)(Tr.: p. 43, l. 11 – p. 44, l. 11)

15. Claimant testified that in addition to the bills from Dr. Warncke, he has bills from UC Health Greeley Hospital emergency room, the ambulance and UC Health Greeley Hospital for surgery and services related to the surgery such as the anesthesiologist. He also testified that such bills remain unpaid. (Tr.: p. 21, ll. 2 – 17)

16. Employer Curtis C[Redacted] testified that he is the owner of Advantage Auto, and that Claimant was his employee on October 15, 2019, his date of injury, and had been employed with him for about 13 months. Mr. C[Redacted] also testified that Claimant never missed a day of work and that Claimant had never reported any groin pain before the October 15, 2019, injury. Consistent with Claimant's testimony and the Employer's First Report of Injury, Mr. C[Redacted] testified that Claimant reported his injury to him. Even though he had not witnessed the injury, he had no reason to doubt Claimant's report of injury. Employer testified that after the incident, Claimant had to wear baggy sweatpants and he could tell Claimant's testicle was very the swollen. (Tr.: p. 46, l. 10 - p. 47, l. 5) (Tr.: p. 47, l. 24 – p. 48, l. 11)

IME Report by F. Mark Paz, M.D.

17. Dr. Paz conducted an IME for Respondents on October 7, 2021, and issued a report. Dr. Paz concluded that it was not medically probable that Claimant's right testicular hydrocele is causally related to Claimant's October 15, 2019, lifting incident. His opinion was based on:

a) Hydroceles do not develop as a result of exposure to traumatic injuries.

b) Symptomatology of hydroceles is unrelated to increased intra-abdominal pressures.

c) There are no extraneous causes for the development of a hydrocele.

d) Claimant's surgery was elective.

e) Dr. Dru in his medical records did not opine that it was medically probable that Claimant's hydrocele and need for treatment was causally related to the October 15, 2019, lifting incident.

(Respondents' Exhibit Y, pp. 108-109)

Medical Records of Christopher Dru, M.D.

18. On April 2, 2020, Claimant consulted Dr. Dru, a urologist, through a Covid telehealth visit for an opinion on causation between his hydrocele surgery and his lifting accident because his workers' compensation claim had been denied. Claimant informed Dr. Dru that he did not believe his surgeon, Dr. Warncke, considered his condition work related. From the clinical history Dr. Dru's initial impression was that Claimant had experienced a reactive right hydrocele secondary to a traumatic event at work, as Claimant had not experienced scrotal swelling before the incident. Reactive hydroceles can occur from trauma and other inciting events. Dr. Dru questioned Dr. Warncke's designation of Claimant's surgery as elective since Claimant was experiencing extreme pain, nausea, and vomiting. Dr. Dru requested Claimant provide him with all his medical records and planned to consult with Dr. Warncke. (Claimant's Exhibit 2, p. 54 – 57)

19. On October 21, 2020, Claimant followed up with Dr. Dru with an in-person office visit. Dr. Dru noted that Claimant's medical records, which predated the October 15, 2019 incident, documented a small hydrocele in May 2016. In his professional opinion a small hydrocele is 1- 4 centimeters. There were no documented physical exams between May 2016 and October 2019. After the accident there was a November 2019 pre-operative

exam which showed a large hydrocele, 6 x 10 centimeters. Dr. Dru noted that Claimant "seems very genuine in how he tells his story" and concluded that it "was entirely possible that the trauma caused enlargement of the hydrocele and pain requiring surgery." (Claimant's Exhibit 2, p. 50 – 53)

Deposition Testimony of Christopher Dru, M.D.

20. By deposition, Dr. Dru, a urologist, was asked whether Dr. Paz was correct in his report which stated that hydroceles do not develop as an exposure to traumatic injuries. Dr. Dru testified that hydroceles are quite common as a result of testicular trauma, and sometimes even with abdominal trauma. He testified that a reactive fluid will form around the testicle to cushion it and protect it from further trauma. These hydroceles are called reactive hydroceles. (Claimant's Exhibit 1, p. 4, l. 1 - p. 5, l. 6)

21. Dr. Dru was then asked to comment on the opinion by Dr. Paz that a hydrocele is unrelated to increased intra-abdominal pressure. Dr. Dru replied that increased intra-abdominal pressure can cause hydroceles. He also testified that a lot of times a hydrocele is formed by increased pressure. A patient can have what is called a patent processus which is essentially a tube that goes from the abdomen into the scrotum. When one does heavy lifting, he is using his core muscles, which increases abdominal pressure, and that can increase testicular pressure. Doctors usually ask patients to avoid heavy lifting because it can make pain worse or a hydrocele worse. (Claimant's Exhibit 1: p, 5, l. 13 – p. 6, l. 15) Asked whether Dr. Paz was correct in stating that there were no extraneous causes for the development of a hydrocele, Dr. Dru answered that hydroceles absolutely can develop through extraneous causes, such as lifting. Based on personal observations in his practice, extraneous causes such as high intensity exercise, a hit to one's scrotum on a pipe or bar or falling, can absolutely exacerbate a hydrocele and go from a point of being asymptomatic to a point where surgery is needed to address the symptoms. He also testified that to a medical probability, heavy lifting can accelerate, exacerbate, or aggravate a hydrocele. (Claimant's Exhibit 1: p. 6, l. 16 – p. 9, l. 3)

22. Dr. Dru was asked to address anything else on the report by Dr. Paz. Dr. Dru pointed out that the record reference to Claimant's hydrocelectomy surgery being elective did not mean that surgery was cosmetic as the word elective is usually interpreted. A symptomatic hydrocele is not treated with emergency surgery but will be treated with pain control, anti-inflammatory medications, followed by surgery within a week. He also testified that any reference to elective surgery should not lessen the severity of the condition. (Claimant's Exhibit 1, p. 11, l. 22 - p. 12, l. 22)

23. Dr. Dru was asked on cross-examination how much weight does one have to lift to aggravate or exacerbate a hydrocele, Dr. Dru stated there was no definitive weight. He testified that people could engage in very light activity and have a fairly large hydrocele. Others can lift a couple of hundred pounds and have an exacerbation or aggravation. The more important factor, however, is how the pressure is transmitted down into the scrotum. Asked to describe how lifting transmits pressure to the scrotum, Dr. Dru explained the pelvis has a whole structure of muscles called the pelvic floor. He also explained that abdominal pressure transmits through the pelvic floor directly to the spermatic cord that goes to the testicles. The transmission is called a strain, which can cause inflammation,

and the inflammation can cause fluid accumulation in the testicles. (Claimant's Exhibit 1, p. 17, l. 20 – p. 18, l. 19)

24. Asked to comment on the statement by Dr. Paz that in his reports Dr. Dru did not opine that it was "medically probable that Claimant's hydrocele and need for treatment was causally related to the October 15, 2019 lifting incident," Dr. Dru stated his notes made at the time stated that is was very possible that the incident had enlarged the hydrocele to a point it required surgery. His testimony at the deposition about causation to a medical probability did not represent a change of his opinion which was that more than likely the incident at work caused a worsening of the hydrocele and the likelihood was very high. He also testified he had consulted with Dr. Warncke as part of his evaluation to get his impression about causation, and Dr. Warncke informed Dr. Dru that it was certainly possible that Claimant's condition was due to the October 15, 2019, lifting incident. (Claimant's Exhibit 1, p. 9, l. 23 – p. 11, l. 21)

25. Dr. Dru was cross-examined on the use of the term "possible" by Dr. Warncke regarding causation. Dr. Dru said that based on Dr. Warncke's tone, Dr. Warncke felt similarly as he: "I would say more definitive than possible… My gut and my professional instinct tells me that it is the cause because I see so much of this." Asked whether based on his medical experience and knowledge of the case, he would rate his causation opinion to a medical probability greater than 50%, Dr. Dru said yes. More importantly, Dr. Dru considered himself an expert in hydroceles and the year before his deposition, he treated about 50 patients in his office for hydroceles. Asked how many of the 50 hydrocele patients he had seen the last year were caused or exacerbated by lifting, Dr. Dru replied "maybe 10%, and that's a true guess." (Claimant's Exhibit 1, p. 21, l. 22 – p. 22, l. 16)

Hearing Testimony of F. Mark Paz, M.D.

26. Dr. Paz testified that it was not medically probable that the lifting on or about October 15, 2019, caused or aggravated the hydrocele in Claimant's right testicle. (Tr.: p. 53, ll. 11 – 15) Dr. Paz had opined in his IME that a.) hydroceles do not develop as a result of traumatic injuries and b.) their symptomatology is unrelated to the intra-abdominal pressures. At the hearing, he abandoned these two positions. Dr. Paz testified that hydroceles can be exacerbated or aggravated by traumatic injuries. (Tr.: p. 63. l. 21 – p. 64, l. 2) He also admitted that intra-abdominal pressure can be communicated to the testicles but denied that this had occurred when Claimant's lifting accident happened. He reasoned that Claimant's processus vaginalis was closed absent any surgery note that the processus vaginalis had been open and repaired through surgery. Dr. Paz assumed that Claimant' s hydrocele was non-communicating. Dr. Paz testified that intra-abdominal pressure can be transmitted only through an open processus vaginalis into the testicles. He also testified that since Claimant's processus vaginalis was closed, no transfer of intra-abdominal pressure from lifting could have occurred during Claimant's lifting accident. Contrary to his IME report where he stated that hydroceles are unrelated to an increase in intra-abdominal pressure, at hearing Dr. Paz testified that he agreed that intra-abdominal pressure could be transferred to a communicating hydrocele through an open port or patent processus vaginalis. (Tr.: p. 60, ll. 8 – 22)(Tr.: p. 66, ll. 12 – 18)(Tr.: p. 68, ll. 9 – 19)(Tr.: p. 71, ll. 13 – 16) On cross-examination, Dr. Paz testified he had probably evaluated two or three hydroceles in the past year. Asked if he had treated any of them,

he replied “Well, they're, they're not going to be work-related, so I've not treated them, per se.” (Tr.: p. 76, l. 18 – p. 77, l. 5) Asked whether he agreed with Dr. Warncke’s opinion that Claimant should refrain from lifting over 10 pounds as lifting something too heavy too soon in the post-operative course could re-accumulate the hydrocele, Dr. Paz answered “Not necessarily… I don’t recall ever seeing Postoperative Instructions that do not include no heavy lifting with the abdomen or a knee, regardless of body part…It’s his call what the restrictions are.” Even though Dr. Warncke’s restrictions had specifically warned that lifting over 10 pounds could re-accumulate the hydrocele, Dr. Paz insisted that Dr. Warncke’s restriction against heavy lifting was so Claimant would not tear his sutures. (Claimant’s Exhibit 3, p. 58)(Tr.: p. 78, ll. 11 - 25)(Tr.: p. 79, ll. 5 - 12)(Tr.: p. 81, ll. 10 – 20)

Credibility of Claimant

27. The ALJ finds Claimant’s testimony to be credible and persuasive. The Claimant’s testimony is consistent with the majority of the underlying medical records regarding the onset of his symptoms and the cause of his symptoms. His testimony was also consistent with the information in the Employer’s First Report of Injury as well as Mr. C[Redacted]’s testimony about the timing of his injury, his symptoms, and when he reported his injury. While Dr. Warncke’s records document Claimant’s symptoms started two months earlier, Claimant credibly testified that he told Dr. Warncke that the onset of his symptoms occurred two weeks earlier and Dr. Warncke made a mistake.

Persuasiveness of Drs. Dru, Warncke and Paz

28. Dr. Dru’s testimony is found to be credible and persuasive for many reasons. First, Dr. Dru is a urologist and an expert in hydroceles. For example, he testified that he treated about 50 hydroceles in the past year, 10% of which had been aggravated or exacerbated by heavy lifting. Second, his opinion that the lifting incident aggravated or exacerbated Claimant’s small preexisting hydrocele is consistent with the onset of Claimant’s symptoms, which occurred right after lifting the tire and feeling pain in his groin. Third, Dr. Dru’s opinion is consistent with the majority of the underlying medical records – and Claimant’s testimony - regarding the onset of Claimant’s symptoms and the cause of such. Fourth, his opinion is consistent with Dr. Warncke’s opinion, as described to Dr. Dru by Dr. Warncke. Fifth, his opinion that lifting can cause a hydrocele is consistent with Dr. Warncke restricting Claimant from lifting over 10 pounds as that activity could re-accumulate the hydrocele.

29. On the other hand, Dr. Paz’ opinion that Claimant’s hydrocele and need for treatment was not caused by lifting a very heavy tire and wheel is not found to be credible for many reasons. First, Dr. Paz initially opined by report following an independent examination and review of all the records that it was not medically probable that the right testicular hydrocele was causally related to Claimant’s October 15, 2019, lifting accident as “hydroceles do not develop as a result of exposure to traumatic injuries,” “symptomatology of hydroceles is unrelated to increased intra-abdominal pressures,” “there are no extraneous causes for the development of a hydrocele.” That said, at hearing Dr. Paz disavowed these opinions, agreeing with Dr. Dru that hydroceles can develop or be exacerbated as a result of exposure to traumatic injuries and therefore

external causes. He also retracted his opinion that hydroceles cannot be aggravated or exacerbated by intra-abdominal pressure, agreeing with Dr. Dru's opinion that intra-abdominal pressure caused by lifting can transmit to a hydrocele. However, he disagreed with Dr. Dru's opinion that intra-abdominal pressure can be transmitted directly from the pelvic floor into a man's scrotum absent an open processus vaginalis. Based on the lack of a surgical note that Dr. Warncke had closed the processus vaginalis, Dr. Paz assumed Claimant's processus vaginalis was closed and the intra-abdominal pressure exerted on October 15, 2019, when he lifted, could not have transferred to his scrotum, and aggravated or exacerbated his hydrocele. Asked whether he agreed with Dr. Warncke's warning to Claimant that lifting over 10 pounds after surgery could re-accumulate the hydrocele, Dr. Paz replied that post-surgery lifting restrictions are meant to protect sutures.

30. In addition, Dr. Paz testified on direct examination that he both treated and evaluated patients with hydroceles. (Tr.: p. 51, ll. 7-9) On cross-examination, however, Dr. Paz admitted he had only evaluated two or three hydroceles in the past 12 months. Dr. Paz did not specify whether his "two or three" evaluations included Claimant. Retracting his testimony on direct, he admitted the number of hydrocele patients he had treated in the past 12 months was "none" as hydroceles are "not work related," "per se." On the other hand, Dr. Dru testified all urologists were experts in hydroceles. Out of the hydroceles he treated in the past 12 months, 5 to 15 had been surgical cases and of the 50 patients he had treated about 10% were hydroceles that had probably been aggravated or exacerbated by heavy lifting.

31. The medical opinions of Dr. Dru and Dr. Warncke as related by Dr. Dru and reflected by Dr. Warncke's post-surgery lifting of no lifting more than 10 pounds as lifting could re-accumulate Claimant's hydrocele, are more persuasive than the opinions of Dr. Paz. The Court finds that Claimant's exertion when lifting the last of 16 wheels and tires to place on the vehicle caused his symptomatology including his onset of pain and subsequent enlargement of his right hydrocele requiring surgery and resulting disability.

Ultimate Findings of Fact

32. Claimant has established that it is more probably true than not that he suffered a compensable injury on October 15, 2019, during the course and scope of his employment with Employer while lifting a heavy tire and wheel. While Dr. Warncke's records dated Claimant's incident "two months ago" while lifting a heavy tire, the November 1, 2019, Emergency Room records recorded that the injury had been present for "several weeks" but the discharge record from the emergency room documents symptoms "over the past two weeks. (Claimant's Exhibit 4, pp. 93 - 94) Plus, Claimant credibly testified his symptoms started on October 15, 2019, when lifting the 16th wheel and tire. He also credibly testified that he requested Dr. Warncke to correct the record regarding the onset of his symptoms. Moreover, Claimant's Employer corroborates a lack of symptoms before October 15, 2019, and Claimant reporting his injury on October 15, 2019. Except for Dr. Warncke's records, the evidentiary record consistently reveals Claimant's symptoms began on October 15, 2019, as related by Claimant.

33. Due to his injury, Claimant developed severe swelling of his testicles and severe pain. The swelling and pain caused the need for medical treatment. As a result, Claimant

treated with Dr. Warncke and ultimately underwent surgery. The ALJ finds the treatment Claimant has received due to his hydrocele – up through the date of the hearing - to be reasonable and necessary.

34. After his injury, Claimant continued to work. However, on November 1, 2019, while at work, Claimant developed significant pain – due to his hydrocele – and was taken to the hospital via ambulance. As a result of his hydrocele, Claimant could not work and perform his regular job duties after November 1, 2019. Claimant could not perform his regular job duties and work until December 17, 2019, when he returned to performing modified duty at work after having surgery. Claimant is therefore entitled to temporary total disability benefits from November 2, 2019, through December 16, 2019.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936);

CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant has established by a preponderance of the evidence that he suffered a compensable injury on October 15, 2019, and is entitled to reasonable, necessary and related medical treatment.

Compensability

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp*., 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center*, WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc*., WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

As found, on October 15, 2019, Claimant was working for Employer changing 15 tires and wheels weighing 65 to 80 pounds. He was in a crouched position lifting the wheel and tire to place on the vehicle that had been lifted about 12 inches from the floor. When lifting the 16th tire and wheel, he felt excruciating pain in his right groin and felt a pop as if he had torn something. He dropped the wheel and tire and reported his symptoms to Employer. He completed his shift but could not bend and continued in pain. The next day, his testicle was swollen, and the swelling and pain continued. Ultimately, the hydrocele and his right testicle swelled up to the size of a papaya. Claimant was diagnosed with an enlarged hydrocele that required medical treatment which included surgery. Claimant did have a preexisting hydrocele in his right testicle which was identified during his 2016 prostate surgery. However, his hydrocele had been asymptomatic since 2016 and did not become enlarged and painful until he lifted the tire on October 15, 2019. As found, the persuasive medical opinion of Dr. Dru support that Claimant's work activities for Employer on October 15, 2019, permanently aggravated his preexisting hydrocele, and resulted in it becoming larger and painful. As a result, the ALJ finds and concludes that Claimant established by a preponderance of the evidence that he suffered a compensable injury on October 15, 2019, in the form of an enlarged hydrocele which was also painful.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

As found, on October 15, 2019, Claimant lifted a very heavy tire and wheel which aggravated Claimant's preexisting hydrocele. As found, the aggravation of his preexisting hydrocele caused his testicle to swell up to the size of a papaya. The aggravation and swelling also resulted in significant pain. As further found, the swelling and pain associated with the lifting accident caused the need for Claimant to seek medical treatment with Dr. Warncke. The swelling and pain also caused the need for Claimant to be taken by ambulance to the emergency room on November 1, 2019. Thereafter, Claimant required surgery to drain the enlarged hydrocele. As further found, the medical treatment Claimant has received up through the day of the hearing is reasonably necessary and related to the work accident.

As a result, the ALJ finds and concludes that Claimant established by a preponderance of the evidence that his work injury caused the need for medical treatment. Claimant is therefore entitled to reasonable and necessary medical treatment to treat his hydrocele – which includes the treatment Claimant has received up through the date of the hearing.

II. Whether Claimant has established by a preponderance of the evidence that he is entitled to Temporary Total Disability (TTD) benefits for the period November 1, 2019, through December 17, 2019.

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

As found, the pain from Claimant's enlarged hydrocele became so severe on November 1, 2019, Employer called an ambulance for Claimant. Moreover, Claimant credibly testified that on November 4, 2014, Dr. Warncke asked Claimant if he could stay home from work and Claimant told him that his Employer had already told him to stay home from work. Based on the record as a whole, the ALJ finds Claimant could not perform his regular job duties after November 1, 2019. As further found, due to his injury, Claimant could not return to work after November 1, 2019, until after his surgery. After his surgery, Claimant could not and did not return to work until December 17, 2019, when he returned to modified duty. Thus, it was found that Claimant was disabled and restricted from discharging his usual and customary employment with Employer from November 2, 2019, through December 16, 2019.

As a result, the ALJ finds and concludes that Claimant established by a preponderance of the evidence that the October 15, 2019, industrial injury caused a disability lasting more than three work shifts, Claimant left work as a result of the disability, and the disability resulted in an actual wage loss. Claimant suffered a complete inability to work and perform his regular employment from November 2, 2019, through December 16, 2019. Thereafter, on December 17, 2019, Claimant could return to modified duty.

As a result, the ALJ finds and concludes that Claimant established by a preponderance of the evidence that he is entitled to TTD from November 2, 2019, through December 16, 2019.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury on October 15, 2019.

2. Dr. Warncke is an authorized provider.

3. Respondents shall pay for Claimant's reasonable and necessary medical treatment to cure and relieve him from the effects of his October 15, 2019, work injury which aggravated his preexisting and asymptomatic hydrocele. This includes the treatment with Dr. Warncke, the ambulance and emergency room visit, and his surgery.

4. Claimant’s average weekly wage is $809.64 with the corresponding TTD rate of $539.76.

5. Respondents shall pay Claimant temporary total disability benefits from November 2, 2019, through December 16, 2019, at a temporary total disability rate of $539,76.

6. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 21, 2021.

ISSUES

- Did Claimant prove by a preponderance of the evidence a right knee revision arthroplasty performed by Dr. Jepson was causally related to the admitted August 5, 2020 work accident?

- Did Claimant prove by a preponderance of the evidence she suffered a 23% scheduled lower extremity impairment? Specifically, did Dr. Sparr correctly assign a 20% extremity rating Table 40 for Claimant's revision total knee arthroplasty?[1]

- If Claimant proved an impairment related to her work injury, did Respondent prove the rating should be apportioned because her prior nonwork-related TKA was "independently disabling" before the work accident?

- Disfigurement.

- The parties agreed to reserve issues relating to mileage reimbursement and Claimant's out-of-pocket surgical costs pending resolution of the causation question regarding the revision TKA.

FINDINGS OF FACT

1. Claimant works as a Deputy Sheriff in Employer's jail. The job is physically demanding, including extensive walking and altercations with inmates. She suffered an admitted right knee injury on August 5, 2020 while escorting a belligerent inmate in the jail. The inmate tripped Claimant, causing her to fall on her right knee. Claimant felt immediate pain in the knee but finished her shift. Later than evening, she felt the knee "shift" when she took a step. Claimant credibly testified she had never experienced that sensation in her knee before. The knee pain persisted and she requested treatment.

2. Claimant has an extensive pre-injury history of right knee problems and surgeries, culminating in a total knee arthroplasty (TKA) performed by Dr. Eric Jepson on March 13, 2017.

3. Claimant did well after the March 2017 TKA. However, she continued to experience intermittent knee pain, primarily with activity. Claimant returned to full-duty work as a Deputy Sheriff in approximately July 2017, including subduing and restraining inmates.

[1] Although Respondent stated at hearing and in its post-hearing brief that it has the burden to prove Dr. Sparr incorrectly assigned the 20% rating, the burden of proof regarding scheduled impairment is properly placed on Claimant.

4. Claimant followed up with Dr. Jepson's PA-C, Robert Peterson, on December 22, 2017. She reported, "over the last 5 or 6 weeks increased pain and swelling mostly while she is weight bearing." Examination showed a "very small" effusion, and mild laxity with varus and valgus stress and anterior drawer test. X-rays showed good alignment of the prosthesis with no indication of loosening or changes from previous x-rays. Mr. Peterson changed Claimant's anti-inflammatory medication and ordered blood work to rule out an infection. If the blood work came back negative, he planned to offer Claimant a cortisone injection. The blood work ultimately showed no infection but there is no indication Claimant pursued the injection.

5. Claimant sought no further evaluation or treatment regarding her right knee until December 12, 2018, when she saw a different PA-C in Dr. Jepson's office, Ryan O'Neal. She described increasing right anterior knee pain over the last 6 months. She had no posterior knee pain but described a "fullness" in the posterior knee and occasional pain in the right calf. Mr. O'Neal noted Claimant "is still able to play racquetball with his knee pain, which she frequently does." Examination of the knee was unremarkable with no pain to palpation, no swelling or effusion, pain-free range of motion, normal strength, and no evidence of instability. Knee x-rays showed the hardware remained in place with good joint alignment and no indication of acute abnormalities. Mr. O'Neal ordered an ultrasound to evaluate a possible DVT. He also ordered blood work and a bone scan of the knee.

6. The ultrasound was negative for DVT and the blood work showed no infection. The bone scan was completed on December 28, 2018. There was mild increased uptake involving the tibia but no definitive evidence of any infection or hardware loosening. The radiologist noted the increased uptake was "not unexpected given recent surgery."

7. There are no further medical records documenting any issue related to Claimant's right knee until August 6, 2020, after the work accident that is the subject of this claim.

8. Claimant was seen at the UCHealth emergency department on October 6, 2019 for "right leg swelling and pain" for several days. The pain was localized to the right calf. Examination of the right leg showed diffuse mild edema and diffuse tenderness but there was no indication of any issue specifically related to the knee. The bony prominences of the right tibia and fibula were "nontender." An ultrasound was negative for DVT. Claimant was diagnosed with nonspecific "myalgia" and elevated blood pressure. There is no persuasive evidence Claimant's symptoms were related to her right knee.

9. Claimant was very active before the August 2020 work accident. Besides performing her job as a deputy sheriff, she worked out three to five days per week, played racquetball, and hiked regularly.

10. Claimant credibly testified she appreciated no "instability" in her right knee between her recovery from the 2017 TKA and the August 2020 work accident.

11. Employer referred Claimant to CCOM for authorized treatment. She saw Valerie Joyce, FNP at her initial appointment on August 6, 2020. The physical examination showed mild effusion and ecchymosis. Knee x-rays showed no evidence of fracture.

12. Claimant saw Dr. Centi at CCOM on August 26, 2020. She reported ongoing pain, laxity, grinding, and stated the knee "feels unstable." Dr. Centi ordered an MRI.

13. The MRI was performed on August 27, 2020. It showed the knee joint effusion, extensive artifact from prior TKA, and potential osteolysis or other cystic process in the distal femur, surrounding the central peg of the prosthesis.

14. Dr. Centi referred Claimant to Dr. Jepson for evaluation of her knee. Claimant saw PA-C Peterson on October 9, 2020. She explained she fell "directly on her knee," and "since that fall she has had increased pain and instability in her knee." On examination, Mr. Peterson noted mild flexion instability with varus and valgus stress, and mild tenderness to palpation. Exam was otherwise unremarkable. X-rays in the office showed the prosthesis was well aligned with no sign of loosening, fracture, or dislocation. Mr. Peterson ordered a triple phase bone scan and blood work "to make sure she has no loosening or infection."

15. The bone scan was completed on November 10, 2020. It showed abnormal increased uptake surrounding the right TKA, which the radiologist stated was "concerning for loosening or infection."

16. Claimant followed up with Dr. Jepson on November 17, 2020 to review the bone scan. Her knee remained painful and "does not feel stable." Dr. Jepson indicated the bone scan was positive for a loose prosthesis but she also had some elevated lab results suggesting possible infection. Dr. Jepson aspirated the knee so the fluid could be definitively checked for signs of infection. The test results ultimately confirmed there was no infection in the knee.

17. Dr. Jepson submitted a preauthorization request for a right revision TKA on December 9, 2020.

18. Dr. James Lindberg performed a Rule 16 review for Respondent on December 15, 2020. Dr. Lindberg concluded Claimant probably had "a deep infection with loosening of the prosthesis which was symptomatic well before the slip and fall." He noted she had been worked up in the past for a possible infection, which "appears to have progressed from that date on." He thought the August 5 work accident was "incidental" and merely led to discovery of the unrelated infection or loose prosthesis. He recommended the revision TKA be denied as not work-related.

19. Dr. Jepson performed the revision TKA on December 30, 2020. The procedure was billed to Claimant's health insurance because it had been denied by Respondent.

20. Claimant followed up with Dr. Centi on January 6, 2021. She still had moderate pain but her knee felt stable.

21. On January 13, 2021, Respondent's counsel sent Dr. Centi a copy of Dr. Lindberg's Rule 16 report. Dr. Centi responded, "per IME, there is no work-related condition." He opined Claimant was at MMI with no impairment and no restrictions.

22. Claimant's care was transferred to Dr. Michael Sparr. She saw Dr. Sparr's physician assistant, Kelsey Walls, on April 20, 2021. Claimant reported her knee was about 75% improved since the revision TKA but she was still having pain and stiffness with bending the knee, squatting, exercising, and sitting "too long." Ms. Walls recommended physical therapy, continued home exercises, and follow up with Dr. Jepson.

23. Dr. Jepson administered a steroid injection to the right knee on May 13, 2021. The injection was helpful.

24. Claimant saw Dr. Sparr for an impairment evaluation on May 25, 2021. Dr. Sparr determined Claimant was at MMI and ready to return to full duty. Dr. Sparr opined, "The patient qualifies for a Table 40 diagnosis. She had a total knee arthroplasty which results in a 20% lower extremity impairment." This was combined with 4% for range of motion loss, for an overall combined lower extremity rating of 23%. Dr. Sparr referenced the Division's Impairment Rating Tips regarding apportionment of prior impairment. He concluded apportionment was not indicated because the prior knee condition was "not independently disabling at the time of the current work injury."

25. Dr. Jepson issued a report dated July 2, 2021 addressing causation of the revision TKA. Dr. Jepson noted Claimant "recovered uneventfully" from the March 2017 TKA and "did very well." She had periodic exacerbations of knee pain, but this was "not unexpected in light of her young age, increased activity level, and the extensive history." He opined the December 28, 2018 bone scan showed "no evidence of loosening," although "it did reveal some increased diffuse uptake which would be expected in a total knee replacement within 2 years of surgery." Claimant was very active after the initial TKA, including playing sports and going on long hikes. She was "doing very well" until the work accident in which she landed directly on her knee. She returned to his clinic after the work injury "secondary to her significant increased pain which was not resolving since the fall." After ruling out an underlying infection, he recommended a "revision arthroplasty" to address aseptic loosening. Dr. Jepson disagreed with Dr. Lindberg that the prior studies, including the 2018 bone scan, showed or suggested loosening before the work accident. He concluded, "The fall she sustained on August 5, 2020 contributed to the loosening of this total knee arthroplasty. There is no evidence in the records to suggest that she had loosening of the implant prior to this fall."

26. Dr. Lindberg issued a supplemental report on September 21, 2021. He opined the uptake on Claimant's bone scan films was evidence of aseptic loosening. Dr. Lindberg noted Claimant was seen on December 22, 2017 with reports of increasing knee pain and swelling over the past five to six weeks. He opined this was probably the first

sign of loosening. She continued to complain of knee pain on December 12, 2018, one and one-half years post total knee arthroplasty. She was worked up for infection, and a bone scan showed moderate uptake involving the patella. There was increased uptake involving the tibia, but not at a level to diagnose loosening or infection. Dr. Lindberg further opined, "It is clear to me that she had aseptic loosening that was secondary to her increased body weight and not secondary to the fall. Her complaints of knee pain preceded the incident at work, and I do not believe this is compensable." He opined a fall on the knee with no fracture is unlikely to cause loosening of the tibial component, as most of the impact would have been on the patella and not on the tibial component. He also disagreed with Dr. Sparr's rating and stated "merely doing a revision does not entitle her to another 20% for a total knee arthroplasty."

27. Dr. Sparr authored a lengthy narrative report on October 18, 2021 analyzing causation of the revision TKA. He agreed with Dr. Jepson's assessment outlined in his July 2, 2021 report. He disagreed with Dr. Lindberg's supposition that Claimant's flare-up in December 2017 was "probably" the first sign of loosening or infection. He pointed out that Claimant worked as a deputy sheriff, which required frequent restraining of inmates. She was also active in athletics including racquetball and working out with a "heavy bag." He thought the episode of pain and swelling in December 2017 was "in no way indicative of" loosening or infection. He opined, "If this was in fact the first sign of either . . . she would've had progressive pain, but this was not the case as she was not seen again until December 12, 2018, a full year after Dr. Lindberg's theoretical first sign of loosening or infection. In fact, when I saw the patient in June 2018 for treatment of a neck injury, her review of systems revealed no joint stiffness or swelling." Dr. Sparr was more persuaded by the radiologist's and Dr. Jepson's interpretation of the pre-injury imaging than Dr. Lindberg's assessment. He emphasized that Claimant had no complaints of instability between her first and second arthroplasties, whereas "after she fell on her knee, which causes loosening of the prosthetic, there are multiple notes indicating a complaint of instability." He disagreed with Dr. Lindberg that Claimant's fall could not cause loosening of the prosthesis. He also disagreed with Dr. Lindberg's opinion that if the loosening were due to trauma, it would have been visible on x-ray and not required a bone scan. In Dr. Sparr's opinion, "loosening is often due to trauma and often not visible on an x-ray. This is why the bone scan is so often utilized to diagnose loosening."

28. Dr. Sparr testified via deposition on October 22, 2021. Regarding impairment, he explained he provided 20% under Table 40 for the August 5, 2020 revision total knee arthroplasty, combined with range of motion loss for an overall lower extremity rating of 23%. He testified apportionment of the rating was not appropriate because "the previous arthroplasty was not independently disabling. She was working full duties as a deputy sheriff and working out. And . . . it wasn't work-related so it couldn't be apportioned out."

29. Dr. Lindberg testified at hearing consistent with his reports. He reiterated his opinion the prosthesis probably began loosening around December 2017. He opined patients with knee replacements are generally asymptomatic, so the fact she had intermittent pain meant something was probably wrong with the hardware. He disagreed with the radiologists' interpretation of the December 2018 bone scan. He opined it takes

a “major trauma” to cause gross loosening of the bone scan and he has never seen a prosthesis loosen without a fracture. He reiterated his belief Claimant’s fall could not have caused traumatic loosening. He agreed the revision TKA was reasonably necessary but was unrelated to the work accident.

30. Dr. Lindberg testified Dr. Sparr should not have given the 20% lower extremity rating for the arthroplasty because the *AMA Guides* do not allow for a specific diagnosis rating for a revision total knee arthroplasty. Additionally, Dr. Lindberg opined Claimant’s condition was independently disabling at the time of the injury. He noted Claimant had episodes of pain in 2017 and 2018, “so she was not at full function” before the work accident. He conceded there is no evidence Claimant’s knee impaired her ability to perform her job before the work accident. He also testified, “she was still doing her exercises and sports but she was having pain doing it, so she was disabled to some extent.”

31. Dr. Jepson and Dr. Sparr’s opinions regarding causation of the revision TKA are credible and more persuasive than the contrary opinions offered by Dr. Lindberg’s opinions.

32. Dr. Sparr’s opinions regarding Claimant’s impairment rating and apportionment are credible and more persuasive than Dr. Lindberg’s opinions.

33. Claimant was a credible witness.

34. Claimant proved the December 30, 2020 revision TKA performed by Dr. Jepson was reasonably necessary and causally related to the admitted work accident.

35. Claimant proved she suffered a 23% lower extremity impairment because of her admitted work accident.

36. Respondent failed to prove Claimant’s rating should be apportioned.

37. Claimant demonstrated visible disfigurement at hearing consisting of an 8.25-inch long by 3/8 to 0.25-inch wide discolored, irregular, partially raised, partially indented surgical scar on the right knee from her revision TKA. Claimant testified the incision for the revision TKA was “on” the scar from the first TKA and Dr. Jepson “tried to follow the same line.” When asked how she would compare the current scar to the scarring she had before the work accident, Claimant testified, “I think the top is a little bit wider but the rest of it is about the same.” Although difficulty to quantify precisely, it appears the current scarring is slightly worse than before the revision TKA. The ALJ finds Claimant should be awarded $500 for disfigurement related to the August 5, 2020 work accident.

CONCLUSIONS OF LAW

A. Causation of the revision TKA

The respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997)*.* The claimant must also prove that the requested treatment is reasonably necessary, if disputed. Section 8-42-101(1)(a). The claimant must prove entitlement to medical benefits by a preponderance of the evidence.

The existence of a preexisting condition does not disqualify a claim for medical benefits where an industrial injury aggravates, accelerates, or combines with a preexisting condition to produce the need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). But the mere fact a claimant experiences symptoms after an incident at work does not necessarily mean the employment aggravated or accelerated the preexisting condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). The ALJ must determine if the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant proved the revision TKA was causally related to the admitted work accident. The analyses and conclusions of Dr. Sparr and Dr. Jepson are credible and more persuasive than the contrary opinions offered by Dr. Lindberg. Claimant did well after the first TKA and quickly returned to her physically demanding job without limitation or difficulty. She also regularly participated in fitness training, sports, and outdoor activities such as hiking. Although Claimant had episodic knee pain, it was relatively minor and required no regular treatment. As Dr. Jepson explained, periodic knee pain was "expected" given her extensive history culminating in a TKA. Despite her rigorous work and fitness routines, Claimant had sought no treatment related to the right knee for over 19 months before the work accident. And there is no persuasive reason to expect she would have sought treatment in August 2020 but for the fall at work. Dr. Sparr and Dr. Jepson agree the mechanism of injury was sufficient to cause Claimant's knee prosthesis to loosen and become symptomatic. Claimant fell directly on her right knee and developed immediate pain. Shortly thereafter the knee felt unstable, which had not been a problem before the work accident.

Even if Dr. Lindberg were correct that the prostheses were loose before the work accident, the knee was minimally symptomatic and caused no notable impact on Claimant's functional capacity. By contrast, she became much more symptomatic immediately after the fall, which continued until she had the revision TKA. The argument that a fall directly on her right knee was merely coincidental is not persuasive. The work accident either caused Claimant's TKA prostheses to become loose, or aggravated and accelerated a pre-existing loosening, or some combination thereof. As a result, the need for the revision TKA was "more likely than not" work-related.

B. Impairment rating for "knee replacement arthroplasty"

Permanent impairment ratings must be "based on" the *AMA Guides to the Evaluation of Permanent Impairment* (3d ed. rev. 1991) ("AMA Guides"). Section 8-42-101(3.7). Whether a rating physician correctly applied the *AMA Guides* is a question of fact for the ALJ. *Metro Moving and Storage v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Where, as here, the claimant suffers a purely scheduled impairment, the claimant must prove entitlement to a rating by a preponderance of the evidence. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App. 2000).

Table 40 of the *AMA Guides* provides a 20% lower extremity rating for "knee replacement arthroplasty." As evidenced by the differing opinions advanced by the physicians in this case, that language is reasonably susceptible of more than one interpretation. Dr. Sparr interprets it to include a "revision total knee arthroplasty." Dr. Lindberg believes it only applies to a first TKA, with no rating for any subsequent procedure. The *AMA Guides* provide no specific instructions for how to rate a revision TKA. Nor is the issue addressed in the Level II curriculum or the Rating Tips. Absent definitive guidance regarding the "correct" way to interpret Table 40, the rating physician enjoys a zone of discretion to determine what, if any, rating applies "based on the *AMA Guides*." *Fisher v. Industrial Claim Appeals Office*, 484 P.3d 816, (Colo. App. 2021) ("the revised third edition is the starting point, not the exclusive font, of impairment rating methodology. By employing 'based on,' instead of using a more limiting word such as 'only,' the legislature made clear that doctors should have some leeway and discretion when determining a patient's final impairment rating.").

Dr. Sparr's rating is "based on" a reasonable interpretation of the *AMA Guides*. As noted, above Table 40 does not differentiate between an "arthroplasty" and a "revision arthroplasty." It simply provides a 20% rating for a "knee replacement arthroplasty." The Lower Extremity MTGs define a total knee arthroplasty as "prosthetic replacement of the articulating surfaces of the knee joint." From a strictly linguistic perspective, that definition can describe a revision TKA, notwithstanding that the "articulating surfaces" in Claimant's knee before the work accident were prosthetic instead of organic. This is also consistent with the terminology used by multiple physicians in this case, including Dr. Dr. Jepson, Dr. Lindberg, and Dr. Sparr, who have described the procedure as a "revision *total knee arthroplasty*." Accordingly, the revision procedure Claimant underwent is a form of "knee replacement arthroplasty."

It is possible the authors of the *AMA Guides* intended to preclude a diagnosis-based rating for a revision TKA, as Dr. Lindberg argues. But it is at least equally likely they saw no need to explicitly discuss revision procedures because a revision is encompassed in the broader term “arthroplasty.” The ALJ is not persuaded that Dr. Lindberg’s interpretation of Table 40 is “right” and Dr. Sparr is “wrong.” Dr. Sparr's rating reflects a reasonable application of the *AMA Guides* to the injury-related impairment suffered by his patient. In that regard, Dr. Sparr’s rating is “based on” the AMA Guides as required by the Act.

The ICAO recently addressed a similar scenario, but from a slightly different angle. *Pulliam v. FedEx Ground Package System, Inc*., W.C. No. 5-078-454-001 (July 12, 2021). The claimant in *Pulliam* had undergone a nonwork-related TKA, from which he recovered well. He subsequently reinjured the knee at work and underwent a revision TKA to treat aseptic loosening caused by the work accident. The claimant eventually underwent a DIME, who assigned a rating based solely on range of motion. The DIME physician did not assign a rating under Table 40 or discuss its applicability. As in Claimant’s case, two experienced Level II physicians had differing interpretations of whether Table 40 applied. The claimant’s IME opined the DIME erred by failing to provide a Table 40 rating for the revision TKA. Conversely, the respondents’ IME opined no specific disorder rating applied because Table 40 does not apply to “revision” TKAs. The ALJ found the respondents’ IME to be more persuasive and denied the request for an additional 20% lower extremity rating. The ICAO affirmed the ALJ’s decision based on the substantial evidence rule. The claimant argued on appeal he was absolutely entitled to a Table 40 rating for the revision TKA. The Panel disagreed that a 20% rating was mandatory under Table 40 for a revision procedure. However, the Panel did not rule that Table 40 definitively precludes a rating for a revision TKA. Had that been the Panel’s interpretation, there would have been no need to resort to the substantial evidence rule. The upshot of *Pulliam* is that the proper rating is a matter of fact for the ALJ’s determination. Accordingly, the ICAO’s ruling in *Pulliam* is not inconsistent with this ALJ’s determination in Claimant’s case.

Dr. Sparr’s analysis of Claimant’s impairment is more persuasive than Dr. Lindberg’s analysis. Claimant proved she suffered a 20% impairment under Table 40 because of her work injury. Combined with the range of motion loss, her overall lower extremity rating is 23%.

C. Apportionment

Once the physician determines a claimant has a work-related permanent impairment, the question of how to account for any pre-existing impairment is answered § 8-42-104(5) (the “apportionment statute”). The current iteration of the apportionment statute reflects a policy determination by the General Assembly that a previous nonwork-related impairment can only be deducted from a claimant's rating if it was “independently disabling” before the work accident. Section 8-42-104(5)(b). Apportionment under § 8-42-104(5) is an affirmative defense which the respondents must prove. *Hansford v. South Metro Fire Rescue District*, W.C. No. 4-693-447 (December 20, 2007).

The phrase “independently disabling in the apportionment statute invokes the analysis set forth in *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996). *Askew* held that “medical impairment” is not synonymous with “disability.” Impairment is “an alteration of an individual’s health status that is assessed by medical means,” whereas disability pertains to “an individual’s capacity to meet personal, social, or occupational demands.”

As found, Respondents failed to prove Claimant’s impairment rating should be apportioned. Although Claimant’s knee was episodically symptomatic before the work accident, it did not limit her ability to perform a strenuous job or engage in other physical activities on a regular basis. Dr. Sparr’s analysis regarding the lack of prior “disability” is persuasive. Dr. Lindberg essentially equates pre-injury pain with “some extent” of disability. That is not the proper standard under the apportionment statute. Moreover, the last documented episode of symptoms was over 19 months before the accident. Thus, even if we accepted Dr. Lindberg’s premise that symptoms equate to disability, there is no persuasive evidence the condition was disabling “at the time of the subsequent injury” as required by § 8-42-104(5)(b).

D. Disfigurement

Section 8-42-108(1) provides for additional compensation if a claimant is “seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view.” As found, Claimant suffered visible disfigurement to her right knee because of the work accident. Accounting for the pre-existing scarring based on Claimant’s credible testimony, the ALJ concludes Claimant should be awarded $500 for disfigurement.

ORDER

It is therefore ordered that:

1. Respondent shall cover the December 20, 2020 revision total knee arthroplasty performed by Dr. Jepson.

2. Respondent shall pay Claimant PPD benefits based on Dr. Sparr’s 23% scheduled lower extremity rating.

3. Respondent shall pay Claimant statutory interest of 8% per annum on all compensation benefits not paid when due.

4. Respondent’s request to apportion Claimant’s impairment rating is denied and dismissed.

5. Respondent shall pay Claimant $500 for disfigurement. Respondent may take credit for any disfigurement benefits previously paid in connection with this claim.

6. Issues relating to medical mileage reimbursement, and payment for the revision TKA, including reimbursement of Claimant’s out of pocket expenses, are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ’s order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

1. Whether Respondents proved by a preponderance of the evidence that Claimant experienced an intervening event on August 18, 2020, that was sufficient to sever Respondent's liability stemming from an admitted injury of March 24, 2020.

2. Whether Respondents established by clear and convincing evidence that the Division IME (DIME) physician's opinions regarding maximum medical improvement (MMI) and impairment rating were incorrect.

3. If applicable, the amount of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 32 year-old male who suffered an admitted work injury to his lower back on March 24, 2020, while working for Employer. Claimant tripped while lifting a heavy case of food (approximately 45 pounds). He felt a sudden onset of midline back pain radiating to the right side of his lower back. (Ex. 3 and Ex. D).

2. Claimant went to UC Health Urgent Care on April 3, 2020, and was evaluated by Sarah Thompson, PA-C. Claimant explained that he had persistent pain in his lower back, and it was worse when he was laying down and trying to sleep. Ms. Thompson advised Claimant to take Naprosyn and Tizanidine as needed, but she did not feel he needed an MRI or physical therapy. Ms. Thompson told Claimant to follow up with a workers' compensation clinic. (Ex. 3 and Ex. D).

3. The first appointment Claimant could secure at Concentra, due to the COVID-19 pandemic, was on July 22, 2020 with Pete Michael, PA-C. Claimant complained of pain in the middle of his lower back. He rated the pain as five out of ten at rest, but movement and bending could increase the pain to ten out of ten. Mr. Michael diagnosed Claimant with a lower back strain. He ordered physical therapy (three times a week, for two weeks), and Claimant was to start Ibuprofen and Lidocaine patches. Claimant was restricted to modified duty. He could not lift more than 10 pounds, and could not push or pull more than 25 pounds. (Ex. E).

4. On July 28, 2020, Claimant returned for a follow-up appointment and was evaluated by Valerie Skvarca, P.A. Claimant reported occasionally having lower back pain, but generally, it was improving. His pain did not radiate, but he felt it when he bent over. Claimant was attending physical therapy and showing functional improvement. (Ex. E).

5. Claimant's follow-up appointment on August 7, 2020 was with Mr. Michael. Claimant had completed his physical therapy and reported that it helped a lot. He still, however, had pain with heaving lifting and bending forward. According to the medical records, the anticipated date of MMI was August 15, 2020. (Ex. E).

6. On August 19, 2020, Amy Pate, M.D. rechecked Claimant's back. Claimant reported some improvement since his last visit, but he told Dr. Pate he experienced pain with heaving lifting (40 pounds) the prior day. According to the medical records, Claimant "reinjured himself" leading to the increased pain. The same medical records, however, state that Claimant had an "exacerbation" of his injury due to lifting heavy. (Ex. E).

7. Dr. Pate ordered physical therapy (three times a week for two weeks) for Claimant. She also renewed his Metaxalone and Lidocaine patch prescriptions, and prescribed him Naproxen. She restricted Claimant to modified duty at work where he could occasionally lift up to 15 pounds, and occasionally push/pull 30 pounds. His anticipated date of MMI was September 30, 2020. (Ex. E).

8. On August 28, 2020, Ms. Skvarca noted that Claimant was close to being able to do the physical requirements of his job. She revised his work restrictions, noting he could work at least eight hours a day, could lift up to 25 pounds frequently, and push/pull 30 pounds frequently. His anticipated date of MMI was September 5, 2020. (Ex. E).

9. On September 8, 2020, Ms. Skvarca released Claimant to full duty work with no restrictions as he was doing much better and only had slight pain. (Ex. E).

10. The ALJ concludes that the incident on August 18, 2020 exacerbated Claimant's admitted back injury. The temporary exacerbation was not an intervening event that broke the chain of causation. The evidence shows that Claimant's back symptoms improved within a short period of time with limited intervention.

11. Claimant credibly testified he returned to Concentra in early October 2020 after an onset of increased back pain from lifting heavy boxes, and he was referred for chiropractic care. (Tr. 27:15-25).

12. There are no Concentra records in evidence between September 8, 2020 and October 9, 2020 that reflect the appointment in early October 2020 that Claimant testified about. The chiropractic records, however, indicate that in October 2020 Ms. Skvarca referred Claimant to Richard Mobus, D.C., for six chiropractic sessions. Claimant received chiropractic care from October 9, 2020 to November 3, 2020. Over this period of time, Claimant's pain level decreased from six out of ten, to three out of ten. (Ex. G)

13. Claimant saw Ms. Skvarca on October 30, 2020. He reported his pain was still moderate, but better than his previous appointment a few weeks prior. Claimant had completed physical therapy and had one more chiropractic appointment. (Ex. E).

14. The ALJ finds that Claimant credibly testified he had another temporary exacerbation of his March 24, 2020 injury on or before October 9, 2020 from lifting heavy boxes.

15. Steve Danahey, M.D., evaluated Claimant on December 18, 2020. He opined that Claimant could return to full-duty work with no restrictions, that Claimant reached MMI as of December 18, 2020, and that Claimant had no permanent impairment. (Ex. E).

16. Claimant requested a DIME on the issues of MMI, permanent impairment and apportionment for his March 24, 2020 injury. (Ex. 1) Joseph Morreale, M.D., was selected as the DIME physician. Respondents sent Dr. Morreale a copy of Claimant's medical records, including records related to the August 18, 2020 incident. (Ex. 2).

17. Dr. Morreale examined Claimant on April 29, 2021. In the DIME report, Dr. Morreale disagreed with the December 18, 2020 MMI date. Dr. Morreale opined that Claimant reached MMI on September 24, 2020, approximately six months after his injury. He assigned a 15% range of motion impairment and gave Claimant a 5% table 53 rating for a 19% whole person impairment rating. Dr. Morreale noted in his DIME report that Claimant still had some back pain and may need physical therapy. (Ex. 1 and Ex. H).

18. Dr. Morreale's DIME report is brief and general. He states, however, that Claimant's "records reveal excellent recovery from physical therapy and chiropractic care with non-painful range of motion of his lumbar spine." (Ex. H). Dr. Morreale does not address Claimant's August 18, 2020 incident.

19. In light of the DIME report, Respondents requested an IME from Mark C. Winslow, D.O. Dr. Winslow did not testify at the hearing, but his report was admitted into evidence.

20. In his IME report, Dr. Winslow disagreed with Dr. Morreale's MMI date. Dr. Winslow opined that Claimant had a significant change in the course of his treatment and his ongoing symptoms due to the August 18, 2020 incident. Dr. Winslow agreed with ATP, Dr. Danahery, and opined that Claimant reached MMI on December 18, 2020. Dr. Winslow alleged that Dr. Morreale "did not review the medical records or note the significant changes in Claimant's profile with the August 18, 2020 injury." (Ex. I).

21. Dr. Winslow did not challenge Dr. Morreale's permanent impairment rating of 19%, and opined that his "[i]mpairment rating is appropriate in terms of its analysis of the data, but by definition is premature". (Ex. I).

22. Based upon the fact that Dr. Morreale was provided all of Claimant's medical records, the ALJ infers that Dr. Morreale reviewed and relied upon all of the medical records in reaching his opinions regarding Claimant's MMI date and impairment rating.

23. Dr. Winslow also opined that "[f]ollowing the incident on August 18 . . . chiropractic was initiated and added to the patient's care." Claimant, however, did not begin chiropractic care until October 9, 2020, following a second temporary exacerbation. (Ex. G.)

24. The ALJ finds that Respondents did not overcome Dr. Morreale's opinions on MMI and impairment by clear and convincing evidence.

25. The ALJ finds that Claimant's August 18, 2020 injury represents a temporary exacerbation of his March 24, 2020 injury and this did not break the chain of causation

26. This ALJ finds Claimant reached MMI on September 24, 2020, and has a 19% whole person impairment rating.

27. Claimant credibly testified that when he was injured, he concurrently worked at Chili's approximately 28 hours a week, for $17.00 an hour. (Tr. 22:19-22). Claimant worked under the name of [Claimant]. Claimant did not have a social security number, so he used his friend's name and social security number for his employment at Chili's. (*Id.* at 23:2-16). The ALJ finds that the wage records for [Claimant] reflect wages earned by Claimant. (Ex. 6).

28. Claimant's wages while working for Employer for 83 days, from January 1, 2020 through March 24, 2020, total $7,118.84. The 83 days equate to 11.86 weeks (83 divided by 7). Claimant's AWW at Employer is $600.24 ($7,118.84 divided by 11.86 weeks). Claimant's wages at Chili's, while working as [Claimant], from January 2, 2020 to March27, 2020, total $4,893.26. The 85 days of work equate to 12.14 weeks (85 divided by 7). Claimant's AWW at Chili's, under the name of [Claimant], is $403.07 ($4,893.26 divided by 12.14 weeks). The ALJ finds Claimant's concurrent AWW is $1,003.31 ($600.24 plus $403.07).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936);

Bodensieck v. Indus. Claim Appeals Office, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Intervening Cause

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002) (citing *Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970)). All results flowing proximately and naturally from an industrial injury are compensable. *Id*. No compensability exists, however, when a later accident, injury, or disease occurs as the direct result of an independent intervening cause. *Owens,* 49 P.3d 1187; *Post Printing & Publishing Co. v. Erickson*, 30 P.2d 327 (Colo. 1934); *Merrill v. Pulte Mortgage Corporation,* WC 4-635-705-02, (ICAO, May 10, 2013). The respondents are only liable for the "direct and natural" consequences of the work related injury. *Reynal v. Home Depot USA, Inc.*, WC 4-585-674-05 (ICAO, Dec. 10, 2012). An intervening injury may sever the causal connection between the injury and the claimant's temporary disability if the claimant's disability is triggered by the intervening injury. *See Standard Metals*, 474 P.2d 622. If the need for treatment results from an intervening injury or disease unrelated to the industrial injury, then treatment of the subsequent condition is not compensable. This is a question of fact for resolution by the ALJ. *Owens,* 49 P.3d at 1188-89.

Claimant suffered an admitted injury to his back on March 24, 2020. Claimant was improving and close to MMI when he reinjured his back on August 18, 2020. (Findings of Fact ¶¶ 5 and 6). The medical records classify this event as Claimant reinjuring himself, and also as an exacerbation of his admitted injury. *Id.* at ¶ 6. The injury was due to the resumption of heavy lifting. *Id.* Claimant's condition, however, improved quickly with limited interventions. *Id.* at ¶ 10. Based upon the totality of the evidence, the ALJ concludes that Claimant suffered a temporary exacerbation of his back injury. Respondents failed to prove by a preponderance of the evidence that this was an intervening event that broke the chain of causation.

DIME Physician's MMI and Impairment Findings

A DIME physician's opinions concerning MMI and whole person impairment carry presumptive weight and may be overcome by clear and convincing evidence. § 8-42-107

(8)(b)(III), C.R.S. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Eng'g,* 5 P.3d 385. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* WC 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., WC 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., WC's 4-532-166 & 4-523-097 (ICAO, July 19, 2004). Rather, it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016). When a DIME physician issues conflicting or ambiguous opinions concerning MMI, the ALJ may resolve the inconsistency as a matter of fact to determine the DIME physician's true opinion. *MGM Supply Co. v. Indus. Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Indus. Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services,* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Indus. Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Indus. Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.*, W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015).

The DIME physician, Dr. Morreale, determined that Claimant reached MMI on September 24, 2020. (Findings of Fact ¶ 17)[1]. Dr. Winslow opined that Claimant was not at MMI until December 18, 2020, because Claimant had a significant change in the course of his treatment and symptoms that Dr. Morreale did not consider. (*Id.* at ¶ 20). There is no evidence, however, that Dr. Morreale's opinion regarding Claimant's date of MMI is incorrect. Dr. Morreale's DIME report does not specifically mention Claimant's presentation on August 18, 2020, and he does not reference this event as an exacerbation of the previous injury, or a new injury. (*Id.* at ¶ 18). The fact that this information it is not specifically addressed in Dr. Morreale's report is not persuasive. Respondents provided Dr. Morreale with a copy of Claimant's medical records, including the records from August 18, 2020. (*Id.* at ¶ 16). The ALJ infers that Dr. Morreale considered this information in rendering his opinions. (*Id.* at ¶ 22). Respondents have not met their burden of proof as they have not presented clear and convincing evidence to overcome the DIME.

[1] Dr. Winslow agreed with Dr. Morreale's impairment rating, so the impairment rating is not at issue. (Findings of Fact ¶ 19).

ORDER

It is therefore ordered that:

1. Respondents failed to prove by a preponderance of the evidence that Claimant experienced an intervening event on August 18, 2020, that severed Respondents' liability related to the admitted March 24, 2020 injury.

2. Respondents failed to prove by clear and convincing evidence that the DIME physician's finding of MMI is incorrect.

3. Respondents failed to prove by clear and convincing evidence that the DIME physician's impairment rating is incorrect.

4. Claimant's concurrent average weekly wage is $1,003.31.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 21, 2021

Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-122-636-002

ISSUES

1. Whether Claimant established by a preponderance the right to select her authorized physician.

FINDINGS OF FACT

1. Claimant sustained an admitted injury on August 21, 2019, arising out of the course of her employment with Employer.

2. Claimant initially sought medical treatment with authorized treating physician (ATP) Kathryn Bird, D.O., at Concentra Medical Centers on August 21, 2019. (Ex. 2).

3. Claimant underwent various treatments, including chiropractic and physical therapy, and attended regular visits with Dr. Bird. On November 18, 2019, Dr. Bird placed Claimant at maximum medical improvement (MMI), with no permanent impairment, work restrictions or recommendations for medical maintenance treatment. (Ex. 2 & F).

4. On August 27, 2020, Claimant underwent a Division Independent Medical Examination (DIME), with Martin Kalevik, M.D. Dr. Kalevik determined Claimant was not at MMI and recommended additional treatment, including EMG/nerve conduction studies, a right hip MRI, and a follow up orthopedic evaluation depending on the results of the imaging studies. Dr. Kalevik also endorsed additional possible or potential treatment, including a physiatry evaluation, SI injection, nerve block and repeat MRI. (Ex. 1).

5. Respondents filed an application for hearing to overcome Dr. Kalevik's DIME opinions. After a hearing, ALJ Peter Cannici issued Findings of Fact, Conclusions of Law, and Order (on June 2, 2021) finding that Respondents failed to overcome the DIME opinion, and that Claimant was not at MMI. (Ex. 2).

6. At hearing in the present matter, Claimant testified that between June and July 2021, she attempted to schedule an appointment with Dr. Bird by calling her office three or four times. Claimant testified that Dr. Bird's receptionist stated that Claimant's was closed two years earlier and refused to schedule an appointment. Other than these phone calls, Claimant made no other direct efforts to schedule an appointment with Dr. Bird. Claimant testified that she did not provide Dr. Bird with a copy of Dr. Kalevik's DIME report.

7. On July 1, 2021, Claimant's counsel's office emailed Respondents' counsel stating "Pursuant to Judge Cannici's June 2, 2021 Order in the aforementioned claim,

[Claimant] is not yet at MMI for the August 21, 2019 injury. At your earliest convenience, please have the adjuster schedule her for a follow-up appointment to resume her care." (Ex. 3).

8. Subsequently, Claimant attended a demand appointment with Dr. Bird on September 7, 2021. At that appointment, Dr. Bird performed a physical examination of Claimant, and opined that Claimant was "at functional goal, not at end of healing." Dr. Bird dispensed acetaminophen 325 mg tablets and referred Claimant for physical therapy, opining that physical therapy "is medically necessary to address objective impairment/functional loss and to expedite return to full activity." Dr. Bird also indicated that if Claimant did not improve, she would consider referrals for acupuncture and to Dr. Kawasaki "for other treatment options." (Dr. Kawasaki is a physiatrist). Claimant was also instructed to keep follow up appointments, and a follow-up appointment was indicated in "about 2 days." (Ex. F). Claimant testified that Dr. Bird did not state to her that she would consider referrals for acupuncture and to Dr. Kawasaki.

9. Claimant did not return to Dr. Bird after September 7, 2021, and did not attend physical therapy as recommended by Dr. Bird. Instead, Claimant elected to treat with physicians at New West Physicians. Claimant testified that she did not treat with Dr. Bird because Dr. Bird would not follow through with the treatment recommended by Dr. Kalevik, although Claimant was not aware of the specific treatment Dr. Kalevik recommended.

10. Claimant testified that she saw physicians at New West Physicians, who ordered an MRI of her hip, but had not yet ordered the additional treatment Dr. Kalevik recommended. Claimant testified that she attended an appointment at New West on September 7, 2021. No records of Claimant's treatment at New West Physician were offered or admitted into evidence. Claimant testified that she did not know if her physicians at New West Physicians are Level II-accredited or treat workers' compensation patients.

11. Claimant indicated she would like to treat with Kimberly Winter, M.D. and Daffney Glotzbach, PA-C at New West Physician, and that she had treated with those providers.

12. Claimant asserts that Dr. Bird refused to treat her for non-medical reasons, and did not know if Insurer was notified of the alleged failure to treat for non-medical reasons.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See*

§ 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Change of Physician for Failure to Treat for Non-Medical Reasons

Section 8-43-404(5)(a), C.R.S. permits the employer or insurer to select the treating physician in the first instance. Once the respondents have exercised their right to select the treating physician, the claimant may not change the physician without the insurer's permission or "upon the proper showing to the division." §8-43-404(5)(a), C.R.S.; *In Re Tovar,* W.C. No. 4-597-412 (ICAO, July 24, 2008). Because §8-43-404(5)(a), C.R.S. does not define "proper showing" the ALJ has discretionary authority to determine whether the circumstances warrant a change of physician. *Jones v. T.T.C. Illinois, Inc.,* W.C. No. 4-503-150 (ICAO, May 5, 2006). The ALJ's decision regarding a change of physician should consider the claimant's need for reasonable and necessary medical treatment while protecting the respondent's interest in being apprised of the course of treatment for which it may ultimately be liable. *Id.* An ALJ is not required to approve a change of physician for a claimant's personal reasons including "mere dissatisfaction." *In Re Mark*, W.C. No. 4-570-904 (ICAO, June 19, 2006). Because the statute does not contain a specific definition of a “proper showing,” the ALJ has broad discretionary authority to determine whether the circumstances justify a change of physician. *Loza v. Ken’s Welding,* WC 4-712-246 (ICAO January 7, 2009); *Pedro Gutierrez Lopez v. Scott Contractors*, W.C. No. 4-872-923-01, (ICAO Nov. 19, 2014).

Claimant asserts that Dr. Bird refused to treat her for non-medical reasons, and that she is therefore entitled to select a new authorized treating physician. Section 8-43-404 (10)(a), C.R.S., provides that where an ATP refuses to provide medical treatment to an injured employee for non-medical reasons, the ATP must provide notice of the refusal to the injured employee and the insurer within three business days by certified mail. The notice must explain, among other things, the reasons for the refusal. Section 8-43-404 (10(b), also provides that if either the ATP or the injured worker notifies the insurer by certified mail that an ATP has refused to provide medical treatment for non-medical reasons and there is no other ATP willing to provide medical treatment, then insurer must designate a new ATP within 15 days. If the insurer fails to designate a new ATP, the right of selection passes to the injured employee.

Claimant has failed to establish by a preponderance of the evidence grounds for selecting a new ATP or that Dr. Bird refused to treat Claimant for non-medical reasons. As found, Dr. Bird originally discharged Claimant at MMI in November 2019. When Claimant contacted Dr. Bird’s office in June or July 2021 to schedule an appointment, Dr. Bird’s office was under the impression that Claimant’s claim had been closed, as evidenced by Claimant’s testimony. No evidence was presented to indicate any other reason for Dr. Bird’s initial refusal to schedule an appointment. No credible evidence was presented that Dr. Bird was aware of the DIME physician’s opinion that Claimant was not at MMI, or ALJ Cannici’s Order finding Claimant not at MMI. Moreover, Dr. Bird saw Claimant in September 2021, recommended additional treatment, and indicated in her record that further treatment may be indicated depending on how Claimant responded to physical therapy.

That Dr. Bird did not implement Dr. Kalevik’s treatment recommendations is not grounds for changing physicians and does not indicate that Dr. Bird refused to treat Claimant for non-medical reasons. "The insurer's right to select the treating physician contemplates the insurer will appoint a physician willing to treat the claimant based on the physician's independent medical judgment." *Scoggins v. Air Serv.*, W.C. No. 4-642-757 (ICAO March 31, 2006). "The question of whether an ATP has exercised independent medical judgment, or is basing a refusal to treat on non-medical considerations, is one of fact for determination by the ALJ." *In re Claim of Ayala*, W.C. No. 4-579-880 (ICAO July 22, 2004). As found, Dr. Bird did not refuse to treat Claimant and referred Claimant for physical therapy. Dr. Bird, as Claimant’s authorized treating physician was not obligated to implement Dr. Kalevik’s treatment recommendations. An ATP cannot be ordered to perform or refer a claimant for treatment recommended by a physician who is not authorized to treat. *In re Claim of Estrada-Perez*, W.C. No. 5-047-415-002 (ICAO March 25, 2021). Under WCRP Rule 11-2(G), a DIME physician is not authorized to treat a Claimant and his or her recommendations for future medical treatment carry no presumptive weight. *In re Claim of Holcombe*, W.C. No. 4-824-259-05 (ICAO March 24, 2017). Given Dr. Bird's referral for physical therapy and her willingness to consider other forms of treatment based on Claimant's response to physical therapy, the ALJ concludes that Dr. Bird's treatment recommendations were based on her exercise of independent medical judgment and that she did not refuse to recommend or refer Claimant for the treatment recommended by Dr. Kalevik for non-medical reasons. Accordingly, Claimant has failed to establish grounds for changing authorized treating physicians.

ORDER

It is therefore ordered that:

1. Claimant's request to change authorized treating physicians is denied.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 22, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-132-097-003

ISSUE

Whether Claimant has established by a preponderance of the evidence that she is entitled to recover penalties pursuant to §8-43-304(1), C.R.S. based on Respondents' failure to pay a lump sum settlement award within 15 calendar days pursuant to §8-43-204(7), C.R.S.

FINDINGS OF FACT

1. On February 24, 2020 Claimant suffered injuries during the course and scope of her employment with Employer. On April 7, 2021 Claimant and Respondents executed a final settlement agreement in Workers' Compensation claim number 5-132-097 for $14,900. Respondents received the settlement order on the same day.

2. Insurer's adjuster Haley P[Redacted] testified regarding the timeline and her actions to issue the settlement check. Ms. P[Redacted] remarked that she received notice from Respondents' counsel regarding the approved settlement documents and the need to issue the settlement check by April 22, 2021. She noted that she was aware that §8-43-204(7), C.R.S. requires that, once a settlement document is received by the insurance company, it is required to pay the claimant or the claimant's attorney the settlement proceeds within 15 calendar days. Ms. P[Redacted] commented that she investigated whether there were any liens in the matter before issuing the settlement check.

3. Ms. P[Redacted] explained that she issued the initial settlement check on April 13, 2021 and the treasury department at her office mailed the check on April 14, 2021. Respondents' internal payment log and documents confirm the settlement check was issued on April 13, 2021 and mailed on April 14, 2021 through USPS. The check thus had sufficient time to arrive at Claimant's attorney's office on or before April 22, 2021. Respondents informed Claimant's attorney the settlement check had been issued.

4. On April 22, 2021 Claimant's attorney notified Respondents that it was the 15th day following the settlement. She requested the check to be sent through overnight mail to her law firm. Respondents' counsel replied by e-mail that the adjuster had issued and mailed the check the previous week and Claimant's counsel would receive it shortly. However, Claimant did not receive the settlement check in the days that followed.

5. On April 28, 2021 Claimant's counsel sent an e-mail to Respondents' counsel stating that the settlement check was six days late. She noted that, in the past when she had alerted other respondents that a settlement check was late, the adjusters typically cancelled the first check and sent a second check through overnight mail to stay in compliance with the 15 day time period specified in §8-43-204(7), C.R.S. Claimant's counsel further advised Respondents that they were in a penalty situation and requested they "overnight a new check to our office immediately."

6. On April 29, 2021 Ms. P[Redacted] became aware for the first time that the settlement proceeds had not been received by Claimant's counsel. Ms. P[Redacted] noted in the claims file that she received an e-mail from Respondents' counsel earlier in the day stating that Claimant's counsel had not received the settlement check. She was asked "to cancel, reissue and overnight to [opposing counsel]." When she learns a settlement check has not been received, Ms. P[Redacted]'s procedure is to immediately cancel the check, reissue it and send it overnight "because it's being delayed." On April 29, 2021 Ms. P[Redacted] thus placed a stop payment on the settlement check. She requested a new check to be issued on Friday April 30, 2021. Ms. P[Redacted] testified that, if she issues a check after 10:00 a.m. on a Friday, the treasury department of her office prints the check on Monday. It then takes a day or two to overnight the document.

7. On May 3, 2021 Claimant's counsel again e-mailed Respondents' counsel stating that the settlement proceeds had not been received. She asked for a "tracking update." On the following day Respondents' counsel stated that the check was scheduled for delivery on May 5, 2021. Claimant's counsel subsequently received the settlement check on May 6, 2021. The FedEx envelope in which the settlement check was shipped reflected the ship date was "05May21." The check was scheduled for priority overnight delivery on "THU - 06 May 10:30A."

8. Claimant testified that she expected the check to be delivered roughly two weeks after the settlement documents were signed by the judge on April 7, 2021. She was relying on receiving the check within 15 days because she had bills to pay and intended to use some of the funds to replace an 18-year-old car that was failing. However, between April 22, 2021 and the time the check was received on May 6, 2021, a major failure occurred to the car. Claimant thus sold the vehicle for less money than she would have received if she had been able to sell it at the time the settlement check should have arrived.

9. Claimant testified that she sold four properties in Leadville, CO between December 2020 and January 2021. She confirmed each of the properties sold for approximately $160,000-$165,000. Claimant noted that she received a total of $650,000 from property sales. However, Claimant remarked that the proceeds were not liquid and thus unavailable at the time she anticipated receiving the settlement proceeds.

10. On June 8, 2021 Claimant filed an Application for Hearing on the issue of penalties for Respondents' violation of §8-43-204(7), C.R.S. because the settlement proceeds were due by April 22, 2021 but not received until May 6, 2021. Claimant specifically sought penalties of $1,000 per day for each day the check was late based on §8-43-304(1), C.R.S.

11. Claimant has failed to establish that it is more probably true than not that she is entitled to recover penalties pursuant to §8-43-304(1), C.R.S. based on Respondents' failure to pay a lump sum settlement award within 15 calendar days pursuant to §8-43-204(7), C.R.S. Initially, §8-43-204(7), C.R.S. specifies that "any lump sum payable as a full or partial settlement shall be paid to the claimant or the claimant's attorney within fifteen calendar days after the date the executed settlement order is

received by the carrier." Here, because Insurer received the fully executed settlement order on April 7, 2021, the settlement check was due no later than April 22, 2021. It is undisputed that the settlement proceeds were not received by Claimant's attorney until May 6, 2021. Therefore, because neither Claimant nor her attorney received the settlement check within 15 days, Respondents violated §8-43-204(7), C.R.S.

12. However, Respondents' violation of §8-43-204(7), C.R.S. was not objectively unreasonable. Respondents' actions were predicated on a rational argument based in law or fact. Initially, it was reasonable to assume the settlement check would be delivered to Claimant's attorney between April 14-22 2021. Ms. P[Redacted] explained that she issued the initial settlement check on April 13, 2021 and the treasury department at her office mailed the check through USPS on April 14, 2021. Insurer's internal payment logs and documents confirm the initial check was issued on April 13, 2021 and sent on April 14, 2021. There was thus sufficient time for the check to arrive at Claimant's attorney's office on or before April 22, 2021. However, on April 22, 2021 Claimant's attorney notified Respondents that it was the 15th day following the settlement and she had not received the check. Respondents' counsel replied by e-mail that the adjuster had issued and mailed the check the previous week and she anticipated Claimant's counsel would receive it shortly. However, Claimant did not receive the settlement check in the days that followed.

13. On April 28, 2021 Claimant's counsel sent an e-mail to Respondents' counsel stating that the settlement check was six days late. She further alerted Respondents that they were in a penalty situation and requested they "overnight a new check to our office immediately." On April 29, 2021 Ms. P[Redacted] noted in the claims file that she received an e-mail from Respondents' counsel earlier in the day that Claimant's counsel had not received the settlement check. She thus placed a stop payment on the settlement check and requested a new check to be issued on Friday April 30, 2021. Ms. P[Redacted] testified that, if she issues a check after 10:00 a.m. on a Friday, the treasury department of her office prints the check on Monday. It then takes a day or two to overnight the document. Claimant's attorney ultimately received and cashed the replacement check on May 6, 2021. The lost check and subsequent process of reissuing the replacement check resulted in a total delay of 14 days. The preceding chronology reflects that Respondents took reasonable actions when issuing the original check and in providing Claimant with a replacement check upon notice the first check was apparently lost in the mail.

14. Finally, even if Insurer's actions were objectively unreasonable, a violation of §8-43-304(1), C.R.S. may be cured within 20 days after an application for hearing has been filed. If a violation is cured, no penalties may be imposed in the absence of "clear and convincing evidence" that the violator "knew or reasonably should have known" of the violation. On June 8, 2021 Claimant filed an Application for Hearing on the issue of penalties for Respondents' violation of §8-43-204(7), C.R.S. Specifically, the settlement proceeds were due by April 22, 2021 but not received until May 6, 2021. As the preceding chronology reflects, Respondents corrected any error by providing Claimant with a replacement check when it became aware that the initial check was apparently lost in the mail. Respondents cured any violation by promptly canceling the April 13, 2021 check

and reissuing a replacement check. Claimant received the replacement check on May 6, 2021 or more than a month before filing the Application for Hearing. Respondents thus cured any violation well before the 20 day limit specified in §8-43-304(4), C.R.S. Accordingly, Claimant’s request for penalties pursuant to §8-43-304(1), C.R.S. based on Respondents’ failure to pay a lump sum settlement award within 15 calendar days pursuant to §8-43-204(7), C.R.S. is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. Indus. Claim Appeals Off.,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. A party may be penalized under §8-43-304(1), C.R.S. for up to $1,000 day for any failure, neglect or refusal to obey any lawful order of the director or panel. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The party seeking penalties bears the burden of proving that a person failed to take an action that a reasonable party would have taken. *City of County of Denver v. Indus. Claim Appeals Off.*, 58 P.3d 1162, 1164-65 (Colo. App. 2002). Once the prima facie showing of unreasonableness has been made, the burden of persuasion shifts to the party who committed the alleged penalty to show that the conduct was reasonable under the circumstances. *See e.g. Pioneers Hosp. of Rio Blanco County v. Indus. Claim Appeals Off.*, 114 P.3d 97 (Colo. App. 2005); *Postlewait v. Midwest Barricade*, 905 P.2d 21, 23 (Colo. App. 1995).

5. Section 8-43-204, C.R.S. governs the settlement of Workers' Compensation claims. Section 8-43-204(7), C.R.S. specifically addresses the timely payment of lump sum settlement awards. The statute provides that "[a]ny lump sum payable as a full or partial settlement shall be paid to the claimant or the claimant's attorney within fifteen calendar days after the date the executed settlement order is received by the carrier or the noninsured or self-insured employer. §8-43-204(7), C.R.S.

6. The imposition of penalties under §8-43-304(1), C.R.S. requires a two-step analysis. *See In re Hailemichael,* W.C. No. 4-382-985 (ICAO, Nov. 17, 2004). The ALJ must first determine whether the disputed conduct violated a provision of the Act or rule. *Allison v. Indus. Claim Appeals Off.,* 916 P.2d 623, 624 (Colo. App. 1995). If a violation has occurred, penalties may only be imposed if the ALJ concludes that the violation was objectively unreasonable. *Colorado Compensation Insurance Authority v. Indus. Claim Appeals Off.,* 907 P.2d 676, 678-79 (Colo. App. 1995). The reasonableness of an insurer's actions depends upon whether the action was predicated on a "rational argument based in law or fact." *In re Lamutt,* W.C. No. 4-282-825 (ICAO, Nov. 6, 1998).

7. Even if an insurer's actions are objectively unreasonable, a violation of §8-43-304(1), C.R.S. may be cured within 20 days after an application for hearing is filed. If a violation is cured, no penalties may be imposed in the absence of "clear and convincing evidence" that the violator "knew or reasonably should have known" of the violation. §8-43-304(4), C.R.S. "Clear and convincing evidence" exceeds the preponderance standard and is evidence that "makes a proposition highly probable and free from serious doubt." *In re Barnes,* W.C. No. 4-632-352 (ICAO, Oct. 30, 2006). Whether a respondent's actions were objectively unreasonable and whether it knew or should have known of a violation are questions of fact for the ALJ. *In re Lamutt,* W.C. No. 4-282-825 (ICAO, Nov. 6, 1998).

8. As found, Claimant has failed to establish by a preponderance of the evidence that she is entitled to recover penalties pursuant to §8-43-304(1), C.R.S. based on Respondents' failure to pay a lump sum settlement award within 15 calendar days pursuant to §8-43-204(7), C.R.S. Initially, §8-43-204(7), C.R.S. specifies that "any lump sum payable as a full or partial settlement shall be paid to the claimant or the claimant's attorney within fifteen calendar days after the date the executed settlement order is received by the carrier." Here, because Insurer received the fully executed settlement order on April 7, 2021, the settlement check was due no later than April 22, 2021. It is undisputed that the settlement proceeds were not received by Claimant's attorney until May 6, 2021. Therefore, because neither Claimant nor her attorney received the settlement check within 15 days, Respondents violated §8-43-204(7), C.R.S.

9. As found, however, Respondents' violation of §8-43-204(7), C.R.S. was not objectively unreasonable. Respondents' actions were predicated on a rational argument based in law or fact. Initially, it was reasonable to assume the settlement check would be delivered to Claimant's attorney between April 14-22 2021. Ms. P[Redacted] explained that she issued the initial settlement check on April 13, 2021 and the treasury department at her office mailed the check through USPS on April 14, 2021. Insurer's internal payment logs and documents confirm the initial check was issued on April 13, 2021 and sent on

April 14, 2021. There was thus sufficient time for the check to arrive at Claimant's attorney's office on or before April 22, 2021. However, on April 22, 2021 Claimant's attorney notified Respondents that it was the 15th day following the settlement and she had not received the check. Respondents' counsel replied by e-mail that the adjuster had issued and mailed the check the previous week and she anticipated Claimant's counsel would receive it shortly. However, Claimant did not receive the settlement check in the days that followed.

10. As found, on April 28, 2021 Claimant's counsel sent an e-mail to Respondents' counsel stating that the settlement check was six days late. She further alerted Respondents that they were in a penalty situation and requested they "overnight a new check to our office immediately." On April 29, 2021 Ms. P[Redacted] noted in the claims file that she received an e-mail from Respondents' counsel earlier in the day that Claimant's counsel had not received the settlement check. She thus placed a stop payment on the settlement check and requested a new check to be issued on Friday April 30, 2021. Ms. P[Redacted] testified that, if she issues a check after 10:00 a.m. on a Friday, the treasury department of her office prints the check on Monday. It then takes a day or two to overnight the document. Claimant's attorney ultimately received and cashed the replacement check on May 6, 2021. The lost check and subsequent process of reissuing the replacement check resulted in a total delay of 14 days. The preceding chronology reflects that Respondents took reasonable actions when issuing the original check and in providing Claimant with a replacement check upon notice the first check was apparently lost in the mail.

11. As found, finally, even if Insurer's actions were objectively unreasonable, a violation of §8-43-304(1), C.R.S. may be cured within 20 days after an application for hearing has been filed. If a violation is cured, no penalties may be imposed in the absence of "clear and convincing evidence" that the violator "knew or reasonably should have known" of the violation. On June 8, 2021 Claimant filed an Application for Hearing on the issue of penalties for Respondents' violation of §8-43-204(7), C.R.S. Specifically, the settlement proceeds were due by April 22, 2021 but not received until May 6, 2021. As the preceding chronology reflects, Respondents corrected any error by providing Claimant with a replacement check when it became aware that the initial check was apparently lost in the mail. Respondents cured any violation by promptly canceling the April 13, 2021 check and reissuing a replacement check. Claimant received the replacement check on May 6, 2021 or more than a month before filing the Application for Hearing. Respondents thus cured any violation well before the 20 day limit specified in §8-43-304(4), C.R.S. Accordingly, Claimant's request for penalties pursuant to §8-43-304(1), C.R.S. based on Respondents' failure to pay a lump sum settlement award within 15 calendar days pursuant to §8-43-204(7), C.R.S. is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for penalties pursuant to §8-43-304(1), C.R.S. based on Respondents' failure to pay a lump sum settlement award within 15 calendar days pursuant to §8-43-204(7), C.R.S. is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NOS. 5-111-600-003 & 5-154-619-003

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that she was injured in the course and scope of her employment while working for Employer on June 22, 2019, the subject of W.C. No. 5-111-600-003 and/or September 12, 2020, the subject of W.C. No. 5-154-619-003..

II. Whether Claimant has proven by a preponderance of the evidence that she is entitled to medical benefits that are reasonably necessary and related to the injuries or occupational diseases, if found compensable.

PROCEDURAL HISTORY

Claimant filed an Application for Hearing on November 6, 2020 on issues that included compensability, medical benefits that are authorized, reasonably necessary and related to the injury, change of physician, termination of benefits as well as temporary total and temporary partial disability benefits for the alleged claim of June 22, 2019, W.C. No. 5-111-600. A second application was filed on the same issues on December 10, 2020. Respondents filed a Response to Application for Hearing on January 8, 2021on the same issues, but adding causation, relatedness, apportionment, offsets, overpayment, termination for cause or responsible for termination. Claimant filed a third Application for Hearing on April 21, 2021 on the same issues and Respondents filed a responsive pleading on May 21, 2021 listing the same issues.

On December 15, 2020 Claimant filed an Application for Hearing with regard to the alleged claim of September 12, 2020, for W.C. No. 5-154-619. This application listed similar issues as for the prior claim but added penalties for failure to admit or deny within the statutory period. Respondents filed a Response to Application for Hearing on January 14, 2021 also listing similar issues as the prior claim filing. A second application was filed on April 21, 2021 and a response on May 21, 2021.

The parties indicated that the claims were consolidated for hearing purposes.

STIPULATIONS

The parties stipulated to reserve the issues of temporary total disability, temporary partial disability and penalties.

The parties also agreed that Claimant had requested a change of physician to Dr. Roberta Anderson Oeser, which Respondents granted.

FINDINGS OF FACT

Based on the evidence presented, the ALJ makes the following findings of fact:

Claimant's testimony

1. Claimant was 54 years old at the time of the hearing. Claimant worked in the mail room for Employer, a newsprint company, for approximately 26 years. She always worked for Employer in the same department but performed multiple jobs within the department. At the time of the hearing, she was not working. When she initially started working for Employer, Claimant worked on a press job line at night, stacking the newspapers, in bundles, onto pallets from the assembly line, and depending on the orders, the pallet would hold up to sixty or seventy bundles, of up to 120 newspapers per bundle, on a pallet.

2. In more recent years, Claimant would work the entire shift as a dolly/lift worker or at the insert machine operator. Claimant would use a dolly, also called a "forklift," which was battery operated. The dolly had forks that would lift pallets or skids full of newspapers, or preprint materials, magazines and advertisements that were inserted into the newspapers. In order for the dolly to move forward, Claimant would twist the handle, like the handle of a motorcycle. To go forward she would twist it forward with her right hand, and if going backward, she twisted the handle backward. When moving sideways, Claimant had to move the handlebar from side to side. It was difficult to maneuver, because the handle was very stiff or hard and Claimant would have a difficult time maneuvering the dolly in order to operate it, frequently using her whole body force. This caused pain in her arms and her shoulders due to the force and torqueing required.

3. With the left hand Claimant held on to the dolly, in order not to fall off the dolly, to keep herself steady. The dolly had wheels that did not always move easily. When the handle would get stuck, Claimant would have to push and pull forcefully, including having to use both hands and arms to make the dolly to go forward, exerting full body force. Claimant generally would be standing on the dolly, while operating it to move the pallets from the press line to the insert machine, all the time pushing the alarm button to let others know that she was moving.

4. The spaces between the insert machines were very small and it was hard to manage to move the dolly close to the insert machine. As an example, the dolly in the photo at Exhibit 19, p. 137, was moving an extra-large pallet made of wood. The inserts on the pallet were advertisements that were to be inserted into the newspapers that were called mains (the newspapers) and had sections.

5. The lifts were even harder to move than the dolly. The lifts were used to raise the full pallets of materials to the level of the insert machine heads. Claimant would have an extremely hard time because they were difficult to line up the lifts to get the lift's forks into the pallets. Claimant would push and pull the lifts to accommodate the pallets. They were hard to maneuver, because on the front they have two wheels but on the back they only had one. There was also a lot of debris from the paper and plastic materials around the work areas, which would wrap around the wheels and the wheels would get stuck. Claimant had to use force to move the lifts and sometimes would have to get the plastic off the wheels with a pocketknife. The videos showed that the bar of the lift was

above Claimant’s chest height while she was pushing the empty lift was, Claimant was leaning forward with her body to move the lift.

6. Claimant had to position the lifts in very constricted, tight areas beside the insert machine, and the pallets were very hard to place, with the lifts, in the small areas. Claimant would have to apply a lot of body force to push the lifts, and pull them manually until they lined up. Claimant stated that, during the time she hurt her arms and shoulders, she would change a pallet every ten to fifteen minutes, then would operate the insert machine until the pallets were empty of materials, starting the process all over again. This was constant throughout her shift. The lifts did have a battery to make the pallets go up to the level of the insert machine.

7. There were multiple lifts that had to be maneuvered because there were up to 48 insert machine heads that needed to be provided with paper products. Each head required a different lift. Each lift was different and there were some that were easier to manage than others. It really depended on what was being run during the time that Claimant would work. Claimant stated that there were approximately six to eight or more lifts per machine that had to be placed at each head of the machine to make sure each of the inserts were inserted into the mains (newspaper sections). The lift would typically jump when they were not loaded with a full pallet, and Claimant had to control the lift’s movement with brute force, with her hands and arms. The lift had a plate to push or pull to operate while standing on the floor, behind the lift.

8. Claimant would also work the insert machine position for other workers when they were on vacation or required a break. The insert machine had multiple heads that required different pallets loaded with the mains and the different preprint advertisements to insert in the newspapers, including the advertisements, or whatever was being run, which were approximately 13,000 to 14,000 newspapers per hour. The newspaper bundles were taken off the pallets, then loaded to the insert machines. She would take half a bundle with the left hand, place it on the jogger then move the bundle to the right hand to place it on the insert machine with her right hand extended.

9. Claimant would move the pallets manually once the pallets were empty of materials that had been loaded to the insert machine. She would stack the pallets in another area up to eight or nine high, by the type of pallet, plastic upon plastic, wood upon wood. The plastic pallets were heavy, but the wooden ones were even heavier. She had to pick them up by hand, because the space was too small to be able to use the dolly. They were not moved with the lift, because moving the lift was too heavy and hard. She would be responsible for moving the pallets, depending on the orders that were made, because each newspaper required different inserts, depending on the area they were to be sent to. She had to keep track of the orders and change the pallets as necessary. Then Claimant would bring in the next full pallet with the dolly to the insert machine, where she would use the lift to bring the full pallet next to the insert machine. Any leftovers on the pallets that were not used, depending on the order, would go to the warehouse. At the end of the shift, she would use the dolly to take away the stacks of the empty pallets

to make sure that her area was clean, including the cardboard, unused or damaged product, debris and plastic.

10. The process was to take the pallet from the palletizer/press line area and take the bundled mains (bundles of 45-50 lbs. each) to the insert machine, where the magazines or preprints were to be inserted into the mains. The bundled mains and the insert preprints would be loaded onto the hoppers of at least three different heads. Claimant would take the newspapers or the preprinted advertisements or magazines, by pulling them from the pallet from the left side, twisting towards the right to stack them onto the hopper so they could be fed into the head of the insert machine. All the while Claimant would take about half of a bundle, maneuvering the stack on to the jogger that vibrated, to make sure that the paper was arranged and smooth. But the jogger table and insert machine were higher than waist level for her, so her upper arm had to be up higher and at an uncomfortable and awkward level, putting pressure on her shoulders to do a lot of the work. The work was fast paced and constant. The process was continuous because if the machine stopped, there were problems on the line and the insert machine would not work properly.

11. The job was hard and intensive. She would normally start work at 5:30 a.m. five days a week when she was working mornings, but it varied. Sometimes she would work mornings, sometimes she would work afternoons. And when they worked overtime, she would work six days a week. She would know what time they would start but did not know what time they would stop. They had two breaks and a lunch break.

12. Claimant never recalled having any down time, because she was always sent to clean up the areas, throw away the trash, or organize the metal carts for single capping, or take away the cardboard from the palletizers. There was always something that they would have her doing. She would also do the stack down, when the palletizer was not functioning.

13. Claimant estimated that an empty pallet weighed approximately 40 lbs., depending on the pallet, medium, large or extra-large.

14. On June 22, 2019 Claimant was working for Employer as a dolly/lift operator and on the insert machine, both, when Claimant initially started having symptoms in her bilateral upper extremities while working the dolly, the lift and insert machine. She reported to the Union Chairman that she was having pain in both arms and shoulders. Her Employer would give her pain medication and she would continue working. Eventually Claimant advised the Union Chairman she needed medical attention and he advised her to report the injury formally with her supervisor.

15. By the end of June the pain was so severe that she reported the June 22, 2019 injury to her supervisor and asked for medical care. She had tendon pain in her arms, they were swollen and felt hard, especially when she used her arms pushing and pulling the machinery, then would perform the insert job. She had difficulty using her arms to lift things, and drive. Her right shoulder was a little lower than the left, less injured,

shoulder. Claimant reported bilateral arm and shoulder problems. She was sent to Dr. Miller as he was the only doctor that would see her without an appointment. Claimant stated that Dr. Miller evaluated her, told her she had tendonitis, sent her for therapy, and provided her with restrictions, which Employer was unable to accommodate. She stated that the therapy Dr. Miller provided was only for the arms, not the shoulders.

16. Claimant recalled that a job site evaluation was performed on August 8, 2019 and Claimant felt much pressured by the individual that did the evaluation. She was advised that she had to do the evaluation despite having symptoms in her arms or restriction, as Dr. Miller had requested the evaluation.

17. Claimant was not happy with the care provided by Dr. Miller because he first provided a diagnosis, and provided restrictions. Then Dr. Miller advised that she did not have any work related problems. Claimant conveyed she believed Dr. Miller had called her a liar, mistreated her and spoke to her in a bad way, telling her to call her own insurance.

18. Claimant took a letter from her Kaiser physician to her Employer with her restrictions. The floor supervisor, treated her poorly in front of all her coworkers. He refused to take the paper from her doctor, a specialist that restricted her from employment for approximately eight weeks. Claimant also saw a different specialist at Kaiser, who also limited her work. Following the treatment at Kaiser, Claimant was able to continue working without restrictions for over a year despite some continuing symptoms. Claimant was off work for a period of time from approximately July through September 2019. Claimant was not paid for the time off.

19. In September 2020 Claimant was assigned to working the press job. The press job required Claimant to lift the bundles of newspapers off the conveyor, which was low, and stack them on the pallets, when the palletizers were broken. There were two palletizers. The two palletizers were frequently broken and they were probably not working one quarter of the time.

20. The conveyor was by the place where they stack the newspapers that come from the pressroom. The stacker was a machine that stacks the newspapers, then ties the stack of completed newspapers into bundles. Then the bundles come out of the stacker to the conveyor belt. The conveyor belt takes the bundles to the palletizes. A person does not generally move the newspapers from the conveyor to the palletizer. The palletizer stacks the bundles onto the pallets and gets the pallets ready with plastic for shipping, to where they have to go. There were approximately twelve bundles flat onto a pallet that were stacked five or six bundles high. There was a smaller conveyor belt that took the pallets to the palletizer. The quantity on each pallet depended on each order of newspapers. The bundles generally held from 80 to 120 copies of completed newspapers, which were run through the press on Saturdays. The bundles would weigh between 45 to 50 lbs.

21. When the palletizers would break or were not functioning, the conveyor belt stopped, and Claimant had to pull the newspaper bundles off the conveyor and place the bundles onto the pallets by hand.

22. Claimant injured herself on September 12, 2020. She had already been working on the insert machine that day, and doing the dolly and lift work as well for a few hours, when she was sent to the press job. On that day, the palletizer was broken, and Claimant was working on the one line of the newspapers that carried two different extra magazines and it was very heavy and awkward to move the bundles. These bundles consisted of up to twelve newspapers only because they were so large. When she was working transferring the bundles in the press job, the pain in her arms and right shoulder were aggravated by the work.

23. Claimant reached a point of no longer being able to continue working on September 26, 2020. She had to stack the heavy bundles onto the pallets by hand and the bundles were large and awkward for her to handle. Claimant stated that all of her jobs are repetitive in nature, requiring full body force, awkward positions and twisting.

24. On September 26, 2020 the pain was in the arms and the right shoulder was so intense that Claimant reported her September 12, 2020 injury to her supervisor. Claimant was crying as she could not perform the work as the pain was so severe. Claimant asked for medical care but was told that she had to wait until the following Monday to be attended by Dr. Ogden. Dr. Ogden did not really help her.

25. Claimant last worked September 26, 2020. Employer discontinued her health insurance, so she no longer had any way to obtain care for her injuries, and no one paid her for her lost time from work. She had no way to pay for health care insurance at this time. She stated that there was no light duty work available.

26. Lastly, the equipment in the mail room was not properly maintained and she had to work despite the poorly operating machines. The lifts, did not have the right type of wheels or they were not fully charged, causing the worker to have to push and pull them with their whole body force. They would have low pressure of the wheels and had product wrapped around the wheels that Claimant had to clean out herself despite multiple reports to her employer that the lifts were not operating properly.

27. Since September of 2020, her pain complaints have changed a little. The swelling was reduced, but still continued with some symptoms. She was advised by her doctor that she has something wrong. She feels a pain deep in her right shoulder, especially when she raises the right arm even to shoulder level. Her doctor advised that her injuries are due to both the heavy and repetitive nature of her work. But because she has not been working and has no insurance or the ability to get insurance, she has been unable to get the therapy she needs to get better but requested further help.

28. The pain that she felt at the time of the hearing was better than before but she continued to have some pain. It had gotten better because she had not been working,

not been lifting heavy bundles of newspapers, driving the stiff to operate dolly, pushing and pulling the lifts, or loading the insert machines. She was avoiding doing anything that would aggravate her bilateral upper extremities as she was unable to afford medical care.

Testimony of Claimant's Coworker, Mr. M.

29. Claimant's coworker, Mr. M., testified during the hearing and did so consistent with Claimant, but with more detailed descriptions of the multiple jobs. He testified that he had worked for Employer in the mail room for approximately 36 years. He was familiar with Claimant, as he worked with Claimant for the time she had worked there, over 25 years. He worked for Employer around the time she was injured but may not have been there on the date she claimed the injury as he did not particularly recall the specific date. He did know she had problems with both arms and had made claims.

30. He was very familiar with the requirements of each of the jobs or positions in the mail room, as he had performed each and every one of them during his time working for Employer. Now that there were less workers, workers performed multiple jobs throughout the day. So a dolly worker would also do the insert machine work.

31. When the newspapers were transported from the pressroom, they were either sent to the insert machines for the inserts or they were stacked in bundles to be loaded onto a pallet to be moved directly to the loading areas for the trucks. Not all newspapers had inserts. For those newspapers that had inserts, the newspapers had to be transported to the insert machine.

32. When working press, the worker would not generally be working with the insert machines. The pressroom sent the newspapers on a conveyor that went to a stacker, then went to a tying machine, then proceeded to a palletizer. If everything was working well, then the process ran on its own, almost automatically. If the palletizers were broken, then the worker needed to stack the bundles of newspapers on the skids by hand. The bundles were heavy, and awkward to handle. The company did not always have palletizers. They were brought into the company approximately 10 years ago. Before that they had to stack the newspapers on the skids by hand to transport them to the insert machine. The worker had to stacking them down from the line, then picking them up, and arrange them on the pallet.

33. Mr. M. stated that the dolly position, required the worker to insert the dolly forks into the skids, and move the dolly and full pallet to the insert machine. The dolly was a hand jack, with two forks, and the worker could stand on it, and had a handle that can move to steer the jack. When working on dolly, the worker would maneuver the dolly with the right hand, and pick up the skids that are full of products, like ads or preprints, which were to be inserted into the newspapers. The skids were parked near the insert machines. The dolly was hardest on the shoulders, and if you hit the crack in the concrete, or hit water or oil, or chunk of wood from a broken skid on the floor, that could jerk the machine, pulling on the shoulder. There was some vibration while operating a dolly.

34. Once the worker used the dolly to bring the pallets full of materials close up to the insert machine, they would pull the dolly out and then tug, pull and push the lift to put the lift forks into the skid, which were sometimes difficult to line up. And if it did not hit the skid just right, the body takes a beating, throwing the body weight into it to move the lift into place. It really depended on the lift. The lifts were always used when performing the dolly job. Some of the lifts were old and not well maintained, so they were very difficult to maneuver. The machines had no preventative maintenance. For the last several years, the Company had been working on a skeleton crew. Nothing was lubed, including the wheels of the dolly or the lifts. They did not get worked upon until they would break down.

35. When doing the dolly job, the product was moved into such a small place between the insert machines, that was extremely difficult, that was why the worker had to push, pull and jog the lifts into place. They were tight fits for the lift to maneuver. The lifts have two legs and the two forks, to maneuver between the machines. The worker had to use his arms and shoulders, pulling and tugging and jerking, just to move the pallet an inch so that they would line up the pallet next to the insert machine.

36. He stated that the worker needed to unwrap or cut off the plastic wrapping from the product materials on the skid or pallet, stripping the product down, including cutting the straps that kept the materials on the skid. With regard to the advertising materials, because the product was frequently slippery, the plastic was sometimes only stripped down as far as needed to handle the product so that the materials did not slip off the skid. The lift itself was battery operated so that the lift would raise the pallet of materials to the level of the insert machine.

37. The job of insert machine operator required the worker to take the product off the skid in bundles and feed it into the insert machine head. The skid was on the left of the worker. The worker would take a stack of product with one hand, the materials were fanned out, then would be place on the jogging machine, to jog the cut or stack of materials, then lift the bundle of materials from the jogging machine and placed the materials into the insert machine head. The jogger was a table that vibrated to get the stack of product as smooth as possible. The jogger was tough on the arms because of the vibration that was constant, to smooth out the product while working on the insert machine. Then, with one hand holding the bundle of product, and the other hand controlling or supporting the materials to where it was placed into the insert machine or the hopper. He also stated that the height of the jogger, hopper and insert machine required him to load the insert machine at waist height but that Claimant was much shorter and would be required to use her shoulders much more. From there, the machine would take the product, page by page, to insert into the newspapers.

38. In order to accomplish this, the worker had to have their hand twisted into a downward position, which was very awkward. Mr. M demonstrated that he had his hand in a supinating position with the wrist fully extended backward while twisting or abducting the wrist. He explained that the materials were held in that position in order to feed them into the machine. The hopper was a table that held multiple materials that would feed

directly into the head of the insert machine and would allow the worker to feed a lot more product to the insert machine. When working on the insert machine, feeding the hopper, the paper or the product was always moved by hand. Generally, the workers used both hands, though it depended on the worker. The workers that had large hands would be able to accomplish the transfer of the insert machine product with one hand, but probably not Claimant.

39. After the pallet was empty of preprinted materials or product, then the worker had to move the lift out, take the pallet manually off the lift forks, move it to another area. The worker stacked the pallets one on top of the other. Once stalked, ther worker would take the dolly or a forklift to move the pallet stack. The dolly would bring in a new full pallet of product or advertisements towards the insert machine, place the pallet down close to the insert machine and the lift, insert the forks, then push, jog and pull the lift, until it was placed next to the insert machine to start all over again. The lift was so that the worker could bring the product to the level of the machine as the pallet was emptied of material, to save the worker from bending over constantly.

40. The height of the insert machine was approximately about four and a half feet tall. The hands get abused because of all the lifting in awkward positions, pulling the product from the skid, putting it on the jogger, then extending the arms with the product to feed the insert machine. It takes hours to do the job, sometimes all day. People have gotten injured because they do it for hours at a time for years.

41. Mr. M. stated that he weighed multiple items, including the lift, the full skids and the different types of pallets the day before the hearing. The lift was approximately 1200 lbs. and when you included the skid and the materials of approximately 1400 lbs., it was, literally, over a ton of weight that had to be moved into position so it would line up to the insert machine head or the hopper. Most of the kids weigh approximately 35 lbs., though wood skids could weight upwards of 100 lbs. or more when wet but that was rare. The skids were of various sizes.

42. Employer had no light duty in the mail room that he knew of because everyone had to perform the job they were assigned. Down time was very rare. The supervisors would find some things to do when the workers had finished their particular jobs, such loading the bailer. The worker would have to pick up bundles, while standing on stacks of skids, to throw the bundles into the bailer. They also had a job on a “bulk out” line. Some organizations or advertisers did not like their products inserted into the newspapers by the machine. Those products were counted, bundled up by weight and tied up, then sent out as a bulk or bundle. The worker had to pick the advertising materials in stalks, weigh them up, and then stack them all together. The stacks would weigh approximately 25 lbs.

43. There were also times when the workers would have over 300 hours of overtime a year but that was not as common these days, but there would still have occasional mandatory overtime.

44. The company used to run approximately 700,000 newspapers a day. Now they run approximately 130,000 per day due to the circulation loss. So now the workers do a wide variety of jobs and are not assigned to just one job.

Pleadings, Medical Records and Employment Records

45. An Employers' First Report of Injury (FROI) dated July 2, 2019 stated that Claimant reported a work injury caused by an occupational exposure to repetitive motion on June 22, 2019, injuring her right shoulder and elbow.

46. Claimant was first evaluated by Dr. Matt Miller on July 3, 2019 for complaints of arm and shoulder pain. Dr. Miller noted that the elbow pain was the most concerning and that Claimant also had pain in the right shoulder and trapezius region as well as the neck. He noted that Claimant was moving a lot of product in the mail room. Upon exam, he noted tenderness in the neck, paracervical and trapezius muscles. He noted good motor strength in the right shoulder though a positive impingement test, tenderness at the lateral epicondyle and medial epicondyle, and a negative Tinel's. On neurological exam, he found decreased sensation in the entire right hand. He assessed bilateral medial epicondylitis but stated that causation was unclear. Dr. Miller provided work restrictions of lifting, pushing, and pulling up to ten (10) pounds, ordered physical therapy at Genex Services, chiropractic treatment with Dr. Justin Houck, lab work, and requested a work site evaluation to assess risk factors.

47. Claimant was seen at Houck Chiropractic from July 8, 2019 through July 29, 2019 for bilateral upper extremity complaints.

48. Dr. Miller reevaluated Claimant on July 18, 2019 and continued the same diagnosis. Examination showed diffuse tenderness to palpation of both extremities from the shoulder to the wrist. He discontinued therapy but continued the restrictions pending the work site evaluation (WSE).

49. Ms. Kelly Harris, a nurse case manager and ergonomic evaluator from the third party administrator for Insurer performed a Worksite Job Evaluation (WSE) on August 8, 2019. She reported that Claimant stated she had a gradual onset of bilateral shoulder, elbow and hand/wrist pain which progressed over the month of June to the point she reported a workers' compensation claim. Ms. Harris concluded that Claimant did not have any primary or secondary risk factors as required by the Medical Treatment Guidelines under W.C.R.P. Rule 17, Exhibit 5, pp. 20-22. The WSE only minimally describes the position of dolly worker/lift operator (less than one half page of the less than 3 page report), stating Claimant would only cover at the insert machine for breaks. It does not describe the motions, measurements, Claimant's statue or requirements. It denotes observation that Claimant would steer the dolly by using her body to lean into the steering handle and that she had to pull and push the lift into place, that the hydraulic lift was to raise the pallets to the level of the insert machine.

50. On August 13, 2019, following work site evaluation, Dr. Miller continued to diagnose epicondylitis and shoulder pain of unspecified etiology. He expected Claimant

to have some improvement while off work for 6 weeks. However, Claimant reported that the WSE worsened her condition. Dr. Miller stated that he saw a video of the machines that she operated and did not think they would cause an overuse injury. Dr. Miller released Claimant at maximum medical improvement, without impairment or restrictions, stating that if she needed work restrictions she should go to her personal care provider and that it was more an issue of fitness for duty than work related complaints. Claimant left upset from the appointment.

51. Respondents filed a Notice of Contest on August 14, 2019.

52. Claimant proceeded with care at Kaiser Permanente under Dr. Terri Richardson, on August 20, 2019, who diagnosed bilateral epicondylitis and right shoulder joint pain. Claimant reported that she felt disrespected by the workers' compensation physician. Claimant advised that she lifted a lot at product. Dr. Richardson ordered x-rays and referred Claimant to orthopedics.

53. On September 4, 2019 she was evaluated by Dr. Kimberly Chhor for the bilateral elbow strain. She reported doing manual labor lifting, pushing, and pulling pallets for Employer for "several years." Examination of the bilateral elbows demonstrated skin was intact, had mild swelling over bilateral medial and lateral condyles, pain with range of motion, tenderness over bilateral medial and lateral condyles. Pain was worsened with elbow and wrist range of motion, but grossly neurovascularly intact. She advised Claimant that therapy may take several months before she would show improvement. Dr. Chhor diagnosed tendinitis and injected the bilateral elbows with cortisone, due to tendinitis, and provided work restrictions of no lifting, pushing, or pulling for 2 weeks.

54. Claimant also saw Dr. Rupert Galvez on September 4, 2019 for an orthopedic evaluation of the right shoulder. X-rays showed mild acromioclavicular osteoarthritis and a preserved subacromial space. Claimant was diagnosed with rotator cuff syndrome with associated tendinopathy, provided a cortisone injection and work restrictions. He stated that if Claimant still continued with significant symptoms he would proceed with an MRI of the right shoulder to evaluate for rotator cuff tear.

55. Claimant had a telemedicine appointment with Dr. Galvez on March 19, 2020. Claimant reported that the injection really did seem to help. She reported she was having difficulty with ranges of motion above shoulder height, resistance, lifting even doing activities of daily living, felt that there was swelling around the shoulder, and was frustrated as she had difficulty working because of her ongoing shoulder and elbow pain. He assessed right rotator cuff syndrome, differential diagnoses included degenerative partial rotator cuff tear, impingement, myofascial pain syndrome, overuse from repetitive motions at work. Dr. Galvez ordered an MRI at that time and stated that Claimant may require surgical consultation depending on the MRI findings.

56. Claimant also had a telemedicine appointment on April 8, 2020 with Dr. Chhor to request further injections for her bilateral elbow tendinitis, but could not proceed due to loss of insurance. Dr. Chhor provided her with time off work through June 3, 2020. She stated that after the prior injections effects wore off Claimant had persistent pain and

stated she had difficulty working. Dr. Chhor provided work restrictions of 8 weeks of no lifting, pushing or pulling greater than 5 lbs. in hopes that Employer could offer her light duty work. Dr. Chhor encouraged her to work on exercises prescribed by therapy, take anti-inflammatory for pain control, and stated that when she was able to obtain medical insurance with Kaiser again she should call to make an appointment for repeat evaluation and possible steroid injection.

57. On June 23, 2020 Claimant contacted Nurse Brooks at Kaiser requesting a referral to Denver Health as she was no longer an insured member of Kaiser, which was denied.

58. A second FROI was filed with Division on September 28, 2020, which stated that Claimant made a report of injury while loading preprints into the hopper on the insert machine while lifting. The FROI identified strain and swelling of both shoulders and stated it was a specific injury.

59. Claimant was evaluated on September 28, 2020 by Dr. Paul Ogden, when she reported that she had bilateral shoulder and elbow pain that was constant, sharp and burning, aggravated by work. He noted that the current exacerbation started as of September 12, 2020. Exam showed Claimant limited range of motion of the shoulders and elbows. Claimant had tenderness over the anterior shoulder, positive Speed's test, and diffuse tender points over the bilateral elbows and forearms with a presentation consistent with bilateral tendinitis as well as shoulder strain. Though he stated that causality was uncertain, Dr. Ogden also noted that the Claimant's presentation was consistent with bicipital tendinitis as well as shoulder strain and elbow and forearm strain from the patient's mechanism of work. He stated that the objective findings were consistent with a history and/or work related mechanism of injury/illness. He provided work restrictions of pushing, pulling, carrying and lifting up to 15 lbs. with both arms; and no above shoulder level work.

60. On October 15, 2021 Claimant returned to Dr. Ogden's clinic, and was seen by Jocelyn Cavender, PA, who provided Celebrex and ordered home exercises for the shoulder, neck and elbow. She continued work restrictions and stated that she should do no above the shoulder work. She requested prior medical records but had not yet received them. The diagnosis did not change from what Dr. Ogden had provided.

61. On October 26, 2020 Claimant again returned to Dr. Ogden with continued symptomatic bilateral upper extremity and posterior shoulder symptoms. Claimant described her pain as sharp, achy, throbbing but improved with meds. She was not working at that point due to the restrictions. On exam he found no swelling of the extremities but tenderness of bilateral lateral epicondyle areas. He stated that if the claim was accepted, then they would start physical therapy and psychological treatment, but in the meantime she was to continue light duty activities, which continued throughout November and December, pending a causation determination as Dr. Ogden had not received all past medical records.

62. Claimant filed a Workers' Claim for Compensation on November 24, 2020 stating that both palletizers were down and Claimant had to "stackdown" bundles, injuring her right upper arm, left lower arm and bilateral elbows on September 12, 2020.

63. On December 3, 2020 Claimant attended Dr. Ogden virtually. Claimant reported that the majority of her pain was in her elbows but she continues to have range of motion issues in her shoulders and could not raise her arms above her head. Dr. Ogden noted Claimant "states that she typically pushes, pulls and carries items, typically working at waist level or higher." Dr. Ogden had received the WSE which advised that there were neither primary nor secondary risk factors for cumulative trauma disorder but agreed to confirm it with the employer. Dr. Ogden documented that he had spoken with human resources and confirmed that there had been no change in the job description since it was prepared and that the WSE was accurate. This ALJ found little confirmation that the HR person was personally aware of the actual job requirements nor evidence that Dr. Ogden discussed in detail or confirmed with Claimant if the WSE was an accurate description of all the jobs she performed or was performing on September 12, 2020.

64. On December 21, 2020 Dr. Ogden advised Claimant that it was unlikely that her diffuse symptomology was work related given her 2019 WSE and the fact that the prior claim had been denied. He advised that, if the insurance company accepted the claim, that he would be happy to provide her with care.

65. Respondents filed a Notice of Contest on January 18, 2021.

66. On January 26, 2021 Claimant was evaluated by Dr. Roberta Anderson Oeser of Premier Spine and Pain Institute. Dr. Anderson stated that Claimant presented with complaints of bilateral shoulder pain and bilateral elbow and forearm pain. On exam, Claimant's right shoulder revealed tenderness over the acromioclavicular joint, subacromial space and biceps tendon insertion site, had restricted range of motion most notably with forward flexion, abduction and internal rotation, and a positive impingement with maneuvers. Claimant had a positive Speeds test and Yergason's test on the right. She had tenderness to palpation over the medial and lateral epicondyles. Resisted wrist extension with the forearm supination caused her pain over the right lateral epicondyle. She had resisted wrist flexion with forearm pronation because of pain over the right medial epicondyle. Evaluation of the left shoulder revealed tenderness over the biceps tendon insertion site and acromioclavicular joint. Left shoulder range of motion was mildly restricted with forward flexion and abduction. Speeds test and Yergason's test were mildly positive on the left. She had tenderness over the medial and lateral epicondyles. Resisted wrist extension with forearm supination caused her pain over the lateral epicondyles and forearm extensor mass.

67. After an extensive discussion with the patient regarding her job duties, it was Dr. Anderson Oeser's opinion that Claimant's current symptoms were related to the repetitive nature of her job in addition to vibration from the machines. Dr. Anderson Oeser specifically diagnosed Claimant with strains of the bilateral forearms, strains of the bilateral shoulders, tendinitis of the bilateral shoulders and depression related to the work injuries.

68. Dr. Anderson recommended Claimant proceed with a course of physical therapy to address the bilateral shoulder strains, occipital tendinitis and impingement and occupational therapy for the bilateral elbow and forearms strains. She explained to Claimant the need for her to engage in an active stretching and range of motion program several times per day. She and Claimant reviewed her program in-depth.

69. Claimant was also reporting depressive type symptoms related to her chronic pain. Dr. Anderson recommended that Claimant be seen by Dr. Ledezma for psychological evaluation and treatment to address her chronic pain issues and any underlying depression and anxiety associated with her work injury.

70. A referral was written for her to see Dr. Ledezma and for PT and OT. She further recommended medications but advised Claimant not to take NSAIDs due to GI issues. She provided work restrictions of 15 lbs., no pushing or pulling greater than 20 lbs. and avoid any repetitive or frequent lifting, pushing, pulling or carrying.

71. Claimant had a telemedicine visit with Dr. Anderson Oeser on March 15, 2021 reporting that the topical medications helped control her symptoms, though she had swelling at the elbows and forearm regions. She continued to diagnose strain of the right arm, bicipital tendonitis of the bilateral shoulders and mixed anxiety and depression, and kept her on work restrictions. Dr. Anderson Oeser is found credible.

72. On March 3, 2021 Claimant was evaluated by Dr. Ledezma for the psychological problems including depression and anxiety. Dr. Ledezma took a lengthy history that included that the injections provided by Drs. Galvez and Dr. Chhor did result in improvement in range of motion in her elbows and right shoulder and the benefit, lasted for several months. When the pain returned, Dr. Galvez referred her for an MRI of her shoulders and elbows. However, in March 2020, her hours were cut at work and she lost her insurance coverage. She was unable to have the MRI. Yet, she continued performing the same duties at work.

73. Dr. Ledezma reported that on September 12, 2020, Claimant was, assigned to lift bundles of newspapers to move to pallets. At that point, she was unable to move her arms any longer. On September 26, 2020 she was assigned to load bundles of print paper on a conveyor belt. She again experienced debilitating pain and another accident report was filed. She was referred to Dr. Ogden's office, who stated that she likely had problems with her tendons. Work restrictions were provided as well as medication she was unable to tolerate. Her employers were unable to accommodate her restrictions and took her off work oin September 2020. In January 2021, her care was transferred to Dr. Anderson-Oeser. Following an analysis of Claimant’s complaints she diagnosed adjustment disorder with mixed anxiety and depression, and recommended psychotherapy and antidepressant medication.

Deposition Testimony of Dr. Matt Miller

74. Dr. Miller testified as an expert in occupational medicine. He testified consistent with his medical reports submitted into evidence. He stated that he based his

decision that Claimant’s June 22, 2019 work related claim was not a work related occupational disease based on Claimant’s multiple complaints that were diffuse as well as the WSE issued by Ms. Harris, a representative of the third party administrator. He stated that he knew Ms. Harris from multiple other cases as she was a nurse case manager that was frequently with patients in his office. He stated that he relied on the employer’s statement that the WSE described the Claimant’s job accurately. Dr. Miller stated that he knew Claimant’s job was repetitive in nature but did not get the detailed specifics of the job from Claimant.

75. Dr. Miller also stated that he agreed with Dr. Ogden’s assessment regarding Claimant’s complaints and that they were similar to his findings but that Dr. Ogden had noted that Claimant complained of tingling in both forearms, swelling in the elbows, woke up at night with pain and had decreased range of motion. He also testified that Dr. Ogden reported that the injury of September 12, 2020 started with a specific instance of loading paper, which is different from the report of injury for the 2019 claim. He stated that since Claimant’s symptoms tend to be diffuse, that she may have a systemic condition or an underlying somatization tendency, which is a psychological underlay causing symptoms that are not one hundred percent physical, though real symptoms.

76. Dr. Miller stated that his first diagnosis included possible epicondylitis, which is an inflammation of the tendons at the elbow. He stated that epicondylitis could be caused by a cumulative trauma or an acute injury. He stated that it is also called tennis elbow. It can be caused by a combination of applied force and extension of the arms. He was unable to make an assessment of how long the condition could last as it was variable. He stated that some patients healed in a few weeks while others had a chronic problem.

77. Dr. Miller also stated that Claimant described a very heavy repetitive job, including lifting, moving of a lot or a high volume of product, and had a very physical job, which included driving machinery. He stated that he took a limited description of the job from Claimant and he did not know what kinds of movements she actually performed, as he depended on the WSE to provide that information. He could not recall whether Claimant told him if it was using the machines or the repetitive motion to put the paper in the machines that was the cause of her injury.

Medical Treatment Guidelines

78. W.C.R.P. Rule 17, Exhibit 5, Section D (3) Cumulative Trauma Conditions, effective March 2, 2017 states, in pertinent part, as follows:

> The steps in a medical causation assessment for cumulative trauma conditions are:
>
> **Step 1:** Make a specific and supportable diagnosis. Remember that cumulative trauma, repetitive strain and repetitive motion are not diagnoses. Examples of appropriate diagnoses include: specific tendinopathies, strains, sprains, and mono-neuropathies. Refer to Section F Specific Musculoskeletal Disorders and Section G Specific Peripheral Nerve Disorders for the specific findings of common cumulative trauma conditions. Less common cumulative trauma conditions not listed specifically in these Guidelines are still subject to medical causation assessment.

Step 2: Determine whether the disorder is known to be or is plausibly associated with work. The identification of work-related risk factors is largely based on comparison of the patient's work tasks with risk factors (as described in Section D.3.a Foundations for Evidence of Occupational Relationships and Section D.3.b Using Risk Factors to Determine Causation).

Step 3: Interview the patient to find out whether risk factors are present in sufficient degree and duration to cause or aggravate the condition. Consider any recent change in the frequency or intensity of occupational or non-occupational tasks. In some cases, a formal job site evaluation may be necessary to quantify the actual ergonomic risks. Refer to Section E.6.c Job Site Evaluations.

Step 4: Complete the required match between the risk factors identified in Section D.3.d Risk Factors Definitions Table and the established diagnosis using the system described in Section D.3.b. Remember that preexisting conditions may be aggravated by, or contribute to, exposures lower than those listed on the table. Those preexisting conditions must be determined by the authorized treating physician based on physiologic plausibility.

Step 5: Determine whether a temporal association exists between the workplace risk factors and the onset or aggravation of symptoms.

Step 6: Identify non-occupational diagnoses, such as rheumatoid arthritis, obesity, diabetes, as well as avocational activities, such as golf and tennis. This information can affect the medical causation assessment. It may be applicable when exposure levels are low and the case does not meet evidence-based criteria.

79. Sec. D(3)(a) states that "The clinician is responsible for documenting specific information regarding the force, posture, repetition, and other risk …. Job title alone is not sufficient to determine the risk factors. A job site evaluation is usually necessary."

80. Sec. D(3)(b) states as follows:

The physician should perform the following:

Step 1. Determine the diagnosis.
Using the history, physical examination and supporting studies, a medical diagnosis must be established. Refer to Section F Specific Musculoskeletal Diagnosis and Section G Specific Peripheral Nerve Diagnosis. Less common cumulative trauma conditions not listed specifically in these Guidelines are still subject to medical causation assessment.

Step 2. Clearly define the job duties of the worker.
Do not rely solely on the employer's description of job duties. The worker's description of how they actually perform the duties is extremely important. Job site evaluations are always appropriate, but they are sometimes unnecessary when the physician can identify the job duty that appears to be causing the symptoms and provide a method for ergonomically correcting the activity. Job site evaluations performed to identify risk factors should always include appropriate ergonomic alterations. It may not be possible to recommend ergonomic alterations in industrial settings where the employer is incapable

Analysis of the Facts

81. Claimant and Mr. M credibly testified that the job of insert machine operator required constant reaching for materials, frequently half a bundle of product from the left, brought to the jogger table that vibrates to arrange the product then the product is loaded to the hopper or the head of the insert machine. They credibly testified that this required twisting motions from left to right. Mr. M. credibly stated that the jogger is a table that vibrates in order to align the paper products in order to smooth them out so that they could feed the products correctly and is very hard on the upper extremities. They both credibly testified that the movements of the arms and wrists were awkward, required twisting and reaching, Mr. M. credibly stated that he was of a height that would require him to load the insert machine at waist height but that Claimant was much shorter and would be required to use her shoulders much more. He also testified that when handling product to feed to the head or the hopper, the worker needed to hold the materials with the wrist extended in a pronated posture on a continual basis and then place them on the vibrating table and handle them by holding the opposite hand, all while twisting.

82. Both Claimant and Mr. M. also testified that the use of the lift was very difficult as it would have to be pushed, pulled and jogged into position. The lift was over a ton when loaded with the skid of the products. Mr. M. credibly testified that the job was hard because workers had to use their whole bodies to move either the lift or the dolly because they were poorly maintained and did not run well. Mr. M. confirmed that he worked for the company for approximately 36 years and knew every job required of workers in the mail room and had performed each of the jobs himself during his time working for Employer. Both Claimant and her co-worker were credible.

83. The WSE completed by Ms. Harris does not define each of the types of work that Claimant performed, including that Claimant was sometimes assigned to the job as an insert material worker for a full shift or that she would perform the job of press worker, loading the completed newspaper bundles when the palletizer was not working. Neither did Ms. Harris document the force or pressure or weight in terms of lbs. required to twist the handles of the dolly or the lift plate, or how much was required of the worker to use their body to manhandle the equipment to get it placed in certain positions. Ms. Harris’ report is not credible.

84. Neither Dr. Miller nor Dr. Ogden followed the Medical Treatment Guidelines in assessing analyzing the causation of Claimant’s injuries or the risk factors in this matter or apply the steps required here. While Dr. Miller ordered a work site evaluation, he did not independently confirm or obtain specifics of the job requirements from Claimant in order to assess specifically the activities and the extent of the activities Claimant performed. Neither are credible.

85. Further, in reviewing the records, and following the care received from both Drs. Galvez and Chhor, they stated that it was their opinions that Claimant’s strain and tendinitis were related to the repetitive motion, work environment and working conditions. They both provided care in the form of injections on September 4, 2019. Their records documented that the injections, in fact, assisted Claimant with the symptoms of the

bilateral elbows and shoulders, contrary to Dr. Ogden's assessment. This is documented specifically by Dr. Galvez on March 19, 2020 and Dr. Chhor on April 8, 2020, when Claimant requested further injections but was unable to proceed as she had lost her insurance. This is also supported by the fact that Claimant returned to work in September of 2019 and continued to work for Employer through September 2020 when she was provided a job lifting heavy bundles on the press line and sustained further strain of her upper extremities, aggravating her prior work related occupational disease. This is also supported by the history taken by Dr. Ledezma.

86. Dr. Anderson Oeser provided an in-depth evaluation and assessment that is more credible than the contrary opinions of Drs. Miller and Ogden. Dr. Anderson Oeser is found to be credible.

CONCLUSIONS OF LAW

Based on these findings of fact, the Judge draws the following conclusions of law:

A. General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the claimant's rights nor in favor of the rights of the respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the analysis of the findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office (ICAO)*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The credibility attributed to expert medical opinion on the issue of causation is within the ALJ's province as fact-finder. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Burden of Proof

The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. Sections. 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000; *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979; *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

C. Compensability

A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. Section 8-41-301(1)(b), C.R.S. (2020); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course" of employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *Horodyskyj v. Karania*n, 32 P.3d 470, 475 (Colo. 2001).

There is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). Rather, it is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. Section 8-43-201, C.R.S.; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989). The determination of whether there is a sufficient nexus or causal relationship between a Claimant's employment and the injury is one of fact and one that the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del*

Valle, 934 P.2d 861 (Colo. App. 1996). When a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *H & H Warehouse v. Vicory, supra.* A preexisting condition or susceptibility to injury does not disqualify a claim if the work related injury aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004).

The Act imposes additional requirements for liability of an occupational disease beyond the "arising out of" and "course and scope" requirements. A compensable occupational disease must meet each element of the four-part test mandated by § 8-40-201(14), C.R.S. which defines an occupational disease as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

The equal exposure element effectuates the "peculiar risk" test and requires that the injurious hazards associated with the employment be more prevalent in the workplace than in everyday life or other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The claimant "must be exposed by his or her employment to the risk causing the disease in a measurably greater degree and in a substantially different manner than are persons in employment generally." *Id.* at 824. The hazard of employment need not be the sole cause of the disease, but must cause, intensify, or aggravate the condition "to some reasonable degree." *Id*. The mere fact an employee experiences symptoms while working does not compel an inference the work caused the condition. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, October 27, 2008). There is no presumption that a condition which manifests at work arose out of the employment. Rather, the Claimant must prove a direct causal relationship between the employment and the injury. Section 8-43-201; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989). The question of whether a claimant has proven that a particular disease was caused by a work-related hazard is one of fact for determination by the ALJ. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The determination of whether there is a sufficient causal relationship between the claimant's employment and the injury or disease is also one of fact, which the ALJ must determine based on the totality of the circumstances. *Delta Drywall v. Industrial Claim Appeals Office*, 868 P.2d 1155 (Colo. App. 1993).

The Division has adopted *Medical Treatment Guidelines* (MTG) to advance the statutory mandate to assure quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers. W.C.R.P. 17, 7 Code Colo. Regs. 1101-3. The Division's Guidelines were established by the Director pursuant to an express grant of statutory authority. See § 8-42-101(3.5)(a)(II), C.R.S. Exhibit 5 of Rule 17 specifically addresses Cumulative Trauma Conditions (CTD MTG), and was most recently updated in December 2016 (effective March 2, 2017). Pursuant to Sec. 8-42-101(3)(b) and W.C.R.P. 17-2(A), medical providers must use the MTG when furnishing medical treatment. In *Hall v. Industrial Claim Appeals Office*, 74 P.3d 459 (Colo. App. 2003) the court noted that the Guidelines are to be used by health care practitioners when furnishing medical aid under the Workers' Compensation Act. See Section 8-42-101(3)(b), C.R.S. The ALJ may consider the MTG as an evidentiary tool but is not bound by the MTG when making determination of causation or when determining if requested medical treatment is reasonably necessary or injury related. Sec.8-43-201(3); *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011).

The Guidelines are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office,* 111 P.3d 549 (Colo. App. 2005). However, the compensable nature of the claimant's industrial injury or disease is not controlled by the application of the Guidelines. In determining the compensability of a claim, an ALJ is not bound by any medical opinion, even if it is unrefuted. *Indus. Commission v. Riley*, 165 Colo. 586, 591, 441 P.2d 3, 5 (1968*); Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). Rather, the determination of the compensable nature of an alleged occupational disease remains controlled by the Workers' Compensation Act and by relevant case law. The claimant sustains an occupational disease when the injury is the incident of the work, or a result of exposure occasioned by the nature of the work and does not come from a hazard to which the worker would have been equally exposed outside of the employment.

While it is appropriate to consider the Guidelines on the question of diagnosis and cause of the claimant's condition, even assuming there might have been some deviation from the Guidelines here, it does not compel the fact finder to disregard the opinion of that medical expert on the issue of the causal connection between a work-related injury and a particular medical condition. See *Eldi v. Montgomery Ward*, W. C. No. 3-757-021 (October 30, 1998); *Jones v. T.T.C. Illinois, Inc.,* W.C. No. 4-503-150 (May 5, 2006).

a. June 22, 2019 Occupational Disease Claim, W.C. No. 5-111—600

Here, the ALJ credited Dr. Chhor and Dr. Galvez with regard to the work-related occupational disease exposure and resolved the conflicts in the evidence in favor of Claimant with regard to the June 22, 2019 claim under W.C. No. 5-111-600. As found, Claimant proved she suffered a compensable occupational disease consisting of soft tissue strains and tendinitis affecting her bilateral upper extremities.

In fact, the CTD MTG explicitly recognizes “strains” and “tendinopathies” as “examples of appropriate diagnoses.” See W.C.R.P. Rule 17, Exhibit 5, Sec. (D)(3). The injury resulted directly from Claimant’s work activities and not from any hazard to which Claimant was exposed outside her job, as Claimant testified that she did not perform strenuous activities outside of her work. Claimant credibly testified that she would use both significant force as well as awkward movements to perform her various jobs.

The WSE was not credible as it failed to accurately document the types of movements Claimant performed while working her jobs as a dolly/lift operator, the job of insert machine worker or the press job. Claimant testified that the force and movement required to operate the dolly was significant and hard. Ms. Harris' Job Evaluation Report failed to document the angle or degree of the movement required to maneuver the handles of the machines. She failed to document what angle Claimant was required to supinate and pronate her wrist while loading a hopper or the head of the insert machine. She failed to document the movement and angles required to pick up the bundles of newspapers or inserts from the skid, the twisting of the arm when arranging the bundles on the "jogger" which vibrated, or the twisting of the arm when loading the insert machine head. Another critical failure is that she did not document the height of the machine and how that would affect Claimant's posture or repetitive activities. Ms. Harris and her Job Evaluation are found not to be credible.

As found, Claimant's co-worker credibly testified that the job of dolly/lift was very hard. He credibly stated that the dolly required forceful movement of the handles forward and backward, side to side, and jogging of the body when driving, affecting the shoulders. He credibly testified that using the, often poorly maintained, lifts required heavy pushing, pulling and jogging of the lifts into place and that these machines would involve upward of a ton of weight. The co-worker credibly stated that it often involved use of full body force to get them to work and move them where they needed to be placed.

As found, Respondents' reliance on the CTD MTG causation algorithm in this case is misplaced because Claimant's credible diagnosis is as provided by Dr. Chhor and Dr. Galvez of tendinitis and strains. The CTD MTG causation tables under W.C.R.P. Rule 17, Exhibit 5, Sec. D(3)(e) does not account for these diagnosis. Accordingly, the causation tables are not particularly helpful in determining the cause of Claimant's soft-tissue upper extremity strains.[1] The MTG CTD causation matrix provides a quick reference to available empirical data regarding the listed CTDs. It does not definitively limit the universe of potentially work-related conditions. The ALJ knows of no authority to support Dr. Miller's opinion that the Claimant's conditions are not work related or that only those diagnoses listed in the CTD causation tables are eligible for coverage in a workers' compensation claim. The ALJ is not persuaded the Division intended to foreclose compensation for non-listed medical conditions if Claimant otherwise satisfies the statutory requirements for a compensable occupational disease. Indeed, such a rule would be contrary to the Act and void. *Reyes v. JBS USA LLC,* W.C. No. 4-968-907-04 (December 4, 2017) (notwithstanding the MTGs, "determination of the compensable nature of an injury remains controlled by the Workers' Compensation Act and by relevant case law").

[1] Section D(3)(a) of the CTD MTG concedes, "there are few studies which address less common musculoskeletal diagnoses" other than those listed in the causation tables to characterize application of the tables to unlisted diagnoses as "evidence-based."

Multiple factors persuade the ALJ that Claimant's upper extremity strains and tendinitis were caused by her work. The symptoms began at work and were associated with specific work-related activities such as working with equipment that was not well maintained and hard to maneuver; pushing, pulling and jogging lifts, which weighed over a ton, that had to be positioned into place beside specific machinery in very limited spaces; lifting bundles of materials from one side to a jogging table that vibrated and then extending the hand backward, while holding the materials in a stack, and torqueing the hand backward and to the side to place the materials into the insert machine head/hopper on a repetitive basis, as well as operating a dolly that also had problems with stuck wheels and hard handles, in addition to the working stations not being easy work at Claimant's level. These are all activities that were repetitive in nature, required a large amount of force, twisting, awkward positioning, and caused Claimant's strains and tendinitis. Claimant's symptoms were worse while she was working, but somewhat better when she was away from work. The persistent and worsening symptoms interfered with her ability to perform specific job-related tasks, prompting her to report the injury and request treatment. None of the experts provided persuasive evidence of any other potentially injurious activity, pathology, or potentially causal risk factors besides Claimant's work that caused the strains and tendinitis. Claimant testified that she did not engage in other work and avoided any strenuous activities at home, and specifically denied any outside activities of an aggravating nature. Nor is there persuasive evidence she was at least equally exposed to the injurious activities outside of work.

Claimant has proven by a preponderance of the evidence that there was a causal link between the work activities, which she performed for over 25 years, and the diagnoses provided by Dr. Chhor and Dr. Galvez. Claimant had little care from Dr. Miller other than three therapy visits. She received several months' worth of some relief from the injections provided by Drs. Chhor and Galvez and was able to return to work in September 2019 for over a year before injuring herself in a specific incident and causing further disability and inability to continue performing the heavy work her employer required. Claimant has proven by a preponderance of the evidence that the tendinitis and strains of the shoulders and elbows are as a direct and proximate consequence of her work related exposure, with an onset date of June 22, 2019, that followed as a natural incident of the work she performed for Employer. It is also concluded that the exposure can be closely traced to her employment as the proximate cause and which Claimant was not otherwise exposed outside of her working environment. Claimant has proven by a preponderance of the evidence that, on June 22, 2019, she suffered an occupational disease that is compensable.

b. September 12, 2020 Injury, W.C. No. 5-154-619

It is specifically found that Claimant injured her bilateral shoulders and bilateral elbows as well as caused significant depression as a consequence of the specific injury of September 12, 2020 caused by the lifting of heavy bundles of newspapers onto a pallet and stacking them up to six bundles high. Claimant and the co-worker testified that lifting the bundles was hard work. Claimant was credible in describing that the work was so difficult that she aggravated her bilateral shoulders and elbow preexisting conditions by lifting the heavy bundles. Claimant has proven by a preponderance of the evidence that she sustained an aggravation of her preexisting occupational disease within the course and scope of her employment while working for Employer on this day. There is a direct causal relationship between Claimant’s employment and the injury. The aggravation was a specific event that had its origin in Claimant’s work-related functions and is sufficiently related to be considered part of Claimant’s service to Employer.

Also as found, in January 2021 Dr. Anderson Oeser found on exam, that Claimant’s right shoulder revealed tenderness over the acromioclavicular joint, subacromial space and biceps tendon insertion site, had restricted range of motion most notably with forward flexion, abduction and internal rotation, and a positive impingement with maneuvers. Claimant had a positive Speeds test and Yergason's test on the right. She had tenderness to palpation over the medial and lateral epicondyles. Resisted wrist extension with the forearm supination caused her pain over the right lateral epicondyle. She had resisted wrist flexion with forearm pronation because of pain over the right medial epicondyle. Evaluation of the left shoulder revealed tenderness over the biceps tendon insertion site and acromioclavicular joint. Claimant’s left shoulder range of motion was mildly restricted with forward flexion and abduction. Speeds test and Yergason's test were also positive on the left. She had tenderness over the medial and lateral epicondyles and resisted wrist extension with forearm supination caused Claimant pain over the lateral epicondyles and forearm extensor mass. These findings are persuasive in this matter and support Dr. Anderson Oeser diagnoses of soft-tissue strains as well as tendinitis and depression are legitimate diagnoses as evidenced by their corresponding ICD-10 codes (shown in her January 26, 2021 report). Dr. Anderson Oeser obtained a detailed description of Claimant’s job and concluded that the injuries were work related. This ALJ finds all of this evidence credible and persuasive in concluding that Claimant suffered a specific incident on September 12, 2020 causing the shoulder and elbow strains and tendinitis as well as the depression caused by the ongoing, untreated chronic pain.

As found, based on the totality of the evidence, Claimant suffered from a specific injury on September 12, 2020 when she was lifting heavy bundles of newspapers and stacking them on a pallet while performing her assigned press job duties. As found, Claimant and Mr. M. are credible in this matter. Claimant did not receive the care to cure or relieve her of the symptoms of the injuries from Dr. Ogden and continued to have symptoms despite the limited care she received under Drs. Anderson Oeser and Ledezma. Claimant has proven by a preponderance of the evidence that she suffered a specific incident on September 12, 2020 and this is a distinct aggravation caused by the work she was performing on September 12, 2020 lifting the heavy bundles of newspapers onto pallets in the press room. This is a separate injury from the occupational disease of the June 22, 2019 claim, which aggravated her preexisting condition. This ALJ concludes that Claimant has proven by a preponderance of the evidence that the bilateral strains and tendinitis of Claimant’s bilateral shoulders and bilateral elbows was aggravated by the work Claimant was performing on September 12, 2020 and the claim is compensable.

D. Medical benefits

Employer is liable to provide such medical treatment “as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury.” Section 8-42-101(1)(a), C.R.S. (2021); *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994); *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo.App.1999); *Kroupa v. Industrial Claim Appeals Office*, *supra*. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. See generally *Stamey v. C2 Utility Contractors, Inc., et. al.,* W.C.No. 4-503-974 , ICAO (August 21, 2008); *Parker v. Iowa Tanklines, Inc.,* W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002). Compensable medical treatment includes evaluations or diagnostic procedures to investigate the existence, nature, or extent of an industrial injury, or suggest a course of treatment. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2000); *Walker v. Life Care Centers of America*, W.C. No. 4-953-561-02 (March 30, 2017); *Jacobson v. American Industrial Service/Steiner Corp*., W.C. No. 4-487-349 (April 24, 2007).

a. Regarding the June 22, 2019 Occupational Disease

As found, Claimant received limited medical care that was reasonably needed to cure and relieve the occupational disease from Dr. Matt Miller from July 3, 2019 through August 13, 2019, when Dr. Miller placed Claimant at MMI. Dr. Miller referred Claimant to her personal care providers for any further care. Claimant then proceeded to obtain care from her personal care providers from August 20, 2019 through April 8, 2020, including Dr. Richardson, Dr. Chhor and Dr. Galvez at Kaiser Permanente. Claimant had follow up visits, and injections for her elbows and her right shoulder strains and tendinitis. Claimant lost her health care insurance and was unable to continue to obtain the care that both Dr. Chhor and Dr. Galvez were recommending including further injections or the MRI of the right shoulder. This care and treatment was reasonable and necessary for Claimant’s occupational disease and allowed Claimant to continue working through September, 2020.

However, absent a completed DIME, the ALJ may not hear or decide any issue that constitutes an actual or constructive challenge to MMI. *Story v. Industrial Claim Appeals Office, supra.* The ICAO has repeatedly held that “after MMI [is] declared, the ALJ lack[s] jurisdiction to award or deny medical benefits to cure and relieve the claimant’s condition.” *McCormick v. Exempla Healthcare,* W.C. No. 4-594-683 (January 27, 2006); see also *Eby v. Wal-Mart Stores Inc.,* W.C. No. 4-350-176 (February 14, 2001) (“once an authorized treating physician places the claimant at MMI, and ALJ lacks jurisdiction to award additional medical benefits for the purpose of curing the industrial injury and assisting a claimant to reach MMI unless the claimant undergoes a DIME."); *Anderson-Capranelli v. RepublicIndustries, Inc*., W.C. No. 4-416-649 (November 25, 2002); *Cass v. Mesa County Valley School District,* W.C. No. 4-69-69 (August 26, 2005) ("[i]f an ATP places the claimant at MMI, an ALJ lacks jurisdiction to award additional medical benefits to improve the claimant's condition unless a DIME has been conducted on the issue of MMI."). Therefore, because Claimant was placed at MMI by Dr. Miller on August 13, 2019, this ALJ has no jurisdiction to order Respondents to pay for the authorized care that Drs. Chhor and Galvez provided Claimant after the date of MMI.

Although a DIME is not a jurisdictional prerequisite to a hearing on a request for post-MMI medical treatment, Claimant has not characterized the care previously recommended by Drs. Chhor and Galvez, who are authorized providers, as a *Grover*-type benefit. At least the injections may be intended to improve Claimant's condition, rather than merely relieve the effects of the occupation disease and prevent deterioration. The ALJ concludes that awarding the treatment requested by Claimant would constitute a constructive challenge to MMI in circumvention of the DIME process pursuant to *Story v. Industrial Claim Appeals Office, supra*. While this situation is a little different because Claimant is unable to seek a DIME at this time, as the Claimant's right to a DIME is only triggered by the filing of a Final Admission of Liability by Respondents pursuant to Sec. 8-42-107.2,(2)(a)(I)(A), C.R.S., and Respondents have denied this claim, but this does not change the jurisdictional requirement. Lastly, Claimant failed to request that the issue of maintenance care after MMI be addressed at this hearing. Therefore, medical benefits after the August 13, 2019 finding of MMI by Dr. Miller are denied at this time, but reserved for future determination, following completion of the DIME process.

b. Regarding the September 12, 2020 specific injury.

This case is a little different than the June 22, 2019 occupational disease claim. In the September 12, 2020 claim, Dr. Ogden stated that he would continue to provide care, if authorized. The parties then agreed to have Dr. Anderson Oeser as the authorized treating physician. As found, the evaluations and treatment Claimant received from Dr. Anderson Oeser, including the referral to Dr. Ledezma, was reasonably necessary to cure and relieve the effects of her injuries of the September 12, 2020 work related injury. Also as found, the treatment Dr. Anderson Oeser continued to recommend, including the occupational and physical therapy and medications are reasonably necessary to cure and relieve Claimant from the effects of the September 12, 2020 work related injury. When Claimant was authorized to change provider to Dr. Anderson Oeser, the care that she recommended was not authorized either. Claimant has been unable to obtain the care that she requires in order to appropriately address her work-related conditions caused by the compensable work related injury. Claimant has proven by a preponderance of the evidence that the treatment recommended by Dr. Anderson Oeser for the Claimant's specific injuries were causally related to the September 12, 2020 work related injury and reasonably necessary and related to the injury in order to cure and relieve Claimant of the effects of the injury.

ORDER

IT IS THEREFORE ORDERED THAT:

1. Claimant's occupational disease claim of June 22, 2019 is compensable.

2. Respondents shall pay for all treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's June 22, 2019 work related occupational disease, including the care Claimant received from Dr. Matt Miller, Genex Services and Justin Houck D.C. through the date of MMI of August 13, 2019. Any medical care received from authorized medical providers, Dr. Richardson, Dr. Chhor and Dr. Galvez, after this date is specifically reserved for future determination pending a DIME evaluation.

3. Claimant's specific incident claim of September 12, 2020 is compensable.

4. Respondents shall pay for the reasonably necessary medical care recommended by authorized treating providers, Dr. Paul Ogden and Dr. Roberta Anderson Oeser for the aggravations of the preexisting strains and tendinitis of Claimant's bilateral shoulders and elbow injuries as well as psychological care recommended by Dr. Anderson and Dr. Ledezma to cure and relieve Claimant of the chronic pain caused by the ongoing work related injuries.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge' s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove he suffered compensable injury to his right knee on May 21, 2021?

- If Claimant proved a compensable injury, is Claimant entitled to reimbursement for a knee brace prescribed by his ATP?

FINDINGS OF FACT

1. Claimant works for Employer as a warehouse worker and parts specialist. The job requires extensive walking and carrying items around the warehouse. Claimant alleges claiming an injury from an incident that occurred at work on May 21, 2021. He was climbing a mobile step ladder carrying a filter weighing approximately ten pounds, when he felt a painful pop in his right knee. The section of the warehouse floor where the ladder was located was slightly uneven, which caused the ladder to "wiggle a bit" as he placed his weight on the step. Despite the slight "wiggle," Claimant's knee did not twist. Claimant cried out in pain. A nearby co-worker came to help and found Claimant in apparent distress after the incident. Claimant reported the injury and completed an illness report the same day. He completed a nurse triage call on May 21, 2021 and was referred to urgent care.

2. Claimant was seen at Concentra Medical Centers by Jennifer Livingston, NP on May 21, 2021. His chief complaint was recorded as "injured right knee while climbing ladder." Claimant explained that he was climbing a ladder when his right knee gave out and he heard a pop. He had difficulty bearing weight once he got to the ground. Claimant thought his knee would get better and continued working for about an hour until the pain became too great and he reported the incident to his supervisor. Claimant described burning pain in the lower lateral aspect of his knee and down his leg. Ms. Livingston observed ecchymosis and swelling around the knee. Range of motion was limited in all planes. Ms. Livingston diagnosed a "right knee injury." She prescribed a knee brace, diclofenac solution, ibuprofen, and referred Claimant to physical therapy. She gave Claimant work restrictions including elevating and icing the right knee for 20 minutes every 2 hours and must be up and walking for five minutes every hour. She opined the objective findings were consistent with the history and a work-related mechanism of injury.

3. Claimant paid for the prescribed knee brace from his own funds.

4. Claimant followed up with Ms. Livingston on May 26, 2021. His pain was no better and that he was still having difficulty bearing weight on the knee. His initial PT appointment scheduled for later in the day. Ms. Livingston made no changes to the prior treatment plan or restrictions.

5. Claimant’s next appointment was on June 2, 2021. He reported no improvement and being unable to participate in PT due to pain. Ms. Livingston requested an MRI.

6. A right knee MRI was performed on June 11, 2021. It showed an ACL strain, reactive edema along the inferolateral patella with patellar tendinitis, and a mild patellar retinaculum strain. There was no fracture, no loose bodies, no osteochondral lesions, no degenerative arthritis, and no meniscal tears.

7. Claimant started seeing Dr. J. Douglas Bradley at Concentra on June 16, 2021. Claimant’s knee was still symptomatic but was “not hurting as much.” The pain and swelling were exacerbated by stairs and walking. On examination, Dr. Bradley noted tenderness in the undersurface of the patella and the medial patellar retinaculum. Dr. Bradley diagnosed “recurrent subluxation of right patella,” although it is not clear how he came to that diagnosis because there are no corresponding documentation of subluxation. Dr. Bradley liberalized Claimant’s work restrictions to 30 pounds lifting and 80 pounds pushing and pulling. Dr. Bradley opined the objective findings were consistent with the history and a work-related mechanism of injury.

8. On July 7, 2021, Dr. Bradley documented that PT was helping but Claimant’s right knee was “buckling” without the brace. He referred Claimant to Dr. David Walden for an orthopedic evaluation.

9. Claimant saw Dr. Walden on July 12, 2021. Claimant explained he was carrying a filter up a ladder and felt a painful pop in his knee. Dr. Walden noted Claimant’s right knee was asymptomatic before the incident at work, “but since then he experienced pain and swelling in the knee.” He further noted Claimant had never experienced any similar problems with his knee in the past. Dr. Walden opined Claimant’s mechanism of injury “is not completely understood, he was climbing up on a ladder with minimal additional weight and a pop was experienced in the knee. He is not certain whether or not there was any twisting involved.” Dr. Walden diagnosed right knee patellofemoral syndrome, and “possible patellofemoral subluxation (?).” Dr. Walden concluded, “the patient’s mechanism of injury is certainly not classic for patellofemoral subluxation, but he continues to experience pain in the knee and his exam is consistent with ongoing patellofemoral symptoms. He denies any prior history of similar episodes and has not had any similar episodes on the opposite knee.” Dr. Walden did not recommend any surgery. Instead, he recommended Claimant continue therapy and return in two weeks for consideration of a steroid injection.

10. Dr. L. Barton Goldman performed an IME at Respondents’ request in August 2021. Claimant reported that his right foot was mostly flat on the upper step to which he was shifting his bodyweight without any obvious anterior translation or twisting. Claimant reported that his right knee gave out and he heard a pop. Claimant found it difficult to bear weight when descending the ladder and reported the incident approximately one hour later. Claimant acknowledged to Dr. Goldman that the alleged mechanism of injury was relatively minor and wondered if walking approximately 6-12 miles per day at work predisposed him to injury. Claimant denied any prior problems with

the knee. Dr. Goldman reviewed photographs of the stepladder and noted it has a 60° incline, which he believed would make patellar subluxation less likely than ascending stairs with a less steep angle. Dr. Goldman diagnosed patellofemoral dysfunction with infrapatellar tendinitis, ACL strain, and reports of recurrent subluxation. He thought Claimant's ongoing symptoms were primarily due to the patellofemoral dysfunction. He believed Claimant to be "sincere and well-meaning," and "doing his best to recollect accurately his history." Nevertheless, he opined the described mechanism of injury "did not make sense for the diagnoses established in the case." He opined an injury was medically "possible" but did not think it was medically "probable." He agreed Claimant needed additional treatment and work restrictions, but not on a work-related basis.

11. Dr. Goldman testified at hearing consistent with his report. He testified Claimant's history suggests dislocation, but examinations have not shown it. Dr. Goldman opined injuries such as this occur most commonly when going downhill, because the bone externally rotates causing the femur to go in the opposite direction with a quick flexion of the knee which pulls the kneecap out to the side. Dr. Goldman opined that such an injury going upstairs or uphill is possible but is not medically probable. He testified Claimant did not mentioned the stairs "wobbling" at the IME but acknowledged he did not specifically ask about that either. In any event, he thought slight movement of the staircase would make the injury "about 5% more plausible" but still not medically probable because there would still need to be some sort of twisting movement. He opined the knee condition for which Claimant has been treated probably occurred within a month or so of the reported date of injury. He described Claimant as "forthright" and did not believe he has falsified the incident. He opined Claimant's knee may have been "predisposed" to injury, but "not to the degree of what we're seeing here."

12. The ALJ credits the causation opinions of Dr. Bradley and Ms. Livingston over the contrary opinions of Dr. Goldman.

13. Claimant proved he suffered a compensable injury to his right knee on May 21, 2021. Claimant's description of the accident is credible and unrebutted by any persuasive evidence. A coworker observed and assisted Claimant immediately after the accident. Dr. Goldman opined Claimant is forthright and sincere and did not falsify the injury. Claimant's knee was asymptomatic before the work accident despite a performing a job that required extensive standing and walking. Ms. Livingston's examination on the date of injury showed objective abnormalities consistent with an acute event. The MRI revealed no pre-existing degenerative pathology or other condition that would have coincidentally precipitated the onset of symptoms at work. There is no persuasive evidence of any alternate injurious event or other causal factor. The preponderance of persuasive evidence shows Claimant's symptoms and need for treatment were precipitated by the distinctly work-related act of climbing a ladder to put parts away.

14. Claimant was prescribed a knee brace by authorized provider. The knee brace was reasonably necessary treatment for the compensable knee injury.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions. *Wild West Radio, Inc. v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employment. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). The claimant must prove an injury directly and proximately caused the condition for which he seek benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The mere fact that a claimant experiences symptoms during or after an activity at work does not necessarily mean they suffered a compensable injury. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005); *Miles v. City and County of Denver*, W.C. No. 4-961-742-01 (July 10, 2015). Claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

As found, Claimant proved he suffered a compensable injury to his right knee on May 21, 2021. Claimant's description of the accident is credible and unrebutted by any persuasive contrary evidence. Although the accident was unwitnessed, a coworker came to his aid immediately and observed Claimant in distress. The ALJ expects Respondents would have presented testimony from the coworker if Claimant's account were inaccurate. Claimant had no problems with his knee before the work accident despite a performing a job that required extensive standing and walking. Claimant's knee became symptomatic for the first time when he stepped up on the ladder and has remained continuously symptomatic ever since. Dr. Goldman opined Claimant is forthright and sincere and did not falsify the injury. Ms. Livingston observed objective abnormalities (ecchymosis and swelling) on examination shortly after the accident, consistent with an acute event. The MRI revealed no pre-existing degenerative pathology or other condition that would have coincidentally precipitated the onset of symptoms at work. There is no persuasive evidence of any alternate injurious event or other causal factor. Given that confluence of factors, most persuasive conclusion is that the activity Claimant was performing when his knee popped and became painful was the proximate cause of his symptoms.

Claimant's case is analogous to the situation in *Reinhard v. Pikes Peak Broadcasting Co*., W.C. No. 4-114-050 (May 20, 1993). The claimant in *Reinhard* was walking down a flight of stairs to a room where his next job assignment was posted. As he turned the corner at the bottom of the stairs, he felt a pop in his back. The injury was deemed compensable because it had its origin in the distinctly work-related activity of descending the stairs. The ICAO noted the mere fact that "the claimant's injury could have occurred from similar activities outside the scope of employment did not compel the ALJ to conclude that the claimant's injury was not compensable."

As in *Reinhard*, *supra*, Claimant's symptoms and need for treatment were precipitated by the distinctly work-related act of climbing a ladder to put parts on the shelf. Claimant proved he suffered a compensable injury arising out or and in the course of his employment.

B. Medical benefits

The respondents are liable for authorized medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. Claimant was prescribed a knee brace by an authorized provider that he had to purchase at his own expense. Claimant is entitled to reimbursement for his out-of-pocket cost for treatment related to the compensable injury. Section 8-42-101(6)(a).

ORDER

It is therefore ordered that:

1. Claimant's claim for a right knee injury on May 21, 2021 is compensable.

2. Insurer shall reimburse Claimant for the knee brace he purchased.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: December 23, 2021

Office of Administrative Courts

ISSUES

I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion of Dr. Hall that Claimant is not at Maximum Medical Improvement?

II. If the DIME opinion is not overcome, was the labral hip surgery performed by Dr. Doner (and without prior authorization) reasonable, necessary, and related to Claimant's work injury, thus subject to reimbursement by Respondents?

III. If the DIME is overcome, are Respondents entitled to reimbursement for TTD overpayments?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background / Procedural Posture

1. Claimant was injured on August 12, 2019, when he and a co-worker were installing a sound door that weighed 350-450 pounds. They tilted the top of the door towards Claimant, who grabbed the top of the door and lowered it down to waist level. Claimant's co-worker picked up his end of the door and Claimant, by all accounts, experienced symptoms which resulted in the claim being admitted for injuries to his lumbar spine.

2. Respondents filed a revised Final Admission of Liability on April 12, 2021, admitting for the spine injuries, but not for ongoing issues with Claimant's hip. (Ex. Y). Claimant timely objected (Ex. Z), and requested a DIME exam, which was completed, after revisions, on June 8, 2021 (Ex. 15). The DIME report found Claimant not to be at MMI, opining that Claimant's hip pathology was work-related. Respondents do not concur, and have challenged the DIME findings. Claimant has now had surgery, outside the Workers Compensation system, to his right hip, and seeks compensation.

Chronology of Claimant's Treatment

3. Claimant saw Michael Dallenbach, M.D. at *Emergicare* the same day. Claimant reported that he had a door at chest height to lower it down and place on a dolly when "he felt a popping and a tearing at the same time." The pain radiated "from the back to the right buttocks" and "down to the whole leg and ankle." There was no mention of hip pain or any mention of a twisting mechanism of injury at his initial visit. (Ex. C, p. 28) Claimant's "Detailed Injury History" indicated that his injured body part was his "lower back" as did his intake form. *Id* at 33, 37.

4. Claimant's pain diagram from that date indicated, via 'O's, that he had 'pins and needles' in his right buttock area including the side. It also noted 'O's in his right thigh and, 'aching', (via 'X's) in the back side of his right buttock, thigh, and calf down to his ankle. (Resp. Ex. C, pg. 34). There were also three 'O's on the frontal diagram in the hip area or groin area. Pain was listed at 8/10. *Id.* 'Stabbing' pain was to be depicted by an *'X' within an 'O'*, but no such markings appear on this initial diagram.

5. Dr. Dallenbach examined claimant's lumbar spine and noted abnormal lumbosacral findings. (Ex. C, p. 29) He did not examine Claimant's right hip. His initial *Impression* was that Claimant had a strain of the lower back. Id at 30. Separate injections were administered to both Claimant's *right and left* Gluteus Maximus at this visit. Id at 29-30.

6. On August 14, 2019, Claimant reported to Dr. Dallenbach that he had ongoing low back pain radiating down his right leg and into the foot and severe pain in his right buttock. Dr. Dallenbach's *review of systems* noted "Injury/pain to back, Injury/pain to hip, Injury/pain to leg, Injury/pain to knee". (Ex. C, p. 41). There are no notes indicating that Dr. Dallenbach examined or tested Claimant's right hip. However, injections into Claimant's *right and left* Gluteus Maximus were also performed that day. *Id* at 42-43.

7. Claimant's questionnaire from August 14, 2019, noted his current pain was in his "*right* lower butt cheek down the leg." Pain was now self-reported at 10/10. There are whole body pain charts, with a frontal and rear view. (Ex. C, pg. 46). As best as can be discerned, the rear view depicts pain down the entire right leg from waist to ankle, with an apparent mixture of 'X's and 'O's, but with the 'O's more towards the buttock area. It appears that there is considerable overlap with some of the 'X's and 'O's, perhaps indicating 'stabbing' pain in that area.

8. On this same page, the ALJ notes that Claimant actually has marked the frontal view as exclusively affecting his *left* side. Due to Claimant's reported 10/10 pain, the ALJ attributes this mismarking as confusion on the part of Claimant, and that he intended to report his frontal pain to his *right* side. Once again, there is a mixture of 'X's and 'O's, with 'O's weighted towards his upper leg/wait area. The lower leg is exclusively 'X's. However, at the groin area, there are (while rather sloppily performed) markings indicative of overlapping of 'X's and 'O's, best interpreted as 'stabbing' pain in the groin and quad region. *Id* at 46.

9. Claimant saw Erik Ritch, M.D., on August 16, 2019 and reported "severe *right* sided low back pain radiating down the back of his right leg to the ankle." Pain attain at 10/10. There was no specific mention of right hip pain, and his hip was not tested. (Ex. C, p. 52) The follow-up visit questionnaire noted that his pain was in his "right back side." The pain diagram (this time correctly R/L oriented by Claimant, but sloppily executed) appears to show 'stabbing' pain in Claimant's right buttocks, down the back side of his right leg into his ankle and 'pins and needles' on the front side of claimant's right leg, including the hip and groin area. *Id* at 54.

10. Claimant saw Dr. Dallenbach on August 21, 2019. The hip was not

examined. (Ex. C, pp. 58-59) The pain diagram (now at 8/10, and correctly R/L oriented) appears to show stabbing pain in the right buttock and pins and needles and stabbing pain in the right calf and ankle as well as pins and needles in his right groin area. Less emphasis on the thigh was marked at this visit. *Id* at 61. There was a reference at this visit to referral to a surgeon for the lumbar symptoms; none for hip issues. *Id.*

11. Claimant saw Dr. Dallenbach on August 26, 2019 and reported ongoing pain radiating from his back to his ankle. Claimant's hip was not examined. (Ex. C, pp. 64-65) Claimant's pain diagram (R/L oriented) did not materially differ from that of 8/21/2019. *Id* at 67. Pain was 8/10, but listed as worsening, with no relief from the prescribed medications. *Id.*

12. On August 28, 2019, Claimant reported to Dr. Dallenbach that he had lower back pain radiating to his buttocks, calf and ankle. Claimant's hip was not examined. (Ex. C, pp. 68-69) Claimant's pain diagram, again, generally resembled the previous one. *Id* at 70. Pain this date was reported at 6/10. *Id.*

13. Claimant returned to Dr. Dallenbach on September 4, 2019. He now reported that he had low back pain radiating to the side into the buttock, lower leg, and calf. (Ex. C, pp. 72-74). Claimant was now complaining of the delays in getting in to see a surgeon, due to constant pain. Claimant's pain diagram appeared to show that he had pins and needles in his low back, right buttock, right thigh, right and left groin, right calf and right ankle. (Ex. C, p. 76). Pain at 8/10. Despite all focus being on Claimant's *right* sided complaints, the medical noted indicate that Claimant actually received two separate injections into his *left* Gluteus that day. Id at 74.

14. Claimant saw Dr. Dallenbach September 11, 2019 and reported persistent back and leg pain. (Ex. C, pp. 82-83) The pain diagram (7/10 pain now reported, R/L oriented) was more detailed, noted an apparent mixture of "X's, and 'O's, sometimes overlapping, in the right buttock, thigh, calf and ankle-*and groin area*. *Id* at 85.

15. Claimant presented to neurosurgeon Sana Bhatti, M.D., on September 16, 2019. He reported that he hurt his back lifting a 400 pound door. He stated that he felt a pop in the low back on the right side, with immediate pain down his right leg to the calf. His pain level was a 7/10. There was no mention of any popping in the right hip or any hip pain. At this visit, Claimant did not report a twisting mechanism of injury. (Ex. D, p. 201). Dr. Bhatti examined claimant's low back, but no examination was done to the right hip. Dr. Bhatti recommended a right L4-5 discectomy with L4-5 fusion. Id at 202.

16. Claimant saw Dwight Leggett, M.D. of *Accelerated Recovery Specialists,* on September 19, 2019. He reported that he was moving a 400 pound door to put it on a cart when he had a "sudden onset of pain in the low back region, which was associated with a 'pop' on the right side." He reported immediate pain down the right leg, primarily in the lateral aspect of the right thigh and calf. There was no mention of a popping or pain in the right hip or a twisting mechanism of injury. (Ex. F, p. 328) Claimant reported that his pain started in the right low back region, went to his buttock, right leg, thigh and foot but not his right hip. (Resp. Ex. F, pg. 329-30). Focus was clearly on the apparent L4/L5

disc herniation, and how to address that. However, under his listed *Impressions*, Dr. Leggett noted:

> 1. It has been several weeks since his accident, and he continues to have significant back pain was well as right leg pain. On exam, there are areas of mechanical irritation, including facet mediated pain, sacroiliitis, myofascial tightness, and *trochanteric bursitis**….**Highest* pain generation seems to be associated with a radiculopathy traveling into the right lower extremities.
>
> 2. Review of the MRI indicates a fairly recent herniation at the L4-L5 level. While this encroaches upon nerves, it did not appear to actually compress any nerve roots. However, there is clearly reproducible radicular symptoms on exam. *….He feels he has some* *soreness in the hip**,* but this is again likely compensatory in nature. *Id* at 331 (emphasis added).

17. On October 1, 2019, Claimant reported to Dr. Dallenbach that he had low back pain that radiated to his right leg. (Ex. C, pp. 87-88) Claimant's pain diagram (now at 4/10) appears to indicate that Claimant had pins and needles in his right groin, thigh, calf and ankle as well as stabbing pain in the right buttock. *Id* at 90.

18. Claimant returned to Dr. Bhatti on October 17, 2019. He reported low back pain that radiated down the posterior aspect of the right leg with numbness and paresthesias, but no hip pain was noted. His pain level was 7/10. (Ex. D, p. 204). At this visit, it was agreed that a L4/L5 discectomy and fusion should proceed. *Id.*

19. On November 25, 2019, Claimant returned to Dr. Dallenbach, and reported ongoing pain that radiated from his lumbar spine into his buttocks and pain in his neck and left arm. There is no mention of right hip pain and his hip was not examined, although his left upper extremity was examined. Claimant weighed 285 pounds with a BMI of 42.086. (Ex. C, pp. 97-98) Claimant's pain diagram was left blank on the frontal view, but the rear view now noted 'O's across both buttocks and down the lateral aspect of the right leg. *Id* at 103.

20. Claimant saw Michael Sparr, M.D. (also with *Accelerated Recovery Specialists*), on December 3, 2019. Claimant was now reporting *left upper extremity* numbness and tingling. He reported that a 400-pound door was falling towards him. He was unable to secure the door and "tried to throw it." He had "immediate onset of central back pain." There was no mention of hip pain. He complained of low back pain and left hand numbness and tingling. Dr. Sparr examined claimant's cervical spine but did not examine Claimant's hip. There was now an abnormal electrodiagnostic study of his left upper extremity, suggestive of possible C7 radiculopathy or carpal tunnel syndrome. (Ex. F, pp. 342-344)

21. On December 9, 2019, Dr. Dallenbach examined Claimant's lumbar and cervical spine. There was no mention of right hip pain and his hip was not examined. Claimant's pain diagram now noted numbness and tingling in his neck, shoulder, arm and hand on the left side as well as pins and needles in both sides of his low back and buttocks

and his right groin, thigh, calf and ankle. (Ex. C, pp. 107-108, 110)

22. Claimant saw Scott Stanley, M.D., of *Centura Orthopedics* (apparently at Respondents' request) on December 18, 2019. He reported diffuse lower back pain that radiated into both buttocks, right posterolateral hip and lower extremity. There was no mention of specific right hip pain other than that his back pain radiated down the side of his hip. His pain level was 6/10. (Ex. H, p. 353) Claimant's pain diagram noted that he had pain, aching, and pins and needles bilaterally in his low back and buttocks and pins and needles on the side of his right thigh into his ankle. There were no markings in his right groin or hip area. *Id* at 363. Dr. Stanley examined claimant but did not test his right hip. *Id* at 356-57. Dr. Stanley appears to have concurred with Dr. Bhatti's overall surgical assessment. *Id.*

23. On December 23, 2019, Dr. Dallenbach evaluated Claimant, but did not note right hip pain, and did not examine claimant's hip. Claimant weighed 293 pounds with a BMI of 42.04. (Ex. C, pp. 112-13) Claimant's pain diagram noted pins and needles in the left side of his head, shoulder, left and right groin, left thigh, calf and ankle as well as numbness in his left forearm and hand. It also noted stabbing pain in the left and right side of his low back and buttocks as well as his right calf and ankle. *Id* at 115.

24. On January 6, 2020, Claimant saw Rachel Langley, D.O. (also with *Emergicare*), who noted abnormal flexion, extension, and rotation of the lumbar spine on exam. There was no mention of right hip pain and the hip was not examined or tested. No pain diagram is noted for this visit. (Ex. C, pp. 117-18)

25. Claimant saw Dr. Dallenbach (now noted to be on *Concentra* letterhead) on January 14, 2020. He reported bilateral lower back pain that radiated to his buttocks, thighs and bilateral calves. There was no mention of right hip pain. (Ex. C, pg. 121). Dr. Dallenbach examined Claimant's lumbar spine but he did not examine his right hip. (Ex. C, pg. 121-22). [It is noted that once Dr. Dallenbach's apparent affiliation began with *Concentra*, there are verbal pain descriptions noted by the patient, but no longer pain diagrams offered].

26. On February 3, 2020, Dr. Bhatti noted that Claimant had low back pain with radiation down the right leg. There was no mention of right hip pain. Dr. Bhatti examined claimant's low back but did not examine claimant's right hip. However, it is readily apparent that pages from Dr. Bhatti's report were not submitted into evidence. The significance of the contents of said excised pages cannot be inferred. (*see* Ex. D, generally)

27. On February 10, 2020, Dr. Bhatti performed his recommended L4-5 right foraminal decompression and fusion. (Ex. D, p. 216)

28. On his February 20, 2020 post-surgical follow-up, Claimant reported to Dr. Bhatti that his low back pain which had radiated to the posterior aspect of the right leg had resolved. He no longer had paresthesias, and his numbness had improved. (Ex. D, p. 236)

29. Claimant saw Lisa Baron, M.D., (with *Concentra*) on March 10, 2020. He reported that he no longer had pain in his right lower extremity but did have some aching in the left buttock. There was no mention of pain in the right hip. His pain level was 5/10. (Ex. C, pg. 132) Dr. Baron did not test or examine his right hip. *Id.*

30. Claimant saw Shelby Johnson, PA, on March 24, 2020, and reported improvement in his right sided pain but continued with neck and arm pain with a pain level of 4/10. There was no mention of hip pain and it was not examined. (Ex. C, p. 136)

31. On April 2, 2020, Claimant reported to Dr. Bhatti that his low back pain that radiated to his right leg had resolved. He no longer had paresthesia, and his numbness had improved. There was no mention of right hip pain. (Ex. D, p. 240).

32. Claimant saw Dr. Dallenbach on April 9, 2020, and reported that his pain was more focused on the left side of his back and leg as well as his left upper extremity. His pain level was a 4/10 in the lumbar spine. There was no mention of right hip pain and his hip was not examined. (Ex. C, p. 139)

33. Claimant saw Tianna Voros, PA-C (with *Concentra*), on April 23, 2020. He reported that he was "handed a 450 lb door from another person and his *trunk* twisted under the weight of the door which caused his back injury." He also claimed that he injured his cervical and lumbar spine at that time. Claimant reported that his low back pain level was better at a 4/10 but he had more pain on the left side of his back. There was no mention of right hip pain and his hip was not examined. (Ex. C, pg. 142)

34. On May 7, 2020, Claimant saw Daniel Peterson, M.D. (also with *Concentra*), and reported "Patient feels like his pain is getting *worse in his hips* and neck pain and headaches are everyday." (Ex. C, p. 145) The report noted hip and buttocks area weakness, leg weakness, numbness and tingling. *Id* at 146.

35. On May 18, 2020, Claimant saw Dr. Bhatti, and reported difficulty ambulating, secondary to his back pain. There was no specific mention of right hip pain. (Ex. D, pg. 246).

36. Claimant again saw Dr. Bhatti on June 1, 2020. He reported neck pain and left arm pain, as well low back pain. There was no mention of right hip pain and his hip was not examined. (Ex. D, pp. 258, 260). Dr. Bhatti recommended an anterior cervical discectomy and decompression at C6-7 with fusion. *Id* at 261.

37. Claimant saw Anthony Stanulonis, M.D. (with *Concentra*), on June 8, 2020, and reported that his low back pain was a 5-6/10. He complained of bilateral low back pain that radiated into his buttocks, right greater than left and no lower extremity radicular symptoms. There was no specific mention of right hip pain, and his hip was not examined. (Ex. C, pg. 149, 151)

38. On July 6, 2020, Claimant saw Dr. Bhatti, and reported that his posterior right leg pain was much better, as was his numbness and paresthesias. He was having increased posterior back pain and neck pain but no reported hip pain. (Ex. D, p. 270)

39. Claimant saw Dr. Stanulonis on July 8, 2020, and reported low back and buttock pain as well as pain in *both* hips and numbness down his right leg with a pain level of 6/10. Dr. Stanulonis did not examine claimant's hips. (Ex. C, pp. 154, 156-57)

40. On August 12, 2020, Claimant reported to Dr. Stanulonis low back pain with radiation to the right thigh and calf as well as neck and left arm pain. There was no mention of right hip pain and his hip was not examined. (Ex. C, pp. 164, 166).

41. Apparently, in an IME report, Michael Rauzzino, M.D., (Ex. C, p. 169) determined that there was no temporal relationship between the onset of claimant's cervical symptoms and his work injury. In any event, Claimant withdrew his Application for Hearing based upon that original assertion. (Ex. T, U).

42. Claimant underwent a Functional Capacity Evaluation (FCE) on November 16, 2020, and reported that he was "lifting a 450 pound door with a partner and felt a pop in the low back with pain shooting down his right leg." Claimant reported that the pain was in his lower back going down the right lower extremity. Claimant reported his pain level was a 3/10. (Resp. Ex. J, pg. 369). The FCE tested claimant's flexion, extension, abduction, adduction, internal rotation and external rotation on his bilateral hips. Claimant's range of motion on all tests were 'within normal limits' for both hips, although there was a slight deficiency in strength in his right hip for internal and external rotation. (Ex. J, p. 379)

43. On December 11, 2020, Claimant reported to Dr. Stanulonis back pain which radiated to his right thigh and calf, with a pain level of 4-6/10. Dr. Stanulonis placed claimant at MMI. Dr. Stanulonis assigned Claimant a 28% whole person impairment rating which consisted of a 10% impairment rating per Table 53, IIE, and a 20% impairment rating for loss of range of motion. (Ex. C, pp. 188, 195-96).

44. Concentra then referred Claimant to *The Peak Physical Medicine*. (Ex. K, p. 404). Claimant then saw Timothy Sandell, M.D., on December 15, 2020, and reported that he was lifting a heavy door when he "felt a popping sensation in the low back." His pain radiated down the side of the right thigh with some numbness in the right buttock. His pain level was a 6/10. *Id* at 406. Dr. Sandell examined his low back and right lower extremity, noting some discomfort in the right leg with manual motor testing. *Id* at 408.

45. Claimant returned to Dr. Bhatti on December 21, 2020. He reported increased low back pain, with radiation down his right buttock, to his right hip and right posterior thigh. His pain level was 6/10. (Ex. D, pp. 276, 279). Dr. Bhatti noted on examination that Claimant had significant pain to abduction and external rotation of the right hip, and referred claimant for a lumbar spine and right hip MRI. *Id* at 278-279.

46. A right hip MRI was completed on January 7, 2021. The *Impressions* were as noted:

1. Coxa Magna within the right hip. There is shortening of the right femoral

neck. Decreased acetabular coverage and developmental hip dysplasia is suspected. *No marrow edema* within the right hip.
2. Normal-appearing articular cartilage and there is *no joint effusion.*
3. Thin smooth tear within the anterior labrum 2:00 position.
4. Diffuse increased signal within a normal-volume superior labrum which could reflect partial ossification/mineralization of the superior labrum. Radiographic correlation would be helpful. There is chondral undercutting of the superior labrum versus a partial-thickness labral base tear.
5. *Normal-appearing left hip* on the large field-of-view coronal STIR sequence. (Ex. 13, p. 352) (emphasis added).

47. A lumbar spine MRI was also completed on January 7, 2021. The MRI showed an instrumented fusion and canal and neural foraminal decompression at L4-5 with improved narrowing. There was moderate to severe right and moderate left neural foraminal narrowing at L3-4 which had progressed. (Ex. 13, p. 353).

48. Claimant saw Dr. Bhatti on January 14, 2021, and reported low back pain with radiation down to his right buttock, hip and thigh. His pain level was 6/10. (Ex. D, pp. 282, 285) Dr. Bhatti noted that Claimant had significant pain to abduction and external rotation of the right hip. *Id* at 284. He noted that Claimant's right hip MRI showed significant arthritic changes. He felt that this was the cause of claimant's symptoms and referred him for an orthopedic evaluation.

Claimant is Referred to Dr. Doner

49. Claimant saw orthopedist Jeffrey Doner, M.D., on April 6, 2021. He reported that he was "lifting a very heavy door and then felt a sharp pain in his right hip." (Ex. M, p. 460). Dr. Doner noted that Claimant had a positive labral impingement sign and positive Faber exam. He also noted that Claimant could not flex his hip past 30 degrees, and that he had pain with flexion, adduction and internal rotation.

50. Dr. Doner reviewed Claimant's MRI, and noted that he had a right hip acetabular tear, coxa magna and cam deformity of his right hip. He noted that Claimant had shortening of the femoral neck and decreased acetabular coverage with a center edge angle of 24 degrees. Dr. Doner recommended right hip arthroscopy with labral repair, femoroplasty and capsular closure. He felt that claimant's hip pain was causally related to his work injury because he did not have any hip pain prior to the incident. *Id* at 460.

IME by Dr. Erickson

51. Claimant saw Jon Erickson, M.D., on April 18, 2021, for an IME. Claimant

reported that he was lowering a 400 pound door onto a dolly when he felt a pop and tearing sensation in his lower back and had pain that radiated down the right leg. Claimant did not report any popping or pain in his hip, nor did he mention a twisting mechanism of injury. (Ex. N, p. 474). Claimant was positive for 4/5 Waddell signs on examination.

52. Dr. Erickson noted the right hip MRI showed an obvious deformity in the proximal femur, with coxa magna deformity and a coxa breva (a shortened femoral head). There was a large cam lesion at the femoral head/neck offset and the acetabulum was very shallow with a center edge angle of 25 degrees. Dr. Erickson noted that this was "a classic example of developmental dysplasia of the acetabulum." He noted that there was significant tearing of the labrum, extending from the anterior to the lateral labrum. (Ex. N, pp. 492-93).

53. Dr. Erickson indicated that because of "the lateralization of the femoral head, there is significant increase in pressure on the lateral acetabulum. This causes widening and thickening of the labrum and evidence of ossification, all of which are present in this case. It has been well established [in the medical literature] that there is a substantial increase in the risk of labral damage and tears with DDH and coxa magna."

54. Dr. Erickson noted that Claimant did not complain of hip pain immediately after his work injury. (Ex. N, p. 493). He indicated that during his extensive career as a hip arthroscopist, he found that hip injuries cause substantial pain and this was not consistent Claimant's lack of pain complaints. He noted that on examination, Claimant's hip pain was posterior, which was not common, nor was sustaining a labral tear without a twisting mechanism of injury. (Ex. N, p. 494) Dr. Erickson was not convinced that Claimant's right hip was severely symptomatic.

55. Dr. Erickson actually recommended a periacetabular osteotomy (PAO) to manage the DDH, and then a femoral head osteoplasty, coupled then with a labral repair. Dr. Erickson opined that Claimant's hip condition and symptomatology was not related to his August 12, 2019 work injury, because the labral tear was most likely related to his developmental abnormalities. Further, Claimant's mechanism of injury was very weak for causing a labral tear and his clinical presentation was not consistent with the injury. *Id* at 494.

The DIME Report by Dr. Hall

56. On May 6, 2021, Timothy Hall, M.D., performed the DIME exam and issued his report. Claimant reported that he was lifting a door that weighed 300-400 pounds which came to his side as his co-worker was lifting the other end. He noted a popping and pulling in his low back and twisted to put the door on a dolly. He reported having low back and leg pain and reported groin pain early on as well. (Ex. 15, p. 386). Claimant reported that he had pretty much constant pain in his back that ran down the right side through his buttock, around his lateral hip and thigh area, into the groin and down the leg into the knee. He stated that since his surgery with Dr. Bhatti he had not had as severe of leg pain. *Id* at 372. "His pain is worse when stair climbing, walking, standing, and prolonged sitting. When he sits, he does not end completely at the waist and keeps his

right leg out in front of him. He uses a cane most of the time…..He has a lift at home to help with the stairs". *Id.*

57. On examination, Claimant exhibits pain behaviors; he could get in and out of chairs 'well enough,' but getting off and on the exam table was 'difficult.' "Psoas is very tender and tight bilaterally. Hip range of motion is noted in the worksheet. In particular, he lacks pretty much any hip rotation. Maneuver of stressing the hip joint is extremely uncomfortable for him…..His gait is quite abnormal. He keeps his knee straight during ambulation." *Id.*

58. Dr. Hall's *Clinical Diagnosis* was (1). L4-5 disc herniation status post fusion at L4-5 and (2) hip pathology/symptomatology potentially related to labral tears. *Id.* Dr. Hall agreed that claimant was at MMI for his low back on December 11, 2020. *Id* at 373.

59. However, regarding the hip, Dr. Hall stated:

> Regarding the hip, there is evidence early on of groin pain on the right. He reports his groin pain not to have responded to the surgery through Dr. Sethi (sic). He does have symptomology and physical findings consistent with hip pathology. *It is my opinion this is related and requires treatment*. I cannot tell you what is the best treatment for this hip situation. It will likely come to surgery, but just what surgery would obviously be up to the surgeon and the patient. *Id* at 373. (emphasis added).

60. Under his *Rationale*, Dr. Hall stated:

> *Regarding the left hip situation as discussed above reviewing the early pain diagrams, it is clear that the groin area, right thigh, and anterior aspect of the leg are marked within a short time frame of the date of injury.* The groin pain and thigh pain did not respond to treatment of the lumbar radiculopathy….This points toward a potential additional pain generator involving the right hip and there is pathology on imaging. *It is therefore my opinion* within a reasonable degree of medical probability that *the right hip situation relates to the compensable injury.* Id at 73. (emphasis added).

61. Dr. Hall assigned provisional impairment ratings. He assigned Claimant a 26% whole person rating for his lumbar spine, which consisted of an 18% for loss of range of motion and a 10% rating under Table 53. For the right hip, he assigned an 11% whole person rating. The two ratings combined equaled a 34% whole person impairment rating. [Respondents' expert, Dr. Erickson felt that Dr. Hall's 26% impairment rating for the lumbar spine was appropriate].

Claimant receives Hip Surgery by Dr. Doner, without prior Authorization

62. Dr. Doner performed his recommended surgery on May 28, 2021. At this time, he noted that Claimant had painful mechanical locking and catching of his right hip.

(Ex. M, p. 464) {Dr. Doner acknowledged during his deposition that this “locking and catching” in Claimant’s right hip was never reported prior to this date].

63. By June 10, 2021, Claimant reported to Dr. Doner that his symptoms were improving. (Ex. M, p. 468).

Ongoing Treatment for the Admitted Lumbar Issues

64. Claimant saw Dr. Sandell on September 13, 2021, and reported increased low back pain after sitting for a long period of time at a volleyball game. He reported a burning pain across his low back and bilateral leg pain, radiating into the right thigh and a pain level of 10/10. (Ex. K, p. 436). Dr. Sandell referred claimant for lumbar and right hip MRIs. *Id* at 442.

65. The October 6, 2021, lumbar MRI showed stable post-operative changes. There was no recurrent disc disease or spinal stenosis at L4-5. (Ex. K, p. 452).

66. Claimant saw Jamie Case, PA, on October 8, 2021, and complained of low back pain that traveled up the lumbar spine and down the through the buttocks wrapping around the hips to the tops of both thighs. His pain level was 8/10. (Ex. K, p. 450).

67. The October 18, 2021, right hip MRI showed a worsening labral tear now with a complex component superiorly and anterosuperiorly, and a re-demonstrated coxa vara morphology. (Ex. EE, p. 743). Dr. Erickson testified that the recurrent and worsened labral tear was related to claimant’s uncorrected pre-existing abnormalities and obesity.

Supplemental IME Report by Dr. Erickson

68. Dr. Erickson issued an addendum report on October 18, 2021. He disagreed with Dr. Hall’s opinion that Claimant’s right hip complaints were related to his work injury. Dr. Erickson noted that upon careful review of the medical records there was no conclusive evidence of a credible complaint of hip pain prior to Dr. Bhatti’s evaluation on December 21, 2020, when Dr. Bhatti suggested that Claimant’s continued back pain could be caused by his hip. There were no specific complaints, and the pain diagrams were not diagnostic. He also noted that there were was no evidence of anyone doing an evaluation of Claimant’s right hip prior to Dr. Bhatti’s examination. This was not consistent with repeated complaints of right hip pain as alleged by Claimant.

69. Dr. Erickson noted an injury to the hip joint causes substantial pain, and pain was not present in this case. Dr. Erickson again stated that Claimant’s pre-existing conditions place his labrum at a risk for tearing as seen on the MRI. However, there was no evidence whatsoever that the labral tear occurred on August 12, 2019; rather it could have occurred at any time. (Ex. N, p. 499).

Deposition of Dr. Doner

70. Dr. Doner’s deposition was taken on October 5, 2021. He has been board certified in orthopedic surgery since 2015. He is not Level II accredited. His focus is on

arthroscopic surgery of the hip, knee, and shoulder. Claimant was initially referred to him by Dr. Bhatti, once Dr. Bhatti began to suspect that some of Claimant's complaints might be due to hip issues. At the initial examination, Claimant showed signs of labral damage on the FABER test, with severe restrictions of flexion range of motion.

71. Dr. Doner noted that the same nerve (L4/L5) that innervates the back can also innervate the hip. As a result, sometimes patients who initially see a back specialist are then referred to a hip specialist, and vice versa. After weighing the options, he felt that the arthroscopic hip repair he performed on Claimant was the best option, and hopefully will not require a hip replacement in the future.

72. Dr. Doner had reviewed the medical records from Emergicare, Dr. Bhatti, Dr. Erickson's IME, and the DIME report. Dr. Doner opined that the symptoms as relayed by Claimant were consistent with the hip injury Claimant suffered. In his practice, perhaps 20 to 30% of his patients who suffer a hip injury actually point to the buttocks area behind the hip, instead of the groin immediately to the hip joint. In reviewing the DIME report, he agreed with Dr. Hall's causation analysis, noting, in essence, that Claimant reported no symptoms before the work injury, then reported symptoms afterwards, which in turn were improved by the hip surgery. He disagreed with the initial assessment of Dr. Bhatti that Claimant's hip issues were arthritic in nature [and thus agreeing with the DIME report], since the surgery did not reveal significant arthritic changes; the arthroscopic repair would hopefully be sufficient.

73. When asked to address Dr. Erickson's position that Claimant's symptoms were due to his coxa magna abnormality (and not the work incident), Dr. Doner noted:

> A …I do agree that he has coxa magna…that was not caused by the injury. That is basically the way the hip formed when the was younger.
>
> And he also had some hip dysplasia, which is a lack of acetabular coverage. But if you look at the patient, and you talk to him, you know he told you that prior to this, you know, date, he had no pain basically coming from his hip. So *he could have been walking around with a coxa magna and his hip dysplasia his whole life, but have no symptoms.*
>
> He then had an injury he reported at work, where he believes that was what…caused that. And ever since then, he's had pain in the hip. So that's why, in my mind, attribute that to the work injury, not to having this underlying …basically anatomical abnormality, which I do agree, he does have that. (Depo, pp. 36-37) (emphasis added).

74. Dr. Doner was then asked if developmental dysplasia and coxa magna increased the chance of a labral tear, he responded:

> A In my mind it does……if you have a coxa magna, which is an abnormality of the bone. You have some hip dysplasia which abuts acetubular coverage, putting more pressure on the labrum. And then you have an injury. *I think you're more likely to…sustain such as the labral tear.*

> Whereas maybe someone, like myself, that has no bone abnormalities…dysplasia or coxa magna…my hip might not have torn. *So I think you have a lower threshold to actually get injured when you have this type of abnormality.* (Depo, pp. 37-38) (emphasis added).

75. Dr. Doner did not agree with Dr. Erickson's opinion that some sort of twisting mechanism would be required to result in a torn labrum. He mentioned, as examples, auto accidents, and tackling injuries injuring hip labrums with no known twisting involved; the shear force was sufficient. In this case, however, he understood that Claimant did in fact engage in some twisting while 'disengaging' with the heavy door. Dr. Doner agreed that excessive weight in someone with these abnormalities could increase the likelihood of damage to the hip joint as well.

Dr. Erickson Testifies at Hearing

76. Dr. Erickson testified that in his extensive clinical experience, a torn labrum causes a great deal of pain immediately when the injury occurs. Any range of motion would cause a great deal of pain. He testified that pins and needles are not a symptom of a torn labrum, but are associated with a neurogenic condition. Therefore, they do not support a finding that claimant tore his labrum on August 12, 2019.

77. Dr. Erickson noted that in his deposition testimony, Dr. Doner had noted that on the pain diagram from August 12, 2019, Claimant drew circles on his buttocks and right hip area, indicating that he had pain in those areas. However, these circles indicate pins and needles, not pain. Dr. Doner again failed to note that the hip and groin areas were marked as having pins and needles and not pain on the October 1, 2019 pain diagram. Almost all of the pain diagrams indicated only a feeling of pins and needles in the hip and groin area. Dr. Erickson testified that Claimant's pain diagrams were not diagnostic for a hip labral tear, but were consistent with a lumbar disc herniation with radiculopathy. He testified that if Claimant had suffered an acute labral tear he "would expect that the pain diagrams would be decidedly different than what they are." However, on cross-examination, Dr. Erickson partially backed off of this position, when shown specific pain diagrams, including from early in Claimant's treatment (*see*, generally Hearing Transcript at pp. 73-77).

78. Dr. Erickson testified that a labrum would likely not tear over time in a normal hip, unless there was some sort of pathology in the hip joint, like degenerative arthritis or other abnormalities. He opined that Claimant's substantial pre-existing abnormalities in his hip joint, along with his body weight, would greatly increase the chances that he would develop a labral tear from normal daily activities. Dr. Erickson testified an activity like baseball [as noted by Claimant in his testimony] could lead to, or cause, a degenerative labral tear in someone with Claimant's similar abnormalities. He noted that a degenerative labral tear could occur from normal daily activities, but the more athletic the activities are, the more likely it is you are going to have a degenerative tear. The body mechanics involved in playing baseball creates more force on a labrum and requires twisting of the hips.

79. Dr. Erickson testified that the majority of hip labral tears involved some kind of a “significant weight-bearing twist to the hip joint.” He noted that Claimant’s injury involved an “axial load, which with the waist in a bent position would put a great deal of strain on the lower back. But [he didn’t] think it would put a great deal of stress on the hip joint.”

80. Dr. Erickson testified that physicians, especially in the Workers’ Compensation field, are trained to take detailed histories and reports of injuries from injured workers, because they are critical to the cases. He testified that in his past experiences with Dr. Dallenbach, he has found him to be very thorough and complete in his examinations. Dr. Erickson opined that if a symptom or report of injury is not included in the initial medical report, then it was most likely not reported to the physician. The fact that there was no mention of immediate pain to Claimant’s hip or a twisting mechanism of injury in Dr. Dallenbach’s initial report indicated to him that there was no hip injury at the time of his accident. Dr. Erickson also noted that Claimant did not begin complaining of specific problems with his hip until after he was evaluated by Dr. Bhatti on December 21, 2020. The first time claimant reported a sharp pain in his hip was when he was first seen by Dr. Doner.

81. Dr. Erickson noted that Claimant was seen by at least 15 different medical providers from August 12, 2019, to December 21, 2020. Claimant claimed that he reported right hip pain to all of these providers but they all failed to note that he specifically reported right hip pain.

82. Dr. Erickson testified that if a patient reported immediate pain or a pop or tearing sensation in the hip joint at the time of an injury, a careful examination would be made of the hip joint. Range of motion would be tested for possible pain with external rotation and flexion. Tests like the FABER, the FADER, and the FAI impingement test would be performed to determine whether there is a labral tear or femoroacetabular impingement. Imaging studies would also be requested. The fact that Dr. Dallenbach did not perform any of these tests indicated to him that there were no complaints of hip pain. The first time anybody did an actual hip examination was when Dr. Bhatti was trying to find another possible source of Claimant’s pain. This led Dr. Erickson to believe that Claimant never complained of significant pain in his hip such that a physician took notice and did an examination.

83. Dr. Erickson testified that he could not definitively say the tear was pre-existing or if it happened after the work injury. But he could definitively say, without any serious doubt, that based on the medical records and his expertise the medical evidence did not support a finding that claimant suffered an acute labral tear on August 12, 2019.

84. Regarding the surgery performed by Dr. Doner, the following exchange occurred:

> Q Now, did you agree with the procedures that Dr. Doner performed, the surgical procedures?

> A I think that they were indicated based on the pathology of the MRI.
>
> Q Is there any additional procedures that should have been performed, in your opinion.
>
> A In my opinion, there was. [whereupon he would have recommended a hip angle realignment procedure prior to the labral repair, in order to assure better long-term results]. (Hearing transcript, pp. 61-62).

Claimant Testifies at Hearing

85. On August 12, 2019, Claimant was a lock specialist for *Colorado Lock and Safe.* Claimant's duties included installing frames and soundproof doors weighing up to 450 pounds in classified containers. Claimant testified that installation of these doors involved a lot of twisting, lifting, kneeling, and upper body strength. Claimant clarified that lifting these doors involved the use of the hips and legs, and that installation can take between 4-5 hours. Claimant had installed over a hundred of these doors prior to his work injury.

86. Claimant testified that he was moving a soundproof door with a coworker ("Jeb") on August 12, 2019, when he was injured. Claimant stated he grabbed the door at the top and it was tilted towards him. As he was walking backwards, he jerked it down to the hip and his coworker picked up the other end to transfer the weight. Claimant stated that when the weight shifted towards his coworker, he felt a tearing sensation. He continued:

> So I had a rock dolly between Jeb and I on the right. So we twisted towards the right to try to make it to the rock dolly so we didn't damage the expensive door. And when I was doing the twisting, the popping—I had that pop, and then I dropped the door and it fell on the ground. And I was in excruciating pain from that day on. (Transcript, pp.108-109).

87. Claimant testified that he experienced both a popping and tearing sensation from this motion within seconds of each other. Claimant testified that when he twisted to the right to move the door onto the dolly that he twisted with his hips and his upper body. Claimant stated that he experienced pain in his lower back, down his right leg, and his groin, which he described as being both a stabbing pain along with pins and needles. Claimant rated his pain in his right hip at the time at a 9/10.

88. Claimant testified he sought medical treatment immediately and that he reported pain in his right buttocks, groin, lower back, and right hip. Claimant testified he was referred to physical therapy and dry needling, which did not help. Claimant stated he had a L4-5 discectomy with Dr. Bhatti that helped with pain shooting down his leg but that he continued to have pain in his back and butt. Claimant had no significant change with pain in his right hip, groin, or right buttocks area after the back surgery.

89. Claimant stated he is currently experiencing pain across his low back, right buttocks, and groin. He also described limited range of motion in his right hip which is constant, and which has gotten worse over time. He described difficulty with activities of daily living, including bending over to tie his shoes, putting on socks, and getting out of bed. Claimant testified that prior to this work injury he was able to hike and play softball without pain but that he is no longer able to do these activities. Claimant also described pain in his hip and groin while rotating during sleep that resulted in a popping sensation.

90. Claimant reviewed his pain diagram from August 28th, 2019, and stated that he marked an ‘X” within a “’O” in the right groin and right buttocks. Claimant stated he also marked an “X” within a “O” in his groin and buttocks in his September 11, 2019 pain diagram. Claimant stated that he consistently reported pain in his hip to his providers. Claimant later clarified that when he stated he reported hip pain consistently to his providers that this also included reports of pain to his groin, thigh, and buttocks.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers’ Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers’ compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers’ compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

In this instance, the ALJ finds that while Claimant has not been a model of consistency throughout his diagnosis and treatment, he still did so in good faith, while in obvious distress as times. While taking a little more care, for example, in filling out the pain charts would have served him better, he likely rushed through the 'formalities' just to get on with things. And while sometimes he mentioned a 'twisting' mechanism, and sometimes he didn't, the ALJ notes that often such responses are context driven, depending upon the perceived level of detail desired by the listener. Be it noted that this entire episode, from start to finish, likely lasted *at most* a few seconds, and yielded sudden and unexpected results. It is simply asking too much to demand precise recall from a layperson whether he twisted his hips vs. his torso while searing pain surges through his back and leg, while trying to save an expensive door. Further, the ALJ finds that Claimant testified to the best of his abilities at hearing.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). The ALJ finds that each expert has rendered their opinions-both in writing and in testimony- to the best of their ability, based upon the information they were provided. The real issue here is one of *persuasiveness.*

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Overcoming the DIME Opinion on MMI, Generally

F. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*; *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998); *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186, 189-190 (Colo. App. 2002); *Sholund v. John Elway Dodge Arapahoe,* W.C. No. 4-522-173 (ICAO October 22, 2004); *Kreps v. United Airlines,* W.C. Nos. 4-565-545 and 4-618-577 (ICAO January 13, 2005). The MMI determination requires the DIME physician to assess, as a matter of diagnosis, whether the various components of a claimant’s medical condition are casually related to the injury. *Martinez v. ICAO*, No. 06CA2673 (Colo. App. July 26, 2007). “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding the cause of a particular component of a claimant’s overall medical impairment, MMI or the degree of whole person impairment, “there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be “unmistakable and free from serious or substantial doubt.” *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).

G. This enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008).

H. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician’s finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician’s determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

I. However, the mere fact that a Claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's pre-existing condition. *See Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990); *Seifried v. Industrial Comm'n*, 736 P.2d 1262, 1263 (Colo. App, 1986) (“[I]f a disability were [ninety-five percent] attributable to a pre-existing, but stable, condition and [five-percent] attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling.")

J. Generally, the Claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009). However, in this instance, the DIME physician has concluded that Claimant's current symptoms were proximately caused by the work injury, rather than an inevitable, natural progression of his hip condition. Respondents must now overcome the DIME in this regard.

Overcoming the DIME on MMI, as Applied

K. In this instance, Dr. Erickson has provided a number of opinions, which dispute the conclusions drawn by Dr. Hall. He opines that the proposed hip surgery was not necessitated by Claimant's work injury. He opines that Claimant's pain complaints were not consistent with the mechanism of injury. He was initially insistent that Claimant never complained of stabbing hip pain until being examined by Dr. Bhatti long after the work incident. However, (and to his credit) he at least partially walked back that assertion during cross examination when shown the relevant pain charts. In the final analysis, while it is likely true that Claimant-to his own detriment-hurried through the process of filling out the pain charts, it is also likely that Dr. Erickson hurried through the process of analyzing these same charts. It's hard to overcome a DIME when you don't play mistake-free ball yourself. The ALJ further notes that five weeks post-injury, Dr. Leggett noted that Claimant reported soreness in his hip, and areas of mechanical irritation, including trochanteric bursitis. Emphasis at that time, however, was on the L4/L5 manifestations.

While he is not Level II accredited, Dr. Doner makes a convincing case for the nexus between the work incident and Claimant's hip complaints. He is an active practitioner, and is actively treating Claimant. Perhaps surprisingly, a sizeable minority (25-30%) of his hip patients point to pain in the buttocks instead of the hip. [Although the ALJ notes in this case that Claimant actually did mark his stabbing hip even early on-while understandably more focused on his lumbar-mediated neuropathic pain]. Both he and Dr. Erickson agree that Claimant's preexisting coxa magna and hip dysplasia made Claimant more susceptible to a hip injury under these circumstances. However, (despite not even knowing what Level II means) Dr. Doner made a better analysis than Dr. Erickson on the proximate cause issue. Claimant brought his own preexisting abnormalities, and his BMI, to work with him, and subjected his hip to stresses which a more 'normal' hip might well have withstood. And he became symptomatic, said symptoms requiring treatment.

In the final analysis, Dr. Erickson's opinions, however sincere they might be, are exactly that – his medical opinions. Respondents have presented insufficient evidence that Dr. Hall *erred* in some critical fashion; instead, it is more of "that's not the way I think he should have done it." It is duly noted that Dr. Hall spend little time emphasizing Claimant's preexisting abnormalities himself, but Dr. Doner concurred with the DIME findings, and provided greater context to them. And the ALJ is not persuaded that Dr.

Doner's opinion is biased towards Claimant, with an eye towards getting paid-any more than Dr. Erickson would appreciate being labeled a 'hired gun.' The ALJ finds that the mere difference in medical opinion as expressed by Respondents' expert does not rise to the level of overcoming the DIME opinion. Claimant was not yet at MMI at the time of the issuance of the DIME report, and will not achieve it until he recovers from the surgical intervention.

Medical Benefits, Generally

L. Once a Claimant has established the compensable nature of his work injury, he is entitled to a general award of medical benefits and Respondents are liable to provide all reasonable and necessary and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission, 759 P. 2d 705 (Colo. App. 1990).* However, a Claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his need for medical treatment. *Merriman v. indus. Comm'n, 210 P.2d 448 (Colo. 1949);Standard Metals Corp. v. Ball, 172 Colo. 510, 474 P. 2d 622 (1970); §8-41-301(1)©, C.R.S.* Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora, 942 P. 2D 1337 (Colo. App. 1997).* The mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. ball, supra*.

Medical Benefits, as Applied

M. It is duly noted that even Dr. Erickson felt that the arthroscopic labral repair performed by Dr. Doner was "indicated', based upon the pathology. The ALJ concurs, and finds such procedure was *reasonable and necessary* to cure Claimant of his hip complaints. Dr. Erickson believes that Dr. Doner should have gone even further, and addressed Claimant's complaints in a two-step process, by first addressing the underlying hip angle abnormalities. Otherwise, the labral repair might be subject to a revision, due to the ongoing stress upon the joint due to Claimant's suboptimal hip angles. Hopefully it will not come to that, but time will tell. As it is, there is no medical opinion contraindicating the *reasonableness and necessity* of the labral repair already performed. And the relatedness of Claimant's hip condition to his work injury has now been established via the DIME process. In an abundance of caution, the ALJ finds that the *relatedness* of the torn hip labrum to the work injury has also been shown by Claimant by a preponderance of the evidence. It is therefore ordered that Respondents shall reimburse Claimant (limited, of course, by the Fee Schedule) for all expenses in diagnosing and treating his torn hip labrum, including, but not limited to, the surgery already provided by Dr. Doner.

Overpayment of TTD Benefits

N. Pursuant to §8-40-201(15.5), C.R.S., "overpayment" means money received by a claimant that exceed the amount that should have been paid or which the claimant was not entitled to receive. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received the disability benefits. *Simpson v. Indus. Claim Appeals Off.*, 2I9 P.3d 354, 359 (Colo. App. 2009), *rev'd in part on other grounds*: *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d777 (Colo.2010); *see also Grandestaff v. United Airlines*, W.C. No. 4-717-644 (Dec. 12, 2013). The Court in *Grandstaff* expressly cited *Simpson v. Industrial Claim Appeals Office*, *supra*, to hold that payment of TTD benefits under an admission of liability did not bar a party from seeking to recover the TTD benefits as an overpayment. *See also Mattorano v. United Airlines*, W.C. No. 4-861-379 (July 25, 2013).

O. However, in this case, the ALJ has found that Claimant is not yet at MMI, due to his ongoing treatment and recovery for his work-related hip injury. Claimant is thus entitled to TTD payments until they are otherwise terminated by operation of law. Ipso facto, there is no overpayment owed as of the date of this Order.

ORDER

It is therefore Ordered that:

1. The DIME opinion of Dr. Hall has not been overcome. Claimant is not yet at Maximum Medical Improvement.

2. The labral hip repair performed by Dr. Doner was reasonable, necessary, and related to Claimant's work injury. Respondents shall reimburse the appropriate parties for all costs in connection therewith, subject to Fee Schedule limitations.

3. Respondents' claim for overpayment of TTD payments is denied and dismissed.

4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is* ***highly recommended*** *that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

ISSUES

WC. 5-163-922-001

1. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury to his left wrist arising out of the course of his employment with Employer on May 18, 2015.

2. Whether Claimant established by a preponderance of the evidence an entitlement to medical benefits related to a May 18, 2015 work injury.

3. Whether Claimant established an entitlement to temporary total disability benefits related to a May 18, 2015 work injury.

4. Claimant's average weekly wage.

5. Authorized treating provider.

6. Whether Respondents established by a preponderance of the evidence that Claimant's claim is barred by application of the statute of limitations.

7. Whether Respondents established by a preponderance of the evidence that Claimant should be penalized up to one day's temporary disability benefits for late reporting.

WC. 5-166-299-001

1. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury to is right upper extremity arising out of the course of his employment with Employer on December 9, 2020.

2. Whether Claimant established by a preponderance of the evidence an entitlement to medical benefits related to a December 9, 2020 work injury.

3. Whether Claimant established an entitlement to temporary total disability benefits related to a December 9, 2020 work injury.

4. Claimant's average weekly wage.

5. Authorized treating provider.

FINDINGS OF FACT

1. Claimant has been employed by Employer in its bakery since 2004. From 2004 to May 2010, Claimant worked as an oven operator. From May 2004 to April 2020, Claimant worked as a "wrap operator." After April 5, 2020, Claimant worked as a "scaler."

2. In the wrap operator position, Claimant placed bread inside baskets and then pushed the baskets along a conveyor belt and the baskets would move down the conveyor belt on rollers on a continual basis. Claimant testified the bread baskets weighted approximately twenty-five pounds, and that his movements were primarily with his left hand. Claimant worked five to seven days per week, and eight hours per day as a wrapper, although he often worked overtime.

3. In the "scaler" position, Claimant's duties included primarily using a hand-held scoop to scoop various ingredients from bins to a scale, using both his left and right hands. Depending on the ingredient, the loaded scoop could weigh up to five pounds. Claimant used the scoop repetitively and frequently over the course of a workday. Claimant testified that when working in the scaler position, he was not constantly using the same exact motion for scooping ingredients and that the various ingredient containers were of different heights and in various locations in his work area. Again, Claimant performed this position five to seven days per week, eight hours per day, and often worked overtime.

WC 5-163-922-001 – Procedural History

4. On February 10, 2021, Claimant reported to Employer that he had sustained an injury to his left wrist from his work as a wrap operator and a scaler. Claimant also reported experiencing the same symptoms in his right wrist at that time. (Ex. 1).

5. Also on February 10, 2021, Claimant's manager, Brittany S[Redacted], completed a Management Report of Associate Injury or Illness in which she indicated Claimant reported his private physician indicated Claimant required surgery. Claimant also reported that his wrist had been bothering him over the previous 2-4 years. (Ex. O). Employer provided Claimant a list of eight designated providers on February 10, 2021, as required by § 8-43-404 ((5)(a)(I)(A), C.R.S. (Ex. P).

6. Claimant testified that he first noted pain in his left wrist sometime in 2015, and that he went to his doctor with left wrist symptoms at that time. Claimant testified that his pain would come and go, and that he did not know what caused the pain. Claimant testified that he came to believe his left wrist symptoms were work-related sometime in 2020, after he moved to the scaler position. Claimant testified he did not report his left wrist pain until 2021 because he then realized that it would not go away and was continuous.

7. On February 12, 2021, Employer filed a First Report of Injury, for Claimant's alleged left wrist injury, indicating a date of injury of May 18, 2015, and that the alleged mechanism of injury was "repetitive motion." (Ex. 1). Respondents filed a Notice of

Contest on February 26, 2021, indicating Claimant' injury required further investigation. (Ex. B).

8. On June 10, 2021, Claimant filed an Application for Hearing in WC 5-166-922-001, endorsing issues of compensability, medical benefits, authorized provider, reasonably necessary, average weekly wage, and temporary disability benefits beginning May 18, 2015. Claimant's stated date of injury was May 18, 2015. (Ex. C).

WC. 5-163-922-001 – Medical History (Left wrist)

9. Claimant's first documented report of left wrist symptoms was on or about March 18, 2016, when Claimant saw his primary care physician, Haftu Gebrehiwot, M.D., at the Romanat Clinic. Claimant reported pain and swelling in his left wrist for two weeks. Claimant reported his pain at 9/10 and aggravated with movement. He reported he was unable to work, and he would like to obtain sick leave. Claimant denied any trauma or fall. On examination, Dr. Gebrehiwot found the left wrist warm to the touch, tender and swollen, with limited range of motion. He wrote a note to excuse Claimant from work for the period of March 18, 2016 to March 25, 2016. Dr. Gebrehiwot ordered x-rays of Claimant's left wrist. (Ex. Y & Ex. 5).

10. X-rays of Claimant's left wrist were performed at Health Images on March 25, 2016. The x-rays of Claimant's left wrist showed a widened scapholunate joint, suggesting ligamentous instability and a potential ligamentous tear. (Ex. Y, p. 104, Ex. 5, p. 49).

11. Claimant's next three documented visits with Dr. Gebrehiwot were on May 12, 2016, March 7, 2017, and March 25, 2017. At these visits Claimant reported various symptoms such as headaches and a cough. Dr. Gebrehiwot's medical records from these dates do not document that Claimant reported any wrist or upper extremity symptoms. (Ex. 5).

12. On May 24, 2018, Claimant saw Nader Shourbaji, M.D., at the UC Health hand surgery clinic for left wrist pain. Claimant reported an acute onset of pain ten days earlier that prompted a trip to the emergency room. (No records of an emergency room visit were offered or admitted into evidence). Claimant reported his wrist pain did not interfere with most of his activities, but bothered him with wrist extension and when he used it a lot. Left wrist x-rays showed SL (i.e., scapholunate joint) widening with radioscaphoid OA (i.e., osteoarthritis). Dr. Shourbaji diagnosed Claimant with arthritis, likely related to SLAC wrist, and discussed treatment options including injections and possible surgery in the future. Claimant indicated he did not wish to pursue treatment and would follow up as his symptoms warranted. Claimant testified that Dr. Shourbaji did not relate Claimant's wrist pain to his work. (Ex. 5, p. 58 – 60, Ex. Z).

13. On August 26, 2018[1], Claimant saw Dr. Gebrehiwot, M.D. for lower back pain. No wrist or upper extremity issues were documented. (Ex. Y, p. 100-101, Ex. 5, p. 40-41).

[1] The date of signature on the medical record is difficult to read, but appears to be either August 26, 2018, or August 26, 2016.

14. On or about July 20 2020[2], Claimant returned to Dr. Gebrehiwot, for complaints of bilateral wrist and hand pain with swelling for approximately three months. On examination, Dr. Gebrehiwot noted that Claimant's left medial wrist was tender and slightly swollen, with no limitation of range of motion. Claimant's right wrist and fingers were mildly tender with palpation. Dr. Gebrehiwot diagnosed Claimant with pain in both wrists and joint pain in both hands, and wrote a note to excuse Claimant from work from July 20, 2020 through July 25, 2020. Dr. Gebrehiwot did not state any opinion regarding the cause of Claimant's symptoms. (Ex. 5, p. 61-62).

15. On February 11, 2021, Claimant saw Brian Beatty, D.O., at Rocky Mountain Medical Group (RMMG). RMMG was listed on the designated provider list provided to Claimant the previous day. Claimant reported pain in his left wrist and a date of injury of May 8, 2015. Claimant reported he had been developing left wrist pain that was initially intermittent, but that he had worsened. Claimant reported that he had x-rays in 2015 which were negative and that he had been seen at University Hospital approximately two years earlier. Claimant also reported developing some right-hand pain as well. Dr. Beatty recommended that Claimant see Craig Davis, M.D., for an orthopedic consult. Dr. Beatty did not impose any work restrictions. Dr. Beatty's February 11, 2021 report does not contain any analysis of the cause of Claimant's condition. (Ex. 5, p. 72-74)

16. On March 3, 2021, Claimant saw Dr. Beatty for his left wrist, and reported no change in his symptoms. Dr. Beatty reviewed Claimant's medical records and noted that Claimant had previously been diagnosed with a SLAC 1 lesion involving his wrist. He diagnosed Claimant with an unspecified sprain of the left wrist and indicated that Claimant was released to perform full work duties. (Ex. 5, p. 76-77).

17. On March 10, 2021, Claimant saw Dr. Davis for left wrist symptoms. Claimant reported developing gradually worsening symptoms over the left wrist for the previous few years. On examination, Dr. Davis noted swelling and tenderness over the dorsal radial aspect of the wrist, and diagnosed Claimant with a scapholunate advanced collapse (SLAC) of the left wrist. Dr. Davis also opined that Claimant had posttraumatic arthritis of the left wrist, "clearly aggravated by his work activities," and that Claimant's job activities significantly aggravated the arthritis resulting in the need for surgery. Dr. Davis discussed treatment options to include steroid injections and surgery. Dr. Davis did not conduct a causation analysis and, apparently, formed his causation opinion based on information provided by Claimant. (Ex. 5, p. 78-82).

18. On March 17, 2021, Claimant saw Dr. Beatty for his left wrist. Dr. Beatty did not impose any work restrictions. (Ex. 5, p. 83-85). Dr. Beatty repeated Dr. Davis' opinion that Claimant's work activities aggravated post-traumatic arthritis, but offered no independent opinion regarding the cause of Claimant's symptoms and condition. (Ex. 5, p. 83-84).

[2] The date of signature on the medical record is July 26, 2020. However, the ALJ infers that the visit took place on or about July 20, 2020 based on Dr. Gebrehiwot's assignment of a work release beginning July 20, 2020.

WC 5-166-299-001 – Procedural History

19. On March 2, 2021, Claimant reported to Employer that his physician had referred Claimant to physical therapy for right shoulder, elbow, and forearm issues. He also reported that on March 2, 2021, he felt pain in his right hand from the shoulder to the tip of his fingers, including his shoulder, elbow, forearm, wrist, and palm of hand, "[a]ll because of overusing or scooping ingredients." (Ex. R & S).

20. Employer appropriately provided Claimant with a list of eight designated providers on March 2, 2021, as required by § 8-43-404 ((5)(a)(I)(A), C.R.S. (Ex. T).

21. On March 5, 2021, Employer filed a First Report of Injury with the division, for Claimant's right upper extremity. The stated date of injury was December 9, 2020. (Ex. E).

22. On March 23, 2021, Respondents filed a Notice of Contest with respect to Claimant's right upper extremity claims. (Ex. F).

23. On August 27, 2021, Claimant filed an Application for Hearing in WC 5-166-299-001, endorsing issues of compensability, medical benefits, authorized provider, reasonably necessary, average weekly wage, and temporary disability benefits beginning December 9, 2020. Claimant's stated date of injury was December 20, 2020. (Ex. G).

24. On September 14, 2021, WC 5-163-922-001 and 5-166-299-001, were consolidated for hearing. (Ex. I).

WC 5-166-299-001 – Medical History

25. On May 8, 2015, Claimant saw Dr. Gebrehiwot, at the Romanat Clinic, reporting right wrist pain and swelling after picking up and moving heavy objects the previous day. Claimant reported sharp pain in the wrist aggravated by movement. Dr. Gebrehiwot diagnosed Claimant with wrist pain and ordered an x-ray of the right wrist joint and hand. (Ex. 5).

26. Claimant testified he reported his right arm pain to his personal physician on December 9, 2020, and was referred to physical therapy. No record of Claimant's December 9, 2020 visit was offered into evidence. Claimant testified he did not receive any treatment for his right wrist between October 2012 and December 2020. Claimant's testimony in this regard is inconsistent with his medical records, as Claimant was evaluated for his right wrist on May 8, 2015, and for bilateral wrist pain on or about July 20, 2020.

27. From December 12, 2020 through December 28, 2020, Claimant attended three physical therapy appointments at Quality Health Physical Therapy for diagnoses of pain in right shoulder, medial epicondylitis in the right elbow and pain in the right wrist flexor. The physical therapy records indicate Claimant was referred by Dr. Gebrehiwot and the date of onset was stated as November 16, 2020. (Ex. 5, p. 63-71).

28. On March 2, 2021, Claimant saw Amanda Cava, M.D., at Concentra for evaluation of his right upper extremity symptoms. Concentra Medical Clinic was included on the designated provider list provided to Claimant on March 2, 2021. Other than a WC 164 form, no record of Dr. Cava's examination was offered into evidence. Dr. Cava noted a diagnosis of a strain of the right hand, elbow, and forearm, internal impingement of the right shoulder and a repetitive motion injury, and referred Claimant for occupational therapy and a job site analysis referral. Dr. Cava indicated claimant would be anticipated to be at maximum medical improvement in 4-6 weeks. (Ex. BB, p. 121). The WC 164 form does not include documentation of Claimant's reported medical history, subjective symptoms, objective findings, an examination, testing or causation analysis.

29. On March 6, 2021, Claimant saw Valeri M. Skvarca, PA-C, at the Concentra Medical Clinic for evaluation of right arm symptoms. The only record of Claimant's evaluation by Ms. Skvarca is a "Work Activity Status Report," indicating Claimant was able to return to work full time on March 6, 2021, and that he was anticipated to be at MMI in two weeks. (Ex. BB, p. 122). The March 5, 2021 record does not include documentation of Claimant's reported medical history, subjective symptoms, objective findings, an examination, testing or a causation analysis.

30. On March 15, 2021, Claimant saw Dr. Cava, for his right arm, hand, and shoulder. Dr. Cava's examination and findings were not included in the record. According to the Work Activity Status Report she prepared, Claimant was able to return to work without restrictions, other than no overtime. (Ex. BB, p. 123). The March 15, 2021 record does not include documentation of Claimant's reported medical history, subjective symptoms, objective findings, an examination, testing or a causation analysis.

31. On March 29, 2021, Claimant saw Dr. Cava, who released Claimant from care for his right upper extremity issues, and found Claimant had reached maximum medical improvement (MMI) on March 29, 2021. Claimant was released with no work restrictions. The only admitted record of Claimant's visit on March 29, 2021 is a Work Activity Status Report. (Ex. BB, p. 124). The March 29, 2021 record does not include documentation of Claimant's reported medical history, subjective symptoms, objective findings, an examination, testing or a causation analysis.

EXPERT WITNESSES

32. Sara Nowotny, M.A., is a vocational consultant and was admitted as an expert in vocational evaluation and rehabilitation. Respondents presented Ms. Nowotny's testimony through deposition in lieu of live testimony. Ms. Nowotny performed two job site evaluations and prepared a job demands analyses for both the wrapper and scaler positions. On July 19, 2021, Ms. Nowotny observed Claimant performing his duties in the scaler position for three hours, and prepared a job demands analysis based on her observations. Based on her observations, Ms. Nowotny determined that Claimant engaged in lifting of 0-50 pounds frequently over the course of a workday. However, she also concluded that the risk factors for cumulative trauma conditions contained in the Colorado Medical Treatment Guidelines, Rule 17, Exhibit 5, were not present. (Ex. M).

33. Also on July 19, 2021, Ms. Nowotny observed a different employee performing the duties of a wrap operator for one hour. Ms. Nowotny testified that the employee she observed was pulling trays onto a conveyor and then pushing loaves of bread into the trays, and sliding the trays onto the conveyor. Her description of the duties observed was consistent with Claimant's description of the duties performed as a wrap operator. Based on her observations, Ms. Nowotny prepared a job demands analysis for the position. Ms. Nowotny indicated that the position required frequent lifting of 11-25 pounds, and occasional lifting of 26-50 pounds. She also determined that simple and firm grasping were performed infrequently. Ms. Nowotny opined that neither the primary nor secondary risk factors for cumulative trauma conditions of the wrist or shoulder identified in the Colorado Medical Treatment Guidelines were present. (Ex. L).

34. Jonathan Sollender, M.D., was admitted as an expert in orthopedics and hand surgery. Respondents submitted Dr. Sollender's deposition in lieu of live testimony. Dr. Sollender conducted an Independent Medical Examination of Claimant on July 5, 2021. (Ex. X.) As part of his evaluation, Dr. Sollender met with Claimant, physically examined Claimant, reviewed all available medical records, and reviewed two Job Demands Analysis reports prepared by Sara Nowotny.

35. Dr. Sollender performed a causation analysis as described in WCRP Rule 15, Exhibit 5 of the Colorado Medical Treatment Guidelines for both Claimant's left wrist and right upper extremity conditions. Based on his analysis, including a thorough review of Ms. Nowotny's job demands analysis for both the wrapper and scaler positions, Dr. Sollender opined that neither Claimant's left wrist symptoms nor his right hand or wrist extremity symptoms caused by Claimant's employment with Employer. Sollender's analysis was thorough and credible. Dr. Sollender offered no opinion on the cause of Claimant's reported shoulder symptoms. (Ex. X).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its “origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee’s service to the employer.” *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Indus. Outsourcing LP*, WC 4-898-391-01, (ICAO Aug. 25, 2014).

The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold d/b/a Atlas Logistics*, WC 4-960-513-01, (ICAO Oct. 2, 2015).

A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa County Valley School Dist. #51*, WC 5-102-109-001 (ICAO Mar. 18, 2020).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Constr. v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Dept. Stores*, WC 5-020-962-01, (ICAO Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

WC 5-163-922-001

Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury or occupational disease to his left wrist arising out of the course of his employment with Employer. As found, Claimant was diagnosed with a scapholunate advanced collapse (SLAC) of the left wrist. Claimant contends this condition manifested while he was working as a wrap operator in 2015, but he did not report it until 2021 because it did not become a continuous issue until 2021. Of Claimant's treating providers, only Dr. Davis opined that Claimant's condition was work-related. However, Dr. Davis' opinion is cursory, and does not demonstrate that he conducted any analysis of the cause of Claimant's condition. Moreover Dr. Davis did not credibly explain how Claimant's position as a wrap operator, or the repetitive physical movements involved in that position could cause a SLAC of the left wrist, osteoarthritis, or how his work aggravated his condition. Claimant did not offer credible, persuasive evidence that his left wrist condition is causally related to his employment with Employer. The ALJ finds credible Dr. Sollender's opinion that Claimant's left wrist condition is not work-related. Claimant has failed to meet his burden of proof of establishing a compensable injury, occupational disease, or aggravation of an existing condition.

Because Claimant has failed to establish a compensable injury, the remainder of Claimant's claims and Respondents' defenses related to the alleged May 18, 2015 injury are moot.

WC 5-166-299-001

Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury or occupational disease to his right upper extremity arising out of the course of his employment with Employer. The evidence presented was insufficient to establish that Claimant's reported right upper extremity symptoms are related to his work activities. Although Claimant saw Dr. Gebrehiwot on December 9, 2020, no record from Dr. Gebrehiwot from this visit was offered into evidence. While the physical therapy records from Quality PT do indicate a referral by Dr. Gebrehiwot, and stated diagnoses of right shoulder pain, and medial epicondylitis of the right elbow, no substantive evidence was offered to explain the basis for Dr. Gebrehiwot's diagnoses or whether he made any determination of causation.

After reporting his condition in March, 2021, Claimant saw Dr. Cava and Ms. Skvarca from March 2, 2021 to March 29, 2021. The only records admitted into evidence from these providers were three "Work Activity Status Reports" and a WC 164 form. These records state diagnoses of strains of the right elbow, forearm and hand, internal impingement of the right shoulder, and cumulative trauma from repetitive impact. Dr. Cava also indicated that objective findings were consistent with "history and/or work-related mechanism of injury/illness." However, the admitted records from Dr. Cava or Ms. Skvarca do not show the history Claimant provided, his subjective complaints, the providers' objective findings, testing or results of examinations performed. Consequently, the record does not contain credible evidence supporting Dr. Cava's diagnoses or causation opinion. The ALJ finds credible Dr. Sollender's opinion that Claimant's right wrist symptoms are not work related. Claimant offered no persuasive evidence demonstrating that his remaining symptoms are work-related.

Because Claimant has failed to establish a compensable injury, the remainder of Claimant's claims and Respondents' defenses related to the alleged May 18, 2015 injury are moot.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable work-related injury or onset of an occupational disease on or about May 18, 2015, as alleged in WC 5-163-922-001. Claimant's claim is denied and dismissed.

2. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable work-related injury or onset of an occupational disease on or about December 9, 2020, as alleged in WC 5-166-299-001. Claimant's claim is denied and dismissed.

3. All other issues are moot.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 27, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-171-125-001

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he sustained a compensable injury to his left knee on April 2, 2020.

II. If Claimant demonstrated that he sustained a compensable injury, whether Respondent established, by a preponderance of the evidence, that Claimant's need for additional treatment, including surgery directed to the left knee is related to a subsequent intervening event.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is employed as a police officer for [Employer Redacted].

2. He is a member of the SWAT team whose duties are primarily to apprehend violent suspects. His job entails engaging in a substantial amount of physical activity, including running at full speed (sprinting), lifting and jumping.

3. On April 2, 2020, two SWAT teams were in pursuit of a suspected offender. As they moved in to apprehend the suspect, he fled on foot prompting Claimant to exit his vehicle and pursue him on foot. During the chase, Claimant slipped on some loose gravel, buckling his left knee. Claimant testified that he felt a popping sensation followed by immediate pain and swelling in the left knee joint.

4. Claimant testified that he has never had any prior injuries/issues with either of his knees before to the pain he felt from the above-described episode.

5. Claimant testified that he reported the injury to his supervisor, Sergeant Troy B[Redacted] immediately. Because the alleged injury occurred on the last day of his workweek[1], Claimant testified that he elected to go home and wait to see if things improved over the weekend. According to Claimant, he spent the weekend resting and icing his left knee without much improvement. Indeed, despite these efforts, Claimant testified that he had significant discomfort and the knee remained stiff and tight.

6. In addition to the aforementioned self-care, Claimant testified that he did some internet-based research into his symptoms after which he formed a belief that he had strained his lateral collateral ligament (LCL). Based upon his research, Claimant

[1] Claimant works four 10-hour shifts, Monday through Thursday and the accident occurred on Thursday afternoon around 4:00 p.m. (Claimant's Exhibit 1, p. 2).

testified that he believed that it would simply take time for his knee heal so he did not seek the assistance of any health care providers.

7. Claimant retuned to work as scheduled on April 6, 2020 and continued to work full-duty in the ensuing months following the April 2, 2020 incident. He testified that within two to three weeks following the incident, his pain as better. Nonetheless, he reported a “vague feeling of instability.” (Resp. Ex. M, p. 57). Claimant continued to work and perform his regular job duties sometimes with assistance and at other times without because he thought it was improving.

8. By late July/early August, Claimant felt his knee had improved enough that he could attempt to play softball. Claimant testified: “[At that point,] I felt really good in my normal day-to-day movement. It really didn’t bother me unless I was trying to push it through running or trying to do some range of motion-type [activities].” However, Claimant experienced an increase in his left knee pain while he was playing in the outfield and a ball was hit to him. As he attempted to run the ball down, Claimant experienced an immediate onset of increased pain in the same area he had following the April 2, 2020 incident. Claimant testified that after resting the knee once more, his pain went back to the baseline level that he had been dealing with before playing softball.

9. Claimant testified that in the months following this softball incident, he “felt really good doing the normal activities of [his] day-to-day” and that his knee “didn’t bother [him] at all.” It was only while pushing himself while working out that he noticed discomfort in his knee.

10. As a member of the SWAT Team, Claimant testified that he stays physically fit. He participates in intense workouts and lists weightlifting, running, and mountain biking as his hobbies. (Resp. Ex. P, p. 71). He has described previously being able to squat more than 400 pounds of weight. (Resp. Ex. A, p. 7). He testified: “Outside of work, I work out probably five to seven days a week in some way, shape, or form. I’m very active. I lift weights, I do sprints, I ride a mountain bike . . . . I’m very active outside of work.” He testified that SWAT Team members are permitted to work out during work hours as long as there is not an episode that needs their attention.

11. Similar to the increased discomfort he experienced while playing softball, Claimant had an episode of intense pain while working out in January 2021. According to Claimant, he was performing deadlifts when he felt increased pain on the outside of his left knee. Claimant testified that because his self-directed treatment regimen had not ameliorated his symptoms completely and because he had again experienced increased pain with his workout, he decided to seek medical attention.

12. Claimant scheduled an appointment with Dr. Huang at the Colorado Springs Orthopedic Group for February 5, 2021; however, he was evaluated by Dr. Huang’s physician assistant (PA-C) Ryan O’Neal on this date. In conjunction with this appointment, Claimant completed paperwork that expressly indicates that his left knee injury was not work related. (Resp. Ex. M, p. 60). Claimant’s “patient History” form

indicates that his left knee pain started on March 2, 2020. (Id.). He indicated further that the left knee had "buckled" two times in the past year while running and that he had pain and at times a grinding sensation with "explosive" movements. (Id.).

13. PA-C O'Neal's February 5, 2021 record indicates that Claimant presented to the office with a complaint of "increasing left lateral knee pain over the last 10 months." (Resp. Ex. M, p. 57). Claimant reported that he had injured the knee while "running when he twisted it . . . awkwardly." (Id.). He described that he had "2-3 weeks of fairly significant left lateral knee pain and swelling . . . but did not see anyone." (Id.). Claimant further described that his left knee pain improved slowly but he continued to have a persistent feeling of instability which became manifest while working out in the gym when his left knee "buckled" on him. (Id.). Claimant explained that he had an immediate onset of left lateral knee pain that had persisted since the buckling incident in the gym. (Id.). He also described a persistent sensation of his knee wanting to "give out" on him but denied any "locking" of the knee. (Id.). Physical examination revealed a positive McMurray's with a Lachman's test and pain with palpation to the lateral aspect of the left knee raising concern for internal derangement. (Id. at p. 58). PA-C O'Neal ordered a MRI of the left knee. (Id. at p. 59).

14. An MRI was performed on February 17, 2021. The MRI revealed an undersurface oblique tear of the posterior horn of the medial meniscus near the posterior junction and a large chondral defect/irregularity of the lateral trochlea that measured 2.3 cm in length and 6 mm in width. There were also full thickness chondral changes and likely morphologic defects with extensive underlying cystic changes of the lateral trochlea along with a partial thickness chondral fissuring/small chondral flaps of the medial patellar facet and median patellar ridge. Finally, there was focal subcortical edema of the mid ridge suggesting a full thickness fissure in this area of the knee. (Resp. Ex. N, p. 63).

15. Claimant returned to Dr. Huang on February 19, 2021. Dr. Huang reiterated the following history:

> Kyle Vanderlinden is a 35 year old male police officer seen for ongoing left knee pain. He reports one year of symptoms starting when he was at work and running around the car to the left side and his knee "buckled." He was able to continue to walk and ambulate and over time, he though his symptoms would improve but unfortunately continues to clean (sic) of mild swelling and pain with high load activities including sprinting and jumping. After resting and modifying his activities and using Ibuprofen, he did have some improvement of the symptoms but approximately 3 months later, he was at a softball game and his knee gave way again. This has resulted in increased pain. His pain is described as sharp, dull and aching and heat predominate. [He] has pain over the lateral aspect of his knee with only occasional pain medially. (Resp. Ex. O, p. 65).

16. Dr. Huang performed a physical examination of Claimant's knees and reviewed the MRI findings with Claimant. Dr. Huang provided the following impressions: "Left knee medial meniscus tear posterior horn, osteochondral defect lateral trochlea/lateral femoral condyle." (Resp. Ex. O, p. 66). Treatment options included continued rest, activity modification, anti-inflammatory medication, injection therapy, bracing and physical therapy. (Id.). Surgical options included "arthroscopic partial meniscetomy medially and evaluation of the chondral defect laterally which would include possible mircofracture/chondroplasty, debridment of loose fragmentation." (Id.).

17. After seeing Dr. Huang, Claimant spoke to his supervisor and elected to file a claim arising out of the April 2, 2020, incident. Nonetheless, it was not until February 24, 2021 that an accident report detailing the April 2, 2020 incident was submitted to Respondent by Claimant's supervisor, Sgt. Troy B[Redacted]. (Clmt's Ex. 11, pp. 65-67). Claimant would not file a Workers' Claim for Compensation form asserting a date of injury of April 2, 2020 until June 6, 2021. (Clmt's. Ex 1). Regardless, Respondent-Employer appears to have had notice of the asserted claim as the same was denied by Notice of Contest filed by Respondent on May 6, 2021. (Clmt's. Ex 2). Claimant then filed an Application for Hearing on June 17, 2021. (Clmt's Ex. 3).

18. After electing to file a claim, Claimant was referred to Respondent-Employer's Occupational Health Clinic where he was evaluated by PA-C Paula Homberger on March 1, 2021. (Resp. Ex. P, pp. 68-72). PA-C Homberger's report from this date of visit notes that Claimant's knee "has continued to bother him [and] be symptomatic with explosive movements. He is fine with daily use. He denies any other injury. He reports having seen an orthopedic surgeon for evaluation [and] having an MRI. He reports seeing him because he wasn't sure this injury would be covered since he waited too long. He reports that Dr. Huang recommends surgery on the lateral aspect of the knee, reportedly an area of cartilage loss. He also reports a meniscus tear." (Resp. Ex. P, p. 68). PA-C Homberger reviewed with Claimant her recommendation for conservative treatment, including physical therapy and possible injections, and discussed with Claimant "that it sounds like the procedure Dr. Huang is recommending is not related to an acute finding, but more of a chronic finding." (*Id*.). Claimant would ultimately be referred to Dr. Michael Simpson for an orthopedic consultation. (Resp. Ex. R, p. 77).

19. Claimant was evaluated by Dr. Simpson on April 21, 2021. At the time of his evaluation, Dr. Simpson did not have either the MRI images or Dr. Huang's report available for review. (Resp. Ex. S, pp. 78, 80). Dr. Simpson indicated that Claimant's situation was "complicated" but thought that the treatment recommendation of Dr. Huang was "propria for the pathology described in his current symptomatology" but that due to the passage of time it was impossible to indicate "beyond medical probability" that the April 2, 2020 incident was responsible for the changes seen on Claimant's MRI.

20. Claimant returned for follow-up at Respondent's Occupational Health Clinic on May 4, 2021 where he was evaluated by Dr. Nicolas Kurz. Following his examination, Dr. Kurz, opined: "Based in (sic) the totality of the info provided, it is my professional medical opinion, and to a greater than 51% medical probability, that the remote

mechanism reported did not cause the findings on the MRI, [Claimant] was fully functional and able to work FDs, participate in weight lifting [and] sports, and is not causally work related. He is advised to follow up [with] his PCP privately, outside of the WC system for this non work related issue." (Resp. Ex. T, p. 88).

21. Respondent sought the opinions of Dr. Annu Ramaswamy. Accordingly, Dr. Ramaswamy completed an independent medical examination (IME) of Claimant on September 21, 2021. As part of his IME, Dr. Ramaswamy obtained a thorough history concerning Claimant's alleged injury. He also completed a medical records review and a physical examination. Following his evaluation, Dr. Ramaswamy opined:

> I would have to opine that I am not able to indicate (in medical probable fashion) that [Claimant's] current knee condition relates to the 04-20-2020 work incident. As [Claimant's] other providers have mentioned, given that [he] did not seek medical attention until 2021, there are no documented physical examinations of the knee (in close proximity to the 04-20-2020 incident). Therefore, it is impossible to indicate in medical probable fashion (greater than 51% probability) that [Claimant's] current left knee pathology relates to the 04-20-2020 incident.

22. Dr. Ramaswamy testified that his inability to causally relate the pathology in Claimant's left knee to the April 2, 2020 incident was due to the fact that (1) no physical examination was performed on Claimant's knee within a timely fashion following the April 2, 2020 incident and (2) the Claimant presented differently than someone who had suffered an acute meniscal tear or cartilage loss. Dr. Ramaswamy explained that because an examination was not performed for many months after the April 2, 2020 incident, he was "at a loss as to what the [Claimant's] diagnosis was at that time." Accordingly, he could not "say that the [Claimant's] medial meniscus tear or the loss of that cartilage . . . relates to that April 2, 2020 injury . . . ."

23. Dr. Ramaswamy testified further that it was not medically probable that Claimant would have presented in the fashion he did after the April 2, 2020 incident if the changes revealed on MRI were causally related to acute trauma.

24. Regarding the medical probability that Claimant's left knee conditions were related to the April 2, 2020 incident, Dr. Ramaswamy testified that he agreed with Dr. Simpson's statement that the injury Claimant purports to have suffered on April 2, 2020 would have been symptomatic and prompted treatment at that time. According to Dr. Ramaswamy, "[w]hen you have acute trauma to the meniscus or both areas (the cartilage and meniscus), you get all this fluid, you get tremendous inflammation, range of motion loss, trouble weight-bearing – that would've been the typical presentation for these issues from an acute event . . ." In contrast, Claimant "presented in April of 2020 with a couple of weeks of discomfort, got better . . . [and] was still working. . . ." Simply put, Claimant's presentation following the April 2, 2020 incident did not match what would have happened physiologically had Claimant's meniscus tear and chondral defect occurred acutely as

part of a traumatic event. Consequently, Dr. Ramaswamy was unable to relate Claimant's left knee condition to the April 2, 2020 incident, suggesting instead that the pathology seen on MRI was degenerative in nature.

25. As presented, the evidence persuades the ALJ that Claimant has failed to carry his burden to establish that he sustained a compensable left knee injury arising out the above-described April 2, 2020 incident. While the ALJ commends Claimant's devotion to his position and otherwise finds that he has been a consistent historian regarding the condition of his left knee and the April 2, 2020 incident, there is a dearth of forensic evidence to support a finding that the pathology in Claimant's left knee is causally related to an acute traumatic event occurring on April 2, 2020.

26. Based upon the evidence presented, the ALJ credits the opinions of Dr. Ramaswamy to find that Claimant has failed to establish the requisite causal connection between his left knee Dr. Ramaswamy noted in his examination that the claimant was extremely physically fit and such provides a plausible inference as to why the claimant did not present for medical treatment before he did. That coupled with his original research indicating that it may take considerable time for his injury to heal indicates to the ALJ that the delay in seeking any medical attention was reasonable given the fact that additionally he was not missing time from work.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence presented. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). When considered in its totality, the ALJ concludes that the evidence in this case supports a reasonable inference/conclusion that Claimant suffers from both a torn meniscus and chondral defect in the left knee. While Claimant probably requires treatment for these conditions, the evidence presented, including the medical opinions of Dr. Simpson and Dr. Ramaswamy persuade the ALJ that Claimant's need for such treatment is unrelated to the April 2, 2020 incident occurring at work. Based upon the evidence presented, the ALJ concludes that Dr. Ramaswamy's opinions concerning the cause of Claimant's left knee pathology and the need for surgery are credible and more persuasive than Claimant's assertions to the contrary.

Compensability

D. A "compensable injury" is one that requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; § 8-41-301, C.R.S. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*. Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

E. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs in the course and scope of employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). Based upon the evidence presented, the ALJ finds ample evidence to conclude that Claimant's alleged left knee injuries may have occurred in the course of his employment while pursuing a felon on foot. Nonetheless, the question remains as to whether Claimant's left knee injuries, i.e. his torn meniscus and chondral defect arose out of his employment. As found, the ALJ is not persuaded that this pathology is casually related to the events of April 2, 2020 while Claimant was chasing the aforementioned suspect.

F. The determination of whether there is a sufficient "nexus" or causal relationship between Claimant's employment and the injury is one of fact, which the ALJ must determine, based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). The fact that Claimant may have experienced an onset of pain while performing job duties does not mean that he sustained a work-related injury or occupational disease. An incident, which merely elicits pain symptoms without a causal connection to the industrial activities, does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between a claimant's work and his symptoms does not mean there is a causal connection between a claimant's injury and his/her work. Further, there is no presumption that an employee found injured on the employer's premises is presumably injured from something arising out of her work. *See Finn v. Industrial Commission,* 437 P.2d 542, 544 (Colo. 1968). As presented, the evidence does not support that Claimant sustained a work related injury to his left knee.

G. Rather, the evidence presented supports a conclusion that Claimant's alleged injury on April 2, 2020 did not require medical treatment or cause him to lose time from work. Moreover, he participated in sports and intense workouts following the events of April 2, 2020. This included participating in softball games, which he continued to participate in even after he tweaked his left knee during a game. Finally, the persuasive medical evidence supports a conclusion that the type of injury Claimant alleges to have occurred on April 2, 2020, if acute, would probably have necessitated medical treatment at or near the time of injury. Indeed, Dr. Simpson emphasized that an injury of the kind Claimant described would have been "pretty symptomatic at the time and would have led to him seeking care at that point." Similarly, Dr. Ramaswamy testified that "[t]he presentation of someone with an acute event to a meniscus or cartilage loss would have presented differently than [Claimant] did after April 2, 2020 incident. . . ." Per Dr. Ramaswamy, Claimant's presentation following the April 2, 2020 incident did not match the physiologic response one would have had if the pathology visualized on MRI were caused by an acute traumatic event leading him to conclude that Claimant's torn meniscus and cartilage loss were probably degenerative in nature. (Hearing Trans. p.

51, ll. 8-25 and p. 52, ll. 1-13). Based on the evidence presented, the ALJ concludes that Claimant has failed to prove, by a preponderance of the evidence, that there is a causal connection between his employment and the resulting condition for which medical treatment benefits are sought. §8-43-201, C.R.S.; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). Because Claimant has failed to prove by a preponderance of the evidence that he suffered a compensable "injury" as defined by the aforementioned legal opinions, his claim for medical benefits must be denied and dismissed.[2]

ORDER

It is therefore ordered that:

1. Claimant's claim for benefits is hereby denied and dismissed.

DATED: December 29, 2021

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

[2] Because Claimant failed to establish that he suffered a compensable left knee injury, this order does not address Respondent's additional contentions that an intervening event severed the causal connection between Claimant's April 2, 2020 injury and his need for treatment.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered compensable cardiac injuries during the course and scope of her employment by receiving the COVID-19 vaccination as a condition of her continued employment with Employer.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical benefits for her industrial injuries.

FINDINGS OF FACT

1. Claimant is a 48 year old female who worked for Employer as a Physical Therapist. She explained that in mid-March 2020 she tested positive for COVID-19 after working with a patient in a nursing home. Claimant noted the acute COVID-19 symptoms lasted for about 10 days. She had never previously suffered any cardiac or respiratory issues.

2. Employer subsequently required Claimant to obtain the COVID-19 vaccination as a condition of continued employment. On December 29, 2020 Claimant received the first Pfizer COVID-19 vaccination. She commented that, immediately after the vaccine, she did not develop any problems. However, about 13 days later, she noticed symptoms that included mild shortness of breath and chest discomfort.

3. On January 10, 2021 Claimant visited the Sky Ridge Medical Center Emergency Department because she had developed left scapular pain, neck pain, chest tightness and numbness in the left jaw. She reported that she suffered COVID-19 in March 2020 and had almost returned to baseline but was still experiencing some chest tightness with exertion. A chest x-ray did not reveal radiographic evidence for acute cardiopulmonary disease. EKG testing was also normal.

4. On January 19, 2021 Claimant received the second Pfizer COVID-19 vaccine. In the waiting room she developed the acute onset of chest pain and all of her prior symptoms significantly worsened.

5. Claimant testified that she was physically active and had no history of cardiac symptoms prior to her second Pfizer COVID-19 vaccine. Her activities included running, climbing and swimming.

6. On January 22, 2021 Claimant visited FNP-C Lisa Lumley at personal medical provider Aurora Internal Medicine Clinic. Claimant's emergency room visit had occurred 13 days after receiving her first COVID-19 vaccination. FNP-C Lumley noted that, after Claimant's second COVID-19 vaccination, she suffered recurrent chest pain

that subsided after approximately one hour. Claimant did not report any shortness of breath, dizziness, nausea, weakness or diaphoresis. She had experienced heart palpitations and felt flushed. Claimant further reported that her exercise tolerance had decreased after having COVID-19. FNP-C Lumley assessed Claimant with chest pain, decreased exercise tolerance, history of COVID-19, and shortened PR interval.

7. On February 22, 2021 Claimant underwent an echocardiogram. The results were within normal limits.

8. On February 25, 2021 Claimant visited cardiologist Barry Smith, M.D. at South Denver Cardiology Associates. Claimant reported a five week history of palpitations, diminished exercise tolerance due to fatigue and shortness of breath. Her episodes were essentially exercise related. She denied associated chest pain. Claimant had no peripheral edema, claudication, or neurologic symptoms. A CT angiogram at the emergency room showed no evidence of carotid vascular disease. Claimant's echocardiogram "revealed no structural heart disease and most likely her palpitations [were] benign." Dr. Smith concluded that, from a cardiac standpoint, Claimant was stable "with activity-related limitations due to new palpitations which sound like ectopic beats." He ordered a Holter monitor to evaluate Claimant's heart condition.

9. On March 8, 2021 Claimant underwent a Holter monitor evaluation. The cardiac testing was within normal limits.

10. On March 22, 2021 Claimant returned to the Emergency Department at Sky Ridge Medical Center because of significant dizziness, she noted a two month intermittent history of chest pain, dyspnea, and palpitations. All diagnostic scans at the emergency room were within normal limits.

11. On May 26, 2021 Claimant visited Robert Maulitz, M.D. at National Jewish Health for a consultation for post-COVID-19 infection symptoms. Claimant reported she had suffered COVID-19 in March 2020 "with subsequent hypoxemia, worse at altitude, as well as breathing difficulty on exertion." She also noted chest pain, palpitations and activity intolerance following her Pfizer COVID-19 vaccine in January 2021. Claimant experienced decreased oxygen levels at higher altitude. She remarked that her symptoms had "somewhat improved" since she had started taking ibuprofen 2400-2800 mg daily. Claimant's physical examination was normal and her oxygen saturation was 96 percent. Dr. Maulitz reviewed Claimant's diagnostic testing results. He assessed Claimant with shortness of breath, chest tightness, hypoxemia and tachycardia. Dr. Maulitz noted that Claimant should try albuterol two puffs every four hours as needed "especially 15-30 minutes before exercise." He recommended "overnight oximetry to ensure adequate saturation on room air at night."

12. On August 3, 2021 Claimant returned to Dr. Maulitz for an evaluation. She reported that her shortness of breath and chest tightness had improved. Claimant's vital signs and physical examination were normal. Dr. Maulitz noted that a February 2021 echocardiogram and a March 2021 Holter monitor test were normal. He assessed Claimant with shortness of breath, chest tightness, pericarditis and hypoxemia. Dr. Maulitz concluded that Claimant's symptoms were "likely related to some combination of

lung disease and Pericarditis related to vaccine." He specifically noted that pericarditis was "presumed, due to financial vaccination." Dr. Maulitz commented that Claimant should continue to use albuterol and supplement her oxygen with activity as needed.

13. On August 3, 2021 Claimant underwent pulmonary function testing at National Jewish Health. The testing revealed increased diffusing capacity and overinflation that suggested subclinical asthma.

14. The record includes a document entitled *Clinical Considerations: Myocarditis and Pericarditis after Receipt of rnRNA COVID-19 Vaccines Among Adolescents and Young Adults* that was last reviewed on August 23, 2021. The article defines "myocarditis" as "inflammation of the heart muscle" and "pericarditis" as "inflammation of the lining outside the heart." In both conditions, the body's immune system causes inflammation in response to an infection or some other trigger. Symptoms can include chest pain, shortness of breath or palpitations. Cases have occurred primarily in male adolescents and young adults 16 years of age and older.

15. On September 25, 2021 Claimant underwent an independent medical examination with Annu Ramaswamy, M.D. He reviewed Claimant's medical records and performed a physical examination. Claimant noted symptoms of chest pain, shortness of breath, palpitations, lightheadedness, dizziness and poor exercise tolerance. She related her symptoms to receiving the Pfizer COVID-19 vaccine. Dr. Ramaswamy recounted that Claimant had visited the emergency room on two occasions. She had undergone several EKG tests, two Holter monitor tests, an echocardiogram and pulmonary function tests. Dr. Ramaswamy remarked that Claimant's differential diagnoses included pericardial effusion and a pulmonary condition.

16. Dr. Ramaswamy explained that Claimant's medical records did not meet the diagnostic criteria for pericarditis. He noted that, although various tests can be normal in the setting of pericarditis, specific criteria have been established to diagnose the condition. Dr. Ramaswamy specified that *the 2015 European Society of Cardiology Guidelines on Pericardial Diseases* recommended that at least two of the following diagnostic criteria must exist to diagnose pericarditis: (1) typical chest pain (sharp and pleuritic, improved by sitting up and leaning forward); (2) evidence of a pericardial friction rub; (3) EKG changes suggestive of pericarditis and (4) new or worsening pericardial effusion. He recounted that the medical records revealed Claimant presented with chest pain and repeatedly stated that lying flat caused more pain. None of the healthcare providers noted the presence of a pericardial friction rub on examination. Furthermore, physicians did not determine that Claimant's EKG findings were consistent with acute pericarditis. Dr. Ramaswamy also remarked that the low voltage appearance on Claimant's initial EKG likely was a normal variant. Finally, an echocardiogram did not document evidence for a pericardial effusion. Dr. Ramaswamy thus concluded that Claimant only met the single criteria of chest pain under the preceding guidelines.

17. Dr. Ramaswamy explained that the Pfizer COVID-19 vaccine has caused rare instances of pericarditis in various individuals. He specified that, in an article entitled *Israel Examines Heart Inflammation Cases after Pfizer Shot*, 1 out of 100,000 individuals developed pericarditis/myocarditis after receiving the Pfizer vaccine. Notably, incidence

rates were higher for men 18-30 years of age. Dr. Ramaswamy commented that the preceding data correlated with the Centers for Disease Control and Prevention (CDC) data. Thus, even if Claimant suffered from pericarditis/myocarditis, she did not likely develop the condition as a result of receiving the Pfizer-COVID-19 vaccine.

18. The record includes an Article entitled *Safety of the BNT162b2 mRNA COVID-19 Vaccine in a Nationwide Setting* (*Safety of the COVID-19 Vaccine)* that was published on August 25, 2021 in the New England Journal of Medicine at NEJM.org. The authors of the article used data from the largest health care organization in Israel to evaluate the COVID-19 vaccine for potential adverse reactions. The study measured adverse effects up to 42 days after vaccination. In evaluating the frequency of myocarditis, 938,812 individuals were studied. Twenty-one participants in the vaccinated group and six individuals in the control group developed the condition within 42 days. Specifically, the 95% confidence interval reflected values between 1 and 5 excess events per 100,000 persons. Among the 21 persons with myocarditis in the vaccinated group, the median age was 25 years (quartile range of 20-34) and 90.9% were male. The authors of *Safety of the Covid-19 Vaccine* concluded that the risk of myocarditis increased by a factor of three after vaccination and translated to approximately three excess events per 100,000 individuals.

19. The article *Safety of the COVID-19 Vaccine* also evaluated the frequency of pericarditis, A total of 936,197 individuals were studied. Twenty-seven individuals in the vaccinated group and twenty-one individuals in the control group developed the condition within 42 days.

20. Importantly, *Safety of the COVID-19 Vaccine* also noted that the COVID-19 infection substantially increased the risk of many different adverse events. Specifically, the COVID-19 infection increased the likelihood of developing myocarditis from 3.95 to 25.12 for a risk difference of 11 events for 100,000 persons. Similarly, the COVID-19 infection increased the likelihood of developing pericarditis from 2.22 to 23.58 for a risk difference of 10.9 events per 100,000 persons.

21. Claimant has failed to demonstrate that it is more probably true than not that she suffered compensable cardiac injuries during the course and scope of her employment by receiving the COVID-19 vaccine as a condition of her continued employment with Employer. Initially, in mid-March 2020 Claimant tested positive for COVID-19 after working with a patient in a nursing home. Claimant noted the acute COVID-19 symptoms lasted for about 10 days. However, the record reveals that she continued to experience lingering symptoms. Employer subsequently required Claimant to obtain the COVID-19 vaccination as a condition of continued employment. On December 29, 2020 Claimant received the first Pfizer COVID-19 vaccination. About 13 days later, she noticed symptoms that included mild shortness of breath and chest discomfort. On January 19, 2021 Claimant received the second Pfizer COVID-19 vaccine. In the waiting room she developed the acute onset of chest pain and all of her prior symptoms significantly worsened.

22. Claimant asserts that, as a result of receiving the Pfizer COVID-19 vaccination as a condition of her continued employment, she developed cardiac problems

including myocarditis or “inflammation of the heart muscle” or pericarditis or “inflammation of the lining outside the heart.” However, a review of the medical records, scientific studies and persuasive opinion of Dr. Ramaswamy reflects that any of Claimant’s cardiac symptoms were not causally related to receiving the Pfizer COVID-19 vaccination. The record does not establish that Claimant suffered myocarditis/ pericarditis and the scientific studies reveal that it is speculative to attribute any of Claimant’s symptoms to the vaccination.

23. Subsequent to receiving the Pfizer COVID-19 vaccinations Claimant underwent several EKG tests, two Holter monitor tests, an echocardiogram and pulmonary function tests. Dr. Ramaswamy persuasively explained that Claimant’s medical records did not meet the diagnostic criteria for pericarditis. He specified that at least two of the following diagnostic criteria must exist to diagnose pericarditis: (1) typical chest pain (sharp and pleuritic, improved by sitting up and leaning forward); (2) evidence of a pericardial friction rub; (3) EKG changes suggestive of pericarditis and (4) new or worsening pericardial effusion. Dr. Ramaswamy recounted that the medical records revealed Claimant presented with chest pain and repeatedly stated that lying flat caused more pain. None of the healthcare providers noted the presence of a pericardial friction rub on examination. Furthermore, physicians did not determine that Claimant’s EKG findings were consistent with acute pericarditis. Finally, an echocardiogram did not document evidence for a pericardial effusion. Dr. Ramaswamy thus concluded that, because Claimant only met the single criteria of chest pain under the preceding guidelines, she did not suffer from pericarditis.

24. In contrast, on August 3, 2021 Dr. Maulitz assessed Claimant with shortness of breath, chest tightness, pericarditis and hypoxemia. Dr. Maulitz concluded that Claimant’s symptoms were “likely related to some combination of lung disease and Pericarditis related to vaccine.” He specifically noted that pericarditis was “presumed, due to financial vaccination.” However, Dr. Maulitz neither provided details of his pericarditis diagnosis nor outlined criteria for assessing the condition. Moreover, the medical records do not support a diagnosis of pericarditis but merely demonstrate Claimant’s subjective complaints of diminished exercise capacity, shortness of breath and palpitations. The objective diagnostic testing in the record reflects that results were largely within normal limits.

25. More importantly, assuming Claimant suffers from myocarditis, pericarditis or some other cardiac condition, it is speculative to associate the development of the disorder to Claimant’s Pfizer COVID-19 vaccination. Numerous scientific studies in the record reveal that, although it is possible to develop myocarditis/pericarditis after the COVID-19 vaccination, it is extremely unlikely. Dr. Ramaswamy specified that, in an article entitled, *Israel Examines Heart Inflammation Cases after Pfizer Shot*, 1 out of 100,000 individuals developed pericarditis/myocarditis after receiving the Pfizer vaccine. Notably, incidence rates were higher for men 18-30 years of age. Similarly, the article entitled *Safety of the COVID-19 Vaccine* specified that, from a group of 938,812 participants, twenty-one individuals in the vaccinated group and six individuals in the control group developed myocarditis within 42 days. Specifically, the 95% confidence interval reflected values between 1 and 5 excess events per 100,000 persons. Among the 21 persons with myocarditis in the vaccinated group, the median age was 25 years

(quartile range of 20-34) and 90.9% were male. The authors of *Safety of the Covid-19 Vaccine* concluded that the risk of myocarditis increased by a factor of three after vaccination and translated to approximately three excess events per 100,000 individuals. The article also evaluated the frequency of pericarditis, A total of 936,197 individuals were studied. Twenty-seven participants in the vaccinated group and twenty-one individuals in the control group developed the condition within 42 days.

26. The article *Safety of the COVID-19 Vaccine* also noted that the COVID-19 infection substantially increased the risk of many different adverse events. Specifically, the COVID-19 infection increased the likelihood of developing myocarditis from 3.95 to 25.12 for a risk difference of 11 events for 100,000 persons. Similarly, the COVID-19 infection increased the likelihood of developing pericarditis from 2.22 to 23.58 for a risk difference of 10.9 events per 100,000 persons. Accordingly, individuals are much more likely to develop myocarditis and pericarditis from the COVID-19 infection than from the vaccination. Based on the study, because Claimant suffered COVID-19 with lingering symptoms before receiving the Pfizer COVID-19 vaccination, it is more likely that any cardiac condition would be related to her prior infection as opposed to the vaccine.

27. Although Claimant explained that she developed cardiac symptoms including chest pain, shortness of breath, heart palpitations and reduced exercise tolerance subsequent to her Employer-mandated COVID-19 vaccination, it is speculative to attribute her symptoms to the Pfizer COVID-19 vaccination. Specifically, temporal proximity is insufficient to create a causal relationship. Claimant’s objective diagnostic testing revealed largely normal results and the medical record does not establish a diagnosis for myocarditis/pericarditis. Moreover, the medical literature in the record reveals a tenuous connection between the COVID-19 vaccination and the development of myocarditis/pericarditis. It is thus unlikely that Claimant’s cardiac symptoms are related to her COVID-19 vaccination. Accordingly, Claimant’s claim is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Off.,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a pre-existing condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *see Snyder v. Indus. Claim Appeals Off.*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when

an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered compensable cardiac injuries during the course and scope of her employment by receiving the COVID-19 vaccine as a condition of her continued employment with Employer. Initially, in mid-March 2020 Claimant tested positive for COVID-19 after working with a patient in a nursing home. Claimant noted the acute COVID-19 symptoms lasted for about 10 days. However, the record reveals that she continued to experience lingering symptoms. Employer subsequently required Claimant to obtain the COVID-19 vaccination as a condition of continued employment. On December 29, 2020 Claimant received the first Pfizer COVID-19 vaccination. About 13 days later, she noticed symptoms that included mild shortness of breath and chest discomfort. On January 19, 2021 Claimant received the second Pfizer COVID-19 vaccine. In the waiting room she developed the acute onset of chest pain and all of her prior symptoms significantly worsened.

9. As found, Claimant asserts that, as a result of receiving the Pfizer COVID-19 vaccination as a condition of her continued employment, she developed cardiac problems including myocarditis or "inflammation of the heart muscle" or pericarditis or "inflammation of the lining outside the heart." However, a review of the medical records, scientific studies and persuasive opinion of Dr. Ramaswamy reflects that any of Claimant's cardiac symptoms were not causally related to receiving the Pfizer COVID-19 vaccination. The record does not establish that Claimant suffered myocarditis/ pericarditis and the scientific studies reveal that it is speculative to attribute any of Claimant's symptoms to the vaccination.

10. As found, subsequent to receiving the Pfizer COVID-19 vaccinations Claimant underwent several EKG tests, two Holter monitor tests, an echocardiogram and pulmonary function tests. Dr. Ramaswamy persuasively explained that Claimant's medical records did not meet the diagnostic criteria for pericarditis. He specified that at least two of the following diagnostic criteria must exist to diagnose pericarditis: (1) typical chest pain (sharp and pleuritic, improved by sitting up and leaning forward); (2) evidence of a pericardial friction rub; (3) EKG changes suggestive of pericarditis and (4) new or worsening pericardial effusion. Dr. Ramaswamy recounted that the medical records revealed Claimant presented with chest pain and repeatedly stated that lying flat caused more pain. None of the healthcare providers noted the presence of a pericardial friction rub on examination. Furthermore, physicians did not determine that Claimant's EKG findings were consistent with acute pericarditis. Finally, an echocardiogram did not document evidence for a pericardial effusion. Dr. Ramaswamy thus concluded that, because Claimant only met the single criteria of chest pain under the preceding guidelines, she did not suffer from pericarditis.

11. As found, in contrast, on August 3, 2021 Dr. Maulitz assessed Claimant with shortness of breath, chest tightness, pericarditis and hypoxemia. Dr. Maulitz concluded that Claimant's symptoms were "likely related to some combination of lung disease and Pericarditis related to vaccine." He specifically noted that pericarditis was "presumed, due to financial vaccination." However, Dr. Maulitz neither provided details of his pericarditis diagnosis nor outlined criteria for assessing the condition. Moreover, the medical records do not support a diagnosis of pericarditis but merely demonstrate Claimant's subjective complaints of diminished exercise capacity, shortness of breath and palpitations. The objective diagnostic testing in the record reflects that results were largely within normal limits.

12. As found, more importantly, assuming Claimant suffers from myocarditis, pericarditis or some other cardiac condition, it is speculative to associate the development of the disorder to Claimant's Pfizer COVID-19 vaccination. Numerous scientific studies in the record reveal that, although it is possible to develop myocarditis/pericarditis after the COVID-19 vaccination, it is extremely unlikely. Dr. Ramaswamy specified that, in an article entitled, *Israel Examines Heart Inflammation Cases after Pfizer Shot*, 1 out of 100,000 individuals developed pericarditis/myocarditis after receiving the Pfizer vaccine. Notably, incidence rates were higher for men 18-30 years of age. Similarly, the article entitled *Safety of the COVID-19 Vaccine* specified that, from a group of 938,812 participants, twenty-one individuals in the vaccinated group and six individuals in the control group developed myocarditis within 42 days. Specifically, the 95% confidence interval reflected values between 1 and 5 excess events per 100,000 persons. Among the 21 persons with myocarditis in the vaccinated group, the median age was 25 years (quartile range of 20-34) and 90.9% were male. The authors of *Safety of the Covid-19 Vaccine* concluded that the risk of myocarditis increased by a factor of three after vaccination and translated to approximately three excess events per 100,000 individuals. The article also evaluated the frequency of pericarditis, A total of 936,197 individuals were studied. Twenty-seven participants in the vaccinated group and twenty-one individuals in the control group developed the condition within 42 days.

13. As found, the article *Safety of the COVID-19 Vaccine* also noted that the COVID-19 infection substantially increased the risk of many different adverse events. Specifically, the COVID-19 infection increased the likelihood of developing myocarditis from 3.95 to 25.12 for a risk difference of 11 events for 100,000 persons. Similarly, the COVID-19 infection increased the likelihood of developing pericarditis from 2.22 to 23.58 for a risk difference of 10.9 events per 100,000 persons. Accordingly, individuals are much more likely to develop myocarditis and pericarditis from the COVID-19 infection than from the vaccination. Based on the study, because Claimant suffered COVID-19 with lingering symptoms before receiving the Pfizer COVID-19 vaccination, it is more likely that any cardiac condition would be related to her prior infection as opposed to the vaccine.

14. As found, although Claimant explained that she developed cardiac symptoms including chest pain, shortness of breath, heart palpitations and reduced exercise tolerance subsequent to her Employer-mandated COVID-19 vaccination, it is speculative to attribute her symptoms to the Pfizer COVID-19 vaccination. Specifically, temporal proximity is insufficient to create a causal relationship. Claimant's objective

diagnostic testing revealed largely normal results and the medical record does not establish a diagnosis for myocarditis/pericarditis. Moreover, the medical literature in the record reveals a tenuous connection between the COVID-19 vaccination and the development of myocarditis/pericarditis. It is thus unlikely that Claimant's cardiac symptoms are related to her COVID-19 vaccination. Accordingly, Claimant's claim is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: December 30, 2021.

WORKERS' COMPENSATION NO. WC No. 5-169-499-001

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that Claimant is entitled to temporary total disability benefits from April 11, 2021 and ongoing until terminated by law.

II. Whether Respondents have proven by a preponderance of the evidence that Claimant is responsible for the wage loss.

PROCEDURAL HISTORY

Respondents filed a General Admission of Liability on May 18, 2021 for medical benefits only, denying loss of wages as they alleged modified duty was available.

Claimant filed an Application for Hearing on June 11, 2021, through prior counsel, on issues that included compensability, medical benefits, authorized medical provider, change of physician, right of selection of authorized treating provider, temporary disability benefits and average weekly wage.

Respondents filed a Response to Application for Hearing on August 9, 2021 on additional issues of responsibility for wage loss, waiver of selection of treating provider or change of physician.

STIPULATION

The parties stipulated to an average weekly wage at hearing of $680.00.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was 61 years old at the time of the hearing. Claimant worked as a kitchen helper performing a variety of duties for Employer, including washing dishes, washing the floor mats and floors for the cooks, taking out trash, which required Claimant to lift the heavy bags of trash onto a cart, up to six or seven bags at a time, and roll them to the basement. Claimant reported to the therapist he would lift and carry up to 50 lbs. Claimant would be standing the majority of the time, with the exception of breaks.

2. The employment records showed an Application for Employment dated April 6, 2021, though the records were only electronic and not signed by Claimant. Claimant testified that he obtained the job through a phone conversation with the supervisor, or account manager, who advised Claimant that they would be providing him with a copy of the documents that were being completed, which he never received. After

he applied by phone, he received a call from the supervisor stating that they had checked his background and that he had been approved for employment. He was instructed when and where to show for work by phone. He was later provided with an envelope with only a bank card in it, he was instructed to activate the card and then he would be able to withdraw his wages. The Employer's Earning Statement shows 7.5 hours of work for the week of March 26, 2021 through April 1, 2021. It is to be inferred that Claimant's 7.5 hours of work actually happened on either April 1 or before this date, and it is inferred that the completed documents were finalized after Claimant had begun to work for Employer. The next Earnings Statement covers April 2, 2021 through April 8, 2021 for 39 hours worked. No records were provided for the actual date of injury. Claimant stated that he only ever spoke with his supervisor by phone or text and never met her in person.

3. On April 10, 2021 at approximately 11:30 p.m., Claimant was walking in the kitchen service area when he slipped and fell onto his knees, catching himself before falling all the way to the ground, cutting his hand on broken glass.

4. Claimant went to an emergency clinic on April 11, 2021 at Advanced Urgent Care, and was attended by Physician Assistant Briana Vieta. Claimant reported injuries to his bilateral knees, hand and low back that occurred on April 10, 2021. They conducted a physical exam, took x-rays, provided medications and recommended therapy of ice and heat. Ms. Vieta also provided work restrictions of lifting, carrying, pushing and pulling of 10 lbs. maximum, with walking, standing and sitting up to 50% of the time per day, as well as seated breaks as needed. Claimant testified that he was advised that he had no broken bones.

5. Claimant was seen at Concentra by Amanda Cava, M.D. on April 13, 2021 Claimant's chief complaints were his bilateral knees, bilateral elbows, hips and left hand laceration, as well as soreness and limited movements. He reported low back pain in the central low back spreading across the low back. Claimant informed Dr. Cava that he slipped on the wet floor while carrying kitchen supplies. She documented that Claimant had an initial evaluation at Advanced Urgent Care in Westminster, where he had x-rays, was given medications (cyclobenzaprine, steroid dose pack, and Tylenol). Dr. Cava noted that Claimant had joint pain, muscle pain, back pain, limping and night pain, as well as tingling and numbness on neurological review of systems. On exam, Dr. Cava noted Claimant had a healing abrasion on the thenar/palm side of the left hand, tenderness of the anterior patella of the knees, right greater than left, including loss of range of motion and pain with motion, as well as tenderness of the right ankle. She also noted tenderness across the L5-S1 area. Claimant demonstrated an antalgic gait.

6. Dr. Cava assessed lumbar strain, contusion of the bilateral knees, and a right ankle sprain. Dr. Cava's plan was to request the services of an interpreter, refer Claimant to physical therapy, direct Claimant to continue to take the medications he was prescribed by Advanced Urgent Care, request the records from Advanced Urgent Care, and, review and update work restrictions. She stated that Claimant's injuries were consistent with history and/or work-related mechanism of injury and should return to work with restrictions as of April 13, 2021. Restrictions were the similar to those provided by Advanced Urgent Care of lifting, pushing and pulling up to 10 lbs. maximum, but added

that Claimant was not to crawl, kneel squat or climb and was to alternate positions between sitting, standing and walking as needed.

7. Claimant attended physical therapy on April 14, 2021. Claimant reported that pain was aggravated by sitting and attempting to stand and laying down, but improved with walking. Claimant reported back pain most of the time, as well as knee and shoulder pain. He also reported pain going down from the low back into the lower leg. Ms. Jessica McAlee noted that Claimant did not report any prior injuries or previous physical therapy and stated Claimant was a good candidate for therapy intervention. Claimant continued physical therapy through at least June 7, 2021.

8. On April 17, 2021 Claimant retuned to Concentra and was evaluated by PA Tanya Manning. She noted that Claimant had not been working as no light duty work was available. Ms. Manning noted that Claimant's symptoms had improved slightly with physical therapy, but continued with joint pain, muscle pain, back pain, limping and night pain. She stated that Claimant was not exhibiting any out of proportion pain, parasthesia or range of motion. Claimant was still reporting pain on palpation of the paraspinal muscles of the lumbar spine and found bilateral muscle spasms. Diagnosis and restrictions remained the same as provided by Dr. Cava previously. Claimant continued with physical therapy and positive changes were noted.

9. Claimant testified that he spoke with his supervisor by phone and was advised that Employer had no work within his restrictions.

10. Claimant returned to see Dr. Cava on April 29, 2021 who reported that Claimant was improving with therapy and medications, though had not been working as no light duty was available. She performed a full examination, noting that Claimant continued to have tenderness in the ATFL[1] and the medial malleolus of the right ankle, swelling of the patella of the left knee, mild tenderness of the bilateral knees, pelvic obliquity with left higher than the right, tenderness in the left paraspinals at the L5-S1 level, left sacroiliac joint pain, with left sided muscle spasms of the lumbar spine and limited painful range of motion. Dr. Cava referred Claimant for chiropractic treatment. She changed restrictions to 20 lbs. lifting, pushing and pulling, with standing, and walking up to 6 hours a day, though restricted repetitive bending, twisting and lifting.

11. Claimant testified that he contacted his supervisor by phone approximately two weeks after his work injury and asked whether he would be paid for his time off. Claimant stated that his supervisor advised he would not be paid and that he had committed an error in contacting an attorney. Claimant stated that he did not hear from her at any time thereafter.

12. Claimant was evaluated and treated by Dr. Richard Mobus for chiropractic care on May 3, 2021. He noted Claimant stated he had no functional impairment prior to the work injury. He described aching, heavy, shooting, burning and dull pain with numbness in the bilateral lower extremities. Claimant was treated with manipulation of

[1] Anterior talofibular ligament

the lumbar spine and lower thoracic spine, was provided neuromuscular reeducation and therapeutic exercises. Treatment with Dr. Mobus continued for multiple sessions through at least May 13, 2021.

13. Dr. Cava reevaluated Claimant on May 17, 2021 and provided restrictions of limited bending and no kneeling or squatting. No medical notes were in the exhibits other than the work status report.

14. On June 10, 2021 Dr. Cava reexamined Claimant, finding he continued with constant pain in the low back, especially the left side, worse with bending, lifting and walking, including weakness in the right leg that gives out when walking. Dr. Cava ordered an MRI of the lumbar spine and referred Claimant to a physiatrist. Dr. Cava altered Claimant's restrictions to 30 lbs. lifting, carrying, pushing and pulling with limited bending repetitively, no kneeling, squatting or climbing as well as limited stair or ladder climbing and occasional sitting breaks as needed.

15. The June 17, 2021 MRI, read by Dr. Louis Golden, showed degenerative changes. At the L3-L4 Claimant had a 4 mm broad-based disc protrusion and bilateral facet arthropathy and moderate bilateral foraminal narrowing. At the L4-L5 level, Claimant showed a 3 mm broad-based disc protrusion and bilateral facet arthropathy that resulted in moderate to severe bilateral foraminal narrowing and exiting the L4 nerve roots were contacted in the foramina. At the L5-S1 level, there was no disc herniation, but showed facet arthropathy and central canal narrowing, with lateral recess narrowing, or foraminal narrowing. Also the circumferential epidural fat tapered the thecal sac.

16. John Aschberger, M.D. evaluated Claimant on June 24, 2021. He noted Claimant was referred by Dr. Cava for evaluation regarding low back pain and potentially radiating symptomatology. Claimant reported pain and irritation at the lumbosacral back. Claimant also indicated he had pain in the medial knee and right ankle. On exam, his position change was guarded and slow. Claimant had intermittent steppage type gait for the right lower extremity, reflexes were 1+ at the patellar and absent at the Achilles tendons, a negative seated straight leg raise, though supine straight leg raise revealed hamstring tightness with restriction on the right at 60 to 70 degrees and left 70 degrees. Claimant had difficulty with heel walking and toe walking, however, with standing, the spine was midline, with no significant areas of localized tenderness, lumbosacral flexion was 80 to 90 degrees and extension restricted at 10 to 20 degrees with increased pain and irritation, and facet loading right worse than left. There was no significant aggravation with anterior pelvic compression. Dr. Aschberger stated that there were multiple levels of degenerative disk disease noted on the June 17, 2021 MRI, with disk protrusions at the L3-L5 and facet arthropathy noted bilaterally at L3 through S1. At L4-5 there was moderate to severe foraminal narrowing and some contact at the L4 nerve roots. However, Dr. Aschberger found that the examination was not very remarkable for localized irritation, but given the radiating symptoms, he ordered electrodiagnostic testing, especially since Dr. Cava did note issues of weakness at her last evaluation, predominantly for toe and heel walking that prompted ordering the MRI scan. He advised that light work duties appeared to be reasonable.

17. On July 1, 2021 Dr. Cava continued the same restrictions of 30 lbs. lifting, carrying, pushing and pulling with limited bending repetitively, no kneeling, squatting or climbing as well as limited stair or ladder climbing and occasional sitting breaks as needed. She continued to state that Claimant's injuries were consistent with history and/or work-related mechanism of injury.

18. Claimant stated that he had never met his supervisor in person, but had always communicated either by phone or by text. He further testified that he never received a call or contact from employer, or his supervisor, to offer him modified duty work. He had spoken with his supervisor after the accident and was advised that there was no work for him. He again called approximately two weeks after his injury, and his supervisor advised him that Employer would not be paying him for his lost time. He never received a call or a text message regarding an offer of employment and did not receive the letter Respondents indicated had been mailed to him. He later was provided a copy of the letter and credibly testified that the address was an old one where he had lived two years prior. He clarified that he had given his supervisor his correct address when he applied for the job over the phone, but that she had also requested a copy of his drivers' license that still had his old address on it, which he had not updated.

19. Claimant credibly testified that he had never been involved in a motor vehicle accident and that the person listed on the ISO report was not him. He also stated he had never lived at the address shown on the ISO report, though he thought his elderly friend, now diseased, had lived at that address.

20. Claimant stated that he had not had any injuries or restrictions until after the accident of April 10, 2021 while working for Employer. Claimant credibly testified that the last time he communicated with the supervisor about working was when she advised him that there was no job available within his restrictions. Claimant credibly testified that he had looked at his phone's history and confirmed he had not received any calls or texts from the supervisor or the HR manager.

21. The HR services specialist stated that by April 17, 2021 Employer had located a modified duty job. She attempted to call Claimant on various dates but was unable to reach Claimant. She testified that she had confirmed with the supervisor that Claimant had not returned to work and that she believed that the supervisor had attempted to contact Claimant regarding returning to work, without success. The HR specialist also stated that she had sent Claimant a letter saying that there was modified work available. The letter was sent to Claimant's old address as that was the address in the employment records. She also stated that she and the supervisor had exchanged multiple texts about their attempts to communicate with Claimant but that she had only preserved the text that indicated that Claimant had not yet returned to work, dated April 27, 2021.

22. The HR specialist also testified that they did not initially have work for Claimant within his restrictions, confirming Claimant's conversation with his supervisor. She stated that she did not keep records of the modified job that had been available or the requirements of the job. Neither did she document the communications with the

supervisors, other than the one text message, or the attempted communications with Claimant. She confirmed that she failed to communicate with Claimant's authorized treating provider, Dr. Cava, regarding whether the job that was available was appropriate for Claimant and within his restrictions. She stated that the letter sent to Claimant did not identify the job that was available, the rate of pay or the date and time Claimant was to start the modified job.

23. As found, Claimant is credible in his testimony. Especially persuasive is the fact that Claimant applied for employment with Employer over the phone, not online. He is credible in his testimony that he was never provided a copy of the application in order to correct or sign the application. He credibly testified that he was advised by his supervisor that they had no work and that the supervisor never contacted him, after the initial conversation regarding the lack of continued employment, with an offer of modified employment. It is found that Claimant has shown by a preponderance of the evidence that he is entitled to temporary disability benefits as he was provided work restrictions by his treating providers as of April 11, 2021 and he is not at maximum medical improvement, or been released to full duty work.

24. Respondents failed to show by a preponderance of the evidence that Claimant was, in fact offered modified work. Claimant credibly testified that he received no communication offering modified work, including the letter sent to his old address, from which he had moved two years prior to the injury.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App.

2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

B. Temporary total disability benefits and termination of benefits

To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)).

Temporary total disability benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. Section 8-42-105(3)(a)-(d), C.R.S. Further, W.C.R.P. Rule 6-1(A) controls termination of temporary disability benefits and states in pertinent part as follows:

> (A) In all claims based upon an injury or disease occurring on or after July 1, 1991, an insurer may terminate temporary disability benefits without a hearing by filing an admission of liability form with:
>
> ….
>
> (4) A copy of a written offer delivered to the claimant with a signed certificate of service, containing both an offer of modified employment, setting forth duties, wages and hours and a statement from an authorized treating physician that the employment offered is within the claimant's physical restrictions.
>
> (a) A written offer of modified duty may only be used to terminate benefits pursuant to this subsection if:
>
> i) A copy of the written inquiry to the treating physician is provided to the claimant by the insurer or employer at the time the authorized treating physician is asked to provide a statement on the claimant's capacity to perform the offered modified duty; and
>
> ii) The claimant is provided a period of 3 business days from the date of receipt of the offer to return to work in response to the offer of modified duty.

Here, as found, Claimant was clearly placed on work restrictions on April 11, 2021 by the Advanced Urgent Care provider, Ms. Vieta, of lifting, carrying, pushing and pulling of 10 lbs. maximum, with walking, standing and sitting up to 50% of the time per day and seated breaks as needed. These restrictions were mirrored and added to by Dr. Cava on April 13, 2021 to include no crawling, kneeling, squatting or climbing and was to alternate positions between sitting, standing and walking as needed. Claimant credibly testified that he contacted his supervisor and she advised that there was no work within his job restrictions. This was confirmed by the HR specialist, who stated that there was no work for Claimant until after April 17, 2021 when she reached out to the supervisors to contact Claimant. There was no confirmation that Claimant, was in fact, contacted. Claimant credibly testified that he did not receive any communications from Employer or the supervisors regarding work other than the calls he made to his immediate supervisor, the first of which she denied that there was any work, the second when she failed to respond. Therefore, Claimant is entitled to temporary disability benefits beginning April 11, 2021.

As found, Dr. Cava did not change Claimant’s restrictions until April 29, 2021 when she increased them to 20 lbs. lifting, pushing and pulling, with standing, and walking up to 6 hours a day, and no repetitive bending, twisting and lifting. Again, as found, Dr. Cava subsequently changed Claimant’s restrictions on June 10, 2021 to 30 lbs. lifting, carrying, pushing and pulling with limited bending repetitively, no kneeling, squatting or climbing as well as limited stair or ladder climbing and occasional sitting breaks as needed. Claimant credibly testified that his physician advised he could contact his supervisor to find out if there was a job for him, but he never received a response from his supervisor when his restrictions were raised to 30 lbs. His supervisor did not testify in this matter. And the HR specialist was never able to reach Claimant, for whatever reason, and sent a letter on May 23, 2021 that did not comply with the requirements of terminating temporary total disability benefits pursuant to the statute and rules. Claimant has established by a preponderance of the evidence an entitlement to temporary total disability benefits beginning April 11, 2021 and continuing until terminated by law.

Temporary total disability benefits calculated for the period of April 11, 2021 through the date of the hearing of November 16, 2021, (220 days or 31 weeks and 3 days), results in a past due payment of $14,247.51. This does not include any TTD due and owing from November 17, 2021 until terminated by law, until Claimant is provided with a proper offer of employment, is release to return to regular work or is placed at maximum medical improvement. Interest from April 11, 2021 through the date of this order on December 30, 2021, calculates to $600.05 with a daily interest rate after December 30, 2021 of $3.23. This interest does not calculate any interest due and owing on benefits beginning November 17, 2021, if Claimant has not been sent an offer of employment in accordance with the rules, has been released to full duty work and/or been placed at MMI by an authorized treating physician.

Respondents argue that, because there was no General Admission of Liability filed admitting for temporary disability benefits from April 11, 2021 forward, they need not have complied with the statutory and rule provisions of terminating temporary disability benefits. However, failure to file a GAL is not sufficient to fail to comply with the rules. As found, clearly, Employer agreed that there was no work initially for Claimant. Both Claimant and the HR specialist testified to this fact. Even if work was available at or around April 17, 2021, this constituted greater that three days of lost time from work pursuant to Sec. 8-42-105(1), C.R.S. and Claimant was entitled to temporary disability benefits. Therefore, the rule and statutory termination provisions applied in this matter. Respondents were required to make an offer of employment. An offer of employment required certain elements that have not been accomplished, including a letter that was vetted through the ATP, had a beginning date and time to show up for work and a rate of pay. While Employer's intensions were clear in that they wanted to reach Claimant, Claimant was credible in stating that the letter sent on May 23, 2021 to his old address did not reach him and that when he applied for employment over the phone, he provided his supervisor with his current address. While Claimant may have been lackadaisical in failing to correct his driver's license's address, so was Employer in failing to provide Claimant a copy of the phone call completed application for employment so that Claimant could correct any errors in his current address. Employer also agreed that they did not make a record of any contacts by phone with Claimant other than the text message from the supervisor acknowledging that Claimant had not returned to work. And Claimant was credible in stating that he did not receive any calls or texts from Employer on his phone. Respondents have failed to show by a preponderance of the evidence that temporary disability benefits should be terminated in this claim, at least through the date of hearing. Neither party indicated at the time of hearing or in their position statements that Claimant had been placed at MMI at this time.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's correct date of injury is April 10, 2021.

2. Respondents shall pay temporary total disability benefits at the rate of $453.33 per week from April 11, 2021 to the date of the hearing and until terminated by law.

3. Respondents shall pay Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts due and not paid when due.

4. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 30th day of December, 2021.

ISSUES

- Did Claimant overcome the DIME's determination of MMI by clear and convincing evidence?

- Is Claimant entitled to reinstatement of TTD benefits effective November 19, 2020?

FINDINGS OF FACT

1. Claimant works for Employer as a flight attendant. She suffered admitted injuries on August 29, 2018 while riding a shuttle bus to the employee parking area after her shift. Claimant had boarded the bus and was in the process of taking her seat when the bus braked unexpectedly, causing her to fall into the rear stairwell. Claimant hit her left shoulder on the stairwell and her low back on the stairs. Her head also "whipped" backward as she fell.

2. Claimant felt immediate severe pain in her low back and tingling in her legs. She also felt lesser pain in her neck, left shoulder, and left arm.

3. Claimant retrieved her vehicle and drove home. When she got home, she rested briefly and then went to urgent care.

4. Claimant was seen at the Complete Care Emergency Department on the evening of August 29. She reported sharp, aching pain in her left low back. Examination showed tenderness and muscle spasm in the left lumbar paraspinal muscles, and limited range of motion. The provider noted a contusion on Claimant's left lower back. Lumbar x-rays showed multilevel degenerative changes but no fracture. Claimant was diagnosed with low back pain and osteoarthritis. She was given a Toradol injection and muscle relaxers and instructed to follow up with a workers' compensation provider. Claimant testified she was also having severe left arm pain. However, the urgent care records make no mention of any left arm or shoulder issues.

5. Employer referred Claimant to Concentra for authorized treatment. She saw PA-C Kenneth Ginsburg at her initial appointment on September 4, 2018. Claimant's primary complaint was severe low back pain, but she also reported pain in the left side of her neck and left upper arm. Examination of the left shoulder showed full range of motion and normal strength. Hawkins, empty can, and painful arc tests were negative. The left upper arm and left trapezius were tender to palpation. Palpation of the cervical muscles showed tenderness and muscle spasm on the left. Mr. Ginsburg diagnosed a lumbosacral strain, SI joint strain, neck strain, and a left shoulder strain. He prescribed NSAIDs and muscle relaxers and referred Claimant to physical therapy.

6. At the initial PT evaluation, the therapist noted low back pain “along with neck tension and L shoulder pain.”

7. Claimant’s symptoms were similar at her next appointment with Mr. Ginsburg on September 7, 2018.

8. On September 10, 2018, the physical therapist documented Claimant’s left lateral upper arm “had been hurting a lot lately when she tries to raise her arm up. She says that her neck feels a little stiff as well.”

9. On September 14, 2018, the therapist noted Claimant’s “neck is doing much better but her back pain seems to persist.”

10. Claimant followed up with Mr. Ginsburg on September 21, 2018. He documented, “all symptoms have resolved except for her low back pain.” Examination of the left shoulder showed no tenderness, full range of motion, normal strength, and no signs of impingement. Mr. Ginsburg referred Claimant to Dr. Randy Knoche, a chiropractor, for treatment of her ongoing low back pain.

11. Claimant started seeing Dr. Knoche on September 27, 2018. He documented, “she has had some physical therapy which included some symptoms in her neck and upper back. These have essentially resolved, and she is left with left-sided lower back pain and sacroiliac joint pain.” Claimant saw Dr. Knoche for a few weeks, with no mention of any left shoulder issues.

12. Claimant started seeing Dr. Daniel Peterson at Concentra on October 4, 2018. His initial report contains no reference to any ongoing left shoulder issues. The left shoulder strain was removed from her list of active diagnoses. He referred Claimant to Dr. Timothy Sandell for SI or facet injections.

13. Dr. Sandell evaluated Claimant on December 11, 2018. Claimant told Dr. Sandell “physical therapy helped her neck and shoulder symptoms, but her back pain persisted.” She reported constant 6-10/10 low back and hip pain and some numbness in the left leg. There was no indication of any ongoing left shoulder issues. Dr. Sandell ultimately treated Claimant for almost 3 years, and his records contain no mention of any ongoing left shoulder symptoms or problems.

14. On December 17, 2018, Claimant told Mr. Ginsburg the chiropractic treatment helped her neck pain, but she still significant low back pain. An examination of the left shoulder was entirely normal.

15. Dr. Peterson’s January 17, 2019 report documented 4/10 left-sided neck pain with numbness and tingling going up her neck and around her left ear. Claimant stated, “this had gotten better but now has this odd tingling and numbness from her L trap up into the L side of neck, L ear, and L side of head.” Claimant made no mention of any left shoulder symptoms. Dr. Peterson documented tenderness and muscle spasm in the left trapezius and left cervical paraspinal muscles, but he found no abnormalities on

examination of the left shoulder. Dr. Peterson referred Claimant to massage therapy for her neck.

16. Claimant started massage therapy on January 29, 2019. Her "main complaints" were "left side of neck and head, tingling lower back." The pain diagram notes bilateral trapezial and scapular pain but no specific left shoulder pain. The massage therapy records document "objective findings" in the trapezius and paraspinal muscles from the neck to low back but nothing regarding the shoulder.

17. Claimant followed up with Mr. Ginsburg on February 18, 2019. The massage therapy was "very helpful" but she was still having intermittent left neck pain with numbness radiating to the left side of her head. There is no indication of any left shoulder issues.

18. On March 18, 2019, Dr. Peterson issued a report on Claimant's behalf regarding SI joint injections that Insurer had denied based on a Rule 16 peer review. Dr. Peterson was concerned Claimant's treatment was being delayed unnecessarily and feared this might lead to a chronic pain condition. This report (and later reports) includes some pointed comments directed to the claims adjuster. Although the disputed treatment was unrelated to the shoulder, Dr. Peterson's willingness to advocate for Claimant belies the argument he would ignore or dismiss shoulder complaints had they been brought to his attention.

19. Claimant reinitiated treatment with Dr. Knoche in August 2019. His reports contain no reference to any left shoulder problems.

20. Dr. David Elfenbein, an orthopedic surgeon, performed an IME at Respondents' request on September 13, 2019. Claimant told Dr. Elfenbein, "The physical therapy helped her shoulder. Her neck and arm pain resolved. The low back continued." Claimant reported "0/10" shoulder pain and stated, "it is fine." She was still having some minor neck pain. Examination of the left shoulder showed no subacromial tenderness and no evidence of atrophy. There was tenderness around the AC joint and the biceps tendon. Supraspinatus strength was 4+/5 with pain. Hawkins sign was positive, but Neer test and cross arm tests were negative. Shoulder range of motion was mildly reduced. Dr. Elfenbein opined there was "no shoulder pathology present on the left." He diagnosed a mild cervical strain superimposed on pre-existing degenerative spondylosis. He opined Claimant was at MMI and provided impairment ratings for her low back and neck. He provided no shoulder rating, because he saw "no evidence of a shoulder injury. 100% of her impairment would be pre-existing and 0% from the work injury."

21. Claimant was evaluated by Dr. Kerry Latch, a pain management specialist, on October 11, 2019. Claimant stated her neck pain had improved since the accident but still got his highest 4/10 on occasion. She stated the neck pain radiated into the posterior left shoulder and made it difficult to move the left shoulder. Her low back remained her biggest complaint. On examination, the left shoulder was very tender at the subacromial-subdeltoid bursa in the lateral edge of the left scapula. She had pain and signs of impingement with abduction at 140°. Dr. Latch's diagnoses included "left shoulder pain,

persistent and resistant to conservative treatment since date of work-related injury, rule out internal derangement." He made several treatment recommendations for her low back, but none related to the shoulder.

22. Claimant underwent a Functional Capacity Evaluation (FCE) on February 6, 2020. When describing her then-current symptoms, Claimant made no mention of her left shoulder. Claimant demonstrated the ability to perform medium level work, although she could not satisfy all the demands of her job related to frequent carrying. The therapist recommended a work conditioning program focused on her low back and neck but recommended nothing related to the shoulder.

23. Claimant completed a repeat FCE on October 6, 2020. She again demonstrated the ability to work at the medium level. The report contains no mention of the left shoulder, and no limitations were attributed to any shoulder condition.

24. Dr. Peterson put Claimant at MMI on November 19, 2020. His final diagnosis was lumbar strain/contusion, with degenerative disc disease. Dr. Peterson assigned a 7% whole person impairment under Table 53 of the *AMA Guides*. He did not assign any range of motion impairment because the measurements were invalid.

25. Claimant attended a DIME with Dr. Timothy Hall on April 27, 2021. Dr. Hall noted Claimant "still" had "considerable symptoms" in her left shoulder. She described difficulty with arm movement, particularly abduction and internal rotation. Examination showed limited range of motion, pain with AC joint compression, mild laxity, and tenderness with palpation of the bicipital tendon. Dr. Hall also indicated impingement maneuvers were "concerning for possible impingement issues." He saw no indication of any labral dysfunction. Dr. Hall opined the left shoulder symptoms were related to the work accident but had been "overlooked" during her course of care. Dr. Hall stated, "I did discuss with the patient that I thought she needed more treatment with respect to her shoulder, but she would rather not do that through the work comp system, so I will be putting her at MMI." Dr. Hall assigned a 12% whole person rating for the lumbar spine and an 8% upper extremity rating for the left shoulder.

26. Claimant returned to Dr. Peterson on September 13, 2021. She said she initially did not want treatment for the left shoulder under her claim but had been advised to pursue it by her counsel. Dr. Peterson agreed left shoulder pain was documented in her early treatment with Mr. Ginsburg but "she never mentioned it to me." He also pointed out her shoulder range of motion was measured as normal at the FCE. Claimant also reported that the left shoulder symptoms increased in September of 2020. Nevertheless, he referred Claimant for an MRI because insurer had already agreed to cover it.

27. A left shoulder MRI was completed on September 27, 2021. It showed: (1) rotator cuff tendinosis with no high-grade partial or full-thickness rotator cuff tear, (2) mild/moderate glenohumeral joint osteoarthritis, chondromalacia, and osteophytes, (3) a degenerative tear of the posterior labrum, (4) a tear and detachment of the superior labrum, and (5) mild AC joint arthrosis.

28. Dr. Mark Failinger conducted an IME for Respondents and testified at hearing. Dr. Failinger opined Claimant suffered a mild strain or sprain to her left shoulder, but it resolved quickly, as documented by Mr. Ginsburg and Dr. Knoche. Thereafter, any left upper quadrant complaints were probably related to the left trapezius and cervical myofascial strains rather than the shoulder. He opined the shoulder examination findings documented by Mr. Ginsburg in September 2018 were consistent with a shoulder strain but not a labral tear or rotator cuff injury. He did not think the mechanism of injury was forceful enough to cause a labral tear. Dr. Failinger opined the pathology shown on the MRI was probably degenerative in nature and is common among individuals in Claimant's age group. He thought it improbable that Claimant's treating providers would ignore repeated reports of left shoulder symptoms for more than two years. Dr. Failinger discussed Claimant's case with Dr. Peterson who confirmed Claimant did not mention any left shoulder issues after he took over as primary ATP. Dr. Failinger concluded the work injury neither caused nor aggravated any pathology in Claimant's shoulder.

29. Dr. Anjmun Sharma performed an IME for Claimant and testified via deposition. He opined Claimant injured her shoulder in the work accident and her current symptoms are related to that initial injury. Dr. Sharma opined Claimant is not at MMI because the left shoulder needs further evaluation and treatment. He noted Dr. Hall had only placed Claimant at MMI because she did not want to seek further care within the workers' compensation system. He believes Claimant should have an orthopedic evaluation to determine if she needs additional treatment or surgery before putting her at MMI for the left shoulder. He believes the injury described by Claimant was sufficient to injure her left shoulder. He further testified individuals with a rotator cuff tears frequently have referred symptoms in adjacent areas, such as the trapezius and scapula. He opined Claimant's cervical pain is probably caused by the shoulder injury.

30. Dr. Failinger's opinions are credible and more persuasive than the contrary opinions offered by Dr. Sharma.

31. Claimant failed to overcome the DIME's determination of MMI by clear and convincing evidence.

CONCLUSIONS OF LAW

A. MMI

A DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). "Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment because of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5). The assessment of MMI "inherently" includes a determination what conditions, if any, are causally related to the work accident. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998). The party challenging the DIME's conclusions must show it is "highly probable" the determination of MMI is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals*

Office, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is “unmistakable and free from serious or substantial doubt.” *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A “mere difference of medical opinion” does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

As found, Claimant failed to overcome the determination of MMI by clear and convincing evidence. Specifically, Claimant did not prove additional evaluation or treatment for the left shoulder is causally related to the admitted work accident. Dr. Failinger’s analysis and conclusions are credible and persuasive. Claimant probably suffered a mild left shoulder strain, which multiple providers documented as “resolved” shortly after the work accident. The subsequent references to trapezial and cervical pain and spasm were probably related to a cervical strain, rather than a shoulder condition. There are no additional specific references to left shoulder problems until Dr. Kerry’s evaluation in October 2019. But just a month before, Claimant had told Dr. Elfenbein her shoulder pain had “resolved” and the shoulder was “fine.” Additionally, Claimant recently told Dr. Peterson that her shoulder worsened in September 2020, more than two years after the work accident. Although Claimant may require some treatment for the left shoulder, the persuasive evidence fails to show that any such treatment is causally related to the August 29, 2018 accident.

B. TTD

TTD benefits were initially terminated on November 18, 2020 based on the finding of MMI. Section 8-42-105(3)(a). Because Claimant failed to overcome the DIME regarding MMI, there is no basis for reinstatement of TTD benefits.

ORDER

It is therefore ordered that:

1. Claimant’s request to set aside the determination of MMI is denied and dismissed.

2. Claimant’s request for TTD benefits commencing November 19, 2020 is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ’s order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms
