26. Claimant further cites housing insecurity and limited internet access as reasons for his delay in filing a claim. Claimant testified that he lived so far outside of the Denver area that there was barely any internet service, and that he only had internet access on his cellular phone. Claimant testified that he had no printer and would go to the library to perform critical tasks; however, he could not do so at some point due to the libraries being closed as a result of the COVID-19 pandemic.

27. The ALJ takes administrative notice of Governor Jared Polis' Executive Order D 2020 017 dated March 25, 2020 and Public Health Order 20-24 issued by the Colorado Department of Public Health and Environment on March 27, 2020. The orders, issued in response to the COVID-19 pandemic, were the first ordering all Coloradans to stay at home, subject to limited exceptions, and directing all non-critical businesses (including public libraries) to temporarily close.

28. The record reflects Claimant made multiple posts on various social media outlets in 2017, 2018, and 2020.

29. Respondents filed a Notice of Contest on June 9, 2020.

30. Due to multiple inconsistencies in Claimant's testimony, the ALJ does not find Claimant credible overall. While the ALJ finds Claimant did experience pain at work on May 8, 2017 and notify Employer of the incident, the ALJ does not find Claimant's description of the nature and severity of his symptoms, his reported inability to work, his purported actual reason for resigning from employment, and his explanation for waiting to file a workers' compensation claim credible. Claimant failed to prove it is more probable than not he sustained a compensable industrial injury on May 8, 2017.

31. Respondents proved it is more probable than not Claimant's claim is barred by the statute of limitations, as Claimant failed to provide a reasonable excuse for his delay in filing a claim almost three years after the commencement of the limitation period.

32. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Statute of Limitations

Section 8-43-103(2), C.R.S. requires a claimant to file a notice claiming compensation within two years of discovery of the work-related nature of an injury or within three years if a reasonable excuse exists and no prejudice results to respondents. The notice must apprise the Division and respondents of the claimant's intent to seek compensation. The preceding requirement is not satisfied by the employer filing a first report of injury, the Division's assignment of a claim number, claimant's counsel's entry of appearance or the claimant's service of interrogatories. *Packard v. Industrial Claim Appeals Office and City and County of Denver,* 456 P.3d 473 (Colo. App. 2019). The limitation period commences when "the claimant, as a reasonable [person], should recognize the nature, seriousness, and probable compensable character of [the] injury." *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *City of Colorado Springs v. Industrial Claim Appeals Office*, 89 P.3d 504 (Colo. App. 2004). For a claimant to appreciate an injury's seriousness and probable compensable nature, the injury must be "to some extent" disabling. *City of Colorado Springs*, 89 P.3d at 506. The "seriousness" of the injury refers to the claimant's recognition of the "gravity of the medical condition." *Burnes v. United Airlines*, WC 4-725-046 (ICAO, Apr. 17, 2008). The claimant must recognize all three of the preceding factors to trigger the running of the statute of limitations. *Id.* The question of when the claimant recognized the nature, seriousness, and probable compensable character of the injury is one of fact for determination by the ALJ. *Id.*

In the event an employer has been given notice of an injury and fails, neglects, or refuses to report said injury to the Division as required, the statute of limitations does not begin to run until the required report has been filed with the Division. Section 8-43-103(2), C.R.S. An employer's duty to "report said injury" to the Division as stated in §8-43-103(2), C.R.S. refers to the employer's statutory duties under §8-43-101, C.R.S. *Grant v.*

Industrial Claim Appeals Office, 740 P.2d 530 (Colo. App. 1987). Section 8-43-101(1), C.R.S. requires that "[w]ithin ten days after notice or knowledge which an employee has contracted such an occupational disease, or the occurrence of a permanently physically impairing injury, or lost-time injury to an employee," the employer must report the injury to the Division. A "lost time injury" is defined as one that causes the claimant to miss more than three work shifts or three calendar days of work. *Grant v. Industrial Claim Appeals Office, supra*. An employer is deemed to have "notice" of an injury when the employer has "some knowledge of accompanying facts connecting the injury or illness with the employment and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Jones v. Adolph Coors Co*., 689 P.2d 681, 684 (Colo. App. 1984). The use of the word "shall" creates a presumption that the reporting requirement is mandatory. *City of Englewood v. Indus. Claim Appeals Office*, 954 P.2d 640, 641 (Colo. App. 1998).

Claimant argues that the statute of limitations did not begin to run until Respondents filed a Notice of Contest, as Employer failed to report his injury to the Division after he notified Employer of his injury on May 8, 2017. The ALJ disagrees.

Here Respondents did not fail to report Claimant's injury to the Division as required. The "injury" Claimant reported to Employer on May 8, 2017 was not an injury that required reporting to the Division at that time. Claimant alleges he sustained an industrial injury, not an occupational disease. There is no evidence Claimant's alleged injury has been deemed permanently physically impairing. Furthermore, there is no evidence Respondents were on notice of a lost-time injury prior to Claimant filing his claim for workers' compensation. While Claimant purports that, due to his alleged injury, there were days he was unable to work for Employer, Claimant also acknowledge he did continue to work as scheduled for Employer and continued to earn his full salary from Employer up to his resignation on August 3, 2017. There is no indication that, prior to filing a claim, Respondents were aware Claimant alleged any lost time from other work due to the May 8, 2017 incident. Additionally, there is insufficient credible evidence Claimant did, in fact, lose more than three days of work due to the work incident, as Claimant's own testimony regarding his ability to work was inconsistent and contradicted by various social media posts.

As Respondents were not required to file a report with the Division under such circumstances, their failure to do so does not toll the statute of limitations in this matter. Additionally, in mid-May 2017, Claimant specifically represented to Employer he would not file a workers' compensation claim for the incident, stating his need for surgery was pre-existing. Such statement is not dispositive of compensability or preclude Claimant from later filing a claim for workers' compensation; however, it is relevant to the analysis of whether Respondents had notice of a potentially compensable injury. The record is devoid of evidence indicating Claimant subsequently notified Employer that he, in fact, deemed the injury a work injury and wished to pursue a claim prior to filing an actual claim in May 2020.

As the statute of limitations did not toll in this matter, the ALJ next addresses when the limitation period commenced. The preponderant evidence establishes Claimant recognized the nature, seriousness and probable compensable character of his alleged injury on May 8, 2017. Claimant testified he felt a pop and severe pain while moving an oven at work on that date. He testified that the pain was so severe he was unable to complete his work shift and went home. He notified Employer of the incident on the day of the incident and began seeking medical treatment shortly thereafter. Claimant's description of the incident and his subsequent actions indicate he recognized the seriousness of the injury on or shortly after May 8, 2017. To the extent Claimant wishes to rely on his contradictory testimony in which he stated he did not initially think he had injured himself that badly and it was not until later his condition worsened, the ALJ is not persuaded.

The ALJ is persuaded Claimant was also aware of the probable compensable character of the alleged injury on the same date. Claimant was aware the alleged injury occurred at work while performing his work duties. Claimant testified he waited to file a claim because he was afraid he would be fired and that doing so would affect future employment opportunities in the cannabis industry. Such testimony indicates Claimant was, in fact, aware of the probable compensable character of the injury and elected to wait to file a workers' compensation claim. Finally, per Claimant's testimony, the alleged injury became to some extent disabling shortly after the alleged injury occurred. Claimant testified that for at least some time after the alleged injury he was unable to work because of the pain and that he spent most of his day in bed in pain. Based on the foregoing, the statute of limitations for Claimant to file a workers' compensation claim began running on May 8, 2017.

Claimant did not file his workers' compensation claim until May 3, 2020, well past the two-year statute of limitations, but prior to the three-year statute of limitations. Claimant did not provide a reasonable excuse for his almost three-year delay in filing a claim for workers' compensation. As discussed, Claimant offered conflicting testimony at various points, testifying that he did not think the injury was that bad at the time of the injury, but also testifying he experienced immediate and disabling pain to the point he could no longer work at times. Claimant also offered conflicting testimony regarding his symptoms. Claimant's testimony on cross-examination regarding a new condition lower down his back was inconsistent with his testimony on direct examination that his symptoms included numbness and pain in his fingers and arm, that are similar to the neck symptoms he reported having from his previous injury.

Claimant's assertion that he sustained an injury on May 8, 2017 that immediately or soon thereafter resulted in severe and disabling symptoms that necessitated medical treatment does not comport with Claimant's subsequent action of waiting almost three years to file a claim for compensation. Claimant points to limited internet access and limited access to public libraries due to the COVID pandemic as additional reasons for his delay in filing a claim. As found, the closing of certain institutions in Colorado, including libraries, did not begin until approximately late March 2020. Thus, Claimant had access to the computers in public libraries from May 2017 to at least March 2020. Claimant's claims that he did not have viable internet access is undermined by evidence of social media posts made by Claimant in 2017, 2018 and 2020. Claimant’s limited access to certain resources for certain periods of time does not reasonably justify a three-year delay in filing a claim in these circumstances.

Additionally, there is no evidence of any mental or physical inability preventing Claimant from filing a claim prior to May 3, 2020. Claimant continued to work for periods of time after May 8, 2017. Moreover, Claimant’s own testimony establishes he willingly delayed filing a claim, stating that he was afraid doing so would affect future employment opportunities and that, after some point, he merely assumed too much time had passed. Claimant did not provide any persuasive evidence that it was plausible future employment opportunities would, in fact, be jeopardized by filing a claim. A claimant's mistake or ignorance concerning the time period for filing his claim is not an excuse for the failure to file within the applicable statute of limitations. A claimant is presumed to know his legal rights, and a mistake in this regard does not constitute an excuse for filing a claim after the statute of limitations has run. *See Paul v. Industrial Commission*, 632 P.2d 638 (Colo. App. 1981)(parties are presumed to know the law); *Ramos v. Sears Roebuck Co*., W.C. No. 4-156-827 (February 10, 1994). Here, it was Claimant’s duty to timely file a claim for benefits.

Based on the totality of the evidence, Claimant failed to provide a reasonable excuse for his failure to file a workers’ compensation claim in the required time frame. Accordingly, Claimant’s claim is barred by the statute of limitations.

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its “origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee’s service to the employer.” *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, WC 4-960-513-01, (ICAO, Oct. 2, 2015).

A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa County Valley School District #51*, WC 5-102-109-001 (ICAO, Mar. 18, 2020).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, WC 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Assuming, *arguendo*, Claimant's claim was not barred by the statute of limitations, Claimant failed to prove it is more probable than not he sustained a compensable industrial injury on May 8, 2017. Claimant's testimony regarding his symptoms and ability to function was inconsistent. Claimant purported to experience symptoms similar to those he experienced as a result of his prior neck injury, which included numbness and weakness in his right upper extremity. Claimant later alleged the work injury was lower down his back. The medical records subsequent to May 8, 2017 do not contain any mid or low back complaints or findings. Claimant's reports to his providers subsequent to the May 8, 2017 incident solely refer to continuing symptoms dating back to a frisbee incident two years prior. The cervical MRI obtained in June 2017 did not reveal any acute injuries, nor did the right upper extremity EMG. There are no medical records in which Claimant's providers addressed a purported work injury. Absent objective evidence of an injury, the ALJ is left to rely on Claimant's subjective reports of his symptoms and function, which are incredible and unpersuasive in light of the aforementioned inconsistencies. Thus, while Claimant felt pain at work on May 8, 2017, the preponderant evidence does not establish that Claimant's work activities caused a compensable injury, including compensable aggravation of a pre-existing condition. As Claimant's claim is barred by the statute of limitations and Claimant failed to prove a compensable injury, the issues of medical benefits and penalties are moot.

ORDER

1. Claimant's claim for benefits is denied and dismissed, as it is barred by the statute of limitations pursuant to §8-43-103(2), C.R.S.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Respondents prove Claimant's temporary total disability ("TTD") benefits should be terminated pursuant to § 8-42-105(3) and WCRP Rule 6-4(D) based on a return to work?

STIPULATIONS

- The parties stipulated Claimant returned to work on November 22, 2019.

- The parties stipulated Insurer would cease payment of additional TTD benefits as of August 3, 2021, and cancel all unnegotiated TTD checks issued since November 22, 2019.

FINDINGS OF FACT

1. Claimant suffered an admitted injury on July 19, 2019. Insurer filed a General Admission of Liability (GAL) on October 25, 2019. Insurer commenced payment of TTD benefits effective October 11, 2019 at a rate of $487.53 per week. TTD benefits have been ongoing since the initial GAL.

2. On May 5, 2021, respondents filed a petition to terminate TTD benefits. The petition alleged that claimant had returned to work, and that she had not complied with an order to provide an employment release. The petition noted Respondents had no documentation of the actual wages being earned.

3. Claimant replied saying, "I sent in this paperwork last February (2020), I have never cashed a single check that has been sent to me. I spoke with Josh on the phone regarding my work. I am not trying to be difficult but I don't even understand what I have not done correctly here." The claims representative explained what needed to be done to adjust benefits, and explained that documentation regarding employment status and wages had not been received. She apologized if it had been sent previously and asked for the material needed. These emails were sent to the Division of Workers' Compensation at the request of the Division clerk, and the Division did not approve the Petition to Terminate.

4. Respondents requested an expedited hearing on the issue of termination of TTD, pursuant to WCRP Rule 6-4.

5. On July 27, 2021, claimant provided a statement that she returned to work as of November 22, 2019. Claimant stipulated to the accuracy of this statement at hearing.

6. Insurer initially paid TTD benefits via electronic funds transfer/direct deposit. Since October 23, 2020, the payments have been in the form of paper checks. Claimant has held those paper checks and has not negotiated them.

7. Respondents requested an order allowing them to cancel the outstanding checks that have been sent to Claimant since October 23, 2020. Respondents explained this request is in an effort to reduce the amount of any overpayment. After a discussion on the record, Claimant stipulated and agreed that the checks should be cancelled. ("Please.").

8. A hearing is currently scheduled for September 28, 2021 on Respondents' separate application for hearing on the issues of overpayment and reimbursement.

CONCLUSIONS OF LAW

By filing an admission of liability, the respondents have admitted that the claimant has sustained the burden of proving entitlement to temporary disability benefits. Thereafter, the insurer is bound by that admission and must pay accordingly. The insurer may not unilaterally terminate benefits without complying with the statute and with rules governing the termination of such benefits. *Colo. Comp. Ins. Auth. v. Indus. Claim Appeals Office*, 18 P.3d 790 (Colo. App. 2000). Section 8-42-105(3) C.R.S. lists the circumstances under which termination of TTD can occur. These include when an employee returns to regular or modified employment. Section 8-42-105(3)(b).

WCRP Rule 6-1 allows respondents to terminate temporary disability benefits without a hearing by filing and admission of liability under certain circumstances, when supported by documentation listed in the Rule. In the case of return to work, to file an admission terminating temporary disability benefits without a hearing, the admission must include both a written report from an employer or claimant stating the claimant has returned to work and documentation of the wages paid. WCRP Rule 6-1(A)(3). In the absence of the required documentation under Rule 6-1, respondents may file a petition for termination of temporary total disability benefits. WCRP Rule 6-4. If there is an objection to that petition, then respondent "shall continue temporary disability benefits at the previously admitted rate until an application for hearing is filed with the Office of Administrative Courts, and the matter is resolved by order." WCRP Rule 6-4(D). If termination is ordered, it is as of the date of the petition. WCRP Rule 6-4(C).

Once commenced, TTD benefits "shall continue" until one of the terminating events set forth in § 8-42-105(3). One of the enumerated bases for termination of TTD is a claimant's return to regular or modified work. Section 8-42-105(3)(b). As found, the parties stipulated that Claimant returned to work effective November 22, 2019. Termination of TTD benefits is therefore proper. *Burns v. Robinson Dairy, Inc*., 911 P.2d 661 (Colo. App. 1995); *Laurel Manor v. Indus. Claim Appeals Office*, 964 P.2d 589 (Colo. App. 1998).

Pursuant to § 8-40-201(15.5), C.R.S., "overpayment" means money received by a claimant that exceed the amount that should have been paid or which the claimant was not entitled to receive. Payment of TTD benefits under an admission of liability does not bar a party from seeking to recover the TTD benefits as an overpayment. *Grandestaff v. United Airlines*, W.C. No. 4-717-644 (December 12, 2013). In an effort to reduce any overpayment, the parties stipulated that the TTD checks Claimant has not negotiated should be cancelled by Insurer. This ALJ is not making a determination regarding the amount of overpayment resulting from claimant's return to work. However, the ALJ agrees that it is in the best interest of the parties to reduce the amount of overpayment that could be due because of claimant's return to work. The ALJ therefore approves this stipulation.

The ALJ issued a bench order during the hearing allowing Insurer to cease payment of ongoing TTD benefits immediately.

ORDER

It is therefore ordered that:

1. Respondents' petition to terminate TTD is GRANTED. Claimant's TTD benefits are terminated as of May 5, 2021.

2. Insurer may cancel all checks not yet negotiated by Claimant for TTD benefits paid since November 22, 2019, the date Claimant agrees she returned to work.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUE

1. Whether Respondents have established ground for modifying Claimant's admitted average weekly wage (AWW), and determination of Claimant's AWW.

FINDINGS OF FACT

1. Claimant is a 23-year-old man who sustained an admitted injury arising out of the course of his employment with Employer on December 14, 2020. Employer is a staffing agency that placed Claimant in a position with a construction company where Claimant worked on construction sites doing various tasks. Claimant was hired at a rate of $17.00 per hour, with no guarantee of a set number of hours per week. Due to the nature of the construction industry, the number of hours available for Claimant to work during a given week may be affected by weather, season, and other factors. In the course of his employment, Claimant was struck in the face by a piece of plywood, sustaining injuries to his face.

2. On December 18, 2020, Respondents filed a General Admission of Liability (GAL), admitting for temporary total disability (TTD) benefits beginning December 15, 2020. (Ex. B). In the GAL, Respondents' calculated Claimant's AWW as $1,204.25, and paid TTD benefits at the rate of $682.83, beginning December 15, 2020, and continuing until at least July 2, 2021. (Ex. H). Insurer, however, miscalculated Claimant's AWW by averaging Claimant's aggregate year-to-date gross wages from each pay stub, rather than the gross wages from each pay period.

3. On March 2, 2021, Insurer filed a Petition to Modify, Terminate, or Suspend Compensation with the Division seeking to modify the admitted average weekly wage pursuant to W.C.R.P. Rule 6-4 (A). (Ex. C). On March 17, 2021, Claimant filed an Objection to the Petition, indicating that a hearing was required to determine Claimant's AWW. (Ex. 1). On March 19, 2021, the Division issued a letter informing Insurer that its Petition was not approved, and indicating if Insurer wished to pursue the issue "you will need to apply for a hearing." (Ex. D). On March 30, 2021, Respondents filed the Application for Hearing seeking to modify Claimant's AWW as of March 2, 2021, the date the Petition was filed.

4. Claimant began employment with Employer on November 16, 2020, and earned $17.00 per hour. Between November 16 and December 14, 2020, Claimant worked during five pay periods and worked between 8 and 31 hours per week. During the week of November 23, 2020, Employer was closed for Thanksgiving and the following day. Claimant did not work on and was not paid for either of those days. Although no pay stubs were submitted for the week of December 14, 2020, Claimant worked and was paid for 8 hours of wages on the date of injury, December 14, 2020, and did not work for

Employer after that date. Claimant credibly testified that he was injured at the end of his shift on December 14, 2020.

5. Claimant's gross wages between November 16 December 14, 2020, were as follows:

Pay Period Start Date	Pay Period End Date	Gross Wages
11/16/20	11/22/20	$323.00
11/23/20	11/29/20	$527.00
11/30/20	12/6/20	$365.50
12/7/20	12/13/20	$493.00
12/14/20	12/20/20	$136.00
TOTAL		$1,844.50

6. Insurer contends Claimant's AWW is $427.13, which is Claimant's total gross wages from November 16, 2020, through December 13, 2020, divided by four weeks (i.e., $1,708.50 ÷ 4 = $427.13). Insurer's proposed calculation fails to account for the fact that the Thursday and Friday of the week of Thanksgiving 2020 were not workdays, and Claimant was not paid for work on those days. Insurer also failed to account for Claimant's work and pay on December 14, 2020. By failing to account for these factors, Respondent's proposed AWW does not accurately reflect Claimant's AWW at the time of injury.

7. Claimant contends his AWW should be $680.00, which presumes a 40-hour work week at $17.00 per hour. Claimant testified at hearing that he was paid weekly and that he was not guaranteed any set number of hours per week when he was hired. Claimant also acknowledged the variability of hours in the construction industry due to weather conditions. Claimant's proposed AWW is based on the speculation that Claimant would have worked 40 hours per week at some indeterminant point in the future, and does not accurately reflect Claimant's AWW at the time of injury.

8. Prior to his injury, Claimant worked three full weeks, and two partial weeks. The week of November 23, 2020 was not a full work week, but 5/7 of a week due to the Thanksgiving holiday. Because Claimant's injury occurred on the first day of the pay period, the week of December 14, 2020, was 1/7 of a week. Thus, Claimant's AWW should be based on the 3 6/7 (or 3.85714) weeks actually worked between November 16, 2020, and December 14, 2020. During this time, Claimant's gross wages were $1,844.50. The ALJ finds that Claimant's average weekly wage at the time of his injury was, therefore, $478.20 (i.e., $1,844.50 ÷ 3.85714 = $478.20).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

AVERAGE WEEKLY WAGE

Section 8-42-102(2), C.R.S., requires the ALJ to calculate a claimant's average weekly wage (AWW) based a claimant's monthly, weekly, daily, hourly, or other earnings. This section establishes the default method for calculating AWW. However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S., establishes the so-called "discretionary exception," which affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity.

Campbell v. IBM Corp., *supra*; *Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007). Where a claimant's AWW at the time of injury is not a fair approximation of Claimant's later wage loss and diminished earning capacity, the ALJ is vested with the discretionary authority to use an alternative method of determining a fair wage. *See id*. .

Respondents have established a basis for modifying Claimant's admitted AWW. As found, Claimant's average weekly wage at the time of his injury was $478.20. This calculation accounts for all of Claimant's gross wages during the 3 6/7 weeks actually worked between his start date and the date of injury. Claimant has not established credible grounds for the ALJ to exercise discretion to calculate his AWW differently. The ALJ concludes that $478.20 is a fair approximation of Claimant's wages and diminished earning capacity as the result of his industrial injury. Respondents' request to modify Claimant's AWW effective March 2, 2021, to reflect an AWW of $478.20 is granted.

ORDER

It is therefore ordered that:

1. Claimant's average weekly wage is $478.20, effective March 2, 2021.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 4, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-159-881-001

ISSUES

- Did Claimant prove he suffered a compensable injury to his left knee on January 9, 2021?

- If the claim is compensable, is Claimant entitled to reasonably necessary medical treatment from authorized providers, including treatment received at Concentra Medical Centers?

- The parties stipulated to an average weekly wage (AWW) of $1,275.56.

- Respondents presented evidence at hearing of an alleged safety rule violation relating to Claimant's failure to wear traction aids on his shoes. Respondents did not endorse a safety rule violation in their February 26, 2021 Response to Application for Hearing, but listed the defense on their Case Information Sheet. Claimant did not object to the safety rule issue at the start of hearing but has objected in his post-hearing brief. Claimant argues the defense was waived, whereas Respondents presumably believe the issue was tried by consent. Although an affirmative defense can be waived if not timely pled, the piecemeal nature of litigation inherent to workers' compensation claims means a party is only obligated to plead defenses pertinent to the benefits under consideration at the time. At this point in the claim, a safety rule violation is largely academic because Claimant is not currently seeking any indemnity benefits. Thus, whether Claimant violated a safety rule is not a defense to any benefits Claimant is asking the ALJ to award. On the other hand, Claimant's actions are not so unequivocal to indicate he consented to adding the issue. *E.g., Crist v. Booth Land & Livestock*, W.C. No. 4-357-502 (April 9, 1999). The present circumstances are insufficient to support a finding of "waiver" by either party. The safety rule defense will be reserved.

FINDINGS OF FACT

1. Claimant worked as a truck driver for Employer since November 2020.

2. On November 16, 2020, Claimant underwent a U.S. DOT pre-employment medical evaluation. Claimant was 6 feet tall and weighed 438 pounds. Aside from "obesity," the physical examination identified no physical abnormalities. Notably, Claimant's "extremities/joints" were normal, with no indication of any left knee problems.

3. Claimant typically begins each shift by reporting to Employer's dispatch center to receive his assignment. Employer maintains continuous video surveillance of the parking lot at the dispatch center. Surveillance footage from January 9, 2021 shows Claimant arrived in his personal vehicle at approximately 7:11 PM. It was actively

snowing, and the ALJ estimates 2-3 inches of snow had accumulated. Claimant exited his vehicle and began walking across the snow-covered parking lot. Shortly thereafter, he slipped and fell to the ground. The exact manner in which he fell is not visible because the view is blocked by cars. Claimant remained on the ground for over a minute, then arose and resumed walking into the building. After the fall, Claimant appears to walk gingerly on his left leg and more slowly than before the fall.

4. Respondents argue the video shows Claimant limping before the fall. The low contrast and resolution of the video makes it difficult to draw definitive conclusions. After viewing the video several times, the ALJ concludes Claimant's pre-fall gait pattern is more consistent with his large body habitus and walking on snowy ground. But regardless of whether Claimant may have had a slight limp or "hitch" in his gait before the fall, his gait is much more impaired after the fall.

5. After the accident, Claimant went inside and spoke with an unnamed individual in dispatch. He stated he fell while walking into the building and his left knee was very painful. This individual "did not know what to do," so Claimant simply collected his assignment paperwork and went to get his load for the day. Respondents presented no witness to dispute Claimant's account of the events after the accident.

6. Claimant worked for another week despite left knee pain. He did not see a physician until January 18, 2021. When asked at hearing why he did not see a doctor sooner, Claimant explained there was "a lot of confusion" regarding the entire incident. After reporting the incident, Claimant testified he was awaiting instruction as to what he needed to do next, such as take a drug test or whatever was required by Employer's policy. Claimant was subsequently contacted and told (erroneously) that workers' compensation coverage was not available because he was not "on the clock" when he fell, even though the accident occurred on Employer's premises. Claimant tried to see his PCP but was turned away and advised to follow up with "Work Comp." He was eventually referred to Employer's designated provider, Concentra. Claimant's explanation for the delay in treatment is credible.

7. Claimant saw Dr. J. Douglas Bradley at Concentra on January 18, 2021 for "left knee pain after slip and fall on 01/13/2021 [sic]." Dr. Bradley documented Claimant's knee pain had been worsening since the fall. The pain was described as 7/10 burning and throbbing. Examination of the left knee showed grade 2 effusion with erythema, limited range of motion in all planes, and reduced strength. X-rays showed no dislocation or fracture and no effusion. Dr. Bradley diagnosed a left knee contusion. He started Claimant on medications for swelling and pain, provided a knee brace wrap, and referred Claimant for physical therapy. He opined Claimant's symptoms and exam findings were consistent with the described mechanism of injury.

8. Dr. Bradley ordered an MRI of the knee on February 8, 2021, because Claimant had not significantly improved.

9. Claimant underwent the MRI on February 22, 2021. It showed (1) mild osteoarthritis with patellar chondromalacia and small joint effusion, (2) a grade-I MCL strain without tear, (3) a horizontal lateral meniscus tear extending into the anterior horn, (4) a small peripheral tear in the posterior horn of the medial meniscus, and (5) prepatellar and pretibial edema, and bone contusion versus reactive osteoedema in the lateral tibial plateau.

10. Kimberly B[Redacted], Employer's Safety and Training Manager on January 9, 2021, performed Claimant’s onboarding in November 2020. She testified she noticed a "slight hitch" in Claimant's gait when he started with Employer. Ms. B[Redacted] did not testify to any known knee symptoms or injuries before January 9, 2021.

11. Dr. Allison Fall performed an IME for Respondents on April 21, 2021. Dr. Fall reviewed the video surveillance and opined that Claimant appeared to have a slight limp favoring the left leg with decreased stance time and stiff-legged gait, both before and after the fall. Dr. Fall opined the lack of effusion shown on the initial x-rays was inconsistent with an acute meniscal injury. She opined the MRI findings were consistent with degenerative changes and Claimant’s obesity, and unrelated to the fall.

12. Dr. Timothy Hall performed an IME for Claimant on May 17, 2021. Claimant reported his knee had improved since the original accident, but he continued to have some symptoms and problems. Dr. Hall reviewed the surveillance footage and opined that “it is clear that he is limping, taking weight off his leg” after he got up. Dr. Hall disagreed with Dr. Fall’s assessment and saw an “obvious” change in Claimant’s gait after the accident. Dr. Hall opined the confusion over workers’ compensation coverage because the accident occurred in the parking lot was a reasonable explanation for the delay in seeking treatment. Dr. Hall opined the meniscal tears might be degenerative but are probably acute because there are no other significant degenerative findings in the knee. He noted Claimant had had only mild osteoarthritis, but a significantly injured meniscus, suggesting the meniscal damage was the result of trauma. Dr. Hall opined Claimant’s obesity “does not help” but is not dispositive because Claimant’s knee was asymptomatic before the fall. Dr. Hall opined Claimant’s history, exam, MRI, and video were all consistent with a work-related left knee injury.

13. Dr. Hall testified in deposition consistent with his report. Dr. Hall explained the bone contusion and MCL strain shown on MRI were good evidence of acute trauma “in the not-too-distant past.” Dr. Hall reiterated he saw a “significant” change in Claimant’s gait on the video after the accident. Dr. Hall did not consider the lack of effusion documented on the initial x-rays to be significant because effusion had been documented by Dr. Bradley and the MRI. Furthermore, he explained meniscal tears do not necessarily cause significant joint effusion because the meniscus “is not a terribly vascularized structure.” Dr. Hall agreed meniscal tears can be asymptomatic, but opined if they were preexistent in this case, the fall caused them to become symptomatic.

14. Dr. Fall testified at hearing consistent with her report. She opined one cannot determine whether a tear is acute or degenerative based on MRI images alone

but must also consider the mechanism of injury and symptoms. Dr. Fall opined Claimant's description of the fall was not a probable mechanism for meniscal tears. Dr. Fall testified Claimant did not complain of meniscal pain and presented no meniscal signs on examination at the IME. Dr. Fall testified Claimant's knee pain was "diffuse," and not specifically over the MCL. Dr. Fall saw no change in Claimant's gait after his fall when she reviewed the video. She also emphasized the delay in pursuing treatment and the fact Claimant continued working after the accident. Dr. Fall concluded Claimant suffered a contusion that did not require medical care and would resolve with time. She opined Claimant was at MMI with no impairment.

15. Dr. Hall's opinions and conclusions are credible and more persuasive than the contrary opinions offered by Dr. Fall.

16. There is no persuasive evidence Claimant's left knee required any medical treatment or caused any functional limitations before January 9, 2021.

17. Claimant credibly testified to ongoing knee pain and associated functional limitations despite improvement since the accident.

18. Claimant proved by a preponderance of the evidence he suffered a compensable injury to his left knee on January 9, 2021.

19. Claimant proved the treatment he received from Dr. Bradley and Concentra was reasonably needed to cure and relieve the effects of his compensable left knee injury.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). A pre-existing condition does not disqualify a claim for compensation if a work accident aggravates, accelerates, or combines with the underlying condition to cause disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The mere fact a claimant is involved in an "accident" does not necessarily give rise to a compensable "injury." A compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016).

As found, Claimant proved he suffered a compensable injury to his left knee on January 9, 2021. Given the video surveillance, there can be no dispute he slipped and fell in Employer's parking lot while walking into work. The fall depicted in the video appears sufficient to cause a knee injury, and the ALJ is unpersuaded by hair-splitting arguments about the precise “way” Claimant fell. Whether or not Claimant had a “slight hitch” in his gait before the accident, his gait “obviously” changed immediately after he fell. Claimant’s explanation for why he waited nine days to see a physician was credible. Claimant has provided consistent accounts of the accident and the associated symptoms and functional limitations to multiple providers, and at hearing. Dr. Bradley opined the exam findings at the initial visit were consistent with the accident Claimant described. Dr. Hall persuasively opined the accident probably caused most of the MRI findings. But even if some (or all) of the pathology was pre-existing, it was asymptomatic, non-disabling, and required no treatment before January 9, 2021. Either scenario is sufficient to establish a compensable claim.

B. Medical benefits

Because he proved a compensable injury, Claimant is entitled to medical treatment reasonably necessary to cure and relieve the effects of his injury. Section 8-42-101. As found, the evaluations and treatment provided by Dr. Bradley were reasonably needed to diagnose and treat Claimant’s compensable injury. Dr. Fall’s argument that Claimant’s knee injury would resolve on its own without treatment is belied by his remaining symptomatic six months later at the hearing.

ORDER

It is therefore ordered that:

1. Claimant’s claim for a left knee injury on January 9, 2021 is compensable.

2. Insurer shall cover all medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant’s compensable left knee injury, including but not limited to treatment provided by and on referral from Dr. Bradley and Concentra.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge’s order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email

address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: August 5, 2021

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she suffered compensable injuries on October 27, 2019 during the course and scope of her employment with Employer.

2. Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical benefits for her industrial injuries.

3. Whether Claimant has proven by a preponderance of the evidence that David W. Yamamoto, M.D. is her Authorized Treating Physician (ATP).

4. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits for the period October 27, 2019 until terminated by statute.

STIPULATION

The parties agreed to hold the issue of Average Weekly Wage (AWW) in abeyance.

FINDINGS OF FACT

1. Claimant worked full-time simultaneously as a cook at two D[Redacted]'s Restaurant locations. One of the D[Redacted]'s locations was on 104th Avenue in Thornton, Colorado. Claimant typically began her shift at the Thornton location at 10 p.m. and finished at 6 a.m.

2. On Sunday, October 27, 2019 Claimant was working at Employer's Thornton location. At about 2:00 a.m. Claimant bent over to retrieve items from a small refrigerator underneath a cook top surface. While bending over, Claimant felt a pop in her back and immediately experienced pain in her lower back and lumbar spine. Claimant reported her injury to her supervisor. Her supervisor prepared a report and instructed her to visit the emergency room at North Suburban Hospital.

3. At North Suburban Hospital on October 27, 2019 Claimant reported a history of osteoarthritis and the recent onset of stabbing lower back pain that traveled into her legs. Claimant reported that her lower back pain began when she felt a pop while bending over at work. She was diagnosed with a lumbar strain and discharged with prescription medications. The emergency room physician excused Claimant from work until she obtained clearance from a physician.

4. Claimant testified she gave the documents she received from North Suburban Hospital to her supervisor. Her manager instructed her to go to Denver Health for treatment.

5. On October 28, 2019 Claimant visited Denver Health for an evaluation. Claimant reported a three-day history of lower back pain after bending over and feeling a pop while working in a kitchen. She remarked that her pain had progressively worsened since the injury. The pain was located in the midline lumbar area radiating to both sides of Claimant's back. Claimant denied any lower extremity weakness or numbness. On physical examination, Claimant exhibited tenderness to palpation in her lumbar spine. X-rays revealed degenerative disc disease at the L1-L2 and L2-L3 levels but were negative for acute injuries. Charlotte S. Withers, P.A. diagnosed Claimant with lower back pain and discharged her with additional medications. Claimant also received a note removing her from work for two weeks until November 11, 2019. The note restricted her from job duties that would aggravate her injury or until she was cleared by a specialist.

6. Employer's November 5, 2019 Injury Report states that Claimant's manager sent her to the nearest hospital on October 27, 2019. The Report also specifies Employer was not aware of the paperwork that needed to be completed for Claimant's injuries. Furthermore, the Workers' Claim for Compensation filed with the Division of Workers' Compensation on November 6, 2019 provides that on October 27, 2019 Claimant leaned over to pick up about half a box of eggs and felt a crack in her lower back. She received medical treatment at North Suburban Hospital and Denver Health.

7. Claimant testified that she took the documents she received from Denver Health to her manager. She remarked that she subsequently requested medical care from the store manager and called her every day for about a month and a half. The manager told Claimant she could not help because she had been unable to obtain instructions from management about visiting a doctor. Claimant commented that her supervisor told her she could not return to work until she saw a specialist.

8. Claimant explained that, because Respondents refused to provide medical care, she sought treatment on January 23, 2020 with David W. Yamamoto, M.D. She remarked to Dr. Yamamoto that her manager first told her to wait for insurance to respond, but then noted she was unable to help. Dr. Yamamoto noted that Claimant was "bending down to pick up an ingredient when she felt a sharp pain and heard a pop in her lower back." On physical examination, Claimant reported pain across the lumbar spine that radiated up her back to her neck and down into both legs. The pain caused a tingling and numbness sensation. Dr. Yamamoto diagnosed Claimant with a strain of her lumbar region, radiculopathy, neck pain and depression. He noted that her personal physician had treated her for depression caused by the accident. Dr. Yamamoto prescribed Meloxicam, recommended an MRI of the lumbar spine, and suggested physical therapy. He assigned restrictions of lifting not to exceed five pounds, no repetitive lifting or carrying more than two pounds, pushing/pulling limited to five pounds, no bending at the waist, combined walking and standing of less than one hour and sitting for seven to eight hours.

9. Claimant returned to Dr. Yamamoto on February 26, 2020. He noted that prior to her work injury Claimant did not have any preexisting lower back injuries or receive treatment for depression. She had attended eight physical therapy visits, but they had not been beneficial. He refilled Claimant's Meloxicam prescription, added medications for depression and sleeping, recommended an MRI and referred her to Amar Patel, M.D., at Premier Spine and Pain Institute. Dr. Yamamoto maintained the same restrictions he assigned during Claimant's January 23, 2020 visit.

10. Claimant continued to receive treatment from Dr. Yamamoto on March 25, 2020, April 27, 2020, May 27, 2020, June 24, 2020, August 4, 2020, September 2, 2020, September 30, 2020, and October 30, 2020. At each of the preceding visits Claimant's condition remained essentially unchanged, with ongoing lumbar spine pain. Dr. Yamamoto reiterated that Claimant's lower back pain began when she was bending down to pick up an ingredient at work.

11. On November 10, 2020 Claimant underwent an independent medical examination with John Raschbacher, M.D. Dr. Raschbacher recounted that while Claimant was working for Employer on October 27, 2019 she bent over to retrieve eggs from a refrigerator underneath a cook top surface. When she bent over she heard a crack in her back before grabbing the eggs. Claimant specified that the symptoms began while she was bending over but before picking up anything. She denied any prior back injuries or treatment. Claimant recounted that, after visiting Denver Health Medical Center she did not improve. Claimant did not receive any additional medical treatment until her lawyer sent her to Dr. Yamamoto.

12. After reviewing medical records and performing a physical examination, Dr. Raschbacher determined there were no objective findings to support a work-related injury or that correlated with any of Claimant's subjective pain reports. Specifically, Dr. Raschbacher determined that Claimant's mechanism of injury was relatively trivial and would not cause chronic neck and back pain that persisted for over a year. He commented that it is likely Claimant would have experienced pain in her lower back when bending over even if she had not been at work.

13. On November 30, 2020 Claimant returned to Dr. Yamamoto for an examination. Dr. Yamamoto strongly disagreed with Dr. Raschbacher's opinion that the mechanism of injury was trivial and her injury should not be considered work-related. He agreed with Dr. Raschbacher that Claimant crouched down to reach into a refrigerator under the grill at work. However, Dr. Yamamoto disagreed with Dr. Raschbacher that, because Claimant made the same movement outside of work, it rendered the accident non-work related. He remarked that it was unfortunate Claimant had not improved, but noted his referrals to spine specialist Dr. Patel and for an MRI had not been authorized.

14. Claimant continued to receive medical treatment with Dr. Yamamoto. Her most recent visit prior to hearing occurred on April 7, 2021. Claimant's condition remained unchanged with pain levels of 8/10 in the lumbar spine.

15. Claimant testified at the hearing in this matter. She recounted that she was cooking omelets and crouched down to grab eggs when her back popped while working for Employer on October 27, 2019. She commented she has stabbing pain in her lower back with numbness in her legs. Claimant noted Dr. Yamamoto placed her on five pound lifting, pushing and pulling restrictions.

16. Dr. Yamamoto also testified at the hearing in this matter. He explained that Claimant's diagnoses were a lumbar strain, myofascial neck pain that developed a few weeks after her injury due to her inability to rest in bed from her lumbar spine injury, as well as depression. He prescribed medications for pain and depression. Claimant's work restrictions included a maximum of ten pounds lifting and eight pounds of repetitive lifting. Dr. Yamamoto noted that he had referred Claimant for an MRI, a physical medicine consultation with Dr. Patel and a psychological evaluation with Dr. Ledezma.

17. Dr. Yamamoto disagreed with Dr. Raschbacher's opinion that Claimant did not suffer a work-related injury because she was engaged in the activity of bending that was not unique to work. He explained that Claimant was injured while performing the job task of crouching down to get eggs from under a grill. He reasoned that, because Claimant suffered symptoms while performing her job duties, her injuries were work related.

18. Dr. Yamamoto further disagreed with Dr. Raschbacher's claims that there were no objective findings to support a work-related injury. He documented consistent range of motion throughout his treatment and disagreed with Dr. Raschbacher's physical examination that showed very limited and inconsistent range of motion. Dr. Yamamoto commented that the note in Dr. Raschbacher's report that Claimant was shifting positions during his examination clearly demonstrated she was experiencing pain in her lower back. Finally, he commented that "bending down" or "bending over" to retrieve eggs was sufficient to cause Claimant's lower back symptoms.

19. Dr. Raschbacher testified at the hearing in this matter. He maintained that Claimant did not suffer an industrial injury to her lumbar spine while working for Employer on October 27, 2019. He commented that Claimant described her mechanism of injury as bending down or forward but never mentioned there was anything special or unique about the way she was bending over at the time of her injury. Dr. Raschbacher emphasized that Claimant likely would have sustained the injury whether or not she was working for Employer because there was nothing unique about the way she was bending, lifting or reaching.

20. Claimant has established that it is more probably true than not that she suffered compensable injuries on October 27, 2019 during the course and scope of her employment with Employer. Initially, on October 27, 2019 Claimant was working for Employer at the Thornton location. At about 2:00 a.m. she bent over to retrieve eggs from a small refrigerator underneath a cook top surface. While bending over, Claimant felt a pop in her back and immediately suffered pain in her lower back and lumbar spine. Claimant reported her injury to her supervisor and was instructed to visit the emergency room at North Suburban Hospital.

21. The record consistently reveals that Claimant injured her lower back while performing her job duties for Employer on October 27, 2019. At North Suburban Hospital on the day of the injury Claimant reported lower back pain after she felt a pop while bending over at work. On the following day Claimant sought medical treatment from Denver Health. Claimant reported a three-day history of lower back pain after bending over and feeling a pop in her back while working in a kitchen. She remarked her pain had progressively worsened since the injury. The Workers' Claim for Compensation filed with the Division of Workers' Compensation on November 6, 2019 specifies that on October 27, 2019 Claimant leaned over to pick up about half a box of eggs and felt a crack in her lower back. Moreover, in her first visit to Dr. Yamamoto on January 23, 2020 Claimant remarked she was "bending down to pick up an ingredient when she felt a sharp pain and heard a pop in her lower back." Finally, Claimant reported to Dr. Raschbacher that, while she was working for Employer on October 27, 2019, she bent over to retrieve eggs from a refrigerator underneath a cook top surface and heard a crack in her back. The preceding medical records reflect that Claimant consistently maintained she developed lower back pain while bending over in Employer's kitchen on October 27, 2019 while performing her job duties.

22. The persuasive medical opinion of Dr. Yamamoto reflects that Claimant's work activities for Employer on October 27, 2019 caused her injuries. Dr. Yamamoto diagnosed Claimant with a strain of her lumbar region, radiculopathy, neck pain and depression. He detailed that Claimant's myofascial neck pain developed a few weeks after her injury due to her inability to rest in bed from her lumbar spine injury and noted that her personal physician had treated her for depression caused by the accident. Dr. Yamamoto explained that Claimant was injured while crouching down to retrieve eggs from under a grill while performing her job duties. He reasoned that, because Claimant developed symptoms while performing her job duties, her injuries were work-related. In contrast, Dr. Raschbacher determined there were no objective findings to support a work-related injury. Specifically, Dr. Raschbacher commented that Claimant's mechanism of injury was relatively trivial and would not cause chronic neck or back pain for over a year. Notably, Claimant never mentioned there was anything special or unique about the way she was bending over at the time of her injury. Dr. Raschbacher emphasized that Claimant likely would have sustained the injury whether or not she was at work because that there was nothing unique about the way she was bending, lifting or reaching on October 27, 2019.

23. Despite Dr. Raschbacher's contention that there were no objective findings to support Claimant's work-related injury, Dr. Yamamoto persuasively explained that "bending down" or "bending over" to retrieve eggs was sufficient to cause Claimant's lower back symptoms. The record reflects a direct causal connection or nexus between the conditions and obligations of Claimant's employment and her injuries. Because Claimant was performing a service arising out of and in the course of her employment when she developed symptoms, her injuries were proximately caused by her work activities for Employer. Accordingly, Claimant's work activities aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment.

24. Claimant has demonstrated that it is more probably true than not that she is entitled to receive reasonable, necessary and causally related medical benefits for her industrial injuries. At North Suburban Hospital on October 27, 2019 Claimant reported the recent onset of stabbing lower back pain that traveled into her legs after she felt a pop while bending over at work. She was diagnosed with a lumbar strain and discharged with prescription medications. On the following day at Denver Health Claimant underwent diagnostic testing, received physical therapy and obtained medications for her lower back symptoms. On January 23, 2020 Claimant began receiving treatment and medications from Dr. Yamamoto. He diagnosed Claimant with a strain of her lumbar region, radiculopathy, neck pain and depression. Dr. Yamamoto also recommended an MRI, a physical medicine consultation with Dr. Patel and a psychological evaluation with Dr. Ledezma. All of the preceding treatment was designed to address Claimant's lower back symptoms and associated conditions as a result of her October 27, 2019 work accident. Moreover, Dr. Yamamoto's treatment recommendations and referrals constitute reasonable, necessary and causally related medical benefits for her industrial injuries.

25. Claimant has proven that it is more probably true than not that Dr. Yamamoto is her ATP. Initially, on October 27, 2019 Claimant reported her injury to her supervisor. Her supervisor prepared a report and instructed her to visit the emergency room at North Suburban Hospital. Claimant explained she gave her documents from North Suburban Hospital to her supervisor. Her manager instructed her to go to Denver Health for treatment. After Claimant visited Denver Health on October 28, 2019 and gave more documents to her manager she requested additional medical care. Claimant specified that she called her store manager every day for about a month and a half. The manager told Claimant she could not help because she had been unable to obtain instructions from management about visiting a doctor. Notably, Employer's November 5, 2019 Injury Report provides that Employer was not aware of paperwork to be completed and Claimant's manager sent her to the nearest hospital on October 27, 2019. The preceding chronology reveals that Employer had some knowledge of the accompanying facts connecting Claimant's injury with her employment and the matter might involve a compensable claim. However, Employer only instructed Claimant to obtain emergency care and did not provide her with a written list of four designated providers despite Claimant's repeated requests for treatment. The right to select a physician thus passed to Claimant.

26. Claimant chose Dr. Yamamoto as her ATP and began treatment on January 23, 2020. Dr. Yamamoto thus had legal authority to furnish medical care to Claimant with the expectation that he would be compensated by Insurer for treatment. He recommended an MRI, a physical medicine consultation with Dr. Patel and a psychological evaluation with Dr. Ledezma. Dr. Yamamoto's referrals are also authorized because they occurred in the normal progression of authorized treatment. His treatment recommendations and referrals constitute reasonable and necessary treatment designed to address Claimant's October 27, 2019 industrial injuries.

27. Claimant has established that it is more probably true than not that she is entitled to receive TTD benefits for the period October 27, 2019 until terminated by statute. Claimant received medical treatment at North Suburban Medical Center on

October 27, 2019. The emergency room physician excused Claimant from work until she obtained clearance from a physician. On the following day Claimant received a note from Denver Health removing her from work for two weeks until November 11, 2019. The note restricted her from work that would aggravate her injury or until she was cleared by a specialist. Claimant subsequently did not obtain medical treatment until she visited Dr. Yamamoto on January 23, 2020. Dr. Yamamoto diagnosed Claimant with a strain of her lumbar region, radiculopathy, neck pain and depression. He assigned restrictions of lifting not to exceed five pounds, no repetitive lifting or carrying more than two pounds, pushing/pulling limited to five pounds, no bending at the waist, combined walking and standing of less than one hour and sitting for seven to eight hours. Dr. Yamamoto continued to assign Claimant work restrictions throughout treatment. At the hearing Dr. Yamamoto testified Claimant's current work restrictions include a maximum of ten pounds lifting and eight pounds of repetitive lifting.

28. Claimant's October 27, 2019 industrial injury caused a disability lasting more than three work shifts, she left work as a result of the disability and the disability resulted in an actual wage loss. The record reveals that Claimant has established a causal connection between her work-related injuries and subsequent wage loss Specifically, Claimant suffered a complete inability to work or work restrictions impaired her ability to effectively and properly perform her regular employment. Claimant has been unable to work since October 27, 2019 and has not reached Maximum Medical Improvement (MMI). Accordingly, Claimant is entitled to receive TTD benefits for the period October 27, 2019 until terminated by statute.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work activities does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. The provision of medical care based on a claimant’s report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician provides diagnostic testing, treatment, and work restrictions based on a claimant’s reported symptoms. It does not follow that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting

compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. In *City of Brighton v. Rodriguez,* 318 P.3d 496 (Colo. 2014) the Supreme Court addressed whether an unexplained fall while at work satisfies the "arising out of" employment requirement of the Workers' Compensation Act and is thus compensable. The Court identified the following three categories of risks that cause injuries to employees: (1) employment risks directly tied to the work; (2) personal risks; and (3) neutral risks that are neither employment related nor personal. The Court determined that the first category encompasses risks inherent to the work environment and are compensable while the second category is not compensable unless an exception applies. *Id.* at 502-03. The Court further defined the second category of personal risks to encompass those referred to as idiopathic injuries. These are "self-originated" injuries that spring from a personal risk of the claimant, such as heart disease, epilepsy, and similar conditions. *Id.* at 503. The third category of neutral risks would be compensable if the application of a but-for test revealed that the simple fact of being at work would have caused any employee to be injured. *Id.* at 504-05.

9. As found, Claimant has established by a preponderance of the evidence that she suffered compensable injuries on October 27, 2019 during the course and scope of her employment with Employer. Initially, on October 27, 2019 Claimant was working for Employer at the Thornton location. At about 2:00 a.m. she bent over to retrieve eggs from a small refrigerator underneath a cook top surface. While bending over, Claimant felt a pop in her back and immediately suffered pain in her lower back and lumbar spine. Claimant reported her injury to her supervisor and was instructed to visit the emergency room at North Suburban Hospital.

10. As found, the record consistently reveals that Claimant injured her lower back while performing her job duties for Employer on October 27, 2019. At North Suburban Hospital on the day of the injury Claimant reported lower back pain after she felt a pop while bending over at work. On the following day Claimant sought medical treatment from Denver Health. Claimant reported a three-day history of lower back pain after bending over and feeling a pop in her back while working in a kitchen. She remarked her pain had progressively worsened since the injury. The Workers' Claim for Compensation filed with the Division of Workers' Compensation on November 6, 2019 specifies that on October 27, 2019 Claimant leaned over to pick up about half a box of eggs and felt a crack in her lower back. Moreover, in her first visit to Dr. Yamamoto on January 23, 2020 Claimant remarked she was "bending down to pick up an ingredient when she felt a sharp pain and heard a pop in her lower back." Finally, Claimant reported to Dr. Raschbacher that, while she was working for Employer on October 27, 2019, she bent over to retrieve eggs from a refrigerator underneath a cook top surface and heard a crack in her back. The preceding medical records reflect that Claimant consistently maintained she developed lower back pain while bending over in Employer's kitchen on October 27, 2019 while performing her job duties.

11. As found, the persuasive medical opinion of Dr. Yamamoto reflects that Claimant's work activities for Employer on October 27, 2019 caused her injuries. Dr.

Yamamoto diagnosed Claimant with a strain of her lumbar region, radiculopathy, neck pain and depression. He detailed that Claimant's myofascial neck pain developed a few weeks after her injury due to her inability to rest in bed from her lumbar spine injury and noted that her personal physician had treated her for depression caused by the accident. Dr. Yamamoto explained that Claimant was injured while crouching down to retrieve eggs from under a grill while performing her job duties. He reasoned that, because Claimant developed symptoms while performing her job duties, her injuries were work-related. In contrast, Dr. Raschbacher determined there were no objective findings to support a work-related injury. Specifically, Dr. Raschbacher commented that Claimant's mechanism of injury was relatively trivial and would not cause chronic neck or back pain for over a year. Notably, Claimant never mentioned there was anything special or unique about the way she was bending over at the time of her injury. Dr. Raschbacher emphasized that Claimant likely would have sustained the injury whether or not she was at work because that there was nothing unique about the way she was bending, lifting or reaching on October 27, 2019.

12. As found, despite Dr. Raschbacher's contention that there were no objective findings to support Claimant's work-related injury, Dr. Yamamoto persuasively explained that "bending down" or "bending over" to retrieve eggs was sufficient to cause Claimant's lower back symptoms. The record reflects a direct causal connection or nexus between the conditions and obligations of Claimant's employment and her injuries. Because Claimant was performing a service arising out of and in the course of her employment when she developed symptoms, her injuries were proximately caused by her work activities for Employer. Accordingly, Claimant's work activities aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment. *See Enriquez v. Americold d/b/a/ Atlas Logistics*, W.C. No. 4-960-513-01 (ICAO, Oct. 2, 2015 (where claimant was in a position to suffer a right knee injury because of his work, his claim was compensable under the first category of risks described in *City of Brighton* because those employment risks are "universally considered to arise out of employment under the Act").

Medical Benefits

13. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

14. As found, Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical benefits for her industrial injuries. At North Suburban Hospital on October 27, 2019 Claimant reported the recent onset of stabbing lower back pain that traveled into her legs after she felt a pop while bending over at work. She was diagnosed with a lumbar strain and discharged with prescription medications. On the following day at Denver Health Claimant underwent diagnostic testing, received physical therapy and obtained medications for her lower back symptoms. On January 23, 2020 Claimant began receiving treatment and medications from Dr. Yamamoto. He diagnosed Claimant with a strain of her lumbar region, radiculopathy, neck pain and depression. Dr. Yamamoto also recommended an MRI, a physical medicine consultation with Dr. Patel and a psychological evaluation with Dr. Ledezma. All of the preceding treatment was designed to address Claimant's lower back symptoms and associated conditions as a result of her October 27, 2019 work accident. Moreover, Dr. Yamamoto's treatment recommendations and referrals constitute reasonable, necessary and causally related medical benefits for her industrial injuries.

Authorized Treating Physician

15. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006). Furthermore, W.C.R.P. 8-3(A) specifies that "[w]hen emergency care is no longer required the provisions of section 8-2 of this rule apply."

16. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v.*

Indus. Claim Appeals Office, 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, WC 5-044-948-01 (ICAO, Oct. 16, 2018). If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. *In Re Patton*, WC's 4-793-307 & 4-794-075 (ICAO, June 18, 2010); *see Jewett v. Air Methods Corporation,* WC 5-073-549-001 (ICAO, Mar. 2, 2020).

17. As found, Claimant has proven by a preponderance of the evidence that Dr. Yamamoto is her ATP. Initially, on October 27, 2019 Claimant reported her injury to her supervisor. Her supervisor prepared a report and instructed her to visit the emergency room at North Suburban Hospital. Claimant explained she gave her documents from North Suburban Hospital to her supervisor. Her manager instructed her to go to Denver Health for treatment. After Claimant visited Denver Health on October 28, 2019 and gave more documents to her manager she requested additional medical care. Claimant specified that she called her store manager every day for about a month and a half. The manager told Claimant she could not help because she had been unable to obtain instructions from management about visiting a doctor. Notably, Employer's November 5, 2019 Injury Report provides that Employer was not aware of paperwork to be completed and Claimant's manager sent her to the nearest hospital on October 27, 2019. The preceding chronology reveals that Employer had some knowledge of the accompanying facts connecting Claimant's injury with her employment and the matter might involve a compensable claim. However, Employer only instructed Claimant to obtain emergency care and did not provide her with a written list of four designated providers despite Claimant's repeated requests for treatment. The right to select a physician thus passed to Claimant.

18. As found, Claimant chose Dr. Yamamoto as her ATP and began treatment on January 23, 2020. Dr. Yamamoto thus had legal authority to furnish medical care to Claimant with the expectation that he would be compensated by Insurer for treatment. He recommended an MRI, a physical medicine consultation with Dr. Patel and a psychological evaluation with Dr. Ledezma. Dr. Yamamoto's referrals are also authorized because they occurred in the normal progression of authorized treatment. His treatment recommendations and referrals constitute reasonable and necessary treatment designed to address Claimant's October 27, 2019 industrial injuries.

Temporary Total Disability Benefits

19. To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, she left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §8-42-105, C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be

evidenced by a complete inability to work, or by restrictions that impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (*citing Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

20. As found, Claimant has established by a preponderance of the evidence that she is entitled to receive TTD benefits for the period October 27, 2019 until terminated by statute. Claimant received medical treatment at North Suburban Medical Center on October 27, 2019. The emergency room physician excused Claimant from work until she obtained clearance from a physician. On the following day Claimant received a note from Denver Health removing her from work for two weeks until November 11, 2019. The note restricted her from work that would aggravate her injury or until she was cleared by a specialist. Claimant subsequently did not obtain medical treatment until she visited Dr. Yamamoto on January 23, 2020. Dr. Yamamoto diagnosed Claimant with a strain of her lumbar region, radiculopathy, neck pain and depression. He assigned restrictions of lifting not to exceed five pounds, no repetitive lifting or carrying more than two pounds, pushing/pulling limited to five pounds, no bending at the waist, combined walking and standing of less than one hour and sitting for seven to eight hours. Dr. Yamamoto continued to assign Claimant work restrictions throughout treatment. At the hearing Dr. Yamamoto testified Claimant's current work restrictions include a maximum of ten pounds lifting and eight pounds of repetitive lifting.

21. As found, Claimant's October 27, 2019 industrial injury caused a disability lasting more than three work shifts, she left work as a result of the disability and the disability resulted in an actual wage loss. The record reveals that Claimant has established a causal connection between her work-related injuries and subsequent wage loss Specifically, Claimant suffered a complete inability to work or work restrictions impaired her ability to effectively and properly perform her regular employment. Claimant has been unable to work since October 27, 2019 and has not reached Maximum Medical Improvement (MMI). Accordingly, Claimant is entitled to receive TTD benefits for the period October 27, 2019 until terminated by statute.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered compensable injuries to her lumbar spine, neck and depression while working for Employer on October 27, 2019.

2. Claimant shall receive reasonable, necessary and causally related medical benefits for her October 27, 2019 industrial injuries.

3. Dr. Yamamoto is Claimant's ATP.

4. Claimant shall receive TTD benefits for the period October 27, 2019 until terminated by statute.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-154-497-001

ISSUE

1. Whether Claimant established by a preponderance of the evidence a basis for reopening his worker's compensation claim.

2. If Claimant established a basis for reopening his claim, whether Claimant proved by a preponderance of the evidence an entitlement to additional medical benefits.

FINDINGS OF FACT

1. Claimant sustained an admitted work injury to his left shoulder on April 10, 2019, while emptying recycling bins in the course of his employment with Employer.

2. Claimant received medical treatment through authorized treating physicians (ATPs) at Concentra for approximately six months until October 16, 2019. Claimant's treatment included physical therapy, massage therapy, and injections. He also had evaluations with an orthopedic surgeon and a physiatrist.

3. On October 16, 2019, Claimant's ATP, Theodore Villavicencio, M.D., released Claimant from care and found that Claimant had no permanent impairment. Dr. Villavicencio completed a Physician's Report of Worker's Compensation Injury on October 23, 2019, in which he indicated Claimant reached maximum medical improvement (MMI) on October 16, 2019, without permanent impairment and that maintenance care was not required.

4. On January 15, 2020, Respondent mailed a Final Admission of Liability (FAL) to Claimant and the Division. In the FAL, Respondent denied liability for maintenance care, and permanent partial disability benefits, consistent with Dr. Villavicencio's October 16, 2019 report. (Ex. A). No evidence was admitted indicating that Claimant requested a division independent medical examination or otherwise challenged Dr. Villavicencio's determination that he was at MMI on October 16, 2019.

5. No credible evidence was admitted indicating that Claimant has had any medical treatment or evaluation since October 16, 2019.

6. On February 13, 2021, Claimant filed an Application for Hearing (AFH) which endorsed multiple issues, including a petition to reopen. In his AFH, Claimant stated "the injury to my shoulder (torn muscle) was never properly treated, has never healed and is still causing pain & discomfort."

7. At hearing, Claimant testified that he did not believe his shoulder was properly treated following his work-injury, and that providers focused on his neck complaints rather than his shoulder. Claimant also testified that his left shoulder has "healed" but he does

not believe that it healed completely. He also testified that he continues to experience pain and difficulty moving his left arm.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

REOPENING CLAIM

Claimant seeks to reopen his claim for the purpose of obtaining additional medical benefits. The power to reopen is permissive, and is therefore committed to the ALJ's sound discretion. The party seeking to reopen bears the burden of proof to establish grounds for reopening. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Barker v. Poudre School Dist.*, W.C. No. 4-750-735 (ICAO, Mar. 7, 2012). An otherwise final award of benefits may be reopened under § 8-43-303, C.R.S., which provides, in relevant part:

> At any time within six years after the date of injury, the director or an administrative law judge may, after notice to all parties, review and reopen any award on the ground of fraud, an overpayment, an error, a mistake, or a change in condition ….

Claimant does not assert that his claim should be reopened for any of the bases set forth in § 8-43-303, and no credible evidence was admitted upon which a finding that these factors exist could be reasonably based. The ALJ finds no basis for reopening Claimant's claim under § 8-43-303, C.R.S., because no credible evidence was admitted demonstrating grounds for reopening.

Claimant argues his claim should be reopened to allow him to receive additional medical treatment based on the assertion that the medical treatment he received prior to being placed at MMI was insufficient or ineffective. In substance, Claimant's claim seeks to challenge Dr. Villavicencio's determination that he was at MMI on October 16, 2019, for his work-related injury.

Under § 8-42-107 (8)(b)(I), an authorized treating physician makes the initial determination as to whether a Claimant has reached MMI. If a party disputes the ATP's MMI determination, the party may request an division independent medical examination ("DIME") in accordance with § 8-42-107.2, C.R.S., to resolve that dispute. Section 8-42-107.2 (2)(a)(I)(A), provides that when a claimant initiates an MMI dispute, the time for selection of a DIME commences with the date of mailing of an FAL that includes an impairment rating. Section 8-42-107.2 (2)(b) provides that the party seeking an IME to dispute an ATP's determination must provide written notice and propose candidates to perform the IME within thirty days after the date of mailing of the FAL. If no notice is submitted within 30 days, the "authorized treating physician's findings and determinations shall be binding on all parties and on the division." *Id*. "A DIME is a prerequisite to any hearing concerning the validity of an authorized treating physician's finding of MMI, and, absent such a DIME, an ALJ lacks jurisdiction to resolve a dispute concerning that determination." *Town of Ignacio v. Indus. Claim Appeals Office*, 70 P.3d 513, 515 (Colo. App. 2002), *citing Story v. Indus. Claim Appeals Office*, 910 P.2d 80, 82 (Colo. App. 1995).

Respondent mailed its FAL on January 15, 2020. To challenge the FAL and the finding of MMI, Claimant was obligated to request a DIME on or before February 14, 2020. No evidence was admitted indicating that Claimant requested a DIME within 30 days of the mailing of the FAL or thereafter. Consequently, pursuant to § 8-42-107.2 (2)(b), C.R.S., Dr. Villavicencio's MMI determination is binding on the parties, and the ALJ lacks jurisdiction to resolve any dispute concerning that determination. The ALJ finds that

Claimant has failed to establish by a preponderance of the evidence grounds for reopening his claim.

ORDER

It is therefore ordered that:

1. Claimant’s petition to reopen is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 6, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Respondents proved Claimant received an overpayment of medical and indemnity benefits to which they are entitled to recover.

II. If Respondents proved Claimant received an overpayment of benefits, determination of a repayment schedule.

FINDINGS OF FACT

1. On November 28, 2014, Claimant was involved in an altercation in which he was attacked by several men and sustained injuries. Claimant alleged the injuries occurred during the course and scope of his employment while he was taking out the trash.

2. Respondents filed a General Admission of Liability ("GAL"), pursuant to which Claimant received medical and indemnity benefits.

3. Claimant was placed at maximum medical improvement ("MMI") on February 22, 2017. At that time, his diagnoses included, *inter alia*, traumatic brain injury, cognitive disorder, vertigo, cephalgia, visual acuity, right hip contusion with labral tear, post traumatic stress disorder, anxiety and depression.

4. Respondents filed a Final Admission of Liability ("FAL") admitting for the permanent impairment rating issued by Dr. Gellrick. Respondents paid permanent partial disability ("PPD") benefits pursuant to the FAL.

5. Allison Fall, M.D. conducted an Independent Medical Examination ("IME") of Claimant on September 27, 2017 and issued supplemental IME reports on November 2 and November 9, 2017. She opined, in relevant part, Claimant would be able to work in the same capacity as he worked prior to the work injury. She noted Claimant had longstanding psychiatric issues unrelated to the assault.

6. In a report dated November 15, 2017, vocational expert Doris Shriver opined that Claimant's combined physical, cognitive and psychological limitations as a result of his assault preclude Claimant from work in his previous fields of employment. Ms. Shriver indicated that Claimant's pre-existing Bipolar disorder, Asperger's and Osgood Schlatter's Disease and limited academic skills further reduced Claimant's work possibilities.

7. Respondents subsequently became aware of information suggesting the admitted injury was not work-related.

8. The matter subsequently proceeded to hearing before ALJ Turnbow on December 20, 2017, March 12, 2018 and April 23, 2018 on the issues of whether the November 28, 2014 injury was a compensable work injury and withdrawal of Respondents' admissions of liability.

9. ALJ Turnbow issued Findings of Fact, Conclusion of Law and Order ("FFCLO") on August 14, 2018. ALJ Turnbow found that no compensable injury occurred on November 28, 2014. ALJ Turnbow determined that Claimant personally knew the assailants and was not taking out the trash as alleged when the assault occurred. ALJ Turnbow found that the altercation in which Claimant was involved was personal in nature and not work-related. She concluded that the admission filed by Respondents was based upon materially false information provided by Claimant. As such, ALJ Turnbow concluded the June 16, 2017 FAL was void *ab initio* and ordered the claim denied and dismissed with prejudice.

10. On August 28, 2018, Respondents filed a FAL terminating Claimant's benefits and claiming an overpayment of $219,364.93 for benefits paid to date on the claim based on ALJ Turnbow's August 14, 2018 FFCLO.

11. On August 31, 2018, Claimant filed a timely Petition to Review, appealing ALJ Turnbow's August 14, 2018 FFCLO.

12. On September 18, 2018, Claimant filed an Application for Hearing ("AFH") to strike the August 23, 2018 FAL, asserting that the August 23, 2018 FAL was not ripe because ALJ Turnbow's FFCLO was not a final order. Respondents filed a Response to Application for Hearing endorsing the issue of overpayment. Respondents subsequently filed a Motion for Summary Judgment and Claimant filed a Cross Motion for Summary Judgment.

13. A hearing was held before ALJ Nemechek on February 6, 2019. At the hearing, Respondents were given the opportunity to argue and submit evidence concerning Respondents' Motion for Summary Judgment and Claimant's Response to Motion for Summary Judgment, and Claimant's Motion to Strike the FAL. At the time of the February 6, 2019 hearing, ALJ Turnbow's FFCLO was not final, as it was on appeal. ALJ Nemechek left the record open to allow counsel for Claimant and Respondents to submit any authority on the legal issues present.

14. On March 15, 2019, the Industrial Claim Appeals Office ("ICAO") issued a Final Order affirming ALJ Turnbow's August 14, 2018 FFCLO.

15. On July 1, 2019, ALJ Nemechek issued a Procedural Order requesting a status update from the parties regarding whether ICAO's July 9, 2019 Final Order was appealed. Nothing was filed by either party in response after July 2, 2019.

16. Claimant appealed ICAO's Final Order to the Colorado Court of Appeals.

17. On April 9, 2020, the Court of Appeals issued an order affirming ICAO's March 15, 2019 Final Order. The matter was not further appealed.

18. On June 15, 2020, Respondents filed an AFH on the issue of reimbursement of all benefits paid out on the claim due to ALJ Turnbow's FFCLO, including a repayment schedule. Claimant filed a Response to Application for Hearing endorsing the issues of jurisdiction, res judicata, collateral estoppel, issue preclusion and closed claim.

19. The matter went to hearing before ALJ Cayce on October 13, 2020 on the issues of overpayment and repayment schedule. At the time of the October 2020 hearing, ALJ Nemechek had not issued an order and there was argument by Claimant that no order on the issue of overpayment or repayment could be issued as long as ALJ Nemechek's order was outstanding.

20. Janine A[Redacted] testified at hearing on behalf of Respondents. Ms. A[Redacted] works for a third-party administrator and is the current resolution associate on Claimant's claim. Ms. A[Redacted] testified that, to date, Respondents paid Claimant $160,452.94 in medical benefits and $58,911.99 in indemnity benefits on the claim.

21. Claimant does not dispute the amount of benefits he received on the claim.

22. Claimant testified at hearing that he receives $802.00 per month in Social Security Insurance ("SSI") benefits and has no other income. Claimant testified he has only worked for approximately 30 days total subsequent to November 28, 2014. Claimant testified he worked for 7-11 for approximately 30 days before having a mental breakdown. He testified he applied for work at Good Times but was not hired after divulging that he had a traumatic brain injury.

23. Claimant lives with his mother, father, wife, daughter, sister, sister's fiancé, and sister-in-law. Claimant testified he pays $775 a month in rent, which includes utilities and that he assists in paying for food and clothing. He testified he relies on different resources, including his family and food banks, for assistance. Claimant testified that he had prior head trauma and preexisting mental health issues before the November 28, 2014 assault and continues to experience issues, including the development of seizures within the last two years.

24. On July 9, 2021, ALJ Nemechek issued a Procedural Order denying Respondents' Motion for Summary Judgment and Claimant's Cross Motion for Summary Judgment and Motion to strike the FAL. He noted the lack of a final order at the time of the February 6, 2019 hearing precluded a full evidentiary hearing. On August 5, 2019, the parties submitted a status report to ALJ Cayce agreeing that, with the issuance of ALJ Nemechek's Order, there was no longer any arguable impediment to ALJ Cayce issuing an order on the issues of overpayment and repayment.

25. The ALJ finds Claimant was overpaid a total of $219,364.93, the amount of benefits he received to which it was ultimately determined he was not entitled. Respondent are entitled to recover the overpaid amount.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overpayment

Section 8-40-201(15.5), C.R.S. defines overpayment as:

> [M]oney received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability or death benefits under said articles.

ICAO and the Colorado Court of Appeals have previously allowed for recovery of overpayments of benefits resulting from retroactive withdraws of admissions of liability based on fraud. *See Stroman v. Southway Services, Inc.,* W.C. No. 4-366-989 (ICAO August 31,1999); *Vargo v. Industrial Commission*, 626 P.2d 1164 (Colo. App. 1981).

Section 8-43-207(1)(q), C.R.S. grants an ALJ authority to order repayment of workers' compensation benefits. The ALJ has authority to fashion a remedy with regard to overpayments. *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), rev'd on other grounds, *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010). The ALJ has the authority to determine the terms of repayment and the recoupment schedule determined by the ALJ will not be disturbed absent an abuse of discretion. *Louisiana Pacific Corp. v. Smith*, 881 P.2d 456 (Colo. App. 1994).

As found, Respondents paid Claimant medical and indemnity benefits pursuant to an admission in the claim that was later determined by ALJ Turnbow to be *void ab initio*. Accordingly, Claimant received an overpayment of benefits, as he received benefits to which he was not entitled. In such circumstances, Respondents are entitled to recover the overpayment. ALJ Turnbow's FFCLO was upheld by ICAO and the Court of Appeals and not further appealed, rendering the order final.

Respondents request a repayment rate of $250 per month, arguing that because this is a case of fraud, Claimant should repay the benefits at a rate commensurate with his receipt of benefits. Respondents contend that Claimant receives over $800 per month in SSI benefits and is able to return to work if he chooses. Claimant requests a repayment schedule of $25 per month, based on his income and purported impaired ability to earn wages due to physical, cognitive and psychological injuries.

Claimant received a substantial amount of benefits to which he was not entitled due to his own material misrepresentations regarding the assault. Claimant testified he receives $802 per month in SSI income ow which he contributes $775.00 per month for rent. Claimant lives with multiple other adult individuals who provide financial assistance. The ALJ infers that Claimant's income is not the sole income and source of monetary support for the household such that paying more than $25 per month would be unduly burdensome. Claimant alleges he is effectively unable to earn wages through gainful employment as a result of his physical, cognitive and psychological issues. Claimant has worked a total of 30 days for one employer within the last six years and only sought employment on one other occasion. Although Claimant's condition may present some difficulties in obtaining employment, the ALJ is persuaded Claimant is able to work in some capacity if he so chooses. Thus, the ALJ concludes that a repayment schedule of $100.00 per month is reasonable.

ORDER

1. Claimant shall repay $219,364.93 to Respondents at a rate of $100.00 per month until the overpayment is extinguished. The first payment shall be made the month after this Order becomes final.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 6, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-149-963-001

ISSUE

1. Whether Claimant proved by a preponderance of the evidence that she sustained a compensable injury arising out of the course of her employment with Employer.

2. Whether Claimant proved by a preponderance of the evidence an entitlement to reasonable and necessary medical care to cure or relieve the effects of an industrial injury.

FINDINGS OF FACT

1. Claimant was employed by Employer as a job compliance analyst beginning in 2018, and worked for Employer until sometime in early 2021. Claimant's job duties consisted primarily of using a keyboard and mouse to conduct quality control audits of mortgage applications.

2. In July 2020, Employer implemented a new software system, which by Claimant's account, greatly increased the number of keystrokes she was required to use to perform her job duties and required her to use a mouse to scroll through up to 1000 pages of documents per audit. Claimant testified that as a result of the repetitive movements associated with the new software, she sustained an injury to the ulnar nerve in her elbow. Claimant's Application for Hearing indicates that the date of injury was September 21, 2020.

3. Claimant testified that the ulnar nerve in her elbow was "pinched," and that she contacted Insurer for medical attention and was sent to a "virtual doctor." Later, Claimant was seen in person at a Concentra clinic located on 6th Avenue where she was seen by a provider named Chelsea Rasis. Claimant credibly testified that she did not see any male physicians at Concentra. Claimant testified that she also saw a physical therapist at Concentra until her treatment was denied by Respondents, and that she has not seen any providers other than Concentra providers for her condition.

4. Neither Claimant nor Respondents offered or admitted credible evidence establishing the date of Claimant's first report of injury or any denial or contest of her claim by Respondents. Additionally, Claimant's treatment records were not offered or admitted into evidence, and no credible evidence was offered to establish Claimant's diagnosis, or whether any treating provider initially determined that Claimant's condition was related to her job duties.

5. In March 2021, Respondents engaged Jill A[Redacted], a vocational evaluator, to conduct a physical demands analysis and risk factor assessment of Claimant's work conditions. At the time of the initial assessment, Claimant was no longer working for

Employer. However, Ms. A[Redacted] interviewed Claimant, and evaluated the ergonomics of Claimant's home office on March 25, 2021. During the course of the interview, Claimant reported to Ms. A[Redacted] she felt that due to the frequency of mouse use she began to experience pain in her right wrist and elbow in August or September 2020. On April 12, 2021, Ms. A[Redacted] observed a different employee performing Claimant's job duties at that employee's home office workstation. Ms. A[Redacted] testified that the employee she observed used the same computer program as Claimant, but she was not aware of whether the other employee did the same work as Claimant. Ms. A[Redacted] also testified that the employee she observed used the keyboard arrow keys, rather than the mouse to navigate documents. As part of her evaluation, Ms. A[Redacted] documented her analysis of the proxy employee's mouse usage over an 8-hour work shift, and used that data in forming her conclusions. Based on her interview with Claimant and her observation the proxy employee, Ms. A[Redacted] concluded that none of the risk factors set forth in the Colorado Medical Treatment Guidelines Exhibits were present in Claimant's position. (Ex. B).

6. Because Ms. A[Redacted]' analysis was performed using a proxy employee who did not perform Claimant's job duties in the same manner as Claimant, and performed them at a different workstation, the ALJ does not find Ms. A[Redacted]' assessment to be a credible assessment of Claimant's performance of her job duties.

7. After completion of Ms. A[Redacted]' assessment, her report was sent to Ted Villavicencio, M.D., a provider at Concentra whom Claimant had not personally seen. On April 20, 2021, Dr. Villavicencio responded to a letter, presumably from Respondents, which asked the following: "In light of the fact the JSA [job site analysis] found no risk factors, per the Colorado Medical Treatment Guidelines Rule 17 Exhibit 5, are the Claimant's complaints causally related or not?" Dr. Villavicencio responded by checking the "NO" option, and stating "does not meet criteria." (Ex. A). Because the ALJ does not find the job site analysis to be credible, Dr. Villavicencio's opinion, based on that analysis is not persuasive.

8. Outside of work, Claimant is a participant in the sport of disc golf, and has been a member of the Professional Disc Golf Association (PDGA) since 2015. Claimant has competed in PDGA tournaments several times per year, including participating in 53 career PDGA events, winning 31 events between 2015 and 2021. No credible evidence was admitted indicating that participation in disc golf has caused Claimant any injury. Claimant testified that her disc golf activities did not cause her symptoms and that she was not advised by her health care providers to curtail her activities. She also testified that she was advised to limit her keyboarding activities.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See*

§ 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

To establish a compensable injury an employee must prove by a preponderance of the evidence that her injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold *d/b/a Atlas Logistics*, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

The mere occurrence of symptoms at work, however, does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, W.C. No. 5-020-962-01 (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc., W.C. No. 4-588-675, (*ICAO, Sept. 1, 2006*).*

Claimant bears the burden of establishing that it is more likely than not that her claimed injury arose out of the course of her employment. Claimant has failed to meet this burden. Although Claimant testified that she suffered a "pinched" ulnar nerve, the evidence does not reflect a diagnosis assigned by any health care provider. Similarly, no credible evidence was admitted indicating any causation analysis was performed by any health care provider, or that any health care provider attributed Claimant's symptoms to her work activities with Employer. Although causation may be established without a medical opinion, Claimant did not offer credible evidence to indicate how the conditions of her employment caused an injury. No credible evidence was presented to establish that Claimant's participation in disc golf caused her condition. Despite the fact that neither Ms. A[Redacted] report nor Dr. Villavicencio's report are persuasive, Respondents are not required to disprove causation or to establish an alternative cause. Claimant bears the burden of proof to establish that it is more likely than not that her claimed injury arose out of the course of her employment with Employer. The ALJ finds that Claimant failed meet her burden to establish by a preponderance of the evidence that she sustained a compensable injury arising out of the course of her employment with Employer.

MEDICAL BENEFITS

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Because Claimant has failed to establish a compensable injury, Claimant has not established by a preponderance of the evidence that she is entitled to an award of medical benefits.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish that she sustained a compensable injury arising out of the course of her employment with Employer, and has failed to establish an entitlement to medical benefits. Claimant's claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 9, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable work injury to her lower back on December 31, 2020? Stated differently, is Claimant's medical condition merely the natural progression of a preexisting condition?

II. Has Claimant shown, by a preponderance of the evidence, that she is entitled to medical benefits for her lower back condition?

III. Is Claimant's lower back condition the result of a (non-work-related) intervening event, to wit: A fall exiting a motor vehicle occurring on February 9, 2021?

IV. Has Claimant shown, by a preponderance of the evidence, that she is entitled to Temporary Total Disability ("TTD") payments from the date of injury, and ongoing?

STIPULATIONS

At hearing, the parties stipulated to an Average Weekly Wage ("AWW") of $352.35, with a TTD rate of $234.90.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background

1. Claimant alleges a work related injury on December 31, 2021 while working as a clerk at the Phillips 66 gas station convenience store while stocking automotive products. She worked as a cashier and her duties included stocking, cleaning the showers and bathrooms, emptying the outside trashcans, and sweeping and washing the windows, along with her cashiering duties.

2. Claimant had been working the job for approximately four months and was paid $13.00 per hour. Her workweek would vary between 20 and 36 hours per week.

3. Claimant filed for Workers Compensation benefits on 1/20/2021. A Notice of Contest was filed by Respondents on 1/25/2021. This Expedited Hearing follows.

Initial Treatment

4. Claimant was transported by ambulance to St. Francis Hospital on January 3, 2021. Upon being received at St. Francis Medical Center, Claimant provided the following: "Patient reports she was attempting to stack heavy boxes full of diesel fuel on a

shelf when it fell off the shelf. As she tried to catch it she fell to the ground onto her lower back. She did not lose any consciousness. She complains of [moderate] lower back pain on the right lumbar region….Initially she complained of some *intermittent* tingling to her right foot." (Ex. D, p. 25)(emphasis added). During the PT evaluation, Claimant reported that she heard a "pop in her back and her legs buckled" on December 31. Claimant remained overnight.

5. An MRI was performed on January 4, 2021. Mild disc bulges were noted at L1/L2 through L5/S1. There was evidence of *edema* at L1/L2. Also noted: "Moderate to considerable thecal sac effacement due to *minor subluxation disc bulging and facet hypertrophic changes at L4/L5*. (Ex. E, p. 48)(emphasis added).

6. Claimant was then seen on 1/4/2021 by a neurosurgeon, Dr. Boone. He recommended maximizing medical therapy, back brace, and follow-up as an outpatient in the neurosurgery clinic. He determined Claimant was non-operative at this point. At that time, Claimant expressed interest in physical therapy and epidural injections. Claimant was then released on 1/5/2021, with lifting, bending, and twisting restrictions. (Ex. D, p. 26).

7. Claimant returned for the outpatient neurosurgery appointment on January 27, 2021. She was seen by PA-C Catherine Marie Pierce, who noted the following: "Patient states her symptoms really have not alleviated much since hospitalization [of Jan 3-5] however she is not interested in any type of surgical intervention at this time. She would like to know about any nonsurgical options that she may have. (Ex. F, p. 52).

8. PA-C Pierce's narrative continues:

> We discussed patient's imaging at length. She does have a *fairly significant L4-5 spinal canal stenosis* with anterolisthesis and mildly associated redundancy of the cauda equina nerve roots….The goal of surgical intervention would be to prevent progression of any neurologic symptoms which *patient does have some intermittent **numbness*** but denies weakness….Additionally she denies any bladder or bowel incontinence. Her only complaint is *severe pain down her right leg in the L5 distribution that has been persistent for the last several weeks but she never had prior to that.* Id at 56. (emphasis added).

Claimant Suffers a Fall

9. Claimant returned to the emergency room on February 9 at St. Francis. Intake notes state:

> This is a 61 y.o. female….who presents to the emergency department complaining of right hip pain and worsening low back pain after a mechanical ground-level fall. Patient states she has *intermittent numbness* of her right foot *since an injury to her lower back on 12-31-*

> *2020.* Today patient was trying to get out of her vehicle *stepped on her numb foot* and her leg gave out on her. ….She denies ***new*** *weakness or numbness* to the right lower extremity. Denies bowel or bladder incontinence, urinary retention, saddle anesthesia….Denies other injury from the fall. (Ex. G, p. 59)(emphasis added).

10. Imaging conducted that day was *"not significantly changed from 1/4/2021 MRI." Id* at 62. Upon exam it was noted: "*Decreased sensation* to the lateral aspect of the *right lower leg*, lateral aspect of the *foot* and over the dorsum of the distal *foot*. Id. Denies IVDA or previous back surgery. *Presentation consistent with soft tissue contusion and exacerbation of chronic back pain.* Patient given prescription for tramadol and lidocaine patches. *She is stable for discharge home.* Patient given strict return precautions and verbalized understanding. *Id* at 64.(emphasis added).

Claimant's Ongoing Condition

11. Claimant's condition continued to deteriorate. She was seen by a Concentra PA on 2/12/2021. A mild right foot drop was noted. Claimant was now walking hunched over, walking with a mild limp.(Ex. 10, p 112). The patient's history and mechanism of injury were noted to be consistent with presenting symptoms and physical exam. *Id* at 114.

12. Claimant was seen again by the Concentra PA on 2/15/2021, at which time the PA noted that the Claimant was hunched over and requiring assistance to walk. PA Peterson urged Claimant to use a cane or walker and recommended ESI. A cane with a foam handle and walker were ordered.

13. Claimant saw Dr. Johnson with Concentra on February 22, 2021. Dr. Johnson thought the Claimant needed surgery, made the referral and indicated that in his opinion the Claimant's findings were consistent with the on-the-job injury. He estimated MMI to be Aug 1, 2021. (Ex. 10, p. 129).

Referral to Dr. Rauzzino

14. Dr. Michael Rauzzino then saw Claimant, for the first time on 2/23/2021. After taking a history [noted to not be materially inconsistent with previous histories in the records], he noted:

> *Since the injury* [which Claimant reported to him as occurring 12/31/2020], *the patient has had new complaints of pain radiating down the right leg.* She is also noting signs and symptoms were (sic) for cauda equina, where she is a pastor in a church, she got up to speak and she had loss of bladder, where she urinated on herself, that has never happened to her before. She describes her current symptoms as lower back pain with a shooting pain down both legs with *numbness* in both feet. She pain is worse on the *right* side than the left. The numbness is worse on the *right* side than left. She has

> difficultly walking. …*She was not being treated for any sort of symptoms in the period immediately prior to this*…..She has weakness in her legs, right greater than left…..(Ex. J, p. 75)(emphasis added).

At this visit, he recommended urgent surgical decompression, and Claimant concurred.

15. Dr. Rauzzino performed the emergent surgery on Claimant on 2/25/2021. Claimant had a surgical complication of a dural sac leak. Claimant remained in the hospital until 3/25/2021, when she was released. Dr. Rauzzino later performed an extension of the surgery performed on 2/25/2021, by extending the fusion with an L3-L4 TLIF surgery in April of 2021.

Claimant's Hearing Testimony

16. Claimant testified at hearing. On December 31, 2021, the 'DEF' [Diesel Exhaust Fluid] was running low and it needed to be restocked. She stated that the DEF came with two, 15–20-pound containers in a box. She requested help, but Stan the manager indicated that she should ask the maintenance man for assistance. He was busy, so she proceeded to get two boxes out of the back room and stock them. She used a two-wheel dolly to take them to the shelf where she was going to stock them. She lifted the two boxes onto a dolly, rolled the dolly out to where she needed to stack the product. As she was stocking the product, she felt a pop in her lower back.

17. This event happened sometime between 11:00 a.m. and 1:00 p.m. Claimant, however, finished her shift that ended at 7:00 p.m. She testified that she was hurting, but had some Advil in her locker and took some of those. She went home and put a heating pad on her back. She went to work the next day, January 1, 2021, but took some Norco that she already had at home. It had been prescribed by Dr. Bird, for a previous wrist injury.

18. Claimant testified that there were no supervisors on the job when she got there the next day, but she told "Heather" about the injury. Claimant testified that she was in a lot of pain performing her duties that day. Claimant went home after work, showered and went to bed. On Sunday, January 2, 2021, the pain was getting progressively worse, and Claimant used ice and heat to attempt to control the pain, but it was not helping. She took some additional Norco along with Advil without relief and she was taken by ambulance to St. Francis Hospital on Monday morning, January 3, 2021.

19. Claimant testified that she was not having any low back complaints before the injury of December 31, 2020. She had not received any type of medical treatment for any low back complaints in the three to four months prior to the injury. Further, she had never had any type of ongoing treatment for a low back issue prior to this injury.

20. At hearing, Claimant testified that she had never had low back surgery prior to the surgery performed by Dr. Rauzzino on 2/25/2021. She testified that in the past, she has had multiple surgeries on her wrist, and many hospitalizations for pneumonia.

21. Claimant denied ever having any type of treatment for a low back condition other than being seen in the emergency room for a couple of slip and falls in the past. She denied any type of previous chiropractic treatment or MRIs being performed on her low back. Her prior medical treatment had been primarily for her wrist and pneumonia as well as having had previous colon surgery.

22. Claimant stated that the surgery that Dr. Rauzzino performed got rid of the incontinence, but she still has the numbness in her legs off and on along with ongoing back pain.

23. Claimant was asked about various inconsistencies in the medical records regarding how the injury happened. The Claimant clarified that as she was lifting the DEF up on the shelf, she was not quite tall enough and strong enough and the product started teetering and that was when she felt the pop in her back. She told Heather, another store employee, about her injury on January 1, 2021, but she did not recall seeing or talking to Stanley L[Redacted] on January 1, as it was his day off.

24. Claimant testified that she had a fractured tailbone in a tubing accident in 2008. The doctor gave her a doughnut to sit on, and she had had a few minor “owies” to her low back over the years, but nothing that ever needed any type of ongoing medical treatment. She acknowledged prior treatment for removal of a portion of her small intestine but again denied any prior surgery or treatment for any type of ongoing low back condition.

Video Evidence

25. By all accounts, video surveillance of the convenience store on December 31, 2020 including various angles does not reveal any of the described mechanisms of injury. No witnesses testified that they observed Claimant’s injury at work. Further, it is simply not possible to infer from the available footage that Claimant was displaying significant injury behaviors after the fact. [This is not entirely unexpected, as the primary purpose of such video is for security purposes, and not detecting subtleties of pain symptoms].

Stanley L[Redacted]’s Hearing Testimony

26. Stanley L[Redacted], Claimant’s supervisor, testified that Claimant initially reported that she was in the hospital due to pneumonia. He testified that the Claimant asked for FMLA leave, and did not qualify, as she was a part time employee. Claimant reported a low back injury to Mr. L[Redacted] five days after she reported being in the hospital for pneumonia. Mr. L[Redacted] testified he

personally reviewed the video of December 31, 2020 and January 1, 2021 and did not witness Ms. Roberts sustaining a work injury. He testified he saw Claimant on December 31, 2020 and January 1, 2021 and she did not report a back injury to him on either date.

27. Noting that while Claimant had said that she reported her injury to “Heather,” Mr. L[Redacted] testified “Heather” is not a supervisor, and that he did not learn of any injury from her. He testified he first learned of the alleged back injury from his District Manager Christine Hess.

Dr. Fall’s Hearing Testimony

28. Dr. Allison Fall testified at hearing. She reviewed several banker’s boxes of medical records in order to prepare a causation analysis including review of many pre-existing records concerning numerous complaints requiring opioid medications, non-compliance with treatment with opioids, and low back injuries and bowel issues. Dr. Fall testified that previously on December 7, 2020, Claimant was seen at UC Health Memorial for potential COVID, pneumonia and or pulmonary embolism. Dr. Fall testified that she reviewed text messages that the Claimant was in the hospital with pneumonia, and requested FMLA for that condition. She testified that there was then mention of a low back injury five days later. Dr. Fall testified this review raised questions for her as a physician.

29. Dr. Fall testified that there was no discernable mechanism of injury. She testified that the Claimant initially reported to the emergency room on January 3, 2021, not on December 31, 2021 as Claimant reported to Dr. Rauzzino. Dr. Rauzzino confirmed that the report of emergent treatment on December 31, 2021 was an error. Claimant was questioned about and reported no incontinence at the time. Nor did Claimant report incontinence on January 4, 2021 to Dr. Boone. Further, incontinence was denied on January 27, 2021to Dr. Boone’s PA-C.

30. Claimant was then seen on February 9, 2021 when she alleged falling out of her car. She denied incontinence on that date as well. Claimant was next seen on February 12, 2021 by Mendy Petersen at Concentra and no incontinence was described. Consequently. Dr. Fall testified that there was no objective findings of incontinence without rectal exams, or nerve testing.

31. The ALJ notes the following from Dr. Fall’s testimony:

> Q So, next the Claimant reported to the emergency room at St Francis on January 3rd of 2021. From your review, was incontinence, either urinary or bowel, reported on January 3, 2021?
>
> A I did look through the records on my review to try to pinpoint when that [incontinence] was first noted. And in those initial records where they say no bowel or bladder incontinence, even into the first visits at Concentra, which was even after the hospitalization. ***So it wasn’t until the end of***

January or early February that it was noted that there was incontinence. (Transcript, p. 135, ll. 10-20)(emphasis added).

32. Dr. Fall testified that after Claimant fell getting out of her car on February 9, 2021, She testified there were no prior reports of leg numbness in the record. In fact, this exchange occurred:

Q Okay. In your review of the records between January 3 and February 9, 2021, were there reports of leg *numbness* associated with this alleged injury?

A ***No.*** *And I didn't see on exam that they found any, like, loss of sensation.* Mainly what they were describing is severe pain.in the notes….

Q. Well, what was the treatment she received on that date [February 9, 2021]?

A They referred her to – ***let me make sure I'm still on the right report.***

They referred her to pain medicine **and neurosurgery.** (Transcript, p. 139, l. 22, through p. 140, l. 15 (emphasis added).

33. She testified that the symptoms of incontinence were more temporally related to the February 9, 2021 fall from the car, and the need for surgery, than from the alleged work injury. She testified incontinence would be expected sooner than 3 weeks from the alleged lifting/falling/reaching incident.

34. Dr. Fall testified Claimant had a long history of prior back complaints including but not limited to known degeneration, known stenosis, and known anterolisthesis. She testified that these complaints are more than just minor falls, including an ER visit in September of 2019, as well as back pain complaints on December 7, 2020 when Claimant left the hospital against medical advice for pneumonia/ potential pulmonary thrombosis complaints.

35. Dr. Fall opined that the MRI of February 23, 2021 is consistent with the natural progression of a pre-existing condition. Dr. Fall and Dr. Castro agreed that there were no acute findings on that MRI. She testified there was no large fragment in the spinal canal outside of the bulging disc. She had never heard of a surgeon describe an internal herniated disc because the definition of a herniated disc is one that goes outside the margins of the disc.

36. Dr. Fall testified that she could not relate Claimant's injury to a specific work-related incident. Rather, she attributes the need for surgery to a natural progression of a pre-existing condition. She stated:

Q ..Leaving aside a natural progression of a preexisting condition, ….what *medical evidence* supports that there is a causal relationship between the [2/25/2021] surgery and the alleged incident on December 31, 2020?

A **None.** (Transcript, p. 148, ll. 5-10)(emphasis added).

37. Dr. Fall noted that Claimant denied prior back surgery, however there is radiographic evidence that perhaps she did. Dr. Fall testified that Claimant reported that her back pain "felt like" when she had surgery. Dr. Fall testified that she reviewed the MRIs between January 4 and February 23, 2021.

Dr. Rauzzino's Hearing Testimony

38. Dr. Michael Rauzzino testified as a Board-certified fellowship trained neurosurgeon, having been Board certified for 15 years and having practiced in his specialty in the State of Colorado for 18 years. Hi is level II certified with the Director of the Division of Workers Compensation for 15 years and was accepted as an expert herein.

39. Dr. Rauzzino testified that he had reviewed the medical reports on causation authored by Dr. Fall and Dr. Castro as well as the other medical records in the matter including the MRI, his surgical records and disagreed with Dr. Fall. He thought that Dr. Castro agreed with him that the Claimant sustained a compensable on the job injury. In explaining his analysis of causation, he stated he first looks at the claimant's condition pre-injury and then he looks at the mechanism of injury to see if it is consistent with the injury and he looks at how the claimant is post-injury. He also looks at the medical records from the emergency room, the radiographic findings and his own physical examination.

40. Dr. Rauzzino was the treating neurosurgeon for Claimant. He stated that he treated her for lumbar spinal stenosis and back and radicular complaints of cauda equina, which were secondary to an acute disc herniation at L4-5 superimposed on chronic degenerative changes. While Dr. Rauzzino noted that Claimant had an extensive medical history, there was no indication to him that she was being actively treated for any prior back symptoms in the period immediately prior to her reported injury.

41. Dr. Rauzzino noted that it did not appear that the Claimant had had a lot of back issues in the past; therefore, it would not be unusual for a 61-year-old lady to have degenerative disc disease. In this situation, she had been seen at the hospital for evaluation for COVID shortly before the injury date, but there was no indication of any complaints or treatment for a back condition. Dr. Rauzzino disagreed with Dr. Fall that simply because she said she hurt all over in that hospitalization, that she was having the type of back pain that results from a herniation of the L4-5 disc. Dr. Rauzzino testified that the mechanism of injury was consistent with the disc herniation and that with her slight body frame was enough to produce a disc herniation to her back.

42. Dr. Rauzzino acknowledged that Claimant was predisposed to this type of injury, due to the pre-existing spinal stenosis and degenerative changes, so it did not take much to produce this type of injury and need for surgical intervention. Dr. Rauzzino also looked at the temporal relationship between the event and medical treatment. He stated that being taken by ambulance to the hospital, that she was indeed in intense pain, as this was an abnormal event for her, given her previous medical treatment for her other conditions.

43. Finally, Dr. Rauzzino testified that when he performed the surgery on February 25, 2021, that there was evidence of an acute injury:

> The other thing that I would say in terms of causation is that there's an *acute* structural injury to her spine that you can see. While we've talked about chronic degenerative changes, when I did the surgery... I exposed the spinal sac and pulled it to the side, there was a large disc bulge pressing up, and as soon as I cut into the disc, large fragments of the disc material under pressure came out. This was the disc herniation that she sustained, and that is an *acute* injury." (Transcript, p. 31).

44. Dr. Rauzzino continues to treat the Claimant and is unsure of when she will reach MMI for her low back condition, saying that it will be quite some time.

45. Dr. Rauzzino maintained that the condition for which he performed surgery on the Claimant was not a chronic condition, but instead one that had occurred acutely, and due to the event that occurred on December 31, 2020. Although the Claimant had pre-existing spinal stenosis and degenerative disc disease that predisposed her to injuring her back, the surgery was necessitated by the acute herniation that occurred.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the

rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

B. In accordance with *Section 8-43-215, C.R.S.,* this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

D. In this instance, the ALJ finds that Claimant has been an imperfect historian – but perfection is not where the bar is set. Claimant has fundamentally recounted what occurred in a reasonably consistent manner. When a patient is in such distress that they must self-admit to the ER, histories don't always translate cleanly. ER personnel are looking for a mechanism of injury to help identify and treat the injury, but not to determine causation. And while Dr. Castro, and Dr. Fall state there are *several* versions of events from Claimant, neither of the physicians point to specific citations in the medical records in support. The ALJ has not identified *multiple* mechanisms of injury in the records-although they might exist. In the end, the most reliable articulation of a mechanism of injury is forged in the crucible of cross-examination, or in the calmer confines of a Level II physician's office.

E. What Claimant testified to at hearing is consistent with her symptoms, and according to Dr. Rauzzino, is easily sufficient to bring about the disc issues Claimant suffered from. Further, the ALJ is not persuaded that Claimant was driven by secondary gain issues-any more than any similarly situated person. Lastly, there is insufficient evidence that Claimant was driven by a drug-seeking motive, prior concerns by other providers notwithstanding. Were that so, one would not expect such a desperate individual to have the discipline to maintain a 'rainy day' reserve of such medication. (*see*

Finding of Fact #17, supra). The ALJ notes that Mr. Lathan testified sincerely enough about what he saw and heard, but compensability here does not pivot upon precisely who Claimant reported her injury to at the onset of symptoms. It is not uncommon for individuals to try to 'shake it off', before coming to terms with how bad things really are.

Compensability, Generally

F According to C.R.S. § 8-43-201, "a claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence; the facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer, and a workers' compensation case shall be decided on its merits." *Also see Qual-Med, Inc. v. Indus. Claim Appeals Off.,* 961 P.2d 590, 592 (Colo. App. 1998) ("The Claimant has the burden of proving an entitlement to benefits by a preponderance of the evidence."); *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915, 918 (Colo. App. 1993) ("The burden is on the claimant to prove his entitlement to benefits by a preponderance of the evidence.").

G. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.,*104 P.3d 273, 275 (Colo. App. 2004).

H. For an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Off.,* 919 P.2d 207, 210, 210 (Colo. 1996); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003). An injury "arises out of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions as part of the employee's services to the employer. *See Schepker, supra.* "In the course of" employment refers to the time, place, and circumstances of the injury. *Id.* There is no presumption that an injury arises out of employment merely because an unexplained injury occurs during the course of employment. *Finn v. Indus. Comm'n,* 165 Colo. 106, 108-09, 4437 P.2d 542 (1968).

I, Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1)(c) C.R.S.*; Faulkner v. Indus. Claim Appeals Off.,* 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for the determination by the ALJ. *Faulkner,* 12 P.3d at 846.

J. Colorado's Workers' Compensation Act creates a distinction between the terms "accident" and "injury". The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." *See* §8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. In other words, an "accident" is the cause and an "injury" is the result. *City of Boulder v. Payne,* 426 P.2 194 (1967). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." A compensable injury is one which requires medical treatment or causes a disability.

K. It is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between her employment and her injuries. An ALJ might reasonably conclude the evidence is so conflicting and unreliable that the claimant has failed to meet the burden of proof with respect to causation. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 191 (Colo. App. 2002) (weight to be accorded evidence on question of causation is issue of fact for ALJ). *See also, In the Matter of the Claim of Tammy Manzanares, Claimant*, W. C. Nos. 4-517-883 and 4-614-430, 2005 WL 1031384 (Colo. Ind. Cl. App. Off. Apr. 25, 2005).

Preexisting Condition, Generally

L. The mere fact that a Claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the preexisting condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a preexisting condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying preexisting condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). The claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a preexisting condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

Intervening Cause, Generally

M. However, no compensability exists if the disability and need for treatment was caused as the direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002); *Merrill v. Pulte Mortgage Corporation,* W.C. No. 4-635-705-02, (ICAO May 10, 2013). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). Similarly, the question of whether the disability and need for treatment was caused by the industrial injury or an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office, supra; Merrill v. Pulte Mortgage Corporation, supra.*

Compensability, as Applied

N. As noted, Claimant has supplied a sufficient mechanism of injury to being about this result. Clearly her longstanding lumbar stenosis was 'an accident waiting to happen.' But in this case, such 'accident' (actually her *injury*) arose from her duties at this convenience store, and while she was in the course and scope of said work. There is no reliable evidence that is occurred anywhere else but on the date, approximate time, and at the location as described. And there is certainly insufficient evidence that Claimant's fall while exiting the car on February 9 was an *intervening cause* of her symptomology.

The MRI was largely unchanged from a month ago, and her complaints were more about hitting her hip. She was treated and released. And the apparent cause of this fall was from stepping onto her *numb* right foot, which gave out on her.

O. Claimant's condition, in fact, gradually worsened, in a progression entirely consistent with her mechanism of injury, and the desperate straits she was in by the time she saw Dr. Rauzzino. And what Dr. Rauzzino observed during the surgery is entirely consistent with an *acutely* herniated disc (wrought by the lifting incident as described) fragmenting under considerable pressure, prior to being decompressed by the surgery itself. Dr. Rauzzino's analysis is persuasive, in that Claimant had never had such severe symptoms requiring this level of treatment, prior to this work incident. It is duly noted that the treating physicians prior to Claimant seeing Dr. Rauzzino felt similarly.

P. Respondents rely upon the records review of Dr. Castro, and the IME by Dr. Fall. As noted, due to the lack of citations by either physician in their records reviews, the ALJ cannot identify *several*, materially different mechanisms of injury from the records. In one version at the ER, she strained her back and fell, in another, she strained her back without falling. Of greater concern to this ALJ is the hearing testimony from Dr. Fall. Apparently, Dr. Fall was wishing to demonstrate that there was too long of a time between the DOI and the reporting of incontinence to establish a causal connection. In support, Dr. Fall said that the incontinence was not first reported until 'the end of January or early February.' In fact, it was even longer than that; Claimant first reported the incontinence to Dr. Rauzzino on February 23, whereby she was scheduled for emergent cauda equina surgery. An accurate rendition of the records would have served better. Better, but still not persuasive.

Q. Simply stated, Claimant herniated her disc at work, but her symptoms continued to worsen as the weeks went on. Her pain got progressively worse. Her intermittent numbness became more prevalent. Initial denials of weakness no longer held. Her ability to walk upright regressed. She then began to experience incontinence for the first time, and the ALJ finds that she reported this to a physician at the first opportunity, apparently not realizing its urgent significance. No such severe symptoms had ever befallen Claimant prior to December 31. Claimant's current condition is not the result of a natural progression of her (admittedly) preexisting condition.

R. Dr. Fall stated, in no uncertain terms, that there had been **no** complaints of *numbness* by Claimant prior to her fall on February 9. A review of Exhibit F (*see* Finding of Fact #7, 8, *supra*) shows otherwise. Claimant had reported *intermittent numbness* two weeks prior. Not only that, Claimant had also reported on February 9 that she had suffered *intermittent numbness* *prior* *to that date*. Then, after this same visit on February 9, Dr. Fall (making sure she was on the right report), stated that Claimant was then *referred* to pain medicine *and* *neurosurgery.* The 2/9/2021 reports show that Claimant was released with pain medication; there is no reference in the medical records that the St. Francis ER referred Claimant to *neurosurgery.* This 2/9/2021 fall was no intervening event.

S. Dr. Fall's answers throughout emphasized Claimant's lack of *objective* evidence in supporting a finding of causation. Even Claimant's verbal complaints of urinary incontinence were dismissed, absent a rectal exam or nerve testing. Had Dr. Rauzzino insisted upon some sort of ‘objective’ testing prior to a cauda equine diagnosis, precious, critical time could have been lost. Of course, one would always desire the subjective complaints of a patient not to be inconsistent with available objective data. That does not mean that *subjective* complaints are to be disregarded entirely, unless they are *objectively* corroborated in some fashion. Otherwise, why ever ask a patient how they are feeling? Because of the possibility that they could exaggerate their pain, feign numbness, fake a limp, provide poor strength testing effort, or make up a report of incontinence? The ALJ finds Respondents’ theory of compensability and relatedness to be unpersuasive, especially in light of the records review that was conducted.

Medical Benefits, Generally

T. A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003).

Medical Benefits, as Applied

U. Dr. Fall does not dispute that the emergent surgery by Dr. Rauzzino was reasonable and necessary at the time it was performed. Nor does any expert retained by Respondents. Having found Claimant’s lumbar disc injury to be compensable, the ALJ will not belabor that said surgery was, in fact, *related* to the work injury. Respondents are therefore responsible for this surgery, as well as all aftercare to bring Claimant to MMI.

TTD, Generally

V. C.R.S. § 8-42-103(1)(a), requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The term “disability” as used in workers’ compensation connotes two distinct elements. The first element is “medical incapacity” evidenced by loss or restriction of bodily function. The second element is loss of wage-earning capacity as demonstrated by the claimant’s inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999) *Hendricks v. Keebler Co.,* W.C. No. 4-373-392 (June 11, 1999).

TTD, as Applied

W. The ALJ has found that Claimant's injury to her lower back was compensable, and that the 2/25/2021 surgery by Dr. Rauzzino was related to said work injury. At hearing, Dr. Rauzzino stated that Claimant remains under his care, and he does not anticipate her reaching MMI for 'quite some time'. The ALJ finds this persuasive, given this injury, and the lack of evidence to the contrary. Claimant continues to suffer a wage loss due to this work injury, and is entitled to TTD payments until terminated by operation of law.

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable injury to her low back on or about December 31, 2020.

2. Respondents shall pay for all reasonable, necessary, and related medical treatment to cure her of said injury. Such treatment shall include, but is not limited to, the surgery performed by Dr. Rauzzino on 2/25/2021. All services not previously paid by Respondents are subject to reimbursement at rates set by the Fee Schedule of the Division.

3. Claimant is entitled to TTD payments from the date of injury and ongoing, until terminated by operation of law.

4. Claimant's Average Weekly Wage is $352.35.

5. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is* ***highly recommended*** *that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NOS. 5-044-996-002 & 5-106-253

ISSUES

The issues set for determination included:

- Did Claimant prove by clear and convincing evidence to overcome the opinion of Douglas Scott, M.D. who performed the Division of Workers' Compensation Independent Medical Examination ("DIME") on the question of MMI and the determination Claimant had no impairment?

- Whether Claimant proved by a preponderance of the evidence that she sustained a worsening of her condition casually related to the March 4, 2019 slip and fall that warrants payment of medical benefits.

- Did Claimant prove by a preponderance of the evidence that the right knee arthroscopy and partial medial meniscectomy proposed by Nirav Shah, M.D. is reasonable, necessary, and related to the work injury of May 19, 2016 or the subsequent exacerbation on March 4, 2019?

PROCEDURAL STATUS

The undersigned issued a Summary Order on March 4, 2021, which was served on March 5, 2021. After a Request for Specific Findings of Fact and Conclusions of Law was filed, Claimant filed (Amended) proposed Findings of Fact, Conclusions of Law and Order on March 25, 2021. Respondent filed (Amended) proposed Findings of Fact, Conclusions of Law and Order on March 29, 2021. A Status Conference was held on July 22, 2021.

STIPULATION

The parties entered into a Stipulation in W.C. No. 5-044-996 in which they agreed that the DIME placed Claimant at maximum medical improvement ("MMI") for her May 19, 2016 injuries on May 22, 2016, with no permanent impairment and Claimant retained the right to challenge the DIME's opinion by clear and convincing evidence. The Stipulation was accepted by the Court and is incorporated by reference in this Order.

FINDINGS OF FACT

1. Claimant has worked as a teacher for Employer since February 2012.

2. There was no evidence in the record that Claimant injured her right knee or right hip prior to 2016, including requiring treatment for those areas of the body.

3. On May 19, 2016, Claimant suffered a compensable injury when she fell at work while walking from the main office to her classroom. Water on the ground caused her to fall.

4. J[Redacted], a teacher at Jefferson Junior/Senior High School, testified at hearing. He was a witness to the May 19, 2016 fall and described it as horrendous; as "bad as anything he had seen in sports". He testified that he saw Claimant fall on her right side and her feet went up about as high as her head. Mr. J[Redacted] said Claimant landed awkwardly with her right leg bent underneath her. He testified Claimant was a truthful person.[1] Mr. J[Redacted] was a credible witness.

5. Claimant reported the injury on May 19, 2016 and the Employer's First Report of Injury indicated Claimant hurt her right ankle, leg and the right side of her back.

6. The ALJ concluded the fall on May 19, 2016 injured Claimant's right leg including the knee and hip.

7. Claimant testified she was able to return to work and suffered intermittent pain, including pain in her right hip and leg. Claimant continued working through the end of the school year and thought her pain would go away. Claimant was a credible witness.

8. Claimant was evaluated by Braden Thomas Meason, M.D. at Lutheran Medical Center on June 19, 2016 for heavy vaginal bleeding. An ultrasound performed at that time revealed an ovarian cyst. Dr. Meason's impression was: vaginal bleeding; iron deficiency anemia due to chronic blood loss.

9. Claimant travelled to California on vacation during June and was there approximately one month. Claimant said she felt pain, which she associated with either menstrual issues or her leg. Claimant did not receive treatment for her knee and hip during the months of June and July 2016, which was significant to the ALJ. The ALJ inferred Claimant's symptoms were not of the degree that caused her to seek medical treatment.

10. On July 26, 2016, Claimant was also evaluated by Michael Johnson, M.D. at Red Rocks Ob/Gyn for gynecological problems. Claimant testified she told Dr. Johnson about her fall in May and the report contained a reference to a fall "two weeks ago".[2] The ALJ inferred that the focus of this evaluation was on bleeding/pelvic

[1] The ALJ allowed this testimony under CRE 608, as the DIME report, as well as Dr. Ciccone's report (which were already admitted into evidence) attacked Claimant's credibility with respect to the delayed report of pain complaints. *People v. Serra*, 361 P.3d 1122, 1134-1135 (Colo. App. 2015).

[2] This may have been a typographical error, as none of the other medical records in evidence referenced a fall in July 2016.

problems and Claimant's explanation that she was focused on her bleeding issues was credible.

11. On August 8, 2016, Claimant was evaluated by John Ogrodnick, M.D., the ATP for Employer, for the work injury. At that time, Claimant described 5/10 right lateral hip pain, as well as thigh and calf pain. Claimant's pain diagram noted stabbing pain both on the front and back part of her right leg, from the knee up to the low back area. Claimant said she was sore for two weeks and got better, but the pain returned. The ALJ found this description of symptoms to be credible.

12. On examination, Dr. Ogrodnick noted tenderness at the bony edges of lateral right superior iliac crest and lateral thigh. Claimant was tender over the right psoas. Dr. Ogrodnick concluded that the exam's objective findings were consistent with history and/or work at related mechanism of injury/illness. The ALJ credited this opinion. Dr. Ogrodnick's assessment was: contusion of right hip. He referred Claimant for chiropractic treatment and Claimant treated with Keith Graves, D.C. pursuant to this referral. The ALJ inferred Dr. Ogrodnick believed Claimant was not at MMI during this period of time, which prompted the referrals for evaluations and further treatment.

13. Dr. Ogrodnick oversaw Claimant's treatment and saw her for follow-up evaluations on September 15, 2016. November 29, 2016, and January 19, 2017. Dr. Ogrodnick's diagnosis remained the same after these evaluations. Claimant referenced knee pain (both lateral and medial) in the pain diagrams for these appointments. In the September 15, 2016 note, Claimant advised Dr. Ogrodnick that she had knee pain, but thought she would be fine. She also reported the prolonged menses and associated intermittent pain with gynecological issues. Dr. Ogrodnick documented restrictions in range of motion ("ROM") and noted the FABER was positive in that it recreated the right buttock and groin pain.

14. At the January 19, 2017 evaluation, Dr. Ogrodnick noted chiropractic treatment raised the issue of whether she had a SI joint dysfunction. The report reflected continued symptoms in Claimant's right hip and right knee, which were also documented in Claimant's pain diagram. Claimant was returned to work full duty.

15. On March 14, 2017, Dr. Ogrodnick opined the right SI joint could be the pain generator. Right knee pain was also noted in this evaluation and Dr. Ogrodnick noted the SI joint did not account for knee pain. Tenderness was documented laterally on the right knee and Dr. Ogrodnick noted a positive McMurray sign at the time of this evaluation.

16. On March 20, 2017, Claimant underwent an MRI of the lumbar spine. The films were read by John Gilbert III, M.D., whose impression was: normal MRI of the lumbar spine without contrast, except for mild facet hypertrophy on the right at L5-S1. No central canal or foraminal stenosis was found.

17. Claimant also underwent a right knee MRI on the same day. The films were read by Virginia Scroggins, M.D. There was a free-edge tearing of the medial meniscal body. Mild cartilage loss along the weight-bearing surfaces of the medial femoral condyle and tibial plateau were seen. No fracture or joint effusion was found.

18. Claimant was evaluated by orthopedic surgeon, Nirav Shah, M.D. on April 6, 2017. She described pain located in the lateral knee, which had been occurring intermittently for months. On examination, Dr. Shah found painful ROM in the right knee, with tenderness to palpation to the medial joint line of the right knee. Claimant was having laterally-based pain in the region of her distal IT band. Dr. Shah recommended the surgery based upon the MRI findings and physical examinations. He noted Claimant had pain predominately laterally, but also medially, with provocation and a positive McMurray's test. Dr. Shah opined that her knee symptoms were emanating from her medial compartment, specifically her medial meniscus. The recommended surgery was a right knee arthroscopy and partial medial meniscectomy.

19. In a follow-up evaluation on April 25, 2017, Dr. Ogrodnick noted Claimant's presentation was atypical, as she had consulted her gynecologist early on. On examination, subtle right knee swelling was noted anteriorly. Tenderness was present on both the medial and lateral joint line. There was a positive McMurray's test. Claimant was not limping today, but had been limping last week.

20. Dr. Ogrodnick stated if Claimant's right leg was bent during the fall, this mechanism would be consistent with the pathology on the MRI. He said Claimant consistently reported right knee pain, which was reflected in pain diagrams and it was more likely than not this was related to her date of injury. He opined the proposed knee surgery would be appropriate and necessary at this time. Dr. Ogrodnick's opinion was persuasive to the ALJ.

21. On June 5, 2017, Claimant returned to Dr. Ogrodnick and had right knee and hip symptoms. Claimant was receiving chiropractic treatment and massage therapy to address her hip imbalance. Dr. Shah was to submit an appeal of the denial of the knee surgery. The record of the July 25, 2017 evaluation reflected Claimant had the same symptoms. Additional chiropractic and massage therapy treatment was to be ordered.

22. On August 5, 2017, a letter was sent from Dr. Shah regarding the denial of the proposed knee surgery. He noted Claimant continued to have knee pain from the date of injury, which waxed and waned. Dr. Shah opined Claimant was having pain for the medial compartment, specifically the meniscus. Dr. Shah reiterated his opinion that Claimant required surgery. The ALJ credited Dr. Shah's opinion that the proposed surgery was necessary.

23. Claimant underwent an MRI of the right hip on October 3, 2017. The films were read by Charles Wells, M.D., whose impression was: non-attached tear of the right anterior and superolateral acetabular labrum. Mild right hip osteoarthritis was present,

as well as mild STIR hyper intense bone marrow signal about the pubic symphysis. This was a non-specific finding and incompletely imaged.

24. Dr. Ogrodnick placed Claimant at MMI on April 19, 2018. She reported continued pain in her right hip and knee when standing. Pain was noted in the right buttocks, hip and knee. The external logroll test produced right knee pain. The FABER and FADIR produced right hip pain. The ALJ found these were objective signs of pathology in these areas of the body. Dr. Ogrodnick noted that it did not make sense to continue prescribing palliative treatment beyond DOWC Guidelines. He assigned a 29% medical impairment to the right lower extremity. Maintenance care was to include continued chiropractic and massages.

25. On June 13, 2018, Claimant underwent an Independent Medical Evaluation with William Ciccone, M.D., at the request of Respondent. Claimant reported right knee popping, along with occasional swelling in the knee. Claimant also said her right hip had pain over its lateral aspect which radiated posteriorly and occasionally into the groin area.

26. Dr. Ciccone noted in his report that Claimant ambulated with a normal-appearing gait. She had pain over the posterior aspect of the hip, with some pain on palpation both anteriorly and posteriorly. On examination, Claimant had hip flexion of approximately 120°, extension of 20°, with internal rotation of about 40°, with no groin pain; external rotation of 50° with posterior pain. Claimant had abduction to 30°, with pain with palpation along the greater trochanter. Examination of the right knee showed range of motion of 120° flexion, -0° of full extension, flexion somewhat limited by the size of the thigh. Claimant had mild pain with circumduction maneuvers, with a negative McMurray's sign.

27. Dr. Ciccone said he did not believe Claimant suffered an injury to the right hip as a result of the fall at work on May 19, 2016. Although she reported the fall the same day, she did not present to occupational medicine for three months after the injury. Dr. Ciccone said if Claimant had suffered a significant right hip injury, one would have expected an earlier medical evaluation either with the gynecologist or occupational medicine. Further, her pain was located in the posterior portion of the hip, which was not the common location for hip pain. He did not believe the October 2017 MRI findings, which showed a labral tear, were acute and opined these were unrelated to the fall at work.

28. With regard to the right knee Dr. Ciccone noted Claimant had no real complaints of knee pain until March 20.[3] She did not have medial joint line pain at that time and individuals with symptoms meniscal pathology have pain in the compartment where the meniscal tear was. He disagreed with Dr. Shah's opinion that patients with medial meniscus tears commonly had lateral joint symptoms. In conclusion, he did not

[3] This was erroneous as Claimant completed pain diagrams on August 8, 2016, September 15, 2016. November 29, 2016, and January 19, 2017 referencing knee pain.

believe Claimant suffered a work related injury. If it was determined that Claimant suffered a compensable right hip injury, he believed Dr. Ogrodnick‘s impairment rating was accurate. He disagreed with Dr. Ogrodnick‘s medical impairment rating for the right knee.

29. On August 31, 2018, Claimant underwent the DIME, which was performed by Dr. Scott.[4] At that time, Claimant complained of pain down her right leg to her right knee, which was elicited by touching her right buttocks. He noted Claimant did not seek medical treatment right away after the fall but experienced soreness over the right hip and lateral thigh. Later in the summer, she experienced sharp pain in the right groin. Dr. Scott noted Claimant was diagnosed with: right hip labral tear and right medial meniscus tear.

30. Dr. Scott said he could not state with certainty that “the May 19, 2016 slip and fall injury cased either her right hip or right knee condition or caused the need for further treatment of those conditions”. This was because it was not temporally supported by the medical record or by the absence of receiving timely medical attention or treatment for an acute injury to the right hip or right knee. Dr. Scott opined that a slip and fall onto a right side “could possibly cause” an acute right labral tear or right near medial meniscus tear, but he expected such injuries would require fairly immediate medical attention.

31. Dr. Scott concluded Claimant was not at MMI because her right knee and/or her right hip condition were “probably” not stable and further treatment could reasonably be expected to improve her condition. He provided a provisional impairment rating of 23% for the right lower extremity. The ALJ found Dr. Scott did not explain the potential internal contradictions within the DIME report, including why the provisional rating was issued, if he believed the knee and hip conditions were not caused by Claimant’s injury.

32. In his deposition testimony, Dr. Scott noted he lacked information/documentation when he performed the DIME, including the Employer‘s First Report of Injury, the Workers’ Claim for Compensation and the report from Claimant’s personal physician. Dr. Scott testified he couldn’t say with certainty there was a causal relationship between her claim and the conditions.[5]

33. Dr. Scott testified that if what Claimant said about her fall was true, she could have not only injured her right hip, but also the right knee.[6] He said if the she had an injury, she was not at MMI. Dr. Scott then said if the injuries to the right lower extremity were not aggravated as a result of the May 19, 2016 fall, there would be no

[4] The DIME report is dated November 7, 2018.

[5] Deposition of Dr. Scott, page 9:23–10:6.

[6] Deposition of Dr. Scott, page 17:8-18.

MMI. He noted he requested additional information, but was not provided it. Dr. Scott went on to testify that Claimant required additional treatment for her right knee and right hip.[7]

34. Dr. Scott concluded Claimant reached MMI three days after the injury. Dr. Scott was asked a series of leading questions, which were punctuated by his agreement to the question, with no explanation.[8] Dr. Scott did not provide details as to his reasoning, nor did he explain the contradictions in his report noted *supra*. In this regard, the ALJ noted Dr. Scott did not provide a detailed explanation as to Claimant's need for treatment, nor was there an analysis of the treatment she had received. Dr. Scott's testimony was not persuasive to the ALJ on the question of whether Claimant was at MMI.

35. Dr. Ciccone testified as an expert in Orthopedic Surgery at hearing. He disagreed with Dr. Ogrodnick's opinion that the May 2016 fall caused traumatic labral and meniscal tears. Dr. Ciccone opined the findings in the hip, including osteoarthritis were chronic. Dr. Ciccone believed the labral tear and meniscus tear were chronic and preexisting. Dr. Ciccone believed Claimant would have had difficulty walking if she had suffered the tears as a result of the fall.

36. Dr. Ciccone reviewed both the DIME report and Dr. Scott's deposition transcript. Dr. Ciccone testified it was very difficult to ascertain what Dr. Scott's thought process was.[9] He agreed Claimant reached MMI three days after the injury. Dr. Ciccone stated it was unlikely that the Claimant would benefit from the right knee surgery recommended by Dr. Shah and did not believe the need for the surgery was reasonable and necessary or causally related to the May 19, 2016 slip and fall event.

37. On March 4, 2019, Claimant slipped and fell on ice while walking to her classroom. She testified that she felt pain in her right hip and right knee.

38. Claimant was seen by Dr. Ogrodnick that same day. Claimant reported 4/10 right knee pain and right hip/buttock pain on a daily basis since the time of his last evaluation December 16, 2018. Claimant noted she had an increase in pain on the inside and outside of her knee, but this had calmed down. Claimant had medial and lateral right knee pain on examination, along with joint line tenderness. Dr. Ogrodnick diagnosed a contusion of the hip; strain of the right knee and said it was hoped that this fall caused a temporary aggravation of her condition. Dr. Ogrodnick administered a Toradol injection and referred Claimant for chiropractic treatment and massage therapy.

39. The ALJ found the March 4, 2019 fall arose out of and was in the course of Claimant's employment.

[7] Deposition of Dr. Scott, page 12:2-6.

[8] Deposition of Dr. Scott, page 21:12-23:23.

[9] Hrg. Tr., p. 165:4-10.

40. When Claimant returned to Dr. Ogrodnick on March 18, 2019, she walked with a limp. Dr. Ogrodnick noted a tender right SI joint, sciatic notch and trochanteric bursa. Claimant‘s right knee joint line was tender both immediately and laterally. She had a positive McMurray’s test. Dr. Ogrodnick recommended a right SI joint injection to confirm the pain generator.

41. In the follow-up evaluation on April 4, 2019, Claimant‘s right knee was pain-free while seated, but medial pain was present while walking. Dr. Ogrodnick noted the knee also catches. Dr. Ogrodnick‘s diagnoses were the same as the prior appointment. Claimant was to see Dr. Chan and follow-up after the MRI.

42. On April 18, 2019, Claimant underwent a lumbar MRI. The films were read by Summit Mehta, M.D. Dr. Mehta concluded that there was no change since the March 20, 2017 MRI. Mild right facet hypertrophic change was found, but no disc herniation was present. There was no central canal or neuroforaminal stenosis.

43. On May 3, 2019, Employer filed a Notice of Contest, disputing liability for the March 4, 2019 injury. The reason the claim was contested/denied was “further investigation“.

44. Dr. Ogrodnick evaluated Claimant on June 21, 219. Claimant described her pain levels as 3/10 in the low back and right hip and 2/10 in the right knee. She said she tended to limp at the end of the day. On examination, Claimant was tender over the right SI joint, upper glutes and lumbar spine. Right SLR to 35° actively, with more upon passive assistance. The FADIR and logroll produced ride buttock/hip pain, with the right FABER causing buttock/hip pain, as well as right groin pain.

45. Dr. Ogrodnick indicated a knee MRI would be ordered, as recommended by Dr. Shah. He also stated that it appeared the second fall was a temporary and minor aggravation of the original claim. Dr. Ogrodnick placed Claimant at MMI on June 21, 2019 and stated she sustained no permanent impairment. No maintenance care after MMI was recommended.

46. On July 2, 2019, Dr. Ogrodnick responded to a denial of Claimant‘s knee MRI and stated the requested MRI was related, reasonable and necessary for the right knee injury. Dr. Ogrodnick cited DOWC’s Lower Extremity Injury Medical Treatment Guidelines, specifically Rule 17 Exhibit 6, page 13.

47. Claimant was evaluated by Dr. Ogrodnick on July 30, 2019, at which time it was noted the right knee surgery was pending authorization. Claimant was returning a weeks and if nothing had been done, would be placed at MMI.

48. When Claimant returned to Dr. Ogrodnick on September 30, 2019, he confirmed she was at MMI. Dr. Ogrodnick assigned a 36% right lower extremity impairment, which was equivalent to a 14% whole person impairment. Dr. Ogrodnick stated this represented a worsening since she was rated in April 2018. Maintenance

treatment in the form of pain management and chiropractic intervention were recommended.

49. Respondent filed a Final Admission of Liability ("FAL") on September 11, 2019. The FAL was filed based upon Dr. Scott's DIME report and admitted for 0% medical impairment.

50. Claimant was released at MMI by Dr. Ogrodnick on September 30, 2019 and was assigned a 36% lower extremity impairment.

51. Dr. Ogrodnick testified as an expert in Occupational Medicine at hearing. He evaluated Claimant 25 times over the course of almost 3 years. He expanded upon the opinions expressed in his reports. He stated Claimant's knee and hip objective abnormalities were the cause of her symptoms and were directly related to the fall in May 2016.[10] Dr. Ogrodnick stated the fall caused the labral tear in the hip and the medial meniscal tear in the knee. The ALJ found Dr. Ogrodnick's opinion to be persuasive.

52. Dr. Ogrodnick placed Claimant at MMI (for the 2016 injury) because he felt his hands were tied on the question of additional treatment-knee surgery. He believed Claimant required surgery. Dr. Ogrodnick reiterated his expert opinion that Claimant's May 19, 2016 fall caused injuries to her knee and hip. Dr. Ogrodnick testified that there was not another injury to right side of Claimant's body. His opinion that she injured her knee and hip was based an assumption that Claimant and accurate reported what happened when she fell in May 2016. Dr. Ogrodnick stated the March 4, 2019 was a temporary aggravation of Claimant's original injury.[11]

53. The ALJ found Dr. Scott's opinions on MMI were overcome by clear and convincing evidence.

54. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

[10] Hearing Transcript ("Hrg. Tr."), p. 50:10-16.

[11] Hrg. Tr., p. 86:14-20.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Claimant had the burden of proof in this case.

Overcoming the DIME

The question of whether Claimant met this burden and overcame Dr. Scott's opinion is governed by §§ 8-42-107(8)(b)(III) and (c), C.R.S. *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263 (Colo. App. 2004). These sections provide that the finding of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 16 P.3d 475, 482-83 (Colo. App. 2005); *accord Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826, 827 (Colo. App. 2007).

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Based upon the evidence admitted at hearing, the ALJ was persuaded Claimant overcame Dr. Scott's DIME opinion on MMI.

As a starting point, the ALJ concluded Claimant was injured in the May 19, 2016 fall. (Finding of Fact 6). The ALJ found Claimant to be credible, particularly in her description that the symptoms initially improved and then worsened. (Finding of Fact 7). The ALJ found Claimant's explanation for her delay in seeking treatment to be credible. *Id*.

In this regard, the ALJ also relied upon Dr. Ogrodnick's reports of the treatment of Claimant, as well as his expert testimony. Specifically, Dr. Ogrodnick, while noting the Claimant's course of treatment was unusual, stated his opinion that she injured both her knee and hip as a result of the May 19, 2016 fall. (Findings of Fact 19-20). Dr. Ogrodnick noted Claimant's symptoms waxed and waned. The ALJ also determined that Dr. Ogrodnick followed Claimant during her entire course of treatment and concluded Claimant required treatment as a result of the fall, including the referral to orthopedic surgeon, Dr. Shah. As found, Dr. Shah recommended surgery, however, authorization was denied for the surgical procedure. (Finding of Fact 22). Dr. Ogrodnick placed Claimant at MMI on April 19, 2018. Dr. Ogrodnick explained his rationale for this determination, as he did not think it made sense to continue providing palliative treatment to Claimant in the absence of a surgical authorization. (Finding of Fact 24).

The ALJ determined Claimant introduced sufficient evidence to overcome Dr. Scott‘s opinions. As determined in findings of Fact 30-34, Dr. Scott’s opinion on MMI was, at times unclear, at others, equivocal. In this regard, Dr. Scott indicated he could not state conclusively that Claimant‘s May 19, 2016 slip and fall caused an injury to the right knee and right hip or the need for treatment. (Findings of Fact 30, 32). He then said such a fall could possibly cause the tears in the knee and hip, but Claimant would have felt immediate pain. *Id.* He also testified that if Claimant‘s description of the fall was accurate, Claimant “could” have injured her knee and hip. (Finding of Fact 33). Dr. Scott then went on to conclude Claimant was not an MMI and stated additional treatment could help her condition. He noted he was not provided information he had requested.

Dr. Scott then provided a provisional medical impairment rating. (Finding of Fact 31). This was despite his initial expressed conclusion that he could not state that the slip and fall caused Claimant to injure her hip and knee. While being questioned, Dr. Scott concluded Claimant reached MMI after three days and the ALJ concluded he did not provide an explanation or rationale of this conclusion. As found, Dr. Scott did not fully explain his conclusions, including one in which he said he could not conclude that the fall caused her knee and hip condition; said Claimant needed the treatment and then provided a provisional impairment rating (which presumes causation). (Finding of Fact 34). Even Respondent’s expert, Dr. Ciccone noted he could not explain Dr. Scott’s reasoning. (Finding of Fact 36).

Dr. Ogrodnick’s opinions (including those on MMI) were more persuasive to the ALJ. He evaluated Claimant on twenty-five occasions and oversaw her treatment since 2016. (Finding of Fact 51). The ALJ credited the opinion of Dr. Ogrodnick on the question of whether the fall caused Claimant’s injuries to the right hip and right knee. *Id.* The ALJ credited Dr. Ogrodnick’s opinion as to what treatment Claimant required, including the surgery recommended by Dr. Shah. (Finding of Fact 20).

Based upon the totality of the evidence, including the fact that Dr. Scott’s conclusions were equivocal, as well as the lack of explanation for his rationale and decision making process, the ALJ concluded Dr. Scott’s opinion on MMI was incorrect. (Finding of Fact 33). *Metro Moving and Storage Co. v. Gussert,* 914 P.2d at 415.

Medical Benefits

Respondent is liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S; *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The question of whether medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo.

App. 1999). Claimant bears the burden of proof to establish the right to specific medical benefits. *Wal-Mart Stores, Inc. v. Industrial Claims Office, supra*.

In the case at bar, the ALJ credited the opinions of Dr. Ogrodnick and Dr. Shah that Claimant required surgery for her knee. (Findings of Fact 18, 20 and 22). Claimant's need for the surgery was related to the May 19, 2016 slip and fall. Respondent will be ordered to provide this treatment to Claimant.

March 4, 2019 Fall

As found, Claimant suffered compensable injuries on March 4, 2019 when she fell while walking into school. (Finding of Fact 39). The ALJ determined these compensable injuries required medical treatment and Claimant treated with Dr. Ogrodnick as the ATP. (Finding of Fact 38). Respondent is liable for medical benefits to cure and relieve the effects of this work injury. Section 8-42-101(1)(a), C.R.S

Based upon the Findings of Fact and discussions with counsel for the parties at the time of the July 29, 2021 Status Conference, the ALJ has determined Respondent is liable for the medical treatment as provided by Dr. Ogrodnick, but that further benefits for this injury will be denied and dismissed.

ORDER

It is therefore ordered:

1. Claimant met her burden of proof and overcame Dr. Scott's opinion on whether she is at MMI. Claimant is not at MMI for the injuries suffered on May 19, 2016.

2. Respondent shall pay for Claimant's medical benefits (pursuant to the Colorado Workers' Compensation Fee Schedule) to cure and relieve the effects of her May 19, 2016 injury, including the surgery proposed for her knee.

3. Respondent shall pay for Claimant's medical benefits for Claimant's treatment for the March 4, 2019 injury up to September 30, 2019. Claimant's claim for additional benefits under WC 5-106-253 after that date is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Have Respondents shown, by a preponderance of the evidence, that Claimant's medical maintenance benefits, in this instance antidepressants and pain medication, are no longer reasonable, necessary, and related to his 1/11/2021 work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant sustained a compensable injury to his low back on or about January 11, 2011. He was working as a deputy Sheriff in the Chaffee County Detention Center. While escorting an inmate to a cell, the inmate abruptly turned during a struggle, and Claimant fell backwards down a flight of steel steps, suffering injuries, most notably to his lower back. Since that incident, he has not secured employment.

Claimant's History of Pre-Existing Low Back Problems

2. In a Respondents' IME report dated September 2, 2015, Dr. Barry Ogin stated the following:

> To begin with, patient [Claimant] offers that while he had pre-existing back pain, it was not severe and that he saw a chiropractor only one or two times a year. This was frequently cited in the provider records, indicating that his back pain was not severe or functionally limiting prior to the work incident. However, a review of the medical records demonstrate that this a fallacy. The patient, in fact, was receiving chiropractic care with Dr. Dickerson on a frequent basis, essentially on a monthly basis in the years prior to the accident. (Ex. B, p. 99).

3. Dr. Elizabeth Bisgard, MD testified at hearing. She had performed a Respondents' IME of Claimant on May 16, 2020. She agrees with Dr. Ogin's assessment. Based on her review of the medical records, the treating providers that Claimant saw for this work injury documented a history from Claimant in which he minimized the extent of his pre-existing condition and that the information that Claimant was providing these providers was essentially wrong (Hrg. Tr. p. 24).

4. Dr. Bisgard noted in her May 4, 2020, report that Claimant, in 2010, had seen his chiropractor (Dr. Dickerson) nine times, the last time being on November 10, 2010. Claimant also had eight physical therapy treatments for his low back between August 23, 2020, and September 29, 2020. Claimant also had an MRI

performed on August 11, 2020, for his lumbar pain complaints. According to Dr. Bisgard's reading of the MRI, this MRI showed mild disc bulges (Hrg. Tr. p. 18).

5. Dr. Bisgard testified that, as a physician, she would not be ordering an MRI of someone's low back unless that patient was having low back pain for six months and had failed conservative treatment (Hrg. Tr. p. 26). In her view, MRIs are not ordered 'out of the blue'; rather, the fact that an individual had an MRI to the low back strongly suggests that individual was having ongoing low back pain for quite some time.

6. As noted *infra*, Claimant saw Dr. Dickerson for his ongoing low back pain on November 20, 2010, two months before the work injury (Ex. P, p. 709). At that visit, Claimant was reporting low back pain of 5/10. Dr. Bisgard testified that Claimant reported the same level of low back pain to her at the time of her evaluation (Hrg. Tr. p. 26).

Pre-Existing Depression

7. Claimant was evaluated for a Respondents' IME by Dr. Robert Kleinman, a psychiatrist, the first being on April 21, 2011 (Ex. I). During that evaluation, Claimant told Dr. Kleinman that he had treated for depression since his early 20s *Id* at 261. As a result, Claimant was prescribed Prozac since his early 20s. Any time his providers attempted to have him stop taking Prozac, his depression worsened. At the time of the work injury, Claimant continued with Prozac.

Treatment for His Work Injury

8. Claimant had an MRI performed on January 17, 2011 (Ex. O). Dr. Bisgard, after comparing this January 17, 2011, MRI with the August 9, 2010, MRI, noted that the only difference was a slight worsening of left disc bulges at the L2-3 level impacting the left L3 nerve root.

9. Claimant had an epidural injection performed at the left-side L2-3 level by Dr. Ross Dickstein on March 23, 2011 (Ex. K). At hearing, Dr. Bisgard testified that the purpose of performing the epidural steroid injection at the left L2-3 level was to determine whether the disc impinging on the L3 nerve root was the "pain generator." (Hrg. Tr. p. 19). Dr. Bisgard stated that a pain generator is pain as a result of some specific, pathophysiological process (Hrg. Tr. p. 24).

10. As part of the March 23, 2011, epidural injection, Claimant reported that his pain levels before the procedure was a 6/10, and after the procedure was a 4/10. *Id* at 383. Dr. Bisgard noted that this small amount of change in pain levels before and after the procedure indicated that the Claimant did not have a diagnostic response to the injection (Hrg. Tr. p. 20). According to Dr. Bisgard's testimony, in order for an epidural steroid injection to be diagnostic, there must be at least an 80% reduction in pain. *Id* at 21.

11. On May 11, 2011, Claimant then underwent another left-side epidural injection by Dr. Dickstein, this time at the L3-4 level (Ex. K, pp. 366-367). Dr. Bisgard believed that performing an epidural at a different level was reasonable in the attempts by Dr. Dickstein to determine if the pain generator could actually be at a different level. (Hrg. Tr. p. 20). Claimant completed a pain diagram to indicate that his pain level before the injection was a 5-6/10, and his pain level after the injection was a 4-5/10 (Ex. K, p. 369). Dr. Bisgard again noted that Claimant did not have a diagnostic response to this epidural, indicating that the disc space between the left L3-4 levels was again, not a pain generator.

12. Dr. Bisgard testified that there was a worsening of Claimant's disc bulges at the L2-3 level between the August 2010 MRI and the January 17, 2011 MRI; however, this worsening noted on the MRI was not an explanation of Claimant's ongoing pain complaints (Hrg. Tr. p. 21).

13. Claimant also had EMGs performed throughout the course of his treatment. The first EMG that Claimant had occurred on April 18, 2011 (Ex. F). Dr. Steven Gulevich performed the EMG. One of his primary diagnoses was peripheral neuropathy. Dr. Bisgard testified that peripheral neuropathy is a metabolic condition that causes nerve damage starting at the most distal part of a limb and then progressive nerve damage moving up towards the trunk (Hrg. Tr. p. 22). She opined that Claimant's peripheral neuropathy should not be considered related to his work injury.

14. Claimant then had a repeat EMG on June 19, 2013, once again performed by Dr. Gulevich (Ex. F, pp. 167-170). At this time, Dr. Gulevich diagnosed Claimant with a previous left S1 radiculopathy *Id* at 170. Dr. Bisgard stated that, despite this finding, this MRI was not consistent with any kind of pathology at the L5-S1 level (Hrg. Tr. p. 23). Claimant, at some point in the past, did have a left S1 radiculopathy, but it was no longer present.

15. Dr. Bisgard testified that there has not been any kind of diagnostic testing or imaging that corroborates Claimant's subjective reports of pain (Hrg. Tr. pp. 23-24).

16. Dr. Robert Kleinman, MD has performed several psychiatric IMEs of Claimant throughout the course of his treatment. The first evaluation was performed on April 21, 2011 (Ex. I, pp. 259-268). Following his evaluation, Dr. Kleinman diagnosed Claimant with the following, for AXIS I:

    1. Pain disorder associated with psychological factors and a medical condition

    2. Dysthymic disorder, chronic

    3. Adjustment disorder with anxious mood

Id at 267. At that time, Dr. Kleinman stated the following:

> It is possible that [Claimant's] *fears* are getting *converted into physical symptoms* that are not in proportion to the objective findings. It could be that his pain complaints and symptoms are getting magnified and possibly converted due to his *denial of the emotional impact* of what happened and *fear* about what could happen to him in jail in the future. *Id* at 266. (emphasis added).

Dr. Kleinman also stated that the discrepancy between objective findings and subjective complaints could be explained as a conversion disorder *Id* at 267.

17. Claimant returned to see Dr. Kleinman for a repeat IME, performed on November 22, 2012 (Ex. I, pp. 238-255). Again, Dr. Kleinman diagnosed Claimant on AXIS I with:

    1. Pain disorder associated with psychological factors and a medical condition

    2. Dysthymic disorder, chronic

    3. Major depressive disorder recurrent, moderate, recent episode resolved.

    Dr. Kleinman noted: "The need for ongoing psychiatric medications pre-existed this injury. Currently, they are not being provided under workers' compensation. The continued use of antidepressants is beyond the scope of the occupational injury." *Id* at 252.

18. Claimant underwent the first DIME on August 2, 2013, performed by Dr. Karen Knight (Ex. E). At that time, Dr. Knight indicated that for Claimant's spinal complaints (lumbar and radicular symptoms into leg), he would be appropriately placed at maximum medical improvement, effective 12/21/2011. *Id* at 161. She did not believe his neck complaints were related to the work injury. However, Dr. Knight diagnosed Claimant's ongoing pain complaints as a result of a chronic pain syndrome *Id* at 162. In her report, Dr. Knight quoted from the Chronic Pain Syndrome Medical Treatment Guidelines as follows:

    > The presence of a chronic pain syndrome should be strongly suspected if a patient does not respond to appropriate medical care within a reasonable period of time, or if the patient's verbal or nonverbal pain behaviors transcend the expected response given the noxious stimulus. Patients suspected of having a chronic pain syndrome should be promptly referred for evaluation and treatment to physician specializing in chronic pain medicine. *Id* at 162.

    Regarding Claimant's chronic pain syndrome, Dr. Knight stated the following:

> With respect to his chronic pain syndrome, I recommend a detailed evaluation by a comprehensive pain team to offer *specific recommendations* for maintenance care, *with the goal of independence in self care in one year.* **I do not agree with ongoing passive modalities for Mr. Glenn. He needs to assume autonomy in his self care in order to leave the sick role.** *Id* at 163. (emphasis added).

19. Claimant was re-evaluated by Dr. Barry Ogin on September 2, 2015 (Ex. B, pp. 83-103). Following his evaluation, Dr. Ogin also diagnosed Claimant with probable somatization disorder, as well as depression. *Id* at 99. In largely agreeing with the DIME conclusions, Dr. Ogin also believed that there was a significant discrepancy between Claimant's objective complaints and any objective pathology supporting this objective complaint. Dr. Ogin was not able to identify any objective findings. *Id* at 101.

20. Dr. Ogin believed it was important to consider the outside factors, such as psychological confounders that might be playing a role in Claimant's condition. Dr. Ogin noted that this has been validated by the patient's long history of depression and anxiety, as well as the records from not only Dr. Kleinman, but also Claimant's treating psychologist, Dr. Evans. Both had found that there was a large psychosocial component to the Claimant's complaints of pain. Therefore, Dr. Ogin opined that Claimant's current condition was much better explained as a somatization disorder, rather than on true objective pathology. Dr. Ogin also opined that Claimant should be *weaned off* his narcotic medications. *Id* at 102.

21. Claimant saw Dr. Kleinman for a final IME on May 5, 2015 (Ex. I, Kleinman, Knight, pp. 207-229). Again, Dr. Kleinman diagnosed Claimant with a pain disorder, a persistent depressive disorder (Dysthymia in remission) and a major depressive disorder, which had fully resolved. Dr. Kleinman noted that a hallmark of major depression is a "depressed mood most of the day, nearly every day." *Id* at 226. A hallmark of a Dysthymia is a "depressed mood for most of the day, for more days than not." Dr. Kleinman believed that Claimant had depression, which remained in remission with his need for ongoing medications. Although Dr. Kleinman noted that the recommended treatment for Claimant's chronic level depression would be the indefinite use of anti-depressants, the use of anti-depressants was no longer within the scope of his work injury. *Id* at 226.

22. At hearing, Dr. Bisgard agreed with Dr. Kleinman's opinion (Hrg. Tr. p. 34). Dr. Bisgard noted that Claimant had pre-existing depression that, at the time that he was placed at MMI, had not worsened. Someone with a longstanding history of depression will need lifetime treatment for that depression. Dr. Bisgard also opined that the work injury did not change Claimant's need for anti-depressants, which he was using before the injury.

23. Dr. Bisgard testified that, at the present time, the appropriate standard of medical care is not using narcotic pain medications for the complaints of pain that is unsubstantiated with objective findings. At the present time, pain medications are typically given for acute episodes of pain over the shortest period of time, with the goal to reduce the pain levels and to increase function (Hrg. Tr. p. 28). Dr. Bisgard stated that it was inappropriate to provide pain medications in the absence of some physiological generated pain:

> The purpose of a pain medication is to address a specific pathology or a physiological problem for a temporary period of time. So, if there is no anatomic, pathologic, physiologic process going on, we don't use pain medication because it is not going to take care of the pain. (Hrg. Tr. p. 29).

Dr. Bisgard noted that the reason why the United States is struggling with narcotic addiction is because of the overutilization of pain medication under inappropriate circumstances. *Id.*

24. Dr. Bisgard agreed with the other physicians that have treated and evaluated Claimant over the years that Claimant does have a conversion disorder as well as somatization: (Hrg. Tr. pp. 29-30).

> There have been multiple incidents in the medical records where Mr. Glenn described something happening. For instance, he described his legs giving out on him on multiple occasions and falling, but there is no medical basis for it. There is nothing on any diagnostic test or examination to explain why his legs would give out. He came in, initially presented after the injury with some hip pain and, within a short period of time, he was in a wheelchair or required a walker. Again, no explanation for the deterioration. He presented to the emergency room on several occasions with severe pain, but there was no etiology or basis for the pain. So, those are just some examples of why he meets the criteria of conversion disorder. *The somatization issue is he has been given very high levels of powerful narcotics, and his pain levels did not change*. *Id* at 30. (emphasis added).

25. As a result, Dr. Bisgard opined that the pain that Claimant is experiencing at this present time is psychologically driven, as opposed to pathologically. She stated that when somebody is having psychologically driven pain, no amounts of narcotics are going to affect that pain, which is exactly what is happening in this case.

26. Based on her review of the voluminous medical records documenting the treatment that Claimant has received for this work injury, it is Dr. Bisgard's opinion that

Claimant's consumption of pain medications has not resulted in a meaningful reduction in Claimant's pain reports (Hrg. Tr. p. 32). In addition, based on her review of the extensive medical records documenting the treatment that Claimant has received for his work injury, she is of the opinion that Claimant's consumption of pain medications has not resulted in a significant and meaningful increase in function. *Id*

27. Finally, Dr. Bisgard opined that, because of her understanding [based upon reports] of Claimant's current level of narcotic consumption, he does not need to go through any kind of formal detoxification (either in-patient or out-patient). Rather, Claimant would be capable of simply stopping his pain medications, with minimal discomfort for a short period. She acknowledged, however, that she has not seen him for over a year, and is not aware of his current consumption.

28. Dr. Daniel Lombardo, MD, is a physician with the First Street Family Health clinic in Salida, CO. Claimant has been a patient with that practice since at least 2002; however, Dr. Lombardo only began treating Claimant on 8/5/2015, with a total of eight visits, ending on 10/5/2016. The details of these visits is unclear, although it appears from the narratives that First Street has served as Claimant's ATP since the onset of treatment. Dr. Lombardo's predecessor in treating Claimant was Dr. Mary Reeves. Upon inquiry by Respondents, in a report dated 12/2/2020 (Ex. 1, pp. 6, 7, 8), Dr. Lombardo clarifies that his current knowledge of Claimant as a patient is based largely upon his review of Claimant's prior records.

29. When asked if Claimant's current condition is *not related* to the 1/11/2011 work injury, he replied, in pertinent part:

> *This is difficult to say*….In the ensuing weeks and follow up visits Dr. Reeves tried tramadol, hydromorphone, celecoxib, gabapentin, and eventually oxycodone and the OxyContin (first prescribed on 4/27/2011 by Dr. Reeves) to manage his back pain….Ultimately, regardless of the nature of the patient's pain, I believe that *it is a stretch to say that patient's current pain issues are "not related" to his injury on 01/11/2011* as this was from my review of his medical record *clearly a turning point* prior to which the majority of his healthcare interactions were for sinus and upper respiratory infections and *after which every visit was related to his chronic pain* and associated mood issues. *Id* at 6. (emphasis added).

30. When asked if Claimant no longer requires medical maintenance treatment under workers compensation claim and pain medications are outside the scope of with work injury, Dr. Lombardo replied, in pertinent part:

> ***No,*** *patient's ongoing need for medical maintenance care including pain medication while not following a typical pattern of an organic injury to the back do seem directly precipitated by his injury and*

> *therefore under the scope of work comp….*[lengthy discussion of interplay of antidepressants, and his opinion that Claimant is not a classic drug seeker, per se]…While I fully concur that chronic narcotic medication would not have been my preference for treatment of this type of injury especially in light of his lack of discernable pathology on imaging, *it is also not unusual* with the limited therapies and medications currently available for back pain *for a person to end up utilizing chronic narcotic pain medication to* *remain functional* *in the face of disabling chronic pain*……*If I were to continue to be in charge of this patient's chronic pain it would be my goal to* *wean him off of the narcotics* and look for other means of controlling his symptoms, though without obvious insight this would take a significant amount of relationship building and trust which seemed out of scope of a work comp claim where the claimant had already reached MMI so not attempts were made on my part to change patient's regimen. *Id* at 7 (emphasis added).

31. In a letter referencing this WC case, dated April 22, 2022 (sic), (Ex. 2, p. 9) Dr. Stephanie Earhart, MD, states that she is Claimant's PCP, but is not involved - not does she wish to become involved - as Claimant's ATP. She states:

> ….I have been prescribing medications to help manage his [Claimant's] pain that was related to his [work] injury. Previously his work comp related medications had been provided by Dr. Daniel Lombardo and Dr. Mary Reeves, who had served as his work comp providers. *Mr. Glenn's OxyContin was abruptly stopped last fall* placing him at risk for serious health consequences. *This forced me to change him to a short acting form to avoid withdrawal* (he could not afford the cash price of OxyContin). I had no notice or warning.
>
> *….Mr. Glenn definitely requires* *ongoing medication* *and deserves at minimum a* *new evaluation* *to best determine a treatment plan for the future,* *to include medication management*….I am not comfortable providing that evaluation as his ongoing primary care physician. *Id.*(emphasis added).

32. Claimant testified briefly at hearing. He could not recall whether he had been on pain medications prior to the work injury. He described his current pain level as being worse than previously. When his OxyContin was stopped last fall, he could no longer afford it, so his PCP changed it to oxycodone. It is not as effective as the OxyContin, but it is better than nothing. Claimant reports being less able to perform activities of daily living now compared to last year.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Act, Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). In this case, the ALJ finds Claimant to have been sincere and credible in describing his symptoms to the ALJ, and his medical providers. Further, the ALJ finds that Claimant has been appropriately motivated in attending his medical appointments and taking proper ownership of his own ongoing rehabilitation in a sincere effort to maintain his health.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, as is not uncommon, the various medical professionals (as expressed through their reports), hold contrasting views on certain points. The ALJ will determine the merits of their positions based upon the *persuasiveness* of their views, as opposed to *credibility* per se. With a couple of exceptions, as noted *infra*, the ALJ finds that Dr. Bisgard's expert testimony was quite helpful in deciding this matter.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Medical Maintenance Benefits, Generally

F. Generally, to prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988). However, when respondents file a final admission of liability acknowledging medical maintenance benefits pursuant to Grover they can seek to terminate their liability for ongoing maintenance medical treatment. See §8-43-201(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). When the respondents contest the liability for a particular benefit, the claimant must prove that the challenged treatment is reasonable, necessary and related to the industrial injury. Id. However, when respondents seek to terminate all post-MMI benefits, they shoulder the burden of proof to terminate liability for maintenance medical treatment. *In Re Claim of Arguello*, W.C. No. 4-762-736-04 (ICAO, May 3, 2016); *In Re Claim of Dunn,* W.C. No. 4-754-838 (ICAO, Oct. 1, 2013). Specifically, respondents are not liable for future maintenance benefits when they no longer relate back to the industrial injury. See *In Re Claim of Salisbury*, W.C. No. 4-702-144 (ICAO, June 5, 2012).

Claimant's Continuing Claim for Antidepressants, as Applied

G. The record in this case is clear, and free from serious doubt. Claimant has long suffered from depression, predating this work injury by many years. His depression, unfortunately, is of such severity that it will likely require treatment and medication for his lifetime. The ALJ finds that continued treatment for depression, including medication, is *reasonable and necessary* to help Claimant maintain function, and for the indefinite future. However, the ALJ is also persuaded by the expert testimony and reports that such continuing treatment for depression is no longer *related* to the work injury – assuming it ever was. Respondents have met their burden on the issue of *relatedness.* While it is certainly hoped that Claimant's treatment for depression will continue unabated, he must henceforth obtain it outside the Workers Compensation system.

Claimant's Continuing Claim for Pain Medication - Related to Work Injury

H. Respondents seek a finding that Claimant's ongoing pain complaints are not related to his 2/11/2011 work injury. The ALJ is not persuaded. As noted by Dr. Lombardo, acting however briefly as his ATP, while Claimant certainly had ongoing back issues prior to the work injury, the need for treatment post-injury accelerated dramatically and remained constant. While Claimant was clearly of the 'eggshell' variety going into this job, Employer 'took him as he found him'. This unfortunate event led to a constellation of symptoms, which one would not ordinarily anticipate for a deputy sheriff falling down some stairs. But Claimant is a medical outlier, sitting way out there on the bell curve. No doubt his pre-existing depression rendered him susceptible to this domino effect. He is not malingering intentionally; his complaints of pain continue to be very real to him. Nonetheless, his ongoing pain complaints are *related* to the work injury.

Claimant's Continuing Claim for Pain Medication – Reasonable and Necessary

I. However, the inquiry does end here. The ALJ duly notes that Claimant's rare convergence of severe depression with a traumatic and frightening injury has led to a system ill-equipped to deal with him. Resources are limited. Distractions abound. Waiting rooms are full. Sometimes the line gets blurred - as was the case here – between the obligations of the Workers Comp system and private health care. To her credit, Dr. Earhart wishes to re-draw that bright line. Without casting aspersions on any of Claimant's well-intentioned providers, *the system(s)* let Claimant fall through the cracks. He is now effectively being 'warehoused' with opiates, and will never leave 'the sick role' [credit to Dr. Knight] without a new, and clear, path towards regaining as much function as can be afforded. This path means *pain medications must terminate, and* ***as soon as is practicable.*** They are no longer helping him; indeed, they have now made his life worse. In that sense, the ALJ concurs with Drs. Bisgard, Kleinman, Ogin, Knight, Lombardo, and Earhart.

J. Dr. Bisgard feels that Claimant can just go cold turkey, with a minimum of temporary discomfort. The ALJ is not persuaded. She has not seen him in over a year, and does not know his current dosage. She is basing her opinions on what his records say about dosage (from a year ago or better), and what one might expect from a typical patient. Fair enough, but this Claimant is far from typical. He has been highly dependent on pain medications for years, but which are not helping his symptoms. The other physicians, in varying degrees, argue for a ***managed plan for removal*** and addressing his somatoform disorder. The ALJ concurs. The ALJ finds that such managed plan is reasonable and necessary to prevent a deterioration of his current condition as he withdraws from the pain medication. As such, it is the final step in Claimant's medical maintenance care.

K. The Workers Comp system is at least partially responsible for getting him into this; it is now responsible for exercising all good faith efforts to get him out of it. This should ideally be done in conjunction with the private treatment for antidepressants. Claimant is also responsible for doing his part. It might be painful, but so is, for example, physical therapy. And if Claimant does not comply, Respondents may apply for termination of the plan. Unless the parties agree otherwise, the First Street Family Health Clinic, or their designee, is Claimant's ATP.

ORDER

It is therefore Ordered that:

1. Effective immediately, Respondents are no longer responsible for paying for antidepressants for Claimant.

2. As soon as feasible, Claimant's ATP, or its designee, must formulate a managed plan to wean Claimant off his pain medication as soon as practicable. Respondents' obligation for medical maintenance care will end at the conclusion of this plan.

3. Claimant must cooperate in the administration of this managed plan, which is being created solely for his own benefit.

4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is **highly recommended** that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

Colorado Springs, Colorado 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-164-662-001

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer on February 16, 2021.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits for his industrial injuries.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period between February 16, 2021 and February 18, 2021, as well as February 24, 2021, for a total of four days.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $1,141.55.

FINDINGS OF FACT

1. Claimant is a 58 year-old male who has worked for the Employer as a Journeyman Pressman for approximately 28 years. He specifically performed maintenance duties to fix printing presses. Claimant's schedule is Monday through Friday from 7:00 a.m. to 2:00 p.m.

2. On February 9, 2021 Claimant was evaluated at the Kaiser Permanente Emergency Department for hearing issues. Claimant remarked that on the previous night his left ear became plugged and he experienced ringing. He noted that his symptoms began quickly. Claimant was diagnosed with left tinnitus (decreased hearing) and left otalgia (likely eustachian tube dysfunction). He underwent ear irrigation to remove cerumen in the left ear. However, there was no improvement with cerumen removal. There was no sign of infection or effusion. Valerie A. Bain, M.D. diagnosed Claimant with likely eustachian tube dysfunction. She recommended Sudafed and Flonase to help open Claimant's eustachian tube.

3. On February 16, 2021 Claimant arrived at work and parked in his normal spot on the west side of Employer's building at about 6:00 a.m. On his morning break, Claimant went to the police impound lot for an automobile auction. He then visited an auto parts store to purchase transmission fluid for his vehicle. Claimant testified that when he returned from his break, he parked on the south side of the building because the City and County of Denver was working on the intersection at 58th and Washington Street. The

construction did not permit him to enter on the west side of Employer's premises. He thus parked on the south side of Employer's facility.

4. Claimant remarked that there was snow on the ground on the south side of Employer's building, but he was unaware there was ice beneath the snow. He commented that, after parking his car, he popped the hood from inside but did not lift it in order to remind himself to add transmission fluid when he left at the end of the day. As he opened his door and exited the vehicle, he immediately fell to the ground and struck the back of his head.

5. Respondents produced surveillance video of the south side of Employer's parking lot from February 16, 2021. The lot was visibly icy and shady, and there were no other cars parked in the area. Claimant pulled alongside an ink tanker and then backed up onto ice and snow. Notably, despite dry spots in the parking lot, Claimant chose to back his car onto ice and snow. He waited for the ink tanker to back out of a parking spot then angled his vehicle in front of the video camera. Claimant opened his car door, exited the vehicle, straightened his shirt, walked around the open door, looked directly into the camera, kept walking and fell forward. Claimant was so far away from the car door that when he fell he tried to grab the left side of the hood where it meets the driver side door. The video reflects that Claimant was going around the car door and not trying to shut it.

6. On February 16, 2021 Claimant visited Kaiser Permanente and underwent an examination with Mark Foster, D.O. Claimant reported that he slipped on ice while getting out of his car at work. He specified that he fell flat on his back and struck his head on the ice. Claimant's diagnoses included a scalp contusion and left posterior thorax contusion. He did not have any loss of consciousness. Claimant had a normal neurological examination and did not report any hearing loss. He was taken off work for the following two days from February 17, 2021 through February 18, 2021.

7. On February 17, 2021 Claimant completed a Worker's Compensation Incident Report. The Report specified that he slipped on the south side parking lot of Employer's building and to "look at your cameras." Claimant stated that he injured his head, shoulder, back and neck. He also lost hearing in his left ear. Claimant gave the report to Employer's now retired Associate Production Manager Tim A[Redacted] on February 19, 2021.

8. Mr. A[Redacted] explained that his job duties involved supervising the production of newspapers and working with the maintenance crew. He testified that on February 16, 2021 Claimant stated he was out checking the oil or transmission fluid in his car. Claimant was holding the top of his head and commented "the hood got him." Mr. A[Redacted] asked Claimant what he meant, and Claimant showed him a lump and small cut on the top of his head. He specified that Claimant tipped his head down and the lump was on the top of his head, a little towards the back, with a small cut. Mr. A[Redacted] remarked that Claimant did not mention he had slipped and fallen. Mr. A[Redacted] then received a call from Employer's production manager and Claimant went in the back of the office to get an ice pack. He later learned that Claimant left Employer's facility to visit his personal physician.

9. Mr. A[Redacted] explained that Claimant always parked on the west side of the building, there was no maintenance work being performed on Employer’s parking lot and there was no reason why Claimant could not have parked in his normal parking area when he returned from his break on February 16, 2021. He remarked that an individual can drive around Employer’s entire building without entering a side street. Furthermore, Mr. A[Redacted] noted that Claimant gave him a written injury report on Friday, February 19, 2021. The report stated he slipped on ice on the south side of the building. Mr. A[Redacted] questioned the report because Claimant initially told him that he struck his head on the hood of his vehicle. He noted that he reports whatever an injured worker writes down.

10. On February 23, 2021 Claimant commenced treatment with Employer’s designated medical provider Occupational Medicine of the Rockies, where he was evaluated by Authorized Treating Physician (ATP) F. Mark Paz, M.D. Claimant reported that he slipped and fell in a parking lot at work. He remarked that he visited personal primary care provider Kaiser on February 16, 2021 and noticed hearing loss when he arrived home from the appointment. Claimant acknowledged that he had suffered ringing in the ears prior to the slip and fall. Dr. Paz diagnosed Claimant with a closed head injury without loss of consciousness, a headache, left-sided hearing loss, neck pain and back pain. On the Physician’s Report of Worker’s Compensation Injury he checked a box reflecting that Claimant’s objective findings were consistent with a history of a work-related mechanism of injury. Dr. Paz took Claimant off work from February 23, 2021 to February 24, 2021. He referred Claimant to Alan F. Lipkin, M.D. for evaluation of left-sided hearing loss.

11. On February 24, 2021 Claimant provided a recorded statement to Insurer’s adjuster. Claimant testified at the hearing that he has previously parked on the south side of Employer’s lot numerous times. However, in his recorded statement, Claimant commented that he rarely parked in Employer’s south side lot and acknowledged there was often ice in the area. He remarked that “in wintertime there’s nothing but ice. I said, ‘[inaudible] put signs out there say ice on it.” Claimant knew there was ice on the south side of the parking lot, but parked there anyway even if he could have driven around the building and parked in his normal spot on the west side.

12. Claimant’s recorded statement further discussed purchasing transmission fluid and putting it into his vehicle. Claimant detailed that he went to lunch, and “we got to the auto part store to get some transmission fluid for my car. I came back and came back to work, parked in the parking lot, unlocked, popped the hood of my car. I was gonna put the transmission fluid in. As soon I got out of my car there was [inaudible] ice. I slipped, fell backwards. And, basically, that’s it.” The adjuster asked Claimant whether he was going to pour the transmission fluid into the vehicle in the parking lot and he responded affirmatively. He further commented that he popped his hood, but did not open it because he did not get that far. Claimant intended to put transmission fluid in his vehicle when he returned from break.

13. On March 11, 2021 Claimant visited ATP Alan F. Lipkin at Harvard Park Hearing for an examination. Claimant remarked that he worked for Employer as a

Journeyman Pressman. Dr. Lipkin noted that Claimant slipped on ice as he was getting out of his truck at work and fell primarily on his occipital area. Claimant reported hearing loss that began two days after the incident. He also stated that he suffered constant buzzing in his left ear. Notably, the tinnitus began the same day as the hearing loss.

14. On March 24, 2021 Employer filed a Workers' Compensation First Report of Injury or Illness form providing that Claimant suffered a cut on his head when he "slipped on ice on the side of the building in the parking lot. Injuring his head with a cut, unspecified shoulder, back, neck, loss of hearing in left ear."

15. On May 3, 2021 Claimant returned to Dr. Lipkin after he had undergone a brain MRI. Dr. Lipkin commented that Claimant last visited his office on March 11, 2021 for left-sided hearing loss attributed to a work related accident that occurred on February 16, 2021. After a 21-day Prednisone taper Claimant noted slight improvement in hearing. Dr. Lipkin explained that Claimant had normal hearing in the right ear but exhibited severe left-sided hearing loss.

16. On May 10, 2021 Claimant returned to Dr. Lipkin for an examination. Dr. Lipkin injected his left tympan membrane in three locations with cortisone. On May 12, 2021 Claimant underwent the same procedure.

17. On May 27, 2021 Dr. Lipkin reported that Claimant's "left-sided tinnitus that sounds like constant TV static" has continued since the May procedures. He was presenting for "continued care for severe post traumatic left sided hearing loss on tinnitus following labyrinthine perfusions on 5/10, 5/12 and 5/14/2021." Dr. Lipkin referred Claimant for a hearing aid evaluation.

18. On June 22, 2021 Claimant visited Emilia Kirbo, Au.D., at Harvard Park Hearing for a hearing aid evaluation. After reviewing Claimant's audiologic test results and consulting with Claimant about his communication needs Au.D. Kirbo recommended a "digital premium-level hearing aid for the left ear."

19. Claimant testified at the hearing in this matter that he missed work after his fall on February 16, 2021 through February 18, 2021 because he was taken off work by Kaiser. He also did not work on February 24, 2021 following his visit with Dr. Paz Claimant thus did not work for Employer for a total period of four days. Claimant also emphasized that the ringing in his ears as a result of his slip and fall sounds like "static from a TV" and is different in duration and type from the ringing he described to Kaiser on February 9, 2021. He commented that he has undergone physical therapy but is still experiencing hearing loss on the left side. Claimant explained that he has not yet received the recommended hearing aids but would like them if they would address his hearing loss and tinnitus.

20. Claimant has failed to establish that it is more probably true than not that he suffered compensable injuries during the course and scope of his employment with Employer on February 16, 2021. Initially, Claimant explained that on February 16, 2021 he parked in Employer's south parking lot after purchasing transmission fluid for his

vehicle during a morning break from his shift. As he exited his vehicle, he slipped and fell on ice. Claimant stated that he injured his head, shoulder, back and neck. He also lost hearing in his left ear as a result of the accident. Despite Claimant's testimony, the record reflects that the February 16, 2021 incident did not likely cause any compensable injuries. Specifically, Claimant's pre-existing left-sided hearing loss, video footage of the fall, Claimant's inconsistent descriptions, the credible testimony of Mr. A[Redacted] and medical records predicated on Claimant's subjective account, reflect that Claimant did not likely suffer industrial injuries during the course and scope of his employment on February 16, 2021.

21. On February 9, 2021 Claimant visited personal medical provider Kaiser for hearing issues. Claimant reported that on the previous night his left ear became plugged and he experienced ringing. He noted that his symptoms began quickly. Claimant was diagnosed with left tinnitus (decreased hearing) and left otalgia (likely eustachian tube dysfunction). He underwent irrigation to remove cerumen in the left ear with no improvement. On March 11, 2021 Claimant reported to Dr. Lipkin that he experienced hearing loss two days after his work accident. However, on his February 23, 2021 visit with Dr. Paz Claimant remarked that he noticed hearing loss when he arrived home from his appointment with Kaiser on February 16, 2021. Moreover, on his February 17, 2021 Worker's Compensation Incident Report Claimant stated that he suffered hearing loss. The inconsistencies in Claimant's account of when he developed hearing loss, in conjunction with the similarity between his symptoms on February 9, 2021 and his current complaints, suggests that it is speculative to attribute Claimant's hearing loss to his February 16, 2021 slip and fall.

22. Video of the south side of Employer's parking lot from February 16, 2021 reveals the lot was visibly icy and shady. There were also no other cars parked in the area. Claimant pulled alongside an ink tanker and then backed up onto ice and snow. Notably, despite dry spots in the parking lot, Claimant chose to back his car onto ice and snow. He waited for the ink tanker to back out of a parking spot then angled his vehicle in front of the video camera. Claimant opened his car door, exited the vehicle, straightened his shirt, walked around the open door, looked directly into the camera, kept walking and fell forward. The record reveals that Claimant parked in a spot where he rarely parks when he knew the parking area was icy in the winter and his normal spot on the west side was available. There was no impediment to parking in his regular spot. Furthermore, Claimant knew where the cameras were located, pulled his car back at an angle and looked directly into the camera before he slipped and fell. Claimant's actions in the video suggest that he anticipated a potential fall.

23. The credible testimony of Mr. A[Redacted] also suggests that Claimant did not suffer any work-related injuries. Mr. A[Redacted] testified that on February 16, 2021 Claimant stated he was out checking the oil or transmission fluid in his car. Claimant was holding the top of his head and commented "the hood got him." Mr. A[Redacted] asked Claimant what he meant and Claimant showed him a lump and small cut on the top of his head. Claimant did not mention he had slipped and fallen. However, Claimant gave Mr. A[Redacted] a written injury report on February 19, 2021 that stated he slipped on ice on the south side of the building. Mr. A[Redacted] questioned the report because Claimant

initially told him that he struck his head on the hood of his vehicle. Claimant's initial and contemporaneous report to Mr. A[Redacted] that the hood fell on his head is also consistent with his recorded statement to Insurer's adjuster. The adjuster asked Claimant whether he was going to pour the transmission fluid into the vehicle in the parking lot and Claimant responded affirmatively. He further commented that he popped his hood but did not open it because he did not get that far before slipping. The preceding chronology reflects that Claimant planned to put transmission fluid into his vehicle after purchasing it during a morning break and was likely struck on the head by the hood of his car. Any injuries were thus not caused by a slip and fall.

24. Dr. Paz diagnosed Claimant with a closed head injury without loss of consciousness, a headache, left-sided hearing loss, neck pain and back pain. On the Physician's Report of Worker's Compensation Injury he checked a box reflecting that Claimant's objective findings were consistent with a history of a work-related mechanism of injury. Furthermore, Dr. Lipkin noted that Claimant slipped on ice as he was getting out of his truck at work and fell primarily on his occipital area. Claimant reported hearing loss and tinnitus that began two days after the incident. Although the reports of Drs. Paz and Lipkin attribute Claimant's hearing loss to his work activities on February 16, 2021 they were predicated on Claimant's subjective account and reporting of a slip and fall. The physicians' reports did not include a causation analysis connecting Claimant's symptoms to his job duties. The preceding opinions are thus speculative regarding Claimant's injuries as a result of his work activities for Employer. Instead, the bulk of the persuasive evidence reflects that Claimant did not likely suffer industrial injuries while working for Employer on February 16, 2021. Considering Claimant's previous recent history of hearing loss and tinnitus, video footage and Claimant's inconsistent accounts of the accident, the record reveals that his injuries were not likely caused by his job duties for Employer. Claimant's work activities also did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment. Accordingly, Claimant's claim for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The “time” limits of employment include a reasonable interval before and after working hours while the employee is on the employer’s property. *In Re Eslinger v. Kit Carson Hospital,* W.C. No. 4-638-306 (ICAO, Jan. 10, 2006). The “place” limits of employment include parking lots controlled or operated by the employer that are considered part of employer’s premises. *Id.*

7. The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its “origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee’s service to the employer.” *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). Nevertheless, the employee’s activity need not constitute a strict duty of employment or confer a specific benefit on the employer if it is incidental to the conditions under which the employee typically performs the job. *In Re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). It is sufficient “if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment.” *Phillips Contracting, Inc. v. Hirst,* 905 P.2d 9, 12 (Colo. App. 1995). Incidental activities include those that are “devoid

of any duty component, and are unrelated to any specific benefit to the employer." *In Re Rodriguez,* W.C. 4-705-673 (ICAO, Apr. 30, 2008). Whether a particular activity has some connection with the employee's job-related functions as to be "incidental" to the employment is dependent on whether the activity is a common, customary and accepted part of the employment as opposed to an isolated incident. *See Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715 (Colo. App. 1995).

8. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

9. As found, Claimant has failed to establish by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer on February 16, 2021. Initially, Claimant explained that on February 16, 2021 he parked in Employer's south parking lot after purchasing transmission fluid for his vehicle during a morning break from his shift. As he exited his vehicle, he slipped and fell on ice. Claimant stated that he injured his head, shoulder, back and neck. He also lost hearing in his left ear as a result of the accident. Despite Claimant's testimony, the record reflects that the February 16, 2021 incident did not likely cause any compensable injuries. Specifically, Claimant's pre-existing left-sided hearing loss, video footage of the fall, Claimant's inconsistent descriptions, the credible testimony of Mr. A[Redacted] and medical records predicated on Claimant's subjective account, reflect that Claimant did not likely suffer industrial injuries during the course and scope of his employment on February 16, 2021.

10. As found, on February 9, 2021 Claimant visited personal medical provider Kaiser for hearing issues. Claimant reported that on the previous night his left ear became plugged and he experienced ringing. He noted that his symptoms began quickly. Claimant was diagnosed with left tinnitus (decreased hearing) and left otalgia (likely eustachian tube dysfunction). He underwent irrigation to remove cerumen in the left ear with no improvement. On March 11, 2021 Claimant reported to Dr. Lipkin that he experienced hearing loss two days after his work accident. However, on his February 23, 2021 visit with Dr. Paz Claimant remarked that he noticed hearing loss when he arrived home from his appointment with Kaiser on February 16, 2021. Moreover, on his February 17, 2021 Worker's Compensation Incident Report Claimant stated that he suffered hearing loss. The inconsistencies in Claimant's account of when he developed hearing loss, in conjunction with the similarity between his symptoms on February 9, 2021 and his current

complaints, suggests that it is speculative to attribute Claimant's hearing loss to his February 16, 2021 slip and fall.

11. As found, video of the south side of Employer's parking lot from February 16, 2021 reveals the lot was visibly icy and shady. There were also no other cars parked in the area. Claimant pulled alongside an ink tanker and then backed up onto ice and snow. Notably, despite dry spots in the parking lot, Claimant chose to back his car onto ice and snow. He waited for the ink tanker to back out of a parking spot then angled his vehicle in front of the video camera. Claimant opened his car door, exited the vehicle, straightened his shirt, walked around the open door, looked directly into the camera, kept walking and fell forward. The record reveals that Claimant parked in a spot where he rarely parks when he knew the parking area was icy in the winter and his normal spot on the west side was available. There was no impediment to parking in his regular spot. Furthermore, Claimant knew where the cameras were located, pulled his car back at an angle and looked directly into the camera before he slipped and fell. Claimant's actions in the video suggest that he anticipated a potential fall.

12. As found, the credible testimony of Mr. A[Redacted] also suggests that Claimant did not suffer any work-related injuries. Mr. A[Redacted] testified that on February 16, 2021 Claimant stated he was out checking the oil or transmission fluid in his car. Claimant was holding the top of his head and commented "the hood got him." Mr. A[Redacted] asked Claimant what he meant and Claimant showed him a lump and small cut on the top of his head. Claimant did not mention he had slipped and fallen. However, Claimant gave Mr. A[Redacted] a written injury report on February 19, 2021 that stated he slipped on ice on the south side of the building. Mr. A[Redacted] questioned the report because Claimant initially told him that he struck his head on the hood of his vehicle. Claimant's initial and contemporaneous report to Mr. A[Redacted] that the hood fell on his head is also consistent with his recorded statement to Insurer's adjuster. The adjuster asked Claimant whether he was going to pour the transmission fluid into the vehicle in the parking lot and Claimant responded affirmatively. He further commented that he popped his hood but did not open it because he did not get that far before slipping. The preceding chronology reflects that Claimant planned to put transmission fluid into his vehicle after purchasing it during a morning break and was likely struck on the head by the hood of his car. Any injuries were thus not caused by a slip and fall.

13. As found, Dr. Paz diagnosed Claimant with a closed head injury without loss of consciousness, a headache, left-sided hearing loss, neck pain and back pain. On the Physician's Report of Worker's Compensation Injury he checked a box reflecting that Claimant's objective findings were consistent with a history of a work-related mechanism of injury. Furthermore, Dr. Lipkin noted that Claimant slipped on ice as he was getting out of his truck at work and fell primarily on his occipital area. Claimant reported hearing loss and tinnitus that began two days after the incident. Although the reports of Drs. Paz and Lipkin attribute Claimant's hearing loss to his work activities on February 16, 2021 they were predicated on Claimant's subjective account and reporting of a slip and fall. The physicians' reports did not include a causation analysis connecting Claimant's symptoms to his job duties. The preceding opinions are thus speculative regarding Claimant's injuries as a result of his work activities for Employer. Instead, the bulk of the persuasive

evidence reflects that Claimant did not likely suffer industrial injuries while working for Employer on February 16, 2021. Considering Claimant’s previous recent history of hearing loss and tinnitus, video footage and Claimant’s inconsistent accounts of the accident, the record reveals that his injuries were not likely caused by his job duties for Employer. Claimant’s work activities also did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment. Accordingly, Claimant’s claim for Workers’ Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant’s request for Workers’ Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge’s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge’s order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: August 12, 2021.

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on March 2, 2021, he suffered an injury arising out of and in the course and scope of his employment with the employer.

2. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to reasonable, necessary and related medical treatment, including all treatment provided by St. Mary's Occupational Health.

3. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that surgery performed on June 30, 2021, constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

4. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits beginning March 2, 2021 and ongoing.

STIPULATION

The parties stipulated that if the claimant's claim is found compensable, his average weekly wage (AWW) is $744.80.

FINDINGS OF FACT

1. The employer operates a company that trims and removes trees. The claimant began working for the employer in May 2020. The claimant's job duties included trimming trees, tree removal, and clean up of all cuttings.

2. On March 2, 2021, the claimant was working at a job site for the employer. The assignment was to trim and remove large elm trees. The claimant testified that while he was bent over picking up branches to place in the chipper, a large log fell and struck him between the shoulders, his neck, and head. The claimant also testified that as the log struck him, he fell to the left and landed on the ground.

3. The log at issue is estimated to weigh between 150 and 200 pounds.

4. The claimant's coworker Mr. S[Redacted] was present at the time of the log incident. Mr. S[Redacted] testified that he cut the log that fell. He also testified that when he noticed that the claimant was in the line of the falling log, he yelled for the claimant to

move. Mr. S[Redacted] then observed that the claimant was seated on his buttocks on the ground. Mr. S[Redacted] did not see whether the log did not did not strike the claimant.

5. Initially, the claimant sat on the ground. The claimant testified that when he turned his head, he could hear “clicking” in his neck. Mr. S[Redacted] called emergency services and an ambulance arrived to transport the claimant to the emergency department (ED) at St. Mary’s Hospital.

6. The claimant also testified that emergency services personnel had to lift and carry him to a gurney.

7. The records of the emergency services personnel identify that upon their arrival the claimant reported neck pain with any neck or arm movement. The claimant declined the use of a cervical collar as he reported it caused additional pain. Emergency services personnel assisted the claimant to a standing position and onto a gurney.

Symptoms and Medical treatment prior to March 2, 2021

8. Prior to the March 2, 2021 incident, the claimant sought treatment for shoulder pain. On October 20, 2020, the claimant was seen by his primary care physician, Dr. Michael Gorman. At that time, the claimant reported bilateral shoulder pain that he had experienced “for ‘at least a few months now’ ”. The claimant also reported that he was unable to raise his arms more than 90 degrees, and occasionally experienced shooting pain down both arms. Dr. Gorman recommended x-rays of the claimant’s bilateral shoulders.

9. The claimant returned to Dr. Gorman on October 26, 2020. At that time, Dr. Gorman noted that the shoulder x-rays showed degenerative joint disease in the AC joints, with possible rotator cuff pathology. Dr. Gorman recommended shoulder MRIs, physical therapy, and possible injections. The claimant did not pursue any of Dr. Gorman’s recommendations. The claimant did not return to Dr. Gorman regarding these symptoms.

10. The claimant testified that his shoulder issues began in 2020 after a different incident at work with the employer. However, that incident was not pursued as a workers’ compensation claim.

11. Mr. S[Redacted] testified that during his time working with the claimant, the claimant would complain of pain in his shoulders, arms, and hands. These complaints were prior to the March 2, 2021 incident.

12. The employer owner, Mr. H[Redacted], also testified regarding the claimant’s prior pain complaints. His testimony was consistent with that of Mr. S[Redacted] on this issue.

Medical Treatment Beginning March 2, 2021

13. In the ED on March 2, 2021, the claimant reported numbness and tingling in his bilateral upper extremities, with pain in his neck, upper back, and left hip. No abraisionis, swelling, or bruising was recorded at that time.

14. Computed tomography (CT) scans were taken of the claimant's head, cervical spine, and thoracic spine. All of the CT scans were normal without fractures or abnormalities. An x-ray of the claimant's left hip showed chronic changes without acute fracture. Magnetic resonance imaging (MRI) of the claimant's cervical spine was recommended.

15. On March 3, 2021, a cervical spine MRI showed severe left neural foraminal narrowing at the C4-5 and C6-7 levels; facet arthropathy; a left sided synovial cyst; and moderate right neural foraminal narrowing at the C4-C5 level.

16. On March 4, 2021, the cervical spine MRI was reviewed again. At that time, it was noted that there was "contour abnormality of the upper thoracic cord at T3-4, with slight swelling of the cord and high T2 signal in the cord at T3 and ventral displacement of the cord at T3-4." These findings were identified as being related to a dorsal thoracic arachnoid web. A neurosurgical consultation was recommended.

17. On March 15, 2021, the claimant was seen by neurosurgeon, Dr. Eric Momin. At that time, the claimant reported a numb sensation radiating down all five of his fingers. The claimant denied lower extremity pain, weakness, or numbness. The claimant also denied trouble with balance or walking. Dr. Momin noted that the thoracic spine MRI showed a dorsal arachnoid web at the T3-T4 level.

18. In that same medical record, Dr. Momin noted that the cause of the bilateral limb paresthesia was unclear, and could be caused by claimant's neck, or carpal tunnel syndrome, or cubital tunnel syndromes. Dr. Momin opined that an anterior cervical discectomy and fusion could be indicated, following the results of an EMG referral. With regard to the thoracic spine, Dr. Momin recommended T3-T5 laminectomies pending further imaging studies. He remarked that there was "ongoing cord compression from a likely arachnoid cyst; it is likely that there was chronic cord compression at this level which was suddenly worsened in the injury."

19. On March 16, 2021, the claimant began physical therapy at Fyzical Therapy & Balance Centers. On that date, the claimant reported bilateral radicular numbness encompassing the entire hand.

20. On March 25, 2021, Dr. Albert Hattem authored a staffing review and noted that he questioned whether the claimant sustained an injury sufficient to aggravate his pre-existing conditions. Dr. Hattem recommended authorization of the diagnostic studies requested by Dr. Momin to rule out dural tear and determine the cause of the upper extremity numbness. In addition, Dr. Hattem requested prior records to further assess the compensability issue.

21. On March 26, 2021, the claimant filed a claim for compensation regarding the March 2, 2021 incident. In that document, the claimant listed the impacted body parts as “neck, shoulder blades, mid-back, left hip, bilateral arms.”

22. On April 12, 2021, the claimant was seen by Dr. Lawrence Frazho and continued to report bilateral hand numbness. Dr. Frazho recommended an EMG and possible cervical facet injections.

23. On April 15, 2021, the claimant returned to Dr. Momin and reported numbness radiating into all five of his fingers, with no weakness. The claimant also reported that his balance was off and he had been walking slowly. Dr. Momin recommended T3-T5 and T9-T11 laminectomies for resection of the arachnoid web and possible biopsy. Dr. Momin also recommended possible injections to treat the claimant’s neck symptoms.

24. On April 21, 2021, Dr. Hattem reviewed Dr. Momin’s surgical recommendation. In his report, Dr. Hattem noted that a dorsal thoracic web is a rare condition that can become symptomatic, but that the finding is usually not associated with an acute injury to the spine. Dr. Hattem recommended that any treatment of the arachnoid web condition be pursued outside the workers’ compensation system.

25. After speaking with Dr. Momin, on April 28, 2021, Dr. Hattem issued another report. In that report, Dr. Hattem noted that Dr. Momin agreed that causation was a difficult issue to determine in this case, but it was Dr. Momin’s opinion that the claimant’s cervical spine complaints were likely worsened by the March 2, 2021 event. Dr. Hattem reported that Dr. Momin was under the impression that the pain, numbness and other symptoms began after March 2, 2021. Dr. Hattem recommended that the matter be reviewed by another neurosurgeon.

26. On May 20, 2021, the claimant returned to Dr. Stagg and reported occipital headaches and nausea. The claimant also reported that physical therapy was making him dizzy. Dr. Stagg reviewed the claimant’s history and noted that the claimant was “not sure whether he got hit in the head or not.” Dr. Stagg recommended a CT scan of the head.

27. On June 3, 2021, the claimant was seen at Red Rock Physical Medicine by Nikos Hollis, NP. In the medical record of that date, NP Hollis noted that EMG testing by Jonathan Belk showed mild right carpal tunnel syndrome with bilateral sensory ulnar neuropathies and some evidence for chronic left C5 and right C7 mild radiculopathies.

28. At the request of the respondents, Dr. Michael Rauzzino reviewed the claimant’s medical records. Dr. Rauzzino testified via deposition. Dr. Rauzzino testified that an arachnoid web, such as the one discovered in the claimant’s thoracic spine, is a layer of tissue that covers the spinal cord. The cause of this condition is typically idiopathic, though there are webs that can form after surgery or trauma. Dr. Rauzzino opined that the claimant’s arachnoid web was not caused by the March 2, 2021, work

incident, as the web would not have had sufficient time to form and thicken at the time of diagnosis.

29. Dr. Rauzzino further testified that the claimant's symptoms were not caused by his arachnoid web because these symptoms are in the wrong place. Injury to the nerves in the thoracic spine would not be indicated by numbness, tingling, or weakness in the hands. Dr. Rauzzino stated that if the claimant had sustained an exacerbation in his thoracic spine or the arachnoid web, he would have expected the claimant to complain of lower extremity symptoms immediately after the injury.

30. It is Dr. Rauzzino's testimony that there are no surgical issues in the thoracic spine, other than the arachnoid web. It is also Dr. Rauzzino's opinion that the surgery recommended by Dr. Momin would not address the claimant's upper extremity symptoms. With regard to the claimant's cervical spine, Dr. Rauzzino testified that the claimant's subjective complaints did not correlate with the objective findings. Dr. Rauzzino noted that there was no large contusion, and no evidence of any significant injury to the spinal cord, the bones, the discs, or the nerves. Despite this, the claimant reported severe pain with worsening and expanding symptoms.

31. The claimant provided testimony regarding his understanding of the surgery recommended by Dr. Momin. The claimant understood that he needed thoracic surgery because the arachnoid web was agitated and constricting his spine. The claimant also believed that if he did not undergo the surgery, he would lose control of his entire left side.

32. On June 30, 2021, Dr. Momin performed the recommended surgery. The surgery was paid for by Medicaid.

33. The claimant testified that before the surgery, he had numbness in his left leg and left arm. The claimant also testified that since the surgery, his left leg numbness has improved. He is able to walk 10 to 15 steps before becoming weak. The claimant further testified that his current symptoms include left arm numbness, neck pain, headaches, loss of range of motion in his neck, and loss of strength. The claimant also testified that he did not have any of these symptoms prior to the March 2, 2021 incident.

34. With regard to the March 2, 2021 incident, the ALJ does not credit the claimant's testimony and finds that the claimant was not stuck between the shoulders by the falling tree limb/log. The ALJ notes that the claimant was bent over at the waist when he claims the log struck him between the shoulder blades and he then fell to the ground. The ALJ finds that it is unlikely that this mechanism of injury would result in the claimant falling backwards and onto his buttocks. The ALJ credits the medical records and further finds that the lack of abrasions and bruising on the claimant's neck and upper back support a finding that the log did not strike the claimant. Furthermore, the ALJ is not persuaded that the claimant's pre-existing neck and back conditions were in any way impacted by the alleged work injury. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that he was injured while at work on March 2, 2021.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that on March 2, 2021 he suffered an injury arising out of and in the course and scope of his employment with the employer. As found, the medical records are found to be credible and persuasive.

6. All remaining endorsed issues are dismissed as moot

ORDER

It is therefore ordered that the claimant's claim regarding an alleged March 2, 2021 injury is denied and dismissed. All remaining endorsed issues are dismissed as moot

Dated this 13th day of August 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. **In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

I. Whether Claimant proved by a preponderance of the evidence the repeat transforaminal epidural steroid injections requested by Brian Siegel, M.D. are reasonable, necessary and related to Claimant's October 19, 2007 industrial injury.

FINDINGS OF FACT

1. Per the parties stipulation at hearing, the Court adopted and relied on, in part, previous findings of fact in three previous Orders issued by ALJs in this claim, as found in Claimant's Exhibits 10, 11 and 12.

2. Claimant is a 38-year-old male who worked for Employer as a truck driver.

3. Claimant sustained an admitted industrial injury on October 19, 2007 when he twisted his left ankle. Damage to the sural nerve required surgery and resulted in chronic neuropathic pain, diagnosed as Chronic Regional Pain Syndrome ("CRPS"). ATP Jeffrey A. Wunder, M.D. placed Claimant at maximum medical improvement ("MMI") on April 13, 2011. Dr. Wunder assigned an impairment rating of 22% of the lower extremity and 10% for a diagnosis of CRPS. Dr. Wunder's final impression was: (1) chronic left sural neuropathy, (2) status post multiple sural neuroma excisions, and (3) left lower extremity CRPS, significantly improved. As maintenance treatment, Dr. Wunder recommended lumbar sympathetic blocks 3-4 times per year, if necessary, and maintenance medication on a permanent basis.

4. Respondents filed a Final Admission of Liability ("FAL") on July 7, 2011 admitting for reasonable, necessary and related medical treatment and/or medications post-MMI. Claimant did not seek a Division Independent Medical Examination or hearing following the FAL. Claimant has since received maintenance care.

5. Claimant was subsequently diagnosed with venous insufficiency, for which he treated with Timothy Quickert M.D. Dr. Quickert noted "varicose veins of left leg with inflammation." On February 8, 2019, Claimant reported a many year history of several symptoms, including discoloration, pain, aching, throbbing, itching, burning, cramping, restless legs and swelling of the left lower extremity. On February 18, 2019, Claimant underwent endovenous ablation of the left greater saphenous vein. He continued to report left leg pain and swelling. ALJ Edwin Felter, in a December 11, 2019 order, found that Claimant's venous insufficiency was not related to the work injury.

6. On March 20, 2019, Claimant suffered a self-inflicted wound which required his hospitalization at the Sidney Regional Medical Center. Thereafter, Rebecca Allard, M.D., located in Sidney, Nebraska, took over Claimant's care as his ATP. Since taking

over care for Claimant, Dr. Allard has provided treatment to Claimant for his work-related condition as well as for several conditions that are unrelated to the work injury, including foot fungus, ingrown toenails, high blood pressure and restless legs. In an April 7, 2020 order, this ALJ determined that medications for high blood pressure and restless legs were not reasonable, necessary or related to the October 19, 2007 work injury.

7. On July 27, 2019, Claimant reported to Dr. Allard that he was experiencing back pain that radiated to his left hip that varied in intensity from day to day with no specific triggers. He indicated he was taking Lyrica for the back pain. It was noted, "Dr. Allard explained cryoablation as a possibility to help relieve his back pain. He will be referred to Dr. Siegel to be evaluated for this." R. Ex. F, p. 101. Subsequent evaluations by Dr. Allard on September 5, 2019 and May 28, 2020 indicate Claimant continued to experience back pain and continued to be referred to Dr. Siegel for consideration of cryoablation.

8. Dr. Siegel first evaluated Claimant on July 20, 2020. Claimant complained of left lower extremity pain described as aching, throbbing, shooting, stabbing, sharp, tiring, nagging and miserable. Dr. Allard noted Claimant was involved in an accident on October 19, 2007 in which he sustained a left lower extremity injury and was diagnosed with CRPS. Claimant reported that he underwent placement of a spinal cord stimulator which had provided some relief, but that he continued to experience low back, left hip and leg pain rated 6/10. Claimant further reported undergoing a prior MRI and prior transforaminal epidural steroid injections, facet injections and radiofrequency ablation. Dr. Siegel noted a normal examination of the left lower extremity, with the exception of some sensory changes in the lateral aspect of the left leg. Examination of the back was normal other than bilateral lumbosacral tenderness, left greater than right.

9. Dr. Siegel's impression was: 1) CRPS, currently being treated somewhat with a spinal cord stimulator; 2) left lower extremity radiculitis/radiculopathy; and 3) lumbosacral spondylosis. Regarding a treatment plan, Dr. Siegel wrote,

> There is nothing further to do as far as his complex regional pain syndrome. I told him that we could attempt reprogramming to maybe get some better coverage. I also told him that if we could get his MRI I could adjust just his low back with possible repeat facet injections and or radiofrequency procedures. With regard to the hip and some of the distal lower extremity pain, it looks like he has responded favorably to transforaminal injections in the past. I just need to see where to inject when I get his MRI.

(Cl. Ex. 7, p. 28)

10. An MRI of the lumbar spine was obtained on September 16, 2020. The impression was multilevel spondylitic changes, with potentially the most significant at

L4-L5 with mild canal stenosis moderate bilateral neural foraminal narrowing and bilateral lateral recess stenosis.

11. Upon reviewing the September 16, 2020 MRI, Dr. Siegel recommended transforaminal injections at L3, L4 and L5 for back, hip and leg pain. Dr. Siegel administered the transforaminal injections at L3, L4 and L5 on October 20, 2020. Dr. Siegel's medical note from October 20, 2020 notes the clinical impression/reason for procedure as low back and left hip pain. Indications listed were: degenerative disc disease/herniated nucleus pulposus lumbar spine, stenosis, and left lower extremity radiculitis. Immediately after the procedure, Claimant reported a reduction in pain from 7/10 to 0/10.

12. Claimant saw Dr. Allard on November 2, 2020 for an unrelated chest wall contusion. Dr. Allard's assessment listed (1) Chest wall contusion; (2) Hypertension; (3) Neuropathy; (4) Anxiety; (5) Restless leg syndrome; and (6) Spinal stenosis of the lumbar region with neurogenic claudication. Under spinal stenosis, Dr. Allard noted "Encourage to lose more weight before considering surgery. Will continue injections with Dr. Siegal (*sic*)." (Cl. Ex. 6, p. 22).

13. On February 26, 2021, Claimant contacted Dr. Siegel's office reporting that his back and leg pain had returned. Claimant requested another injection. Dr. Siegel recommended repeat injections, which have been denied by Respondents as not related to the industrial injury.

14. At the request of Respondents, Katherine F. McCranie, M.D. performed an independent records review of Claimant and issued a report dated May 22, 2021. Dr. McCranie previously performed an Independent Medical Examination ("IME") of Claimant on March 5, 2019 and performed additional records reviews on July 14, 2019 and February 3, 2020 in connection with prior hearings/issues on this claim. Dr. McCranie has reviewed Claimant's records dating back to 2002.

15. Dr. McCranie opined that the transforaminal injections recommended by Dr. Siegel are not related to Claimant's October 19, 2007 work injury. Dr. McCranie explained that there is no subjective or objective connection between Claimant's work injury and his current lumbar spine complaints. She testified that Claimant's low back was not a condition included in his work-related diagnoses when he was placed at MMI on April 13, 2011 and that, at the time of the work injury and throughout the course of treatment up to MMI, there were no complaints of low back pain. Dr. McCranie testified that the medical records documented a lumbar injury in March 2006 prior to the work injury, for which Claimant treated with chiropractic care through late March 2006. Subsequent to being placed at MMI for the October 19, 2007 work injury but prior to Claimant's reports of back pain to Dr. Allard in June 2019, Dr. McCranie noted three references to lumbar symptomatology: (1) A July 27, 2011 complaint to Dr. Wunder of a knot in his back after undergoing a lumbar sympathetic block. The knot was noted to be improving; (2) May 18, 2015 complaints Dr. Thayer of back pain and abdominal pain related to a postoperative visit after an appendectomy and (3) a July 2, 2018 complaint

of back pain to PA-C Ford secondary to a recent non work-related lifting incident. Dr. McCranie noted complaints of left hip pain between 2014 and 2019.

16. Dr. McCranie explained that, although Claimant reported to Dr. Siegel and Dr. Fillmore undergoing prior epidural steroid injections, facet procedures, and medial branch blocks, the records did not contain any documentation that such procedures were actually performed, other than the transforaminal epidural steroid injections administered by Dr. Siegel in October 2020. Dr. McCranie concluded that the injection performed by Dr. Siegel did provide a diagnostic and therapeutic response, but that the response was for a condition unrelated to the work injury.

17. Claimant testified at hearing that he has undergone transforaminal epidural steroid injections, facet injections, and radiofrequency ablation in the past, as he reported to Dr. Siegel on July 20, 2020. The evidence offered at hearing does not document such procedures were performed, other than the transforaminal epidural steroid injection performed by Dr. Siegel on October 20, 2020. Claimant testified that the spinal cord stimulator did not completely address swelling or tenderness in his left lower extremity, nor did it provide relief from numbness in his left foot. Claimant testified that the October 20, 2020 was in the same location as prior injections and provided similar relief to the relief he experienced from prior injections.

18. Claimant's Exhibit 3 consists of two photographs of Claimant's left foot taken by Claimant on June 14, 2021. Claimant's left foot appears swollen and discolored. He testified that the swelling and discoloration appearance of his foot was because of the denial of the transforaminal epidural steroid injections. He further testified that the injections permit him to do perform his work as a truck driver and makes the activities of daily living more functional. Claimant desires the second injection recommended by Dr. Siegel and believes the injections are related to his work injury.

19. Dr. McCranie testified by deposition as a Level II accredited expert in physical medicine and rehabilitation and pain medicine. Dr. McCranie testified consistent with her report and continued to opine that the recommended transforaminal epidural steroid injections are not related to Claimant's work injury. She testified that Claimant did not sustain an injury to the lumbar spine, the injury did not cause the pathology seen on Claimant's MRI, and, throughout the claim, the lumbar spine has not been considered a part of Claimant's work injury. She reiterated that she did not see any evidence in the medical records of any epidural steroid injections, facet injections or radiofrequency ablations prior to October 20, 2020. Dr. McCranie testified that Claimant did previously undergo lumbar sympathetic blocks to treat his CRPS. She explained that a lumbar sympathetic block is completely different from a lumbar epidural steroid injection, noting the former is administered to the lumbar sympathetic chain outside of the vertebrae to treat sympathetically mediated pain and CRPS, while the latter is injected in between the vertebrae into the epidural space to decrease inflammation and treat radicular-type pain. The last lumbar epidural steroid injection Claimant received was in 2013.

20. Dr. McCranie testified that Claimant’s “excellent” diagnostic and therapeutic response to the October 20, 2020 transforaminal epidural steroid injection meant that Claimant does have lumbar radicular symptoms, but that those symptoms are due to a completely separate medical issue unrelated to Claimant’s October 19, 2007 work-related ankle injury. She explained that there is no mention in Dr. Siegel’s records that he recommended the injections for the purpose of treating Claimant’s CRPS, and that Claimant would not get any relief for his CRPS from the recommended lumbar transforaminal epidural steroid injection, as the injection is not performed to treat CRPS. Regarding the June 14, 2021 photographs, Dr. McCranie explained that the photos showed venous insufficiency and possibly some mottling due to CRPS. She testified that there is no causal link between the requested injections and the appearance of Claimant’s foot.

21. The ALJ finds the testimony of Dr. McCranie, as supported by the medical records, more credible and persuasive than Claimant’s testimony.

22. Claimant failed to prove it is more likely than not the transforaminal epidural steroid injections recommended by Dr. Siegel are causally related to the October 19, 2007 work injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado (the “Act”), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’ testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

A claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. See § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012).

In cases where the respondents file a FAL admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services,* W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant argues that the repeat requested transforaminal epidural injection at L3, L4 and L5 are causally related to his work injury, contending that the injections are being used to treat the numbness, swelling and pain related to his CRPS diagnosis. The preponderant credible and persuasive evidence does not support Claimant's contention.

The records indicate Dr. Allard referred Claimant to Dr. Siegel for back pain and radicular symptoms associated with Claimant's low back, which have not been diagnosed or treated at part of this claim. In her June 27, 2019 medical note, Dr. Allard specifically stated she was referring Claimant to Dr. Siegel for evaluation of possible cryotherapy for Claimant's back pain. When Dr. Allard noted on November 2, 2020 that Claimant would continue injections with Dr. Siegel, this was in reference to Claimant's lumbar spinal stenosis with neurogenic claudication.

At his initial evaluation, Dr. Siegel diagnosed Claimant with CRPS, left lower extremity radiculitis/radiculopathy, and lumbosacral spondylosis. He specifically stated that there was "nothing further to do" as far as Claimant's CRPS, which contradicts Claimant's assertion that Dr. Siegel's recommendation for transforaminal epidural steroid injections is to treat Claimant's CRPS. In his July 20, 2020 medical note, Dr. Siegel suggested transforaminal injections in reference to Claimant's hip and distal lower extremity pain. His recommendation was based, at least in part, on Claimant's reports that he had undergone transforaminal injections previously and responded favorably. Dr. McCranie performed a comprehensive review of Claimant's medical records dating back to 2002 and saw no documentation of prior transforaminal injections. No other records were offered into evidence to the contrary. The indications listed for the transforaminal injections performed on October 20, 2020 were degenerative disc disease/herniated nucleus pulposus lumbar spine, stenosis, and left lower extremity radiculitis. Dr. McCranie credibly testified that those conditions are not related to the October 19, 2007 work injury.

Dr. McCranie further credibly explained that the recommended transforaminal injection is completely different from the lumbar sympathetic blocks Claimant had previously received under this claim to treat his CRPS. She credibly explained that the recommended transforaminal injection is to treat radicular-type pain, which is unrelated to the work injury. Claimant last received a lumbar sympathetic block in 2013. To the extent Claimant suffers from multiple symptoms of his left lower extremity as the result of multiple conditions, it is understandable Claimant would associate relief he received from the transforaminal injection to that from the lumbar sympathetic block. Nonetheless, the preponderant evidence does not establish that the recommended transforaminal epidural steroid injections are reasonably necessary to maintain or relieve ongoing symptoms that are causally related to the October 19, 2007 work injury.

ORDER

1. Claimant failed to prove by a preponderance of the evidence the transforaminal epidural steroid injections at L3, L4 and L5 recommended by Dr. Siegel, M.D. are reasonable, necessary and related to Claimant's October 19, 2007 industrial injury. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 13, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Are Respondents entitled to an offset for net LTD benefits referenced in the December 10, 2020 letter from Employer's LTD carrier?

- At hearing, Claimant requested an increase in the AWW based on the COBRA cost to continue Claimant's heath insurance. In his post-hearing brief, Claimant agrees the issue is "moot" because Respondents already increased the AWW and Claimant cannot receive TTD benefits in excess of the maximum compensation rate.

FINDINGS OF FACT

1. Claimant suffered an admitted low back injury on May 5, 2020.

2. Insurer filed a General Admission of Liability (GAL) dated August 31, 2020, admitting to an average weekly wage (AWW) of $2,000, and a closed period of temporary total disability (TTD) benefits at the maximum TTD rate of $1,022.56.

3. Employer provides long-term disability (LTD) insurance for its employees through Reliance Standard Life Insurance Company (Reliance). Employer paid 100% of the premiums for the LTD policy.

4. The LTD policy has a dollar-for-dollar offset if Claimant becomes eligible for workers' compensation benefits. Specifically, the LTD benefit amount is calculated by "subtact[ing] . . . all benefits (except medical or death benefits) . . . an insured is eligible to receive because of his/her Total Disability under . . . Workers' Compensation Laws."

5. On December 10, 2020, Reliance sent Claimant a letter stating he was approved for LTD benefits. Because of his high pre-injury wage, Claimant qualified for the maximum monthly LTD benefit of $5,000. However, his benefits were subject to deductions, including an offset for workers' compensation benefits. The letter calculated Claimant's net LTD benefits as $2,162.24:

Maximum monthly benefit:	$5,000.00
Social Security Tax:	-$145.16
Medicare Tax:	-$33.95
Workers' Compensation Offset:	-$2,658.65
Monthly benefit:	$2,162.24
Net Benefit Payable for the period from 11/29/20 to 12/29/20	**$2,162.24**

6. The December 10 letter did not explain how the “Workers’ Compensation Offset” of $2,658.65 was calculated, or why it was less than the $4,431.09 that would otherwise be expected based on the policy language mandating an offset for “all” TTD benefits ($1,022.56 x 52 / 12 = $4,431.09).

7. Insurer filed a revised GAL reducing Claimant’s TTD befits to $523.58 per week effective December 11, 2020 based on Claimant’s receipt of $498.88 per week in LTD benefits. The reduction was based the following calculation: $2,162.24 LTD x 12 months / 52 weeks = $498.98; $1,022.56 TDD - $498.98 LTD = $523.58. Respondents reasoned that because Reliance was only taking a partial offset for TTD, they could offset the remaining balance of LTD benefits.

8. On May 12, 2021, Insurer filed a new GAL increasing Claimant’s AWW to $2,683.80, effective April 1, 2020, to account for the COBRA cost of continuing Claimant’s health insurance. The GAL did not increase the TTD benefit rate because “Claimant’s disability rate [is] already capped at maximum so no additional payment due.”

9. The preponderance of persuasive evidence shows the Reliance policy “terms” preclude LTD benefits on a dollar-for-dollar basis to the extent Claimant is eligible for TTD benefits.

CONCLUSIONS OF LAW

Section 8-42-103(1)(d)(I) provides:

> (d)(I) In cases where it is determined that periodic disability benefits are payable to an employee under a pension or disability plan financed in whole or in part by the employer, . . . the aggregate benefits payable for temporary total disability, temporary partial disability, and permanent total disability pursuant to this section shall be reduced, but not below zero, by an amount equal as nearly as practical to the employer pension or disability plan benefits, with the following limitations:
>
>> (A) Where the employee has contributed to the employer pension or disability plan, benefits shall be reduced under this section only in an amount proportional to the employer’s percentage of total contributions to the employer pension or disability plan.
>>
>> (B) Where the employer pension or disability plan provides by its terms that benefits are precluded thereunder in whole or in part if benefits are awarded under articles 40 to 47 of this title, the reduction provided in this paragraph (d) shall not be applicable to the extent of the amount so precluded.

Here, there is no dispute Employer provided a disability plan and paid 100% of the premiums. The only issue involves the applicability of subsection (B).

The statutory offset provision is intended to prevent a claimant from receiving a “double recovery” where the employer has purchased both a disability plan and workers' compensation insurance to compensate for a work-related injury. *Spanish Peaks Mental*

Health Center v. Huffaker, 928 P.2d 741 (Colo. App. 1996). Benefits are coordinated by allowing an offset where a claimant is concurrently eligible for benefits under both policies. However, the General Assembly made workers' compensation benefits the "primary" coverage and allowed disability plans the first opportunity to take an offset. To that end, a workers' compensation carrier is not entitled to "any" offset where the LTD policy provides a dollar-for-dollar offset against workers' compensation benefits. *E.g., Madsin v. Gardner-Denver-Cooper Industries, Inc*., 689 P.2d 714 (Colo. App. 1984); *Gonzales v. City of Fort Collins*, W.C. No. 4-365-220 (August 5, 2004).

Respondents' position in this case is based on the December 10, 2020 letter from Reliance that ostensibly takes only a partial offset for Claimant's TTD benefits. Respondents acknowledge the LTD policy provides a dollar-for-dollar offset, and they concede there is no evidence to explain "why Reliance is offsetting only $2,658.65 in workers' compensation benefits." But Respondents argue the LTD policy language is "irrelevant because the statute permits Respondent an offset in 'an amount equal as nearly as practical to the employer pension or disability plan benefits.'"

The problem with Respondents' argument is that the exception in subsection (B) overrides the general offset provision in subsection (d)(I). And the applicability of subsection (B) explicitly hinges on the "terms" of the LTD plan ("where the employer pension or disability plan ***provides by its terms*** . . . .") (Emphasis added). Black's Law Dictionary (7th Ed.) defines the word "terms" as "provisions that define an agreement's scope, conditions or stipulations." This definition comports with the ALJ's general understanding of the word. The policy "terms" are the sole touchstone for applicability of the subsection (B) exception, with no reference to the amount a claimant receives from the LTD plan. Thus, the *policy language* is dispositive.

The only persuasive evidence in the record regarding the "terms" of the LTD policy is in Exhibit 12. The policy unequivocally states the monthly LTD benefit is calculated by "subtract[ing] . . . all benefits . . . under Workers' Compensation Laws." There is no persuasive evidence of any endorsement, rider, or other "terms" that modify or limit the workers' compensation offset provision of the policy. The December 10, 2020 letter is merely an explanation of benefits and cannot reasonably be considered part of the "terms" of the policy.

Moreover, there is no discernible relationship between the $2,658.65 "workers' compensation offset" outlined in the December 10 letter and the TTD benefits for which Claimant is eligible. The parties offered no evidence or theory to explain Reliance's calculation, and the ALJ cannot "reverse engineer" the stated offset using any other data in the evidentiary record. Given the clear policy language requiring a dollar-for-dollar offset, and absent any persuasive evidence to reconcile the partial offset reflected in the December 10 letter, the most probable inference this ALJ can draw is that Reliance simply made a mistake.

By paying Claimant $2,162.24 per month in LTD benefits, Reliance appears to be creating an overpayment under the express terms of its policy. But Respondents cannot take an offset based on an overpayment of LTD. *Gonzales v. City of Fort Collins*, *supra* ("the mere fact that the claimant received LTD benefits in excess of what he was entitled to receive under the policy does not mean [the respondent] is entitled to claim those payments as an offset again liability for workers' compensation"). Nor are Respondents entitled to an offset for any amounts Reliance paid in excess of workers' compensation benefits. *Gonzales v. City of Fort Collins*, *supra*.

As found, the preponderance of persuasive evidence shows the Reliance policy "terms" preclude LTD benefits on a dollar-for-dollar basis "to the extent" Claimant is eligible for TTD benefits. Accordingly, Respondents are not entitled to an offset.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant TTD benefits at the rate of $1,022.56 per week, without offset for LTD benefits, commencing December 11, 2020 and continuing until terminated by law. Insurer may take credit for TTD benefits already paid commencing December 11, 2020.

2. Insurer shall pay Claimant statutory interest of eight percent (8%) per annum on all benefits not paid when due.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: August 16, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that on August 20, 2020, he suffered an injury arising out of and in the course and scope of his employment with the employer.

If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to authorized, reasonable, necessary, and related medical benefits.

If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits for the period of August 20, 2020 through April 10, 2021.

If the claim is found compensable, what is the claimant's average weekly wage (AWW)?

FINDINGS OF FACT

1. The employer operates a restaurant. On August 5, 2020, the claimant began working for the employer as a server and bartender. The claimant testified that he arrived before the restaurant opened and worked after the restaurant closed. His job duties included morning prep work, stocking the bar area, cleaning the restaurant tables and chairs, taking customer orders (both by telephone and in person), preparing customer drinks, and serving food. The claimant also testified that the restaurant opened at 11:00 a.m. and closed around 10:00 or 10:30 p.m.

2. At the end of his work day on March 20,2020, the claimant was taking trash outside to the dumpster. When the claimant re-entered the restaurant, the door slammed on his left hand, smashing his left third finger.

3. The claimant immediately told the manager, Mr. L[Redacted], that he had injured his left hand. Mr. L[Redacted] assisted in bandaging the claimant's hand at the restaurant. Mr. L[Redacted] then drove the claimant for medical treatment at an emergency room in Steamboat Springs, Colorado.

4. The claimant testified that while in the emergency department he received stitches on his left middle finger and injections to his left hand. The claimant understood that he was to keep his left hand out of water, and not shake that hand. The claimant understood that he was to return to have the stitches removed in three to four weeks.

5. A WC-164 form was entered into evidence related to the treatment the claimant received on August 20, 2020. That form indicates that the claimant underwent

an x-ray, removal of the nail on his left third finger, bandaging, and a splint. The medical provider listed the claimant's work restrictions as "must wear gloves on [left] hand". These work restrictions were in effect from August 20, 2020 until August 20, 2020. The medical provider opined that the claimant would reach maximum medical improvement (MMI) on August 30, 2020.

6. The claimant provided receipts for prescriptions filled at a Walgreens in Steamboat Springs, Colorado. The total amount paid for the prescriptions was $51.42.

7. The claimant also provided a receipt for $200.00 paid to Wellness and Care Medical, Inc. on August 28, 2020. The ALJ notes that the address for Wellness and Care Medical, Inc. is located in City of Industry, California.

8. Medical records entered into evidence show that on August 28, 2020, the claimant sought treatment at Wellness and Care Medical, Inc. for his left middle finger. That same record indicates that there was no visible swelling and the claimant was to return for a new dressing in two weeks.

9. The claimant testified that he has not worked for the employer since August 20, 2020. In addition, he had not worked for any other employer between August 20, 2020 and April 10, 2021. The claimant also testified that he was unable to work during that time because he could not touch water with his left hand, he could not perform bartender duties, and he was unable to engage in cleaning duties.

10. Mr. L[Redacted] testified that the doctor instructed the claimant not to work for one week. After one week, the claimant did not return to work because he traveled to California.

11. The claimant is left hand dominant. He testified that his current left hand symptoms include difficulty with chopsticks, forks, and scissors. In addition, he is unable to hold heavy objects with his left hand.

12. The claimant asserts that his average weekly wage (AWW) while working for the employer was $1,290.00. The claimant provided testimony regarding his calculations. The claimant estimates that he worked 85 hours per week for the employer. In 2020, Colorado's minimum wage was $12.00 per hour for the first 40 hours, and $18.00 per hour for the remaining 45 hours of overtime (hours over 40 hours at time and one-half).

13. The claimant also testified that he received a check for $1,000.00 from the employer for his earnings. That is the only payment the claimant has received from the employer.

14. The employer provided conflicting testimony regarding the claimant's job duties, wages, and hours. Mr. L[Redacted] testified that the claimant was hired on a trial basis for one month. The employer agreed to pay the claimant $2,000.00 per month, plus 10 percent of tips. In addition, the employer provided the claimant with a place to live. The employer also provided the claimant with three free meals per day, even on the claimant's day off.

15. Mr. L[Redacted] testified that the claimant worked at the restaurant for 13 days. Mr. L[Redacted] also testified that the building where the claimant lived has a monthly rent (plus utilities) of $4,800. In addition, six people live in that building.

16. Mr. L[Redacted] testified that the meals the claimant was provided have a value of between $15.00 and $20.00 each. Mr. L[Redacted] testified that the claimant was paid his share of the tips at the end of each shift. Mr. L[Redacted] estimated that while the claimant worked for the employer, the claimant received tips totaling between $500.00 and $800.00.

17. Based upon documents entered into evidence, on August 20, 2020, the employer had a General Liability Insurance policy. That policy did not include workers' compensation coverage.

18. The ALJ credits the claimant's testimony regarding work duties and his mechanism of injury. The ALJ also credits the medical records. The ALJ finds that the claimant has demonstrated that it is more likely than not that on August 20, 2020 he injured his left middle finger while working for the employer.

19. With regard to medical treatment, the ALJ credits the claimant's testimony and the medical records. The ALJ finds that the claimant has demonstrated that it is more likely than not that treatment the claimant received at the emergency department on August 20, 2020 and the prescriptions filled at Walgreens constitutes reasonable medical treatment necessary to cure and relieve the effects of the work injury.

20. The ALJ finds that the claimant has failed to demonstrate that the medical treatment he received from Wellness and Care Medical, Inc. in California was authorized medical treatment. The authorized medical provider was the emergency department on August 20, 2020. On that date, the respondent, through Mr. L[Redacted], provided the claimant with medical treatment. The claimant's decision to travel to seek additional treatment in California was outside any chain of authorization. Therefore, even if the treatment in California was reasonable and necessary, the ALJ finds that it was not authorized medical treatment.

21. With regard to temporary total disability (TTD) benefits, the ALJ credits the medical records and the testimony of Mr. L[Redacted] on this issue. The ALJ finds that the claimant has demonstrated that it is more likely than not that, as a result of his work injury, he was unable to work from August 20, 2020 through August 30, 2020. The claimant is entitled to TTD benefits during that time. The ALJ is not persuaded that the claimant's August 20, 2020 injury resulted in an inability to work between August 31, 2020 and April 9, 2021.

22. The ALJ credits the testimony of Mr. L[Redacted] regarding the claimant's wages and fringe benefits. The ALJ finds while employed with the employer, the claimant had earnings, tips, and fringe benefits of housing and meals. Based upon the information provided, the ALJ calculates the claimant's AWW to be $1,286.14. This calculation was reached as follows:

a. $2,000.00 per month, times 12 months is equal to annual wages of $24,000.00 divided by 52 weeks in a year for a weekly average of $461.54;

b. Housing costs of $4,800.00 per month divided among six people equals a monthly “rental” value of $800.00 times 12 months in a year and divided by 52 weeks for a weekly average of $184.62;

c. 21 meals per week valued at $15.00 per meal equals a value of $315.00;

d. Tips of $650.00[1] over a two week period (13 days) results in weekly tips of $325.00;

e. $461.54 + $184.62 + 315.00 + 325.00 equals an AWW of $1,286.14.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition

[1] The ALJ notes that the tipped amount is estimated to have been between $500.00 and $800.00. The ALJ averages these numbers and uses $650.00 in these calculations.

does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has demonstrated, by a preponderance of the evidence, that on August 20, 2020, he suffered an injury arising out of and in the course and scope of his employment with the employer. As found, the medical records and the claimant's testimony are credible and persuasive on this issue.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

7. As found, the claimant has demonstrated by a preponderance of the evidence, that the medical treatment he received on August 20, 2020 and prescription he filled at Walgreens were reasonable, necessary, and related medical treatment. As found, the medical records and the claimant's testimony are credible and persuasive on this issue.

8. Section 8-43-404(5)(a), C.R.S. grants employers the initial authority to select the claimant's authorized treating physician (ATP). However, in a medical emergency a claimant need not seek authorization from her employer or insurer before seeking medical treatment from an unauthorized medical provider. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777, 781 (Colo. App. 1990). A medical emergency affords an injured worker the right to obtain immediate treatment without the delay of notifying the employer to obtain a referral or approval. Once the emergency is over the employer retains the right to designate the first "non-emergency" physician. *Bunch v. Indus. Claim Appeals Office of State of Colorado*, 148 P.3d 381, 384 (Colo. App. 2006); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

9. As found, the claimant has failed to demonstrate, by a preponderance of the evide, that the medical treatment he received in California was authorized medical treatment. As found, even if that treatment was reasonable and necessary, the ALJ finds that it was not authorized medical treatment.

10. To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage

earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that the claimant establish physical disability through a medical opinion of an attending physician. Claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

11. As found, the claimant has demonstrated, by a preponderance of the evidence, that as a result of his work injury, he was unable to work from August 20, 2020 through August 30, 2020. As found, the claimant is entitled to TTD benefits during that time. As found, the medical records and the testimony of Mr. L[Redacted] are credible and persuasive on this issue.

12. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that as a result of his work injury, he was unable to work between August 31, 2020 and April 10, 2021. As found, the claimant is not entitled to TTD benefits during that time. As found, the medical records and the testimony of Mr. L[Redacted] are credible on this issue.

13. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

14. Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on his earnings at the time of the injury. Under some circumstances, the ALJ may determine the claimant's TTD rate based upon his AWW on a date other than the date of the injury. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

15. As found, the claimant's average weekly wage (AWW) for this claim is $1,286.14 (resulting in a TTD rate of $977.47). As found, Mr. L[Redacted]'s testimony on this issue is credible and persuasive.

ORDER

It is therefore ordered:

1. On August 20, 2020, the claimant suffered an injury arising out of and in the course and scope of his employment with the employer.

2. The respondent shall pay for the medical treatment the claimant received at the emergency department on August 20, 2020.

3. The respondent shall reimburse the claimant’s out-of-pocket expense of $51.42 for prescriptions.

4. The claimant’s request for reimbursement for payment made to an unauthorized medical provider (Wellness and Care Medical, Inc.) is denied and dismissed.

5. The respondents shall pay the claimant temporary total disability (TTD) benefits for the period of August 21, 2020 through August 30, 2020.

6. The claimant’s request for TTD benefits from August 31, 2020 through April 10, 2021 is denied and dismissed.

7. The claimant’s average weekly wage (AWW) for this claim is $1,286.14 (resulting in a TTD rate of $977.47).

8. The respondents shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

9. In lieu of payment of the above compensation and benefits to the claimant, the respondent shall:

> a. Within ten (10) days of the date of service of this order, deposit the sum of $1,028.89 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, 633 17th Street, Suite 400, Denver, Colorado 80202, Attention: Gina Johannesman, Trustee; **OR**
>
> b. Within ten (10) days of the date of service of this order, file a bond in the sum of $1,028.89 with the Division of Workers' Compensation:
>
> i. Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or
>
> ii. Issued by a surety company authorized to do business in Colorado.
>
> iii. The bond shall guarantee payment of the compensation and benefits awarded.

10. The respondents shall notify the Division of Workers' Compensation of payments made pursuant to this order.

11. The filing of any appeal, including a petition to review, shall not relieve the respondents of the obligation to pay the designated sum to the trustee or to file the bond. Section 8-43-408(2), C.R.S.

Dated this 17th day of August 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Has Clamant shown, by a preponderance of the evidence, that she suffered a compensable work injury on or about January 3, 2018?

II. If such injury is compensable, has Claimant shown that the right of selection passed to her, due to Respondents' failure to timely provide a Designated Provider list?

III. If such injury is compensable, what medical treatment has Claimant shown she is entitled to receive?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background

1. Claimant was employed with Employer for approximately 11½ years as a bookkeeper. On January 3, 2018, Claimant reported to work a few minutes late due to a pre-scheduled doctor's appointment for right hip pain. When Claimant reported to work after her appointment, she was notified by her employer, Anthony T[Redacted], that her position was moving to Denver and that she was being laid off, effective immediately. She was advised she could box up her personal belongings and put them in her car. According to Anthony T[Redacted], Employer's business manager, she was paid for that day, plus a severance.

2. Less than an hour after being notified of her separation from the company, Claimant states she fell while walking in the parking lot while carrying the second of '6 or 7' boxes to her car. This incident was not reported to Employer when it occurred. A *First Report of Injury* was filed by Claimant's attorney on January 28, 2018. A *Notice of Contest* was filed by Respondents on February 27, 2018. Claimant filed an initial *Application for Hearing* on April 12, 2018. (Ex. A).

Initial Treatment at St. Francis Emergency Room

3. On January 5, 2018, Claimant reported to the Emergency Room at St. Francis Medical Center, complaining of pain in her "left foot, right hip, right side of her neck and shoulder" as a result of a "fall forward onto her left side and then backwards onto her right side." (Ex. I, p. 47). She had not reported her alleged injury to her employer at the time, and went to the ER on her own accord. (At hearing, Claimant admitted to chronic right hip pain with ongoing treatment and that she initially felt fine after the fall).

4. Claimant told the ER physicians "that when she fell *she did not hit her head* and denies any loss of consciousness. She has not had any ongoing neurological symptoms." (Ex. I, p. 47)(emphasis added). Claimant denied eye pain, back pain, headache, or other joint pain. *Id.* Physical examination failed to reveal any evidence of outward trauma (bruising/edema/abrasions, bleeding, etc...) to Claimant's right knee, hip, or shoulders, her head was noted as atraumatic, her neck was supple with no tenderness, and her back showed "no signs of trauma." *Id* at 47-49.

5. Imaging showed no evidence of acute trauma to Claimant's left foot or right hip. *Id* at 49. Claimant was recommended to attend her pre-scheduled right hip MRI, and noted feeling much better after a short course of pain medications. *Id* at 50. She was discharged home with a "final diagnosis" of right hip and left foot pain, without recommending further treatment or therapy related to her alleged fall. *Id*

Claimant Returns for Pain Treatment for her Hip

6. Claimant reported to her pain management specialists at Pain Management of the Rockies on January 11, 2018 for review of her complaints. (Ex. F, p. 30). Claimant complained of a subjective increase in her right pain complaints since a fall at work. *Id* Physical examination during this visit revealed no outward signs of acute trauma, Claimant's neck demonstrated normal ranges of motion, and "no acute injury" was noted after review of Claimant's right hip MRI. *Id.* She was advised to contact her employer for continuity of care.

Claimant Initially Bypasses Occupational Medicine

7. Claimant did not contact her employer; instead she sought treatment again at St. Francis ER. On January 29, 2018, (one day **after** the *First Report of Injury* was filed) Claimant presented to the St. Francis Emergency Room, with complaints of ongoing right neck and right hip pain after mechanical fall. (Exhibit I, p. 52). Neurological examination confirmed Claimant had no ongoing neurological symptoms. A review of her neurological symptoms revealed "No headache." *Id.* At this visit, again *no mention was made by Claimant of hitting her head.*

8. Further imaging (of Claimant's neck, not her head) showed no evidence of acute injury, and only early degenerative disc disease at Claimant's C4-5. *Id* at 55. Dr. Nichols believed Claimant's ongoing complaints originated from her trapezius muscles as she had no signs of a spinal injury and improved significantly with muscles relaxers. *Id.* Claimant was discharged with pain medications and recommended to continue conservative treatment with her primary care physician. *Id.*

9. On March 14, 2018, Claimant returned to the St. Francis Emergency Room, this time complaining of significant headache after a fall backwards while at work. Claimant, for the first time to St. Francis, now alleged that she struck the back of her head on asphalt but did not lose consciousness. According to the intake notes of Dr. Hakkenen, Claimant now "presents to the ED with a persistent headaches(s) since January 3rd, worse since

last night." (Ex. I, p. 57). The ER physicians immediately conducted a CT scan of Claimant's head; however, the CT scan was negative for acute abnormalities. She was prescribed medication for her headache and was released from care. *Id.*

Claimant also Treats at Concentra

10. Records show, however, that Claimant had also begun to visit Concentra, prior to her 3/14/2018 visit to St. Francis ER, *supra.* (It is also noted that neither her visits to Concentra, nor her diagnoses or treatment plan, were mentioned to the treating ER physician on 3/14/2018). The initial visit to Concentra occurred on 2/23/2018. At this visit, Claimant first indicated to any medical provider that she had hit the back of her head during this fall. (Ex. J, p. 63). It was noted by Concentra that there had been no CT during her ER trip on 1/3/2018, and ER had ruled out a concussion.

11. In the original Concentra 2/23/2018 intake notes to Fernando Ortiz, MD,[which the ALJ observes had not been carried over from some other prior record, i.e., such notes were generated on that date], under *Occupational History,* it states: "Not scheduled to work today", "Patient is satisfied with her job", and "There is support on the job" *Id.* Her *Assessment* included (only) 1. Shoulder pain, right, 2. Hip pain, right. She was to begin prescription medications and physical therapy. *Id* at 64.

12. Claimant also attended physical therapy with Concentra, on 2/23/2018, 2/27/2018, 3/1/2018, 3/2/2018, and 3/5/2018. (Ex. J). During these visits, Claimant complains of a constellation of symptoms, each time varying from the previous visit. On 2/23/2018, she reports her ankle pain is now at a 10/10. On 2/27/2018, her right hip bothers her the most. She complains in varying amounts about right sided headaches. PT notes indicate exaggerated pain symptoms, with no correlating anatomic structures. *Id* at 77.

13. Claimant attended her second, and final visit to a Concentra physician on 3/6/2018. (Ex. J, p. 67). Notes from Chad Davis, MD, indicate no change in any of her pain locations since her original fall of 1/3/2018. There were no findings on exam to suggest anything other than muscular or ligamentous injuries. *Id* at 68. She was then referred to delayed recovery.

14. On March 21, 2018, Dr. Kurz evaluated Claimant for her continued complaints of pain. (Ex. L). Claimant was observed to enter and exit the office and climb up and down from the exam table without difficulty. *Id* at 86. Dr. Kurz noted Claimant complained of "chronic, pre-existing, congenital issues resulting in reduced range of motion at bilateral shoulders, and chronic, pre-existing right hip pain, also unrelated to this claim." *Id* at 84. Physical examination revealed normal range of motion in her bilateral hips, knee, and ankles with normal sensation and strength throughout, "specifically normal exam of left foot and ankle and toes." *Id* at 86.

15. It was Dr. Kurz' opinion that Claimant had not sustained a work-injury but if she had, she had been appropriately treated and brought back to her baseline status. It was his opinion that Claimant had attained MMI (if compensable) without impairment or restriction, as she

had a normal physical exam without qualifying or ratable impairments noted. *Id* at 87.

Claimant Stops Treating at Concentra; Seeks Treatment Privately

16. Claimant subsequently withdrew her workers' compensation claim, while then attempting to pursue litigation against the policyholder for premises liability. (Ex. B). Claimant continued to seek out and receive extensive treatments from non-authorized providers starting in March 2018 and extending through April of 2021. None of this had been reported to Respondents. (Ex. E-Q).

IME by Dr. Raschbacher

17. Dr. Jeffrey Raschbacher M.D., a physician in occupational medicine, completed an IME of Claimant on June 1, 2021 and issued a report. (Ex. Q). He noted Claimant had not worked since being laid off on January 3, 2018. Claimant also advised him that her husband is disabled from a back injury and is not working. *Id* at 401. On that day, Claimant claimed her left ankle twisted on crumbled asphalt which caused her right knee to go forward and the rest of her body backward. Claimant told Dr. Raschbacher that she has experienced 18 different symptoms at one time or another as a result of the alleged fall and that all of her conditions were getting worse even now over 3.5 years later. *Id* at 400-401. She admitted to previously having 8-9/10 pain in right hip, but claimed the pain went away after an injection despite having being recommended to undergo an MRI of her right hip due to a lack of improvement. *Id.* Dr. Raschbacher noted Claimant had no issues ambulating around the examination room and gesticulating with her extremities during his IME exam.

18. After review of the medical records and physical examination and interview of Claimant he opined that it was reasonable to conclude that she had chronic pain prior to her injury claim date as she complained of low back pain, shoulder area pain, had a shoulder myofascial pain diagnosis, had several injections at the low back and hips on each side. *Id* at 409. He wrote that Claimant had complaints of numerous body part injuries since her claim over 3.5 years ago without any clear substantiating objective findings except some arthritis in the foot, which was pre-existing and not work related. *Id*. Dr. Raschbacher thought it was remarkable to note that she claimed an unwitnessed and unreported workers' compensation injury just after being laid off, but was able to continue packing numerous boxes through the same parking lot without issue.

19. Dr. Raschbacher did not believe that Claimant's report of hitting her head to him and other providers was accurate, since the ER physicians' notes during multiple visits clearly contradicted her later claims. *Id* at 409-410. He did not believe that there was any medical reason or objective support as to why she would still have the subjective degree of continually increasing symptomatology and dysfunction 3-3.5 years after an alleged fall which caused no outward signs of trauma. He concluded that he believed no such incident had occurred at all.

Dr. Raschbacher Testifies at Hearing

20. Dr. Raschbacher testified at hearing, and consistently with his IME report. He stated that if Claimant's current head complaints and symptoms were in fact due to a head injury on January 3, 2018, all medical literature and studies indicate that her symptoms would be getting better, and not worse as Claimant claimed. He believed the initial Emergency Room Visit was significant, in that it noted Claimant denied having hit her head, a neurological examination noted no headache or neurological symptoms, and physical examination failed to reveal an iota of evidence of physical trauma having occurred. He had no doubt that if Claimant mentioned having struck the back of her head on asphalt and that she had 9/10 pain in her head, she would have received a full ER work-up including CT scan.

21. Dr. Raschbacher reiterated how important it was to attempt to corroborate Claimant's subjective statements with objective findings. However, he testified that there was no objective evidence which could substantiate the conclusion that an injury occurred. However, even if the mechanism of injury as described by Claimant did occur, medically there is no explanation why her symptoms continue to get worse.

22. Dr. Raschbacher did not believe there was any evidence to support the conclusion that any of Claimant's pain complaints or conditions were aggravated or accelerated by an incident on January 3, 2018. He believed Claimant's complaints of pain after January 3, 2018 were a continuation of her pain complaints which were pre-existing to her alleged fall on January 3, 2018. He did not ultimately believe that there was a fall experienced by Claimant on January 3, 2018.

Claimant Testifies at Hearing

23. Claimant testified at hearing. Claimant alleged that as her left foot twisted in the parking lot, she was able to throw the box she was carrying into the trunk before grabbing onto her bumper but then claimed she fell backward hitting the back of her head on asphalt. Claimant stated that she had her husband take a picture of the asphalt parking lot within 3-4 days of being laid off (Ex. 13). Despite claiming to have just experienced a fall that is now producing worsening symptoms 3.5 years later, Claimant denied having experienced any pain immediately after the fall, but alleged she was bleeding from her right knee. Claimant alleged she was unable to report her alleged injury to her employer Anthony T[Redacted]; however, she admitted to shaking his hand and briefly speaking with him while he was off the phone and as she was leaving. She also indicated that she told "Ralph" that she had fallen, and thinks she told him she was bleeding. She has not worked since January 3, 2018, and is not now seeking employment. She is aware that her health insurance from Employer is no longer in effect.

24. Claimant initially stated that she first felt a headache the night after the fall. It was a 9/10. She has had right-sided headaches every day since, and they are now 'even worse'. She reported that her initial left foot pain was '6 or 7/10', but now she cannot not even walk on her left foot. Her neck pain was 9/10. It is even worse now. She had never experienced neck pain before this incident. She acknowledged some preexisting shoulder pain, but now cannot complete basic activities of daily living. Injections, physical therapy, and

muscle relaxers have not helped. Her low back now hurts constantly, and it is hard to walk down stairs. While acknowledging some preexisting hip pain, it used to be ‘every 3 or 4 months’ now, it is constant.

25. On cross-examination, Claimant stated it was ‘possible’ that her (already scheduled) 1/8/2018 MRI was to address existing hip pain. (*see* Ex. F, pp. 25-29). She could ‘not recall’ if her orthopedist had scheduled an MRI for her shoulders at a visit on 12/17/2018, since injections were not helping. (*see* Ex H, pp. 41-46). She does not remember if she had difficulty finishing up loading the rest of the boxes into her car. Claimant indicated that she first saw her PCP on January 5, 2018, who then directed her to the Emergency Room. [The ALJ is unable to identify any such report of referral from Claimant’s PCP in the records in evidence]. When asked about prior complaints of neck pain from 2016, Claimant could ‘not recall’.

26. Claimant insisted that she told the ER staff that she had 9/10 head pain on 1/3/2018 due to the fall. If they failed to address that in her treatment, then it was the ER’s mistake. She returned to the ER on 1/29/2018, whereupon she “had to have mentioned” her head pain at that visit, but could not recall specifically. She could not recall if Dr. Kurz had placed her at MMI with no further treatment; nonetheless, she never went back to him to seek any more treatment.

27. Despite successfully navigating the parking lot multiple times each work-day for 11 years without incident, Claimant acknowledged she had an unwitnessed and unreported fall within 60 minutes of being laid off from her position. She eventually admitted to undergoing active treatment for her low back, right hip, and bilateral shoulders prior to her alleged injury. Claimant claimed she hit the back of her head, which has now caused a diagnosis of a concussion, but did not even sustain a bump on her head from doing so. She denied having any immediate head pain from the fall, but then complained of having 9/10 head pain thereafter.

28. A Review of Claimant’s prior medical records show Claimant had numerous chronic and pre-existing complaints of pain and dysfunction. Starting as far back as January 2013 with right shoulder rotator cuff surgery, Claimant progressively developed pain and dysfunction, which extended into her neck, low back, right hip, and bilateral shoulders. So much so, that Claimant had a pain management specialist following her, had already attended an appointment the morning of her alleged fall, had received numerous injections less than 1 year prior, and was already recommended and scheduled to undergo an MRI of her right hip due to a failure to improve. (Ex. E, F, H).

Anthony T[Redacted] Testifies at Hearing

29. Anthony T[Redacted] testified at hearing. Mr. T[Redacted] confirmed Claimant arrived just after 8:00 am, and that he immediately notified her, along with his assistant, that she was going to be laid off. Mr. T[Redacted] explained how serious he took the responsibility of laying someone off, and denied having being on the phone while Claimant was removing her personal items. He stated he remained in the conference room. Mr.

T[Redacted] denied having observed any indication that Claimant had sustained a fall in the parking lot. He then walked Claimant out the back door and had a conversation with her. He was never notified by Claimant that she sustained a work-injury but was instead told by his insurance provider.

Nancy A[Redacted] Testifies at Hearing

30. Nancy A[Redacted] testified at hearing. She testified that Respondents appropriately provided Claimant a designated provider list pursuant to C.R.S. 8-43-404(5)(a)(I)(A) and WCRP 8-2. Claimant was initially given a designated provider list in Denver, since that is where Employer's main offices are. (*see* Ex. R). However, after discussion with Claimant's attorney, Claimant agreed on Concentra in Colorado Springs as her authorized provider. Ms. A[Redacted] testified that the last bill and request for treatment received under Claimant's workers compensation claim was on March 21, 2018. She testified that she received no further requests for treatment, or referrals to other providers, and that all treatment received after March 21, 2018 was from unauthorized providers

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002).

D. In this instance, the ALJ finds Anthony T[Redacted] and Nancy A[Redacted] to be credible and reliable in recounting what they recalled, and reasonable in the actions they took. The ALJ also finds Dr. Raschbacher's examination and conclusions, however harsh at first glance, to be compelling. As will be discussed, infra, whether for self-serving reasons, or a severe somatoform disorder, Claimant's version of events is simply not credible – not to the various medical providers, nor in her testimony.

Compensability, Generally

E. Claimant must prove by a preponderance of the evidence that he is a covered employee who suffered an injury arising out of and in the course of employment. C.R.S. § 8-41-301(1); *See*, *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett, 33 P.3d 1230* (Colo. App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 592 P.2d 792 (Colo. 1979).

F. An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract.

Preliminary Observation Number One

G. Assuming the falling incident as described by Claimant had occurred, and resulted in injury, it would have indeed been compensable. It occurred on Employer's parking lot, in an authorized employee parking area. As noted by Claimant, case law indicates that leaving employment under these circumstances has a sufficient nexus to the employment relationship that it would have occurred in the course and scope of employment. However, if Respondents were ever pursuing that as a defense, they are not doing so now.

Preliminary Observation Number Two

H. Once Claimant's *First Report of Injury* was actually received, there was a brief administrative error by Employer in providing a Designated Provider list. The ALJ concludes such error occurred in good faith, and for understandable reasons. The error was promptly rectified when called to Employer's attention. Even if this claim were compensable, Claimant could not show any prejudice by this brief administrative issue, and could in no way have claimed in good faith that she was somehow not bound to select from the corrected list of Colorado Springs Authorized Providers. In fact, she chose the local Concentra office anyway. And that issue is now moot.

Preliminary Observation Number Three

I. While this fall as alleged by Claimant was unwitnessed, such events often are, and through no fault of the injured worker. Either a claimant is fortunate enough to have someone standing nearby (or a video, for example) to corroborate it, or they must rely upon corroborating evidence. Such corroborating evidence, however, is usually not hard to come by. But such corroboration is totally absent here. Secondly, although Claimant was presumably familiar with the general disrepair of the parking lot, it is understandable that she still might have missed seeing the pothole, since 1) she had a box in front of her, obscuring the view of her feet, and 2) she was in a state of understandable distress, thus distracted.

Compensability, as Applied

J. Nonetheless, Claimant's credibility is severely lacking. To the extent that her version of events on scene differ from those of Mr. T[Redacted], the ALJ finds Mr. T[Redacted] to be more reliable. Claimant had a series of preexisting conditions prior to this alleged fall. She either denied them outright, or minimized them in order to pursue this claim. Her motives were fairly transparent; she was out of work, would soon lose her health insurance, is still not seeking work, and her husband is apparently on disability himself. She rolled the dice.

K. Claimant now complains that she struck her head in this incident, resulting in severe headaches. She insists that she told ER personnel about it both times, and that the ER got it wrong in failing to note it. The ALJ finds this claim to be not merely uncorroborated, but outrageous. Dr. Raschbacher's analysis is persuasive. There is no way the ER would allow this allegation of a head injury to go untreated. Twice. They would also not fail to note blood on her knee from this alleged fall. And the ALJ also finds, in accordance with Dr. Raschbacher, that if Claimant's injuries occurred as she described, her symptoms would get better over time. Instead, she alleges that they got *worse* – not merely one symptom, but *all of them.* This is simply highly medically improbable.

L. For reasons not entirely clear, when Claimant first presented to Concentra, she cited an ongoing, satisfactory, and supportive work environment. It is possible Claimant believed she needed to remain employed to maintain coverage. However, when it became apparent that Claimant was not going to get any traction in the Workers Compensation arena, she went back to St. Francis *emergency room,* yet again, for the same allegation, now ten weeks after the fact. And this time, for an alleged head injury, now being reported to the ER for the first time. Following protocol, St. Francis dutifully imaged her, and found nothing to corroborate her complaints. However, (and without the benefit of being advised by Claimant of her Concentra visits), subsequent medical providers have now referenced a possible concussion. Such references were made solely on Claimant's self-reporting of same. Now such references are being touted by Claimant as proof that such a diagnosis was made. As Dr. Raschbacher put it: "Garbage in, Garbage out." The ALJ concurs.

M. The ALJ does not find that Claimant fell in the parking lot, suffered minor injuries, was treated, and reached MMI in short order. Instead, the ALJ finds that Claimant never fell at all, as she has alleged. This claim is not compensable.

Medical Benefits

N. There being no nexus whatsoever between Claimant's medical complaints and a work injury, Claimant's claim for medical benefits is denied and dismissed.

ORDER

It is therefore Ordered that:

1. This claim is not compensable. Claimant's claim for Workers Compensation benefits is denied and dismissed.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is* ***highly recommended*** *that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: August 17, 2021

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that the L3-L4 and L4-L5 decompression and fusion surgery recommended by Bryan Andrew Castro, M.D. is reasonable, necessary and causally related to his August 15, 2019 industrial injury.

2. Whether Respondents have proven by a preponderance of the evidence that they are entitled to recover costs for three missed independent medical examination appointments with Brian Reiss, M.D. that were scheduled for November 4, 2020, February 3, 2021 and March 10, 2021.

FINDINGS OF FACT

1. Claimant worked for Employer as a Ramp Agent. His job duties involved loading and unloading passenger luggage and other cargo from commercial aircraft. Claimant typically moved between 60 and 90 pieces of luggage and 25 pieces of cargo per plane during his workday. He worked eight hours per day for five days each week.

2. While loading and unloading aircraft Claimant was typically inside the cargo-hold to either take luggage/cargo from the conveyor belt and stack it in the hold or remove the luggage from the hold and place it on the conveyor belt. Claimant was often on his knees while lifting and twisting during the loading and unloading process.

3. On August 15, 2019 Claimant suffered an admitted industrial injury during the course and scope of his employment with Employer. He explained that, while he was in the process of loading bags into the plane, his feet went out from under him and he landed on concrete on his back.

4. Claimant has previously experienced lower back symptoms. On August 10, 2015 Claimant was involved in a motor vehicle accident and suffered lower back pain. His symptoms continued to increase for several months.

5. By April 19, 2016 Claimant's medical providers, David Whatmore, PA-C, and Chad Prusmack, M.D. determined that he had suffered a "permanent injury to his lumbar spine as a direct result of his motor vehicle accident dated 8/10/2015." Dr. Prusmack recommended Claimant as a candidate for a surgical decompression at L3-L4 with possible non-segmental instrumentation.

6. On June 13, 2016 Dr. Prusmack determined that Claimant "had significant neurogenic claudication and a disc protrusion with stenosis at L3-L4 causing severe central canal stenosis as well as bilateral foraminal stenosis." Neurogenic claudication for Claimant involves decreased blood supply to the nerves in his lower back. The lack of

oxygen to the nerves causes pain and weakness in the legs. Dr. Prusmack recommended an L3-L4 “minimally invasive decompression” and possible non-segmental instrumentation.

7. Claimant acknowledged that, if he suffered from the same symptoms and limitations in 2016 as he does today, he would have had no choice but to undergo the surgery recommended by Dr. Prusmack. However, he emphasized that his lumbar condition was not significant enough to proceed with any type of surgery in 2016.

8. Claimant detailed that, after injection therapy for the August 10, 2015 motor vehicle accident, he returned to his normal level of function and activities. His activities included working out in the gym up to twice per day, cycling, lifting weights, hiking, attending concerts at Red Rocks Amphitheater, helping a disabled friend with moving heavy items, assisting in building a concrete patio that required lifting bags of cement weighting 100 pounds, and walking four to five hours at a time. Claimant remarked that he performed the preceding activities between June 2016 and his August 15, 2019 industrial accident.

9. Sander Orent, M.D. testified that pain diagrams completed in 2016 reflected that Claimant was experiencing radicular symptoms down his lower extremities that were “quite telling.” He reasoned that any claudication Claimant was experiencing in 2016 was transient and resolved with injection therapy. Dr. Orent also noted that Claimant did not undergo medical treatment for his lower back between June 2016 and his work injury on August 15, 2019.

10. On September 10, 2019 Claimant underwent a lumbar MRI for his August 15, 2019 industrial injury. The MRI revealed disc bulging at the L3-L4 and L4-L5 levels of Claimant’s lumbar spine. The L4-L5 herniation included extruded disc material. The imaging also showed severe stenosis at the L3-L4 and L4-L5 levels.

11. On September 12, 2019 Claimant was evaluated by Stephen F. Pehler, M.D. for his August 15, 2019 industrial injury. Claimant reported severe lower back pain, bilateral buttock, and lower extremity pain. He also noted that his symptoms were worsening with increasing numbness and lower extremity weakness. Dr. Pehler remarked that Claimant’s lumbar MRI demonstrated a disc herniation as well as severe stenosis at L4-L5 and moderate stenosis at L3-L4. He diagnosed Claimant with: 1) lumbar spondylosis with myelopathy; 2) lumbar spondylolisthesis; 3) intervertebral disc stenosis of the neural canal of lumbar region; and 4) lower back pain. Due to the objective diagnostic findings and Claimant’s symptoms, Dr. Pehler discussed lumbar surgery in the form of a decompression at the L3-L5 levels with a fusion at the L4-L5 level.

12. Following his evaluation with Dr. Pehler, Claimant began treatment with Authorized Treating Physician (ATP) Bryan Andrew Castro, M.D. on October 18, 2019. Dr. Castro reviewed Claimant’s medical records and performed a physical examination. He assessed Claimant with lumbar spine pain that required further evaluation. Dr. Castro determined that Claimant had a large disc herniation “resulting in congenital narrowing resulting in severe central canal impingement at L4-L5 and to a lesser extent at L3-L4.”

Dr. Castro recommended conservative treatment with lumbar injections, but he considered surgical intervention based on Claimant’s severe stenosis. However, the injections only provided short-term benefit before Claimant’s symptoms returned.

13. Dr. Castro ultimately recommended a lumbar decompression at the L3-L4 and L4-L5 levels with a fusion at the L4-L5 level. He remarked that the decompression at L3-L4 and L4-L5 was required because of the disc herniation.

14. On June 4, 2020 Claimant underwent another lumbar spine MRI. The MRI revealed severe central canal narrowing at L3-L4 and a two mm disc protrusion. At the L4-L5 level there was moderate central canal narrowing and a three mm disc protrusion.

15. Respondents denied the surgical request after three peer reviews by Sean L. Lager, M.D. Dr. Lager reviewed Claimant’s medical records and on September 4, 2020 determined that he did not exhibit any neurological deficits on examination. He reasoned that the lack of neurological deficits rendered the surgery proposed by Dr. Castro not medically necessary.

16. After Claimant filed an Application for Hearing challenging the denied surgical request, he underwent an independent medical examination with Brian Reiss, M.D. on May 19, 2021 after he initially missed three appointments. Dr. Reiss issued reports on May 19, 2021 and June 9, 2021. The second report was completed after Dr. Reiss reviewed additional records from Claimant’s motor vehicle accident in 2015.

17. Dr. Reiss discussed Claimant’s disc herniation in his June 9, 2021 report. While both he and Dr. Castro agreed that the disc herniation was a new injury to Claimant’s lumbar spine, their differences emerged regarding whether the problem had resolved and required surgery. Dr. Reiss testified that the disc herniations at the L3-L4 and L4-L5 levels had resolved.

18. Dr. Reiss explained that the June 4, 2020 MRI demonstrated that Claimant’s extruded fragments at the L3-L4 and L4-L5 levels had resolved. Specifically, the MRI did not show the disc herniations at the L3-L4 and L4-L5 levels that had been present on the September 10, 2019 MRI. Dr. Reiss reasoned that, because the disc herniation had resolved, surgical treatment was not necessary. He explained that generally disc herniations do not usually require surgical intervention because 95% of the time they resolve non-operatively.

19. In both his June 9, 2020 report and during his testimony at hearing Dr. Reiss acknowledged that Claimant likely suffered some residual nerve pain to the left lower extremity as a result of his disc herniations. However he explained that residual nerve damage is not a surgical problem. Instead, nerve damage could be treated with neuroactive medications and Claimant’s lingering back pain could be treated through a therapy program directed at core strengthening, aerobic conditioning and stretching.

20. In contrast, Dr. Castro explained that Claimant’s presentation and symptoms following the August 5, 2019 work injury were different than after his 2015

motor vehicle accident. Dr. Castro reasoned that Claimant's current symptoms are more related to nerve impingement. In 2015 and 2016 Claimant's primary issue involved lower back pain. His symptoms resolved and there was then a lack of medical treatment for Claimant's lower back until August 15, 2019. Dr. Castro summarized that "by definition, [Claimant] got better" following his brief lower back treatment through June 2016. However, Claimant currently suffers from radicular symptoms that were not present in his lower extremities in 2015 or 2016. The lack of radicular symptoms in 2015-16 reveals that Claimant had a "distinctly different presentation" following his work injury.

21. In addition to suffering from neurogenic claudication as discussed by Dr. Orent, Dr. Castro also remarked that Claimant suffers from lumbar radiculopathy. Radiculopathy is the result of nerve root impingement and causes numbness, tingling, shooting pains and weakness down one or both legs. Claimant's radicular symptoms were confirmed by an EMG nerve conduction study.

22. Dr. Castro detailed that Claimant's pain down his legs and claudication is a lot worse now that prior to his industrial injury. He remarked that claudication substantially diminished Claimant's function because he cannot walk very far. In contrast, Claimant's previous symptoms were limited to lower back pain. Dr. Castro emphasized that the proposed decompression and fusion surgery is designed to address Claimant's neurogenic claudication, radiculopathy and structural instability that is likely to result from the L3-L4 and L4-L5 decompression. The surgery is not intended to address Claimant's generalized back pain. Dr. Castro concluded that Claimant's work injury has caused a permanent aggravation and exacerbation of his underlying, pre-existing pathology. He confirmed that Claimant satisfies all pre-surgical requirements specified in Rule 17, Exhibit 1, §G(4)(e) of the Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*).

23. Dr. Castro testified the first lumbar MRI on September 10, 2019 revealed a disc herniation that constituted a new injury as a result of Claimant's August 15, 2019 work event. Claimant's large disc herniation and compression was not present in 2015. The large disc herniation compressing his nerves caused the sudden onset of Claimant's symptoms after his industrial injury. Although Claimant's second lumbar MRI on June 4, 2020 revealed that the disc herniation had become smaller, it still caused some nerve compression and symptoms. Dr. Castro thus concluded that the proposed surgery is reasonably and necessary for Claimant's August 15, 2019 industrial injury.

24. Dr. Orent testified consistently with Dr. Castro's recommendation for surgical intervention. Considering Claimant's medical records, the development of new signs and symptoms since the work injury and Claimant's high level of functionality between June 2016 and August 2019, Dr. Orent reasoned that it is more medically probable that the lumbar decompression and fusion surgery recommended by Dr. Castro is reasonable, necessary and causally related to Claimant's August 15, 2019, work injury. Notably, Claimant's work injury caused a permanent aggravation and acceleration of his underlying asymptomatic lumbar pathology.

25. Claimant has demonstrated that it is more probably true than not that the L3-L4 and L4-L5 decompression and fusion surgery recommended by Dr. Castro is reasonable, necessary and causally related to his August 15, 2019 industrial injury. Initially, on August 15, 2019 Claimant suffered an admitted industrial injury during the course and scope of his employment with Employer. He explained that, while he was loading bags onto a plane, his feet slipped out from under him and he landed on his back on concrete. In an evaluation with Dr. Pehler Claimant reported severe lower back pain, bilateral buttock, and lower extremity pain. He also noted that his symptoms were worsening with increasing numbness and lower extremity weakness. Dr. Pehler remarked that Claimant's September 10, 2019 lumbar MRI demonstrated a disc herniation and severe stenosis at L4-L5 with moderate stenosis at L3-L4. He diagnosed Claimant with: 1) lumbar spondylosis with myelopathy; 2) lumbar spondylolisthesis; 3) intervertebral disc stenosis of the neural canal of lumbar region; and 4) lower back pain. Due to the objective diagnostic findings and Claimant's symptoms, Dr. Pehler discussed lumbar surgery in the form of a decompression at the L3-L5 levels with a fusion at the L4-L5 level.

26. Claimant was involved in a motor vehicle accident in 2015 and suffered lower back pain. His symptoms were limited to his lower back and did not include radicular symptoms down his lower extremities. Claimant's condition ultimately resolved following lower back injections. Furthermore, Claimant was able to return to a high level of function following his 2016 lumbar injections that included working out in the gym up to twice per day, cycling, lifting weights, hiking, attending concerts at Red Rocks Amphitheater, helping a disabled friend with moving heavy items, assisting in building a concrete patio that required lifting bags of cement weighting 100 pounds, and walking four to five hours at a time. Claimant was capable of performing the preceding physical activities, as well as his demanding occupational activities until his August 15, 2019 work injury.

27. Dr. Castro determined that Claimant had suffered a large disc herniation "resulting in congenital narrowing resulting in severe central canal impingement at L4-L5 and to a lesser extent at L3-L4" as a result of his August 15, 2019 industrial accident. After initially recommending conservative treatment with lumbar injections, Dr. Castro proposed surgical intervention in the form of a lumbar decompression at the L3-L4 and L4-L5 levels with a fusion at the L4-L5 level. Dr. Castro testified the first lumbar MRI on September 10, 2019 revealed a disc herniation that constituted a new injury as a result of Claimant's work injury. Claimant's large disc herniation and compression was not present in 2015. The large disc herniation compressing his nerves caused the sudden onset of Claimant's symptoms after his industrial injury. Although Claimant's second lumbar MRI on June 4, 2020 revealed that the disc herniation had become smaller, it still caused some nerve compression and symptoms. Dr. Castro further detailed that Claimant's pain down his legs and claudication is much worse than prior to his industrial injury. He remarked that claudication substantially diminished Claimant's function.

28. Dr. Castro explained that the proposed surgery is reasonable and necessary medical treatment for Claimant's August 15, 2019 industrial injury. He summarized that the proposed decompression and fusion surgery is designed to address Claimant's neurogenic claudication, radiculopathy and structural instability that is likely to result from the L3-L4 and L4-L5 decompression. Dr. Castro determined that Claimant's

work injury caused a permanent aggravation and exacerbation of his underlying, pre-existing pathology. He also confirmed that Claimant satisfies all pre-surgical requirements specified in Rule 17, Exhibit 1, §G(4)(e) of the *Guidelines*. Dr. Orent testified consistently with Dr. Castro's recommendation for surgical intervention. Considering Claimant's medical records, the development of new signs and symptoms since the August 2019 work injury and Claimant's high level of functionality between June 2016 and August 2019, Dr. Orent reasoned that it is medically probable that the lumbar decompression and fusion surgery recommended by Dr. Castro is reasonable, necessary and causally related to Claimant's August 15, 2019, work injury. Notably, Claimant's work injury caused a permanent aggravation and acceleration of his underlying asymptomatic lumbar pathology.

29. In contrast, Dr. Reiss explained that the June 4, 2020 MRI demonstrated that Claimant's extruded fragments at the L3-L4 and L4-L5 levels had resolved. Specifically, the MRI did not reveal the presence of the disc herniations at the L3-L4 and L4-L5 levels that had been existed on the September 10, 2019 MRI. Dr. Reiss reasoned that, because the disc herniations had resolved, surgical treatment was not necessary. Nevertheless, although he acknowledged that Claimant likely suffered some residual nerve pain to the left lower extremity as a result of his disc herniations, his symptoms could be treated conservatively. Despite Dr. Reiss' opinion, the medical records and persuasive opinions of Drs. Castro and Orent reveal that Claimant's August 15, 2019 work injury caused a permanent aggravation and exacerbation of his underlying, pre-existing lower back pathology. Specifically, Claimant's ability to return to a high level of function prior to his August 15, 2019 industrial accident and a new disc herniation causing compression and radicular symptoms reveal that the surgery proposed by Dr. Castro is reasonable and necessary to cure or relieve the effects of Claimant's industrial injury. Notably, although Claimant's second lumbar MRI on June 4, 2020 reflected that the disc herniation had become smaller, it still caused some nerve compression and symptoms. Accordingly, Claimant has demonstrated that it is more probably true than not that his employment aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment in the form of L3-L4 and L4-L5 decompression and fusion surgery recommended by Dr. Castro.

30. Respondents have failed to prove that it is more probably true than not that they are entitled to recover costs for three missed independent medical examination appointments with Dr. Reiss. Specifically, Claimant missed three appointments with Dr. Reiss on the following dates: November 4, 2020; February 3, 2021; and finally March 10, 2021. Claimant selected Dr. Orent to accompany him to the preceding appointments. However, Claimant rescheduled the three appointments because Dr. Orent had conflicting obligations. Respondents argue they are entitled to recover the cost of three missed appointments against future indemnity payments to Claimant.

31. Claimant remarked that he did not complete the first appointment on November 4, 2020 because he and Dr. Orent had been waiting for at least 45 minutes for Dr. Reiss. However, Dr. Orent had to leave for his own appointment. Claimant explained that Dr. Orent called his attorney before leaving, and after speaking to the attorney, they ultimately left Dr. Reiss' office. Regarding the second independent medical examination

scheduled with Dr. Reiss for February 3, 2021 Claimant testified that he received a call from his attorney stating that Dr. Orent was unavailable to attend. Consequently, the appointment had to be rescheduled. Similarly, for the independent medical examination appointment scheduled with Dr. Reiss for March 10, 2021, Claimant commented that he was again instructed by his attorney that Dr. Orent was unable to attend. The appointment had to be rescheduled.

32. Respondents essentially assert that §8-43-404(1)(b)(II), C.R.S. does not limit the definition of "estimated expenses" to only those enumerated as evidenced by the word "including" in the language of the statute. Despite Respondents assertion, §8-43-404(1)(b)(II), C.R.S. does not require Claimant to reimburse them for any cancellation fees associated with missed independent medical examination appointments. To interpret §8-43-404(1)(b)(II), C.R.S. as Respondents propose would require reading words into the statute. However, courts are precluded from reading nonexistent provisions into the Act. *See Archuletta v. Industrial Claim Appeals Office*, 381 P.3d 374, 377 (Colo.App. 2016). Respondents argument fails because §8-43-404(1)(b)(II), C.R.S. is limited to recovery of lodging, travel, and hotel costs associated with attending an independent medical examination when the claimant misses the appointment. Accordingly, Respondents request to recover the cost of three missed independent medical examination appointments against future indemnity payments to Claimant is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Proposed Lumbar Surgery

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a preexisting condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

5. Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Industrial Claim Appeals Office,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001).

6. As found, Claimant has demonstrated by a preponderance of the evidence that the L3-L4 and L4-L5 decompression and fusion surgery recommended by Dr. Castro is reasonable, necessary and causally related to his August 15, 2019 industrial injury. Initially, on August 15, 2019 Claimant suffered an admitted industrial injury during the course and scope of his employment with Employer. He explained that, while he was loading bags onto a plane, his feet slipped out from under him and he landed on his back on concrete. In an evaluation with Dr. Pehler Claimant reported severe lower back pain, bilateral buttock, and lower extremity pain. He also noted that his symptoms were worsening with increasing numbness and lower extremity weakness. Dr. Pehler remarked that Claimant's September 10, 2019 lumbar MRI demonstrated a disc herniation and severe stenosis at L4-L5 with moderate stenosis at L3-L4. He diagnosed Claimant with: 1) lumbar spondylosis with myelopathy; 2) lumbar spondylolisthesis; 3) intervertebral disc stenosis of the neural canal of lumbar region; and 4) lower back pain. Due to the objective diagnostic findings and Claimant's symptoms, Dr. Pehler discussed lumbar surgery in the form of a decompression at the L3-L5 levels with a fusion at the L4-L5 level.

7. As found, Claimant was involved in a motor vehicle accident in 2015 and suffered lower back pain. His symptoms were limited to his lower back and did not include radicular symptoms down his lower extremities. Claimant's condition ultimately resolved

following lower back injections. Furthermore, Claimant was able to return to a high level of function following his 2016 lumbar injections that included working out in the gym up to twice per day, cycling, lifting weights, hiking, attending concerts at Red Rocks Amphitheater, helping a disabled friend with moving heavy items, assisting in building a concrete patio that required lifting bags of cement weighting 100 pounds, and walking four to five hours at a time. Claimant was capable of performing the preceding physical activities, as well as his demanding occupational activities until his August 15, 2019 work injury.

8. As found, Dr. Castro determined that Claimant had suffered a large disc herniation "resulting in congenital narrowing resulting in severe central canal impingement at L4-L5 and to a lesser extent at L3-L4" as a result of his August 15, 2019 industrial accident. After initially recommending conservative treatment with lumbar injections, Dr. Castro proposed surgical intervention in the form of a lumbar decompression at the L3-L4 and L4-L5 levels with a fusion at the L4-L5 level. Dr. Castro testified the first lumbar MRI on September 10, 2019 revealed a disc herniation that constituted a new injury as a result of Claimant's work injury. Claimant's large disc herniation and compression was not present in 2015. The large disc herniation compressing his nerves caused the sudden onset of Claimant's symptoms after his industrial injury. Although Claimant's second lumbar MRI on June 4, 2020 revealed that the disc herniation had become smaller, it still caused some nerve compression and symptoms. Dr. Castro further detailed that Claimant's pain down his legs and claudication is much worse than prior to his industrial injury. He remarked that claudication substantially diminished Claimant's function.

9. As found, Dr. Castro explained that the proposed surgery is reasonable and necessary medical treatment for Claimant's August 15, 2019 industrial injury. He summarized that the proposed decompression and fusion surgery is designed to address Claimant's neurogenic claudication, radiculopathy and structural instability that is likely to result from the L3-L4 and L4-L5 decompression. Dr. Castro determined that Claimant's work injury caused a permanent aggravation and exacerbation of his underlying, pre-existing pathology. He also confirmed that Claimant satisfies all pre-surgical requirements specified in Rule 17, Exhibit 1, §G(4)(e) of the *Guidelines*. Dr. Orent testified consistently with Dr. Castro's recommendation for surgical intervention. Considering Claimant's medical records, the development of new signs and symptoms since the August 2019 work injury and Claimant's high level of functionality between June 2016 and August 2019, Dr. Orent reasoned that it is medically probable that the lumbar decompression and fusion surgery recommended by Dr. Castro is reasonable, necessary and causally related to Claimant's August 15, 2019, work injury. Notably, Claimant's work injury caused a permanent aggravation and acceleration of his underlying asymptomatic lumbar pathology.

10. As found, in contrast, Dr. Reiss explained that the June 4, 2020 MRI demonstrated that Claimant's extruded fragments at the L3-L4 and L4-L5 levels had

resolved. Specifically, the MRI did not reveal the presence of the disc herniations at the L3-L4 and L4-L5 levels that had been existed on the September 10, 2019 MRI. Dr. Reiss reasoned that, because the disc herniations had resolved, surgical treatment was not necessary. Nevertheless, although he acknowledged that Claimant likely suffered some residual nerve pain to the left lower extremity as a result of his disc herniations, his symptoms could be treated conservatively. Despite Dr. Reiss' opinion, the medical records and persuasive opinions of Drs. Castro and Orent reveal that Claimant's August 15, 2019 work injury caused a permanent aggravation and exacerbation of his underlying, pre-existing lower back pathology. Specifically, Claimant's ability to return to a high level of function prior to his August 15, 2019 industrial accident and a new disc herniation causing compression and radicular symptoms reveal that the surgery proposed by Dr. Castro is reasonable and necessary to cure or relieve the effects of Claimant's industrial injury. Notably, although Claimant's second lumbar MRI on June 4, 2020 reflected that the disc herniation had become smaller, it still caused some nerve compression and symptoms. Accordingly, Claimant has demonstrated that it is more probably true than not that his employment aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment in the form of L3-L4 and L4-L5 decompression and fusion surgery recommended by Dr. Castro.

Recovery of Costs

11. Section 8-43-404(1)(b)(II), C.R.S. permits the employer or insurer to recover the advanced expenses paid to the claimant for his or her lodging, travel, and hotel costs associated with attending an independent medical examination when the claimant misses the independent medical examination. There is no specific Workers' Compensation Rule of Procedure that requires the claimant to reimburse the respondents for the costs of a missed independent medical examination. *See* W.C. Rule of Procedure 8-8, 7 CCR 1101-3 (addressing independent medical examinations); *see also* W.C. Rule of Procedure 18-7(B), 7 CCR 1101-3 (addressing cancellation fees for payer-made appointments); *Safeway, Inc. v. Industrial Claim Appeals Office*, 186 P.3d 103, 105 (Colo.App. 2008) (the same rules of statutory construction apply when construing an administrative rule or regulation).

12. As found, Respondents have failed to prove by a preponderance of the evidence that they are entitled to recover costs for three missed independent medical examination appointments with Dr. Reiss. Specifically, Claimant missed three appointments with Dr. Reiss on the following dates: November 4, 2020; February 3, 2021; and finally March 10, 2021. Claimant selected Dr. Orent to accompany him to the preceding appointments. However, Claimant rescheduled the three appointments because Dr. Orent had conflicting obligations. Respondents argue they are entitled to recover the cost of three missed appointments against future indemnity payments to Claimant.

13. As found, Claimant remarked that he did not complete the first appointment on November 4, 2020 because he and Dr. Orent had been waiting for at least 45 minutes for Dr. Reiss. However, Dr. Orent had to leave for his own appointment. Claimant explained that Dr. Orent called his attorney before leaving, and after speaking to the attorney, they ultimately left Dr. Reiss' office. Regarding the second independent medical examination scheduled with Dr. Reiss for February 3, 2021 Claimant testified that he received a call from his attorney stating that Dr. Orent was unavailable to attend. Consequently, the appointment had to be rescheduled. Similarly, for the independent medical examination appointment scheduled with Dr. Reiss for March 10, 2021, Claimant commented that he was again instructed by his attorney that Dr. Orent was unable to attend. The appointment had to be rescheduled.

14. As found, Respondents essentially assert that §8-43-404(1)(b)(II), C.R.S. does not limit the definition of "estimated expenses" to only those enumerated as evidenced by the word "including" in the language of the statute. Despite Respondents assertion, §8-43-404(1)(b)(II), C.R.S. does not require Claimant to reimburse them for any cancellation fees associated with missed independent medical examination appointments. To interpret §8-43-404(1)(b)(II), C.R.S. as Respondents propose would require reading words into the statute. However, courts are precluded from reading nonexistent provisions into the Act. *See Archuletta v. Industrial Claim Appeals Office*, 381 P.3d 374, 377 (Colo.App. 2016). Respondents argument fails because §8-43-404(1)(b)(II), C.R.S. is limited to recovery of lodging, travel, and hotel costs associated with attending an independent medical examination when the claimant misses the appointment. Accordingly, Respondents request to recover the cost of three missed independent medical examination appointments against future indemnity payments to Claimant is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for L3-L4 and L4-L5 decompression and fusion surgery as recommended by Dr. Castro is granted.

2. Respondents' request to recover the cost of three missed independent medical examination appointments against future indemnity payments to Claimant is denied and dismissed.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty

(20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

ISSUES

I. Are the Widow and both Minor Children wholly or partially dependent for purposes of death benefits under the Act?

II. Did Respondents prove by a preponderance of the evidence that they are entitled to an offset for Social Security Administration (SSA) Survivors Benefits that were awarded in the amount of $1,462.00 per month to each of the Minor Dependent Children, and if so, what is the effective date of that offset.

III. Did Respondents prove by a preponderance of the evidence that they are entitled to an offset for survivor benefits awarded to the Widow of the deceased Claimant in the amount of $4,640.87 per month from the Statewide Death & Disability Plan (SWD&D) through the Fire & Police Pension Association (FPPA), and if so, what is the effective date of that offset.

PROCEDURAL HISTORY

Respondents filed an Application for Hearing on January 18, 2021 to address an adjustment of death benefits and assert any applicable offsets in light of the benefits that were subsequently awarded from other sources. In the remarks section of the Application, Respondents noted:

> "Decedent was involved in a fatal motor vehicle accident on 10/16/20 within the course and scope of his employment. Dependents have been identified .... Death benefits are currently being paid at maximum rate, per GAL filed on 10/30/20. Since the filing of GAL, additional benefits have been awarded to dependents from the Fire & Police Pension Association of Colorado (FPPA) and from SSA. Respondents are applying for hearing to obtain an order confirming the status of dependents; the offset(s) for each dependent; the calculation of benefits payable to dependents after offsets are asserted; and a recoupment schedule for any resulting overpayment. §8-41-501; § 8-41-503; § 8-42-113.5; §8-42-114; § 8-42-115; § 8-42-120; § 8-42-121; § 8-42-122."

A hearing was scheduled for May 18, 2021. The Administrative Law Judge issued a bench order allowing the hearing to be continued for up to 75 days for Claimant to obtain counsel. Respondents were to reset the case for a hearing within either 14 or 15 days from May 18, 2021.

Claimant's counsel entered his appearance on May 24, 2021.

The hearing was convened on July 16, 2021. At that time the parties agreed that they would not address the issue of the calculation of offsets, if any, and the recoupment schedule of any overpayment as that would be agreed upon by the parties.

STIPULATIONS

The parties reached multiple factual stipulations, which were read into the record as follows:

1. The deceased Claimant was employed with Employer on October 16, 2020. Claimant was a detective for Employer when he was involved in a fatal motor vehicle accident on October 16, 2020. Claimant was in the course and scope of his employment.

2. Claimant was legally married to the Dependent Widowed Claimant at the time of death and living together at their home in Commerce City with their two minor children.

3. The date of birth for the Dependent Widow is September 30, 1987. The date of birth of the Older Minor Dependent is December 10, 2016 and of the Younger Minor Dependent is February 10, 2020.

4. The parties agree that all three surviving Claimants were wholly dependent upon the deceased at the time of his death on October 16, 2020.

5. Respondents filed a General Admission of Liability (GAL) on October 30, 2020 recognizing the three dependent Claimants, and commencing death benefits at the maximum rate of $1,074.22 per week.

6. Since the filing of the GAL Respondents learned of other multiple sources of income received by Dependents including:

   a. SSA Survivors Benefits for the Older Minor Dependent Claimant in the amount of $1,462.00 per month beginning as of October 2020.

   b. SSA Survivors Benefits for the Younger Minor Dependent Claimant in the amount of $1,462.00 per month beginning as of October 2020.

   c. The Widowed Dependent was awarded Survivors Benefits by the Statewide Death and Disability Plan through the Fire and Police Pension Association of Colorado, a non-taxable benefit, as of October 17, 2020 in the amount of $4,640.87 per month.

7. The parties agree that the SSA benefits paid to the Minor Dependents is offsettable under the Act and any death benefits shall be reduced pursuant to § 8-42-114. C.R.S.

8. The parties agree that, if the Widowed Dependent Claimant remarries, this would trigger termination of benefits to the Widowed Dependent Claimant at the time of the remarriage pursuant to § 8-42-120, C.R.S.

9. The parties further agree that any benefits being paid to the Minor Dependents shall be terminated upon reaching 18 years of age unless they continue studies at an accredited school, in which case any benefits being paid shall be terminated at the age of 21 or at death, whichever is reached first, pursuant to § 8-41-501(C), C.R.S.

10. The parties agree that they will work together to calculate the amount of any overpayment, reach a mutually agreeable repayment schedule or recoupment plan, and that benefits will not be terminated outright, in order to recoup any overpayment caused by the SSA benefits payments to the Minor Dependent Claimants.

FINDINGS OF FACT

1. The deceased Claimant was employed with Employer as a detective assigned to the Investigations Bureau and normally worked from 7 a.m. to 5 p.m. He was initially hired as a recruit on June 27, 2016 but later hired, after his swearing in, on December 27, 2016 as an officer.

2. The deceased was involved in a fatal motor vehicle accident on October 16, 2020 as he was travelling home. Claimant had finished his normal duties at 5 p.m. but had begun his “on call” status as a trainee detective. Pursuant to Employer’s Policies, detectives are allowed to travel home during their time while “on call,” subject to being immediately recalled. Claimant was paid for his “on call” status in accordance with the Collective Bargaining Agreement (CBA) for one hour of straight time from 5 to 6 p.m.

3. The October 16, 2020 accident occurred at approximately 5:20 p.m. while the decedent was travelling northbound on Highway 2. A Ford F350, that was travelling southbound, crossed the median and struck Claimant’s police cruiser head on. Claimant was in the course and scope of his employment at the time of his death.

4. The Division of Workers’ Compensation issued a letter on October 21, 2020, to determine whether the decedent had dependents that may be entitled to workers’ compensation benefits, including spouses, any child under the age of 18, any child under the age of 21 if they were full-time students; or other relatives who were financially dependent upon the deceased Claimant.

5. Claimant was legally married to the Dependent Widowed Claimant at the time of death. They were living together at their home in Commerce City with their two minor children, also Dependent Claimants in this matter. The date of birth for the Dependent Widow is September 30, 1987.

6. The date of birth of the Older Minor Dependent is December 10, 2016 and of the Younger Minor Dependent is February 10, 2020.

7. It is found that the Widowed spouse and both Minor Children were wholly dependent upon the decedent at the time of his death on October 16, 2020.

8. Respondents filed a General Admission of Liability (GAL) on October 30, 2020 recognizing the three Dependent Claimants. Benefits are being paid to the Widowed Dependent at the maximum rate from October 17, 2020 through an undetermined date at the maximum rate of $1,074.22 per week, which is 100% of any death benefits due.

9. The GAL filed on October 30, 2020 lists both Minor Children as wholly dependent but, as found, no payments have been specifically apportioned or paid to the Minor Dependent Claimants.

10. A Notice of Award dated December 12, 2020 was issued to each Minor Child by the Social Security Administration (SSA). The notices specified the Minor Dependent Children were to receive monthly Survivors Benefits in the amount of $1,462.00 each.

11. As found, there was no evidence in the record that the Dependent Widowed Claimant is receiving Social Security Survivors Benefits.

12. On December 28, 2020, a Notification of Survivor Benefit was issued by the Fire & Police Pension Association of Colorado (FPPA) to the Widowed Dependent informing her that she was awarded survivor benefits by the Statewide Death and Disability (SWD&D) Plan through the FPPA, a non-taxable benefit, as of October 17, 2020 (retroactively) in the amount of $4,640.87 per month.

13. The FPPA award letter explained that the money purchase retirement account funds of the decedent were offset from the SWD&D benefits the survivor was to receive for herself and any dependent children. This was approved, pursuant to the Dependent Widow's Application filed on November 30, 2020, by the Disability Review Committee (DDRC). They determined the decedent's death was the result of an accident while performing official duties arising out of, and in the course and scope of his employment as a member. The DDRC issued a Decision Sheet initially on December 11, 2020 granting Survivor Benefits. The FPPA member plan is fully funded by Employer.

14. The Claims Representative testified at hearing. She works for Insurer as a Complex Claims Representative and has been working for Insurer for 14 years. She has been involved in the adjusting of this claim from the inception of the claim.

15. The Claims Representative testified she filed the GAL on October 30, 2020 and commenced payments to the dependent Claimants as of that time, which have continued to date. She determined the correct names and dates of birth from the

Dependent Widow directly, during a phone call on October 28, 2020. She also received copies of the marriage certificate and both birth certificates for the Minor Children from the Widowed Dependent.

16. The Claims Representative stated that the indemnity logs show payments through June 25, 2021 in the amount of $45,671.92 plus an additional amount of $2,148.44 paid on July 9, 2021 which covers indemnity through July 23, 2021. This brings the total indemnity payments to the amount of $47,820.36 through July 23, 2021. After payments were started under the Workers' Compensation Act, the Claims Representative learned that payments were made under the SWD&D Plan and for Social Security Survivors Benefits to the two Minor Children. She confirmed these benefits directly with the Widowed Dependent, and received the letters of award via email from the Widowed Dependent as well.

17. The Claims Representative explained to the Widowed Claimant the impact both of the sources of benefits (SSA and SWD&D) may have on the workers' compensation benefits being paid by Respondents. She further explained that there may be an offset and a significant overpayment that would have to be repaid to Respondents, indicating that Respondents would rely on the SSA Award letters to the dependent children in calculating the offset related to the SSA payments to the Minor Dependent Claimants.

CONCLUSIONS OF LAW

A. General Principles

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability benefits to Claimants at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2020. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of Claimants or the rights of Employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives, bias, prejudice, or interest of the witness, whether the testimony has been contradicted or not. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2020).

B. Dependents for Purposes of Death Benefits

Respondents seek a determination of the status of the dependents in this matter. Pursuant to § 8-41-501(1),C.R.S. the following persons shall be presumed to be wholly dependent (however, such presumption may be rebutted by competent evidence):

> "(a) Widow or widower, unless it is shown that she or he was voluntarily separated and living apart from the spouse at the time of the injury or death or was not dependent in whole or in part on the deceased for support…
>
> (b) Minor children of the deceased under the age of eighteen years, including posthumous or legally adopted children;
>
> (c) Minor children of the deceased who are eighteen years or over and under the age of twenty-one years if it is shown that:
>
> > (I) At the time of the decedent's death they were actually dependent upon the deceased for support; and
> >
> > (II) Either at the time of the decedent's death or at the time they attained the age of eighteen years they were engaged in courses of study as full-time students at any accredited school. The period of presumed dependency shall continue until they attain the age of twenty-one years or until they cease to be engaged in courses of study as full-time students at an accredited school, whichever occurs first.

As found, both Minor Children and the Widowed Spouse are wholly dependent upon the deceased Claimant at the time of death. This is established by the stipulated agreement of the parties, which states that "all three surviving Claimants were wholly dependent upon the deceased at the time of his death on October 16, 2020." Further, the General Admission filed on October 30, 2020 lists the Widowed Claimant, the Older Minor Dependent and the Younger Minor Dependent as wholly dependents in this matter. Lastly, pursuant to the statute cited above, the Widowed Claimant and both Minor Children (under age 18 as their birth years are 2016 and 2020 respectively) are presumed dependents as they were living in Commerce City with the decedent at the time of his death. What has not been established is the proportion of benefits that each of the Dependent Claimants is to receive and neither party requested that this ALJ issue an order in this regard.

C. Offset of Social Security Survivors Benefits

Respondents seek an offset for benefits received by both Minor Dependents in this matter. Section 8-42-114, C.R.S. lays out what death benefits dependents may receive and states designates what reductions may be asserted against those death benefits as follows:

> In case of death, the dependents of the deceased entitled thereto shall receive as compensation or death benefits sixty-six and two-thirds percent of the deceased employee's average weekly wages, not to exceed a maximum of ninety-one percent of the state average weekly wage per week for accidents occurring on or after July 1, 1989, and not less than a minimum of twenty-five percent of the applicable maximum per week. In cases where it is determined that periodic death benefits granted by the federal old age, survivors, and disability insurance act or a workers' compensation act of another state or of the federal government are payable to an individual and the individual's dependents, the aggregate benefits payable for death pursuant to this section shall be reduced, but not below zero, by an amount equal to fifty percent of such periodic benefits.

The GAL specifies that the Dependent Widow is receiving 100% of the death benefits and no benefits are being paid to the wholly Dependent Children. This means that any offsets may only be deducted from the Dependent Widows' benefits from any SSA benefits received by the Dependent Widow. The evidence does not support that the Widow Dependent is receiving any SSA benefits at this time. Therefore, Respondents are not entitled to offset Dependent Widow's benefits for social security benefits received.

Respondents cite to § 8-42-122, C.R.S. for purposes of suggesting that the Dependent Widow, who is receiving death benefits, is doing so on behalf of the Minor Children. The ALJ is unable to determine this, as it was not part of the parties' stipulations and there was no persuasive evidence in this regard. This particular statutory provision references that a surviving spouse may make application or claim on behalf of the Minor Dependents, not that the surviving spouse may be paid the benefits on the dependents' behalf. In fact, this statutory provision states that any portion of benefits paid to minors must be deposited in an account for the purpose of safeguarding the minors' interests.

The SSA benefits received by the Dependent Minors may be offset if workers' compensation death benefits were to be paid to the Dependent Minors. At this time, that is not the case, and the statute states that any death benefits may not be reduced below zero. Since the Dependent Minors are receiving zero death benefits, no offset is due at this time and the parties may readdress this at a later time, if a proportion of the workers compensation benefit is paid to the Minor Dependents pursuant to § 8-42-121, C.R.S., which states:

> Death benefits shall be paid to such one or more of the dependents of the decedent, for the benefit of all the dependents entitled to such compensation, as may be determined by the director, who may apportion the benefits among such dependents in such manner as the director may deem just and equitable. Payment to a dependent subsequent in right may be made, if the director deems it proper, which payment shall operate to discharge all other claims therefor. The dependents or persons to whom benefits are paid shall apply the same to the use of the several beneficiaries thereof according to their respective claims upon the decedent for support in compliance with the finding and direction of the director.

Therefore, Respondents may take an offset of those benefits paid to the Minor Dependents from death benefits Respondents are paying to the Dependent Minors. This is not taking place at this time, so Respondents cannot assert a right to an offset from the SSA death benefits currently being paid to the Dependent Minors. The issue of apportionment of the death benefits is reserved for future determination.

D. Offset of FPPA Survivor Benefits

In this matter, the Widowed Dependent was awarded survivor benefits by the Fire & Police Pension Association of Colorado (FPPA) under the Statewide Death and Disability plan. Respondents are requesting leave to reduce the workers' compensation death benefits by the amount the Widowed Dependent is receiving from FPPA. Section 8-42-114, C.R.S. (cited above) lays out what death benefits dependents may receive and what may be reduced from the death benefits. The statute only allows for offset for "the federal old age, survivors, and disability insurance act or a workers' compensation act of another state or of the federal government."

The statute specifically states that federal benefits, such as social security survivors benefits, and other states' workers' compensation benefits, must be offset. Nothing in the statute states that other survivor benefits paid under other sections of the Acts or other statutes should be reduced or offset under § 8-42-114.

Further, § 31-30.5-301 provides the legislative declaration regarding the SWD&D plan. It states:

> The general assembly finds and declares that the establishment of statewide actuarial standards regarding funded and unfunded liabilities of state-assisted old hire police officers' and firefighters' pension funds established pursuant to this article is a matter of statewide concern affected with a public interest, and the provisions of this part 3 are enacted in the exercise of the police powers of this state for the purpose of protecting the health, peace, safety, and general welfare of the people of this state. The general assembly further declares that state moneys provided to municipalities, fire protection districts, and county improvement districts do not constitute an obligation of the state to participate in the costs of pension plan benefits but are provided in recognition that said local governments are currently burdened with financial obligations relating to pensions in excess of their present financial capacities. It is the intent of the general assembly in providing state moneys to assist said local governments that state participation decrease annually, terminating at the earliest possible date.

The legislative intent is laid out in § 31-30.5-305, C.R.S. that states as follows:

> It is the intention of the general assembly that the minimum funding standards established by this part 3 shall not enlarge nor diminish the obligation of municipalities and fire protection districts to their employees for pension benefits provided pursuant to this article.

Title 31, which establishes the funding of the Statewide Death and Disability plan or "old hire pension plan" fails to state that the funds may be offset by other benefits or that other benefits would be offset by this plan other than those established under the statutory directives.

In reading the statutory language of both the Workers' Compensation Act and the Fire and Police Old Hire Pension Plans Act, neither provides for statutory offsets. Therefore, no offset are appropriate in this matter for the FPPA benefits received by the three dependent Claimants for the benefits approved by the FPPA Death and Disability Review Committee (DDRC) pursuant to the dependents' application. The DDRC has determined that the detective's death was the result of an accident while performing official duties arising out of and in the course of his employment as a member and that the dependents are entitled to full benefits from the plan.

Recovery of overpayments on death benefits cases is discussed in § 8-42-113.5:

> If a claimant has received an award for payment of disability benefits or a death benefit under articles 40 to 47 of this title and also receives any payment, award, or entitlement to benefits under the federal old-age, survivors, and disability insurance act, an employer-paid retirement plan, or any other plan, program or source for which the original disability benefit or death benefit is required to be reduced pursuant to said articles but which were not reflected in the calculation of such disability benefits or death benefits:

This statute only allows for offset of benefits "which the original disability benefit or death benefit is required to be reduced pursuant to said articles." The words "said articles" references the WC Act and the only reductions allowed for death benefits is clearly delineated in § 8-42-114, C.R.S., specifying that the original benefits shall be reduced only for SSA benefits and workers' compensation benefits paid by other states or the federal government. The statute, § 8-42-113.5, only controls the method of recovery of any benefits other statutes under the Act allows to be offset It does not establish any other separate statutory rights or entitlement to offset or reduce death benefits. This is simply a notice provision regarding those benefits created elsewhere in the Act.

When the court interprets a provision of the Workers' Compensation Act, we must give it its "plain and ordinary meaning" if the statutory language is clear. *Davison v. Indus. Claim Appeals Office*, 84 P.3d 1023, 1029 (Colo. 2004). The Supreme Court stated that "[W]hen examining a statute's plain language, we give effect to every word and render none superfluous because "[w]e do not presume that the legislature used language "idly and with no intent that meaning should be given to its language[.]""" *Colo. Water Conservation Bd. v. Upper Gunnison River Water Conservancy Dist.,* 109 P.3d 585, 597 (Colo. 2005)(citation omitted)(quoting *Carlson v. Ferris*, 85 P.3d 504, 509 (Colo. 2003), superseded in part by statute on other grounds as recognized by *St. Jude's Co. v. Roaring Fork Club*, LLC, 2015 CO 51 ¶ 17, 351 P.3d 442); also see *Keel v. Industrial Claim Appeals Office of the State*, 2016 COA 8, 369 P.3d 807, 811, (Colo. App. Division 6, 2016).

If courts can give effect to the ordinary meaning of words used by the legislature, the statute should be construed as written, giving full effect to the words chosen, as it is presumed that the General Assembly meant what it clearly said. See Askew v. Industrial

Claim Appeals Office, 927 P.2d 1333, 1337 (Colo. 1996); PDM Molding, Inc. v. Stanberg, 898 P.2d 542, 545 (Colo. 1995). The Supreme Court in *State v. Nieto*, 993 P.2d 493, 500 (Colo. 2000) stated that we "must refrain from rendering judgments that are inconsistent with that intent." [Citing *Farmers Ins. Exch. v. Bill Boom, Inc.,* 961 P.2d 465, 469 (Colo. 1998)]. Pursuant to § 2-4-101, C.R.S. "[W]ords and phrases shall be read in context and construed according to the rules of grammar and common usage." If the statutory language is clear and unambiguous, courts need not look further at statutory construction. See *Town of Superior v. Midcities Co.,* 933 P.2d 596, 600 (Colo. 1997); *Boulder County Bd. of Equalization v. M.D.C. Constr. Co.,* 830 P.2d 975, 980 (Colo. 1992). Because we can readily give the words that the legislature used in § 8-42-114, C.R.S. full effect, it is necessary to apply only reductions as the legislature wrote it. See *Keel v. Industrial Claim Appeals Office of the State*, *supra*.

Lastly, while this ALJ is not bound by panel decisions (see *United Airlines v. Industrial Claim Appeals Office,* 213 COA 48, 312 P.3d 235), *Thielsen v. Rockwell International Co.,* W.C. No. 4-263-037, ICAO, (May 28 1997) is instructive, holding that § 8-42-114 limits any offsets Respondents may assert against death benefits. Here, the Widowed Dependent is receiving survivor benefits form FPPA, not social security survivors benefits or other benefits designated by § 8-42-114, C.R.S. Therefore, Respondents are not entitled to reduce her death benefits by Dependent Widow's survivor benefits paid by FPPA as they are not a listed benefit that may be reduced under the statute. Respondents' request to offset the FPPA survivor benefits is denied.

ORDER

IT IS THEREFORE ORDERED:

1. The Widow and both Minor Children were wholly dependent upon the decedent at the time of his death for purposes of death benefits

2. Respondents failed to meet their burden of proof that they are entitled to offset social security benefits awarded to Minor Dependent Claimants, as neither is receiving workers' compensation death benefits at this time ,and benefits may not be reduced below zero pursuant to § 8-42-114, C.R.S. The issue of apportionment of the death benefits is reserved for future determination pursuant to § 8-42-121, C.R.S. Respondents are entitled to terminate pursuant to § 8-42-120, C.R.S. and under § 8-41-501(c)(II), C.R.S., if benefits are apportioned.

3. Respondents failed to prove they are entitled to reduce the Widowed Dependent Claimant's death benefits by her receipt of survivor benefits awarded under the Statewide Death & Disability Plan through the Fire & Police Pension Association (FPPA).

4. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

Dated this 19th day of August, 2020.

By: Elsa Martinez Tenreiro
Administrative Law Judge

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-136-714-001

ISSUES

I. Did Respondents prove by a preponderance of the evidence that the General Admission of Liability (GAL) filed by Respondents on July 17, 2020 may be withdrawn.

II. Did Claimant prove by a preponderance of the evidence that the left total knee arthroplasty (TKA) surgery is automatically authorized; in the alternative, is the left knee TKA surgery is reasonable, necessary and related to the admitted work injury of March 28, 2020.

III. Did Respondents prove by a preponderance of the evidence that Claimant is responsible for his termination of employment, and if so, may TTD be terminated.

PROCEDURAL HISTORY

Respondents filed an Application for Hearing on March 3, 2020 on issues of compensability, medical benefits that are reasonably necessary and related to the injury, causation of the injury, withdrawal of the admission and that Claimant is responsible for termination entitling Respondents to terminate admitted temporary disability benefits.

Claimant filed a Response to the March 3, 2021 Application for Hearing on April 9, 2021, citing issues of reasonably necessary medical benefits which are related to the admitted injury of March 28, 2020 (TKA). Claimant also seeks penalties for failure to deny or approve the surgery recommended by Dr. Phillip Stull within 7 business days of the request dated December 7, 2020, specifically whether the surgery is automatically approved pursuant to the rules.

Both Dr. Timothy O'Brien and Claimant testified in this matter at the hearing.

STIPULATIONS

The parties reached the following stipulations:

1. The parties stipulated that the December 7, 2020 request for prior authorization for surgery sent by Dr. Phillip Stull's office was received by Respondents and Respondents failed to issue a denial of the prior authorization request within the required time period established by the rules.

2. Dr. Phillip Stull is an authorized treating physician (ATP).

These stipulations are approved and accepted by the ALJ.

FINDINGS OF FACT

Based upon the evidence presented at hearing the facts are as follows:

1. Claimant was a flight attendant and purser for Employer on March 28, 2020. He worked for Employer for a period of approximately 47 years. Claimant is 72 years old.

2. Claimant had a prior admitted work-related right knee injury on January 20, 2017 while working for Employer. This occurred while performing his duties as a flight attendant when there was turbulence on the plane and Claimant twisted his right knee while trying to secure a beverage cart. Claimant underwent a right knee total knee arthroplasty (total knee replacement) of the performed by Dr. Phillip Stull. Claimant returned to full time work for Employer of injury, without restrictions or limitations.

3. As found, prior to March 28, 2020, Claimant had no medical care for the left knee, only the right knee.

4. On March 28, 2020, Claimant was positioning a full beverage cart back into its slot when the plane hit turbulence. The beverage cart weighs approximately 250 pound when full, which it was on this occasion. Claimant's left knee buckled and twisted. Claimant felt his left knee pop. Claimant also felt immediate pain and thereafter his left knee was swollen and stiff. Claimant found that use of the stairs was excruciating. Claimant stated he had no prior trouble performing his duties as a flight attendant prior to the claimed injury of March 28, 2020. Claimant's testimony is found to be credible.

5. Claimant had a consultation on March 30, 2020 with a nursed through Employer (Brandy M. – LNU). The report documents a three-inch swelling of the left knee, with pain of 8-9/10, and limited ability to walk due to the pain. Claimant was referred to proceed with telemedicine for follow-up medical care. The report documented that Claimant reported the injury within 24 hours, on March 29, 2020. This was also documented on the Employers' First Report of Injury, which stated that Claimant had swelling of the left knee.

6. Claimant was evaluated on April 2, 2020, through telemedicine (video) by a medical provider with Concentra, Shauna Stupart, M.D. Dr. Stupart diagnosed a sprain of the left knee and documented a mechanism of injury similar to that reported by Claimant to Employer. The report also documents Claimant's years with Employer and states that he was assisting passengers including food and beverage service and preparing food and beverage carts, lifting bags occasionally, frequently reaching overhead, pushing, pulling, standing, walking, twisting, bending, and squatting. Dr. Stupart assessed that objective findings were consistent with the history and/or the work-related mechanism of injury.

7. Claimant continued to be evaluated by telemedicine at Concentra, including by Dr. Aharon Wolf on April 7, 2020, who also diagnosed Claimant with a sprain of the left knee. He provided sitting restrictions of 80% of the time, referred Claimant to physical therapy and continued visits through telemedicine.

8. Claimant disclosed that he was not evaluated in person by any provider at Concentra. Only during one of the telemedicine visits was he asked by his provider to show his left knee with his telephone. Claimant's testimony is credible.

9. On April 21, 2020 Claimant was initially seen by Andrea Guevara, P.T. at Select Physical Therapy for his left knee pain. The history documented is consistent with the prior documented history. Claimant reported he twisted his left knee while working on March 28, 2020. When the plane hit turbulence, he was holding on to a 250-pound cart and while trying to stabilize himself, he planted his foot and felt a pop in his left knee when trying to hold on to the cart. Pain immediately ensued. It further states that Claimant's job duties included twisting, reaching both overhead and below waist, bending, squatting, grasping, climbing stairs, sitting, standing, and walking. Claimant is required to lift up to 40 pounds overhead, frequently lift overhead approximately 20 pounds and push/pull a 250-pound cart on wheels. Ms. Guevara reported Claimant had not tried to perform job-related duties, however, was experiencing pain with functional movement such as squatting, walking, and lifting activities. She noted that Claimant had mild-moderate pain in the MCL (Medial Collateral Ligament), decreased quad endurance and strength, mild hip strength deficits, moderate guarding and difficulty with single leg activities. Claimant continued with physical therapy through June 9, 2020, without relief of his symptoms.

10. On April 24, 2020 Dr. Wolf documented, in the review of systems, Claimant had joint pain, muscle pain, joint stiffness, muscle weakness and night pain. On May 4, 2020 Dr. Wolf stated that Claimant continued to have constant sharp pain in his left knee, Claimant was limping and ordered an MRI of the left knee. On May 14, 2020 he documented that the MRI showed both chronic and acute pathology of the left knee and referred Claimant to an orthopedic specialist due to left knee pain and swelling.

11. The MRI was performed on May 11, 2020 and showed the MCL was distended medially by an extruded body segment, the medial meniscus was markedly macerated with complex degenerative tearing of the posterior horn and body segment to the anterior horn body junction, and extruded into the medial gutter 6 mm. There was advanced subcondral edema of the medial femoral condyle and medial tibial plateau. There was also knee joint effusion and edema. Dr. Scot Campbell's impressions were of advanced medial compartment osteoarthritis, associated marked maceration and degenerative tearing of the medial meniscus and joint effusion.

12. Claimant was evaluated on May 19, 2020 by Dr. Phillip Stull of Colorado Orthopedic Consultants pursuant to a referral from Concentra. In the report he thanks Dr. Aharon [Wolf] for the referral of a patient that had been previously treated by him two years before. He documented that Claimant reported his left knee had become uncomfortable in February 2020, with vigorous activities, but that he injured his knee while working on March 28, 2020. It also documents that Claimant had been furloughed due to the economic environment.

13. Dr. Stull performed an in-person physical exam of Claimant. He found a mild varus alignment, minimal effusion, medial and patellofemoral compartment

tenderness and crepitation, antalgic gait, and favoring of the left knee. His impressions and diagnosis included advanced arthritis and work-related trauma of the left knee. Dr. Stull injected the knee with cortisone but stated that, if steroid injections were unsuccessful in controlling Claimant's symptoms, a knee replacement would be indicated and recommended.

14. Claimant testified that there is a difference between vigorous activities and his job duties. He was able to perform his job duties without difficulty prior to March 28, 2020. Claimant is credible.

15. On May 24, 2020 Claimant was seen through telemedicine by Dr. Michael Chiang from Concentra. He transferred care to Dr. Stull for continuing orthopedic care. Dr. Chiang kept Claimant on work restrictions of sitting duty for the majority of the day (80%) with no squatting or kneeling.

16. On June 30, 2020 Dr. Stull again examined Claimant and recommended continued conservative care. He stated that Claimant was to continue with restrictions in accordance with his referring provider.

17. On July 17, 2020 Respondents filed a General Admission of Liability accepting Claimant's left knee injury as work related. Respondents admitted to temporary total disability (TTD) benefits as of April 7, 2020. As inferred from the evidence, and as found, Respondents filed the admission because Claimant was placed on temporary work restrictions by Dr. Wolf at that time and was not provided work within his temporary work restrictions by Employer.

18. Claimant testified that, as of August 1, 2020, while still under restrictions and receiving TTD benefits, Claimant accepted a retirement package offered by Employer to eligible employees given the reduction in flights due to Covid-19 as they had approximately four thousand flight attendants on the books. Claimant stated he continued to have knee pain. Given his knee pain, his age and the fact that he was not working, Employer offered Claimant a buyout for him to retire. Claimant was not offered any work within his restrictions at any time between April 7, 2020 through the official date of his retirement as none was available within his sedentary restrictions. It is inferred from the evidence that he was unlikely to be able to perform his job as a flight attendant thereafter. Claimant is found credible.

19. Timothy O'Brien, M.D. conducted a medical record review on August 14, 2020 on behalf of Respondents. Dr. O'Brien documents Claimant's prior injury in 2017 to the right knee, the subsequent total knee arthroplasty (TKA) performed by Dr. Stull and the treatment he received at Concentra. He also documents the telemedicine care with Drs. Shauna Stupart and Aharon Wolf related to the March 28, 2020 incident. In his report, Dr. O'Brien opines that neither the 2016 [sic.] nor the 2017 mechanisms of injuries could have cause the need for TKAs for either the right or the left knee, as the incidents were "innocuous" and not significantly traumatic. He also stated, "the absence of medical record documentation proving that those joints were asymptomatic prior to the time when an examinee is ready to consider a total joint arthroplasty is hardly proof positive that the

joints were not symptomatic." Dr. O'Brien is not credible with regard to his opinion that the Claimant's work-related accidents were "innocuous" or insignificantly traumatic, nor his opinions with regard to causality.

20. Dr. Stull repeated a cortisone injection on August 25, 2020 and acknowledged he received a copy of Dr. Timothy O'Brien's independent medical evaluation.

21. On December 4, 2020 Dr. Stull requested prior authorization for the left knee replacement, specifying that the surgery was to take place on February 19, 2021 at the Surgery Center at Cherry Creek, including arthroplasty, total left knee. He also injected Claimant's left knee with steroids again.

22. On the Physician's Report of December 4, 2020, Dr. Stull stated that Claimant was unable to work at that time. (He crossed off the typed in "work restrictions per referring doctor" and marked unable to work.).

23. The official request for prior authorization was faxed to Respondents on December 7, 2020 by Dr. Stull's office with a copy of the medical records as required by the Division rules.

24. Pursuant to the stipulation of the parties, Respondents acknowledged that they received the request for prior authorization but never responded to the request. It is found that Respondents failed to either deny or authorize the surgery pursuant to the request for prior authorization by an ATP, in accordance with the Division rules.

25. Dr. O'Brien testified at hearing that a knee can turn and twist, and it is only when there is significant force that an injury can occur. Dr. O'Brien testified that the MRI findings with effusion and edema do not represent an injury and the swelling is because arthritic knees cause inflammation and effusion. However, he also confirmed that joint effusion occurs with trauma. He explained that edema represents in the joint because the excessive calor or heat of the synovial lining caused by friction and starts to excessively create synovial fluid, a watery substance, and deposit at the knee cap to lubricate the joint. He also stated that, as of the May 11, 2020 MRI, Claimant had swelling in the knee. He further opined that the surgery recommended by ATP Stull was reasonable and necessary in parlance of the workers' compensation system, to cure and relieve the Claimant of his injury, though not caused by the events of March 28, 2020. Dr. O'Brien stated different physicians could reach different conclusions.

26. Claimant continues to be off work, has not been released from care and has not been returned to modified duty. He stated that he knows what is involved in the surgery he is requesting, as he had the experience of undergoing the right TKA with good results and was able to return to work. He also stated that he had good results every time he had steroid injections with Dr. Stull, but the problems always come back and continues to wish to proceed with the TKA for the left knee. Claimant's testimony is credible.

CONCLUSIONS OF LAW

A. Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. (Cum. Supp. 2020). A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. *supra*. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ need not address every piece of evidence that might lead to a conflicting conclusion and has specifically rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2020). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ resolves the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

B. Withdrawal of the General Admission of Liability

Respondents seek to withdraw the General Admission of Liability file on July 17, 2020. Respondents argue, given Dr. O'Brien's opinion that Claimant did not sustain any significant injury or disability as a result of any incident on March 28, 2020, Respondents have shown there is good cause to withdraw the admission.

Section 8-43-201, C.R.S. generally establishes the burden of proof in disputes arising under the Workers' Compensation Act. It provides, in pertinent part "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification." Therefore, it is Respondents' burden of proof by a preponderance of the evidence to establish that withdrawal of the GAL is justified.

By filing an admission of liability, the employer or insurer has "admitted that the claimant has sustained the burden of proving entitlement to benefits." *City of Brighton v. Rodriguez*, 318 P.3d 496, 507 (Colo. 2014). Thus, to withdraw a GAL, the respondents must prove the claimant suffered no compensable injury in the first instance.

As found, Claimant was a flight attendant who handled a very heavy beverage cart each day he worked. It is not an insignificant matter that Claimant had to maneuver and control the heavy cart when there was turbulence on the plane. Claimant testified that on March 28, 2020 he was trying to control the cart during turbulence and his left leg buckled, it is inferred under the weight of the cart, and he felt a pop of his left knee after twisting it, feeling immediate pain. The incident is specifically found to be significantly traumatic to cause injury and Claimant is found credible.

Respondents' argument that this is a similar incident than that which occurred in 2017 is not relevant in this ALJ's mind. Claimant was a flight attendant, which necessarily involves handling the heavy cart each time he worked, and turbulence is common on flights, placing Claimant at increased risk of injuring himself in this manner. Dr. Stupart at Concentra diagnosed a sprain of the left knee and documented that objective findings were consistent with history and/or work related mechanism of injury. Her opinion is found credible. Dr. Wolf diagnosed claimant with a sprain of the left knee and referred Claimant for an MRI and for further care to an orthopedic surgeon. His opinion is found persuasive and credible. The MRI showed that Claimant had edema (swelling) on May 11, 2020. Dr. Stull diagnosed Claimant with a significant condition that required the need for a left knee total knee arthroplasty related to the work-related trauma. Dr. Stull is credible. Claimant's testimony that he was able to perform his regular duties and was not under any limitations just prior to his work-related injury is credible as well. Claimant had an accident that he immediately reported within 24 hours and requested medical attention. He reported to the nurse that he had a swollen knee, had immediate pain, an, it is specifically found that it proximately caused him to seek treatment he would not otherwise have pursued. The persuasive evidence shows Claimant suffered a compensable injury on March 28, 2020.

While the opinions of Dr. O'Brien differ from those of other providers and point to evidence that might support a different outcome, it is found that his opinion in this regard is not credible and does not rise to the level required in order to allow the withdrawal of the admission of liability in this matter by a preponderance of the evidence. This ALJ finds persuasive the fact that, while Claimant has a preexisting condition, the condition was not one that caused impairment or disability. A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). As found, Claimant aggravated his preexisting condition on March 28, 2020 to such an extent that it caused the need for medical care and surgery. Therefore, Respondents' request to withdraw the GAL is denied.

C. Medical Benefits

Claimant requests a determination with regard to authorization of the total knee arthroplasty recommended by Dr. Stull, an authorized treating provider. Claimant reasons, first, that the surgery is automatically authorized under the Division rules as Respondents failed to deny or authorize the surgery. Secondly, Claimant argues that the surgery is reasonably necessary and related to the work injury of March 28, 2020.

The parties agree that Dr. Phillip Stull is an authorized treating physician. On December 7, 2020, Dr. Stull requested prior authorization to proceed with a total left knee arthroplasty, as reasonably necessary and related to the March 28, 2020 work-related trauma. Dr. Stull provided Respondents with the proposed date of surgery programed for February 19, 2021 at the Surgery Center at Cherry Creek. Respondents acknowledged that they received the request and took no action to either approve the surgery or follow the denial process as laid out in the rules. The question here is whether the surgery was automatically approved by Respondents' failure to respond or whether Claimant must prove by a preponderance of the evidence that the surgery is reasonably necessary and related to the injury.

W.C.R.P. Rule 16-7(B), in effect as of the request for prior authorization on December 7, 2020, states that Respondent have seven (7) business days to comply with certain provisions. (As of January 1, 2021 this rule changed to 10 days of receipt of the complete request.)

W.C.R.P. Rule 16-7 (2020) states, in pertinent part:

(A) If an ATP requests prior authorization and indicates in writing, including reasoning and relevant documentation, that he or she believes the requested treatment is related to the admitted workers' compensation claim, the insurer cannot deny solely for relatedness without a medical opinion as required by section 16-7(B). The medical review, IME report, or report from an ATP that addresses the relatedness of the requested treatment to the admitted claim may precede the prior authorization request, unless the requesting physician presents new evidence as to why this treatment is now related.

(B) The payer may deny a request for prior authorization for medical or non-medical reasons. Examples of non-medical reasons are listed in section 16-11(B)(1). If the payer is denying a request for prior authorization for medical reasons, the payer shall, within seven (7) business days of the completed request:

(1) Have all the submitted documentation under section 16-6(E) reviewed by a "physician provider" as defined in section 16-3(A)(1)(a), who holds a license and is in the same or similar specialty as would typically manage the medical condition, procedures, or treatment under review. The physician providers performing this review shall be Level I or Level II accredited. In addition, a clinical pharmacist (Pharm.D.) as defined by section 16-3(A)(1)(b)(xvi) may review prior authorization requests for medications without having received Level I or Level II accreditation.

(2) After reviewing all the submitted documentation and other documentation referenced in the prior authorization request and available to the payer, the

> reviewing provider may call the requesting provider to expedite communication and processing of prior authorization requests. However, the written denial or approval still needs to be completed within the seven (7) business days specified under this section.
>
> (3) Furnish the provider and the parties with a written denial that sets forth the following information:
>
> (a) An explanation of the specific medical reasons for the denial, including the name and professional credentials of the person performing the medical review and a copy of the medical reviewer's opinion.
>
> (b) The specific cite from the Medical Treatment Guidelines, when applicable;
>
> (c) Identification of the information deemed most likely to influence the reconsideration of the denial when applicable; and
>
> (d) Documentation of response to the provider and parties.

As found, Claimant was injured in the course and scope of his employment, Respondents admitted to the claim and the authorized treating physician requested prior authorization for the TKA surgery. From the start of Claimant's treatment with Dr. Stull on May 19, 2020, Dr. Stull anticipated that the advanced arthritis of the left knee, which was aggravated by the work-related trauma, would probably require a total knee replacement, if conservative care measures were unsuccessful. Yet Respondents filed a GAL on July 17, 2020 admitting to the compensable work-related injury. Once this admission was filed, Respondents were obligated to comply with the rules.

If Respondents intended to deny the request for prior authorization, they were required to provide notice of the denial and obtain a medical review of the request for prior authorization, which did not occur in this claim. The parties specifically stipulated that the December 7, 2020 request for prior authorization for surgery sent by Dr. Phillip Stull's office was received by Respondents and Respondents failed to issue a denial of the prior authorization request within the required time period established by the rules.

W.C.R.P. Rule 16-7(E) (2020), in effect as of the request for prior authorization on December 7, 2020, states as follows:

> Failure of the payer to timely comply in full with section 16-7(A), (B), or (C) shall be deemed authorization for payment of the requested treatment unless the payer has scheduled an independent medical examination (IME) and notified the requesting provider of the IME within the time prescribed for responding set forth in section 16-7(B).

W.C.R.P. Rule 16-7(C) does not apply as that portion of the rule concerns the appeal process when there is a denial of the request for prior authorization pursuant to the rules. Here, it is found that Respondents failed to follow the process as laid out in Rule 16-7 and therefore, the surgery proposed by Dr. Stull is automatically authorized as reasonably necessary and related to the admitted claim pursuant to W.C.R.P. Rule 16-7(E). Respondents are required to pay for the procedure in accordance with the fee schedule under W.C.R. P. Rule 18.

Employer is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Stamey v. C2 Utility Contractors, Inc., et. al.*, W.C.No. 4-503-974 , ICAO (August 21, 2008); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002). Even if this was not the case, Claimant has proven that the surgery, as recommended by Dr. Stull, is reasonably necessary and related to the admitted work injury of March 28, 2020. Nothing in Dr. O'Brien's report or testimony persuades this ALJ that this is not the case. While Dr. O'Brien opined that that the work injury was innocuous, this ALJ does not find that credible. Claimant had previously had an admitted work-related injury in 2017 to the right knee, which was surgically treated. Claimant returned to work without limitations and was able to accomplish his normal work duties as a flight attendant. This required Claimant to perform activities such as pushing and pulling a full beverage cart, which weighed approximately 250 pounds, up and down the isle of the plane, twisting, reaching both overhead and below waist, bending, squatting, grasping, climbing stairs, sitting, standing, walking, lifting up to 40 pounds overhead and frequently lifting overhead approximately 20 pounds. On March 28, 2020, Claimant twisted his left knee while trying to control the beverage cart during turbulence on the plane. Claimant felt a pop in his knee and immediate pain. The injury caused pain, stiffness, intermittent swelling, effusion, and edema. As found, his is clearly an aggravation of the underlying disease and is the cause for the need for treatment, including the TKA of the left knee as recommended by Dr. Stull. The surgery is found to be reasonably necessary and related to the admitted work-related trauma. Therefore, the surgery is not only reasonably necessary and related to the injury but is found to be authorized. Respondents shall pay for the TKA surgery pursuant to the fee schedule.

D. Affirmative Defense of Responsible for Termination of Employment

Respondents assert that Claimant's acceptance of the offer to retire tendered by Employer is proof by a preponderance of the evidence that Claimant is responsible for his termination from employment justifying termination of temporary disability benefits. Respondents argue the affirmative defense of Claimant's responsibility for termination as a defense to continued TTD benefits pursuant to Sections 8-42-105(4), C.R.S. and 8-42-103(1)(g), C.R.S. (referred to as the termination statutes). These statutes contain identical language stating that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury."

In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061, 1064 (Colo. App. 2002), the Colorado Court of Appeals held that the term "responsible" reintroduced into the Workers' Compensation Act the concept of "fault." Hence, the concept of "fault" as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. In that context, "fault" requires that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. See *Gonzales v. Industrial Commission*, 740 P.2d 999 (Colo. 1987). Whether the claimant is responsible for the termination of his employment must be based upon an examination of the totality of circumstances. *Id.* The burden to show that the claimant was responsible for his discharge is on the Respondents. See *Gilmore v. Indus. Claim Appeals Office*, 187 P.3d 1129 (Colo. App. 2008). Therefore, Respondents bear the burden of proof to establish the applicability of these provisions. *Witherspoon v. Metropolitan Club,* W. C. No. 4-509-612 (Dec. 16, 2004). Respondents aver that Claimant's acceptance of the retirement package offered by the employer is a volitional act that merits termination of temporary disability benefits.
The question of whether the claimant acted volitionally or exercised a degree of control over the circumstances of the termination is one of fact for the ALJ. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

Claimant started receiving temporary disability benefits pursuant to the General Admission of July 17, 2020, beginning as of April 7, 2020 when Claimant was placed on work restrictions by Dr. Aharon Wolf. The work restrictions continued for the time Claimant was under the care of the Concentra providers. When Claimant was released from Concentra, by Dr. Michael Chiang on May 24, 2020, he continued to have restrictions of sitting duty for 80% of the day with no squatting or kneeling. Dr. Chiang transferred care to Dr. Phillip Stull for continuing orthopedic care. Dr. Stull had already documented on May 19, 2020 that Claimant had been furloughed due to the economic environment related to Covid-19 and the lack of work. Claimant testified that he did not receive an offer of modified duty, in fact he was offered a package deal to retire as there were approximately four thousand flight attendants on the books and Employer had a severely reduced flight schedule due to the Covid-19 pandemic.

The relevant consideration is whether the totality of the circumstances establishes that Claimant was at fault for the termination of his employment. Claimant in this case was receiving temporary total disability benefits at the time of he accepted his formal retirement on August 1, 2021 but neither party raised issues with regard to offset applicable under Section 8-42-105(3)(a)-(d), C.R.S. This ALJ is required to resolve the case under Section 8-42-103(1)(g), and Section 8-42-105(4)(a), C.R.S. If an injured worker is responsible for his termination from employment, the injured worker is not entitled to continue receiving benefits compensating him for the wage loss after the date of termination. A claimant does not act "volitionally" or exercise control over the circumstances leading to a claimant's termination if the effects of the injury prevent a claimant from performing assigned duties and cause the termination of employment. *In re of Eskridge*, W.C. No. 4-651-260 (ICAO April 21, 2006). This ALJ finds that Claimant was not at fault for his termination. This case is distinguished from the underlying factual case in *Gilmore*, *supra*. In that case, the court reasoned that "employer is precluded by the job termination from the opportunity to make an offer of modified duty." Here, as is found, Respondents did not avail themselves of the opportunity to make an offer to place Claimant in a modified job position. This ALJ infers that they had no intention of doing so due to the economic climate and given the Claimant's age and medical restrictions.

On June 30, 2020 Dr. Stull continued Claimant on restrictions in accordance with the referring provider and on December 4, 2020 Dr. Stull took Claimant off of work completely, according to the Physician's Report. When Claimant was offered a retirement package, which he accepted as of August 1, 2020 just two weeks later, there was still no work available under Claimant's limitations and he continued having pain in his left knee, which resulted in Dr. Stull taking him off work ahead of his scheduled surgery.

Here, the Court is asked to infer that Claimant was aware of the effects the offered retirement package would have on Claimant's entitlement to temporary total disability benefits. Claimant was receiving TTD because the employer was unable to offer employment from April 7, 2020 through July, 2020, within Claimant's sedentary work restrictions as shown by the filing of the admission on July 17, 2020. This ALJ infers that Employer offered the retirement package because Claimant was unable to work due to both the economic circumstances cause by the Covid-19 pandemic, and Claimant's lack of job offers from his employer caused by his ongoing symptoms related to the work injury, as credibly established by Claimant's testimony. As found the evidence does not show that Claimant was offered sedentary work by Respondents or tend to show that Employer offered the retirement package in order to terminate temporary disability benefits. In fact, Respondents did not file the application for hearing to terminated benefits until March 3, 2021, over seven months later. Further, Claimant was taken off all work by Dr. Stull on December 4, 2020, which is further evidence that Employer would have been unlikely to have offered any employment within Claimant's limitations. Respondents have not met their burden of establishing by a preponderance of the evidence that Claimant was at fault or responsible for his termination. The totality of persuasive evidence shows Claimant did not perform a volitional act or otherwise exercise a degree of control over the circumstances leading to his separation from employment. Claimant continues to be temporarily and totally disabled until he is released to return to work at full duty; until he actually returns to work; or, until he reaches MMI. Therefore, Respondents request to terminated temporary disability benefits is denied.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's March 28, 2020 claim is compensable and Respondents' request to withdraw the admission of liability is denied.

2. Claimant proved by a preponderance of the evidence that the left total knee arthroplasty (TKA) surgery recommended by Dr. Phillip Stull is automatically authorized

pursuant to W.C.R.P. Rule 16-7(E). Respondents shall pay for the reasonably necessary and related medical care subject to the fee schedule.

3. Respondents' defense that Claimant was responsible for termination of his employment is denied and dismissed.

4. All matters not determined here are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

Dated this 23rd day of August, 2021.

ISSUES

Whether the claimant has shown by a preponderance of the evidence that he is permanently and totally disabled as a result of the May 24, 2017 work injury.

The endorsed issue of disfigurement is reserved for future determination.

FINDINGS OF FACT

1. The claimant worked for the employer as a truck driver. The claimant's job duties included delivering items for the employer. This would entail loading and unloading trucks at the employer's loading dock.

2. On May 24, 2017, the claimant was working on the loading dock moving a crate with a coworker. The claimant testified that the weight of the crate was about 1,800 pounds. The claimant's coworker was operating a forklift and the claimant was on the ground, when the crate fell and caught the claimant's right foot. The claimant was able to remove his foot from under the crate and received medical treatment that same day.

3. The claimant was diagnosed with a complete tear of the anterior talofibular ligament (ATFL); sprain of the deltoid; fracture of the first metatarsal; and a distal tibial fracture at the tibiotalar joint.

4. Beginning on July 24, 2017, the claimant returned to light duty work for the employer. The claimant worked in that capacity through September 13, 2017, which was the claimant's last day working for the employer. The claimant has not worked for any other employer since that date.

5. On November 2, 2017, the claimant was seen by Dr. Adam Cota. On that date, Dr. Cota noted that the claimant had pain over the right ATFL, and significant pain over the posterior lateral aspect of the hind foot. Dr. Cota also noted discoloration in the right foot. Dr. Cota opined that the claimant could have complex regional pain syndrome (CRPS) and referred the claimant to Dr. Ellen Price for evaluation.

6. The claimant was first seen by Dr. Price on January 17, 2018. On exam, Dr. Price noted that the claimant had significant right ankle swelling, with pitting edema. She also noted allodynia, hyperpathia, and color changes. In a list of diagnoses, Dr. Price included possible CRPS. Dr. Price recommended a number of treatment modalities including psychological counselling, lumbar sympathetic blocks, acupuncture, and physical therapy.

7. On February 6, 2018, Dr. Price administered electromyography (EMG) testing of the claimant's right lower extremity. Dr. Price identified it as an abnormal study

with evidence of partial moderate right tibial and sural nerve injury (secondary to severe edema), evidence of reinervation potentials noted, and possible CRPS.

8. On February 21, 2018, the claimant was seen by Dr. David Reinhard for diagnostic testing related to CRPS. Specifically, Dr. Reinhard performed stress thermography testing and an autonomic testing battery. At the conclusion of the testing, Dr. Reinhard noted that the testing was "strongly positive for evidence of [CRPS]". He further noted that two positive tests is considered confirmation of CRPS under the Colorado Medical Treatment Guidelines (MTG).

9. On June 13, 2018, the claimant attended a functional capacity evaluation (FCE) with Pat Riley, PT. In a written report, PT Riley opined that the claimant was capable of working in a light duty position, up to four hours per day and five days per week. PT Riley also noted positional tolerances for sitting, standing or walking up to 30 minutes. PT Riley recommended that the claimant change positions frequently and elevate his right leg. PT Riley opined that the claimant's limitations did not match the requirements of his position with the employer.

10. On June 18, 2018, Dr. McLaughlin placed the claimant at maximum medical improvement (MMI) and assigned a permanent impairment rating of 30 percent, whole person. This included 25 percent for the CRPS diagnosis and seven percent for the claimant's right lower extremity. Dr. McLaughlin also imposed permanent work restrictions of no lifting more than 50 pounds, no repetitive lifting of more than 25 pounds, change positions as needed, no ladders, no crawling, no kneeling, no squatting, no climbing, and limit standing/walking to 30 minutes at time. With regard to maintenance medical treatment, Dr. McLaughlin recommended gabapentin, ketamine cream, additional physical therapy, and follow-up with him, as needed. Dr. McLaughlin noted that Dr. Cota determined that the claimant was not a surgical candidate.

11. On November 20, 2018, the claimant attended an Division-sponsored independent medical examination (IME) with Dr. Stanley Ginsburg. In connection with the DIME, Dr. Ginsburg reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. Dr. Ginsburg agreed with Dr. McLaughlin that the claimant reached MMI on June 18, 2018. With regard to permanent impairment, Dr. Ginsberg assessed a whole person impairment of 35 percent. This rating was based on the CRPS diagnosis. Dr. Ginsburg did not include a lower extremity rating because the claimant would not allow him to complete range of motion measurements. Dr. Ginsberg did not opine with regard to maintenance medical treatment or permanent work restrictions.

12. At the request of the respondents, on April 2, 2019, the claimant attended an independent medical examination (IME) with Dr. John Raschbacher. Prior to issuing his written report, Dr. Raschbacher reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. Dr. Raschbacher opined that the claimant's impairment rating for CRPS should be 15 percent.

13. On August 27, 2019, the respondents filed a Final Admission of Liability (FAL) reflecting the MMI date of June 18, 2018 and Dr. Ginsberg's impairment rating of 35 percent, whole person.

14. On March 5, 2019, Dr. McLaughlin completed a medical source statement. In completing that form, Dr. McLaughlin noted that the claimant could lift up to 50 pounds, occasionally, and 20 pounds frequently. Dr. McLaughlin also indicated that the claimant could walk between up to one hour at a time, and up to one to two hours total per day. With regard to sitting, the claimant could sit three hours at a time, with a total of three to four hours per day. Dr. McLaughlin also opined that the claimant could work up to four hours per day, with 15 minutes of sustained work activity. He also noted that the claimant would miss between four and seven days per month.

15. On October 15, 2019, the claimant returned to Dr. McLaughlin. On that date, Dr. McLaughlin completed a medical source statement. Dr. McLaughlin marked that the claimant was unable to sit or stand for more than 10 minutes at a time; that in an eight hour period he could sit for less than two hours total; stand/walk for less than two hours total; lift 10 pounds occasionally, and 20 pounds rarely; and would miss more than four days a month.

16. A second IME was performed by Dr. Raschbacher on November 8, 2019. As with the prior IME, Dr. Raschbacher reviewed the claimant's medical records, obtained history from the claimant, and completed a physical examination. At that time, the claimant reported that over the prior three to four months he was no better and no worse. Dr. Raschbacher noted the claimant's assertion that he was totally disabled. However, it was Dr. Raschbacher's opinion that the claimant was not totally disabled. Dr. Raschbacher noted that, based upon his exam, there was no clear objective evidence of persistent or worsening CRPS. He recommended repeat CPRS testing (including x-ray, bone scan, QSART, and thermography) to determine whether the claimant still had CRPS. In addition, Dr. Raschbacher recommended that following such testing, the claimant should undergo an FCE.

17. On December 3, 2019, Dr. Raschbacher authored an addendum to his November 2019 IME report. In the addendum, Dr. Raschbacher clarified that if repeat CRPS testing is negative, the claimant would not have any work restrictions. If, however, the testing is positive for CRPS, the claimant would be restricted to sedentary work.

18. On December 13, 2019, the claimant was seen by Dr. McLaughlin. At that time, Dr. McLaughlin recommended that the claimant see a physical medicine and rehabilitation specialist to address whether additional CRPS testing was warranted. Also on that date, Dr. McLaughlin identified the claimant's work restrictions as lifting up to 20 pounds, repetitive lifting up to 10 pounds, standing/walking for 10 minutes at a time, sit-down duty only, and no driving.

19. The claimant was seen in the emergency department (ED) for two incidents unrelated to his work injury. Those ED visits occurred on March 5, 2020 and April 27,

2020, respectively. These medical records do not reflect the claimant's diagnosis of CRPS. Nor do those records indicate that the claimant was exhibiting any pain behaviors related to his right lower extremity.

20. Thereafter, the claimant was seen in the ED at Community Hospital on October 1, 2020 after a motorcycle accident. On October 1, 2020, the claimant reported to ED providers that he was in a motorcycle accident two days prior. The claimant also reported that he was traveling without a helmet at approximately 25 miles per hour, when he fell to the right and lost consciousness.

21. The claimant testified regarding the motorcycle accident. The claimant describes driving between five and ten miles per hour in a parking lot when he hit some gravel and fell to the right. The claimant also testified that he broke his leg and hit his head. The claimant also testified that the injuries he sustained as a result of the 2020 motorcycle accident did not change his CRPS symptoms.

22. The medical record of October 1, 2020 identified the claimant's diagnoses as a right minimally displaced tibial plateau fracture; right sided rib fractures; a right distal radius fracture; and a right scaphoid fracture. Dr. Duwayne Carlson opined that the claimant did not need surgery. In that same record, Dr. Carlson referenced the claimant's crush injury "several years ago" and the claimant's report that "he has been evaluated by multiple doctors with no diagnosis or treatment".

23. On January 12, 2021, Dr. McLaughlin completed a medical source statement. In this statement, he opined that as of December 13, 2019, the claimant was capable of occasionally lifting up to 20 pounds and frequently and continuously lifting 10 pounds. In addition, the claimant was capable of standing 10 minutes at time (for up to four hours per day), and was able to sit for up to eight hours per day. Dr. McLaughlin also stated that the claimant's maximum work tolerance was 8 hours per day and that he would miss one to three days of work per month. He did not believe that the claimant's work injury impaired his ability to concentrate. In addition, Dr. McLaughlin opined that vocational rehabilitation and training would likely assist the claimant in returning to work.

24. On January 25, 2021, the claimant was seen by Dr. McLaughlin. At that time, the claimant reported the recent motorcycle accident and worsening symptoms. The claimant reported to Dr. McLauglin that at the time of his motorcycle accident he was going ten miles per hour when the motorcycle fell. It was the claimant's belief that the motorcycle accident did not change his CRPS symptoms. Despite that statement, the claimant asked about leg amputation. Dr. McLaughlin noted that although he had previously provided work restrictions for modified duty, he "did not see how [the claimant] could even get to work or do any work."

25. On January 29, 2021, the claimant returned to Dr. Raschbacher for an additional IME. In connection with this IME, Dr. Raschbaher performed a physical examination and reviewed additional medical records, including those related to the 2020 motorcycle accident. Dr. Rachbacher also reviewed a social media investigative report. The claimant reported to Dr. Raschbacher that at the time of the motorcycle accident, he was going approximately five miles per hour when the motorcycle slipped on gravel. The

claimant also denied any change to his CRPS symptoms following the motorcycle accident.

26. In his IME report, Dr. Raschbacher questioned the degree of symptomatology the claimant was reporting in light of his ability to operate a motorcycle and kayak (as depicted in the social media pictures). In addition, Dr. Raschbaher opined that it was unlikely that the claimant's report of the motorcycle accident was accurate given that the claimant was knocked unconscious and sustained fractures to his right leg, right wrist, and right ribs. Dr. Raschbaher reiterated his prior recommendations for repeat testing to confirm CRPS. Dr. Rashbaher concluded that the recent worsening of the claimant's symptoms was due to the motorcycle accident.

27. On March 3, 2021, the claimant was seen by Dr. McLaughlin. On that date, Dr. McLaughlin declined to refer the claimant for any repeat CRPS testing.

28. On March 19, 2021, the claimant was seen by Dr. Price. This was the first time the claimant was seen by Dr. Price since April 2018. On that date, Dr. Price completed a medical source statement in which she listed the claimant's restrictions as lifting up to 20 pounds; standing and walking up to one hour per day; and sitting up to three hours per day. Dr. Price identified the claimant's maximum work tolerance as three hours per day. In addition, Dr. Price opined that the claimant would miss between one and three days per month.

29. On March 23, 2021, Dr. Price issued a second form outlining work restrictions in which she opined that the claimant could only sit or stand for 10 minutes at a time, and for up to one hour per day. She also opined that the claimant would miss more than four days of work per month, and he would be off task during ten percent of his work day.

30. On March 29, 2021, Dr. Price authored a response to a letter from the respondents' counsel. In her reply, Dr. Price noted that she was aware that prior to the motorcycle accident, the claimant did not undergo any medical treatment for his work injury. Dr. Price opined that the injuries the claimant sustained in the motorcycle accident were not contributing to his current presentation or disability.

31. Dr. McLaughlin's testimony was consistent with his written reports. Dr. McLaughlin testified that the claimant continues to have CRPS and remains at MMI. With regard to the various work restrictions he has issued, Dr. McLaughlin testified that the work restrictions at the time he placed the claimant at MMI and in the January 12, 2021 medical source statement are reflective of his attempt at optimism regarding the claimant's level of function. Dr. McLaughlin also testified that it is his opinion that the claimant has worsened since the date of MMI and was not capable of returning to work.

32. Dr. Price's testimony via deposition was consistent with her written reports. Dr. Price testified that the claimant's condition has worsened, but he remains at MMI. During her testimony, Dr. Price acknowledged that prior to her March 19, 2021 examination of the claimant, she had not seen him for three years. Dr. Price reiterated

her opinion that the 2020 motorcycle accident had no impact on the claimant’s current complaints.

33. Dr. Raschbacher’s testimony was consistent with his written reports. Dr. Raschbacher reiterated his opinion that repeat CRPS testing would assist in determining whether the claimant is or is not at MMI. Dr. Raschbacher also testified that the work restrictions assigned by Dr. McLaughlin at the time of MMI were reasonable at that time. He also noted that the claimant’s reported change of function since MMI is inconsistent with maintaining MMI. Dr. Raschbacher testified that the interval between MMI and the April 2019 evaluation with Dr. McLaughlin demonstrates that the claimant’s CRPS was stable. In addition, the additional work restrictions assigned in April 2019 were based solely on the claimant’s subjective report and not any objective testing.

34. Dr. Raschbacher also testified that he recommended repeat testing in November 2019 to determine whether the claimant continued to have CRPS. He reiterated that if repeat testing confirmed CRPS, he would agree that sedentary work restrictions would be appropriate. However, Dr. Raschbacher also testified that the claimant’s ability to ride a motorcycle in September 2020 was not consistent with the symptoms he reported to Drs. McLaughlin and Price. Dr. Raschbacher testified that the injuries the claimant sustained as a result of the 2020 motorcycle accident are relevant to the claimant’s current presentation. Specifically, the right leg fracture caused additional trauma to the same body part in which the claimant has been diagnosed with CRPS. Dr. Raschbacher noted that additional trauma to the same extremity can worsen symptoms of CRPS. He further testified that it was not medically probable for the fracture sustained on September 30, 2020 to have completely healed and be asymptomatic by the time of Dr. McLaughlin’s evaluation in January 2021.

35. The claimant testified that his current right foot/leg symptoms include pain with walking, showering, and wearing a shoe. The claimant uses heat and/or ice two to three times each day. He will have the heat or ice on his right foot as long as he “can stand it”. When walking he uses a cane because walking feels like stepping on 1,000 needles.

Education and Work History

36. The claimant is a high school graduate. His work experience includes waiting tables, sales positions, and working on a frac crew in the oil and gas industry. The claimant began working as a delivery driver for the employer’s predecessor, Conway Freight. In 2011, the employer in this case purchased Conway Freight and the claimant began his employment with the employer.

Vocational Evaluations

37. On November 4, 2019, Bob Van Iderstine issued a vocational evaluation report regarding the claimant. In connection with his report, Mr. Van Iderstine interviewed the claimant on February 28, 2019, reviewed the claimant’s medical records, and conducted a review of the labor market. In his report, Mr. Van Iderstine opined that the claimant would be unable to earn wages in competitive employment in the Grand

Junction/Mesa County area. In support of this opinion, Mr. Van Iderstine relied on a medical source statement prepared by Dr. McLaughlin on October 15, 2019. Therefore, Mr. Van Iderstine opined that the claimant would be off task for up to 25 percent of his work day. Mr. Van Iderstine also noted that Dr. McLaughlin estimated that the claimant would miss four or more work days per month. It is Mr. Van Iderstine's opinion that the claimant would be unable to obtain and retain competitive employment because employers would not tolerate the number of breaks, off-task time, and missed work days identified by Dr. McLaughlin.

38. Mr. Van Iderstine's testimony was consistent with his written report. Mr. Van Iderstine testified that the changes made by Dr. McLaughlin to the claimant's work restrictions since MMI would result in the claimant being unemployable. In support of this opinion, Mr. Van Iderstine noted that Dr. McLaughlin identified that the claimant would miss between one and two days per month. Mr. Van Iderstine explained that this level of unplanned absences would not be tolerated by an employer. Mr. Van Iderstine also noted that the claimant's need to recline would preclude him from working. Mr. Van Iderstine reiterated his opinion that the claimant would be unable to earn wages in competitive employment in the Grand Junction/Mesa County area.

39. Following an interview with the claimant, on January 3, 2020, Katie Montoya, Vocational Consultant, issued an initial vocational assessment report. In connection with that report, Ms. Montoya interviewed the claimant, reviewed the claimant's medical records, and conducted vocational research. However, Ms. Montoya did not state an opinion regarding the claimant's ability to return to work.

40. On March 26, 2021, Ms. Montoya issued a subsequent report in which she expressed opinions regarding the claimant's ability to return to work. In her report, Ms. Montoya opined that the claimant is able to return to work. In support of this opinion, Ms. Montoya referred to the January 12, 2021 medical source statement in which Dr. McLaughlin released the claimant to work eight hours per day, with the ability to lift up to 20 pounds. Ms. Montoya noted the claimant's prior experience in customer service and sales. In addition, Ms. Montoya referenced the inconsistent opinions expressed by Drs. McLaughlin and Price regarding the claimant's work restrictions.

41. Ms. Montoya's testimony was consistent with her written reports. Ms. Montoya reiterated her opinion that the claimant is capable of earning wages in the Mesa County/Grand Junction, Colorado area. Ms. Montoya testified that she has worked with individuals with CRPS who returned to regular gainful employment. In her testimony, Ms. Montoya noted the changing work restrictions in this case. With regard to the initial restrictions assessed by Dr. McLaughlin at MMI, the claimant was employable within those restrictions in a "modified medium" category. Given the changing and inconsistent work restrictions, Ms. Montoya also testified that it is her practice to to use the restrictions that made the most sense given all of the factors in the case. In this case, she determined that sedentary work in customer service or sales positions would be viable employment options for the claimant.

42. The ALJ does not find the claimant's testimony regarding the 2020 motorcycle accident or his current symptoms to be credible or persuasive. The ALJ credits

the medical records, and opinions of Dr. Raschbacher and Ms. Montoya over the contrary opinions of Drs. McLaughin and Price, and Mr. Van Iderstine. The ALJ specifically credits the opinion of Dr. Raschbacher that there is no clear objective evidence of persistent or worsening CRPS. The ALJ also credits Dr. Raschbacher's opinion that the break in medical treatment from MMI on June 18, 2018 to the follow up appointment with Dr. McLaughlin in April 2019 indicates that the claimant's condition had stabilized. The ALJ is also persuaded that the claimant's 2020 motorcycle accident is more likely the cause of the claimant's current right lower extremity symptoms. The ALJ credits Ms. Montoya's opinion that the claimant is employable in sedentary jobs including customer service and sales. For all of the foregoing reasons, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that he is permanently and totally disabled as a result of the May 24, 2017 work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. In order to prove permanent total disability, claimant must show by a preponderance of the evidence that he is incapable of earning any wages in the same or other employment. Section 8-40-201(16.5)(a), C.R.S. (2016). A claimant therefore cannot receive PTD benefits if he is capable of earning wages in any amount. *Weld County School Dist. RE-12 v. Bymer*, 955 P.2d 550, 556 (Colo. 1998). The term "any wages" means more than zero wages. *Lobb v. ICAO*, 948 P.2d 115 (Colo. App. 1997); *McKinney v. ICAO*, 894 P.2d 42 (Colo. App. 1995). In weighing whether claimant is able

to earn any wages, the ALJ may consider various human factors, including claimant's physical condition, mental ability, age, employment history, education, and availability of work that the claimant could perform. *Weld County School Dist. R.E. 12 v. Bymer*, 955 P.2d at 550, 556, 557 (Colo. 1998). The critical test is whether employment exists that is reasonably available to claimant under his particular circumstances.

5. The respondents are not required to prove the existence of a job offer to refute a claim for permanent total disability benefits. *Black v. City of La Junta Housing Authority*, W.C. No. 4-210-925 (ICAO, December 1998) (claimant is not permanently totally disabled even though respondents' vocational expert was unable to identify a single job opening available to claimant); *Beavers v. Liberty Mutual Fire Ins. Co.*, (Colo. App. No. 96 CA0275, September 5, 1996) (not selected for publication); *Gomez v. Mei Regis*, W.C. No. 4-199-007 (September 21, 1998). Rather, the claimant fails to prove permanent total disability if the evidence establishes that it is more probable than not that the claimant is capable of earning wages. *Duran v. MG Concrete Inc.*, W.C. No. 4-222-069 (September 17, 1998).

6. As found, the claimant has failed to demonstrate by a preponderance of the evidence that he is incapable of earning wages in the same or other employment in his commutable labor market. As found, the claimant is able to work in sedentary to light duty work. As found, the medical records and the opinions of Dr. Raschbaher and Ms. Montoya are credible and persuasive. In reaching this conclusion, the ALJ has considered "human factors" including the claimant's age, physical condition, work restrictions, educational background, and employment history. Therefore, the claimant has failed to demonstrate, by a preponderance of the evidence, that he is permanently and totally disabled as a result of the May 24, 2017 work injury. The ALJ concludes that the claimant is not entitled to PTD benefits.

ORDER

It is therefore ordered:

1. The claimant's request for permanent total disability (PTD) benefits is denied and dismissed.

2. The issue of disfigurement is reserved for future determination.

Dated this 24th day of August 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. **In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Did Claimant prove the settlement in his claim should be reopened on the grounds of fraud or mutual mistake of material fact?

FINDINGS OF FACT

1. Claimant suffered compensable injuries on January 9, 2009. He tripped over an air hose at work and injured his neck, back, and left shoulder.

2. Claimant had a previous neck injury and underwent a two-level cervical fusion in 2007. He received Social Security Disability benefits for an unclear length of time[1] but had returned to work 18 months before the work accident.

3. Claimant received medical treatment and was put at MMI by his ATP in on December 28, 2010.

4. Dr. Kathy McCranie performed a Division IME in July 2011. Dr. McCranie agreed with the MMI date assigned by the ATP. She concluded Claimant's ongoing neck and back issues were not caused by the work accident. Dr. McCranie assigned a small rating for the left shoulder, although she opined, "I would question whether even this impairment would be related to the 01/09/09 accident." Dr. McCranie also opined Claimant required no medical treatment after MMI causally related to the work accident.

5. Respondents filed a Final Admission of Liability (FAL) based on Dr. McCranie's DIME report. Claimant requested a hearing, and ALJ Walsh ultimately found he failed to overcome the DIME. This determination was upheld by the Industrial Claim Appeals Office (ICAO) and the Court of Appeals. As a result of this litigation, the claim was closed.

6. Claimant was diagnosed with a right hip labral tear in 2014. He filed a petition to reopen in August 2014 because "the hip was not included" in his claim previously. Claimant requested a hearing on reopening and permanent total disability "because I was not able to walk." Claimant also asserted the DIME's prior findings of causation and apportionment were a "mistake."

7. ALJ Felter initially granted summary judgment and dismissed the petition to reopen on the theory that causation had already been fully litigated and decided against Claimant. Claimant appealed *pro se* to the ICAO, which reversed the entry of summary judgment. The ICAO noted that § 8-43-303(1) allows reopening based on "mistake." The Panel held, "the question of whether the DIME physician made an erroneous conclusion that the claimant was at MMI, that the claimant's condition of disability was not related to

[1] Conflicting information in the record indicates Claimant was on SSDI for one year or 20 years.

the work injury, or that the claimant would [not] need any future medical treatment caused by his work is one of fact for determination by the ALJ." The ICAO remanded the claim for a hearing on the merits of the petition to reopen.

8. Claimant retained Roger Fraley, Esq. to represent him at the hearing. On October 17, 2017, Judge Felter determined Claimant's left shoulder had worsened and reopened the claim. Judge Felter's Order was not submitted into evidence, so it is unknown what, if any, specific benefits were awarded in conjunction with the reopening. Claimant testified Judge Felter did not address his claim for permanent total disability.

9. In November 2018, the parties participated in a binding arbitration before PALJ Eley pursuant to § 8-43-206.5. Judge Eley credited Dr. McCranie's opinion that MRIs performed before and after the 2009 work accident showed no significant changes to the left shoulder. Judge Eley found, "Claimant's left shoulder suffered no permanent injury in the 2009 accident," and any treatment for Claimant's left shoulder was instead related to the "significant history of left shoulder problems suffered by Claimant prior to the 2009 accident." Accordingly, Judge Eley denied all treatment for the left shoulder as unrelated to the January 2009 work accident.

10. In March 2019, Claimant agreed to settle his claim on a full and final basis for $24,899.00. The parties used the standard form settlement documents as required by the Division. Claimant admitted he read the settlement documents before signing them, including the provision that states, "Claimant rejects, waives, and forever gives up the right to all compensation and benefits to which Claimant might be entitled . . . including but not limited to . . . [p]ermanent total disability benefits." Claimant testified he "did not understand" the provision regarding waiver of PTD benefits, but admitted Mr. Fraley explained the documents and gave him the opportunity to ask questions about anything he did not understand. Claimant admitted he signed the documents in Mr. Fraley's office and verified the authenticity of his signatures on Exhibit B. The documents were notarized on March 15, 2019. The Division accepted the documents and entered an Order approving the settlement on March 18, 2019.

11. Claimant testified he later emailed Mr. Fraley regarding his objection to the settlement, but no such emails were offered or admitted into evidence.

12. Claimant received his share of the settlement proceeds, minus attorney fees and costs, on April 2, 2019.

13. Claimant testified he did not sign the settlement documents before the notary on March 15, 2019, despite the attestation on the documents. Claimant testified he drove through a major snowstorm to sign the documents in Mr. Fraley's office. He testified by the time he arrived, Mr. Fraley had "sent the notary home" because of the storm. He testified Mr. Fraley said, "he would take and get my signature notarized before his notary."

14. Claimant's testimony regarding the notarization is not supported by any other persuasive evidence in the record. Mr. Fraley contradicted this allegation and stated

Claimant signed the documents on March 15, 2019, as attested by the notary. In his post-hearing brief, Claimant described his testimony as “new evidence,” and the ALJ infers Claimant said nothing about any alleged problems with the notarization before the hearing.

15. Claimant testified he received poor representation from Mr. Fraley and has filed a grievance against Mr. Fraley for nonspecific “professional misconduct and dishonesty.” Claimant presented no persuasive evidence to substantiate his allegations. On June 6, 2021, Mr. Fraley sent a detailed letter to the Attorney Regulation Counsel regarding his representation of Claimant. The letter was offered into evidence by Claimant. Mr. Fraley’s statements regarding the course of the claim and the circumstances surrounding execution of the settlement are credible and more persuasive than the contrary allegations offered by Claimant.

16. Claimant testified he thinks Mr. Fraley should have pursued a claim for permanent total disability on his behalf and “that was left out of the whole settlement. That’s why I’m asking the Court to reconsider it, set the judgment aside, and allow me to have my permanent total disability and my day in court.” Claimant admitted he believed he was permanently totally disabled as of at least November 2014, more than four years before he settled his claim.

17. Claimant testified his left hip has worsened and “my doctor, Brian White with Western Orthopedics, says it has worsened too.” Claimant believes the left hip is related to the 2009 work accident. He testified, “I did not know it was both hips up until just after the settlement.” No medical records from Dr. White were offered into evidence. There is no persuasive evidence that any issue with Claimant’s left or right hip is causally related to the work accident.

18. X-rays of his cervical spine were taken on May 17, 2021. The radiologist noted postoperative changes from the prior multilevel cervical fusion. Although there was no evidence of mature bone formation at the fusion site, the hardware was intact with no obvious mechanical failure or loosening. Flexion-extension views showed no evidence of segmental instability. Degenerative spondylosis at C5-6 and C6-7 appeared “stable” compared to prior June 28, 2000 films, but there was some interval progression of “degenerative disc disease and osteophyte formation at C3-4.” There is no persuasive evidence any of the visualized pathology or associated symptoms are causally related to the 2009 work accident.

19. On May 26, 2021, Claimant saw Lauren Eller, PA-C at the Vascular Institute of the Rockies. Ms. Eller noted Claimant’s neck and back pain had gotten worse since his last office visit. He also reported significant right shoulder pain “secondary to his neck. He is hoping to get this repaired in the next couple of months pending clearance.” The report states Claimant was scheduled for a total hip replacement the following week. Ms. Eller opined Claimant was cleared to proceed with low back surgery “if required in consultation with his spine surgeon.” Her report contains no discussion of causation and offers no opinion that any of Claimant’s musculoskeletal complaints were related to the 2009 work accident.

20. Claimant testified he was recently diagnosed with an unspecified “problem” at C3, which he apparently believes is related to the original work accident. He testified he was “going to see Dr. William Choi about [that] tomorrow, because there’s no sense in . . . redoing surgery—cervical C4 and C5 and not dealing with C3. I had neck surgery May 28th of 2018, prior to this settlement that was negotiated between the Respondents and Mr. Fraley.” No records from Dr. Choi were offered into evidence. Based on the radiologist’s reading of the May 17, 2021 x-rays, any “new” problem at C3 probably reflects the natural progression of underlying multilevel degenerative changes.

21. Respondents proved Claimant entered into a valid agreement to settle his claim on a full and final basis. The settlement was approved by the Division

22. Claimant failed to prove any fraud or mutual mistake of material fact relating to his settlement or any other aspect of his claim. Although Claimant has made multiple *arguments* regarding his request to reopen the settlement, he has provided very little *evidence* to support his claim. Even though many of Claimant’s arguments relate to his medical condition, he submitted only four pages of medical records. Claimant testified his PCP (Dr. Fine) and his orthopedic surgeon (Dr. Brian White) have offered opinions regarding his level of disability and need for treatment. But no records from Dr. Fine or Dr. White were tendered at hearing. There is no persuasive evidence to show any of Claimant’s ongoing medical issues are related to the 2009 work accident. Mr. Fraley’s June 6, 2021 letter persuasively refutes many of Claimant’s allegations regarding the process leading up to the settlement. Mr. Fraley’s letter also persuasively shows Claimant has mischaracterized and/or misinterpreted many circumstances and events regarding his claim, which casts substantial doubt on the reliability of his testimony in general.

CONCLUSIONS OF LAW

A. Validity of the settlement agreement

The Workers’ Compensation Act allows injured workers to settle all or part of their claim. Section 8-43-204(1), C.R.S. (2009). Claimant initially appears to challenge the validity of the settlement based on alleged irregularities regarding the notarization of his signature. But Claimant’s allegations about the notarization are not substantiated by any other persuasive evidence. Mr. Fraley contradicted Claimant’s testimony he did not sign the documents on March 15, 2019. There is no persuasive evidence Claimant told anyone about the allegedly improper notarization before the June 23, 2021 hearing, and it appears to be a recent addition to his narrative. The notarization appears valid on its face, Claimant conceded he personally signed the documents, and the documents were accepted by the Division. Under the circumstances, the ALJ is not inclined to accept Claimant's bare assertions regarding potential notarial irregularities absent other corroborative evidence. The preponderance of persuasive evidence shows the settlement is valid under § 8-43-204.

B. Fraud

All final settlements are subject to reopening "on the ground of fraud or mutual mistake of material fact." Section 8-43-204(1). The party seeking to reopen a settlement bears the burden of proof by a preponderance of the evidence. Section 8-43-303(4).

To prove fraud, it must be shown that (1) the party misrepresented or concealed a material existing fact that in equity and good conscience should be disclosed; (2) the party knew they were making a false representation or concealing a material fact; (3) the other party was ignorant of the existence of the true facts; (4) the party making the representation or concealing a fact did so with the intent to induce action on the part of the other party; and (5) the misrepresentation or concealment caused damage to the other party. *Morrison v. Goodspeed*, 60 P.2d 458 (Colo. 1937); *Ingels v. Ingels*, 487 P.2d 812, 815 (Colo. App. 1971); *Beeson v. Albertson's, Inc*., W.C. No. 3-968-056 (April 30, 1996). To succeed on a claim for fraudulent concealment or nondisclosure, a party must show the other party had a duty to disclose material information. *Poly Trucking, Inc. v. Concentra Health Servs., Inc*., 93 P.3d 561, 563–64 (Colo. App. 2004).

As found, Claimant failed to prove fraud relating to the settlement or any other aspect of his claim. There is no persuasive evidence of any intent on Respondents' part to deceive, misrepresent, or conceal material information. Claimant's primary argument regarding fraud relates to notarization of the settlement documents. This argument is unpersuasive for several reasons. As previously discussed, the ALJ does not credit Claimant's account of the notarization.[2] In any event, Claimant admitted he signed the documents and verified his signatures. Claimant's assertion he "was never in agreement with this settlement" and "objected to the settlement since I first heard about it" is inconsistent with the undisputed evidence that he signed the agreement and accepted the funds. Claimant agreed to the settlement of his own free will, without force, pressure, or coercion from anyone.

Nor is the ALJ persuaded Claimant was confused or misunderstood the settlement agreement when he signed it. The Workers' Compensation system contains unique procedural safeguards to ensure claimants understand the ramifications of a full and final settlement. The Division requires parties use a standard form settlement agreement, which has been drafted to convey settlement terms using as understandable language as possible. WCRP 9-9(A). Additionally, injured workers must receive an advisement before any settlement can be approved by the Division. Section 8-43-204(3). Where, as here, the claimant is represented by counsel, the Division allows the attorney to provide the advisement. Claimant conceded he reviewed and discussed the settlement with Mr. Fraley before he signed it, and there is no persuasive evidence he was misinformed in any way. Claimant's allegation he did not understand he was waiving any claim for permanent total disability benefits is not credible considering his demonstrated ability to

[2] Moreover, even if Claimant's testimony regarding the notary were credited, it would not show any fraud. Claimant testified Mr. Fraley sent the notary home early because of a major snowstorm. Claimant further testified Mr. Fraley explained the situation to him before he signed the settlement documents. Thus, Claimant's own version of events shows he was fully aware of the circumstances, which conclusively refutes his claim of deception, concealment, or material misrepresentation.

prosecute a successful *pro se* appeal and marshal legal authority and arguments in support of his petition to reopen the settlement.

C. Mutual mistake of material fact

Besides fraud, the only other statutory basis to reopen a final settlement is "mutual mistake of material fact." Section 8-43-204(1). A mistake is "mutual" if it is reciprocal and common to both parties. *Maryland Casualty Co. v. Buckeye Gas Products Co*., 797 P.2d 11 (Colo. 1990); *Cary v. Chevron U.S.A., Inc*., 867 P. 2d 117 (Colo. App. 1993). A mistake is "material" when it goes to "the very basis of the contract." *England v. Amerigas Propane*, 395 P.3d 766, 771 (Colo. 2017). "In other words, the mistake of fact must relate to a material aspect of the contract such that, but for the mistake, the party seeking rescission would not have entered the contract." *Id*. The mistake must pertain to a past or present fact not an opinion or prophecy about the future. *Gleason v. Guzman*, 623 P.2d 378 (1981). A mistake may be found where parties settle a claim without being fully informed concerning the "extent, severity and likely duration" of the injury. *Id*. The mistake must not relate to a fact regarding which the party seeking relief bears the risk.

As found, Claimant failed to establish any mutual mistake of material fact relating to his claim or the settlement. Claimant submitted minimal documentary evidence to substantiate his testimony and support his allegations. To be sure, a Claimant is not required to present expert testimony or opinion evidence to prove causation and can attempt to support his claim with any competent evidence, including lay testimony. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983). But the lack of supporting medical evidence is a legitimate factor to consider when determining if a claimant has met his burden of proof. Judge Eley conclusively determined Claimant's left shoulder condition is unrelated to the work accident, and there is no persuasive evidence any right shoulder issues are work-related. Nor is there any persuasive evidence of a causal connection between the work accident and any hip pathology. As for his argument about permanent total disability benefits, Claimant admitted he thought he was permanently totally disabled well before the settlement was consummated. Therefore, even if there were a "mistake" about this aspect of the claim, it was not "mutual."

ORDER

It is therefore ordered that:

1. Claimant's request to reopen his settlement is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: August 24, 2021

Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant, by clear and convincing evidence, overcome the DIME opinion of Dr. Bissell on the issue of Maximum Medical Improvement?

II. If Claimant has not overcome the DIME opinion, has he shown, by a preponderance of the evidence, that his 7% extremity impairment rating should be converted to that of the Whole Person?

III. If Claimant has not overcome the DIME opinion, has he shown, by a preponderance of the evidence, that substantial evidence exists to make a general award of medical maintenance care?

IV. Have Respondents shown, by a preponderance of the evidence, that they are entitled to recovery of an overpayment for benefits received by Claimant?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background

1. This is an admitted claim. Claimant injured his left shoulder while working as a probation officer for Employer on February 26, 2019. He was required to undergo safety training in Golden, Colorado as part of his employment. His training group was practicing rear chokeholds at the time of the incident. Claimant stated he felt a 'pop', along with immediate and severe pain in the left shoulder. By that evening, Claimant reported an intense aching in his shoulder blade area, "kind of in the whole region."

2. [ALJ note*] The first medical reports admitted into evidence are dated 4/5/2019. It was clarified at hearing by Claimant that he reported his injury the next day, was referred to Centura Health, received some physical therapy, and had his care transferred to Lamar, Colorado, near Claimant's place of residence. The medical record for the first 5½ weeks is, therefore silent.

Treatment begins at Prowers Medical Clinic

3. The Prowers Medical Clinic began treating as Claimant's ATP on April 5, 2019. In his intake notes, Dr. Scott Cameron, DO, noted that even he could not access the medical records, except for the initial visit on 2/27/19. Dr. Cameron stated that Claimant had received conservative care only for 5½ weeks. Claimant reported that his progress had

plateaued for several weeks, and was experiencing zingers and an aching throb into the hand, popping and aching at night, and pain lifting overhead. Weakness or consistent numbness was denied. (Ex. 1, p. 3).

4. Based upon the history and physical exam, Dr. Cameron felt that Claimant should have progressed more than he had. He ordered an MRI, PT, and pain medications. *Id* at 4, 5. He also placed Claimant onto modified duty for 10 days, with certain restrictions on shoulder usage. *Id* at 2.

5. Claimant returned to Dr. Cameron on 4/16/19. (Ex. 1, p. 7). Pain remained the same. Range of Motion ("ROM") was essentially 'full', but limited by pain. The MRI had not been completed. Claimant was continued on modified duty. Id at 9.

6. The MRI was then completed on 4/23/2019. The significant *Findings* were:

> There is *no full-thickness [rotator cuff] tear.* There is *no large partial-thickness tear.* There is a *small* area of increased signal intensity in the distal supraspinatus tendon [which could be due to a *tiny* interstitial tear ***or*** administration variation]. (Ex. 10, p.10)(emphasis added).

7. Claimant returned to Dr. Cameron on 4/30/2019. He reported similar complaints ongoing. Dr. Cameron noted: "Reviewed the MRI results with pt, showing possible small tear of rotator cuff tendon, but *nothing that requires surgical intervention as this time nor anything to explain the nature of his pain. Pt states that he believes the MRI is wrong* and believes he has significant problems with his shoulder." *Id* at 16. (emphasis added). If Claimant did not improve with continued PT, Dr. Cameron mentioned the possibility of further testing and an orthopedic referral. *Id* at 18.

8. After physical therapy had achieved little benefit, Claimant returned to Dr. Cameron on 6/11/2019. Dr. Cameron noted:

> Has seen ortho, has received *shoulder injections, have helped somewhat,* but pain is returning. *[Patient] States the plan is to get a repeat MRI, does not like a shoulder MRI but looking now at thorax;* has not heard back about scheduling this yet….Anything involving retraction of L shoulder blade is the worst pain…(Ex. 1, p. 41)(emphasis added).

9. On 6/18/2019, the thoracic MRI was performed. Every facet of the examination was normal and unremarkable. (Ex. 1, p. 46).

10. Dr. Hilton Ray, also with Prowers Medical Group, first treated Claimant on 7/11/2019. (Ex. 1, p. 48). Reported symptoms persisted, and a diagnosis remained elusive. While other testing was considered, Dr. Ray decided on a second orthopedic referral.

Claimant is referred to Dr. Meinig

11. Based upon Dr. Cameron's initial referral, and after the first MRI, Claimant presented to Dr. Richard Meinig for orthopedic evaluation. (Ex. 2). Dr. Meinig diagnosed Claimant on May 24, 2019 with bursitis/tendonitis of the shoulder, and rotator cuff impingement syndrome of the left shoulder. *Id.* at 63. Physical examination by Dr. Meinig revealed "markedly positive Hawkins and impingement sign…. Very marked tenderness along the scapulothoracic medial border of the scapula. *Id.* at 65. Claimant reported ongoing 8 or 9 out of 10 level pain since the work incident. He reported occasional catching and popping in the shoulder and that physical therapy had provided him no relief. *Id.* at 64. Dr. Meinig suspected a possible impingement, and scapulothroacic bursitis.

12. Two injections, each containing bupivacaine and lidocaine, were performed at this visit: one into the medial inferior aspect of the scapulothoracic bursa and an injection into the subacromial space *Id* at 63.

13. Claimant reported at his follow-up visit on June 5, 2019 that the injections reduced his anterior shoulder pain "by perhaps 80%," though he was continuing to have 'about 5 of 10' pain in the shoulder blade area that radiates to the base of the neck. *Id.* at 67. Dr. Meinig then administered another similar injection, this time only to the subscapular bursa. Claimant was also fitted with a clavicle support on 6/28/2019 to address his impingement complaints. Id at 69.

Claimant is referred to Colorado Springs Orthopedic Group

14. Claimant's reported symptoms failed to progress, so he was then referred to Dr. Richard Stockelman with Colorado Springs Orthopedic group for a second opinion. Dr. Stockelman first examined Claimant on August 28, 2019. (Ex. 3, pp. 72-74). Physical examination revealed an inability to perform forward flexion due to pain. Dr. Stockelman diagnosed Claimant with possible left shoulder bursitis, cervical muscle spasms, left carpal tunnel syndrome, and cervical radiculopathy, since Claimant was now reporting numbness and tingling into his ring and middle fingers.

15. Dr. Stockelman noted the 4/23/2019 MRI results. The physical exam was mostly normal, except pain reported with forward flexion, markedly positive Tinel's test, and a positive near test for impingement. *Id* at 73. Claimant also received a Medrol dosepak. Dr. Stockelman then referred Claimant for an EMG/NCS.

16. The EMG was performed by Dr. Katherine Leppard on October 14, 2019. (Ex. 4). In the interim, Dr. Stockelman had performed another subacromial injection of Claimant's left shoulder on September 11, 2019, this time with Marcaine and Depo-medrol. (Ex. 3, p. 77).

17. Claimant returned to Dr. Stockelman on October 23, 2019 stating that the subacromial injection did "give him 'some' relief." (Ex. 3, p. 78). After noting that the EMG was also

normal, Dr. Stockelman felt the next appropriate step would be to perform surgery on the shoulder; however, he did have concern that Claimant could possibly have complex regional pain syndrome (CRPS) and wanted to rule that out prior to any surgery. *Id.* at 80. Dr. Stockelman noted that if Claimant in fact had CRPS, "surgery could make this worse." *Id* at 80.

18. Claimant followed up at Colorado Springs Orthopedic Group, this time being evaluated by Dr. Dale Cassidy for his more distal extremity symptoms. *Id.* at 84-86. During the physical exam, Claimant showed signs of carpal tunnel syndrome, but Dr. Cassidy then noted:

> He had sudden and significant pain involving his left shoulder during my examination. *There was not necessarily distinct provocative maneuver that led to his pain other than general shoulder range of motion*….we essentially stopped the examination due to his pain level. Id at 85 (emphasis added).

19. Dr. Cassidy opined, "While his nerve studies were negative, He [sic] clearly has positive provocative symptoms radiating to both the median and ulnar nerve distribution testing." Dr. Cassidy opined he would be "hesitant" to perform surgery at that time and he and Claimant agreed to try splinting to see if this helps his symptoms in the interim. *Id.*

20. Pain management physician Christopher Malinky evaluated Claimant for CRPS on November 19, 2019. (Ex. 7). Claimant was reporting pain in the posterolateral neck (trapezius area) on the left, left lateral neck, left anterior chest, left lateral chest, upper back overlying the left shoulder blade, and upper back below the level of the shoulder blades of the left arm. *Id.* at 113. Dr. Malinky opined that he did not feel Claimant has CRPS, and that he would be fine to proceed with orthopedic surgery, if so advised. *Id.* at 118.

21. Claimant returned to Dr. Cassidy on December 3, 2019. (Ex. 3, pp. 87-89). Claimant indicated that there was less numbness and tingling, but the shoulder remained painful. Dr. Cassidy stated that he recommended continued observation of Claimant's cubital and carpal tunnel symptoms, but no surgery, given the benefit received from splinting. However, Dr. Cassidy stated, "He will continue seeing Dr. Stockelman for his shoulder issues." *Id.*

22. Claimant saw Dr. Stockelman again on January 15, 2020. (Ex. 3, pp. 90-93). Dr. Stockelman opined, "The next step for his shoulder is an SAD. [Claimant] would like to do this as soon as possible." *Id* at 92. Dr. Stockelman explained that since nonoperative measures had not given lasting relief, that arthroscopy with decompression of the subacromial space with partial acromioplasty was advised. However, he noted *"This surgery could potentially inflame his shoulder more*. He could live with what he has and do PT and pain management **or** go through the surgery." *Id.* (emphasis added).

Records Review IME by Dr. Failinger

23. Orthopedist Mark Failinger performed a record review IME on January 27, 2020 regarding Dr. Stockelman's request for surgery, and whether said request was reasonably necessary. (Ex. 8). Dr. Failinger opined that it does not "appear" at this point that a left shoulder surgery would be reasonable and would not be necessary given the lack of focal pain identification. Dr. Failinger opined that Claimant had a constellation of symptoms that did not point clearly to a "single source" of Claimant's pain. *Id* at 122. Dr. Failinger noted that he had not seen any of the imaging films involved in the claim.

24. Dr. Failinger noted: …"his diffuse pain patterns, with the expanding list of symptoms, are a major negative prognostic indicator for a successful outcome should a decompression shoulder surgery be improved (sic) [approved]. Id at 122. He felt it would be reasonable only if the subacromial injection were performed and Claimant was checked within 15 minutes and report at least 70% to 80% improvement of his symptoms. Respondents denied the request for surgery.

Claimant returns to Prowers Medical Clinic

25. Claimant returned to Prowers Medical Clinic on April 24, 2020, this time being seen by Dr. Ray. (Ex. 1, pp. 57-59). Claimant stated that he was so frustrated with his condition and his surgery being denied that he sought a second orthopedics opinion on his own. Dr. Ray noted that Prowers did not have that report from [orthopedist] Dr. Porter, but are requesting them through the patient, since it was felt that such reports *"need to be reviewed to see what is the most appropriate next step for [Claimant Redacted]" Id* at 58.

26. Claimant did indeed have a March 11, 2020 appointment with Parkview Orthopedics. (Ex. 9). Claimant reported to them that he was still having left shoulder pain from his work injury. Claimant "states that he just wants to know what else can possibly be done with his shoulder. He has a complaint of pain, scapular pain, and every now and then painted[sic] in his fingers." *Id* at 125. In a *Treatment* note prepared by Alan Garcia, PA-C, he stated:

> I discussed with the patient after reviewing all his previous paperwork and diagnostic studies that *there was not any clearcut issues. We discussed a possible rheumatoid panel, other reasons for his potential pain*. Based on this, *we discussed the case with Dr. Porter. Also discussed the case with Dr. King.* If he is appropriate consultation at that time, we will order that. He can result can be diagnostic arthroscopy, possibly indicated view the failure of nonoperative management….*He will now follow up as needed. Id* (sic)(emphasis added).

27. [The ALJ notes that there are no medical reports in evidence regarding any follow-up by Claimant on a rheumatoid panel, other reasons for his potential pain, nor are there any reports from either Dr. Porter or Dr. King. The ALJ further notes that the DIME examiner does not reference any such reports in his record review, nor does the IME physician Dr. Ciccone, IME physician Dr. Rook, nor Dr. Weinstein].

28. Prowers filed a WC164 on 6/5/2020, stating simply that "Patient's appointment was rescheduled due to Dr. Ray not being in. Patient rescheduled to July 2nd @ 8:15 am." (Ex. 1, p. 60).

29. In a new WC164, Dr. Ray placed Claimant at MMI on July 2, 2020 with permanent restrictions and a referral for impairment. (Ex. 1, p. 61). No narrative reports accompany this document indicating that anything had changed, or noting whether Dr. Porter's reports had ever been tendered by Claimant.

Dr. Ciccone's IME

30. Claimant underwent an IME with Dr. William Ciccone on August 26, 2020 at the request of Respondents. (Ex. 10). Dr. Ciccone opined that Claimant sustained nothing more than a minor sprain/strain of the left shoulder from the work event. He noted the MRI studies not documenting any "acute" pathology, but without stating whether any underlying pathology was permanently aggravated. He noted that Claimant's shoulder was "quite sensitive beyond what would be expected" *Id* at 138.

31. Although Claimant reported 80% relief following his first injection, the second injection on September 12, 2019 was performed and only gave "some" relief. Dr. Ciccone concluded that Claimant received no lasting benefit from the injections; therefore, surgery should not be performed, and may only make symptoms worse. *Id.* Dr. Ciccone opined that Claimant was at MMI (no effective MMI date was actually designated, but the report itself is dated 8/26/2020). He also recommended home exercises.

32. A Final Admission of Liability was filed by Respondents on September 30, 2020. Respondents used the MMI date of 8/26/2020, instead of the ATP, Dr. Ray's MMI date of 7/2/2020. (Ex. G). Dr. Ray's WC164 sheet was silent on maintenance care. Respondents admitted to an 11% scheduled rating worth $7,092.80. [At hearing, Claimant testified that he did not have any reason to dispute that he received $7,092.80 in permanent partial disability benefits based upon that FAL].

Dr. Bissell's DIME Report

33. Claimant disagreed with his MMI determination and sought a DIME. The DIME exam occurred with Dr. John Bissell on January 13, 2021. (Ex. 11). In his report issued 1/15/2021, Dr. Bissell documented Claimant's history as having "about 5 injections in different areas of the shoulder" to which he had variable responses. At the time of the examination, Claimant continued to report aching, burning, and stabbing in his left shoulder.

34. Under *Date and Discussion of MMI*, Dr. Bissell states, "He received reasonable, appropriate, and necessary conservative management and reached maximum medial improvement on August 26, 2020." *Id* at 144. . Dr. Bissell stated "None" on the final page of his report whether Claimant needed *Work Restrictions, Maintenance Medication*, or

Future Testing. For *Maintenance Care*, that line is simply left blank. . *Id.* at 145. Dr. Bissell also recalculated Claimant’s impairment rating to that of a 7% scheduled, convertible to 4% whole person*. Id.* [From reading this DIME report in its entirety, the ALJ infers that Dr. Bissell also intended to state “None” regarding *Maintenance Care*].

35. A new Final Admission of Liability was filed on February 3, 2021, admitting to the 7% upper extremity impairment rating assigned by Dr. Bissell. (Ex. H). That 7% upper extremity impairment rating was worth $4,513.60 in permanent partial disability benefits. *Id.*

Claimant consults Dr. Weinstein

36. Claimant sought yet another opinion on his own. He was evaluated by Dr. David Weinstein on October 28, 2020. (Ex. 5). Dr. Weinstein’s history states: “The patient has tried rest, activity modification and local ice over the left shoulder. He has had physical therapy which he states made his symptoms worse. *He has had a number of cortisone injections, six in total, which* ***he*** *states were minimally helpful.”* *Id* at 103. (emphasis added). At this visit, Claimant’s complaints now centered more on his subacromial complaints rather than subscapular. Dr. Weinstein makes no mention of any visits with Dr. Porter or Dr. King.

37. Dr. Weinstein discussed performing (yet another) diagnostic subacromial injection to help distinguish between myofascial and shoulder complaints. *Id.* at 106. Dr. Weinstein does not reference Claimant’s reported prior 80% relief from one of those injections. [This is not surprising, since Claimant apparently did not supply Dr. Weinstein his existing records, and had just reported to him at this sole visit that all six injections had been ‘minimally helpful’. Further, while Claimant mentioned cortisone, he did not mention that Drs. Meinig and Stockelman specifically had also used anesthetics with their injections]. Dr. Weinstein opined that surgery might be warranted, if in fact Claimant did have a diagnostic response to the injection. *Id.*

Dr. Rook’s IME

38. Claimant also sought an IME of his own. Dr. Jack Rook performed this IME of Claimant on May 18, 2021. (Ex. 12). Dr. Rook provides a summary of the medical records. Dr. Rook noted that the injections from Dr. Meinig did not provide any long-term benefit. After Dr. Stockelman performed another injection, Dr. Rook stated that Claimant had *“noticeable less pain.” Id.* at 149. [The ALJ notes that Dr. Stockelman’s report actually states that this injection did *“give him some relief.”* (*see* Finding of Fact #17, *supra*). Dr. Rook also referenced Dr. Weinstein’s report, noting that Dr. Weinstein had documented, from Claimant, “He has had a number of cortisone injections, six in total, which he [Claimant] states *were minimally helpful”. Id* at 158. (emphasis added).

39. Claimant reported to Dr. Rook that he continued to struggle with his severe left shoulder pain. He described the pain as being constant, “being most severe in the anterior shoulder

and also involving the left shoulder blade including underneath the shoulder blade." *Id.* at 150. This causes pain in his left-sided upper back that frequently extends to his neck and can even trigger headaches. Dr. Rook diagnosed Claimant with chronic left shoulder pain with a clinical examination consistent with tendinitis and impingement, along with surrounding myofascial pain involving the left-sided pectoral, scalene, scapular, upper trapezius, parathoracic, and paracervical muscles. *Id.* at 160.

40. Dr. Rook opined that Claimant's intermittent left upper extremity paresthesias were likely a reflection of myogenic thoracic outlet syndrome associated with exacerbations of left shoulder myofascial pain. *Id.* at 160. Dr. Rook opined that some of Claimant's pain is coming from the shoulder joint and agreed with performing a subacromial injection. *Id.* Dr. Rook points out that Dr. Failinger himself stated on January 27, 2020 that the surgery would be reasonable if Claimant had a 70% to 80% relief in symptoms within 15 minutes of a subacromial injection. *Id.* at 161. Dr. Rook noted that the record does not reflect that Claimant underwent such an injection after Dr. Failinger's review. Such an injection could lead to a reasonably necessary surgery that could improve Claimant's chronic pain. Dr. Rook makes no mention in his report of any contact Claimant may have had with Dr. Porter or Dr. King.

41. Dr. Rook further opines in his report that Claimant is not at MMI for his severe myofascial pain. *Id* at 161. He discusses Claimant's symptoms in the context of the Medical Treatment Guidelines ("Guidelines") and the other modalities available for continuing to treat Claimant. *Id.* at 161-62. Dr. Rook lists nine different treatments and medications that could still be used to improve Claimant's ongoing condition to bring him to MMI. *Id.* at 162. Dr. Rook did not find any errors in Dr. Bissell's impairment rating, but he opined that Claimant's extremity rating should be converted to a whole person rating, given the amount of symptoms and functional loss Claimant is experiencing beyond his shoulder.

Claimant Testifies at Hearing

42. Claimant testified at hearing. Claimant recalled undergoing physical therapy and testified that it was okay for a little while, but as it continued, the pain got worse. Claimant was sent to Dr. Richard Meinig for injections. Claimant recalled the injections being in his back and shoulder area, with the shots in his back being 'extremely painful'. He recalled five injections at different times. Claimant was then asked:

> Q …And what relief, if any, did you receive from those injections?
>
> A *Momentary, at best*. It was very…it didn't last long.
>
> Q. …..How much of a percentage of relief would you estimate that you got from *any* of the injections?

> A That was such a long time ago. It's hard to remember exactly…I would say *20 to 30 percent*, maybe, something like that. (Transcript, pp. 22-23)(emphasis added).

43. Claimant stated that he continues to have ongoing symptoms in the shoulder including audible popping and cracking, tightness in the shoulder blade, pain in the armpit and chest area, along with pain up into his neck. Claimant described the simple act of reaching across his body as being "awful."

Dr. Rook Testifies at Hearing

44. Dr. Jack Rook testified at hearing as an expert in the fields of physical medicine and rehabilitation, and pain management. He is level II accredited. Dr. Rook performs approximately 50 DIMEs per year, though it had recently decreased due to the pandemic. When asked about Dr. Bissell's DIME opinion that Claimant was at MMI as of the date of Dr. Ciccone's IME, Dr. Rook opined that Claimant was not at MMI. He opined that Claimant not only did not receive full and appropriate treatment; he also did not get a complete and appropriate workup for his condition. Moreover, his treaters did not follow the Guidelines with regard to treatment for individuals with Claimant's symptoms.

45. Dr. Rook testified that the DIME's report was based on erroneous information and conclusions. He explained that Claimant's MRIs were performed without contrast, which is recommended when you need more differentiation of the intra-articular space. Dr. Stockelman had recommended surgery because Claimant did not have a neurological disorder, he continued to have intra-articular pain, and he felt that Claimant had an appropriate clinical response to the injection. Moreover, the record shows that Claimant received 80% relief with said injection, and it was the injections in the posterior shoulder that did not help.

46. Dr. Rook reiterated that Dr. Failinger recommended getting a better assessment on the results of a subacromial injection immediately after the injections are in the anesthetic phase. This was never accomplished, because the ATP placed Claimant at MMI after Dr. Ciccone opined that Claimant's surgery was not reasonably necessary. Dr. Rook ultimately testified that he was not of the opinion that the surgery was presently reasonably necessary; however, Dr. Rook did state that additional workup is necessary to determine whether Claimant is at MMI or if he is a surgical candidate, which would mean he is not at MMI.

47. Dr. Rook further opined Claimant's injury was more appropriately rated as a whole person injury rather than a scheduled injury, since Claimant has had extensive treatment proximal to the glenohumeral joint, injections into his shoulder blade/back, and ongoing repeated complaints of neck pain and upper back pain. Dr. Rook did state that the subacromial injection could be performed as maintenance care, though a positive diagnostic response would mean Claimant needs surgery and was never truly at MMI.

Dr. Ciccone Testifies by Deposition

48. Dr. Ciccone II testified via deposition on June 30, 2021 as a Level II accredited expert in the fields of orthopedic surgery and sports medicine. Dr. Ciccone reiterated that he felt Claimant's injury was "minor" and that he had been appropriately treated and brought to MMI for his work condition. Dr. Ciccone testified that Claimant had six different injections, and that none of them gave any long-lasting relief. Dr. Ciccone also states that what Dr. Weinstein recommended was the same injection as the other six already performed.

49. Dr. Ciccone also stated his disagreement with Dr. Rook's opinion that an MRI with contrast should have been performed.

> A Well, *we use contrast examinations to better evaluate interarticular structures. The reality of all this is, is the claimant's myofascial pain is his main complaint.* So anything within the shoulder really would be unrelated to the myofascial symptoms. ..I would also say that *very rarely* do we see a whole lot of differences between an MR arthrogram and a standard MRI scan. (Ciccone Depo, pp. 9-10)(emphasis added).

50. Dr. Ciccone felt Claimant needed no additional treatment for his myofascial symptoms addressed by Dr. Rook, because of his opinion that Claimant had a minor injury. The chronic pain Claimant has continued to experience would not be related to such a minor event. Dr. Ciccone essentially agreed with Dr. Rook that Claimant's reported symptoms could justify a conversion, but stated:

> A Well, I mean, the answer to that is , yes, I agree with it *if the claimant has an injury that would be consistent with his complaints.*
>
> In this situation, I think he may have suffered a minor sprain to the shoulder, but clearly did not suffer a significant injury to the chest wall and all the other pain he is complaining of.
>
> So in this situation, I do not agree with it because I do not think the symptoms that he is complaining of at this time are *causally related* to the work event. (Transcript, pp. 10-11)(emphasis added).

51. Dr. Ciccone was asked about Claimant's six prior injections, after his report had referenced three injections. When asked, he was unable to state what or when they were, indicating he saw that number in Dr. Weinstein's and Dr. Rook's notes.

Dr. Bissell Testifies by Deposition

52. Dr. John Bissell testified via deposition on July 21, 2021 in his capacity as the DIME. He was qualified as an expert in the field of physical medicine and rehabilitation. Dr. Bissell testified he determined Claimant was at MMI because he felt Claimant's condition was "stable and stationary with a very low chance of deriving improvement with additional

treatments." (Bissell Depo, pp. 5-6). Dr. Bissell testified he reviewed Dr. Rook's report, and felt Claimant was still at MMI. He acknowledges that not all treatment was exhausted, as Dr. Rook stated, but he was of the opinion such treatments would be redundant or not useful.

53. When asked about the reasonableness of performing yet another injection, as suggested in Dr. Weinstein's report, he clarified:

> A Well, yes, but it has already been done. He has had I think five or six injections in the shoulder, *all of which included local anesthetic,* in addition to steroid, and none of them resulted in any significant improvement in this man's condition. …He had pain after these injections—which were *combination injections; that is, they were both, diagnostic and therapeutic.* …There is no point in doing another one. It's going to be the seventh one. (Bissell Depo, pp. 9-10)(emphasis added).

54. Dr. Bissell was asked, hypothetically, if a seventh injection yielded a positive response, would Claimant then be a surgical candidate, he replied:

> A ….I think the likelihood of it [surgical success] is extremely low because *he has pain everywhere around his shoulder.* He has *myofascial pain*, and *that almost never responds to single, one-area injections*….His MRI demonstrates there is *no identifiable surgical pathology.* (Bissell Depo, p. 12)(emphasis added).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals*

Office, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this instance, Claimant's hearing testimony poses a dilemma. While Claimant appears sincere, his complaints of pain have not only been migratory, they have been, according to numerous providers, far out of proportion to any anatomical findings. While not addressed by any party herein, Claimant's reported symptoms suggest an overlay of a psychological component, and perhaps a considerable one.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, there are numerous medical records, IME reports, depositions, and hearing testimony. The ALJ finds that each expert has rendered their opinions to the best of their ability, *based upon the information they were provided*. The real issue here is one of *persuasiveness,* keeping in mind the burden of proof in this matter.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Overcoming the DIME Opinion on MMI, Generally

F. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*; *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998); *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186, 189-190 (Colo. App. 2002); *Sholund v. John Elway Dodge Arapahoe,* W.C. No. 4-522-173 (ICAO October 22, 2004); *Kreps v. United Airlines,* W.C. Nos. 4-565-545

and 4-618-577 (ICAO January 13, 2005). The MMI determination requires the DIME physician to assess, as a matter of diagnosis, whether the various components of a claimant's medical condition are casually related to the injury. *Martinez v. ICAO*, No. 06CA2673 (Colo. App. July 26, 2007). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding the cause of a particular component of a claimant's overall medical impairment, MMI or the degree of whole person impairment, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).

G. The decisions of a DIME physician are only to be given presumptive effect when provided by the statute. Maximum Medical Improvement is defined at 8-40-201(11.5), C.R.S. as: "a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." When a course of treatment has a reasonable prospect of success and a claimant willingly submits to such treatment, a finding of MMI is premature. *See, Reynolds v. ICAO,* 794 P.2d 1080 (Colo. App.1990). The definition of MMI found in the above section contains two components or requirements for a finding of MMI; first, that the condition resulting from the injury be stable and secondly, that no further treatment is reasonably expected to improve the condition. The use of the conjunctive "and" in the definition of MMI connotes that both stability of the condition and the absence of further treatment reasonably expected to improve the condition must be present in order for MMI to exist.

H. This enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008).

I. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

Overcoming the DIME on MMI, as Applied

J. The ALJ has reviewed the DIME report, and incorporated by reference the deposition testimony of the DIME physician. The unambiguous conclusion of Dr. Bissell requires no interpretation: Claimant suffered a minor work injury, and has recovered from it. This was a shoulder strain/sprain, and is now at MMI for it, effective 8/26/2020. Claimant's ongoing complaints, however sincerely rendered, bear no relation to this original work injury. He has been assigned an extremity rating based upon what is causally related to the work injury, in this case, slightly limited range of motion. Claimant can return to work full-time, with no restrictions, and needs no further testing, referrals, maintenance care or medications.

K. Claimant now alleges that Dr. Bissell failed to explicitly address what was originally reported to Dr. Meinig as an 80% improvement following the first shoulder injection. The ALJ makes the following observations. Had Claimant harbored such concerns, Dr. Bissell sat right across the table (figuratively speaking now, of course) from counsel during his deposition. What better opportunity exists but to *ask that question directly*, and await the DIME's response? Based upon Claimant's failure to ask the obvious, the ALJ will not now presume that such response would favor Claimant – especially given the burden of proof. In fact, Dr. Bissell stated that he reviewed all the medical reports provided. There is no proof to the contrary. He is a specialist in physical medicine and rehabilitation, and is fully aware of the values and limitations of injections. He pointed out that of the numerous injections that Claimant has received, they were in fact diagnostic, containing anesthetics as well as steroids. A seventh one would not tell us anything new. The ALJ concurs.

L. Claimant's own testimony at hearing was that the five 'extremely painful' injections he recalled receiving provided "momentary, at best" relief, providing maybe '20 to 30 percent' relief. He told Dr. Weinstein that the six cortisone injections had been 'minimally helpful.' Dr. Bissell had access to Dr. Rook's IME report, which in turn referenced Dr. Weinstein's feedback from Claimant on the efficacy of the injections. In fact, what is clear to the ALJ is that Dr. Bissell has a far better handle on which injections were already diagnostic – instead of purely therapeutic – than several of the other players involved. Not surprising, since he had access to the pertinent records, and knew how to interpret them.

M. At hearing, Dr. Rook stated that the ATP placed Claimant at MMI after Dr. Ciccone had opined that such surgery was not necessary, thus depriving Claimant of the diagnostic injection. This assertion is simply incorrect. The ATP, Dr. Ray, placed Claimant at MMI on 7/2/2020 – eight weeks before Dr. Ciccone ever became involved. While not explicitly stated in the 7/2/2020 WC164, one can infer from previous narratives why Dr. Ray did so. Claimant told Dr. Ray on 4/24/2020 that he had seen Dr. Porter (which in fact, he had on 3/11/2020) for an orthopedic consult. Dr. Ray, not having access to said consult, told Claimant it was important to see, so he could make treatment recommendations. It is clear that Claimant never did so, nor did he provide such records for this hearing beyond the PA-C note. Dr. Ray was out of viable treatment options, so he placed Claimant at MMI. Whether Claimant actually followed through with the suggested plan by Dr. Porter (rheumatoid screening, other pain screening) will remain known only to Claimant.

N. Dr. Bissell has noted that the MRIs (which the ALJ finds were reasonably performed, contrast or not) show a “tiny” interstitial tear, or perhaps nothing at all, due to test administration. He has observed that Claimant’s reported pain complaints have been a moving target, at best, being myofascial pain not readily addressed with a subacromial decompression. CRPS has been eliminated through testing. Considerable efforts have been expended on Claimant’s behalf (even after he didn’t ‘trust’ the first MRI), and a treatable pain generator has still not been identified – much less a pain generator *causally related to this work injury.* No further testing is likely to help treat the *work injury*. Dr. Ciccone concurs with the DIME. Dr. Ray has not changed his MMI determination. Dr. Rook feels otherwise, Dr. Weinstein had limited information, as did Dr. Failinger. We will never know about Drs. Porter and King. In the end, there is a difference in medical opinions, but nothing more. The ALJ cannot conclude that Dr. Bissell erred in any fashion. Claimant has not overcome the DIME opinion on MMI, nor on the scheduled impairment rating assigned.

Conversion to Whole Person, Generally

O. Whether the Claimant sustained a "loss of an arm at the shoulder" within the meaning of § 8-42-107 (2) (a), C.R.S., or a whole person medical impairment compensable under § 8-42-107 (8), C.R.S. is one of fact for determination by the ALJ. In resolving this question, the ALJ must determine the situs of the Claimant’s "functional impairment," and the situs of the functional impairment is not necessarily the location of the injury itself. Langton v. Rocky Mountain Health Care Corp., supra; Strauch v. PSL Swedish HealthcaSystem, supra. Because the issue is factual in nature, we must uphold the ALJ’s determination if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; Walker v. Jim Fuoco Motor Co., 942 P.2d 1390 (Colo. App. 1997). This standard of review requires us to defer to the ALJ’s resolution of conflicts in the evidence, credibility determinations, and plausible inferences drawn from the record. Metro Moving and Storage Co. v. Gussert, 914 P.2d 411 (Colo. App. 1995).

P. Whether the Claimant has sustained an “injury” which is on or off the schedule of impairment depends on whether the claimant has sustained a “functional impairment” to a part of the body that is not contained on the schedule. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Functional impairment need not take any particular impairment. Discomfort which interferes with the claimant’s ability to use a portion of his body may be considered “impairment.” *Mader v. Popejoy Construction Company, Inc.*, W.C. No. 4-198-489, (ICAO August 9, 1996). Pain and discomfort which limits a claimant’s ability to use a portion of his body may be considered a “functional impairment” for determining whether an injury is on or off the schedule. *See, e.g., Beck v. Mile Hi Express Inc.*, W.C. No. 4- 238-483 (ICAO February 11, 1997).

Conversion, as Applied

Q. While the ALJ need not afford any presumption to the DIME's opinion on conversion, the ALJ nonetheless finds Dr. Bissell's diagnosis persuasive; Claimant has recovered from a left shoulder sprain/strain, with resultant minor limits on his range of motion. Nothing more. Dr. Rook has noted the numerous limitations as reported by Claimant involving his pectoral, scalene, trapezius, parathoracic and paracervical muscles; therefore, there is a case for conversion to whole person. The ALJ cannot concur in this reasoning. Claimant's ongoing constellation of complaints, accurately reported or not, cannot be attributed to the work injury. His diffuse, migratory, myofascial pain in these areas has not been shown to be causally related to his shoulder sprain/strain. The only situs of Claimant's functional impairment is in his shoulder. Claimant's extremity rating will remain on the schedule.

Medical Maintenance Care, Generally

R. To prove entitlement to medical maintenance benefits, the Claimant must present *substantial evidence* to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710- 13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995)*.* Once a claimant establishes the probable need for future medical treatment [s]he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). An award for *Grover*-type medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that a claimant is actually receiving medical treatment. *Holly Nursing Care Center v. ICAO,* 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. ICAO*, 916 P.2d 609 (Colo. App. 1995). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

Medical Maintenance Care, as Applied

S. Once again, while the ALJ need not provide deference to the DIME opinion of this issue, the ALJ once again finds Dr. Bissell's reasoning persuasive. Claimant has recovered from his work injury. There is no further treatment or medication that will help him stay at MMI. Claimant himself indicates that physical therapy makes things worse. In fact, no conservative care was of any real value to him. While Claimant's self-reported condition has deteriorated since the work injury, he has not shown a causal nexus between his condition and the actual work injury. His ongoing complaints should be addressed outside the Workers Compensation system. There is no substantial evidence in the record that any future medical treatment will be needed to provide further relief, or prevent any deterioration of Claimant's condition, which is attributable to the work injury.

Overpayment

T. Section 8-43-207(q), C.R.S. gives an Administrative Law Judge the authority to order repayment of overpayments. Section 8-40-201(15.5), C.R.S. defines an overpayment as follows:

> 'Overpayment' means money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability or death benefits under said articles.

U. It is undisputed that Respondent previously admitted for, and paid out, permanent partial disability benefits in the amount of $7,092.80, based upon the 11% upper extremity impairment rating assigned by Dr. Ciccone. Claimant then requested a DIME, and such requests are seldom risk-free. Dr. Bissell then assigned a 7% extremity rating for this injury, which the ALJ finds has not been overcome by Claimant, even by a preponderance of the evidence. Actual PPD benefits owing are now $4,513.60. Claimant has been overpaid $2,579.20 in permanent partial disability benefits. Respondents assert that such overpayment should be repaid in $200 monthly installments. The ALJ has not heard sufficient evidence to concur. If the parties are unable to reach a reasonable repayment accommodation on their own, they may then seek specific relief through the administrative process.

ORDER

It is therefore Ordered that:

1. The DIME of Dr. Bissell has not been overcome. Claimant reached MMI on 8/26/2020.

2. Claimant's 7% left extremity rating will remain on the schedule.

3. Claimant's claim for Medical Maintenance benefits is denied and dismissed.

4. Respondents may recover an overpayment of $2,579.20 from Claimant, as authorized by law.

5. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is* ***highly recommended*** *that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: August 24, 2021

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-977-958-005

ISSUES

I. Whether Claimant's left shoulder and biceps condition has worsened and whether his case should be reopened based on a change of condition and need for medical treatment.

II. Whether the surgery recommended by Dr. Hatzidakis is reasonable, necessary, and related to Claimant's December 5, 2014, workers' compensation injury.

STIPULATIONS

The following stipulations were entered into at the beginning of the hearing and via Respondents' post hearing proposed order:

1. Respondents received the July 23, 2020, Petition to Reopen on W.C. No. 4-886-857 on July 27, 2021.
2. The surveillance footage from February 5, 2021, taken between 1:52 p.m. and 2:55 p.m. is edited as to time.
3. Respondents withdraw the appeal of PALJ Tenreiro's January 29, 2021, Prehearing Conference Order.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is a 60-year-old CDL delivery driver/patient service technician who sustained an admitted injury to his left shoulder on December 5, 2014. Claimant injured himself while pulling a dolly with a full oxygen tank upstairs. Respondents' Hearing Exhibits (RHE) at 37. Claimant suffered an extensive left rotator cuff tear and a torn biceps tendon. *See* Hatzidakis Deposition (HD) at 9., RHE at 46.; Dr. Failinger's Deposition (FD) at 10. Claimant also sustained a right shoulder injury in the months before the left shoulder injury and received treatment for both through the same medical providers.
2. Claimant first treated on December 8, 2014, at Concentra. An MRI from December 18, 2014, showed a biceps tendon tear. RHE at 37. After Claimant did not improve with conservative treatment, a repeat MRI was performed on May 9, 2015, at the request of Mark Failinger, M.D. *Id*. The MRI revealed a full-thickness tear of the supraspinatus tendon, probable tear of the infraspinatus tendon, subscapularis tendinosis, a retracted biceps tendon, degenerative changes in the glenohumeral and acromioclavicular joints, a condition predisposing impingement, and a joint effusion in the subacromial subdeltoid bursa. RHE at 40.

3. Cary Motz, M.D., performed a left shoulder arthroscopy with debridement of the rotator cuff, biceps tendon and subacromial space. Claimant's Hearing Exhibits (CHE) at 145. It was noted that the rotator cuff tear was massive and retracted, stiff, and with poor tendon quality. *Id*.

4. Dr. Motz referred Claimant to Dr. Papillion for evaluation of a shoulder replacement. RHE at 38. Claimant reported that Dr. Motz told him he was too young for this procedure and that "they do not last." *Id*. Dr. Papillion said that there were less invasive procedures that could be performed instead of a total shoulder replacement. *Id*. Claimant continued with post-operative therapy and had continued complaints.

5. A repeat MRI of the left shoulder showed similarity to the prior study. There was a complete supraspinatus tear with a full-thickness tear of the infraspinatus, rotator cuff muscle atrophy, retraction of the torn long head of the bicep, and moderate glenohumeral acromioclavicular degenerative joint disease with acromioclavicular joint effusion and degenerative labral tearing. RHE at 44.

6. On February 24, 2016, Dr. Papillion recommended a reverse total shoulder arthroplasty. This was denied by Respondents. On February 25, 2016, Claimant was referred for a second opinion through Armodios Hatzidakis, M.D.

7. On March 15, 2016, Carlos Cebrian, M.D., for an IME. Dr. Cebrian indicated a diagnosis of left biceps tendon tear secondary to the December 5, 2014, injury. (RHE at 46.) Dr. Cebrian suggested that Claimant did not meet the criteria for eligibility for a reverse total shoulder arthroplasty according to the Colorado DOWC Medical Treatment Guidelines (MTG). RHE at 47. Dr. Cebrian noted that this procedure was generally considered a salvage procedure according to the MTG for patients over 70 with severe osteoarthritis, massive rotator cuff tears and pseudo paralysis with integrity of the deltoid. *Id*. It is also noted that the procedure is generally limited to patients over 65 and that patient satisfaction was higher if pre-operative flexion was less than 90 degrees. It was also noted that, where patients have massive rotator cuff tears but can still elevate the shoulder, nonoperative treatment is preferable to surgery. It was last noted that smokers had delayed healing and higher post-operative costs, and that Claimant was a smoker. *Id*.

8. Based on the criteria in the MTG, Dr. Cebrian concluded that Claimant was not a candidate for a reverse total shoulder arthroplasty. Dr. Cebrian noted that Claimant had documented flexion range of motion at that time between 120 and 150 degrees by multiple examiners. RHE at 48. Dr. Cebrian suggested that Claimant would lose range of motion after a total shoulder procedure and would further limit his function. *Id*. Dr. Cebrian also noted that Claimant was too young for the procedure. *Id*. Last, Dr. Cebrian noted that Claimant was a smoker, which would inhibit his recovery. *Id*. Dr. Cebrian, however, has not re-evaluated Claimant since he filed his petition to reopen and alleged a worsening of condition. As a result, the ALJ does not find his opinion to be persuasive for three reasons. First, Dr. Cebrian has not evaluated Claimant since 2016. Second, Claimant's symptoms have worsened since 2016 and there are radiographic findings showing a change in condition that have arisen after his evaluation in 2016. Third, Claimant underwent another surgery that was performed by Dr.

Hatzidakis to help salvage Claimant's shoulder joint and instead of a reverse shoulder replacement surgery.

9. An MRI of the left shoulder performed on April 23, 2016, showed severe supraspinatus and infraspinatus muscular volume loss. RHE at 75-76. The noted tears in the rotator cuff were similar to prior studies. *Id*.

10. On September 13, 2016, Claimant saw Dr. Hatzidakis for a second opinion and surgical evaluation. CHE at 152. The assessment was traumatic left shoulder pain with likely irreparable rotator cuff tear and possible low-grade infection. CHE at 153. Forward flexion was noted as 150 degrees on range of motion measurements. *Id*. Dr. Hatzidakis recommended further diagnostics and recommended that Claimant quit smoking. *Id*.

11. On October 14, 2016, Claimant returned to Dr. Hatzidakis as he felt he was failing conservative treatment and wanted to discuss surgical options. CHE at 157. Pain was indicated as 6/10. *Id*. The assessment was painful left shoulder with ruptured biceps tendon, muscle spasms, extensive rotator cuff tear, subacromial impingement, and possible low-grade infection. CHE at 158. Dr. Hatzidakis recommended a second surgery involving arthroscopic rotator cuff repair with likely superior capsular reconstruction. *Id*.

12. Claimant underwent revision surgery with capsular reconstruction with Dr. Hatzidakis on November 1, 2016. It was noted that Claimant had limited range of motion post-surgically and could not do active range of motion but could advance to 130 degrees of flexion after physical therapy. CHE at 160.

13. On December 13, 2016, it was noted that post-operative P. acnes infection test was successfully treated with antibiotics. CHE at 162.

14. Claimant underwent post-operative therapy for the rest of 2016 and throughout 2017. Claimant completed 90 post-operative physical therapy visits. RHE at 90. Dr. Hatzidakis regularly measured improvements in range of motion throughout this time. CHE at 163-172.

15. On November 8, 2017, Dr. Hatzidakis concluded that Claimant had reached MMI and was ready for an impairment rating. RHE at 104. Dr. Hatzidakis noted complaints of intermittent numbness and tingling bilaterally to all fingers. *Id*. Dr. Hatzidakis measured active range of motion to include forward flexion 150 degrees; abduction 160 degrees; external rotation 40 degrees; and internal rotation to L1. *Id*. Dr. Hatzidakis said that Claimant could be seen on an as-needed basis for the left shoulder.

16. On January 31, 2018, Claimant was referred to Shimon Blau, M.D., for an impairment rating as he was thought to be at MMI. RHE at 92.

17. On February 15, 2018, post MMI, x-rays showed a well centered glenohumeral joint with no migration (CHE 15, p. 174). And on November 12, 2018, x-rays show a well centered glenohumeral joint with adequate glenohumeral joint space. There was no superior migration of the humeral head. (CHE 15, p. 178).

18. On February 21, 2018, Dr. Blau examined Claimant and performed an impairment rating. Claimant stated his pain was between 4.5 and 6/10 on a pain scale. RHE at 99. Dr. Blau measured active range of motion as: flexion 115 degrees; abduction 110 degrees; external rotation 56 degrees. RHE at 100. Dr. Blau gave Claimant a 22% scheduled impairment rating of the left upper extremity. *Id*.

19. On April 23, 2018, Claimant underwent a Functional Capacity Evaluation (FCE) at Select Physical Therapy. RHE at 93. The FCE results showed that Claimant was in the medium to heavy physical demand category between 20 and 50 pounds. *Id*. The testing appeared valid. *Id*.

20. Claimant pursued a DIME, which was performed by Anjmun Sharma, M.D., on July 25, 2018. RHE at 55. Dr. Sharma agreed with MMI on January 31, 2018 and noted that "the patient is at MMI by all physician's accounts" in a medical report from Dr. Failinger reviewed (this was performed on the right shoulder but included some commentary on the left). RHE at 94. Dr. Sharma noted that Dr. Hatzidakis had indicated Claimant would need minimal medical care moving forward for the left shoulder. *Id*. Dr. Sharma noted that, while Claimant reported ongoing pain in the shoulder, he was still at MMI. *Id*. Dr. Sharma measured active range of motion as: flexion 83 degrees; abduction 84 degrees; and external rotation at 12 degrees. *Id*. Dr. Sharma indicated that the Claimant could return to work with maximum lifting, repetitive lifting, carrying, pushing, and pulling no more than 30 pounds. RHE at 95. Overhead lifting was limited to 10 pounds and restrictions were imposed pursuant to the FCE indicating capacity between 20 and 50 pounds. *Id*. Pushing/pulling was also indicated up to 90 pounds. RHE at 96. The final combined left upper extremity impairment was 30% on the schedule of injuries. RHE at 95.

21. Respondents filed an Amended Final Admission of Liability (FAL) on September 6, 2018, admitting in accordance with the DIME. RHE at 4.

22. On November 12, 2018, Claimant returned to Dr. Hatzidakis for a follow-up maintenance visit. Claimant complained of continued shoulder pain mostly localized to the biceps area. RHE at 106. Claimant noted that the shoulder was exceptionally bothered by cold weather. *Id*. Dr. Hatzidakis took active range of motion measurements: forward flexion 140 degrees; abduction 120 degrees; external rotation to 35 degrees; internal rotation to the waist. *Id*. Dr. Hatzidakis recommended continuation of normal maintenance routine including a home stretching and exercise plan. RHE at 107.

23. On December 5, 2019, Claimant presented to Dr. Hatzidakis with complaints of pain ranging between 4 to 5/10. CHE at 182. Measured active range of motion was: 140 degrees forward flexion; 135 degrees of abduction; and 50 degrees of external rotation. *Id*. X-rays taken on this date reflected superior humeral migration with moderately progressive glenohumeral osteoarthritis. *Id*. This was indicated by Dr. Hatzidakis as "mildly progressive superior rotator cuff deficiency with mild to moderate glenohumeral osteoarthritis." *Id*. Dr. Hatzidakis reviewed options with Claimant and recommended physical therapy and strengthening of the bilateral shoulders. RHE at 183.

24. On April 6, 2020, Claimant returned to Dr. Hatzidakis and was seen per a telemedicine visit. RHE at 108. Claimant had significant symptoms in the long head of the biceps with pain and spasm. *Id*. This was noted as his main complaint. *Id.* It is noted that "the left shoulder is overall doing well also." *Id*. Claimant reported maximum pain between 3.5 and 4/10. *Id*. Measurements for active and passive range of motion included: forward flexion 140 degrees; abduction 160 degrees; external rotation 50 degrees. *Id*. It is noted that Claimant wanted to proceed with surgery, proposed by Dr. Hatzidakis as re-tensioning tenodesis. RHE at 109. Dr. Hatzidakis explained that there may be a reasonable chance of improvement with surgery but that he could not guarantee results and also said that there may be insufficient biceps to retention. *Id*.

25. On May 13, 2020, Dr. Failinger performed an IME evaluating the Claimant's bilateral shoulder injuries, specifically addressing the left shoulder complaints and the procedure requested by Dr. Hatzidakis. Claimant was evaluated in-person and physically examined. Claimant reported pain in the left shoulder as 3/10 with pain up to 10/10 at worst, which was experienced while driving and doing activities such as vacuuming and sweeping. RHE at 20. It is noted that "[Claimant] thinks about activities before performing them, as he does not want to cause increase pain." *Id*. Claimant reported that the left shoulder procedure performed by Dr. Hatzidakis in 2016 "helped him quite a bit." *Id*. Claimant reported left biceps pain in the medial upper arm and denied any other areas of discomfort except for the inner arm. *Id*. Claimant desired improvement of the left biceps "like he did on the right." *Id*. Claimant stated he will drop things for unknown reasons. *Id*. It was noted that Claimant recently quit smoking but had been a smoker on and off for 30 years. RHE at 21. Dr. Failinger measured Claimant's range of motion as: forward flexion 100 degrees; abduction 88 degrees; and extension as 35 degrees. *Id*.

26. Dr. Failinger contended that the proposed re-tensioning surgery for the bicep was not reasonably necessary or related. Dr. Failinger stated that it was not medically probable that the procedure would help significantly. RHE at 34. Dr. Failinger noted that the location of the reported pain was in the neurovascular bundle and not the long head of the biceps or medial head and that surgery would not make sense or be expected to improve pain because the area of pain would not be re-tensioned. RHE 34-35. Dr. Failinger noted that an EMG showed no abnormalities in the left arm and that any neurologic symptoms, especially in a person who was not performing aggressive physical therapy, would more likely relate to ongoing degeneration not related to the work injury. RHE at 35.

27. Respondents denied the requested surgery for biceps re-tensioning pursuant to W.C.R.P. 16 pursuant to Dr. Failinger's opinion. RHE at 123-126.

28. On July 23, 2020, Claimant filed a Petition to Reopen on claim W.C. No. 4-866-857 with attachments pertaining to the proposed re-tensioning surgery. There was no Petition to Reopen filed on W.C. No. 4-977-958, the relevant claim.

29. On January 29, 2021, PALJ Elsa Martinez Tenreiro issued a Prehearing Order (PHO) granting Claimant's Motion to substitute the correct W.C. No. on the Petition to Reopen. CHE at 134. Claimant was permitted to withdraw and re-file the Application for Hearing under the correct claim number.

30. Surveillance footage from January 27, 2021, and February 5, 2021, shows Claimant on his driveway shoveling snow. The footage from January 27, 2021, reflects Claimant shoveling several inches of snow. The footage from February 5, 2021, shows Claimant shoveling more snow from his driveway. Claimant is observed shoveling his driveway and the area on the sidewalk and street around his car with no apparent distress, using his left arm to hoist shovelfuls of snow at and sometimes above chest height.

31. On June 3, 2021, Dr. Hatzidakis issued a medical note reflecting that he had a conference with Claimant's attorney on that date to discuss an upcoming deposition and the case. RHE at 112. It was noted that he had not seen Claimant in over a year and that it would be useful to have a physical examination. *Id*. Dr. Hatzidakis said that prior to the deposition it was appropriate to have a follow-up visit and obtain repeat radiographs. *Id*.

32. On June 8, 2021, Dr. Hatzidakis physically examined Claimant. At that time Claimant was complaining of left shoulder and biceps pain indicating that the left shoulder had become more symptomatic over time particularly over the last year or so. He rated the left shoulder at 50% of normal. He was complaining of spasms in the biceps that occur daily with activities in addition to the burning pain in the short head of the biceps. (CHE 15, p. 191) Claimant was reporting pain in various areas of the shoulder and the bicep area.

33. Physical examination of Claimant's left shoulder as compared to his right showed more limited active range of motion when compared to the right side. Claimant had pain at the end range of motion in all planes. Claimant had weakness and minimal tenderness over the ac joint and the short head of the biceps. There was significant tenderness over the proximal long head of the biceps anteriorly and the long head of the biceps with strength testing was somewhat prominent without a true Popeye sign. It was difficult to access because of the size of his arms. Active range of motion was measured as: 130 degrees forward flexion; 105 degrees abduction; and 35 degrees of external rotation, which was worse than that measured by Dr. Hatzidakis when he placed Claimant at MMI. (CHE 15, p. 192.)

34. Dr. Hatzidakis performed repeat X-rays of the left shoulder which revealed acromial humeral head abutment with the weight bearing view, moderate glenohumeral joint osteoarthritis, mild anterior subluxation on the axillary view consistent with the patient's weak subscapularis on examination. (CHE 15, p. 192.) The X-rays showed that the left shoulder arthritis was progressing and the deficiency, the inability of the rotator cuff to function properly had progressed since Claimant's X-rays on December 5, 2019, and the last examination. (HD pg. 17.) Dr. Hatzidakis assessed Claimant with left shoulder pain and osteoarthritis status post arthroscopic superior capsular reconstruction/allograft augmentation with rotator cuff repair of an extensive tear, long head of biceps symptomatology with significant likelihood of pain due to long head of biceps detensioning and a new finding of anterior–superior rotator cuff deficiency.

35. Dr. Hatzidakis stated in his report that Claimant's left shoulder discomfort, function and radiographic appearance had deteriorated slowly over time. Claimant had evidence of rotator cuff deficiency which is likely responsible for his weakness and inability to perform everyday activities on the left side. Dr. Hatzidakis was of the opinion that the

video of Claimant shoveling snow was not a contradiction of the current condition of his left shoulder. Dr. Hatzidakis was of the opinion that a patient with Claimant's condition could perform a certain amount of upper extremity activity and the video showed very little if any overhead activities. He also noted in his report that Claimant could lift his arms as part of his examination and did not exhibit any signs of symptom magnification or falsification. (CHE 15, p. 193)

36. Because of Claimant's persistent worsening symptoms, Dr. Hatzidakis indicated Claimant was a candidate for revision surgery of the left shoulder with reverse total shoulder arthroplasty and an associated surgery that includes retensioning the long head of the biceps.

37. On June 29, 2021, Dr. Failinger issued a brief report, answering four questions posed by Respondents. RHE at 16. Dr. Failinger said that Claimant's objective findings had not significantly worsened since MMI and noted that his range of motion measurements documented on June 8, 2021, were significantly improved when compared to those at the time of MMI. Dr. Failinger stated that any worsening of condition would most reasonably be based on ongoing degeneration rather than pathology caused by the work injury. Dr. Failinger stated that "if in fact the left shoulder claim is accepted," the proposed surgery would be related. Dr. Failinger reviewed surveillance footage from February 5, 2021, of Claimant shoveling snow. Dr. Failinger noted no significant withdrawal or pain behaviors from Claimant while performing what appeared to be relatively heavy physical use of the upper extremities. Dr. Failinger stated that, at least on the date of the snow shoveling, there was not a significant degree of shoulder dysfunction.

Deposition of Dr. Hatzidakis (6/17/2021)

38. Claimant deposed Dr. Hatzidakis on June 17, 2021. Dr. Hatzidakis testified that there was evidence of arthritis of the shoulder in the more recent x-rays from 2021. CHE at 211. Dr. Hatzidakis also testified that the shoulder did not center well in the joint and that the subscapularis was not functioning properly because the ball slipped forward. *Id*. Dr. Hatzidakis explained that this occurs over time in patients with poor rotator cuff tissue and that the slippage is a failure of the front rotator cuff, which isn't part of the repair. *Id*. But he also testified the top portion of the rotator cuff, which was part of the prior repair, is also not functioning properly. (HD, p. 16.)

39. Dr. Hatzidakis credibly testified that the surgery is really the definitive option to cure and relieve Claimant from the effects of his work injury. (HD, p. 18.) He also credibly testified to the following regarding why the surgery is reasonable and necessary to cure Claimant from the effects of his work injury. As for the reverse shoulder replacement Dr. Hatzidakis stated:

> [Claimant] had a significant work injury in which he sustained a large rotator cuff tear. He did not have much arthritis at the time of surgery. He had a surgery to fix that rotator cuff. Rotator cuff did not heal.
>
> He had a 2nd surgery, one we performed, to reconstruct the rotator cuff. He at least healed that partially for some period of time. But once again, the shoulder showed signs of rotator cuff failure in developing osteoarthritis,

> worsening of arthritis in the shoulder, which is a consequence of the shoulder decentering as a result of the rotator cuff not holding it properly, articulating with the glenoid any longer.
>
> So that it is a well-known long-term complication of an extensive rotator cuff tear.
>
> (HD, p. 19.)

Regarding the biceps retensioning, Dr. Hatzidakis credibly and persuasively testified that:

> The patient had the surgery on the right and he didn't have a complete resolution of symptoms. But symptoms did get better.
>
> So, when I see patients for this sort of thing, I tell them, listen, I cannot guarantee that this will cure your problem. I can't guarantee even it will help.
>
> I've seen patients who have the symptoms for years who do have the procedure and it does help them.
>
> Now, do I know how much it will help him? No, I have no idea of predicting the future, I think it is a reasonable option for him to have done in an attempt to improve his symptomatology.
>
> I don't think it carries a lot of risk. So, him what I think about is risk-benefit ratio. So, the risk of him having an untoward complication from a retention of his biceps is very low. The chance of improving his symptoms is more than the risk. So, I think it is a reasonable option to consider.
>
> (HD, p. 20.)

40. The ALJ finds Dr. Hatzidakis' testimony to be credible and persuasive because it is consistent with Claimant's statements in his medical records - and some of his testimony about his condition worsening - and is supported by objective findings. The objective findings include the x-rays that show Claimant has advancing arthritis in his shoulder and that his shoulder is not sitting in the joint properly, both of which are consequences of, and related to, his initial work injury and subsequent surgeries, and support Claimant's complaints of increasing pain and decreasing function.

41. Dr. Hatzidakis also testified about the surveillance video. After watching the video, he concluded Claimant was not violating his restrictions – which included a 20-pound lifting restriction - while shoveling. After reviewing the surveillance video, the ALJ finds Dr. Hatzidakis' testimony related to the shoveling to be credible and persuasive. As a result, the ALJ does not find that Claimant's actions of shoveling exceeded his restrictions. The ALJ further finds that Claimant did not aggravate his preexisting shoulder condition while shoveling.

42. Based on the credible and persuasive testimony of Dr. Hatzidakis, that ALJ finds that Claimant's condition has worsened and the surgery is reasonable and necessary to cure Claimant from the effects of his work injury.

Deposition of Dr. Failinger (7/1/2021)

43. Respondents deposed Dr. Failinger on July 1, 2021. RHE H. Dr. Failinger's testimony and his opinions are contradictory. Dr. Failinger believes that the original incident in 2014 did not cause Claimant's rotator cuff tear, therefore, the need for treatment is unrelated. (FD, p 10.) Moreover, Dr. Failinger testified in one portion of his deposition that any worsening of Claimant's condition would be due to non-related degenerative pathology. (FD, p. 10, 11.) Dr. Failinger further testified that Claimant had a preexisting rotator cuff tear before December 5, 2014, and that the MRI studies do not show that the preexisting rotator cuff was accelerated or made significantly worse by the injury. (FD, p. 10.) Dr. Failinger testified that the degeneration of the rotator cuff was an ongoing process that did not stop and noted that Dr. Hatzidakis acknowledged the quality of the tendon was poor, which was a genetic issue rather than a result of a tear. RHE H at 11. Dr. Failinger testified that ongoing degeneration of the cuff was part of the natural course of the preexisting pathology and would be expected to progress regardless of the repair. RHE H at 11-12.

44. On the other hand, in another portion of his deposition, Dr. Failinger testified and agreed that Claimant suffered an aggravation of his preexisting rotator cuff condition in 2014. Dr. Failinger agreed that:

> [I]n this particular case then, this would have been an aggravation of [Claimant's] preexisting condition based upon the December of 2014 occupational injury.
>
> (FD, p. 38.)

45. Dr. Failinger also reviewed the February 5, 2021, surveillance footage and testified that there was lifting up to the chest level. RHE H at 20. Dr. Failinger testified that there was involvement of the rotator cuff with the movements at chest level or above observed on the footage. *Id*. Dr. Failinger testified that the primary force to lift the snow was the left arm. *Id*. Dr. Failinger testified that at no point did he perceive that Claimant was having any difficulty or pain lifting the snow shovel. RHE H at 22. Dr. Failinger testified that the video evidenced Claimant's ability to perform activities of daily living. *Id*.

46. Dr. Failinger testified that the allograft procedure performed by Dr. Hatzidakis was to prevent a reverse total shoulder procedure and that absent some event that created further worsening of the rotator cuff tear, the need for the procedure was unrelated to the injury. RHE H at 27. Dr. Failinger testified that, just because a patient is dissatisfied with a surgical outcome does not necessarily mean that their condition is worse. RHE H at 30. Dr. Failinger testified that based on Claimant's observed degree of function in surveillance, it did not appear that the reverse total shoulder procedure was the most reasonable thing to perform. RHE H at 33.

47. To the extent Dr. Failinger does not think the shoulder surgery is reasonable, necessary, and related, the ALJ does not find his opinion to be persuasive for several reasons. First, Dr. Failinger admitted that Claimant suffered an aggravation of his preexisting rotator cuff in 2014. Second, many of Dr. Failinger's opinions are based on assumptions that are inconsistent with the ALJ's findings. For example, Dr. Failinger

testified that a reverse shoulder replacement would not be necessary if Claimant's condition is the same as it was when he was placed at MMI. (FD, pp. 31-33.) As found, Claimant's condition has worsened, and he is not the same as when he was placed at MMI. Third, Dr. Failinger further testified that he was the first orthopedic surgeon to see Claimant when he first injured his shoulder. Dr. Failinger stated that Claimant had a "massive tear" and it is "likely irreparable." (FD, p. 38.) Thus, since he initially concluded that the tear was massive and irreparable, the only surgery left to perform is a shoulder joint replacement. Thus, to now say it is not reasonable and necessary is not persuasive.

Testimony of Claimant

48. Claimant credibly testified that he now gets pain in his left shoulder when:

- Waking up in the morning or when trying to get to sleep. As a result, he now has to take over-the-counter pain medication to get to sleep.
- Getting dressed.
- When performing household chores like sweeping and performing light duty activities. See page Hearing Transcript, (HT) at 33.

49. He also credibly testified that he has the recurrence of spasms and cramping in his biceps when doing light duty activities. For example, Claimant credibly testified that he now gets spasms and cramping in his left biceps when:

- Taking a shower and washing his hair.
- Drying off after showering.
- Brushing his teeth.
- Shaving.

50. Moreover, Claimant's contention that his condition is worse is substantiated by objective findings. For example, Claimant has an increase in the arthritis in his shoulder – which is due to his work injury. Claimant has also developed some additional weakness in his left shoulder – consistent with his rotator cuff injury – and the new findings that the ball of his shoulder joint is not positioned correctly – which is also due to his compensable shoulder injury. Plus, Claimant has a slight decrease in range of motion – as measured by Dr. Hatzidakis – compared to when Claimant was placed at MMI and his range of motion was measured by Dr. Hatzidakis.

51. As a result, the ALJ finds that Claimant's condition has worsened to the point that he now gets pain in his left shoulder as well as recurrence of cramping and spasms in his left biceps when performing activities that did not cause pain when he was placed at MMI.

52. Claimant also testified that he did not have any change in condition since he was placed at MMI in 2018. (HT at 43.) But, the ALJ finds that such testimony is inconsistent with his medical records, statements in the medical records, the objective findings that show that his condition has worsened, as well as the reports and testimony of Dr. Hatzidakis. Plus, it is inconsistent with his other testimony that demonstrates he now has pain when

performing activities that did not cause pain at the time he was placed at MMI. As a result, the ALJ resolves these conflicts in the evidence and finds that Claimant's condition has worsened since being placed at MMI and that he is in need of medical treatment to cure him from the effects of his work injury.

ULTIMATE FINDINGS OF FACT

53. Claimant suffered a compensable injury to his left shoulder in December 2014. Claimant's compensable injury includes his rotator cuff and his biceps tendon.

54. Since Claimant was placed at MMI, his condition has worsened, and he is in need of additional medical treatment to cure him from the effects of the work injury.

55. The surgery recommended by Dr. Hatzidakis is reasonable and necessary to cure Claimant from the effects of his work injury. As a result, it is also related to his December 2014 work injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant's left shoulder and biceps condition has worsened, and his case reopened based on a change of condition.

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the ground of, *inter alia*, change in condition. The claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. Section 8-43-201; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988).

Colorado recognizes the "chain of causation" analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury. Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability or the need for additional treatment such disability and need for treatment represent compensable consequences of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). However, no compensability exists if the disability and need for treatment were caused as a direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002).

The question of whether the claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan, supra.* Similarly, the question of whether the disability and need for treatment were caused by the industrial injury or by an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office, supra.*

A worsening of condition can take a number of forms. Thus, a worsening of condition does not have to be based on an increase in pain levels. For example, a worsening of condition can be based on an increase or change in the type of activities that causes pain. For example, in this case, Claimant credibly testified that he now gets pain in his left shoulder when:

- Waking up in the morning or when trying to get to sleep. As a result, he now has to take over-the-counter pain medication to get to sleep.
- Getting dressed.
- When performing household chores like sweeping and performing light duty activities.

He also credibly testified that he has the recurrence of spasms and cramping in his biceps when doing light duty activities. For example, Claimant credibly testified that he now gets spasms and cramping in his left biceps when:

- Taking a shower and washing his hair.
- Drying off after showering.
- Brushing his teeth.
- Shaving.

As found, there are some inconsistencies in Claimant's testimony. However, it must be borne in mind that inconsistencies are not uncommon to the adversary process which, of necessity, must rely upon the sometimes contradictory and often incomplete testimony of witnesses who are attempting to reconstruct historical facts and reconcile them with current facts. *See People v. Brassfield*, 652 P.2d 588, (Colo. 1982).

As found, Claimant's condition has worsened to the point that he now gets pain in his left shoulder as well as recurrence of cramping and spasms in his left biceps when performing activities that did not cause pain when he was placed at MMI.

Moreover, Claimant's contention that his condition is worse is substantiated by objective findings. For example, Claimant has an increase in the arthritis in his shoulder – which is due to his work injury. Claimant has also developed some additional weakness in his left shoulder – consistent with his rotator cuff injury. Plus, Claimant has a slight decrease in range of motion – as measured by Dr. Hatzidakis – compared to when Claimant was placed at MMI. Lastly, due to his work injury and subsequent surgery, the ball of Claimant's shoulder joint is no longer positioned properly.

The ALJ also credits the opinions of Dr. Hatzidakis who concluded Claimant's condition has worsened since being placed at MMI. On the other hand, the ALJ did not credit the opinion of Dr. Failinger to the extent he does not think Claimant's condition has worsened and the surgery is not reasonable, necessary, and related to Claimant's December 2014 work accident.

As a result, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that his condition has worsened and that he needs additional medical treatment to cure him from the effects of his work injury.

II. Whether the surgery recommended by Dr. Hatzidakis is reasonable, necessary, and related to Claimant's December 5, 2014, workers' compensation injury.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the MTG is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the MTG such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008).

As found, Dr. Hatzidakis has recommended a reverse shoulder replacement and biceps retensioning surgery to cure Claimant from the effects of his work injury. The ALJ credits Dr. Hatzidakis' testimony and finds it persuasive. Moreover, no other physician has offered another type of treatment to cure Claimant from the effects of his work injury. Under Respondents contention, Claimant should merely live with his pain and dysfunction – despite the fact that there is a reasonable surgery that has a reasonable chance to cure him from the effects of his work injury.

Moreover, the ALJ has considered, but rejected the opinions of Dr. Failinger and Dr. Cebrian as to whether the surgery recommended by Dr. Hatzidakis is reasonable, necessary, and related.

As a result, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that the surgery recommended by Dr. Hatzidakis is reasonable, necessary, and related to treat Claimant from the effects of his work injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's condition has worsened and his case is reopened.

2. Respondents shall pay for the surgery recommended by Dr. Hatzidakis, pursuant to the Colorado Workers' Compensation Fee Schedule.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 25, 2021.

/s/ Glen B. Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether the claimant has overcome, by clear and convincing evidence, the Division-sponsored independent medical examination (DIME) physician's opinion regarding maximum medical improvement (MMI).

2. Whether the claimant has demonstrated, by a preponderance of the evidence, that treatment with Dr. Kevin Borchard is authorized.

3. Whether the claimant has demonstrated, by a preponderance of the evidence, that the right knee surgery performed by Dr. Borchard on June 20, 2021, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted work injury.

FINDINGS OF FACT

1. The claimant has been employed with the employer for 22 years. On January 2, 2020, the claimant suffered an injury to her right knee, when she was shoveling snow at work. The claimant testified that while shoveling, she slipped on some ice and twisted her right knee, but did not fall.

2. The claimant's authorized treating physician (ATP) for this claim is Dr. Frederick Scherr. Since the January 2, 2020 incident, the claimant has undergone treatment including physical therapy, pain medications, right knee surgery, and injections.

3. During the course of the claim, Dr. Scherr referred the claimant to orthopedic surgeon, Dr. Michael Sisk. On May 12, 2020, Dr. Sisk performed a right knee arthroscopy, partial medial meniscectomy, chondroplasty of the medial femoral condyle and patellofemoral joint and partial lateral meniscectomy.

4. On October 20, 2020, a magnetic resonance image (MRI) of the claimant's right knee was performed. The MRI showed, *inter alia*, post-surgical changes. The MRI also showed that the degenerative condition of the claimant's right knee was unchanged when compared to a January 2020 MRI.

5. On October 29, 2020, the claimant was seen by Dr. Scherr. In the medical record of that date, Dr. Scherr noted that the claimant's physical therapist had advised that the claimant was ready to transition from formal physical therapy to a home exercise program (HEP). Dr. Scherr also noted that the claimant did not exhibit an antalgic gait and was able to perform a deep squat without difficulty or pain. On that date, Dr. Scherr determined that the claimant had reached maximum medical improvement (MMI). In addition, Dr. Scherr assigned a scheduled permanent impairment rating of 12 percent for the claimant's right lower extremity. Dr. Scherr assigned permanent work restrictions of

no kneeling or crawling. Dr. Scherr also recommended maintenance medical treatment of six visits of physical therapy, and one pool therapy visit.

6. During that same October 29, 2020 appointment, the claimant reported issues with her right hip, right foot, and back. In the medical record of that date, Dr. Scherr noted that these were new symptoms. Dr. Scherr credibly opined that the claimant's right hip, right foot, and back were not causally related to the admitted work injury.

7. On October 30, 2020, the respondents filed a Final Admission of Liability (FAL), reflecting the MMI date of October 29, 2020, and the impairment rating assessed by Dr. Scherr.

8. The claimant contested the FAL and requested a Division-sponsored independent medical examination (DIME).

9. On February 21, 2021, the claimant attended a DIME with Dr. John Hughes. In connection with the DIME, Dr. Hughes reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his DIME report, Dr. Hughes noted that he was asked to evaluate a number of body parts/conditions. That list included "digestive as well as psychological conditions", the claimant's lumbar spine, pelvis, bilateral lower extremities (including feet, knees, and hips), and complex regional pain syndrome (CRPS). Dr. Hughes agreed with the MMI date of October 29, 2020, as determined by Dr. Scherr. Dr. Hughes assessed a scheduled impairment rating of 21 percent for the claimant's right lower extremity. Dr. Hughes did not recommend any maintenance medical treatment.

10. On March 5, 2021, the respondents filed an FAL reflecting the MMI date and impairment rating in Dr. Hughes' DIME report.

11. The claimant testified that after being placed at MMI, she continued to have right knee symptoms. As a result, she sought out a second opinion with Dr. Kevin Borchard. The claimant was first seen by Dr. Borchard on April 13, 2021. On that date, the claimant reported continued right knee pain, catching, and popping. Dr. Borchard opined that the claimant had developed adhesions in her right knee following the May 12, 2020 surgery. Dr. Borchard recommended a right knee scope to remove that scar tissue.

12. On April 14, 2021, Dr. Sisk's office generated a referral to Dr. Borchard for consultation regarding the claimant's right knee. The claimant testified that she contacted Dr. Sisk's practice and requested a referral to Dr. Borchard. The claimant did not speak with Dr. Sisk, nor was she seen in his office regarding her referral request.

13. On June 20, 2021, Dr. Borchard performed the recommended right knee procedure.

14. The claimant testified that since the June 20, 2021 surgery her right knee is pain-free. the claimant underwent the right knee scope recommended

15. Dr. Scherr's testimony was consistent with the October 29, 2020 medical record. During his testimony, Dr. Scherr reiterated his opinion that the claimant's right knee is the only body part causally related to the claimant's January 2, 2020 work injury.

16. The ALJ credits the medical records and the opinions of Drs. Hughes and Scherr that the claimant reached MMI on October 29, 2020.

17. The ALJ further credits the medical records and the opinion of Dr. Hughes that the claimant did not require additional medical treatment after she was placed at MMI.

18. With regard to treatment the claimant received from Dr. Bourchard, the ALJ credits the medical records and the opinion of Dr. Scherr that the surgery was not reasonable and necessary medical treatment. Additionally, the ALJ finds that treatment provided by Dr. Bourchard was not authorized by the respondents. Although there was an attempt by the claimant to obtain a referral from Dr. Sisk's office, the ALJ is not persuaded that this treatment was authorized, nor was it within the chain of referral.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome

by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probable that the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000). The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions, including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. As found, the claimant has failed to overcome, by clear and convincing evidence, the opinion of the DIME physician on the issue of MMI. As found, the medical records and the opinions of Drs. Scherr and Hughes are credible and persuasive on this issue.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where the claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission*, *supra.*

7. As found, the claimant has failed to demonstrate, by a preponderance of the evidence that medical treatment provided by Dr. Bourchard, including the June 20, 2021 surgery, was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, treatment with Dr. Bourchard was not authorized by the respondents, nor was it within the chain of referral. As found, the medical records and the opinions of Dr. Scherr are credible and persuasive on this issue.

8.

ORDER

It is therefore ordered:

1. The claimant has failed to overcome the DIME physician's opinion on the issue of MMI.

2. The claimant's request for treatment with Dr. Bourchard, including the surgery performed on June 20, 2021, is denied and dismissed.

3. All matters not determined here are reserved for future determination.

Dated this 25th day of August 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. **In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Did Claimant prove his claim should be reopened because his condition changed and he was no longer at MMI?

FINDINGS OF FACT

1. Claimant works for Employers as a custody control officer. He suffered an admitted injury to his right hip on February 22, 2019, when he slipped on ice and fell.

2. The fall caused a right intertrochanteric fracture. He underwent an open reduction/internal fixation with cephalomedullary nail the next morning.

3. Claimant was referred to CCOM in Pueblo for authorized treatment. Dr. Daniel Olsen has been Claimant's primary ATP. Claimant participated in physical therapy with gradual improvement of the hip pain. He also had a right hip steroid injection in July 2019, which was helpful.

4. Dr. Olson put Claimant at MMI on September 25, 2019. Claimant reported difficulty running and that prolonged sitting made his hip "stiff." Claimant reported a pain level of 3/10. Dr. Olson noted a "slight hitch" in Claimant's gait and fairly substantial range of motion deficits. Dr. Olson assigned a 16% lower extremity rating. He released Claimant with no restrictions and no need for further care.

5. It quickly became apparent Dr. Olson had been mistaken to release Claimant with no provision for maintenance care. Claimant returned to Dr. Olson on October 22, 2019 and expressed "a lot of frustration and some depression over the fact that he cannot do a lot of the activities that he normally could do before his injury." Claimant also reported increased pain in the groin and right hip. Dr. Olson referred Claimant for counseling with Amy Alsum to address the depression. Dr. Olson also ordered an MRI of the hip and recommended Claimant follow up with his surgeon, Dr. Porter, after receiving the MRI results.

6. On December 12, 2019, Dr. Olson documented Claimant had seen Dr. Porter who thought the ongoing hip pain was probably related to scar tissue. He mentioned possibly removing the hardware but gave Claimant no assurance that would alleviate his pain. Dr. Porter "had no other suggestions." Dr. Olson noted Claimant had been working with Ms. Alsum but "he does not feel like he's getting a great deal out of that."

7. By January 2, 2020, Claimant had finished his sessions with Ms. Alsum and reiterated he "did not find them helpful." Claimant reported 7/10 right hip pain.

8. On January 22, 2020, Claimant was still reporting 7/10 hip pain and aching and burning in the right upper thigh. Dr. Olson referred Claimant to physical therapy and

prescribed Lidoderm patches. Although it appears the physical therapy was primarily directed at an unrelated shoulder condition, Dr. Olson stated, “I will also have the physical therapist work on some of his leg tightness and stretches.”

9. At his next appointment on February 19, 2020, Claimant informed Dr. Olson the Lidoderm patches were helpful. He noticed cold weather and “working a lot of hours in a row” bothered his hip. He had some pain to palpation of the posterior piriformis and gluteus muscles on the right. Dr. Olson noted Claimant “has just started physical therapy for the shoulder.” No specific treatment was recommended for the hip.

10. On March 9, 2020, Claimant reported reducing his work shifts to 10 hours “has helped his hip pain.”

11. Claimant received a refill of the Lidoderm patches on July 9, 2020. He reported “the patches make his pain ‘manageable.’” His pain level that day was 4/10.

12. Claimant attended a hearing before ALJ Edie on October 15, 2020. Judge Edie found Claimant was entitled to a general award of medical benefits. No specific medical benefits related to the hip were awarded.

13. Respondents admitted liability for medical benefits after MMI based on Judge Edie’s order. Claimant’s medical benefits are not “closed.”

14. Dr. Thomas Centi took over as Claimant’s primary ATP in on November 23, 2020. He recommended no specific treatment for the right hip.

15. Claimant next saw Dr. Centi on January 13, 2021. He described the pain as “moderate” but “feels it is stable.” Dr. Centi ordered x-rays of the right hip.

16. Claimant followed up with Dr. Centi on January 21, 2020. He again reported his hip condition was “stable.” Claimant requested work restrictions, specifically he asked for limitations on running and to work no more than 12-hour shifts. Dr. Centi reviewed with x-rays and noted the fracture had healed. There was some moderate osteopenia but no acute findings. Dr. Centi referred Claimant for an orthopedic evaluation “for maintenance, follow-ups and/or complications.” Dr. Centi did not impose any work restrictions.

17. Claimant saw Dr. Robert Thomas at Parkview Orthopedics on February 3, 2021, because Dr. Porter had retired. Claimant explained he had a good response from the steroid injection in 2019, but his pain returned within several months. The report indicates Dr. Porter administered a greater trochanteric injection in November 2020, although there are no corresponding records of that appointment in evidence. Claimant stated the most recent injection was not helpful. Claimant reported lateral right hip pain radiating over the anterior aspect of his thigh. His pain increased with ambulation. Examination showed tenderness over the greater trochanter. He complained of some soreness with internal and external rotation but demonstrated full hip range of motion and full strength. Dr. Thomas reviewed the x-ray and saw the TFN nail was well-positioned. The intertrochanteric fracture was healed, and the hardware was not particularly prominent. There was some loss of the intraarticular joint space consistent with arthritis.

Dr. Thomas diagnosed trochanteric tendinitis and recommended physical therapy. He opined,

> I believe this pain is more related to greater trochanteric tendinitis as Dr. Porter treated back in November. I then talked about repeating an injection, though it did not seem to work. I would be willing to try at once more. Second thing is to try and work with physical therapy. Beyond that, I really do not have much more to offer. I do not think removal of the hardware will do much since the hardware is very well-positioned, not prominent at all. Replacing the hip joint [I] also do not think [is] probably going to help since his pain seems to be more over the greater trochanter and less intra-articular. He decided how it may [sic] just work with physical therapy for now. He does not really want to repeat the greater trochanter injection and will follow up with us as needed.

18. No subsequent medical records were submitted at hearing, and there is no persuasive evidence Claimant pursued any additional treatment for the hip.

19. Claimant failed to prove his condition changed and he was not at MMI at any time after September 25, 2019.

CONCLUSIONS OF LAW

Section 8-43-303 authorizes an ALJ to reopen any award on the grounds of error, mistake, or a change in condition. A "change in condition" refers either to a change in the condition of the original compensable injury, or a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). The authority to reopen a claim is permissive, and whether to reopen a claim if the statutory criteria have been met is left to the ALJ's discretion. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). The party requesting reopening bears the burden of proof. Section 8-43-304(4).

The respondents are liable for medical treatment after MMI reasonably necessary to relieve the effects of the injury or prevent deterioration of the claimant's condition. Section 8-42-101; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the employer's right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003).

Claimant's claim remains open for medical benefits after MMI pursuant to Judge Edie's order and Respondent's admission. Accordingly, there is no need to "reopen" the claim to obtain additional *"Grover"*-type care. But Claimant argues the claim should be reopened because he is no longer at MMI and the treatment he received had been intended "to bring the Claimant back to MMI."

MMI is defined at the point where the injury has become stable, and no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5). The type of treatment provided is not determinative whether it should be considered pre- or post-MMI treatment. The dispositive question is the ***purpose*** for which treatment is provided rather than the "nature" of the treatment. *Milco Construction v. Cowan*, 860 P.2d 539, 542 (Colo. App. 1992).

As found, Claimant failed to prove he was no longer at MMI at any time since September 25, 2019. Claimant's authorized providers have consistently indicated he remained at MMI. Claimant has been described on more than one occasion as "stable." Although Claimant's pain level may fluctuate depending on the weather and his activity level, some waxing and waning of symptoms is reasonably expected given the nature of Claimant's injury, his age, and his physically demanding job. But the mere fact a claimant experiences periodic flares does not necessarily mean they come off MMI. The key question is whether any recommended treatment is intended to improve Claimant's condition instead of simply managing his symptoms. The treatment Claimant has received since being put at MMI has been intended to relieve symptoms and is appropriately considered "maintenance care." There is no persuasive evidence that claimant requires any treatment reasonably expected to "cure" or improve his condition. The preponderance of persuasive evidence shows Claimant has remained at MMI since September 25, 2019.

ORDER

It is therefore ordered that:

1. Claimant's petition to reopen his claim is denied and dismissed.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: August 26, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable work injury in her home office on June 30, 2020?

II. If the claim is compensable, is Claimant entitled to a general award of medical benefits in connection with this claim?

STIPULATIONS

The parties agreed that the issue they wished to be decided is compensability. It was agreed that a general award or denial of medical benefits was all that was being sought, in order to render this case appealable. Claimant also withdrew her claim for Penalties.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant's Work Arrangement

1. Claimant serves as an analyst for Employer [Redacted]. This job entails setting up health benefit plans when [Employer] gets a contract with a client/employer, and involves setting up benefit plans for new client/employer to offer their own employees. Her official job title is "Benefit Engine Architect."

2. Claimant has been doing this type of work for [Employer] for approximately eight years. She previously worked for Anthem in a similar position. At the time of the reported work injury, Claimant was salaried at approximately $72,000 per year. Claimant was assigned a 'regular' work schedule of eight hours per day, five days per week (*see* Ex. C, p. 12); however, no start or end times of her 8-hour day are noted, nor are lunch hours or breaks addressed at all. While Claimant and her supervisor vary in their understanding of the extent of overtime needed to perform the job, it is undisputed that Claimant would sometimes work overtime as needed, and without further compensation.

3. Until approximately November, 2016, Claimant would commute to the office of [Employer], located in Denver. When she moved to Colorado Springs, however, she started working from home, as [Employer] allowed certain employees to work from home, if they lived more than 50 miles from [Employer]'s Denver office.

The Telecommuting Agreement

4. However, as a condition precedent to be permitted to work from home, Claimant (presumably like all those similarly situated) had to enter into a *Telecommuting Agreement ("Agreement")* with [Employer]. (Ex. C, pp. 11-16).

5. In pertinent part, this *Agreement* states:

●Telecommuting is considered a legitimate management option *when it is cost effective and supportive* *of [Employer]'s* *business objectives. Id* at 12 (emphasis added).

●Claimant was designated as an employee spending "nearly 100%' of her work time at the *telecommuting site*, which is her home address. *Id* at 12.

●There is a separate section of the *Agreement* applicable to hourly employees only. This ***Telecommuting Schedule*** expressly forbids such employees from working overtime without express permission. No such language addresses exempt employees. *Id* at 13.

●Employees were required to remain accessible during "designated work hours", to attend to duties, including, for example, to check email every hour.

●Under the ***Liability*** section: "Telecommuter's at-home or telecommuting work space will be considered an *extension of [Employer]'s work space* for Telecommuter only. If Telecommuter incurs a work-related injury or illness in the course and scope of employment and arising out of such employment *during his/her telecommuting work hours,* Telecommuter's claim will be processed…[for Workers Compensation-otherwise [Employer] is not liable]." *Id* at 14 (emphasis added).

●The *telecommuting work hours* will conform to a schedule agreed upon by Telecommuter and his/her manager. *Id* (emphasis added) [NOTE* this ***Liability*** section makes no distinction between hourly and exempt employees, unlike the ***Telecommuting Schedule.***

●Under ***Home Office: Set-Up, Security, Safety and Ergonomics***, it notes: "Telecommuter will take the necessary steps to ensure that the alternative *worksite* is safe", referencing furniture, lighting and ventilation, trip and fall hazards, and distractions. *Id* at 14 (emphasis added).

●"Telecommuters will be provided equipment, assets, and supplies that are *reasonably needed* to perform their job. [Employer] then specifies which equipment (laptop, monitors, etc.) will be supplied to Claimant, but notes further: "Miscellaneous supplies such as paper clips, file folders, pencils, pens, etc. will be provided *to Telecommuter*. *Telecommuter* *will obtain these supplies through [Employer] and not purchase them from an outside vendor".* *Id* at 15 (emphasis added).

6. Pursuant to the *Agreement*, it was Claimant's understanding that she was required to have a home office that was separate and apart from the common areas of the house to avoid interruptions. It also had to be secure, since she would handle confidential information. Claimant testified that she had a door installed at her residence with a lock, so that her office and an adjacent bathroom were separate from the rest of the house. Claimant testified that she only used the office for her [Employer] work, and that it remained locked the rest of the time.

7. Claimant purchased a desk, bookcases, a file cabinet and a printer stand for the office, for which she was not reimbursed by [Employer]. [Employer] provided the computer, two monitors, and router along with computer supplies and ink for the printer. (*see also* Ex. 12, p. 15). At hearing, Claimant also indicated that there were some boxes in the office on the floor, "but everything was in its place and was working properly" (Transcript, p. 19). [Employer] had previously provided Claimant with an ergonomic chair, as a result of neck surgery in 2013. When Claimant moved into her home office, [Employer] permitted her to take this chair with her.

8. Claimant testified that for about a year before April, 2020, she was required to go into the office in Denver on Wednesdays. However, when the Covid pandemic hit, [Employer] had her return to five days per week in her home office.

The Wall Clock

9. Claimant testified that she had been under stress for failing to meet deadlines, and had met with her supervisor, Ms. M[Redacted], about setting priorities and spending a more appropriate amount of time on certain projects. She wanted to be more productive, so she purchased a wall clock to place on the wall in front of her desk. She bought it from the ARC (thrift store), paying "around $3", and described it as having a mauve background, with rhinestones. She actually bought it about two months prior to attempting to hang it.

10. Claimant noted: "Well, I was keeping track of my time, and also it as much easier for me to see something large right in front of my face in terms of my time. Rather than find my phone or look at the tiny little square on the screen, I wanted to be able to see it and read it quickly." (Transcript, p. 22). When asked if the clock would confer a personal benefit to her, Clamant advised: "No, I couldn't see it from anywhere else. I didn't hang out in my office when work was over." *Id* at 23.

Claimant Falls from her Work Chair

11. Claimant testified that on June 30, 2020, she had worked a regular workday, which was typically 6:00 am to 2:30 pm, or 6:30 am to 3:00 pm. However, there was a (virtual) group meeting scheduled for 3:00 pm that day. Having some time before this meeting, she decided to hang the clock. Prior to doing so, she left the home office to get a hammer and nail.

12. Claimant testified that she took some boxes that were filled with books and binders, and braced the bottom of her work chair, so the wheels on the bottom would not move. When she stood up on the seat of the chair to hang the clock, the seat of the chair started turning. She had nothing to hang onto, so she fell backwards and to the floor.

13. Claimant stated:

> …I hit my bottom first, mostly on my left side, my knee got caught in the…armrest…of the chair, so that got injured, and then when I fell, I started to free fall. I hit my neck on the magazine rack, and then, of course, my hip, and my back, and my lower back, and my upper back had abrasions on it, and my head…(Transcript, p. 24).

Claimant Reports this Incident to her Supervisor/ Seeks Treatment

14. Claimant testified that she let Ms. M[Redacted] know about the fall during a call with her team a few days later, but she did not make the call at 3:00 on the June 30th because of the fall.

15. Based on her conversation with Ms. M[Redacted], she thought HR was going to advise her what medical providers to see. However, by 'Friday' [July 3, 2020], having heard nothing from Ms. M[Redacted], she sent her a message, stating she was going to the ER. Ms. M[Redacted] then said, "I hope you find someone." (Transcript, p. 25).

16. Claimant testified she went to the UCHealth ER, and the ER doctor told her to follow up with her primary care doctor, who is Dr. Stefani. UCHealth records indicate that on 7/7/2020, Claimant reported to ER staff that she had injured her back 'onset 5 days ago', by falling off a chair with wheels to hang stuff on the wall. (Ex. A, p. 1). [The ALJ notes that '5 days ago' from 7/7/2020 would have been 7/2/2020].

17. On 7/21/2020, Claimant had a video visit with Dr. Stefani at [Employer]. His notes indicate that Claimant had reported to him, "Pt reports that she suffered a fall while at work on 7/7/2020. Went to the ED where imaging was conducted. Imaging was largely unremarkable…We agreed to repeat the imaging…She states that workers comp is pending." (Ex. B, p. 2). [The ALJ notes that UCHealth ER did perform xrays on 7/7/2020].

18. Thereafter, she testified that Dr. Stefani referred her to Dr. Malinky, whom the Claimant had seen before for pain management for her neck surgery. Dr. Malinky then referred her to Dr. Hammers, who performed surgery on her low back on November 18, 2020. Claimant then developed sepsis following this low back surgery, and she stated that she has not been placed at MMI by Dr. Malinky.

Brenda M[Redacted] Testifies

19. Brenda M[Redacted], the Claimant's supervisor, testified at hearing. She testified that since the alleged injury, Claimant has complained of both neck and low back pain. Prior to the alleged injury, Claimant had never complained to her about not being able to see clocks, nor was she late for meetings.

20. Ms. M[Redacted] testified that the first time she knew about the Claimant's injury was on [Tuesday] July 7, 2020. At that time, Claimant only told her that she had fallen about a week before, but did not tell her it was an on the job injury. Claimant did tell her that she had fallen off a swivel chair while trying to hang a clock.

21. Ms. M[Redacted] testified that with the Outlook software [Employer] uses, there are reminder sounds for meetings that are on the calendar. Claimant did not request any type of prior approval for the purchase of this clock, nor did Claimant seek reimbursement after the fact. Claimant never sought any help in hanging this clock. Further, she did not believe that Claimant needed another clock in her home office. She has never, however, visited Claimant's home office.

22. Ms. M[Redacted] opined that Claimant hanging this clock did not benefit [Employer] in any way. She also opined that Claimant did not comply with her obligation under the Agreement to maintain a safe worksite, when she used the wheeled swiveling chair to hang the clock. She did agree that she told Claimant that her injuries might be covered by Workers Compensation.

23. Ms. M[Redacted] has been the Claimant's supervisor since August of 2018. Claimant did have earlier performance issues that had been corrected, but by April, 2020, she was having performance issues again, with missed deadlines. However, such missed deadlines were based on dates, rather than just missing deadlines by hours or minutes.

24. Ms. M[Redacted] estimated that about 95% of the Claimant's daily work activities are dedicated to getting her daily work done and meeting deadlines, with little time spent in meetings herself. She acknowledged that as a salaried employee, Claimant would work overtime if needed to meet her deadlines, but felt that such would be a rare occasion. However, she never tracked Claimant's hours to know how much overtime she actually worked.

25. Ms. M[Redacted] also agreed that, although the computer software advises of planned meetings, it does not keep track of the time spent on separate files. Claimant was having issues with missing deadlines, which Ms. M[Redacted] agreed was a time management issue. She agreed that the Claimant knew as of June 30, 2020 that she was not meeting expectations.

26. Ms. M[Redacted] further acknowledged that even prior to the work incident, she and her manager, Andrew May, were already planning on giving Claimant a 'final warning'

about her performance. This was more than a mere 'performance improvement plan'; however, such 'final notice' was not scheduled to actually occur until July 17, 2020. (Transcript, p. 47).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S.. A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. (8-43-201, C.R.S.).

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. In this instance, the ALJ finds that both Claimant and Ms. M[Redacted] have testified sincerely, and to the best of their memories. There are occasional conflicts in their respective positions, most notably on when this incident was reported, and what was said during such discussions. Further, while the medical reports - limited though they are - appear to reference 7/2 ('5 days ago' from 7/7) as a date of injury, such 'guesstimates' by injured parties are not uncommon at an ER intake. Similarly, while the [Employer] records state that the injury occurred on 7/7, clearly something got lost in that translation. 7/7 was the date that Claimant went to the UCHealth ER in the first instance, and she had been injured days before that initial visit. While Ms. M[Redacted] is no doubt sincere in her interpretations of Claimant's obligations to the *Agreement*, such interpretations are to be weighed against applicable law. In the final analysis, the ALJ does find that Claimant did fall from this office chair, in the manner she described, and for the reasons she described, and this incident occurred on or about June 30, 2020. The parties have essentially put the reasonableness, necessity, and relatedness of Claimant's subsequent medical treatment on hold, seeking only a determination of compensability, and a general award of medical treatment.

E. An ALJ's Order must be supported by substantial evidence. *See Newman v. McKinley Oil Field Service*, 711 P.2d 697 (Colo. App. 1985). Substantial evidence is any evidence that is convincing to the ALJ as the sole arbiter of fact. An ALJ's Order may only be vacated when "the great weight of the evidence or even the overwhelming evidence supports a contrary decision." *Wecker v. TBL Excavating, Inc.,* 9058 P.2d 1186 (Col. App. 1995). The evidence may be direct or that which is drawn by the ALJ's reasonable inferences. *Univ. of Denver v. Nemeth*, 127 Colo. 385, 257 P.2d 423 (1953). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability, Generally

F. A compensable injury is one that arises out of and in the course of employment. Section 8-41-301(1)(b), C.R.S. *In re question submitted by U.S. Court of Appeals,* 759 P.2d 17,20 (Colo. 1988). The course of employment requirement is satisfied when the claimant shows that the injury occurred within the time and place limits of the employment. *Popovich v. Irlando,* 811 P2d 379 (Colo.1991). The "time" limits of the employment can embrace a reasonable interval before and after official working hours when the employee is on the employer's property. *Industrial Commission v. Hayden Coal Co.,* 113 Colo. 62, 155 P.2d 158 (1944) (allowing for arrival and departure from work).

G. The "arising out of" element is narrower than the "course" element, and requires the claimant to prove that the injury had its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich, supra.* The "arising out of" test is one of causation, and generally requires that the injury have its origin in an employee's work-related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Rodriguez v. Exempla Healthcare, Inc,* WC No. 4-705-673, (ICAO, 2008).

H. The injured worker has the burden of proof by a preponderance of the evidence of establishing the compensability of an industrial injury and entitlement to benefits. 8-43-201 and 8-430210, C.R.S. *See City of Boulder v. Steeb,* 706 P.2d 786 (Colo. 1985). *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App, 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000); *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202 (Colo. App. 2012).

Greater considerations on "The New Normal", and why they matter

This is but one case, the result of which, of necessity, will be confined to its own facts. Interestingly, Claimant's home office arrangement predates the pandemic. However, in Covid's aftermath, the American workplace will never be the same. 2020 brought the unprecedented, emergent need for many in the 'nonessential' workforce to work from home, dovetailed with the cost-effective technological abilities to facilitate it. Long after Delta variant, et al, becomes a memory, there will remain the paradigm cultural shift towards telecommuting, with the specific terms varying with each corporate culture. With the swelling ranks of telecommuters will come the swelling ranks of persons injured while doing so. This will sometimes occur across state lines; occasionally across continents. And while each case must still rest on its own unique facts, it will be critical to articulate certain key factors that this jurisprudence can point to, to provide some measure of predictability to the process. Case law on home office injuries is scant; it is important that it now be built carefully, and in tandem with existing principles.

Thousands of 'nonessential' Colorado State employees provide but one example of the 'new normal'. Almost overnight, this workforce went from *"You shall come in to work Monday through Friday,"* to *"Here's your laptop. Go home, find a spot to work, and you shall not come in until further notice."* Currently, it's *"We want some of you back, some of the time, but not all of the time, unless you really want to. Even then, make sure there aren't too many of you at work at any one time. Some of you can even work from home full-time, provided others are willing to come in more often; however, we might reallocate your office. See you all at the Christmas party."* Unless, of course, Delta starts breaking through, in which case all bets are off. This is not to say that all of this is without justification, or an isolated example. We must all adapt with the times.

Home office parameters can range from rather formalized (as herein) to almost nonexistent. The availability of a dedicated home office room will be largely dictated by income and household size. Single persons of modest means, sharing an apartment, might have only their own bedroom to double as their home office – with their dresser doubling as their work desk. The physical and functional lines between personal and work functions will be blurry indeed. If a telecommuter leaves their 'workspace' to answer the doorbell, then falls down the stairs, did such fall "arise out of" the employment relationship? If it's a neighbor at the door bearing a six-pack of Dos Equis, maybe not; if it's UPS needing a signature for a critical component for the work laptop, probably yes. So then,…what if you don't know who's down there ringing the doorbell?

What results when a telecommuter falls down stairs while letting his dog out - in large part, because that's what dogs need, but in small part, because that dog *might* disrupt an important Zoom meeting? If, as here, there is a fairly bright line where the home office sits, is the worker merely "commuting" to work until he gets to the office doorway? If he takes lunch in the kitchen for personal comfort, can he 'detour' to go turn off the sprinkler? Will it matter whether it's an exempt vs. an hourly employee? Could it sometimes matter whether telecommuting is mandated, optional, or 'sick-time only'? If it's 'anything goes', with Wi-Fi and a laptop, is the entire house now the workspace?

If a (highly allergic) telecommuter is stung by a wasp while at their home workstation, it sounds compensable. Or falls off *[someone's]* swiveling chair in an attempt to swat it. So query, would fixing the screen (and cutting one's hand in the process) in the home office to prevent such intrusions inure to the employer's benefit? How about fixing the screen in an adjoining room, lest a wasp enter the office anyway, and run up a big medical bill? Will it matter if such repair is undertaken during (or outside of) set work hours by an hourly worker, versus an exempt employee who notices this problem at the end of his 'customary' shift? Might it matter if he repairs it from the outside, rather than staying indoors? Could it matter if the house is a *rental*, such repair thus more benefitting a *third party*, instead of the owner?

Ironically, this advent of telecommuting could now permit a person under quarantine to maintain their schedule unabated. It can also facilitate the early return to full-time duties of Mr. Type A, mere days removed from ACL surgery, wholly dependent upon crutches, yet still weeks away from MMI. Perhaps his surgery was not work-related. In any event, simple trip hazards like electrical cords near the stairs become PTD magnets for Mr. Type A. What happens when he gets the urge on Saturday to put up that glass-framed, 16x20 poster of The Company's mission statement? There's really only one chair handy, which has five wheels, and a tilt function lever that sometimes needs jiggling. (Who owns that chair, by the way?) Anyway, well within his 'fall radius', still leaning against the wall and also awaiting installation, is the glass-framed, 16x20 family vacation picture from Cancun. Better yet, let's make him an hourly employee doing this after hours. If he reports it as a work injury, maybe it's compensable, but then he gets written up for working overtime. Decisions, decisions.

Perhaps such situational hairsplitting is inevitable, since despite their appeal, litmus tests often prove simplistic and unworkable. However, the ALJ suggests that developing a weighted list of enumerated factors - not unlike the method for distinguishing employee from independent contractor - could greatly assist the process. But we digress. Now back into my lane I go.

Did this injury occur in the Course and Scope of Employment?

I. In this case, there is a clearly delineated home office, dedicated solely to the business of [Employer]. According to [Employer]'s own terms (which the ALJ acknowledges are not legally binding on the parties), Claimant's home office served as *an extension of [Employer] work space.* The ALJ finds that Claimant was injured on premises *made available by Employer for Claimant's use.*

J. Regardless of whether there was actually a 3:00 pm group meeting scheduled for that day, the ALJ finds that Claimant *believed* there was. She therefore *intended to remain at work,* continuously, between ending her customary stop time of 2:30 pm, and starting the meeting at 3:00 pm. Claimant was salaried, and had to remain on the job until all tasks were completed. In this instance, this would include attending a group meeting. In the meantime, she decided to do something else useful. Even though Claimant arguably left the 'workspace' for a few minutes to retrieve a hammer and nail, she returned without incident. So in this instance, there is no need to delve into the rather more dicey hypothetical of Claimant falling in her basement while retrieving the hammer, or being a non-exempt employee, whose shift had formally ended, thus explicitly precluding her from working past her set hours. The ALJ finds that this injury occurred during work hours, or alternatively, it occurred during a reasonable interval after (customary) work hours, while still on premises made available for Claimant's use to perform work. Combined with the location of the occurrence, the ALJ now finds that this fall occurred in the course and scope of employment.

Did this injury 'Arise out of' the Employment Relationship?

K. A few facts are duly found for the record in this case, although none are pivotal to deciding compensability. [Employer] supplied the chair from which Claimant fell. [Employer] did not supply the hammer or nails to put up the clock, nor did Claimant request them. Claimant purchased this wall clock with her own funds, and of her own initiative. Claimant intended this clock to remain her personal property. (Claimant also supplied her own desk, bookcases, printer stand, and file cabinet). Claimant could have requested that [Employer] buy a wall clock for her to use, then await their decision, but she did not do so. While this clock was not, therefore, an explicitly authorized purchase, neither was its purchase forbidden – nor was its placement into the home office. It was her money, and neither the clock, hammer, nor chair, was inherently dangerous. [Employer] was never even aware of the existence of this clock until Claimant reported her injury. Claimant could have still performed the essential functions of her job without buying a wall clock at all. She indeed had other options to tell the time, including the computer monitor, landline, cellphone, or a simple wristwatch. It remains unproven whether this clock would have materially, measurably, enhanced Claimant's productivity. Lastly, Claimant exercised poor judgment in using this chair to stand on – although near-identical poor judgment is commonly deployed throughout office suites from coast to coast. There was just nobody standing there to warn her, or at least hold her chair still.

"Importing the Danger"

L. Respondents argue that Claimant effectively 'imported the danger' to the workplace, citing *ICAO v. Enyeart*, from 1927. The ALJ is not persuaded. The underlying premise of the *Enyeart* Court was that Claimant, purely for his own purposes (as interpreted during the Coolidge Administration; questionable logic in 2021 in any event) had 'imported' the instrumentality of his own injury onto his employer's premises. This was likened to bringing your own poisoned lunch to work, eating it there, and getting sick. This case is distinguishable. It simply cannot be said here that Claimant "imported the danger" by (unwisely) moving the chair a couple feet and standing on it, any more than she would "import the danger" by slamming her finger in the desk drawer – even though she bought that desk herself. One cannot conflate a mere moment's lapse of judgment with bringing a *dangerous instrumentality* into the workplace. Just remember: "Desk drawers don't crush people's fingers – people do."

M. Along similar lines, [Employer] now argues that Claimant somehow violated the terms of the *Agreement*, thus accentuating the egregiousness of her deviation from the terms of employment. The terms of any such agreement cannot supersede Workers Compensation law, but this mere lapse in judgment did not, in any event, constitute a failure to maintain a safe workspace – any more than slamming her finger in the desk drawer would. Contemplated by this *Agreement* would be matters such as ongoing trip hazards, exposed wires, sharp edges, precarious placement of heavy objects, and perhaps poor ergonomic practices. Even material deviations from those defined norms would not insulate [Employer] from a Workers Compensation claim; it could, of course revoke telecommuting privileges.

Was Claimant Acting for her Sole Benefit?

N. Respondents cite *Kater* and *Callahan* in support of their position. Dancing on a break, or fixing a personal car constituted a substantial deviation from the mandatory or incidental functions of employment, conferring *no benefit whatsoever* to employer; such activities were found to be *solely* for the Claimant's personal benefit. Claimant cites *Hagestad Porsche Audi, Pueblo County v. ICAO,* and *Brogger v. Keezer,* in citing the *dual purpose doctrine.* The dual purpose doctrine holds that an injury sustained while the claimant is performing an act for the mutual benefit of the employer *and* the employee is compensable. Even painting the back side of one's personal residence, with the concurrent intent to spruce it up to impress the occasional business guest, met this test.

O. At a minimum, Claimant satisfied a dual purpose. She wanted to be more productive *for the benefit of her employer*, and this was her modest way of trying. Ms. M[Redacted] has sincerely opined that a wall clock is not a great way to get there, but that is not controlling; at most, it moves the needle just a bit. Relevant, but not pivotal either, is that alternatives existed to tell the time. Certainly, a [Employer]-bought clock might have changed [Employer]'s compensability stance, but that does not change the *purpose* for which it was bought - and the subsequent *act* of installation. Arguably, Claimant could posit that this clock was for the *sole benefit of employer* – although she need not prove such an element. Why else would anybody making $72,000 a year buy a $3 mauve wall clock from a thrift store, festooned with rhinestones, to enhance their personal home décor? Perhaps fortunately for Claimant, she couldn't even see the thing from elsewhere in the house. It certainly would not take much enhanced productivity to pay for itself. This case is really no different than an office worker putting up their own wall calendar to glance at dates, or placing plants around the office to make clients - or her - feel more comfortable, or installing blinds in a home office to keep glare off the computer screen. Maybe The Company will pay for those things, maybe they won't. But if the *activity* is *incidental* to the terms of employment, and benefits employer in some fashion, that will also meet the *personal comfort* standard. Claimant has established this as well. The ALJ concludes that this is a compensable injury.

Medical Benefits

P. As noted, the parties have agreed that they only seek a finding on Compensability, after which the conferred or denied benefit would consist of a general award of medical benefits. Such medical benefits are hereby awarded.

ORDER

It is therefore Ordered that:

1. Claimant's injury of June 30, 2020 is compensable.

2. Claimant is entitled to a General Award of Medical Benefits in connection with her work injury.

3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a Petition to Review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, to help ensure that your Petition is timely processed, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: August 30, 2021

Colorado Springs, Colorado 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-158-967-001

ISSUES

I. Whether Claimant suffered a compensable injury on September 15, 2020 and is entitled to reasonable and necessary medical treatment.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant works for [Redacted], Department of [Redacted].
2. Claimant alleges a work injury to her right forearm/arm on September 15, 2020, at which time she alleges she was bit by either a bug or spider while she was working for Respondent.
3. On September 15, 2020, Claimant was observing hygiene/morning routine in the Horizon Pod and leaned against a railing when she felt a "pinch" to her right forearm.
4. Claimant looked at her arm and noticed what she described as a mosquito bite. She stated she was wearing a long sleeve shirt at the time of the alleged incident but could not recall whether she had her sleeves down or pushed up.
5. Claimant did not see any bug or spider at the time of the alleged incident.
6. Claimant continued to work her regular duties following the alleged incident and did not seek medical attention immediately after the pinching sensation.
7. About 2 - 2 ½ hours later she felt a burning sensation on her forearm and noticed a red line going up her arm. She reported the incident to her immediate supervisor who advised Claimant to go see medical to examine it.
8. Medical told her to complete an injury report and provided her with a list of authorized treating providers and recommended she see the closest provider on the list.
9. Claimant chose Front Range Occupational Medicine from the list provided as they were the closest. She presented for examination there at around Noon and was evaluated by Dr. Matt Miller that same day.
10. The reason Claimant sought medical treatment was because of the infection/red line moving up her right arm.
11. According to Dr. Miller's September 15, 2020 office visit report, Claimant felt a pinch in the right forearm and thought she had a mosquito/bug bite. (Ex. A, p. 10). A few hours later she felt a tingling and burning in the forearm, which came on within a few hours of noticing the pinch. (*Id*.). Claimant was assessed with "bite/stung by non-venom insect & orth nonvenom arthropods, init. Possible lymphangitis?" (*Id*. at 11).

Dr. Miller opined “causality unclear. She reports a possible insect bite at work, but unclear.” (*Id*. at 12). Dr. Miller instructed Claimant to watch the red line closely and go to the ER for any worsening. (*Id*.).

12. The red line on her arm continued to progress and Claimant decided to go to Urgent Care; despite Dr. Miller’s instruction to present to the ER (emergency room) for any worsening.

13. Claimant was at Urgent Care for about 2 minutes before they sent her to St. Anthony’s ER.

14. Claimant presented to the ER at St. Anthony’s on September 15, 2020, at about 5:57 p.m. According to St. Anthony’s records, Claimant reported she “woke this morning with some pain, redness to the distal forearm on the right side. She had spreading of the erythema, streaking lymphangitis throughout the day.” (Ex. C, p. 27). Differential diagnoses for the infection/red line included cellulitis, necrotizing fasciitis, thrombophlebitis, DVT; however, after labs and evaluation Claimant’s primary diagnosis was cellulitis. (*Id*. at 31, 24). Claimant did not report that she had been bitten by a bug/spider/mosquito at work.

15. Claimant was provided IV antibiotics and her condition stabilized at approximately 9:30 p.m. on September 15th; however, St. Anthony’s admitted her overnight anyway for continued observation. Claimant was discharged on September 16, 2020.

16. Claimant was placed at maximum medical improvement (MMI) by the ATP, Dr. Matt Miller, on October 1, 2020, without impairment or the need for maintenance care. (Ex. A, p. 4).

17. On October 9, 2020, Broadspire, the third-party administrator of the claim, sent a letter to Dr. Miller to address causation of her cellulitis. (Ex. 3). Dr. Miller opined he did not believe it was medically probable for cellulitis to have developed within 1-2 hours of the alleged bite. (*Id*.).

18. The ALJ reasonably infers Dr. Miller’s opinion is that he does not believe Claimant’s cellulitis was a proximate result of an alleged bug/spider bite that occurred at around 8:00 a.m. at work on September 15, 2020.

19. Respondent also obtained a record review with Dr. Nicholas Kurz for a causation opinion on Claimant’s cellulitis and need for medical treatment. (Ex. B). Dr. Kurz is a board certified and Level II Accredited physician. (*Id*. at p. 16). Dr. Kurz reviewed the medical records in this claim, including the records from Front Range Occupational Medicine and St. Anthony’s Hospital. (*Id.* at 16-17).

20. Dr. Kurz concluded that Claimant did not meet criteria to be hospitalized. (*Id*. at 17). Additionally, Dr. Kurz explained that cellulitis is a common bacterial skin infection. (*Id*.). He explained that cellulitis caused by *Pasteurella multocido* a type of bacteria found in the oral cavities of animals and passed via bites can present less than 24 hours after the bite has occurred. (*Id*.). He explained these infections are accelerated by the larger and deeper soft tissue damage, puncture wounds, and skin tears. (*Id*.). He also explained the most common types of bacteria usually have an incubation period of several days, as it takes time for the small inoculation amount of tiny bacteria to multiply enough to overwhelm your immune defenses and cause

symptoms, taking days to progress into cellulitis. (*Id*.). He explained the most common types of bacteria, Streptococcus, and *Staphylococcus* that live on the surface of your skin can enter small puncture points, such as those from mosquitos, bees, and ants, again, have an incubation period of several days before developing into an infection. (*Id*.). He then explained that only a few types of spiders have fangs long enough to penetrate human skin and venom strong enough to hurt humans. (*Id*.). He also explained that cellulitis is usually treated with an oral antibiotic and resolves after a few days. (*Id*.).

21. Dr. Kurz noted that there were inconsistencies in Claimant's report of the red spot, or alleged bite, on her arm – she reported to Dr. Miller that she came in within a few hours of noticing the pinch/bite but reported to the ER that she woke that morning with some pain, redness to the distal forearm on the right side. (*Id*.) He concluded that the event may not have occurred at work "and certainly not within a few hours of presenting at 1:30 p.m. to see Dr. Miller." (Ex. B, p. 18). Dr. Kurz concluded that a bite or skin disruption that occurred the night or day before September 15, 2020 "would more correlate with the natural evolution and progression of an infection resulting in cellulitis." (*Id*.). Dr. Kurz concluded that, to a greater than 51% medical probability, Claimant's wound, be it an abrasion, a puncture, or an insect bite, occurred hours before beginning her workday and was not causally related to an alleged bite that occurred at work on September 15, 2020, based on the known rate of bacterial growth rate. (Ex. B, p. 19).

22. The ALJ credits and finds persuasive the medical opinions of Drs. Miller and Kurz that, the cellulitis for which Claimant sought and obtained medical treatment was not medically probable to have resulted from any bug/spider bite that may have occurred while Claimant was working for Respondent on September 15, 2020, over any opinion to the contrary.

23. The ALJ also credits and is persuaded by the September 15, 2020, ER report which documents that Claimant reported she woke up that morning with pain and a red spot on her right forearm. The ALJ finds it more likely than not that the bite or abrasion on Claimant's right upper extremity existed before Claimant even presented to work on September 15, 2020.

24. The ALJ finds that Claimant has failed to meet her burden to prove she sustained a compensable work-related injury on September 15, 2020.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence

is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant suffered a compensable injury on September 15, 2020 and is entitled to reasonable and necessary medical treatment.

The claimant was required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC

4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Here, Claimant alleges a bug/spider bite occurred at work on September 15, 2020. Claimant testified she felt a "pinch," at around 8:00 a.m. but did not see a bug or spider at that time. Claimant also testified that she had a long sleeve shirt on at the time of the alleged incident and could not recall if she had her sleeves down or up. Claimant did not seek medical treatment following the described "pinch." Claimant testified that around 2-2 ½ hours later she experienced a burning sensation in her right forearm and noticed an infection/red line traveling up her arm. It was for this infection/red line, which was later diagnosed as cellulitis, that she sought and obtained medical treatment, first with Dr. Miller at Front Range Occupational Medicine (the ATP), then with Urgent Care, followed by St. Anthony's Hospital. Both Drs. Miller (the ATP) and Kurz (Respondent's IME) agreed Claimant's cellulitis was not causally related to any bug/spider bite that may have occurred around 8:00 a.m. on September 15, 2020. Furthermore, St. Anthony's records document that Claimant reported she woke up the morning of September 15, 2020, with pain and a red spot on her right forearm. This establishes and supports a timeline of a bite that had to have occurred before Claimant even went to work.

The ALJ credits and finds persuasive the opinions of Drs. Miller and Kurz regarding causation. These physicians opined that the infection/red line/cellulitis on Claimant's right arm - which was the basis for her seeking medical treatment - was not caused by any bug/spider bite that may have occurred at work on September 15, 2020.

Based on the above, Claimant has failed to prove by a preponderance of the evidence that she suffered a compensable work-related injury on September 15, 2020. As a result, Respondent is not liable for any medical treatment Claimant received at either Front Range Occupational Medicine, Urgent Care, or St. Anthony's Hospital.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to prove by a preponderance of the evidence that she sustained a compensable injury on September 15, 2020. Claimant's claim for workers' compensation benefits, including medical benefits, is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 31, 2021.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Did Claimant prove by a preponderance of the evidence that she sustained a compensable injury to her left knee on or about October 9, 2020?

II. If Claimant proved compensability of her left knee, is she entitled to medical benefits that are authorized, reasonably necessary, and related to the injury, including for care with SCLHealth Salud Family Health Clinic and Health Images?

STIPULATIONS

The parties stipulated to only address compensability and authorized medical benefits, including whether SCL Health Salud Family Health was authorized, reasonably necessary and related to the injury. The parties also stipulated that, if the claim is found compensable, the MRI bill of $250.00 is authorized. All other issues are reserved by the parties, including the issues of temporary disability benefits and average weekly wage.

FINDINGS OF FACT

1. Claimant worked for Employer as a temporary staffing worker for approximately three years. Employer is a staffing agency. In October 2020 Claimant was assigned to a project located at Sheridan and 10th Avenue in Lakewood, CO. She was assigned by Employer to perform cleaning, sweeping and a variety of general labor duties.

2. On or about October 9, 2020, Claimant was assigned additional duties on the project by the project's superintendent, not an employee of Employer. He demanded Claimant lay down plastic over the new carpeting to protect the new installations. Claimant also testified that she was forced to take the stairs up and down the seven flights of stairs throughout the day, as the elevator was not in working order. Claimant testified that subsequent to having to perform these activities she started having problems with her knees. On October 9, 2020 she began the day without any knee problems but as the day progressed, she started having serious problems with her left knee. Claimant stated that the extended kneeling and stair climbing caused her pain and injury to her left knee.

3. On April 29, 2016 Claimant presented for treatment at Salud Family Health Centers. She complained of bilateral knee pain, noting that she had been having such pain for three years, taking advil once a day with relief. On exam, Dr. Jason Heine found full range of motion, no crepitus with movement, no tenderness on the bilateral knees, and documented that all tests were negative. There was no history of specific injury or surgery. X-rays showed no acute abnormality. Claimant was prescribed ibuprofen three times a day.

4. Claimant was seen by Dr. Michael Noonan at the SCL Salud Famly Health Centers on November 19, 2020. Dr. Noonan documented that Claimant had left leg pain for three months. The records show that on examination Claimant had the greatest pain in posterior medial left knee, tenderness to palpation over both medial and lateral tibial plateau of left knee, no effusion or swelling of knee, no calf tenderness or swelling, no edema, pulses were equal bilaterally, with normal pulses, normal color, and normal temperature. Claimant was diagnosed with left knee pain and osteoarthritis. Imaging showed mild osteophyte formation. Claimant was provided with medication and a topical regimen.

5. On February 3, 2021 Claimant had a telehealth visit with SCL Salud Family Health. She was evaluated by Dr. Layne Bracy for left knee pain. Claimant reported that she had left knee pain for six months and it hurt to walk. Dr. Bracy noted that prior x-rays were unremarkable, but she did order an MRI of the left knee.

6. On February 10, 2021, Claimant had an MRI of her left knee that showed a near full-thickness radial tear of the posterior horn of the medial meniscus as well as moderate to full thickness cartilage loss in the medial compartment. Claimant also showed a grade 3-4 patellofemoral chondromalacia and joint effusion.

7. Claimant was evaluated by Matthew Edwards, PA-C at Midtown Occupational Health on February 22, 2021. There is some confusion in this report as it discusses both a male patient and a female patient. Mr. Edwards documented that Claimant had preexisting left knee osteoarthritis, which was not work-related, and recommended that Claimant return to her primary care physician for continued care.

8. On March 8, 2021 Claimant was evaluated by Dr. Daniel Hamman of SCL Orthopedics. Dr. Hamman documented that Claimant's pain is mostly medial and worse with lifting and exercise, and is better with resting. He documented that Clamant was seen by her PCP and an MRI was obtained which revealed avulsion/root tear of the medial meniscus with advanced chondral loss of the medial and patellofemoral compartments. On exam of the left meniscus, there was effusion, stable varus/valgus testing, showed Claimant had pain with McMurray's maneuver, which was positive, medial joint line tenderness, range of motion of 0-135 and 5/5 strength. Dr. Hamman diagnosed left knee pain, with joint effusion of left knee, and tear of medial meniscus of left knee, with primary osteoarthritis of the left knee. Dr. Hamman injected the left knee with cortisone and prescribed anti-inflammatories.

9. Dr. Hamman explained that her meniscal root tear is part of the arthritic process. She and her daughter agreed. They discussed the natural history of osteoarthritis, including the waxing and waning course that it can take. They also discussed the treatment options, including oral nonsteroidal anti-inflammatory medications, unloader bracing, weight loss, and low impact exercise. They discussed joint injections of both corticosteroid and occasionally hyaluronic acid and discussed surgical treatments including arthroscopy and total joint replacement.

10. On April 8, 2021 Claimant return to the orthopedic clinic with persistent left knee pain, stated that the injection only helped for two to three days and had mostly medial and retropatellar pain. Claimant was limping at that time. Dr. Hamman recommended arthroplasty (total knee replacement).

11. Claimant presented at Rose Medical Center Emergency Room on June 10, 2021. She stated that she had sustained a knee injury in November of 2020. Claimant's daughter reported that Claimant was initially told that she had an overuse injury but that her knee had continued to swell without improvement. Claimant had undergone several injections without relief. Dr. Ryan Bradley ordered new x-rays and prescribed limited narcotic medication. Dr. Dipti Nevrekar, M.D. read the x-rays to show moderate degenerative findings, normal worsening of the medial compartment and possible small effusion.

12. Claimant testified at hearing that after the events of October 9, 2020 she decided to wait to see if the pain would go away on its own before making an official report to her Employer. She stated that she commented she was having problems to Laura H, an Employer representative, approximately two weeks after the project on Sheridan ended, but they both decided she was probably just tired. In approximately January 2021 Claimant contacted Juan Carlos H., a supervisor for Employer, and requested that she be sent to a medical provider. Claimant testified that the Employer did not send Claimant to a doctor, so she went on her own, since Employer failed to tender a provider list.

13. The Regional Manager (Ms. Claudia F.R) for Employer, a 20 year veteran of the company, testified that she knew about the Claimant's knee problems and that Claimant had mentioned that she had knee problems for some time prior to October 2020. She specifically testified that Claimant had told her she had arthritis in her knees and had requested lighter duty, which she accommodated several times before October 2020. The manager stated that Claimant was specifically given training at the time Claimant was hired that Claimant was required to immediately report any work related injuries in writing, as demonstrated by the documents in the Employment file, which were signed and initialed on May 22, 2018 by Claimant. The employment file is in Spanish and, while this ALJ is able to read and understand it, the content cannot be considered in this matter as there is no official English translation. However, as found, the date of the Application for Employment of May 22, 2018 is noted.

14. The Claimant's prior direct supervisor (Ms. Laura H) also testified at hearing that she had been employed by Employer for 8 years. She stated that she went from office to office as needed. She testified that Claimant started working in landscaping in 2018 and had requested a change in jobs because her knees were achy. In fact, Ms. H testified that Claimant left the company for a short period in 2018 and 2019 because of her knee complaints, in order to take a job that was not so hard on her knees. She stated that she did not see or speak with Claimant after March 2020, as Ms. H had transferred to another of Employer's branches. She denies that Claimant ever reported a work injury to her.

15. A third Employer witness (Mr. Juan Carlos H) also testified that he would normally make job assignments for Claimant. He testified that he assigned Claimant the Sheridan site job. He further stated that Claimant did not report any injuries to him but that, in approximately February 2021, Claimant contacted him and requested that the company help her with her medical expenses, as she required surgery. He was in charge of filling out any First Report of Injury forms generally, but denied Claimant reported any injury. He testified that he did not fill out any First Report of Injury on Employer's behalf in this matter. It is found, that Claimant's request for medical care is, in fact, a report of injury.

CONCLUSIONS OF LAW

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S., 2020. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it aggravates, accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

A compensable injury is one which arises out of and in the course of employment. Section 8-41-301(1)(b), C.R.S. (2017). The "arising out of" test is one of causation. It requires that the injury have its origin in an employee's work-related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968); Rather, it is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. Section 8-43-201, C.R.S. 2002; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989).

There is no presumption that an injury, which occurs in the course of employment, also arises out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). The determination of whether there is a sufficient nexus or causal relationship between a Claimant's employment and the injury is one of fact and one that the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996). When a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.,* W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and her symptoms does not mean there is a causal connection between the claimant's injury and work activities.

In this case, the ALJ finds that Claimant's pain resurged while conducting work activities on October 9, 2020. As found, the ALJ credits the medical records over Claimant's testimony to establish this factual finding. However, there is no credible evidence that the pain in this case was related to the activities or to any other action Claimant was performing on behalf of employer on October 9, 2020. As found, Claimant had a pre-existing condition involving her left knee and there is a lack of evidence to establish that the manifestation of Claimant's left knee symptoms was related to her employment with Employer.

The ALJ would further note that this does not involve a case where some unexplained event occurred causing an injury, such as an unexplained fall. The ALJ recognizes that unexplained falls are compensable under the Colorado Workers' Compensation Act pursuant to *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Under the unexplained falls line of cases, the unexplained fall is a "neutral risk" that results in a compensable injury.

In this case, there is no “neutral risk” that resulted in claimant’s onset of symptoms related to Claimant’s employment with Employer. Claimant’s symptoms were related to the underlying condition of her left knee arthritis and degenerative condition and simply became symptomatic on October 9, 2020. As found, there is insufficient evidence to establish that any work duties Claimant performed on October 9, 2020 caused the degenerative condition leading to the need for medical care.

The Act imposes additional requirements for compensability of a claim based on an occupational disease. A compensable occupational disease must meet each element of the four-part test mandated by § 8-40-201(14), which defines an occupational disease as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

The “equal exposure” element effectuates the “peculiar risk” test for occupational diseases and requires that the injurious hazards associated with the employment be more prevalent in the workplace than in everyday life or other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The employment must have exposed Claimant to the risk causing the disease “in a measurably greater degree and in a substantially different manner than are persons in employment generally.” *Id.* at 824. The conditions of employment need not be the sole cause of the disease, but must cause, intensify, or aggravate the condition “to some reasonable degree.” *Id*. *Id*. at 824.

There is no persuasive independent corroborative evidence to shows Claimant suffered a specific injury such as video surveillance, eyewitness testimony, or contemporaneous documentation. As a result, proof of an injury or occupational disease rests entirely on Claimant’s statements. The witness testimony was highly conflicting and impossible for this ALJ to reconcile. Claimant’s testimony appeared credible and her story is plausible. But Employer’s witnesses also appeared credible. The testimony of the Regional Manager, the prior supervisor and the supervisor who designated the alleged job of injury also provided plausible stories. All three stated that Claimant had commented that she was having problems with her knees prior to October 2020. This is particularly challenging for Claimant case, because there is no persuasive evidence of any animosity, bias, or other motivation on any of their part to fabricate testimony. Based on the evidence presented, Respondent’s version of events is at least as likely as Claimant’s version.

Additionally, Dr. Hammon persuasively explained in his report that the left knee symptoms, like those experienced by Claimant, are frequently with no precipitating event or identifiable cause other than age-related degeneration. Dr. Hamman diagnosed left knee pain, with joint effusion of left knee, and tear of the medial meniscus of left knee, with primary osteoarthritis of the left knee. Dr. Hamman explained that Claimant’s meniscal root tear is part of the arthritic process. Claimant and her daughter particularly agreed with Dr. Hammon. They discussed the natural history of osteoarthritis, including the waxing and waning of symptoms that the osteoarthritis course can take. Dr. Haine stated that Claimant had a history of three years of problems in 2016 and Dr. Noonan documented on November 19, 2020 that Claimant had a history of three months of left knee pain, which would place the Claimant's initial complaints at sometime in August, not October, 2020. This is confirmed by the report issued by Dr. Bracy of February 3, 2021, which documented a history of six months of problems, which would also bring the initial complaints to around the same August date. Although a causal nexus between Claimant's work and her left knee symptoms is possible, Claimant failed to prove such a relationship is more probable than not. As found, based on the totality of the evidence presented, including the medical opinions and the lay witnesses' testimony, Claimant's claim for benefits must be denied. All other issues are moot in light of this findng.

ORDER

IT IS THEREFORE ORDERED:

1. Claimant's claim for benefits is denied and dismissed.

Dated this 31st day of August, 2021.

Denver, CO 80203

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-075-517-005

ISSUES

I. Whether Claimant proved by a preponderance of the evidence the left knee surgery recommended by Jason Dragoo, M.D. is reasonably necessary and causally related to his admitted, April 9, 2018, industrial injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. This claim involves an admitted April 9, 2018, left knee injury. On December 18, 2018, and due to his work injury, Claimant underwent left knee surgery with Michael Hewitt, M.D., who performed an ACL reconstruction, partial lateral meniscectomy (anterior mid to posterior horn, 50%), and an examination under anesthesia. *Claimant's Exhibit 8, page 90*. On March 27, 2019, Claimant treated with Dr. Hewitt and reported increasing anterior left knee pain and intermittent popping and catching. Claimant reported he has had to cut his work hours due to his left knee pain. *Claimant's Exhibit 8, pages 92-94*. On April 5, 2019, Claimant underwent a left knee MRI, which revealed a joint effusion, synovitis, which was not present on the prior MRI, scarring from the prior surgery, increased quadriceps patellar tendinosis, evidence of the prior lateral meniscectomy, and worsened lateral compartment chondromalacia or mild arthritis. *Claimant's Exhibit 9, pages 96-97*. On April 12, 2019, Claimant treated with Dr. Hewitt, who noted Claimant reported persistent left knee pain and instability. *Claimant's Exhibit 8, page 95*.
2. On June 10, 2019, and due to his work injury, Claimant underwent a second left knee surgery with Dr. Noonan, who performed an arthroscopy and lysis of adhesions with anterior interval release. In his operative report, Dr. Noonan noted, "About 50% of the posterior horn and body of the [lateral] meniscus remained intact following previous partial meniscectomy." *Claimant's Exhibit 7, pages 79-82*.
3. On October 3, 2019, Lori Rossi, M.D., Claimant's authorized treating provider, placed Claimant at MMI with an impairment rating and maintenance medical treatment. Claimant continued to report sharp left knee pain, stiffness, clicking, and increased pain with squatting, kneeling, stairs, and direct pressure. *Claimant's Exhibit 6, pages 74-78*.
4. On January 9, 2020, Claimant treated with Dr. Noonan and reported worsening knee pain after going down an escalator at work and twisting his knee. Claimant reported he has been experiencing lateral-sided pain and popping. On physical exam, Dr. Noonan noted lateral tenderness and popping and pain with McMurray's maneuver. Dr. Noonan recommended a left knee MRI and ongoing work restrictions (no working more than 5 hours) *Claimant's Exhibit 4, pages 47-50*.

5. On January 17, 2020, Claimant had a repeat left knee MRI, which revealed "[A]ttenuation of lateral meniscus which may be from partial meniscectomy and repair. Irregularity of the small peripheral remnant of the meniscus body and posterior horn which may be postoperative and degeneration fraying, and areas of degenerative tearing could be present." *Claimant's Exhibit 9, pages 98-99*.
6. On February 6, 2020, Claimant treated with Dr. Noonan and reported persistent left knee pain and laterally popping. Dr. Noonan recommend a steroid injection and physical therapy. *Claimant's Exhibit 4, pages 43-46*.
7. On February 25, 2020, Claimant underwent a Division IME, at Respondent's request, with Linda Mitchell, M.D. who determined Claimant is not at MMI because of his persistent left knee issues. Dr. Mitchell recommended Claimant continue treatment with Dr. Noonan. *Claimant's Exhibit 5, pages 61-73*.
8. On March 3, 2020, Claimant treated with Dr. Noonan, who noted Claimant had only minimal relief from the steroid injection and physical therapy. Dr. Noonan recommended HA injections. *Claimant's Exhibit 4, pages 40-43*.
9. On April 1, 2020, Respondents filed a General Admission of Liability reopening the claim based on the Division IME. *Claimant's Exhibit 1, page 1*.
10. On June 11, 2020, Claimant underwent his first left knee superolateral Euflexxa injection. *Claimant's Exhibit 4, pages 37-39*. On June 18, 2020, Claimant underwent his second left knee superolateral Euflexxa injection. *Claimant's Exhibit 4, pages 34-36*. On June 25, 2020, Claimant underwent his third left knee superolateral Euflexxa injection. *Claimant's Exhibit 4, pages 33-34*
11. On August 25, 2020, Claimant treated with Dr. Noonan and reported he did get some improvement following the HA injections but that he still had intermittent painful lateral-sided left knee popping when sitting cross-legged or with varus stress. On physical exam, Dr. Noonan noted some mild lateral left knee tenderness. Dr. Noonan advised Claimant that he has very little meniscal tissue remaining and referred Claimant to Dr. Jason Dragoo for a second opinion for consideration of a lateral meniscus allograft. *Claimant's Exhibit 4, pages 28-32*.
12. On August 26, 2020, Claimant treated with Jason Dragoo, M.D., and reported persistent left knee pain and functional issues and lateral-sided popping after he sits cross-legged for some time or with varus stress on his knee. Clamant also reported mechanical-based symptoms on the lateral side of his left knee and locking and catching of his left knee. On physical exam, Dr. Dragoo noted a pop toward the lateral posterior aspect of Claimant's left knee after sitting cross-legged. Dr. Dragoo also noted pain over the lateral join line and positive Steinmann's and McMurray's tests to the lateral joint line. Dr. Dragoo reviewed Claimant's left knee MRI. Dr. Dragoo opined:

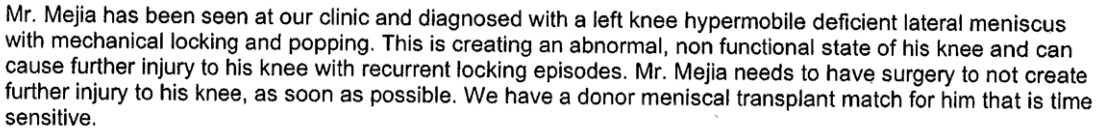
> Based on the patient's physical exam, lateral popping as well as the patient's mechanical symptoms and MRI of a deficient lateral meniscus not sufficient for repair, we recommend a left knee arthroscopy, synovectomy in al three compartments and lateral meniscus transplant. Due to the fact that the

> patient had a prior meniscectomy, there is not enough tissue for repair which is why we are recommending lateral meniscus transplant.

Dr. Dragoo placed Claimant on work restrictions, including no squatting.

Claimant's Exhibit 4, pages 24-28.

13. On October 2, 2020, Dr. Dragoo stated:



Mr. Mejia has been seen at our clinic and diagnosed with a left knee hypermobile deficient lateral meniscus with mechanical locking and popping. This is creating an abnormal, non functional state of his knee and can cause further injury to his knee with recurrent locking episodes. Mr. Mejia needs to have surgery to not create further injury to his knee, as soon as possible. We have a donor meniscal transplant match for him that is time sensitive.

Claimant's Exhibit 4, page 22.

14. On October 27, 2020, Claimant underwent an IME with Adam Farber, M.D., Respondent's retained expert witness. After reviewing Claimant's medical records and performing a physical exam, Dr. Farber opined there is no evidence of any additional left knee structural pathology. Dr. Farber opined the lateral meniscal transplant surgery recommended by Dr. Dragoo is not reasonably necessary or related to Claimant's industrial injury because: a) Claimant does not have any lateral knee complaints; and b) meniscal transplant surgery is typically indicated following a subtotal or total meniscectomy surgery, and Clamant has not undergone a subtotal or total meniscectomy. Citing the Colorado Medical Treatment Guidelines, Dr. Farber noted that meniscal transplant surgery should only be performed when 2/3 of the meniscus is removed, and Claimant has not had 2/3 of his lateral meniscus removed. *Respondent's Exhibit D, pages 12-33*. On November 10, 2020, Dr. Dragoo issued a second report after reviewing Claimant's January 17, 2020 left knee MRI radiology report. Dr. Farber's opinions did not change. *Respondent's Exhibit D, pages 34-35*.

15. On November 11, 2020, Respondent denied Dr. Dragoo's surgery request. *Respondent's Exhibit E, pages 39-40*.

16. On January 25, 2021, Claimant treated with Dr. Dragoo and had painful, intermittent lateral-sided popping and mechanical locking of his left knee. Claimant also had increased left knee pain when sitting cross-legged or with varus stress on his knee. Claimant was also gradually getting weaker, which was causing more pain and dysfunction. Moreover, Claimant was having left knee mechanical locking and functionally limiting pain. On physical exam, Dr. Dragoo noted positive Steinmann's and McMurray's to the lateral knee, pain over the lateral joint line, and trace effusion. Dr. Dragoo noted he felt a pop toward the lateral posterior aspect of his knee. Dr. Dragoo reviewed Claimant's left knee MRI and noted it revealed attenuation of the remaining lateral meniscus and deficient lateral meniscus from prior resection of the posterior horn completely. *Respondent's Exhibit H, page 66*. That same day, Claimant underwent a left knee MRI, which revealed attenuation of the lateral meniscus, irregularity, and possible fraying of margins of the small remaining body to posterior horn extending toward notch and posterior root, relative uncovering of weightbearing aspect of lateral compartment,

and areas of chondral thinning partial thickness grade 2-3 along lateral and possibly patellofemoral compartments. *Claimant's Exhibit 9, pages 100-101*.

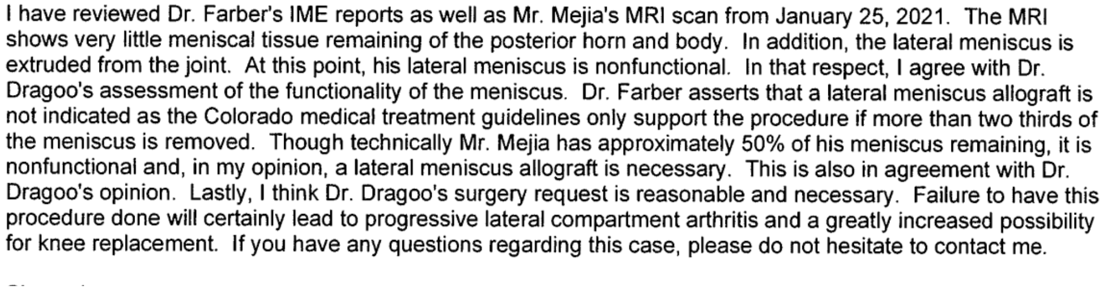
17. On February 5, 2021, Dr. Dragoo visualized Claimant's January 25, 2021 left knee MRI and opined "there has been previous segmental removal of portions of his meniscus which has made it diminutive and nonfunctional from a mechanical perspective." Dr. Dragoo also noted synovitis in all three knee compartments. Dr. Dragoo diagnosed Claimant with a hypermobile and deficient lateral meniscus. Dr. Dragoo recommended proceeding with a left knee arthroscopy, synovectomy, anterior interval release, and allograft lateral meniscal transplant. *Claimant's Exhibit 4, page 17*.

18. On February 26, 2021, Dr. Farber issued a third report after his review of Dr. Dragoo's February 5, 2021 report. Dr. Farber's opinions did not change. *Respondent's Exhibit D, pages 36-37*.

19. On March 1, 2021, Respondent denied Dr. Dragoo's surgery request. *Respondent's Exhibit F, pages 42-45*.

20. On May 5, 2021, Claimant applied for a hearing on reasonable and necessary medical benefits, specifically surgery authorization. *Claimant's Exhibit 2, pages 11-13*. On June 4, 2021, Respondent filed a Response to Claimant's Application for Hearing. *Claimant's Exhibit 3, pages 14-15*.

21. On July 6, 2021, Dr. Noonan issued a report regarding Claimant's left knee and his need for surgery. Dr. Noonan noted:



> I have reviewed Dr. Farber's IME reports as well as Mr. Mejia's MRI scan from January 25, 2021. The MRI shows very little meniscal tissue remaining of the posterior horn and body. In addition, the lateral meniscus is extruded from the joint. At this point, his lateral meniscus is nonfunctional. In that respect, I agree with Dr. Dragoo's assessment of the functionality of the meniscus. Dr. Farber asserts that a lateral meniscus allograft is not indicated as the Colorado medical treatment guidelines only support the procedure if more than two thirds of the meniscus is removed. Though technically Mr. Mejia has approximately 50% of his meniscus remaining, it is nonfunctional and, in my opinion, a lateral meniscus allograft is necessary. This is also in agreement with Dr. Dragoo's opinion. Lastly, I think Dr. Dragoo's surgery request is reasonable and necessary. Failure to have this procedure done will certainly lead to progressive lateral compartment arthritis and a greatly increased possibility for knee replacement. If you have any questions regarding this case, please do not hesitate to contact me.

Claimant's Exhibit 4, page 16.

22. On March 1, 2021, Respondent denied Dr. Dragoo's surgery request. *Respondent's Exhibit F, pages 41-45*.

23. At hearing, Dr. Farber testified as an expert in orthopedic surgery. Dr. Farber testified consistently with his IME reports. On cross-exam, Dr. Farber testified he did not actually review Claimant's MRI scans, just the radiologist's reports, despite testifying multiple times on direct examination that he did review the diagnostic studies. Dr. Farber testified the McMurray's test is an objective test a doctor performs to determine whether a patient has a meniscus issue. Dr. Farber testified the McMurray's test is objective if the doctor can feel popping in the knee. Dr. Farber testified that in Claimant's case, Dr. Dragoo performed a McMurray's test, which was positive and that Dr. Dragoo could feel a pop. Dr. Farber testified that Dr. Dragoo and Dr. Noonan have concluded that Claimant's left knee lateral meniscus is functioning as though a subtotal or total meniscectomy has been performed on his left knee. Dr. Farber testified he does not

understand how these surgeons can reach that conclusion because Claimant has not had a subtotal or total meniscectomy.

24. The issue here is whether the recommended left knee surgery is reasonably necessary and causally related to Claimant's admitted industrial injury – which involved a meniscal injury. More pointedly, the issue is whether Claimant needs a lateral meniscus transplant surgery despite not having 2/3 of his lateral meniscus removed during the prior surgeries. The Guidelines state that a meniscal allograft procedure should be performed only if the patient has had 2/3 of his meniscus removed, among other factors, which are not relevant here. Dr. Farber stated that because Claimant has not had 2/3 of his lateral meniscus removed, he does not meet the Guidelines criteria for a meniscal allograft, thus the recommended surgery is not reasonably necessary.

25. Drs. Dragoo and Noonan, Claimant's treating surgeons, credibly and persuasively concluded that while Claimant's has not had 2/3 of his meniscus removed (as required by the Guidelines), Claimant needs the recommended surgery because his lateral meniscus is equivalent to a person who has had 2/3 of his meniscus removed. Based on Claimant's left knee MRI scans and physical exam of Claimant's left knee, Drs. Dragoo and Noonan credibly and persuasively opined Claimant's lateral meniscus is extruded from the joint, nonfunctional, and diminutive from a mechanical standpoint. Drs. Dragoo and Noonan's opinion are supported by the medical records, including Claimant's MRI scans, Claimant's subjective reports of pain, symptoms, and functional issues, as well as the objective testing, including Drs. Dragoo and Noonan's findings on physical examination of Claimant's left knee. Drs. Dragoo and Noonan have both documented lateral-sided knee pain and tenderness, as well as positive objective testing, including McMurray's and Steinman's tests. Further, Drs. Dragoo and Noonan opined the recommend surgery is reasonable and necessary to treat Claimant's work injury and that failure to do the surgery will lead to progressive lateral compartment arthritis and a greater likelihood Claimant will need a knee replacement. The ALJ finds Drs. Dragoo and Noonan's opinions credible and persuasive. Despite the fact Claimant has not had 2/3 of his lateral meniscus removed, the ALJ finds sufficient evidence justifies deviation from the Guidelines. The ALJ finds that due to his work injury and subsequent surgeries, Claimant's left knee lateral meniscus is nonfunctional, diminutive, hypermobile, and deficient and equivalent to a person who has had 2/3 of his lateral meniscus removed. As a result, the ALJ finds Claimant proved by a preponderance of the evidence the left knee surgery recommended by Dr. Dragoo is reasonable, necessary, and causally related to his admitted industrial injury

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant proved by a preponderance of the evidence the left knee surgery recommended by Jason Dragoo, M.D. is reasonably necessary and causally related to his admitted, April 9, 2018, industrial injury.

Respondent is liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

The Colorado Medical Treatment Guidelines (hereinafter Guidelines) are contained in Workers' Compensation Rule of Procedure 17, 7 CCR 1101-3, and provide that health care providers shall use the Guidelines adopted by the Director of the Division of Workers' Compensation. See § 8-42-101(3)(b), C.R.S. (medical treatment guidelines shall be used by health care practitioners for compliance with section). In *Hall v. Indus. Claim Apps. Office*, 74 P.3d 459 (Colo. App. 2003), the Colorado Court of Appeals noted that the Guidelines are to be used by health care practitioners when furnishing medical aid under the Workers' Compensation Act.

The Guidelines are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Indus. Claim Apps. Office*, 111 P.3d 549 (Colo. App. 2005). C.R.S. section 8-43-201(3) provides that when deciding whether certain medical treatment is reasonable, necessary, and related, "[t]he director or administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations." It is appropriate for an ALJ to consider the Guidelines in deciding whether a certain medical treatment is reasonable and necessary for the claimant's condition. *See Deets v. Multimedia Audio Visual*, W. C. No. 4-327-591 (March 18, 2005) (Guidelines are a reasonable source for identifying the diagnostic criteria). The ALJ's consideration of the Guidelines may include deviations from them where there is evidence justifying the deviations. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (Jan. 25, 2011). The Guidelines, however, do not constitute evidentiary rules, and an expert's compliance with them does not dictate whether the expert's opinions are admissible, or whether they may constitute substantial evidence supporting a fact finder's determinations. Rather, compliance with the Guidelines may affect the weight given the ALJ to any particular medical opinion. *See Cahill v. Patty Jewett Golf Course*, W.C. No. 4-729-518 (February 23, 2009); *see also Thomas v. Four Corners Health Care*, W.C. No. 4-484-220 (April 27, 2009) (noting ALJ not required to award or deny medical benefits based on the Guidelines). The Guidelines are not definitive, but merely guidelines, and the ALJ has the discretion to make findings and orders which follow or deviate from the Medical Treatment Guidelines depending upon the evidence presented in a particular case. *Jones v. T.T.C. Illinois, Inc.*, W.C. 4-503-150 (ICAO May 5, 2006), *aff'd Jones v. Indus. Claim Apps. Office*, N. 06CA1053 (Colo. App. March 1, 2007) (not selected for official publication); *Nunn v. United Airlines*, W.C. 4-785-790 (ICAO September 9, 2011).

Additionally, the ICAO has previously noted the lack of authority mandating that an ALJ award or deny medical benefits based on the Guidelines. *See Thomas v. Four Corners Health Care*, supra (noting ALJ not required to award or deny medical benefits based on the Guidelines); *see also Andregg v. Arch Coal, Inc.*, W.C. No. 4-629-269-07 (Jan. 24, 2017) (noting ALJ not required to award maintenance medical benefits based on Guidelines); *see also Tafoya v. Associations*, Inc., W.C. No. 4-931-088-03 (Jan. 13, 2017) (although ALJ evaluated need for surgery in context of medical issues tied to Guidelines, she was not bound by Guidelines when awarding medical benefits). The

ALJ may appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse*, W.C. 4-665-873 (ICAO January 25, 2011).

According to the Code of Colorado Regulations Department of Labor and Employment Division of Workers' Compensation Rule 17, Exhibit 6, Lower Extremity Injury Medical Treatment Guidelines. Section E.2.f.H): "Meniscal allograft should only be performed on patients with a stable knee, previous meniscectomy with 2/3 removed, lack of function despite active therapy, BMI less than 30, and sufficient joint surface to support repair."

As found, Claimant proved by a preponderance of the evidence that the left knee surgery recommended by Dr. Dragoo is reasonably necessary and causally related to his admitted industrial injury. While Claimant may not have had 2/3 of his meniscus removed during the prior surgeries as required by the Guidelines, Drs. Dragoo and Noonan opined credibly and persuasively that Claimant's left knee lateral meniscus is hypermobile, deficient, and nonfunctional and operating as though he has had 2/3 of his meniscus removed. As a result, sufficient evidence justifies deviation from the Guidelines. Thus, the ALJ finds and concludes that the surgery recommended by Dr. Dragoo is reasonable and necessary to treat Claimant from the effects of his work injury. Therefore, the need for surgery is also causally related to Claimant's work injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant proved by a preponderance of the evidence that the left knee surgery recommended by Jason Dragoo, M.D. is reasonably necessary and causally related to his industrial injury. Respondent shall pay for the left knee surgery subject to the Division of Workers' Compensation Medical Fee Schedule.
2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S.

For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 1, 2021.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove the 2% extremity rating assigned by the TIME should be converted to one percent whole person?

- The parties agreed to reserve the issues of average weekly wage, the potential adjustment of other admitted benefits if the average weekly wage is changed, and overpayment.

FINDINGS OF FACT

1. Claimant worked for Employer as an assistant manager. She suffered an admitted injury to her left shoulder on March 8, 2019, while moving a pallet.

2. Employer referred Claimant to the UC Health occupational medicine clinic. At her initial appointment with Dr. Autumn Dean, Claimant reported pain and tightness in her shoulder and neck. Examination showed tenderness of the posterior left shoulder and spasm in the left trapezius. Shoulder and cervical ranges of motion were normal. Dr. Dean diagnosed left shoulder and left trapezius strains. She recommended NSAIDs, and gave Claimant work restrictions of no lifting over 10 pounds and no use of the left arm.

3. Claimant followed up with Dr. Dean on March 21, 2019. She was still having pain in the left shoulder and trapezius. The physical examination again showed left trapezius tenderness and spasm. Dr. Dean continued Claimant's work restrictions and referred her to physical therapy.

4. Claimant started physical therapy on April 5, 2019. She was experiencing left thoracic pain with limited cervical and thoracic range of motion. There was also muscle tightness in her left scapular thoracic regions coupled with difficulty using her left arm. On examination, there was muscle tightness throughout the left upper trapezius/levator scapular muscles as well as the cervical and thoracic paraspinals. Significant tenderness was found in the thoracic spine, left scapular region, upper trapezius, and rhomboids. Therapy was provided to the upper trapezius, scapular muscles, and thoracic paraspinals.

5. A PT note dated April 8, 2019 documented decreased active range of motion in the cervical spine and left shoulder secondary to hypertonicity in the left upper trapezius. Subsequent PT notes from reveal ongoing pain with stiffness in the left trapezius, scapular musculature, and cervical spine. These records reflect treatment was directed toward the same areas.

6. On May 16, 2019, the therapist documented that Claimant's symptoms worsened with activities such as vacuuming, picking up laundry, and reaching.

7. Claimant had a CT scan of her left shoulder on June 28, 2019. It showed no acute bony abnormality.

8. Claimant saw PA-C Ryan Japp at UC Health on July 2, 2019. Claimant was frustrated with her ongoing symptoms and lack of progress with physical therapy. She reported 8/10 pain radiating to her left scapular area and occasional numbness and tingling in the left upper extremity. Mr. Japp ordered cervical x-rays, which showed no abnormalities. He referred Claimant to Dr. Javernick for an orthopedic evaluation.

9. Claimant saw Dr. Javernick on July 23, 2019. She described burning and numbness at the base of her neck with some radiation to the collarbone area. She also reported shoulder pain with activities such as reaching overhead. Physical examination was "limited as all maneuvers because pain." Dr. Javernick assessed, "left acute shoulder pain of unclear etiology with excessive pain. At this point it is unclear as to the cause of her level of pain. My first recommendation would be for MRI of the shoulder. . . . Even with an MRI her level of pain is disconcerting for success with any structural treatment."

10. Claimant followed up with Dr. Javernick on August 20, 2019. She had not had the MRI because she had surgery many years ago for an aneurysm and did not know what type of surgical clips were used. Dr. Javernick's working diagnosis was "left rotator cuff tendinopathy" and administered a subacromial injection. The injection provided significant relief for several weeks.

11. Claimant saw Dr. Emily Burns at UC Health on October 2, 2019. She was improved but still having left-sided neck and shoulder girdle pain. Dr. Burns noted, "her shoulder pain had essentially resolved after a previous injection but her back pain remained." Claimant reported a sharp pain in her left upper trapezius when she reached down to pull up her socks. She had restarted physical therapy the day before. On examination, Dr. Burns appreciated a "substantial left upper trap trigger point that reproduces her symptoms." She ordered thoracic x-rays, which were normal. Dr. Burns opined Claimant had "primarily myofascial pain remaining, certainly in the left upper trap."

12. Claimant was evaluated by Brian Polvi, D.C. on December 19, 2019. Dr. Polvi documented ongoing pain in the left paracervical, parathoracic, superior trapezius, parascapular, shoulder, and brachial regions. Similar symptoms were noted in Dr. Polvi's subsequent treatment notes.

13. Claimant saw Dr. Kenneth Finn on February 24, 2020 for electrodiagnostic testing. She reported pain along the trapezial ridge, radiating to the scapula, shoulder, and neck. She also described diffuse left arm pain, numbness, and tingling that did not follow any specific dermatomes. Her symptoms were aggravated by moving her neck, static postures, and work and household activities. Physical examination showed tenderness and spasm of the left upper quadrant and paraspinal musculature. The EMG was normal with no evidence of cervical radiculopathy, plexopathy, or peripheral nerve entrapment.

14. On May 18, 2020, Dr. Burns opined Claimant was approaching MMI. She was still having pain in her thoracic spine and upper trapezius. Claimant was advised to schedule an impairment rating appointment.

15. Dr. Burns put Claimant at MMI on June 16, 2020, with a 10% extremity rating, which converts to 6% whole person. She was also given permanent restrictions work restrictions to include no overhead lifting.

16. Dr. William Ciccone II performed an IME for Respondents on June 24, 2020. Claimant explained most of her ongoing pain was in the trapezius up into the neck and posteriorly down into the scapula. She also reported some residual left shoulder pain. Dr. Ciccone opined Claimant suffered a minor "sprain/strain" to the left trapezius and scapular musculature. He did not believe there was any injury to the glenohumeral joint itself. He noted, "my examination confirmed no specific shoulder pathology related to the shoulder joint but significant pain along the scapula." He opined Claimant had received appropriate treatment and agreed she was at MMI.

17. Claimant saw Dr. Dwight Caughfield for a DIME on December 15, 2020. Claimant was frustrated with her ongoing upper back, scapular and shoulder pain. Dr. Caughfield noted Claimant was independent with ADLs but was paying her teenage daughter to mop floors because that activity increased her pain. She was working for a new employer performing a sedentary job. Claimant's shoulder range of motion was "initially very guarded . . . but with encouragement [gave] consistent effort in range that [was] reproducible on repeat measurements." Dr. Caughfield observed a palpable upper trapezius trigger point. Cervical range of motion was symmetric in all planes with minimal pain complaints if the trapezius was not involved. Dr. Caughfield diagnosed "myofascial findings and pain behaviors but no established glenohumeral joint pathology." He opined Claimant suffered no specific injury to the cervical and thoracic spine, and thought her symptoms were "most consistent with myofascial pain of the shoulder girdle." He agreed that Claimant had reached MMI on June 16, 2020. He assigned a 2% extremity (1% whole person) shoulder rating based on range of motion. Dr. Caughfield noted the differences between his rating and that provided by Dr. Burns were higher flexion measurements and normalization to the uninjured right shoulder.

18. On February 10, 2021, Claimant saw Dr. Aparna Komatineni on referral from her PCP. Claimant reported pain in her neck, left shoulder, and left pectoralis. She was noted to have atrophy in her left trapezius, weakness with raising her left arm above shoulder level, tenderness to palpation, and reduced range of motion. Dr. Komatineni diagnosed cervical dystonia, left upper extremity weakness, and neck pain.

19. Dr. Caughfield testified Claimant's left shoulder pain was toward the edge of the shoulder and diffusely in the scapular area. Dr. Caughfield explained that even though Claimant demonstrated some pain behaviors, she gave good effort with encouragement. He also testified that Claimant's positive diagnostic to a trigger point injection confirmed there was pain coming from the left shoulder girdle muscles. He agreed that scapular dysfunction can cause issues with neck movement and twisting the

upper back. He opined Claimant had no neck injury, and her neck pain was coming from her shoulder. Dr. Caughfield had no opinion regarding conversion to whole person.

20. Claimant credibly testified she continues to experience pain and stiffness in her left shoulder and trapezius area. She further testified her pain worsened while performing modified duty and she felt pain in her neck and shoulder blade. Claimant described difficulty with activities such as mopping, vacuuming, and laundry because of her injury. She stated that these activities cause pain in her neck and left shoulder that radiates into her arm. Claimant has difficulty cooking or sleeping on her side because of pain on the left side of her neck and into her shoulder. She testified she did most of the cooking and cleaning, including vacuuming and mopping before her injury but now requires assistance from family members to complete these tasks.

21. Claimant proved by a preponderance of the evidence she suffered a functional impairment beyond her arm.

CONCLUSIONS OF LAW

When evaluating whether a claimant has sustained scheduled or whole person impairment, the ALJ must determine "the situs of the functional impairment." This refers to the "part or parts of the body which have been impaired or disabled as a result of the industrial accident," and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of "an arm at the shoulder." Section 8-42-107(2)(a). If the claimant has a functional impairment to part(s) of his body other than the "arm," she has sustained a whole person impairment and must be compensated under § 8-42-107(8).

There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000).

Pain and limitation in the trapezius and scapular area can functionally impair an individual beyond the arm. *E.g. Steinhauser v. Azco, Inc.*, W.C. No. 4-808-991 (January 11, 2012) (pain and muscle spasm in scapular and trapezial musculature warranted whole person impairment); *Franks v. Gordon Sign Co.*, W.C. No. 4-180-076 (March 27, 1996) (supraspinatus attaches to the scapula, and is therefore properly considered part of the "torso," rather than the "arm"); *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (ICAO, June 30, 2008) (pain affecting the trapezius and difficulty sleeping on injured side supported ALJ’s finding of whole person impairment). Limitations on overhead reaching can also consitute functional impairment beyond the arm in appropriate cases. *E.g.*, *Brown v. City of Auror*a, W.C. No. 4-452-408 (October 9, 2002); *Heredia v. Marriott*, W.C. No. 4-508-205 (September 17, 2004). However, the mere presence of pain in a part of the body beyond the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021).

As found, Claimant proved she suffered functional impairment not listed on the schedule. Claimant suffered no injury to her “arm” or to the shoulder joint *per se*. Rather, she has myofascial pain affecting the left trapezius and scapular area. Although the anatomic location of the original injury is not dispositive, it is a legitimate factor to consider when determining whether a claimant has a scheduled or whole person impairment. *See, e.g., Martinez v. Albertson’s LLC*, W.C. No. 4-692-947 (June 30, 2008) (“The [claimant’s] subacromial decompression was done at the acromion and the coracoacromial ligament in order to relieve the impingement, which is all related to the scapular structures above the level of the glenohumeral joint”). Multiple treating and examining providers have documented symptoms proximal to Claimant’s arm, and associated functional limitations. The medical records also document trigger points and muscle spasms in the trapezius, which objectively substantiates Claimant’s reported symptoms. Claimant’s testimony regarding the impact the injury has had on her ability to perform activities at work and home was credible. The preponderance of persuasive evidence shows Claimant has functional impairment to parts of her body beyond her “arm.”

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant PPD based on the DIME’s 1% whole person impairment rating. Insurer may take credit for any PPD benefits previously paid to Claimant.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ’s order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ’s order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: September 1, 2021

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that he suffered an injury arising out of and in the course and scope of his employment with the employer. Specifically, was the claimant exposed to the COVID-19 virus[1] at work, resulting in the need for medical treatment.

If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that treatment he received from Valley View Hospital was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

RESERVED ISSUES

At hearing, the parties agreed to reserve the remaining endorsed issues for future determination, if necessary. Those reserved issues are: average weekly wage (AWW); temporary total disability (TTD) benefits; temporary partial disability (TPD) benefits; change of physician; and safety rule violation.

FINDINGS OF FACT

1. The employer provides public transportation in the Rifle, Glenwood Springs, and Aspen, Colorado corridor. The claimant is employed with the employer as a bus driver.

2. The claimant resides with his daughter and granddaughter[2]. The claimant's daughter is employed at City Market, a local grocery store. The claimant testified that his daughter does all of the grocery shopping for the home. He also testified that he and his daughter do not eat together and are "like roommates".

3. In addition, the claimant rents out a second residence on his property. At all times material to this case, the claimant had tenants in that other residence. The claimant testified that when he interacted with those tenants, he did so outside.

[1] The ALJ recognizes that some of the medical records entered into evidence identify the claimant contracting SARS-CoV-2, or some other similar name. The ALJ further recognizes that SARS-CoV-2 is the virus identified by the World Health Organization (WHO) that causes COVID-19. For consistency and clarity, the ALJ refers to the virus at issue as "COVID-19".

[2] Other than the disclosure that she resides in the claimant's home, there was no evidence or testimony presented with regard to the nature of the claimant's interaction with his granddaughter.

4. In late October 2020, the claimant traveled by airplane to visit family in Arizona. The claimant returned to Colorado, by airplane, on November 3, 2020. The claimant asserts that during that trip he did not come in contact with any sick individuals.

5. While driving for the employer, the claimant typically works a split shift. He will work for approximately five hours in the morning, have the next five hours off, and then return in the afternoon/evening to work an additional five hours.

6. The claimant provided testimony regarding a November 15, 2020 incident in which a bus passenger coughed and sneezed on him. On that date, the claimant was driving the route between Rifle and Glenwood Springs. The claimant testified that he was wearing a face mask as required by the employer. In addition, the driver area had a moveable barrier (like a shower curtain) that the claimant was to close when passengers were entering and exiting the bus.

7. It is the claimant's testimony that on November 15, 2020, a homeless man boarded the claimant's bus in Rifle. This individual was wearing a face mask. However, the individual removed the mask and began coughing and sneezing. The claimant testified that he asked the individual to put on his mask. When the passenger did not comply, the claimant stopped the bus, walked from the driver area to the back of the bus to confront the customer. The claimant testified that he was within three feet of the individual and coughed and sneezed. It was the claimant's testimony that he felt droplets on his face. The claimant also testified that there were approximately four other passengers on the bus at this time.

8. The claimant did not report this incident to the employer on November 15, 2020.

9. However, on November 15, 2020, the claimant did report concerns to a supervisor regarding the "fogger" that was used to sanitize all surfaces in the bus interior.

10. The claimant testified that he did not report his potential COVID-19 exposure to the employer because at that time he did not believe he had been exposed to anything. The claimant also testified that if he had made such a report he would have been taken off of work for two weeks.

11. The claimant completed his morning runs on November 15, 2020. The claimant returned for his afternoon shift on that date and completed that shift. The claimant also worked his full schedule on November 16, 2020.

12. On November 18, 2020, the claimant attended an appointment at a "lung clinic" to receive an injection. The claimant testified that all individuals present at the clinic wore masks.

13. The claimant testified that approximately eight hours after his appointment at the lung clinic, he began sneezing. The following morning, the claimant had a fever of 102 degrees.

14. At that time, the claimant believed he had a cold. He contacted the lung center regarding his symptoms. It was the claimant's understanding that the injection he received on November 18, 2020, did not cause his symptoms.

15. On Saturday, November 21, 2020, the claimant contacted the employer and reported that he was ill and would not be at work on Sunday, November 22, 2020. The claimant did not report that he was having COVID-like symptoms. The claimant did not report to the employer that he had an interaction with a sneezing/coughing passenger.

16. The claimant testified that he continued to run a fever, and experienced shortness of breath. On Monday, November 23, 2020, the claimant was tested for COVID-19. The claimant was notified on November 24, 2020 that his COVID-19 test was positive.

17. On November 24, 2020, the claimant was hospitalized at Valley Valley Hospital after a computed tomography (CT) angiogram showed evidence of COVID-19 pneumonia. The claimant was discharged from the hospital on November 25, 2020.

18. The claimant returned to Vail Valley Hospital on November 28, 2020, because he was having difficulty breathing and his oxygen levels were low. The claimant was admitted to the hospital and was not discharged until December 18, 2020.

19. Jason S[Redacted], Safety and Training Manager with the employer testified regarding the safety measures taken by the employer to address COVID-19. This included installing barriers between bus drivers and passengers. Mr. S[Redacted] also testified that all employees were instructed that if they believed they had been exposed to COVID-19, they were to leave work immediately. Additionally, at the beginning of each shift all employees are required to complete a COVID-19 questionnaire. If an employee worked a split shift, like the claimant, these forms were completed at the start of each shift. Therefore, the claimant would have completed such a form when he returned for his afternoon shift on November 15, 2020 and again the following morning of November 16, 2020.

20. Mr. S[Redacted] testified that he was notified by human resources that the claimant believed he was exposed to COVID-19 at work. The claimant did not make any such report to Mr. S[Redacted].

21. Maria V[Redacted] is the employer's Human Resources and Risk Management Analyst. Ms. V[Redacted] testified that she spoke with the claimant at various times during his hospitalizations. Despite this somewhat regular communication, it was not until December 16, 2020 that the claimant first mentioned a possible work exposure to the employer. On that date, Ms. V[Redacted] called the claimant to check on the state of his health. During that December 16, 2020 telephone conversation, Ms. V[Redacted] asked the claimant if he had been exposed to COVID-19 at work. After this query by Ms. V[Redacted], the claimant first told a version of the story regarding the November 15, 2020 interaction.

22. Also on December 16, 2020, the claimant contacted the employer's CEO and reported COVID-19 exposure at work. As a result of these December 16, 2020 communications, the employer filed a First Report of Injury or Illness.

23. On May 27, 2021, the claimant virtually attended an independent medical examination (IME) with Dr. John Hughes. In connection with the IME, Dr. Hughes reviewed the claimant's medical records and obtained a history from the claimant. Dr. Hughes did not physically examine the claimant due to the nature of the virtual meeting. In his report, Dr. Hughes noted that the exam was "limited to [the claimant's] seated appearance in a Zoom conference." In his IME report, Dr. Hughes stated that he could not state that it was medically probable that the claimant sustained COVID-19 during the passenger interaction on November 15, 2020. In support of this opinion, Dr. Hughes noted his understanding that the claimant's symptoms began on November 19, 2020. In addition, he noted that the Center for Disease Control (CDC) accepts a timeline of exposure to development of symptoms as 14 days. Based upon the information available to him at the time of the IME, Dr. Hughes opined that the claimant was likely exposed to COVID-19 in the 14 day period prior to the commencement of symptoms; specifically between November 4, 2020 and November 19, 2020. Finally, Dr. Hughes indicated in his IME report that he would need additional information regarding the claimant's trip to Arizona, the claimant's interactions with his daughter, and the November 18, 2020 medical appointment.

24. Based upon the opinions of Dr. Hughes, the respondent denied the claimant's claim for workers' compensation benefits.

25. Dr. Hughes's testimony was consistent with his written report. Dr. Hughes testified that it is possible that the claimant was exposed to COVID-19 during his trip to Arizona, at the November 18, 2020 lung clinic appointment, and when interacting with his tenants. Dr. Hughes also testified that although claimant returned from Arizona on November 3, 2020 (which is 15 days from the date his symptoms began), there is a possibility that the claimant was exposed to COVID-19 at that time. Dr. Hughes clarified that the 14-day guidance from the CDC is not absolute. Dr. Hughes further testified that while it is possible that the claimant was exposed to COVID-19 on November 15, 2020, it is not probable that was the date and time of exposure.

26. The ALJ credits the medical records, the testimony of Ms. V[Redacted] and Mr. S[Redacted]. The ALJ also credits the opinions of Dr. Hughes. The ALJ does not find the claimant's testimony regarding the alleged November 15, 2020 passenger interaction to be credible or persuasive. The claimant did not raise any concern related to workplace exposure until his second hospital stay in December 2020. At that time, it was only after questions from Ms. V[Redacted] that the claimant began to allege the passenger interaction. Since that time, the claimant's description of that interaction has become more and more detailed.

27. The ALJ also finds that the claimant had a number of other possible COVID-19 exposures close in time to the development of his COVID-19 symptoms. Those other possible exposures include the November 15, 2020 lung clinic appointment; interactions with his tenants; and his plane travel to and from Arizona. Additionally, the claimant lives

with his daughter and granddaughter. Although no information was included in the record regarding the claimant's granddaughter, the ALJ notes that the claimant's daughter works at a grocery store. The ALJ finds that the claimant could have been exposed to COVID-19 through interactions with either his daughter or granddaughter. Based upon all of the foregoing, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that he was exposed to COVID-19 at work, resulting in his need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he was exposed to COVID-19 at work. Therefore, the claimant has failed to demonstrate, by a preponderance of the evidence, that he suffered an injury

arising out of and in the course and scope of his employment with the employer. As found, the medical records, the testimony of Ms. V[Redacted] and Mr. S[Redacted], and the opinions of Dr. Hughes are credible and persuasive. All remaining endorsed issues are dismissed as moot.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation related to an alleged exposure to COVID-19 is denied and dismissed. All remaining endorsed issues are dismissed as moot.

Dated this 3rd day of September 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he is entitled to a change in authorized treating provider.

II. Whether Claimant has proven by a preponderance of the evidence that he is entitled to multiple penalties to be paid pursuant to Sections 8-43-304(1), C.R.S. and 8-43-305, C.R.S., as follows:

a. Respondents' alleged violation of W.C.R.P. Rule 5-2(a) and Sec. 8-43-203(1)(a) for failing to timely admit or deny liability from January 12, 2021.

b. Respondents' alleged failure to pay temporary disability benefits pursuant W.C.R.P. Rule 5-6 from March 11, 2021 through the present and pursuant to W.C.R.P. Rule 6-8 from July 22, 2021 to the present, including interest under Section 8-43-10, C.R.S.

c. Respondents' alleged failure to timely authorize medical treatment per W.C.R.P. Rule 16-6(C), Rule 16(D) and Rule 16-6(G from January 12, 2021 to the present including a nerve conduction study (EMG/NCV) and physical therapy.

d. Respondents' alleged failure to issue mileage reimbursement consistent with W.C.R.P. Rule 16-l0(G).

FINDINGS OF FACT

1. Claimant worked as a bike mechanic or parts mechanic for Employer. He started working for Employer as of June 15, 2020. He stated that when he was originally contracted by Employer, they were to provide him housing. The housing was a trailer in the back of Employers' property. Claimant stated that he lived there for a few weeks then moved out. Claimant provided his current address in Oregon at the time of the hearing.

2. Claimant stated that his job involved tearing down bikes and/or motorcycles for parts. Claimant was not allowed to leave the parts on the ground and they had to be stored on the shelves or in bins on the shelves. Claimant stated that the lift was out of service and advised his Employer of that fact.

3. On November 28, 2020, Claimant was twisting on a ladder placing a very heavy bin of parts onto a shelf overhead when he felt a pop in his shoulder, experiencing immediate pain in the shoulder and extending all the way down his arm. Claimant stated that he reported the incident to Employer and was sent home. The next Monday, Claimant contacted Employer, who advised him to seek medical care for the injury.

Claimant stated that Employer failed to provide him with a list of providers. As found, because Employer failed to provide a list of providers pursuant to the Act and the rules, the right of selection passed to Claimant.

4. Claimant went to North Suburban Medical Center emergency room on December 1, 2020.[1] He reported the history above to Physician Assistant Caitlin Trierweiler. The providers suspected a rotator cuff injury and stated that Claimant may need further diagnostic evaluations such as an MRI. They provided Claimant with a sling and recommended he practice gentle range of motion exercises in order to avoid a frozen shoulder. The also recommended he be examined by an orthopedic specialist.

5. Claimant presented to Dr. Kareem Sobky of Health One Colorado Limb Consultants on December 9, 2020. In the history, Dr. Sobky documented that Claimant was a 27 year old right hand dominant patient that on or about November 28, 2020 Claimant was lifting up a motorcycle bin weighing approximately 120 pounds, getting up on a ladder and twisting using both arms to put this heavy bin onto a shelving unit. In the twisting motions he felt a pop in the left shoulder, shoulder blade and neck area. Dr. Sobky diagnosed left cervical spine radiculopathy, derangement of the left shoulder joint, scapulalgia, paresthesia, and acute pain of left shoulder. Dr. Sobky noted that Claimant "sustained a work-related injury, while lifting and twisting a heavy item." The report was faxed to the Insurer's adjuster on December 10, 2020, and received by their counsel on or before February 11, 2021.[2]

6. Dr. Sobky had concerns for cervical disc herniation as well as internal derangement of the left shoulder as he has combined symptoms. Given that he has had minimal improvement in the prior week and a half he recommended a Medrol Dosepak as well as naproxen. Dr. Sobky stated he was not entirely sure what was going on mechanically in the left shoulder with catching and popping and a positive O'Brien's test as well as a positive Spurling sign, with numbness and tingling down the arm. He ordered an MRI of the left shoulder and an MRI of the C-spine.

7. The shoulder MRI took place on December 16, 2020.[3] It showed a small linear interstitial tear of the cranial subscapularis insertion with mild underlying tendinosis. There was mild medial subluxation of the adjacent long head biceps at the proximal bicipital groove with mild rotator Interval tendinosis. Dr. Vincent Herlihy was concerned that the findings raised concern for dysfunction of the biceps pulley mechanism. He also found a small focal area of non-displaced partial detachment of the posterior inferior glenoid labrum with mild diffuse underlying labral fraying as well as mild to moderate supraspinatus and mild infraspinatus tendinosis.

[1] Exhibit 8, bates 39-44.
[2] Exhibit 10, bate 62.
[3] Exhibit 5, bates 13-14.

8. The cervical spine MRI, also performed on December 16, 2020, showed mild multilevel degenerative changes with bilateral foraminal stenosis at the C3-4 level, and a small midline disc protrusion at the C4-5 level.[4]

9. On December 21, 2020 Dr. Sobky opined that Claimant's shoulder damage warranted surgery to include arthroscopic evaluation, biceps tenodesis, subscapularis repair, possible labral repair, and subacromial decompression. Dr. Sobky state that Claimant's "C-spine MRI shows more significant C4-5 a annular fissure with a small central disc herniation. However his symptoms are significant enough with burning down the entire arm into the thumb and index finger I would recommend evaluation and recommendations with DISC." He referred Claimant to Denver International Spine Center.

10. Dr. Sobky's December 22, 2020 Work Status and Progress Report states "Patient off work status from December 22, 2020 until TBD, patient having surgery."[5]

11. The Authorization Request for surgery was submitted to Respondents on December 30, 2020, which specified the diagnosis and documented the multiple tears to be repaired. On the right side of both the request for prior authorization and the telephone encounter form, it shows an electronic stamp dated December 30, 2020 that it was received by Respondent Insurer.[6] The Authorization Request specifically notes that medical records were attached and the electronic confirmation shows that eleven pages were sent to Respondent Insurer.

12. Claimant proceeded with surgery of the left shoulder on January 7, 2021 with Dr. Sobky. As reasonably inferred from this information, the request for surgery was not denied by Respondents.

13. On January 12, 2021 Claimant filed a Request for Change of Physician, selecting Dr. Rafer Leach.[7] Claimant testified that Dr. Sobky was treating only his shoulder complaints and Dr. Kuklo was only treating his cervical spine problems. Claimant requests that Dr. Leach be the provider to address all his problems related to the claim. Claimant testified that Respondents sent a letter to Claimant's counsel on February 15, 2021 denying the request for a change of physician. Claimant also filed a Workers' Claim for Compensation on January 12, 2021 with the Division. As Claimant's admitted injury occurred on October 22, 2020 the January 12, 2021 Request for a Change of physician is within the 90 days. As found, Claimant is entitled to a change of physician to Dr. Leach as Respondents failed to comply with the 20 day deadline to respond to the request, which is deemed waiver of any objection.

[4] MRI documented by multiple provider in Exhibit 7, bates 21 & 23; Exhibit 10, bate 70; Exhibit 11, bate 80, all consistent with each other and the reports are found reliable.

[5] Exhibit 10, bate 71.

[6] Exhibit 10, bates 70 and 72.

[7] Exhibit 3, bate 11.

14. Claimant returned to Dr. Sobky's office on January 20, 2021 and was evaluated by his PA-C, Ms. Bridget Van Boxtel. She stated that Claimant was seen two weeks "status post a left shoulder arthroscopic subscapularis repair, rotator cuff repair, subacromial decompression with acromioplasty and CA ligament release, bursectomy, and biceps tenodesis," and that he was doing well overall, but had not yet started physical therapy. Ms. Van Boxtell also saw Claimant on February 17, 2021, six weeks post op and reported that he had tightness over the anterior aspect of the shoulder with end range of motion and some paresthesia of his first three digits of the left hand. By that time he had started physical therapy at Premier Physical Therapy.

15. Claimant started physical therapy on January 22, 2021 according to the reports from Premier Physical Therapy.[8] The therapist, Blake Giles, documented that:

> Patient presents with normal heal s/p L rotator cuff repair, subacromial decompression/debridement, bicep tenodesis and labrum repair on 1-7-21. Patient will benefit from Physical Therapy plan of care in coordination with Surgeon's protocol to achieve normal healing and return patient to his prior level of function.

16. Claimant was evaluated for his cervical spine by Dr. Timothy Kuklo of Denver International Spine Center on February 16, 2021. Dr. Kuklo ordered an EMG of the left upper extremity to assess the paresthesia going into his left hand.[9] He reported that Claimant had 3 months' worth of neck and arm pain that started in November 2020 when working for Employer. Dr. Kuklo assessed acute cervical radiculopathy and median nerve compression. He recommended an "EMG of bilateral upper extremities to compare contralateral side and establish patient norm. Assess for median nerve entrapment or carpal tunnel compression test due to thumb and index finger having loss of sharp versus dull sensation." Dr. Kuklo also personally reviewed the cervical spine MRI and viewed a "C5-6 loss of disc height with shallow disc osteophyte and bilateral UCVJ spurs and small joint effusions." He referred Claimant to a neurologist, Dr. Alexander Feldman for the NVC/EMG.

17. On February 23, 2021 Claimant was first evaluated by Rafer Leach, M.D. of MSK Medical, LLC. Dr. Leach issued several diagnosis including cervicalgia, cervicobrachial syndrome, thoracic pain, rotator cuff and left labrum injury, adjustment disorder and facet injury. He also referred Claimant for an NCV/EMG (nerve conduction study).[10]

18. Claimant testified that the NCV/EMG was denied by Respondents. Claimant stated that Respondents scheduled an appointment for him to be seen by Dr. John Burris for an Independent Medical Examination (IME). The IME took place on April 6, 2021.[11] Dr. Burris documented that Claimant's complaints were of left shoulder pain

[8] Exhibit I, Bates 40-70.
[9] Exhibit 11, bates 79-81.
[10] Exhibit 9, bates 55-59 and Exhibit J, bates 80-82.
[11] Exhibit 7, bates 17-26.

and left thumb and index finger numbness. When asked whether the NCV/EMG was reasonably necessary and related, Dr. Burris stated as follows:

> [Claimant] is reporting numbness in his left thumb and index finger. The cervical spine MRI and his examination are unrevealing for cervical radiculopathy. However, the described mechanism of injury could have caused a brachial plexus or nerve traction type injury. Dr. Sobky, Dr. Kuklo, and Dr. Leach have all recommended a left upper extremity NCV/EMG for diagnostic clarity. Therefore, the left upper extremity NCV/EMG appears reasonable and related to the 11/28/2020 workplace event.

19. Respondents filed a General Admission of Liability (GAL) on March 2, 2021 admitting to temporary partial disability (TPD) from November 28, 2020 through December 14, 2020 and temporary total disability benefits (TTD) from December 15, 2020 forward.[12] The GAL is addressed to Claimant in care of Employer's address. The Certificate of Mail shows that it was neither sent to Claimant nor to Claimant's counsel, just to Employer, Respondents' counsel, and the Division.[13] This did not comply with the rules and the General Admission of Liability' validity is suspect.

20. Premier Physical Therapy documented on March 3, 2021 that the patient had made good progress, had achieved mostly full range with passive motion performed by therapist and was able to progress to performing exercises and activities prescribed by his surgeon's protocol. They documented that Claimant was tolerating active exercises well despite expected muscle weakness and fatigue. Mr. Guiles stated that Claimant continued to benefit from further progression of physical therapy care in order to achieve normal healing and patient's maximum functional potential.[14]

21. Claimant testified that his first indemnity check was not issued until March 11, 2021 and it was sent to his employer. He received it the middle of March from Employer. Respondents continued to send the temporary disability benefits to Employer, which paid through July 22, 2021. The last check he received, Employer held it and eventually forwarded to his old address, which had to be forwarded from there. Then benefits stopped altogether and Claimant stated that he had not received any indemnity benefits for the last two weeks of July or for August, 2021. He has not ever had any TTD checks go directly to him to his address directly from Insurer. As found, Respondents violated the requirement that Respondents send any benefits checks to the Claimant as a payee; violated the requirement that the first indemnity benefits check be paid when the General Admission is filed and violated the rule that benefits may not be stopped unless some condition precedent takes place pursuant to the statute and rules.

22. Claimant indicated that his nerve conduction study (NVC/EMG) was not performed after Dr. Burris made the recommendation with regard to the test, for some

[12] Exhibit 12, bates 82-83.

[13] Pursuant to W.C.R.P. Rule 1-4(A), "Whenever a document is filed with the Division, a copy of the document shall be mailed to each party to the claim and attorney(s) of record, if any."

[14] Exhibit I, bate 67.

time thereafter. He did not recall the specific date. However, he was sent a copy of the denial of authorization of the NVC/EMG by Respondents' counsel dated March 5, 2021.

23. Claimant also stated that he had to wait for physical therapy for several weeks after his surgery. Then after several weeks, the physical therapy was stopped for about one- and one-half months, from sometime in March, because the adjuster would not authorize the treatment. Claimant spoke with his doctor and was concerned that his shoulder was very tight, He was concerned about frozen shoulder due to the interruption and the delay in receiving physical therapy. He stated that eventually the therapy office contacted and advised they would continue with his therapy without the required authorization as they did not wish him to have any further delay in care.

24. Claimant testified that he had submitted mileage requests for reimbursement. Respondents conceded, in their position statement, that Claimant submitted mileage reimbursement requests on April 14, 2021 for $98.58 and May 25, 2021 for $47.70.[15] Claimant testified that he never received any mileage reimbursement checks. Claimant asserted that he looked at every check he has received to the date of the hearing, and none were for the amounts indicated or for mileage reimbursement. Respondents allege the check for $98.58 for mileage reimbursement was issued on May 5, 2021, though no proof of payment was provided by Respondents.

25. On May 27, 2021 Prehearing Administrative Law Judge (PALJ) Marcus Zarlengo issued an order granting Claimant's motion to add penalty allegations including failure to authorize medical care and failure to reimburse mileage.[16] Claimant filed an Amended Application for Hearing on the same day, including the additional issues.

26. PALJ Judge Laura Broniak issued at Prehearing Order on July 2, 2021 allowing Claimant to add additional issues to the scheduled hearing to commence on August 6, 2021, which included specific penalties.[17]

> Claimant alleges that Respondents filed a general admission liability on March 2, 2021, but did not start issuing temporary total disability (TTD) checks until late April 2021 and sent the check to the Employer rather than to Claimant directly. Claimant alleges Respondents' conduct violates W.C.R.P. Rule 5-6(B) and Section 8-43-410, C.R.S. 1 2. Claimant alleges that Respondents unilaterally ceased issuance of TTD checks; and that despite requests to send checks directly to Claimant, the last check was sent to the Employer. Claimant alleges a violation of W.C.R.P. Rule 6-8.

27. Claimant moved to compel Respondents to produce an updated copy of the claim file on July 22, 2021 before PALJ Susan Phillips. The Prehearing Order granted the motion, ordering Respondents to produce the updated file no later than August 2,

[15] See Respondents' Position Statement, p. 11, paragraph 29.
[16] Exhibit 2, bates 8-10.
[17] Pleading filed with OAC to add the issues for hearing.

2021.[18] Respondents conceded that they were late in producing the file. Claimant argued that the updated claim file was necessary to determine what payments were made, when and where they were sent. Since Claimant did not have this confirmatory information, despite the PALJ's order to produce it, Claimant was prejudiced in this matter. As found, Respondents disregard for the order showed a pattern of behavior that justified Claimant's requests for penalties in this matter.

28. Claimant stated he recently had to move to Oregon, to live with family, approximately three weeks prior to the hearing. He testified that he was unable to afford to live in Colorado since he had no family here or any other resources. He has not received any medical care since moving, has not been released by his providers and is extremely worried whether he is going to get the care he needs. He continues to have significant tightness in his shoulder and stated that his range of motion is not quite what it should be. As found, Claimant's financial hardships caused by Respondents' failure to appropriately and timely make payments directly to Claimant as a payee and for their violation of the rules in terminating Claimant's temporary disability benefits justifies an award of penalties in this matter related to his work injury.

CONCLUSIONS OF LAW

A. Generally

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well.

[18] Exhibit 16, bates 275-277.

See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

4. The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

B. Authorized Provider and Change of Physician:

1. Claimant seeks a determination of whether Claimant is entitled to a change of physician to Dr. Rafer Leach and weather other specialists that have treated Claimant are authorized providers. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). A change of physician is permitted under several circumstances. Here Claimant filed a Change of Physician form on January 12, 2021. (Claimant's Exhibit 3), which was sent to Respondents. No evidence shows or was submitted to dispute that the address it was sent to was incorrect.

2. Section 8-43-404(5)(a)(VI)(A), C.R.S. states:

> In addition to the one-time change of physician allowed in subparagraph (III) of this paragraph (a), upon written request to the insurance carrier or to the employer's authorized representative if self-insured, an injured employee may procure written permission to have a personal physician or chiropractor treat the employee. The written request must be completed on a form that is prescribed by the director. If permission is neither granted nor refused within twenty days after the date of the certificate of service of the request form, the employer or insurance carrier shall be deemed to have waived any objection to the employee's request. Objection shall be in writing on a form prescribed by the director and shall be served on the employee or, if represented, the employee's authorized representative within twenty days after the date of the certificate of service of the request form.

3. W.C.R.P. Rule 8-7 lays out the requirements for a change of physician under §8-43-404(5)(a)(VI)(A). The Rule states as follows:

> (A) In addition and separately from all the other provisions of this Rule 8, an injured worker may submit a written request to change physicians to the insurer or employer's authorized representative if self-insured. Such a request must be on the form prescribed by the division of workers' compensation.

> (B) The insurer or employer's authorized representative if self-insured shall have twenty (20) days from the date of the certificate of service of the request form to either grant permission for the requested change of physician or object in writing on the form prescribed by the division of workers' compensation. Failure to timely object shall be deemed a waiver of objection.

4. Twenty days from the request dated January 12, 2021 was February 1, 2021. Respondents sent Claimant a denial of a change of physician on February 15, 2021. It was in the form of a letter and not a response on the form prescribed by the Division. As found, Respondents failed to timely respond to Claimant's request for a change of physician. Failure to timely object is deemed a waiver of Respondents' right to object to the change of physician under the rule. Respondents did not object in writing on the form prescribed in a timely manner. Therefore, it is found that Dr. Rafer Leach is an authorized treating physician.

5. Section 8-43-404(a)(VI)(B), C.R.S. states:

> If an injured employee is permitted to change physicians under sub-subparagraph (A) of this subparagraph (VI) resulting in a new authorized treating physician who will provide primary care for the injury, then the previously authorized treating physician providing primary care shall continue as the authorized treating physician providing primary care for the injured employee until the injured employee's initial visit with the newly authorized treating physician, at which time the treatment relationship with the previously authorized treating physician providing primary care is terminated.

6. In this case, it is found and concluded, there were no authorized treating physicians that were providing primary care. Dr. Sobky is the lower extremity or limb consultant and Dr. Kuklo is the spine specialist. Neither provided the required forms such as M-164 Physician Report of Worker's Compensation Injury forms, needed to establish a patient's status and work restrictions. Claimant was first evaluated by Dr. Leach on February 23, 2021 and he provided a status report. As such, Claimant was entitled to designate Dr. Rafer Leach as his authorized treating physician.

7. Pursuant to Section 8-43-404(5) (a) (I) (A) the employer or insurer must provide "a list of at least four physicians or four corporate medical providers …in the first instance, from which list an injured employee may select the physician who attends the injured employee."

8. Pursuant to W.C.R.P. Rule 8-2(E) "If the employer fails to supply the required designated provider list in accordance with this rule, the injured worker may select an authorized treating physician or chiropractor of their choosing."

9. In this case, Claimant was attended by Dr. Sobky to evaluate his knee and Dr. Sobky referred Claimant to Dr. Kuklo, the spine specialist. Both of these specialists are authorized providers as Claimant credibly testified that he was not provided with a designated provider list by Employer, and Respondents did not provide evidence to the

contrary. Therefore, Dr. Leach, Dr. Sobky and Dr. Kuklo are all authorized treating physicians.

C. Penalties

Failure to Admit or Deny

10. Claimant is seeking multiple penalties. The first is a penalty for failure to admit or deny the claim in a timely manner. Claimant points to Section 8-43-203(1), C.R.S. as requiring an insurer to notify the Division in writing, whether a claim is admitted or denied, within 20 days after a report of an injury is filed as required by § 8-43-101, C.R.S. Claimant notes that W.C.R.P. Rule 5-2(D) directs the insurer to submit such a document within 20 days after the Division sends to the insurer a Worker's Claim for Compensation. The record shows Claimant filed a Claim for Compensation on January 12, 2021.

11. W.C.R.P. Rule 5-2 states in pertinent part:

> (B) A First Report of Injury shall be filed with the Division in a timely manner whenever any of the following apply. The insurer or third-party administrator may file the First Report of Injury on behalf of the employer.
>
> …
>
> (2) Within ten days after notice or knowledge by an employer that an employee has contracted an occupational disease listed below, or the occurrence of a permanently physically impairing injury, or that an injury or occupational disease has resulted in lost time from work for the injured employee in excess of three shifts or calendar days….
>
> (C) The insurer shall state whether liability is admitted or contested within 20 days after the date the employer's First Report of Injury is filed with the Division. If an Employer's First Report of Injury should have been filed with the Division, but wasn't, the insurer's statement concerning liability is considered to be due within 20 days from the date the Employer's First Report of Injury should have been filed. The date a First Report of Injury should have been filed with the Division is the last day it could have been timely filed in compliance with paragraph (B) above.
>
> (D) The insurer shall state whether liability is admitted or contested within 20 days after the date the Division mails to the insurer a Worker's Claim for Compensation or Dependent's Notice and Claim for Compensation.
>
> (E) A statement regarding liability is required for any claim in which a division-issued workers' compensation claim number is assigned or a First Report of Injury should have been filed pursuant to paragraph (B) of this rule. A statement regarding liability shall not be filed without a First Report of Injury, Worker's Claim for Compensation, or Dependents Notice and claim having been successfully filed and assigned a workers' compensation claim number. A first report of injury must be filed prior to a notice of contest being accepted by the division.

12. Section 8-43-304, C.R.S. provides that Respondents may be subject to penalties up to one thousand dollars per day for a statutory violation or rule violation

(where Respondents fail or refuses to perform any duty lawfully enjoined within the time prescribed by the director). The amount of the penalty awarded at hearing is within the discretion of the administrative law judge (ALJ). Section 8-43-305, C.R.S. states that each day is a separate violation.

13. Whether statutory penalties may be imposed under §8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* WC 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth*, 924 P.2d 1094 (Colo. App. 1996). The question of whether the insurer's conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); see *Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. See *Pioneers Hospital* 114 P.2d at 99. If the claimant makes a prima facie showing the burden of persuasion shifts to the respondents to prove their conduct was reasonable under the circumstances. *Id.*

14. Further Section 8-43-304(4), C.R.S. states that after the date of mailing of an application for hearing, "an alleged violator shall have twenty days to cure the violation. If the violator cures the violation within such twenty-day period, and the party seeking such penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed."

15. As found, Claimant filed a Workers' Claim for Compensation and a Change of Physician form on January 12, 2021. The Change of Physician form was received by Respondents. It was mailed to Insurer and Respondents' counsel sent a letter responding to the request on February 15, 2021. This is an indication that Respondent Insurer received the mailed form, forwarded it to counsel, and knew or should have known that Claimant filed a claim with the Division as the form included Workers' Compensation No. 5-155-282. This in and of itself is clear and convincing evidence that Insurer should have reasonably known that they had to take some action in the claim, whether to admit or deny the claim. The rule is very clear that a statement regarding liability is required for any claim in which a "division-issued workers' compensation claim number" is assigned pursuant to W.C.R.P. Rule 5-2(E) and Respondents had 20 days from that date to file the appropriate admission or denial. Therefore, the admission or denial filing deadline was February 1, 2021.

16. Neither party provided a copy of a Notice of Contest in this matter so this ALJ will infer that Respondents failed to file such a notice. A rule is an order of the director pursuant to Section 8-40-201(15), C.R.S. and compliance may be ensured through the

application of Section 8-43-304(1), C.R.S. *Diversified Veterans Corporate Center v. Hewuse*, 942 p.2d 1312, 1313 (Colo. App. 1997).

17. In their defense, Respondents are relying on the cure statute. The cure statute adds an element of proof to a claim for penalties in cases where a cure is proven. Typically, it is not necessary for the party seeking penalties to prove that the violator knew or reasonably should have known they were in violation. The party seeking penalties must only prove the putative violator acted unreasonably under an objective standard. See *Jiminez v. Indus. Claim Appeals Office*, *supra*.

18. As found, Claimant has proven by clear and convincing evidence that Respondents knew or reasonably should have known that Respondents were in violation of the rules by failing to admit or deny the claim within 20 days of January 12, 2021, which in this case is February 1, 2021. An Application for Hearing is not needed in order to make a determination that Respondents violated the rule and may be subject to the penalties. In this case, Claimant testified that after multiple attempts at communications with Respondents, they were not responding. Respondents were paying for medical care. Dr. Sobky sent both the Authorization Request form and the Telephone Encounter form, which Respondent insurer received, as shown by the receipt stamps. Claimant proceeded with surgery on January 7, 2021. All of these are indications that Respondents reasonably knew that they should take action and comply with the rules. Cleary Claimant was off work pursuant to Dr. Sobky's December 22, 2020 Work Status and Progress Report, which stated "Patient off work status from December 22, 2020 until TBD, patient having surgery." and Respondents had a duty to comply with W.C.R.P. Rule 5-2(E) by no later than February 1, 2021. The requirement to act upon receipt of documents that put Respondents on notice that a Claimant is off work and that there is a workers' compensation claim with the Division are part of a statutory scheme designed to promote, encourage, and ensure prompt payment of compensation without the necessity of a formal administrative determination in cases not presenting a legitimate controversy. *Olivas-Soto v. Indus. Claim Appeals Office,* 143 P.3d 1178, 1179 (Colo.App.2006). In light of that intent, one purpose of the requirement is to give notice to the Respondents to actively take steps to avoid any situation that would involve a penalty and put Claimant on notice of the exact basis of the denied liability, so that Claimant can make an informed decision whether to take steps to dispute the Respondents' position. *See Smith v. Myron Stratton Home,* 676 P.2d 1196, 1200 (Colo.1984). It is specifically found that Respondents objectively acted unreasonably in light of the above facts. Therefore, Claimant is entitled to a penalty.

19. An ALJ may consider a "wide variety of factors" in determining an appropriate penalty. *Adakai v. St. Mary Corwin Hospital*, WC 4-619-954 (ICAO, May 5, 2006). However, any penalty assessed should not be excessive in the sense that it is grossly disproportionate to the conduct in question. *Associated Business Products v. Industrial Claim Appeals Office,* 126 P.3d 323 (Colo. App. 2005); *Espinoza v. Baker Concrete Construction*, WC 5-066-313 (ICAO, Jan. 31, 2020); *CDLE vs. Dami Hospitality, LLC*., 442 P.3d 94 (Colo. 2019) [A court should consider whether the gravity of the offense is proportional to the severity of the penalty, considering whether the fine is harsher than

fines for comparable offenses in this jurisdiction or than fines for the same offense in other jurisdictions. In considering the severity of the penalty, the ability of the regulated individual or entity to pay is a relevant consideration. And the proportionality analysis should be conducted in reference to the amount of the fine imposed for each offense, not the aggregated total of fines for many offenses.]

20. When determining the penalty the ALJ may consider factors including the "degree of reprehensibility" of the violator's conduct, the disparity between the actual or potential harm suffered by the claimant and the award of penalties, and the difference between the penalties awarded and penalties assessed in comparable cases. *Associated Business Products*, 126 P.3d at 324, *supra*. When an ALJ assesses a penalty, the Excessive Fines Clause of the Eighth Amendment to the U.S. Constitution requires the ALJ to consider whether the gravity of the offense is proportional to the severity of the penalty, whether the fine is harsher than fines for comparable offenses in this or other jurisdictions and the ability of the offender to pay the fines. The proportionality analysis applies to the fine for each offense rather than the total of fines for all offenses. *Conger v. Johnson Controls Inc*., WC 4-981-806 (ICAO, July 1, 2019).

21. In this case, there is significant harm caused to Claimant as he was without wages for a period between December 22, 2020 and mid March 2021. Claimant was forced to move to Oregon to live with family and abandon his authorized provider care for the duration of over three months. The violation is also significant as any insurer is required to comply with the rules of procedure in handling workers' compensation claims in the State of Colorado. Respondents failed to act in a reasonable manner by failing to state a position, despite knowing that Claimant was undergoing surgery. Respondents simply took no actions as required by the Rule, other than to deny a change of physician late in the claim. Then Respondents sent benefits to Claimant's employer, not to Claimant directly despite the fact that Claimant's correct address was on the Workers' Claim for Compensation. Respondents continued to deny benefits, even after the General Admission of Liability was filed by failing to authorize physical therapy and ATP recommended evaluations (NCV/EMG); and continuing to send Claimant's temporary disability checks directly to the employer, not to Claimant. Respondents terminated benefits in July 2021, without notice, in contravention to the rules. Lastly, Claimant was forced to seek multiple orders from PALJs to compel Respondents to provide information that they were statutorily bound to provide upon request, violating the order. This shows an objectively unreasonable pattern of misconduct. Respondents shall pay a penalty of $150.00 per day for each day Respondents failed to admit or deny the claim from February 1, 2021 through the date of the admission filed on March 2, 2021.[19]

Payment of Temporary Disability per the Admission

[19] This ALJ considered penalties from the time Respondents actually knew of the Claimant's lost time from work, the date of the electronic stamp of December 30, 2020 on Dr. Subky's medical records, but determined that there was insufficient persuasive evidence to enlarge the time period for the failure to admit or deny.

22. The next penalty sought by Claimant is for violation of W.C.R.P. Rule 5-6 from March 11, 2021 through the present and pursuant to W.C.R.P. Rule 6-8 from July 22, 2021 to the present. Section 8-42-105(2)(a), C.R.S. states, in pertinent part, as follows:

> The first installment of compensation shall be paid no later than the date that liability for the claim is admitted by the insurance carrier or self-insured employer. …. Compensation shall be paid at least once every two weeks, except where the director determines that payment in installments should be made at some other interval. The director may by rule convert monthly benefit schedules to weekly or other periodic schedules.

23. W.C.R.P. Rule 5-6(B) states:

> Temporary disability benefits awarded by admission are due on the date of the admission and the initial payment shall be paid so that the claimant receives the benefits not later than five (5) calendar days after the date of the admission. Temporary total disability benefits are payable at least once every two weeks thereafter from the date of the admission. In some instances an Employer's First Report of Injury and admission can be timely filed, but the first installment of compensation benefits will be paid more than 20 days after the insurer has notice or knowledge of the injury. So long as the filings are timely and benefits timely paid and for the entire period owed as of the date of the admission, the insurer will be considered in compliance. When benefits are continuing, the payment shall include all benefits which are due as of the date payment is actually issued.

24. Section 8-42-126, C.R.S. states in pertinent part that for the purposes of Act and "any orders of the division and office of administrative courts, monetary benefits or penalties required to be paid to an injured worker are deemed paid on the date the payment is received by or delivered to the intended payee…" This means that any payment that Claimant failed to receive personally is in violation of both the act and the rules.

25. W.C.R.P. Rule 6-1(A) lays out the conditions for terminating temporary disability benefits. The evidence submitted by the parties fails to show that an authorized medical provider returned Claimant to regular work or placed Claimant at maximum medical improvement, nor that Claimant was offered modified work, rejected an offer of modified work, or that Claimant failed to attend a demand medical appointment. W.C.R.P. Rule 6-8 addresses the failure to comply with the requirements of Rule 6 and states in pertinent part:

> (A) Temporary disability benefits may not be suspended, modified or terminated except pursuant to the provisions of this rule; pursuant to an order from the Director; or pursuant to an order of the Office of Administrative Courts.

26. Claimant asserted that he never received a disability benefits check directly, that they were mailed to his employer and that he would later get them from his employer. Claimant stated that he did not receive his first disability benefits check until mid March, 2021. Based on the evidence presented, this ALJ will infer that took place on or about March 16, 2021. Claimant stated that he is currently missing disability benefits payments, with the last check paid through July 22, 2021. Claimant also argued that Respondent failed to comply with the July 22, 2021 Prehearing Order to produce an updated claim file by no later than August 2, 2021, so Claimant did not have an indemnity ledger available to better detail the missing benefit payments owed to Claimant. During the hearing, counsel conceded that the claim file was not produced in time in accordance with the order, though argued that it had been produced just before the hearing. Claimant's counsel asserted that he had not seen the updated file at the time of the hearing.

27. The failure to comply with both the rules and an order shows flagrant disregard for both the requirements of the rules and a judge's order, meriting penalties in this matter. The analysis for the penalties here is the same as stated above. Claimant has shown by clear and convincing evidence that Respondents knew or should have known that compliance with the rules is mandatory, not merely a suggestion. Respondents acted objectively unreasonably in this matter by not sending Claimant the first installment of compensation to Claimant no later than the date that liability for the claim was admitted on March 2, 2021.[20] It is found and concluded that Claimant is entitled to 14 days of penalties in the amount of $200.00 per day for each day that Respondents failed to make the payment directly to Claimant for the first installment of indemnity as required by statute from March 3, 2021 through March 16, 2021. It is found that Respondents failed to send the check directly to Claimant as the rule requires that Claimant be paid so that the "claimant receives the benefits."

Termination of Temporary Disability

28. Claimant also seeks penalties for the violation of the rules for termination of temporary disability benefits. This analysis is also the same as above. It is also found that Respondents terminated temporary disability benefits improperly and improvidently. Claimant has met the clear and convincing standard here as well. He has been significantly harmed by the termination of benefits, the duration of the termination has caused him to take actions he may not have otherwise taken, by moving away to Oregon, where he no longer has access to his authorized medical providers. The termination violates both the rules and the statutory mandate. Respondents have shown a flagrant disregard for the rules and orders in this matter, and Respondents' counsel failed to respond to the allegation of misconduct for the termination of benefits or provided evidence that Respondents have corrected the problem. Claimant is found credible that his temporary disability benefits were terminated as of July 22, 2021 and that Respondents failed to meet the requirements of W.C.R.P. Rule 6-1(A) in order to terminate benefits.

[20] Though this ALJ is not certain that the GAL is quite valid since the certificate of mail is not complete pursuant to W.C.R.P. Rule 1-4(A).

29. None of the requirements of Section 8-42-105(3) in order to terminate benefits were met. It is found that Claimant has not been placed at maximum medical improvement by any treating provider or been released to full duty employment. Claimant has not return to work or been offered work within his restrictions. He has not rejected work and there was no showing that he was terminated for cause pursuant to Section 8-42-105(4)(a), C.R.S. As found, Claimant continues to be under restrictions by ATPs Drs. Leach and Sobky. Claimant is also found credible that no provider has released him from care. In fact, the failure to continue indemnity payments caused Claimant to have to move from Colorado to Oregon with his family as Claimant has no resources or funds to pay bills at this time. Claimant is extremely worried whether he is going to get the care he needs since the move. He continues to have a very tight shoulder and stated that his range of motion is not quite what it should be. Claimant is found to be credible. Claimant is entitled to penalties for Respondents' termination of temporary total disability benefits from July 22, 2021 until Respondents resumes indemnity payments sent to Claimant's address in Oregon, and many not rely on Employer to send the payments on to Claimant. These facts show by clear and convincing evidence that Respondents were objectively unreasonable in their behavior and acts. Respondents shall pay a penalty of $250.00 for each day temporary total disability benefits payments are late.

Authorization of physical therapy

30. Claimant demanded penalties for failure to timely authorize medical benefits alleging that Respondents failed to timely authorize medical treatment per W.C.R.P. Rule 16-6(C), Rule 16(D) and Rule 16-6(G) from January 12, 2021 to the present including nerve conduction studies (EMG/NCV) and physical therapy. Section 8-42-101(1)(a), C.R.S. states that Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the work injury. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). "Authorization" generally refers to the legal authority to treat and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a). *Braun v. Foley's Department Stores,* W. C. No. 4-603-819 (February 28, 2005); *Wladyslaw Galica v. Pietraszek Enterprises*, W.C. 4-640-668 (May 9, 2008). *See also, One Hour Cleaners v. Industrial Claim Appeals Office*, 914 P.2d 501, 504 (Colo. App. 1995) ("authorized medical benefits" refers to legal authority of provider to deliver care).

31. Claimant states that his request for physical therapy following surgery was delayed. Here, Claimant testified that he had surgery on January 7, 2021 and that therapy was to start three weeks following the surgery. Claimant commenced his physical therapy as of January 22, 2021, which is less than three weeks. Further, Respondents were not obliged to comply with the rules with regard to prior authorization until after they had filed a General Admission of Liability, which occurred on March 2, 2021. Next, Claimant states that his physical therapy was not authorized and was interrupted for a period of approximately one and one half month. The physical therapy notes provide no indication that therapy was terminated for failure to authorize. All of the Premier Physical Therapy notes were not included in Claimant's case in chief and the reports provided by

Respondents in Exhibit I do not indicate anything other than therapy was to continue. There is insufficient evidence of the timeline for which physical therapy was terminated and resumed in order to address a penalty with regard to the failure to authorize physical therapy in this matter. The request for penalties for failure to authorized physical therapy is reserved for future determination.

Authorization of NVC/EMG

32. With regard to the failure to authorize the EMG/NCV, this matter is considered separately. In this case, Claimant's authorized treating physician, Dr. Kuklo requested authorization for the EMG/NCV on February 16, 2021. He made a referral to Dr. Alexander Feldman, a neurologist, to conduct the NVC/EMG. Claimant testified that he received a copy of the March 5, 2021 denial of the request for prior authorization for the NCV/EMG as not being reasonably necessary and related to Claimant's work related injury of November 28, 2020. Respondents scheduled an IME with Dr. Burris for April 6, 2021. Dr. Burris provided a report of the same date recommending the NCV/EMG. He specifically stated that "Dr. Sobky, Dr. Kuklo, and Dr. Leach have all recommended a left upper extremity NCV/EMG for diagnostic clarity. Therefore, the left upper extremity NCV/EMG appears reasonable and related to the 11/28/2020 workplace event."

33. By March 5, 2021, when Claimant received the denial, Respondents had already admitted to the claim. Therefore, they were obliged to comply with the Workers' Compensation Rules of Procedure for requests for prior authorization under W.C.R.P. Rule 16. Respondents correctly state that Claimant failed to show that prior authorization was denied in this matter. In looking at W.C.R.P. Rule 16-6(C), Rule 16(D) and Rule 16-6(G), Claimant has failed to show that the provider requested written confirmation of authorization in accordance with W.C.R.P. Rule 16-6(C), or that the provider denied the proposed treatment without the written authorization in accordance with Rule 16-6(D). Claimant did not properly argue that there was any issue with incorrectly applied Medical Treatment Guidelines. As found, Respondents followed the rules in this matter and once the report of Dr. Burris was provided to Claimant, Claimant was free to obtain the NVC/EMG from Dr. Feldman at any time in accordance with W.C.R.P. Rules 16-6(A) and 16-7-2(E), as the treatment was deemed authorized. Claimant failed to show that there was any denial of the authorized medical care for the NVC/EMG following the completion of the IME process. While Claimant testified that it took a long time from April 6, 2021 IME report to the time he had the testing performed, no persuasive evidence was provided that the delay in performing the testing was due to any acts or omission performed by Respondents in this matter. Claimant's request for penalties for failure to authorize the NCV/EMG treatment is denied and dismissed.

Mileage reimbursement

34. Claimant alleges Respondents failed to issue mileage reimbursement consistent with W.C.R.P. Rule 16-l0(G). Claimant seeks penalties to be determined for violation of the Rules from May 13, 2021 through the present, under §8-43-305, C.R.S. Claimant seeks penalties of up to $1,000 a day for violation of the Rules under the

general penalties statute. See §8-43-304(1), C.R.S. Claimant testified that he had submitted mileage requests for reimbursement. Respondents conceded that Claimant submitted mileage reimbursement requests on April 14, 2021 for $98.58 and May 25, 2021 for $47.70. Claimant testified that he never received any mileage reimbursement checks. Respondents allege the $98.58 in mileage was issued on May 5, 2021, though no proof of payment was provided by Respondents.

35. W.C.R.P. Rule 16-10(G) states "Payers shall reimburse injured workers for mileage expenses as required by statute or provide written notice of the reason(s) for denying reimbursement within 30 days of receipt." This ALJ interprets this rule to state that the payment for any reimbursement to Claimant should be made directly to Claimant. The evidence presented is that Claimant never received a check directly from the Insurer, and if they were sent, they were sent to Employer. However, Claimant asserted that he looked at every check he has received to the date of the hearing, and none were for the amounts indicated or for mileage reimbursement. As found, Claimant is credible in this matter.

36. Pursuant to Sec. 8-43-304(4), C.R.S. Respondents have 20 days to cure the alleged violation. Claimant's Amended Application for Hearing, was permitted by PALJ Zarlengo's Prehearing Order of May 27, 2021, so the deadline to cure started as of that date. As there is no persuasive evidence that shows that the matter was cured by June 16, 2021, Claimant is entitled to a penalty for failure to comply with the rule. Respondents argue that there is a specific penalty for failure to pay mileage as mileage is a quasi-medical benefit and should be treated as a medical benefit for purposes of determining any penalty. Section 8-43-401(2)(a), C.R.S. States as follows:

> If any insurer … knowingly delays payment of medical benefits for more than thirty days … such insurer … shall pay a penalty of eight percent of the amount of wrongfully withheld benefits; except that no penalty is due if the insurer or self-insured employer proves that the delay was the result of excusable neglect.

37. This ALJ is persuaded by Respondents' arguments and citation of *Jack Richardson v. Pizza Hut,* W.C. No. 4-560-586 (Feb. 7, 2014); *Sigman Meat Co. v. Indus. Claim Appeals Office,* 761 P.2d 265 (Colo. App. 1988), which stand for the proposition that mileage expenses for travel to attend medical appointments are recoverable as incidental to medical treatment under the Workers' Compensation Act. Therefore, while Claimant is entitled to a penalty, that penalty is limited to the eight percent listed in the statute. Penalties begin as of 30 days following each mileage reimbursement request until Respondents send the mileage reimbursement check to Claimant directly. Claimant filed the first mileage reimbursement request on April 14, 2021 for $98.58. Mileage penalties shall be calculated for this amount at 8% interest from May 14, 2021 through the date Respondents paid Claimant mileage, or to the date the $98.58 mileage check was cashed by Claimant, if it was already issued. The second mileage reimbursement request was sent to Respondents on May 25, 2021 for the amount of $47.70. Respondents shall further pay 8% interest on the second request beginning as

of June 24, 2021 through the date Respondents paid Claimant for the mileage reimbursement, or to the date the $47.70 mileage check was cashed by Claimant, if it was already issued.

Apportionment of penalties

38. When considering penalties under Section 8-43-304(1), C.R.S., which are being granted in this matter, the ALJ must consider apportionment of the penalties and/or payment of penalties to the Colorado Uninsured Employer fund. Pursuant to Section 8-43-304(1) the statute specifies that penalties shall be "apportioned, in whole or part, at the discretion of the director or administrative law judge, between the aggrieved party and the Colorado uninsured employer fund created in section 8-67-105; except that the amount apportioned to the aggrieved party shall be a minimum of twenty-five percent of any penalty assessed."

39. As found, Claimant in this matter was substantially affected by the acts or failure to act by Respondents in this matter as stated above. In this regard the majority of the funds should be proportioned to the aggrieved party. Therefore, it is determined that seventy-five percent of the penalties awarded for failure to admit or deny, failure to timely pay and termination of temporary disability benefits shall be awarded to Claimant as the aggrieved party. Twenty-five percent of all penalties award and paid pursuant to this order shall be paid to the CUE Fund. Penalties paid for failure to reimburse quasi-medical benefits, in this case mileage, shall be paid solely to Claimant.

ORDER

IT IS THEREFORE ORDERED:

1. Dr. Leach is an authorized treating physician. Nothing in this Order changes the fact that Dr. Sobky and Dr. Kuklo are also authorized treating physicians.

2. Respondents shall pay penalties directly to Claimant at his Oregon address as follows:

a. From February 1, 2021 to the date the admission was filed on March 2, 2021 in the amount of $150.00 per day for each day Respondents failed to admit or deny the claim, for the 28 days, a total of $4,200.00.

b. From March 2, 2021 to March 16, 2021 Claimant is entitled to 14 days of penalties in the amount of $200.00 per day for each day that Respondents failed to make the payment directly to Claimant for the first installment of indemnity, as required by statute, for the total amount of $2,800.00.

c. From July 23, 2021, for inappropriate termination of benefits, for each day temporary total disability benefits payments are late until

Respondents resumes indemnity payments sent to Claimant's address in Oregon in the amount of a $250.00 per day. This amounts to 15 days through the August 6, 2021 hearing for an amount of $3,750.00 and should continue at the daily rate until benefits are delivered to the Claimant.

d. Eight percent on all mileage reimbursements that were not paid directly to Claimant when due pursuant to Sections 8-42-126 and 8-43-404(2)(a), C.R.S.

3. The penalties shall be apportioned at seventy five percent to Claimant and twenty five percent paid to the Colorado Uninsured Employer Fund pursuant to Sec. 8-43-304(1), C.R.S.

4. Respondents shall pay interest at the rate of 8% per annum on all amounts of compensation not paid to Claimant directly when due.

5. All matters not determined here are reserved for future determination.

6. If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm

Dated this 9th Day of September, 2021.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-150-743-002

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she suffered a compensable injury on December 18, 2019.

II. Whether Claimant established, by a preponderance of the evidence, that she is entitled to reasonable and necessary medical treatment, as prescribed by the providers at Aurora COMP.

III. Whether the Respondents established, by a preponderance of the evidence, that the Claimant was responsible for the termination of her employment.

STIPULATIONS

At the time of hearing, the Respondents stipulated and agreed as follows:

- If the claim is deemed compensable, the medical treatment provided by Aurora COMP is reasonable, necessary, and related to the work injury.

Respondents further stipulated in their proposed order that:

- The claimant's average weekly wage is $437.11, with a corresponding benefit rate of $291.41.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. The claimant is a 56-year-old woman with a January 9, 1965, date of birth. The claimant was hired by the Respondent Employer on April 7, 2015, to work as a deli associate. **Exhibit A.**
2. After being hired by the Employer, the claimant underwent orientation and safety training. The claimant was also required to complete computer-based learning modules on an at least an annual basis. The Employer's computer-based learning modules also included safety training. The safety training the Employer provided to the claimant included training on its policy that any incident, or accident, no matter how minor, be reported to a member of management immediately. The Employer training provided to the claimant distinguished between an incident, as a work event from which the employee was not requesting medical treatment, and an accident, a work event for which the employee was requesting medical treatment.

3. The claimant testified she suffered a December 18, 2019, injury to her left shoulder in the course and scope of her employment with [Redacted] while lifting frozen chickens. The claimant initially testified that, at the time of the injury, she was lifting boxes of frozen chicken above shoulder level, "all the way to the ceiling". The claimant later clarified the injury occurred when she was lifting boxes of frozen chicken, with the top of the box being chest level.

4. On December 18, 2019, the claimant completed an "Associate Incident Report. In the report, it is specifically noted that she was not requesting medical care at that time. **RHE F, Bates 85**.

5. On December 19, 2019, Employer Associate, Elizabeth Reilly, completed a witness statement, indicating the claimant "reported that two months ago she had hurt her arm lifting a box of chickens off the shelf. She did not report it sooner because the pain went away but then came back." **RHE F, Bates 87**. Employer associate, Brittany Welch also completed a Witness Statement indicating the claimant came to her stating, "she hurt her arm while racking chickens" . . . two months ago, and she was not getting any better. **RHE F, Bates 88.** Aliyah K[Redacted] also completed a Witness Statement indicating the claimant approached him stating she had hurt her arm two months ago, but it wasn't at work. When the claimant approached the witness again, she reported the injury did occur at work. **RHE F, Bates 89.** On December 19, 2019, Employer associate, Elizabeth Campbell, reported the claimant told her she hurt her arm and shoulder "about two months ago" and she decided to report it because it started to hurt again. **RHE F, Bates 90.** Neither the Associate Incident Report, nor any of the five employer witness statements, describe the claimant's alleged December 18, 2019, left shoulder injury. Moreover, the witness statements describe the claimant's alleged injury as occurring in October 2019.

6. The claimant testified to her work duties at the Employer as constantly lifting "everything that was heavy, everything was heavy". On March 27, 2019, the claimant presented to her primary care provider, Kaiser Permanente, with complaints of shortness of breath. The claimant reported to the Kaiser Permanente providers that "She is relatively sedentary. Her most activity she does is walking on a flat surface and cleaning her house." **RHE C, Bates 5.**

7. In the period from December 18, 2019, through September 24, 2020, the claimant continued working her regular job with the Employer, without restrictions. The claimant testified that although she was working full duty, she was overcompensating with her right arm, which then began to hurt.

8. On August 31, 2020, more than eight months after her alleged work injury, Claimant first sought treatment for left shoulder complaints from Kaiser Permanente. She also presented with complaints of GERD and headache. **RHE C, Bates 9.** Despite alleging an injury 8 months earlier, Claimant gave a history of greater than a year of left shoulder pain when attempting to lift it above shoulder level. Claimant also denied having an injury and reported that her shoulder felt fine while at rest. **RHE C, Bates 12.** The Kaiser provider referred Claimant for left shoulder x-rays and physical therapy. X-rays of the left shoulder were taken on September 1, 2020. The x-ray technician report

reveals Claimant complained of chronic left shoulder pain without a reported mechanism of injury. **RHE C, Bates 14.**

9. On September 11, 2020, Claimant participated in physical therapy through Kaiser. At this appointment, the date of injury is noted as "several weeks" and the mechanism of injury is noted as "unknown." **RHE C, Bates 16.** When Claimant returned to physical therapy, she presented with left sided neck pain, difficulty picking up objects, numbness in the shoulder and top of arm, and pain on the side of her thumb. Despite alleging a work injury, the reported mechanism of injury remained "unknown". **RHE C, Bates 21.**

10. On September 24, 2020, the Kaiser provider restricted Claimant from lifting in excess of five pounds. **RHE C, Bates 26.** Shortly after her work activities were restricted, Claimant requested medical treatment from Employer for her left shoulder.

11. On September 25, 2020, Employer provided Claimant a Rule 8, W.C.R.P., list of providers and Claimant selected Colorado Occupational Medicine as the provider designated to treat her injury. **RHE C, Bates 93.**

12. On September 29, 2020, Employer offered Claimant modified employment, within the Kaiser provider's restrictions, which the claimant accepted. **RHE F, Bates 94.**

13. On October 28, 2020, Claimant presented to Colorado Occupational Medicine. For the first time, the medical records reflect a mechanism of injury. In this report, the mechanism of injury is noted as "moving heavy boxes, approximately 50 pounds" for an injury that occurred "back in November 2019". The record also reflects that Claimant stated the injury "occurred while lifting a heavy box and felt a sudden pull/strain pain in her LEFT shoulder." **RHE D, Bates 31.** Based on Claimant's presentation, Claimant was placed on restricted duty which consisted of no lifting in excess of five pounds. **RHE D, Bates 36.**

14. On February 5, 2021, Claimant's employment with the Employer was terminated for two days of no call, no show, in violation of the Employer's attendance policy.

15. Diane S[Redacted], Employer's People Lead, credibly testified she left one or more phone messages for Claimant about her failure to appear for her scheduled shifts, without response.

16. On April 14, 2021, Dr. William Ciccone evaluated Claimant at Respondents' request. The claimant gave Dr. Ciccone a history of injuring her left shoulder when she was pulling a cart with 50-pound boxes of frozen chicken. **RHE E, Bates 78.** On Dr. Ciccone's physical examination, Claimant demonstrated significantly limited left shoulder motion, with diffuse shoulder pain involving the whole thorax and clavicle. **RHE E, Bates 80.** Based on his review of the medical records, and examination of Claimant, Dr. Ciccone credibly opined Claimant did not suffer a left shoulder injury in the course and scope of her employment with the Employer. Dr. Ciccone testified that one would expect an early medical evaluation if Claimant suffered a significant acute injury. Dr. Ciccone credibly testified that it is not medically probable that Claimant would remain at full work duties for the eight to nine months between the alleged December 18, 2019, incident and August 31, 2020, the date Claimant first sought medical treatment. **RHE E, Bates 82.** Dr. Ciccone credibly testified that Claimant's findings on physical examination are not consistent with an acute injury. In Dr. Ciccone's

evaluation, Clamant had significant pain in the shoulder with any type of motion, but in the earlier evaluations on September 11, 2020, September 22, 2020, October 30, 2020, and December 3, 2020, Claimant had near full range of left shoulder motion. One would expect a consistent loss of shoulder motion if one had suffered an acute shoulder injury. **RHE E, Bates 83.** Since Dr. Ciccone's opinions are consistent with the underlying record, the ALJ finds his opinions to be credible and persuasive.

17. There are many inconsistencies in Claimant's testimony when compared with the underlying medical and employment records. As a result, the ALJ does not find Claimant credible. These inconsistencies include:

    - Claimant alleges she suffered a compensable injury on December 18, 2019. However, on that same day, Claimant completed an Associate Incident Report and specifically noted that she was not seeking medical care. Claimant then did not seek medical treatment until eight months later.
    - When Claimant did seek medical treatment eight months latter on August 31, 2020, the medical record from that visit indicates Claimant has had chronic left shoulder pain for over one year. This puts the onset of her pain much earlier than the date she contends she injured her shoulder. Moreover, the report from this visit notes that Claimant denied any injury to her left shoulder.
    - When Claimant obtained x-rays on September 1, 2020, for her left shoulder, the history she provided at that time indicates she has had chronic left shoulder pain and has problems raising her arm into the air. Absent from the report is any indication that her left shoulder pain is because of an injury.
    - On September 11, 2020, when Claimant sought additional medical treatment, she started to complain of additional symptoms such as left sided neck pain, difficulty picking up objects, numbness around her shoulder and the top of her arm, as well as pain on the side of her thumb. And despite reporting additional symptoms, the mechanism of injury is listed as "unknown."
    - Claimant testified that when she reported the incident in December 2019 she assumed they would refer her to a doctor. However, such testimony is inconsistent with the Associate Incident Report in which Claimant specifically noted that she was not requesting medical care at that time. (**RHE F, Bates 85.**)
    - During her testimony, Claimant denied telling the Kaiser provider(s) that she had more than one year of left shoulder pain. She also denied telling them that she did not suffer an injury. The ALJ does not find it credible that Kaiser just came up with that information without input from Claimant.

18. As a result of the many inconsistencies in Claimant's testimony, when compared to the documents submitted into evidence at the hearing, the ALJ cannot credit Claimant's testimony.

19. The ALJ finds insufficient evidence to establish that it is more likely than not Claimant suffered a left shoulder injury requiring medical treatment, resulting in disability or permanent physical impairment, arising out of, and in the course and scope of her employment with the Respondent Employer on December 18, 2019.

20. Claimant failed to prove by a preponderance of the evidence that she suffered a left shoulder injury in the course and scope of her employment.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established, by a preponderance of the evidence, that she suffered a compensable injury on December 18, 2019.

The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

In this claim, the claimant alleges a left shoulder injury on December 18, 2019. The claimant, and the co-workers' statements indicate the claimant's alleged left shoulder injury occurred sometime in October 2019 but was not timely reported as the pain "went away", but subsequently returned. The claimant's own Incident Report references only the December 2019 incident, with no reference to lifting boxes of chicken on December 18, 2019, as a cause of the new shoulder pain. Plus, Claimant denied requiring medical treatment in the form.

The claimant testified she worked full duty in the period December 18, 2019, through August 31, 2020, but she was "overcompensating with the right arm", which then began hurting. The medical records in evidence contain no credible or persuasive evidence of overcompensation with the right arm or right arm pain developing in the period between December 18, 2019, and August 31, 2020. Similarly, the claimant did not include right shoulder or arm pain in the diagram completed for Dr. Ciccone.

Plus, as found, there are additional inconsistencies in Claimant's testimony when compared with the underlying medical and employment records. These inconsistencies include:

- Claimant alleges she suffered a compensable injury on December 18, 2019. However, on that same day, Claimant completed an Associate Incident Report and specifically noted that she was not seeking medical care. Then Claimant did not seek medical treatment until eight months later.

- When Claimant did seek medical treatment eight months later on August 31, 2020, the medical record from that visit indicates Claimant has had chronic left shoulder pain for over one year. This puts the onset of her pain earlier than the date she contends she injured her shoulder. Moreover, the report from this visit notes that Claimant denied any injury to her left shoulder.
- When Claimant obtained x-rays on September 1, 2020, for her left shoulder, the history she provided at that time indicates she has had chronic left shoulder pain and has problems raising her arm into the air. Absent from the report is any indication that her left shoulder pain is because of an injury.
- On September 11, 2020, when Claimant sought additional medical treatment, she started to complain of additional symptoms such as left sided neck pain, difficulty picking up objects, numbness around her shoulder and the top of her arm, as well as pain on the side of her thumb. And despite reporting additional symptoms, the mechanism of injury is listed as “unknown.”
- Claimant testified that when she reported the incident in December 2019, she assumed they would refer her to a doctor. However, such testimony conflicts with the Associate Incident Report in which Claimant specifically noted that she was not requesting medical care at that time.
- During her testimony, Claimant denied telling the Kaiser provider(s) that she had more than one year of left shoulder pain. She also denied telling them that she did not suffer an injury. The ALJ does not find it credible that Kaiser just came up with that information on their own and put it in her medical records without input from Claimant.

As a result of all the inconsistencies, the ALJ does not find Claimant to be credible. The ALJ does, however, credit Dr. Ciccone’s opinions. His opinions are consistent with the underlying record regarding the inconsistencies in the records he reviewed. Plus, his opinion about Claimant working full duty for about 8 months after the alleged work injury before seeking medical treatment is inconsistent with an injury occurring on December 18, 2019, is also found to be credible and persuasive.

Thus, the ALJ finds and concludes that claimant has failed to prove, by a preponderance of the evidence, that she suffered an injury requiring medical treatment, resulting in disability or permanent physical impairment in the course and scope of her employment with the respondent employer. As a result, Claimant failed to establish that she suffered a compensable injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant’s claim for compensation and benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 10, 2021.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant overcome the DIME's whole person rating by clear and convincing evidence?

- Did Claimant prove by a preponderance his left shoulder extremity rating should be converted to whole person?

- Did Claimant prove entitlement to a general award of medical benefits after MMI?

FINDINGS OF FACT

1. Claimant worked for Employer as a delivery truck driver, primarily delivering food items to restaurants. On February 23, 2018, he was unloading heavy product using a hand truck. The loading ramp became dislodged from the back of the truck, and the product fell to the ground. This forcibly jerked Claimant forward and caused injuries to his left shoulder and neck.

2. Dr. Daniel Olson has been Claimant's primary ATP during the claim. Dr. Olson initially diagnosed neck and left rotator cuff strains, and a possible grade-1 AC joint separation. Claimant was initially treated with physical therapy, acupuncture, and massage, with minimal improvement.

3. Claimant had a left shoulder MRI on March 20, 2018. The radiologist noted mild impingement with arthrosis of the AC joint and calcific tendinitis in the supraspinatus tendon, but no rotator cuff tears.

4. Claimant was evaluated by Dr. Michael Sparr on May 3, 2018. Significant exam findings included a positive Spurling's maneuver and a positive cervical facet loading test. Claimant was scheduled for a left AC joint intra-articular injection to be followed by additional massage therapy and a course of trigger point injections. Dr. Sparr also ordered an EMG and an MRI of the cervical spine.

5. The cervical MRI was performed on June 6, 2018. It showed disc bulging at multiple levels but no surgical lesion. Dr. Sparr opined Claimant's neck pain was related to persistent cervical and parascapular "myofasciitis" and cervical facet dysfunction.

6. EMG testing on June 27, 2018 revealed moderate to severe right carpal tunnel syndrome but no evidence of cervical radiculopathy or brachial plexopathy.

7. Dr. Sparr administered multiple trigger point injections to claimant's neck and paracervical area during 2018. He also provided facet injections and at multiple levels. These injections provided temporary relief but no lasting benefit. Claimant also received a platelet rich plasma injection to his left shoulder from Dr. Leggett.

8. Claimant saw Dr. Karl Larsen, an orthopedic surgeon specializing in upper extremity conditions in August 2018. Dr. Larson diagnosed severe acute CTS secondary to the work injury. He recommended carpal tunnel release surgery.

9. Dr. John Raschbacher performed a medical record review for Respondents on September 4, 2018. Dr. Raschbacher opined the CTS surgery was reasonably needed but was unrelated to the work accident. Claimant eventually had the CTS surgery done under health insurance.

10. Dr. Olson referred Claimant to Dr. Alex Romero, an orthopedic surgeon, to evaluate his persistent shoulder symptoms. Dr. Romero reviewed Claimant's imaging and saw supraspinatus tendinosis and a questionable labral tear. He gave Claimant an injection and ordered an MR arthrogram.

11. Claimant had the MR arthrogram on December 18, 2018. The radiologist saw no evidence of a labral tear and no findings consistent with internal derangement in the left shoulder.

12. On January 2, 2019, Dr. Romero recommended a diagnostic arthroscopy because of persistent symptoms and lack of sustained benefit from the injection.

13. Dr. Raschbacher performed a second record review on January 25, 2019, regarding the proposed shoulder surgery. He thought it unlikely Claimant had suffered an AC joint separation. He opined the calcific tendinitis was neither acute nor work-related. Dr. Raschbacher noted the left shoulder MRI showed no clear tears and opined there was no pathology that was likely to respond to surgery. He recommended the surgery be denied.

14. In early 2019, Dr. Sparr recommended multi-level cervical rhizotomies because of recurrent cervical facet dysfunction and myofascial pain.

15. Dr. Raschbacher reviewed the request for pre-authorization of cervical rhizotomies at Respondents' request. He saw no clear evidence of facet involvement and opined the rhizotomies were not reasonably necessary or related to the work accident. Nevertheless, Claimant underwent left C2, C3, C4, and C5 rhizotomies on April 2, 2019.

16. Dr. Raschbacher performed an in-person IME on August 2, 2019. He noted "a paucity of objective findings" regarding Claimant's shoulder, including an unremarkable MR arthrogram. Similarly, he opined the cervical imaging pointed to no specific pain generator. He saw no evidence that Claimant's complaints were related to his work for Employer. He thought it "likely" Claimant was seeking secondary gain and probably would not improve while his claim was in litigation. Because he believed Claimant's complaints were unsubstantiated by any objective findings or pathology, he saw no reason for any further treatment. Dr. Raschbacher concluded Claimant had been at MMI for almost a year and recommended "no further care, no further limitation of physical activity, and no further diagnostic tests or application of medical resources of any kind." He opined Claimant had no ratable, work-related permanent impairment for his shoulder or neck.

17. Dr. Olson placed Claimant at MMI on September 23, 2019. However, Dr. Olson's report makes clear that his determination of MMI was primarily based on administrative issues as opposed to the medical factors. He opined, "[Dr. Raschbacher's conclusion] that there was nothing wrong with [Claimant] is in stark disagreement with those taking care of him. Since no further treatment is going to be authorized, he was placed at maximum medical improvement." Dr. Olson assigned a 29% whole person rating for Claimant's neck and left shoulder. Dr. Olson's cervical rating included 7% under Table 53 for the three-level rhizotomy.

18. Respondents requested a DIME, which was performed by Dr. Thomas Higginbotham on January 20, 2020. Dr. Higginbotham noted the case was "quite complicated," but concluded it was "biologically plausible" Claimant injured his left shoulder and neck on February 23, 2018. He found no evidence of pre-injury functional limitations or any need for treatment related to the neck or shoulder. Claimant appeared frustrated and became tearful when discussing Dr. Raschbacher's assessment. Dr. Higginbotham reviewed a recent left shoulder MRI (completed on November 21, 2019), which showed a probable AC joint separation and labral tear, and suspected partial supraspinatus tendon tear. He noted Claimant was scheduled for left shoulder surgery soon with Dr. Romero. Dr. Higginbotham determined Claimant was not at MMI pending the shoulder surgery. He also assigned an advisory impairment rating of 20% whole person for the shoulder and neck.

19. Claimant underwent the shoulder surgery on February 13, 2020. Dr. Romero found partial tears of the supraspinatus and subscapularis tendons, a type IIc SLAP tear, and severe inflammation of the subacromial and sub-deltoid bursas. He performed a biceps tenodesis and extensive debridement.

20. Claimant suffered severe complications after the surgery. He developed a systemic staph infection that required treatment with IV antibiotics and two additional surgical cleanout procedures. He also developed a DVT in the left arm. Anticoagulants prescribed to treat the DVT caused a large hematoma in the left shoulder, which had to be surgically drained and evacuated. All told, Claimant underwent four surgeries to his left shoulder, including the original surgery on February 13.

21. The surgery and ancillary treatment were covered by Medicaid. Claimant credibly testified his rehabilitation and long-term recovery was hampered by limitations imposed by Medicaid regarding the number and frequency of physical therapy sessions he was able to attend.

22. Dr. Raschbacher performed a follow-up IME on June 23, 2020. His opinions and conclusions were "unchanged" from the previous IME. He opined the February 13, 2020 arthroscopic surgery "should not have been done," but in any event, it was unrelated to the work accident. He thought the additional surgeries "were appropriate for an infected joint, but not on a work-related basis." He also maintained Claimant did not qualify for a cervical rating because he had no objective pathology.

23. Respondents requested a hearing to challenge Dr. Higginbotham's determination Claimant was not at MMI. Respondents disputed that the shoulder surgery was reasonably necessary or related to Claimant's admitted injuries. A hearing was held before Administrative Law Judge Lamphere on August 13, 2020. Judge Lamphere found Claimant proved the initial February 13 shoulder surgery was reasonably necessary and causally related to Claimant's February 23, 2018 industrial injury. He further concluded the subsequent surgeries were needed to address complications from the first surgery. Judge Lamphere found Respondents failed to overcome the DIME's determination of MMI by clear and convincing evidence. Finally, Judge Lamphere ordered that Claimant be returned to Dr. Higginbotham for a follow-up DIME to assess MMI and impairment.

24. Claimant saw Dr. Higginbotham for the follow-up DIME on December 17, 2020. Dr. Higginbotham opined Claimant was at MMI as of the date of the appointment. He assigned a 14% whole person cervical rating, comprised of 7% for the 3-level rhizotomies and 8% for range of motion. He also assigned an 11% scheduled shoulder rating based on range of motion deficits. The final combined rating was 20% whole person. Claimant's shoulder measurements were generally improved from the first DIME. There is a discrepancy between Dr. Higginbotham's shoulder ROM worksheet and his report regarding Claimant's adduction. His rating worksheet lists 40 degrees of adduction, whereas the report lists 32 degrees of adduction, with a "norm" of 40 degrees. This difference is substantive because it changes the rating by 1%.

25. Dr. Higginbotham recommended no specific post-MMI treatment and opined any further treatment "is primarily in the form of self-care," such as stretching and home exercise, appropriate breathing techniques, and auto-massage with a foam roller. There is no indication Dr. Higginbotham inquired about or knew Claimant was still taking Tramadol daily for pain and aspirin as a prophylactic for future blood clot issues.

26. Insurer filed a Final Admission of Liability on January 20, 2021, based on Dr. Higginbotham's DIME report. The FAL admitted for 14% whole person cervical impairment and 11% scheduled impairment for the shoulder. The FAL invoked the statutory benefit "cap" of $87,470.18 because the combined whole person rating was less than 26%. The FAL denied medical benefits after MMI. Claimant timely objected to the FAL and requested a hearing.

27. Claimant saw Dr. Gary Zuehlsdorff for an IME at his counsel's request on June 21, 2021. Claimant reported 4-7/10 shoulder pain and estimated he had achieved roughly 40-50% recovery from the shoulder injury. He felt popping and increased shoulder pain with use of his arm, and it fatigued easily. Regarding the neck, Claimant felt only approximately 20% improved, with constant 4-7/10 pain. He initially received significant benefit from the rhizotomy, but it has since "worn off." Claimant described "dramatic reduction and ADLs because he cannot really turn his head hard to the left or right significantly impacting his ability to drive, especially a truck." Claimant explained he had lost his CDL "secondary to primarily use of his left arm and decreased range of motion of his neck." Claimant was taking Ultram (tramadol) three times a day for pain control. Examination of the shoulder showed significant range of motion loss and positive impingement signs, including Hawkins, Neer's, and Speed's tests. Dr. Zuehlsdorff did not

elicit any clear crepitus from the shoulder. With respect to the neck, Claimant had tenderness and increased spasm in the left lateral trapezius region and posterolateral paravertebral musculature. Cervical range of motion was "dramatically" diminished. Dr. Zuehlsdorff assigned a 15% extremity rating for shoulder, which converts to 9% whole person. He also calculated a 20% whole person cervical rating, including 8% for the 3-level rhizotomy and 13% for range of motion. Dr. Zuehlsdorff's final combined rating was 27% whole person.

28. Dr. Zuehlsdorff testified at hearing to elaborate on the opinions expressed in his report. Citing the Division's Impairment Rating "Tips," he opined Dr. Higginbotham erred by assigning 7% for the cervical rhizotomies. According to Dr. Zuehlsdorff, the correct Table 53 rating is "seven plus one from [sections] II(C) and II(F) that is recommended for a three- or four-level rhizotomy." He testified different range of motion measurements account for the lion's share of the difference between his overall rating and Dr. Higginbotham's rating. He acknowledged range of motion measurements will vary from day to day, based on factors such as "the patient's emotional status, how he slept, and the weather." He opined, "[Claimant's] range of motion probably falls [] sometimes as high as I'm doing, potentially sometimes worse. And then, some days, where Dr. Higginbotham puts it. That's the reality . . . ." Dr. Zuehlsdorff testified he is not arguing Dr. Higginbotham performed the measurements improperly.

29. Dr. Zuehlsdorff opined Claimant's shoulder impairment should be converted to whole person because "the severity of the injury . . . resulting in four total surgeries, resulting in much less rehab that he should have gotten . . . it would be most unexpected do not have some referred pain from the shoulder impacting the neck." He also cited limitations on Claimant's ability to perform routine activities.

30. Dr. Zuehlsdorff was "surprised" that Dr. Higginbotham recommended no maintenance care given Claimant's "moderately severe" injuries, postoperative complications, and significant ongoing symptoms. He opined Claimant should have, "at least . . . medication management." He also thought Claimant should be able to follow-up with Dr. Olson, Dr. Romero, and with Dr. Sparr for consideration of possible repeat rhizotomies. Dr. Zuehlsdorff opined Claimant's current dose of tramadol was reasonable and below the level commonly prescribed in other cases. He opined Claimant's limited post-operative physical therapy was "not . . . even close to the amount he was supposed to get" had he not been required to use Medicaid.

31. Dr. Raschbacher testified at hearing consistent with his reports. He disagreed that the shoulder rating should be converted, opining this would be duplicative of the cervical rating. Dr. Raschbacher opined maintenance care is not necessary, as there is nothing more to do for the shoulder, with no further defects to address. In particular, the interventions have not led to improved function, so no further interventions such as injections or physical therapy are needed or indicated. Dr. Raschbacher did not recommend ongoing medication maintenance because the small dose Claimant is taking would not have any ongoing efficacy given the tolerance effects, and the proper dose of an anti-inflammatory medication should have equal pain-relieving effects. He Dr. Olson had previously recommended a year of Tramadol as maintenance care, which had

already passed. Dr. Raschbacher disagreed that Dr. Higginbotham should have given 8% for the three-level rhizotomy. He opined 7% was the correct rating under Table 53.

32. Claimant credibly testified Dr. Olson referred him to Dr. James Pollack for ongoing pain management. Dr. Pollack is prescribing tramadol 50mg three times per day. Claimant displayed a prescription bottle to corroborate his testimony. Claimant also testified he takes one aspirin daily to protect against further blood clots.

33. Claimant failed to overcome the DIME's whole person rating by clear and convincing evidence. The 7% Table 53 rating assigned by Dr. Higginbotham is the correct rating under the AMA Guides and the Impairment Rating Tips. There is no credible evidence to suggest Dr. Higginbotham erred with respect to his range of motion measurements. The differences between Dr. Higginbotham and Dr. Zuehlsdorff's range of motion ratings merely reflect expected day-to-day variability.

34. Because Claimant failed to overcome the DIME's 14% cervical rating, issues relating to the shoulder rating are moot. Even if Dr. Zuehlsdorff's shoulder rating were adopted, the overall whole person rating would be only 22% (14% combined with 9% = 22%). Claimant's overall rating is less than 26%, and he is barred from receiving any additional PPD benefits by the indemnity benefit "cap."

35. Claimant proved he requires future medical treatment to relieve the effects of his injury and prevent deterioration. Claimant's testimony regarding ongoing symptoms and limitations related to his neck and shoulder was credible. Dr. Zuehlsdorff's opinions regarding medical treatment after MMI are credible and more persuasive than the contrary opinions offered by Dr. Raschbacher.

CONCLUSIONS OF LAW

A. Overcoming the DIME regarding impairment

A DIME's determination regarding whole person impairment is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). The clear and convincing burden also applies to the DIME's determination of which impairments were caused by the work accident. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1988). The party challenging a DIME rating must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

Deviations from rating protocols outlined in the *AMA Guides* are relevant but not dispositive in determining whether the DIME rating has been overcome. *Corley v. Bridgestone Americas, Inc*., W.C. No. 4-993-719-004 (February 26, 2020). Similarly, the ALJ may consider but is not bound by the Division's Impairment Rating Tips or the Level

II accreditation curriculum. *Vuksic v. Lockheed Martin Corporation*, W.C. No. 4-956-741-02 (August 4, 2016) (rating “Tips” are not “merely guidance” and “not binding rules”).

As found, Claimant failed to overcome the DIME’s whole person cervical rating by clear and convincing evidence. Dr. Zuehlsdorff was mistaken that Claimant should receive an 8% whole person rating under Table 53. The Impairment Rating Tips state,

> To rate rhizotomies, the total number of levels at which a rhizotomy is performed should be divided by 2. A two-level bilateral or unilateral rhizotomy receives a rating of II(C) because II(C) accounts for the initial two levels. ***Three or four-level rhizotomies receive a II(C) plus II(F) 1% for the additional levels***. (Emphasis added).

The applicable rating for the cervical spine under Table 53 II(C) is 6% whole person, not 7% as Dr. Zuehlsdorff opined.[1]

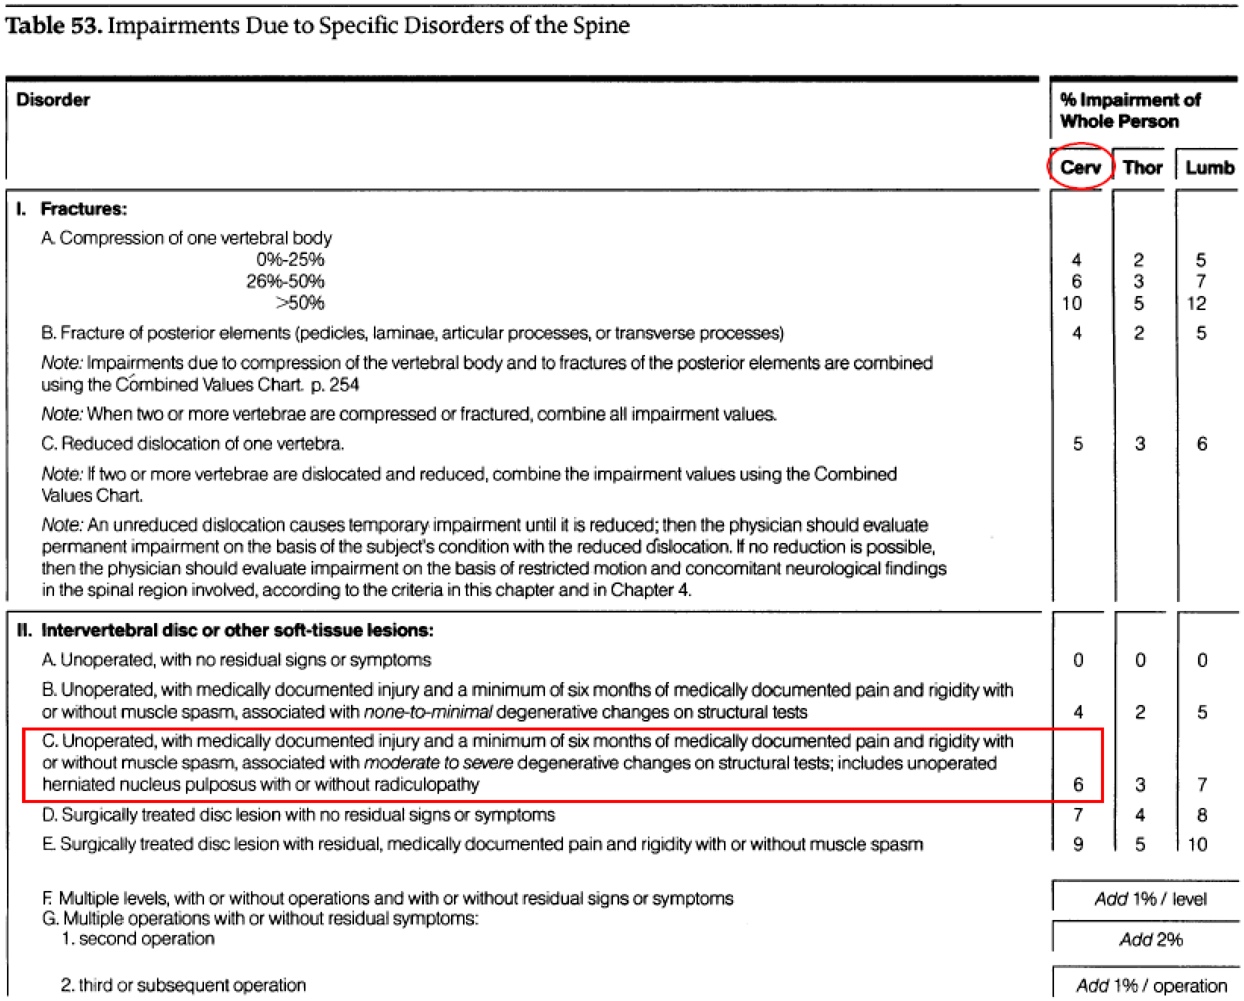

Table 53. Impairments Due to Specific Disorders of the Spine

Disorder	% Impairment of Whole Person		
	Cerv	Thor	Lumb
I. Fractures:			
A. Compression of one vertebral body			
0%-25%	4	2	5
26%-50%	6	3	7
>50%	10	5	12
B. Fracture of posterior elements (pedicles, laminae, articular processes, or transverse processes)	4	2	5
Note: Impairments due to compression of the vertebral body and to fractures of the posterior elements are combined using the Combined Values Chart. p. 254			
Note: When two or more vertebrae are compressed or fractured, combine all impairment values.			
C. Reduced dislocation of one vertebra.	5	3	6
Note: If two or more vertebrae are dislocated and reduced, combine the impairment values using the Combined Values Chart.			
Note: An unreduced dislocation causes temporary impairment until it is reduced; then the physician should evaluate permanent impairment on the basis of the subject’s condition with the reduced dislocation. If no reduction is possible, then the physician should evaluate impairment on the basis of restricted motion and concomitant neurological findings in the spinal region involved, according to the criteria in this chapter and in Chapter 4.			
II. Intervertebral disc or other soft-tissue lesions:			
A. Unoperated, with no residual signs or symptoms	0	0	0
B. Unoperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with *none-to-minimal* degenerative changes on structural tests	4	2	5
C. Unoperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with *moderate to severe* degenerative changes on structural tests; includes unoperated herniated nucleus pulposus with or without radiculopathy	6	3	7
D. Surgically treated disc lesion with no residual signs or symptoms	7	4	8
E. Surgically treated disc lesion with residual, medically documented pain and rigidity with or without muscle spasm	9	5	10
F. Multiple levels, with or without operations and with or without residual signs or symptoms	*Add* 1% / level		
G. Multiple operations with or without residual symptoms:			
1. second operation	*Add* 2%		
2. third or subsequent operation	*Add* 1% / operation		

[1] It appears Dr. Zuehlsdorff inadvertently referenced the II(C) lumbar rating of 7%.

Everyone agrees an additional 1% is required for Claimant's 3-level procedure, which produces a final Table 53 rating of 7%. Dr. Higginbotham's rating is correct.

B. Shoulder impairment is moot

Section 8-42-107.5 limits the combined total of temporary disability and permanent partial disability benefits a claimant may receive based on their final impairment rating. For Claimant's date of injury, the applicable cap is $87,470.18 for a whole person rating less than 26%. Claimant's overall final whole person rating is less than 26%. Even if we were to analyze Claimant's shoulder impairment under the more lenient preponderance standard and adopt Dr. Zuehlsdorff's 15% extremity rating, the overall combined whole person rating would still be less than 26%. The 15% extremity rating converts to 9% whole person, which combines with Dr. Higginbotham's binding 14% cervical rating to produce an overall rating of 22% whole person.

Respondent has already admitted for $87,470.18 in temporary and permanent partial disability benefits. Because Claimant failed to prove he has impairment greater than 25% whole person, a determination of whether his shoulder rating represents a scheduled or whole person impairment will have no impact on his compensation. Accordingly, Claimant's request to convert the shoulder is moot and will not be addressed.

C. Medical benefits after MMI

The respondent is liable for medical treatment after MMI reasonably necessary to relieve the effects of the injury or prevent deterioration of the claimant's condition. Section 8-42-101; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Proof of a current or future need for "any" form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). There is no requirement that a particular course of treatment be articulated or that the claimant actually be receiving treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the employer's right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003).

As found, Claimant proved he is entitled to a general award of medical benefits after MMI. Claimant had a significant injury and extensive complications related to his shoulder surgery. Additionally, he received less physical therapy than he should have because he had to use Medicaid. Claimant credibly described ongoing symptoms and associated functional limitations caused by his injuries. The low dose of tramadol Claimant is taking is reasonable, with no persuasive suggestion in the record of misuse. Dr. Zuehlsdorff's opinions regarding medical treatment after MMI are persuasive. Even if Claimant's symptoms could be managed equally as well with OTC analgesics and NSAIDs (as argued by Dr. Raschbacher), such medications would still support an award of *Grover* benefits. *E.g., Guillotte v. Pinnacle Glass Company*, W.C. No. 4-443-875 (November 20, 2001) ("the fact [a] medication is available without a prescription does not vitiate its compensability or nullify the award of *Grover*-style medical benefits."); *Mann v.*

Ridge Erection Company, W.C. No. 4-225-122 (April 4, 1996) (no distinction between "over the counter" medications and prescribed medications for *Grover* benefits); *Ashton-Moore v. Nextel Communications, Inc*., W.C. No. 4-431-951 (September 12, 2002) (recommendation for OTC anti-inflammatories "as necessary for pain" can support a *Grover* award).

ORDER

It is therefore ordered that:

1. Claimant's request to overcome the DIME's whole person impairment rating is denied and dismissed.

2. Claimant's request to convert the admitted scheduled impairment ratings to the equivalent whole person ratings and/or increase his scheduled rating is denied and dismissed as moot.

3. Insurer shall cover all medical treatment from authorized providers reasonably needed to relieve the effects of Claimant's injuries and prevent deterioration of his condition.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-113-756-004

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the left carpal tunnel release surgery, as recommended by Dr. Karl Larsen, is reasonable, necessary, and related to her 4/29/2019 work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. The parties have stipulated that any injuries which occurred on April 29, are compensable, and ultimately stem from Claimant losing her balance while wearing a boot, which had been issued in connection with a separate admitted claim for Claimant's right ankle. Therefore, independent of the above, the course and scope of this 4/29/2019 incident need not be proven for compensability purposes. (Ex M, and discussion during hearing).

2. Claimant has worked as a massage therapist for 16 years. She began working for this Employer as a massage therapist on November 22, 2018.

3. Before this incident in question, Claimant had earlier reported that she tripped on a cord at work around February 19, 2019, and caught her fall with her outstretched arms**.** The associated diagnosis was acute pain of both wrists (Ex. B, p.5).

4. After regular visits and conservative therapy, Claimant's symptoms for the February 19, 2019 fall resolved. On 4/29/2019, Claimant had her final visit with Dr. George Johnson at Concentra for this 2/19/2019 fall. (Ex. B, p. 22). In his report (signed at 3:13 pm on 4/29/2019), he noted "At MMI. No impairment. Full Work. No permanent restrictions. No maintenance care. No medications." *Id.* At no point in his report does he note that Claimant ever mentioned to him that she had fallen (now for a second time) on her wrists [for this claim] on that very same day of her final visit. Nor does he mention that Claimant was now in a walking boot for her ankle.

5. In a visit to Champions Family Medical on 5/17/2019 for "left ankle swelling", Claimant reported to Kayla Previdi, NP, "**She was given a soft boot** [for her right ankle, on the admitted claim] **on April 29, 2019** and one week later her left ankle started to swell and become painful." (Ex. A, p. 3)(emphasis added). NP Previdi's report makes no mention of a *fall* which had also occurred on 4/29/19; just the *boot. Id.*

6. At hearing, Claimant testified that on April 29, 2019, she again tripped and fell, this time due to wearing a boot on her ankle, which had been injured due to an admitted claim involving this Employer.

Q Now then, you've alleged that as a result of your ankle injuries, you tripped and fell on – I have it down as April 29th, 2019. Is that correct?

A Yes

Q Okay. And you landed on your hands when that happened?

A Well yes. I fell into a chair. Yes.

Q And so, so that's when you believe that you injured your left upper extremity, your hand, your wrist on 4/29/2019?

A That's when I know I did.

Q Okay. Now you've not worked with your employer since that fall on, on *February* 29, 2019. Correct? [Note*presumably intended to state *April* 29].

A Correct. (Transcript, pp. 25-26).

7. Later in the hearing, Claimant was asked:

Q [Claimant Redacted], before you started work for this employer on November 22, 2018, were you having any problems with your left wrist?

A None

Q Were you seeing *any* medical doctors for *any* treatment for your left wrist before November 22 2018?

A No. (Transcript, p. 27).

Claimant also stated at hearing that she is not working currently, and that *it is due to this injury.* (Transcript, p. 20).

8. However, the first medical report referencing a 4/29/2019 injury is dated November 6, 2019. (Ex. E, p. 112), wherein Claimant was seen by Stephanie Noble PA-C, who noted: "She sustained another injury at work in April. She states this was due to the boot. She tripped and fell landing on outstretched arms injuring both wrists both elbows and her right shoulder. **Due to the ankle injury *she has blown off the wrist and elbow pain*** but she did declare it at the time of the injury." *Id*. MRIs were ordered, with *Impression* of *Bilateral wrist chronic pain. Id* at 113.(emphasis added).

9. The left wrist MRI was conducted on 12/20/2019. (Ex. K). Under *Clinical*, it noted: "Pain in bilateral wrists after a fall in April 2019. **History of left scapholunate ligament tear.**

Bilateral *carpal tunnel surgery 2006.* Besides noting possible cysts or erosions, the *Impression* noted: **Arthritic** change in carpal bone. Id. (emphasis added).

10. Claimant saw Orthopedist Karl Larsen, MD on 1/13/2020. (Ex. E, p. 118). At this visit, Claimant was complaining more of right lateral elbow pain than right wrist today. Her left side continues to have discomfort more in the ulnar and dorsal part of the wrist especially with weightbearing activities." Id. *Mild* tenderness was noted with left wrist extension. He noted the left MRI had subtle findings of ulnar carpal abutment with mild edema in the ulnar lunate and some mild cystic changes throughout the carpus, and believed she had symptoms of ulnocarpal abutment. *Id.* An injection was performed that day.

11. On January 15, 2020, Dr. Johnson at Concentra diagnosed left wrist sprain and noted as follows "I am not sure that is work related. She has not worked for over 8 months. She states that despite this the condition is NOT improving" (Ex. B, p. 26).

12. Dr. Larsen reevaluated Claimant on March 2, 2020 at which he stated, in part, as follows:

> [Claimant] has multiple foci of arm pain. I have discussed that she does not have anything that is dangerous. The things we have been able to identify include lateral epicondylitis in the right elbow, general degenerative changes in the right wrist and ulnocarpal abutment in the left wrist. None of these are so severe that they rise to the need of aggressive intervention, though she feels like she has nowhere else to go" (Ex. E, p. 122).

13. Claimant next saw PA-C Noble on 1/6/2021 (Ex. E, p. 124). "She complains of bilateral arm pain and hand numbness and tingling. Her left is much worse than her right. *She has pain at the wrists and elbow**s***…She appears quite miserable today on exam as both arms are quite painful, but the left seems to be much worse." (emphasis added). PA-C Noble put under her *Impression*: bilateral carpal and cubital tunnel syndrome. *Id*.

14. Claimant returned to Dr. Larsen on 2/22/2021, wherein he noted that "She continues to complain of ***multiple foci of diffuse arm pain*** and intermittent numbness and tingling now in the hands she has aching discomfort that radiates into her forearms it is present on both sides despite previous carpal tunnel release in the remote past on the right side. (Ex. E, p. 126)(emphasis added). He noted that the carpal tunnel release surgery under consideration "may not alleviate all her symptomology." *Id* at 127.

15. On March 2, 2021, Dr. Lars**e**n requested authorization for left carpal tunnel release surgery (Ex. E, p. 129). Respondents denied prior authorization, and scheduled an IME with Wallace Lars**o**n, MD. (Ex. F).

16. On March 25, 2021, Claimant attended the IME with Dr. Larson. In his report, (Ex. I) Dr. Larson opined that left carpal tunnel surgery recommended by Karl Larsen, MD was not a reasonable and necessary treatment for Claimant's left wrist symptoms. He also opined that the proposed surgery was not related to Claimant's work injury.

17. Dr. Larson also responded if his record review supported a new injury from 4/29/2019, by noting: "medical records do not support the allegation of any new injuries related to a 4/29/2019 fall. A note of 11/6/2019 reports the patient's [first reported] statement of a fall 4/29/2019. *Multiple notes prior to that do not indicate any history* of any upper extremity injuries relative to a 4/29/2019 fall. (Ex. I, p. 163)(emphasis added).

18. Dr. Larson testified at hearing, consistently with his written IME report. He is a board-certified orthopedic surgeon whose sub-specialty is hand surgery. At hearing, Dr. Larson estimated that he performs 300 hand surgeries per year.

19. Dr. Larson testified that his understanding of how Claimant allegedly injured her left arm on April 29, 2019 as follows: falling forward into or toward a chair and the right arm was up on the chair and the left hand went down toward the floor.

20. Carpal tunnel syndrome ("CTS") is the result of pressure on the median nerve going through the wrist with a distribution of numbness, typically, in the thumb, index, long, and part of the ring finger. CTS is a constellation of symptoms and not "just an electrical finding or abnormality on EMGs." (Transcript, p. 39).

21. Dr. Larson noted that *associating* certain activities with CTS is different than *causation.* He testified:

> That the *only activities* that really seem to be a causation factor in CTS is *repetitive impact or vibration,* such as jackhammer and that sort of thing that have seen to be associated with CTS as a cause, as a true causation.
>
> There is probably some suspicion, although not…medically established that…*persistent strong gripping and abnormal or…awkward positions can*…cause some CTS...[but not typing or computer usage]. (Transcript, p. 40).
>
> [Can acute trauma cause CTS?]
>
> There...really is not literature *showing CTS associated with …trauma…except* for…very rare reports and even some of those are a bit questionable in terms of whether it's a true causation. There's very rare reports of…a single traumatic event causing CTS. Those are in the range of kind of rare and unconfirmed type of events.
>
> But the things that...are really talked about with orthopedic literature in CTS and trauma really related to things with fairly severe trauma, especially just radius fractures. Transcript, pp. 42-43)(emphasis added).
>
> [CTS caused by acute traumatic event, also is…] really secondary more to the radius fracture that is not only out of place and puts pressure basically is the nerve has to be pulled around the corner of a fracture that's

> out of place, but also quite a bit of swelling in the area of the carpal tunnel because there's bleeding around the fracture. Id.

22. In his own practice, Dr. Larson could not recall a case of CTS caused by trauma requiring surgery, unless that CTS was also accompanied by a wrist fracture or dislocation. At most, Claimant suffered at most a very mild trauma. *Id* at 44.

23. Claimant's reported fall on April 29, 2019 did not involve a fracture or other identifiable anatomic injury (Transcript p. 44; *also see* Ex. E, p. 113).

24. When Dr. Larson examined Claimant on March 25, 2021, he found no evidence of muscle atrophy at the base of Claimant's thumbs. In cases of traumatic carpal tunnel syndrome, muscle atrophy would, likely, begin within a couple of months of the trauma (Transcript pp. 47-48).

25. Semmes-Weinstein testing is testing that utilizes various thicknesses of monofilament fiber to test sensation in body structures that might be neurologically compromised. The smallest fiber exerts .07 grams of force. The next smallest fiber is the 3.61 fiber that exerts .04 grams of force. These fibers of various sizes are pressed against the skin exerting forces of as little as .07 grams to as much as 300 grams (Transcript pp. 51-52).

26. Regarding Semmes-Weinstein testing, virtually everyone with an intact nerve can sense fiber exerting 0.4 grams of force. Only a person with a completely severed nerve---not just a damaged or bruised nerve---would be unable to feel the largest fiber that that exerts 300 grams of force. *Id.*

27. Dr. Larson testified that he conducted Semmes-Weinstein testing at the March 25, 2021 IME. During this testing on the left upper-extremity, Claimant reported that she could not feel any of the monofilament fibers, even those fibers that involved the strongest forces, except when the force of the fiber moved Claimant's arm. *Id* at 53. When Dr. Larson applied the filaments to Claimant's upper-extremities, Claimant was looking away, and not able to see while these fibers were applied to her skin. *Id* at 54.

28. During the Semmes-Weinstein testing, Dr. Larson observed that when he applied fiber to Claimant's arm, Claimant's arm "jumped" or moved at times when Claimant said that she could not feel the fiber. *Id.* (*Note: when asked about this on rebuttal, Claimant was 100% sure that every time Dr. Larson touched her arm, she told him "yes", and that her right arm jerked one time, but her left arm never did so) (Transcript, pp. 110-111).

29. Dr. Larson testified that when he examined Claimant, her reported upper-extremity numbness was consistent with 'glove-and-stocking' anesthesia, which is a circumferential lack of feeling through the entire hand, wrist, and forearm. As such, that implicates all nerve distributions through the upper extremity**.** *Id* at 56.

30. Glove-and-stocking anesthesia is a classic non-physiologic report from a patient that cannot be explained based on any physical problem or combination of physical problems**.** *Id.* Glove-and-stocking anesthesia is not consistent with any known physical disorder and, especially, not with CTS**.** *Id.*

31. Claimant's left upper-extremity studies evidenced mild electrical abnormalities. EMG testing of Claimant's left upper extremity showed that the distal motor latency testing was 4.6 which was slightly slower than expected (4.2 or lower). The amplitude testing was normal where Claimant's was measured at 6.5 and anything above 5.0 is considered normal. EMG testing of sensory fibers was, slightly, abnormal at 3.7 where the normal reading is less than 3.5-3.6. *Id* at 60.

32. Dr. Larson noted that as many as 50% of people who have borderline abnormal EMG testing results are asymptomatic. *Id* at 62.

33. Claimant's left upper-extremity EMG studies were "borderline" abnormal, and unless EMG studies are extremely abnormal, EMG studies, without further clinical correlation, does not establish a diagnosis of CTS. *Id.*

34. Clinical correlation of CTS means numbness restricted to the median nerve distribution (thumb, index, and long fingers) and, possibly, muscle atrophy. *Id* at 64. The glove-and-stocking distribution of Claimant's left upper-extremity symptoms is not consistent with CTS. *Id* at 65. Claimant's reported glove-and-stocking anesthesia cannot be explained by reference to damaged or compressed nerves, and it is a classic non-physiologic finding absent diabetic neuropathy**.** *Id.*

35. Dr. Larson did acknowledge that a number of reports from Claimant's various medical providers did not note any non-physiologic symptoms or behaviors. He did not perform a Phalen's test, due to pain behaviors exhibited by Claimant. He also questioned the reliability of that test. He could not recall performing a Tinel's sign, believing that such a test was not a good predictor of CTS, even though it is commonly used. He further acknowledged that Claimant's complaint of increase pain from driving longer distances [which Claimant did complain of] is a possible indicator of CTS.

36. When asked about Claimant's reported response to the injection into her left wrist, Dr. Larson noted:

> A It would be suggestive that it was *coming from her wrist rather than her CTS*, but I don't think it would be truly diagnostic, especially put in into the context of the multiple non-physiological symptoms.
>
> But *it would be suggestive the pain was coming from her wrist joint rather than her carpal tunnel area.* (Transcript, pp. 99-100)(emphasis added).

37. Dr. Larson was asked if he was in agreement with *WCRP 17 Exhibit 5 (G)(1)(d)* of the Medical Treatment Guidelines, which states:

> **"**[n]o one test is predictive of carpal tunnel syndrome. Multiple tests should be recorded with the patient's exact response. Final diagnosis is dependent on a correlation of symptoms, physical exam findings, and nerve conduction velocity (NCV) testing as any of these alone may have a false positive or false negative result."

A I think I would agree that's a reasonable statement. (Transcript, pp 104-105)

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. The ALJ finds that each medical expert offering opinions has done so in good faith, and with a sincere effort to provide the ALJ valuable expert information. It is also noted that as a treating physician, Dr. (Karl) Larsen has recommended treatment (with reservations as noted) that he sincerely believes might help Claimant address her symptoms. As such, the ALJ will determine these issues on the basis of *persuasiveness*, and not *credibility* per se.

D. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits, Reasonable and Necessary, Generally

E. Claimant bears the burden of establishing entitlement to any specific medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S*.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

Reasonable and Necessary, as Applied

F. As noted, Dr. (Karl) Larsen has ultimately opined that treating Claimants symptoms with a left carpal tunnel release is a *reasonable* approach to take. He appears to equivocate himself on whether such procedure is actually *necessary.* He noted multiple foci of diffuse arm pain as reported by Claimant. The pain was reported on both sides, despite a prior right CTS release in Claimant's remote past. He noted that this CTS release "may not alleviate all her symptomology." One year prior, he had noted that none of Claimant's symptoms were "so severe that they rise to the need of aggressive intervention."

G. By contrast, Dr. Larson has opined that there is no anatomic correlation, nor test results, to confirm what Claimant describes. He has gone into far greater detail on this issue than has Dr. Larsen. (In all fairness to Dr. Larsen, it was not necessarily his role as an ATP to 'disprove' or aggressively question Claimant's need for such treatment). Nonetheless, the Semmes-Weinstein testing raises serious issues regarding Claimant's alleged pain generator. Dr. Larsen never addressed this issue after the fact to dispel any misconceptions that Dr. Larson might harbor. The glove-in-stocking anesthesia raises issues, not addressed by Claimant, about identifying a surgical target. The EMG testing, while *consistent* with possible CTS, fell short of *compelling* such a conclusion. Dr. Larson opined that Claimant's response to the injection was suggestive of an issue with her *wrist,* especially with an apparent history of a scapholunate ligament tear (not otherwise disclosed) noted in the MRI, with findings of *arthritic* changes to the carpal bone. And a review of Claimant's reported symptoms throughout her treatment reveals migratory and varying pain complaints.

H. The ALJ concludes that while Claimant may have shown that a left CTS release might be a *reasonable* surgical option, she has not shown that such procedure is medically *necessary* to relieve her of her symptoms.

Medical Benefits, Related to Work Injury, Generally

I. Further, a Claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those that flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), simply because a Claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted, "[C]orrelation is not causation." Whether Claimant met the burden of proof to establish the requisite causal connection between the industrial injury and the need for medical treatment is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Related to Work Injury, as Applied

J. Regardless of the wisdom of proceeding with the CTS release, Claimant has not shown that such procedure (even if it might later be shown to have helped considerably) is *causally related* to her fall at work. If anything, Claimant has not shown herself to hold back on her pain complaints, or to note deficiencies in her treatment. Claimant testified that *after this fall of* 4/29/2019, she has not returned to work. Yet (and as noted by Dr. Larson in his report) Claimant never mentioned this fall to any medical provider until five months had elapsed, despite numerous orthopedic visits for her ankle. The ALJ is skeptical of her claim (made on 11/6/19) that she "blew off" the wrist and elbow pain due to the ankle injury for 5 months, *if she had never returned to work since this 4/29/2019 incident.* While she apparently reported this 4/29/19 *incident* itself to Employer, more pain complaints would have surfaced before November. Claimant's answer at hearing seemingly implies that it was this 4/29/19 incident that rendered her disabled.

K. Dr. Larson addressed the possible causation issues of CTS, noting that the most likely culprit for a CTS diagnosis is repetitive impact or vibration. Less likely, but still possible, is persistent strong gripping or awkward positions. Only rarely would acute trauma result in such diagnosis; in such unlikely event, it would have been accompanied by some other acute, and serious, trauma, such as a dislocation or radius fracture. At most, Claimant's 4/29/2019 incident was mild trauma, with no identifiable anatomic injury. Muscle atrophy, to be expected with longstanding CTS, was absent upon his exam. As noted previously, as the ATP, Dr. Larsen might have focused less on causation issues, since his emphasis was rightfully on treatment; nonetheless, Dr. Larson’s opinions on causation remain unrebutted. Indeed, Dr. Larsen does not appear to address causation/relatedness issues in his reports much at all.

L. Taking all the evidence into account, Claimant has not shown, by a preponderance of the evidence, that the condition she now complains of (whatever that might be) was proximately caused by her work incident of 4/29/2019. The proposed CTS release is therefore *not related* to her work injury.

ORDER

It is therefore Ordered that:

1. Claimant’s request for left carpal tunnel release surgery is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is* ***highly recommended*** *that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

Colorado Springs, Colorado 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-161-225-001

ISSUES

1. Determination of Claimant's authorized treating physician (ATP).

2. Whether Respondents proved by a preponderance of the evidence that Respondents are entitled to suspend or terminate Claimant's temporary disability benefits pursuant to § 8-42-105(2)(c), C.R.S., due to Claimant's failure to attend a demand appointment with Kathryn Buikema, D.O.

FINDINGS OF FACT

1. Claimant is an auto mechanic who sustained an admitted injury to his back arising out of the course of his employment with Employer.

2. On December 30, 2020, Claimant was changing the axle seals on a car using a breaker bar to remove bolts from the vehicle. While doing so, Claimant felt a sharp pain in his lumbar spine. Claimant immediately notified his supervisor, Travis D[Redacted], of the injury. Claimant testified he told Mr. D[Redacted] he would like to wait to see if the pain would resolve. After a few minutes, Claimant told Mr. D[Redacted] he needed to go to the emergency room. Mr. D[Redacted] did not provide Claimant with a list of designated providers.

3. At approximately 10:00 a.m. on December 30, 2020, Claimant was seen at the emergency department (ED) at Good Samaritan Medical Center, in Lafayette, Colorado, where he was diagnosed with acute right-sided low back pain without sciatica. The ED physician recommended that Claimant see his primary care provider as soon as possible for advanced imaging and pain control. (Ex. 1)

4. Claimant credibly testified that later in the day on December 30, 2020, Victor R[Redacted], owner of Employer, texted Claimant to ask how he was doing and asking him to keep Employer informed. Mr. R[Redacted] did not provide Claimant with a list of designated providers.

5. Due to the New Years' holiday, Claimant was not able to immediately see a specialist or his primary care provider. On January 5, 2021, Claimant saw Michael Tracy, D.O., and Daniel Manilla, PA-C, of Integrated Sports & Spine (IS&S) for his work-related injury. Claimant had a previous or then-existing physician-patient with Dr. Tracy and had seen him for non-work-related issues prior to his December 30, 2020 injury. The examination performed by Dr. Tracy and/or Mr. Manilla on January 5, 2021, was directed to Claimant's lower back pain. Claimant was prescribed oxycodone and diazepam. Dr. Tracy ordered a lumbar MRI and scheduled Claimant for a return appointment after the

MRI was completed. On January 7, 2021, Mr. Manilla authored a letter recommending that Claimant avoid working for the next 15 days due to his injury. (Ex. 2).

6. On January 6, 2021, Respondents filed an Employer's First Report of Injury (EFROI) regarding Claimant's December 30, 2020 injury. The EFROI indicates Employer was notified of Claimant's injury on January 4, 2021. (Ex. A).

7. Insurer prepared a letter to Claimant which included information concerning workers' compensation claims and a Designated Provider List (DPL) compliant with § 8-43-404 (5)(a)(I)(A), C.R.S. The letter indicates it was "prepared" on January 6, 2021, but does not indicate whether the DPL was provided to Claimant through mail or another way, or the date the DPL was provided. (Ex. 6).

8. On January 7, 2021, Insurer sent correspondence to IS&S requesting copies of office notes, a Doctor's First Report of Occupational Injury or Illness Form 5021, and medical records related to Claimant's treatment. (Ex. 7).

9. On January 11, 2021, Claimant underwent the lumbar MRI ordered by Dr. Tracy. (Ex. 3).

10. Claimant returned to Dr. Tracy's office on January 14, 2021, for a consultation regarding the outcome of his MRI. Dr. Tracy scheduled Claimant for a bilateral epidural steroid injection with Dr. Feldman the following week and indicated that following the epidural he would be provided with a referral for physical therapy. In addition, Dr. Tracy prescribed oxycodone and morphine for pain. (Ex. 2).

11. On January 14, 2021, Claimant receive the DPL which listed the following providers: Concentra Medical Center; Sandra Mason, D.O. - SCH Health Medical Group-Denver; Nextcare Urgent Care; and Lucina Kidd – Family Medical Associates. (Ex. E).

12. On January 18, 2021, Claimant sent an email to Insurer attaching a signed copy of the designated provider list and indicating that he "received the Designated Provider List on January 14, 2021." (Ex. 8).

13. Claimant credibly testified that in a telephone call with Insurer's adjuster, he was advised that he was required to see one of the physicians identified on the DPL. Consequently, Claimant scheduled an appointment with SCL Health Medical Group, and saw Kathryn Buikema, D.O., on January 25, 2021, believing that the appointment was mandatory.

14. On January 22, 2021, Respondents filed a General Admission of Liability, admitting for medical benefits, and temporary total disability benefits. (Ex. B).

15. Following the January 25, 2021 appointment with Dr. Buikema, Claimant was scheduled for a follow-up appointment for February 2, 2021. Claimant did not attend the February 2, 2021 appointment. Claimant testified that, after consultation with his attorney, he did not believe that he was required to attend the appointment with Dr. Buikema because he did not believe she was a "valid" authorized treating physician.

16. On February 3, 2021, Claimant was again seen at Dr. Tracy's office. The February 3, 2021 treatment note indicates that Claimant was to continue "his physical therapy guided home exercise program as tolerated." (Ex. 2).

17. On February 9, 2021, Claimant's counsel wrote to Insurer indicating that Claimant "was not presented with a choice of four providers at the time of injury," and requesting that Respondents provide written verification of acceptance of IS&S/Dr. Tracy as Claimant's ATP. (Ex. 9). Claimant continued to seek treatment through IS&S, and had follow-up visits on March 3, 2021, March 31, 2021, April 22, 2021, May 24, 2021, June 23, 2021, and July 20, 2021. (Ex. 2).

18. On March 29, 2021, Trina Castillo, a Case Manager for SCL Health, wrote to Claimant advising him that he missed the February 2, 2021 appointment with Dr. Buikema, and requested that he contact the office to reschedule the appointment. (Ex. F).

19. Also on March 29, 2021, Respondents, through counsel, sent Claimant a letter advising that Respondents had, pursuant to W.C.R.P. Rule 6-1(A)(5), set up a "demand appointment with Kathryn Buikema, D.O., for April 16, 2021, at 11:30 p.m." The letter further stated: "If you do not attend this demand appointment, please note that your temporary disability benefits may be suspended for failure to appear at that appointment per Workers Compensation Rules of Procedure Rule 6-1(A)(5)." (Ex. G).

20. On April 8, 2021, Claimant's counsel wrote to Respondents' counsel indicating that "Claimant does not consider Dr. Buikema to be a valid ATP and will not attend an appointment with her in this capacity." (Ex. 11).

21. Claimant did not attend the appointment with Dr. Buikema on April 16, 2021, or any time thereafter. On April 26, 2021, Ms. Castillo sent another letter to Claimant advising that he had missed the April 16, 2021 appointment. (Ex. H).

22. Beginning December 31, 2020, Respondents paid Claimant temporary total disability (TTD) benefits based on an average weekly wage of $724.40 per week. (Ex. B). Respondents continued to pay Claimant's TTD benefits through hearing, and did not suspend payment of TTD after Claimant did not attend the April 16, 2021 appointment Insurer scheduled with Dr. Buikema.

23. In May 2021, Respondents filed a Petition to Modify, Terminate, or Suspend Compensation with the Division, seeking to terminate Claimant's temporary disability benefits beginning December 31, 2021. (Ex. C).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See*

§ 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Indus. Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

AUTHORIZED TREATING PROVIDER

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Rule 8-2 (A)(2) clarifies that, "[a] copy of the written designated provider list must be given to the injured worker in a verifiable manner within seven (7) business days following the date the employer has notice of the injury." The term "business days" refers to any day other than a Saturday, Sunday, or legal holiday. W.C.R.P. 1-2 (C).

An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. Indus. Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006). If upon notice of the injury the employer does not timely designate an ATP, the right of selection passes to the claimant. *Rogers v. Indus. Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987), *see also* W.C.R.P. 8-2 (E) ("If the employer fails to supply the required designated provider list in accordance with this rule, the injured worker may select an authorized treating physician or chiropractor of their choosing.")

Employer had knowledge of Claimant's injuries on December 30, 2020, when Claimant notified his supervisor that he sustained an injury and needed to be seen by a physician. Accordingly, Employer was obligated to provide Claimant with a designated provider list within seven business days of December 30, 2020. The ALJ takes judicial notice that January 1, 2021, was a holiday, January 2, 3, 9, and 10, 2021 were Saturdays and Sundays, and thus not considered "business days." Employer was, therefore, obligated to provide Claimant with written notice on or before January 11, 2021.

The evidence demonstrates that Insurer prepared a letter containing the DPL on January 6, 2021. However, no credible evidence was presented to indicate the date the DPL was given to Claimant. Given Claimant's testimony and his contemporaneous email of January 18, 2021, in which Claimant acknowledged receiving the list on January 14, 2021, the ALJ finds credible Claimant's testimony that he did not receive the DPL until January 14, 2021. Because Claimant was not provided a DPL before January 11, 2021 (i.e., within seven business days after receiving notice of his injury), the right of selection of his ATP passed to Claimant.

Once the right of selection passed to Claimant, his actions below indicate Claimant selected Dr. Tracy and IS&S as his ATP. Where a claimant has signified "by words or conduct that he has chosen a physician to treat the industrial injury," he has made physician "selection." *In re Claim of Murphy-Tafoya*, W.C. No. 5-153-600-001 (ICAO, Sept. 1, 2021). Claimant sought treatment from Dr. Tracy on January 5, 2021, underwent an MRI ordered by Dr. Tracy on January 11, 2021 and returned to Dr. Tracy's office on January 14, 2021, for treatment of his industrial injury. Claimant continued to see Dr. Tracy for his industrial injury, and only saw Dr. Buikema because he was under the impression that it was mandatory based on his conversation with Insurer.

Respondents' reliance on *Williams v. Halliburton Energy Servs.*, W.C. No. 4-995-888-01 (ICAO, Oct. 28, 2016), does not lead to a different conclusion. In *Williams*, the claimant began treatment with Injury Care of Colorado, and was later provided with an untimely DPL which included Injury Care of Colorado. The claimant then later sought to change his ATP. The ICAO found that claimant, through his words and actions had selected Injury Care of Colorado as his ATP, and that the untimely DPL did not afford him the right to change ATPs once he made his selection. *Williams* is not analogous to the present case. Here, Claimant sought and accepted treatment and referrals from Dr. Tracy and IS&S for his work-related injury, both before and after the right of selection passed to him on January 11, 2021. That the Claimant later provided an untimely DPL and Claimant saw Dr. Buikema after being instructed he was required to see a physician on the list does not alter the fact that Claimant had already selected Dr. Tracy as his ATP.

The ALJ finds and concludes Dr. Buikema is not Claimant's ATP, instead the right of selection of ATP passed to Claimant on January 11, 2021, and Claimant, through his actions, selected Dr. Tracy, and IS&S as his ATP.

DEMAND APPOINTMENT

Respondents have failed to establish by a preponderance of the evidence a basis to suspend or terminate Claimant's temporary disability benefits pursuant to § 8-42-105(2)(c), C.R.S., due to Claimant's failure to attend a demand appointment with Dr. Buikema. The statutory authority permitting an insurer to suspend a claimant' temporary disability benefits is contained in section 8-42-105(2)(c), C.R.S., which provides:

> If an employee fails to appear at an appointment with the employee's attending physician, the insurer or self-insured employer shall notify the employee by certified mail that temporary disability benefits may be suspended after the employee fails to appear at a rescheduled appointment. If the employee fails to appear at a rescheduled appointment, the insurer or self-insured employer may, without a prior hearing, suspend payment of temporary disability benefits to the employee until the employee appears at a subsequent rescheduled appointment.

Rule 6-1(A)(5) of the Workers' Compensation Rules of Procedure, provides the procedure for suspension of temporary disability benefits without a hearing. The Rule makes clear the "attending physician" referenced in § 8-42-105(2)(c) means the ATP. As found, Dr. Buikema is not Claimant's ATP. Consequently, Claimant's refusal to attend an appointment with Dr. Buikema did not trigger Insurer's ability to suspend his temporary disability benefits. The ALJ finds and concludes that Respondents failed to establish a basis for suspension of Claimant' temporary disability benefits under § 8-42-105(2)(c), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant's authorized treating provider is Michael Tracy, D.O.

2. Respondents request to suspend or terminate Claimant's temporary disability benefits for failure to attend a demand appointment with Kathryn Buikema, D.O., is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-114-698-001

ISSUES

1. Whether Claimant established by a preponderance of the evidence that her scheduled impairment rating for her left shoulder should be converted to a whole person impairment rating.

PROCEDURAL ORDERS

Claimant endorsed the issue of disfigurement on her Application for Hearing and Case Information Sheet. Because Claimant did not have video capability at the time of hearing, Claimant moved for leave to withdraw the issue of disfigurement without prejudice and with leave to refile an application for hearing on the issue of disfigurement. Respondents did not object, and Claimant's motion was granted.

FINDINGS OF FACT

1. Claimant is employed by Employer as a store manager. On August 8, 2019, Claimant sustained admitted injuries to her left shoulder and pelvis when she fell from a ladder while moving boxes on a shelf.

2. As the result of her work-related injuries, Claimant underwent two surgeries on her left shoulder. Initially, Claimant underwent an open reduction internal fixation (ORIF) surgery on her left shoulder to address a humeral fracture which did not adequately address Claimant's injuries and failed within a short amount of time. Consequently, on September 4, 2019, Claimant underwent a second shoulder surgery consisting of a reverse total shoulder arthroplasty. Reverse total shoulder arthroplasty is a procedure in which the upper head of the humerus is removed and replaced with an artificial "socket" and the natural "socket" of the glenoid is replaced with an artificial ball. The result of the surgery is that the natural ball and socket of the shoulder joint are reversed.

3. Claimant underwent post-surgical therapy and was placed at maximum medical improvement by her authorized treating physician (ATP) on March 2, 2021. Claimant was then referred to Ethan Moses, M.D., for the assessment of an impairment rating. Dr. Moses assigned Claimant a 40% scheduled left upper extremity impairment rating under the AMA Guides. The 40% scheduled left upper extremity impairment corresponds to a 24% whole person impairment. Dr. Moses noted that Claimant "is physically incapable of raising the right arm above shoulder level. As such, her single remaining restriction is no[] overhead use of the left arm." (The ALJ infers that Dr. Moses' reference to Claimant's "right" arm is a mistake, and the statement is a reference to Claimant's injured left arm.) (Ex. A).

4. Claimant credibly testified that she experiences significant difficulties with her left shoulder and arm. Claimant cannot raise her left arm above shoulder level in any plane, and experiences pain in from the top of her left shoulder to her elbow; left side of her chest; upper back above her left shoulder blade; and left trapezius area when attempting to use her left arm in many capacities. Claimant credibly testified that she experiences difficulty with many activities, including lifting and pushing with her left arm, bathing, and sleeping. Prior to her work-related injury, Claimant participated in activities such as running, swimming, walking her dog, and bicycling. Claimant testified that although she is able to engage in these activities, they require substantial modification, such as swimming with a kickboard, holding her left arm static in front of her body when running, holding a dog leash with only her right hand, and using only her right arm when bicycling. In her employment activities, Claimant limits her lifting significantly, and relies on fellow employees to lift and move boxes and products when necessary. Claimant credibly testified that prior to her work-injury, she could perform each of these activities without modification.

5. Timothy O'Brien, M.D., was admitted as an expert in orthopedic surgery and testified at hearing. Dr. O'Brien testified that he agreed that Dr. Moses' impairment rating was properly calculated and appropriate. Dr. O'Brien opined that he did not believe any foundation existed to convert Claimant's schedule impairment rating to a whole person impairment because she did not experience any adverse "systemic effects" from her shoulder injury or surgery. He testified that he was unable to identify any peer reviewed medical literature indicating that a reverse shoulder total arthroplasty can cause "systemic effects" and that none of his patients over the past 15-20 years who have undergone the procedure have developed "systemic effects" as the result of the surgery. Dr. O'Brien further opined that it was "not logical" that an injury to a discrete joint, such as the shoulder, could result in impairment to the whole body. Dr. O'Brien's testimony was neither credible nor persuasive because conversion from a scheduled impairment to a whole person impairment does not require proof of a "systemic" dysfunction throughout the body, but that an injured worker sustained an impairment not listed on the schedule of impairments in § 8-42-107(2)(a), C.R.S.

6. John Hughes, M.D., performed an independent medical examination at Claimant's request on July 20, 2021. Dr. Hughes opined that Claimant has sustained functional impairment extending proximal to her left shoulder into the region of her left thoracic and cervical spine regions. He indicated that Claimant has hypertonicity of the left posterior trapezius that measurably inhibits right lateral flection of her cervical spine, as well as atrophy of her left pectoralis muscles extending into the left anterior thorax. He opined that Claimant has sustained a loss of function beyond her shoulder and into the cervical and thoracic spine. (Ex. 2).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Conversion of Scheduled Impairment to Whole Person Impairment

When an injury results in a permanent medical impairment not set forth on a schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* §8-42-107(8)(c), C.R.S. Whether a claimant has suffered the loss of an arm at the shoulder under §8-42-107(2)(a), C.R.S., or a whole-person medical impairment compensable under §8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. *See DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

The ALJ must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS,* W.C. No. 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. *See In re Hamrick*, W.C. No. 4-868-996-01 (ICAO, Feb. 1, 2016); *In re Zimdars,* W.C. No. 4-922-066-04 (ICAO, Feb. 4, 2015).

Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson –Wood*, W.C. No. 4-536-198 (ICAO, June 20, 2005); *Vargas v. Excel Corp.,* W.C. 4-551-161 (ICAO, Apr. 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (ICAO, Nov. 16, 2007); *O'Connell v. Don's Masonry,* W.C. 4-609-719 (ICAO, Dec. 28, 2006).

In the case of a shoulder injury, the question is whether the injury has affected physiological structures beyond the arm at the shoulder. Brown v. City of Aurora, W.C. 4-452-408 (ICAP Oct. 9, 2002.) Claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the arm at the shoulder and the consequent right to PPD benefits awarded under § 8-42-107(8)(c), C.R.S. Whether Claimant met the burden of proof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2001); *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005). In re Claim of Barnes, 042420 COWC, 5-063-493 (ICAO, April 24, 2020).

Claimant has established by a preponderance of the evidence that she has sustained an impairment of anatomical structures beyond the arm at the shoulder. Although the reverse total shoulder arthroplasty did result in anatomical changes to the Claimant's humerus (i.e., replacing the distal end of the bone with an artificial "cup"), the surgery extended beyond the humerus to the glenoid, where an artificial "ball" was placed, thereby altering the anatomy of Claimant's shoulder joint beyond the arm. It is undisputed that Claimant has significant limitations in the range of motion of her left shoulder. The ALJ concludes the Claimant's functional limitations, as found in this Order, are more probable than not, manifestations of a functional impairment of her shoulder joint, beyond the arm. Accordingly, Claimant's left upper extremity impairment rating is converted from a 40% scheduled impairment to a 24% whole person impairment.

ORDER

It is therefore ordered that:

1. Claimant's 40% scheduled impairment rating for her left upper extremity related to her August 8, 2019 work injury is converted to a 24% whole person impairment.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. Denver, Colorado, 80203

ISSUES

- Did Claimant prove he suffered functional impairment not listed on the schedule of disabilities, therefore entitling him to PPD benefits based on the DIME's 5% whole person rating?

- Disfigurement.

FINDINGS OF FACT

1. Claimant has worked for Employer as a police officer since 2013. He suffered an admitted injury to his left shoulder on March 29, 2018 while apprehending a suspect.

2. Claimant was referred to Dr. David Weinstein, an orthopedic surgeon. Dr. Weinstein diagnosed a large labral tear causing significant anterior-inferior instability.

3. On May 16, 2018, Dr. Weinstein performed an arthroscopic subacromial decompression, anterior-inferior capsular shift with a labral repair, and a superior labral repair.

4. Claimant completed several months of postoperative physical therapy. On October 24, 2018, Dr. Weinstein noted he was making steady progress and having minimal pain. Dr. Weinstein released Claimant from care on December 17, 2018.

5. Claimant's ATP, Dr. Nicholas Kurz, placed Claimant at MMI on February 19, 2019, with a 7% scheduled / 4% whole person rating. At the time of MMI, Claimant's shoulder still felt "loose" and painful with certain activities.

6. Claimant attended a DIME with Dr. William Watson on June 18, 2019. His primary concern was ongoing pain and instability in the shoulder, which was interfering with his ability to perform various exercises and wrestle with suspects. Impingement and labral tests were positive. Dr. Watson agreed with the February 19, 2019 MMI date, but was concerned that Claimant still had evidence of instability and possible re-tear of the labrum. He recommended an MR arthrogram and an evaluation with a shoulder surgeon as part of the "maintenance care." Dr. Watson opined if the surgeon recommended further intervention, Claimant would not be at MMI. He assigned a 15% scheduled / 9% whole person rating.

7. Dr. John Hughes performed a record review for Respondent on September 17, 2019. He did not think the scheduled rating should be converted the whole person because he saw no evidence of loss of function beyond the shoulder into the cervical and thoracic region. However, he acknowledged that "this is more of a legal than a medical

determination." Dr. Hughes opined it was reasonable for Claimant to be re-evaluated by Dr. Weinstein.

8. Claimant followed up with Dr. Weinstein on December 20, 2019. He explained his shoulder symptoms never completely resolved and become progressively worse over time. Dr. Weinstein diagnosed left shoulder adhesive capsulitis and rotator cuff tendinitis. He gave Claimant a cortisone injection and referred him for physical therapy.

9. Claimant continued to have problems with the shoulder, and on June 24, 2020, Dr. Weinstein gave him three options: observation, a repeat cortisone injection followed by more therapy, or surgery. Claimant chose the surgical option.

10. Claimant saw Dr. Hughes for an in-person IME on July 30, 2020. Dr. Hughes noted crepitus with left shoulder motion, limited range of motion, and a mildly positive empty can test. He appreciated no abnormalities on examination of Claimant's neck. Dr. Hughes opined Claimant's clinical findings were consistent with hypertrophic synovitis and rotator cuff tendinitis. He agreed the proposed surgery was reasonably necessary.

11. On August 20, 2020, Dr. Weinstein performed a left arthroscopic subacromial decompression and extensive glenohumeral debridement with capsular release and lysis of adhesions. He noted the previous labral repair remained intact.

12. Claimant had a good result from the second surgery. On December 14, 2020, Dr. Weinstein documented Claimant was doing great with no pain. Examination of the neck showed no tenderness over the cervical spinous process, facets, or paracervical musculature. Dr. Weinstein opined Claimant could return to regular duty "as he feels comfortable." He recommended Claimant complete his work hardening program and anticipated MMI in approximately six weeks.

13. Claimant had a follow-up DIME with Dr. Watson on April 6, 2021. Claimant told Dr. Watson his pain and function were significantly improved and he was pleased with the outcome of the second surgery. He still had some pain with end range of motion with flexion and abduction. He was working the day shift, which required fewer physical altercations than the night shift. He described some ongoing difficulty with weightlifting exercises, particularly anything overhead. Physical examination showed marked improvement in shoulder range of motion, with no evidence of impingement. The shoulder was more stable than at the first DIME, although he still had mild anterior laxity. Dr. Watson determined Claimant reached MMI on January 19, 2021. He provided an 8% upper extremity rating, which converts to 5% whole person.

14. Respondent filed a Final Admission of Liability on May 5, 2021 admitting for Dr. Watson's 8% scheduled rating. Claimant timely objected to the FAL and requested a hearing on whole person conversion.

15. Dr. Hughes issued an additional report on August 16, 2021 based on a record review. He did not meet with or examine Claimant at that time. He agreed with the

MMI date and extremity rating assigned by Dr. Watson. He indicated he did not see objective clinical findings showing loss of function proximal to the shoulder joint at his prior in-person IME. He also noted he found normal cervical range of motion, as had Dr. Watson and Dr. Weinstein. Dr. Hughes concluded there was no medical basis for conversion to a whole person rating.

16. Claimant testified at hearing regarding his ongoing symptoms and limitations. Claimant agreed he improved after the second surgery but said he still has pain in various parts of his body with exertion. Claimant described pain primarily in the scapular area and to a lesser degree the trapezius/neck and pectoralis. He works out regularly to maintain the strength and fitness necessary for his job. Exercises that elicit proximal symptoms include bench press, pull-ups, military press, running, and other cardio training. He also experiences scapular, trapezial, and neck pain during or after altercations, which are a routine part of his job.

17. Claimant's testimony was credible and persuasive.

18. Dr. Hughes testified at hearing to elaborate on the opinions expressed in his reports. He explained he found no objective clinical evidence of functional impairment beyond the arm, such as muscle spasm, hypertonicity, or adhesions affecting the cervicothoracic tissues, or scapular dyskinesis. He noted other providers had also failed to document such findings. Accordingly, he saw no medical basis to convert Claimant's extremity rating to whole person. He conceded he had not examined Claimant since the July 2020 IME, but noted the medical records showed a significant improvement in Claimant's condition after the second surgery. Dr. Hughes agreed the injury could reasonably produce the proximal symptoms Claimant described at hearing. But he opined the determination of whether purely subjective reports would support conversion "requires a legal conclusion, because at that point it extends beyond medicine into what you all have determined to be the legal criteria for conversion." Dr. Hughes agreed that the surgeries performed by Dr. Weinstein were directed to anatomical structures proximal to the humeral head.

19. The ALJ appreciates Dr. Hughes' thoughtful discussion, but disagrees with his ultimate conclusion regarding conversion.

20. Claimant proved he suffered functional impairment not listed on the schedule and should therefore receive PPD benefits based on the DIME's 5% whole person rating.

21. Claimant has seven arthroscopic surgery portal scars about the left shoulder. The scars are approximately ½ inch long and ⅛ to ¼ inch wide and discolored when compared to the surrounding skin. At least one scar is indented. The ALJ finds Claimant shall be awarded $1,400 for disfigurement.

CONCLUSIONS OF LAW

A. Whole person impairment

When evaluating whether a claimant has sustained scheduled or whole person impairment, the ALJ must determine “the situs of the functional impairment.” This refers to the “part or parts of the body which have been impaired or disabled as a result of the industrial accident,” and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of “an arm at the shoulder.” Section 8-42-107(2)(a). If the claimant has a functional impairment to part(s) of his body other than the “arm,” they have suffered a whole person impairment and must be compensated under § 8-42-107(8).

There is no requirement that functional impairment take any particular form, and “pain and discomfort which interferes with the claimant’s ability to use a portion of the body may be considered ‘impairment’ for purposes of assigning a whole person impairment rating.” *Martinez v. Albertson’s LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant’s testimony regarding pain and reduced function. *Olson v. Foley’s*, W.C. No. 4-326-898 (September 12, 2000).

Pain and limitation in the trapezius or scapular area can functionally impair an individual beyond the arm. *E.g. Steinhauser v. Azco, Inc.*, W.C. No. 4-808-991 (January 11, 2012) (pain and muscle spasm in scapular and trapezial musculature warranted whole person impairment); *Franks v. Gordon Sign Co.*, W.C. No. 4-180-076 (March 27, 1996) (supraspinatus attaches to the scapula, and is therefore properly considered part of the “torso,” rather than the “arm”); *Martinez v. Albertson’s LLC*, W.C. No. 4-692-947 (ICAO, June 30, 2008) (pain affecting the trapezius and difficulty sleeping on injured side supported ALJ’s finding of whole person impairment). Limitations on overhead reaching can also consitute functional impairment beyond the arm in appropriate cases. *E.g*., *Brown v. City of Auror*a, W.C. No. 4-452-408 (October 9, 2002); *Heredia v. Marriott*, W.C. No. 4-508-205 (September 17, 2004). However, the mere presence of pain in a part of the body beyond the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021).

As found, Claimant proved he suffered functional impairment not listed on the schedule. The surgeries performed by Dr. Weinstein were directed to anatomical structures proximal to the “arm,” including a subacromial decompression with acromioplasty, bursal resection, and debridement of rotator cuff tendons. Although the anatomic location of the injury is not dispositive, it is a legitimate factor to consider when determining whether a claimant has a scheduled or whole person impairment. *See, e.g., Martinez v. Albertson’s LLC*, W.C. No. 4-692-947 (June 30, 2008) (“The [claimant’s] subacromial decompression was done at the acromion and the coracoacromial ligament in order to relieve the impingement, which is all related to the scapular structures above the level of the glenohumeral joint”). Additionally, Claimant credibly described intermittent pain in areas proximal to his arm such as his scapula, trapezius, and pectoral muscle. This pain affects his ability to engage in various activities related to his job. He also has difficulty with overhead reaching. Admittedly, Claimant has undergone several examinations that showed no proximal symptoms or abnormalities. Certainly, the absence of objective clinical findings on examination or documented in the longitudinal record are pertinent considerations when evaluating the veracity of a claimant’s testimony regarding pain and associated limitations. But Claimant was a credible witness and the ALJ credits his testimony. Notably, Claimant’s proximal symptoms are typically associated with physical activities but are not noticeable at rest. So it is not necessarily unexpected that such findings would fail to manifest on examinations in clinical settings. The preponderance of persuasive evidence shows Claimant has functional impairment in parts of his body beyond the arm at the shoulder.

B. Disfigurement

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if she is “seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view.” As found, Claimant has observable disfigurement because of his admitted work injury. The ALJ concludes Claimant should be awarded $1,400 for disfigurement.

ORDER

It is therefore ordered that:

1. Respondent shall pay Claimant PPD benefits based on the DIME’s 5% whole person impairment rating. Respondent may take credit for any PPD benefits previously paid in this claim.

2. Respondent shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

3. Respondent shall pay Claimant $1,400 for disfigurement.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ’s order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-092-210-002

ISSUES

The issues set for determination included:

- Did Claimant waive his right to contest his medical impairment rating by failing to endorse Region 4 or Region 1 on the DIME application and not paying the required DIME fee?
- Did Claimant prove by clear and convincing evidence that the DIME physician's impairment rating is incorrect?

PROCEDURAL HISTORY

The undersigned issued a Summary Order on August 27, 2021. Claimant requested a full order on September 9, 2021, which was received on September 13, 2021. This Order follows.

FINDINGS OF FACT

1. Claimant worked for Employer as a bus driver.

2. Claimant suffered an admitted industrial injury on November 5, 2018 while working for Employer. The injury occurred when he was assaulted by passengers who had been riding on the bus he was driving. Claimant was struck in the face, head and back.

3. On November 6, 2018, Claimant was evaluated by Brendan Matus, M.D. at Workwell, the ATP for Employer. In the initial evaluation, Claimant complained of a headache, stiffness in the neck, radiating back pain into his left shoulder, and a facial laceration.

4. Dr. Matus diagnosed: contusion of the other part of head; contusion of left back wall of thorax; sprain of ligaments of cervical spine; concussion without loss of consciousness; laceration without foreign body of lip; unspecified sprain of left shoulder joint. Dr. Matus noted Claimant showed mild symptoms of head injury and some early signs of emotional trauma. Dr. Matus opined Claimant did not meet the criteria for imaging.

5. Dr. Matus noted Claimant had continued symptoms in the follow-up appointment on November 12, 2018. The diagnoses remained the same and Dr. Matus referred Claimant for massage therapy and physical therapy ("PT"), as well as referring Claimant to Ronald Carbaugh, Psy.D. for PTSD.

6. Claimant received a total of seventeen (17) massage therapy treatments at Workwell and Medical Massage of the Rockies from November 14-December 26, 2018 and January 2-31, 2019 and April 11-July 18, 2019. This treatment included petrissage, myofascial release, NMT, kneading, skin rolling, efflourage and was applied to the head, neck an, shoulders, upper and lower back and pecs. He also received physical therapy (“PT“) at Workwell from November 16-December 14, 2018.

7. Claimant also treated with Dr. Carbaugh beginning on November 19, 2018 for psychological issues arising out of the injury. Dr. Carbaugh noted Claimant’s physical symptoms included: left arm pain; left-sided neck pain; headaches; numbness in his left band; mid back pain; and low back pain. Dr. Carbaugh said Claimant was anxious and frustrated during the interview. Dr. Carbaugh diagnosed Claimant as suffering an adjustment disorder with anxiety, which arose as a result of the workplace assault. Dr. Carbaugh opined Claimant would benefit from psychological intervention specifically as it related to the November 5, 20 18, assault. The goals of this intervention were to provide him with cognitive and behavioral strategies for anxiety management.

8. Claimant treated with Dr. Carbaugh, which included cognitive behavioral therapy. He met with Dr. Carbaugh on November 29, December 7, 14, 31, 2018,

9. Dr. Matus continued to oversee Claimant’s treatment, which included making referrals. Dr. Matus’ diagnoses remained: contusion of the other part of head; contusion of left back wall of thorax; sprain of ligaments of cervical spine; concussion without loss of consciousness; laceration without foreign body of lip; unspecified sprain of left shoulder joint. He released Claimant to return to work from a physical standpoint on January 16, 2019. Claimant remained on restrictions of no commercial vehicle driving due to his psychological care.

10. Claimant also received chiropractic treatment from Robert Sundquist, D.C. Dr. Sundquist diagnosed Claimant with contusions and sprains to his head, thorax, cervical spine, and left shoulder joint. Claimant’s treatment included sixteen (16) sessions of chiropractic adjustments and manipulation of the cervical and thoracic spine, as well as TENS unit therapy.

11. Claimant returned to Dr. Carbaugh on January 11, 18, February 7, 18, March 8, 27, 2019. As of this last appointment, Claimant was scheduled for a follow-up with Dr. Carbaugh.

12. Dr. Matus concluded Claimant could return to regular duty for a trial period on April 23, 2019, while noting he was still seeing Dr. Carbaugh, receiving massage therapy and was scheduled for chiropractic treatment.

13. Dr. Matus concluded Claimant reached MMI on May 10, 2019 and determined Claimant suffered no permanent medical impairment as a result of the work injury. Dr. Matus ordered maintenance care that included massage therapy, psychological counseling and chiropractic care.

14. On June 4, 2019, Claimant filed a timely Notice and Proposal and Application for a Division Independent Medical Examination ("Notice and Proposal"). This form was the form adopted by DOWC. The Notice and Proposal specified (on page 2) that the DIME physician will consider the issues of MMI, permanent impairment and apportionment [section a)], as well as the following:

> "b) Check specific Region(s) and part(s) of the body and/or conditions to be evaluated. The report will be deemed incomplete unless all of the checked areas are addressed".[1]

15. Claimant checked the following regions and parts of the body to be evaluated:

> "Region 3-psychological; Region five: ear, nose and throat (ENT)–face".

16. No other specific regions and parts of the body and/or conditions were checked. More particularly, Claimant did not endorse Region 4: Spine or Region 1: Upper Extremity. The ALJ inferred Claimant's choice not to endorse Regions 1 and 4 was volitional.

17. Claimant's failure to endorse Regions 1 and 4 and pay the required fee for additional parts of his body constituted a waiver.

18. On September 23, 2019, Claimant was evaluated by Khoi Pham, M.D. for the DIME. At that time, Claimant reported neck, left shoulder pain, as well as left arm numbness and weakness. Claimant also advised Dr. Pham that he expected those areas of the body to be evaluated.

19. Dr. Pham confirmed Claimant was at MMI, was released by Dr. Carbaugh and had returned to work satisfactorily. Dr. Pham concluded Claimant sustained a 5% psychological impairment and utilized the worksheet for permanent mental impairment, as required by the W.C.R.P. Dr. Pham found no impairment for Claimant's ENT (face). The ALJ found Dr. Pham's evaluation comported with the request made by Claimant.

20. There was no evidence in the record which established that Dr. Pham's impairment rating was erroneous.

21. A Final Admission of Liability ("FAL") was filed on behalf of Respondent on October 15, 2019 based upon Dr. Pham's rating.

22. Claimant did not introduce evidence that Dr. Pham's conclusions at the DIME were more probably wrong.

23. The DOWC adopted rules to govern Independent Medical Examinations. W.C.R.P. Rule 11 was changed in 2019. DOWC had the authority to adopt these

[1] Exhibit B, p. 20.

rules. Rule 11 provides in pertinent part:

> "11-5 PAYMENTS/FEES
>
> (A) The DIME fee will be determined based upon the length of time elapsed between the date of injury and the filing of the notice and proposal as well as body regions identified on the DIME application in accordance with the following schedule:
>
> (1) Less than two years after the date of injury and/or less than three body regions: $1,000;
>
> (2) Two or more years but less than five years after the date of injury and/or three or four body regions: $1,400;
>
> (3) Five or more years after the date of injury and/or five or more body regions: $2,000."

24. The Director of DOWC has authority to promulgate rules governing the DIME process. The DOWC had statutory authority to modify and adopt an amended Rule 11 in 2019. There was no evidence in the record that DOWC failed to follow its procedures when adopting the amended rule.

25. Claimant did not introduce any evidence to suggest that the adoption of the amended rule ran counter to any regulation or legal standard.

26. On June 10, 2020, Claimant was evaluated by Carlos Cebrian, M.D., at the request of Respondent. At that time, Claimant complained of headaches, left arm numbness, pain in his left side and back pain. On examination, Dr. Cebrian found no spasms, trigger points or atrophy in Claimant's cervical spine. Full range of motion ("ROM") was present with flexion of 60°, extension of 75°, right lateral flexion of 45°, left lateral flexion of 45°, rotation of 80° and left rotation of 80°.

27. Claimant's left shoulder was diffusely tender to palpation, but no spasms, trigger points or atrophy was present. ROM testing showed flexion of 180°, extension of 50°, abduction of 180°, abduction of 50° internal rotation of 90° and external rotation of it 90°. no impingement was present. The examination of the right shoulder revealed identical ROM measurements. On examination, Claimant's thoracic and lumbar spine had no spasms, trigger points or atrophy.

28. Dr. Cebrian's assessment was: adjustment disorder with anxiety; multiple contusions/strains of the left shoulder, cervical spine and thoracic spine; contusions of the scalp.

29. Dr. Cebrian agreed with the finding that Claimant reached MMI as of May 10, 2019. Dr. Cebrian opined that there was no objective basis to assign a permanent

impairment for physical injuries. He noted Claimant's widespread discomfort did not lead to the conclusion that there was a permanent medical impairment pursuant to the AMA Guides to the Evaluation of Permanent Impairment (Third edition revised) [”AMA Guides”]. More particularly, Dr. Cebrian stated Claimant did not have a disorder of the cervical, thoracic or lumbar spine that would warrant a Table 53 diagnosis. Claimant had myofacial pain. In addition, there was no permanent impairment of the left shoulder. Dr. Cebrian concluded Dr. Pham did not make any errors when he rated Claimant's mental impairment at 5%. Dr. Cebrian found that the impairment rating for Claimant’s mental impairment was appropriate. Dr. Cebrian’s opinion was credible.

30. The ALJ found Dr. Cebrian’s opinions supported Dr. Pham’s conclusions regarding Claimant’s medical impairment.

31. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers’ Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Waiver

As determined in Findings of Fact 2-6, Claimant suffered an admitted industrial injury and receive treatment that was overseen by his ATP, Dr. Matus. That treatment included care for his physical and psychological conditions. *Id.* Dr. Matus concluded

Claimant reached MMI on May 10, 2019 and determined Claimant suffered no permanent medical impairment as a result of the work injury. (Finding of Fact 13).

Claimant then requested a DIME and utilized the notice and proposal form prescribed by the Colorado division of Worker's Compensation. (Finding of Fact 14). This form was adopted by the DOWC and Rule 11, which governs DOWC Independent Medical Examinations was amended in 2019. (Findings of Fact 14, 23). Claimant checked the following regions and parts of the body to be evaluated: "Region 3-psychological; Region five: ear, nose and throat (ENT)–face". Claimant chose no other regions of his body to be evaluated. *Id.* Specifically, Claimant did not endorse Region 4: Spine or Region 1: Upper Extremity. (Findings of Fact 15-16).

Based upon the evidence presented at hearing, the ALJ concluded Claimant waived his right to have the body areas in Region 4 and Region 1 evaluated. (Finding of Fact 17). Claimant, of his own volition, selected the areas of his body he was requesting the DIME physician to examine. Waiver is the intentional relinquishment of a known right. *Ross v. Republic In. Co.*, 134 P.3d 505, 510 (Colo. App. 2006). Waiver may be express, as when a party states its intent to abandon an existing right, or may be implied, as when a party engages in conduct that manifests its intent to relinquish the right or that is inconsistent with its assertion. *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 P.3d 475, 479 (Colo. App. 2005); *In re Marriage of Robbins*, 8 P.3d 625 (Colo. App. 2000). As found, Claimant's waiver occurred when he did not select Region 4: Spine or Region 1: Upper Extremity as areas for the DIME physician to evaluate and did not pay the required fee. Claimant waived his substantive right to an examination by the DIME physician by not requesting an evaluation of those areas of the body.

When coming to this conclusion, the ALJ considered Claimant's argument that he was not required to check the box for every potentially related condition. Claimant also asserted Rule 11-5 conflicted with the substantive right to a workers' compensation DIME and ran counter to the substantive rights afforded under the Act, which established the DIME process. The ALJ found DOWC was within its statutory authority to adopt, as well as modify the rules governing DIME-s. (Findings of Fact 23-24). The authority to adopt and modify regulations specifically in regards to the DIME process was upheld in *Lobato v. Industrial Claim Appeals Office,* 105 P.3d 220, 227 (Colo. 2005), in which the Court noted the Division and the Director "have consistently taken administrative steps to implement this legislative purpose" concerning DOWC IME-s. The ALJ reasoned the modification of WCRP Rule 11 was within the authority of Director to adopt reasonable and proper rules.

It follows that DOWC had the authority to promulgate the forms on which the request for DIME was based. Claimant offered no authority to rebut the conclusion that Rule 11-5 was adopted in the normal course of DOWC's function and this rule governed the DIME conducted in the case at bar. (Finding of Fact 24). In this regard, the ALJ concluded the Director/DOWC had the authority and responsibility to adopt regulations to administer the Act. *Id.* Colorado courts have consistently upheld this authority. *Cruz-Cesario v. Don Carlos Mexican Foods*, 122 P.3d 1078, 1081 (Colo. App. 2005). [Director of DOWC is an indispensable party to a challenge to WC rules “because the director is the very party charged with promulgating those rules and administering the Act.”] In *Cruz-Cesario v. Don Carlos Mexican Foods, supra*, the Court of Appeals cited *Pena v. Indus. Claim Appeals Office*, 117 P.3d 84 (Colo. App. 2004) and § 8-47-107, C.R.S. to affirm that the Director has the power to adopt reasonable rules and regulations to administer the Act.

The ALJ’s determination that Claimant waived his right resolves the question of whether Dr. Pham should be ordered to conduct a follow-up evaluation on additional parts of his body. Even assuming, *arguendo,* that Claimant did not waive his right when completing the Notice and Proposal, insufficient evidence was introduced to support the conclusion that Dr. Pham‘s opinions regarding Claimant’s impairment rating were more probably wrong.

Overcoming the DIME

Section 8-42-107(8)(c), C.R.S. provides that the DIME physician’s finding regarding impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician’s finding must produce evidence showing it is highly probable the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411, 414 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.*

Claimant did not adduce sufficient evidence to meet his burden of proof to overcome Dr. Pham’s opinions by clear and convincing evidence. Claimant’s argument was premised on the fact that Dr. Pham did not evaluate all of the injured parts of his body and therefore was incomplete. However, the ALJ found Dr. Pham’s opinions were supported by Respondent’s expert and there was no evidence supporting the conclusion that Claimant was entitled to additional impairment admitted at hearing. (Findings of Fact 20, 30). Dr. Cebrian opined Claimant did not qualify for an impairment of his cervical, thoracic or lumbar spine pursuant to the AMA Guides. (Finding of Fact 29). The ALJ credited this opinion. Accordingly, there was insufficient evidence introduced to meet the clear and convincing evidentiary standard.

ORDER

It is therefore ordered:

1. Claimant’s request that Dr. Pham issue a supplemental opinion regarding the relatedness and impairment rating, if any, suffered by Claimant for cervical spine and arm conditions is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 5-097-540-001

ISSUES

- Did Claimant prove by a preponderance of the evidence his claim should be reopened based on a change in condition?

- Did Claimant prove entitlement to TTD benefits from June 26, 2020 through January 31, 2021?

- Did Claimant prove a lumbar surgery performed by Dr. Roger Sung was reasonably necessary, causally related, and authorized treatment for his admitted work injury?

- Did Claimant prove treatment for his low back provided by and through Dr. Sandell's office after June 25 2020 was reasonably necessary and causally related to his admitted injury?

FINDINGS OF FACT

1. Claimant works for Employer as an installation and repair technician. The job is physically demanding and requires frequent heavy lifting and awkward postures.

2. Claimant suffered an admitted low back injury on January 12, 2019 while moving an appliance that was stuck to the floor.

3. Claimant was referred to Concentra, where he came under the care of Dr. Daniel Peterson. Claimant's initial symptoms were primarily localized to his low back, with no significant lower extremity symptoms or neurological findings. He was diagnosed with a lumbar strain and referred to physical therapy.

4. Claimant subsequently reported some radiation of pain to his left thigh, so Dr. Peterson ordered an MRI.

5. Claimant underwent a lumbar MRI on February 26, 2019 at Southwest Diagnostic Centers. It was interpreted as showing minimal soft-tissue edema around L4-5 and L5-S1, consistent with "strain." There was mild facet arthropathy at L4-5 and L5-S1, but no evidence of any foraminal or canal stenosis, or any disc-based pathology.

6. Claimant followed up with Dr. Peterson on March 5, 2019. Dr. Peterson noted the MRI was "normal." Claimant's primary problem continued to be low back pain, although he was having radiating pain to his thigh. Physical examination showed facet tenderness. Lower extremity strength and sensation were normal bilaterally, and straight leg raise testing was normal. Dr. Peterson referred Claimant for chiropractic treatment.

7. On May 21, 2019, Dr. Peterson referred Claimant to Dr. Timothy Sandell because PT and chiropractic were not helping. Claimant reported experiencing “numbness in L foot yesterday at end of a long day of standing.” Lower extremity neurological testing remained normal.

8. Claimant saw Dr. Sandell on June 17, 2019. He described left-sided low back pain and radiating pain into his legs. Lifting and sitting aggravated his back pain. Dr. Sandell noted the MRI report indicated only mild facet arthropathy with no evidence of neural foraminal or spinal canal stenosis. Claimant expressed reservations about the accuracy of the MRI because he did not believe Southwest Diagnostics obtained “clear enough imaging.” Physical examination suggested left sacroiliac joint dysfunction and facetogenic pain. Lower extremity strength and sensation were intact and straight leg raise test was negative bilaterally. Dr. Sandell opined, “In reviewing his current presentation, I was primarily concerned with pain emanating from the left SI joint or lower facet joints. His physical exam is more suggestive of SI joint involvement. Although he is experiencing some radicular symptoms, the MRI scan is relatively unremarkable and there is no suggestion of nerve root impingement or disc pathology.” Dr. Sandell recommended an SI joint injection.

9. Dr. Sandell performed a left SI joint injection on July 12, 2019.

10. Claimant followed up with Dr. Sandell’s PA-C, Jamie Case, on July 26, 2019. The SI injection had provided no benefit. Facet loading was positive at L4-5 and L5-S1. Ms. Case recommended facet injections, but Dr. Sandell later changed the recommendation to medial branch blocks at L4-5 and L5-S1.

11. Claimant had a good response to the medial branch blocks, and Dr. Sandell recommended rhizotomies.

12. Dr. Sandell performed left L4-5 and L5-S1 rhizotomies on September 25, 2019. The rhizotomies were very helpful, and provided excellent pain relief. He saw Dr. Peterson the next day and reported “the pain he was feeling is gone.”

13. On October 16, 2019, Dr. Peterson noted Claimant was feeling “much better. He has no pain with full ROM now.” Dr. Sandell had released him to follow up “prn.” Claimant was released to full duty, which he tolerated without difficulty.

14. Claimant was put at MMI on December 5, 2019 by Dr. Peterson. Claimant said his pain “seems to be getting worse again but only slightly. . . . He has nothing like he did before but occasionally bending over he gets a sharp jolt of pain.” Examination showed facet joint tenderness but no pain over the lumbar spine. The neurological examination was normal, including bilateral straight leg raise testing. Dr. Peterson opined Claimant may need additional rhizotomies in the future, and recommended 24 months of follow up with Dr. Sandell. He assigned a 15% whole person lumbar spine rating. Claimant was cleared to continue working with no restrictions.

15. Insurer filed a Final Admission of Liability dated January 13, 2020, admitting for Dr. Peterson’s rating. The admitted average weekly wage is $647.74,

which corresponds to a TTD rate of $431.83. The FAL also admitted for medical benefits after MMI Claimant did not object to the FAL and the claim closed (except for post-MMI medical benefits).

16. In early 2020, Claimant experienced recurrent low back pain, along with numbness in his bilateral buttocks and posterior thighs. The pain was so severe he had difficulty walking.

17. Claimant contacted Dr. Sandell's office in April 2020 and asked for repeat rhizotomies. Dr. Sandell's office requested authorization, and Insurer approved the procedure.

18. Dr. Sandell performed repeat L4-5 and L5-S1 rhizotomies on June 8, 2020.

19. Claimant followed up with Ms. Case on June 25, 2020. He described shooting pain across to the right side of his back and down both legs to his calves. Claimant stated "his right leg is unusable because of shooting pain down the back of his leg. Since Saturday, June 20, when he lies on his back both legs go numb." His symptoms were worse on the right side. Ms. Case stated, "this is a new description of pain and a new experience of pain for him. He denies having any specific traumatic or inciting event." There were new physical examination findings, including an antalgic gait favoring the right leg, and positive straight leg raise. Ms. Case opined,

> It appears he has lower extremity radicular pain without a specific inciting incident. I cannot attribute this directly to the current Workmen's Compensation claim that brought him here today following the radiofrequency rhizotomy. I am going to refer him out for a lumbar MRI as soon as possible. We will see him in follow-up after imaging under different insurance.

20. Ms. Case prescribed Tramadol and a Medrol Dosepak, and took Claimant off work.

21. Claimant testified Ms. Case advised him the treatment was "not going to be covered by workers' comp," and she would see him in follow-up under his health insurance. This testimony is corroborated by notations in Dr. Sandell's records beginning June 25 that showed Claimant's insurance as "UNITED HEALTH CARE." However, Dr. Sandell's office continued sending records to Insurer at least through Claimant's July 22, 2020 appointment.

22. Claimant believed his back problems were related to the work accident but he accepted Ms. Case's assessment because he has no medical expertise or training. He used his health insurance because he had been advised to proceed in that fashion by his treating doctor.

23. The lumbar MRI was performed on June 27, 2020 at PENRAD. It showed a large central-left paracentral L4-5 disc herniation at effacing the CSF spaces with

mass effect on the nerve roots. But it also showed lesser pathology at multiple levels, including: mild canal stenosis and moderate narrowing of the thecal sac at L2-3 and L3-4, moderate facet arthropathy at L3-4, and diffuse bulging and mild hypertrophy at L5-S1.

24. Claimant saw Ms. Case again on June 29, 2020 to review the MRI report. She compared it to the February 26, 2019 MRI report which "only revealed mild facet changes at L4-5 and L5-S1. There was no neural foraminal or central canal stenosis noted on that image." Ms. Case opined, "The disc degeneration at the L4-5 level noted on the recent MRI would not be related to his Workmen's Compensation claim because the February 2019 image revealed only mild changes that would not have anticipated to progress to the degeneration noted on the recent image."

25. Ms. Case recommended an L4-5 epidural steroid injection. Dr. Sandell's office initially requested authorization from Insurer, but shortly thereafter sent a fax stating "CANCEL THIS REQUEST PLEASE! SORRY."

26. After his appointment with Ms. Case on June 29, Claimant emailed Employer's "Leaves" department and explained,

> I was informed on follow-up from a work comp injury that I have some issues with my discs in my lower back. I have been sent to an emergency MRI and it was discovered I have 2 badly compressed discs. The doctor wants to do an operation but does not want me to work until after said operation. I have given a first copy of my return to work from the doctor for July 3rd to my office and now it is extended to July 10 at the earliest. I am going to drop this new paper off at my office today as well as attached to this email.

27. The next day, Claimant discussed his case with Barton Reese, Employer's Workers' Compensation Liability Coordinator. Mr. Reese made notes documenting the following:

> Called EE, EE said that the WC doc sent ee to get emergency MRI, ee said that nerve damage was from injury, but no one has said whether or not the disc is related/doc doesn't know if it's related. EE said to the L4-L5 area is compressed. EE said he filed all this under his own health insurance. EE said he was advised to notify leaves of his absence since he was off work, but leaves thought it was WC. EE said this was just a courtesy to make everyone aware of what was going on. Let EE know I would call him back.
>
> Called EE back – Let him know if he felt this was WC he would need to get with TPA Lori on all this, EE did not feel that this was WC, let EE know if that was the case I would let leaves no that this would be a personal leaves. EE said he just want to make sure everyone knew that he was off of work.

28. Claimant was put on unpaid leave effective June 26, 2020. Although Employer routinely offers modified duty to injured workers, it has no similar policy regarding nonwork-related leave. Employer did not offer Claimant modified duty because his leave was classified as related to a personal medical condition.

29. Dr. Sandell performed the ESI on July 6, 2020. It was not helpful. Dr. Sandell and/or Ms. Case referred Claimant to Dr. Roger Sung for a surgical evaluation.

30. Claimant tried to schedule an appointment with Dr. Sung, but Dr. Sung's office staff advised they could not see him under health insurance without documentation that the treatment was not being covered under his workers' compensation claim. Claimant called Ms. Singmaster on July 29, 2020 and asked her to provide the requested documentation. After the call, Ms. Singmaster faxed a letter to Dr. Sung's office stating, "[Claimant] has a workers' compensation claim with [Employer] for date of loss 1/12/19. [Claimant's] current treatment is not related to this injury and is not covered under this claim. Please bill his current treatment directly to his personal health insurance."

31. Claimant saw Dr. Sung on August 20, 2020. He explained his back injury improved after a rhizotomy in November 2019, but the pain recurred in March 2020. He had a second rhizotomy with no benefit. Claimant described bilateral leg pain, worse on the right. Dr. Sung reviewed the June 2020 MRI and noted severe stenosis and a central disc herniation at L4-5. He recommended an L4-5 decompression with microdiscectomy.

32. Claimant contacted Ms. Singmaster again on September 4, 2020 and requested a PPD lump sum so he would have funds for the co-payments and deductibles associated with the pending back surgery. Ms. Singmaster issued the lump sum shortly thereafter.

33. Dr. Sung performed an L4-5 decompression surgery on October 27, 2020.

34. On December 9, 2020, Dr. Sung stated he would continue to restrict Claimant from working "until the beginning of February to give him additional time to heal as his job is very physical."

35. Claimant steadily improved over the next few months. He returned to full-duty work on February 1, 2021.

36. Claimant retained counsel in March 2021 and filed a petition to reopen his claim on March 5, 2021. Respondents denied the petition on March 8, 2021.

37. On June 13, 2021, Claimant saw Dr. Robert Messenbaugh, an orthopedic surgeon, for an IME at Respondents' request. Dr. Messenbaugh discussed the history with Claimant in detail. Dr. Messenbaugh reviewed the February 26, 2019 MRI and noted "the exceedingly minimal findings." Claimant explained he distrusts MRIs from Southwest Diagnostic based on a prior bad experience relating to his shoulder. He previously had a shoulder MRI at Southwest Diagnostics that was read as normal. But a

later MRI at PENRAD showed significant pathology, for which he required surgery. Claimant believes the MRI machine at Southwest Diagnostics is outdated and produces inadequate images.

38. Dr. Messenbaugh noted the repeat rhizotomies in June 2020 "provided no improvement and in fact, in many ways seems to have made him worse." Dr. Messenbaugh reviewed the June 27, 2020 MRI from PENRAD and opined it was "exceedingly improbable" that Claimant developed "such extensive lumbar pathology" between February 2019 and June 27, 2020. The most probable explanation is that the February 2019 MRI was simply inaccurate. Dr. Messenbaugh diagnosed lumbar soft tissue myofascial strain and sprain, and aggravation of pre-existing lumbar degenerative disc disease and spinal stenosis. He disagreed with Ms. Case's causation assessment and opined "the treatment recommendations made by Dr. Sandell should be recognized as a continuation of [Claimant's] treatments for events originating on January 12, 2019, and not be considered as being a separate and unrelated issue." He also noted, "the best [Claimant] understood it, he was following the recommendations of physician's assistant, Jamie Case, in that he did see at her request, Dr. Sung, and at Dr. Sung's request he did have the lumbar surgical procedure." Dr. Messenbaugh opined Claimant did "exceedingly well" after surgery and reached MMI on February 1, 2020, when he returned to full-duty work.

39. Dr. Messenbaugh's analysis and conclusions are credible and more persuasive than the contrary causation assessment offered by Ms. Case.

40. Claimant's testimony was generally credible.

41. Claimant proved by a preponderance of the evidence his case should be reopened based on a change in condition. Claimant's injury-related condition worsened in 2020 and he required additional treatment, including surgery. Claimant was no longer at MMI when he was taken off work on June 25, 2020.

42. Claimant proved he suffered increased disability related to his worsened condition, which proximately caused a wage loss from June 26, 2020 through January 31, 2021.

43. Claimant proved the surgery performed by Dr. Sung was reasonably needed to cure and relieve the effects of his compensable injury.

44. Claimant proved Dr. Sung is authorized. He was referred to Dr. Sung by an authorized provider to treat a condition that has been found related to his admitted accident. The fact that Ms. Case was mistaken about the causal relationship and instructed Claimant to use his personal health insurance instead of his workers' compensation claim does not render Dr. Sung "unauthorized."

CONCLUSIONS OF LAW

A. This claim should be reopened based on a change in condition.

Section 8-43-303 allows an ALJ to reopen any award on the grounds of error, mistake, or a change in condition. The reopening statute reflects a "strong legislative policy" that the goal of achieving a fair and just result overrides the interests of litigants in obtaining final resolution of their dispute. *Padilla v. Industrial Commission*, 696 P.2d 273, 278 (Colo. 1985). The authority to reopen a claim is permissive, and whether to reopen a claim if the statutory criteria have been met is left to the ALJ's discretion. *Id*. The party requesting reopening bears the burden of proof. Section 8-43-304(4).

A "change in condition" refers either to a change in the condition of the original compensable injury, or a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). If a claimant's condition is shown to have changed, the ALJ should consider whether the change represents the natural progression of the industrial injury, or results from an intervening cause. *Goble v. Sam's Wholesale Club*, W.C. No. 4-297-675 (May 3, 2001).

As found, Claimant proved his case should be reopened based on a change in condition. His condition clearly worsened and 2020, and the only difficult question is whether the worsening was causally related to the original injury. Dr. Messenbaugh's causation opinions are credible and persuasive. Ms. Case's contrary conclusion was predicated on the mistaken assumption that the February 2019 MRI was accurate. The ALJ gives greater weight to the opinions of an orthopedic surgeon over those of a physician's assistant regarding the interpretation and relative significance of the MRI results. The worsening of Claimant's condition reflected the natural progression of the underlying injury, without contribution from any nonindustrial factor.

B. Claimant is entitled to TTD benefits from June 26, 2020 through January 31, 2021.

A change in condition after MMI does not automatically entitle a claimant to additional TTD benefits, unless the worsened condition causes a "greater impact upon [the] claimant's temporary work capability." *City of Colorado Springs Disposal v. Industrial Claim Appeals Office*, 954 P.2d 677 (Colo. App. 1997). The dispositive question is whether the claimant proves "increased disability, as measured by [their] capacity to earn wages." *Friesz v. Wal-Mart Stores, Inc*., W.C. No. 4-823-944-01 (July 26, 2012).

Claimant proved his worsened condition caused greater impact on his work capacity and proximately caused a wage loss from June 26, 2020 through January 31, 2021. Claimant improved after the initial rhizotomies in 2019 and was appropriately placed at MMI in December 2019. He returned to physically demanding work without restrictions. By June 2020, his symptoms were severe enough to interfere with his ability to perform his regular job. He was appropriately taken off work on June 25, 2020 by Ms. Case, and remained off work until February 1, 2021 per Dr. Sung's recommendation. Claimant is entitled to TTD benefits from June 26, 2020 through January 31, 2021.

C. The surgery performed by Dr. Sung was reasonably needed and causally related to the work accident.

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Even if the respondents admit liability and pay for some treatment, they retain the right to dispute the reasonable necessity or relatedness of any other treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

The existence of a pre-existing condition does not preclude a claim for medical benefits if an industrial injury aggravates, accelerates, or combines with the pre-existing condition to produce the need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The ultimate question is whether the need for treatment was proximately caused by an industrial aggravation or merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

Claimant proved the October 27, 2020 surgery was reasonably needed and causally related to the work accident. Dr. Sung's reports are persuasive regarding the indications for surgery, including Claimant's progressive symptomology and the herniated disc at L4-5. Although Dr. Messenbaugh did not explicitly address reasonable necessity, the ALJ infers he agreed the surgery was appropriate. Claimant had a good outcome and returned to a demanding job within three months after surgery.

D. Dr. Sung is an authorized provider

Besides proving medical treatment was reasonably necessary and causally related, a claimant must prove the treatment was "authorized." "Authorization" refers to a physician's legal authority to treat the injury at the respondents' expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). A physician who treats a claimant on referral from an ATP in the "normal progression of authorized treatment" becomes authorized. *Bestway Concrete v. Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

Respondents argue that even if this claim is reopened, they are not liable for the L4-5 surgery because Dr. Sung was not authorized. Specifically, Respondents argue Claimant was referred to Dr. Sung "outside of the workers' compensation claim" when Ms. Case determined the condition was not injury-related. The ALJ disagrees with this argument, based on the holding in *Cabela v. Industrial Claim Appeals Office*, 198 P.3d 1277 (Colo. App. 2008). In *Cabela*, the Court of Appeals held that if an ATP determines a claimant's condition is not work-related and instructs the claimant to pursue treatment with personal physicians, the treatment will be deemed authorized if it is later determined the condition was compensable. The court held that "the risk of mistake by an ATP in concluding that an injury is noncompensable lies with the employer" rather than the claimant.

There is no question Dr. Sandell and Ms. Case are authorized providers. Dr. Sandell and/or Ms. Case referred Claimant to Dr. Sung for consideration of surgery. Although Ms. Case advised Claimant to proceed under his health insurance because she believed the condition was unrelated to the original injury, her mistaken impression about causation is not dispositive of the authorization issue. The persuasive evidence shows Claimant was referred to Dr. Sung by an authorized provider to treat a condition related to his admitted injury. Those facts are sufficient to render Dr. Sung "authorized."

E. Respondents are liable for treatment of Claimant's low back provided after June 25, 2020.

Respondents argue more broadly they are not liable for any care Claimant received after June 25, 2020 because they had "no notice" Claimant would seek to have the treatment covered under his claim. Respondents also raise an ancillary argument that none of Claimant's providers requested preauthorization for treatment after June 25, including the surgery. These arguments are unconvincing for several reasons. Claimant advised Employer of the new developments regarding his medical situation in June 2020, including the potential for "an operation." Insurer received copies of Dr. Sandell's records at least through the July 22, 2020 visit, which outlined the treatment being recommended. Claimant told Ms. Singmaster he had been referred to Dr. Sung for a surgical evaluation in July, before his initial appointment. He subsequently advised Ms. Singmaster of the pending surgery more than six weeks before the scheduled date. Respondents were privy to essentially the same information Claimant had during the period in question. Under the circumstances, it is difficult to imagine what more Claimant could have done to keep Respondents "in the loop."

Moreover, the fact that neither Dr. Sandell's office nor Dr. Sung's office requested preauthorization does not preclude Claimant from seeking to have the treatment covered at a hearing. *E.g., Garcia v. McDonalds Corp*., W.C. No. 4-862-853-01 (June 19, 2014). The Rule 16 prior authorization process provides a mechanism for providers to seek advance approval and guarantee their charges, but it imposes no substantive limitation on a claimant's entitlement to medical treatment that is otherwise reasonably needed and causally related to the work accident. *Id; see also Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990) ("when medical treatment results from a referral by an authorized treating physician, such treatment is considered part of the normal progression of authorized treatment and the express consent of the employer is not required.")

ORDER

It is therefore ordered that:

1. Claimant's request to reopen his claim is granted.

2. Insurer shall pay for the treatment provided by Dr. Roger Sung commencing August 20, 2020, including but not limited to, the cost associated with the October 27, 2020 lumbar surgery.

3. Insurer shall cover treatment provided by Dr. Sandell's office for Claimant's low back after June 25, 2020.

4. Insurer shall pay Claimant TTD benefits at the rate of $431.83 per week from June 26, 2020 through January 31, 2021.

5. Insurer shall pay statutory interest of 8% per annum on all benefits not paid when due.

6. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

The issues for determination involve Claimant's entitlement to medical benefits. The questions answered are:

I. Whether Claimant established, by a preponderance of the evidence, that an arthroscopic debridement of the left rotator cuff and labrum, with subacromial decompression and biceps tenodesis as recommended by Dr. Duffey is reasonable, necessary, and related to her June 12, 2020, industrial injury.

II. Whether Claimant established, by a preponderance of the evidence, that the referral to Dr. Hammers for a neurosurgical consultation concerning the lumbar spine is reasonable, necessary, and related to her June 12, 2020, industrial injury.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Drs. Finn and Duffey, the ALJ enters the following findings of fact:

1. On June 12, 2020, Claimant sustained injuries to her left shoulder and low back while down stocking pallets of fresh produce for Employer. Claimant explained that while breaking down pallets of lettuce, she lowered a box of produce from her head to her left shoulder and experienced a "pop" in her low back. Claimant testified that she felt an immediate "lightning bolt" like sensation down both legs. Claimant continued working for approximately another hour before requesting medical treatment. She selected UCHealth from the list of designated medical providers to treat her work injury.

2. Claimant proceeded to the UC Health Urgent Care Clinic where she was evaluated by Physician Assistant (PA) Jayme Eatough for complaints of back and left shoulder pain. Physical examination of the back revealed tenderness over the thoracic and lumbar spine and good, but painful range of motion of the back along with a slow stiff gait. Straight leg raise testing was negative and strength testing in the lower extremities was equal bilaterally. Palpation of the left shoulder revealed tenderness about the joint. Claimant demonstrated full shoulder extension but limited flexion and abduction movements. X-rays of the thoracic and lumbar spine were obtained. Thoracic spine x-rays revealed proper height and alignment of the vertebral bodies. However, "[m]oderate diffuse multilevel hypertrophic changes" throughout the thoracic spine was present. There was no evidence of acute fracture or compression deformity noted. X-rays of the lumbar spine revealed, "[m]oderate L3-L4 to L5-S1 disc space narrowing" but no evidence of lumbar spine fracture. PA Eatough indicated that Claimant's history and examination supported a mechanism of injury consistent with causing a work-related injury to the left

shoulder and low back. (Respondents' Submissions, Bates# 006- 009). Dr. Elizabeth Bisgard excused Claimant from work until June 17, 2020. Id. at Bate# 019.

3. Claimant followed up at Urgent Care with Dr. Emily Burns on June 17, 2020. During this appointment, Claimant reported a history of injuring herself while lifting a crate, which caused a pop in her back followed by immediate symptoms down both legs. She told Dr. Burns that her left shoulder pain started with this as well. Claimant reported ongoing pain in the low and mid back that had not improved along with pain in the left shoulder that was somewhat improved since the initial incident. Physical exam revealed significant diffuse tenderness to palpation along the lumbar spine and limited range of motion with flexion when Claimant started to bend her knees. (Claimant's Submissions, Bates# 0054- 0058).

4. Claimant underwent MRIs of the thoracic and lumbar spine on June 17, 2020. Claimant's thoracic imaging was "abnormal", demonstrating a "left-sided disc protrusion with potential compression of the left T10 nerve root." Images of the lumbar spine revealed evidence of prior surgery directed to the L3-L4 and L4-S1 spinal segments without residual or recurrent stenosis present.[1] Images of the L2-L3 spinal segment revealed a "posterior central disc protrusion and mild facet arthropathy with mild left lateral recess and foraminal stenosis without nerve compression. (Claimant's Submissions, Bates# 000218-00219).

5. Claimant returned to Dr. Burns on June 19, 2020. She continued to report lower back pain and right thigh numbness in addition to left shoulder soreness. Physical exam revealed diffuse tenderness throughout the lumbar spine and tenderness over the right SI joint as well as limited flexion of the spine. Left shoulder range of motion was limited and there was tenderness to palpation directly over the acromion. (Claimant's Submissions, Bates# 0063- 0067)

6. Claimant was reevaluated by Dr. Burns on June 29, 2020. Her pain was not improved. During this encounter, Claimant told Dr. Burns that on June 20, 2020, while walking at work, her right leg went completely numb and she could not move it. Claimant also reported that her right heel was numb since this incident. Claimant stated her left shoulder was painful across the front of her arm and that she was having difficulty working three hours a day. (Claimant's Submissions, Bates# 0068- 0071)

7. On June 30, 2020, Claimant presented to Absolute Healthcare for an initial chiropractic consultation with Dr. Brian Polvi. Claimant reported no improvement. She documented an 8/10 pain level. Her pain diagram revealed pain in the left parascapular shoulder region and mid to lower thoracic and lumbar spine. She also described gluteal pain, left hand numbness and lightening both type pain extending down both legs into her

[1] Claimant has a history of prior injury to the cervical and lumbar spine. She suffered a broken neck in a car accident, which lead to a cervical fusion. Moreover, a prior injury to the low back in 1994 resulted in a lumbar fusion from L5-S1 with subsequent extension of the fusion to include L3-L4 and ultimately removal of the fusion hardware.

feet and toes. Claimant participated in chiropractic care with no change in her pain levels until August 3, 2020, when she reported 4/10 pain instead of 8/10. (Claimant’s Submissions, Bates# 000223-000228; 000236-000261)

8. On July 13, 2020, Dr. Burns documented that while Claimant had improved with chiropractic care, she was still experiencing achiness and restricted motion with weakness in the left arm. Claimant described having to pick up her left arm to move it, particularly when she was laying down. Physical exam of left shoulder revealed tenderness about the entire shoulder. Dr. Burns noted Claimant was concerned about a rotator cuff injury in the left shoulder. Claimant also reported being tender to palpation of the lumbar spine but this had improved from previous appointments. Physical examination revealed a diminished right ankle reflex when compared to the left. (Claimant's Submissions, Bates# 0073- 0077)

9. Claimant underwent left shoulder imaging on July 20, 2020. The MRI from this date revealed mild tendinosis of the supraspinatus and infraspinatus without evidence of partial or full-thickness tearing, tendinosis of the intra-articular portion of the long biceps without evidence of partial or full- thickness tearing, and mild degenerative fraying of the anterior superior labrum without evidence of tear. (Claimant’s Submissions, Bates# 000220-000221)

10. Claimant participated in physical therapy (PT) for her left shoulder from July 22, 2020, to August 17, 2020. During her initial PT visit, Claimant reported tenderness to palpation of her left supraspinatus/infraspinatus, teres minor, and left deltoid joint. Claimant described having significant difficulties with her activities of daily living due to left shoulder symptoms, including severe pain and tingling. During her July 22, 2020, PT session, Claimant reported improvement of her left shoulder symptoms after working on range of motion in the pool. On August 13, 2020, Claimant reported improvement of her back symptoms but her shoulder was still tender, although improving. Claimant was discharged from PT on August 17, 2020. At that time, she reported mild difficulty with the performance of heavy household chores, carrying shopping bags, washing her back, and recreational activities. Her left shoulder pain was described as mild, and her activities of daily living were slightly limited due to her left shoulder pain. The PT note from her last visit indicates that Claimant was progressing well with exhibited improvement in functional strength and range of motion. Her pain was level was described as a 2 out of 10. (Claimant's Submissions, Bates# 81-84; 94-95; 98-99; 104-105; 107-108; 111-113).

11. Claimant returned to Dr. Burns on July 28, 2020, reporting that she was doing “okay.” She described a slight return of symptoms, including tingling in her right upper foot. Claimant reported she was doing her home exercises. She indicated that work was going okay. Regardless, she indicated that she could not vacuum and that her shoulder hurt badly after four hours of work. (Claimant's Submissions, Bates# 0088-0090)

12. Claimant followed-up with Dr. Burns on August 18, 2020. She reported significant improvement and asked to return to work full duty. She also indicated that she

was participating in pool therapy and exercises on her own. (Claimant's Submissions, Bates# 000117-000128)

13. When Claimant returned to Dr. Burns on August 24, 2020, she had almost no low back or left shoulder pain or symptoms. She requested a release to lift up to 50 pounds in order to return to full duty work. (Claimant's Submissions, Bates# 000129-000136).

14. On September 16, 2020, Claimant returned to Dr. Burns for a follow-up appointment. At this visit, Claimant reported that she was tolerating full duty but asked for injections directed to the areas of her remaining symptoms. (Claimant's Submissions, Bates# 000138-000139)

15. On September 29, 2020, Claimant underwent an injection of Betamethasone and Marcaine into the biceps sheath and subacromial space performed by Dr. James Duffey at the UCHealth Orthopedics Clinic. Dr. Duffey commented on Claimant's previously obtained imaging as follows: "Radiology studies independently visualized and are pertinent for MRIs reviewed. Tendons of the rotator cuff and biceps have evidence of tendinosis but without significant tear. No glenohumeral arthritis or other degenerative change. (Claimant's Submissions, Bates# 000144-000145)

16. On October 8, 2020, Claimant underwent an initial consultation with Dr. Kenneth Finn at Springs Rehabilitation for consultation regarding injection therapy directed to the low back. During this encounter, Claimant reported 3/10 back pain. She also noted that sitting, standing, walking, driving, household activities, work activities, static positioning, transitional movements, and activities that involve too much movement of her lumbar spine aggravated her back causing leg pain. Dr. Finn recommended a L2-L3 steroid injection, which Claimant underwent on November 3, 2020. (Claimant's Submissions, Bates# 000286-000290)

17. Claimant returned to Dr. Burns on October 14, 2020. She reported relief in her shoulder after September 29, 2020 injection. Claimant would remain at full duty work status until January 6, 2021, when she reported increased burning in her anterior thighs and left shoulder. (Claimant's Submissions, Bates# 000148-000151; 000160; 000175-000179)

18. Claimant followed-up with Sonja Griffith, physician assistant to Dr. Finn on November 17, 2020 to discuss the results of her November 3, 2020 injection. Claimant described improvement in her right anterior thigh burning/pain from level 5-7/10 to 1-2/10 for about three days after the injection. Her pain then "abruptly" returned to its higher levels. Claimant described using a Lidocaine patch and 200 mg. of Gabapentin daily. She also reported that prolonged walking resulted in right foot numbness. Additional transforaminal epidural steroid injections at L2-L3 were suggested. (Claimant's Submissions, Bates# 000289-000293).

19. On December 15, 2020, Dr. Duffey evaluated the Claimant and offered left shoulder arthroscopy, with arthroscopic debridement of rotator cuff and labrum, with subacromial decompression and biceps tenodesis. (Respondents' Submissions, Bates# 145). Respondents have denied the request for authorization to proceed contending that the recommended surgery is not reasonable, necessary or related to Claimant's June 12, 2020 work injury.

20. On December 16, 2020, Dr. Finn performed an L2-L3 transforaminal injection, which only afforded Claimant short-term pain relief. Accordingly, during a January 5, 2021 follow-up appointment, Dr. Finn opined he had nothing further to offer Claimant and referred her to neurosurgeon, Dr. Ronald Hammers for a surgical consultation. (Claimant's Submissions, Bates# 000295-000297). Authorization to proceed with the consultation has been denied for the same reasons that surgery for the left shoulder was denied, i.e. that the need for a neurosurgical consultation is not reasonable, necessary or related to Claimant's June 12, 2020 work injury.

21. Claimant attended an appointment with Dr. Polvi on December 28, 2020. During this visit, Claimant reported 8/10 pain with constant radiation into the left upper extremity and low back down both legs. (Claimant's Submissions, Bates# 000267-000268)

22. On January 26, 2021, Claimant had a follow up appointment with Dr. Burns. During this appointment, Claimant reported burning in her right leg after stopping Gabapentin. She also described continued difficulty with overhead reaching with her left arm/shoulder. Dr. Burns imposed restrictions including limited bending and no pushing or pulling of roller carts. (Claimant's Submissions, Bates# 000180-000184).

23. On January 29, 2021, Dr. Burns responded to a letter from Respondents seeking her opinions regarding Claimant's pre-injury baseline, maximum medical improvement (MMI) and future treatment needs. Dr. Burns opined that Claimant had not returned to her pre-injury baseline, was not at MMI and was waiting a neurosurgical evaluation to recommend additional treatment. (Respondents' Submissions, Bate# 090).

24. On February 9, 2021, Claimant underwent an examination with Dr. Wallace Larson to address the reasonableness, necessity and relatedness of Dr. Duffey's request for authorization to proceed with left shoulder surgery and Dr. Finn's referral to Dr. Hammers for neurosurgical evaluation. During this evaluation, Claimant reported tenderness in the entire thoracic and lumbar spine, as well as her buttocks, posterior hip and sacrum. Dr. Larson reviewed and compared records from Claimant's prior history of back pain to the records generated following her June 12, 2020 work injury. He also performed a physical examination. Following his records review and physical examination, Dr. Larson opined that Claimant had returned to baseline. As support for his opinion, Dr. Larson relied on the imaging studies, which he opined demonstrated no acute change/injury. Accordingly, Dr. Larson concluded that Claimant did not have "indications for surgical intervention to the lumbar spine or left shoulder." Citing a history of "chronic pain and multiple non-physiological findings on physical examination", Dr.

Larson opined that Claimant presented as a "likely" high risk for surgical failure. (Respondents' Submissions, Bates# 139-146).

25. Claimant's pain has persisted since her evaluation with Dr. Larson. On March 16, 2021, Claimant's restrictions were increased by Dr. Burns to no use of ladders, no overhead reaching, bending for only 1-2 hours per day, and no pushing or pulling of roller carts. Claimant's restrictions and pain levels remained largely the same until May 15, 2021 when Claimant was taken completely off work. (Claimant's Submissions, Bates# 000190-000192; 000198-000201; 000213).

26. On March 24, 2021, Claimant presented to Northgate Physical Therapy for a functional capacity evaluation (FCE). On her pain diagram, Claimant indicated she was having shooting pain in the back of her thighs, buttocks and in her mid-back. She was unable to tolerate stooping, crouching, kneeling, reaching overhead with her left arm, climbing stairs, lifting high, or pulling. She was able to perform lifting and pushing within the light category and carrying within the sedentary category. The FCE was determined to be valid. (Claimant's Submissions, Bates# 000305-000332).

Claimant's Testimony

27. Claimant testified that despite significant conservative care, including PT, chiropractic care, medications, home exercise and injection therapy she has continued to experience persistent low back and left shoulder pain. According to Claimant, she is still experiencing low back pain that radiates into both legs and groins, right greater than left. Claimant testified that due to low back pain she has numbness in her legs/feet, which makes it difficult to perform everyday activities such as driving. (Hrg. Tr. Pg. 11-15).

28. Claimant testified that she is currently experiencing a constant dull, achy, and sharp pain in the front and back of her left shoulder with limited range of motion. Claimant testified that she cannot lift her arm all the way up. She went on to explain that she has difficulty making her bed and washing/hanging clothes because of limited range of motion. Similarly, Claimant testified that she cannot style her hair because she cannot bring reach her arm all the way up to her head. Claimant testified that she can no longer go camping, fishing, four wheeling, motorcycle riding, or skiing due to on-going pain in her left shoulder and back.

29. Claimant testified that prior to her June 12, 2020 injury she was able to perform her job without difficulty and without assistance. (Hrg. Tr. Pg. 23-24). As noted above, Claimant is now restricted with respect to her physical capacity.

30. Claimant testified she had no issues with her left shoulder prior to her injury on June 12, 2020. (Hrg. Tr. Pg. 25, Lines 13-25).

31. Claimant testified that while she had a previous lumbar fusion related to a prior 1994 injury, she recovered from this injury without the need for continuing care following a

lumbar fusion. Claimant testified she was on pain medication (Tramadol) prior to June 12, 2020 for her knees and that this was to be used for the foreseeable future. (Hrg. Tr. Pg. 25-26). Based upon available record, including Dr. Larson's independent medical examination (IME) report, the ALJ finds Claimant's assertion that she did not need continuing care for her low back following her previous lumbar fusion unconvincing.

32. On cross-examination, Claimant testified that she did not remember seeking treatment for low back pain from 2015 through 2019. As noted, the available record contains references regarding Claimant having lumbago, sciatica and chronic pain and back issues related to a prior surgery. (Hrg. Tr. Pg. 34 Lines 12-25; See also, Respondents' Submissions, Bates# 142). Nonetheless, there is a dearth of evidence to suggest that Claimant's low back was symptomatic or disabling in the weeks and months before her June 12, 2020 work injury.

The Testimony of Dr. Larson

33. Dr. Wallace Larson testified in accordance with his report. He testified that Claimant had undergone a previous L3-S1 fusion, but was unsure whether that occurred as part of one procedure or two. He also testified that Claimant's reported symptoms in the legs and feet were inconsistent with an L2-L3 disc protrusion or L3 nerve compression as reported by Dr. Finn. He said this was because the pain associated with pathology at these spinal segments would be isolated to the anterior and lateral portion of the thigh rather than the back of the legs and feet. He also testified that a disc protrusion is a common asymptomatic finding in people of Claimant's age and that nothing on Claimant's MRI, including the disc protrusion at L2-L3 supports that she suffered an acute injury. Rather, Dr. Larson testified that the changes noted on MR imaging are degenerative in nature and Claimant had returned to her baseline. According to Dr. Larson, it is highly likely that the L2-L3 disc protrusion on MRI was present before Claimant's June 12, 2020 industrial injury, suggesting that Claimant's current symptoms are related to the degenerative process in her lumbar spine.

34. Dr. Larson testified that the abnormalities present on Claimant's lumbar MRI do not demonstrate the accepted severity of abnormalities necessary for surgical intervention per the medical treatment guidelines, adding that Claimant has chronic pain syndrome and non-physiologic findings on examination making her a poor surgical candidate. (Hrg. Tr. Pg. 48; 49; 50; 52 Lines 8-22).

35. Regarding Claimant's shoulder pain, Dr. Larson testified that there was no evidence of a rotator cuff tear, and that bursitis is normal for someone of Claimant's age. He testified that there was no surgically correctable lesion in the shoulder according to Claimant's MRI reports. Nonetheless, Dr. Larson admitted that Claimant had no complaints related to her left shoulder prior to her June 12, 2020 work injury. (Hrg Tr. Pg. 65 Lines 16-23).

36. During cross-examination, Dr. Larson admitted that spinal fusions place more stress on the segments above and below the level of the fusion, which can lead to adjacent level disease potentially making the disc above the fusion more susceptible to injury. According to Dr. Larson adjacent level disease can occur with or without trauma and manifests variably in time. He also testified that he would expect that if the symptoms were coming from Claimant's L2-3 region, the injections given by Dr. Finn would have helped her symptoms. (Hrg. Tr. Pg. 75 Lines 22-25; 76 Lines 2-6; 77 Lines 9-12; 79 Lines 7-19).

37. Dr. Larson testified that he based his opinions concerning the degenerative nature of Claimant's L2-3 disc protrusion on what he knows physiologically and medically about degenerative disc changes. He testified that there were no MRIs taken prior to Claimant's work injury that were available for him to review and no objective findings for him to base this on. (Hrg. Tr. Pg. 91 Lines 4-10; 18-22). Nonetheless, he suggested that neither Dr. Finn nor Dr. Duffey explained why this case represented an exception to the accepted MTGs to justify providing either the left shoulder surgery or a neurosurgical evaluation of the lumbar spine.

The Deposition Testimony of Dr. Duffey

38. Dr. Duffey testified by deposition as an expert in orthopedic surgery. Dr. Duffey testified in accordance with his reports and medical records. He testified that he diagnosed Claimant with rotator cuff syndrome and biceps tendonitis. He testified that he believes both the rotator cuff syndrome and biceps tendonitis are more likely than not related to Claimant's work injury of June 12, 2020, and that her current symptoms are consistent with Claimant's described mechanism of injury. (Duffey Depo. Tr. Pg. 14, Lines 3-5; 15, Line 2; Pg. 16, Lines 21-24).

39. Dr. Duffey testified that he considered an arthroscopic debridement to be reasonable and necessary as a result of the injury from June 12, 2020 because of "persistent and consistent" complaints for six months following Claimant's acute injury. He testified that he was not aware of any previous history of pain or problems in the left shoulder. Dr. Duffey testified that he disagreed with Dr. Larson's statement that Claimant had returned to baseline, explaining that there was no reference to pre-existing left shoulder pain in the medical record establishing a baseline upon which she could return. He testified that that her shoulder pain was, more probably than not, unrelated to her prior cervical fusion. According to Dr. Duffey, Claimant has an acute shoulder injury that indicates arthroscopic surgery. He testified that Claimant did not complain of diffuse tenderness while he was examining her. He testified that he was confident surgery would improve the state of Claimant's left shoulder. (Duffey Depo. Tr. Pg. 17 Lines 6-20; Pg. 18 Lines 11-24; Pg. 19 Lines 3-23; Pg. 20 Lines 4-25; Pg. 22 Lines 1-22).

40. On cross-examination, Dr. Duffey testified that his scope of treatment only included Claimant's left shoulder. He testified that even though Claimant began to report less pain in her left shoulder due to at-home physical therapy, the results of such therapy

cannot be measured day-to-day. He testified that Claimant did not report overall improvement of her left shoulder pain to him directly. He also maintained that Claimant did not demonstrate overall improvement with respect to the shoulder as she was still reporting significant pain during her recent visits. Dr. Duffey went on to testify that Claimant's increased work restrictions did not necessarily support a conclusion that her shoulder condition was improving because a workers' compensation doctor would be likely to increase restrictions, and Claimant's desire to return to full duty work may have been in part to demonstrate that she was not malingering. (Duffey Depo. Tr. Pg. 25 Lines 24-25; Pg. 26 Line 1; Pg. 29 Lines 16-25; Pg. 31).

41. On re-direct, Dr. Duffey testified that pain fluctuates, and it is not uncommon for a patient's pain levels to wax and wane. He further testified that while improvement of function is important per the Medical Treatment Guidelines, often his goal when deciding to perform surgery is to reduce pain.

Dr. Finn's Deposition Testimony

42. Dr. Kenneth Finn testified by deposition as an expert in Physical medicine and Rehabilitation (PM&R) in addition to pain management. He testified that a surgical consultation with Dr. Hammers would be reasonable and necessary, as there was no further treatment he could offer Claimant to relieve her symptoms. He testified that he referred Claimant to Dr. Ronald Hammers for a surgical consult due to failure of conservative care and lack of sustained improvement from injections. He explained that he considered the referral to Dr. Hammers to be reasonable, necessary and related to Claimant's work injury because of the mechanism of her injury and lack of records indicating any ongoing treatment after her spinal fusion. He testified that more likely than not, Claimant's lumbar injury and symptoms are a result of her June 12, 2020, injury. He also testified that Claimant's current symptoms were consistent with her mechanism of her injury. (Finn Depo. Tr. Pg. 12, Lines 15-24; Pg. 16 Lines 1-25; 17 Lines 21-25).

43. Dr. Finn testified that Claimant's prior L3-S1 fusion might have placed more stress at the L2-L3 level above the fusion leading to transitional segment disease causing the L2-L3 level to become weaker. He disagreed with Dr. Larson's opinion that Claimant had returned to baseline. He testified that the injections he administered served as a diagnostic tool in that Claimant's response to the injection demonstrated potential issues with the L2-L3 disc and surrounding nerves. He opined that the results of Claimant's physical examination was consistent with having a L2-3-disc protrusion. He testified that Claimant has reflex asymmetry, which supported pathology at the L3 level. Dr. Finn testified that it is not probable that Claimant would have developed adjacent segment syndrome absent her work injury. (Finn Depo Tr. Pg. 14, Lines 13-21; Pg. 18, Lines 14-17; 19 Lines 1-10; Pg. 22 Lines 1-4Pg. 27 Lines 8-12).

44. Dr. Finn testified that Claimant's prior spinal fusion, her symptoms and physical examination findings that correlating to "structural testing, along with her failure to improve

with conservative care, prompted his decision to make the referral to Dr. Hammers. Per Dr. Finn, the referral was reasonable and necessary. (Finn Depo, Tr. Pg. 17, Lines 8-20).

45. Dr. Finn testified that there was nothing about the previous treatment directed to Claimant's low back that made him hesitant to say that the current symptoms she is experiencing are related to anything but her work injury. (Finn Depo. Tr. Pg. 48).

46. Based upon the evidence presented as a whole, the ALJ finds the testimony and opinions of Drs. Duffey and Finn credible and more persuasive than the contrary opinions of Dr. Larson. The ALJ credits the testimony of Dr. Duffey and Dr. Finn to find that Claimant has established, by a preponderance of the evidence, that the surgery requested by Dr. Duffey, and the referral to Dr. Hammers as requested by Dr. Finn, is reasonably necessary medical treatment, related to the June 12, 2020, accident.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary opinion).

D. When considered in its totality, the ALJ concludes that the evidence in this case supports a reasonable inference/conclusion that Claimant's current left shoulder and low back pain complaints represent a continuation of the pain she has experienced since her June 12, 2020 work injury. Moreover, the evidence presented supports a conclusion that the recommended left shoulder surgery and low back neurosurgical consultation are reasonable and necessary treatment designed to cure and relieve Claimant from the ongoing effects of her June 12, 2020 industrial injury.

The Arthroscopic Left Shoulder Surgery Recommended by Dr. Duffey

E. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970)*;* § 8-41-301(1)(c), C.R.S. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those that flow proximately and naturally therefrom. *Standard Metals Corp. v. Ball*, *supra*. In this case, Claimant has been consistent in reporting that she has never had treatment directed to the left shoulder and the available medical record supports her account. Here, the ALJ credits this testimony and the testimony of Dr. Duffey that Claimant's left shoulder symptomatology appeared unrelated to any prior neck problems as her pain was isolated to the left shoulder on examination to find and conclude that Claimant's need for additional left shoulder treatment, including the proposed arthroscopic surgery is causally related to her June 12, 2020 industrial accident. Nonetheless, Claimant must also establish that the recommended treatment, i.e. Dr. Duffey's requested surgery is reasonable and necessary before Respondents will be held liable to provide and pay for it.

F. The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact for determination by the ALJ. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). In this case, Dr. Duffey opined that Claimant is experiencing rotator cuff syndrome and biceps tendinitis in her left shoulder. The evidence presented, including Claimant's testimony that she has experienced functional decline due to persistent pain, weakness and impaired range of motion, supports these medical diagnosis and Dr. Duffey's opinion that the surgery he is recommending is reasonable and necessary. While Dr. Duffey testified that often his main goal when performing surgery is to reduce pain, the ALJ is convinced that improving Claimant's left shoulder pain will likely improve her function. Indeed, the medical record supports that as Claimant's pain temporarily improved with conservative care during which time she enjoyed a greater level of functional independence.

G. The MTG's enumerated at WCRP, Rule 17 are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook V. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). WCRP Rule 17-2(A) provides: All health care providers shall use the Medical Treatment Guidelines adopted by the Division. In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *See*, Section 8-43-201(3) (C.R.S. 2014); *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011). Nonetheless, they carry substantial weight as accepted guidance in the assessment/treatment of shoulder injuries.

H. Concerning the recommendation for left shoulder surgery, the MTG's, specifically, Rule 17, Exhibit 4 provides that surgical intervention of the shoulder "should be contemplated within the context of expected functional outcome and not purely for the purpose of pain relief." WCRP, Rule 17, Exhibit 4. Moreover, Exhibit 4 provides that the concept of "cure" with respect to surgical treatment by itself is generally a misnomer. Consequently, "[a]ll operative interventions must be based upon positive correlation of clinical findings, clinical course, and diagnostic tests. A comprehensive assimilation of these factors must lead to a specific diagnosis with positive identification of pathologic conditions. Based upon the evidence presented, the ALJ is convinced that Claimant has met the diagnostic criteria for consideration of shoulder surgery for conditions categorized as Rotator Cuff Syndrome/Impingement Syndrome and other Associated Shoulder Tendinopathies pursuant to WCRP, Rule 17, Exhibit 4.E.9. Indeed, physical examination and testing supports a conclusion that Claimant meets several of the indications for surgical intervention, including: positive impingement testing (Hawkins) a positive Yergason's test and painful range of motion in the abduction arc between 60 and 110 degrees. See, WCRP, Rule 17, Exhibit 4.E.9.c.i-ix. Moreover, the MTG's indicate that '[w]hen functional deficits interfere with activities of daily living and/or job duties after 3 to 6 months of active patient participation in an appropriate shoulder rehabilitation program, surgery may restore functional anatomy and reduce the potential for repeated impingement. Based upon the evidence presented, there is little doubt that Claimant has failed extensive conservative care. Moreover, Claimant continues to suffer from functional deficits, which are interfering with her ability to carry out her activities of daily living and the demands of her occupation.

I. In this case the ALJ resolves the conflicts in the evidence regarding whether the arthroscopic surgery recommended by Dr. Duffey is reasonable and necessary in favor of Claimant. Based upon the evidence presented as a whole, the ALJ is convinced that the proposed surgery has been contemplated within the context of improving Claimant's functional status by decreasing her ongoing pain. The contrary opinions expressed by Dr. Larson, while sincere, are simply unpersuasive. Accordingly, the ALJ concludes that the proposed left shoulder surgery represents reasonable and necessary treatment to cure and relieve Claimant of the ongoing effects of her June 12, 2020 industrial injury.

Dr. Finn's Referral to Dr. Hammers

J. It is well settled that a pre-existing condition "does not disqualify a claimant from receiving worker's compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or the need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940). As found, the persuasive evidence demonstrates that Claimant sought treatment for low back pain after engaging in a specific activity, i.e. lifting, and lowering boxes of fresh produce while down stocking pallets for Employer on June 12, 2020. Based upon the evidence presented, the ALJ finds/concludes that the activity in question likely placed Claimant's diseased back in a compromised position aggravating a pre-existing condition caused by her prior injury and subsequent fusion to give rise to her symptoms and need for treatment. Although Claimant has significant pre-existing degenerative changes in the low back, confirmed by MRI, the ALJ finds no persuasive evidence to establish that Claimant's low back was symptomatic or disabling immediately prior to June 12, 2020. Respondents' suggestion, as promoted by Dr. Larson that all of Claimant's low back symptoms can be explained on the basis that she had multiple non-physiologic findings on his physical examination is unpersuasive given the findings on MR imaging of the thoracic and lumbar spine. As noted by Dr. Finn, it is possible that Claimant's prior three-level fusion lead to adjacent segment syndrome, which subsequently weakened the L2-L3 spinal segment causing the protrusion, noted on MRI. While it is clear that Claimant remains symptomatic and that Dr. Finn has no further to treatment to offer in an effort to cure and relieve her persistent back pain, questions remain as to the origin of Claimant's intransigent pain. Indeed, Claimant's pain may be emanating from an injury to the L2-L3 disc caused by her work duties on June 12, 2020 or her symptoms may represent the natural and probable progression of her pre-existing degenerative changes caused by her prior injury and lumbar fusion.

K. Based upon the evidence presented, the ALJ finds/concludes that the potential low back pain generators have not been adequately defined and treated in this case as required by the MTG's. The ALJ concludes that a referral to a spinal surgeon, such as Dr. Hammers, with the expertise to identify Claimant's pain generator(s) is reasonable and necessary to adequately/effectively treat Claimant's ongoing low back pain. Although low back surgery has not been recommended to date, any recommendation for surgery shall be contemplated in accordance with the criteria set forth in WCRP, Rule 17, Exhibit 1 of the MTG's.

L. Rule 17, Exhibit 1.G.4.e provides that the following pre-surgical indicators be considered before proceeding with additional fusion surgery:

> i. All pain generators are adequately defined and treated; and
>
> ii. All physical medicine and manual therapy interventions are completed; and
>
> iii. X-ray, MRI, or CT myelography demonstrate spinal stenosis with instability or disc pathology, requiring decompression that may surgically induce segmental instability or a positive discogram; and
>
> iv. Spine pathology is limited to two levels; and
>
> v. Psychosocial evaluation with confounding issues addressed; (required for all cases except those with degenerative spondylolisthesis with persistent claudication or radicular leg pain with neurologic signs); and
>
> vi. For any potential fusion surgery, it is recommended that the injured worker refrain from smoking for at least six weeks prior to surgery and during the period of fusion healing. Because smokers have a higher risk of non-union and higher post-operative costs, it is recommended that insurers cover a smoking cessation program peri-operatively.

M. Taken in its entirety, the ALJ concludes that the evidentiary record contains substantial evidence to support a conclusion that a neurosurgical consultation with Dr. Hammers is reasonable and necessary to assist in the identification of Claimant's pain generators and the development of effective treatment options to address those generators in light of Claimant's prior lumbar fusion. As noted above, all pre-surgical indicators enumerated in the MTGs shall be considered before proceeding with additional surgery. Moreover, Respondents retain the right to challenge any future surgical request on the grounds that it is not reasonable, necessary or related to Claimant's June 12, 2020 industrial injury. *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995); Section 8-42-101 (1) (a), C.R.S.; *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

ORDER

It is therefore ordered that:

1. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation medical benefits fee schedule, to cure and relieve Claimant from the effects of her left shoulder and low back conditions, including, but not limited to the arthroscopic debridement of the left rotator cuff and labrum, with subacromial decompression and biceps tenodesis as recommended by Dr. Duffey and the neurosurgical referral to Dr. Hammers as requested by Dr. Finn.

2. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

DATED: September 22, 2021

/s/ Richard M. Lamphere________________

Colorado Springs, CO 80906

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-153-276-001/002/003

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he suffered compensable injuries on October 23, 2021.

II. If compensable, whether Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized, reasonable and necessary medical benefits to cure or relieve the effects of his industrial injuries.

III. If compensable, whether Claimant has proven by a preponderance of the evidence that he is entitled to a one-time change of physician to Dr. Kareem Sobky at Presbyterian St. Luke.

IV. If compensable, what is Claimant's average weekly wage.

V. If compensable, whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary total disability benefits from October 23, 2020 through the date of maximum medical improvement.

VI. Whether Claimant has proven by a preponderance of the evidence that he is entitled to penalties for alleged violations of Section 8-43-203, C.R.S. and W.C.R.P. Rule 5-2 for Respondents' failure to admit or deny the claim in a timely manner or if Respondents have cured any potential penalties pursuant to Section 8-43-304(4), C.R.S.

PROCEDURAL HISTORY

This matter was previously scheduled for Hearing for May 11, 2021 and came before Administrative Law Judge Edwin L. Felter, Jr. The parties submitted their exhibits at that time. Claimant stated that he did not have time to review Respondents' exhibits as they were provided electronically and he was unable to access them. Respondents stated that a hard copy of the exhibit packet had been left on Claimant's porch, but Claimant stated that he had not receive it. The parties disclose that PALJ Susan Phillips combined all issues listed on the multiple Applications for Hearing into one hearing.

There are two regular Applications for Hearing. One was filed by Claimant's prior counsel on December 23, 2020 which lists issues of compensability, medical benefits, average weekly wage ($1,191.71), temporary disability benefits and requests authorization of care under Dr. Carlos Glass, psychologist, pursuant to Dr. Corson's referral. The second one was filed by Claimant on December 23, 2020, which includes the additional issue of penalties for failure to admit or deny the claim, was accompanied by a Concentra Work Activity Status Report dated December 8, 2020 and a letter from the Division dated December 15, 2020, stating that they had not received a timely admission or denial. The third is an Applications for Expedited Hearing—One-Time Change of Authorized Treating Physician dated January 11, 2021 with an attached Notice of One-Time Change of Physician & Authorization for Release of Medical Information filed by Claimant on January 5, 2021 for a change to Dr. Kareem Sobky at Presbyterian St. Luke, from Dr. Corson at Concentra.

Other relevant procedural history includes Claimant's Petition to the Division's Director for penalties dated January 6, 2021 and Motion for Summary Judgment dated January 15, 2021. The motions were denied on January 27, 2021 by Director Tauriello pursuant to Sec. 8-43-203(2)(a), C.R.S. It is clear that the Motion for Summary Judgement was also filed with the OAC as ALJ Steven R. Kabler also denied the motion on January 26, 2021.

A Prehearing Order for Prehearing Conference of February 8, 2021 was issued by PALJ Susan D. Phillips granting Respondents' motion to engage in discovery with the *pro se* Claimant, denying Respondents' motion to compel Claimant's attendance at an IME, granting an extension of time, vacating a prior hearing set for March 12, 2021, consolidating all issues for the rescheduled hearing, denying Claimant's motion to compel claim file as moot, and denying Claimant's motion for penalties.

On May 7, 2021 and on subsequent dates Claimant sent multiple emails to the Office of Administrative Courts demanding an order that Respondents pay for benefits based on alleged statements made during the May 11, 2021 hearing before ALJ Felter. In an abundance of caution, Respondents filed a Response to Claimant's Motion for Summary Judgment on June 17, 2021. On June 28, 2021 ALJ Felter issued an order denying Claimant's Motion for Summary Judgment.

On July 14, 2021 ALJ Felter issued an Order Concerning Hearing of August 27, 2021 indicating that any ALJ could hear this matter and that no further extensions would be allowed unless under "extreme good cause."

During pretrial matters, Claimant was advised that he had the right to be represented by an attorney and waived that right. He was also advised that he would be held to the same standard as an attorney with regard to his knowledge of the Act, rules and case law and that the court could not assist in his prosecution of the claim. Claimant acknowledge his understanding and requested leave to proceed *pro se* (self-represented).

Claimant's exhibits 1 through 13 and 15 through 17 were admitted into evidence. Respondents objected to Exhibit 1 and 4 as Claimant had circled and written on the exhibits. This ALJ took judicial notice that there were some marks and writing on the exhibits but that this ALJ would not take notice, other than as part of Claimant's position statement regarding these markings, as they do not change the wording on the documents themselves. Respondents objected to Exhibits 15 through 17. These photographs were admitted following laying a foundation. The Respondents' Exhibits A through J were admitted into evidence without objection. The record was left open through September 15, 2021 for the parties to submit position statements which were timely submitted by both parties.

FINDINGS OF FACT

Based upon the evidence, the ALJ makes the following Findings of Fact:

1. Claimant testified that he was employed by Employer from April 1. 2020 through October 23, 2020 as a Class A truck driver. His duties included hauling flooring products in a large tractor trailer. Claimant had deliveries both within the state and out of state (Wyoming). This required Claimant to check the loads on the trailer, hook up the trailer, drive and deliver the products within a certain amount of time. He would also use a forklift to move the heavy products when necessary. Claimant was only allowed to drive up to 11 hours a day, at which time Claimant had to have overnight stays at motels. Overnights would occur approximately once per week. Claimant would be reimbursed for the overnight expenses including a per diem. Respondents would frequently pay for the motels with a company credit card. Claimant testified that on October 22, 2020 he was able to complete his job duties without difficulty, including unloading his truck while performing deliveries, and that he would not have been able to do so if he had been hurt.

2. During the week of October 23, 2020 Claimant was due to haul product from the Aurora facility to locations that were not familiar to Claimant. Claimant was assigned the new route because a co-worker was on vacation. Claimant objected to the change because he did not know the routes that had to be covered, did not have any training regarding the routes, including the delivery points and customers, the opening and closing times or the deadlines for delivery.

3. Claimant arrived at the Employer's facility extremely early on October 23, 2020 because he needed to obtain the paperwork, familiarize himself with the routes for deliveries, the loads on the trailer, the order of the delivers and whether the products were loaded in the right order in order to accomplish the deliveries. He also needed to make sure that the products were strapped in correctly. Claimant testified that the products were extremely heavy and his first delivery had to happen by 6 a.m. in the morning. On that particular day, it had snowed and the parking lot was covered in snow and ice. Claimant stated that the person in charge of the loading frequently would raise the trailer to a higher level, with the nose higher than the back end, in order to use a forklift, and would fail to level the trailer out after loading. This would cause problems when Claimant was hitching the semi-truck to the trailer because they were not able to couple correctly to secure the trailer to the semi-truck. Claimant needed to have the semi-truck come together with the trailer so that the king pin and lock achieve coupling in order to secure the load. However, if the front end was too high, this cannot happen.

4. On October 23, 2020 Claimant arrived at approximately 2:00 a.m. Claimant had been provided with the security code so that he could enter the building when needed.

He entered the building to access the truck, that was kept in the building due to the cold weather. He states that he had safety glasses, gloves, and steel toed boots, as required. He took the truck to his personal vehicle to get his personal belongings. As Claimant was walking from the vehicle to the truck, his arms full of personal items he was transferring, Claimant states he slipped on the ice and fell forward, injuring his abdomen and both knees. He states that it was so slippery that he lost control and that it was very fast. He also hit his head hard. He does not know if he lost consciousness. Claimant stated that he got up afterwards, after what he thought might have been a few minutes, and continued to the dock area to check the trailer.

5. Claimant assumed that the fall would have been caught by the security system on the building. He stated that the employees are advised that the premises are under surveillance because of the cost of the products, which could amount to millions of dollars. Claimant found out later that the security system was not operational and failed to record the fall as the video set up were just "dummies."[1] Claimant determined since Concentra was not open at that time in the morning and there was no one around to discuss what had happened to him that he would proceed with his deliveries and see how he did. He managed the pre-trip inspection of the semi-truck and drove to the dock area where the trailer was parked in the bay. He found that the trailer was too high. He tried to manually lower the trailer with the hand crank. He struggled with the crank and overstrained himself, causing severe pain in his abdomen and groin. Claimant did not know if the hernias occurred at the time of the fall or when he strained himself but his abdomen was already hurting by the time he was trying to crank the trailer down. Claimant testified that it took him approximately 20 to 30 minutes to get the trailer level so that it could be coupled with the truck.

6. Claimant identified and explained the notations he had made on the pictures he had taken of the parking lot and dock area with his phones. The parking lot and dock pictures were taken on the day of the injury at approximately 5:50 a.m.[2] These pictures were taken with his work phone. He described the hook up mechanism shown on the photos showing the large gap between the trailer and the truck (5th wheel). He stated that the lock jaws had a release handle once the coupling was achieved but it would not operate unless the coupling occurred correctly. When trailer was not level, the trailer would show the plate on the trailer as uneven. Claimant explained that the trailer must then be lowered so that the trailer skid plate is level or parallel with the 5th wheel plate until the king pin is able to be secured on the plate then the lock jaw release, so the handle can be operated to secure the load. The building pictures were taken on April 11, 2021.[3] These pictures were taken by Claimant with his personal phone. He downloaded and printed the pictures himself. He explained that the difference in color was because he printed some pictures with his own printer, which stopped working, and the remaining pictures with his mother-in-law's printer. He testified that no other person had access to either of his phones before he downloaded the pictures. As found, Claimant is credible

[1] Exhibit 1 pp. 1-2; Exhibit 17 pp. 1 & 3.
[2] Exhibit 15 & 16
[3] Exhibit 17

and has proven that he was injured in the course and scope of his employment, injuring his bilateral knees and abdomen.

7. Once Claimant was on his way, he was forced to stop at the open weigh station. He was advised that he was significantly overweight, at approximately 68,000 pounds. He returned to the facility and unloaded some of the product that he no longer had time to deliver that day due to the delays. He used a forklift to perform the activity. Claimant testified that he was in pain the whole time he was working that day and asked the customers to perform the unloading. On his way back, he contacted Concentra. He was asked questions, including whether he had been exposed to COVID-19. Claimant disclosed that he had been at the VA Hospital, after which he received a call that he might have been exposed. Concentra advised that they would be unable to see him for an exam until after a fourteen day self-quarantine.

8. Claimant returned to the Employer's facility and advised the management that he could not unload the trailer. Claimant stated he later communicated with the Human Resources department for Employer by email regarding the accident and incident and the fact that Concentra refused to see him for the next two weeks due to COVID-19 exposure. Since Claimant failed to receive a response from HR, he consulted with his personal provider, Dr. Tutt. He was provided with an appointment for the following Monday. Claimant stated that he did not discuss the work injury with his supervisor because he considered that he had a "hostile work environment" and was not getting along with his supervisor. Specifically, he discussed that his supervisor had threatened him not to make any further complaints about any issues about the company work or the other workers. He therefore would only discuss matters directly affecting his work, schedule or hours, not his medical conditions. As found, Claimant is credible in his testimony.

9. Claimant's direct supervisor testified that he provided text messages that he had kept from communications between himself and "[Claimant's first name] Driver," who he stated was Claimant.[4] The texts included several from June 2020, when Claimant had discussed a work-related back injury that subsequently resolved and November 9, 2020. On Monday, October 26, 2020 Claimant sent the following text to his supervisor:

> Claimant:
>
> Good evening Sir, I have a problem. I was informed today that I may have been exposed to vivid 19 at the VA where I go for some of my therapy sessions.
>
> I will begin a new test and screening tomorrow, but not sure how things are handled at work??? I'm being told I should self quarantine for 2 weeks but need to communicate with you.
>
> I just read your note about loading trucks, I apologize for missing, but Marcos usually waits till Tuesday morning to load my truck anyway.

[4] Exhibit 0, bates 75-89.

I attempted my therapy, but was turned away until I complete my screening period and am determined to be safe.

Supervisor:

Marcos will be in to load the trucks tomorrow. If you are not showing symptoms you can come to work

10. On October 28, 2020 Claimant sent his supervisor a text stating:

Claimant:

Hello Sir, just spoke with Mr Parrish and informed him I don't have a doctor's release to return to work yet. I see my primary care doctor Monday morning and she will provide me with instructions from there. I will make every effort to keep you informed as soon as I get answers myself.

Supervisor:

Thanks and I do hope you feel better. Please do.

11. The next text is dated November 3, 2020, though it seems that the following texts are from a different phone or text stream.

Claimant:

Do I request sick time, or PTO. I have a mild grade fever and have felt a little sluggish since Friday morning. I need to go to clinic for test and first screening tomorrow, I'd like to request time off.

Supervisor:
Ok let me know when you plan to be back.

Claimant:
I will speak with doctors and keep you informed, thanks Sir.

12. On October 29, 2020 relevant texts from the supervisor's phone state as follows:

Supervisor:
Are you expecting results on your testing soon?

Claimant:
I assume they will give me update on Monday. I did have positive symptoms, the low grade fever, muscle cramping, and breathing problems, fatigue, but did not state I do or do not have covid 19 for certain. They are treating the symptoms, and will consult with more docs on Monday. I may be seeing a specialist also???

Supervisor:

Specialist for what?

13. It seems that Claimant responded on Friday, Oct 30, 2020 as follows:

Claimant:
Good morning Sir, I've submitted information to Human Resource addressing the further medical concerns. But on a more pressing scale, I am unable to enter the Paylocity program to enter medical leave for this week, or next. Can you please assist and enter hours for me? Thanks.

14. It is not apparent from the texts that the supervisor responded to the above text. On Monday, Nov 2, 2020 Claimant sent his supervisor a follow-up text:

Claimant:
Good afternoon Sir, my primary doctor states mv fever has returned and my blood pressure is extremely high, so they are continuing the quarantine for now. Other medical information has been sent to HR.

Supervisor:
[Claimant] Hr will be calling you today. They said they haven't heard from you?

Claimant:
Ok, I have been texting Ms. [HR Consultant]'s number all my information.

Supervisor:
Make sure you speak with her today please.

Claimant:
I will be expecting and awaiting her call.

15. On Mon, Nov 2, 2020 the following texts show:

Claimant:
[Supervisor] I tried to call Ms. [HR Consultant] at 801-349-2595 but got no answer. Not sure why I can't reach her for follow up.

Supervisor
That is the correct number so I'll let her know.

Claimant:
Thanks Sir

16. On Tuesday, Nov 3, 2020 the supervisors' texts screen show:

Claimant:
Sorry, I can't talk right now.

17. The next text shows “Text Message, Friday 7:41 AM.” It is suggested by the placement of this text that since it is on the same screenshot as the prior November 3, 2020 text, that it would be Friday November 6, 2020. It seems to be addressed to the HR Consultant. This text does not display as the other text sent by Claimant in a grey box, but in green, like the texts from the supervisor. The text states as follows:

> Claimant:
> Good morning Ms. [HR Consultant], I'm writing to inform you I may have suffered an OJI. I fell on the ice last Friday in the company parking lot as I was getting ready for driving at 2am. I believe I may have injury to my

18. Then the message is cut off and continues “necessary by my medical providers.” Then another cut off portion states “I believe the hernia problem is the…” and again it is cut off. Following these messages, another message from Claimant to his supervisor on “Wednesday at 3:03 PM” states:

> Claimant:
> Hey [supervisor], I finished sending the rest of those messages to Ms. [HR Consultant] myself. Have a good evening.

19. This ALJ infers from the texts above that Claimant likely authored the texts but, whether the text messages were truly authored at the times suggested by the order of the list provided by the supervisor is in question. Some texts were clearly sent to the supervisor by another individual such as the time reference of “Text Message, Friday 7:41 AM.” looks different than the other texts and is in green instead of gray as other texts which are likely authored by Claimant. This ALJ finds that the texts under Finding of Fact numbers 17 and 18 are, in fact a text sent by Claimant. This is supported by certain references made by Claimant on October 26 which states that “I attempted my therapy, but was turned away until I complete my screening period.” This is consistent with Claimant’s testimony that he attempted to see someone at Concentra but was turned away due to his COVID exposure. It also follows that Claimant informed his supervisor on October 28 that he “just spoke with Mr Parrish and informed him I don't have a doctor's release to return to work yet. I see my primary care doctor Monday morning and she will provide me with instructions from there.” This is supported by the fact that Claimant was seen by Dr. Hutt on November 2, 2020. And on October 30 Claimant stated “Good morning Sir, I've submitted information to Human Resource addressing the further medical concerns.” From all this information, this ALJ finds that the copied text message listing “Text Message, Friday 7:41 AM” was more likely than not a text message originally sent by Claimant to the HR Consultant on Friday October 30, 2020, advising them of the prior Friday’s work related slip and fall accident and clearly advised of the hernia problem, though the full text message was not displayed by the evidence submitted. However this is supported by Claimant’s testimony listed above explaining how he was injured, which is found credible.

20. The last text dated “Today 8:18 AM,” which this ALJ infers to have taken place around November 9, 2020 based on the supervisor’s testimony and the

employment records detailing the Claimant's termination, is clearly addressed to multiple individuals, and states:

> Claimant:
> Good morning all, trying to get things off on a good note. Just need to get my final paycheck provided today as per Colorado guidelines. [Supervisor] I need my clipboard out of the truck, and I will be returning company products as well. [First unknown person] I'll need information on what I need to do to file my short and long term disability claim thru the insurance. [Second unknown person], you're right, Work Comp will take care of my OJI concerns. Thanks, [Claimant].

21. Claimant has a past history of several medical conditions. On June 26, 2016 Claimant was under the care of Dr. Charles Glass, a psychologist, due to a diagnosis of adjustment reaction with anxious features, relating to an on the job slip and fall injury in 2015 when he injured his right shoulder.[5] This care related to Claimant's fear of surgery and his past experiences with surgeries.

22. Claimant had a substantial right knee injury and surgeries resulting in a total right knee replacement (TKA) in January 2018.[6] Prior to surgery he was diagnosed with right knee osteoarthritis (OA) with retained hardware from prior ORIF for Tibial Plateau fracture and prior anterior cruciate ligament (ACL) reconstruction. In April 2018 Claimant complained of left foot problems and was diagnosed with a left foot second intermetatarsal space neuroma.[7]

23. Claimant went through the Division Independent Medical Examination (DIME) process in 2017 as a result of his right shoulder injury in 2015.[8] The evaluation included multiple conditions. The DIME physician identified no masses or tenderness in the abdomen.[9] The DIME documented examining the lower extremities showing muscle tone is diminished on gross inspection on the right side compared to the left. He found mild bilateral iliotibial-band tenderness on palpation, sitting straight leg raising was near full, with evidence of hamstring tension bilaterally. Surgery of the right shoulder occurred in April 2017.[10] The first documented work-related injury occurred on September 20, 2007, documenting thoracolumbar condition, for which he was given an impairment rating.[11]

24. Past medical-history is positive for hypertension diagnosed in the mid-1990's, diabetes diagnosed in 2017 and blood clots experienced in 2015 related to contusions to the right lower extremity.[12]

[5] Exhibit P, bates 90-93.
[6] Exhibit R, Kaiser medical records, bates 143-162; Exhibit S, bates 170-198.
[7] Exhibit R, bates 167-168
[8] Exhibit T, bates 199-231.
[9] Exhibit T, bate 223.
[10] Exhibit T, bate 229.
[11] Exhibit T, bate 202.
[12] Exhibit T, bate 221.

25. Claimant underwent a Department of Transportation (DOT) physical on March 26, 2020. At that time, Nurse Kathy Okamatsu completed the Federal Motor Carrier Safety Regulation examination, including of the abdomen and lower extremities for any abnormalities. She advised that Claimant had no abnormalities for the abdomen or the extremities and met the federal standards but required periodic monitoring of hypertension, finding Claimant qualified to continue driving. The same nurse also performed the October 23, 2019 DOT exam, making similar findings.[13]

26. On August 31, 2020 Claimant established care with Dr. Jennifer Marie Tutt at Centura Health. Dr. Tutt stated that Claimant had hyperextended his left knee four weeks prior to the exam but his symptoms had been slowly improving since the incident.[14]

27. Claimant returned to Dr. Tutt on November 2, 2020. Dr. Hutt stated that she was unable to fully examine Claimant as he had been exposed to COVID-19 and had a mild temperature on November 2, 2020. She suspected Claimant has an inguinal hernia so she ordered an ultrasound of the groin and also a referral to general surgery. She also placed a referral to orthopedic surgery.[15] Dr. Tutt assessed the following: [16]

> 1. Groin pain.
> Complains of having left groin pain and swelling for almost 2 weeks.
> Symptoms occurred after he slipped on the ice in a parking lot.
> The swelling/bulging gets worse and more painful with deep cough.
> Concerned he may have a hernia. Has a history of a right-sided hernia requiring surgery 12 years ago.
> Minimal pain at rest however with a cough pain can be quite severe. Has been taking Aleve with only partial relief.
>
> 2. Knee pain.
> C/o having left knee pain x 3-4 months.
> Injured his knee by twisting/hyperextending it several months ago.
> At that time had persistent swelling and pain. His symptoms gradually improved with time and using Voltaren gel.
> Reinjured his knee 10 days ago after slipping on ice.
> His current pain is worse than it was before. At rest his pain is a 6 out of 10.
> Has been taking Aleve with partial relief.

28. Respondents completed a First Report of Injury (FROI) on November 6, 2020 documenting that Respondents were notified of the work related injuries on November 3, 2020 regarding injuries to Claimant’s knee and groin due to a fall. They reported the date of injury as October 22, 2020 and stated that was Claimant’s last day of work. The form was completed an HR Employer Representative, the HR Consultant. They reported Claimant’s average weekly wage as $1,180.00.

[13] Exhibits 5 and 5B.
[14] Exhibit U, bates 236.
[15] Exhibit U, bates 259.
[16] Exhibit U, bate 261.

29. An Employer Termination Slip was issued on November 9, 2020, stating that Employer was unable to accommodate Claimant's light duty restrictions and was formally terminated from employment with Employer as of November 9, 2020.[17]

30. Claimant was first seen at Concentra on November 9, 2020 by Nurse Kathy Okamatsu. The history reported was that Claimant was in the process of moving items from his personal truck to the company truck, while walking on the icy parking lot. He slipped on the ice, falling forward and landing on both knees but that he did not strike his head. Shortly thereafter, Claimant used both hands to turn the crank arm of his truck to move the landing gear, while lowering the high trailer and had a sudden onset of pain in left groin. On exam Nurse Okamatsu found tenderness over the left lateral collateral ligament, over the medial collateral ligament and diffusely over the posterior knee. Upon palpation of the left knee she found crepitus and that Claimant had abnormal flexion and extension while performing range of motion, though without pain. She found mild swelling and tenderness of the right knee proximally to the patella. She also observed mild limping. Upon palpation of the abdomen, she noted that Claimant may have a left inguinal hernia. She assessed that Claimant had a strain in the left groin, and bilateral knee injuries. Nurse Okamatsu made a causality determination, stating that it is at least 51% likely this condition is a result of exposure at work. She ordered an MRI of the left knee and an ultrasound of the abdomen, as well as x-rays of the bilateral knees. She provided restrictions of lifting up to 10 lbs. occasionally, push/pull up to 15 lbs. occasionally, no squatting or kneeling.

31. Claimant had a limited abdominal ultrasound of the left groin area, on November 9, 2020, which showed a large indirect inguinal hernia.[18] This was pursuant to Nurse Okamatsu's referral. Also on November 9, 2020, Claimant obtained an MRI of the left knee, also pursuant to Nurse Okamatsu, which showed a horizontal tear of the left knee medial meniscus of the posterior horn, mild to moderate medial compartment arthritis, subchondral edema of the medial tibial plateau, moderate patellofemoral compartment osteoarthritis with some moderate to high-grade involvement of the central to lateral trochlea, subchondral edema, and left knee joint effusion.[19]

32. On November 11, 2020, Dr. Thomas Corson reviewed the MRI results with Claimant, which revealed a left medial meniscus tear of the posterior horn and the ultrasound reveals a reducible hernia. Dr. Corson reported Claimant's history of "significant PTSD and severe anxiety (he became tearful and anxious upon hearing the results and the likelihood of needing surgery for the hernia and possibly the meniscus. He sees a psychiatrist for his PTSD and says he was going to need to see him after hearing this news. He has a significant phobia of surgery." Claimant also reported that his right knee was still causing him a fair bit of discomfort as well. On exam Dr. Corson found reducible hernias on both the right and left inguinal sites. He also found swelling of the left knee over the medial joint line and tenderness as well as altered gait. He noted that Claimant was anxious, concerned, quiet and tearful. Dr. Corson modified restrictions

[17] Exhibit L, bate 57.
[18] Exhibit U, bate 318.
[19] Exhibit U, bates 333-334.

to include a 5 lbs. lifting occasionally and may not walk on uneven terrain or climb ladders. Claimant was referred to Dr. Robert Glass, psychologist (to assist Claimant with severe anxiety due to likelihood of surgery); to a general surgeon for the hernia, to an orthopedic surgeon at Steadman Hawkins in Vail for the knee conditions and to physical therapy.[20]

33. Employer sent Claimant a COBRA letter advising Claimant that he would no longer be entitled to health insurance benefits from Employer as of November 30, 2020. If he wished to continue health benefits under COBRA beginning December 1, 2020, he would be required to pay a premium of $1,172.61 per month to cover medical dental and vision benefits.

34. Respondent Insurer filed a Notice of Contest on November 19, 2020 stating further investigation of prior medical history and compensability evaluation was needed.[21] The Notice of Contest (NOC) showed a date of injury as October 22, 2020, consistent with the FROI filed by Employer. It is noted that the claim number on the NOC of "5153276" is the correct one for this claim, identified Claimant by name, address and social security number as well as the correct Employer and Insurer for this claim.

35. Employer's Statement, which is dated December 1, 2020 and signed by HR Consultant, stating that Claimant was no longer employed as of October 30.[22] It shows that as of June 1, 2020 Claimant's weekly earnings are $1,191.71 and Claimant worked 40 hours a week.

36. Dr. Charles Glass documented on December 3, 2020 that Claimant was interested in pursuing psychological evaluation and treatment but appointments were only being conducted by telehealth because of the Coronavirus pandemic and Claimant did not have the technical capability to have telehealth appointments.

37. Claimant returned to Concentra for follow-up on December 8, 2020. Dr. Corson examined Claimant, and palpated reducible right and left inguinal hernias. He found right knee swelling, tenderness diffusely over the anterior knee, over the lateral joint line, over the medial joint line, in the undersurface of the patella, in the inferior pole patella, on the distal patella tendon, in the mid portion of the patella tendon and in the superior pole patella, with limited range of motion in all planes. Dr. Corson found swelling of the left knee at the medial joint line, the patella, with tenderness over the medial collateral ligament, diffusely over the medial knee and diffusely over the posterior knee, in addition to crepitus and limited range of motion in all planes. He stated that MMI was unknown because he was awaiting specialist input. He assessed acute medial meniscal tear of the left knee, injury to the right knee and inguinal hernias. Dr. Corson stated that the objective findings were consistent with history and work-related mechanism of injury.

38. On December 15, 2020 the Division issued an Urgent Notice Requiring Immediate Response. It notified Respondents that the period for filing a timely position

[20] Exhibit V, bates 358-362.
[21] Exhibit 10.
[22] Exhibit 9.

statement had expired and that they were potentially in a penalty situation, as an admission or denial had not been filed with the Division. As found, Respondents complied with the requirement to file a Notice of Contest on November 19, 2020, though Division may have rejected it due to discrepancies of the date of injury.

39. Claimant filed a Notice of One-Time Change of Physician & Authorization form on January 5, 2021 requesting a change from Dr. Corson to Dr. Sobky. On January 6, 2021 Respondents denied the change of physician as Dr. Sobky was not on the designated provider list. As found Respondents failed to use the correct form required by the rules. Attached was a designated provider list but nothing on the list or document showed this had been provided to Claimant. As found, the designated provider list is unsigned and was therefore not provided in a "verifiable manner."[23] However, it is also found that Claimant failed to file the One-Time Change of Physician request within ninety days of the date of the injury. The deadline was December 31, 2020, pursuant to Sec. 8-43-404(5)(a)(III)(A), C.R.S. and W.C.R.P. Rule 8-5(A). Therefore, Claimant is not entitled to a one-time change of physician under this provision.

40. Dr. Kareem Sobky of HealthOne/OrthoOne, of Colorado Limb Consultants, evaluated Claimant on January 13, 2021 for the bilateral knee problems. He obtained x-rays that showed a total right knee arthroplasty in good position, no sign of obvious complications though a small fleck of bone or cement at the superior pole of the patella, but that the implants seemed to be stable. He also reviewed the left knee MRI, which he read as showing a medial meniscus tear, full thickness chondral loss, full thickness chondral loss of the medial femoral condyle. Dr. Sobky referred Claimant for physical therapy for edema control, strengthening of the quads, hip girdle, stabilization of the bilateral knees, and modalities twice a week for six weeks.

41. On January 15, 2021 Insurer filed an Amended Notice of Contest, which stated that it was "refiled to correct DOL [date of loss] to 10/23/2020." It included the claim number as "5153276," which is the correct claim number in this matter.

42. Claimant was evaluated by Dr. Anthony Canfield first on February 23, 2021 for the bilateral inguinal hernias. It is inferred that this was pursuant to a referral within the chain of referral as the "Workmen's Comp. coordinator" was present during the evaluation. On exam, Dr. Canfield, found that there was a left inguinal hernia palpable with Valsalva but the right side was uncomfortable but he did not feel a hernia on the right. He ordered a right sided dynamic ultrasound to rule out possible right groin recurrent right inguinal hernia. On February 24, 2021 he filed a request for surgery authorization scheduled for March 18, 2021 at Presbyterian St. Luke.

43. Claimant underwent an MRI of his right knee on March 3, 2021. The MRI showed low signal intensity thickening and internal architectural distortion of the quadriceps tendon; longitudinal clefts of hyperintensity at the patellar insertion consistent with partial tearing, overall comprising approximately 15% of the cross-

[23] Exhibit M, bate 58-59.

sectional circumference. The right knee showed signs of mild proximal tendinosis without signs of a tear.[24]

44. Dr. Sobsky assessed Claimant again on March 12, 2021. He read the right knee MRI, which showed an interstitial tear of the distal lateral quadriceps but no avulsion, loosening of the prosthesis or fracture of the prosthesis, no patellar tendon or quadriceps tendon avulsion. He found no significant effusion at that time.

45. On March 25, 2021 Dr. Alexandra McKenzie issued a report following a limited ultrasound of the right inguinal area. She found no definite evidence of a right inguinal hernia, stating that the ultrasound was limited by artifact shadowing related to existing mesh and the radiologist recommended a CT scan for further evaluation.

46. Dr. Corson stated on March 30, 2021 that Claimant's general surgeon, Dr. Canfield, had ordered a CT of his abdomen. He also documented that the MRI of the right knee showed some particle disease, but did not have the actual reports to review. He continued to state that the objective findings were consistent with history and work-related mechanism of injury. Dr. Corson concluded as follows:

> Returning for follow-up: 4/27
> Continue specialist care.
> Work/Activity Status
> Are your objective findings consistent with history and/or work-related mechanism of injury/illness: Yes
> Able to return to modified duty from: 3/30/21 to 4/27
> Limitations/Restrictions:
> Temporary Restrictions
> Lifting (maximum weight in pounds) 5 lbs.
> Pushing/Pulling 15 lbs
> Crawling 0 hours per day
> Kneeling 0 hours per day
> Squatting 0 hours per day
> Climbing 0 hours per day
> May not walk on uneven terrain.
> May not work in safety sensitive position.
> Follow Up Care And Referrals

47. On April 20, 2021, Dr. Carlos Cebrian authored an independent medical evaluation (IME). Respondents retained Dr. Cebrian, to conduct an IME evaluation which took place on April 5, 2021. Dr. Cebrian opined that Claimant's alleged mechanisms of injury did not support that he suffered a work injuries on October 23, 2020. Dr. Cebrian addressed the four areas of complaint in order. Regarding the left knee, Dr. Cebrian noted that Claimant's left knee pain complaint began the summer of 2020 due to a hyperextension and twisting injury documented by Claimant's personal care provider Dr. Tutt. Claimant's described his mechanism of injury to Dr. Cebrian as falling forward onto his knees. Dr. Cebrian stated this would be consistent with a bruise or strain, but would

[24] Exhibit Z, bates 460-461.

not with a meniscal tear. Regarding Claimant's right knee, Dr. Cebrian opined that Claimant had a history of right knee pain and complaints, including a prior right knee arthroplasty. He noted that Claimant did not complain of right knee pain on his initial evaluation with Dr. Tutt and therefore, the right knee complaints were pre-existing, not related to the work injury. Regarding Claimant's hernia, Dr. Cebrian noted that there was no evidence of a right-sided hernia condition. Regarding the left-sided hernia, Dr. Cebrian noted that Claimant's hernia was very large on the initial sonogram, indicating that it was a pre-existing condition. Dr. Cebrian noted that Claimant has a history of hernia repairs including a repair in 2007. Dr. Cebrian concluded that the request for a left inguinal hernia repair was not causally related to the work injury.

48. Also on April 20, 2021, either coincidentally or because he received Dr. Cebrian's report, Dr. Corson stated that Claimant was at maximum medical improvement (MMI) with no restrictions or impairment. The nurse case manager (NCM) was on teleconference throughout the patient's visit. However, his report still documented that the objective findings were consistent with history and work-related mechanism of injury. His assessment was as follows:

1. Acute medial meniscal tear, left, initial encounter (S83.242A)
2. Hernia, inguinal (K40.90)
3. Knee injury, left, initial encounter (S89.92XA)
4. Knee injury, right, initial encounter (S89.91XA)
5. Painful orthopaedic hardware (T84.84XA)
6. Strain of groin, left, initial encounter (S76.212A)

49. Dr. Cebrian testified at hearing consistent with his report. He stated that Claimant had a lengthy history of right knee complaints, including a right total knee arthroplasty. He testified that Claimant's right knee x-ray and other imaging studies did not show any damage to the hardware. With regard to the partial 15% quadriceps interstitial tear shown on the MRI, he stated that it was too small to be significant and was probably age related. Dr. Cebrian testified that Claimant's left knee meniscal injury pre-dated the work injury as documented in August and November of 2020 reports by Dr. Tutt. Dr. Cebrian testified that Claimant's left knee meniscal tear was consistent with a twisting injury not a straightforward fall to his knees initially described by Claimant. Lastly, Dr. Cebrian stated that there was no evidence suggesting that Claimant had or has a right-sided hernia and that inguinal hernias are generally the result of congenital non-work factors, that an upper body cranking motion would not put significant pressure on the groin in a way that would cause or worsen an inguinal hernia. Dr. Cebrian also noted that Claimant had not complained of lower back pain until approximately six months after the work injury.

50. Claimant testified that when he slipped on ice, he had multiple items in his hands as he was transferring them from his personal vehicle to his work truck. He was unbalanced and was slipping and sliding on the ice. He fell forward but knows that he was unstable on the ice before he actually fell forward. He does not know exactly if there was much twisting involved in the manner in which he was falling but knows there was some twisting involved before he went forward. He also stated that while he was

attempting to use the crank handle to lower the loaded trailer, he was slipping on the ice and had to attempt to lower the trailer multiple times before he was successful, all the while slipping on the ice, which was shown in the pictures he submitted.

51. Claimant agreed that he had prior problems with his knees, but not to the extend as after the October 23, 2020 injury. He did not deny that he had a hyperextension problem in the summer, but that it had resolved by the time of this injury with the care he had been previously given and had advised Dr. Tutt of that fact, which she documented. He also stated that his abdomen was sore after he fell but that the force involved in pulling on the hand crank was very significant because the trailer was overloaded with 68,000 lbs. of materials. He disagreed with his supervisor that the crank is easy to move. Claimant's testimony is credible and persuasive.

52. Claimant testified that he believed he earned $28.00 per hour plus overtime and incidentals. His incidentals were overnight trip per diem of approximately $500.00 per week. He received approximately $125.00 for the phone, $80.00 for the meals and for hotels up to $300.00 per night. Claimant also testified that when Claimant was stranded for the weekend on a Saturday, that his hours were not compensated despite being away from home. He also testified that he did not return to work after the October 23, 2020 date of injury, that Employer made a mistake in first reporting the injury as having occurred October 22, 2020 and that he was formally terminated as of November 9, 2020 because of his restrictions.

53. Claimant's direct supervisor testified he was the warehouse manager for Employer. He stated that someone that has a work related injury can report to him but that Claimant did not. He conceded that employees could report work injuries directly to the Human Resources (HR) department. He would generally communicate with Claimant directly or by text. He identified [Claimant] Drive as Claimant in the text messages he provided as above. He stated that he was not at the warehouse until approximately 7:30 a.m. each day. He stated that Claimant was paid hourly and was provide $20.00 per diem for breakfast and $60.00 per diem for dinner. The supervisor stated that generally he paid for hotels or motels with his own credit card, which was approximately $100.00 to $200.00 per night but that they would reimburse employees for out of pocket costs. The supervisor stated that the crank is not difficult to move but could not state what amount of strength or force in terms of pounds is required or if the weight of the trailer would change the amount of force involved, but that drivers had to do it every day.

54. Insurer's Senior Claims Representative testified that he had been involved in the claim since December 2020. The Claims Representative stated that Insurer received the claim on November 6, 2020. He stated that Insurer's records show that they sent in the Notice of Contest dated November 19, 2020 but that Division rejected the NOC because it did not have the correct date of loss that corresponded with the workers' compensation number. Insurer received correspondence from Division and documented a conversation with a Division representative regarding the NOC that was filed. Insurer then communicated with Employer to resolve the issue of the date of injury. After the Claims Representative was able to communicate with Employer and received further

information, Respondent Insurer filed a new NOC on January 15, 2021. He advised that NOCs are required to be filed electronically with the Division pursuant to the rules but that hard copies are sent to the parties. The Claims Representative is found credible. As found, it is determined that Respondents filed a timely Notice of Contest in this matter, which was likely rejected by the Division due to the discrepancy in the date of injury. As found, both NOCs provided Claimant notice of Respondents' position and no penalties are due for failure to admit or deny.

55. The wage records show that Claimant earned $30,367.87 for a weekly average of $1,073.61 from April 1, 2020 through October 15, 2020 [$30,367.87 / 198 days x 7 days]. This ALJ considered that Claimant received an increase in hourly earnings to $27.50 per hour as of June 1, 2020, and that Employer reported Claimant's average weekly wages as $1,180.00 and $1,191.71 in two separate documents. Despite these facts, as found, it is determined that the fair approximation of the Claimant's average weekly wage (AWW) as of October 23, 2020 is $1,153.61, which includes the $80.00 per diem and the average earnings from April 1, 2020. As of December 1, 2020, Claimant lost his health benefits, including medical, dental and vision. Claimant's COBRA benefits amounted to $1,172.61 per month or $270.60 per week. Therefore, as found, Claimant's AWW beginning on December 1, 2020 is $1,424.21.

CONCLUSIONS OF LAW

Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S., 2020. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias,

prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary opinion).

Claimant sustained work related injuries

A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990).

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. Section 8-41-301(1)(b), C.R.S. (2020); *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course" of employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *Horodyskyj v. Karania*n, 32 P.3d 470, 475 (Colo. 2001).

There is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968). Rather, it is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. Section 8-43-201, C.R.S.; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989). The determination of whether there is a sufficient nexus or causal relationship between a Claimant's employment and the injury is one of fact and one that the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996). When a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *H & H Warehouse v. Vicory, supra.* A preexisting condition or susceptibility to injury does not disqualify a claim if the work related injury aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004).

As found, Claimant was injured in the course and scope of his employment on October 23, 2020. Claimant slipped on ice in Employer's parking lot, injuring his bilateral lower extremities, including a meniscal tear on the left side and aggravating the right knee as well as causing a quadriceps injury on the right. The accident also resulted in injury to his bilateral inguinal areas causing a definite hernia on the left side and possible hernia on the right side, aggravating the preexisting right sided conditions. This is supported by Claimant's testimony, which will not be recited here, but is contained in Findings of Fact 1 through 8 as well as findings determined in Findings of Fact 19, 50 and 51. This determination is also supported by the opinions of Dr. Corson, Dr. Hutt, Nurse Okamatsu, Dr. Sobky and Dr. Canfield.

Specifically it is found that Claimant injured his left knee, right knee and quadriceps, and bilateral inguinal areas on October 23, 2020 as a direct consequence of the fall and subsequent efforts in cranking motions to secure the trailer to the truck on October 23, 2020. Dr. Hutt stated that she was unable to fully examine Claimant as he had been exposed to COVID-19 and had a mild temperature on November 2, 2020. Dr. Hutt stated that Claimant had symptoms which occurred after he slipped on the ice in a parking lot including swelling/bulging in his abdomen, which gets worse and more painful with deep cough. She was concerned he may have a hernia, as he had a history of a right-sided hernia requiring surgery 12 years before, and reinjured his knee 10 days ago after slipping on ice. Nurse Okamatsu specifically found on exam on November 9, 2020 that Claimant had swelling and tenderness of the right knee proximally to the patella, left knee crepitus and abnormal flexion and extension, and upon palpation of the abdomen, she noted that Claimant may have a left inguinal hernia. Dr. Corson specifically stated multiple times that the mechanism of the Claimant's injuries were the cause of the work related injuries. Upon examination on two different occasions, he found palpable reducible hernias on both the right and the left. He reviewed the left knee MRI, which he read as showing medial meniscus tear, full thickness chondral loss, full thickness chondral loss of the medial femoral condyle. Dr. Corson reported that Claimant became tearful and anxious upon hearing the results of the diagnostic testing and the likelihood of needing surgery for the hernia and possibly the meniscus. Dr. Sobky also found that Claimant had a horizontal tear of the left knee medial meniscus and a right knee interstitial tear of the distal lateral quadriceps. This ALJ finds all of this testimony credible and persuasive.

With regard to the bilateral hernias, Dr. Corson continued to state that the Claimant's objective findings were consistent with history and work-related mechanism of injury, continuing to diagnose Claimant with inguinal hernias, left meniscal tear and right knee painful hardware, even at the time of releasing Claimant from care. Dr. Canfield, found that there was a left inguinal hernia palpable with Valsalva. On the right side Dr. Canfield noted that Claimant was uncomfortable but he did not feel a specific hernia at the time of exam but ordered a right sided dynamic ultrasound to rule out possible right groin inguinal hernia. The ultrasound was limited by artifact shadowing related to existing mesh and the radiologist recommended a CT scan, which has not yet taken place. Lastly, Claimant underwent a DIME in 2017 and DOT physicals in both 2019 and 2020 with Nurse Okamatsu which included abdominal examinations all three of which revealed no masses or abnormalities in the abdomen. Nothing in Dr. Cebrian's report or testimony persuades this ALJ that this is not the case. While Dr. Cebrian opined that that the work related incidents of October 23, 2020 did not cause Claimant's injuries to his bilateral knees and inguinal areas, this ALJ does not find that credible. As found, based on the totality of the evidence, Claimant has proven by a preponderance of the evidence that the October 23, 2020 incidents aggravated, accelerated or combined with his preexisting conditions to cause disability and need for medical treatment and therefore represents a compensable injury. When considered in its totality, the ALJ concludes that the evidence in this case supports the reasonable inferences/conclusions that Claimant suffers from compensable left and right knee injuries including a right quadriceps injury, as well as bilateral inguinal injuries.

Claimant has failed to show that his low back was injured in the claim as he did not have an exacerbation or aggravation of the low back as a result of the October 23, 2020 injury. Claimant argues that the records from Dr. Sobky demonstrate a spinal injury and foot drop issue. However, no such records were submitted in this matter. Medical records show that Claimant failed to mention problems with his back immediately after and subsequent to the injury for several months. The mere fact a claimant experiences symptoms following a work injury does not require the inference that there has been an aggravation or acceleration of a preexisting condition. See *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. See *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.,* W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function or on the job injuries, does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's symptoms and work activities. As found, it is determined that the October 23, 2020 accident did not cause Claimant's continuing low back pain.

Medical benefits authorized, reasonably necessary and related to the injury

"Authorization" refers to the physician's legal authority to treat the injury at the respondents' expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Under § 8-43-404(5)(a), the employer has the right to choose the treating physician in the first instance. It is well established that an employer does not lose the right to designate a treating physician merely because it denies a claim. *Yeck v. Industrial Claim Appeals Office,* 966 P.2d 228 (Colo. App. 1999). Once the employer has exercised its right of selection, the claimant may not unilaterally change physicians without prior approval from the respondents or an ALJ. Such permission may be express or implied, and a physician becomes authorized if the “employer has expressly or impliedly conveyed to the employee the impression” that he has permission to treat with the physician. *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

Here, Employer timely exercised its right to choose a physician after Claimant notified Employer of his injuries. The First Report of Injury states that Claimant provided notice of the injury as of November 3, 2020 and Claimant established care with Concentra as of November 9, 2020. As found, Respondents referred Claimant to Concentra upon notice of the claim. In fact, Claimant testified that he knew he needed to contact Concentra as of the day of injury and did so, but was unable to be seen because of his exposure to COVID-19, so he attended Dr. Hutt on November 2, 2020. This initial visit is considered an emergent care service and is compensable. Claimant was then seen and treated at Concentra as of November 9, 2020. This indicates that Claimant selected from the list of providers and proceeded to obtain care from the Concentra providers and the subsequent referrals of those providers. Therefore, as found, Claimant’s authorized treating providers are Nurse Okamatsu, Dr. Corson, Dr. Canfield, Dr. Glass and the orthopedic specialist at Steadman Hawkins pursuant to Dr. Corson’s referral. As found, this is in addition to the diagnostic testing and treatment referred by these providers, including physical therapy, pool therapy, MRIs of the left and right knees, ultrasounds of the abdomen, CT of the abdomen prescribed by Dr. Canfield and the psychological care prescribed by Dr. Corson with Dr. Glass, which are all authorized, reasonably necessary and related to the injury.

It is unclear from the record if Dr. Corson, another authorized provider or if Insurer authorized Dr. Sobky to address Claimant’s work related lower extremity injuries. However, Respondents conceded in their brief that Dr. Sobky is already an authorized treating physician in this matter. Therefore, this is taken as a judicial admission and Dr. Sobky is also an authorized treating physician.

Employer is liable to provide such medical treatment “as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury.” Section 8-42-101(1)(a), C.R.S. (2021); *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994); *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo.App.1999); *Kroupa v. Industrial Claim Appeals Office*, *supra*. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. See generally *Stamey v. C2 Utility Contractors, Inc., et. al.,* W.C.No. 4-503-974 , ICAO (August 21, 2008); *Parker v. Iowa Tanklines, Inc.,* W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Dr. Corson stated on March 30, 2021 that Claimant's general surgeon, Dr. Canfield, had ordered a CT of his abdomen. He also documented that the MRI of the right knee showed some particle disease. He continued to state that the objective findings were consistent with history and work-related mechanism of injury. Claimant has proven that the surgery, as recommended by Dr. Canfield, and for which he submitted a request for prior authorization, for the left inguinal hernia, is reasonably necessary and related to the compensable work injury of October 23, 2020. Claimant has proven that he requires further diagnostic testing as stated by the Dr. McKenzie, who performed the right inguinal limited ultrasound and recommended a CT scan for further evaluation, as well as Dr. Canfield, which this ALJ finds as reasonably necessary medical care. Claimant was found to have both swelling of the right knee and a quadriceps injury, which also need to be addressed by the authorized treating providers. Dr. Corson also referred Claimant to Dr. Glass for psychological treatment due to Claimant's anxiety related to proposed surgery, and which is found reasonably necessary and related to the injury. All of this care did not take place but is found to be reasonably necessary and related to the injury.

However, Dr. Corson, either by coincidence, communication with the nurse case manager, who was present by telephone throughout the visit, or by receipt of Dr. Cebrian's report, determined on April 20, 2021 that Claimant had reached MMI without need for further care or restrictions.

"Section 8-42-107(8)(b)(I), C.R.S., provides that 'an authorized treating physician shall make a determination' as to the achievement of MMI. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo.App. 2002). A determination of MMI by an authorized treating physician terminates a Claimant's ability to seek further care without a determination by a Division of Workers' Compensation Independent Medical Examiner's (DIME) opinion pursuant to Sec. 8-42-107(8)(b)(II), C.R.S., which states in pertinent part:

> If either party disputes a determination by an authorized treating physician on the question of whether the injured worker has or has not reached maximum medical improvement, an independent medical examiner may be selected in accordance with section 8-42-107.2…

Therefore, an MMI determination is binding in the absence of an independent medical examination (IME) or a change in that ATP's opinion. Furthermore, the statute prohibits the ALJ from resolving disputes until a DIME has been completed. *Story v. Industrial Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995).

In fact, a claim for additional medical benefits designed to improve Claimant's condition constitutes a constructive challenge to the determination of MMI. S*tory v. Industrial Claim Appeals Office*, *supra*. If Dr. Corson's true opinion is that Claimant does not require the care that he had previously recommended and had referred Claimant to receive, then Claimant must proceed through the DIME process. If Dr. Corson determines that Claimant is, indeed now not at MMI, then Claimant may proceed with the care recommended in this matter as the care has been found reasonably necessary and related to the injury. *Whiteside v. Smith*, 67 P.3d 1240, 1246 (Colo. 2003).

However, absent a completed DIME, the ALJ may not hear or decide any issue that constitutes an actual or constructive challenge to MMI. *Story v. Industrial Claim Appeals Office, supra.* The ICAO has repeatedly held that "after MMI [is] declared, the ALJ lack[s] jurisdiction to award or deny medical benefits to cure and relieve the claimant's condition." *McCormick v. Exempla Healthcare,* W.C. No. 4-594-683 (January 27, 2006); see also *Eby v. Wal-Mart Stores Inc.,* W.C. No. 4-350-176 (February 14, 2001) ("once an authorized treating physician places the claimant at MMI, and ALJ lacks jurisdiction to award additional medical benefits for the purpose of curing the industrial injury and assisting a claimant to reach MMI unless the claimant undergoes a DIME."); *Anderson-Capranelli v. RepublicIndustries, Inc*., W.C. No. 4-416-649 (November 25, 2002); *Cass v. Mesa County Valley School District,* W.C. No. 4-69-69 (August 26, 2005) ("[i]f an ATP places the claimant at MMI, an ALJ lacks jurisdiction to award additional medical benefits to improve the claimant's condition unless a DIME has been conducted on the issue of MMI.").

Although a DIME is not a jurisdictional prerequisite to a hearing on a request for post-MMI medical treatment, Claimant has not characterized the care previously recommended by Dr. Corson and the other authorized providers as a *Grover*-type benefit. At least the hernia surgery is intended to improve Claimant's condition, rather than merely relieve the effects of the injury and prevent deterioration. The ALJ concludes that awarding the treatment requested by Claimant would constitute a constructive challenge to MMI in circumvention of the DIME process pursuant to *Story v. Industrial Claim Appeals Office, supra*. While this situation is a little different because Claimant is unable to seek a DIME at this time, as the Claimant's right to a DIME is only triggered by the filing of a Final Admission of Liability by Respondents pursuant to Sec. 8-42-107.2,(2)(a)(I)(A), C.R.S., and Respondents have denied this claim, but this does not change the jurisdictional requirement. Lastly, Claimant failed to request that the issue of maintenance care after MMI be addressed at this hearing. Therefore, medical benefits after the April 20, 2021 finding of MMI by Dr. Corson are denied at this time, but reserved for future determination.

Change of Physician not authorized

While Claimant requested a one-time change of physician to Dr. Sobky, he did not seek this request within the required 90 days pursuant to Sec. 8-43-404(5)(a)(III), C.R.S., which states specifically:

> An employee may obtain a one-time change in the designated authorized treating physician under this section by providing notice that meets the following requirements:
>
> (A) The notice is provided within ninety days after the date of the injury, but before the injured worker reaches maximum medical improvement;…"

Claimant filed a Notice of One-Time Change of Physician & Authorization form on January 5, 2021 to request a change of provider from Dr. Corson to Dr. Sobky. The deadline to request a one-time change of physician was December 31, 2020, pursuant to Sec. 8-43-404(5)(a)(III)(A), C.R.S. and W.C.R.P. Rule 8-5(A). As found Claimant failed to file the One-Time Change of Physician request within ninety days of the date of the injury. (A one time change of physician would deauthorize Dr. Corson and the Concentra providers pursuant to statute, so it is different than Dr. Sobky simply being one of the authorized treating physician.) Therefore, Claimant is not entitled to a one-time change of physician under this provision.

Average Weekly Wage

Section 8-42-102(2) provides compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But Sec. 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office,* 916 P.2d 539 (Colo. App. 1995). Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on his earnings at the time of the injury. Under some circumstances, the ALJ may determine the claimant's TTD rate based upon Claimant's AWW on a date other than the date of the injury. *Campbell v. IBM Corporation, supra.* Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a "fair approximation" of claimant's wage loss and diminished earning capacity. *Ebersbach v.United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

As found, Claimant's average weekly wage (AWW) as of October 23, 2020 is $1,153.61, and Claimant's AWW beginning on December 1, 2020 is $1,424.21. Respondents filed the FROI on November 6, 2020 reporting Claimant's average weekly wage as $1,180.00 and an Employer's Statement reporting a wage of 1,191.71. Employer conceded that Claimant received a wage increase on June 1, 2020 to $27.50 per hour and that Claimant would also travel with overnights at least once per week. Respondents also conceded that Claimant would be provided a per diem of $20.00 for breakfast and $60.00 for dinner for a total of $80.00 per week. The wage records show that Claimant earned $30,367.87 from April 1, 2020 through October 15, 2020 for a weekly average of $1,073.61 from April 1, 2020 through October 15, 2020 [$30,367.87 / 198 days x 7 days]. This ALJ considered that Claimant received an increase in hourly earnings to $27.50 per hour as of June 1, 2020 but determined that the fair approximation, despite the increase, is $1,073.61 plus the per diem of $80.00 for a total of $1,153.61 as of the date of the injury. Pursuant to the COBRA letter Claimant's health benefits were terminated as of November 30, 2020. The cost of continuing health benefits, beginning December 1, 2020, was $1,172.61 per month, $270.60 per week, which would increase the average weekly wage to $1,424.21. The ALJ concludes this methodology of calculating Claimant's AWW is the most accurate and appropriate.

Claimant is entitled to temporary total disability benefits

To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish his physical disability. Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Lymburn v. Symbois* Logic, 952 P.2d 831 (Colo. App. 1997).

As found, Claimant has established by a preponderance of the evidence that he is entitled to an award of TTD benefits beginning October 23, 2020 as Claimant testified that he was able to perform his job on October 22, 2020 and on October 23, 2020 he was not able to perform all of his activities. He specifically testified that he had to request that the customers unload the truck for him. He was unable to work after that date. Further, after he was provided restrictions by the Concentra ATP, Nurse Okamatsu, of lifting up to 10 lbs. occasionally, push/pull up to 15 lbs. occasionally, no squatting or kneeling and Employer issued a termination slip stating that they were unable to accommodate Claimant's restrictions. As found, the Claimant's testimony is found credible and the medical records in this case document that Claimant was continually kept on restrictions until he was placed at maximum medical improvement on April 20, 2021 by Dr. Corson. Claimant is entitled to TTD beginning October 24, 2020 through April 19, 2021, though those benefits may continue should Dr. Corson change this determination of MMI or a DIME physician finds that Claimant is not at MMI.

Penalties not warranted

Claimant argues that since the Division issued a letter dated December 15, 2020, stating that Division had not received a timely admission or denial from Respondents, that Claimant is entitled to penalties pursuant to alleged violations of Section 8-43-203(1)(a), C.R.S. and W.C.R.P. Rule 5-2. Section 8-43-203(1)(a) states that "the employer's insurance carrier shall notify in writing the division and the injured employee … within twenty days after a report is, or should have been, filed with the division pursuant to section 8-43-101, whether liability is admitted or contested…" W.C.R.P. Rule 5-2 states in pertinent part:

> (C) The insurer shall state whether liability is admitted or contested within 20 days after the date the employer's First Report of Injury is filed with the Division. If an Employer's First Report of Injury should have been filed with the Division, but wasn't, the insurer's statement concerning liability is

> considered to be due within 20 days from the date the Employer's First Report of Injury should have been filed. The date a First Report of Injury should have been filed with the Division is the last day it could have been timely filed in compliance with paragraph (B) above.
>
> (D) The insurer shall state whether liability is admitted or contested within 20 days after the date the Division mails to the insurer a Worker's Claim for Compensation or Dependent's Notice and Claim for Compensation.
>
> (E) A statement regarding liability is required for any claim in which a division-issued workers' compensation claim number is assigned or a First Report of Injury should have been filed pursuant to paragraph (B) of this rule. A statement regarding liability shall not be filed without a First Report of Injury, Worker's Claim for Compensation, or Dependents Notice and claim having been successfully filed and assigned a workers' compensation claim number. A first report of injury must be filed prior to a notice of contest being accepted by the division.

This ALJ infers from Claimant's argument that Claimant is stating that he did not have notice of the denial. However, Claimant failed to state that he did not receive the Notice of Contest dated November 19, 2020 and, in fact, confirmed his address as stated on the Notice of Contest. Pursuant to W.C.R.P. Rule 1-4(1)(A), proper service is to be made by mail. In *Bowlen v. Munford*, 921 P.2d 59, 60 (Colo. App.1996) the court acknowledged the rule that whenever a document is filed with the Division, a copy of the document shall be mailed 'to each party to the claim'; *Kuhndog, Inc. v. Ind. Claim Appeals Office,* 207 P.3d 949 (Colo. App. 2009).

Respondent Insurer filed a Notice of Contest on November 19, 2020 stating further investigation of prior medical history and compensability evaluation was needed. The Notice of Contest had the correct claim number of 5-153-276, identified Claimant by name, address and social security number as well as the correct Employer and Insurer for this claim. While the Division may have rejected the NOC due to the incorrect date of injury, the NOC served to give notice to Claimant regarding the denial of the claim.

An elementary and fundamental requirement of due process in any proceeding is notice reasonably calculated, under all the circumstances, to apprise Claimant of the pendency of the action and afford Claimant an opportunity to present a response. *Mullane v. Cent. Hanover Bank & Trust Co*., 339 U.S. 306, 314, 70 S.Ct. 652, 94 L.Ed. 865 (1950); *Schmidt v. Langel*, 874 P.2d 447, 451 (Colo.App.1993).

Due process does not require that the method of providing notice be absolutely certain to effect notice in every instance; it only requires that the method be reasonably calculated to effect notice to Claimant. *Kuhndog, Inc. v. Ind. Claim Appeals Office, supra.* Further, the record indicates, and Claimant does not contest, that Claimant was provided actual notice, as he provided a copy of the NOC in his Exhibit packet[25]. Accordingly, the service made in this instance was not deficient. *EZ Bldg. Components Mfg., LLC v. Indus.*

[25] Exhibit 10.

Claim Appeals Office, 74 P.3d 516, 518 (Colo.App.2003) (when there is no indication that the prescribed method of notice is jurisdictional, actual notice satisfied due process).

Further, under Sec. 8-43-203(2)(a), an employer "may become liable" to Claimant "for up to one day's compensation for each day's failure" to file an admission or notice of contest with the Division. The phrase "may become liable" means imposition of penalties under Sec. 8-42-203(2)(a) is discretionary. *Gebrekidan v. MKBS, LLC*, W.C. No. 4-678-723 (May 10, 2007). The purposes of requiring the employer to admit or deny liability are to notify the claimant he is involved in a proceeding with legal ramifications, and to notify the Division of the employer's position so the Division can exercise its administrative oversight over the claim process. *Smith v. Myron Stratton Home,* 676 P.2d 1196 (Colo. 1984). Two important purposes of penalties in general are to punish the violator and deter future misconduct. *May v. Colorado Civil Rights Commission*, 43 P.3d 750 (Colo. App. 2002). The ALJ should consider factors such as the reprehensibility of the conduct and the extent of harm to the non-violating party. *Associated Business Products v. Industrial Claim Appeals Office,* 126 P.3d 323 (Colo. App. 2005). The penalty should not be constitutionally excessive or grossly disproportionate to the violation found. *Dami Hospitality, LLC v. Industrial Claim Appeals Office,* 442 P.3d 94 (Colo. 2019). The claimant bears the burden of proof to establish circumstances justifying the imposition of a penalty under Sec. 8-43-203(2)(a), C.R.S. *Pioneer Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005). This has not occurred in this case. The Claims Representative testified that the NOC was filed timely on November 19, 2020 and this is credible.

Claimant failed to prove Employer should be penalized under Sec. 8-43-203(2)(a), C.R.S as there was no harm and, since Claimant received actual notice of the denial, there is no need to address the issue of the cure provision in this matter. The Claimant's claim for penalties is denied and dismissed.

ORDER

IT IS THEREFORE ORDERED THAT:

1. Claimant has proven by a preponderance of the evidence that he suffered compensable injuries on October 23, 2020 causing injuries to his bilateral knees, right quadriceps and bilateral inguinal injuries.

2. Claimant's claim for a lumbar spine injury is denied and dismissed.

3. Respondents shall pay for the authorized, reasonable and necessary medical benefits to cure or relieve the effects of his industrial injuries including all care, referrals through the Concentra system, diagnostic testing and therapy as stated above through the date of MMI, including Nurse Okamatsu, Dr. Corson, Dr. Canfield, Dr. Sobky, Dr. Glass, Dr. McKenzie, Dr. Tutt for only the emergency

visit of November 2, 2020, Denver Integrated Imaging, Health Images Cherry Creek, Presbiterian St. Lukes' Medical Center Diagnostic Imaging Department.

4. Claimant failed to show he is entitled a one-time change of physician pursuant to Sec. 8-43-404(5)(a)(III), C.R.S.

5. Claimant's average weekly wage as of October 23, 2020 is $1,153.61. Beginning December 1, 2020 Claimant's AWW is adjusted to $1,424.21 due to cancellation of his health insurance.

6. Respondents shall pay temporary total disability benefits from October 24, 2020 through the date of maximum medical improvement.

7. Claimant's claim for penalties is denied and dismissed.

8. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

9. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge' s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable work injury to one or more parts of her body, to include her neck, mid-back, head, and left shoulder?

II. Has Claimant shown, by a preponderance of the evidence, that she is entitled to all reasonable, necessary, and related medical treatment for her work injury, most notably the left shoulder surgery as requested by Dr. Minihane?

III. Has Claimant shown, by a preponderance of the evidence, that she is entitled to Temporary Total Disability ("TTD") payments from January 25, 2021 through June 3, 2021?

STIPULATIONS

After the hearing was concluded, the parties have now agreed in their position statements that Claimant's Average Weekly Wage is 579.29. The ALJ adopts this stipulation.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background

1. Claimant began work as a store associate for Employer on August 30, 2018. Her duties included stocking in the dairy and frozen area, and involved lifting, stooping, bending, carrying, and shelving.

Surveillance Video

2. On September 2, 2020, while in a back hallway, Claimant was moving a cart loaded with boxes through a double door, which presumably led into the public area of the store. The ALJ notes that the DVD supplied by Respondents (Ex. L), and the thumb drive supplied by Clamant (Ex. 7) share identical content; surveillance video from directly overhead of an interior doorway, from an extreme fisheye perspective (so extreme that the resultant image is itself circular). As a result, images any activity occurring at either end of this hallway are quite distorted, curved, and disproportionately smaller.

3. Claimant is seen pushing a cart with merchandise ready to be stocked. As she passes under the camera, one can see that the oblong, unmarked cardboard box on

the upper left of the cart (which fell onto Claimant seconds later) has been opened, then partially reclosed, revealing contents blue in color. The size and shape of the box is entirely consistent with one containing a handful of hand brooms or mops (as Claimant later indicated). The bottom of the box is positioned at a height just above Claimant's head. Claimant then continues pushing the cart to the end of the hallway.

4. Upon arriving at the double doors, a smaller box appears to fall from the left side of the cart to the floor; immediately thereafter, a larger oblong box falls to the right. Claimant bends down to retrieve this smaller box, and as she does so, a coworker enters from outside the doors, apparently unaware of Claimant's presence, and attempts to replace this larger box back onto the cart. In this process, the coworker knocks the 'broom box' off the top of the cart and onto Claimant, who was still bent over. It cannot be ascertained exactly where the box struck her, other than somewhere onto her back side.

5. Claimant remains on her feet, and after a few seconds, resumes placing items back onto the cart, and leaves with the cart. It appears that the coworker re-enters the doors and retrieves the final box, which appears to be the 'broom box.' Other than the awkwardness of the shape this partially opened box (thus rendering it more likely to flex while handling it), the coworker appears not to struggle with the box's weight as he leaves the hallway and into the store.

Claimant Treats at Concentra, then Canon City Urgent Care

6. Claimant initially sought treatment on September 3, 2020, from Concentra. When seen at Concentra, the Claimant's complaints were of headache, low back pain and neck pain, *with no reference to left shoulder complaints*. Pain at 8/10. During the telemedicine intake, once Claimant revealed complaints of a head contusion, the attending physician, Aharon Wolf, MD, then recommended an in-person evaluation. (Ex C, pp. 52-53).

7. Claimant then sought treatment at Canon City Urgent Care, also on September 3, 2020. She was evaluated by PA Steven Quackenbush. While there is no narrative report, PA Quackenbush's WC164, dated 9/3/2020, states, *Injured Worker's Description of Accident/Injury* to be, "A box fell on the right side of head and fell onto left side". (Ex. H, p. 197).

8. Cervical x-rays taken 9/3/2020 showed "No acute fracture is identified. There is grade 1 retrolisthesis C4 on C5 and C5 on C6. There is grade 1 anterolisthesis C7 on T1. Multilevel degenerative disc disease is present. This is greatest at C4-5 and C5-6, where it is moderate in severity. Multilevel bilateral degenerative facet hypertrophy is present. There is no significant prevertebral soft tissue swelling." (Ex. 2, pp. 3-4).

9. Left shoulder x-rays taken 9/3/2020 showed: “no acute fracture or dislocation. No evidence of significant degenerative change. No destructive bony lesions are identified. The surrounding soft tissues are unremarkable.” *Id* at 4.

10. Based on this reported mechanism of injury, PA Quackenbush diagnosed the Claimant with a sprain of the left rotator cuff capsule, strain of cervical portion of left trapezius muscle, posterior chest wall strain. (Ex. H, pp. 194, 200).

11. By September 10, 2020, Claimant reported to PA Quackenbush that she continues to have some upper neck tenderness, which she states now, is on the right side. The posterior chest wall symptoms have resolved. She has persistent transient “tingling” into her right second and third fingers. She does not have an associated headache. She has some pain into her left shoulder, which has improved without popping of the shoulder. …She has been return[ed] to modified duty and is working within these restrictions without significant problems….The patient will be referred to physical therapy today…”(Ex. 2, p. 9).

12. The physical exam was unremarkable, except for “some right paracervical and trapezius muscular tenderness without erythema or discoloration or rash…[and]…The patient has minimal tenderness of the left anterior lateral [s]houlder with palpation without discoloration or deformity. *Id* at 10-11.

13. PA Quackenbush (co-signed by John Reasoner, MD) filed a new WC164 on 9/24/2020, with lifting and push/pull restrictions, PT recommendations, and an anticipated MMI date in 2-3 weeks. (Ex. 2, p. 16). The lung x-ray he recommended was unremarkable. *Id* at 17.

14. Claimant’s visit of 10/2/2020 showed continued improvement with chiropractic treatment. “The patient is also responding *very favorably to her physical therapy* with regard to the cervical neck and left shoulder symptoms and strain. *Id* at 19. No significant findings on exam. MMI now estimated “now after next follow-up visit or 2.” *Id* at 18. (emphasis added).

15. Claimant also received chiropractic treatment from 9/25/2020 through 10/15/2020. (*see, generally,* Exhibit 3, Exhibit I). On her final visit with Seth Oquist, DC, on 10/15/2020, he notes:

> *Karen feels the complaint has improved her ability to lifting, walking and standing and has changed about 90%* since the onset of the complaint/condition. She has been evaluated by analyzing the Functional Rating Index functional outcome assessment tool with beginning score or percentage of 25 and goal score or percentage of 50% or better. The current overall score or percentage is 7 with *an overall change of 80%.* In consideration of the findings from today’s re-evaluation of Karen’s

> complaints, the outcome score and my examination findings for this condition, *continued treatment is unnecessary and the new treatment plan will be discontinued* and advised to return as referred by CCOM. (Ex. 3, p. 112)(emphasis added).

16. Claimant's 10/25/2020 visit revealed no complaints or exam findings, except for a tight spasm on Claimant's left paracervical and trapezius areas of her upper back and neck. Id at 22, 23. No numbness of the extremities. *Id* at 23. PT to continue, chiropractic has been completed. *Id* at 22, 24.

17. On 11/6/2020, Claimant's exam was essentially normal. "She has *improved significantly* with transient and *greatly diminished pain* involving her paracervical and trapezius area." "She continues to take Robaxin in the morning and at noon and Flexeril at night is sleeping much better." *Id* at 27. No further testing or specialist visits were anticipated. MMI was deferred, once again, "at her next follow-up or two." *Id* at 27, 30. Left overhead reaching still restricted. Lifting, push/pull restrictions were raised from previous. *Id* at 30.

18. On November 12, 2020, PA Quackenbush opined the Claimant would be at MMI at her next visit. Her physical exam was essentially normal, but now with some increased pain complaints with her left shoulder and left neck. MMI was estimated to be at her next visit. *Id* at 31-34. Claimant was first to be checked by Dr. Reasoner for likely closure of the case. *Id.*

19. Dr. John Reasoner evaluated the Claimant on November 23, 2020. [For reasons unclear, the first page of this report was excised from Claimant's exhibit packet]. This first page [now from Respondent's exhibits] states:

> She states that she was doing better until Thursday when she developed an occipital headache on the right side causing pain into the right side of her neck. She has utilized her Robaxin, Flexeril, and Motrin *without any improvement*…She states she called off work the last 2 days but was unable to come in to be seen for her discomfort. *She has undergone physical therapy without any significant improvement.* Currently she states that her right first 3 fingers have been numb over the past week. Her current pain level is *8/10.* She states that any movement increases the discomfort in her neck and left shoulder. (Ex. H, p. 227)(emphasis added).

At that appointment, Claimant reported a worsening of symptoms in the cervical spine and left shoulder, without describing any precipitating event. Dr. Reasoner referred Claimant for cervical and left shoulder MRIs.

20. The left shoulder MRI showed a partial thickness, partial width tear of both the supraspinatus and infraspinatus tendons. The cervical MRI showed multilevel,

chronic degenerative changes. (Ex. H, p. 233). Dr. Reasoner referred the Claimant to orthopedic surgeon Keith Minihane, MD.

21. On 1/4/2021, Claimant returned to Dr. Reasoner. "*Diagnosis is cervical strain and partial left rotator cuff tear.* Patient continues to be symptomatic with shoulder and neck discomfort that affects her ability to sleep. *Patient is currently working modified work duties. She is working at the door and checking receipts….*Her current pain level is 5-6/10." (Ex H, p. 239)(emphasis added).

22. In his WC164, dated 1/4/2021, Dr. Reasoner continued to recommend a referral to Dr. Minihane (orthopedist), with temporary work restrictions of no climbing, crawling or overhead reaching, 5 lb. lifting and carrying, 10 lb. push/pulling. He noted that Claimant could perform 'administrative duties.' (Ex. H, p. 243).

23. Claimant returned to PA Quackenbush on 1/25/2021. "I am going through torture at work…The patient states that she has had significant exacerbation of neck and back pain after days labor at work" (Ex. H, p. 244). The *Review of Symptoms* noted "Positive for Arthralgias, back pain, myalgias, neck pain and neck stiffness" *Id* at 245. No *shoulder pain* is referenced in this narrative report. Nonetheless, in the WC164, Claimant was removed from work entirely on this date, with a work-related diagnosis of "left shoulder and left cervical strain, left chest wall contusion". *Id* at 248.

Claimant is Referred to Dr. Minihane

24. Orthopedist Keith Minihane evaluated Claimant on January 6, 2021. The mechanism of injury reported to Dr. Minihane was a direct blow to the left shoulder. (Ex. J, p. 308). Dr. Minihane diagnosed the Claimant with a traumatic incomplete tear of left rotator cuff and arthritis of the left acromioclavicular joint. An interarticular joint injection was performed, which only provided three days of relief. *Id* at 311, 312.

25. On February 11, 2021, Dr. Minihane requested prior authorization of a left shoulder arthroscopy with subacromial decompression and rotator cuff debridement with concurrent distal clavicle resection. (Ex. J, p. 320).

Dr. Cebrian Performs an IME / Claimant Placed at MMI

26. Dr. J. Carlos Cebrian evaluated the Claimant on April 26, 2021, at Respondents' request. (Exhibit K). In his written report dated 5/14/2021, Claimant gave Dr. Cebrian a history of the September 2, 2020, incident as follows: "As Ms. [Claimant] was bent over, a box fell and hit her on the back of the head on the right side in the mid back. *The box did not hit her left shoulder." Id* at 321. (emphasis added). In *Past Medical History*, he notes that Claimant "denies ever having any problems or complaints in the left shoulder or any treatment on her left shoulder. *Id* at 322.

27. Based on his review of the medical records, and evaluation of the Claimant, Dr. Cebrian opined the Claimant suffered, at most, a cervical contusion or strain as a result of the September 2, 2020, work incident. *Id* at 345. He opined that the proposed shoulder surgery was not reasonable or necessary, but in any event it was not causally related to her work injury, as the mechanism of injury as described could not cause the partial rotator cuff tears she suffers from. He opined that she reached MMI on 1/4/2021 for all work-related injuries, and is now able to return to work, with no restrictions, and no maintenance care. *Id* at 346.

28. Claimant had remained restricted from all work activity in the period January 25, 2021, through June 2, 2021. At Claimant's final appointment on June 4, 2021, PA Quackenbush (sanctioned by Steven Decoud, MD) released Claimant at MMI (*effective on 6/3/2021*, *see* Ex. H, p. 288, and narrative), with no restrictions, no impairment, and no need for medical treatment to maintain MMI. Under *Assessment and Plan,* he states: "After review of IME from Dr. Carlos Cebrian MD from May 14, 2021 the patient will be placed at MMI." *Id* at 283. He recommended that Claimant follow-up with her family physician and/or orthopedic specialist for non-work-related medical issues, most notably her left shoulder complaints. *Id.*

Claimant's Prior Medical History

29. Prior to her employment with Employer, the Clamant suffered a March 7, 2017, work injury. That injury occurred when the Claimant was operating a stand-up forklift, following a co-employee into a garage. The garage door started closing, striking the Claimant in the head and landing on her left shoulder. (Ex. C, p. 8). Claimant was diagnosed with a forehead contusion, contusion of the left upper arm, and cervical strain. Claimant consistently reported pain at a level 8/10 associated with her injuries. *Id* at 21, 26.

30. March 10, 2017, x-rays of the cervical spine were read as showing multilevel discogenic and bony degenerative changes. *Id* at 39. On March 15, 2017, Claimant reported previous injuries to the left neck, left shoulder, and head, as the result of a slip and fall while at work. *Id* at 45. She reported that her *left upper extremity is sore proximally*. *Id.* On that day, the provider released the Claimant from care on March 15, 2017, opining the Claimant had "returned to her pre-DOI baseline and is advised to follow up with her PCP for her chronic, pre-existing, non-work-related degenerative cervical spine condition." *Id* at 43.

31. On December 18, 2017, the Claimant sought treatment at the Arkansas Valley Surgery Center. Her prior medical history included dizziness, low back and neck injuries, fibromyalgia, and muscle spasms. (Ex. C, p. 57). Her prescription drug history included Tramadol, Voltaren gel, Hydrocodone-Acetaminophen, and Hydroxyzine, among multiple other medications. *Id* at 58-59.

32. Claimant also sought treatment with Metamorphosis Pain Management. On 4/11/2018, her subjective complaints included, “chronic pain syndrome”, with the reported “major” sources of pain being the neck, *left shoulder*, and low back. (Ex. F, p. 172). By 6/11/2018, Claimant’s problem list included, but was not limited to, arthritis/arthrosis, chronic back pain, degeneration of the cervical intervertebral disc, joint pain, lumbar radiculopathy, lumbar spondylosis, other spondylosis, with radiculopathy, and recurrent brief depressive disorder. *Id* at 165.

33. Ultimately, Claimant underwent a series of medial branch blocks. (Ex. F, p. 168, Ex. K, p. 324). On March 30, 2018, she was evaluated for pre-operative **bilateral** shoulder joint injections. The procedure was performed on 4/11/2018. (Ex. F, p. 168).

34. Claimant also established care with JPS Hospital Systems on April 29, 2019. She reported a past medical history to include chronic neck pain, chronic back pain, degenerative joint disease, and spinal stenosis. (Ex. E, p. 68). Her final diagnoses included chronic pain syndrome, chronic neck pain, chronic low back pain, and other long-term (current) drug therapy. *Id* at 62, 68.

Claimant Testifies at Hearing

35. Claimant testified about her duties as a stocker. She testified that prior to 9/2/2020, she was not having any left shoulder pain, and her left shoulder did not limit her ability to perform her job. While acknowledging some prior neck pain, she stated that post-injury, her neck pain was “a lost worse. I couldn’t hardly move.” (Transcript, p. 20).

36. In describing the incident, she stated “all of a sudden I felt boxes coming down on top of me and hitting me, and it kind of stunned me. Took a minute. I stood up, held on to the cart, trying to gather my thoughts of what just havened. And just the increased pain and all of it, I started crying and I just broke out.” *Id* at 20-21. She did not know how many boxes fell onto her, other than the one that did hit her was for sure “mops and brooms or something like that.” *Id.* She did not know the weight of this box. *Id.*

37. Claimant testified that she was given “such great grief [by managers at work] in regards to going to a doctor.” *Id* at 22. The next day she was scheduled for work, and “then I was hurting so bad I couldn’t hardly move. I went ahead and called in to take off that day.” *Id* at 22-23. The work-related pain Claimant described as still hurting, at the time of hearing, was “in my left front part of my shoulder, sometimes on top and down into my arm.” *Id* at 24, 25.

38. Claimant testified that she was offered, and accepted, modified duty from Employer for “four, five months.” She stated that she was taken off work on January 24, 2021, and then returned to work on *July 4,* 2021. She now works in cosmetics, a position she had sought prior to the work injury.

39. Claimant confirmed that the box[es] that fell did not hit her on the left shoulder or the left side of her back or left neck. *Id* at 29. Neither was she struck on her chest area, since she was bent over at the time. *Id* at 31. She did not fall to the ground, nor did she fall onto outstretched arms. *Id* at 29.

40. Claimant confirmed a prior work injury to her left shoulder in 2017, for which she was prescribed physical therapy and narcotic medications. Claimant disputed taking any drug screenings as recently as 2018 or 2019. She believed it to have been at least 10 years or more. *Id* at 34. She acknowledged prior diagnoses of fibromyalgia and chronic fatigue syndrome. *Id.* Claimant's recall of other recent treatment was vague, at best.

Deposition of Dr. Cebrian

41. In an August 12, 2021, post-hearing evidentiary deposition, Dr. Cebrian testified as a Level II accredited expert in the field of occupational medicine. Dr. Cebrian testified that Claimant suffered a cervical contusion/strain as a result of the September 2, 2020, incident. He testified it is not medically probable that Claimant's complaints of left-sided neck pain, left shoulder pain, and chest wall pain are related to the work event. He explained that getting hit on the right side of the head and back may injure the right-side of the neck or back, but it is not medically probable it would result in any injury to the left shoulder. There would not be enough force to the left shoulder to cause any kind of pathology to the left rotator cuff or shoulder joint.

42. Dr. Cebrian explained that both PA Quackenbush and Dr. Minihane relied on an incorrect description of the mechanism of injury in arriving at their opinions that Claimant suffered a left shoulder injury on September 2, 2020. Dr. Cebrian opined, to a reasonable degree of medical probability, that a cervical contusion/strain would improve with the passage of time, either with or without medical treatment. He opined, based on the Claimant's mechanism of injury, that it is not medically probable that a cervical contusion or strain would result in lost time from work or permanent impairment. He further opined that the work restrictions imposed on Claimant were not related to the September 2, 2021, work incident; instead they were related to her pre-existing chronic pain condition.

43. Dr. Cebrian testified that, given the Claimant's medical history, while it was reasonable for the Claimant to seek medical treatment following the September 2, 2020, incident, it was not medically necessary. He opined that, given the Claimant's medical history, while it was reasonable for PA Quackenbush to impose work restrictions through October 23, 2020, it was not medically necessary.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002).

D. In this instance, the ALJ finds Claimant to be a less-than-reliable medical historian. Her symptoms as relayed at various stages of her treatment follow no particular pattern, waxing and waning (and migrating) beyond what one might reasonably anticipate with simple 'good days and bad days'. Initially, her physical therapy is providing great results; then when she sees Dr. Reasoner for the first time, it had never helped. Neither did her medications help at all, despite refilling them regularly through PA Quackenbush, with no complaints. Claimant made no mention of her self-reported spectacular results from chiropractic care. Claimant denied any left shoulder issues pre-injury; the medical records say otherwise. While Claimant did acknowledge prior diagnoses for fibromyalgia and chronic fatigue syndrome, attempting now to correlate her current complaints with a specific work injury becomes clearly problematic.

Compensability, Generally

E. Claimant must prove by a preponderance of the evidence that he is a covered employee who suffered an injury arising out of and in the course of employment. C.R.S. § 8-41-301(1); S*ee*, *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett, 33 P.3d 1230* (Colo. App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 592 P.2d 792 (Colo. 1979).

F. An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract.

Compensability, as Applied

G. Claimant was struck somewhere on her back or neck (or both) by a large cardboard box from a height of 2-3 feet, from the top of the cart down to her back. Claimant believed the box contained brooms or mops, and the evidence is consistent with that belief. The box had apparently been opened, but not fully re-closed, quite possibly to allow one or two brooms to be removed in a pinch to stock an empty shelf. What can be inferred is that this box would not weigh much more than a few pounds, based upon: 1. Claimants own description of the contents, 2. The relative ease with which the co-worker carried it away after the incident, 3. Its placement on the very top of a push cart, when better options existed for transport of heavier objects by store personnel, and, 4. The ease by which this box was casually nudged over the side by the unknowing co-worker, while in the process of re-placing another lightweight box back onto the cart. Further, it appears it landed more or less flat onto Claimant, instead of along an edge, or even a corner, where all the transferred energy might otherwise impact a small area. In other words, Claimant did not suffer much of an impact at all from this box, although it was likely startling.

H. Given Claimant's preexisting medical history, her migratory and varying symptoms as reported, and the mechanism of injury here, the ALJ finds Dr. Cebrian's analysis to be persuasive. *At most, Claimant suffered a cervical contusion/strain, and* *minor back contusion.* The mechanism of injury could not have caused the partial tears in Claimant's infraspinatus or supraspinatus tendons, nor would it have precipitated the need for a subacromial decompression or a distal clavicle resection. The box never struck Claimant's left shoulder, nor did she land on outstretched arms. Any treatment for an alleged rib cage misalignment would not be related to this singular, minor work incident. Nor would her complaints of headaches, or tingling in her fingers, or *any other condition* she complained of beyond the cervical contusion/strain and minor back contusion. Further, the ALJ finds that, *beyond this minor work injury to her neck and back,* any other medical complaints were not the result of aggravating, either temporarily or permanently, a preexisting condition such that a disability resulted which required further medical treatment.

I. Nonetheless, Claimant has shown she did suffer a minor compensable work injury, which required medical treatment. The remainder of her complaints have not been shown to be work-related. While Canon City Urgent Care has served as Claimant's ATP from Day One, both PA Quackenbush and Dr. Reasoner's specialty is noted to be *Urgent Care*, and not Occupational Medicine. While they duly filled out WC164s regularly, the record does not reflect whether they are even Level II accredited. Given the ostensible urgency of Claimant's condition (overlain with existent covid considerations), issues of *causation* were not at the forefront of their considerations. As is not uncommon in urgent and emergency care situations, focus on the mechanism of injury understandably emphasizes *diagnosis and treatment,* rather than the forensic issue of *causation.* While Claimant may not to be to blame for any of this, her initial mechanism of injury on 9/3/2021 describes a *fall onto her left side*, which likely got carried over into future reports without much scrutiny. Additionally, adding to the confusion was her variety of self-reported symptoms which temporally correlated with the work injury.

Claimant's Date of MMI

J. While it is clear from the record that continued treatment was recommended by her ATPs for a variety of Claimant's complaints, to include most notably, her left shoulder, Dr. Cebrian's IME report changed the ATPs' analysis. Once this report was issued, it was plainly relied upon by PA Quackenbush (and now sanctioned by Dr. Decoud), who released Claimant at MMI, effective at her next appointment on June 3, 2021. At that appointment, he encouraged her to seek treatment for her shoulder complaints outside the workers compensation system. While Dr. Cebrian opined that Clamant was at MMI for all work related complaints as of 1/4/2021, PA Quackenbush simply assigned MMI on the 6/3/2021 appointment date; he did not make it retroactive. In this instance, the ALJ finds that Claimant's MMI status remained in flux solely as a result of her non-work-related complaints. Arguably, Claimant reached MMI well before the 1/4/2021 date assigned by Dr. Cebrian, but for purposes of this Order, the MMI date of 1/4/2021 will be accepted by the ALJ.

Medical Benefits

K. Respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101 (1)(a), C.R.S. (2009); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Whether the claimant sustained his burden of proof is generally a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P .2d 496 (Colo. App. 1997).

L. Claimant has now received all medical treatment which was reasonable, necessary and related to treat her industrial injuries. She is at MMI for such injuries, and no medical maintenance care is required. Her rotator cuff complaints are *not causally related* to her work injury; therefore, there is no need to determine if such surgery is reasonable and necessary. Nor has Claimant shown that further treatment for any condition *except her cervical contusion/strain and back contusion* is *causally related* to her work injury. Perhaps further treatment might be *reasonable and necessary* to treat fibromyalgia in the same body parts complained of, but any such treatment is not *causally related*. No further medical benefits are due and owing to Claimant.

Temporary Total Disability

M. To prove entitlement to temporary total disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the Claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

N. In this case, Claimant was taken of work by PA Quackenbush and Dr. Decoud on 1/25/2021, under their mistaken belief (as of 1/25/2021) that Claimant's shoulder complaints were work-related. They both concluded otherwise, effective 6/3/2021. The ALJ concurs with such assessment. Thus, while Claimant may well have left work as a result of a disability (to her shoulder) for more than three work shifts, and that she thereby suffered a commensurate wage loss, *she has failed to show that such* *events were caused by her industrial injury.* Further, the record is equally clear that Employer (while enjoying the inherent luxury of being *large*) had offered modified duty consistent with the work restrictions imposed by the ATP from Day One. Claimant accepted such modified duty, and while perhaps uncomfortable at times, had no apparent difficulty in completing it. And as noted, her total removal from work in 1/25/2021 was not related to Claimant's minor work injury. Temporary total disability payments are not appropriate for Claimant's situation.

ORDER

It is therefore Ordered that:

1. Claimant has suffered a minor compensable work injury, but limited only to a cervical contusion/strain and minor back contusion.

2. Claimant has now received all appropriate medical care which was reasonable, necessary, and related to her compensable work injury. Claimant's claim for any further medical treatment, to include the proposed shoulder surgery, is denied and dismissed.

3. Claimant's claim for Temporary Total Disability Benefits is denied and dismissed.

4. Claimant's Average Weekly Wage is $579.29.

5. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is* ***highly recommended*** *that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

ISSUES

- Did Claimant overcome the DIME's MMI date by clear and convincing evidence?

- Did Claimant prove by a preponderance of the evidence she suffered a functional impairment not listed on the schedule?

- If Claimant proved whole person impairment, did she overcome the DIME's impairment rating by clear and convincing evidence?

- If Claimant did not prove whole person impairment, did she prove a 16% extremity rating by a preponderance of the evidence?

- Did Claimant prove her average weekly wage (AWW) should be adjusted based on an increase in the Colorado state minimum wage?

- Did Claimant prove entitlement to medical benefits after MMI?

- Disfigurement.

FINDINGS OF FACT

1. Claimant worked for Employer as a hostess. At the time of her injury, she earned $11.33 per hour, plus tips. Wage records show $2,262.40 in declared tips from January 1 through October 24, 2019, which equates to an average of $226.24 per month.

2. Claimant suffered an admitted injury to her right shoulder on May 11, 2019 when she slipped on ice and fell.

3. Employer referred Claimant to Dr. Cynthia Schafer at UCHealth. At the initial visit on May 14, 2019, Claimant reported pain around the right clavicle, right shoulder, and the right side of her neck. The medial end of the clavicle had become "prominent" since the accident. Physical examination showed tenderness, decreased strength, and decreased range of motion of the right shoulder. She also had tenderness around the right side of her neck and right trapezius, with reduced cervical range of motion. Dr. Schafer diagnosed a right shoulder "sprain." She gave Claimant a shoulder immobilizer and referred her to Dr. Chad Abercrombie for chiropractic treatment.

4. Claimant's initial visit with Dr. Abercrombie to place on May 25, 2019. She reported chest pain, right collarbone pain, right greater than left neck pain, and diffuse mid back pain. On examination, her right shoulder was noticeably "depressed." Dr. Abercrombie also observed anterior prominence of the right sternoclavicular joint. Claimant had tenderness and spasm in the right upper trapezius extending into the right-sided neck muscles. Cervical range of motion was moderately limited. She was also

tender at the right sternoclavicular joint and around the sternocostal region. Dr. Abercrombie diagnosed sternocostal and sternoclavicular strains and cervicothoracic strains with facet and costovertebral joint components.

5. Claimant initially responded well to chiropractic treatment. On July 19, 2019, Dr. Abercrombie noted the right shoulder remained depressed but was "greatly improved" from her initial evaluation. She continued to exhibit tightness and trigger points along the trapezial ridge into the right lateral cervical muscles. She still had pain around the sternoclavicular and sternocostal areas.

6. Claimant saw Dr. Dwight Leggett on August 9, 2019. She explained the treatment with Dr. Abercrombie had been helpful but she was still having symptoms and associated limitations. She described persistent "swelling" over the collarbone since the accident which did not seem to be getting better. She also reported "a large amount of tension" in her neck, particularly on the right side. She felt her right shoulder pain was worsening and she had difficulty tolerating chiropractic treatment to that area. She experienced frequent clicking, popping, and catching, and the shoulder had become "stuck" on a few occasions. Dr. Leggett observed "a large amount of swelling of the right greater than left sternoclavicular joint, as well as somewhat into the region of the anterior scalenes." These areas were severely tender and hypersensitive to palpation. Dr. Leggett also identified "high levels of myofascial tightness" throughout the upper pectoralis, mastoid, scalenes, trapezius, and around the shoulder. Her right shoulder was approximately 2 inches lower than the left. Dr. Leggett recommended trigger point injections and sternoclavicular joint injections. He also wondered about possible labral and/or rotator cuff tears.

7. Dr. Leggett administered the injections on August 29, 2019. They provided short-term relief but no sustained benefit.

8. Claimant underwent an MR arthrogram of the right shoulder on August 30, 2019. It showed a partial supraspinatus tear with focal full-thickness perforation through the bursal surface of the tendon, a circumferential labral tear with a labral cyst, and tendinosis of the long head of the biceps. After reviewing the report, Dr. Schaffer referred Claimant to Dr. Christopher Jones for an orthopedic evaluation.

9. Claimant saw Dr. Jones on October 14, 2019. She described ongoing pain around the right shoulder and lateral neck. She felt the pain was getting worse. On examination, Dr. Jones found no tenderness to palpation of the sternoclavicular joint, clavicles, or bicipital groove. Claimant was tender at the acromioclavicular joint, the anterolateral acromion, cervical spine, and trapezius. She appeared "quite stiff." She had significant pain with shoulder extension and lateral rotation, and a positive Spurling maneuver. Dr. Jones noted mild crepitus on palpation of the subacromial space with range of motion. Impingement signs were positive but she had full rotator cuff strength. X-rays of the right shoulder showed arthritis with an early "goats beard osteophyte" at the inferior humeral neck and glenoid. The joint space was well preserved. There was also moderate AC joint arthritis. Dr. Jones opined the labral tear shown on the arthrogram was

degenerative and “normal for her age.” He thought most of Claimant’s pain was coming from her neck as opposed to any shoulder pathology, and recommended a cervical MRI.

10. Claimant was dissatisfied with Dr. Jones’ assessment and requested a second opinion, so Dr. Schaffer referred her to Dr. David Weinstein.

11. Claimant saw Dr. Weinstein on November 18, 2019. She reported persistent right shoulder pain radiating to the sternoclavicular joint. She also described clicking and popping within the shoulder joint. Physical examination showed tenderness around the neck, right trapezius, and right scapula. She was tender to palpation over the sternoclavicular joint, the subacromial space, and the proximal biceps tendon. Rotator cuff strength testing showed weakness with forward elevation, abduction, and external rotation. Provocative impingement and rotator cuff testing was positive. Dr. Weinstein did not mention any shoulder crepitus. He reviewed the arthrogram images and concurred with the assessment of a partial supraspinatus tear and diffuse labral tearing. He thought Claimant’s symptoms and clinical findings were consistent with a rotator cuff injury, but opined the labral tear was an incidental, age-related finding, and not a likely pain generator. Dr. Weinstein was primarily impressed with right shoulder myofascial inflammation, evidenced by significant tenderness over the trapezius, anterior chest, and costochondral area. He recommended Claimant return to Dr. Leggett for additional soft tissue treatment, but also recommended a diagnostic shoulder injection to determine whether any of her symptoms were related to the shoulder.

12. Claimant had the cervical MRI the same day she saw Dr. Weinstein. It showed moderate spondylosis and neural canal stenosis at multiple levels, but no evidence of nerve root impingement or cord compression.

13. Claimant followed up with Dr. Weinstein on January 2, 2020. Her symptoms and clinical examination findings were unchanged. Dr. Weinstein injected the right shoulder. Re-examination 15 minutes later showed no change in her overall exam, with continued diffuse tenderness, pain and weakness, and range of motion deficits. Dr. Weinstein concluded Claimant’s symptoms were not related to the pathology on the MRI, but were instead related to myofascial inflammation. He thought no treatment specifically directed at the shoulder would help, and recommended she follow up with Dr. Leggett.

14. Claimant returned to Dr. Leggett on January 9, 2020. He reviewed the interval history and the cervical MRI findings. Claimant was participating in physical therapy, but was having difficulty tolerating the sessions because of pain. Most of her pain was around the shoulder, scapula, and sternum. Examination of the right upper quadrant showed substantial hypersensitivity with multiple trigger points throughout the cervical and parascapular region, and into the upper lateral chest wall. Dr. Leggett agreed with Dr. Weinstein that the majority of Claimant’s pain was myofascial. He administered trigger point injections and referred Claimant back to Dr. Abercrombie for chiropractic treatment.

15. Claimant reported gradual but appreciable improvement over the next several months with trigger point injections and chiropractic treatment. Her trigger points were primarily located the trapezius and parascapular musculature.

16. On March 2, 2020, Dr. Leggett injected the right sternoclavicular joint and a few sternocostal joints.

17. Claimant followed up with Dr. Leggett on May 7, 2020. She reported a "clear decrease in hypersensitivity" after the injection, although she continued to have pain and tension in her neck and shoulder. Claimant's treatment had been interrupted by the "stay-at-home" order related to COVID, which caused her to "lo[se] some of the ground that we had made." Dr. Leggett injected multiple trigger points and sent her immediately over to Dr. Abercrombie's office.

18. On May 14, 2020, Dr. Leggett noted Claimant was beginning to identify a "cyclic nature of her pain." She typically enjoyed a "clear decrease in pain" for several days after trigger point injections, but the symptoms inevitably returned to the same level. She was frustrated and asked about treatment options that might prove more lasting. She reported intermittent popping and catching in the shoulder, which Dr. Leggett reproduced on examination. Dr. Leggett opined Claimant's myofascial pain in the neck had responded well to treatment, but persisted in the right shoulder girdle. He recommended PRP (platelet rich plasma) injections for the right shoulder.

19. Insurer approved the PRP treatment, and Claimant had the first injection in mid-June 2020.

20. On July 14, 2020, Dr. Leggett documented "substantial improvement since the injection, with improved activity tolerance and range of motion. She is able to do her own hair, which she is extremely pleased with. Overall, she feels that she is making clear gains." Examination of the right shoulder showed "a clear decrease in hypersensitivity diffusely throughout the region, and a clear increase in tolerance of exam. Range of motion is also clearly increased." Dr. Leggett anticipated she would continue to improve over the next few weeks, but might need a second round of PRP. He opined claimant was "approaching MMI in the near future."

21. Claimant followed up with Dr. Leggett on August 4, 2020. She stated her level of improvement was "amazing," with significant decrease in shoulder pain. Her range of motion and activity tolerance had also improved. However, she remained limited by ongoing hypersensitivity in the shoulder and chest region. Examination showed "a clear decrease in hypersensitivity" with palpation of the right shoulder. Provocative rotator cuff testing remained somewhat positive but was "clearly less intense as compared to previous evaluations." Dr. Leggett opined, "She has had clear benefit with the PRP injection into the right shoulder," and recommended a second injection. He planned to target the subacromial space again, but also the acromioclavicular and sternoclavicular joints.

22. The second set of PRP injections was completed on August 20, 2020.

23. At her next appointment on September 16, 2020, Claimant stated the additional injections were "quite beneficial" regarding her shoulder pain. Dr. Leggett noted her examination findings were improved from the last visit. Claimant was under the

impression she would be put at MMI soon, and Dr. Leggett suggested additional PRP injections may be warranted. He opined, “This could be done under ongoing treatment, or possibly under the maintenance phase of her treatment.”

24. Dr. Leggett administered a third set of PRP injections on October 20, 2020.

25. On November 13, 2020, Claimant reported the injection provided moderate benefit, but she still had pain over the anterior chest around the sternoclavicular joint. Claimant was emotionally labile and described significant depression and anxiety about the ongoing impact the injury was having on her life. She was concerned about returning to work given her age and functional limitations. She anticipated being placed at MMI by Dr. Schafer within a week, and asked about maintenance care. Dr. Leggett told Claimant he expected Dr. Schafer to outline a maintenance program at the time of MMI, which could include additional treatment with Dr. Abercrombie for pain flares and possible repeat PRP injections.

26. Dr. Schafer put Claimant at MMI on November 16, 2020. Claimant reported the PRP injections had improved her pain in the AC joint but were of little benefit for the sternoclavicular joint pain. Dr. Shafer observed Claimant’s clavicle “continues to be more prominent anterior to the sternum at that junction, [but] I told her there was little more that could be done in that regard.” On examination, Claimant was tender to palpation primarily in the AC joint and into the chest wall. Dr. Schafer appreciated “minimal crepitus.” Dr. Schafer opined “limited range of motion does not adequately reflect the level of dysfunction related to this injury, and I need to rate the anterior chest wall dysfunction.” To that end, she added 6% extremity for mild crepitus. This produced an overall rating of 16% extremity/10% whole person.

27. Dr. Schafer recommended maintenance care including meloxicam, up to 12 sessions of chiropractic treatment with Dr. Abercrombie over the next 12 months, and up to two PRP injections in the right shoulder or right chest wall in the next 12 months.

28. Dr. Rebekah Martin performed an IME for Respondents on January 4, 2021. Dr. Martin noted significant pain behaviors during the examination, including reported severe pain with light palpation around the right shoulder girdle, neck, and sternoclavicular joint. Dr. Martin saw no asymmetry between the left and right sternoclavicular or AC joints. The right shoulder was slightly lower than the left. In her opinion, the imaging studies showed only age-related degenerative changes and indicated no acute injury aside from the soft tissue strains. She opined Claimant suffered a soft tissue cervical strain, thoracic strain, pectoralis muscle strain, and parascapular muscle strain in the fall, but reached MMI approximately three months later, on August 11, 2019. Dr. Martin thought it was “unfortunate that the patient underwent a right shoulder MRI because it appears that the age-related findings on MRI led to significant unnecessary care.” She saw no objective findings to support Claimant’s reports of severe pain and dysfunction. She also felt Claimant did not put forth full effort during strength testing at the IME. Dr. Martin concluded Claimant suffered no permanent impairment and required no maintenance care or work restrictions.

29. Dr. Stephen Lindenbaum performed a DIME on March 19, 2021. His report reflects a comprehensive record review and thorough physical examination. Like Dr. Martin, Dr. Lindenbaum noted Claimant's significant pain reaction in response to even light touch. He could not elicit any crepitus despite repeated shoulder motion. He observed no significant sternoclavicular swelling or prominence. Dr. Lindenbaum opined Claimant probably had pre-existing age-related right shoulder pathology that was aggravated by the injury. He thought Dr. Martin's proposed MMI date of August 11, 2019 was "a little premature based on the fact the patient continued to have treatments with injections and chiropractic after that time." He concluded the appropriate MMI date was May 7, 2020. He reasoned,

> [that was] around the last treatments that Dr. Leggett and the chiropractor did together of 5/7/20. . . . [T]reatments after that were related to PRP injections which in themselves are not considered a mainstream for this type of injury, as well as the biofeedback that could have been done on a maintenance basis. It is for that reason that I think the date of MMI should have been as of 5/7/20.

30. Dr. Lindenbaum assigned an 8% upper extremity/5% whole person rating based on shoulder range of motion deficits. He noted the primary difference between his rating and Dr. Schafer's rating was the rating based on crepitus. He opined,

> [T]his would be covered under her decreased motion as far as impairment is concerned, and I did not feel any evidence of significant crepitus on examination of either the AC joint, sternoclavicular joint, or subacromial space. It is for that reason that I gave the patient 8% upper extremity rating that converted to a 5% whole person rating. This is in contrast to the 16% upper extremity rating that was given by Dr. Schafer of which the large percentage was related to a rating for crepitus which I did not see.

31. Dr. Lindenbaum opined Claimant should be permanently restricted to lifting no more than 5 pounds. He saw no need for any maintenance care.

32. Dr. Martin issued a supplemental report on May 13, 2021 after reviewing additional records, including Dr. Lindenbaum's DIME report. She agreed with Dr. Lindenbaum that no cervical spine rating was warranted, but disagreed with the shoulder rating. She reiterated her opinion that Claimant did not suffer a right shoulder injury from the fall.

33. Dr. Martin testified in deposition consistent with the opinions expressed in her reports.

34. Dr. Martin's opinion that claimant did not injure her right shoulder in the accident is not persuasive. That opinion is directly contradicted by the assessments of Dr. Schafer, Dr. Leggett, Dr. Abercrombie, Dr. Weinstein, and Dr. Lindenbaum, and the longitudinal treatment history as reflected in the medical records.

35. Claimant has reported popping and crepitation with movement of the right shoulder on multiple occasions. However, this finding has been only intermittently reproducible on examination. In her position statement, Claimant cited numerous medical records documenting crepitus on examination. But Respondents also highlighted multiple examinations which did not elicit crepitus. The ALJ sees no persuasive reason to disregard these records and finds that crepitus is a variable clinical finding, present at some examinations but not at others.

36. Claimant overcame Dr. Lindenbaum's May 7, 2020 MMI date by clear and convincing evidence. Claimant was still receiving treatment reasonably expected to improve her condition through October 2020. Moreover, Dr. Leggett documented significant improvement after each set of PRP injections. Dr. Lindenbaum was highly probably incorrect to assign an MMI date before Claimant completed active treatment that improved her condition, merely because PRP injections are not considered "mainstream." Claimant proved by clear and convincing evidence she was not as MMI as of May 7, 2020. Claimant reached MMI on November 16, 2020, as determined by Dr. Schafer.

37. Claimant proved she suffered functional impairment not listed on the schedule of disabilities. The records from Dr. Schafer, Dr. Leggett, Dr. Weinstein, and Dr. Abercrombie, coupled with Claimant's credible testimony on this topic, show functional impairment throughout the right shoulder girdle, extending into the trapezius, right lateral neck, and chest.

38. Claimant failed to overcome Dr. Lindenbaum's 5% whole person shoulder rating by clear and convincing evidence. There is no persuasive evidence to suggest Dr. Lindenbaum's range of motion measurements were inaccurate or the product of flawed methodology. The primary difference between his rating and Dr. Schafer's rating is the additional percentage for crepitus. It was within Dr. Lindenbaum's zone of discretion to omit a rating for crepitus because he appreciated no crepitus during the DIME appointment.

39. Claimant proved entitlement to a general award of medical benefits after MMI. Dr. Schafer and Dr. Leggett's opinions regarding Claimant's probable need for future treatment are credible and more persuasive than the contrary opinions offered by Dr. Lindenbaum and Dr. Martin.

40. Claimant failed to prove her AWW should be adjusted based on increases to the Colorado state minimum wage. Claimant was already earning above the minimum wage for "tipped employees" at the time of injury, and the minimum wage for tipped employees is still lower than the rate of pay upon which the admitted AWW is based.

41. Claimant demonstrated visible disfigurement consisting of: (1) shoulder asymmetry, with the right shoulder sitting noticeably lower than the uninjured left shoulder, (2) bulging or swelling around the right sternoclavicular joint, and (3) a subtle prominence of cartilage on the right chest. This disfigurement affects parts of the body normally exposed to public view. The ALJ finds Claimant should be awarded $2,500 for disfigurement.

CONCLUSIONS OF LAW

A. Claimant overcame the DIME regarding the date of MMI

A DIME's determinations regarding MMI and whole person impairment are binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). The party challenging a DIME physician's conclusions must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment because of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5).

As found, Claimant the DIME's determination she was at MMI on May 7, 2020 by clear and convincing evidence. Claimant continued receiving treatment reasonably expected to improve her condition through October 2020. Although PRP is not a "common" procedure in the workers' compensation system, the MTGs support PRP injections for certain shoulder, elbow, and knee conditions. *E.g*., WCRP 17, Exhibit 4 § (E)(10)(e); Exhibit 5 § (H)(4)(a); Exhibit 6 § (F)(6)(d). More important, Dr. Leggett documented significant improvement after each set of PRP injections. The decision to put Claimant at MMI before she completed active treatment that improved her condition, merely because PRP injections are outside the "mainstream," was highly probably incorrect. Claimant proved by clear and convincing evidence she was not at MMI on May 7, 2020. Claimant reached MMI on November 16, 2020, as determined by Dr. Schafer.

B. Burdens of Proof regarding impairment

Claimant is requesting whole person benefits for her shoulder and also seeking to set aside Dr. Lindenbaum's rating in favor of Dr. Schafer's rating. Claimant argues both issues should be decided under the preponderance of the evidence standard. The ALJ disagrees with this position.

Whether Claimant's shoulder impairment represents a scheduled or whole person impairment is a threshold question that must be answered before we can determine the weight to be accorded to the DIME's rating. Section 8-42-107 sets forth two methods of compensating permanent medical impairment. Subsection (2) provides a schedule of disabilities and subsection (8) provides a DIME process for whole person ratings. The DIME's determination regarding whole person impairment is binding unless overcome by clear and convincing evidence. Conversely, scheduled impairment is a question of fact for the ALJ based on a preponderance.

Whether a claimant sustained a scheduled or non-scheduled impairment is a question of fact for determination by the ALJ. The heightened burden of proof that attends a DIME rating applies only if the claimant establishes by a preponderance of the evidence that the industrial injury caused functional impairment not found on the schedule. Then, and only then, does either party face a clear and convincing evidence burden to overcome the DIME's rating. *Webb v. Circuit City Stores, Inc*. W.C. No. 4-467-005 (August 16, 2002). Although the DIME's opinions may be relevant to this determination, they are not entitled to any special weight on this threshold issue. *See Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998) (DIME provisions do not apply to the scheduled ratings).

Claimant's argument is primarily predicated on *Fresquez v. Montrose School District RE-1J*, W.C. No. 4-969-602-01 (April 14, 2017). At first blush, the quoted language from *Fresquez* could be read to suggest a claimant can increase a whole person rating with a two-step process under the preponderance standard. But *Fresquez* differs from Claimant's case in a critical respect, namely, it involved only a dispute over the ATP's rating. In *Fresquez*, the ATP had initially provided a 16% extremity rating, but later corrected the rating to 24% at a hearing. The ALJ determined that the amended rating of 24% was the ATP's true rating, based on a preponderance of the evidence. The ALJ then applied the preponderance standard to determine the claimant suffered a whole person impairment.

When viewed in that context, *Fresquez* fits the legal framework outlined at the beginning of this section (B). It is well-established that an ATP or a DIME may amend or alter their rating. *Montoya v. Industrial Claim Appeals Office*, 203 P.3d 620 (Colo. App. 2008); *Jarosinski v. Industrial Claim Appeals Office*, 62 P.3d 1082 (Colo. App. 2002); *Kaur v. King Soopers*, W.C. No. 5-017-566-001 (January 8, 2020). And ALJs have jurisdiction to reconcile ambiguous or conflicting ratings issued by a single ATP. *E.g., Blue Mesa Forest v. Lopez*, 928 P.2d 831 (Colo. App. 1996); *Calvillo v. Intermountain Wood*, W.C. No. 4-462-927 (September 24, 2002). In such as case, the ALJ determines the physician's "true opinion" using the preponderance standard. *Simpson v. Safeworks, LLC*, W.C. No. 4-877-091-02 (January 23, 2014). That determination should include consideration of the physician's reports and testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office*, 984 P.2d 656 (Colo. App. 1998). Once the doctor's opinion is ascertained, the evaluation of impairment proceeds on the normal path. If the claimant accepts the rating and only seeks to prove that they suffered whole person as opposed to a scheduled impairment, that issue is decided under the preponderance standard. But if the claimant wishes to challenge a whole person rating provided by the ATP, they must request a DIME. Similar logic applies where, as here, the DIME issues a shoulder rating that might reflect scheduled or non-scheduled impairment. The ALJ must first answer the threshold question of whether the claimant suffered a scheduled or whole person impairment. If the claimant has a scheduled impairment, the DIME's rating is entitled to no special weight. But if the claimant has a whole person impairment, the DIME's rating is binding unless overcome by clear and convincing evidence.

Accordingly, Claimant must prove she suffered non-scheduled impairment by a preponderance of the evidence. If successful, she must overcome the DIME's 5% whole person rating by clear and convincing evidence.

C. Claimant proved she suffered functional impairment not listed on the schedule

When evaluating whether a claimant has sustained scheduled or whole person impairment, the ALJ must determine "the situs of the functional impairment." This refers to the "part or parts of the body which have been impaired or disabled as a result of the industrial accident," and is not necessarily the site of the injury itself. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). The schedule of disabilities refers to the loss of "an arm at the shoulder." Section 8-42-107(2)(a). If the claimant has a functional impairment to part(s) of his body other than the "arm," she has sustained a whole person impairment and must be compensated under § 8-42-107(8).

There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000).

Pain and limitation in the trapezius and scapular area can functionally impair an individual beyond the arm. *E.g. Steinhauser v. Azco, Inc.*, W.C. No. 4-808-991 (January 11, 2012) (pain and muscle spasm in scapular and trapezial musculature warranted whole person impairment); *Franks v. Gordon Sign Co.*, W.C. No. 4-180-076 (March 27, 1996) (supraspinatus attaches to the scapula, and is therefore properly considered part of the "torso," rather than the "arm"); *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (ICAO, June 30, 2008) (pain affecting the trapezius and difficulty sleeping on injured side supported ALJ's finding of whole person impairment). However, the mere presence of pain in a part of the body beyond the schedule does not automatically represent a functional impairment or require a whole person conversion. *Newton v. Broadcom, Inc*., W.C. No. 5-095-589-002 (July 8, 2021).

As found, Claimant proved she suffered functional impairment not listed on the schedule. The record is replete with references to myofascial pain, spasm, and trigger points around the shoulder, scapular area, trapezius, neck, and chest. Claimant received extensive treatment, including multiple trigger point injections, directed to parts of her body that are proximal to her arm. Claimant's testimony regarding the impact the injury has had on her ability to perform various activities was credible. The preponderance of persuasive evidence shows Claimant has functional impairment to parts of her body beyond her "arm."

D. Claimant failed to overcome the DIME's whole person rating

Claimant failed to overcome Dr. Lindenbaum's 5% whole person shoulder rating by clear and convincing evidence. The ALJ is not persuaded by Claimant's argument that Dr. Lindenbaum was deliberately attempting to minimize her rating. Had that been his motivation, it would have been easier to simply assign a zero percent rating based on exaggerated complaints and lack of objective injury-related pathology, consistent with Dr. Martin's assessment. Dr. Lindenbaum provided the rating he thought was most appropriate based on his review the records and the examination he performed.

The primary difference between Dr. Lindenbaum's rating and Dr. Schafer's rating is the additional percentage for crepitus. Although Claimant has repeatedly reported crepitus with shoulder motion, it has been only variably present on examination by multiple providers. Dr. Schafer referred to "mild" crepitus, so it is plausible it would not be appreciable on every examination. Dr. Lindenbaum could not elicit crepitus despite multiple attempts. It was within Dr. Lindenbaum's zone of discretion to omit a rating for crepitus because he could not substantiate its existence and permanence during the DIME appointment.

E. Claimant is entitled to a general award of medical benefits after MMI

The respondents are liable for medical treatment after MMI reasonably necessary to relieve the effects of the injury or prevent deterioration of the claimant's condition. Section 8-42-101; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Proof of a current or future need for "any" form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). There is no requirement that a particular course of treatment be articulated or that the claimant actually be receiving treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999). If the claimant establishes the probability of a need for future treatment, she is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute causation or reasonable necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003).

As found, Claimant proved a probable need for future treatment to relieve the effects of her injuries and prevent deterioration of her condition. Dr. Schafer and Dr. Leggett's opinions regarding Claimant's probable need for medical treatment after MMI are credible and more persuasive than the contrary opinions offered by Dr. Lindenbaum and Dr. Martin. Claimant remains symptomatic more than two years after the accident despite significant treatment. Her pain is unlikely to resolve, and it is reasonable and appropriate to allow access to treatment to help manage her condition.

F. Claimant failed to prove her AWW should be increased

Section 8-42-102(2), C.R.S. provides that compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

The discretionary authority regarding AWW extends to post-injury pay raises a claimant would have received but for the injury. *Ebersbach v. UFCW Local No. 7*, W.C. No. 4-240-475 (May 5, 1997); *Romero v. Cub Foods*, W.C. No. 4-218-823 (September 28, 2000). The critical question is whether the post-injury wage increase was "sufficiently definite" rather than merely speculative. In *Ebersbach*, *supra*, the ICAO held that the claimant was entitled as a matter of law to have her AWW adjusted to account for post-injury pay raises she was eligible to receive under a union contract. Similarly, in *Marr v. Current Inc*., W.C. No. 4-407-504 (September 20, 2000), the ALJ recomputed the claimant's average weekly wage to include a pay raise the claimant received approximately one month after the injury. The ICAO affirmed based on the rule in *Campbell*. The dispositive factor was whether the pay raise was sufficiently definite to be included in the AWW.

Article XVIII § 15 of the Colorado Constitution establishes the Colorado state minimum wage. The minimum wage is adjusted annually on January 1. However, the Constitution allows a lower minimum wage for employees who receive tip income. The Colorado Department of Labor and Employment regulations define a "tipped employee" as "any employee engaged in an occupation in which s/he customarily and regularly receives more than $30 per month in tips." 7 CCR 1103-1 COMPS Order #37. Claimant averaged $226.24 in tips for the first 10 months of 2019, well in excess of the $30 required by the regulations. The Colorado state minimum wage for tipped employees was $8.98 per hour in 2020 and $9.30 per hour in 2021. Claimant was paid $11.33 per hour in 2019, which was, and still is, higher than the "tipped employee" minimum wage. Accordingly, Claimant had no legal right to an increase in her rate of pay in January 2020 or January 2021. Whether Claimant's wages would have increased on January 1, 2020 based on an increase in the minimum wage is speculative. Although Employer might have increased her pay, it was under no legal obligation to do so. Claimant failed to prove a basis to invoke the ALJ's discretionary authority to adjust her AWW.

G. Disfigurement

Section 8-42-108(1) provides for additional compensation if a claimant is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant suffered visible disfigurement to her right shoulder and chest area. The ALJ concludes Claimant should be awarded $2,500 for disfigurement.

ORDER

It is therefore ordered that:

1. Claimant's date of MMI is November 16, 2020, as determined by Dr. Schafer.

2. Claimant's request to adjust the admitted AWW based on increases in the Colorado state minimum wage on or after January 1, 2020 is denied and dismissed.

3. Claimant's request to overcome the DIME's 5% whole person impairment rating is denied and dismissed.

4. Insurer shall pay Claimant PPD benefits based on the DIME's 5% whole person rating. Insurer may take credit for any PPD benefits previously paid to Claimant on this claim.

5. Insurer shall pay statutory interest of 8% per annum on all benefits not paid when due.

6. Insurer shall cover medical treatment after MMI from authorized providers reasonably needed to relieve the effects of her injury and prevent deterioration of her condition.

7. Insurer shall pay Claimant $2,500 for disfigurement. Insurer may take credit for any disfigurement benefits previously paid to Claimant.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to this order is the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: September 24, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-159-938-001

ISSUES

1. Whether Claimant established by a preponderance of the evidence that she sustained a compensable injury on December 14, 2020 arising out of the course of her employment with Employer.

2. If Claimant sustained a compensable injury, whether Claimant established by a preponderance of the evidence an entitlement to medical benefits.

3. Whether Claimant established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from January 7, 2021 to May 13, 2021.

FINDINGS OF FACT

1. The parties stipulated that Claimant's average weekly wage is $547.84, and if Claimant's injury is found compensable, Workwell would be Claimant's authorized treating physician.

2. Claimant was a bus driver employed by Employer working approximately 30 hours per week. On December 14, 2020, Claimant reported to Employer that she sustained a pulled muscle in her right shoulder, arm, and neck when she sharply turned the steering wheel to avoid an oncoming car. Claimant indicated the bus steering wheel was difficult to turn. (Ex. 6). Claimant did not seek or receive medical treatment for several weeks following the incident, but did file an "Employee's Workers' Compensation Notice" with Employer on December 14, 2020.

3. On January 2, 2021, Claimant filed a Worker's Claim for Compensation with the Division in which she reported sustaining a strain/pulled muscle of the right neck and shoulder while turning a bus. Claimant indicated she had not received any initial medical treatment. (Ex. A).

4. Claimant's first medical examination after December 14, 2020, was on January 6, 2021, when she was seen at Medical Center of Aurora emergency department for complaints of right-sided neck pain. Claimant reported she sustained an injury while straining to drive a bus three weeks earlier and had intermittent right-sided neck pain since the incident. Claimant also reported intermittent right arm numbness. Examination showed no spinal tenderness, no deformity, full range of motion of all joints, and no evidence of weakness or neurologic injury. X-rays showed degenerative changes in the cervical spine without acute radiographic abnormality. Claimant diagnosed with a cervical strain, treated symptomatically with pain medication, and advised to follow up with her workers' compensation physician. (Ex. J).

5. On January 7, 2021, Claimant was seen by Paul Ogden, M.D., at Workwell, for complaints of neck and right shoulder pain. Claimant reported she was in a bus with bad steering and was trying to turn swiftly when she felt a muscle pull in her right neck trapezius area. Claimant also reported she continued to work and had a "second episode" on January 4, 2021, with pain in her neck. Claimant indicated that she stopped work after the "second episode" on January 4, 2021. (Ex. 3).

6. Claimant also reported a prior injury with shoulder pain approximately one year earlier, which Claimant asserted had resolved until December 14, 2020. In addition to neck and shoulder pain, Claimant reported a tingling sensation into the left thumb. On examination, Dr. Ogden noted moderately limited cervical rotation to the right, and tenderness to palpation. Examination of Claimant's right shoulder was negative, with the exception of weakness with behind-the-back push-off. Dr. Ogden diagnosed Claimant with "strain of muscle, fascia and tendon at neck level" and "radiculopathy, cervical region." Dr. Ogden prescribed Flexeril and Voltaren gel, and recommended work restrictions to include no commercial driving. Finally, Dr. Ogden opined that Claimant's objective findings were consistent with a work-related mechanism of injury, although no narrative explanation for this opinion is contained in the medical record nor were any objective findings documented in the medical record. (Ex. 3).

7. Claimant continued to be seen at Workwell for treatment including massage, physical therapy, and chiropractic. Claimant continued to report pain in her neck and right shoulder which she reported was not improved, and headaches. Dr. Ogden's examination on January 11, 2021 was positive for tight musculature in the cervical spine and right shoulder, with mildly limited rotation of the cervical spine. (Ex. 3).

8. On January 28, 2021, at a visit with Dr. Ogden, Claimant reported for the first time that she was experiencing lower back pain, which she attributed to her neck pain. Dr. Ogden noted Claimant had tight posterior cervical musculature with improving range of motion. Examination of Claimant's right arm was normal with full range of motion. (Ex. 3).

9. At her February 8, 2021 visit with Dr. Ogden, Claimant reported doing worse after doing chores and experiencing increased pain in her right neck, shoulder and lower back. Cervical x-rays performed on February 8, 2021, showed reversal of cervical lordosis at C4-5, moderate degenerative disc disease at C5-6 and C6-7, and anterolistheses of 1mm of C4 on C5. (Ex. 3).

10. On February 23, 2021, Claimant reported to Dr. Ogden that she felt some improvement, but physical therapy and chiropractic aggravated her symptoms. Claimant also reported intermittent headaches and was "concerned that she will develop neck pain and headaches while driving, but overall her pattern is fine as long as she is not driving." Claimant also reported she was cutting hair part-time, which did not aggravate her symptoms. On examination, Dr. Ogden noted moderately restricted range of motion of the cervical spine with tenderness to palpation. Examination of Claimant's right shoulder showed full range of motion and strength, and negative responses to testing, with the exception of a positive O'Brien test. Dr. Ogden ordered an MRI of Claimant's cervical spine. (Ex. 3). The Colorado Medical Treatment Guidelines indicate a positive O'Brien

(Active Compression) test suggests labral and internal impingement or biceps instability. *See* W.C.R.P. Rule 17, Ex. 4. However, no physician diagnosed Claimant with either of these conditions, and that ALJ finds the positive O'Brien test not to be objective evidence of the injury Claimant claims to have sustained .

11. Claimant underwent a cervical spine MRI on March 15, 2021.

12. On March 22, 2021, Claimant saw Dr. Ogden. At that time, Claimant reported light activity around the house, such as cleaning, aggravated her neck pain. Examination of her cervical spine was essentially normal without significant tenderness, and only missing a few degrees of rotation of the cervical spine. Dr. Ogden noted that Claimant's MRI showed "extensive degenerative changes, some of which are significant" and indicated he would request Claimant be evaluated by Dr. Castro. He also opined Claimant was not ready to resume full work duties, and she seemed to get worse with physical therapy and other treatment. He indicated Claimant needed to undergo work conditioning to return to work but he was "not sure she will tolerate this." Due to Claimant's intolerance, physical therapy was discontinued but massage was continued. (Ex. 3).

13. On May 13, 2021, Dr. Ogden completed a Physician's Report of Worker's Compensation Injury, in which he indicated Claimant was at Maximum Medical Improvement (MMI) as of that date without impairment. He also released Claimant to full work duty. Dr. Ogden noted Claimant "has decided she would prefer not to return to bus operation." He noted if Claimant did return to bus operation, a work conditioning program would be appropriate. With respect to medical maintenance care, he opined that no further treatment was indicated, but Claimant should have access to Dr. Ogden for 2 months to discuss further care if needed. (Ex. 3).

14. On April 21, 2021, Claimant saw Lawrence Lesnak, D.O., for an independent medical examination (IME), at Respondent's request. Based on his review of the medical records and examination of Claimant, Dr. Lesnak concluded that Claimant did not sustain an injury on December 14, 2020. Therefore, Dr. Lesnak opined that maximum medical improvement, consideration of an impairment rating, and medical maintenance treatment were therefore not applicable.

15. Dr. Lesnak credibly opined that, to a reasonable degree of medical probability, the reported mechanism of injury would not cause or aggravate any specific cervical spine or shoulder injuries or pathology. He also opined that Claimant's report that she has no difficulty cutting hair is inconsistent with "any specific symptomatic pathology involving her cervical spine, shoulder or even soft tissues in her suprascapular scapular regions." (Ex. G).

16. At hearing, Claimant testified that on December 14, 2020, she pulled a muscle while turning the bus she was operating harder than normal to avoid a car. She testified she felt something pull in her neck at the time of the incident and experienced neck and shoulder pain. She filed written report to her employer about her injury on the day it occurred. Claimant testified that she requested to see a doctor on the date of injury and that she continued to work as a bus driver until approximately a week later when she

stopped due to pain. After suffering recurring headaches, she went to the emergency room on January 6, 2021. Claimant testified that she had worked part-time as a hairstylist at Great Clips for approximately five years, and that cutting hair did not cause an increase in symptoms she attributed to the December 14, 2020 incident.

17. Claimant also testified about a prior injury that occurred in October 2019 that caused neck and shoulder pain. She had been treated for this injury at Workwell, until the COVID-19 pandemic caused her treatment to end early. She continued to work as a bus driver while receiving treatment. She testified that the October 2019 injury had been resolved by the time the December 2020 injury occurred, and that the December 2020 injury was different because it caused more neck pain and headaches while she was at work.

18. Claimant's testimony and reports in the medical records that activities such as driving a bus (but apparently not another vehicle), doing household chores, and physical therapy made her symptoms worse, but that her other employment cutting hair did not cause any symptoms is not credible.

Prior Medical Conditions

19. Claimant was involved in a motor vehicle collision on June 1, 2019. Following the collision, Claimant received chiropractic treatment at North Aurora Chiropractic. Claimant reported that she was taken by ambulance to Medical Center of Aurora following the collision and had x-rays taken of her right wrist and back. The chiropractic records from North Aurora Chiropractic indicate that Claimant complained of and received treatment for her neck, thoracic spine, lumbosacral spine, headaches, right wrist, and right knee. Claimant had 25 chiropractic visits between June 3, 2019, and September 17, 2019. The final daily record from North Aurora Chiropractic indicated Claimant was dismissed from scheduled care on September 19, 2019 with a new "diagnosis" of "resolved to flair-up [sic] care." (Ex. D).

20. On October 17, 2019, Claimant reported that she sustained an injury to her neck when she was attempting to move her bus seat forward and grab a bag from the floor when she felt something "pop" in her neck and began to experience pain in her right neck and arm. (Ex. I).

21. Following the October 17, 2019 injury, Claimant received treatment at Workwell, and was diagnosed with a strain of the "other muscles, fascia and tendons at shoulder and upper arm level, right arm" and a strain of the "Muscle, fascia and tendon at neck level." (Ex. I.) Claimant denied any previous prior problems "of this type" and indicated there had been no prior medical care for this. Claimant's reported symptoms included pain in the posterior and anterior neck on the right side going down into her lateral trapezius and mid back. Claimant also reported that her pain was only present when she drove. Claimant's pain complaints following the October 17, 2019 injury were substantially the same as those she reported after December 14, 2020, with the exception of headaches.

22. At her December 27, 2019 visit with Dr. Ogden at Workwell, Claimant reported that on December 24, 2019, she was turning a bus and felt her symptoms in her right neck and posterior right trapezius into the upper arm get aggravated. (Ex. I).

23. Claimant was treated at Workwell, receiving massage therapy, until February 19, 2020, when treatment was terminated due to the Covid pandemic. At her January 30, 2020 appointment with Dr. Ogden (the last documented examination by a physician prior to February 19, 2020) Dr. Ogden noted that Claimant was not at MMI because she remained under treatment. Claimant testified she did not continue treatment due to the Covid pandemic.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id.* at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991)*.* The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v. Americold D/B/A Atlas Logistics*, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc., W.C. No. 4-588-675, (*ICAO, Sept. 1, 2006*)*

Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable work injury on December 14, 2020. Although Claimant reported symptoms in her right shoulder and neck on December 14, 2020, Claimant continued to work and did not seek medical treatment until January 6, 2021, approximately three weeks following the incident. When Claimant did seek medical treatment, she reported to Dr. Ogden that she had a "second episode" on January 4, 2021, which lead to headaches, and after which she did not return to work. The record does not reflect either the nature or the circumstances of the "second episode." There is insufficient credible evidence to determine if Claimant's reported symptoms were the result of an incident on December

14, 2020, the “second episode” on January 4, 2021, or the continuation of symptoms she experienced as the result of one of her prior injuries.

Moreover, no credible evidence was presented to explain how the act of turning a steering wheel resulted in an injury to Claimant’s neck and shoulder. The ALJ credits Dr. Lesnak’s opinion that the mechanism of turning the steering wheel would not likely cause or aggravate any injury in the cervical spine or shoulder.

The ALJ concludes the evidence does not credibly establish it more probable than not that Claimant sustained a compensable injury on December 14, 2020.

MEDICAL BENEFITS

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Because Claimant has failed to establish a compensable injury, Claimant is not entitled to an award of medical benefits.

TEMPORARY DISABILITY BENEFITS

To prove entitlement to Temporary Total Disability (TTD) benefits, Claimant must prove an industrial injury caused a disability lasting more than three work shifts, she left work as a result of the disability, and the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995).

Because Claimant has failed to establish a compensable injury, Claimant is not entitled to temporary disability benefits.

ORDER

It is therefore ordered that:

1. Claimant’s claim for workers’ compensation benefits for an alleged injury on December 14, 2020, is denied and dismissed.

2. Claimant’s claims for medical benefits and temporary disability benefits are denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 27, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUE

Whether Respondents have proven by a preponderance of the evidence that they are entitled to recover an overpayment of Temporary Total Disability (TTD) benefits in the amount of $12,925.55.

NOTICE OF THE PROCEEDINGS

1. Claimant failed to attend the September 9, 2021 video hearing in this matter. Therefore, prior to entering an order, the ALJ must consider whether Claimant had adequate notice of the proceedings.

2. Office of Administrative Courts Rules of Procedure for Workers' Compensation Hearings (OACRP) Rule 23 governs the entry of orders against non-appearing parties at hearings. Rule 23 provides, in relevant part:

> If a party fails to appear at a hearing after the OAC has sent notice of the hearing to that party, prior to entering any orders against the non-appearing party as a result of that hearing, the judge will consider:
>
> A. The addresses to which the notice of hearing was sent are the most recent addresses provided by the non-appearing party to either the OAC or the Division of Workers' Compensation; or
>
> …
>
> C. A copy of a record or other written statement from the OAC or the Division of Workers' Compensation containing the most recent address provided by the non-appearing party to either of those agencies shall be sufficient to create a rebuttable presumption that the non-appearing party received notice of the hearing.

3. On January 7, 2021 Claimant provided notice to Respondents' counsel's paralegal that he had moved to 540 Delta Street, Denver, CO 80221. Claimant used the email address dj[Claimant]@msn.com to inform Respondents of his new physical residence.

4. On May 14, 2021 Respondents filed an Application for Hearing endorsing the issue of seeking an Order for repayment of the overpayment of Temporary Total Disability (TTD) benefits. The Application for Hearing was mailed to Claimant's physical address at 540 Delta Street, Denver, CO and sent to his email address at dj[Claimant]@msn.com.

5. On June 11, 2021 the Office of Administrative Courts (OAC) sent a Hearing Confirmation to Claimant's email address at dj[Claimant]@msn.com. The Notice provided that Claimant's physical address was 540 Delta Street, Denver, CO 80221. The Notice specified that the hearing would be conducted on September 9, 2021 at 8:30 a.m.

6. On July 13, 2021 Respondents filed a Motion to Engage in Discovery with pro se Claimant. Respondents sent the Motion to Claimant at the physical and email addresses he had previously confirmed. On July 19, 2021 Respondents' counsel received a signed, certified mail receipt confirming delivery of the Motion to Claimant at his physical address.

7. On July 22, 2021 the OAC sent a Notice of Hearing to Claimant's email address at dj[Claimant]@msn.com. The Notice provided that Claimant's physical address was 540 Delta Street, Denver, CO 80221. The Notice specified that the hearing would be conducted on September 9, 2021 at 8:30 a.m. through Google Meet.

8. On September 3, 2021 Respondents filed a Case Information Sheet (CIS), again notifying Claimant of the September 9, 2021 hearing and the issues to be heard before the ALJ, The CIS was sent to the physical and email addresses Claimant had previously verified. On September 3, 2021 Respondents' counsel also sent an email to Claimant at dj[Claimant]@msn.com in an attempt to reach him regarding the claim and previously exchanged records.

9. Claimant did not file a CIS prior to the hearing in this matter. He also did not submit any exhibits.

10. On September 8, 2021 the OAC emailed the parties details of the virtual hearing to be conducted on September 9, 2021 through Google Meet. The parties were notified of the option to attend either by video (by clicking the hyperlink) or by telephone. The telephone number and access code were provided on the invitation.

11. Despite the preceding notice of the September 9, 2021 video hearing, Claimant failed to appear. At the outset of the hearing, the ALJ reviewed the record to determine whether Claimant had received adequate and proper notice of the 8:30 a.m. hearing. Based on a review of the file and comments from Respondents' counsel, the ALJ was satisfied Claimant had proper and adequate notice of the matter. Because the case involved Respondents' Application for Hearing, the ALJ proceeded with the matter.

12. The preceding chronology reflects that Claimant had adequate notice of the September 9, 2021 hearing in this matter. The Notice of Hearing was sent to Claimant's email address on file with the OAC. Moreover, on September 9, 2021 the OAC emailed the parties details of the virtual hearing to be conducted on September 9, 2021 through Google Meet. The parties were notified of the option to attend either by video (by clicking the hyperlink) or by telephone. Furthermore, Respondents corresponded with Claimant on multiple occasions through the email address of dj[Claimant]@msn.com as well as his physical address of 540 Delta Street, Denver, CO 80221 advising of him of the scheduled

hearing. The record thus demonstrates sufficient evidence to create a rebuttable presumption that Claimant received notice of the hearing. Claimant has failed to rebut the presumption. Because Claimant had adequate notice of the September 9, 2021 hearing but chose not to appear, entry of an order in this matter is appropriate.

FINDINGS OF FACT

1. Employer is in the business of operating steakhouses throughout the United States. The steakhouses included a former location in Denver, Colorado. Claimant is a 31-year old male who worked for Employer as a Human Resources (HR) Manager.

2. On December 29, 2019 Claimant sustained an admitted industrial injury during the course and scope of his employment with Employer. Claimant specifically suffered a right index finger and hand crush injury in the door of a freight elevator at work. Claimant had been trying to close the door of the freight elevator when his finger became caught in the door.

3. On December 29, 2019 Claimant obtained emergency medical treatment from Kevin E. Beato, M.D. He was diagnosed with an open displaced fracture of the proximal phalanx of the right index finger. Medical providers splinted and sutured his laceration.

4. On January 8, 2020 Claimant visited Stacy Lowe, PA at Denver Health for an evaluation. After a physical examination and x-rays of Claimant’s right index finger, PA Lowe recommended surgery in the form of an ORIF procedure.

5. On January 13, 2020 Claimant underwent a closed reduction and percutaneous pinning of the phalanx of the right index finger with Stephanie Malliaris, M.D. The surgery specifically addressed the following: (1) the displaced fracture of the shaft of the proximal phalanx of the right index finger; and (2) a laceration of the volar IF base/second webspace 4cm. Claimant was unable to return to work following the surgery.

6. On January 27, 2020 Respondents filed a General Admission of Liability (GAL). The GAL acknowledged that Claimant was entitled to receive medical benefits and Temporary Total Disability (TTD) benefits beginning on January 13, 2020. However, unknown to Insurer’s Adjuster Vanessa P[Redacted] Claimant returned to work earning full wages on February 10, 2020.

7. On February 26, 2020 Claimant attended another follow-up appointment with PA Lowe. PA Lowe noted Claimant was doing well, reported good improvement in his pain and denied any symptoms of fever, chills, malaise, numbness, tingling, or pain. The appointment would ultimately be the last time Claimant visited a medical provider for any treatment under his Workers’ Compensation claim.

8. On July 7, 2020 Employer’s HR Generalist Katie G[Redacted] confirmed to Ms. P[Redacted] that Claimant returned to work earning his full wages on February 10, 2020. Following his return to work, Employer furloughed Claimant due to the ongoing

COVID-19 pandemic. Claimant received TTD benefits for the period from January 13, 2020 until June 14, 2020 in the total amount of $16,133.27.

9. Because Claimant returned to work at full wages on February 10, 2020 his TTD benefits should have terminated. Claimant should only have received TTD benefits totaling $3,207.72. Subtracting $3,207.72 from $16,133.27 yields an excess payment of TTD benefits in the amount of $12,925.55.

10. On July 8, 2020 Respondents filed an amended GAL terminating TTD benefits effective February 9, 2020. On the amended GAL, Respondents asserted an overpayment of $12,925.55 for TTD benefits paid to Claimant after his return to work at full wages on February 10, 2020.

11. Respondents sought discovery into the background of Claimant's Worker's Compensation claim on October 30, 2020. They sent authorizations for the release of medical, personnel, unemployment and Social Security records. Respondents also requested a list of providers who have previously treated Claimant for relevant prior injuries and preexisting conditions.

12. After Claimant failed to attend any additional medical appointments following the February 26, 2020 visit with PA Lowe, Respondents scheduled a demand appointment with Dr. Malliaris on November 25, 2020. Respondents sent notice of the demand appointment to Claimant electronically and through the United States mail. Nevertheless, Claimant failed to attend the appointment.

13. On November 30, 2020 Claimant sent a response email regarding the demand appointment to the paralegal of Respondents' counsel. Claimant acknowledged that he was aware of the demand appointment but failed to attend. He sought to reschedule the demand appointment.

14. After Claimant failed to timely provide executed releases for his records or the list of providers who had previously treated him for relevant prior injuries and preexisting conditions, Respondents filed an Opposed Motion to Compel Authorizations for Release of Records and List of Providers on December 22, 2020. On January 5, 2021 ALJ Elsa Martinez Tenreiro granted Respondents' Motion in part and ordered Claimant to provide a list of providers he had seen over the last five years and executed releases for records within seven days of the Order. However, Claimant failed to produce a list of providers or executed releases.

15. Respondents scheduled a second demand appointment with PA Lowe for January 13, 2021. Respondents provided Claimant with notice of the second demand appointment through email and United States mail. However, Claimant failed to attend the second demand appointment.

16. Because of Claimant's failure to attend the two demand appointments, Respondents sent him a letter on February 3, 2021, pursuant to W.C.R.P. Rule 7-1(B)(3), notifying him of their intention to file a Final Admission of Liability (FAL) within 30 days. The FAL was predicated on the assumption Claimant had recovered to the point where

his physical condition was the same as it was prior to his admitted industrial injury. Respondents sent the letter through United States mail to the physical and email addresses Claimant had previously acknowledged with Respondents' counsel's paralegal on February 4, 2021. Claimant had 30 days to respond if he felt he needed additional treatment or was claiming any permanent impairment.

17. Because Claimant failed to respond to the letter, Respondents filed a FAL on March 25, 2021. The FAL was filed pursuant to W.C.R.P. 7-1(B). Respondents again asserted an overpayment of $12,925.55 for TTD benefits paid to Claimant after his return to work at full wages on February 10, 2020.

18. The FAL included attachments consisting of the following: (1) the first letter to Claimant regarding a demand appointment sent on November 11, 2020; (2) the second letter to Claimant regarding a demand appointment sent on December 10, 2020; (3) the records regarding his failure to attend the two demand appointments; and (4) the 30 day letter sent to Claimant on February 3, 2021. Claimant did not file an objection to the FAL. The matter thus closed by operation of law.

19. Respondents filed an Application for Hearing on May 14, 2021. They sought an Order for repayment of the overpayment in TTD benefits in the amount of $12,925.55 as had been asserted on the amended GAL and FAL.

20. Respondents have proven that it is more probably true than not that they are entitled to recover an overpayment of TTD benefits in the amount of $12,925.55 after Claimant returned to work at full wages on February 10, 2020. Initially, on December 29, 2019 Claimant suffered an admitted industrial injury during the course and scope of his employment with Employer. Claimant specifically suffered a right index finger and hand crush injury in the door of a freight elevator at work. On January 27, 2020 Respondents filed a GAL. The GAL acknowledged that Claimant was entitled to receive medical benefits and TTD benefits beginning on January 13, 2020. However, unknown to Insurer's Adjuster Ms. P[Redacted], Claimant returned to work earning full wages on February 10, 2020.

21. Claimant received TTD benefits from January 13, 2020 until June 14, 2020 in the total amount of $16,133.27. However, Claimant was only entitled to TTD benefits until February 9, 2020 because he returned to regular duty work on February 10, 2020. He thus should only have received TTD benefits totaling $3,207.72. Subtracting $3,207.72 from $16,133.27 yields an excess payment of TTD benefits in the amount of $12,925.55.

22. Claimant's entitlement to TTD benefits ceased when he returned to regular employment with Employer on February 10, 2020. Respondents paid Claimant TTD benefits in the amount of $12,925.55 after he returned to regular employment. He was thus not entitled to receive $12,925.55 in TTD benefits. Claimant received money in excess of the amount he should have been paid. He thus obtained an overpayment of TTD benefits totaling $12,925.55.

23. On March 25, 2021 Respondents filed a FAL, Claimant did not object and the matter closed. Respondents filed an Application for Hearing on May 14, 2021. They sought an Order for repayment of the overpayment of TTD benefits in the amount of $12,925.55 as asserted on the amended GAL and FAL. By filing an Application for Hearing seeking to recover an overpayment of TTD benefits, Respondents have made an effort to recover the overpayment within one year. Because Respondents have established an overpayment and sought to recover the amount within one year of the filing the FAL, they are entitled to recover $12,925.55 from Claimant.

24. Respondents seek recovery of the $12,925.55 overpayment from Claimant over a period of six months. Dividing $12,925.55 by six yields a monthly payment in the amount of $2154.26. A monthly payment of $2154.26 is excessive. Although Claimant returned to regular duty work for Employer on February 10, 2020, the record reveals that he was subsequently furloughed by Employer due to the ongoing COVID-19 pandemic. Because Claimant’s current financial situation is uncertain, repayment of the overpayment over a one year period is reasonable. Dividing $12,925.55 by 12 yields a monthly payment in the amount of $1077.13. Accordingly, Claimant shall repay Respondents $1077.13 per month in overpaid TTD benefits until recovered in full.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

5. Section 8-40-201(15.5), C.R.S, defines "overpayment" as "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles." There are thus three categories of possible overpayment pursuant to §8-40-201(15.5), C.R.S. *In Re Grandestaff,* No. 4-717-644 (ICAO, Mar. 11, 2013). An overpayment may occur even if it did not exist at the time the claimant received disability or death benefits. *Simpson v. ICAO,* 219 P.3d 354, 358 (Colo. App. 2009). Therefore, retroactive recovery for an overpayment is permitted. *In Re Haney,* W.C. No. 4-796-763 (ICAO, July 28, 2011).

6. Under §8-42-113.5(b.5)(I), C.R.S. once an FAL has been filed, any attempt to recover the overpayment must be asserted within one year after the time the requester knew of the overpayment. Furthermore, under §8-42-113.5(c), C.R.S., if for any reason recovery of the overpayment is not practicable, an employer or insured is authorized to seek an Order for repayment of the overpayment. *See Peoples v. Industrial Claim Appeals Office*, 457 P.3d 143,148 (Colo. App. 2019) (determining that an attempt to recover an overpayment under §8-42-113.5(1)(b.5)(1), C.R.S. cannot be a mere assertion of an overpayment, but there must be some effort to regain the overpayment within one year of discovery).

7. As found, Respondents have proven by a preponderance of the evidence that they are entitled to recover an overpayment of TTD benefits in the amount of $12,925.55 after Claimant returned to work at full wages on February 10, 2020. Initially, on December 29, 2019 Claimant suffered an admitted industrial injury during the course and scope of his employment with Employer. Claimant specifically suffered a right index finger and hand crush injury in the door of a freight elevator at work. On January 27, 2020 Respondents filed a GAL. The GAL acknowledged that Claimant was entitled to receive medical benefits and TTD benefits beginning on January 13, 2020. However, unknown to Insurer's Adjuster Ms. P[Redacted], Claimant returned to work earning full wages on February 10, 2020.

8. As found, Claimant received TTD benefits from January 13, 2020 until June 14, 2020 in the total amount of $16,133.27. However, Claimant was only entitled to TTD benefits until February 9, 2020 because he returned to regular duty work on February 10, 2020. He thus should only have received TTD benefits totaling $3,207.72. Subtracting $3,207.72 from $16,133.27 yields an excess payment of TTD benefits in the amount of $12,925.55.

9. As found, Claimant's entitlement to TTD benefits ceased when he returned to regular employment with Employer on February 10, 2020. Respondents paid Claimant TTD benefits in the amount of $12,925.55 after he returned to regular employment. He was thus not entitled to receive $12,925.55 in TTD benefits. Claimant received money in excess of the amount he should have been paid. He thus obtained an overpayment of TTD benefits totaling $12,925.55.

10. As found, on March 25, 2021 Respondents filed a FAL, Claimant did not object and the matter closed. Respondents filed an Application for Hearing on May 14, 2021. They sought an Order for repayment of the overpayment of TTD benefits in the amount of $12,925.55 as asserted on the amended GAL and FAL. By filing an Application for Hearing seeking to recover an overpayment of TTD benefits, Respondents have made an effort to recover the overpayment within one year. Because Respondents have established an overpayment and sought to recover the amount within one year of the filing the FAL, they are entitled to recover $12,925.55 from Claimant.

11. As found, Respondents seek recovery of the $12,925.55 overpayment from Claimant over a period of six months. Dividing $12,925.55 by six yields a monthly payment in the amount of $2154.26. A monthly payment of $2154.26 is excessive. Although Claimant returned to regular duty work for Employer on February 10, 2020, the record reveals that he was subsequently furloughed by Employer due to the ongoing COVID-19 pandemic. Because Claimant's current financial situation is uncertain, repayment of the overpayment over a one year period is reasonable. Dividing $12,925.55 by 12 yields a monthly payment in the amount of $1077.13. Accordingly, Claimant shall repay Respondents $1077.13 per month in overpaid TTD benefits until recovered in full.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents are entitled to recover an overpayment in TTD benefits from Claimant in the amount of $12,925.55. Claimant shall repay Respondents $1077.13 per month in overpaid TTD benefits until recovered in full.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty

(20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

ISSUES

1. Whether Claimant established by a preponderance of the evidence that diclofenac gel 3% prescribed by Matthew Pouliot, D.O., and used by Claimant prior to reaching MMI was reasonably necessary to cure or relieve the effects of Claimant's industrial injury.

2. Whether Claimant established by a preponderance of the evidence that a pre-MMI dental occlusal mouth guard was reasonably necessary to cure or relieve the effects of Claimant's industrial injury, entitling Claimant to reimbursement of $500.00 for payment of that mouth guard pursuant to § 8-42-101 (6)(b), C.R.S.

FINDINGS OF FACT

1. On November 24, 2015, Claimant sustained an admitted injury to her left ankle arising out of the course of her employment with Employer.

2. Due to her work-related injury, Claimant has undergone three separate ankle surgeries, including a left ankle arthroscopy on March 7, 2016, a debridement and adhesion lysis on December 21, 2016, and a left ankle fusion on July 25, 2018. In addition, Claimant underwent multiple procedures for pain control, including lumbar sympathetic blocks and a PRP injection in her left ankle. On January 7, 2020, a trial spinal cord stimulator for pain control was implanted, and a permanent spinal cord stimulator was implanted on October 30, 2020.

3. Beginning on March 2, 2017, Claimant began seeing Matthew Pouliot, D.O., for management of leg pain, and received multiple prescriptions for pain management. Between March 2, 2017, and May 28, 2021, Claimant saw Dr. Pouliot or other providers in his clinic more than 50 times. Beginning in approximately July 2017, Claimant began using a pain compound cream which included among its ingredients, diclofenac 3% gel (a topical anti-inflammatory). The pain compound cream was apparently prescribed by a Dr. Nystrom, although no records were admitted into evidence from Dr. Nystrom. (Ex. 5).

4. On September 28, 2018, Dr. Pouliot provided Claimant with a sample of diclofenac 3% gel. Dr. Pouliot's records do not explain the rationale for providing the sample, and subsequent records do not describe Claimant's response to the medication. Claimant saw Dr. Pouliot approximately monthly for the next year, during which time no further samples of diclofenac 3% gel were documented as being provided. (Ex. 5).

5. On September 3, 2019, Dr. Pouliot prescribed Claimant diclofenac 3% gel, to be applied twice daily. Dr. Pouliot's records do not document the rationale for the medication. During this time, Claimant continued to use the same compound pain cream provided by Dr. Nystrom. (Ex. 5).

6. On September 13, 2019, Claimant filled the prescription for diclofenac 3% gel through the Injured Workers Pharmacy, at a cost of $1,124.29. (Ex. 4).

7. The request for diclofenac 3% gel was submitted to insurer, who submitted the request to Joseph Fillmore, M.D., for review. On September 18, 2019, Dr. Fillmore reviewed the request and noted that the Medical Treatment Guidelines recommend the use of oral anti-inflammatories before using a topical anti-inflammatory, and if a topical anti-inflammatory was to be used, the Claimant should start with the lowest possible dose. Dr. Fillmore recommended that Claimant try diclofenac 1% gel before progressing to diclofenac 3% gel. Insurer did not approve or pay for Claimant's diclofenac 3% gel. (Ex. 9).

8. Claimant saw Dr. Pouliot on September 19, 2019, and September 26, 2019. Dr. Pouliot's records do not indicate that Claimant attempted a trial of diclofenac 1% or 2% gel during this time. Dr. Pouliot's records also do not indicate whether the Claimant's use of diclofenac 3% resulted in an improvement in Claimant's function. As of September 12, 2019, Claimant was also being prescribed ibuprofen 800mg, oxycodone HCL 5mg, Xtampza ER (oxycodone) 9mg twice per day, and Gralise (gabapentin) 1800mg before bed. Each of these medications was prescribed for pain. (Ex. 5).

9. On October 8, 2019, Claimant filled another prescription from Dr. Pouliot's office for diclofenac 3% gel through the Injured Workers Pharmacy, at a cost of $1,124.29. (Ex. 4).

10. On October 16, 2019, Dr. Fillmore conducted a second review and again recommended that Claimant try diclofenac 1% gel to determine its effectiveness prior to advancing to diclofenac 3% gel. Insurer did not approve or pay for Claimant's diclofenac 3% gel. (Ex. 9).

11. On November 7, 2019, December 6, 2019, and January 14, 2020, Claimant filled additional prescriptions from Dr. Pouliot's office for diclofenac 3% gel through the Injured Workers Pharmacy, at a cost of $1,124.29 per prescription. (Ex. 4). During this time frame, Claimant did not attempt a trial of diclofenac 1% gel. (Ex. 5).

12. On January 14, 2020, Ms. Henrion submitted a "Medical Certification of Medical Necessity," to the Injured Workers Pharmacy, for diclofenac 3% gel, indicating that it was "used to relieve pain and swelling as well as stiffness in (L) LE – 3% needed as pt diagnosed with CRPS and will need stronger dose." (Ex. 5). As of January 14, 2020, no medical records indicate that Claimant had attempted a trial of diclofenac at any strength other than diclofenac 3% gel.

13. On January 22, 2020, Dr. Fillmore conducted another review of Claimant's request for diclofenac 3% gel. Dr. Fillmore indicated that he did not have sufficient information to approve the request for diclofenac 3% gel. (Ex. 7). Insurer did not approve or pay for Claimant's diclofenac 3% gel.

14. On February 7, 2020, March 9, 2020, and April 8, 2020, Claimant filled additional prescriptions from Dr. Pouliot's office for diclofenac 3% gel through the Injured Workers Pharmacy, at a cost of $1,124.29 per prescription. (Ex. 4). During this time frame, Claimant did not attempt a trial of diclofenac 1% gel. (Ex. 5). Insurer did not approve or pay for Claimant's prescriptions for diclofenac 3% gel.

15. Claimant continued to see Dr. Pouliot and Ms. Henrion through at least May 28, 2021. The first documented use of diclofenac 1% was on August 14, 2020. Claimant's September 29, 2020 record from UCHealth Pain Management Clinic indicates Claimant "has tried and failed oral NSAIDs as well as topical diclofenac 1%, we have been trying to get her topical diclofenac 3% however her insurance continues to deny." (Ex. 6).

16. At hearing, Claimant testified that the topical compound pain cream she used provided her no relief. She testified she initially tried 1% diclofenac, which did not provide her relief, that diclofenac 3% gel provided "instant relief" of her ankle pain, and that she used it for breakthrough pain and at night. Claimant testified that diclofenac 3% gives "immediate relief" of burning and aching and allows her to sleep at night and helps her ankle to relax. Claimant's testimony that she tried diclofenac 1% gel prior to diclofenac 3% gel, and that diclofenac 3% gel provides "instant" or "immediate" relief is not credible.

17. Between Dr. Pouliot's initial prescription for diclofenac 3% gel on September 3, 3019 and June 2020, Claimant's prescriptions included ibuprofen 800mg, Oxycodone HCL 5mg. compound pain cream, Gralise 1800mg. and Xtampza 9mg. During this time frame, Claimant's prescriptions for these other medications were not significantly modified or terminated after she began using diclofenac 3% gel. Additionally, during this time frame, despite the use of diclofenac 3% gel, neither Dr. Pouliot nor Ms. Henrion documented any improvement in Claimant's function or change in pain attributed to the use of diclofenac 3% gel.

18. Claimant was placed at Maximum Medical Improvement ("MMI") on May 10, 2021, by John Sacha, M.D., one of Claimant's authorized treating physicians. Dr. Sacha assigned Claimant a 24% lower extremity permanent impairment rating. For maintenance care, Dr. Sacha recommended pool physical therapy, and gym and pool pass, that Claimant wean off of opioids, and be allowed non-opioid analgesics for 12-24 months. Dr. Sacha did not recommend or comment on the use of diclofenac 3% gel or an occlusal mouth guard. (Ex. C).

19. Dr. McCranie testified that the pharmacology of diclofenac gel is not the type that would result in immediate pain relief. Dr. McCranie credibly testified that diclofenac is not an anesthetic, numbing medication. Instead, the pain relief that results from diclofenac is

a produce of the anti-inflammatory properties of the medication. Dr. McCranie testified that diclofenac inhibits prostaglandins, which decrease the body's reactions that cause swelling, and the resulting decrease in swelling causes a decrease in pain. She credibly testified that this process take time, and that it would not have an immediate effect to decrease pain.

20. In total, between September 13, 2019, and April 8, 2020, Claimant filled eight prescriptions for diclofenac 3% gel through the Injured Workers Pharmacy. During this time, neither Dr. Pouliot nor Ms. Henrion persuasively documented the necessity, reasonableness, or effectiveness of the medication.

21. Claimant testified at hearing that as a result of the pain in her ankle, she clenches her jaw and grinds her teeth at night. Claimant testified that before her injury she had not experienced tooth grinding. She testified she is currently using a mouth guard she purchased for $500 and now needs a new replacement mouth guard. The evidence did not clearly establish the date Claimant purchased her original mouth guard.

22. On December 4, 2019, James Plaisted (whom the ALJ infers is a dentist), wrote a letter indicating that Claimant "severely grinds her teeth at night leading to worn teeth and pain in TMJ." Dr. Plaisted opined that Claimant's grinding stems from the stress and pain from her ankle injury, although no other possible causes of grinding were addressed. He stated an occlusal guard worn at night would be the correct step to treat Claimant's grinding by transmitting the forces of the nighttime grinding to the occlusal guard as opposed to her teeth. (Ex. 8).

23. On December 20, 2019, David Orgel, M.D., reviewed Claimant's request for a dental mouth guard at Respondents' request. Dr. Orgel opined that bruxism (*i.e.*, teeth grinding) is most commonly related to sleep apnea, and that Claimant's BMI rendered her susceptible to sleep-disordered breathing and sleep apnea, and that the likely cause of her bruxism was Claimant's obesity. He recommended that Claimant be evaluated for sleep apnea. (Ex. G).

24. In an undated report, (which the ALJ infers was authored between December 20, 2019, and January 22, 2020) Sharon Day, P.T., indicated that Claimant had jaw clenching "caused by her serious pain flares from her Complex Regional Pain Syndrome of her Right foot and leg." Ms. Day wrote that Claimant had learned to control jaw clenching through biofeedback, but could not control the reaction while sleeping at night. (Ex. 8). No other records from Ms. Day were offered or admitted into evidence.

25. On January 22, 2020, David Orgel, M.D., reviewed Claimant's request for a dental appliance related to bruxism. Dr. Orgel again recommended a sleep apnea test and that the request for the dental mouth guard be reconsidered if Claimant's sleep apnea test was negative. (Ex. G).

26. On June 22, 2021, Bradford Edgren, D.D.S., authored a report regarding Claimant's "symptoms of discomfort and jaw dysfunction." In his report, Dr. Edgren indicated that Claimant had strong evidence of tooth grinding. However, Dr. Edgren did

not opine as to the cause of Claimant's tooth grinding or whether it was related to her industrial injury. (Ex. 8).

27. No credible evidence was presented to establish that Dr. Plaisted, Dr. Edgren or Ms. Day are authorized treating physicians.

28. In her June 8, 2021 Report, Dr. McCranie opined that there is "no direct causal relationship between the need for [a] mouth guard and that of her left ankle injury." Dr. McCranie also noted that obstructive sleep apnea was the highest risk factor for teeth grinding during sleep, and that Claimant had not been tested for sleep apnea. Dr. McCranie also noted that a mouth guard was not recommended as part of Claimant's maintenance care when Dr. Sacha placed Claimant at MMI. (Ex. A).

29. Claimant's medical records from Dr. Pouliot and Dr. Sacha do not reference any issues with bruxism, clenching, TMJ or jaw pain, or recommend any treatment for those conditions.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SPECIFIC MEDICAL TREATMENT AT ISSUE

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002); *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *In the Matter of the Claim of Bud Forbes, Claimant*, No. W.C. No. 4-797-103, 2011 WL 5616888, at *3 (ICAO Nov. 7, 2011). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Trans. District,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

DICLOFENAC 3% GEL

Claimant has failed to establish by a preponderance of the evidence that diclofenac 3% gel prescribed between September 2019 and April 2020 was reasonably necessary to cure or relieve the effects of Claimant's industrial injury. As found, Claimant began regularly using diclofenac 3% gel in September 2019, and continued to use the medication through at least April 2020. Prior to starting diclofenac 3% gel, Claimant did not attempt to use diclofenac 1% or 2% gel. That Claimant later used diclofenac 1% gel beginning and did not find it effective is not credible evidence that the medication would not have been effective if used earlier.

Nonetheless, after starting diclofenac 3%, Claimant's medical records do not document an increase in function, a decrease in pain, a decrease in other medications or that diclofenac 3% resulted in any significant effect on Claimant. Claimant's testimony that diclofenac 3% resulted in immediate relief of her pain permitting her to sleep is not credible or supported by the evidence for several reasons. No credible evidence was offered to explain why Claimant found no relief from the compound cream containing diclofenac 3%, but experienced “instant” relief when used on its own. Claimant’s medical records demonstrate that the only reported improvement in her sleep was the result of the SCS implant. The medical records make no mention that diclofenac 3% provided relief, much less “immediate” or “instant” relief, or that the medication improved function. The ALJ infers that if such information had been reported to her providers, given the significance of such a report, it would have been documented in the medical records, and would, at a minimum, have resulted in a decrease in the Claimant’s medications. The ALJ further credits Dr. McCranie’s testimony that the pharmacology of diclofenac would not result in the immediate relief Claimant described.

OCCLUSAL MOUTH GUARD

Claimant has failed to establish by a preponderance of the evidence that the use of an occlusal mouth guard was reasonably necessary to cure or relieve the effects of Claimant’s industrial injury. As found, Claimant purchased an occlusal mouth guard apparently on the recommendation of Dr. Plaisted, who is not an ATP. Despite seeing Dr. Pouliot more than 50 times between March 2017 and May 2021, Claimant’s records do not reflect any issues with bruxism, jaw clenching or other issues for which Dr. Plaisted, Dr. Edgren, or Ms. Day recommended the use of an occlusal mouth guard. The records do not reflect that Dr. Plaisted, Dr. Edgren or Ms. Day ruled out any other potential causes of Claimant’s bruxism. Claimant has not credibly established that the need for an occlusal mouth guard is related to her admitted work injury.

ORDER

It is therefore ordered that:

1. Claimant’s request for approval of pre-MMI prescriptions for diclofenac 3% gel is denied and dismissed.

2. Claimant’s request for approval and reimbursement of a pre-MMI occlusal mouth guard is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: September 30, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts

Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-123-008-001

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that the cervical spine disc replacement at C6-C7 recommended by authorized treating physician, Dr. B. Andrew Castro, is reasonably necessary and related to the admitted injury of October 5, 2019.

STIPULATIONS

The parties stipulated that the only issue to be addressed is medical benefits related to the surgical procedure recommended by the authorized treating physician (ATP), Dr. Castro, for C6-C7 disc replacement.

FINDINGS OF FACT

Based upon the evidence submitted by the parties in this matter, the ALJ makes the following Findings of Fact:

1. Claimant was a truck driver for Employer when he was injured in the course and scope of his employment on October 5, 2019. He was driving southbound on highway 85 at approximately 11:50 p.m., when a vehicle going northbound turned into his truck, striking the front part of his semi-truck. Claimant suddenly veered when the car hit him, causing him to go into the ditch. Claimant slammed his head and shoulder into the window or the pillar of his truck. He felt immediate pain in his left shoulder, neck and head. He is able to alleviate some of the pain going down his left arm by twisting his head to the right and forward. Claimant testified that prior to the October 2019 motor vehicle accident (MVA) he had no problems with his head, neck or left upper extremity. He went to the emergency room that night, transported by his supervisor. The following day he was seen by another physician and provided restrictions but it was three days before he was able to get an appointment with Advanced Urgent care.

2. Claimant was first evaluated at Platte Valley Medical Center Emergency Medicine Department in the early morning hours of October 6, 2019. The first evaluation was documented at approximately 2:41 a.m., stating that Claimant was a restrained driver, travelling at approximately 40 mph and was struck on the driver's side. He complained of left sided body pain after the MVA, patient did not lose consciousness and was complaining of left-sided head, paraspinal cervical neck pain and left shoulder pain. They documented that Claimant had a history of chronic lower back pain with radiculopathy, for which he was taking cyclobenzaprine tablets. He was discharge with no evidence of acute traumatic injury, but worsening degenerative disc disease, was advised to return to the emergency department if any additional concerning signs or symptoms developed, and referred to his PCP by Dr. Sarah Braden White.

3. A CT scan performed on October 6, 2019 of the cervical spine showed reversal of the normal cervical lordosis, which may have been due to patient positioning or muscle spasm. Dr. Michael Letzing, Neuroradiologist, found mild osteophytic endplate ridging and mild left neural foraminal narrowing from uncovertebral hypertrophy at the C3-C4; and endplate and uncovertebral spurring, mild thecal sac compression, mild right neural foraminal narrowing from uncovertebral and facet hypertrophy at the C6-C7 level. Dr. Letzing also read the CT of the head as normal. A lumbar spine CT was also performed and read by Dr. David Constantino of Diversified Radiology, showing significant impingement at the L3, L4, and L5 nerve roots and extensive degenerative disc disease and spinal stenosis. Dr. John Wendel read the left shoulder X-Ray as normal.

4. On October 7, 2019 Claimant was examined by Jennie Schulman, PA-C under Dr. Ethan Moses of Peak Form Professional. She assessed after examination that Claimant suffered from a head contusion with mild concussion, left shoulder contusion and mild exacerbation of chronic lumbar pain with radiculopathy. Claimant was provided with work restrictions of 6 to 8 hours out of 12/14 shift and a 20 lbs. lifting, carrying, pushing, pulling. She indicated that the injury was work related to a reasonable degree of medical probability.

5. Claimant was evaluated by Physician Assistant Alison Lenz of Advanced Urgent Care (AUC) on October 10, 2019, noting a chief complaint of shoulder, head and neck injury from the MVA. Claimant reported a 7/10 pain level with pain getting worse as the day goes on. She assess that Claimant had a contusion of the head, concussion of the brain, strain of the neck muscles with tenderness upon examination. Ms. Lenz prescribed use of ice, heat, over the counter anti-inflamatories and pain medication as needed for the neck pain. She released Claimant to work full duty upon Claimant's specific request.

6. Ms. Lenz reevaluated Claimant on October 17, 2019, noting Claimant was having neck pain, with numbness (hypesthesia) and tingling in the left arm and left hand when Claimant moves his head to look upward. Her assessments were contusion of the head, concussion, strain of the neck, fascia and tendons of the neck, and numbness and tingling sensation and paresthesia of the skin. Ms. Lenz ordered a cervical MRI due to the continuing neck pain and tingling/numbness radiating down the left arm.

7. The MRI of the cervical spine was performed on November 11, 2019 at Spectrum Medical Imaging. Indications shown are numbness and neck pain after MVA and showed multilevel, multifactorial cervical degenerative changes. Dr. Clayton Vandergriff stated that there was moderate foraminal and spinal canal stenosis, moderate disc osteophyte complex, moderate ligamentum flavum thickening, facet arthrosis, and uncovertebral arthrosis at the C6-7 level. He stated that the AP diameter of the thecal sac is 7mm.

8. Dr. Julie Parsons (also from Advanced Urgent Care) evaluated Claimant on December 4, 2019. Dr. Parsons documented that Claimant's neck was tight, would get pain from the neck into the shoulder, radiating down the left arm with numbness and

tingling. She noted extension aggravated the symptoms. On exam, she documented decreased range of motion on the left, showing a positive Spurling's test, (a positive test indicating nerve compression with specific movements[1]). She assessed contusion of the head, concussion, strain of the neck muscles, fascia and tendons, paresthesia and cervical radiculopathy. Claimant was referred to a Physical Medicine and Rehabilitation specialist, Dr. Roberta Anderson Oeser, to physical therapy and prescribed prednisone.

9. Dr. Anderson Oeser (Ascent Medical Consultants) first evaluated claimant on January 14, 2020 pursuant to Dr. Parson's referral. She documented the history of the MVA consistent with Claimant's testimony and history taken by prior providers. Specifically, she documented that on October 5, 2019:

> H[h]e was driving his semitruck through a green light when another driver traveling approximately 45 mph turned in front of him. The other vehicle struck the driver side front wheel. He states that his head and left shoulder struck the left pillar. He had no loss of consciousness. He states that his truck veered off to the right side of the road and ended up in the grass next to a fence. He recalls having immediately left shoulder pain. He states that he was unable to move his left arm. He called 911 and states that he then exited his truck. He said he had head and shoulder pain. He states that the company supervisor arrived and took him to Platte Valley Hospital in Brighton.

Dr. Anderson Oeser further noted:

> He states that he had difficulty extending his head and neck. He reports that if he extends his neck towards the left his deltoid goes numb. Dr. Parsons referred him for physical therapy. He states that the traction has been helpful. He had an MRI of the cervical spine performed on November 11, 2019. At the C4-5 level he was noted to have a small central disc protrusion and annular fissure. Mild to moderate facet and uncovertebral arthrosis. Moderate foraminal stenosis and mild spinal canal stenosis. At the C6-7 level he had moderate ligamentum flavum thickening, facet arthrosis and uncovertebral arthrosis. He has moderate spinal canal stenosis and moderate foraminal stenosis.

On exam Dr. Anderson Oeser found that Claimant's cervical spine revealed increased tone with palpable spasming in the cervical paraspinals, left greater than right. He was tender over the left cervical facet joints. Cervical range of motion was restricted with extension, lateral bending to the left and rotation to the left. Spurling's was mildly positive on the left. He had palpable spasms in the left upper trapezius, left upper scapulae and mild tenderness over the left acromioclavicular joint. She diagnosed strain of the muscles, fascia and tendons of the neck, cervical radiculopathy, parasthesia, contusion of the head and concussion. She recommended a trial of osteopathic manipulation with Dr. Conforti, a Tens Unit, and NCS/EMG study to rule out cervical radiculopathy and to continue physical therapy to increase range of motion, stretching and strengthening. The pain diagram documents Claimant's symptoms from the neck, into the shoulder and down the left upper extremity.

10. On January 15, 2020, Dr. Parson's nurse practitioner, Ms. Textoris, documented Claimant's complaints of muscle aches in the posterior left shoulder, with

[1] Exhibit 8, bate 274, Depo. pp. 34:22-35:12 & bate 277, Depo. p. 47:3-17.

turn of his head to the left and back, as well as numbness and tingling, which occurs mainly with straining to look upward. On exam she noted that Claimant had limited range of motion, mainly to the left, pain with neck movement to the left and back that radiated into the posterior shoulder and left upper extremity. Diagnosis remained the same and issued a referral to physical therapy.

11. Dr. Anderson Oeser performed an EMG/NVS of the left upper extremity on January 29, 2020, which was found to be normal, with no electrophysiologic evidence of a left cervical radiculopathy, brachial plexopathy or peripheral nerve entrapment neuropathy. Claimant continued to complain of pain in his neck, an aching sensation in the left cervical region in addition to pain and paresthesias throughout the left upper extremity, though he reported improvement with time. Claimant also reported a burning sensation in and increased pain with changing positions, including while sitting and driving, as well as with coughing, laughing, or sneezing, moving his head to the left or back. She reported Claimant’s physical exam was consistently similar with the prior exams but stated that Claimant had palpable spasms in the left upper trapezius and left levator scapulae, with mild tenderness over the left acromioclavicular joint. Dr. Anderson Oeser referred Claimant to Dr. Bunker for chiropractic care.

12. On February 6, 2020 Dr. Anderson Oeser noted that Claimant continued to complain of ongoing cervical pain and left upper extremity pain and paresthesias. Claimant reported that he was using his TheraBands at home and performing his stretches on a regular basis, still awaiting authorization for the neuromuscular massage, has been utilizing the TENS/IF unit, which he found quite beneficial to manage his pain and spasms. He advised Dr. Anderson Oeser that he would rather see Dr. Conforti for the OMT since his schedule had changed. His physical exam remained consistent with prior exams, including ongoing cervical pain and left upper extremity pain and paresthesias. He was given the option of proceeding with a diagnostic/therapeutic C6-7 interlaminar epidural steroid injection, and given a prescription to be seen by Dr. Patel for the procedure for both diagnostic and therapeutic purposes.

13. Claimant attended Dr. Parson’s PA, Alice Nguyen on February 14, 2020. She documented that Claimant was taking gabapentin. On exam, Ms. Nguyen stated that Claimant showed full range of motion of the neck but with neck movement to the left and back Claimant had radiating pain into the posterior shoulder and LUE, together with numbness and tingling with looking upward.

14. On March 5, 2020 Dr. Anderson Oeser’s PA, Kristin Seger, stated that Claimant returned after a C7-T1 ESI with Dr. Patel on February 24, 2020. He stated that he was 50% improved but returned to baseline by March 5, 2020. He complained of occipital headache, trapezius ache on the left side, unless he extends and rotates his head, which causes severe left arm pain, tingling and shoulder pain. During the exam, Ms. Seger found increased tone in the cervical spine with palpable spasming in the cervical paraspinals, left greater than right, tenderness over the left cervical facet joints, restricted range of motion with extension, lateral bending to the left and rotation to the left, mildly positive Spurling's on the left and palpable spasms in the left upper trapezius

and left levator scapulae. Her diagnosis remained the same as previously identified by Drs. Oeser, Parson and Chicoine.

15. Dr. Debra Conforti evaluated Claimant on March 25, 2020 for chief complaints of left cervical pain, left upper extremity pain and parasthesia. She reported that symptoms had slightly increased after the first visit. Following osteopathic treatment modalities, Dr. Conforti advised Claimant that she would be stopping manipulative treatments due to the COVID-19 pandemic restrictions but would see Claimant once the clinic reopened.

16. On March 30, 2020 PA Kristina Johnson at AUC stated that Claimant continued with the same symptoms and diagnosis previously documented by other providers at Advanced Urgent Care. On exam she stated that Claimant had decreased range of motion with minimal neck extension and minimal left lateral flexion. She stated that Claimant was to continue care with Dr. Oeser.

17. Dr. Anderson Oeser established a telemedicine consult with Claimant on April 7, 2020. Claimant reported ongoing left-sided cervical pain and left upper extremity pain and paresthesias. She documented that Claimant had a significant improvement of his symptoms with the C7-T1 interlaminar epidural steroid injection. Claimant reported that extending his neck or lateral bending to the left aggravates neck pain, and left upper extremity pain and paresthesias. Claimant conveyed he was unsure the treatment with Dr. Conforti was beneficial. Dr. Anderson Oser recommended Claimant undergo a second C7-T1 interlaminar epidural steroid injection in her notes, but the referral states "refer to Dr Patel for C6-7 interlaminar steroid injection for diagnostic/therapeutic purposes."

18. On May 12, 2020 Dr. Anderson Oeser conducted a second telemedicine appointment due to the ongoing pandemic. Claimant reported that he had persistent left-sided cervical pain and left upper extremity pain and paresthesias. He denied any specific weakness in the left upper extremity. He advised he was scheduled to have his 2nd cervical epidural injection on May 18, 2020 with Dr. Patel. He reported that extending his neck or lateral bending to the left aggravates neck pain and left shoulder girdle and upper extremity pain and paresthesias. She advised Claimant to continue with his independent home range of motion, stretching and exercise program and continue utilizing the TENS unit to address his pain, spasms, paresthesias and for him to improve blood flow to the area. Dr. Anderson Oeser also recommended Claimant proceed with the ESI with Dr. Patel.

19. Dr. Kevin Chicoine (AUC) evaluated Claimant on June 16, 2020. He noted that Claimant continued to report muscle aches in the posterior left shoulder with turning his head to the left and back as well as numbness (hypesthesia) of the left arm when he turns his head. Claimant reported that his pain was improved and generally does not have neck pain unless he tilts his head to the left side and holds it. Diagnosis remained the same as documented by Dr. Parson and other providers at Advanced Urgent Care.

20. On June 17, 2020, Claimant attended an in person visit with Dr. Anderson Oeser. Claimant was complaining of a burning, stabbing, pins and needle sensation in

the left cervical region with radiation throughout the left upper extremity and into his hand. Claimant stated that the symptoms are brought on by extending his head towards the left or when he rests his forearm on a window in his truck. Claimant had not yet undergone his injection. She completed a physical exam, which was consistent with prior exams showing muscle spasming, increased tone and tenderness as well as loss of range of motion of the neck and paraspinals muscles. She referred Claimant to Dr. Wernick to perform the repeat C7-T1 interlaminar ESI. She advised Claimant that he was quickly approaching MMI following further osteopathic manipulation, massage and ESIs.

21. Claimant returned to see Dr. Anderson Oeser on July 15, 2020 with continued neck, shoulder and arm pain, pins and needles, burning, aching, and stabbing sensations. Claimant advised her that he determined that the prior ESI was not of much help to control his symptoms and decided to forgo the injection as he had prior experience with ESIs without long lasting benefit. Dr. Anderson Oeser referred Claimant to Dr. B. Andrew Castro for a surgical consult and would determine MMI status following that evaluation.

22. On August 5, 2020 Laura McDonough, another of AUC's PAs, stated that Claimant had moderate improvement since last visit. She noted Claimant's pain in the left neck and tingling down the LUE with tilting his head back and to the left continues longer. Claimant continued to report muscle aches in the left trap with back and to the left motion only. Ms. McDonough diagnosed neck strain, paresthesia of the upper limb and cervicalgia. She recommended massage therapy and stated that Claimant's significant symptoms warranted a referral to an orthopedic surgeon. This was signed off on by Dr. Chicoine.

23. Dr. Chicoine evaluated Claimant next on August 25, 2020. On exam of the cervical spine, the exam was benign, except that he had a Spurling's test that was mildly positive on the left. On August 31, 2020 Dr. Chichoine stated that Claimant was not at maximum medical improvement (MMI) and that he would likely not achieve MMI for one to two months. On September 22, 2020 Dr. Chicoine reported Claimant's symptoms consistent with prior reports at Advanced Urgent Care. He noted that Claimant had paracervical tenderness. Claimant advised Dr. Chicoine that he would like to transfer care to Dr. Oeser since he had been with her the longest and is now seeing Dr. Castro in addition to Advanced Urgent Care. Claimant complained that it was a lot of visits. Dr. Chicoine agreed to the requested change to Dr. Oeser.

24. On August 26, 2020, Claimant was seen by Bryan Andrew Castro, M.D. at Cornerstone Orthopaedics. Claimant complained of ongoing neck pain, neck stiffness, peritrapezial, periscapular pain, pain in the outer arm and dorsoradial forearm down to the third and fourth digits. Dr. Castro's Impression/Plan stated: cervical radiculopathy, ongoing, failing to respond to conservative management. At this point, his MRI was greater than six months old and stated he would like to get a new cervical MRI to better evaluate for any neural encroachment to see if there is a better option Claimant would have as far as an injection.

25. On September 1, 2020, Claimant was seen by Dr. Anderson Oeser via telemedicine. Claimant continued to complain of left-sided neck pain and left upper extremity pain and paresthesias and weakness, though he reported that his pain was worse since the last visit. Claimant advised Dr. Anderson Oeser that his anti-inflammatory medication was not working as well as in the past and questioned whether there was something else he could take. She prescribed meloxicam 7.5 mg on a trial basis. On visual exam she found that Claimant's cervical range of motion was restricted with extension and lateral bending to the left; and shoulder range of motion was restricted with forward flexion, abduction and internal rotation on the left. Claimant had been seen by Dr. Castro, who requested an updated MRI.

26. On September 1, 2020, Claimant underwent an MRI of his cervical spine without contrast. The impression detailed a central disc protrusion at the C6-C7 level causing moderate stenosis. The MRI also showed facet arthropathy producing from mild-to-moderate neural foraminal narrowing at the C3-C4, C4-C5, and C6-C7 levels, with multilevel disc degeneration and facet arthropathy of the cervical spine. With respect to the C6-C7 level, the MRI showed a central disc protrusion with disc desiccation and disc space narrowing. The protrusion produces moderate central stenosis, narrowing the anteroposterior dimension of the thecal sac to 6 to 7 mm. Moderate bilateral facet arthropathy and uncovertebral hypertrophy produce mild to moderate right neural foraminal narrowing.

27. On September 22, 2020, Claimant was seen by Dr. Chicoine. Claimant was complaining of same or similar issues in his neck and left upper extremity. Dr. Chicoine noted that Claimant was seeing both Dr. Oeser and Dr. Castro, that it was Claimant's preference to see fewer doctors, and asked if Dr. Oeser could be the ATP from this point forward. Dr. Chicoine agreed with this request.

28. Dr. Castro performed a follow up exam on September 28, 2020. Who noted that Claimant has a central disc herniation at C6-C7 that is causing biforaminal stenosis and central canal impingement. Dr. Castro wrote:

> For his neck, we discussed treatment options as well. He has biforaminal stenosis and severe central canal impingement. I think that surgical intervention could be reasonably considered here. This would entail a one-level cervical disc replacement at C6-C7. …I believe his symptoms are ongoing and failing to respond to conservative approaches, and I do think his treatment as discussed is reasonable and related to his work-related injuries. His treatment as I have outlined does follow the Colorado Workers' Compensation Guidelines.

29. On October 20, 2020 Dr. Chicoine documented Claimant's complaints of muscle aches in the left trap with back and to the left motion, numbness (hyperesthesia) of the left arm only when he turns his head, as well as aching; burning; stabbing; throbbing; sharp; occasional; worsening; left arm goes numb quickly with any movement. He reported 4/10 pain level, and a positive Spurling's maneuver on the left side. He diagnosed contusion of the head (resolved), concussion of the brain, neck muscle strain, numbness and tingling of the left upper extremity dependent on positioning, paresthesia, and radiculopathy of the cervical spine. Dr. Chicoine also documented that Claimant was awaiting disc surgery for the neck.

30. Claimant discussed his case with Dr. Anderson Oeser on both October 5, 2020 and November 2, 2020. She documented that Claimant perceived his symptoms as continuing to worsen for the last several visits, as he is having more pain and muscle spasms. She recorded that he had aching, stabbing, pins and needles and numbing sensation throughout the left upper extremity.

31. On December 8, 2020 Claimant followed up with Dr. Anderson Oeser at Premier Spine and Pain Institute. Exam is consistent with her prior exams of Claimant as well as her diagnosis. She documented the following:

> He was evaluated by Dr. Castro who was recommending a cervical disc replacement. He has not proceeded with the cervical disc replacement due to the surge and COVID-19 cases. He plans to move forward with the surgery once the pandemic is under better control. He is concerned about contracting the virus. He continues with his independent home range of motion, stretching and exercise program on a regular basis. He will occasionally have symptoms in his right arm. He reports mild to moderate pain in the left arm which he describes is mostly a burning, pins and needle sensation.

Dr. Anderson Oeser stated that Claimant was to proceed with surgery once he is comfortable that the pandemic is under control and should continue with his independent home range of motion, stretching and exercise program, which she modified in depth during the consult.

32. Dr. Anderson Oeser reevaluated Claimant on January 7, 2021. Claimant was still complaining of left cervical pain and left upper extremity pain and paresthesias, was reporting numbness in the left shoulder girdle region and occasional electrical pain radiating down his left upper extremity. She advised Claimant to follow up with Dr. Castro to undergo surgery. On February 15, 2021 Dr. Anderson Oeser documented that Claimant was waiting to move forward with his surgery but had to undergo an independent medical examination (IME) first. He continued to complain of left sided cervical pain with stabbing, burning, aching with numbness of the left upper extremity. He reported that his pain levels range from a 5/10 to a 9/10 and turning his head to the left, extending his neck towards the left and sneezing aggravate his pain, though taking medication (diclofenac and misoprostol) and stretching help decrease his symptoms.

33. Dr. Carlos Cebrian evaluated Claimant on March 17, 2021 at Respondent' request for an Independent Medical Examination (IME). Claimant reported that he has a lot of neck pain, that it depends on how he is holding his head that controls the level of his pain, and that he has symptoms of numbness and pain going down his left arm if he moves his head to the left or extends his head. Claimant specifically told Dr. Cebrian that 70% of his pain is in his arm with movement though, if he is not moving his head, then the pain is limited to his neck, but this is not possible when he is driving. Dr. Cebrian examined Claimant and found loss of range of motion with discomfort primarily with extension and left lateral flexion and rotation. Dr. Cebrian diagnosed cervical strain with work related aggravation of cervical spine degenerative disc disease, left shoulder contusion and scalp contusion. He further opined that since the Claimant did not fit within

the Medical Treatment Guidelines, that the surgery recommended by Dr. Castro was not reasonably necessary. Dr. Cebrian opined that claimant is at MMI and had impairment of the work related cervical spine with moderate to severe degenerative changes and loss of range of motion. He stated that apportionment was not applicable.

34. On April 13, 2021 Dr. Oeser documented that prior to the accident Claimant had no cervical pain or left arm pain, paresthesias and weakness. Claimant advised that he had tried to pick up a plate and bowl with his left arm and had severe spasming in the left shoulder and biceps. He reported that he had minimal neck pain but significant pain, paresthesias and weakness in the left arm. He was unsure if he would will be able to continue working due to the pain, paresthesias and weakness of the arm. Dr. Oeser examined Claimant and found that evaluation of the cervical spine revealed increased tone with palpable spasming in the cervical paraspinals, left greater than right, tenderness over the left cervical facet joints, restricted cervical range of motion with extension, lateral bending to the left and rotation to the left, positive Spurling's on the left, palpable spasms in the left upper trapezius and left levator scapulae, with mild tenderness over the left acromioclavicular joint.

35. On July 14, 2021 Dr. Oeser documented that Claimant is having more pain with his left forearm, that the supination of the forearm is becoming more difficult due to pain and tightness, that his arm is "irritated" with increased use, continues to have difficulty using his hand and arm, has tremors in his left hand when the pain becomes severe and occasionally will drop objects from his left hand due to the numbness, tingling, weakness and spasming. She also documented that "using the left upper extremity aggravates his pain and paresthesias." She continued to find increased tone and spasming in the cervical paraspinals, tenderness over the left cervical facets and lower intradiscal spaces, restricted range of motion, and positive Spurling's on the left. She also found palpable spasm in the left upper trapezius and left levator scapulae, as well as tenderness over the acromioclavicular joint. She found decreased strength with left elbow flexion, wrist extension and grip strength. She also found that Claimant had loss of sensation on pinprick of the 3rd, 4th and 5th digit of the left hand.

36. Dr. Anderson Oeser testified by deposition on August 9, 2021,[2] who was accepted as an expert in physical medicine and rehabilitation, without objection. She stated that the diagnosis documented in the records with regard to the cervical spine, left shoulder and left upper extremity were due to the work related motor vehicle accident. Dr. Oeser testified that prior to the work injury Claimant was not having problems with the cervical spine or upper extremity. As found, this ALJ infers that Dr. Oeser was stating that Claimant did not have any significant symptoms of the cervical spine prior to the injury. Dr. Oeser stated that Claimant was referred to Dr. Castro because she had exhausted possible conservative care modalities, from which Claimant only had temporary relief, to determine if Claimant was a surgical candidate. Dr. Oeser opined that Claimant should undergo the surgery recommended by Dr. Castro for the disc

[2] Exhibit 8.

replacement at the C6-C7 level. With regard to the surgery she specifically stated as follows:

> Q. And why do you think he should undergo that surgery?
>
> A. Because he is getting worse with the passage of time. He has actually got weakness now in that left upper extremity that he did not have in the beginning when I saw him. He has tremors in his hands. He drops objects out of the hand and he has a lot of pain. You know, if he doesn't keep his head in one particular position, which is like straight, not really bending it, especially not off to the left or looking up, as soon as he does that, he has the pain shooting down into his arm and hand.
>
> Q. Should he get surgery, this surgery, would it be your opinion that that surgery would be related to his original October 2019 work injury?
>
> A. Yes, because he had no symptoms prior to it. Even though I know he had degenerative changes, he was totally asymptomatic.
>
> Q. And then do you believe that the surgery is reasonably necessary?
>
> A. Yes, I do, given the fact that he is getting worse with the passage of time.
>
> Q. Are there any other alternatives that you can think of that would help [Claimant]?
>
> A. Well, he has tried all the alternatives that I have and I send people to before I even consider surgery. I don't have anything else to offer him, other than treating him with medications. Even medications don't get rid of the weakness that he is experiencing in his arms, the tremors and stuff.

37. Dr. Oeser opined further that Claimant had failed conservative care, disagreed with Dr. Cebrian's opinion and that Dr. Cebrian was incorrect that Claimant has more problems in the neck than in his arm. She stated that when Claimant held his head in a neutral static position, Claimant did have pain in his neck but the minute he would flex or extend, his symptoms were 70% in his left upper extremity, which is classical for radicular symptoms. She testified that Claimant's biggest issue was his arm pain, numbness and weakness that Claimant developed spasming in the arm with difficulty using the arm and, if anything, the increasing symptoms, reinforced her opinion that he should move forward with the surgery before the symptoms become permanent. Lastly, she stated that Claimant was not at MMI. She opined that different radiologists read MRI films differently and the only way to resolve discrepancies in the reading of the MRI reports is to have a radiologist compare them. Dr. Oeser was very adamant in stating that she did not believe Claimant's ongoing symptoms were caused by the spinal degeneration because Claimant had no problems with his arm or neck prior to the injury.[3] Claimant's radiculopathy is confirmed by exam and by the positive Spurling's.[4] She also stated that Claimant's difficulty with weakness and pain that shoots down his arm is interfering with his functioning, despite Claimant's request to be left on full duty.[5] As found, Dr. Oeser has treated Claimant since a few months following the injury. While it

[3] Exhibit 8, bate 272, Depo. p.25:3-14.
[4] Exhibit 8, bate 275, Depo. p. 38:18-9.
[5] Exhibit 8, bate 276, Depo. p.44:4-11.

is true that Claimant has conceded that he does not always have pain if his neck is in a neutral position, he is unable to drive in this manner, or take on most activities of living in this manner. As found, Claimant testified, and the medical records amply support, the Claimant's consistent symptoms since his injury, including numbness, tingling, weakness and pain going down the left upper extremity. Both MRIs show that Claimant has significant stenosis of the spine at the C6-C7 level, which Dr. Oeser testified can alone cause the type of symptoms Claimant is having in his upper extremity. Dr. Oeser and Claimant are found credible in this matter.

38. Dr. Cebrian's deposition took place on September 2, 2021. He is board certified in family medicine and Level II accredited. He continued to opine that Claimant's cervical spine condition at the C6-C7 level was possibly related to the natural degenerative process. He mainly relied on the MRI reports being different and the one time evaluation as well as only those times when Claimant holds his head in a neutral position. He stated that, because Claimant did not meet all the requirements and criteria of the MTGs that Claimant does not qualify to proceed with the surgery suggested. As found, Dr. Cebrian's experience is limited to one visit, that is inconsistent with the consistent prior medical history and exams of other providers. Even Dr. Cebrian did not apportion the loss of range of motion, degenerative condition of the spine to any preexisting factors, stating that the impairment was related to the claim. Dr. Cebrian is found unpersuasive in regard to whether the cervical spine C6-C7 artificial disc replacement is reasonably necessary and related to the injury as well as the fact that Claimant is functioning in a normal manner. While he may be performing his job and Claimant did request that he not be given restrictions, this is not equivalent to being completely functional. The medical records are rife with documented facts that Claimant is having difficulty using his non-dominant upper extremity. As found Dr. Cebrian is unpersuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S., 2020. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra.*

The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); *Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary opinion).

Medical Benefits that are reasonably necessary and related to the injury

Employer is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. (2021); *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994); *Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo.App.1999); *Kroupa v. Industrial Claim Appeals Office*, *supra*. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. See generally *Stamey v. C2 Utility Contractors, Inc., et. al.,* W.C.No. 4-503-974 , ICAO (August 21, 2008); *Parker v. Iowa Tanklines, Inc.,* W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

The mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals*

Corp. v. Ball, 172 Colo. 510, 474 P.2d 622 (1970); Sec. 8-41-301(1)(c), C.R.S. Based upon the evidence presented, the ALJ concludes that Claimant has proven that surgery recommended by Dr. Castro is reasonable, necessary and related to the injury. The medical reports outline persistent pain and functional decline in the face of failed conservative treatment leading Dr. Castro to recommend surgical intervention. The evidence shows that from the time Claimant slammed his head and shoulder into the window or the pillar of his truck, he felt immediate pain in his left shoulder, neck and head. He is able to alleviate some of the pain going down his left arm by utilizing maneuvers and stretching but the problems have persisted and continued to develop consistently, despite conservative care provided by his medical providers. Claimant testified that prior to the October 2019 motor vehicle accident (MVA) he had no problems with his head, neck or left upper extremity. Claimant is credible.

Dr. Oeser opined further that Claimant had failed conservative care, agreed that Claimant required surgery as recommended by Dr. Castro and disagreed with Dr. Cebrian's opinion, stating that Dr. Cebrian was incorrect. Dr. Oeser stated that Claimant has more problems with his symptoms in his left upper extremity, classical for radicular symptoms at any time he is not in a neutral static position. Claimant does have pain in his neck but the minute he would flex or extend, the problems are much greater going down the upper extremity. Dr. Oeser consistently documented in her records that Claimant has palpable spasming in the cervical paraspinals, left greater than right, tenderness over the left cervical facet joints, restricted cervical range of motion and positive Spurling's maneuver, which is indicative of a pinched nerve. The November 11, 2019 MRI shows moderate foraminal and spinal canal stenosis, moderate disc osteophyte complex, moderate ligamentum flavum thickening, facet arthrosis, and uncovertebral arthrosis at the C6-7 level with an AP diameter of the thecal sac is 7mm, which is abnormal. The subsequent MRI on September 1, 2020 showed a central disc protrusion at the C6-C7 level causing moderate stenosis, with disc desiccation, disc space narrowing, and a narrowing of the anteroposterior dimension of the thecal sac of 6 to 7 mm. Dr. Castro opined that Claimant has biforaminal stenosis and severe central canal impingement, recommending surgical intervention entailing a one-level cervical disc replacement at C6-C7, as a result of ongoing symptoms failing to respond to conservative approaches. Dr. Castro opined that the recommended treatment is reasonable and related to his work-related injuries which follow the Colorado Workers' Compensation Guidelines. Both Drs. Oeser and Dr. Castro are more persuasive that Dr. Cebrian in this matter.

The Medical Treatment Guidelines are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook V. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo.App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide "All health care providers shall use the Medical Treatment Guidelines adopted by the Division." In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011). While the Guidelines may carry substantial weight, and provide substantial guidance, the ALJ is not bound by the Guidelines in deciding individual cases or the principles contained therein alone. Indeed, § 8-43-201(3), C.R.S. specifically provides:

> It is appropriate for the director or an administrative law judge to consider the medical treatment guidelines adopted under section 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease. *The director or administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations.* (*emphasis added*).

Pursuant to W.C.R.P. 17-1(A), the statement of purpose of the guidelines is as follows:

> In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these 'Medical Treatment Guidelines.' This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost.

W.C.R.P. 17-5(C) provides: "The treatment guidelines set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

It is appropriate for an ALJ to consider the guidelines while weighing evidence, but the Medical Treatment Guidelines are not definitive. *Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); *aff'd Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication); *Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the medical treatment guidelines were not shown to be present, ICAO was not persuaded that such a determination would be definitive). While the MTGs provide for that several preoperative surgical indications should be considered before surgery is undertaken, including assessment/definition and treatment of all likely pain generators along with xray, MRI or CT myelography findings consistent with spinal stenosis with instability or disc pathology, the Court is not bound by the MTGs in deciding individual cases on the guidelines or the principles contained therein alone.

Concerning the issue presented, the MTG's indicate that "[t]here is some evidence that the ALJ may decide the weight to be assigned the provisions of the *Guidelines* upon consideration of the totality of the evidence. *See Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006). As found in this case, the totality of the evidence presented supports a conclusion that Claimant meets the requirements for surgery as MRI imaging indicate that Claimant has central disc protrusion, and moderate stenosis at the C6-C7 level as well as severe central canal impingement. The evidence shows that upon any movement of the head, Claimant has significant dysfunction affecting the upper extremity. It is not reasonable to state that function is limited to only work activities that Claimant accomplishes with modifying behavior and activities. As found, Claimant proved the MTGs suggest patients with discs injury and radiculopathy should undergo surgery. The ALJ credits the medical records of the authorized treating providers that have evaluated and treated Claimant over time and the testimony of the claimant regarding the claimant's symptoms. The ALJ also credits the opinions of Drs. Oeser and Castro over the contrary opinion of Dr. Cebrian. The ALJ finds that Claimant has demonstrated that it is more likely than not that the C6-C7 disc replacement surgery is reasonable medical treatment necessary and related to the October 5, 2019 motor vehicle accident. Also as found, Claimant has demonstrated by a preponderance of the evidence that the October 5, 2019 MVA caused an aggravation or acceleration of the preexisting degenerative condition in the Claimant's cervical spine, resulting in the need for medical treatment in the form of surgery as proposed by Dr. Castro. As found, Claimant's testimony, the medical records and the opinions of Drs. Oeser and Castro are credible and persuasive, on this issue.

ORDER

IT IS THEREFORE ORDERED THAT:

1. Respondents shall pay for the C6-C7 disc replacement as recommended by Dr. B. Andrew Castro in accordance with the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge' s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 30th day of September, 2021.

Administrative Law Judge
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove entitlement to TTD benefits commencing January 25, 2021?

- Did Respondents prove Claimant was responsible for termination of his employment?

- The parties agreed to reserve a dispute over the validity of a January 24, 2020 modified job offer for future determination.

FINDINGS OF FACT

1. Claimant worked for Employer as a dispatcher and manger trainee. The job was sedentary and required no significant lifting or standing. Although Claimant occasionally retrieved parts from the warehouse weighing up to 50 pounds, this was not part of the essential duties of the position.

2. Claimant suffered admitted injuries in a slip and fall accident on December 17, 2019. He was initially seen in the emergency room and admitted overnight.

3. Claimant was referred to CCOM after being was released from the hospital. He saw Dr. Thomas Centi on December 19, 2019. Claimant's primary complaints were pain in the neck, right shoulder, left ankle, and left ribs. Dr. Centi's physical examination was almost entirely normal, with the only significant clinical findings being right paracervical pain to palpation. Dr. Centi diagnosed contusions, a cervical strain, and a right shoulder strain.

4. Claimant followed up with Dr. Centi on December 23, 2019. The documented physical examination findings were unchanged. Dr. Centi reviewed multiple x-rays and CT images and saw no evidence of any acute musculoskeletal abnormalities. Dr. Centi imposed restrictions on lifting, keyboarding, grasping, pinching, and reaching.

5. Dr. Centi's January 3, 2020 report documents a normal physical examination. Specifically regarding the cervical spine, Dr. Centi found no spinal tenderness, no muscle spasms, and essentially full range of motion. He noted positive Waddell's findings and thought Claimant gave limited effort. He released Claimant to sedentary work with no lifting over 10 pounds.

6. On January 10, 2020, Dr. Centi documented Claimant had been to two sessions of physical therapy without benefit. The physical examination findings were unchanged from the previous visit. Dr. Centi ordered a cervical MRI, referred Claimant for massage therapy, and prescribed Flexeril. He maintained the same work restrictions.

7. The same physical examination findings were documented on January 17, 2020.

8. Respondents wrote to Dr. Centi on January 20, 2020 and asked him to approve a modified job offer. The proposed work duties involved online training, filing, restocking marketing material, inventory, and other general office duties. The schedule was from 7AM to 4PM with a one-hour lunch break. Claimant was to be paid his regular pre-injury wage.

9. Dr. Centi approved the modified job on January 22, 2020.

10. Employer send the modified job offer to Claimant on January 24, 2020. Claimant acknowledged receiving the job offer. Claimant conceded he did not return to work after receiving the offer. Claimant testified he assumed Employer did not expect him back "until I had received adequate medical care." There is no persuasive evidence Employer shared that view of Claimant's employment status.

11. Claimant had remained in near-daily contact with his direct supervisor, Kyle W[Redacted], while he was off work. Claimant typically texted Mr. W[Redacted] that he was not coming to work each day. Claimant texted Ms. W[Redacted] about the modified duty position, and explained he did not feel ready to return to work because he was still symptomatic and waiting for Insurer to approve the MRI and massage therapy. Claimant told Ms. W[Redacted], "you've been a good boss and I want you to know that I'm not trying to abandon my job. I'm just trying to get my back/neck to a point where I can work but I have had very little treatment so far."

12. Dr. Centi reviewed the MRI findings at Claimant's February 14, 2020 appointment, and described the results as "negative." The exam findings from that appointment were normal, with no cervical spine tenderness or spasm and full range of motion. Dr. Centi liberalized Claimant's work restrictions to allow lifting up to 15 pounds and standing and walking up to 75% of each shift.

13. Claimant's final appointment with Dr. Centi was on March 6, 2020. The examination findings were unchanged, with no cervical spine tenderness or muscle spasm and essentially full range of motion. Dr. Centi put Claimant at MMI[1] and released him to full duties.

14. Insurer filed a General Admission of Liability on March 12, 2020 admitting for a closed period of TTD from December 18, 2019 through December 28, 2020. The termination of TTD was based on "1/28 signed light duty offer letter."

[1] Neither party mentioned Dr. Centi's determination of MMI or suggested it provided an impediment to an award of TTD. Respondents cited only the full-duty release and Claimant's responsibility for termination as the basis for their defense. Respondents subsequently agreed to a change of physician and authorized additional treatment. The ALJ infers the parties mutually agreed to disregard Dr. Centi's declaration of MMI.

15. Mr. W[Redacted] left Employer in late January or early February 2020. Claimant did not communicate with his new supervisor or anyone else from Employer. He does not know who replaced Mr. W[Redacted]. Employer never provided Claimant with contact information for his new supervisor, but Claimant made no effort to obtain that information either.

16. Claimant had no further contact with anyone at Employer until he was terminated approximately one month later.

17. Claimant was informed of his termination by Melinda B[Redacted], an HR representative and workers' compensation coordinator for Employer. Ms. B[Redacted] explained Claimant was being terminated for job abandonment because he had gone too long without communicating with Employer.

18. Claimant had spoken with Ms. B[Redacted] about his claim several times in December 2019 and early January 2020. On January 9, 2020, Ms. B[Redacted] told Claimant he did not need to continue updating her regularly about his claim because "[Insurer] will obtain any documents needed." Claimant had no further contact with Ms. B[Redacted] until she called about the termination.

19. Although Ms. B[Redacted] did not need regular updates regarding his claim, there is no persuasive evidence she advised Claimant not to remain in contact with his supervisors about his employment.

20. The parties subsequently agreed to a change of physician to Dr. Shireen Rudderow. Claimant saw Dr. Rudderow on July 1, 2020. He described neck pain radiating down both arms, worse on the right, and stated, "it has been getting worse of the last several months." He also reported numbness and weakness in his right hand. On examination, Claimant reported increased upper back pain with forward flexion of his right shoulder. He was tender to palpation of the upper thoracic vertebra and parathoracic musculature. There was no tenderness of the cervical paraspinal muscles. Dr. Rudderow ordered right upper extremity electrodiagnostic testing and prescribed a prednisone taper. She gave Claimant work restrictions of no lifting over 10 pounds and no overhead reaching with the right arm.

21. Claimant moved to Pennsylvania and shortly thereafter moved to Delaware because he could not work and needed support from family and friends. Claimant has lived with his mother in Delaware since September 2020.

22. Claimant's care was transferred to a Concentra clinic in Newark, Delaware. He saw Dr. Michael Kennedy on January 21, 2021. Examination of Claimant's neck showed tenderness from C4 to C6, and also in the right trapezius muscle. There was no muscle spasm. Cervical range of motion was full but painful. Sensation to light touch was diminished in the right forearm, thumb, and fingers. Dr. Kennedy agreed "an EMG may be useful to reveal RUE neurologic problems." He imposed work restrictions of no lifting greater than 10 pounds occasionally and no reaching above shoulder level. Dr. Kennedy opined Claimant could work an 8-hour shift. Although he referenced the "Light" exertional

level per the DOT, the definition of light work requires lifting up to 20 pounds occasionally. The ALJ interprets Dr. Kennedy's restrictions as a hybrid sedentary-light.

23. The restrictions provided by Dr. Kennedy would not have precluded Claimant from performing the essential functions of his pre-injury job.

24. On February 3, 2021, Claimant saw Dr. Phyllis James at Concentra. Claimant stated that prolonged sitting aggravated his neck pain. Dr. James' examination showed tenderness and spasm in the right cervical paraspinals and limited cervical range of motion. There was also tenderness and spasm in the upper thoracic paraspinal muscles, with limited range of motion. Dr. James amended Claimant's lifting restriction to five pounds occasionally. She also referred Claimant to Dr. Selina Xing, an orthopedist.

25. Claimant's initial appointment with Dr. Xing took place on February 17, 2021. He described neck pain radiating to the right shoulder and arm, and tingling in his right hand. He was also having frequent headaches from the neck pain. The examination showed pain, hypertonicity and increased muscle tone in the cervical muscles, and decreased cervical range of motion. He had decreased sensation to light touch and pinprick testing in the right forearm and right fingers. Flexion-extension x-rays showed moderate facet hypertrophy diffusely in the cervical spine, mild disc space narrowing, and grade 1 anterolisthesis of C4 on C5. Dr. Xing diagnosed cervicalgia and cervical radiculopathy. She ordered a right upper extremity EMG, cervical x-rays, and a cervical MRI. Dr. Xing changed Claimant's work restrictions to sedentary work no more than four hours per day.

26. The upper extremity EMG was completed on February 25, 2021. The results were normal, but Dr. Xing opined "a sensory radiculopathy cannot be ruled out with this test."

27. On March 19, 2021, Dr. Kennedy released Claimant from further care at Concentra and instructed him to continue treating with Dr. Xing.

28. Dr. Xing administered multilevel cervical medial branch blocks on March 22, 2021.

29. Claimant saw Dr. Xing's partner, Dr. Douglas Patterson, on May 11, 2021. Dr. Patterson documented persistent numbness in Claimant fingers, and "worsening weakness." Clinical signs pointed to brachial plexopathy/thoracic outlet syndrome. Dr. Patterson noted "among the conditions that might be missed by electrophysiologic studies and would cause altered sensibility in multiple distributions are cervical radiculopathy and thoracic outlet syndrome." Because Dr. Xing was already treating radiculopathy, Dr. Patterson recommended therapy to address the TOS.

30. Claimant had a cervical epidural steroid injection in May 2021.

31. The most recent report from Dr. Xing in the record is dated June 14, 2021. She maintained the 4-hour shift limitation through that report. There is no persuasive evidence Dr. Xing has rescinded Claimant's restrictions since that last report.

32. Claimant has suffered from Crohn's disease for several years. He underwent multiple digestive tract surgeries between September 2017 and October 2019. He has been "in remission" since October 2019. Claimant suffers episodic nausea related to the Crohn's. He testified the nausea was exacerbated after the work injury, but Dr. Centi told him that "I was not allowed to reference any of that in relation to this case." Claimant testified the Crohn's disease limits his ability to work a full shift, but believes he could work a full 4-hour shift were it not for the Crohn's.

33. Respondents proved Claimant was responsible for termination of his employment.

34. Claimant proved his injury-related condition worsened after his termination and caused an additional impact on his earning capacity. The worsened condition precluded Claimant from performing his regular job as of February 17, 2021, when Dr. Xing restricted him to 4-hour shifts. Claimant is disabled by the effects of his admitted injury, irrespective of any poorly-defined limitations related to Crohn's disease. Claimant proved he is entitled to TTD benefits commencing February 17, 2021 and continuing until terminated by law.

CONCLUSIONS OF LAW

A. Claimant was responsible for termination of his employment

Sections 8-42-103(1)(g) and 8-42-105(4)(a) provide, "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." A claimant's responsibility for termination not only provides a basis to terminate temporary disability benefits, but also limits the initial eligibility for TTD. Section 8-42-103(1)(g); *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002); *Valle v. Precision Drilling*, W.C. No. 5-050-714-01 (July 23, 2018). The respondents must prove the claimant was terminated for cause or was responsible for the separation from employment by a preponderance of the evidence. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The concept of "volitional conduct" is not necessarily related to moral turpitude or culpability but merely requires the exercise of some control or choice in the circumstances leading to the discharge. *Richards v. Winter Park Recreational Association*, 919 P.2d 983 (Colo. App. 1996). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for his termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

As found, Respondents proved Claimant was responsible for termination of his employment. Claimant failed to communicate with Employer for a month after Mr.

W[Redacted] left the company. Although Employer did not provide contact information for his new supervisor, neither did Claimant make any effort to obtain that information. It is reasonable for an employer to expect its employees to maintain communication even if they are off work because of an injury. Claimant knew his treating physician had approved him to work in some capacity and knew Employer was willing to accommodate his injury with modified duties. Although Ms. B[Redacted] told Claimant he did not need to update her regularly regarding his claim, there is no persuasive evidence she told Claimant it was acceptable to stop communicating with Employer regarding his job. Claimant reasonably should have known maintaining "radio silence" for a month would jeopardize his job. Respondents proved Claimant's termination resulted from volitional conduct.

B. Claimant is entitled to TTD benefits commencing February 17, 2021

Termination for cause is not a permanent bar to receiving temporary disability benefits, and a claimant can reestablish eligibility for TTD by showing a worsened condition that caused a subsequent wage loss. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004). A post-termination wage loss is "caused by a worsened condition" if the worsening results in limitations which did not exist at the time of the termination, and those limitations cause a limitation on the claimant's temporary earning capacity that did not exist at the time of the termination. *Martinez v. Denver Health*, W.C. No. 4-527-415 (August 8, 2005). The imposition of new work restrictions does not automatically establish a worsening, but is simply one factor to consider when evaluating the preponderance of evidence. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630 (Colo. App. 2014). On the other hand, formal work restrictions are not a prerequisite to an award of TTD benefits, and a claimant may establish eligibility with any competent evidence, including lay testimony. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The burden of proof to establish a worsening of condition and consequent wage loss is on the claimant. *Green v. Job Site, Inc.*, W.C. No. 4-587-025 (July 19, 2005).

Claimant proved he is entitled to TTD benefits commencing February 17, 2021. The medical records show a worsening of Claimant's clinical findings after his termination. Dr. Centi repeatedly documented normal or near-normal physical examinations until he released Claimant on March 6, 2020. When Claimant saw Dr. Rudderow in July 2020, he said his neck and arm symptoms had "been getting worse of the last several months." That statement is corroborated by Dr. Rudderow's physical examination, which showed tenderness to palpation of the upper thoracic musculature, areas which Dr. Centi had previously found to be normal. Dr. Rudderow thought Claimant's symptoms warranted further investigation and ordered upper extremity electrodiagnostic testing. Claimant could not pursue treatment for almost seven months because he had to move out of state. When he was able to resume treatment in late January and early February 2021, examinations showed decreased range of motion, muscle spasms, and diminished sensation in the right upper extremity. Dr. Xing documented similar findings at her initial evaluation on February 17, 2021. Claimant proved a worsening of his condition.

In the context of TTD benefits, the concept of "disability" is generally tied to the claimant's ability to perform their preinjury job. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Dr. Kennedy restricted Claimant to sedentary work with occasionally lifting 10 pounds. Those restrictions would have still allowed Claimant to perform his preinjury job as a dispatcher. But the limitation to four-hour shifts imposed by Dr. Xing would have precluded the performance of Claimant's regular job. The ALJ is persuaded Claimant reestablished a causal connection between his injury and his wage loss as of February 17, 2021, when he was medically restricted from performing his regular work.

An injury need not be the *sole* cause of the wage loss, and a claimant is entitled to TTD if a work-related injury contributes "to some degree" to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The evidence is vague regarding what portion of Claimant's disability may be attributable to Crohn's disease. The preponderance of persuasive evidence shows the vast majority of Claimant's disability since February 17, 2021 was caused by the effects of his work accident, irrespective of any poorly-defined limitations related to Crohn's disease.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant TTD benefits, based on the admitted AWW of $506.46, commencing February 17, 2021, and continuing until terminated by law.

2. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: September 30, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

STATE OF COLORADO OFFICE OF ADMINISTRATIVE COURTS 2864 S. Circle Drive Ste. 810, Colorado Springs, CO 80906	
In the Matter of the Workers' Compensation Claim of: **[REDACTED],** Claimant, v. **G[REDACTED],** Employer, and **A[REDACTED],** Insurer/Respondents.	▲ **COURT USE ONLY** ▲ **CASE NUMBER:** **WC 5-148-634-002**

FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

A hearing in the above captioned matter was held on July 20, 2021, before Administrative Law Judge (ALJ), Richard M. Lamphere. Because of COVID-19 related restrictions, the hearing was conducted remotely via video/teleconference. The hearing was digitally recorded on the Google Meets platform between 1:00 and 2:56 p.m.

Claimant was present and represented by [Redacted], Esq. Respondents were represented by [Redacted], Esq. Testimony was taken from Claimant, [Claimant] and Ronald C[Redacted]. In addition to the above referenced testimony, the following exhibits were admitted into evidence: Claimant's Hearing Exhibits 1-9 and Respondent's Hearing Exhibits A-I.

Following the presentation of evidence, the ALJ held the record open through August 10, 2021, to allow counsel time to file position statements in lieu of closing argument. The parties' position statements have been received. Consequently, the matter is ready for an order.

In this order, [Claimant Redacted] will be referred to as "Claimant"; G[Employer Redacted], Inc. will be referred to as "Employer" and A[Redacted] will be referred to as "Insurer". All others shall be referred to by name.

Also in this order, "Judge" or "ALJ" refers to the Administrative Law Judge, "C.R.S." refers to Colorado Revised Statutes (2020); "OACRP" refers to the Office of Administrative Courts Rules of Procedure, 1 CCR 104-1, and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he sustained a compensable injury to his low back while working for the Employer on August 13, 2020.

II. If Claimant established that he sustained a compensable low back injury, whether he also established that he is entitled to reasonable, necessary and related medical treatment to cure and relieve him from this injury.

III. If Claimant's low back injury is compensable, whether he established, by a preponderance of the evidence, that he is entitled to temporary partial and temporary total disability benefits for the following periods:

Temporary Partial Disability (TPD)	8/14/2020 – 12/17/2020.
Temporary Total Disability (TTD)	12/18/2020 – 12/22/2020
Temporary Partial Disability (TPD)	12/23/2020 - ongoing.

IV. Whether Respondents' established by a preponderance of the evidence that Claimant is responsible for his separation from employment thereby precluding his entitlement to temporary disability benefits after December 17, 2020.

V. Claimant's Average Weekly Wage ("AWW").

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is a former trash truck driver for Employer who claims to have injured his low back while connecting a full rolling dumpster to the lift on his truck in preparation for tipping.

2. According to Claimant the incident occurred between 3:00pm to 3:30pm on August 13, 2020. Some of Claimant's work can be done with the truck alone; however, Claimant is often required to perform heavy lifting and other manual activity to complete his job tasks. Claimant testified that he ran both residential and commercial trash collection routes. Residential routes involve dumping typical household trashcans and garbage bags into the back of the truck, while collecting commercial trash involves emptying large rolling industrial dumpsters that may hold several yards of trash and are very heavy. Claimant explained that dumping commercial trash receptacles often requires the driver to physically push/pull the dumpsters into position so they can be hooked up to a lift on the trash truck and subsequently lifted into the air so the waste can be dumped into the back of the truck.

3. Claimant estimated that he had to make 175 stops on the day of his alleged injury and that he was assisting another driver (Ron C[Redacted]) with his route in Larkspur, Colorado when he got hurt. According to Claimant, he made a stop on the route to empty a large commercial dumpster. Claimant testified that he jumped out of his truck to hook up a three-yard commercial dumpster to the lift on his truck, which was not positioned correctly for dumping. Claimant pushed the dumpster into place and began the process to hook it to the lift on his truck. At about this time, Mr. C[Redacted] showed up at his site to see if Claimant needed assistance. Claimant testified that he completed latching one side of the dumpster to the lift and as he attempted to latch the top bar on the other side, it stopped and would not latch. Claimant pushed on the dumpster in an effort to get the latch to catch and in the process developed immediate pain in his low back. He testified that he bent over in pain grabbing his low back. According to Claimant, Mr. C[Redacted] witnessed the entire incident.

4. Claimant testified Mr. C[Redacted] helped get him back into his truck and they each proceeded to drive their trucks to the next stop on the route. Upon arrival at the next stop, Claimant realized he was not physically able to lift the three metal cans associated with the account, so Mr. C[Redacted] collected the trash at this stop. He and Mr. C[Redacted] then proceeded straight back to the Employer's headquarters. Claimant testified that upon reaching the yard, Mr. C[Redacted] assisted him into the building where he reported his injury to Ryan B[Redacted]. According to Claimant, Mr. B[Redacted] encouraged Claimant to see his chiropractor and "give it the weekend" to see if his condition would improve, noting that he had been hurt on the job before. Claimant agreed. Claimant's pain worsened, prompting him to seek treatment from Comfort Care Family Practice on Monday, August 17, 2020. Claimant testified that he chose this clinic because it was convenient and they were able to see him right away.

5. The claim was filed with a date of injury of September 13, 2020[1], but the evidence presented supports a finding that the true date of injury was probably August 13, 2020. Claimant testified that he was not sure of the exact date of the incident but believed it occurred on Thursday, August 13, 2020. He was certain the incident occurred on a Thursday because he was working with his co-worker Ron C[Redacted] with whom he only worked on Thursdays. He also reiterated that he was encouraged to wait the weekend before perusing the case further. As noted, Claimant presented to Comfort Care Family Practice on Monday, August 17, 2020. The record from this date of visit states that the injury occurred four days prior. (Clmt's. Ex. 3, p. 34). The first page of the report states it happened five days prior (Clmt's. Ex. 3, p. 32); however, Claimant confirmed at hearing that the incident occurred on a Thursday, and August 13, 2020 was a Thursday. *Id.* at 32. The first note also explicitly documents that Claimant's pain "started after pushing a dumpster at work." (Clmt's. Ex. 3, p. 32). According to this report, Claimant reported that he "felt his back go out and pain shooting down [his] left leg at the time of injury." *Id.* Claimant was assessed with "Low Back Pain", was given an injection of Toradol and a prescription for Zanaflex for pain and spasm and instructed to follow up with his primary care provider (PCP). This report did not impose or address work restrictions.

[1] *See* Clmt's. Ex. 9, p. 74.

6. Claimant went to see his PCP, Dr. Kurt Lesh, at Colorado Springs Family Practice on August 21, 2020 because Employer, despite having notice of his claimed injury (Resp. Ex. G, p. 52) did not provide him with a list of providers from which to choose to provide treatment for his alleged injuries. (Clmt's. Ex. 4). During his initial visit, Claimant reported "throbbing" pain in his low back with "shooting" pain down his legs to the top of his foot. Id. at p. 36. The report from this date of visit documents that Claimant was pushing a heavy dumpster when he felt a "crack" in his back causing his leg to involuntarily kick out. Physical examination revealed exquisite tenderness in one specific spot of the lumbar paraspinous musculature, which was felt to represent a trigger point. Dr. Lesh administered a trigger point injection that, by report, gave Claimant "almost immediate partial relief [from] his pain." *Id*. at p. 36.

7. Claimant underwent an MRI of his lumbar spine, as ordered by Molly Kallenbach, D.C. Imaging was completed on September 1, 2020 and interpreted by William Anderson, D.C. The MRI revealed mild degenerative narrowing and desiccation of the intervertebral disc, anterolateral spondylosis deformans and diffuse circumferential annular bulging at L2-L3. At the L4-5 level, in addition to mild degenerative disc desiccation, there was an "acute to subacute posterior/left paracentral extrusion of the nucleus pulposus which [had] fragmented, migrating cephalically into the left lateral recess and neural foramen" markedly compressing the interformanial left L4 nerve root. At L5-S1, there was "marked posterior/paramedian annular bugging and bilateral degenerative facet arthropathy. The degenerative disc facet complex was more advanced on the left side and was noted to "[lead] to left lateral recess and foraminal stenosis with subsequent interforaminal compression of the left L5 nerve root and marked crowding of the contralateral right L5 nerve root in the neural foramen. According to Dr. Anderson, these findings "may contribute to paresthesia and radiculopathy extending into the left and/or right L5 dermatomes. (Resp. Ex. D, p. 21).

8. On September 22, 2020, Claimant was evaluated by Dr. Christopher Malinky, by referral from Dr. Lesh. Dr. Malinky noted that Claimant complained of left-sided low back and buttock symptoms, as well as left leg symptoms. Dr. Malinky documented that Claimant's symptoms first occurred after a "trauma and/or injury while standing and twisting. He also noted, "The injury was not reported to worker's compensation." Physical examination revealed lumbar spine "tenderness and a positive straight leg raise test on the left. No Waddell's sings were present. Following the evaluation, Claimant was diagnosed with lumbar "intervertebral disc disorders with radiculopathy", lumbar degenerative disc disease and myalgia. He was subsequently provided with prescriptions for hydrocodone (5/325 mg) and methocarbamol 750 mg. and scheduled for a transforaminal epidural steroid injection. Finally, Dr. Malinky provided the following commentary:

> Patient with some low back pain and radicular symptoms three to four months ago. They did improve over six to eight weeks; however, approximately two weeks ago the patient has a significant low back pain and radicular symptoms in the left leg with some numbness and

> tingling in the left thigh and weakness. This has not been improving with conservative care. MRI was reviewed which does show disc bulges at L4/5 and L5/S1 with nerve compression on the L4 and L5 nerve.

(See generally, Clmt's. Ex. 6).

9. Claimant returned to Dr. Malinky on October 12, 2020. Dr. Malinky performed the aforementioned left-sided L4-L5 transforaminal epidural steroid injection (ESI) noting that further interventional procedures would depend on the results of the injection administered that day. (Clmt's Ex. 6, p. 53).

10. Claimant was evaluated in follow-up at Dr. Malinky's office on October 21, 2020. Adam Haeffner, Dr. Malinky's physician's assistant (PA), saw him. During this encounter, Claimant reported a pain level of 7-8/10. Physical examination revealed pain with lumbar extension and right lateral flexion along with tight lumbar paraspinal muscles that were tender to palpation. PA Haeffner ordered a L5-S1 injection for low back pain and radiculitis given that Claimant had "inadequate" relief from the previous L4-L5 ESI administered October 12, 2020 by Dr. Malinky. (Clmt's Ex. 6, p. 57).

11. On November 23, 2020, Dr. Malinky performed a fluoroscopically guided L5-S1 interlaminar epidural steroid injection. On December 8, 2020, Claimant returned to Dr. Malinky's office where it was noted that he experienced approximately 75% improvement of his symptoms and the relief was ongoing. Following the evaluation, a repeat ESI was considered. Dr. Malinky did not impose or address work restrictions.

12. Claimant admitted that he returned to work after the incident and that Mr. B[Redacted] put him on modified duty based upon claimant's subjective reports. Claimant could not recall exactly what type of work he was performing but admitted that for an unknown amount of time he was on "driving duty" only, which Claimant admitted is not physically demanding. Claimant resigned his position with GFL on December 17, 2020 and began working as an over the road truck driver for Expeditor Services performing substantially similar driving duties to those he had performed while on modified duty with GFL on December 23, 2020. (Ex. I).

13. Claimant underwent an independent medical examination (IME) with Dr. Timothy Hall at the request of Claimant's counsel on February 9, 2021. (Clmt's. Ex. 7). Dr. Hall had no records at the time of his IME. Nonetheless, he obtained the following history from Claimant:

> [Claimant] gives a history that on the date above (September 13, 2020) he was working his usual job picking up dumpsters. That day he made over 100 stops. He was then told to go help another driver. He backed up to a 3-yard dumpster. He got out and "latched" the dumpster to the truck, which involved lifting a latch and pushing. He does not report there being anything dysfunctional or out of the ordinary about this activity. In the midst of this activity, he felt pain in

> his anterior hip into his left thigh. He bent down due to the pain and when he stood back up he had burning in his low back. . . . He then went back to the yard and was in “serious pain.” He told his supervisor that “I hurt myself bad,” and the supervisor told him that they did not have a specific doctor but wondered if it was something that might just go away with time. [Claimant] agreed to see what happened and he simply took it easy over the weekend, but by Monday, he could hardly walk and went to urgent care.

(Clmt’s Ex. 7, p. 65).

14. Claimant also reported a “history about 2 months prior to this episode of having done something to his back.” According to Claimant, “a dumpster flew off a truck and he had to jump out of the way. This gave him some left knee area pain and some low back pain, which kept him off work for about 2 months. [Claimant] did not report the injury or get treated through work comp. He simply 'nursed [himself] at home.' He had been back to work about 6 weeks prior to this September injury. Per Claimant’s report, the pain from the August 13, 2020, event was “far worse and different in location and quality than the prior event.” (Clmt’s Ex. 7, p. 66).

15. Dr. Hall performed a physical examination, which revealed, “straightening” of the normal lordosis, bilateral tenderness of the thoracolumbar paraspinal musculature in the area of the quadratus laborum (QL) and limited lumbar range of motion in all planes. Claimant was generally hyporeflexive in the lower extremities with trace reflexes at the knees bilaterally. Dr. Hall was unable to elicit an ankle reflex on either side. Claimant was weak in dorsiflexion of the foot on the left side and he could not heel or toe walk. Finally, Dr. Hall noted sensory dysfunction in the L5 dermatome on the left side. Dr. Hall diagnosed Claimant with a lumbar herniated nucleus pulposus at L4-L5 with left L4 nerve root involvement and facet arthropathy at L5-S1 and potential left L5 nerve root involvement. Dr. Hall ultimately concluded that Claimant’s symptoms and need for treatment were precipitated by his work activities manipulating the dumpster in an effort to latch it to the lift on his trash truck. Dr. Hall did not address the need for work restrictions. (Clmt’s Ex. 7, p. 66-67).

16. Claimant underwent an IME with Dr. Lawrence Lesnak at the request of Respondents’ counsel on June 16, 2021. (Resp. Ex. A). Claimant told Dr. Lesnak that he had made 175 stops to pick up trash on the date of incident. He stated the incident occurred while he was connecting a dumpster to the latch on the truck. He had reportedly latched one side and walked around to the other side when he felt a sudden pop in his left lateral buttock and groin region. At this examination, Claimant reported diffuse symptoms involving the left lumbar region, bilateral buttocks, intermittent right sided upper back pains and frequent numbness and pins and needles sensations involving the entirety of his right upper extremity that had begun approximately 2.5 weeks after the incident. He also reported occasional left anterior medial knee pain and feelings of instability that began several months after the incident. Claimant also reported being an over the truck driving and working full time in that capacity.

17. Claimant also disclosed to Dr. Lesnak, as he had to Dr. Hall, that he had sustained an injury in July 2020. He again reported that he self-treated those symptoms for approximately one month until his symptoms improved. Other than the injury earlier in 2020, he denied any prior low back problems. On examination, Dr. Lesnak found no objective findings to support Claimant's subjective complaints. Dr. Lesnak's discussion begins with Claimant's apparent prior back condition, stating Claimant was having lower back for several months prior to the work incident. *Id.* at p. 8. Respondents also argued that Claimant had a longstanding history of similar symptoms. Claimant testified at hearing that he was not having any lower back issues leading up to the incident with the dumpster and the available medical record supports this testimony. Indeed, the closest medical record in time preceding the incident with the dumpster is a note from Comfort Care Family Practice dated July 9, 2020, approximately one month prior to Claimant's alleged date of injury in this case. Claimant presented to Comfort Care on this date because he was unable to get in to see his PCP and he had a three-month history of hypertension. *Id.* at 30. The note documents Claimant was in no acute distress, was healthy appearing, his station and gait were normal, and there was nothing on physical examination to suggest he was experiencing any back problems. *Id.* at 30-31. The more remote records support a finding that Claimant's prior medical treatment focused on his hypertension, his hepatitis C diagnosis and his efforts to stop smoking.

18. Dr. Lesnak did concede that based on the history Claimant provided to Comfort Care on August 17, 2020, it was possible that he sustained a mild back strain/sprain. (Resp. Ex. A, p. 8). Nonetheless, Dr. Lesnak opined that Claimant developed "symptoms involving his buttock, hips legs and most likely his low back approximately several months prior to any alleged incident that occurred on 8/7/2020. (Resp. Ex. A, p. 8)(emphasis in original). He opined that Claimant's myriad of symptoms/subjective complaints were not supported by objective findings, noting further that Claimant had been able to work full-time for the past six months. *Id.* Consequently, Dr. Lesnak concluded that, to a reasonable degree of medical probability, there is no medical evidence to support that [Claimant] sustained any type of injury as a result of any work activities that he may have been performing in August of 2020." *Id.* at p. 9. He further noted, that even if Claimant did sustain a soft tissue strain injury, Dr. Malinky noted on December 8, 2020 that claimant had little to no symptoms at that point which was about the same time he began working in his new employment and required no additional medical care at that time. *Id.* at p. 10.

19. Dr. Lesnak testified via prehearing deposition as a Level II accredited expert in the field of physical medicine and rehabilitation (PM&R). In general, he testified consistently with his written report admitting that it was possible that Claimant sustained a strain/sprain injury. Nonetheless, Dr. Lesnak acknowledged Claimant was a "very poor historian," noting further that newly obtained medical records associated with a claim for social security disability benefits from 2011 supported a conclusion that Claimant had prior back pain. Dr. Lesnak also did not believe the reported mechanism of injury (MOI), which did not involve any lifting, bending, or twisting would be sufficient to injure the low back. Accordingly, he opined that Claimant did not sustain any work related injury. Rather, Dr. Lesnak opined that Claimant's symptoms were due to a pre-existing condition

and a potential injury that had occurred approximately two months prior to the reported incident. During his deposition, Dr. Lesnak admitted that he saw no records documenting ongoing treatment directed to the low back between 2011 and the date of injury in this case. (Depo. Dr. Lesnak, p. 14, lines 4-10).

20. At hearing, Claimant explained that he had applied for social security disability income (SSDI) in 2011 primarily due to his hepatitis C. According to Claimant, his hepatitis C caused body aches all over, including in his low back and constant flu like symptoms. Review of the medical report associated with Claimant's application for SSDI substantiates that he was evaluated by Dr. Adam Summerlin on August 6, 2011 for a chief complaint of "Back pain." The report generated by Dr. Summerlin documents that Claimant dated his back pain to 2009 without any precipitating cause. He reported that he had a constant tender and achy back with pain at 6/10 that increased to 10/10 with bending and lifting. Pain was located in his low back and upper thoracic region. (Ex. B). Claimant's station and gait were normal for tandem and toe-heel walking. While Claimant had reported tenderness to palpation over all of the spinous processes from the mid thoracic spine to the sacrum, there was no noted paravertebral spasm. Dr. Summerlin concluded that Claimant did not have an objective physical condition that was likely to impose a limitation on him for 12 or more continuous months.

21. Ryan B[Redacted] testified as the Operations Supervisor for Employer. He was Claimant's supervisor on the date of the alleged incident. Mr. B[Redacted] explained that Claimant had worked for him for approximately five years with Tri-Lakes Disposal before Employer acquired that company. Mr. B[Redacted] testified that the latching mechanism Claimant was using weighed no more than 10 pounds and did not require any bending or twisting to attach the dumpster to the trash truck.

22. Mr. B[Redacted] testified that he did not recall any conversation with Claimant on August 13, 2020 regarding his alleged work injury. It was Mr. B[Redacted]'s testimony that he did not hear about Claimant's alleged injury until August 17, 2020, when Claimant sent him a text message that he would not be into work due to back and hip pain. Even then, Mr. B[Redacted] contends that Claimant did not inform him that his pain was connected to his work duties. Indeed, Mr. B[Redacted] did not complete a written accident report until October 13, 2020, which he asserts is the date he was first notified that Claimant's back pain purportedly had its roots in Claimant's work related functions on August 13, 2020. In his written statement, Mr. B[Redacted] contends that Claimant told him his pain was from a previous injury. (Resp. Ex. G, p. 52).

23. Mr. B[Redacted] also testified that he had a discussion with Claimant on September 13, 2020 regarding the condition of his low back. According to Mr. B[Redacted], Claimant was having a difficult time accessing his employer paid health insurance benefits due to the recent acquisition of Claimant's prior employer, Tri Lakes Disposal, by GFL on June 1, 2020. Mr. B[Redacted] testified that he was working with Claimant and other employees of the former company to help straighten out their health insurance benefits. Per Mr. B[Redacted], he spoke with Claimant in September 2020 at which time they discussed that he may want to see a chiropractor for his back pain in lieu

of going back to an urgent care clinic as a more economical option. Mr. B[Redacted] did not recall Claimant reporting the incident to him as a work-related during this conversation and reiterated that he first learned that Claimant was alleging a work injury after he filed his Workers Claim for Compensation.

24. As further evidence that he was unaware of the work related nature of Claimant's low back pain, Mr. B[Redacted] testified that he never received any written work restrictions from a medical provider attending to Claimant's back pain. He testified that he simply placed Claimant on modified duty beginning in August 2020 based upon his report of back pain. Claimant initially worked light duty at the transfer station, which Mr. B[Redacted] testified essentially amounted to office work. Mr. B[Redacted] then moved Claimant to driving duty only and regularly assigned Claimant a helper on his routes. Claimant was working on driving duty only on December 17, 2020 when he voluntarily resigned. Mr. B[Redacted] testified that he was willing to continue providing modified duty to Claimant at the time of the resignation but understood the desire to find less physically demanding work than driving a trash truck.

25. Claimant admitted that he voluntarily resigned from his position with Employer on December 17, 2020 and to starting a job as an over the road truck driver on December 23, 2020. Claimant testified that he resigned because: 1) he was dissatisfied with management, 2) he wanted better pay, and 3) he felt the job was too physically demanding. Although Claimant stated that he resigned in part because his job was too physically demanding, he could not recall if he was doing anything other than driving at the time of his resignation. Mr. B[Redacted] testified that Claimant was on "driving duty" only at the time of his resignation. Claimant admitted that "driving" the trash truck was similar to driving the freight truck, which he reported no difficulty performing.

26. Ron C[Redacted] testified in rebuttal on behalf of Claimant. Mr. C[Redacted] testified that he recalled Claimant hurting his back on a date in which the two men had worked together all day. He recalled Claimant reporting the injury to Mr. B[Redacted] upon returning to the yard although he did not directly witness the conversation between Claimant and Mr. B[Redacted]. Mr. C[Redacted] did not testify regarding the date and time of either the incident or the conversation between Claimant and Mr. B[Redacted]. Claimant also testified in rebuttal and stated that Mr. C[Redacted] was mistaken about the two men working together all day. Claimant believed that Mr. C[Redacted] had his dates confused and was likely referring to a different day. Despite testifying earlier that he only worked with Mr. C[Redacted] on Thursdays, Claimant testified in rebuttal that he worked with Mr. C[Redacted] multiple days per week and believed Mr. C[Redacted] was referring to events that occurred on a different day of the week.

27. Based upon the evidence presented, the ALJ finds Claimant to be a poor historian drawing the reliability of his testimony into question. Nonetheless, he has remained consistent regarding the MOI that gave rise to his symptoms and was adamant that the events leading to his low back pain happened on a Thursday when he was working with Mr. C[Redacted]. As found, the medical records substantiate that Claimant

first sought treatment on August 17, 2020, during which it was noted that he had had a four-day history of back pain supporting an onset date of August 13, 2020, which happens to fall on a Thursday. Moreover, Mr. C[Redacted] confirmed that Claimant injured his back on a day the two worked together and that Claimant reported the injury to Mr. B[Redacted] upon returning to the yard. Respondents' suggestion that Mr. C[Redacted] was probably recalling a different injury date on which he was working with Claimant as a "helper" after Claimant's injury had already occurred is unconvincing.

28. While Claimant described a prior incident involving a dumpster that flew off a truck causing low back pain two months before the index injury in this case, the evidence supports a finding that he recovered from this event and returned to full duty work after "nursing" himself at home. Accordingly, the ALJ is not convinced that this prior accident represents the underlying cause of Claimant's present pain.

29. While the remote medical records document that Claimant had pre-existing complaints of low back, there is a dearth of evidence, as admitted by Dr. Lesnak, to support a finding that he required treatment for or was disabled by those symptoms between 2011 and the date of injury in this case. Indeed, Dr. Summerlin, who evaluated Claimant at the behest of the Social Security Administration, concluded that Claimant did not have a medical condition that was likely to impose a limitation on him for 12 or more continuous months. (Resp. Ex. B, p. 16). Regarding Claimant's prior complaints of low back pain between 2009-2011, the ALJ credits Claimant's testimony to find that those symptoms were probably related to the flu like effects of his hepatitis.

30. The ALJ credits the medical records of Comfort Care Family Practice, Colorado Springs Family Practice (Dr. Lesh), Front Range Diagnostic Radiology, Interventional Pain Management and Dr. Hall to find that Claimant has established that he sustained a compensable injury to his lower back on August 13, 2020. While Dr. Lesnak opined the "incident" in August of 2020 was not a sufficient mechanism to injure the back, the content of the medical records convinces the ALJ that it is unlikely that Claimant was simply attaching one side of the metal latch to the dumpster as Dr. Lesnak suggested. The ALJ is convinced that Claimant was probably pushing on the dumpster while manipulating the latching mechanism in an effort to attach the container to his nearby truck injuring his back in the process. Dr. Lesnak's deposition testimony that Claimant's lumbar MRI is devoid of any evidence of an "acute injury or trauma-related pathology" appears patently incorrect. (Depo. Dr. Lesnak, p. 9, lines 14-23). Dr. Lesnak seemingly failed to notice Dr. Anderson's notation that Claimant's MRI demonstrated "probable acute to subacute" disc herniation at L4-L5 with paracentral extrusion and fragmentation of the nucleus pulposus which had migrated into the left lateral recess resulting in marked compression of the left L4 nerve root. (Resp. Ex. D, p. 21). Contrary to Dr. Lesnak's suggestion, the ALJ is convinced that Claimant's MRI demonstrates "trauma-related pathology" and objective evidence of an acute injury, which supports his subjective symptoms.

31. The ALJ finds the care Claimant received through Comfort Care Family Practice, Colorado Springs Family Practice (Dr. Lesh), Front Range Diagnostic

Radiology, Interventional Pain Management reasonable, necessary and designed to cure and relieve him of his ongoing pain and dysfunction.

32. Claimant began working for Employer on June 1, 2020. Wage records for the 14-week period from June 20, 2020 through September 25, 2020 were offered into evidence. (Resp. Ex. F). While these records document that Claimant earned a total of $12,723.60 for this period, the ALJ is cognizant that the wage records include earnings after Claimant's date of injury when his hours probably dropped off due to the effects of his industrial injury. For example, Claimant worked 9 hours for the pay period extending from August 15 through August 21, 2020. He only worked 10.90 hours the next pay period. (August 22-28, 2020). In the eight weeks extending from June 20, 2020 to August 14, 2020, the day after his August 13, 2020 injury, Claimant earned $9,307.00. This results in an average weekly wage of $1,163.37 ($9,307.00 ÷ 8 = $1,163.37). The ALJ finds that this figure represents a fair approximation of Claimant's earnings at the time of his industrial injury and his diminished earning capacity afterward.[2] *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993); *National Fruit Prod. v. Crespin,* 952 P.2d 1207 (Colo. App. 1997).

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law: Conversely

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* Claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; See, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001).

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

[2] Claimant's gross pay for the two-week pay period ending 7/3/20 was $2,270.00. Similarly, his gross pay for the two-week pay periods ending 7/17/20 and 7/31/20 was $1900.00 and $1,516.00 respectively. Conversely, Claimant's gross pay for the two-week pay period extending from August 15, 2020 to August 28, 2020 after his industrial injury was $398.00.

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16; *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. The weight and credibility to be assigned expert testimony is also a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, Dow Chemical Co. v. Industrial Claim Appeals Office, 843 P.2d 122 (Colo. App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). As found in this case, the ALJ credits Claimant's testimony regarding the MOI along with the content of the medical records and the expert medical opinions of Dr. Hall to conclude that Claimant probably injured his low back while attempting to attach a large commercial dumpster to his trash truck while helping Mr. C[Redacted] with his route on August 13, 2020. The contrary opinions of Dr. Lesnak are unconvincing.

Compensability & Claimant's Entitlement to Medical Treatment

E. A "compensable injury" is one which requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; § 8-41-301, C.R.S. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*. Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(l)(b), C.R.S.*

F. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements before an alleged injury will be determined to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 552 P.2d 1033, 1036 (1976). Based upon the evidence presented, there is little doubt that Claimant's alleged injuries occurred during the time and place limits of his relationship with Employer and during an activity connected to his job-related functions, namely collecting trash. Accordingly, the ALJ concludes that Claimant has proven that he was in the course and scope of his employment at the time he developed pain in his low back. While the evidence supports a conclusion that Claimant was in the course and scope of his employment the remaining question is whether Claimant's injuries arose out of his work duties.

G. The term "arises out of refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando, supra; Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). Colorado courts have repeatedly emphasized that the determination of whether alleged injuries arose out of and in the course of an employment relationship is largely dependent upon the facts surrounding the injury in question. *Bennet v. Furr's Cafeterias, Inc.*, 549 F. Supp. 887 (D. Colo. 1982).

H. As found here, the contents of the medical records, particularly the September 1, 2020 MRI, support a conclusion that Claimant's trash collecting duties on August 13, 2020, probably caused "trauma-related pathology", including an acute herniated nucleus pulposus at L4-L5 giving rise to his symptoms and need for treatment on August 17, 2020. Based upon the available record, after 2011 and prior to August 17, 2020 there is a paucity of evidence to suggest that Claimant required treatment directed to his low back. While Claimant admitted to a prior incident involving a dumpster that flew off a truck causing back pain occurring approximately two months before the August 13, 2020 incident, the record is devoid of any indication that Claimant required treatment following this event. Indeed, Claimant credibly testified that he "nursed" himself at home. Moreover, the evidence presented supports a conclusion that following this incident Claimant returned to and participated in full duty work for several weeks before the suffering the injury in question here. Accordingly, the evidence supports a conclusion that this prior incident was not disabling as of August 13, 2020.

I. In this case, the totality of the evidence presented supports a reasonable inference that the event that caused Claimant to "nurse" himself at home probably injured and weakened the disc at L4-L5 causing a latent but non-disabling condition, which subsequently became manifest and required treatment when acted upon by the events of August 13, 2020. It is well settled that a pre-existing condition, whether manifest and not disabling or latent, "does not disqualify a claimant from receiving worker's compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment, as is the case here, "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or the need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940). In this case, the acute nature of Claimant's L4-L5 disc herniation persuades the ALJ that his back pain is a consequence of employment related activity. The evidence presented supports a reasonable inference that pushing on a heavy three-yard dumpster while manipulating the latch to attach the container to the truck probably hastened (accelerated) the deterioration of the disc causing it to rupture. The subsequent extrusion of the nucleus pulposus into the left lateral recess compressed the L4 nerve root which, more probably than not, gave rise to Claimant's symptoms and need for treatment. Accordingly, the ALJ concludes that the claimed injury is compensable.

J. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Whether the claimant sustained his/her burden of proof is generally a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P .2d 496 (Colo. App. 1997). In this case, the persuasive evidence demonstrates that after resting for the weekend without improvement, Claimant sought treatment for an acute injury to his low back sustained on August 13, 2020. As concluded, the ALJ is convinced that Claimant's symptoms and need for treatment, including his treatment with Comfort Care Family Practice, Dr. Lesh, Front Range Diagnostic Radiology and Interventional Pain Management is causally related to this compensable injury. The evidence presented also supports a conclusion that this treatment was reasonable and necessary to cure and relieve Claimant from his going symptoms. In so concluding, the undersigned ALJ rejects Dr. Lesnak's contrary opinions as unpersuasive.

Claimant's Separation from Employment & His Entitlement to Temporary Disability Benefits

K. As Claimant's injury was after July 1, 1999, sections 8-42-105(4) and 8-42-103(1)(g), C.R.S. apply regarding his entitlement to TTD benefits. These identical provisions state, "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Sections 105(4) and 103(1)(g) bar reinstatement of TTD benefits when, after the work injury, claimant causes his/her wage loss through his/her own responsibility for the loss of employment. *Colorado Springs Disposal d/b/a Bestway Disposal v. Industrial*

Claim Appeals Office, 58 P.3d 1061 (Colo. App. 2002). Simply put, if the claimant is responsible for his/her termination of employment, the wage loss that is the consequence of claimant's actions shall not be attributable to the on-the-job injury. *Anderson v. Longmont Toyota, Inc.,* W.C. No. 4-465-839 (ICAO February 13, 2002). Respondents shoulder the burden of proving by a preponderance of the evidence that Claimant was responsible for her termination. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 20 P. 3d 1209 (Colo. App. 2000).

L. The concept of "responsibility" is similar to the concept of "fault" under the previous version of the statute. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994). An employee is "responsible" if the employee precipitated the employment termination by a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (September 27, 2001). "Fault" does not require "willful intent" on the part of the Claimant. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo. App. 1996) (unemployment insurance); *Harrison v. Dunmire Property Management, Inc.,* W.C. no. 4-676-410 (ICAO, April 9, 2008).

M.. In this case, it was undisputed that Claimant voluntarily resigned his employment with Employer on December 17, 2020 and began work as an over the road freight driver for Expeditor Services less than one week later, on December 23, 2020. Mr. B[Redacted] credibly testified that despite never receiving any written work restrictions from a medical provider, he voluntarily provided modified duty to claimant based upon Claimant's subjective reports of his physical limitations. At the time of Claimant's resignation, he was performing driving duty only and working with a helper who was responsible for loading the dumpsters. Mr. B[Redacted] also testified that he would have continued providing modified duty to Claimant throughout his recovery.

N. Claimant admitted that driving of the trash truck was not physically demanding and no more demanding than driving the freight truck associated with his job with Expeditor Services. Nonetheless, Claimant argues that he was effectively forced to resign given the physical nature of his job. The ALJ is not persuaded. Claimant's voluntary decision to leave his modified job for Employer and begin performing substantially similar work for Expeditor Services less than one week later fundamentally undercuts his claim that he was physically incapable of performing the same type of work, i.e. driving for Employer. Based upon the evidence presented, the ALJ concludes that Claimant's resignation was not the result of his physical inability to perform the work for Employer or a failure on the part of Employer to accommodate his perceived restrictions. Rather, the ALJ is persuaded that Claimant's resignation was the result of his desire to work elsewhere. Considering the entire evidentiary record, the ALJ concludes that Claimant exercised a degree of control over the circumstances resulting in his termination by volitionally resigning from his position. The ALJ concludes that any employee would reasonably expect such action to result in the loss of employment. Because his termination was not compelled by the natural consequence of the work injury, Claimant is "responsible" for the termination of his employment. *Blair v. Art C. Klein Construction Inc., supra; Longmont Toyota, Inc.*, *supra*. Accordingly, Claimant's wage loss after December 17, 2020 is not attributable to his on-the-job injury. C.R.S. §§ 8-42-103(1)(g), 8-42-105(4). Nonetheless, Claimant also asserts entitlement to temporary partial disability (TPD) benefits extending from August 14, 2020 – December 17, 2020.

O. Temporary partial disability benefits are intended to pay for lost wages while a claimant is able to return to modified duty but not yet at maximum medical improvement. *Monfort of Colorado v. Husson*, 725 P.2d. 67 (Colo. App. 1986). In this case, Claimant failed to present wage records after September 25, 2020. Consequently, the ALJ cannot determine Claimant's entitlement to TPD benefits after this date. Nonetheless, the evidence presented persuades the ALJ that Claimant was unable to perform his usual job properly due to the effects of his industrial injury. He was subsequently placed on "drive only" modified duty status by employer[3] and suffered a wage loss as a consequence. Consequently, the ALJ concludes that Claimant was "disabled" within the meaning of section 8-42-105, C.R.S. entitling him to TPD benefits. While the ALJ cannot compute Claimant's potential entitlement to TPD benefits after September 25, 2020, the evidence presented persuades the ALJ that Claimant is entitled to TPD benefits at a rate of two-thirds of the difference between his average weekly wage (AWW) at the time of injury (as calculated below) and the weekly earnings during the continuance of his partial disability for the following periods in the following amounts:

8/15/20 – 8/21/20: $1,163.37 - $180.00 = $983.37
$983.37 × 2/3 = $655.58 (Clmt's. Ex. 8, p. 70)

8/22/20 – 8/28/20: $1,163.37 - $218.00 = $945.37
$945.37 × 2/3 = $630.25 (Clmt's. Ex. 8, p. 70)

8/29/20 – 9/4/20: $1,163.37 - $674.00 = $489.37
$489.37 × 2/3 = $326.25 (Clmt's Ex. 8, p. 72)

9/5/20 – 9/11/20: $1,163.37 - $794 = $369.37
$369.37 × 2/3 = $246.25 (Clmt's. Ex. 8, p. 72)

9/12/20 – 9/18/20: $1,163.37 - $690.00 = $473.37
$473.37 × 2/3 = $315.58 (Clmt's. Ex. 8, p. 73)

9/19/20 – 9/25/20: $1,163.37 - $670.00 = $493.37
$493.37 × 2/3 = $328.91 (Clmt's. Ex. 8, p. 73)

Total TPD Due = $2,502.82

Average Weekly Wage

[3] A medical opinion is not a prerequisite to proving entitlement to temporary disability benefits. Indeed, the testimony of the claimant, if credited is sufficient to prove causation and the inability to work. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997).

P. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp., 867 P.2d 77 (*Colo. App. 1993)*; National Fruit Prod. v. Crespin,* 952 P.2d 1207 (Colo. App. 1997).

Q. Section 8-42-102(2), C.R.S., sets forth certain methods of calculating the average weekly wage. Section 8-42-102(2)(d) provides that "[w]here the employee is being paid by the hour, the weekly wage shall be determined by multiplying the hourly rate by the number of hours in a day during which the employee was working at the time of the injury or would have worked if the injury had not intervened, to determine the daily wage; then the weekly wage shall be determined from the daily wage in a manner set forth in paragraph (C) of this subsection (2). In this case, the ALJ concludes that utilizing an 8-week time period of earnings to calculate Claimant's AWW is fundamentally fair as it represents Claimant's earnings over a sufficient period after he began his employment with Employer and only one day after he suffered his compensable injury. This 8-week period takes into account the natural fluctuations that occurred in Claimant's earnings due both to overtime and holiday pay as well as his decision to use vacation time. Accordingly, the ALJ determines that Claimant's average weekly wage is $1,163.37. As found, this figure most closely approximates Claimant's actual wage loss and diminished earning capacity at the time of his August 13, 2020 compensable work related injury.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his low back on August 13, 2020.

2. Claimant is entitled to all reasonable, necessary, and related medical care to cure and relieve him of the effects of his low back condition, including but not limited to his treatment with Comfort Care Family Practice, Colorado Springs Family Practice (Dr. Lesh), Front Range Diagnostic Radiology and Interventional Pain Management. All medical expenses associated with Claimant's injury shall be paid in accordance with the Colorado Workers' Compensation medical benefits fee schedule.

3. Claimant is entitled to TPD from August 14, 2020 through September 25, 2020.

4. Claimant's claim for TPD from September 26, 2020 to December 17, 2020 is reserved for future determination.

5. Respondents have established that Claimant was responsible for the termination of his employment on December 17, 2020. Consequently, his claim for temporary total and temporary partial disability benefits after December 17, 2020 is denied and dismissed.

6. The insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. Claimant’s average weekly wage is $1,163.37.

8. All matters not determined herein are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-134-953-001

ISSUE

1. Whether Colorado has subject matter jurisdiction over Claimant's workers' compensation claim.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 44 year-old truck driver who suffered a ruptured aneurysm on February 25, 2020, in Fort Collins, Colorado. Claimant was employed by Employer on the date of the injury.

2. Claimant subsequently received medical treatment at healthcare facilities in Colorado.

3. Claimant did not testify at the hearing because she is unable to speak from the injury she suffered on February 25, 2020. Her daughter, Alexandria JRedacted], testified on her behalf.

4. Employer is a trucking company headquartered in Omaha, Nebraska.

5. On December 20, 2019, Claimant applied for a position as a truck driver with Employer. Claimant completed a phone application. Per the application, Claimant lived in Commerce City, Colorado. (Exhibit C). Claimant still resides in Commerce City, Colorado.

6. Based on her application, Claimant met Employer's minimum guidelines for employment, so Employer invited Claimant to attend orientation in Omaha, Nebraska. Claimant attended orientation beginning January 13, 2020.

7. While Claimant was in Nebraska, Employer checked her references and past driving records. Claimant underwent a background check and completed drug and alcohol testing.

8. During orientation, and prior to being formally hired, Claimant signed a document with Employer titled "Acknowledgment of Employment in Nebraska and Consent to State of Nebraska Workers' Compensation." (Exhibit D). This document states: "[t]he driver hereby acknowledges and states he/she is fully aware, if [Employer] hires the driver, the driver will be a state of Nebraska-based employee, and all employees of [Employer] regardless of where employees claim residence, are subject to Nebraska's

workers' compensation jurisdiction and laws and Nebraska's labor and employment laws."

9. On January 17, 2020, Employer completed and approved Claimant's file and hired her as a student truck driver.

10. After completing orientation and being hired, Employer assigned Claimant to drive with trainer, Matthew H[Redacted]. From January 20, 2020 to February 12, 2020, Claimant completed 151 hours of training with Mr. H[Redacted], and they drove through 26 states. According to the driver log (Exhibit E), Claimant and Mr. H[Redacted] drove truck 17189, a total of 14,977 miles collectively. Truck 17189 was assigned to Mr. H[Redacted]. There is no evidence as to how many of the 14,977 miles Claimant drove.

11. According to the driver log, Claimant and Mr. H[Redacted] drove a total of 868 miles in Colorado. This represents approximately 6% of the total miles Claimant and Mr. H[Redacted] drove collectively from January 20, 2020 to February 12, 2020. They were in Colorado on three occasions. They delivered two loads to Colorado, and picked up one load in Colorado.

12. Scott H2[Redacted], Employer's corporate safety manager, testified that Employer has 200 divisions. He explained that some truck drivers drive between two cities so they can be home every night and others drive through all 48 states. According to Mr. H2[Redacted], Employer tries to accommodate its employees' preferences.

13. Employer hired Claimant as a full-time employee on February 14, 2020, and assigned her truck 71764. Employer dropped truck 71764 off in Colorado on January 30, 2020, for Claimant to pick up. Mr. H2[Redacted] testified that Claimant never hauled any loads on her own for Employer after being assigned truck 71764.

14. Employer assigned Claimant to Dollar General out of Fulton, Missouri. This route went through the Midwest. According to Mr. H2[Redacted] this route would have enabled Employer to get Claimant "home." Claimant's home is in Colorado.

15. Claimant's daughter, Ms. JRedacted], testified that Employer has a location in Colorado, and Claimant's vehicle is still parked at Employer's location in Colorado.

16. The Worker's Claim for Compensation form (Exhibit A) reflects that the "accident" occurred at the Budweiser Distribution Center in Fort Collins, Colorado on February 25, 2020. Mr. H2[Redacted] credibly testified that Employer has customers in Fort Collins, Colorado.

17. The evidence is undisputed that Claimant lives in Colorado and resided in Colorado at the time of her injury. Mr. H2[Redacted] credibly testified that Employer has customers in Colorado, and that Claimant and Mr. H[Redacted] dropped off and picked up three loads in Colorado during Claimant's training period. He further credibly testified that Employer delivered Claimant's truck to Colorado, and Employer assigned Claimant

to Dollar General in Fulton, Missouri, because the Midwest route would get her home. The ALJ reasonably infers that at the time of Claimant's injury, her routes for Employer would start and end in Colorado. Thus, the ALJ finds that a substantial portion of Claimant's work for Employer was performed in Colorado.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

ALJs are vested with original jurisdiction to hear and decide all matters arising under the Act. *See* § 8-43-201, C.R.S.; *Blood v. Qwest Servs. Corp.*, 224 P.3d 301 (Colo. App 2009). A court's jurisdiction consists of two elements: jurisdiction over the parties, or personal jurisdiction, and jurisdiction over the subject matter of the issue to be decided, or subject matter jurisdiction. *Leewaye v. Indus. Claim Appeals Office*, 178 P.3d 1254 (Colo. App. 2007). Subject matter jurisdiction involves a court's power to resolve a dispute in which it renders judgment. A court has subject matter jurisdiction if the case is one of the type of cases that the court has been empowered to entertain by the sovereign from which the court derives its authority. *Horton v. Suthers*, 43 P.3d 611, 615 (Colo. 2002). These concepts also apply to the authority of an administrative agency. *Leewaye*, 178 P.3d at 1257.

The jurisdictional prerequisites to recovering benefits under the Act are that a substantial portion of the employee's work be performed in Colorado combined with either an injury that occurred in Colorado or a contract for hire in Colorado. *United States Fidelity & Guar. Co. v. Indus. Comm'n*, 61 P.2d 1033 (Colo. 1936). It is undisputed that Claimant's injury occurred in Colorado. Thus, the question of jurisdiction turns on whether a substantial portion of Claimant's work is performed in Colorado.

"There is no strict formula for determining whether a claimant's work in Colorado is 'substantial.'" *Turner v. Sunrise Trans.*, W.C. 4-981-338 (ICAO Aug. 23, 2017). The determination of whether the claimant had "substantial employment" in Colorado is factual in nature. *See Roseborough v. Schneider Nat'l*, W.C. No. 4-007-808 (ICAO Dec. 17, 1991). "Substantial evidence is evidence which would support a reasonable belief in the existence of a fact without regard to conflicting evidence and inferences." *Rodenbaugh v. DEA Constr.,* W.C. No. 4-523-336 (ICAO Dec. 20, 2002) (citing *Ackerman v. Hilton's Mech. Men, Inc.*, 914 P.2d 524 (Colo. App. 1996)). A claimant's usual and regular employment are relevant factors in making a determination regarding substantial employment. *Id.* (citing *RCS Lumber Co. v. Worthy*, 369 P.2d 985 (Colo. 1962)); *see also Pfuhl v. Prime*, *Inc*., W.C. No. 4-215-425 (ICAO Feb. 16, 1995); *Hatt v. Scneider Nat'l Carriers, Inc*., W.C. No. 4-121-034 (ICAO Oct. 2, 1992); and *Bryan v. Schneider Nat'l, Inc*., W.C. No. 3-962-117 (ICAO Aug. 23, 1991).

In *Masters v. Viking Freight Sys.*, W.C. No. 4-119-690 (ICAO Mar. 21, 1995), the claimant was an over-the-road truck driver who sustained an injury in Colorado. The claimant drove in all 48 states, but Viking's primary business was in 11 western states. Notably, claimant picked up and delivered loads in Colorado. Additionally, he refueled at Viking's terminal in Colorado. The claimant traveled through Colorado seven times over a two and a half year period. The ALJ found that the court had jurisdiction because the claimant "frequently traveled through the State of Colorado" and performed substantial employment in Colorado. Similarly, in *Hunsinger v. Werner Enter., Inc.,* W.C. 3-957-206 (ICAO Jan. 24, 1992), the claimant was an over-the-road truck driver who was injured in Colorado. The claimant made 45 trips, 25 of which were training trips, through 47 states. Either one or five of the training trips went through Colorado, and seven subsequent trips went through Colorado. Further, all of the trips began and ended in Colorado. Based on this, the ALJ found that claimant performed a substantial amount of his work in Colorado, and the court had jurisdiction in the case.

The *Masters* and *Hunsinger* decisions are persuasive with respect to substantial employment in Colorado as related to over-the-road truck drivers. The evidence shows that Employer dropped Claimant's truck off in Colorado. (Findings of Fact ¶ 13). Further, Employer assigned Claimant to Dollar General based in Fulton, Missouri. This was a Midwest route enabling Claimant to get "home." (*Id.* at ¶ 14). The ALJ infers that at the time of Claimant's injury, her routes for Employer would start and end in Colorado. (*Id.* at

¶ 17). Thus, the evidence in the record established that a substantial portion of Claimant's work was performed in Colorado. Because a substantial portion of Claimant's employment was performed in Colorado, and Claimant was injured in Colorado, Claimant has met her burden of proving by a preponderance of the evidence that Colorado has jurisdiction over her claim.

ORDER

It is therefore ordered that:

1. Colorado has jurisdiction over Claimant's workers' compensation claim.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Victoria E. Lovato
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-163-001-001

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that he sustained a compensable occupational disease arising out of and in the course and scope of his employment with the employer.

2. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment he has received for his cervical spine, including a September 4, 2019 surgery performed by Dr. Donald Corenman, is reasonable and necessary to cure and relieve him from the effects of the occupational disease.

3. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that Dr. Corenman is an authorized provider.

4. If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits for the period of September 4, 2019 through November 27, 2019.

5. If the claim is found compensable, what is the claimant's average weekly wage (AWW)?

FINDINGS OF FACT

1. The claimant suffered an injury at work on February 19, 2007[1], when he slipped on ice and fell while working at the employer's coal mine.

2. Subsequently on August 18, 2009, Dr. Sanjitapal Gill performed a C4-C5 and C5-C6 anterior cervical discectomy and fusion (ACDF), with allograft and plating.

3. On October 24 2013, Dr. David Corenman determined that the claimant had reached maximum medical improvement (MMI) for the 2007 injury. In addition, Dr. Corenman assessed permanent work restrictions of no lifting, pushing, or pulling more than 100 pounds. Dr. Corenman assessed permanent impairment of 21 percent whole person for the claimant's cervical spine, and 16 percent whole person for the lumbar spine.

4. On July 2, 2014, Dr. Brain Reiss performed a Division-sponsored independent medical examination (DIME) of the claimant for the 2007 injury. Dr. Reiss determined that the claimant had reached MMI. With regard to permanent impairment,

[1] The February 19, 2007 injury was assigned WC number 4-715-955.

Dr. Reiss assigned a whole person impairment of 17 percent. Dr. Reiss recommended that the claimant engage in a home exercise program with core strengthening.

5. Based upon the opinions of Dr. Reiss, on October 14, 2014, the respondents filed a Final Admission of Liability (FAL) for the 2007 injury. In the FAL, the respondents admitted for the impairment rating of 17 percent whole person, and the MMI date of July 2, 2014. The respondents also admitted for post-MMI medical treatment that is reasonable, necessary, and related to the 2007 injury.

6. The claimant testified that after he was placed at MMI he continued working for the employer as a roof bolter, a shuttle car driver, and a laborer. The claimant's roof bolter position involved overhead lifting of roof bolts, roof mesh, cable bolts, and bolt wrenches. The shuttle car position involved transporting coal to a feeder. In addition, the claimant used the shuttle car to transport roof mesh, ventilation tubes, and other materials to the miners. The claimant testified that driving the stuttle car involves sitting sideways, and constantly turning his neck and head while driving. The claimant also testified after he was placed in MMI, his neck was always stiff and he continued to have migraine headaches.

7. On June 2, 2019, the claimant sought treatment in the emergency department (ED) at the Ashley Regional Medical Center. The claimant testified that he sought treatment on that date because he woke up with pain shooting down his neck and left arm.

8. The ED medical record of June 2, 2019, indicates that the claimant's symptoms included " 'spasm' pain" in the left side of his chest, the left side of his back and his left arm. The claimant reported that he was injured in 2007 and he had similar pain that "acts up intermittently" and this was not new pain. Dr. Adam Nielson recorded the claimant's condition as strain of muscle and tendon of back wall of thorax.

9. On June 3, 2019, the claimant returned to the ED reporting back pain. On that date, Dr. Nolan Brooksby diagnosed the claimant with cervicalgia; upper extremity pain and spasm; cervical disc disorders; segmental and somatic dysfunction of the cervical region; and chronic pain syndrome. On that same date, Dr. Brooksby administered a trigger point injection to the claimant's left shoulder.

10. On July 1, 2019, magnetic resonance imaging (MRI) of the claimant's cervical spine showed a mature fusion at C4 through C6; a right C4-C5 subarticular osteophyte; and multilevel neural foraminal narrowing, most prominent at the left C6-C7 level.

11. On August 1, 2019, the claimant was seen at The Steadman Clinic by Eric Strauch, PA-C and Dr. Corenman. At that time, the claimant reported that he experienced severe left trapezius and arm pain when he woke up on May 31, 2019. On August 1, 2019, x-rays of the claimant's cervical spine showed the prior fusion was solidly fused, with normal plate alignment. The x-rays also showed disc narrowing at the C3-C4, C4-C5, and C6-C7 levels. Dr. Corenman opined that the claimant had C7 radiculopathy and

recommended an injection. Dr. Corenman implied that if the injection was not successful, a repeat ACDF would be pursued.

12. On August 20, 2019, Dr. Thos Evans administered a left transforaminal epidural steroid injection (TFESI).

13. On September 4, 2019, Dr. Coreman performed surgery that included removal of the C4 through C6 plate, ACDF at the C6-C7 level, using an iliac crest graft, local bone graft, and plate, with reconstruction of the graft site.

14. The claimant testified that following the September 4, 2019 surgery his arm and back pain were gone. The claimant further testified that this surgery was paid for by his personal insurance. The claimant testified that because he was in a great deal of pain, he did not report to the respondents that he believed that his need for medical treatment in September 2019 was work related.

15. At the request of the respondents, Dr. Brian Castro performed a review of the claimant's medical records in connection with the 2007 injury and the 2019 surgery. In his report dated February 29, 2020, Dr. Castro opined that the claimant was appropriately placed at MMI on July 2, 2014 for the 2007 injury. Dr. Castro further opined that the claimant may have suffered a new injury that is unrelated to the admitted 2007 work injury. Dr. Castro noted that the claimant's disc herniation is likely acute, and not due to adjacent segment syndrome. In his report, Dr. Castro noted that the claimant injured his left shoulder in July 2009, resulting in a left shoulder arthroscopy and rotator cuff repair.

16. On September 9, 2020, the parties went to hearing before the undersigned ALJ. The issue before the ALJ at that time was whether treatment of the claimant's cervical spine, (including the September 4, 2019 surgery), was reasonable medical treatment necessary to maintain the claimant at MMI and/or cure and relieve the claimant from the effects of the admitted February 19, 2007 work injury.

17. On October 8, 2020, the ALJ issued Findings of Fact, Conclusions of Law, and Order. In that order, the ALJ determined that the claimant's need for cervical surgery in 2019 was not related to the 2007 injury.

18. Subsequently, on February 8, 2021, the claimant filed a Worker's Claim for Compensation regarding the alleged occupational disease currently before the ALJ. Specifically, the claimant indicated that he had developed "[n]ew cervical radiculopathy and stenosis" because of "heavy manual labor between [2001] and [2019]".

19. On February 19, 2021, the respondents filed a Notice of Contest on the basis of "[p]re-existing conditions".

20. At the request of the respondents, on May 13, 2021, the claimant attended an independent medical examination (IME) with Dr. Nicholas Olsen. In connection with the IME, Dr. Olsen reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Olsen opined that the symptoms the claimant experienced in June 2019 are not due to an occupational

disease. Rather, it is Dr. Olsen's opinion that the issues the claimant experienced in June 2019 are "merely symptoms that have developed following his left shoulder surgery."

21. Dr. Olsen's testimony was consistent with his written report. Dr. Olsen explained that trauma to the cervical spine typically occurs acutely. Dr. Olsen also testified that a cumulative trauma disorder of the cervical spine is extremely rare. Dr. Olsen noted that the Colorado Medical Treatment Guidelines (MTG) do not identify a cumulative trauma occupational disease of the cervical spine.

22. Dr. Olsen further testified that when determining whether work activities rise to the level of a compensable occupational disease, it is necessary to determine a diagnosis. Then it is necessary to obtain a history of the individual's work activities. The next step is to analyze whether the individual's work activities have the necessary force, frequency, and duration to cause the diagnosis. In addition, a determination is made as to whether the individual has adequate periods of rest and recovery. Dr. Olsen further testified that having a variety of work activities gives the body the opportunity to recover between stressful activities. It is Dr. Olsen's that the claimant's work activities were varied enough to allow his cervical spine to rest and recover between stressful activities.

23. Dr. Olsen also testified that during the IME the claimant indicated that following his 2009 shoulder surgery, he did not do any rehabilitation exercises. Dr. Olsen explained that to have the best result following a surgery, rehabilitation exercises are imperative. Therefore, if the claimant did not do physical therapy exercises after his left shoulder surgery, the claimant would likely develop shoulder girdle pain. Dr. Olsen testified that there is a significant overlap between shoulder girdle pain and cervical radiculopathy.

24. The ALJ credits the medical records and the opinions of Dr. Olsen and finds that the claimant has failed to demonstrate that it is more likely than not that he sustained a compensable occupational disease arising out of and in the course and scope of his employment with the employer. The ALJ credits the opinion of Dr. Olsen that the claimant's job duties were varied enough to allow for periods of rest and recovery. The ALJ is not persuaded that the claimant's cervical spine symptoms, and the need for the 2019 surgery were related to the claimant's job duties with the employer. The ALJ is likewise not persuaded that the claimant engaged in work activities with the necessary frequency, force, and duration to result in cumulative trauma to his cervical spine.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306,

592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *H & H Warehouse v. Vicory, supra*.

5. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

6. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251, 252 (Colo. App. 1999). Moreover, Section 8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the workplace than in everyday life or in other occupations. *Anderson v.*

Brinkhoff, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id*. Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id*.

7. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *Cotts v. Exempla, Inc.*, W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *F. R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, April 10, 2008). Simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAP, October 27, 2008).

8. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he sustained a compensable occupational disease arising out of and in the course and scope of his employment with the employer. As found, the claimant's job duties were varied enough to allow for periods of rest and recovery. As found, the claimant's cervical spine symptoms, and the need for the 2019 surgery are not related to the claimant's job duties with the employer. As found, the claimant's job duties did not involve the necessary frequency, force, and duration to result in cumulative trauma to his cervical spine. As found, the medical records and the opinions of Dr. Olsen are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits related to an occupational disease is denied and dismissed.

Dated this 5th day of October 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, his existing scheduled lower extremity impairment rating should be converted to a whole person rating.

II. Claimant endorsed disfigurement as an issue for determination; however, at the commencement of the hearing, he indicated he wished to hold this issue in abeyance pending a personal appearance before an ALJ. Respondent had no objection to this request. Consequently, the issue of disfigurement is not addressed in this order.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. The documentary record in this matter is voluminous. Indeed, Respondent submitted in excess of 500 pages of exhibits and Claimant submitted an additional 49 pages. The evidence presented supports a finding that Claimant was employed as a Patrol Officer by Respondent's police department. He injured his left knee on December 24, 2018, while struggling to arrest a suspect attempting to flee the police station. In an effort to subdue the suspect, Claimant fell down some cement stairs striking his left knee on the edge of one of the steps.

2. Claimant presented to Employer's Occupational Health Clinic ("Clinic") on January 4, 2019. Dr. Kurz reported, ". . . Mr. [Claimant] reports L (left) knee pain, swelling and kneecap bruising, that was improving, but now w/episodes of buckling, locking and giving out with pain rated at 8/10. He has some stiffness & soreness. He still has some pain with movement, like stirs [stairs] and entering exiting his vehicle. He is taking Tylenol P.M. with minimal benefit. He used the brace for the first week with some relief…" (Resp. Ex. p. 31). Dr. Kurz assessed "Left knee contusion, strain, and pain," and imposed light duty work restrictions. (Id.).

3. Claimant had no complaints or concerns about body parts other than his left knee. (Id.) Claimant noted he was 5' 11" and weighed 308 pounds. (Resp. Ex. p. 34). Moreover, on the initial intake form, Claimant noted his left knee as the only injured body part and marked only the left knee on the pain diagram. (Id. at p. 38).

4. MRI of the left knee was performed January 11, 2019. Imaging revealed no meniscus or ligament tear, grade 2 chondromalacia in the lateral tibial plateau and patellofemoral compartment, and mild lateral patellar subluxation. (Resp. Ex. p. 38). Claimant participated in physical therapy, without benefit.

5. Claimant saw Physician Assistant (PA-C), Paula Homberger, at the Clinic on

February 1, 2019. She noted he had injured the same knee in 2015, ". . . that was treated conservatively and closed w/o IR (impairment rating) or MM (medical maintenance), but he opines – 95% improved prior to this DOI (date of injury)." Ms. Homberger referred Claimant to orthopedic surgeon Dr. Michael Simpson. (Resp. Ex. p. 54).

6. Dr. Simpson met with Claimant on February 11, 2019 and noted, "[Claimant] is about 5 weeks out from a direct contusion to the anterior aspect of his knee and a subsequent follow-up episode where his knee buckled on him as he got out of the car. His MRI does not show any obvious ligamentous or significant meniscal pathology. However, by examination he still symptomatically (sic) and struggles with full range of motion. I think at this point it would be appropriate to consider corticosteroid injection." Dr. Simpson administered the injection. (Resp. Ex. p. 65).

7. Claimant returned to Dr. Simpson on March 4, 2019 and the doctor noted, "…Brian continues to struggle with pain and weakness in the sensation of giving way of his knee. His knee is painful when it gives way. On examination, he does have some repetitive clicking in his knee, which is worrisome for a chondral flap as opposed to simple chondromalacia. It is more distinct click as opposed to crepitation. It is reproducible on clinical examination. I have told him that at this point he is a bit of a difficult situation. He does have some lateral patellofemoral subluxation with an increased tibial offset. This would be a very hard problem to completely address short of a distal patellar realignment, which would have a lengthy recovery. His MRI does not show any evidence of a disruption of his patellofemoral ligament so I don't think there is a soft tissue procedure that would address any instability. I would recommend we start with an R scopic (arthroscopic) evaluation of his knee, chondroplasty of his patella and synovectomy as necessary. Hopefully this will relieve some of the source of discomfort in his knee and allow him to return to full activities. If he doesn't make rapid progress with this response, then a patellofemoral realignment may be required. This would have a lengthy recovery…" (Resp.' Ex. pp. 116, 117).

8. On March 7, 2019, Dr. Simpson performed "arthroscopy left knee with partial synovectomy, excision of medial plica, and debridement of infrapatellar plica left knee." (Resp. Ex. p. 136).

9. On March 8, 2019, Claimant saw PA-C, Kimberly A. Shenuk, for a post-op visit. There were no pain complaints other than to the left knee. (Resp. Ex. p. 157).

10. At hearing, Claimant testified his alleged hip pain began probably a little bit after his March 7, 2019 surgery. (Hrg. Tr. p. 24, l. 8-9). Claimant also alleged low back pain at the hearing, relating to his left knee; however, he did not provide any relative timeframe for its onset.

11. Between March 12, 2019 and June 18, 2019, Claimant participated in 26 physical therapy sessions. There are no references in any of the 26 reports from these visits of Claimant alleging hip or back pain. (See Resp. Ex. pp. 179 (3/12/19), 180, (3/19/19), 186 (3/22/19), 187 (3/28/19), 188 (4/2/19), 189 (4/4/19), 195-96 (4/9/19), 197 (4/11/19), 198 (4/16/19), 199 (4/18/19), 200 (4/23/19), 201 (4/25/19), 202 (4/29/19), 211 (5/1/19), 217

(5/7/19), 224 (5/9/19), 225 (5/13/19), 226 (5/16/19), 227 (5/21/19), 228 (5/23/19), 229 (5/28/19), 232 (5/30/19), 257 (6/6/19), 258 (6/11/19), 265 (6/14/19), 266 (6/18/19)).

12. Three different physical therapists provided treatment to Claimant over the aforementioned 26 treatment sessions. The 26 reports contain various notes, including Claimant alleging sleep trouble on March 28, 2019 (Resp. Ex. p. 187), Claimant reporting on April 4, 2019 he tripped on a curb the previous night and twisted his left knee (Id. at p. 189), Claimant reporting on May 23, 2019 his dog recently brushed against his left knee causing him to fall (Id. at p. 228), multiple reports noting Claimant's report that his left knee buckled/gave out, and multiple reports noting the physical therapist observed an antalgic gait.

13. During this same period, Claimant completed and signed Work Injury Symptom Review forms for the physical therapists on April 9, 2019 (Resp. Ex. p. 196), May 7, 2019 (Id. at p. 218) and May 30, 2019 (Id. at p. 233). Each Review form contains pain diagrams. On all pain diagrams, Claimant marked pain or symptoms to the left knee only.

14. In the three months after Dr. Simpson's March 7, 2019 surgery, Claimant returned to Dr. Simpson's office four (4) times to see Kimberly Shenuk, PA-C. None of the four corresponding reports from these visits reference complaints of hip or back pain. (See Resp. Ex. p. 153 (3/8/19), p. 203 (5/1/19), p. 234 (5/31/19), and p. 254 (6/4/19)).

15. In the three months after Dr. Simpson's surgery, PA-C Homberger and Nurse Practitioner (NP) Shannon Christopher from Dr. Kurz's office saw Claimant five times. Claimant only complained of pain to his left knee. None of the five reports from these dates of visit mention hip or back pain. (See Resp. Ex. p. 181 (3/20/19), 213 (5/3/19), 219 (5/9/19), 249 (6/4/19), and 272 (6/28/19)). On June 28, 2019, NP Christopher noted Claimant had difficulty initiating sleep. (Resp. Ex. p. 272 (6/28/19).)

16. Claimant saw PA-C Shenuk, in Dr. Simpson's office on June 6, 2019. She reported, ". . . Brian is still struggling with quite a bit of pain and he feels like the pain is actually worsening. He has good stability on exam and I do feel that this is related to lateral talar [patellar] subluxation, he is on the upper end of normal at 14 mm for his tibial tubercle trochlear groove calculations. I have discussed the case with Dr. Simpson and he has looked at his X-rays. Brian could have a component of femoral anteversion. Dr. Simpson is recommending a second opinion from Dr. Walden to see if he is a candidate for patellar realignment surgery." (Resp. Ex. p. 256).

17. Claimant saw Dr. David Walden on June 13, 2019 and he noted, ". . . I saw Officer [Claimant] in the office today. Unfortunately, he has struggled with regard to pain and episodes of subluxation of his patellofemoral joint following a work-related fall on 12/24/19. Because he is failed to progress, I would recommend an arthroscopic evaluation of the knee, an examination under anesthesia, a likely Fulkerson osteotomv (anterior medial tibial tubercle transfer) and a medial patellofemoral ligament reconstruction. I will discuss the case further with Dr. Simpson as well…" (Resp. Ex. p. 259).

18. Dr. Kurz placed Claimant at MMI on June 25, 2019, declaring that Claimant had

been treated properly per the Division of Workers' Compensation Medical Treatment Guidelines for his right knee contusion and has been objectively returned to his pre-injury baseline.[1] Dr. Kurz did not feel that Claimant's injury qualified for an impairment rating. Nor did he feel that Claimant required medical maintenance for his injury. (Resp. Ex. p. 269). Finally, Dr. Kurz opined no work restrictions were required. (Id.). Claimant would challenge Dr. Kurz' MMI opinion by requesting a Division Independent Medical Examination (DIME).

19. Claimant saw NP Christopher at the Clinic on June 28, 2019. NP Christopher noted, ". . . [Claimant] has trouble climbing stairs and has trouble walking. He is a police officer and cannot perform his normal job duties at this time. He needs a note for work stating he needs to be limited to desk duties." (Resp. Ex. p. 272). It was also noted, "Patient was evaluated in office today for knee pain post knee injury and surgery. His capacity to perform work in his regular line of duty is limited due to knee instability, decreased range of motion activities, [and a] decreased ability to ambulate. Please restrict patient to light work/desk duty. He will be re-evaluated in 2 months." (Id. at 275).

20. Claimant underwent a third surgical opinion, with Dr. Tyler Bron, on September 13, 2019. Dr. Bron reported, ". . . Patient is a very pleasant 33-year-old who prior to his fall in December 2018 was very active and [did] not have knee pain or limitation. Dr. Bron noted that Claimant developed patellar instability after his fall and that this "instability is his major underlying issue and the arthritis within the lateral patellar facet is likely secondary to the instability." Dr. Bron agreed with Dr. Waldman that Claimant required a patellar realignment procedure involving a tibial tubercle osteotomy or a Fulkerson osteotomy. He did not feel that any other procedure(s) would give Claimant significant pain relief, noting further that the osteotomy would both realignment Claimant's tracking and offload the lateral patellar facet. (Resp. Ex. pp. 280, 281).

21. Dr. Timothy Hall performed the requested DIME on September 30, 2019. Dr. Hall noted that Claimant was performing desk duty at the time of the DIME. He also noted that Claimant worked four days on and three days off work. Per Dr. Hall, by the fourth day at work, Claimant would experience more pain, more difficulty walking, and more instability in the knee. (Clmt's. Ex. p. 4). Dr. Hall observed that, ". . . [Claimant] has considerable ongoing functional deficits and pain complaints as described in section B (of his report). Functionally, he has difficulties with weight bearing, prolonged standing or walking, and range of motion. He cannot kneel. He cannot run. He generally does not feel safe particularly in the context of doing his job as a police officer due to his ongoing pain and limitations created by the knee." (Id. at p. 7). Dr. Hall concluded that, ". . . Mr. [Claimant] is not at maximum medical improvement. It is my opinion within a reasonable degree of medical probability it will take a surgery to get him to maximum medical improvement." (Id.)

22. Dr. Walden met with Claimant on November 22, 2019 and reported, ". . . The

[1] The ALJ finds Dr. Kurz' reference to Claimant having sustained a right knee contusion a probable documentation error as the balance of the evidentiary record, including Dr. Kurz' other reports supports that Claimant injured his left, rather than the right knee.

patient is here today stating he still has a great deal of difficulty walking with the knee. The kneecap remains unstable and there is persistent pain. He has persistent night pain. Pain is constant with no relief of his symptoms despite continued exercises from physical therapy and anti-inflammatories. His case has been reopened and he states the city has claim responsibility for this injury…The patient is now gotten a second opinion through CSOG (Colorado Springs Orthopedic Group). Dr. Bron provided the patient with a similar opinion that he would recommend a Fulkerson osteotomy, lateral release, medial patellofemoral ligament reconstruction, similar to what I had recommended previously. The patient then saw Dr. Hall for an IME. The patient is now approved for surgery. We described the surgery to the patient and I went over it again with him. I answered his questions. He understands that there is no cure for arthritis but this may help to unload the joint…" (Resp. Ex. p. 283).

23. Between Dr. Simpson's March 2019 surgery and December 2019, Claimant had three office visits with Dr. Kurz. Claimant only complained of pain in his left knee during each visit. The reports from these visits make no mention of alleged hip or back pain. (See R Ex. p. 190 (4/9/19), 268 (6/25/19), and 289 (12/10/19).) Similarly, between March 20, 2019 and December 10, 2019, Claimant completed and signed six PATIENT FOLLOW-UP VISIT forms from Dr. Kurz's office. Each form included pain diagrams and requested Claimant list the body parts in which he felt pain. On all six forms, Claimant only endorsed pain in his left knee and on all six-pain diagrams; Claimant marked the left knee only. (See Resp. Ex. p. 184 (3/20/19), p. 194 (4/9/19), p. 223 (5/8/19), p. 253 (6/4/19), p. 270 (6/15/19), and p. 293 (12/10/19)). Finally, Claimant saw Dr. Walden or his PA Rachel Cerchia on occasion between March 2019 and January 6, 2020 during which he did not report hip or back pain. (See Resp. Ex. p. 259 (6/13/19), p. 282 (11/22/19), and p. 296 (1/6/2020)).

24. On January 15, 2020, Dr. Walden performed a second surgery directed to the left knee, which included a Fulkerson osteotomy, a left knee medial patellofemoral ligament reconstruction, a left knee lateral release, and a left knee arthroscopic chondroplasty of the lateral facet of patella. (Resp. Ex. p. 302-306).

25. On February 13, 2020 Dr. Walden recommended continued use of a knee brace in addition to starting physical therapy. (Resp. Ex. p. 320).

26. Claimant participated in physical therapy from March, 2020 through September, 2020. (Resp. Ex. CCCC through HHHHHH). On March 13, 2020, a physical therapist reported, ". . . Good quad tone with weight shift with brace on, will unlock brace as instructed by MD after visit." (Id. at 338). On March 17, 2020, Dr. Walden's PA, Rachel Cerchia, noted, ". . . Aggressive physical therapy is indicated. His brace was opened up to match his motion at 60 degrees today and he is full weight bearing as tolerated with discharge of the crutches within the next week. Continue physical therapy is indicated and a prescription was given to him…" (Id. at 340).

27. On April 27, 2020, a therapist noted, ". . . Pt reports that he was walking on Friday and his knee gave out on him and he almost passed out from the pain." (Resp. Ex. TTTT, p. 381). On May 4, 2020, a therapist noted, "…Pt reports knee continues to be pretty sore. He has continued to have some giving out episodes. Stairs still challenging due to pain and weakness." (Resp. Ex. VVVV, p. 385).

28. Between March 10, 2020 and July 17, 2020, Claimant participated in 40 physical therapy sessions with four (4) different therapists. The documentary record contains 36 therapy reports for the aforementioned period. There are no references in any of these 36 reports of Claimant alleging hip or back pain to the therapist. (*See* Resp. Ex. pp. 334 (3/10/2020), 338, (3/13/2020), 349 (3/20/2020), 351 (3/27/2020), 353 (3/31/2020), 359 (4/3/2020), 361 (4/7/2020), 363 (4/10/2020), 365 (4/14/2020), 372 (4/16/2020), 377 (4/20/2020), 379 (4/22/2020), 381 (4/27/2020), 383 (4/29/2020), 385 (5/4/2020), 392 (5/6/2020), 394 (5/11/2020), 396 (5/13/2020), 405 (5/19/2020), 408 (5/22/2020), 411 (5/26/2020), 414 (5/29/2020), 417 (6/2/2020), 420 (6/5/2020), 428 (6/9/2020), 430 (6/12/2020), 437 (6/16/2020), 440 (6/19/2020), 443 (6/23/2020), 448 (6/26/2020), 451 (6/29/2020), 454 (7/1/2020), 457 (7/7/2020), 460 (7/10/2020), 468 (7/14/2020), 470 (7/17/2020)). While there are no references to hip or back pain in the aforementioned records, the reports support a finding that Claimant began experiencing increased knee pain after trying to increase his activity level. Indeed, on May 26, 2020 Claimant reported he walked about a mile the previous day. (Resp. Ex. p. 411-13). On May 29, 2020, Claimant reported he was sore from hiking the previous day. (Resp. Ex. p. 414-16). On June 19, 2020, Claimant reported he was sore from hiking with his dog the previous day (Resp. Ex. p. 440-42). On June 23, 2020, Claimant reported he called out of work because of increased soreness after pushing his activity over the weekend walking his dog and climbing stairs (Resp. Ex. p. 443-45). On June 29, 2020, Claimant reported having hiked about 2 miles (Resp. Ex. p. 451-53). On July 14, 2020, Claimant was limping due to increased pain (Resp. Ex. p. 468-69), and on July 21, 2020, Claimant reported he was taking one day off work per week due to knee pain (Resp. Ex. p. 472-75).

29. On May 5, 2020, Dr. Walden noted, ". . . Positive for gait problem. Negative for arthralgias, back pain, joint swelling and myalgias." (Resp. Ex. WWWW, p. 388).

30. On May 19, 2020, Dr. Kurz prescribed Temazepam for Claimant's sleep problems resulting from post-operative knee pain. (Resp. Ex. AAAAA, pp. 400-404).

31. Dr. Walden met with Claimant on June 9, 2020 and noted, ". . . Reports today that he has constant pain in the knee that he would rate approximately 4-5 out of 10. He does feel that his mobility and strength have improved but still lacking. He feels he was making good progress in physical therapy but now feels that he has plateaued. He still is unable to kneel on his knee and stairs continue to be an issue. He also reports that even when wearing a brace he feels some instability in the knee and that his leg gives out every few days." Dr. Walden recommended a patellar stabilizing brace and visco-supplementation injections. (Resp. Ex. p. 424).

32. On June 16, 2020, Claimant reported to Dr. Kurz that his sleep issues were slightly better with Temazepam. Claimant noted Temazepam on his medication list along with Cyclobenzaprine, Tramadol and ibuprofen on the Patient Follow-up Visit form for June 16, 2016. (See Resp. Ex. p. 403.) He also reported that left knee pain was impairing his ability to his physical therapist on September 16, 2020, September 17, 2020, September 21, 2020 and September 23, 2020.

33. A repeat MRI of the left knee was performed on June 23, 2020. (Resp. Ex. p. 446). Six days later a physical therapist noted, “Pt reports that he did about 2 miles hiking on Friday. He has been doing more stairs with continued pain. He cannot kneel on L knee due to pain with the pressure. Is able to get into kneeling position but cannot tolerate the position.” (Id. at 451).

34. On July 14, 2020 Dr. Walden reviewed the repeat MRI of the left knee taken June 23, 2020. He noted that the imaging demonstrated no acute changes, but added “. . . there is chondral damage noted on the lateral facet of the patella…” (Resp. Ex. p. 465). Dr. Walden reported, “. . . [Claimant] continues to report that he has constant pain in the knee. Unfortunately, he states that his pain has been increasing and is now worse than at his last office visit. He reports that he was instructed to increase his exercise and physical therapy which [he] feels has aggravated his symptoms. The knee is now swollen and stiff. Stairs and kneeling continue to be an issue for him as well…” Dr. Walden injected the knee. (Id. at p. 463). On the same day, a physical therapist noted, “Pt states 6/10, limping due to increased pain, due increasing ADL’s, i.e. trying reciprocal stairs.” (Id. at p. 468).

35. PA Cerchia performed Orthovisc injections on August 10, 17, and September 14, 2020. (Resp. Ex. pp. 476, 480, and 483 respectively). On September 15, 2020, Dr. Kurz noted Claimant reported “. . . constant L knee pain, 5/10. He feels like he is doing a lot of work to try & improve. He still reports struggling w/pain & instability esp. w/stairs. He struggles w/kneeling due to pain. He saw Dr. Walden and has completed the Synvisc injections, which reportedly did not provide any lasting benefit . . .” (Id. at p. 486). Dr. Kurz opined Claimant was able to return to work without restrictions. (Id. at p. 487).

36. On September 16, 2020, a physical therapist noted, “. . . [Claimant’s] gait is very rigid with limited hip mobility and is overusing hip mobility instead of proper sequencing for heel strike . . . left hip restricted in all planes of movement only grossly checked . . . Gait pattern and observation of tight mm in hips with restricted left LE extension of hip with gait pattern. (Resp. Ex. p. 491). She continued, “Patient has an extensive exercise program for his left knee, however has not addressed reduced hip mobility that may be causing part of his left knee issues . . .” (Id. at p. 492).

37. Claimant was seen at the City Employee Medical Clinic on September 17, 2020. Upon examination, NP Sullivan established that Claimant’s left knee/leg strength were diminished in flexion and extension against resistance. She found “[n]ormal hip ROM and strength.” There is no reference to Claimant reporting hip pain during this examination. (Resp. Ex. p. 495). NP Sullivan reported; “Will request records from Occ Health. Regardless of cause, patient is not safe to return to full duty as a Police Officer at this time. I will write note for patient to remain on light duty for 2 weeks, but I recommend patient seek expert opinion to find long-term solution for pain and decreased function of knee. Referral placed back to Dr. Walden, as he is familiar with case; however consider getting an additional opinion by Ortho. Referrals: Orthopedic Surgery. Evaluate and treat.” (Resp. Ex. p. 495).

38. On September 17, 2020 a physical therapist reported, “ASSESSMENT Loss of medial left hip rotation, unable to step down 2” step and grossly uneven in WB coming from sit to stand to sit. This presentation of basic functions, pain inhibition and limited

range of left knee and hip does not match with functions needed to be a police officer…" (Resp. Ex. p. 499). Four days later she noted, "Patient Is not noting any changes from the last couple of PT treatments in the pain noted in his left knee. He has a good exercise program for the knee, but the hip and ankle may be inhibiting normal gait and activity. Patient may benefit from biofeedback that may alter pain symptoms." (Id. at p. 504).

39. On September 23, 2020, Claimant completed and signed a Work Injury Symptom Review form for the physical therapist. On the pain diagrams, Claimant only marked pain or symptoms in the left knee. Claimant did not note any sleep problems. (Resp. Ex. p. 507).

40. Dr. Kurz placed Claimant at MMI with no work restrictions and no maintenance care on September 29, 2020. (Resp. Ex. pp. 508-513).

41. Dr. Hall performed a follow-up DIME on December 29, 2020. He noted, " . . . I discussed with the patient the surgery, therapies, and his present situation. Unfortunately, other than gaining minimal range of motion, he still has considerable pain. He has pain all the time in the knee. He has significant limitations in standing, walking, stair climbing, and uneven surfaces. He might at times be able to walk for an hour or so as long as it is a flat surface, but generally, he is limited. He cannot run, jump, squat, or kneel. He has no pain outside of the knee. Most of the pain is under the patella." (Resp. Ex. p. 525). Dr. Hall agreed Claimant had reached MMI, and he issued a 23% lower extremity rating, which converts to a 9% whole-person rating. (Id. at p. 526). Dr. Hall issued work restrictions to include, no walking or standing more than 30 minutes during any one-hour period, no walking on uneven surfaces, no stair or ladder activities, no squatting and no running. (Id.) Concerning maintenance care, Dr. Hall recommended medications including cyclobenzaprine. (Id.) Respondents filed a FAL consistent with Dr. Hall's opinions on February 17, 2021. (Id. at p. 516).

42. Claimant was evaluated by several physicians in connection with his claim for
43. FPPA (Fire and Police Pension Association) benefits.[2] On October 6, 2020, Claimant was evaluated by Dr. Phillip Stull, who reported:

> The patient reports limited to no benefit from the treatments that he has regarding his left knee symptoms. He reports persistent pain, some limitation in motion and generally poor function in his knee. He reports that he cannot run, jump, kneel, crawl, or squat. He reports he cannot participate in vigorous recreation. He reports he has been unable to return to regular duty as a police officer. He reports he has been working light duty, a desk job, since the left knee was injured in 2018. (Clmt's Ex. p. 48).

[2] Claimant testified he was seen "in-person" for some of the evaluations, and by video for others. He could not recall "which was which," but based on the written reports it appears Dr. Ramaswamy saw claimant either in-person or by video; that Dr. Arthur saw Claimant in-person; that Dr. Rokicki saw Clamant by video; and that Dr. Stull saw Claimant in-person. The ALJ places no particular importance on whether Claimant was examined in-person or by video.

On physical examination, Dr. Stull noted, ". . . Quadriceps and hamstring strength are 5/5. He walks with mild antalgia in his gait favoring the left side." (Id.) Dr. Stull opined Claimant "to be not disabled" as a result of his injury. (Id. at p. 49).

44. Claimant was evaluated by Dr. Jeffery Arthur on November 12, 2020. Dr. Arthur documented:

> . . . I do feel that appropriate treatments have been performed and that he really has exhausted all conservative measures up to this point. He is wanting to get back to full duty, if he could physically. He understands, and is in agreement, that this most likely is not a possibility. I do not think there is any other treatment modalities that would expedite his recovery or allow him to return to full duty as a police officer. He is continuing light duty at this time. There is a possibility this will not be able to be maintained into the new year. I feel he has reached maximum medical improvement at this time. If he had a job that did not require the strenuous activities that this job requires, he could return to full duty. However, as a police officer I do not feel it is safe for him or for his peers to return to work under his current state. (Clmt's Ex. p. 28).

Dr. Arthur concluded Claimant was permanently occupationally disabled. (Id. at p. 26).

45. Robert Rokicki, also evaluated Claimant on November 24, 2020. Dr. Rokicki noted:

> . . . The patient's chief complaint is left knee pain which is at a level of 5/10 nonstop 24 hours a day. The left knee pain increases to 8 or 9/10 when he uses the knee in activities such as kneeling, squatting, or stairclimbing. Because of chronic knee pain he does not sleep well and is up approximately six times a night. Often, he has to take the next day off because of lack of sleep and pain. Because of left knee pain he is incapable of running, jogging, squatting, kneeling, and stairclimbing. Indeed, he has to take stairs one at a time in a step-to type of gait. There is also a sense of giving way in the left knee which occasionally lead to falls. He has tried a wide variety of knee braces including specific patellar support sleeves which minimally improve his symptomatology. He has tried a wide variety of medications including Cyclobenzaprine which he takes at night which only helps a little. He has tried some occasional Ibuprofen but because of GI upset had to be placed on antacids recently. He takes Tramadol occasionally for very severe pain, at most every other day. . . (Clmt's Ex. p. 32)

Dr. Rokicki concluded:

> . . . His patellar chondromalacia is only grade 2 and is probably not the source of pain. His patellofemoral arthritis is not consistent with the severity of his current pain complaints. It is grade 5/10 at all times (even at rest) and 9/10 with any activity. It awakens him up to 6 times a night. It causes reflex

> giving way leading to falls. It was unresponsive to steroid injection, orthovisc injection, and two surgical procedures that theoretically should have corrected structural malalignment of the patello-femoral joint. It is minimally affected by oral pain medications. It is unresponsive to any form of bracing including specific patellar tracking sleeves. The pain is more severe and debilitating than would be expected from patellofemoral arthritis, or patellar tracking issues. I believe his current pain complaints may be related to "patellofemoral pain syndrome" in which CRPS may be playing a rote. Isolated CRPS of the patella does exist and is difficult to diagnoses and treat. This man is only 34 years old and has an incapacitating degree of chronic pain. Having to face the next 50 or so years of his life like this is understandably upsetting. He appears to have reached a plateau. Although it may be a long shot, perhaps testing with thermogram, sweat test, bone scan, or even sympathetic block might be considered, but I would leave that to the judgement of his treating physician.
>
> He is unable to return to his normal employment as a police officer because he cannot run, jog, jump, squat, kneel, climb stairs, or perform physical arrests. (Clmt's Ex. pp. 41-42).

Dr. Rokicki found Claimant permanently occupationally disabled. (Id. at p. 31).

46. On December 9, 2020, Dr. Rokicki composed a supplemental report, wherein he noted he reviewed a CD of left knee x-rays taken November 5, 2020. Dr. Rokicki noted the "findings on the x-rays indicate that Mr. [Claimant] has had a successful Fulkerson osteotomy with excellent healing of the tibial tubercle osteotomy site, and there appears to be no loosening of the screws. His joint spaces are well maintained, with no obvious cartilage space narrowing. Likewise, the patellar views show good preservation of the patellofemoral cartilage space." Dr. Rokicki stated, "These x-rays are consistent with my report of November 24, 2020, and they do not change it in any way." (C Ex. p. 43).

47. On December 31, 2020 Dr. Annu Ramaswamy noted:

> . . . Mr. [Claimant] states that range of motion in the knee improved but he still noted limited progress. He still noted instability and increased pain. He indicates that he is unable to kneel or squat without intense pain. He has trouble ascending and descending the stairs without holding onto the railing. He is unable to jog, run or walk without assistance of a cane, as all of these activities will cause increased pain or instability in the knee. Mr. [Claimant] states that given the chronic pain, he notes a lack of sleep. He has missed multiple days of work due to increased pain." (Clmt's Ex. p. 13).

48. Consistent with the aforementioned reports of Drs. Arthur and Rokicki, Claimant testified he was awarded FPPA benefits based on a permanent occupational disability.

49. Dr. Mark Failinger conducted a records review at Respondent's request. Following

this review, Dr. Failinger authored a report dated June 2, 2021. (Resp. Ex. A). Dr. Failinger opined that Claimant's left lower extremity rating should not be converted. He stated, "There does not appear to be any adjacent joint nor distant musculoskeletal symptoms or dysfunction in either the ipsilateral hip nor the contralateral hip, nor the contralateral lower extremity. There have been no complaints noted in the spine due to possible secondary compensatory development of discomfort. Given such, it does not appear reasonable to convert the patient's left knee impairment to the whole person after careful review of the records." (Resp. Ex. p. 18).

50. Dr. Failinger would subsequently testify by deposition on August 6, 2021. At his deposition, Dr. Failinger clarified his opinion on conversion of the knee rating to a whole person rating. He testified that the only mention of other involvement beyond the knee was restricted hip motion documented in the late physical therapy reports. (Failinger Depo. pp. 13:20 – 14:16.) He explained that any restriction in motion was due to the knee and did not indicate any structural impairment beyond the knee; rather, should Claimant strengthen his quadriceps muscles sufficiently any hip tightness and antalgic gait would resolve. (Id. at p. 14:19-25). Thus, he concluded that Claimant's impairment was localized to the knee.

51. On cross-examination, Dr. Failinger further clarified that the last four physical therapy reports (*See* Resp. Ex. pp. 491 (9/16/2020), 499 (9/17/2020), 503 (9/21/2020), and 506 (9/23/2020)) showed restricted motion in the hip, but did not show that the hip itself was significantly painful. (Failinger Depo. p. 19:22 – 20:25). Claimant's pain diagrams support the lack of significant pain complaints around this same time. (See Resp. Ex. pp. 507 (9/23/2020) & 515 (9/29/2020). Dr. Failinger further explained that the restricted motion, at least based on the physical therapy reports, was due to Claimant tightening up the left lower extremity because his body is not trusting the left quadriceps muscle. He reiterated that this would not be a basis for conversion in this case.

52. Claimant testified he experienced no relief resulting from the first knee surgery, and only "minimal" relief following the second surgery. After the injury, Claimant returned to "light duty." However, due to Employer's concerns about his ability to safely perform his job, he was never allowed to return to regular duty. According to Claimant, he had to "medically retire" due to his permanent occupational disability in January 2021. He had hoped to continue working as a Patrol Officer but his physical restrictions precluded this. Claimant now works as an Analyst for the police department's Vice, Narcotics and Intelligence unit. This is a "desk job" with none of the physical requirements associated with his prior patrol position.

53. Claimant testified that he continues to experience impaired sleep and symptoms in his left knee. According to Claimant, he wakes up about "a half a dozen times" every night due to knee and hip pain. Claimant testified his knee "gives out" and he has fallen down on "numerous, numerous occasions."

54. Claimant testified that he remains impaired and that his ability to complete everyday activities have been affected by his injury and ongoing symptoms. He explained that he has trouble carrying a laundry basket up the stairs and that it is difficult for him to

complete yardwork and daily household upkeep. Claimant testified that he had to purchase a snow blower because he was unable to shovel snow due to the injury. Moreover, Claimant testified that he has had to forego and completely cease some recreational pursuits, including weightlifting, hiking and mountain climbing. Claimant used to enjoy hunting prior to his injury; however, he testified that he is unable to hunt now because he cannot hike into the backcountry and could not carry an animal out if his hunt was successful.

55. Claimant testified that he began experiencing left hip pain shortly after his first surgery, likely due to his documented altered gait. Claimant testified that he limps as a result of his injury, and experiences low back pain from the limp. The documentary record contains references to limping and Claimant having an antalgic (abnormal) gait pattern. Claimant attributes his low back and hip pain to his altered gait, and explained it feels like "everything has been thrown out of whack." Claimant is able to differentiate between his knee, hip and back pain.

56. The ALJ credits the testimony of Claimant and the opinions of Drs. Hall, Arthur and Rokicki to find that he has established, by a preponderance of the evidence, that he has sustained functional impairment that extends beyond his lower extremity. While the documentary evidence does not specifically reference complaints of back pain and only mentions hip pain many weeks after the index injury in this case, a reasonable inference can be drawn from the evidence that Claimant's altered gait ultimately lead to hip and back pain causing functional impairment beyond the knee. Indeed, Dr. Arthur and Rokicki both concluded that Claimant was occupationally disabled and the record supports a finding that Claimant is unable to meet the full range of his personal and social demands. The contrary opinions of Dr. Stull and Failinger are unconvincing.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201. As found, the medical record generally supports the testimony of Claimant regarding his hip pain and altered gait. It is plausible to conclude that that Claimant's knee/hip pain has altered his gait pattern and that this has resulted in back pain, which is limiting Claimant's functional capacity beyond that caused solely by his knee injury. Even if one were to disregard Claimant's assertions of low back pain, the opinions of Drs. Hall, Arthur and Rokicki support a conclusion that Claimant's knee injury alone has caused functional impairment beyond the knee. Indeed, Claimant cannot kneel or squat without intense pain. He has trouble ascending and descending the stairs, he is unable to jog, run or walk effectively and has trouble sleeping, all of which has limited his capacity to meet his personal, social and occupational demands.

Conversion

D. When a claimant's injury is listed on the schedule of disabilities, the award for that injury is limited to a scheduled disability award. *Section 8-42-107(1)(a), C.R.S*. However, a claimant may establish that his/her injury has resulted in "functional impairment" beyond the schedule enumerated in C.R.S. §8-42-107(2)(a); thus, entitling him/her to "conversion" of the scheduled impairment to impairment of the whole person. This is true because the term "injury" as used in § 8-42-107(1)(a)-(b), C.R.S., refers to the part or parts of the body which have been impaired or disabled, not the situs of the injury itself or the medical reason for the ultimate loss. *Walker v. Jim Fucco Motor Co,* 942 P.2d 1390 (Colo. App. 1997); *see also Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996). Thus, while ratings issued under the AMA Guides are relevant to determining the issue, they are not decisive as a matter of law. *Strauch v. PSL Swedish Healthcare System, supra*. Whether a claimant has sustained a scheduled injury within the meaning of § 8-42-107(2), C.R.S. or a whole person impairment compensable under § 8-42-107(8), C.R.S. is a factual question for the ALJ and depends upon the particular circumstances of the individual case. *Walker v. Jim Fucco Motor Co, supra*. In the case of a knee injury, the question is whether the claimant has sustained functional impairment beyond the leg at the hip. Section 8-42-107(2) (w).

E. "Functional impairment" is distinct from physical (medical) impairment under the AMA Guidelines and as noted above, the site of functional impairment is not necessarily the site of the injury itself. The site of functional impairment is that part of the body which has been impaired or *disabled*. *Strauch, supra*. Physical impairment relates to an individual's health status as assessed by medical means. Disability or functional impairment, on the other hand, pertains to a person's ability to meet personal, social, or occupational demands, and is assessed by non-medical means. Consequently, physical impairment may or may not cause "functional impairment" or disability. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office, 984 P.2d 656, 658 (Colo. App. 1998).* Physical impairment becomes a disability only when the medical condition limits the claimant's capacity to meet the demands of life's activities. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office, supra at 658.* Furthermore, as pointed out by Claimant's counsel, functional impairment need not take any particular form. *See Nichols v. LaFarge Construction, W.C. No. 4-743-367 (October 7, 2009); Aligaze v. Colorado Cab Co., W.C. No. 4-705-940 (April 29, 2009); Martinez v. Alberston's LLC, W.C. No. 4-692-947 (June 30, 2008*). Consequently, "referred pain from the primary situs of the industrial injury may establish proof of functional impairment to the whole person." *Hernandez v. Photronics, Inc., W.C. No. 4-390-943 (July 8, 2005). Nonetheless, s*ymptoms of pain do not automatically rise to the level of a functional impairment. To the contrary, the undersigned concludes that there must be evidence that such pain limits or interferes with Claimant's ability to use a portion of her body to be considered functional impairment. See *Mader v. Popejoy Construction Co., Inc.,* W.C. No. 4-198-489 (August 9, 1996), *aff'd Popejoy Construction Co., Inc.,* (Colo. App. No. 96CA1508, February 13, 1997)(not selected for publication)(claimant sustained functional impairment of the whole person where back pain impaired use of arm). Thus, i*n order to determine whether permanent disability should be compensated as physical impairment on the schedule or as functional impairment as a whole person, the issue is not whether Claimant has pain, but whether the injury and the associated pain caused thereby has impacted part of Claimant's body which limits her "capacity to meet personal, social and occupational demands." Askew v. Industrial Claim Appeals Office, 927 P.2d 1333 (Colo. 1996).*

F. Based on the evidence presented as a whole, the ALJ concludes that conversion of Claimant's scheduled lower extremity impairment to impairment of the whole person is warranted. Here, the record supports a conclusion that Claimant's knee injury has led to an altered gait, which in turn has caused documented hip and probable low back pain. Combined Claimant's altered gait and persistent knee, hip and low back pain have caused permanent occupational disability. He is incapable of activities involving running, jogging, squatting, kneeling, and stairclimbing, which Claimant credibly testified limits and interferes with his ability to use his legs and back to meet his personal and social demands. While a knee injury may not typically be susceptible to conversion, the impact that this injury has had on Claimant's overall ability to function renders conversion appropriate in this case.

ORDER

It is therefore ordered that:

1. Claimant’s request for conversion of his 23% scheduled right knee impairment to the corresponding 9% whole person impairment is GRANTED. Permanent partial disability benefits shall be paid in accordance with C.R.S. § 8-42-107(8) at 9% impairment of the whole person.

2. All matters not determined herein, including disfigurement are reserved for future determination.

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the surgery proposed by Dr. Larsen to his right wrist is reasonable and necessary to cure and alleviate him from the effects of his admitted work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background / Initial Treatment

1. Claimant sustained an admitted injury to his right wrist on January 29, 2020 when he fell off of a ladder while clearing icicles from a building. The ladder shifted to one side, and he fell to his right to the ground. At hearing, he estimated that he fell from 7 to 9 feet.

2. Claimant began treating through San Luis Valley Health ("SLV Health") – Occupational Medicine. (Ex. 1; Ex. C). Claimant reported at his first visit that he fell approximately 8 feet off a ladder onto his right side, more specifically his right wrist. (Ex. C, p. 13). Claimant reported that he thought his wrist was bent in a flexed position underneath him. "He had some immediate pain and developed some fair significant swelling within a short period amount of time." *Id.* A February 14, 2020 MRI of the left wrist showed the central disc was irregular with intermediate signal likely representing an undersurface partial-thickness tear." (Ex. 1, p. 2).

3. Claimant underwent an EMG with Dr. Dwight Caughfield on May 19, 2020 to further evaluate Claimant's ongoing symptoms. (Ex. 2). Claimant reported that he fell at work on his flexed wrist and that he has had persistent pain in the right wrist, with tingling in all digits and his palm. Symptoms increased with use. *Id* at 34. The EMG demonstrated right ulnar neuropathy at the elbow and right median neuropathy at the wrist. *Id.*

First Surgery by Dr. Larsen

4. Claimant was seen by orthopedist Karl Larsen, MD, for evaluation of his right wrist on May 27, 2020. (Ex. 3, p. 39). Dr. Larsen opined that Claimant had developed carpal tunnel and cubital tunnel syndrome as a result of the traumatic fall. *Id.* He felt a carpal and cubital tunnel decompression on the right side would be a reasonable option. While performing this surgery, he would want to arthroscopically evaluate the wrist and either perform a TFC debridement or repair, if indicated. He further diagnosed Claimant as likely having a triquetral impingement ligament tear ("TILT") lesion. Dr. Larsen also recommended an ulnar capsulotomy to relieve pressure in this area and reduce his pain. *Id.*

5. Dr. Larsen performed surgery on Claimant's right wrist on June 23, 2020. (Ex. 3, pp. 44-46). The diagnoses both pre- and post-operatively were right carpal tunnel syndrome, cubital tunnel syndrome, wrist triangular fibrocartilage tear, wrist triquetral impingement ligament tear. *Id.* at 44. He performed a carpal tunnel release, a minimal incision ulnar neurolysis at the elbow, an arthroscopy of the wrist with extensive debridement and repair of the triangular fibrocartilage and ulnar capsulotomy for the triquetral impingement ligament tear. *Id.*

6. Claimant attended his first follow-up with Dr. Larsen on July 8, 2020. He was no longer experiencing any numbness or tingling, and his pain was controlled at the time. *Id* at 47. There was, however, pain with any attempted forearm rotation, so that axis was not stressed further. *Id.*

7. Claimant had the long arm cast removed on August 10, 2020. *Id* at 48. He was cautious to use his arm because it was "still quite painful for him." *Id.* Claimant felt as if he was having too much pain still to begin physical therapy, nor did he feel ready to be placed into a brace. Claimant was instead placed into a short arm cast for another month. *Id.*

8. On September 4, 2020, Claimant reported persistent ulnar-sided wrist pain. Ex. 3, p. 50). Examination suggested that the TILT procedure was most likely successful and that the pain was likely coming from the DRUJ. *Id.* Dr. Larsen indicated in his report these conditions can remain painful for up to a year. He therefore recommended ongoing conservative care and management, since Claimant was only 2½ months out from surgery. *Id.*

9. On October 2, 2020, Claimant indicated his numbness and tingling that had somewhat returned was now completely resolved, and the only problem remaining was the persistent ulnar sided wrist pain. (Ex. 3, p. 51). Claimant was given a "Wrist Widget strap" to try to stabilize his ulna in attempt to relieve the pain. *Id.* Dr. Larsen continued to recommend waiting on any potential surgical procedure.

10. Claimant followed up with Dr. Larsen's office on December 2, 2020. (Ex. 3, p. 52). "He continues to have ulnar-sided wrist pain and feels *he is now restricted in his daily activities and his pain has remained persistent*." Physical examination documented *palpable subluxation of the ECU tendon over the ulnar head. Id.* (emphasis added). At this appointment, Claimant was examined by both Dr. Larsen and his PA, Stephanie Noble. It was recommended that he receive a cortisone injection into his ECU tendon sheath. *Id.*

11. On January 4, 2021, Claimant stated that the injection provided no significant benefit. (Ex. 3, p. 54). Claimant continued to have activity-limiting pain, noticeable with grip, ulnar deviation, and twisting activities. *Id.* Dr. Larsen noted that Claimant's DRUJ felt stable, but it remained painful. Upon physical exam, Dr. Larsen noted:

> On examination, his wounds are benign. He has normal sensation in the dorsal sensory branch of ulnar nerve distribution, pads of the digit. His DRUJ is stable, but painful to stress. He is a little bit tender over his suture now from the TFC repair. He is very tender over the fovea and has marked

> pain with ulnocarpal grinding. The LT interval is stable. Watson’s maneuver is stable with no pain. (Ex. D, p. 72).

Second Surgery Recommended by Dr. Larsen

12. Dr. Larsen ultimately opined it made the most sense to perform a second surgery. Dr. Larsen’s procedure in the past for patients with persistent pain following TFC repairs is to perform an ulnar shortening osteotomy to “serve to unload the ulnar side of the wrist and tension the repair even more. In the same sitting, I would consider an arthroscopy to evaluate the TFC repair it is certainly possible that it has not healed or he has persistent laxity and while I think the exam points away from that, it is certainly advantageous to look while we are there and have the option available to revise the TFC repair in the same sitting as the ulnar shortening.” (Ex. 3, p. 54). Claimant was interested in trying the procedure since everything else to date had failed to relieve his pain. Dr. Larsen requested authorization to perform a “Right wrist scope, possible revision TFC repair, ulna shortening osteotomy”. (Ex. 3, p. 57). This was denied by Respondents.

13. Surveillance video of Claimant had apparently been obtained at some point that showed him using his right wrist. [This video was not tendered as a hearing exhibit by either party, nor was any accompanying narrative report; ergo, the ALJ has only seen second-hand references to its existence]. Neither Dr. Larsen nor (Respondent’s IME) Dr. Rovak expressed concern with what they saw on this video. Both physicians agree Claimant’s problem is not his initial ability to use his wrist at the start of a task, but the pain that follows shortly thereafter, thus preventing further use of the wrist.

IME by Dr. Primack

14. Respondents asked Scott Primack, D.O. to examine Claimant, review the medical records, review the aforementioned surveillance video, and opine whether the second surgery proposed by Dr. Larsen was reasonable and necessary for Claimant’s condition. Dr. Primack saw Claimant on March 1, 2021, and agreed with Dr. Rovak’s conclusion and opinion. Dr. Primack concluded:

    > Based upon the history, clinical examination, and the patient's high level of functioning, I do not feel as though the wrist scope, revision of the TFCC, ulnar shortening osteotomy, is medically reasonable or necessary to treat his condition. The goal for any surgical intervention such as this is to optimize the patient's functioning. The video surveillance does demonstrate excellent functioning. The patient was not utilizing his WristWidget or a brace. I do believe an ulnar shortening otectomy is a large procedure. It is not going to significantly alter his overall level of physical functioning given today's data. I also would not do any type of debridement to the ECU tendon.” (Ex. B, pp. 11, 12).

    Dr. Primack believed claimant was at MMI, with permanent right wrist impairment, for his injury covered by this claim. *Id.* Respondents thus continued to deny authorization of the second surgery proposed by Dr. Larsen.

IME by Dr. Rovak

15. Dr. Jason Rovak, MD, of Hand Surgery Associates, P.C. also performed an IME of Claimant for Respondents, and authored a report dated June 10, 2021. (Ex. 6; Ex. A). Claimant reported to Dr. Rovak that his issues with numbness and tingling have resolved; however, "he reports that he can use his wrist, but it *swells around the ulnar head." Id at 67.* (emphasis added). He reported a constant throbbing and aching that worsens with use. Voltarin gel was of minimal help; ice gave some relief. At rest, pain was reported as 3/10, but 5-6/10 when it flares up. Physical examination showed ECU synergy testing caused discomfort on the ulnar side of the wrist, as well as passive ulnar deviation. Dr. Rovak did not note any DRUJ laxity. Dr. Rovak also noted that Claimant's x-rays showed his ulna is congenitally 3mm negative. *Id.* at 68.

16. Dr. Rovak opined that Claimant's pain "probably" had "an element of TFCC pathology." *Id* at 68. He was not confident this would be the source of "all of the discomfort" though. *Id.* He opined that Claimant's symptoms were work related. *Id.* at 69. "While I feel that the pain is causally related to his injury, I do not think this surgery has much chance of eliminating his discomfort." *Id.*

17. Dr. Rovak noted Claimant's MRI arthrogram, "really did not show major TFCC pathology." While during the surgery Dr. Larsen noted, "that there was a fair bit of synovitis, but repairing a TFCC in this setting I have generally found to lead to fairly unsatisfactory results including stiffness and continued discomfort." Dr. Rovak also stated Claimant did not have DRUJ [Distal Radial Ulnar Joint] laxity, and thus, "[T]here is not a structural issue with the TFCC so I think it is fairly unlikely that is what is causing the discomfort." (Ex. A, pp. 1, 2)

18. Dr. Rovak opined that Claimant's discomfort was not coming from the TFCC. He wrote, "I think it is reasonably unlikely that revising the TFCC repair with a stable DRUJ is going to be the thing that makes this patient's pain go away. Along those lines, an ulnar shortening osteotomy is a fairly large procedure, and I think it has minimal chance of success in this case." He then stated: "it is fairly unlikely that further ulnar shortening is necessarily going to be the thing that improves his pain." Dr. Rovak recommended the denial of the surgery proposed by Dr. Larsen, as he thought that surgery was not reasonable or necessary *Id.* Respondents therefore denied the surgery's authorization.

Dr. Larsen testifies by Deposition

19. Dr. Karl Larsen testified via deposition on August 2, 2021. Dr. Larsen testified that he recommended the second surgery on Claimant because of ongoing pain that was limiting Claimant's function. (Larsen Depo., pp. 7, 8). There were two components to the proposed surgery: Dr. Larsen would look at his previous TFCC repair for possible laxity *and* perform an ulna shortening osteotomy. (Larsen Depo., p. 8). As he previously explained in his clinical note, although his exam pointed away from ongoing laxity, the problem certainly could still be ongoing laxity, or that it simply did not heal properly. Dr. Larsen explained that the ulna is the small finger side forearm bone and is what the TFCC

attaches to. The procedure entails cutting away millimeters of the ulna to make it shorter and provide even more tension through the cartilage. (Larsen Depo., p. 8).

20. Dr. Larsen elaborated on the difficulty of assessing laxity in a case such as Claimant's: "It's kind of a subjective thing. And when it's grossly unstable, it's pretty obvious. But when it's [subtly] unstable, it's really hard to discern." *Id* at 17, 18. So, despite the lack of strong clinical findings, Dr. Larsen continues to have "a fairly reasonable degree of success" on other patients with similar conditions that he is recommending for Claimant.

21. Dr. Larsen felt the procedures were 'more likely than not' to help relieve Claimant of the effects of the injury. *Id* at 18. In terms of risk, the biggest concern for him, aside from the inherent risks with any surgery, was that "we could all of this and not satisfactorily relieve his pain." *Id* at 19. He felt clarified that there is a 5/10 chance of an unfavorable or unimproved outcome after surgery. *Id* at 28. Later, he defined a successful surgery in this case:

> I think a successful surgery would be that the patient reporting less pain as an ultimate outcome, or a home run would be becoming pain free. I don't know…if that's realistic, but…I would love that….And then as for reporting that they're able to be more active, more physically active, more work active. *Id* at 31.

22. When asked about more conservative alternatives to improve function, he stated:

> Yeah, ….if looking in terms of what's available to apply to it, right, therapy, medications, injections, time, not really. You know, I think taking chronic pain medications for discomfort is an option, but I don't know that that necessarily results in a functional improvement.
>
> We've tried some injections that were not of benefit, so I think that's not the way we work. I don't think additional therapy is going to work, where he did a very long period of therapy afterwards. Id at 31, 32.

23. One of Dr. Rovak's reservations, as expressed in his report, regarding the ulna shortening is that Claimant is already 3mm ulna negative, yet there was not ulnocarpal impact. Dr. Larsen agreed there was not ulnocarpal impaction; however, "The length relationship between the radius and the ulna is not static. The ulna pistons long relative to its static position…. My exam and, you know, what we treated him for, points towards tearing and things that aggravate the ulna side of the wrist, in terms of loading to the triangular fibrocartilage." (Larsen Depo., p. 16).

24. On cross-examination, Dr. Larsen stated there are only a certain number of reasons that Claimant's condition can be painful, whether it's tearing, not being under the right amount of tension, etc. *Id* at 36, 37. By unloading that side, Dr. Larsen is trying to "reduce the maximum weight that the ulna can achieve and apply across the triangular fibrocartilage." *Id* at 16. Regarding Claimant being 3mm congenitally negative, Dr. Larson provided the following explanation why that was not an indication against surgery:

> And that shows that the static relationship between the radius and the ulna, when the rotation of the forearm is neutral, so midway between maximum pronation and maximum supination. What we know, that the relative length of the ulna, compared to the radius, can be increased by pronation and by grip and by application of force or weight-bearing. And that's not something that's not reflected in that 3 millimeter variance. So if I shorten him 2 millimeters in the neutral position and it doesn't change the…dynamic pistoning [sic] of the ulna, which is what I'm trying to deal with here. *Id* at 38.

25. Dr. Larsen summarized his position when asked about Dr. Rovak's opinion. "I mean, we…don't agree on that point… that is something that even in person we would debate. He doesn't feel like all the shortening would be helpful. You know, obviously, I do, or I wouldn't have offered it to him." *Id* at 15. Dr. Larsen has nothing else to offer Claimant in the way of potential relief without this surgery. *Id* at 17.

Dr. Rovak testifies by Deposition

26. Dr. Rovak testified via deposition on August 31, 2021. Dr. Rovak reiterated his opinion that the surgery was quite unlikely to help Claimant's pain and function. "I just don't think it would help. So in my practice, if I looked at this guy, there are patients where you just go, look, I understand that you have pain, but I don't think surgery is going to make it better. And that's where [Claimant] fell for me in this case given the stuff that I had to review." (Rovak Depo., pp. 15,16).

27. Dr. Rovak explained that before embarking on the second surgery proposed by Dr. Larsen, there needed to be an analysis done to be sure that the proposed surgery is going to be, "within the realm of what was going to be possibly helpful," [to Claimant]. (Rovak depo. p. 12). He concluded the second surgery proposed by Dr. Larsen was within that realm. Claimant's, "physical exam was a little bit, I wouldn't say unreliable, but I would say nondiagnostic because it was sort of diffuse and the pain was not limited to this particular maneuver or that particular maneuver." *Id* at 17. Dr. Rovak emphasized that the findings in Claimant's MRI arthrogram and Dr. Larsen's first surgery were, "all fairly minimal." *Id* at 14.

28. Dr. Rovak testified that there was no ulnar impaction syndrome present. Such impaction would exist if Claimant's ulna were too long. In fact, Dr. Rovak explained, the opposite situation exists, since Claimant's ulna is short. The proposed surgery to shorten Claimant's ulna would leave his right ulna, "2 millimeters shorter than his normal, which actually makes him very (5 mm) ulnar negative, which could be a problem." *Id* at 23, 24. Because he and Dr. Larsen agree Claimant's ligament isn't loose or unstable, by tightening it further will cause extra tension. Additionally, by shortening the ulna and taking it out of its natural alignment, the surface won't be articulating the same way. That can cause problems with discomfort and motion. *Id* at 24, 28. Dr. Rovak also shared Dr. Larsen's belief that Claimant's pain generator had not been conclusively identified, testifying that the symptom generator is unknown. *Id.*

29. Dr. Rovak further stated Dr. Larsen’s proposed second surgery is not reasonable and necessary because there are no findings or evidence that it will improve claimant’s condition:

> I would almost describe it [the proposed surgery] more as a Hail Mary. So a salvage operation means, look, you have a problem that is unfixable. I can't fix the problem, but what I could do is do this, what is called a salvage procedure, meaning I am going to do something that, you know, we are just going to try and take a tradeoff and salvage, you know, some degree of function, understanding that we can't fix the problem. That is a salvage operation. Salvage operations are very accepted, and you go, look, if somebody has like an arthritic wrist, I can't undo the arthritis, but I can, you know, do a procedure called like a proximal row carpectomy or a four-corner fusion, which you are going to have some limitations from but it may help your pain. That is a salvage. To me in this case, I would consider it not a salvage operation because salvage operations are predictable. I would say it is a Hail Mary where you are going, this is the last thing I have got, I don't know if this is going to help or not, you know, and then you are just throwing a long-bomb pass before the buzzer runs out, you know.” *Id* at 20.

30. However, Dr. Rovak was only against the ulnar shortening osteotomy. Dr. Rovak testified that if the only component of the surgery was the repeat wrist arthroscopy to check his work and look for a problem, that would not be unreasonable given the fact that “the morbidity of doing a repeat wrist arthroscopy is very low.” *Id* at 29. Dr. Rovak then testified the biggest risk associated with the ulnar shortening procedure is that it just is not going to help. *Id* at 32.

Claimant testifies at Hearing

31. Claimant testified at hearing. He explained that virtually any movement of his wrist prior to the first surgery would cause severe pain and swelling. His symptoms also included numbness and tingling, and weakness. The numbness and tingling went away with the surgery; however, the ongoing pain in the wrist has persisted. Additional conservative care, including an injection in the hand, did not help at all. Claimant also continued with more physical therapy. Despite the ongoing care, Claimant’s wrist would continue to hurt and swell, particular with use.

32. Claimant understands that, realistically, the surgery is not going return him to his preinjury condition, but that it could get it “somewhat” back to his baseline. Claimant testified that he continues to feel “broken” due to his inability to use the wrist for any prolonged period of time, and the constant pain associated with it. Claimant testified he is well aware that the surgery may not help his condition at all, but he feels he is “backed up to a corner” and is willing to undergo the surgery since it has the potential to alleviate his symptoms to some degree and increase his ability to use his wrist.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In this instance, the ALJ finds Claimant to be credible in recounting the work incident, and in describing his ongoing symptoms to his medical providers and IMEs to the best of his abilities. Claimant has been sincerely dismayed at his condition, and has made every reasonable effort to rehabilitate from his injury and become as fully productive as possible. The ALJ sees no evidence of seeking secondary gain; to the contrary, Claimant wants to get as well as he can, so that he can at least reduce his pain after using this wrist, and thus gain greater function moving forward.

D. The ALJ further finds that the medical experts in this case have all rendered sincere medical opinions, but as is not infrequent, such opinions differ. In final analysis, the ALJ must decide who is more *persuasive* (as opposed to *credible*, per se), in light of their respective expertise and access to all pertinent information.

E. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits, Generally

F. Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be considered a "medical benefit" it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995). *A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the Claimant's physical needs. Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the Claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995)*; Karim al Subhi v. King Soopers, Inc.,* W.C. No. 4-597-590, (ICAO. July 11, 2012). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006).

Medical Benefits, Repeat Wrist Arthroscopy

G. Causation for Claimant's predicament is not in dispute. It is due to his fall off the ladder at work. And the ALJ is not prepared to find Dr. Novak's position to be unreasonable; indeed, his positions are well thought out, and presumably the same positions he would take were he advising one of his own similarly-situated private patients. However, looking further, Dr. Novak even concurred that the repeat wrist arthroscopy (to look for structural issues not readily ascertained by imaging), as a stand-alone procedure, would not be unreasonable, especially since "the morbidity of doing a repeat wrist arthroscopy is very low." The ALJ concurs with that assessment, and finds that the repeat wrist arthroscopy component of the surgery proposed by Dr. Larsen is reasonable and necessary to address Claimant's medical condition.

Medical Benefits, Ulnar Shortening

H. Accepting that the repeat arthroscopy is reasonable and necessary (and assuming, as the ALJ does herein, that Claimant will follow through with that component), what then, is the remaining risk to adding in the ulnar shortening? Claimant will already be subjected to the usual inherent risks of surgery-anesthesia, infection, rehab, potentially disappointing results, etc. Dr. Rovak already agrees that the morbidity rate for such a procedure is ‘very low.’ While the ulnar shortening is admittedly another step beyond the arthroscopy, the ALJ finds that any *additional* morbidity risk in performing this proposed ulnar component is extremely slight. Everyone will already be at the party. And Respondents are already getting the bill.

I. In the end, Dr. Rovak conceded that while there are inherent risks (as there clearly are) to the ulnar shortening, the *biggest* risk is that it’s just not going to help. In the final analysis, Dr. Larsen, as the ATP, has expressed similar sentiments; he just feels that the risk is slighter than does Dr. Rovak, but still one worth taking. These are valid differences in medical opinions. But in the final analysis, *it is Claimant’s wrist.* This is how the rest of his life will play out. Everyone else involved gets to go home.

J. Claimant may indeed be disappointed in the results of the procedure, once all the rehab has been completed. Perhaps Dr. Rovak will be vindicated in the end. Claimant, however, has thought this issue through. He understands the risks, and has realistic expectations. Of course he wants the home run. He’ll settle for a single. In fact, he’ll settle for a groundout, but at least he got to bat. He understands what recovery from surgery is like, since he’s been there once already. And he does not want to live the rest of his life not knowing what things might have been like, if he’d just had the surgery and found out for himself. The ALJ cannot totally ignore this.

K. Claimant should not have to seek this treatment through private means, assuming he could even afford it. It would be patently unfair to tell him to just give up at this point, and live with the pain, and subsequent diminished function. Or worse yet, just live on pain meds. Instead, the ALJ finds that the ulnar shortening, combined with the arthroscopic revision, just as proposed by Dr. Larsen, is reasonable and necessary to cure and alleviate the effects from his work injury.

ORDER

It is therefore Ordered that:

1. Respondents shall authorize and pay for the right wrist surgery as proposed by Dr. Larsen.

2. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is* ***highly recommended*** *that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

Colorado Springs, Colorado 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-091-545-001

ISSUES

1. Whether Claimant established by clear and convincing evidence that the Division Independent Medical Examination (DIME) opinion of Jade Dillon, M.D., that Claimant reached maximum medical improvement (MMI) on January 25, 2021, is incorrect.

2. If Claimant overcomes the DIME with respect to MMI, whether Claimant established by a preponderance of the evidence an entitlement to medical treatment reasonably necessary to cure or relieve the effects of his industrial injury.

3. If Claimant overcomes the DIME with respect to MMI, whether Claimant established by a preponderance of the evidence an entitlement to temporary total disability benefits after January 25, 2021.

4. If Claimant fails to overcome the DIME, has Claimant established by a preponderance of the evidence an entitlement to necessary, and related medical maintenance benefits designed to relieve the effects of his work-related injury or to prevent further deterioration of his condition pursuant to *Grover v. Indus. Comm'n*, 795 P.2d 705 (Colo. App. 1988).

5. Whether Claimant established by clear and convincing evidence that the DIME opinion of Dr. Dillon that Claimant did not have a permanent partial impairment from his work-related injury is incorrect.

PROCEDURAL ORDERS

Claimant endorsed the issue of disfigurement on his Application for Hearing. Because Claimant did not have video capability at the time of hearing, the ALJ orders that the issue of disfigurement is withdrawn without prejudice and with leave to refile an application for hearing on the issue of disfigurement. Respondents did not object to this relief.

FINDINGS OF FACT

1. Claimant is a 54-year-old male who sustained an admitted injury to his left shoulder arising out of the course of his employment with Employer on September 10, 2018.

Past Medical History

2. Claimant has a history of shoulder issues dating to August 2013. In August 2013, Claimant sought treatment from Melanie Metcalf, M.D. at Salud Family Health Centers (Salud), indicating he sustained an injury to his left shoulder while placing a box on the

floor. Claimant reported a burning sensation in his left shoulder with pain in the left side of his neck and trapezius area. Claimant also has a history of uncontrolled diabetes mellitus type II. (Ex. A).

3. On September 30, 2013, Claimant underwent a left shoulder x-ray which showed "abnormal sclerosis and slight flattening of the lateral humeral dome and greater tuberosity." The radiologist indicated the condition could relate to "age indeterminant [sic] Hill-Sachs deformity or impaction fracture." The radiologist indicated that a CT or MRI may be useful for further assessment. However, no MRI or CT was performed. A cervical x-ray performed on the same day showed "[m]ild cervical spondylosis with possible left C6-7 and C7-T1 osseous neuroforaminal narrowing." (Ex. A). Following the x-rays, Dr. Metcalf indicated Claimant's x-rays were both abnormal, and recommended a trial of gabapentin because Claimant's symptoms were radicular in nature. (Ex. A).

4. In January 2014, Dr. Metcalf referred Claimant for an orthopedic evaluation noting a suspected primary lesion in the left shoulder and superimposed pain from cervical radiculopathy. She also noted that Claimant's diabetes mellitus was uncontrolled. Dr. Metcalf indicated that an MRI was pending. (Ex. A).

5. On January 22, 2014, Claimant saw Daniel Heaston, M.D., for an orthopedic evaluation. Dr. Heaston diagnosed Claimant with adhesive capsulitis of the left shoulder and recommended conservative treatment, including physical therapy. (Ex. B). A radiology report from January 22, 2014, indicated Claimant had mild narrowing of the glenohumeral and acromioclavicular joints, and mild degenerative arthropathy of the left shoulder. (Ex. A). Claimant continued to report left shoulder symptoms through March 28, 2014. (Ex. A). No records were admitted into evidence indicating Claimant reported left shoulder symptoms between March 28, 2014, and January 2017.

6. In January 2017, Claimant was seen by Stefano Lee, M.D. at Salud, and reported a left shoulder injury. Claimant reported left shoulder pain while driving with decreased range of motion of the neck due to left trapezius tenderness. He was diagnosed with "stiffness of neck." At a follow-up visit one week later, Claimant reported his neck stiffness and pain had improved. (Ex. A).

7. On February 21, 2017, Claimant returned to Dr. Lee and reported his left shoulder pain had returned. He was diagnosed with a rotator cuff sprain. (Ex. A).

Claimant's September 10, 2018 Work Injury

8. Following Claimant's September 10, 2018 work injury, Claimant was seen at Concentra on September 11, 2018 by Gerald Pernak, PA-C, the physician assistant for Darla Draper, M.D. Claimant was diagnosed with a left shoulder strain, and muscle strain, multiple sites. Claimant was later seen by Dr. Draper and diagnosed with a left shoulder strain, thoracic myofascial strain, and cervical strain. Claimant was referred for physical therapy and massage, and an MRI of the left shoulder was ordered. (Ex. D).

9. The following day – September 12, 2018 – Claimant saw Kelli Shanahan, PA-C, at Salud Family Health Centers. Claimant reported left shoulder pain for three days, which

he did not attribute to any specific injury. Claimant was treated with Lidoderm patches, meloxicam, and cyclobenzaprine. Claimant was provided a Toradol injection in the office for acute pain. (Ex. E).

10. On September 25, 2018, an MRI of Claimant's left shoulder was performed that showed a full thickness tear with tendon retraction and moderate muscular atrophy, and a complete disruption and distal retraction of the left biceps tendon. (Ex. F & L).

11. Claimant was then seen by orthopedist Craig Davis, M.D., at Concentra on October 2, 2018. Dr. Davis noted that despite the size of the rotator cuff tear, Claimant had fairly good strength and motion, and his pain had improved. He recommended continuing therapy, and also noted that most people with a rotator cuff tear the size of Claimant's end up requiring surgery. (Ex. I).

12. Claimant then saw orthopedist Mark Failinger, M.D., for a second opinion on October 25, 2018. Dr. Failinger noted that Claimant had attended physical therapy with mild improvement. He diagnosed Claimant with a left supraspinatus tear with retraction, and a probable ruptured long head of the biceps, with AC joint osteoarthritis. Dr. Failinger recommended surgery to repair Claimant's rotator cuff, and not performing surgery on Claimant's biceps because function is not typically impaired by this injury. He also recommended that Claimant quit smoking and noted Claimant's diabetes and smoking were negative factors for healing. (Ex. I & L).

13. Dr. Failinger's surgical request was reviewed for Insurer by a Dr. Weingarten, who approved the surgery. (Ex. F). Subsequently, on November 16, 2018, Jon Erickson, M.D., performed a second review on behalf of Insurer. Dr. Erickson apparently reviewed additional medical records and noted Claimant had a prior left shoulder injury in January 2014 also associated with neck complaints. Based on this information, Dr. Erickson concluded that the recommended surgery was not work-related. Dr. Erickson also opined that all of the abnormalities shown on Claimant's September 25, 2018 MRI were old and pre-existing. He also opined there was no objective evidence of aggravation or worsening of his pre-existing condition. Dr. Erickson recommended denial of the surgery proposed by Dr. Failinger. (Ex. I).

14. Over the next several months, Claimant followed up with Scott Richardson, M.D., at Concentra. Dr. Richardson was an authorized treating physician (ATP). On January 17, 2019, Dr. Richardson opined that Claimant was at maximum medical improvement (MMI). (Ex. K). However, Claimant continued to receive care and pursue the surgery recommended by Dr. Failinger.

15. On September 8, 2019, Claimant saw James P Lindberg, M.D., for an independent medical examination at Respondents' request. Dr. Lindberg reviewed Claimant's September 2018 MRI and opined that Claimant had a chronic pre-existing rotator cuff tear dating to 2014. He also opined that Claimant has a biceps tendon rupture of unknown date, and that the biceps tendon rupture was not amenable to surgical repair. Dr. Lindberg opined Claimant was at MMI, and that Dr. Failinger's proposed surgery on Claimant's left shoulder was not related to a work-related injury. (Ex. F).

16. Ultimately, Insurer apparently approved Dr. Failinger's proposed surgery. On November 5, 2019, Dr. Failinger performed surgery on Claimant's left shoulder, including a mini-open rotator cuff repair, subacromial decompression, debridement of the rotator cuff, labrum, and synovectomy. Claimant's post-operative diagnoses were left shoulder medium to large supraspinatus tear, left shoulder chronic rupture of the long head of the bicep, left shoulder synovial degenerative tear, and left shoulder synovitis. (Ex. G).

17. Following surgery, Claimant received substantial post-surgery care, including evaluations at Concentra and by Dr. Failinger, two repeat left shoulder MRIs, evaluation and treatment by physiatrist John Aschberger, M.D., electrodiagnostic testing, a left elbow orthopedic evaluation by Todd Alijani, M.D., a cervical MRI, pain rehabilitation evaluation and cervical steroid injection from Robert Kawasaki, M.D., a surgical evaluation by Stephen Pehler, M.D., a surgical evaluation by Dr. Davis, and physiatry consultation and treatment from Kathy McCranie, M.D. (Ex. I).

18. In February 2020, Dr. Failinger diagnosed Claimant with adhesive capsulitis, and Claimant underwent an MRI, which Dr. Failinger interpreted as showing a healing rotator cuff repair, and no other internal derangement or significant shoulder problems. He noted that Claimant's then-existing complaints appeared to be peri-scapular and cervical in nature. (Ex. I).

19. Dr. Aschbacher evaluated Claimant for left arm fasciculation and symptoms of ulnar nerve irritation. He performed an EMG that was negative for cervical radiculopathy but showed moderate ulnar neuropathy of the left wrist, consistent with carpal tunnel syndrome. Dr. Alijani recommended surgery for ulnar nerve transposition, and Insurer denied this request based on a report issued by Davis Hurley, M.D., on July 13, 2020. Dr. Hurley opined that the need for surgery was not related to Claimant's shoulder injury or shoulder surgery, but more likely due to Claimant's pre-existing diabetes. (Ex. H).

20. On October 27, 2020, Dr. Davis opined that Claimant's ulnar nerve neuropathy was the result of the treatment to Claimant's left shoulder and recommended decompression or transposition of the ulnar nerve at the left elbow. He opined that Claimant's carpal tunnel symptoms were an incidental finding of the nerve study. (Ex. I).

21. On January 29, 2020, Kathleen D'Angelo, M.D., performed an independent medical examination of Claimant at Respondents' request. Based on her review of medical records and examination of the Claimant, Dr. D'Angelo stated: "while it is my medical opinion that [Claimant's] left shoulder complaints as well as his left shoulder MRI findings are **causally unrelated** to his 2018 work injury; the patient was approved for surgery." (Ex. I). She also opined that Claimant was at MMI for his left shoulder condition, which she believed should be limited to his left shoulder range of motion deficits. She noted given Claimant's "long history of decreased cervical spine ROM as well as left trapezius spasms and pain; I would not provide [Claimant] with any cervical spine impairment as this would be consistent with his pre-injury state."

22. On January 11, 2021, Dr. McCranie performed an impairment rating and assigned a 10% impairment for Claimant's left shoulder due to loss of range of motion. She noted

that there was no impairment for the surgery performed, and no neurologic impairment. Dr. McCranie opined that Claimant's left ulnar neuropathy was not related to his work injury. Similarly, she opined that there was no identifiable etiology in the cervical spine to warrant an impairment rating.

23. On January 25, 2021, Dr. Richardson placed Claimant at MMI noting that Claimant would have permanent restrictions and/or permanent partial disability. (The records is insufficient to determine why Dr. Richardson's initial MMI determination was retracted or withdrawn, but the ALJ infers that it was withdrawn due to Insurer's approval of Claimant's left shoulder surgery).

24. On April 13, 2021, Claimant underwent a DIME with Jade Dillon, M.D. Although Dr. Dillon's range of measurements resulted in an 11% upper extremity impairment rating, Dr. Dillon concluded that Claimant's impairment was not related to his industrial injury, and instead concluded that Claimant's condition was the result of a pre-existing condition. In doing so, she stated that she "concur[red] with Dr. McCranie[1] and Dr. Lindberg that the vast majority of [Claimant's] left shoulder problems predate the occupational injury in question. It is clear that he was [previously] diagnosed with adhesive capsulitis of that shoulder. Unfortunately, the MRI scan recommended at that time was not completed so we do not have definitive documentation of the actual pathology." She stated "there is no convincing evidence that this pre-existing condition was significantly permanently exacerbated by the occupational injury in question." Consequently, Dr. Dillon did not assign Claimant a permanent impairment rating, finding Claimant's impairment was not directly causally related to his work injury. Dr. Dillon placed Claimant at MMI on January 25, 2021. (Ex. L).

25. On May 6, 2021, Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Dillon's report, denying any permanent total disability. (Ex. M). On May 10, 2021, Claimant filed an Application for Hearing seeking the relief sought in this matter.

26. At hearing, Claimant testified that he continues to experience difficulties with his left arm, and has problems with his neck. Claimant testified that he has difficulty sleeping on his left side, putting on clothes and engaging in sports with his family. Claimant also testified that he believes his left biceps requires repair.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the

[1] In her report, Dr. Dillon conflates the opinions of Dr. D'Angelo with those of Dr. McCranie. The ALJ infers that Dr. Dillon's intended to reference Dr. D'Angelo's opinion.

evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

OVERCOMING DIME - MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000); *Kamakele v. Boulder Toyota-Scion,* W.C. No. 4-732-992 (ICAO Apr. 26, 2010).

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Indus. Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Indus. Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* W.C. No. 4-974-718-03 (ICAO Mar. 15, 2017). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Indus. Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Indus. Claim Appeals Office,* 794 *P.2d 1090 (Colo. App. 1990); Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (ICAO Mar. 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *In Re Villela,* W.C. No. 4-400-281 (ICAP, Feb. 1, 2001).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office, supra*. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect, and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* W.C. No. 4-712-812 (ICAO Nov. 21, 2008); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

Claimant has failed to establish by clear and convincing evidence that Dr. Dillon's determination that Claimant reached MMI on January 25, 2021 is incorrect. Dr. Dillon's opinion is consistent with MMI opinion of Claimant's authorized treating provider, Dr. Richardson and Dr. McCranie. Moreover, no physician has opined that Claimant is not at MMI, or that Claimant had not reached MMI by January 25, 2021. No credible evidence was offered to indicate that Dr. Dillon's MMI opinion is highly probably incorrect. As found, Claimant received substantial work-up and care for his work injury before being placed at MMI, and no medical evidence was submitted indicating that additional pre-MMI care is being recommended at this time. The ALJ concludes that Dr. Dillon's opinion that Claimant is at MMI for this claim is free from serious or substantial doubt.

MEDICAL BENEFITS

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002); *Hobirk v. Colorado Springs School Dist. #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Bud Forbes v. Barbee's Freeway Ford,* W.C. No. 4-797-103, (ICAO Nov. 7, 2011). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Trans. District,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

Because Claimant has failed to establish that the DIME physician's MMI determination is incorrect, Claimant has failed to establish an entitlement to general medical benefits. With respect to Claimant's request for repair of his left biceps tendon, the record reflects that Dr. Failinger was aware of Claimant's ruptured biceps tendon and recommended not performing surgery. Additionally, Dr. Lindberg also concluded that his left biceps tendon was not amenable to surgery. Claimant presented no evidence from any medical provider indicating that surgery on his left biceps was reasonable, necessary or related to his work injury.

TEMPORARY TOTAL DISABILITY BENEFITS

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* 8-42-105(1). C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). By statute, TTD benefits continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Because Dr. Dillon determined Claimant reached MMI on January 25, 2021, and Claimant failed to overcome the DIME opinion regarding MMI, his entitlement to TTD benefits terminated on that date pursuant to § 8-42-105 (3)(a) – (d), C.R.S. Consequently, Claimant has failed to establish an entitlement to additional TTD benefits.

OVERCOMING DIME - IMPAIRMENT

The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge,* W.C. No. 4-914-378-02 (ICAO June 25, 2015).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Indus. Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services,* W.C. No. 4-941-721-03 (ICAO Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Indus. Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Indus. Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Indus. Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Indus. of Colo.*, W.C. No. 4-350-36 (ICAO Mar. 22, 2000); *Licata v. Wholly Cannoli Café,* W.C. No. 4-863-323-04 (ICAO July 26, 2016).

Claimant has failed to establish by clear and convincing evidence that the DIME physician's determination that Claimant has no permanent impairment related to his industrial injury is incorrect. Claimant presented no credible evidence showing that Dr. Dillon's determination that his permanent impairment is not causally related to his industrial injury is highly probably incorrect. No credible evidence was offered explaining why Dr. Dillon's opinion was incorrect. Consequently, Claimant failed to meet his burden of proving by clear and convincing evidence that he is entitled to a permanent impairment rating.

GROVER MEDICAL BENEFITS

Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Indus. Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, W.C. No. 4-471-818 (ICAO May 16, 2002). There is no bright line test to distinguish treatment designed to cure an injury from treatment designed to relieve the effects of the injury. Surgery may be designed to cure an injury or may be maintenance treatment designed to relieve the effects or symptoms of the injury. Post-MMI treatment may be awarded regardless of its nature. *Corley v. Bridgestone Americas*, W.C. No. 4-993-719 (ICAO Feb. 26, 2020).

To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Indus. Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Indus. Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* WC 4-461-989 (ICAO Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Indus. Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

Claimant has failed to establish by a preponderance of the evidence that he is entitled to medical maintenance benefits. No provider has opined that Claimant requires further treatment for his injuries that he has not already received. Again, Claimant offered no credible evidence to support his contention, other than his personal belief that he required surgery on his left biceps. As discussed above, no provider has recommended the surgery Claimant seeks. Moreover, Claimant has not presented credible evidence to indicate that other treatment is required.

CLAIMANT'S ADDITIONAL REQUESTS

In addition to the workers' compensation benefits Claimant seeks, in his position statement he requests an award of "at least" $150,000 to compensate Claimant for, among other things, loss of his "active lifestyle" and future lost wages. The ALJ's jurisdiction is limited to benefits provided under the Act. The Act contains no provision that permits an award of general damages for compensation or future lost wages. Consequently, the requests for such relief are denied.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by clear and convincing evidence that the DIME physician's opinion that Claimant reached MMI on January 25, 2021, was incorrect.

2. Claimant has failed to establish by clear and convincing evidence that the DIME physician's opinion that Claimant has no permanent impairment is incorrect.

3. Claimant's request for medical benefits is denied and dismissed.

4. Claimant’s request for Grover medical benefits is denied and dismissed.

5. Claimant’s request for additional temporary total disability benefits is denied and dismissed.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 13, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer on October 6, 2020.

2. If the claim is compensable, whether Claimant's treatment through the Kaiser network was authorized.

STIPULATIONS

The parties agreed to the following:

1. If the claim is compensable, Claimant earned an AWW of $1,194.55 for the period October 6, 2020 through February 4, 2021 and an AWW of $1,396.61 for the period February 5, 2021 continuing.

2. If the claim is compensable, Claimant is entitled to receive TTD benefits for the period October 6, 2020 through January 9, 2021.

FINDINGS OF FACT

1. Employer is a hospital on the Anschutz Medical Campus. Claimant is a 26 year old male who began working for Employer on October 15, 2018 as a Respiratory Therapist. He ceased employment with Employer on February 5, 2021. Claimant worked three 12 hour shifts per week from 6:30 a.m. until 7:00 p.m.

2. Claimant was required to punch in and out on a time clock to report his work hours. He explained that the timekeeping system was available in various locations throughout Employer's hospital. Claimant noted that he drove to work every day and was instructed by Employer to park in the Capri parking lot. The lot is owned by The Childern's Hospital but leased by Employer. The Capri lot is located across Colfax Avenue from the Anschutz Medical Campus. To get from the Capri lot to the respiratory department of the Campus Claimant had to cross Colfax Avenue.

3. Claimant explained that Employer provided a shuttle to employees in order to transport them from the Capri lot to the Campus to clock in for their shifts. However, taking the shuttle was not mandatory. Claimant often simply walked to the hospital to begin his work shift. Other employees also walked from the lot to the facility. In fact, Claimant detailed that the majority of his co-workers (approximately 60%) had the same habit of walking rather than taking the shuttle. He noted that management was aware that many employees walked to the Campus, but never objected. Claimant estimated that

walking from the Capri lot to the hospital took about 10 minutes while taking the shuttle took about 15 minutes.

4. On October 6, 2020 Claimant arrived at the Capri lot at approximately 6:21 or 6:22 a.m. He chose to walk from the parking lot to the hospital to begin his 6:30 a.m. work shift. Claimant walked along the sidewalk and reached the light to cross Colfax Avenue. As he was “hustling across the crosswalk” he heard a vehicle accelerating from his right side. Claimant noticed a car coming towards him while he was in the crosswalk on Colfax Avenue. The vehicle struck his right knee, and his momentum carried him around to the front of the car. Claimant’s left foot went under the driver front tire and he fell to the ground. He quickly stood up to avoid oncoming traffic and hobbled to the center median of Colfax Avenue. The driver of the vehicle fled the scene.

5. From the median, Claimant called his charge nurse and reported the incident and resulting injuries. A fellow employee pulled up next to him and offered him a ride to the hospital. Claimant visited Employer’s Emergency Department and was treated for injuries to his right knee and left foot as a result of the accident.

6. Claimant commented that prior to about 11:00 a.m. on October 6, 2020 he contacted his supervisors Candice Parkinson and Dana Wilkening to report the accident. He also completed a Workers’ Claim for Compensation.

7. After Claimant received emergency care, he sought additional treatment through his personal medical provider Kaiser Permanente. Claimant explained that he spoke to Insurer’s adjuster but was informed that the October 6, 2020 accident would not be covered by Workers’ Compensation. He remarked that the adjuster advised him that, if he had been on either side of the street, the accident would have been covered. However, because he was in the street when the vehicle struck him, the accident was not covered. Because Employer never gave him a list of medical providers or authorized treatment, Claimant understood that he was required to obtain care through his personal medical provider. Claimant received treatment from the Kaiser network through January 13, 2021.

8. On October 7, 2020 Claimant received an e-mail from Employer representative TyAmber W[Redacted] informing him that a First Report of Injury had been filed for the October 6, 2020 accident and a claim was filed on his behalf. The designated medical provider was Elizabeth Bisgard, M.D. and all medical care for his work-related injuries was to be coordinated through her. The e-mail also directed Claimant to visit Dr. Bisgard because he had already received care from the emergency room. The e-mail provided the phone number for Employee Health so that he could schedule an appointment. Claimant acknowledged receiving the email. Respondents did not authorize any additional providers.

9. Despite the e-mail directing Claimant to pursue treatment through Dr. Bisgard, Claimant explained that he did not follow-up with her because his care would not be covered by Workers’ Compensation. Claimant specifically believed the e-mail

instructions were contingent on the Workers' Compensation insurance carrier accepting liability. However, the e-mail did not make representations about liability. Because Claimant was concerned that his personal health carrier Kaiser would not pay for treatment with Employer's designated provider, he chose to obtain medical care through the Kaiser network.

10. Employer's Manager for [Employer Redacted] Ms. K[Redacted] testified at the hearing in this matter. She explained that she oversees business operations and is responsible for managing the respiratory therapy department of Employer's entire hospital. She was Claimant's supervisor and explained Employer's tardiness policy. Ms. K[Redacted]agreed with Claimant that he had received three tardy warnings between the time he began working for Employer on July 15, 2020 and the date of the accident on October 6, 2020. She noted that Claimant would have received an additional tardiness warning if he had arrived at 6:36 a.m. for a 6:30 a.m. shift. Ms. K[Redacted] acknowledged that Employer would not have taken any significant action and Claimant's job would not have been in jeopardy if he had been tardy on October 6, 2020 because he would not have accumulated sufficient points to warrant additional corrective action.

11. Ms. K[Redacted]commented that she learned of Claimant's accident on October 6, 2020 from Ms. W[Redacted]. On October 7, 2020 she received a copy of the e-mail directing Claimant to Employee Health and Dr. Bisgard. Ms. K[Redacted]acknowledged that employees were not required to take the shuttle from the Capri parking lot to Employer's hospital. Some employees took the shuttle and others walked to the hospital from the parking lot.

12. Employer's Director of Guest Services at the outpatient pavilion Lourdes B[Redacted] testified at the hearing in this matter. She oversaw transportation and shuttle service at the Anschutz Medical Campus. Ms. V[Redacted] explained that Employer leased the Capri parking lot from The Children's Hospital and it is one of three employee parking locations. Employees pay $10.00 per month to park in the Capri lot. The distance from the Capri lot to Employer's respiratory therapy services in the AIP two building is about three blocks. Ms. B[Redacted]estimated that the shuttle ride from the Capri lot to the AIP two building took about six to eight minutes.

13. Insurer's Adjuster Melissa C[Redacted] testified at the hearing in this matter that she managed Claimant's Workers' Compensation claim. Employer's designated provider on October 6, 2020 was UC Health. She denied having any conversations with Claimant about whether his claim was compensable. Ms. C[Redacted] remarked that Kaiser was not an authorized medical provider.

14. Claimant has demonstrated that it is more probably true than not that he suffered compensable injuries during the course and scope of his employment with Employer on October 6, 2020. Initially, on October 6, 2020 Claimant arrived at Employer's leased Capri lot at approximately 6:21 or 6:22 a.m. He chose to walk from the parking lot to the hospital to begin his 6:30 a.m. work shift. Claimant walked along the sidewalk and reached the light to cross Colfax Avenue. As he was walking across

the crosswalk he was struck by a vehicle and suffered injuries to his right knee and left foot.

15. The record reveals that Claimant faced the special hazard of crossing Colfax Avenue while walking from Employer's designated Capri lot to the hospital to clock in for his shift. Although Employer provided a shuttle to employees in order to transport them from the Capri lot to the hospital to clock in for their shifts, taking the shuttle was not mandatory. In fact, Claimant and many of his co-workers often simply walked to the Anschutz Medical Campus to begin their work shifts. Notably, Ms. K[Redacted]acknowledged that employees were not required to take the shuttle from the Capri parking lot to Employer's hospital building. Some employees took the shuttle and others walked from the parking lot.

16. Employer's provision of a shuttle service that Claimant could have ridden does not change the facts of the case or the applicability of the relevant case law. Employees were not required to utilize the shuttle service. In choosing to walk to the hospital Claimant did not break any rules or deviate from the course and scope of his employment. Because Claimant was injured while crossing the special hazard of Colfax Avenue while walking between the designated Capri lot and his place of employment to begin work, his injuries are compensable.

17. The record reveals that Claimant's medical treatment through the Kaiser network was not authorized. Initially, on October 6, 2020 Claimant received emergency medical treatment for injuries to his right knee and left foot as a result of the accident through Employer's Emergency Department. In a medical emergency a claimant need not obtain authorization from his employer or insurer before seeking medical treatment. There is thus no dispute that Claimant's emergency treatment immediately after the accident was proper. However, once the emergency ended, Employer retained the right to designate the first non-emergency provider.

18. Employer directed Claimant to receive treatment through ATP Dr. Bisgard. On October 7, 2020 Claimant received an e-mail from Employer representative Ms. W[Redacted] informing him that a First Report of Injury had been filed for the October 6, 2020 accident and a claim was filed on his behalf. The designated medical provider was Dr. Bisgard and all medical care for his work-related injuries was to be coordinated through her. The e-mail also directed Claimant to visit Dr. Bisgard because he had already received care from the emergency room. The e-mail provided the phone number for Employee Health so that he could schedule an appointment. On October 7, 2020 Ms. K[Redacted]also received a copy of the e-mail directing Claimant to Employee Health and Dr. Bisgard. Finally, Insurer's Adjuster Ms. C[Redacted] testified that Employer's designated provider on October 6, 2020 was UC Health. She denied having any conversations with Claimant about whether his claim was compensable. Ms. C[Redacted] remarked that Kaiser was not an authorized medical provider.

19. Despite the e-mail directing Claimant to pursue treatment through Dr. Bisgard, Claimant explained that he did not follow-up with her because his care would

not be covered by Workers' Compensation. Claimant specifically believed the e-mail instructions were contingent on the Workers' Compensation insurance carrier accepting liability. However, the e-mail did not make representations about liability. Because Claimant was concerned that his personal health provider Kaiser would not pay for treatment with Employer's designated provider, he chose to obtain medical care through the Kaiser network. Claimant received treatment from Kaiser through January 13, 2021.

20. The Kaiser network was not an authorized medical provider because Employer only referred Claimant to ATP Dr. Bisgard and she did not make any referrals in the normal progression of authorized treatment. Because Claimant obtained unauthorized medical treatment, Respondents are not required to pay for it. Accordingly, Respondents are not financially responsible for Claimant's medical treatment for his October 6, 2020 industrial injuries through the Kaiser or any referrals from Kaiser.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v.*

Streeb, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "time" limits of employment include a reasonable interval before and after working hours while the employee is on the employer's property. *In Re Eslinger v. Kit Carson Hospital,* W.C. No. 4-638-306 (ICAO, Jan. 10, 2006). The "place" limits of employment include parking lots controlled or operated by the employer that are considered part of employer's premises. *Id.*

5. There is no requirement under the Act that a claimant must be on the clock or performing an act "preparatory to employment" in order to satisfy the "course of employment" requirement. *In re Broyles*, W.C. No. 4-510-146 (ICAO, July 16, 2002). As noted in Ventura v. Albertson's, Inc., 856 P.2d 35, 38 (Colo. App. 1992):

> The employee, however, need not be engaged in the actual performance of work at the time of injury in order for the "course of employment" requirement to be satisfied. Injuries sustained by an employee while taking a break, or while leaving the premises, collecting pay, or in retrieving work clothes, tools, or other materials within a reasonable time after termination of a work shift are within the course of employment, since these are normal incidents of the employment relation.

6. The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). Nevertheless, the employee's activity need not constitute a strict duty of employment or confer a specific benefit on the employer if it is incidental to the conditions under which the employee typically performs the job. *In Re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). It is sufficient "if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment." *Phillips Contracting, Inc. v. Hirst,* 905 P.2d 9, 12 (Colo. App. 1995). Incidental activities include those that are "devoid of any duty component, and are unrelated to any specific benefit to the employer." *In Re Rodriguez,* W.C. 4-705-673 (ICAO, Apr. 30, 2008). Whether a particular activity has some connection with the employee's job-related functions as to be "incidental" to the employment is dependent on whether the activity is a common, customary and accepted part of the employment as opposed to an isolated incident. *See Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715 (Colo. App. 1995).

7. Generally, injuries sustained by employees while they are traveling to or from work are not compensable because such travel is not considered the performance of services arising out of and in the course of employment. *Madden v. Mountain West Fabricators*, 977 P.2d 861, 863 (Colo. 1999). However, injuries incurred while traveling are compensable if "special circumstances" exist that demonstrate a nexus between the injuries and the employment. *Id.* at 864. In ascertaining whether "special circumstances" exist the following factors should be considered:

- Whether travel occurred during working hours;
- Whether travel occurred on or off the employer's premises;
- Whether travel was contemplated by the employment contract; and
- Whether obligations or conditions of employment created a “zone of special danger” out of which the injury arose.

Id. In considering whether travel is contemplated by the employment contract the critical inquiry is whether travel is a substantial part of service to the employer. *See id.* at 865.

8. If special circumstances demonstrate a causal connection between the conditions under which the work is performed and the “off premises” injury, the resulting injury arises out of and in the course of the employment. Special circumstances may be found if the employer provides a parking area as a fringe benefit to employees and the claimant sustains an injury while using the lot. It is not essential to a finding of compensability that the employer actually own or physically operate and maintain the lot for the exception to apply. *See Woodruff World Travel, Inc. v. Indus. Claim Appeals Office,* 38 Colo. App. 92, 554 P.2d 705 (1976); *Rodriguez v. Exempla Healthcare, Inc.* WC 4-705-673 (ICAO, Apr 30, 2008). Additionally, once a parking lot has achieved the status of "a portion of the employer's premises, compensation coverage attaches to any injury that would be compensable on the main premises." *Larson's Workers' Compensation Law*, §13.04[2][b]. Similarly, special circumstances may be found where the employer, for its own benefit, intervenes in the employee’s parking choices as a matter of policy. In such circumstances selection or use of a parking area is not a purely personal choice. *Friedman’s Market, Inc. v. Welham,* 653 P.2d 760 (Colo. App. 1982).

9. It is not critical to a finding of compensability that the employer actually own, control, or maintain the premises for the special circumstances exception to apply. *See Woodruff World Travel, Inc.*, 554 P.2d at 707. The *Woodruff* Court explained that it was not essential that an injury occurred "near or on a parking lot owned, maintained, or controlled by the employer." *Id*. Rather, the court considered it sufficient that the parking lot was provided for the employees to use, the employer was aware its employees used the lot, and the lot constituted "an obvious fringe benefit to claimant." *Id.* Injuries sustained while an employee is leaving work and walking through a parking lot arise out of the employment because the employer is required to furnish a safe means of ingress and egress to and from the work location. *See State Compensation Insurance Fund v. Walter,* 143 Colo. 549, 354 P.2d 591 (1960); *Vigil v. Healthcare Services Group*, WC 5-100-792 (ICAO, June 10, 2020).

10. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer on October 6, 2020. Initially, on October 6, 2020 Claimant arrived at Employer’s leased Capri lot at approximately 6:21 or 6:22 a.m. He chose to walk from the parking lot to the hospital to begin his 6:30 a.m. work shift. Claimant walked along the sidewalk and reached the light to cross Colfax Avenue. As he was walking across the crosswalk he was struck by a vehicle and suffered injuries to his right knee and left foot.

11. As found, the record reveals that Claimant faced the special hazard of crossing Colfax Avenue while walking from Employer's designated Capri lot to the hospital to clock in for his shift. Although Employer provided a shuttle to employees in order to transport them from the Capri lot to the hospital to clock in for their shifts, taking the shuttle was not mandatory. In fact, Claimant and many of his co-workers often simply walked to the Anschutz Medical Campus to begin their work shifts. Notably, Ms. K[Redacted] acknowledged that employees were not required to take the shuttle from the Capri parking lot to Employer's hospital building. Some employees took the shuttle and others walked from the parking lot.

12. As found, Employer's provision of a shuttle service that Claimant could have ridden does not change the facts of the case or the applicability of the relevant case law. Employees were not required to utilize the shuttle service. In choosing to walk to the hospital Claimant did not break any rules or deviate from the course and scope of his employment. Because Claimant was injured while crossing the special hazard of Colfax Avenue while walking between the designated Capri lot and his place of employment to begin work, his injuries are compensable. *See State Compensation Insurance Fund v. Walter,* 143 Colo. 549, 354 P.2d 591 (1960) (injuries sustained when the claimant was crossing a public way in order to reach a parking lot provided or maintained by the employer was compensable because crossing the street constituted special circumstances); *Vigil v. Healthcare Services Group*, WC 5-100-792 (ICAO, June 10, 2020) (injuries were compensable when the claimant slipped on an icy sidewalk in front of an entrance to the employer's premises where the time clock was located prior to beginning work).

Authorized Medical Provider

13. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In Re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

14. Section 8-43-404(5)(a), C.R.S. grants employers the initial authority to select the Authorized Treating Physician (ATP). However, in a medical emergency a claimant need not seek authorization from her employer or insurer before seeking medical treatment from an unauthorized medical provider. *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777, 781 (Colo. App. 1990). A medical emergency affords an injured worker the right to obtain immediate treatment without the delay of notifying the employer to obtain a referral or approval. *In Re Gant*, WC 4-586-030 (ICAO, Sept. 17, 2004). Because there is no precise legal test for determining the existence of a medical emergency, the

issue is dependent on the particular facts and circumstances of the claim. *In re Timko,* WC 3-969-031 (ICAO, June 29, 2005). Once the emergency is over the employer retains the right to designate the first "non-emergency" physician. *Bunch v. Indus. Claim Appeals Office of State of Colorado*, 148 P.3d 381, 384 (Colo. App. 2006).

15. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch,* 148 P.3d at 383; *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Kilwein v. Indus. Claim Appeals Office,* 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, WC 5-044-948-01 (ICAO, Oct. 16, 2018). If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. *In Re Patton*, WC's 4-793-307 & 4-794-075 (ICAO, June 18, 2010); *see Yeck v. Industrial Claim Appeals Office,* 996 P.2d 228 (Colo. App. 1999); *Jewett v. Air Methods Corporation,* WC 5-073-549-001 (ICAO, Mar. 2, 2020) (reasoning that surgery performed by an unauthorized provider was not compensable because the employer had furnished medical treatment after receiving knowledge of the injury).

16. As found, the record reveals that Claimant's medical treatment through the Kaiser network was not authorized. Initially, on October 6, 2020 Claimant received emergency medical treatment for injuries to his right knee and left foot as a result of the accident through Employer's Emergency Department. In a medical emergency a claimant need not obtain authorization from his employer or insurer before seeking medical treatment. There is thus no dispute that Claimant's emergency treatment immediately after the accident was proper. However, once the emergency ended, Employer retained the right to designate the first non-emergency provider.

17. As found, Employer directed Claimant to receive treatment through ATP Dr. Bisgard. On October 7, 2020 Claimant received an e-mail from Employer representative Ms. W[Redacted] informing him that a First Report of Injury had been filed for the October 6, 2020 accident and a claim was filed on his behalf. The designated medical provider was Dr. Bisgard and all medical care for his work-related injuries was to be coordinated through her. The e-mail also directed Claimant to visit Dr. Bisgard because he had already received care from the emergency room. The e-mail provided the phone number for Employee Health so that he could schedule an appointment. On October 7, 2020 Ms. K[Redacted]also received a copy of the e-mail directing Claimant to Employee Health and Dr. Bisgard. Finally, Insurer's Adjuster Ms. C[Redacted] testified that Employer's designated provider on October 6, 2020 was UC Health. She denied having any conversations with Claimant about whether his claim was compensable. Ms. C[Redacted] remarked that Kaiser was not an authorized medical provider.

18. As found, despite the e-mail directing Claimant to pursue treatment through Dr. Bisgard, Claimant explained that he did not follow-up with her because his care would not be covered by Workers' Compensation. Claimant specifically believed the e-mail instructions were contingent on the Workers' Compensation insurance carrier accepting liability. However, the e-mail did not make representations about liability. Because Claimant was concerned that his personal health provider Kaiser would not pay for treatment with Employer's designated provider, he chose to obtain medical care through the Kaiser network. Claimant received treatment from Kaiser through January 13, 2021.

19. As found, the Kaiser network was not an authorized medical provider because Employer only referred Claimant to ATP Dr. Bisgard and she did not make any referrals in the normal progression of authorized treatment. Because Claimant obtained unauthorized medical treatment, Respondents are not required to pay for it. Accordingly, Respondents are not financially responsible for Claimant's medical treatment for his October 6, 2020 industrial injuries through the Kaiser or any referrals from Kaiser.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered compensable injuries during the course and scope of his employment with Employer on October 6, 2020.

2. Respondents are not financially responsible for Claimant's medical treatment for his October 6, 2020 industrial injuries through the Kaiser network or any referrals.

3. Claimant earned an AWW of $1,194.55 for the period October 6, 2020 through February 4, 2021 and an AWW of $1,396.61 for the period February 5, 2021 continuing.

4. Claimant is entitled to receive TTD benefits for the period October 6, 2020 through January 9, 2021.

5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For* *further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms.*

DATED: October 15, 2021.

Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

STIPULATION

Prior to the commencement of the hearing, the parties stipulated that Claimant's average weekly wage is $1,275.56. This stipulation was accepted by the ALJ and is included as part of this Order.

REMAINING ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he is entitled to wage loss benefits as a result of an admitted, January 16, 2021 industrial injury.

II. If Claimant established his entitlement to temporary total disability (TTD) benefits, whether Respondents established, by a preponderance of the evidence, that Claimant was responsible for the termination of his employment for failing to submit to a mandatory January 28, 2021 drug test, thus precluding wage loss benefits after this date.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

Claimant's January 16, 2021 Motor Vehicle Accident

1. Claimant is a former delivery driver for Employer. He was involved in a motor vehicle crash while driving Employer's truck on January 16, 2021. Claimant testified that he was driving from New Mexico northbound on I-25 past Trinidad, CO at the time of the accident. According to Claimant, he had to make an abrupt lane change during which he lost control of the truck and flipped it onto its side. Claimant broke several bones in his hand, cut his elbow badly, and described being bruised almost head-to-toe from the trauma. Claimant was able to make it out of the turned over vehicle and waited for police and EMS to arrive.

2. Claimant was transported to Mount San Rafael Hospital by ambulance where he called Employer to report the accident. (See generally, Resp. Ex. I). Post-accident drug testing was ordered and completed promptly in the hospital. Testing included both a breath alcohol test and a urine drug screen. (Resp. Ex. G & I).

Employer's Policies Regarding Post-Accident Drug Screening

3. Claimant's January 16, 2021 drug and alcohol testing was administered in accordance with Employer's policies. (Resp. Ex. G, p. 79-80). Claimant acknowledged the post-accident drug testing policy on November 24, 2020. *Id*. The testing policy

provides that any driver found to be in violation of any part of the policy, including refusal to submit to post-accident drug and alcohol testing, is subject to termination. *Id.* The evidence presented persuades the ALJ that Claimant was aware of the policy and consequences of failing to submit to a mandatory drug and alcohol test after an accident. (Resp. Ex. G).

4. Debra H[REDACTED], testified as Employer's Risk Management Director and the Designated Employer Representative ("DER") for Employers drug and alcohol testing program. As Employer's DER, Ms. H[REDACTED] testified that she coordinates Employer's post-accident drug and alcohol testing and handles Employer's workers' compensation claims. As Employer's DER Ms. H[Redacted] is also privy to and acts upon the information collected and maintained by the Federal Motor Carrier Safety Administration (FMCSR). The FMCSR maintains a "Clearinghouse" of information regarding drug and alcohol violations involving drivers and shares this information with commercial carriers. Ms. H[Redacted] has access to the information maintained in the Clearinghouse and reports specific information to the Clearinghouse herself.[1]

5. Ms. H[Redacted] testified that Employer's drug and alcohol testing policies follow the Department of Transportation ("DOT") guidelines; in a post-accident setting, including DOT testing requirements mandating that a breath alcohol test be completed within eight hours and that a urine drug screen be obtained within thirty-two hours of an accident.

6. Ms. H[Redacted] testified that all employees are made aware of Employer's post-accident drug and alcohol policy during their onboarding process. She also testified that when testing is necessary, she makes associates requiring a test aware of the need and is the point of contact should there be questions/concerns about testing or testing results.

7. As noted, Ms. H[Redacted] testified that an injured worker's failure to appear for testing is reported to the Clearinghouse. She also noted that if an associate requiring testing appears for, but does not complete testing for any reason, the medical review officer ("MRO") assigned to the case reports that to the Clearinghouse. According to Ms. H[Redacted], the consequence to the driver of having a report sent to the Clearinghouse is that the driver has a documented testing "violation" on their record and must then follow-up with a substance abuse professional, participate in recommended treatment and submit to follow-up testing for a period of months to years.

8. In order to complete testing; Ms. H[Redacted] testified that injured workers are sent a passport advising them where to appear for testing. Ms. H[Redacted] testified that drivers requiring testing are also informed that failure to present will be considered an automatic refusal to submit to testing and will be deemed an automatic positive result that will be reported to the Clearinghouse.

[1] Ms. H[Redacted] testified that she directly reports those individuals who fail to appear for drug testing to the Clearinghouse.

Claimant's January 16, 2021 Test Results

9. Ms. H[Redacted] testified that Claimant did in fact submit to drug and alcohol testing on January 16, 2021 and that she received his testing results later the same day. According to Ms. H[Redacted], Claimant's breath alcohol test was negative. However, Ms. H[Redacted] testified that immunoassay interference—of unknown etiology—caused invalid drug testing results. Ms. H[Redacted] testified that when there is an invalid test result, there usually is a suspicion that something was done to alter the results of the test. In these circumstances, the MRO has the right to cancel the test and ask for an observed test. According to Ms. H[Redacted], the MRO requested a second observed drug test in this case.

The Necessity for Additional Drug Testing and Claimant's Failure to Appear for the Same

10. Ms. H[Redacted] testified that she spoke with Claimant a couple of times after the initial drug test, including on January 27, 2021 when Claimant contacted her. According to Ms. H[Redacted], she informed Claimant that he needed to submit to an additional drug test, and that her associate, Kerry P[Redacted], would send him a passport for use at the testing site. The passport was sent to both Claimant's old and new cellphone numbers and he acknowledged its receipt.

11. Ms. H[Redacted] testified that during their January 27, 2021 conversation, she
informed Claimant of the consequences of not appearing for the requested observed drug test. According to Ms. H[Redacted], she advised Claimant that a failure to appear would be considered a refusal to test which would be reported to the Clearinghouse triggering a need to follow-up with a substance abuse professional and participate in recommended treatment, i.e. "entry into the SAP program."

12. Claimant did not appear for his second drug test.

Claimant's Termination

13. Claimant testified that he did not attend the second drug test because he had been terminated two days after his accident, on January 18, 2021. According to Claimant, he received a phone call from the terminal manager, Bobby G[Redacted] on January 18, 2021 informing him that Employer was going to "let [him] go" because of the accident.[2] The Employee Change Record, records Claimant's termination date as January 18, 2021. (Rs' Ex. G, P. 76). Claimant testified that because he had been fired on January 18, 2021 and he and Ms. H[Redacted] did not talk about his need to take a second drug test until January 27, 2021, he did not present for the requested second test. According to Claimant, his termination on January 18, 2021 formed the basis for his decision not to appear for the second drug test. Claimant testified that because he had been terminated before the second test was requested, he consulted his attorney to

[2] Mr. G[Redacted] did not testify.

determine if he had an obligation to submit to additional screening. Per Claimant, he was advised that he had no duty to present for additional testing, so he "didn't."

14. When asked about Claimant's date of termination, Ms. H[Redacted] testified that prior to January 27, 2021, the matter, i.e. Claimant's accident was under investigation and nothing had been processed. According to Ms. H[Redacted], Claimant was taken out of service but in "terms of any actual processing of paperwork, [Claimant] was still employed" with Employer.

15. Ms. H[Redacted] testified that she was not privy to any conversations between Claimant and Bobby G[Redacted]; however, she agreed that, as Claimant's manager, Mr. G[Redacted] would have spoken to Claimant about the accident. Ms. H[Redacted] then reiterated her suggestion that Claimant could not have been fired because "no paperwork was process at that point." She also testified that under the circumstances presented, authority to terminate Claimant's employment would have fallen to her office as a "safety-type term" adding that performance-based terminations are processed through the Human Resources department. Because Mr. G[Redacted] was not a member of Human Resources, Ms. H[Redacted] suggested that Mr. G[Redacted] had no authority to terminate Claimant's employment.

16. On cross-examination, Ms. H[Redacted] maintained that the reason Claimant's employment was terminated was his failure to present for a second drug test. Ms. H[Redacted] was asked if she recalled writing an email to Kerry P[Redacted] on January 18, 2021 at 1:22pm. She could not recall this specific email without it in front of her and asked what counsel was referencing. Claimant's then counsel read the following aloud:

> Seven-week employee with two injuries, the second involving taking our truck off road. Right now, they are investigating to see if he was driving down the wrong side of the interstate. Suffice it to say he will be terminated (for taking truck off roadway, rollover with total loss of truck, trailer, and load)." (Emphasis added).

17. Following the reading of Ms. H[Redacted]'s email to Kerry P[Redacted], she was asked if she recalled sending the message to Ms. P[Redacted] on January 18, 2021. Ms. H[Redacted] acknowledged that she did send the message adding the following:

> Firstly, its company policy is, if you take a truck off the roadway, it -- usually we, unless there's some reasonable explanation of why. And [Claimant] had indicated that his brakes had failed. That's what he reported at the time of the loss. So, the matter was still under investigation. But barring any – any other unusual circumstances, up to and including his refusal to test, it was likely that his employment would terminate. Yes, sir. (Hrg. Tr. p. 33, ll. 4-11).

18. Careful review of the Employee Change Record establishes that it was prepared by “Manager” Kimberly B[Redacted] on February 1, 2021.[3] The form also unequivocally documents that Claimant was terminated on “01/18/21”, 9 days before Ms. H[Redacted] claims he was terminated for failing to submit to repeat drug testing.

19. Suggesting that Claimant’s termination was processed following his failure to appear for a second drug test, Respondents assert that the actual date of Claimant’s termination is February 1, 2021, when Ms. B[Redacted] finalized the Employee Change Record. In contrast, Claimant contends that his testimony, the contents of the “Employee Change Record” and Ms. H[Redacted]’s email message to Ms. P[Redacted] contradicts the testimony of Ms. H[Redacted] to persuasively establish that he was terminated for suffering a prior injury and the January 16, 2021 accident itself. Claimant asserts that by the time the Employee Change Record was completed, Employer had all of the evidence regarding Claimant’s failure to take the second drug test, and yet the form indicates he was terminated on January 18, 2021, not January 27, 2021 or February 1, 2021.

Claimant’s Medical Treatment

20. Claimant was diagnosed with multiple injuries at the emergency room on January 16, 2021, including a fracture of his left little finger, and a displaced fracture of the middle left index finger. (Clmt. Ex. 2 p. 11). Claimant also reported pain in the left scapular area; left subscapular area; dorsal aspect of his left forearm, wrist, and hand; palmar aspect of left forearm and left knee pain. *Id.* at 12.

21. Claimant was first seen by a workers’ compensation physician 2 days later on January 18, 2021. (Clmt. Ex. 3, p. 15). Dr. Douglas Bradley with Concentra evaluated Claimant and assessed neck pain, left hand abrasion, left forearm abrasion, multiple closed fractures of the finger with malunion, thoracic myofascial strain, left elbow contusion, and left shoulder contusion. *Id.* at 16. Claimant was started on medication and appropriate referrals were made, e.g., to a hand surgeon, physical therapist, etc. Dr. Bradley imposed significantly limiting physical restrictions of no lifting or carrying more than 5 pounds, no crawling, no climbing, no driving of company vehicles, and to wear a split/brace on his left upper extremity for up to 8 hours per day, and most importantly, no use of the left upper extremity. *Id.* at 18. Claimant was released to modified duty following this appointment.

22. Claimant returned to Dr. Bradley for a follow-up appointment on January 22, 2021. At the close of this appointment, Dr. Bradley released Claimant to modified duty as of January 21, 2021, with the following restrictions: No lifting or repetitive lifting greater than 5 pounds, no carrying, pushing or pulling greater than 5 pounds, no crawling, no climbing, no use of the left upper extremity while in splint and no driving of company vehicles due to “functional limitations.” (Clmt. Ex. 3, p. 33).

[3] While the Employee Change Record clearly references Ms. B[Redacted] as a “Manager”, neither party established whether she is an employee in the Human Resources Department.

23. Claimant's restrictions remained unchanged following his January 29, 2021 appointment with Dr. Bradley. (Clmt. Ex. 3, p. 40). Claimant testified that Dr. Bradley nor any other physician released him to full duty work. (Hrg. Tr. p. 15, ll. 24-25).

24. Based upon the evidence presented, the ALJ finds that Claimant was not offered modified duty between January 16, 2021 and February 1, 2021, the date, which Respondents contend that he was terminated. Claimant testified that he can now lift 40 pounds but his remaining restrictions remain unchanged (Hrg. Tr. p. 16, ll. 4-6). The evidence presented persuades the ALJ that Claimant remains physically restricted and unable to perform the full range of work duties as a delivery driver.

Claimant Received Unemployment Benefits after He Stopped Working

25. After Claimant stopped working for Respondents, he applied for and received unemployment benefits. (Rs' Ex. J.)

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence presented. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002).

Temporary Total Disability Benefits

D. Pursuant to §§ 8-42-103 and 8-42-105, C.R.S., a claimant is entitled to an award of temporary total disability (TTD) benefits if: (1) the injury or occupational disease causes disability; (2) the injured employee leaves work as a result of the injury; and (3) the temporary disability is total and lasts more than three regular working days. *Lymburn v. Symbios Logic* 952 P.2d 831 (Colo. App. 1997). TTD benefits exist to help offset lost wages when the employee cannot work due to the injury. *Anderson v. Longmont Toyota, Inc.* 102 P.3d 323 (Colo. 2004). Accordingly, the statute expressly contemplates proof the injured worker left work or lost employment as a result of the industrial injury in order to establish entitlement to temporary disability benefits. *Randall v. The Anschutz Mining Corporation,* W. C. No. 4-433-235 (September 14, 2000). *See also City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997); *Lunsford v. Sawatsky,* 780 P.2d 76 (Colo.App. 1989) (temporary disability benefits are designed to protect the claimant against the loss of earnings caused by the industrial injury). The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment or wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric,* 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in §8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claims Appeals Office, supra*. The question of whether the claimant proved such a disability is one of fact for the ALJ. *See Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo.App. 1997).

E. In this case, the persuasive evidence demonstrates that on January 18, 2021, Claimant was given work restrictions of no lifting or carrying more than 5 pounds, no crawling, no climbing, no driving of company vehicles, and to wear a split/brace on his left upper extremity for up to 8 hours per day, and no use of the left upper extremity. The evidence supports a conclusion that these restrictions remained in place through February 8, 2021. Dr. Bradley also imposed a restriction precluding Claimant from driving company vehicles "due to functional limitations", which by the evidence presented was not lifted prior to February 8, 2021. The evidence presented persuades the ALJ that Claimant's ability to perform his regular employment was probably impaired by both a restriction of bodily function, particularly the use of his left upper extremity/hand and the restrictions imposed by Dr. Bradley. Although the medical records support that Claimant was released to modified duty, no evidence was presented that Employer offered Claimant modified duty between the date of his accident though the date of his termination regardless of whether that was January 18, 2021 or February 1, 2021. Based upon the evidence presented, the ALJ is persuaded that Claimant's motor vehicle accident (MVA) caused a temporary total disability and that this disability resulted in an actual wage loss for Claimant lasting more than three days. Accordingly, the ALJ concludes that Claimant has proven his initial entitlement to TTD benefits. See *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (ICAO, June 11, 1999).

Termination for Cause

F. Although Claimant has established his initial entitlement to TTD benefits, this case raises a question of whether he is entitled to collect TTD based upon the assertion that he is responsible for his wage loss for failure to submit to repeat drug testing. As Claimant's injury was after July 1, 1999, §§ 8-42-105(4) and 8-42-103(1)(g), C.R.S. apply regarding his entitlement to TTD benefits. These identical provisions state, "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." *Anderson v. Longmont Toyota*, Colo. 102 P.3d 323 (Colo. 2004).

G. The termination statutes provide an affirmative defense to a claim for TTD benefits, and the respondents bear the burden of proof to establish their applicability. *Witherspoon v. Metropolitan Club*, W. C. No. 4-509-612 (Dec. 16, 2004). The concept of "responsibility" is similar to the concept of "fault" under the previous version of the statute. See, *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control by a claimant over the circumstances leading to the termination." *Gilmore v. Indus. Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo.App. 2008)(citing *Padilla v. Digital Equipment Corp.*, 902 P.2d 414, 416 (Colo.App. 1994). Generally, the question of whether the claimant acted volitionally and, therefore, is "responsible" for a termination from employment, is a question of fact to be decided by the ALJ, based on consideration of the totality of the circumstances. *See Gonzales v. Industrial Commission*, 740 P.2d 999 (Colo. 1987). An employee will be deemed "responsible" if he/she precipitated the employment termination by a committing a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (September 27, 2001). "Fault" does not require "willful intent" on the part of the Claimant. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo.App. 1996); *Harrison v. Dunmire Property Management, Inc.,* W.C. No. 4-676-410 (ICAO, April 9, 2008).

H. In this case, significant questions exist surrounding the reason Claimant was terminated and whether he was employed by Employer at the time he allegedly committed the volitional act (failure to submit for additional drug screening) which Respondents contend precipitated his termination. Based upon the evidence presented, the ALJ credits Claimant's testimony and the Employee Change Record to find/conclude that Claimant was probably terminated on January 18, 2021. Although Mr. G[Redacted] did not testify, Ms. H[Redacted] admitted that he would have spoken to Claimant about the accident. Given this and that fact that the Employee Change Record reflects that Claimant was terminated on January 18, 2021, the ALJ finds it reasonable to conclude that Mr. G[Redacted] called Claimant to inform him that the Company was letting him go because of the accident.

I. The ALJ agrees with Claimant that the testimony of Ms. H[Redacted] is incongruent with the balance of the more persuasive evidence. Contrary to Ms. H[Redacted]'s testimony, the Employee Change Record supports a conclusion that Claimant was fired on January 18, 2021, not February 1, 2021 as she contends. While the report may have been finalized on February 1, 2021, the Change Record reflects, unequivocally, that Claimant was terminated on January 18, 2021. Moreover, Ms. H[Redacted]'s email message to Ms. P[Redacted], also dated January 18, 2021, reflects that she had already determined that Claimant would be terminated for taking the truck off the road, which caused it to rollover resulting in total loss of the truck, trailer and load. In keeping with her email message to Ms. P[Redacted], Ms. H[Redacted] testified during cross examination that, barring unusual circumstances, taking a truck off the roadway would likely lead to termination. Consequently, the ALJ concludes that the evidence presented supports a reasonable inference that not only was Claimant fired on January 18, 2021, but also that he was terminated for rolling his truck and losing the load. Because the evidence supports that Claimant was terminated on January 18, 2021, for leaving the roadway resulting in complete loss of the truck, trailer and load, the ALJ finds/concludes that the second request for drug screening was of no consequence to his status as an employee since his termination had been effectuated several days before. *Bolatito Akigbogun v. People Ready*, W.C. No. 5-050-006-001 (ICAO, December 10, 2018). Accordingly, the ALJ rejects Respondents' contention that Claimant committed a volitional act or otherwise exercised a degree of control over the circumstances resulting in his termination by failing to present for repeat drug testing. Based upon the totality of the evidence presented, the ALJ concludes that Claimant is not responsible for the loss of his employment and is thus entitled to TTD benefits.

J. Based upon the evidence presented, the ALJ is convinced that Respondents are entitled to offset Claimant's TTD benefits by the amount of unemployment benefits received in accordance with C.R.S. § 8-42-103(1)(f).

ORDER

It is therefore ordered that:

1. Claimant has proven his entitlement to temporary total disability benefits beginning January 17, 2021.

2. Respondents have failed to establish, by a preponderance of the evidence, that Claimant is responsible for his termination and resulting wage loss with Employer. Consequently, Respondents shall pay Claimant TTD benefits beginning January 17, 2021 and ongoing until properly terminated by law.

3. Respondents are entitled to offset Claimant's TTD benefits in accordance with C.R.S. § 8-42-103(1)(f).

4. As stipulated, Claimant's average weekly wage is $1,275.56.

5. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination

NOTE: If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-144-591-002

ISSUE

1. Whether the left shoulder, arthroscopic surgery, which authorized treating physician ("ATP"), Michael Hewitt, M.D. requested for Claimant, is reasonable, necessary and causally related to the admitted industrial injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant is a 46 year-old woman who works for Employer as a dental practice manager.

2. On October 29, 2019, Claimant suffered an admitted industrial injury when she lifted a desk to remove a piece of paper. Claimant testified that she bent over "all the way", lifted the desk with her left hand and pulled the paper out with her right hand. Claimant testified that she felt a "pop" in her left arm. In less than an hour, her whole left arm went numb and her left hand was tingling.

3. Claimant credibly testified that she had no left upper extremity symptoms, limitations or pain complaints, prior to the October 29, 2019 industrial injury.

4. Claimant had a previous workers' compensation claim involving her cervical spine in 2009. None of Claimant's symptoms in 2009 involved her left shoulder. (Exs. C-I).

5. On October 30, 2019, the day after her industrial injury, Claimant presented to the Employer's designated medical provider, Denver Health Occupational Health ("Denver Health") for an evaluation. She presented with persistent pain (5/10) in her left shoulder. Claimant had radicular symptoms down her left arm to her hand and fingers. She also had intermittent numbness/tingling in her fingers. (Ex J).

6. ATP, Annette Davis, N.P., diagnosed Claimant with a "left shoulder strain/trap, rhomboid and left UE." Ms. Davis gave Claimant the following work restrictions – no lifting over ten pounds and no overhead work. (Ex. J.).

7. Claimant returned to Denver Health on November 5, 2019, and ATP, Joan Mankowski, M.D., treated her. Claimant presented earlier than scheduled due to her left arm pain and tingling that became worse two days prior. The pain was constant on her posterior left shoulder down to her entire hand, worse with hand dependency and better with left shoulder flexion. Her pain ranged from 4/10 to 8/10. The tingling was constant from her elbow distally along the flexor aspect of her forearm including fingers 2-5. Dr. Mankowski referred Claimant for physical therapy, and had her continue with massage therapy. Dr. Mankowski noted that if Claimant did not improve and the paresthesia

continued, she would consider a referral for EMG/NCV. Claimant remained on modified duty. (Ex. K).

8. As part of her November 5, 2019 examination of Claimant, Dr. Mankowski administered a Hawkins test, which was positive. (Ex. K). Respondent's expert, William Ciccone, M.D., credibly testified that the Hawkins test is used to test for impingement syndrome. *See* also WRCP, Rule 17, Exhibit 4(9)(c)(ix). Dr. Ciccone is an orthopedic surgeon who regularly treats and operates on shoulders.

9. On November 11, 2019, Claimant returned to Denver Health for a follow-up appointment with Ms. Davis. Claimant felt much improved after her second massage therapy appointment, and her first physical therapy appointment that day. Ms. Davis had Claimant continue with physical therapy and massage therapy, and her same work restrictions. Ms. Davis deferred EMG testing since Claimant's radicular symptoms and pain were improving. (Ex. L).

10. Claimant did not return to Denver Health until January 3, 2020. Claimant explained she was doing well until three days prior when her left shoulder started hurting again for an unknown reason. The pain was constant and she rated it as 4/10. Claimant had left scapular pain radiating to her posterior elbow. She did not report any upper extremity sensory changes or paresthesia, so EMG testing was not indicated. Dr. Mankowski ordered modified duty, and had Claimant resume physical therapy. (Ex. N.)

11. Claimant saw Dr. Mankowski on May 5, 2020. Dr. Mankowski noted that Claimant had persistent pain since her injury in October 2019, and she had a "[p]ositive provocative test." Dr. Mankowski referred Claimant for an MRI to rule out a rotator cuff or labral injury. Claimant had no work restrictions. (Ex. Q.).

12. On June 4, 2020, Claimant had a left shoulder MRI without contrast. Eduardo Seda, M.D. read the MRI and his impression was: "Supraspinatus, infraspinatus and subscapularis tendinosis with possible subtle calcification suggesting calcific tendinitis versus impingement by the small acromial osteophyte**.** Correlation with x-ray appearance is recommended." (Ex. 15).

13. Dr. Mankowski met with Claimant on June 8, 2020 to review the MRI and explain there were no rotator cuff issues or labral tears. Dr. Mankowski referred Claimant to an orthopedic surgeon and had her continue with physical therapy. (Ex. 4 at pp 81-83).

14. On June 19, 2020, ATP, Michael S. Hewitt, M.D. of Orthopedic Consultants reviewed Claimant's MRI and evaluated her. Dr. Hewitt's impression was impingement syndrome of the left shoulder. The treatment options for clinical impingement were: observation, activity modification, NSAIDs, therapy, cortisone injection, and lastly shoulder arthroscopy. Claimant decided to proceed with the subacromial injection. (Ex. 7).

15. Respondent's expert, Dr. Ciccone, testified that he agreed with these treatment options. Dr. Ciccone and Dr. Hewitt are partners.

16. Claimant returned to see Dr. Hewitt on August 14, 2020. The subacromial injection administered on June 19, 2020, provided Claimant mild to moderate improvement for "several weeks," but her symptoms gradually returned. At this appointment with Dr. Hewitt, Claimant complained of pain with overhead reaching and intermittent night pain. (Ex. 7).

17. Dr. Ciccone testified that a sign of impingement syndrome is pain with overhead reaching.

18. Dr. Hewitt and Claimant discussed the treatment options again, and he explained that her final option was surgery. Dr. Hewitt had previously noted surgery as a treatment option. Claimant decided to proceed with a repeat subacromial injection before considering surgery. Dr. Hewitt agreed with this approach, and gave her another injection. He explained they could consider surgery later in the year if her symptoms failed to resolve. (Ex. 7).

19. Dr. Hewitt examined Claimant approximately four months later, on December 2, 2020. The subacromial injection he administered on August 14, 2020, gave her mild-to-moderate transient improvement in her symptoms, but it did not provide her long-term relief. Dr. Hewitt, who had been treating Claimant for clinical impingement of her left shoulder for six months, opined that surgery was medically reasonable and appropriate. He recommended arthroscopy of her left shoulder with subacromial decompression. Claimant agreed to proceed with surgery. (Ex. 7)

20. On December 10, 2020, Respondent timely denied Dr. Hewitt's request for surgery. (Ex. 7).

21. On December 7, 2020, Dr. Ciccone submitted a records review report. Dr. Ciccone concluded that Claimant did not injure the shoulder joint itself and that she does not suffer from impingement syndrome. He opined that none of the findings seen on Claimant's left shoulder MRI were causally related to the industrial event. Dr. Ciccone determined that that Claimant experienced an injury to the muscles that attach to the scapula. (Ex. W.)

22. Dr. Ciccone conducted an IME of Claimant, and submitted his report on April 14, 2021. In his IME report, Dr. Ciccone concluded that the presented symptoms were not likely associated with a shoulder injury, but rather an injury to the trapezius and scapula. Dr. Ciccone concluded that the arthroscopic surgery recommended by Dr. Hewitt would not benefit Claimant or alleviate her symptoms. (Ex. Z)

23. Dr. Ciccone testified that it was not medically probable that impingement syndrome resulted from the mechanism of injury that Claimant suffered in this case. He testified that these injuries are typically caused by overhead movement, and the movement as demonstrated by Claimant at the hearing, was unlikely to result in impingement syndrome.

24. The ALJ finds Dr. Ciccone's testimony to be credible, but unpersuasive. Multiple ATS, including Drs. Mankowski and Hewitt, were fully aware of the manner in which

Claimant was injured and they concluded her injury was causally related. The ALJ finds that Claimant's injury is causally related to her October 29, 2019 industrial injury.

25. In his IME report, Dr. Ciccone recommended that Claimant have a cervical MRI scan and a physiatry evaluation. (Ex. Z.).

26. ATP, Jennifer Pula M.D., referred Claimant for an MRI of her cervical spine. (Ex. 9). Dr. Ciccone testified that the MRI ruled out cervical radiculopathy. Claimant's cervical spine was not the cause of her pain.

27. Dr. Pula also referred Claimant for a physiatry work up. Samuel Chan, M.D., a physiatrist, treated Claimant on four different occasions: April 30, 2021, May 17, 2021, June 14, 2021, and July 7, 2021. At each of these appointments, Dr. Chan, in his objective findings regarding Claimant's bilateral shoulders noted that "impingement signs are negative bilaterally." He also noted each time under diagnosis: "impingement syndrome of left shoulder." Further, in his assessments and recommendations, Dr. Chan noted "[t]here could potentially be subacromial space impingement." (Ex 13).

28. Dr. Chan diagnosed Claimant with: 1) muscle spasm of back; 2) pain of left shoulder region; 3) biceps tendinitis of left shoulder; 4) impingement syndrome of left shoulder; 5) medial epicondylitis, left elbow, and 6) neuropathy of left suprascapular nerve. (Ex. 13).

29. Dr. Ciccone testified that he agrees with Dr. Chan's diagnosis of neuropathy of the left suprascapular nerve, and that this is significant because Dr. Chan is the first physician who appropriately diagnosed Claimant. While Dr. Ciccone's testimony is credible, the ALJ finds this argument unpersuasive in light of the inconsistencies in Dr. Chan's records.

30. Dr. Ciccone agrees with four of Dr. Chan's six diagnoses. He does not agree with Dr. Chan's diagnoses of impingement syndrome of the left shoulder and biceps tendinitis of left shoulder. Dr. Ciccone testified that Dr. Chan's diagnosis of impingement syndrome of the left shoulder is likely a carryover diagnosis because Dr. Chan's examination did not confirm findings consistent with impingement. The ALJ finds this testimony to be speculative and unpersuasive.

31. Dr. Ciccone further testified that he did not read Dr. Chan's medical reports generated in this claim as endorsing or recommending that Claimant proceed with shoulder surgery. The ALJ finds that Dr. Chan took no position with respect to the recommended shoulder surgery.

32. Claimant previously suffered from scapular neuritis caused by an April 28, 2009 work accident. Claimant underwent scapular blocks for treatment of her 2009 industrial injuries. (Ex. I) Dr. Ciccone testified that Claimant's October 29, 2019 industrial accident aggravated her pre-existing scapular neuritis.

33. Dr. Ciccone's testimony is credible but unpersuasive. In light of the findings of fact above, it is specifically found that the expert medical opinions of ATPs, Drs. Mankowski

and Hewitt, with respect to Claimant's diagnosis of shoulder impingement, are credible and persuasive.

34. The ALJ finds that Dr. Mankowski and Dr. Hewitt evaluated Claimant and diagnosed her with left shoulder impingement.

35. Arthroscopic Surgery is an operative procedure to treat impingement syndrome and other injuries to the rotator cuff. WCRP, Rule 17, Exhibit E(9)(g), at p. 96. The goal is to "restore functional anatomy by re-establishing continuity of the rotator cuff . . . and reducing the potential for repeated impingement." WCRP, Rule 17, Exhibit E(9)(a), at p. 95.

36. The ALJ finds that Claimant completed the conservative treatment modalities recommended by Drs. Hewitt Ciccone, but they did not relive her symptoms.

37. Claimant credibly testified that she still has pain in the front and posterior portion of her left shoulder, and numbness and tingling in her fingers on the left hand. Claimant understands the risks of surgery. The ALJ finds the testimony of Claimant credible and persuasive.

38. The ALJ finds that arthroscopy of Claimant's left shoulder with subacromial decompression is reasonable, necessary and related to her admitted industrial injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101*, et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

A Respondent is liable for medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002); *Hobirk v. Colo. Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012). For a service to be considered a "medical benefit" it must be provided as medical or nursing treatment or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., WC 4-517-537 (ICAO, May 31, 2006). The determination of whether services are medically necessary or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *see Taravella v. US Bancorp,* WC 4-797-901 (ICAO, July 15, 2020). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Indus. Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004).

When determining the issue of whether proposed medical treatment is reasonable and necessary, the ALJ may consider the provisions and treatment protocols of the Division's Medical Treatment Guidelines ("Guidelines"). The Guidelines are generally accepted as professional standards for medical care under the Act and are to be used by health care providers when working under the Act. *Hall v. Indus. Claim Appeals Office*, 74 P.3d 459 (Colo. App. 2003). Evidence of compliance or non-compliance with the treatment criteria of the Guidelines is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the Guidelines such weight as she determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC*., WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220

(ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008); Section 8-43-201(3), C.R.S.

No benefits flow to the victim of an industrial accident unless the accident causes a compensable injury. A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 426 P.2d 194 (1967). In order to prove causation, it is not necessary to establish that the industrial injury was the sole cause of the need for treatment. Rather, it is sufficient if the injury is a "significant" cause of the need for treatment in the sense that there is a direct relationship between the precipitating event and the need for treatment. Although a preexisting condition does not disqualify a claimant from receiving workers' compensation benefits, the claimant must prove a causal relationship between the injury and the medical treatment claimant is seeking. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. App. 2002).

Factual determinations related to this issue must be supported by substantial evidence in the record. §8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence that a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411, 415 (Colo. App. 1995).

While the Claimant had a prior 2008 workers' compensation claim involving her cervical spine, there is no evidence it involved Claimant's left upper extremity. (Finding of Fact ¶ 4). Claimant was credible in her testimony that she did not have symptoms, limitations or restrictions in her left shoulder area leading up to the admitted industrial injury. (*Id*. at ¶ 3). In November 2019, ATP, Dr. Mankowski, diagnosed impingement syndrome with a positive Hawkins test. (*Id*. at ¶ 8). ATP, Dr. Hewitt, treated Claimant for six months and consistently opined that Claimant had a left shoulder impingement syndrome. (*Id*. at ¶ 19). Medical records and diagnoses from treatment thereafter all reference shoulder impingement syndrome.

Dr. Chan diagnosed Claimant with multiple conditions including impingement syndrome of left shoulder and neuropathy of left suprascapular nerve. (*Id*. at ¶ 28). While Dr. Chan's notes are inconsistent, Dr. Chan never opines that the requested surgery is not appropriate. (*Id*. at ¶ 31). Further, in his assessments and recommendations, Dr. Chan notes "[t]here could potentially be subacromial space impingement." (*Id*. at ¶ 27).

Dr. Ciccone reaches an opinion that is different than that of his partner, Dr. Hewitt. Different doctors can reach different opinions. Despite the discrepancies between Dr. Ciccone's opinion and that of the treating physicians, the ALJ is persuaded that the surgery recommended by Dr. Hewitt is reasonable, necessary and related.

The ALJ concludes Claimant proved by a preponderance of the evidence that the request for arthroscopy surgery of the left shoulder with subacromial decompression is reasonable, necessary and related to her admitted October 29, 2019 industrial injury.

ORDER

It is therefore ordered that:

1. Dr. Hewitt’s request for left shoulder, arthroscopic surgery is reasonable, necessary and related to Claimant’s work injury.

2. Respondent shall pay for the cost of the surgery recommended by Dr. Hewitt.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

1. Has Claimant overcome the Division Independent Medical Examination ("DIME") physician's opinion regarding MMI by clear and convincing evidence?

2. Has Claimant overcome the DIME physician's opinion regarding impairment by clear and convincing evidence?

3. Has Claimant proven by a preponderance of the evidence that he is entitled to disfigurement benefits?

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following findings of fact:

1. Claimant sustained an admitted work injury on June 8, 2019.

2. On June 13, 2019, Brittany Blanchard, PA-C examined Claimant for his work injury. Ms. Blanchard's assessment was strain of muscle at thorax level and thoracic back pain. She recommended heat and OTC ibuprofen/Salon Pas. Ms. Blanchard released Claimant to full-duty work. He was to follow up in one week. (Ex. B).

3. On June 22, 2019, Claimant had an MRI, without contrast, of his thoracic spine. Forrest Lensing, M.D., read the MRI. Dr. Lensing's impression was: "Normal thoracic spine MRI. No fracture. No evidence of advanced degenerative disc disease, disc herniation or foraminal narrowing." (Ex. E).

4. On June 25, 2019, ATP, Julie Parsons, M.D. evaluated Claimant. He told Dr. Parsons his upper back felt numb. Claimant had not started massage therapy as ordered. Dr. Parsons instructed Claimant to continue with the Amcare first aid on site for heat, to use OTC pain medications and patches, and to start massage therapy. Claimant could continue to work full duty. He was to follow up in two weeks. (Ex. F).

5. On July 10, 2019, Nathan Adams, PA-C examined Claimant. In addition to his complaints regarding the upper thoracic spine and upper extremity weakness, Claimant reported that he began to have right-sided neck pain with limited range of motion on July 3, 2019. Mr. Adams's assessment was neck strain and strain of thoracic back region. He prescribed Claimant acetaminophen 325 mg, methylprednisolone 4 mg, and naproxen 375 mg, and referred Claimant for physical therapy. Mr. Adams ordered x-rays of the cervical and thoracic spine and dispensed a Hot/Cold pack. He assigned Claimant restrictions of working only eight hours a day and lifting no more than 10 pounds. (Ex. I).

6. On August 1, 2019, Scott Richardson, M.D., saw Claimant. In addition to back and neck symptoms, Claimant admitted to anxiety and feeling a bit depressed since the injury. Claimant declined medication for anxiety/depression. Dr. Richardson thought Claimant's psychological state was interfering with his healing. He referred Claimant to a psychologist and for chiropractic care. Dr. Richardson assigned Claimant work restrictions with respect to pushing/pulling (10 pounds) and lifting/carrying (15 pounds), but noted Claimant could work his entire 10-hour shift. (Ex. L).

7. Matthew Lugliani, M.D. examined Claimant on September 24, 2019. Claimant continued to complain of upper mid-back pain and occasional non-reproducible numbness and tingling and weakness involving both extremities. Dr. Lugliani referred Claimant for an EMG/NCS and a consultation with Nicholas K. Olsen, D.O., a qualified pain management specialist. Dr. Lugliani also referred Claimant for chiropractic treatment and acupuncture treatment. He placed a hold on physical therapy and massage therapy. Dr. Lugliani released Claimant to modified duty including a five-pound lifting restriction. Claimant was to follow up on October 15, 2019. (Ex. Q).

8. On September 26, 2019, Claimant presented to Craig Anderson, M.D., on a walk-in basis, reporting increased symptoms since returning to work and expressing concerns regarding his work restrictions. Dr. Anderson attempted to reassure Claimant that he did not demonstrate evidence of a serious underlying injury that would be exacerbated by performing the tasks that Dr. Lugliani had specified. He noted they could not make the work restrictions any stricter or Claimant would not have any work. He increased the visits to Amcare for pain management to five per shift, for the next two weeks. Claimant was to follow up with Dr. Lugliani on October 15, 2019. (Ex. R).

9. On October 3, 2019, Claimant went to Dr. Olsen for a physiatry consultation and consideration of an EMG/nerve conduction study. Dr. Olsen's assessment of Claimant was a cervicothoracic sprain/strain, status post-thoracic MRI on June 22, 2019 (normal study), and subjective complaints of right upper extremity weakness and numbness. Dr. Olsen noted there was no indication on the MRI that Claimant had a pinched nerve. Dr. Olsen did a manipulation of Claimant's thoracic spine and recommended Claimant follow through with the EMG study. (Ex. S).

10. On October 21, 2019, Dr. Olsen performed the EMG/NCS. His impression was: "normal examination. There is no electrodiagnostic evidence of peripheral nerve entrapment, plexopathy, or cervical radiculopathy." (Ex. U).

11. On November 19, 2019, Dr. Lugliani determined Claimant had reached maximum medical improvement ("MMI") with no permanent impairment, as there was no specific diagnosis. He noted Claimant had been noncompliant with the treatment plan and had not been seen in two months. He recommended six additional sessions of chiropractic treatment and massage therapy as maintenance. Dr. Lugliani stated Claimant was safe to return to full-duty work with no restrictions. (Ex. W).

12. On April 20, 2020, Claimant was seen by John Sacha, M.D. for a DIME. Dr. Sacha's clinical diagnosis was thoracic strain versus thoracic displaced disc with ongoing symptoms. He agreed Claimant reached MMI on November 19, 2019, as he had plateaued in care and no other surgical or interventional procedures were indicated. He rated Claimant's permanent impairment at 4% of the whole person, combining 2% per Table 53 of the *American Medical Association's Guides to the Evaluation of Permanent Impairment* ("AMA Guides"), Third Edition (revised), and 2% for range of motion. The only area he believed was appropriate for impairment was the thoracic spine. He agreed Claimant could return to full-duty work. Dr. Sacha recommended maintenance care. (Ex. X).

13. On June 3, 2020, a Final Admission of Liability was filed consistent with Dr. Sacha's DIME report, including admitting liability for maintenance care after MMI. (Ex. Y).

14. Claimant presented for a Respondents' IME with Carlos Cebrian, M.D. on September 3, 2020. Dr. Cebrian's assessment was thoracic spine strain. He noted Claimant's normal thoracic MRI on June 22, 2019, and his normal right upper extremity EMG on October 21, 2019. He agreed Claimant was appropriately placed at MMI on November 19, 2019, and he agreed with Dr. Sacha's impairment rating of 4% of the whole person. He opined that "no maintenance care is medically reasonable, necessary or related," and Claimant needed to engage in a self-directed home exercise program. (Ex. A).

15. At the hearing, Claimant testified he sometimes has a bruise to the left of his upper spine. He believes this occurred after the manipulation by Dr. Olsen on October 3, 2019. Claimant testified that his wife recently noticed the bruise, and it is more visible after a hot shower.

16. Dr. Cebrian credibly testified that when he examined Claimant, he did not see any kind of bruising, redness, or swelling of his thoracic spine.

17. At the hearing, the ALJ asked Claimant to show her the bruising he referred to. The ALJ was not able to see any bruising.

18. Claimant testified his condition worsened after Dr. Olsen's manipulation of his thoracic spine.

19. Dr. Cebrian testified that the medical records do not report any worsening of Claimant's pain complaints as a result of Dr. Olsen's manipulation. He pointed out that when Claimant was seen by Dr. Anderson before his appointment with Dr. Olsen, he had 8/10 pain complaints. When he was seen by Dr. Lugliani after his appointment with Dr. Olsen, he had 5/10 pain complaints**.**

20. Dr. Cebrian reviewed Dr. Sacha's DIME report and testified he did not perceive any errors in Dr. Sacha's report. He noted Dr. Sacha reviewed the medical records, took a detailed history from Claimant, and documented the information. Dr. Cebrian credibly

testified that Dr. Sacha did not make any errors in coming up with the MMI date or in determining that Claimant's complaints warranted a permanent impairment rating.

21. The ALJ finds that Claimant did not overcome Dr. Sacha's opinions on MMI and impairment by clear and convincing evidence.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, § 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the ALJ. *Univ. Park Care Ctr. v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insur. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colo. Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

DIME Physician's MMI and Impairment Findings

The party seeking to overcome the DIME physician's finding regarding permanent impairment bears the burden of proof by clear and convincing evidence. *Id.* Clear and convincing evidence is evidence that demonstrates that it is highly probable the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge,* WC 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., WC 4-476-254 (ICAP, Oct. 4, 2001).

In this case, the DIME physician, Dr. Sacha, determined that Claimant reached MMI on November 19, 2019. (Finding of Fact ¶ 12). This finding was consistent with that of the ATP, Dr. Lugliani, and with Respondents' IME physician, Dr. Cebrian. (*Id.* at ¶¶ 11 and 14). Dr. Sacha explained how he rated Claimant's permanent impairment at 4% of the whole person, per the *AMA Guides*, and Dr. Cebrian agreed that Dr. Sacha's rating was correct using the *AMA Guides*. That opinion must be overcome by clear and convincing evidence.

Claimant presented no medical evidence to challenge Dr. Sacha's findings. Similarly, Claimant presented no credible evidence demonstrating that Dr. Sacha's date of MMI or his impairment rating was in error. Claimant did not introduce sufficient evidence to meet his burden of proof to overcome Dr. Sachas' findings regarding MMI and impairment.

Disfigurement

Section 8-42-108(1) of the Colorado Revised Statutes provides for additional compensation if a claimant is seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view. The basis for Claimant's claim of disfigurement is a bruise he alleges he has, some of the time, to the left of his upper spine. The ALJ was not able to see any bruising on Claimant's back. Claimant submitted pictures of the "bruising". A bruise, however, is not a permanent disfigurement as defined in § 8-42-108(1), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant has failed to prove by clear and convincing evidence that the DIME physician's finding of MMI is incorrect.

2. Claimant has failed to prove by clear and convincing evidence that the DIME physician's impairment rating is incorrect.

3. Claimant has failed to prove by a preponderance of the evidence that he is entitled to disfigurement benefits.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-108-794-001

ISSUE

1. Whether Claimant proved by a preponderance of the evidence that a right knee arthroscopy requested by authorized treating physician Dr. Hartman is reasonable, necessary, and causally related to his admitted industrial injury of May 15, 2019.

FINDINGS OF FACT

1. Claimant is a 34-year-old man who was employed by Employer as a truck driver. Claimant sustained an admitted injury to his right knee, and other body parts, in a work-related motor vehicle accident on May 15, 2019. (Ex. 1). The motor vehicle accident occurred while Claimant was driving a delivery truck and a semi-truck turned in front of him.

2. On May 15, 2019, Claimant was seen at the UC Health emergency room where he complained of neck and knee pain. A right knee x-ray showed normal alignment of the right knee, with no fracture or dislocation, mild degenerative changes along the medial compartment, prepatellar soft tissue swelling and no significant joint effusion. Claimant reported that his right knee was pinned between the dashboard and center console of the truck in the accident. (Ex. 4).

3. On May 30, 2019, Claimant began treatment at Workwell, and was later referred for a right knee MRI which was performed on July 2, 2019. The MRI showed superior surface partial tearing of the anterior root attachment of the medial meniscus with an adjacent lobular cystic structure that may represent a parameniscal cyst. The radiologist also noted "moderate edema seen within the superior-lateral aspect of Hoffa's fat pad which can be seen with an underlying patellofemoral tracking abnormality or Hoffa's diseases less likely." (Ex. 12)

4. On July 11, 2019, physician assistant Amber Payne, PA-C, reviewed Claimant's MRI and noted that Claimant was experiencing patellofemoral symptoms. Claimant was referred to Joshua Snyder, M.D., for an orthopedic evaluation. (Ex. 5).

5. Claimant saw Dr. Snyder and physician assistant Elizabeth Metz, PA-C, on August 6, 2020, reporting that his right knee struck the dashboard of his truck in the accident. Claimant reported ongoing right knee pain in the medial and anterior aspects of the knee. Claimant noted his pain was worse with walking and he was experiencing some catching and locking. Claimant reported undergoing physical therapy through Workwell twice per week, without much improvement, and that he had been wearing a patellar stabilizer which he felt was helpful. On examination, Dr. Snyder noted tenderness to palpation in the medial joint line, tenderness along the medial and lateral patellofemoral joint with positive patellar grind, but overall good stability of the knee. He diagnosed Claimant with

right knee pain with evidence of medial meniscal tear with parameniscal cyst and patellofemoral cartilage damage. Noting that Claimant had failed conservative therapy, he recommended a right knee arthroscopy with partial medial meniscectomy, removal of parameniscal cyst, and chondroplasty of the patella and lateral femoral condyle. (Ex. 6).

6. On November 6, 2019, Dr. Snyder performed surgery on Claimant's right knee. Dr. Snyder's pre- and post-operative diagnoses were right knee medial meniscal tear, chondromalacia patella, and maltracking patella. The procedures performed included right knee arthroscopy, partial medial meniscectomy, and patellar chondroplasty. (Ex. 6).

7. Following surgery, Claimant received physical therapy and by January 14, 2020, Claimant reported that his right knee was "back to normal." Between February 3, 2020, and May 14, 2020, Claimant was seen at Workwell approximately five times. During these visits, Claimant did not report any additional symptoms in his right knee and no examination of his knee was documented at these visits. (Ex. 5). At a physical therapy visit on January 9, 2020, Claimant reported 100% improvement of his right knee. (Ex. 10).

8. On June 11, 2020, Claimant saw Robert Watson, M.D. at Workwell. Dr. Watson performed an examination of Claimant's knee and noted that Claimant had slightly reduced motion with flexion and crepitation on motion. Dr. Watson also noted that Claimant's right knee had "essentially healed and is unlikely that further treatment is needed." The June 11, 2020 appointment was Claimant's only documented visit with Dr. Watson. (Ex. 5).

9. On July 13, 2020, Claimant saw Eric Shoemaker, D.O., for back issues, and reported that he had "some knee pain at times though this is mild and tolerable." (Ex. 8).

10. Over the next several months, Claimant had telemedicine visits with providers at Workwell. At his August 10, 2020 visit, Claimant reported that he was having issues with his right knee again and requested to see Dr. Snyder. (ex. 5).

11. On August 20, 2020, Claimant saw Dr. Snyder, reporting he had experienced increasing pain in his knee over the past couple of months, mostly around his kneecap. Claimant reported pain with squatting and pending, and swelling. On examination, Dr. Snyder noted Claimant walked with an antalgic gait, had no swelling present, and tenderness to palpation along the patellofemoral joint with significant crepitus. He also noted lateral translation of the patella. X-rays were performed of both knees. Dr. Snyder found Claimant had significant patellar tilt and joint space narrowing that was fairly symmetric on both knees. His impression was right knee patellofemoral symptoms and maltracking. He recommended Claimant follow up with Ryan Hartman, M.D. (Ex. 6).

12. Claimant saw Dr. Hartman on October 1, 2020. Claimant reported increased right knee pain/symptoms over the previous six months. Dr. Hartman opined that Claimant had significant underlying patellofemoral arthritic changes, "which were likely preexisting and aggravated by his work injury event." Claimant denied any pre-injury knee symptoms and noted that he had gained significant weight since his work-injury. On examination, Dr. Hartman noted mild to moderate retropatellar crepitus, trace effusion, patellar mobility

with 30% lateral subluxation, 15mm medial translation, and slight decrease in tilt with patellofemoral joint compression and grinding. Based on his review of imaging studies and examination, Dr. Hartman diagnosed Claimant with aggravation of patella femoral arthritis with patellar maltracking, tight lateral retinaculum, and "significant lateral facet patellofemoral arthritis aggravated with work injury." Dr. Hartman recommended Claimant undergo a Synvisc injection and consider a patellar realignment procedure If that intervention failed. Dr. Hartman noted Claimant does have a component of lateral patellar compression syndrome and that a patella realignment anterior medialization would have a reasonable chance of improving his symptoms. (Ex. 6)

13. On October 26, 2020, Claimant underwent a Synvisc injection with Dr. Hartman, which Claimant later reported afforded him approximately three months of relief. (Ex. 6).

14. On March 22, 2021, Dr. Hartman noted that Claimant had undergone conservative treatment with short-lived benefit, and recommended right knee arthroscopy, patellar chondroplasty, lateral retinacular release and open tibial tubercle osteotomy to realign the patella to offload the lateral facet." He opined that because Claimant has well-preserved cartilage medially, there is at least a 70% chance this will improve his symptoms and slow the progression of osteoarthritis. On March 23, 2021, Dr. Hartman submitted a surgery authorization request to Insurer. (Ex. 6).

15. On August 16, 2021, Dr. Hartman issued a letter explaining his rationale for recommending additional surgery to Claimant's right knee. In that letter, Dr. Hartman stated:

> The patient has underlying right knee patellofemoral arthritis, which I believe was aggravated with his work injury. He had a borderline elevated TT-TG distance which affects patellar tracking and adds increased pressure on the lateral aspect of his patella likely aggravating his knee pain. I felt there was a 70% chance his knee would improve with the surgical procedure to release his tight lateral retinaculum and transfer his tubercle which would put his patella in better alignment and potentially decrease his pain.

16. In the same letter, Dr. Hartman indicated that Claimant's knee issues were unrelated to his meniscus surgery. He indicated the patellar chondroplasty performed by Dr. Snyder "alone did not alleviate enough of his pain and did not address any of the patellar malalignment issues." He also indicated that while "the underlying patellofemoral arthritis was likely preexisting … when I saw the patient, he reported to me that he had no significant problems with his knee prior to his work injury; thus, I believe he had work related aggravation of a preexisting condition." (Ex. 6).

17. Dr. Hartman explained that the "proposed surgery would attempt to realign the patella to offload the more arthritic areas of the patella and thus has I believe more potential to improve his symptoms and decrease his pain. I do not think he will be pain free after the proposed patellar realignment procedure, but likely will be improved." (Ex. 6).

18. On July 14, 2021, Claimant attended an independent medical examination (IME) performed at Respondents' request with Jon Erickson, M.D. Dr. Erickson was admitted as an expert in orthopedic surgery. Dr. Erickson also performed a "physician advisor review" for Insurer on March 26, 2021, in which he opined that Claimant's right knee pathology as revealed on his MRI was "likely pre-existing, with no evidence of any acute trauma. If there were acute trauma present, it would have been surgically addressed by Dr. Snyder." He also opined that Claimant's "current symptoms are related to his worsening pre-existing condition." Dr. Erickson also expressed these opinions in his July 14, 2021 report. (Ex. E).

19. At hearing, Dr. Erickson testified that Claimant's lack of cartilage and patellar tracking and tilting issues were present prior to his injury. He testified that there are no acute findings in the anatomical areas of Claimant's knee where Dr. Hartman is proposing surgery. He testified that Claimant's knees could become symptomatic without trauma gradually over time. Dr. Erickson opined that as it relates to his work injury, Claimant's right knee issues resolved in January 2020, and when the Claimant got to the point where his knee was "normal" the "problem was solved.

20. Dr. Erickson does not agree with Dr. Hartman that Claimant's work-injury aggravated a pre-existing condition. Dr. Erickson stated in his report that "[f]or aggravation or worsening of a pre-existing condition, there must be radiographic evidence of acute trauma." He also testified that he cannot answer whether Claimant's injury accelerated his arthritis, and that a patient can go years before developing symptoms.

21. Dr. Erickson also testified that he does not agree with Dr. Hartman's assessment that the proposed surgery will likely improve Claimant's pain. He testified that he does not believe the surgery will be successful and will likely fail.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

AUTHORIZATION OF SURGERY

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Indus. Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO May 31, 2006).

The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002); *Hobirk v. Colorado Springs School Dist. #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School Dist. No.11*, W.C. No. 3-979-487, (ICAO Jan. 11, 2012); *Ford v. Regional Trans. Dist.,* W.C. No. 4-309-217 (ICAO Feb. 12, 2009).

A compensable aggravation can take the form of a worsened preexisting condition, a trigger of symptoms from a dormant condition, an acceleration of the natural course of the preexisting condition or a combination with the condition to produce disability. The compensability of an aggravation turns on whether work activities worsened the preexisting condition or demonstrate the natural progression of the preexisting condition. *Bryant v. Mesa County Valley School Dist. #51*, W.C. No. 5-102-109-001 (ICAO Mar. 18, 2020). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v.*

Streeb, 706 P.2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The issue before the court is whether the surgery requested by Dr. Hartman is reasonably necessary to cure or relieve the effects of Claimant's work injury. Ultimately, the resolution to the issue turns on two questions. First, whether Claimant's knee pain that developed in summer 2020 was causally related to his May 15, 2019 work injury. Second, if Claimant's knee pain is causally related, whether the surgery is reasonably necessary to cure or relieve the effects of that injury.

Dr. Hartman has opined that Claimant's work injury resulted in an aggravation of Claimant's pre-existing patellar arthritis. On the other hand, Dr. Erickson has opined that Claimant's right knee symptoms developed as the result of his pre-existing condition, and that the Claimant's work injury did not cause his current symptoms. Of the two opinions, the ALJ finds Dr. Hartman's opinion more probable than Dr. Erickson's opinion.

The essence of Dr. Erickson's opinion is that the Claimant's right knee symptoms spontaneously developed approximately seven to eight months after his initial surgery. As both Dr. Erickson and Dr. Snyder indicated, Claimant has similar underlying, pre-existing pathology in both knees. The primary difference between Claimant's knees is that his right knee was damaged in his work accident and subsequently surgically repaired due to that injury. Thus, the right knee is now anatomically different than his left knee. No evidence was admitted that Claimant sustained any traumatic injury to his right knee after his work injury. Respondents, however, point to Claimant's participation in activities, such as turkey hunting and gardening, as a potential cause of Claimant's symptoms. If, as Respondents argue, Claimant's symptoms were caused by his outside activities, independent of his work injury, one would expect that Claimant's left knee would also become symptomatic. The ALJ finds it more probable than not that Claimant's right knee symptoms are related to his injured and surgically repaired right knee than a spontaneous emergence of unrelated symptoms.

With respect to the potential efficacy of the surgery, Dr. Hartman opined that while the proposed surgery would not likely eliminate Claimant's pain, it would likely result in a reduction of Claimant's pain, which Dr. Hartman opined was caused by a work-related aggravation of his underlying arthritis. The ALJ infers from Dr. Hartman's opinions that while the surgery will address the preexisting maltracking, the ultimate purpose of the surgery is to relieve the pain caused by the work-related aggravation of Claimant's pre-existing condition. Dr. Erickson opined that the surgery would likely fail. Again, on balance, the ALJ finds Dr. Hartman's opinion to be more credible.

The ALJ concludes that the evidence indicates it is more likely than not that the surgery recommended by Dr. Hartman is reasonably necessary to cure or relieve the effects of Claimant's work injury.

ORDER

It is therefore ordered that:

1. The right knee arthroscopy recommended by Dr. Hartman is reasonably necessary to cure or relieve the effects of Claimant's May 15, 2019 injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 21, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable right wrist injury during the course and scope of his employment with Employer on February 7, 2021.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Partial Disability (TPD) benefits for the period February 7, 2021 until terminated by statute.

3. Whether Claimant has established by a preponderance of the evidence that the right wrist surgery recommended by Authorized Treating Physician (ATP) Morry A. Olenick, M.D. is reasonable, necessary and causally related to his February 7, 2021 industrial injury.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW), including concurrent employment, of $1,452.18.

FINDINGS OF FACT

1. Prior to February 7, 2021 Claimant worked for two employers. Claimant primarily worked as an Accountant for One TouchPoint. Claimant also worked a second job as a Customer Service Representative for Employer. His job duties involved returning merchandise from the service desk to the receiving area.

2. On February 7, 2021 Claimant was pushing a cart filled with a 60-inch television, a television stand and other heavy items while performing his job duties for Employer. Because the cart was overloaded and top heavy, it began tipping over. Claimant remarked that, because the service area was crowded with tax preparers and customers, he forcefully grasped the handles of the cart in an attempt to keep it from falling and potentially causing injury. He grasped the cart for at least a minute, "holding on as tight as [he] could," before the cart fell. Claimant explained that while attempting to stop the cart from falling he twisted his right wrist. He immediately experienced shooting pain down his wrist.

3. Employer's security video captured the February 7, 2021 incident. Claimant appeared on the video at approximately 2:29:23 p.m. The video depicts three associates behind the service desk and two customers in front of the desk. At 2:29:36 p.m. Claimant walked from behind the service desk to a cart loaded with merchandise. At 2:30:05 p.m. he began to push the loaded cart and at 2:30:08 p.m. the cart started to fall. Claimant immediately released the cart and threw his arms up and to his sides.

4. Claimant testified that prior to February 7, 2021 he had no limitations or symptoms in his right wrist. However, he previously suffered a right wrist fracture in 1972 while playing goalie for his high school soccer team.

5. The record reflects that Claimant had a previously unhealed right wrist fracture. On April 28, 2019 Claimant presented to the North Suburban Medical Center for treatment of a right index finger fracture. He underwent x-rays of the right hand and wrist in connection with the finger fracture. The wrist x-ray showed evidence of an unhealed scaphoid fracture and possible avascular necrosis. In discussing the x-ray findings Claimant noted that he suffered a wrist injury in high school that he believed never healed properly. Claimant commented that he thought, “he may [have] reinjured it sometime last summer.” The provider “discussed the importance of having a follow-up with this injury.”

6. On May 10, 2019 Claimant sought treatment from Morry A. Olenick, M.D. to repair his finger fracture. Dr. Olenick documented limited right wrist motion with SLAC wrist deformity, minimally displaced distal phalangeal fracture and nonarticular right index.

7. On June 7, 2019 Dr. Olenick again evaluated Claimant. On physical examination, Dr. Olenick documented that Claimant’s right wrist navicular was tender. Moreover, a Watson maneuver, which tests for scapholunate problems, was uncomfortable. Dr. Olenick recommended further work-up, including an MRI, for Claimant’s SLAC wrist deformity. He referred Claimant for right wrist x-rays for “injury with pain.”

8. On July 9, 2019 Claimant underwent right wrist x-rays. In connection with the x-rays, Claimant completed an intake questionnaire. Claimant noted he slammed his right index finger in the door in May. He also remarked, “previous right wrist fractures—pain.” Claimant specifically documented “chronic” right wrist pain for “years.” The right wrist x-rays revealed advanced osteoarthritis consistent with SLAC wrist.

9. On February 7, 2021 Respondents filed an Employer’s First Report of Injury. The Report specified that Claimant had injured his “hands” while “turning a full cart of return merchandise to take to claims” on February 7, 2021 at approximately 2:40 p.m.

10. Respondents subsequently filed a Notice of Contest denying that Claimant’s injury was work-related. Nevertheless, Claimant continued to receive treatment with the designated providers at Concentra Medical Centers.

11. On February 11, 2021 Claimant visited Concentra for an examination. Claimant reported two different descriptions of the February 7, 2021 mechanism of injury. He stated the first account was inaccurate but the second report was correct. In the latter description Claimant recounted that he was pushing an over-stuffed cart to receiving when it started to tip over. He tried to catch the cart but it fell over and he forcefully grasped the handle with his right hand. Claimant reported pain in the right wrist area, thumb and index finger. Nathan Adams PA-C diagnosed Claimant with a strain of the right hand that was consistent with a history of a “work-related mechanism of injury/illness.”

PA-C Adams assigned temporary work restrictions of no lifting in excess of one pound and referred Claimant to Authorized Treating Physician (ATP) Dr. Olenick.

12. Claimant testified that upon returning to work with Employer he discussed work restrictions with his supervisor. The supervisor advised Claimant that he would no longer be able to work overtime as a customer service representative because of the temporary work restrictions.

13. On February 16, 2021 Claimant returned to Concentra and was evaluated by Rosemary Greenslade, M.D. She concurred with PA-C Adams' diagnosis of a right-hand strain. Dr. Greenslade also agreed that Claimant's history was consistent with a work-related injury and maintained Claimant on a one-pound lifting restriction.

14. While Claimant was receiving treatment at Concentra he also underwent seven physical therapy visits. In the initial physical therapy note of February 12, 2021 Claimant reported "some chronic wrist pain to affected area with functional deficits." Notably, physical therapy did not relieve Claimant's right wrist symptoms.

15. On February 17, 2021 Claimant visited ATP Dr. Olenick for an examination. Dr. Olenick determined that on February 7, 2021 Claimant had suffered a "right wrist sprain, superimposed on previous SLAC wrist deformity, status post right carpal tunnel decompression."

16. On April 7, 2021 Claimant returned to ATP Dr. Olenick for an examination. Dr. Olenick recommended consideration of a cortisone injection and right wrist reconstruction. Dr. Olenick specifically requested surgery in the form of a "four-bone arthrodesis of the right-wrist with excision scaphoid." On May 7, 2021 Insurer denied Dr. Olenick's surgical request.

17. On May 18, 2021 Claimant returned to PA-C Adams for an evaluation. PA-C Adams noted that Insurer had denied the surgery requested by Dr. Olenick. Claimant had not yet tried steroid injections, but sought to pursue the procedure. He reiterated that he had no pain or functional deficits following his right wrist fracture in 1972. PA-C Adams commented that Claimant understood the concept of post traumatic arthritis and was frustrated that "his work related trauma exacerbated his underlying arthritis**.**" Claimant mentioned great difficulty with activities of daily living and was dependent on a wrist brace.

18. On June 9, 2021 Claimant underwent right wrist x-rays. The x-rays revealed a tiny bony density in the ulnar aspect of the right wrist that "could represent a tiny avulsion fragment or degenerative mineralization."

19. On August 17, 2021 Claimant underwent an independent medical examination with Sean Griggs, M.D. He conducted a physical examination and reviewed Claimant's medical records. Dr. Griggs issued a report and testified at the hearing in this matter.

20. Claimant reported to Dr. Griggs that he injured his right wrist while pushing a cart filled with returned items. In the process of grabbing the cart to prevent it from

tipping, Claimant twisted his right wrist. Claimant denied any history of right wrist pain or limitations prior to February 7, 2021 other than the 1972 right wrist fracture. Based on his review of the medical records and evaluation, Dr. Griggs diagnosed Claimant with a right wrist sprain with pre-existent severe scaphoid nonunion advanced collapse arthritis. Dr. Griggs initially determined that "the injury as described would lead to a sprain of the wrist but would not cause the severe arthritis that the patient has."

21. Dr. Griggs did not view the store security video of the February 7, 2021 incident prior to drafting his report. However, he had the opportunity to view the video at the time of hearing. Dr. Griggs determined that Claimant's description of the February 7, 2021 incident was inconsistent with the depiction on the security video. He concluded that the February 7, 2021 incident was minor because Claimant did not appear to hold onto the cart to prevent it from falling.

22. Dr. Griggs explained that Claimant's need for a four-corner fusion was not related to the February 7, 2021 event but was caused by chronic, severe scapholunate nonunion advanced collapse arthritis. He remarked that the natural history of scaphoid nonunion advanced collapse arthritis is that it will become symptomatic and painful over time. Dr. Griggs reasoned that Claimant would have required the requested surgery even in the absence of the February 7, 2021 incident.

23. At the time of the hearing in this matter Claimant remained under temporary work restrictions of wearing a right hand wrist splint and no lifting, pushing or pulling in excess of two pounds with the right hand. Medical records reveal that a date for MMI was uncertain "because surgery pending approval."

24. Claimant has demonstrated that it is more probably true than not that he suffered a compensable right wrist injury during the course and scope of his employment with Employer on February 7, 2021. Initially, Claimant explained that on February 7, 2021 he was pushing a cart filled with numerous heavy items while performing his job duties for Employer. Because the cart was overloaded and top heavy, it began to tip. Claimant grasped the handles of the cart in an attempt to keep it from falling, but twisted his right wrist. Store surveillance video reflects that Claimant immediately released the cart and threw his arms up and to his sides. He then experienced shooting pain down his right wrist.

25. On February 11, 2021 PA-C Adams at Concentra diagnosed Claimant with a strain of the right hand that was consistent with a history of a "work-related mechanism of injury/illness." PA-C Adams assigned temporary work restrictions of no lifting in excess of one pound and referred Claimant to ATP Dr. Olenick. On February 16, 2021 Dr. Greenslade at Concentra concurred with PA-C Adams' diagnosis of a right-hand strain. Dr. Greenslade also agreed that Claimant's history was consistent with a work-related injury and maintained Claimant on a one-pound lifting restriction.

26. The record reflects that Claimant had a previously unhealed right wrist fracture. Claimant acknowledged that he suffered a right wrist fracture in 1972 while playing goalie for his high school soccer team. On April 28, 2019, while receiving medical

treatment for his index finger, a right wrist x-ray showed evidence of an unhealed scaphoid fracture and possible avascular necrosis. On May 10, 2019 Dr. Olenick documented limited right wrist motion with SLAC wrist deformity, minimally displaced distal phalangeal fracture and nonarticular right index. Right wrist x-rays on July 9, 2019 revealed advanced osteoarthritis consistent with SLAC wrist.

27. After conducting a physical examination and reviewing Claimant's medical records, Dr. Griggs diagnosed Claimant with a right wrist sprain with pre-existing severe scaphoid nonunion advanced collapse arthritis. He initially determined that "the injury as described would lead to a sprain of the wrist but would not cause the severe arthritis that the patient has." After reviewing store surveillance video Dr. Griggs concluded that the February 7, 2021 incident was minor because Claimant did not appear to hold onto the cart to prevent it from falling.

28. Despite Dr. Griggs' opinion, the record reflects that Claimant's work activities on February 7, 2021 aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. Claimant explained that, while he was pushing an overloaded court that began to tip he attempted to stop it from falling but immediately suffered shooting pain down his right wrist. Video surveillance reveals that Claimant was pushing a loaded cart that tipped over. Respondents' First Report of Injury, the medical records and the testimony contain slight variations in the precise mechanism of injury to Claimant's right-wrist. Nevertheless, Claimant has consistently maintained that, as he attempted to prevent the cart from tipping, he twisted his right wrist. Finally, while undergoing treatment for a non-work-related right finger injury in 2019 with Dr. Olenick, right wrist x-rays revealed advanced osteoarthritis consistent with SLAC wrist. Dr. Olenick did not recommend right wrist surgery at the time, but requested right wrist surgery subsequent to the February 7, 2021 work incident. The record thus reflects that, although Claimant suffered from a pre-existing right wrist condition, the February 7, 2021 incident caused the need for medical care and work restrictions. Claimant's work activities on February 7, 2021 thus aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment.

29. Claimant has proven that it is more probably true than not that he is entitled to receive Temporary Partial Disability (TPD) benefits for the period February 7, 2021 until terminated by statute. On February 11, 2021 PA-C Adams diagnosed Claimant with a strain of the right hand and assigned temporary work restrictions of no lifting in excess of one pound. On February 16, 2021 Dr. Greenslade maintained Claimant on a one-pound lifting restriction. Claimant credibly explained that, because of his temporary work restrictions, he has suffered decreased earnings since February 7, 2021. Claimant detailed that upon returning to work with Employer he discussed restrictions with his supervisor. The supervisor advised Claimant that he would no longer be able to work overtime as a customer service representative because of the temporary work restrictions. At the time of the hearing in this matter Claimant remained under temporary work restrictions of wearing a right hand wrist splint and no lifting, pushing or pulling in excess of two pounds with the right hand. Medical records reveal that a date for MMI was uncertain "because surgery pending approval."

30. The record thus reveals that Claimant's February 7, 2021 work injuries decreased his ability to earn wages. He was specifically unable to work overtime because of his work restrictions. Accordingly, Claimant is entitled to receive Temporary Partial Disability (TPD) benefits for the period February 7, 2021 until terminated by statute.

31. Claimant has established that it is more probably true than not that the right wrist surgery recommended by ATP Dr. Olenick is reasonable, necessary and causally related to his February 7, 2021 industrial injury. Initially, on April 7, 2021 ATP Dr. Olenick recommended consideration of a cortisone injection and right wrist reconstruction for Claimant's February 7, 2021 industrial injury. Dr. Olenick specifically requested surgery in the form of a "four-bone arthrodesis of the right-wrist with excision scaphoid." On May 7, 2021 Insurer denied Dr. Olenick's surgical request.

32. Dr. Griggs explained that Claimant's need for a four-corner fusion was not related to the February 7, 2021 event but was caused by chronic, severe scapholunate nonunion advanced collapse arthritis. He remarked that the natural history of scaphoid nonunion advanced collapse arthritis is that it will become symptomatic and painful over time. Dr. Griggs reasoned that Claimant would have required the requested surgery even in the absence of the February 7, 2021 incident. His opinion reflects that Dr. Olenick's surgical request was reasonable and necessary, but not related to the February 7, 2021 work incident.

33. Despite Dr. Griggs' opinion, the record reveals that the February 7, 2021 work accident precipitated Claimant's need for right wrist surgery as recommended by Dr. Olenick. Notably, Dr. Olenick determined that on February 7, 2021 Claimant had suffered a "right wrist sprain, superimposed on previous SLAC wrist deformity, status post right carpal tunnel decompression." Although Claimant's industrial injury may not have been the sole cause of his disability it was a significant, direct, and consequential factor in his need for right wrist surgery. Claimant's employment thus aggravated, accelerated, or combined with his pre-existing condition to produce a need for surgical intervention. Accordingly, ATP Dr. Olenick's request for surgery in the form of a "four-bone arthrodesis of the right-wrist with excision scaphoid" is reasonable, necessary and causally related to Claimant's February 7, 2021 work incident.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms. It does not follow that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *cf. Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment").

8. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable right wrist injury during the course and scope of his employment with Employer on February 7, 2021. Initially, Claimant explained that on February 7, 2021 he was pushing a cart filled with numerous heavy items while performing his job duties for Employer. Because the cart was overloaded and top heavy, it began to tip. Claimant grasped the handles of the cart in an attempt to keep it from falling, but twisted his right wrist. Store surveillance video reflects that Claimant immediately released the cart and threw his arms up and to his sides. He then experienced shooting pain down his right wrist.

9. As found, on February 11, 2021 PA-C Adams at Concentra diagnosed Claimant with a strain of the right hand that was consistent with a history of a "work-related mechanism of injury/illness." PA-C Adams assigned temporary work restrictions of no lifting in excess of one pound and referred Claimant to ATP Dr. Olenick. On February 16, 2021 Dr. Greenslade at Concentra concurred with PA-C Adams' diagnosis of a right-hand strain. Dr. Greenslade also agreed that Claimant's history was consistent with a work-related injury and maintained Claimant on a one-pound lifting restriction.

10. As found, the record reflects that Claimant had a previously unhealed right wrist fracture. Claimant acknowledged that he suffered a right wrist fracture in 1972 while playing goalie for his high school soccer team. On April 28, 2019, while receiving medical treatment for his index finger, a right wrist x-ray showed evidence of an unhealed scaphoid fracture and possible avascular necrosis. On May 10, 2019 Dr. Olenick documented limited right wrist motion with SLAC wrist deformity, minimally displaced distal phalangeal fracture and nonarticular right index. Right wrist x-rays on July 9, 2019 revealed advanced osteoarthritis consistent with SLAC wrist.

11. As found, after conducting a physical examination and reviewing Claimant's medical records, Dr. Griggs diagnosed Claimant with a right wrist sprain with pre-existing severe scaphoid nonunion advanced collapse arthritis. He initially determined that "the injury as described would lead to a sprain of the wrist but would not cause the severe arthritis that the patient has." After reviewing store surveillance video Dr. Griggs

concluded that the February 7, 2021 incident was minor because Claimant did not appear to hold onto the cart to prevent it from falling.

12. As found, despite Dr. Griggs' opinion, the record reflects that Claimant's work activities on February 7, 2021 aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. Claimant explained that, while he was pushing an overloaded court that began to tip he attempted to stop it from falling but immediately suffered shooting pain down his right wrist. Video surveillance reveals that Claimant was pushing a loaded cart that tipped over. Respondents' First Report of Injury, the medical records and the testimony contain slight variations in the precise mechanism of injury to Claimant's right-wrist. Nevertheless, Claimant has consistently maintained that, as he attempted to prevent the cart from tipping, he twisted his right wrist. Finally, while undergoing treatment for a non-work-related right finger injury in 2019 with Dr. Olenick, right wrist x-rays revealed advanced osteoarthritis consistent with SLAC wrist. Dr. Olenick did not recommend right wrist surgery at the time, but requested right wrist surgery subsequent to the February 7, 2021 work incident. The record thus reflects that, although Claimant suffered from a pre-existing right wrist condition, the February 7, 2021 incident caused the need for medical care and work restrictions. Claimant's work activities on February 7, 2021 thus aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment.

Temporary Partial Disability Benefits

13. Section 8-42-106(1), C.R.S. provides for an award of Temporary Partial Disability (TPD) benefits based on the difference between the claimant's Average Weekly Wage (AWW) at the time of injury and the earnings during the continuance of the disability. Specifically, an employee shall receive 66.66% of the difference between his wages at the time of his injury and during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury caused the disability and consequent partial wage loss. §8-42-103(1), C.R.S.; *see Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (TPD benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). Section 8-42-106(2), C.R.S. provides that TPD benefits shall continue until either of the following occurs: "(a) The employee reaches maximum medical improvement; or (b)(I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment." *See Evans v. Wal-Mart*, WC 4-825-475 (ICAO, May 4, 2012).

14. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Partial Disability (TPD) benefits for the period February 7, 2021 until terminated by statute. On February 11, 2021 PA-C Adams diagnosed Claimant with a strain of the right hand and assigned temporary work restrictions of no lifting in excess of one pound. On February 16, 2021 Dr. Greenslade

maintained Claimant on a one-pound lifting restriction. Claimant credibly explained that, because of his temporary work restrictions, he has suffered decreased earnings since February 7, 2021. Claimant detailed that upon returning to work with Employer he discussed restrictions with his supervisor. The supervisor advised Claimant that he would no longer be able to work overtime as a customer service representative because of the temporary work restrictions. At the time of the hearing in this matter Claimant remained under temporary work restrictions of wearing a right hand wrist splint and no lifting, pushing or pulling in excess of two pounds with the right hand. Medical records reveal that a date for MMI was uncertain "because surgery pending approval."

15. As found, the record thus reveals that Claimant's February 7, 2021 work injuries decreased his ability to earn wages. He was specifically unable to work overtime because of his work restrictions. Accordingly, Claimant is entitled to receive Temporary Partial Disability (TPD) benefits for the period February 7, 2021 until terminated by statute.

Medical Benefits and Proposed Right Wrist Surgery

16. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a pre-existing condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

17. Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Industrial Claim Appeals Office,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001).

18. As found, Claimant has established by a preponderance of the evidence that the right wrist surgery recommended by ATP Dr. Olenick is reasonable, necessary and causally related to his February 7, 2021 industrial injury. Initially, on April 7, 2021 ATP Dr. Olenick recommended consideration of a cortisone injection and right wrist reconstruction for Claimant's February 7, 2021 industrial injury. Dr. Olenick specifically

requested surgery in the form of a "four-bone arthrodesis of the right-wrist with excision scaphoid." On May 7, 2021 Insurer denied Dr. Olenick's surgical request.

19. As found, Dr. Griggs explained that Claimant's need for a four-corner fusion was not related to the February 7, 2021 event but was caused by chronic, severe scapholunate nonunion advanced collapse arthritis. He remarked that the natural history of scaphoid nonunion advanced collapse arthritis is that it will become symptomatic and painful over time. Dr. Griggs reasoned that Claimant would have required the requested surgery even in the absence of the February 7, 2021 incident. His opinion reflects that Dr. Olenick's surgical request was reasonable and necessary, but not related to the February 7, 2021 work incident.

20. As found, despite Dr. Griggs' opinion, the record reveals that the February 7, 2021 work accident precipitated Claimant's need for right wrist surgery as recommended by Dr. Olenick. Notably, Dr. Olenick determined that on February 7, 2021 Claimant had suffered a "right wrist sprain, superimposed on previous SLAC wrist deformity, status post right carpal tunnel decompression." Although Claimant's industrial injury may not have been the sole cause of his disability it was a significant, direct, and consequential factor in his need for right wrist surgery. Claimant's employment thus aggravated, accelerated, or combined with his pre-existing condition to produce a need for surgical intervention. Accordingly, ATP Dr. Olenick's request for surgery in the form of a "four-bone arthrodesis of the right-wrist with excision scaphoid" is reasonable, necessary and causally related to Claimant's February 7, 2021 work incident.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable right wrist injury during the course and scope of his employment with Employer on February 7, 2021.

2. Claimant earned an AWW, including concurrent employment, of $1,452.18.

3. Claimant shall receive TPD benefits for the period February 7, 2021 until terminated by statute.

4. The right wrist surgery recommended by ATP Dr. Olenick is authorized.

5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty

(20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: October 21, 2021.

ISSUES

I. Whether Respondents have overcome the DIME physician's opinion, by clear and convincing evidence, that Claimant is not at MMI.

II. Whether Respondents have overcome the DIME physician's opinion, by clear and convincing evidence, that Claimant's left knee condition and left shoulder condition are causally related to her work injury.

III. Whether Claimant established, by a preponderance of the evidence, that Respondents are liable for her prior left knee replacement, her prior left shoulder replacement, and ongoing treatment for her left knee?

IV. Whether Claimant has established, by a preponderance of the evidence, that Respondents are liable for the additional medical treatment she is requesting.

V. Whether Claimant has established that Respondents are liable for an increase in her average weekly wage for temporary lodging provided at the ambulance station?

VI. Whether Claimant has to establish, by clear and convincing evidence, that Claimant is not at MMI for her other injuries – not her shoulder and knee injury.

VII. Whether Respondents are liable for Melissa Abate, a case manager, to be a case manager under this claim.

STIPULATIONS

Claimant, in her post hearing proposed order, stated that the parties have stipulated that the following medical providers are authorized:

- Dr. David Blatt
- Dr. Stephen Moe
- Dr. Braden Mayer
- Dr. Thomas Pazik
- Dr. Thomas Politzer
- Dr. David Schneider
- Dr. Greg Reichhardt
- Dr. Gregory Thwaites
- Royle Rebound Sports PT

- ProActive Physical Therapy
- Dr. John. R. Schultz, Centeno-Schultz Clinic
- Dr. Demetri J. Aguila, Healing Hands of Nebraska
- Dr. Jan Gillespie Wagner, Northern Colorado Pain Management
- Physicians and physician assistants at Banner Health Medical Group
- Dr. David L. Reinhard, Colorado Rehabilitation & Occupational Medicine

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. This case involves an admitted claim that occurred on October 18, 2018. At the time of Claimant's compensable accident, she was working for Morgan County as a paramedic. Claimant had worked as a paramedic for Morgan County since 2010. Although Claimant was working as a paramedic at the time of the accident, Claimant also worked as a volunteer firefighter for the Town of Galeton. Claimant had worked as a volunteer firefighter for Galeton since 2009.
2. On October 18, 2018, Claimant was involved in a significant high-speed motor vehicle accident.

Preexisting Left Knee and Left Shoulder Conditions

Preexisting left knee condition.

3. In September 2007, Claimant injured her left knee in an accident. Claimant suffered a tibial plateau fracture that required external fixation and a subsequent surgery. R. 765. Following a course of physical therapy and hardware removal she was released to full duty without restrictions as late as March 16, 2011. (Exhibit QQ, Page 1213)
4. While Claimant did have occasional left knee pain preceding the work accident, there is no credible and persuasive evidence establishing Claimant needed or sought medical treatment from March 17, 2011, through October 17, 2018, for her left knee. Plus, there is no credible and persuasive evidence establishing Claimant had any functional impairment – or disability – regarding her left knee from March 16, 2011, through October 17, 2018.

Preexisting left shoulder condition.

5. In December 2011, Claimant injured her left shoulder. She underwent an arthroscopy including a subacromial decompression and biceps tenodesis in February 2012 with Dr. Durbin at the Orthopedic Center of the Rockies (OCR). Following a course of physical therapy Dr. Durbin placed claimant at MMI on August 13, 2012 and released her to full activities as tolerated with no restrictions. (Exhibit QQ, Page 1150-1152, 1207-1210, 1212). Dr. Durbin, before the surgery, thought Claimant might have had a torn rotator cuff. But, during surgery, no rotator cuff tear was found. (*Id.* at 1207, 1209)

6. After being placed at MMI, Claimant sporadically sought additional medical treatment for her left shoulder. During the next four years, Claimant sought treatment about five times. Claimant returned for left shoulder pain two months later and a nerve study was recommended due to possible deltoid damage. (Exhibit QQ, Page 1147.). About two years later, in 2014, Claimant saw Dr. Yemm complaining of left shoulder pain. Dr. Yemm performed a subacromial injection which showed marked improvement after ten minutes. (Exhibit QQ, Page 1144). Dr. Yemm saw her again in February 2015 and performed another subacromial injection. (Exhibit QQ, Page 1142). Dr. Grey saw her in May 2015, and at this point Dr. Grey discussed the option of a possible partial arthrosurface (partial joint replacement) procedure but that it would not allow her to return to firefighting, but as a paramedic she "may be able to continue her work as she knows it." (Exhibit 21, Page 550). Her last pre-work-injury appointment was on August 10, 2016, with Dr. Yemm who performed another injection. (Exhibit 21, Page 552).

7. There is no credible and persuasive evidence establishing Claimant needed or sought medical treatment from August 11, 2016, through October 17, 2018, for her left shoulder condition. There is also no credible and persuasive evidence that established Claimant had any functional impairment – or disability – regarding her left shoulder from August 11, 2016, to October 17, 2018.

In 2017 Claimant Underwent a Firefighting Physical

8. In August 2017, Claimant underwent a complete physical exam so she could keep working as a firefighter. The physical was conducted pursuant to the National Fire Protection Association Guidelines. (Exhibit 5) In that exam Claimant was fully forthcoming about her prior left shoulder and left knee surgeries. *Id. at 133, 136.* Her arms and legs range of motion were within normal limits. *Id. at 134-135.* In the end, Dr. Vlahovich – the physician who performed the physical examination – concluded Claimant could work unrestricted duty as a firefighter. *Id. at. 136.*

Job Performance Requirement – Fit for Duty Assessment

9. On October 13th and 15th of 2018, Claimant participated in an extensive, comprehensive, and physically demanding Job Performance Requirement (JPR) or fit for duty assessment for her volunteer firefighting position. (Ex. 4, pp. 103-113 and pp. 115-130) The JPR required Claimant to perform extremely physically demanding activities consistent with fighting a fire and rescue operations. The physically demanding activities included, but were not limited to, the following.

    - Claimant had to put on her 21-pound breathing apparatus. This required Claimant to have full range of bilateral shoulder motion to flip the breathing apparatus over her head while simultaneously sliding her arms into the straps. (Ex. 4, p. 103.)

    - Claimant had to use a firefighting and rescue ladder. This required Claimant to work with another individual and lift a 70-pound ladder up from the ground and place it on one of her shoulders. Then, Claimant had to lift her arms overhead to extend the ladder and place the ladder against a wall. (Ex. 4, pp. 104-106.)

- Claimant had to climb the rescue ladder with a chain saw and breaker bar. This required Claimant to carry a 15-pound chainsaw up the ladder. Claimant was also required to carry a 9-pound breaker bar up the ladder to vent the structure. (Ex. 4)
- Claimant had to perform a simulated rescue of a 150-pound person. This required her simulate rescuing a person by using a dummy – called Rescue Randy - that weighed 150 pounds using the ladder. To perform this rescue simulation, Claimant was required to carry the 150-pound dummy down a ladder – across her arms – while wearing her firefighting gear. The firefighting gear weighed an additional 19-pounds. Thus, Claimant had to climb a ladder with 19 pounds of gear on and then carry 150 pounds down the ladder. As result, Claimant had to carry almost 170 pounds down the ladder. (Ex. 4)
- Claimant had to perform various water supply tests. This required Claimant to pull items using her entire body weight, with over 100 pounds of force. She also had to climb onto all sides of the firetruck. The water supply tests also required Claimant to reach up and grab items from the truck and attach heavy water hoses to the firetruck and a fire hydrant. (Ex. 4)

10. The JPR required Claimant to use her left knee and left shoulder to perform extremely physically demanding tasks. Claimant passed all physical demands of the JPR. Claimant therefore passed her physical and was cleared to work fully duty as a firefighter and also passed her JPR. As a result of Claimant passing her physical and being cleared to work full duty and passing her JPR, the ALJ finds that within a week of her work accident, Claimant did not have any functional limitations of her left knee or left shoulder due to her prior injuries.

11. On the other hand, during the approximate two-year period before her work accident, Claimant did have occasional pain and discomfort in her left knee and left shoulder. That said, the pain and discomfort did not prevent Claimant from performing her job duties as a volunteer firefighter or paramedic and such conditions did not require medical treatment.

12. As a result, the ALJ finds Claimant did not have any functional impairment or disability due to her prior left shoulder and left knee injuries that precluded her from performing her job as a volunteer firefighter and paramedic. The ALJ also finds that Claimant's prior left shoulder and knee injury did not require any medical treatment up until her compensable work accident on October 18, 2018.

Work Accident on October 18, 2018

13. On October 18, 2018, 36 hours into a 72-hour paramedic shift, Claimant and her partner had just dropped a patient off from an ambulance transport and were on a two-lane highway. Claimant was in the passenger seat and her partner was driving. The ambulance was traveling about 65 miles an hour. A semi tractor-trailer was approaching from the opposite direction and crossed into their lane. The semi struck the ambulance on the driver's side slamming it over onto its right (passenger) side. (Exhibit 20)

14. Claimant sustained loss of consciousness. When she regained consciousness, her partner was screaming because the main oxygen tank regulator had popped off and apparently oxygen was escaping from the tank. As a result, there was concern that the vehicle would blow up. Claimant was laying on the passenger's side door, as the vehicle was flipped onto its right side and onto the passenger's side. Claimant stood up on her door after releasing her seatbelt and was now vertical since the vehicle was flipped on its right side. Claimant's partner, who was driving, was hanging by her seatbelt that was holding her in place. Claimant released her partner from the seatbelt. To release her partner from her seatbelt, she had to lift the (much heavier) body weight of the driver off of the seatbelt with her left arm to unlock the seatbelt with her right arm. Claimant then lowered the driver down to her door. Once removing her partner from her seatbelt, they were unable get out of the ambulance because of the positioning of the vehicle. Claimant therefore decided to try to kick out the front window. Claimant, while in an awkward position, successfully kicked out the front window and she and her partner managed to get out of the ambulance.

15. After exiting the ambulance, Claimant checked her partner out first and noted there was blood on her face and that she was complaining of hip pain. Claimant then looked for the truck that hit her and called the accident into her office on the ambulance radio. The truck that hit the ambulance was not immediately visible, but she saw the truck in the distance in a field. Claimant and her partner tried to check on the driver of the semi, but the truck driver had gotten out of his vehicle.

Medical Treatment after the Work Accident

16. Right after the accident, Claimant was seen at the hospital in the early morning hours complaining of headache, vomiting, neck pain, left shoulder pain, chest wall pain, thoracic pain, left low back pain, and knee pain. Claimant was prescribed Norco for her shoulder and knee pain. (Ex. 18, pp. 514-515)

17. The next day, October 19, 2018, Claimant was seen by her primary occupational medical provider and her pain complaints still included headaches, head, neck, left shoulder, vomiting, low back, and left knee pain. (Ex. 18, p. 519)

18. Thus, Claimant's complaints of left shoulder pain and left knee pain are documented the day of the accident as well as the next day.

19. On November 1, 2018, Claimant underwent an MRI of her left shoulder. The MRI showed the following:

    - Supraspinatus tendinosis without a tear. The remaining rotator cuff was normal.

- Changes of biceps tenodesis at the upper bicipital groove with intact biceps tendon below that level.
- Mild glenohumeral degenerative arthrosis with diffuse grade 2 chondral thinning and fibrillation as well as an 8x8x5 mm loose body in the axillary recess.

(Ex. E, pp. 148-149)

20. Dr. Reichhardt, who was managing Claimant's workers' compensation injuries, referred Claimant to Thomas Pazik, M.D. (Ex. 7, p. 281)

21. On February 5, 2019, Dr. Pazik, M.D. evaluated Claimant for left knee and left shoulder pain. Dr. Pazik obtained a detailed history from Claimant about her preexisting shoulder and knee problems and how her symptoms got much worse after the work accident. Dr. Pazik's notes from this visit show Claimant stated that just before her work accident, her prior shoulder and knee injuries did not prevent her from functioning as a paramedic/firefighter. In essence, Claimant stated that she could function with no problems. Claimant's statements to Dr. Pazik about her functioning before and after the accident are consistent with her physical and JPR done shortly before the work accident. (Ex. 7, pp. 281-285.)

22. Dr. Pazik reviewed the November 1, 2018, MRI report of Claimant's left shoulder. He also reviewed the January 14, 2019, MRI of her left knee and discussed the findings with the radiologist. He also reviewed X-rays of Claimant's shoulder and knee. *Id.*

23. After performing a thorough assessment of Claimant's condition, Dr. Pazik concluded that the accident aggravated Claimant's preexisting left knee and left shoulder condition. He concluded that:

    - Claimant has post traumatic arthritis of her left knee. Claimant suffered from a preexisting condition that was exacerbated by the work accident. He based his opinion on the fact that Claimant was previously asymptomatic and functioning before the work accident and was not after the accident.
    - Claimant has osteoarthritis of the left shoulder. He also concluded that while Claimant's osteoarthritis preexisted her work accident, and that she had intermittent biceps achiness, the work accident exacerbated her shoulder condition.

    Id.

24. The ALJ finds Dr. Pazik's opinions that the work accident aggravated Claimant's left knee and left shoulder condition to be credible and persuasive. The ALJ finds his opinions to be persuasive because they are consistent with Claimant passing her physical and JPR shortly before the accident. They are also consistent with Claimant's statements about the worsening of her knee and shoulder pain after the accident. Plus, they are also consistent with Claimant's need for medical treatment that arose after the accident.

25. Dr. Pazik concluded that shoulder and knee surgery would be needed to relieve Claimant's pain that was caused by the work accident. (Ex. 7, p. 284) Claimant

decided to proceed with left knee surgery first because that was giving her more problems than her shoulder. (*Id.)* At the appointment, Dr. Pazik also stated that Claimant could proceed with either an arthroscopic procedure for her knee, or a total knee replacement, a more definitive procedure to cure Claimant from the effects of her work injury – by reducing her pain and increasing her function. (Ex. 7, p. 286)

26. On February 12, 2019, Claimant returned to Dr. Pazik. At this visit, Claimant again stated that she preferred to undergo a total knee replacement to alleviate her knee pain. Dr. Pazik agreed and stated that Claimant had failed nonoperative measures and was having increasing difficulty performing activities of daily living independently and comfortably because of her knee pain. For these reasons, he recommended Claimant proceed with a left total knee replacement. (Ex. 7, pp. 286-288)

27. On May 7, 2019, Claimant was evaluated by Dr. Pazik. Again, Dr. Pazik noted that Claimant had failed nonoperative treatment for her work-related knee injury. He also noted that Claimant was still having increasing difficulty performing activities of daily living – which Claimant could perform before her work injury. As a result, he again recommended a total knee replacement to cure Claimant from the effects of her work injury. Claimant agreed with his recommendation and decided to proceed with the total knee replacement.

28. Respondents denied the request for Dr. Pazik to perform the total knee replacement. Claimant, however, proceeded with getting the total knee replacement with Dr. Pazik under her personal insurance. (Ex. 7, p. 291)

29. On May 17, 2019, Claimant was evaluated by Dr. John Schultz. At this appointment, Dr. Schultz obtained a detailed history about Claimant's prior left knee and left shoulder injuries. He noted Claimant said that although she had some shoulder and knee pain before the accident, her shoulder and knee pain worsened after the accident. He noted that since the work accident, Claimant's left shoulder pain was different in character and constant in duration. He also noted Claimant's knee pain was constant in duration and diffuse in character. He also noted Claimant had a complex tear of the posterolateral meniscus with both horizontal and radial components. (Ex. 3, p. 47)

30. On May 20, 2019, Claimant underwent a total left knee replacement arthroplasty to decrease her pain and increase her function. The surgery was performed by Dr. Pazik. (Ex. 7, p. 299)

31. After her knee replacement, Claimant had ongoing left knee pain. Based on her ongoing pain, Dr. Pazik concluded Claimant had an injury to her saphenous nerve. Thus, he referred Claimant to Dr. Matthew Gray, a pain management physician. (Ex. 7, p. 312)

32. On August 29, 2019, Claimant was seen by Dr. Schultz for him to determine whether Claimant might have developed chronic regional pain syndrome (CRPS) because of her knee surgery. To help diagnose CRPS, Dr. Schultz performed a lumbar sympathetic nerve block. He also performed a left saphenous nerve block. Then, he performed another lumbar sympathetic block. By October 10, 2019, he thought Claimant had chronic regional pain syndrome of her left knee. (E. 7, p. 318)

33. On April 28, 2020, Dr. Schultz issued a follow up note in which he concluded that Claimant's left sided knee pain is consistent with CRPS. (Ex. 3)

34. Based on the work accident, Claimant developed pain in her knee. The total knee replacement was prescribed by Dr. Pazik to cure Claimant from the effects of her work injury. Thus, the knee replacement was reasonable, necessary, and related to treat Claimant from the effects of her work injury,

35. Based on the development of CRPS shortly after the knee surgery, the ALJ finds that the knee surgery caused Claimant's CRPS. This finding is also supported by the fact that none of the doctors who have evaluated Claimant have persuasively concluded that Claimant's CRPS was not caused by the knee surgery.

36. On May 12, 2020, Claimant underwent an exploratory left shoulder arthroscopy based on the chronic pain caused by the work accident. The surgery was performed by Dr. James Schneider. (Ex. 12, p. 421)

37. On May 29, 2020, and based on the findings during the exploratory shoulder surgery, Claimant underwent a left reverse total shoulder arthroplasty, which was performed by Dr. James Schneider. (Ex. AA, p. 646) The preoperative and postoperative diagnosis was severe osteoarthritis with rotator cuff injury. *Id*. The reverse total shoulder arthroplasty was recommended because of Claimant's osteoarthritis – which was aggravated by the work accident - and the rotator cuff injury that was either aggravated or caused by the work accident and identified during the surgery. As a result, the shoulder replacement surgery was due to her osteoarthritis, which was permanently aggravated by her work accident, and the rotator cuff tear that was either permanently aggravated or caused by the work accident. (Ex. 12, pp. 424-425) Moreover, the shoulder replacement surgery was reasonable and necessary to cure Claimant from the effects of her work injury because it was prescribed to reduce Claimant's pain and increase her functional deficit – both of which were caused by the accident. Thus, the shoulder replacement surgery was also related to her work accident.

38. On August 11, 2020, Claimant had a follow up appointment with Dr. Pazik. It is noted that at this appointment, Claimant stated that she was delighted with the results of her reverse total shoulder replacement. It was also noted that Claimant, based on her left knee complaints, had undergone further evaluation by Dr. Demetrio J. Aguila, and was diagnosed with saphenous neuroma and CRPS. It was also noted that Dr. Aguila recommended treatment of her CRPS and surgical treatment of her saphenous neuroma. Claimant was also evaluated by Dr. Kinder who also recommended the treatment outlined by Dr. Aguila before specific treatment of her knee – with possible revision surgery regarding her knee. Dr. Pazik noted that Claimant would like to proceed with the recommendations made by Dr. Aguila, but they were being denied by her workers' compensation carrier. Dr. Pazik concluded by again stating that Claimant's shoulder and knee problems were caused by the work accident. He also reaffirmed his referrals to Drs. Auguila, Schultz, and Kinder to continue treating Claimant's knee pain and to Dr. Schneider to continue treating Claimant's shoulder pain. (Ex. 7, pp. 334 – 336)

39. On September 3, 2020, Claimant underwent surgery of the left saphenous nerve to treat her left knee pain (CRPS). The surgery was performed by Dr. Aguilar. (Ex. 10, pp. 369-372) Claimant returned to see Dr. Aguilar one week later. At this visit, Claimant reported improvement of her knee pain.

40. On November 12, 2020, Claimant was evaluated by Dr. Jan Gillespie Wagner, of Norther Colorado Pain Management, via videoconference. The visit was to discuss the effects of Claimant's Ketamine infusion therapy for her CRPS. At this appointment, Claimant reported significant improvement in the burning and shooting pain down her lower leg. She also reported improvement to the hypersensitivity to the skin around the left knee. On the other hand, the deep pain and instability in the knee joint itself remained. Dr. Gillespie Wagner concluded by stating that Claimant should update her orthopedic surgeon, Dr. Kinder, regarding the pain relief she received from the ketamine. Dr. Gillespie also prescribed a custom-made left knee hinged knee brace for stability after her total knee replacement. (Ex. 11, p. 376)

24-Month Division Independent Medical Examination

41. On February 8, 2021, Claimant underwent a 24-month Division Independent Medical Examination (DIME) with Dr. John Hughes. Dr. Hughes performed a physical examination, reviewed Claimant's medical records, and obtained a detailed history from Claimant. Dr. Hughes noted that Claimant's reported history was consistent with the medical records. After examining Claimant, reviewing her medical records, and obtaining a detailed history, Dr. Hughes noted that Dr. Pazik's stated in his August 11, 2020, report that due to ongoing knee pain, Claimant might need a revision knee surgery. Based on his thorough evaluation of Claimant, Dr. Hughes concluded that Claimant suffered a number of injuries due to her work-related motor vehicle accident. The injuries included:

    - Closed head injury with visual, cognitive, and central vestibular symptoms.
    - Cervical spine sprain/strain with persistence of non-radicular cervical spine pain.
    - Left shoulder sprain/strain with aggravation of left shoulder osteoarthritis, leading to a total shoulder arthroplasty with good outcome.
    - Left knee sprain/strain, with aggravation of osteoarthritis, leading to left total knee arthroplasty with residual ligamentous laxity and left lower extremity CRPS, needing further treatment essentially as endorsed by Dr. Pazik.
    - Adjustment disorder.

42. In the end, Dr. Hughes concluded that Claimant was not at MMI because she needs to have additional medical treatment to cure her from the effects of her work-related knee injury and resulting CRPS as outlined and endorsed by Dr. Pazik in his August 11, 2020, report. The treatment endorsed by Dr. Pazik included:

    - Excision of the saphenous neuroma – which has been done.
    - Ongoing pain management with Dr. Schultz for Claimant's CRPS.

- Additional treatment with Dr. Kinder for her left knee pain - including possible revision surgery.

43. The ALJ credits, and finds persuasive, Dr. Hughes' ultimate opinions and conclusions that Claimant's suffered a work-related injury to her left shoulder and left knee based on an aggravation of a preexisting condition. The ALJ also credits and finds persuasive his ultimate opinion that Claimant is not at MMI because of her chronic knee pain and need for treatment to cure Claimant from the effects of her work injury. The ALJ credits and finds persuasive his ultimate findings because they are consistent with Claimant's history, consistent with the underlying medical records of her treating providers, and consistent with her treating providers who have not placed her at MMI for her chronic knee pain that was caused by her work accident – which they also relate to her work accident.

Dr. Schakaraschwili IME and Rule 16 Reviews

44. On April 2, 2019, Dr. Schakaraschwili performed an IME. Dr. Schakaraschwili reviewed Claimant's medical records and physically examined Claimant. After reviewing certain medical records, he concluded that the only injury or condition caused by the work accident was possibly posttraumatic stress disorder. As a result, he found Claimant did not injure her left knee or left shoulder during the accident. Thus, he found the high-speed motor vehicle accident did not cause the need for medical treatment for her left knee and left shoulder. The primary basis for his conclusion was that Claimant had preexisting shoulder and knee problems and it was noted in her medical records that she might need additional surgery at some point in the future to treat those conditions. He did not, however, consider Claimant's reports of increase in pain and decrease in function after the accident. Instead, he relied on the MRI findings which he concluded did not show an acute injury to her shoulder or knee. In his first report, he also did not have the results of Claimant's 2017 physical and the results of her 2018 JPR – each of which cleared Claimant for full duty as a firefighter. (Ex. YY, pp. 1462-1473)

45. On October 11, 2019, Dr. Schakaraschwili issued an addendum report after reviewing more medical records. In the end, his opinions remained basically the same. (Ex. YY)

46. On April 24, 2020, Dr. Schakaraschwili issued another addendum after reviewing additional records. In essence, Dr. Schakaraschwili's opinions remained the same. It was his opinion that there were no objective findings, based primarily on the MRIs, that supported a finding that Claimant injured her left shoulder and left knee during the accident. (Ex. YY) In other words, he basically concluded that the MRI findings were definitive and completely rejected Claimant's reports of increasing pain complaints and disability – all which occurred after the accident.

47. In the end, the ALJ does not find Dr. Schakaraschwili's opinions to be credible or persuasive for many reasons. First, he completely dismisses Claimant's statements about her condition just before the accident and after the accident. Second, he fails to adequately address whether the work accident could have aggravated her underlying conditions and necessitated the need for treatment. Third, he seemed to be dismissive of information that would lead to a finding of causation. For example, he

dismissed the fact that Claimant passed her JPR testing within a week of the accident and could perform her job before the accident but could not perform her job after the accident. In the end, it seems like he was merely looking for reasons to not find a causal link between her claimed injuries and the accident rather than acting independently. Thus, the ALJ neither credits, nor finds persuasive, the opinions of Dr. Schakaraschwili.

IME and Testimony of Dr. Failinger

48. On November 19, 2020, Dr. Failinger performed an IME on behalf of Respondents and issued a report. He also testified consistent with his report. It was his opinion that Claimant suffered a rotator cuff strain and that her preexisting shoulder and knee osteoarthritis was not aggravated by the motor vehicle accident. Dr. Failinger based his opinion on the subacromial injection that was performed on November 6, 2018, as well as the MRI findings. He also appears to base his opinion that Claimant had deferred undergoing shoulder surgery – which was suggested before the work accident – because Claimant could manage her symptoms. Missing from his analysis is the fact that Claimant could manage her occasional shoulder pain and still work before the accident – and then after the accident she could not manage the increase in pain and could not perform her job.

49. Dr. Failinger also supported his opinion that Claimant did not injure her knee during the accident because he contends the medical records from the day of the accident do not document Claimant had knee pain. But, in reviewing the medical records from the day of the accident, Claimant was treated with Norco for shoulder and knee pain. Plus, Claimant complained of left shoulder and left knee pain the day after the accident when she saw another provider. He also supported his opinion because x-rays taken on November 20, 2018, a month after the accident did not show any effusion. In the end, he concluded that Claimant probably sustained a strain or contusion to her knee but did not sustain a new injury.

50. Again, the ALJ comes back to the fact that Claimant's pain and disability increased significantly after the accident – which occurred days after Claimant successfully passed her JPR evaluation. Overall, the ALJ does not find Dr. Failinger's opinions to be credible and persuasive because he cannot explain Claimant's increased pain, continued pain, and disability that arose after the high-speed motor vehicle accident.

IME and Testimony of Dr. Orent

51. On February 25, 2020, Dr. Orent performed an Independent Medical Examination on behalf of Claimant. (Ex. 2) Dr. Orent also testified at hearing. Dr. Orent's testimony was consistent with his report.

52. In essence, it is Dr. Orent's opinion that Claimant's ability to pass her JPR just days before her work accident – even if she had some pain in her shoulder and knee because of her preexisting conditions - shows that her preexisting shoulder and knee conditions did not functionally impair Claimant's ability to perform her job. He also concluded that Claimant's ability to pass her JPR just days before the work injury shows Claimant did not require medical treatment for her preexisting knee and shoulder conditions at that time. It was also his opinion that Claimant injured her left knee and left shoulder due to the work accident and such injuries caused additional pain and disability and necessitated the need for medical treatment.

53. Dr. Orent also concluded that the need to treat Claimant's shoulder pain, knee pain and CRPS are due to her work accident – and not due to her preexisting conditions. In other words, he concluded that the shoulder replacement and knee replacement were reasonable and necessary to treat the increase in pain caused by the work accident.

54. He also concluded that Claimant's CRPS was caused by the knee surgery and therefore related to the work accident.

55. Lastly, he concluded that Claimant is not at MMI and needs additional treatment to cure her from the effects of the work injury and bring her to MMI.

56. In the end, Dr. Orent based his opinion on:

    - Claimant's current symptoms.
    - Claimant's underlying medical records.
    - Claimant's description of her lack of preinjury disability and then her postinjury disability.
    - Claimant's ability to pass the JPR just days before the work accident.
    - Claimant's description of her preinjury and postinjury shoulder and knee pain.
    - That Claimant was involved in a significant high-speed accident and subsequent extrication of her partner out of the ambulance.

57. As noted, Dr. Orent relied on Claimant's statements about how her pain got worse after the accident and how she could no longer perform her job. In essence, he found Claimant credible and credited her statements in determining causation.

58. It should also be noted that Claimant's stated history to Dr. Orent is consistent with the underlying medical records.

59. As a result, the ALJ finds Dr. Orent's opinions to be credible and highly persuasive. Dr. Orent's opinions are consistent with the underlying medical records, consistent with the Claimant's statements, and consistent with the findings and conclusions of Claimant's treating providers.

60. Thus, the ALJ finds that Claimant's left shoulder and left knee conditions were permanently aggravated by the work accident and such aggravation necessitated the need for medical treatment – including each joint replacement.

Housing Provided by Employer

61. Claimant worked a three day 72-hour shift and was on-call at all times during her shift. Then, Claimant would be off for six days. To perform her job, Claimant was provided a room to sleep in at the Employer's place of business – the ambulance station. The room was necessary for Claimant to perform her job so she could be on-call during her shift.

62. Claimant contends that the cost of her room – that was provided by Employer – should be included in her average weekly wage as a fringe benefit.

63. Claimant, however, maintained a separate and primary residence at which she resided at all other times. Moreover, Claimant, did not have reasonable access to the room provided at the ambulance station on a day-to-day basis. In other words, Claimant could not stay at the ambulance station whenever she wanted. She was only provided access to the room while working and to perform her job.

64. In addition, there is no economic or monetary loss to Claimant as a result of Claimant losing access to the room since she has not returned to work because of the accident. For example, Claimant did not have to replace the room for three days a week. As found above, Claimant has a primary residence.

65. There was no credible and persuasive evidenced submitted at hearing which established the provision of the room was bargained for or part of her compensation. For example, there was no testimony indicating Claimant was expected to have her own housing during each 72-hour shift and use of the room was a negotiated component of her compensation.

66. Nor did the room provide an actual economic benefit to Claimant. For example, she could not forgo other housing expenses. She still had to have a primary residence.

67. Claimant did testify about the daily rate of renting a hotel room. But there is no reason for Claimant to rent a room three days a week to replace the room she was being provided at the ambulance station.

Case Management

68. Dr. Schultz referred Claimant to Melissa Abate for managed care. Dr. Schultz recommended Ms. Abate to assist Claimant manage her care because Claimant was having significant difficulty managing and understanding the scope of her care and treatment. He also stated that the difficulties were profoundly impacting Claimant's care and recovery. He further stated that Claimant needed a case manager who will be able to work with her and her doctors to assist her with good clinical outcomes and to keep her treatment consistent.

69. His referral is consistent with the significant injuries sustained by Claimant, including her closed head injury, and the extensive amount of treatment she requires to cure and relieve her from the effects of her work injury. Therefore, the ALJ credits his opinion about the need for such treatment and the referral for such treatment. As a result, the ALJ finds Dr. Schultz' referral to Ms. Abate, a case manager, to be reasonable, necessary, and related to treat Claimant from the effects of her work accident.

Based on the preceding findings of fact, the Judge draws the following conclusions of law:

CONCLUSIONS OF LAW

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondents have overcome the DIME physician's opinion, by clear and convincing evidence, that Claimant is not at MMI.

II. Whether Respondents have overcome the DIME physician's opinion, by clear and convincing evidence, that Claimant's left

knee condition and left shoulder condition are causally related to her work injury.

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve her injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Patterson v. Comfort Dental East Aurora,* WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008). The ultimate question of whether the party challenging the DIME physician's finding of MMI has overcome it by clear and convincing evidence is one of fact for the ALJ. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

In this case, Claimant underwent a DIME that was performed by Dr. Hughes. Dr. Hughes reviewed Claimant's medical records, took a detailed history from Claimant, and performed a physical examination. Based on his evaluation of Claimant, he concluded Claimant sustained a number of injuries because of her work accident. He also concluded that Claimant was not at MMI and needed additional medical treatment to cure her from the effects of her work accident. He summarized his conclusions regarding Claimant's work-related injuries, conditions, and need for further treatment as follows:

- Closed head injury with visual, cognitive, and central vestibular symptoms.
- Cervical spine sprain/strain with persistence of non–radicular cervical spine pain.
- Left shoulder sprain/strain, with aggravation of left shoulder osteoarthritis, leading to a total shoulder arthroplasty with good outcome.
- *Left knee sprain/strain, with aggravation of osteoarthritis, leading to left total knee arthroplasty with residual ligamentous laxity and left lower extremity CRPS, meriting further treatment essentially as endorsed by Dr. Pazik* (emphasis added).
- Adjustment disorder.

He also set forth his opinion about Claimant's MMI status as follows:

> I do not believe [Claimant's name, Redacted] is at MMI. I endorse further surgical treatment recommended by Dr. Pazik. Hopefully this will lead to substantial improvement as surgical treatment of [Claimant's name, Redacted] 's left shoulder did.

The ALJ credited and found persuasive, Dr. Hughes' ultimate opinions and conclusions that Claimant suffered a work-related injury to her left shoulder and left knee based on an aggravation of a preexisting condition – and each injury caused the need for a total joint replacement. The ALJ also credited and found persuasive his ultimate opinion that Claimant is not at MMI due to her chronic knee pain and need for additional treatment to cure Claimant from the effects of her work injury. The ALJ credited and found persuasive his ultimate findings because they are consistent with Claimant's history, consistent with the underlying medical records of her treating providers, and consistent with the fact that her treating providers have not placed her at MMI for her work-related injuries – which includes her chronic knee pain that was caused by the work accident.

Claimant also underwent an IME with Dr. Orent. Dr. Orent concluded that Claimant injured her left shoulder and left knee during the work accident. He also concluded that Claimant's need for medical treatment, which included the left shoulder arthroscopic surgery, total reverse shoulder replacement, and total knee replacement were reasonably necessary and related to Claimant's work accident.

The ALJ found Dr. Orent's opinions to be credible and highly persuasive. Dr. Orent's opinions are consistent with the underlying medical record, consistent with the Claimant's statements, and consistent with the findings of the majority of Claimant's treating providers.

In order to overcome Dr. Hughes' opinions regarding MMI as well as the cause of Claimant's left shoulder condition, left knee condition, and the need for the surgeries Claimant underwent after her work accident, the Respondents provided the opinions of Dr. Schakaraschwili and Dr. Failinger. The ALJ did not, however, find their opinions to be persuasive.

Facts are stubborn things. In this case, Drs. Schakaraschwili and Dr. Failinger try their best to ignore the fact that Claimant passed her JPR and could perform her job as a firefighter within days of the accident – and then she could not. What happened during that short time? Claimant was involved in a significant high-speed motor vehicle accident.

Drs. Schakaraschwili and Failinger seek to construct an evidenced based opinion built upon some facts, but not all facts. In constructing their opinion, each doctor cherry-picked certain facts in the record to conclude that Claimant's need for medical treatment for her left knee and left shoulder is merely the natural progression of her preexisting and underlying medical conditions – and not altered by the significant high-speed accident.

It is as if Drs. Schakaraschwili and Failinger concluded that:

- Claimant did not pass her JPR just days before her accident.
- Claimant was not in an ambulance that got hit by a semi-tractor while going 65 miles per-hour and then tipped over and slid down the highway.
- Claimant did not rescue the driver of the ambulance – who weighed about 185 pounds – by lifting the driver up with her left arm, and then unbuckled her seatbelt with her right hand.
- Claimant did not get in an awkward position and forcefully kick out the front window – of the ambulance she thought would explode.
- Claimant did not have shoulder pain and knee pain in the emergency room right after the accident.
- Claimant did not go for years before the work accident without seeking medical treatment for her left shoulder and left knee and then sought and obtained medical treatment after the accident to reduce her pain and increase her functioning.

Moreover, in reaching their conclusions, Drs. Schakaraschwili and Failinger brush aside Claimant's contention that before the accident she could perform all aspects of her job and did not need any medical treatment and then right after the accident she had a change in her symptoms — pain — and could not perform her job and required medical treatment. Again, this is another fact ignored by Drs. Schakaraschwili and Failinger.

In the end, the ALJ did not find the opinions of Drs. Schakaraschwili and Failinger to be credible and persuasive given that Claimant passed the physically demanding JPR just days before her work accident, had not sought medical treatment for her left shoulder and left knee in years, and needed medical treatment right after the accident. As stated above, Claimant could perform all aspects of firefighting and rescue work right before the accident and then she could not because the work accident aggravated her preexisting knee and shoulder conditions and caused the need for medical treatment.

The ALJ is mindful that correlation does not prove causation. *Smith v. City of Ouray*, W.C. No. 4-992-026, (ICAO January 25, 2019). On the other hand, to the extent certain events occur nearly simultaneously, the causal connection between them becomes quite strong. *Wilson v. City of Lafayette*, 510 F. App'x 775 (10th Cir. 2013)

Thus, the ALJ finds and concludes that Respondents have failed to overcome the DIME opinion of Dr. Hughes by clear and convincing evidence. The Respondents did not establish that it is highly probable that Dr. Hughes' findings concerning MMI is incorrect. The Respondents failed to establish that it is highly probable that Dr. Hughes' is wrong in his conclusions that Claimant's left shoulder and left knee injuries are causally related to the industrial accident and that Claimant needs additional medical treatment to cure her from the effects of her work accident. As a result, the ALJ finds and concludes Claimant is not at MMI. The ALJ further finds and concludes that her left shoulder and left knee conditions - injuries - are causally related to her industrial accident.

III. Whether Claimant established, by a preponderance of the evidence, that Respondents are liable for her prior left knee replacement, her prior left shoulder replacement, and any ongoing treatment for her left knee?

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

A preexisting disease or susceptibility to injury does not disqualify a claim if the injury aggravates, accelerates, or combines with the preexisting disease or infirmity to produce the need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The ICAO has noted that pain is "a typical symptom from the aggravation of a pre-existing condition" and a claimant is entitled to medical treatment for pain as long as the pain was proximately caused by the injury and is not attributable to an underlying preexisting condition. *Rodriguez v. Hertz Corp.,* WC 3-998-279 (ICAO February 16, 2001).

However, the mere occurrence of symptoms at work or after an accident does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any preexisting condition. Rather, the occurrence of symptoms at work or after an accident may represent the result of or natural progression of a preexisting condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found above, the ALJ credits and finds persuasive the opinions of Dr. Orent and Dr. Hughes which both found the need for Claimant’s left total shoulder replacement and left total knee replacement were reasonably necessary and related to Claimant’s work accident. And as found above, the ALJ did not find the opinions of Drs. Schakaraschwili and Failinger to be persuasive.

As found, before the work accident Claimant had occasional left shoulder and left knee pain. However, despite having some occasional shoulder and knee pain, Claimant could perform all aspects of her paramedic and volunteer firefighting job and did not require active medical treatment. As found, the accident permanently aggravated Claimant’s shoulder and knee condition and such aggravation resulted in a permanent increase in pain and functional impairment that prevented Claimant from performing her jobs and caused the need for medical treatment.

The shoulder and knee surgery were prescribed to alleviate Claimant’s pain and increase her decrease in function – each of which was caused by the accident. There was no credible and persuasive evidence submitted by Respondents that indicated the shoulder and knee replacement surgeries were not reasonable and necessary. The primary argument submitted by Respondents was that the treatment was not related to Claimant’s work accident.

While Claimant did have preexisting shoulder and knee problems, the work accident was the primary cause of Claimant’s need for the shoulder and knee replacement. As a result, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that the left total shoulder replacement and the left total knee replacement were reasonable, necessary, and related to Claimant’s work accident and injuries.

IV. Whether Claimant has established, by a preponderance of the evidence, that Respondents are liable for the additional medical treatment she is requesting.

Claimant has requested additional medical treatment to cure and relieve her from the effects of her work injury. That said, the record is not fully developed as to whether there is specific treatment at issue – compared to medical treatment in general - to treat a particular condition. Plus, the record is not clear as to whether any of the additional treatment she is requesting is currently being recommended and has been prescribed by an authorized treating physician. As a result, any medical benefits not specifically decided in this order are reserved for future determination.

V. Whether Claimant has established that Respondents are liable for an increase in her average weekly wage based on temporary lodging provided at the ambulance station?

Section 8-40-201(19)(b) provides that the term "wages" shall include the reasonable value of board, rent, housing, and lodging received from the employer, the reasonable value of which shall be fixed and determined from the facts in each particular case. The reasonable value of board and lodging is a question of fact. *Western Cultural Resource Management, Inc. v. Krull*, 782 P.2d 870 (Colo. App. 1989).

In *Meeker v. Provident Health Partners*, 929 P.2d 26 (Colo. App. 1996), the court discussed the circumstances under which a fringe benefit might be considered part of an employee's "wages" for purposes of 8-40-201(19)(b). The court indicated that a benefit may be considered "wages" if it has a "reasonable, present-day, cash equivalent value," and the employee has "reasonable access" to the benefit on a "day-to-day basis, either actually or potentially," or has an expectation interest in receiving the benefit under "appropriate reasonable circumstances." *Meeker* at 28.

Here, the evidence supports a finding that Claimant did not have a reasonable day-to-day expectation of receiving housing or lodging at the ambulance station. Claimant only had access to the room during her 72-hour shift – and then she did not have use of it during her six days off.

The temporary use of the room was necessary for Claimant to perform her job which required her to be on-call during each 72-hour shift. Plus, the room did not allow Claimant to forgo other housing. For example, Claimant could not give up her primary residence due to the temporary room provided by Employer and live at the ambulance station.

Thus, the ALJ finds and concludes that under the specific facts and circumstances of this case, the temporary use of the room provided by Employer did not have a reasonable value that should be included in her average weekly wage.

VI. Whether Claimant has to establish, by clear and convincing evidence, that Claimant is not at MMI for her other conditions.

Respondents contend Claimant has to prove by clear and convincing evidence that Dr. Hughes is wrong in determining Claimant reached maximum medical improvement (MMI) for her cervical condition, her left shoulder condition, and her TBI symptoms is wrong?

MMI is not divisible. *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429, 433 (Colo. App. 2010). Moreover, the ALJ has not ordered any additional medical treatment to cure Claimant from the effects of her other injuries. As a result, such issue is not ready for determination.

VII. Whether Respondents are liable for Melissa Abate, a case manager, to be a case manager under this claim.

Section 8-42-101(3.6)(p)(II) provides that Respondents shall offer at least managed care or medical case management. In this case, Claimant is arguing that because Dr. Schultz referred Claimant to Melissa Abate for managed care, Respondents are liable for that cost.

However, case management can only be offered by Respondents and rejected by Claimant. The authorized treating providers cannot designate a person to provide case management services, *Muir v. King Soopers*, W.C. No. 4-350-892 (ICAO May 20, 2003). In *Muir*, Claimant was arguing that Respondents were obligated to pay for a case manager that one of her authorized treating providers had designated. The ICAO affirmed the ALJ's determination that Respondents would not be responsible for payment of case management services based on the ATP's designation of that case manager. The ICAO, interpreting Section 8-42-101(3.6)(p)(II), concluded that it was Respondents, in the first instance, that are allowed to designate the case manager. This particular statutory provision does not allow for an authorized treating provider to designate a different case manager. Consequently, based on the rationale in *Muir,* Claimant's request for Respondents to authorize and pay for case management services by Ms. Abate based on the arguments propounded by Claimant must be denied.

Moreover, 8-42-101(3.6)(p)(II) provides that Respondents shall offer managed care or medical case management. The issue of whether Respondents offered managed care or case management as defined by 8-42-101(3.6)(p)(I)(A) or 8-42-101(3.6)(p)(I)(B) is not before the court.

As a result, the ALJ finds and concludes that Respondents are not liable for Melisa Abate as a case manager.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to overcome the Division IME.

2. Claimant is not at MMI.

3. Claimant's left shoulder and left knee condition were aggravated by her work accident. As a result, they are related to her work accident.

4. Claimant's left shoulder replacement and left knee replacement were reasonable, necessary, and related to Claimant's work accident.

5. Claimant's average weekly wage shall not be increased based on the temporary use of a room provided by her employer.

6. Respondents shall provide Claimant reasonable, necessary, and related medical treatment to cure and relieve her from the effects of her work injuries.

7. Respondents are not liable for Melisa Abate as a case manager.

8. All issues, including any medical benefit issues not specifically addressed in this order, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 25, 2021.

ISSUES

- Did Claimant prove he suffered a compensable injury to his right shoulder on November 15, 2020?

- Did Claimant prove a right shoulder surgery recommended by Dr. Charles Hanson is reasonably needed to cure and relieve the effects of his compensable injury?

- The parties stipulated Dr. Hanson is the designated ATP. Respondent agreed if the claim is compensable, the December 16, 2020 MRI at St. Mary Corwin Medical Center and the treatment provided at Dr. Hanson's clinic, on November 20, December 10, 2020, and January 4, 2021, were reasonably necessary, causally related, and authorized.

- The parties stipulated to an average weekly wage (AWW) of $867.44, which corresponds to a TTD rate of $578.29.

- Respondent agreed if the claim is compensable, Claimant is entitled to TTD benefits commencing February 4, 2021.[1]

FINDINGS OF FACT

1. Claimant worked for Employer as an overnight grocery stocker. The job is physically demanding and requires lifting and carrying cases of heavy product, and frequent reaching.

2. On November 15, 2020, Claimant was stocking canned vegetables on a high shelf. A can fell from the shelf, and he instinctively reached with his right arm to try to catch it. Claimant did not catch the can but felt a painful pop in his right shoulder. He took a brief break and resumed his duties. The shoulder felt "sore" and continued to bother him through the remainder of his shift. Near the end of the shift, Claimant told a co-worker, "I think I tweaked something in my shoulder." Claimant did not report the injury to management or seek medical treatment because he assumed the injury "was just a muscle strain" that would resolve quickly.

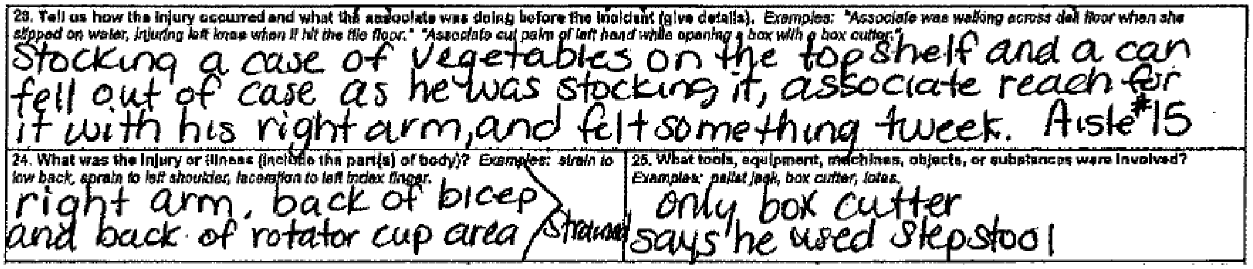
3. By the start of his next shift on November 18, Claimant's shoulder still felt "kind of sore" but he figured "it would work itself out." However, the pain increased significantly after stocking heavy items. At the end of the shift (the morning of November

[1] When discussing the issues at the outset of the hearing, counsel and the ALJ inadvertently referenced a TTD start date of February 4, 202**0**.In fact, Claimant's last date of work was February 3, 202**1**. The ALJ has therefore corrected the stipulation to reflect the parties' true intentions.

19), Claimant mentioned to his co-worker "Andrew" that he had "pulled something" in his shoulder. Claimant went home and went to bed.

4. When Claimant awoke that evening to get ready for his next shift, his shoulder was very painful, and he had difficulty moving his arm. He called the store and told the head clerk he could not come to work that night.

5. On November 20, Claimant met with the store manager, Lisa Q[Redacted], to discuss the injury. He explained what happened, and Ms. Q[Redacted] wrote the information on the accident report form. The form documented:



23. Tell us how the injury occurred and what the associate was doing before the incident (give details). *Examples: "Associate was walking across deli floor when she slipped on water, injuring left knee when it hit the tile floor." "Associate cut palm of left hand while opening a box with a box cutter."*

Stocking a case of vegetables on the top shelf and a can fell out of case as he was stocking it, associate reach for it with his right arm, and felt something tweek. Aisle #15

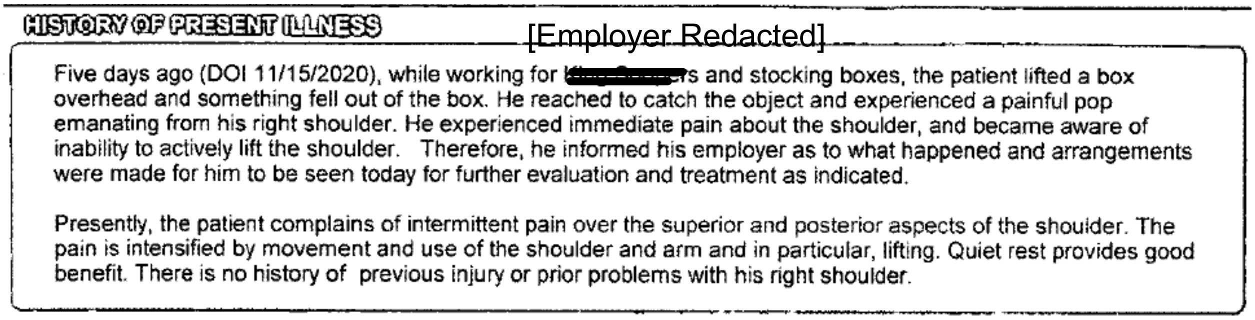
24. What was the injury or illness (include the part(s) of body)? *Examples: strain to low back, sprain to left shoulder, laceration to left index finger.*

right arm, back of bicep and back of rotator cup area / Strained

25. What tools, equipment, machines, objects, or substances were involved? *Examples: pallet jack, box cutter, totes.*

only box cutter says he used Stepstool

6. Claimant saw Dr. Charles Hanson, an orthopedic surgeon, on November 20, 2020. Dr. Hanson documented the history as:



HISTORY OF PRESENT ILLNESS

[Employer Redacted]

Five days ago (DOI 11/15/2020), while working for [redacted]s and stocking boxes, the patient lifted a box overhead and something fell out of the box. He reached to catch the object and experienced a painful pop emanating from his right shoulder. He experienced immediate pain about the shoulder, and became aware of inability to actively lift the shoulder. Therefore, he informed his employer as to what happened and arrangements were made for him to be seen today for further evaluation and treatment as indicated.

Presently, the patient complains of intermittent pain over the superior and posterior aspects of the shoulder. The pain is intensified by movement and use of the shoulder and arm and in particular, lifting. Quiet rest provides good benefit. There is no history of previous injury or prior problems with his right shoulder.

The history noted by Dr. Hanson is generally consistent with Claimant's testimony and the accident report. Claimant probably told Dr. Hanson the same thing he has told everyone else about how the accident occurred. Any apparent inaccuracy in the timeline is probably because Dr. Hanson was paraphrasing Claimant's statements rather than providing a verbatim transcript.

7. Dr. Hanson's examination showed pain, reduced strength, and limited range of motion. Dr. Hanson diganosed a "work related acute right shoulder injury" with a rotator cuff "sprain." He ordered an MRI to check for a rotator cuff tear. Claimant was put on work restrictions of no lifting more than five pounds with the right arm.

8. Claimant followed up with Dr. Hanson on December 10, 2020. His symptoms and physical examination findings were largely the same as at the prior appointment. Claimant had not had the MRI because it had not been approved. Dr. Hanson referred Claimant to physical therapy and maintained his work restrictions.

9. The shoulder MRI was completed on December 16, 2020. It showed moderate joint effusion, a complete supraspinatus tendon tear with marked edema at the musculotendinous junction, and a high-grade partial infraspinatus tear with marked edema. The MRI also showed slight AC joint arthropathy and mild hypertrophic bone spurring.

10. Respondent filed a Notice of Contest on December 18, 2020.

11. Claimant returned to Dr. Hanson on January 4, 2021. His symptoms were no better despite working light duty. Dr. Hanson recommended a mini-open right shoulder decompression, rotator cuff exploration, and rotator cuff repair.

12. Claimant has not seen Dr. Hanson since January 4 because no further treatment was authorized.

13. Employer accommodated Claimant's work restrictions through February 3, 2021. Employer stipulated Claimant is entitled to TTD benefits commencing February 4, 2021 if the claim is found compensable.

14. Claimant saw Dr. Wallace Larson for an IME at Respondent's request on April 21, 2021. Claimant's description of the accident was generally consistent with the accident report, his statements to Dr. Hanson, and testimony at hearing. Dr. Larson concluded the pathology in Claimant's right shoulder was not causally related to the incident at work on November 15, 2020. Dr. Larson suggested Claimant may be exaggerating his symptoms and functional limitations based on his review of video surveillance footage. The video was not offered into evidence.

15. Dr. Larson testified at hearing to elaborate on the conclusions expressed in his report. He opined the forces involved in reaching for the falling can were insignificant and insufficient to cause any injury to Claimant's shoulder. Dr. Larsen opined the underlying MRI findings are degenerative in nature and predated the November 15 work accident. He opined the fact Claimant's shoulder became symptomatic when he reached for the can was coincidental and did not indicate a causal relationship. He testified Claimant merely happened to be at work when he noticed right shoulder symptoms. He testified patients frequently experience the initial symptoms from underlying shoulder pathology while performing routine activities. He opined the rotator cuff tears shown on the MRI are highly unlikely to be traumatic. He concluded it is "almost certain" that the pathology in Claimant's right shoulder is age-related, degenerative, and entirely unrelated to his work. He opined the incident on November 15, 2020 neither caused nor aggravated any condition in Claimant's shoulder. Dr. Larson agreed Claimant needs the rotator cuff surgery, but not on a work-related basis.

16. Claimant's testimony was credible.

17. Dr. Larson's conclusion that Claimant's shoulder condition is entirely unrelated to his work is not persuasive. Claimant felt a painful pop in his right shoulder while reaching for the falling can, and he has been continuously symptomatic since that moment. Although it is unlikely that reaching for the can caused a complete tear, it may

have finished off the last intact fibers from a pre-existing partial supraspinatus tear and worsened the partial infraspinatus tear. The moderate joint effusion and marked edema shown on the MRI suggests a recent injury as opposed to purely longstanding pathology. On the other hand, Dr. Larson may be right that most, or even all, of the pathology shown on the MRI was pre-existing. But Claimant's shoulder was asymptomatic and nondisabling before he reached for the falling can. The fact that his shoulder might have become symptomatic at some time outside of work does not negate the fact it became symptomatic on November 15, 2020 because of his work. The preponderance of persuasive evidence shows the work accident either caused new pathology or aggravated pre-existing but asymptomatic pathology. Claimant proved he suffered a compensable injury.

18. Claimant proved the surgery recommended by Dr. Hanson is reasonably needed to cure and relieve the effects of his compensable injury.

19. As stipulated by the parties, Claimant is entitled to ongoing TTD benefits commencing February 4, 2021 because his injury has been found compensable.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). The claimant must prove an injury directly and proximately caused the condition for which he seek benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1); *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not establish a compensable injury. A compensable injury is one that requires medical treatment or causes disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016).

If an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). A claimant need not show an injury objectively caused any identifiable structural change to their underlying anatomy to prove an aggravation. A purely symptomatic aggravation is sufficient for an award of medical benefits if the symptoms were triggered by work activities and caused the claimant to need treatment he would not otherwise have required. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-

066-531-002 (May 7, 2019). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms after an incident or activity at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). In evaluating whether a claimant suffered a compensable aggravation, the ALJ must determine if the need for treatment was proximately caused by the claimant's work or merely reflects the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant proved he suffered a compensable injury to his right shoulder on November 15, 2020. Claimant's shoulder symptoms were precipitated by the distinctly work-related act of reaching for a falling can. Although the forces involved were relatively minor, they were sufficient to elicit symptoms in Claimant's shoulder. There is no persuasive evidence of any pre-injury right shoulder symptoms or limitations. Undoubtedly, at least some pathology shown on the MRI predated the work accident, and Dr. Larson may be correct that it was all pre-existing. But Claimant's right shoulder was asymptomatic, non-disabling, and required no treatment when he arrived at work on November 15, 2020. The work accident either caused new pathology, caused previously asymptomatic pathology to become symptomatic, or some combination thereof. The preponderance of persuasive evidence shows a work-related proximate cause is at least 51% likely.

B. Medical benefits

The respondents are liable for authorized medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. Respondent stipulated that the treatment Claimant has received from Dr. Hanson was reasonably needed, authorized, and a covered benefit if the claim is compensable. Claimant proved the surgery recommended by Dr. Hanson is reasonably needed and causally related. The ALJ credits Dr. Hanson's opinions regarding the most appropriate treatment modalities, including the proposed surgery. Additionally, Dr. Larson agreed the surgery is appropriate, and his only disagreement related to causation.

C. TTD commencing February 4, 2021

The parties stipulated Claimant is entitled to TTD benefits commencing February 4, 2021 if the claim is compensable.

ORDER

It is therefore ordered that:

1. Claimant's claim for a right shoulder injury on November 15, 2020 is compensable.

2. Respondent shall cover medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury, including but not limited to the shoulder surgery recommended by Dr. Hanson.

3. Claimant's AWW is $867.44, with a corresponding TTD rate of $578.29.

4. Respondent shall pay Claimant TTD benefits at the weekly rate of $578.29, commencing February 4, 2021 and continuing until terminated according to law.

5. Respondent shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

6. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ's order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

WORKERS' COMPENSATION NO. WC 5-170-337-001

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that the surgery recommended by Joseph Hsin, M.D., for right shoulder arthroscopy with rotator cuff repair and subacromial space decompression, is reasonably necessary and related to the admitted April 1, 2021 injury.

II. Whether the request for prior authorization for right shoulder arthroscopy with rotator cuff repair and subacromial space decompression was properly denied per W.C.R.P. Rule 16.

PROCEDURAL HISTORY

Respondents filed a General Admission of Liability on May 4, 2021 admitting to medical benefits and temporary disability benefits. On June 8, 2021 Claimant filed an Application for Hearing with the Office of Administrative Courts on issues of reasonable, necessary and related medical benefits, specifically surgery recommended by his authorized treating physician, Dr. Joseph Hsin.

STIPULATION

The parties stipulated that the correct date of injury is April 1, 2021. Respondents agreed to amend the General Admission of Liability to reflect the correct date of injury.

FINDINGS OF FACT

Based on the evidence presented, the ALJ enters the following findings of fact:

1. Claimant is a 39 years old, 5 foot 2 inches tall, medical waste worker for Employer since January 25, 2021. He was a slip seat driver, so he would be in a different truck during any particular week. He was lifting full bins of TPO-4, which is medical waste, to stack them four high onto a truck that would hold about 150 bins total. The bins were originally loaded three high on a dolly and pulled onto the bed of the truck to unload, while pulling a forth bin up the ramp with a hook. Then Claimant would have to lift the fourth bin overhead. The truck itself had a 26 foot long bed and was 13 feet high off the ground. Each full bin weighs approximately 50 lbs., but many weigh more (up to approximately 80 lbs.) and the customers had to pay an overweight charge for those that were above the 50 lbs. limit.

2. Claimant had to stack the heavy bins despite the weight. The topmost bin must be lifted above the level of Claimant's head and Claimant was initially provided with a step stool, but that was taken away due to safety concerns. Claimant had to go onto his tip toes to reach the height required to stack the final fourth level bin to complete his job quickly. There was a time limit to accomplish his tasks. This made Claimant unstable in holding the full bins, with arms extended, above his height level. Claimant stated he could barely reach the height required. Claimant stated that he was supposed to be lifting in his "power zone," which is close to the body, not reaching away from the body with heavy weight.

3. In the days leading up to the incident, approximately one week before the incident, Claimant felt discomfort in his shoulder, and advised his supervisor, but he did not seek any medical care at that time.

4. Claimant was injured in the course and scope of his employment on April 1, 2021. On that day Claimant was lifting heavy bins that he thought were probably around 70 to 80 lbs. when he felt he injured his right shoulder. When reporting the April 1, 2021 injury, Claimant, who this ALJ infers has no medical training, stated that his shoulder problems may have been caused by repetitive use of his shoulder in overhead activities while stacking the bins. Such a reporting could support an occupational disease claim against the Employer. However, the ALJ finds that his injury was the result of an accidental occurrence on April 1, 2021, which aggravated and accelerated his underlying degenerative shoulder condition.

5. Claimant testified that Dr. Myles Cope did not wish Claimant to start therapy initially until he had seen an orthopedic specialist to determine how care should proceed. Claimant proceeded with physical therapy in July and August 2021, which improved Claimant's range of motion, but did not improve the pain in the top part of his shoulder. Before the physical therapy, Claimant stated his shoulder was locked up. He also temporarily improved with the cortisone/steroid injection he received on or about July 22, 2021. The injection helped with the symptoms, so long as he did not move his arm too much, but did not take away the pinching pain in his right shoulder.

6. Claimant has continued to work light duty with reduced hours initially performing office duty for two to three months for Employer. Then Claimant was sent to work for ARC Thrift Stores on a "return to work" program. Claimant continues to perform modified work at the ARC Thrift Stores as of the date of the hearing.

7. Claimant requested leave to proceed with the surgery recommended by his authorized treating physician, as he wishes to be able to continue to properly support his family and get back to regular work. Claimant is found credible as stated in these findings of fact.

8. Claimant was first evaluated by Myles Cope, M.D. on April 6, 2021. Dr. Cope documented Claimant strained his shoulder by lifting a 50 lbs. bin overhead, causing a sharp pain. Medications improved his symptoms but overhead reaching, and pulling motions made his pain worse. On exam he found Claimant was tender to palpation

along the acromioclavicular joint, with severe pain with resisted abduction and adduction, and strength of 4/5. Dr. Cope restricted Claimant to desk work only with no use of the right arm. At the time, Dr. Cope suspected a grade 1 acromioclavicular joint separation, and stated that objective findings were consistent with a history and/or work related mechanism of injury/illness. On April 12, 2021, Dr. Cope relaxed the work restriction but prescribed lidocaine patches and home exercises.

9. On April 26, 2021 Claimant was evaluated by Dr. Bruce Cazden who stated that Claimant was 3 weeks post lifting injury to the right shoulder and not improving with an exercise program. He was still having debilitating right shoulder pain and limited range of motion (ROM). On exam Claimant continued to have tenderness to palpation at the glenohumeral joint and bicipital groove, limited ROM for flexion, abduction and internal rotation, with a positive empty can test,[1] weakness against resistance in both flexion and abduction at 90° and stated that objective findings were consistent with a history and/or work related mechanism of injury/illness. He ordered an MRI of the right shoulder to rule out internal derangement. Claimant was to continue with gentle ROM exercises and follow-up to consider physical therapy (PT) or surgical referral.

10. Respondents filed a General Admission of Liability on May 4, 2021 admitting for reasonably necessary medical benefits and temporary disability benefits.

11. The magnetic resonance imaging (MRI) of May 4, 2021 showed multiple significant findings, including 1) a deep high-grade partial thickness tear involving the distal fibers of the infraspinatus tendon occurring at the greater tuberosity insertion spanning 9 mm, which involves greater than 75% of the tendon thickness and measures 10 mm medial to lateral, 2) a tear that also extends to and involves the posterior fibers of the distal supraspinatus tendon, 3) tendinosis and low grade partial thickness articular sided tearing of the distal most fibers of the subscapularis tendon, 4) tendinosis of the intra-articular segment of the proximal long head of biceps tendon, and 5) mild fatty atrophy of the teres minor muscle. Dr. Craig Stewart also read the MRI to show acromioclavicular joint osteoarthritis with surrounding bone marrow edema, a small amount of fluid in the subacromial subdeltoid bursa, degenerative superior and posterosuperior labral tearing with tendinosis of the proximal long head of the biceps tendon, tendinosis and very low-grade partial tearing of the distal subscapularis tendon.

12. On May 10, 2021 Teresa Ayandale, a physician assistant at WorkWell, referred Claimant to Dr. Hsin for a specialist consultation, and refilled the prescription for lidocaine patches as Claimant’s symptoms were unchanged.

13. Joseph Hsin, M.D. examined Claimant on May 18, 2021 and diagnosed traumatic complete tear of the right rotator cuff based on examination showing a positive drop-arm test[2] and Jobe test and review of the MRI films. Dr. Hsin and Claimant discussed treatment options, concluding that arthroscopy of the right shoulder with rotator cuff repair, subacromial space decompression and biceps tendinopathy was the right course of treatment. Dr. Hsin submitted a request for prior authorization for surgery at

[1] Empty can test, also known as Jobe test, is a test to examine the integrity of the supraspinatus muscle and tendon.

[2] Drop-arm test is used to assess whether a patient may have rotator cuff pathology, including tears.

that time to include right shoulder arthroscopy with rotator cuff repair and subacromial space decompression.

14. Dr. Cope reviewed the MRI findings on May 25, 2021 and noted the high-grade tear of the distal supraspinatus and infraspinatus tendons, osteoarthritis of the acromioclavicular joint, degenerative labral tear and partial tear of the distal subscapularis tendon. He noted a referral to Dr. Hsin. Dr. Cope stated that the mechanism of injury was from stacking bins overhead and that objective findings were consistent with a history and work related mechanism of injury.

15. On May 27, 2021 Respondents denied the request for prior authorization and advised Dr. Hsin that Respondents were seeking an Independent Medical Examination (IME) with Dr. Mark Failinger, which was scheduled for June 14, 2021. Respondents received the IME report from Dr. Failinger on June 28, 2021. On July 7, 2021 Respondents sent a follow up letter stating that they continued to deny the prior authorization of the surgery.

16. At Respondents' request, Claimant underwent an independent medical examination with Dr. Failinger. Dr. Failinger issued a report dated June 14, 2021. He examined Claimant and found that Claimant had a positive Hawkins' test[3] on the right but no other significant findings other than loss of range of motion with passive movement above 90°. He stated he reviewed the MRI imaging and opined that Claimant does not have a full-thickness tear, or even a significant high-grade tear visible on the MRI. He opined the surgical intervention would not be medically reasonable and necessary without the patient first undergoing conservative measures. Dr. Failinger cited to the Medical Treatment Guidelines (MTGs) that recommend conservative care as a first line medical care approach for rotator cuff tendinopathy when a full thickness tear or high-grade tear is not present. Dr. Failinger is not persuasive with regard to the findings on the MRI.

17. Dr. Failinger opined that most rotator cuff pathology occurs as degenerative in the absence of a specific disorder or aggravation of the underlying preexisting conditions. He specifically states:

> There are some patients who fail conservative measures, including relative rest, physical therapy, and cortisone injections, and they have ongoing pain. In that situation subacromial decompression, as well as a possible rotator cuff repair, is reasonable if, in fact, there is a high-grade tear of the rotator cuff, and if the location of the pain has been reasonably identified and confirmed by a diagnostic injection performed in the shoulder.

18. On June 16, 2021, Claimant started physical therapy with WorkWell under Seneca Tantura, P.T. She assessed that Claimant had pain with right glenohumeral motion to flexion and abduction, right AC joint laxity and tenderness to palpation. She

[3] Hawkins test is to assess whether there is impingement of the structures between the humerus and the coracohumeral ligament, especially the supraspinatus and infraspinatus.

noted Claimant had good pain relief with ice and e-stim, and that Claimant was motivated and had a good prognosis.

19. Claimant was evaluated by Nurse Practitioner Bill Ford on June 24, 2021. He diagnosed strain of muscles and tendons of the rotator cuff of the right shoulder, and rotator cuff tear or ruptures. He stated that objective findings were consistent with a history and/or work-related mechanism of injury.

20. Mr. Ford noted on July 22, 2021 that Claimant had a steroid injection with Dr. Hsin and was sore and stiff in the 24 hours following the injection but did note some improvement in pain. He also noted that physical therapy has been helpful and ordered further sessions of PT.

21. Claimant was next seen by Dr. Katherine Drapeau on August 2, 2021, who noted Claimant had some improvement with injection, but Claimant still noted a sharp pain in his right shoulder with any movement. She stated that objective findings were consistent with a history of work related mechanism of injury.

22. On August 18, 2021 Dr. Drapeau referred Claimant back to Dr. Hsin to discuss possible surgery. She continued the physical therapy to maintain range of motion and work on strength.

23. Dr. Failinger testified as an orthopedic surgeon and sports medicine expert. He testified consistent with his report, specifically explaining that Dr. Hsin should have recommended conservative care, including physical therapy and steroid injections before venturing to perform any surgeries. Dr. Failinger stated that he believed Dr. Hsin was a good orthopedic surgeon.

24. Dr. Failinger opined that Claimant may have suffered a minor strain/sprain injury on April 1, 2021. Dr. Failinger noted that Claimant had significant preexisting problems in his right shoulder. It was Dr. Failinger's opinion that the condition of Claimant's right shoulder is chronic, preexisting the injury and not the result of an acute injury. Dr. Failinger noted that rotator cuff surgery may be a reasonable treatment of Claimant's right shoulder, but that treatment was unrelated to the minor strain Claimant may have sustained on April 1, 2021. Dr. Failinger is not persuasive with regard to the preexisting condition and the causation analysis.

25. Dr. Joseph Hsin, Dr. Craig Stewart and Dr. Myles Cope all opined there was a high-grade tear after reviewing the May 4, 2021, MRI films and/or report. Dr. Drapeau sent Claimant back to Dr. Hsin to discuss further possibilities of surgery of the right shoulder. Multiple physicians found positive findings indicating rotator cuff pathology including Dr. Bruce Cazden, Dr. Drapeau, Dr. Hsin, and even Dr. Failinger (Hawkins' test and loss of range of motion above 90°). Dr. Stewart's and Dr. Hsin's opinions that Claimant has a high-grade tear of the infraspinatus, and a tear of the supraspinatus, are more persuasive than Dr. Failinger's opinion.

26. Claimant's testimony that he did not suffer from shoulder problems until working for Employer is also credible and persuasive. The mechanism of injury,

specifically lifting very heavy bins of materials significantly over the level of his head aggravated and accelerated the Claimant's preexisting asymptomatic rotator cuff pathology, causing the need for medical treatment and surgery. Claimant has proven that the right shoulder arthroscopy with rotator cuff repair and subacromial space decompression recommended by Dr. Hsin is reasonably necessary to cure and relieve him from the effects of the admitted April 1, 2021 work injury.

27. The ALJ credits Claimant's testimony, the medical records, and the opinions of Dr. Cope, Dr. Drapeau, Dr. Stewart, Dr. Cazden, Nurse Ford and Dr. Hsin over the contrary opinions of Dr. Failinger. The ALJ finds that Claimant's asymptomatic preexisting right shoulder rotator cuff pathology became symptomatic because of the April 1, 2021 injury at work. Based upon Claimant's testimony and the medical records, the ALJ finds that when Claimant was required to lift the heavy bins over the level of his head with his arms outstretched, his preexisting right shoulder condition was aggravated and accelerated, necessitating medical treatment. Therefore, the ALJ finds that Claimant has demonstrated that it is more likely than not that the recommended right shoulder surgery is reasonable medical treatment necessary to cure and relieve Claimant from the effects of the admitted work injury.

CONCLUSIONS OF LAW

Based on these findings of fact, the Judge draws the following conclusions of law:

A. General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.. The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the claimant's rights nor in favor of the rights of the respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S..

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office (ICAO)*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." See *Bodensieck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v.*

ICAO, 55 P.3d 186 (Colo. App. 2002). The same principles for credibility determinations that apply to lay witnesses apply to expert witnesses as well. See *Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008).

The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. See *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2018). A workers' compensation case is decided on its merits. Sec. 8-43-201, C.R.S.

B. Medical Benefits

The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. Sections. 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000; *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979; *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301, C.R.S. See *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). Therefore, in a dispute over medical benefits that arises after the filing of a general admission of liability, an employer generally can assert, based on subsequent medical reports, that the claimant did not establish the threshold requirement of a direct causal relationship between the work injury and the need for medical treatment. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A panel of the ICAO also addressed these issues in *Maestas v. O'Reilly Auto Parts*, ICAO, W.C. No. 4-856-563-01 (August. 31, 2012). The panel stated:

> [The *Snyder*] principle recognizes that even though an admission is filed, the claimant bears the burden of proof to establish the right to specific medical benefits, and the mere admission that an injury occurred and treatment is needed cannot be construed as a concession that all conditions and treatments which occur after the injury were caused by the injury.

Section 8-42-101(1)(a), C.R.S., provides that Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *Snyder v. Industrial Claim Appeals Office*, *supra*; *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *In re Claim of Foust*, I.C.A.O, WC, 5-113-596 (COWC October 21, 2020).

Claimant alleged that surgery recommended by Dr. Joseph Hsin, M.D., an ATP, for right shoulder arthroscopy with rotator cuff repair and subacromial space decompression is reasonably necessary and related to the admitted April 1, 2021 injury. Respondents argue that the surgery is neither reasonably necessary nor related to the injury. Respondents specifically argue that the Claimant's preexisting pathology caused the need for surgery and that the Claimant did not sustain the underlying rotator cuff pathology, for which Claimant is requesting surgery, during the course and scope of his employment.

A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). As found, Claimant aggravated his preexisting condition on April 1, 2021 to such an extent that it cause the needed medical care and surgery as recommended by Dr. Hsin. During the hearing, Claimant credibly testified that prior to working for Employer he had no issues performing heavy work. He credibly testified that, while he did have some symptoms the week leading up to the actual day of injury, they did not require him to seek any medical attention nor disable him from work. It was not until April 1, 2021 when lifting the 70 to 80 lb. bin full of medical equipment waste that he felt an intense pain in his right shoulder and he could no longer perform his work. Claimant's testimony is credible and persuasive.

At Respondents' request, Claimant underwent an independent medical examination with Dr. Failinger. Dr. Failinger opined that Claimant may have suffered a minor strain injury caused by the lifting, but that the minor injury had resolved. Dr. Failinger noted that Claimant has significant preexisting problems in his right shoulder. It was Dr. Failinger's opinion that the condition of Claimant's right shoulder is chronic and not the result of an acute injury. Dr. Failinger noted that rotator cuff surgery may be a reasonable treatment of Claimant's right shoulder, but that treatment was unrelated to the minor strain Claimant may have sustained on April 1, 2021. Dr. Failinger is not persuasive in this matter.

The medical records of Drs. Cope, Cazden, Drapeau, and Mr. Ford all found that the mechanism of injury of the right rotator cuff was related to the Claimant's work injury. This ALJ infers from these statements that, whether or not there was preexisting asymptomatic pathology, the pathology was aggravated, which caused the need for medical treatment. Further, Dr. Hsin and Dr. Stewart found that Claimant had a complete tear or high-grade tear of the rotator cuff structures. These opinions are also more persuasive than the contrary opinion of Dr. Failinger. Dr. Drapeau referred Claimant back to Dr. Hsin to consider surgery. It is inferred from this act, that Dr. Drapeau deemed the needed surgery was related to the mechanism of injury and reasonably necessary. The opinions of Drs. Cope, Cazden, Drapeau, Mr. Ford and Dr. Hsin are more persuasive than the contrary opinions of Dr. Failinger. As found, this ALJ concludes Claimant has established by a preponderance of the evidence that Dr. Hsin, who is an authorized treating physician, prescribed and recommended rotator cuff surgery for Claimant's right shoulder injury. This ALJ further finds and concludes Claimant has established by a preponderance of the evidence that the right shoulder arthroscopy with rotator cuff repair and subacromial space decompression recommended by Dr. Hsin is reasonably necessary and related to the admitted April 1, 2021 work injury.

Respondents also argued that Dr. Hsin failed to comply with the requirements of the Medical Treatment Guidelines in recommending surgery at the time of his first evaluation of Claimant, and subsequent actions, by not recommending Claimant proceed with conservative care, including physical therapy and a second steroid injection.

The Guidelines are contained in Workers' Compensation Rules of Procedure, Rule 17, 7 CCR 1101-3, and provide that health care providers shall use the Guidelines adopted by the Director of the Division of Workers' Compensation. Sec. 8-42-101(3)(b), C.R.S. state specifically that the MTG shall be used by health care practitioners. In *Hall v. Industrial Claim Appeals Office*, 74 P.3d 459 (Colo. App. 2003), the Colorado Court of Appeals noted that the Guidelines are to be used by health care practitioners when furnishing medical aid under the Workers' Compensation Act.

The Guidelines are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). It is appropriate for an ALJ to consider the Guidelines in deciding whether a certain medical treatment is reasonable and necessary for a claimant's work related condition. See *Deets v. Multimedia Audio Visual*, W. C. No. 4-327-591 (March 18, 2005).

Despite this, an ALJ's consideration of the Guidelines may include deviations from them where there is evidence justifying the deviations. *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (Jan. 25, 2011). The Guidelines do not constitute evidentiary rules of procedure, and an expert's compliance with them does not dictate whether the expert's opinions are credible, admissible, or whether they may constitute substantial evidence. Rather, compliance with the Guidelines affects the weight given to the medical opinions and the determination to grant or deny a particular medical treatment as reasonably necessary. See *Cahill v. Patty Jewett Golf Course*, W.C. No. 4-729-518 (February 23, 2009); *Thomas v. Four Corners Health Care*, W.C. No. 4-484-220 (April 27, 2009); *Tafoya v. Associations, Inc.,* W.C. No. 4-931-088-03 (Jan. 13, 2017).

Section 8-43-201(3), C.R.S. states that "[t]he director or administrative law judge is not required to utilize the medical treatment guidelines as the sole basis" for determinations of whether a claimant may require or need surgery in context of medical issues tied to Guidelines. This ALJ is not bound by the Guidelines when awarding medical benefits that are reasonable, necessary and related to a particular injury. While it is appropriate for this ALJ to consider the Guidelines on the question of diagnosis, causal relationship or the aggravation of the claimant's condition, it does not compel the ALJ to adopt the opinion of any expert on the issue of causal connection between the work related injury and the need for medical care. As found, Dr. Hsin credibly diagnosed that Claimant had a high-grade tear or complete tear and required rotator cuff surgery at the time of the diagnosis. Further, as found and concluded, the surgery proposed by Dr. Hsin is reasonably necessary and related to the April 1, 2021 admitted work related injury.

C. Prior Authorization Denial

An authorized treating physician's request for prior authorization for medical care is controlled by W.C.R.P. Rule 16-7 as enacted as of January 1, 2021, which states in pertinent part as follows:

> Rule 16-7
>
> B. Prior Authorization for prescribed treatment may be granted immediately and without a medical review. However, the payer shall respond to all Prior Authorization requests in writing within 10 days from receipt of a completed request as defined per this Rule.
>
> Rule 16-7-2
>
> B. The payer shall have 10 days from the date of the appeal to issue a final decision and provide documentation of that decision to the provider and parties.
> ….
>
> E. Failure of the payer to timely comply in full with all Prior Authorization requirements outlined in this rule shall be deemed authorization for payment of the requested treatment unless the payer has scheduled an independent medical examination (IME) and notified the requesting provider of the IME within the time prescribed for responding.
>
> 1. The IME must occur within 30 days, or upon first available appointment, of the Prior Authorization request, not to exceed 60 days absent an order extending the deadline.
>
> 2. The IME physician must serve all parties concurrently with the report within 20 days of the IME.
>
> 3. The payer shall respond to the Prior Authorization request within 10 days of the receipt of the IME report.

The rule specifically requires Respondents to respond to a request for prior authorization within 10 days. Dr. Hsin made the request for prior authorization on May 18, 2021 and Respondents sent the letter denying the prior authorization on May 28, 2021, which is within the required time period. The IME was scheduled for June 14, 2021 and Claimant attend the IME. This falls within the 30 days required for IMEs to occur. Dr. Failinger issued a report, which Respondents represent they received on June 28, 2021. Respondents sent a letter on July 7, 2021 stating they continued to deny the surgery recommended by Dr. Hsin. This falls within the required 10 days of receipt of the report.

Claimant provided no evidence to the contrary and made no arguments that the facts provided by Respondents were incorrect. As found, Respondents complied with the prior authorization request requirements of W.C.R.P. Rule 16 with regard to the request for prior authorization made by Dr. Hsin.

ORDER

IT IS THEREFORE ORDERED THAT:

1. Respondents shall pay for the right shoulder rotator cuff surgery and decompression that is reasonably necessary and related to the admitted April 1, 2021 injury.

2. The surgery shall be paid in accordance with the Colorado Medical Fee Schedule.

3. Respondents complied with the requirements of W.C.R.P. Rule 16 following Dr. Hsin's request for prior authorization.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge' s order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED this 26th day of October, 2021.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-151-060-002

ISSUES

I. Whether the back surgery recommended by Dr. Robinson is reasonable, necessary, and related to Claimant's compensable work injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant began working for Rose Medical Center as a certified nursing assistant in February 2017. Claimant became a registered nurse in February 2020 and then worked at Rose Medical Center as a nurse. **[Transcript p. 34 ¶ 8-16]**
2. Claimant worked as a certified nursing assistant at Rose Medical Center for about two years. Claimant's job duties as a certified nursing assistant were strenuous and included activities such as moving patients in and out of beds and moving patients to and from commodes. Claimant's work as a certified nursing assistant, at times, required that he repetitively lift dementia patients. **[Transcript p. 35 ¶ 1-25/ Transcript p. 37 ¶ 7-9]**
3. Claimant had back surgery in 2005 to address a herniated disc at L4-L5. **[Transcript p. 19 ¶ 21-25]**
4. When Claimant had back surgery in 2005, Claimant's surgeon advised Claimant that back symptoms treated by surgery could return. **[Transcript p. 37 ¶ 14-25]**
5. During the two-year period that Claimant performed work as a certified nursing assistant at Rose Medical Center that Claimant described as strenuous, Claimant did not experience back pain. **[Transcript p. 37 ¶ 1-13]**
6. On July 10, 2020, after Claimant had become a nurse at Rose Medical Center, Claimant helped a dementia patient with heart problems transfer in and out of the patient's bed on multiple occasions after which Claimant reported back pain. **[Transcript pgs. 16-17]**
7. Respondents admitted liability for the injury Claimant suffered on July 10, 2020, at Rose Medical Center. **[Respondents' Exhibit P, p. 320]** As a result, this is an admitted claim.
8. Claimant's lumbar MRI on July 29, 2020 revealed the following: **[Respondents' I, pgs. 306-307]**

   L1-L2: There is mild bilateral facet arthropathy

   L2-L3: There is diffuse bulging and mild bilateral facet arthropathy resulting in mild right neural foraminal narrowing

> L3-L4: There is disc bulging asymmetric to the right, thickening of the ligamentum flavum and mild bilateral facet arthropathy resulting in severe right and mild left neural foraminal narrowing.
>
> L4--L5: There is diffuse disc bulging, small superimposed central-disc protrusion and mild bilateral facet arthropathy resulting in mild central canal stenosis and mild bilateral neural foraminal narrowing. A left hemilaminectomy is noted.
>
> L5-S1: There is minimal diffuse disc bulging and moderate bilateral facet arthropathy.
>
> IMPRESSION: Moderate degenerative changes including mild L4-L5 central canal stenosis and severe right L3-L4 neural foraminal narrowing.

9. On July 30, 2020, Dr. Irish saw Claimant and reviewed the July 29, 2020, MRI. Dr. Irish found that the MRI revealed “moderate degenerative changes throughout the lumbar spine.” Dr. Irish’s diagnosis was sacroiliac joint sprain. **[Respondents’ Exhibit C, pgs. 83,85]**

10. Claimant was seen by Dr. Chan on August 14, 2020. Dr. Chan diagnosed lumbar radiculopathy, sprain of ligaments of lumbar spine, SI joint dysfunction, and low back pain at multiple sites. Dr. Chan recommended an L4-L5 ESI injection to serve both “diagnostic and therapeutic purposes.” **[Respondents’ Exhibit B, p. 9**]

11. In a report dated August 14, 2020, Dr. Chan discussed his review of Claimant’s lumbar MRI stating: “MRI was reviewed with the patient at great length. There is no specific identifiable pathology. There are degenerative changes noted in the L3-4 and L4-5 levels…[t]hus, I am in agreement with Dr. Irish that the pain generator is somewhat elusive.” **[Respondents’ Exhibit B, p. 9]**

12. Dr. Irish examined Claimant on August 19, 2020. At the visit, Claimant asked to see a spinal surgeon which Dr. Irish refused pending the outcome of an injection. Dr. Irish advised Claimant “that the majority of the findings on MRI are degenerative and not acute.” Dr. Irish’s diagnosis was sacroiliac joint sprain. **[Respondents’ Exhibit C, pgs. 105,108]**

13. When Claimant followed-up with Dr. Chan on September 16, 2020, Dr. Chan noted that he had administered an L4-L5 injection 2 weeks earlier and that the injection provided “no diagnostic or therapeutic benefit at all whatsoever.” At the September 16, 2020, evaluation, Dr. Chan conducted lower-extremity EMG testing concluding that the test was negative for bilateral SI radiculopathy. **[Respondents’ Exhibit B, pgs. 34, 36]**

14. Dr. Chan administered an SI joint injection on October 7, 2020. Claimant saw Dr. Chan on October 15, 2020. Dr. Chan concluded that Claimant’s response to the L4-L5 and S1 joint injections was nondiagnostic. Dr. Chan noted that “[a]t this juncture, the pain generator is rather elusive. We are dealing with subjective pain complaint [sic].” **[Respondents’ Exhibit B, pgs. 45, 54]**

15. Dr. Chan evaluated Claimant on November 4, 2020. Dr. Chan noted:

> "I am in agreement with Dr. Irish that the pain generator is definitely elusive. We are dealing with subjective pain complaint without overt objective findings. Given the fact that the MRI did not show any significant pathology, and that the EMG did not show any frank neuropathic lesions, the patient's pain complaint could very well be myogenic in origin." **[Respondents' Exhibit B, p.57]**

16. Claimant was seen by Dr. Burke on November 17, 2020. The diagnosis was lumbar radiculitis and lumbar disc disease. Dr. Burke recommended a transforaminal ESI injection at L4-L5**. [Respondents' Exhibit E, pgs. 256-257]**
17. On January 4, 2021, Dr. Burke administered bilateral L4-L5 transforaminal epidural steroid injections. **[Respondents' Exhibit E, p. 259]**
18. Claimant saw Dr. Burke on January 12, 2021. Claimant reported that he experienced a 25% reduction of symptoms after the injection that lasted about 2 hours. **[Respondents' Exhibit E, pgs. 261-262]**
19. To succeed as a diagnostic tool, the results from an injection should occur within the expected time frame and there should be pain relief of approximately 80% demonstrated by pre and post Visual Analog Scale (VAS) scores**. WCRP 17, Exhibit 1, (E) (2) pg. 22 "The Medical Treatment Guidelines."**
20. Claimant attended a Respondent IME (RIME) with Dr. Burris on February 2, 2021. Dr. Burris concluded that Claimant's described mechanism of injury on July 10, 2021, likely, resulted in a minor lumbar soft tissue strain**.** Dr. Burris concluded that Claimant's diagnostic tests were negative and that Claimant's responses to injections were non-diagnostic**. [Respondents' Exhibit F. p. 277]**
21. In his RIME report dated February 2, 2021, Dr. Burris concluded that the that there were no indications for surgery in Claimant's case, and that Claimant reached maximum medical improvement on November 10, 2020. **[Respondents' Exhibit F, p. 277]**
22. In her deposition on February 23, 2021, Dr. Burke testified as follows: **[Claimant's Exhibit 1, p. 32 ¶ 21-25; p. 33 ¶ 1-17]**

> Question: Well, is there--is there anything, that's a [sic] purely objective [sic] nature, that establishes that he, that [Claimant's name redacted] , is having radicular symptoms?
>
> Answer: So pain is--there's nothing that can be objectively defining for pain, unless you have someone that gets a functional MRI of their brain while they're experiencing symptoms. See, even with the EMG studies that show radicular pathology, not everyone will even experience pain in that situation. So, you know, I would say across the board, simply put, by nature of what it is, pain is a subjective feature.

23. When asked what further treatment Claimant required, Dr. Burke testified at her deposition on February 23, 2021, as follows: "Other options would be to see if he's

a candidate for some type of surgical intervention. I don't think that he is." **[Claimant's Exhibit 1, p.18 ¶ 17-19]**

24. Claimant was seen for the first time by Dr. Robinson, a neurosurgeon, on March 3, 2021. Dr. Robinson's diagnosis was lumbar radiculopathy, degenerative disc disease, and post-laminectomy syndrome. Dr. Robinson stated that Claimant might be a "good candidate" for L4-L5 arthroplasty. Dr. Robinson referred Claimant for an x-ray. **[Respondents' Exhibit G, pgs. 279-280]**

25. Claimant had a lumbar x-ray on March 3, 2021, that revealed moderate disc space narrowing at L4-L5 and mild disc space narrowing at L3-L4 and L5-S1. The radiologist impression was "degenerative disc disease." **[Respondents' Exhibit J, p. 308]**

26. On March 15, 2021, Claimant was seen by Dr. Robinson a second time. Dr. Robinson recommended L4-L5 arthroplasty. **[Respondents' Exhibit G, p.284]**

27. Respondents received a request for authorization of L4-5 lumbar arthroplasty/lumbar artificial diskectomy surgery from Dr. Robinson on March 30, 2021, and denied authorization for surgery pending an IME with Dr. Rauzzino. **[Respondents' Exhibit K, p. 310]**

28. **WCRP 17, Exhibit 1, (G)(11) (c)** the Colorado "Medical Treatment Guidelines" set forth the following as indications for disc replacement surgery:

    All pain generators are adequately defined and treated;

    Spine pathology limited to one level;

    Symptomatic one-level degenerative disc disease established by objective testing (CT or MRI scan followed by [positive provocation discogram]);

    Symptoms unrelieved after six months of active non-surgical treatment;

    All physical medicine and manual therapy interventions are completed;

    Psychosocial evaluation with confounding issues addressed

29. **WCPR 17, Exhibit (G) (11) (d)** of the Colorado "Medical Treatment Guidelines" provides that the following, among other things, are contraindications for disc replacement surgery:

    Multiple-level degenerative disc disease (DDD).

    Generalized chronic pain

    Spondylolysis.

    Spinal canal stenosis.

    Symptomatic facet joint arthrosis – If imaging findings and physical exam of pain on extension and lateral bending are present, exploration of facet originated pain should be completed prior to disc replacement.

    Deficient posterior elements.

    Spondylolisthesis greater than 3 mm.

Significant spinal deformity/scoliosis.

Spinal instability at the pathologic or adjacent level requiring fusion.

Evidence of nerve root compression, depending on the device used.

30. Claimant attended another RIME. This second RIME was with Dr. Rauzzino on April 13, 2021. In his RIME report, Dr. Rauzzino concluded that if Claimant sustained an injury, the injury was likely a lumbar strain that would have resolved over time and would not account for Claimant's pain and radiculopathy. Dr. Rauzzino found that Claimant's physical examination and reported location of pain were not consistent with an L4-L5 injury, specifically. **[Respondent's Exhibit H, p. 303]**

31. Dr. Rauzzino helped procure and write the WCRP 17 Medical Treatment Guidelines. **[Transcript p. 53 ¶ 5-10]**

32. Dr. Rauzzino is a board-certified neurosurgeon who has been in private practice for about 20 years. Dr. Rauzzino has performed more than 100 disc-replacement procedures in connection with his surgical practice. Dr. Rauzzino serves as the Chief of Neurosurgery at Sky Ridge Hospital. **[Transcript p. 40 ¶ 7-18; p. 41 ¶ 1-4; p. 46 ¶ 3-15]**

33. In his RIME Report, Dr. Rauzzino concluded that the L4-L5 surgery recommended by Dr. Robinson is not a reasonable or necessary treatment for Claimant's spine and the treatment is not relatable to the work injury. **[Respondent's Exhibit H, p. 303]**

34. Dr. Rauzzino stated that the radiographic abnormalities seen in Claimant's diagnostic films are explained by Claimant's previous discectomy, and that there is no evidence that Claimant had an acute injury to the L4-L5 interspace that requires any sort of treatment. **[Respondent's Exhibit H, p. 302]**

35. In his RIME report, Dr. Rauzzino stated that Claimant's testing and treatment, to date, had not, appropriately identified Claimant's pain generators and that there have been no studies that localize Claimant's pain to the L4-L5 interspace. **[Respondent's Exhibit H, p. 303]**

36. When discussing contraindications for disc replacement surgery as stated in the Medical Treatment Guidelines (deficient posterior elements, symptomatic facet arthrosis, and multilevel lumbar degenerative disease), Dr. Rauzzino noted that Claimant had a previous discectomy at the level of proposed surgery and there is evidence of previous facet resection, facet arthrosis, and multi-level lumbar degenerative disc disease all that could be contributing to pain. **[Respondent's Exhibit H, p. 303]**

37. In his report, Dr. Rauzzino stated, "[i]t is important to remember that while a patient may have complaints of back pain that has failed other modalities, that does not mean that surgery is therefore indicated…" Dr. Rauzzino, further stated that "[Claimant's name redacted] does not meet the criteria for lumbar disc replacement or other types of surgery mainly because a pain generator has not been identified nor has his pain been localized specifically to the L4-L5 level. Mr. [Claimant's

name redacted] has had previous surgery and facet arthritis at this level as well as facet arthritis and chronic degenerative disc disease at multiple levels. **[Respondent's Exhibit H, p. 304]**

38. On July 2, 2021, Haley Burke, M.D., one of Claimant's treating providers, issued a report responsive to Dr. Rauzzino's RIME report. Dr. Burke noted that she is not a surgeon. Dr. Burke agreed that Claimant's mechanism of injury may have contributed to a myofascial strain, but that Claimant's constellation of symptoms was not consistent with a myofascial injury. **[Respondents' Exhibit E p. 267]**

39. Dr. Burke agreed that the decision to pursue surgery "ideally will come after diagnostic epidural injection yields outstanding benefit, but this too is not always a perfect diagnostic tool." Dr. Burke argued that Claimant's symptoms are consistent with discogenic pain but did not address whether this discogenic pain could be localized to the L4-L5 interspace. **[Respondents' Exhibit E p. 267]**

40. Dr. Rauzzino testified that artificial disc replacement involves cutting the disc out of the disc interspace and placing an artificial disc in the disc space. Unlike fusion surgery where the placement of instrumentation does not have to be perfectly symmetrical, successful disc replacement surgery requires that the artificial disc be properly recessed in the middle of the disc space. **[Transcript p. 47 ¶ 5-17]**

41. Dr. Rauzzino testified that failed disc replacement surgery or surgery that does not alleviate symptoms creates a "whole host of trouble" and that taking artificial discs out is "a dangerous thing" and "if you're going to take the trouble of putting one in and go through the risks of the surgery and all that, you really need to be sure that you have---you know, that this it. This is where the pain's coming from." **[Transcript p. 62 ¶ 3-1l]**

42. At hearing, Dr. Rauzzino testified that Claimant doesn't just have one bad disc or one bad level, he has multiple bad levels, and when a person doesn't have a single pain generator that is the proven source of their pain, that person is not a good candidate for disc-replacement surgery. **[Transcript p. 52 ¶ 11-21]**

43. When asked whether Claimant's L4-5 symptomology is established by objective testing, Dr. Rauzzino testified as follows. **[Transcript p. 57 ¶ 1-25]**

> "No, it hasn't. So, if, if you look at the, if you look at the patient's symptoms, if you look at the treatments which, which have been rendered, and if you look at the response to this treatment, again it doesn't seem to pass the test in my mind.
>
> If you look at his symptoms, he, he initially had backpain and some left leg pain. Then, the pain migrated to the right side. You know, that's different. It kind of changed over time.
>
> So it isn't like he just has symptomatic -- a, a, a clearly defined set of symptoms. He has diffuse complaints which have expanded over time. And then, radiographically, he has multilevel changes throughout this complaint. They talk about severe disease at the level above where they, they talked about an artificial disc being placed. He's had surgery at the L4-L5 level, which affects his success. And then, if you look at his response,

> he doesn't have a physical exam that points to it. He doesn't have a cliff drop or something that clearly says that there's that this is the disc which is producing his symptoms because he doesn't really have any disease on the right side."

44. At hearing, Dr. Rauzzino was asked whether Claimant's pain generators had been adequately defined and treated. In response, Dr Rauzzino testified that the L4-L5 disc has not been establish as the "root cause of the pain." Dr. Rauzzino testified further: **[Transcript p. 61 ¶ 8-16]**

> "I mean, we did the -- they did the injections there, which were nondiagnostic. They looked at, you know, he doesn't have a physical exam which points to specifically the L4-L5 level. He doesn't have isolated radiographic findings specific to L4-L5."

45. At hearing, Dr. Rauzzino was asked about a contraindication for disc replacement surgery, symptomatic facet joint arthrosis. Dr. Rauzzino testified that Claimant has facet arthritis, but that he could not determine whether it was symptomatic pending the results of a facet injection. **[Transcript p. 68 ¶ 4-25; p. 69 ¶ 1]**

46. The ALJ finds Dr. Rauzzino's opinions to be credible and highly persuasive for many reasons. First, he is a spinal surgeon who performs disc replacement surgery for his patients who are proper candidates. Second, his opinions are consistent with the Colorado Medical Treatment Guidelines. Third, he uses the same criteria set forth in the Colorado Medical Treatment Guidelines when determining whether disc replacement surgery is reasonable and necessary for his own patients. Fourth, his opinions are supported by Claimant's medical records – regarding Claimant having multilevel degenerative disc disease and the lack of an identifiable pain generator.

47. Claimant has multilevel degenerative disc disease of his lumbar spine. Thus, his spinal pathology is not limited to one-level of his lumbar spine.

48. The spinal injections provided to Claimant during the claim were nondiagnostic. As a result, the pain generator in Claimant's back has not been identified. Thus, it has not been established that the pain generator is localized at the L4-L5 level.

49. Because the pain generator has not been identified as coming from the L4-L5 level, and Claimant has multilevel degenerative disc disease, disc replacement surgery is contraindicated under the Colorado Medical Treatment Guidelines.

50. Because the pain generator has not been identified as coming from the L4-L5 level, and Claimant has multilevel degenerative disc disease, disc replacement surgery at the L4-L5 level is not reasonable and necessary to treat Claimant from the effects of his work injury. As a result, the ALJ finds that the disc replacement surgery recommended by Dr. Robinson is not reasonable and necessary to treat Claimant from the effects of his work injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether the back surgery recommended by Dr. Robinson is reasonable, necessary, and related to Claimant's compensable work injury.

C.R.S. § 8-42-101 (1)(a) provides that Respondents shall furnish medical care and treatment reasonably necessary to cure and relieve the effects of the injury. Claimant bears the burden of proof of showing that medical benefits are causally related to his work-related injury or condition. *Ashburn v. La Plata School District 9R,* W.C. No. 3-062-779 (May 4, 2007). Therefore, Claimant is not entitled to medical care that is not causally related to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the Medical Treatment Guidelines because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the Medical Treatment Guidelines is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the Medical Treatment Guidelines such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008).

Claimant suffered a compensable back injury on July 10, 2020, that required medical treatment. Before Dr. Burke referred Claimant to Dr. Robinson, Dr. Burke, mindful of Claimant's diagnostic test results, doubted that Claimant was a candidate for spinal surgery. Claimant saw Dr. Robinson for the first time on March 3, 2021. At that initial visit, Dr. Robinson thought Claimant might be a good candidate for an L4-L5 disc replacement pending an x-ray. Then, after an x-ray, he concluded Claimant was a good candidate for an L4-L5 disc replacement. Nowhere in Dr. Robinson's reports does he go through whether Claimant is a candidate for disc replacement surgery pursuant to the Colorado Medical Treatment Guidelines.

Dr. Rauzzino, a neurosurgeon who performs disc replacement surgeries, reported, and testified credibly and persuasively, that successful disc replacement requires precision, and that disc replacement surgery addresses a very specific pain generator. Here, the procedure addresses pain generated from L4-L5 disc space. Dr. Rauzzino credibly testified that if a patient's pain generators are not sufficiently identified, there is a risk that disc replacement surgery will not address the patient's symptoms and the surgery may have to be revised where revision can be dangerous.

Dr. Rauzzino testified credibly to his belief - a belief which tracks relevant portions of The Medical Treatment Guidelines - that before a disc replacement surgery is performed, the patient's pain generators should be clearly defined. The Medical Treatment Guidelines - discussing when disc replacement surgery is indicated - state that all pain generators should be identified and treated, and that spinal pathology should be limited to one level. Dr. Rauzzino reported and testified credibly that pain generators are identified through physical examination, diagnostic injections, and diagnostic imaging.

Dr. Rauzzino credibly testified that Claimant's MRI and x-ray films show evidence of multi-level degenerative lumbar disc disease and do not, themselves, establish the L4-L5 disc space as a primary pain generator. Dr. Chan conducted an EMG study that was negative for evidence of lower-extremity radiculopathy. Dr. Rauzzino, Dr. Chan, and Dr. Burris reported and/or testified credibly that spinal injections provided during the claim were nondiagnostic. Dr. Chan, after performing a second diagnostic injection stated, “[a]t this juncture, the pain generator is rather elusive.” Dr. Rauzzino testified credibly that Claimant’s physical examination does not establish the L4-L5 disc space as a pain generator.

In a July 2, 2021, report where Dr. Burke argued in favor of surgery and in support of the proposition that Claimant’s symptoms are discogenic in origin, Dr. Burke did not argue, persuasively, that the situs of the proposed surgery, L4-L5, is a pain generator and/or primary pain generator. The ALJ found that the source(s) of Claimant’s pain has not been clearly or objectively identified.

The Medical Treatment Guidelines provide, as an indication for disc replacement surgery, that there be one level of spinal pathology. The Medical Treatment Guidelines state that multiple-level degenerative disc disease is a contraindication to disc replacement surgery. Dr. Rauzzino testified credibly that Claimant’s diagnostic films evidence multiple-level degenerative disc disease. Dr. Burke, who argued in favor of disc replacement surgery, stated in her November 17, 2020, and January 12, 2021, reports that Claimant’s MRI showed multi-level disc disease. Dr. Chan reviewed Claimant’s lumbar MRI, which provided “[t]here are degenerative changes noted in the L3-4 and L4-5 levels.”

As found, Claimant has multilevel degenerative disc disease and Claimant has not established that his spinal pathology is limited to one-level of his lumbar spine. An L4-5 disc-replacement surgery targets a very specific and potential source of pain: the L4-5 disc space. The source of Claimant’s symptoms has not been adequately defined. Furthermore, it is not clear that Claimant’s disc pathology is limited to one-level. Claimant has multi-level degenerative disc disease. Dr. Rauzzino’s opinion that disc replacement surgery recommended by Dr. Robinson is not a reasonable or necessary treatment for Claimant’s spine - an opinion that finds support in the Medical Treatment Guidelines - is credited by the ALJ.

As a result, the ALJ finds and concludes that Claimant has failed to establish by a preponderance of the evidence that the disc replacement surgery recommended by Dr. Robinson is reasonable and necessary to treat Claimant from the effects of his work injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant’s request L4-L5 lumbar arthroplasty/lumbar artificial diskectomy is denied and dismissed.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 26, 2021.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-127-088-001

ISSUES

1. Whether Claimant established by clear and convincing evidence that the opinion of DIME physician, Bradley Abrahamson, M.D., that Claimant reached maximum medical improvement on December 30, 2020 is incorrect.

2. Whether Claimant established by clear and convincing evidence that Dr. Abrahamson's assignment of a 0% permanent impairment rating was incorrect.

FINDINGS OF FACT

1. On February 20, 2019, Claimant sustained an injury to his lower back in the course of his employment with a former employer – Vestas. Claimant received treatment at Banner Occupational Health Clinic (BOHC) under the direction of Linda Young, M.D. and from Gregory Reichhardt, M.D. at Rehabilitation Associates of Colorado for diagnoses of low back pain and right sided sciatica. In addition, Claimant received physical therapy, and chiropractic.

2. On December 6, 2019, Claimant saw Dr. Young for his February 2019 injury. Claimant reported back pain at a level of 5/10, tightness in his back, and difficulty sleeping due to back pain. Claimant had not yet begun massage therapy at that time, but had completed chiropractic and physical therapy. Dr. Young noted that Claimant had then-existing work restrictions, including frequent position changes, and lifting 25 pounds or more as tolerated. Dr. Young recommended Claimant see a psychologist to help with his sleep and issues related to anxiety and stress. Dr. Young also recommended Claimant re-initiate chiropractic care in conjunction with massage therapy. Claimant was scheduled for a follow-up appointment in four weeks, and Dr. Young indicated she anticipated putting Claimant back to work at full duty as tolerated at the next visit. As of December 6, 2019, Claimant had not been placed at maximum medical improvement (MMI) for his February 2019 injury. (Ex. E).

3. Sometime after his February 2019 injury, Claimant left employment with Vestas and began working for Employer. On December 17, 2019, Claimant was involved in a motor vehicle accident while performing deliveries for Employer.

4. On the date of the accident, Claimant was seen at Workwell by Lloyd Luke, M.D. Claimant reported right lumbar and hip pain, paresthesias down his right posterior thigh into the foot, jaw pain and neck stiffness. Claimant was not sure if he hit his head in the accident. Dr. Luke indicated he was not comfortable with the initial evaluation being performed at Workwell and sent Claimant to the emergency department without performing an examination. (Ex. 13).

5. Claimant then went to the UC Health emergency room where he reported neck, back, right shin, and facial pain, with some mid-line spinal tenderness. Imaging studies of Claimant's head, jaw, right leg, and cervical, thoracic, and lumbar spine were all interpreted as unremarkable. Claimant reported neurological symptoms including numbness, tingling, weakness, dizziness, and vision problems. Claimant was diagnosed with a muscle strain, contusions of the face and right leg, and bilateral back pain, and then discharged with muscle relaxers. (Ex. 14).

6. On December 19, 2019, Claimant was seen at BOHC by Douglas Drake, PA-C. Mr. Drake noted that Claimant also had a then-existing workers' compensation claim related to a low back injury sustained at Vestas and was under the care of Dr. Young at Banner for those injuries. Claimant reported pain in his neck, back and right knee, which he rated at 10/10. On examination, Mr. Drake noted mild tenderness to palpation in the thoracic spine, with limited range of motion due to discomfort. Examination of Claimant's neck was unremarkable. Mr. Drake diagnosed Claimant with cervicalgia, contusion of the head, contusion of the right knee and back pain. Mr. Drake prescribed Norco for pain. Claimant did not report cognitive issues at this visit. (Ex. 11).

7. On December 26, 2019, Claimant saw Mr. Drake again. Claimant reported that Norco and muscle relaxers were not helping and that he was having difficulty sleeping. He rated his back pain at 8/10. Mr. Drake prescribed poot therapy and physical therapy. Claimant did not report cognitive issues at this visit. (Ex. 10).

8. On January 10, 2020, Claimant apparently saw Mr. Drake in follow up for his February 2019 injury. No record for this date was offered or admitted into evidence. According to a medical summary prepared by Claimant's expert witness, Dr. Goldman, Claimant reported his low back pain level was 5/10. (Ex. 1).

9. On January 13, 2020, Claimant saw Daniel Bates, M.D., at BOHC. Dr. Bates noted Claimant was transitioning care from Dr. Young to him. Dr. Bates indicated Claimant was approaching MMI for his February 20, 2019 injury on October 18, 2019. While Dr. Bates apparently reviewed Claimant's prior medical records, he did not note that Dr. Young saw Claimant on December 6, 2019, or that Claimant was recommended to receive massage therapy and chiropractic after December 6, 2019. Dr. Bates indicated he was "closing" Claimant's February 2019 case, and that patient was at MMI for that injury, with no maintenance and no permanent impairment. (Ex. 9).

10. With respect to Claimant's December 17, 2019 injury, Dr. Bates indicated Claimant continued to report severe back pain and was ambulating with a cane. Claimant had been prescribed Flexeril and Norco, neither of which provided any reported benefit. Claimant reported "persistent bitemporal headache" worse through the day with mild photophobia and phonophobia, slurred speech and slowed cognitive process. Dr. Bates' diagnosis was neck strain, lower back strain, right knee contusion and concussion without loss of consciousness. Dr. Bates opined that Claimant's examination and history were consistent with a mild concussion with continued cognitive slowing and headache symptoms. He recommended beginning chiropractic and massage therapy and prescribed a trial of prednisone and Zanaflex. (Ex. 9).

11. On January 21, 2020, Claimant again saw Dr. Bates. Claimant continued to report severe back pain and that he was not improved with medication, including “high-dose corticosteroids and non-benzodiazepine muscle relaxer.” Claimant reported difficulty lying down due to discomfort and sleeping 1-2 hours per night. Claimant also noted headaches, slurred speech, and slowed cognitive process. On examination, Dr. Bates noted a negative straight leg raise test bilaterally, tenderness to palpation in the cervical and lumbar paraspinal muscles, and markedly limited range of motion in the cervical spine. Dr. Bates prescribed a trial of Valium, following up with physical therapy, chiropractic, and massage. In addition, Dr. Bates ordered a neuropsychological evaluation for Claimant’s concussion symptoms. (Ex. 8).

12. On January 30, 2020, Claimant was evaluated by Alissa Wicklund, Ph.D., for post-concussive symptoms. Claimant reported headaches, difficulty with concentration, memory and word-finding. Claimant also indicated that physical activity caused dizziness, balance instability, and photophobia. Based on her testing, Dr. Wicklund indicated there was some question in the validity of her testing, due to discordant testing results. For example, Dr. Wicklund noted Claimant’s new learning was tested as “profoundly impaired” but average in areas of retentive memory. Claimant’s clinical profile was “notable for overt focus on somatic symptoms, as well as a high level of symptoms of depression and anxiety, which are impairing functional ability.” On vestibular testing, she indicated Claimant’s eye movement was “unusual” and suggested it may be non-organic in nature. However, she also noted that Claimant would benefit from vestibular physical therapy due to his symptoms. In addition, she recommended psychological therapy for his emotional response to the injury. (Ex. 12).

13. On February 11, 2020, Claimant returned to Dr. Bates. Dr. Bates noted that Claimant’s physical examination was improved. Although Claimant reported tenderness to palpation in the cervical and lumbar musculature, Dr. Bates indicated that “actual palpation” “noted soft musculature without apparent spasm, vastly improved from previous examination which was notable for diffuse muscle tension and palpable spasm throughout the cervical[,] thoracic and lumbar spine.” Dr. Bates stated his examination of Claimant’s spinal muscles was “not consistent with [Claimant’s] continued complaints of tightness and pain. Overall [Claimant’s] objective findings are not consistent with his subjective pain complaints in the neck or back.” He further indicated that “[g]iven [Claimant’s] unusual pattern of complaints and lack of improvement with standard intervention at this time in his care[,] I am concerned for possible malingering.” He recommended Claimant return to active work with de-escalating restrictions consistent with the known physiologic injury he sustained.” He recommended Claimant continue with physical therapy, massage, and chiropractic. (Ex. 6).

14. On March 2, 2020, Claimant returned to Dr. Bates, but no examination took place. Dr. Bates indicated that Claimant began a “conflict laden conversation regarding the findings in the previous note, particularly the suspicion of malingering…” Dr. Bates requested that Claimant’s care be changed to a different primary treating provider. He also believed the majority of Claimant’s symptoms were non-physiologic, because his examinations had been consistently out-of-proportion to his injuries and a lack of improvement with conservative care. (Ex. 5).

15. On April 1, 2020, Claimant saw Marc-Andre Chimonas, M.D., at DOHC, who agreed to assume management of Claimant's care. Claimant's primary complaint was low back pain into the thoracic spine. Claimant reported his neck pain was vastly improved, but still had some blurry vision. On examination, Dr. Chimonas noted Claimant exhibited "notable pain behavior specifically pain with axial rotation, pain with light touch to the lumbar spine, and inconsistencies with range of motion." He also indicated Claimant's range of motion on examination was inconsistent with his ability to sit with his femur at roughly 90 degrees angle to the spine. Dr. Chimonas indicated he "removed" Claimant's back pain from his December 17, 2019 workers' compensation claim and that "further treatment of the back cannot occur for this injury." He recommended that Claimant seek treatment for his back through his prior (i.e., February 20, 2019) workers' compensation claim. Dr. Chimonas recommended that Claimant's neck and possible post-concussion symptoms be treated as through his December 17, 2019 claim, and requested vestibular rehabilitation for Claimant's post-concussive symptoms. He also noted that any work restrictions would not be related to the December 17, 2019 claim. (Ex. 4).

16. At Claimant's May 6, 2020 visit, Dr. Chimonas noted the insurance company did not wish to separate Claimant's treatment for different claims. Claimant had attended three vestibular rehabilitation treatments and felt that his dizziness was resolving, but continued to report residual double vision and difficulty focusing on close objects. Dr. Chimonas offered Claimant a psychological evaluation which Claimant declined. On examination, Dr. Chimonas elicited "notable pain behavior" and again indicated Claimant's range of motion was inconsistent with his ability to sit with his femur at a roughly 90-degree angle to the spine. Dr. Chimonas did not believe further treatment that would benefit Claimant. He recommended proceeding to a function capacity evaluation to determine permanent work restrictions and impairment rating, and referred Claimant to physical therapy to obtain range of motion measurements for a lumbar spine impairment rating. (Ex. 3).

17. On September 2, 2020, Dr. Chimonas placed Claimant at MMI effective September 2, 2020, and indicated Claimant would not benefit from maintenance care. He indicated Claimant had a previous visit on August 19, 2020, where range of motion testing was performed, but lumbar flexion measurements were invalid due to lack of reproducibility. (No records from August 19, 2020 were offered or admitted into evidence). Claimant's, lumbar range of motion was repeated and felt valid on September 2, 2020. Dr. Chimonas' lumbar spine measurements yielded a 9% total lumbar range of motion impairment. Dr. Chimonas assigned Claimant a 14% whole person impairment (9% for range of motion and 5% for a table 53 disorder. He noted that no other impairment for other body parts was indicated. (Ex. 2).

18. On December 30, 2020, John Burris, M.D., performed a record review at Respondents' request. Respondents presented Dr. Burris testimony by deposition in lieu of live testimony.

19. On February 22, 2021, Claimant underwent a Division Independent Medical Examination (DIME) with performed by Bradley Abrahamson, M.D. Dr. Abrahamson

opined that Claimant was at MMI on December 30, 2020, the date of Dr. Burris' record review. . (Ex. A, p. 25).

20. Regarding impairment ratings, Dr. Abrahamson performed range of motion measurements of Claimant's cervical, thoracic, and lumbar spine which, if valid, would correspond to 16%, 2%, and 19% range of motion impairments, respectively. Combined with corresponding Table 53 disorders, Claimant's combined impairment ratings would yield a 40% whole person impairment. Claimant's lumbar range of motion impairment was measured as 19%, more than double the range of motion impairment measured by Dr. Chimonas in September 2020. Additionally, Dr. Abrahamson determined that Claimant's traumatic brain injury would correlate to a 6% whole person impairment. The 40% and 6% whole person impairments convert to a 44% whole person impairment.

21. Ultimately, however, despite the fact that Claimant's range of motion measurements were internally consistent, Dr. Abrahamson determined that Claimant did not qualify for any permanent impairment. In addressing Claimant's spine ratings, Dr. Abrahamson stated:

> As a point of fact, throughout his treatment all three areas of the spine (cervical, thoracic and lumbar) were intermittently mentioned by occupational medicine providers and/or physical therapists over a period of time exceeding 6 months. Technically he does meet criteria then for a Table 53 11B rating of each area. I completed and attached all applicable worksheets. However, these findings were non-physiological and measurements were invalid on prior examinations. Also, since he was making no progress and not fully participating in PT and Functional Capacity Examinations, he could have been placed at MMI sooner than 6 months into the case. Therefore, no permanent disability is assigned (see also Section L) pursuant to the DIME tips #8 and the Spinal Rating tip #2. (Ex. A., p. 26).

22. At the time of Dr. Abrahamson's DIME, Claimant was working as a forklift operator for a new employer. Dr. Abrahamson indicated that based on his familiarity forklift operation, a forklift operator must turn his entire spine to see where they are going when backing up, which he characterized as a "routine part of the job." He found "it highly implausible (less than 50% probability) that any of [his] recorded spine range of motion measurements are actually valid." Dr. Abrahamson further stated: "In my opinion he was able to reproduce measurements within 10% variance, and in doing so he 'beat the test.' My findings are non-physiologic and also do not make sense for this injury." (Ex. A, p. 27).

23. Regarding Claimant's traumatic brain injury rating, Dr. Abraham stated:

> The mathematics would have qualified him for a 6 percent disability. However. since he refused all Psychological care and Dr. Wicklund's report expressed a great degree of doubt, this could have been at MMI long ago. I do not think there is greater than 50% probability that this can be

> considered a work-related finding in the absence of Psychological care, which was repeatedly offered and refused. … In summary, there is no physiologic permanent partial disability. (Ex. A, p. 26)

24. In explaining his rationale for refusing to assign a disability rating for a traumatic brain injury, Dr. Abrahamson stated “As pointed out in previous IME reports, [Claimant] did not consistently exhibit classic concussion symptoms. It was expected that there was a significant psychological component to his concussion-like symptoms. Moreover, Dr. Wicklund reported conflicting results in her testing that do not support a TBI work injury here.” (Ex. A, p. 27).

25. Dr. Abrahamson concluded, that based on his clinical judgment and observations of other providers, that “the findings are essentially non-physiologic. On these grounds, his permanent partial disability from this particular case is zero.” (Ex. A., p. 27). Regarding medical maintenance care, Dr.

26. At hearing, Claimant presented the testimony of H. Barton Goldman, M.D., who was admitted as an expert in physical medicine and rehabilitation. Dr. Goldman opined that Claimant was not at MMI, and that Dr. Abrahamson incorrectly determined that Claimant had no permanent impairment as the result of his work-related injuries. Dr. Goldman testified that he believed it would be difficult for Claimant to manipulate the results of his range of motion testing. Dr. Goldman agreed Claimant exhibited signs of symptom magnification. However, he believes Claimant’s symptom magnification should have been considered when determining the existence of an impairment, and not used as a basis for refusing to assign an impairment rating. Dr. Goldman testified that when he examined the Claimant, he was able to “extinguish” Claimant’s symptom magnification by providing cues and coaching to Claimant as to how to properly perform certain testing. For example, he testified that he was able to obtain a valid straight leg test from Claimant where other providers were not because he was able to “coach” claimant on how to properly perform the maneuver. Similarly, in his report, Dr. Goldman notes that Claimant had a positive Hoover’s sign, but it was extinguished with “verbal cueing.” Dr. Goldman’s ability to obtain ostensibly valid measurements does not render Dr. Abrahamson’s opinions incorrect.

27. Dr. Goldman assessed a 24% impairment rating for both the cervical spine (10%) and the lumbar spine (15%), which the Claimant requests that the ALJ find to be Claimant’s permanent impairment rating.

28. Dr. Goldman also testified that he does not believe Claimant is at MMI because he should have full neuropsychological testing to evaluate vision and memory issues, and that Claimant would benefit from more active therapy, and a pain management consultation.

29. Dr. Goldman testified that a DIME physician has the discretion not to apply otherwise valid range of motion measurements for impairment ratings if the DIME physician believes they lack credibility.

30. With respect to Claimant's MMI determination, Dr. Goldman testified that he believes Claimant could benefit from additional therapy. In his report, he states "it is not clear to this examiner that [Claimant] is in fact at [MMI} relative to the injury suffered December 17, 2019."

31. Claimant testified that he continues to have difficulty with his lower back and neck. He testified that he voluntarily left employment with Employer and began working as a forklift operator. He indicated that he was able to do that job, but had difficulty sitting for a long period of time. Claimant is currently working as a tattoo artist, where his job requires minimal lifting. Claimant testified that he did not recall being offered psychological treatment, and that he did not participate in a functional capacity evaluation when recommended because he was not employed by Employer at the time.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Indus. Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Indus. Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Indus. Comm'n*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

OVERCOMING DIME ON IMPAIRMENT AND MMI

The Act defines MMI as "a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." § 8-40-201(11.5), C.R.S. Where disputes exist on whether a Claimant has reached MMI, the ALJ must resolve that issue.

Under § 8-42-107 (8)(b)(III), C.R.S., a DIME physician's opinions concerning MMI and whole person impairment carry presumptive weight and may be overcome by clear and convincing evidence. "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance'; it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411, 414 (Colo. App. 1995). Accordingly, a party seeking to overcome a DIME's MMI determination and/or whole person impairment rating must present "evidence demonstrating it is 'highly probable' the DIME physician's MMI determination or impairment rating is incorrect and such evidence must be unmistakable and free from serious and substantial doubt. *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001); *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). Whether a party has overcome the DIME physician's opinion is a question of fact to be resolved by the ALJ. *Metro Moving & Storage*, 914 P.2d at 414.

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Indus.,* WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café*, W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Indus. Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services,* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Indus. Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Indus. Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.*, W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); *compare In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation, and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Indus. Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

Claimant has failed to establish by clear and convincing evidence that Dr. Abrahamson's opinions regarding maximum medical improvement and impairment are incorrect. With respect to MMI, Dr. Goldman's opinion that Claimant may benefit from additional treatment does not demonstrate that Dr. Abrahamson's MMI opinion is highly probably incorrect. Dr. Abrahamson's assignment of MMI is later than that assigned by Dr. Chimonas, and no treating physician has opined that Claimant is not at MMI. The ALJ finds that Dr. Goldman's opinions on this issue are merely a difference of opinion and do not reach the standard of clear and convincing evidence.

Regarding Dr. Abrahamson's decision not to assign permanent impairment ratings, again, Claimant has failed to establish to meet his burden of establishing that Dr. Abrahamson's opinions are incorrect by clear and convincing evidence. Given that at least three of Claimant's treating providers expressed concerns about the non-physiologic nature of Claimant's complaints, and the fact that Dr. Abrahamson's lumbar range of motion measurements were significantly different than those of Dr. Chimonas approximately five months earlier, there is insufficient evidence to find that Dr. Abrahamson's opinions are highly probably incorrect. While Dr. Goldman offered a plausible explanation and support for assigning Claimant an impairment rating, his testimony did not establish that Dr. Abrahamson's opinions on MMI and impairment rating were highly probably incorrect.

ORDER

It is therefore ordered that:

1. Claimant's has failed to establish by clear and convincing evidence that Dr. Abrahamson's determination that Claimant has no permanent impairment is incorrect. Claimant's request for permanent partial disability benefits is denied and dismissed.

2. Claimant has failed to establish by clear and convincing evidence that Dr. Abrahamson's MMI opinion is incorrect. Claimant reached MMI on December 30, 2020.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-172-164-002

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that the right to select an Authorized Treating Physician (ATP) passed to her through Respondents' failure to provide a written list of at least four designated medical providers in violation of §8-43-404(5), C.R.S. and WCRP Rule 8-2.

2. Whether Respondents have demonstrated by a preponderance of the evidence that Claimant chose Concentra Medical Centers located at Chambers Road and I-70 as her ATP through her words and conduct.

FINDINGS OF FACT

1. Claimant is a 31-year-old shift manager for Employer. On April 13, 2021 she suffered an admitted right lower extremity injury when she tripped over a dustpan. She specifically suffered a right knee sprain. Claimant reported the injury to her immediate supervisor Alejandra C[Redacted].

2. Claimant was transported by ambulance to the Emergency Room at Platte Valley Medical Center. She reported that she "twisted her right knee" and was experiencing severe pain with any movement. Claimant denied any ankle pain, foot pain or other injuries. After a physical examination she was discharged with the clinical impression of a "right knee injury." An appointment was scheduled with John Mangelson, M.D. at the orthopedic clinic for the following day.

3. Claimant testified that she called Ms. C[Redacted] on April 14, 2021 to discuss the recommended follow-up treatment. Ms. C[Redacted] informed Claimant that she did not have any Workers' Compensation information and should contact Employer's District Manager Rafael G[Redacted]. Claimant remarked that she discussed the orthopedic referral with Mr. G[Redacted]. He informed her that Concentra Medical Centers was Employer's authorized provider and suggested a Concentra clinic located at Chambers Road and I-70 in Aurora.

4. Mr. G[Redacted] testified that on April 14, 2021 he discussed the injury with Claimant. He explained that he was not Employer's "point person" on Workers' Compensation issues and had already spoken to his supervisor Director of Operations Lana P[Redacted]. Mr. G[Redacted] commented that he advised Claimant she could search for and treat at any Concentra location she preferred. He mentioned he had previously sustained a Workers' Compensation injury, received treatment at the Concentra located on Chambers Road in Aurora and was satisfied with his care.

5. Mr. G[Redacted] testified that Claimant told him she wanted to treat at the Chambers Road Concentra because it was not far from her house and on her way to

work. She specifically stated “I will go there.” Although Mr. G[Redacted] reiterated that she could treat at any Concentra location, he understood that Claimant was selecting the Chambers Road Concentra facility.

6. Mr. G[Redacted] commented that Claimant requested contact information for the Chambers Road Concentra. He sent her the details after the telephone conversation in a text message on the afternoon of April 14, 2021. Mr. G[Redacted] remarked that, if Claimant had mentioned she wanted to treat at a different Concentra location, he would have provided her with the appropriate address.

7. Claimant testified that Mr. G[Redacted] instructed her to contact Ms. P[Redacted]. Claimant left a message for Ms. P[Redacted] on April 14, 2021 and Ms. P[Redacted] returned the call on April 15, 2021. They discussed the hospital’s referral to orthopedic physician Dr. Mangelson. Ms. P[Redacted] informed Claimant that she could not visit the orthopedic doctor and was required to choose a provider authorized by Respondents. She specifically advised Claimant that she could visit any Concentra or HealthOne clinic. Claimant informed her that she planned to visit the Concentra location at Chambers Road and I-70.

8. Ms. P[Redacted] testified that in her current position as Director of Operations and previously as Senior District Manager she is charged with handling Workers’ Compensation claims. When a workplace injury occurs at any of Employer’s stores, she ensures that the employee has access to treatment.

9. Ms. P[Redacted] confirmed that all of Employer’s stores have a designated provider list that includes several HealthOne and Concentra locations. She further commented that she would normally tender a letter when a claimant required or desired medical treatment. However, Claimant never returned to work by the time they talked about treatment on around April 14-15, 2021.

10. Ms. P[Redacted] discussed treatment options with Claimant. She told Claimant she could obtain treatment at any Concentra or HealthOne facility in the region. Ms. P[Redacted] specifically enumerated several locations, including the Green Valley, Colfax and Chamber Road Concentra facilities. During the conversation, Claimant stated that the Chambers Road Concentra was “the one that’s close to my house. That’s the one I am going to.” She detailed that the location was most convenient for her and she preferred to treat at that location. Ms. P[Redacted] understood Claimant was selecting the Chambers Road Concentra location as her authorized provider.

11. Claimant acknowledged on cross-examination that she spoke to Mr. G[Redacted], he told her that she could treat with any provider at Concentra and they discussed Mr. G[Redacted]’s prior experience at the Chambers Road facility. Claimant agreed that the Chambers Road Concentra location was the closest to her house. She confirmed that she received the text message with the address of the Chambers Road Concentra after she spoke to Mr. G[Redacted]. She also recognized that she spoke to Ms. P[Redacted] and received two provider choices. The options included Concentra and

another provider that she could not recall, but might have been HealthOne. Nevertheless, Claimant maintained that she did not select the Chambers Road Concentra, but only went there because she had nowhere else to go and the facility was close to her house.

12. On April 22, 2021 Claimant told Insurer's Claims Adjuster Hope W[Redacted] that she was treating at Concentra. Ms. W[Redacted] understood that Claimant would continue treating at the facility. Claimant did not express any dissatisfaction with her care, raise any concerns with the designation or request a change of physician. Ms. W[Redacted] subsequently did not receive a request for a change of physician.

13. Claimant explained that from April 15, 2021 through April 29, 2021 she visited the Chambers Road Concentra location for a total of three medical appointments and five physical therapy visits. Claimant scheduled her own appointments, provided transportation and voluntarily presented for care. On April 15, 2021 Amanda Cava, M.D. completed a Physician's Report of Workers' Compensation Injury in which she noted that Claimant suffered a right knee sprain when she slipped on a dust pan at work. Dr. Cava recommended a splint, provided work restrictions and scheduled follow-up treatment. The medical records reveal that Claimant subsequently visited Michael Pete, PA-C for medical treatment and DPT Ronald Kochevar, DPT for physical therapy.

14. Claimant testified that she was referred for an MRI and her therapist DPT Kochevar would "hold" her treatment until the MRI was completed. She noted that therapy sessions scheduled for the following week were then cancelled. Claimant waited for one month but the MRI was not been approved.

15. Despite Claimant's testimony, the last physical therapy record from April 29, 2021 reflects that she would continue treating with Concentra. There is no suggestion that treatment would be suspended. The April 29, 2021 medical record specifically provides that Claimant reported a benefit from her treatment based on a reduction in symptoms. Notably, Claimant was a good candidate for therapy intervention and demonstrated a positive prognosis for improvement. Furthermore, Ms. W[Redacted] explained that Respondents never received an MRI referral and did not deny or fail to authorize any medical treatment through Concentra. Finally, Claimant has since refused additional treatment under the claim and failed to present for demand medical appointments at Concentra scheduled for August 6, 2021 and August 30, 2021.

16. In May 2021 Claimant sought legal representation to obtain further medical treatment. She detailed that, because the requested MRI had not been approved, she could not receive additional treatment. Claimant noted that, if the MRI and additional medical treatment had been approved, she likely would have continued to obtain treatment through Concentra. She explained that she changed physicians and selected David Yamamoto, M.D. as her treating physician.

17. Claimant has established that it is more probably true than not that the right to select an ATP passed to her through Respondents' failure to provide a written list of at

least four designated medical providers in violation of C.R.S. §8-43-404(5) and WCRP Rule 8-2. Initially, on April 13, 2021 Claimant suffered an admitted right lower extremity injury when she tripped over a dustpan. She immediately received emergency treatment at the Platte Valley Medical Center. Claimant subsequently had conversations with supervisors Mr. G[Redacted] and Ms. P[Redacted] about treatment options through Employer's designated providers Concentra and HealthOne. Mr. G[Redacted] commented that he advised Claimant that she could search for and treat at any Concentra facility she preferred. Moreover, Ms. P[Redacted] told Claimant she could obtain treatment at any Concentra or HealthOne facility in the region. Ms. P[Redacted] specifically enumerated several locations, including the Green Valley, Colfax and Chambers Road Concentra facilities. Despite the verbal discussions between Claimant and her supervisors, the record is devoid of a written list of four designated providers. Furthermore, Respondents have conceded that they did not explicitly meet the requirements of WCRP 8-2 by tendering a written letter within seven days of the injury. The record also does not reveal any written list of providers. Because Respondents failed to provide Claimant with a written list of designated providers, the right to select an ATP passed to her.

18. Because the right of selection passed to Claimant, the central issue is whether she demonstrated by her words or conduct that she chose the Chambers Road Concentra location for treatment. The record reveals that Respondents have demonstrated that it is more probably true than not that Claimant selected the Concentra medical facility located at Chambers Road and I-70 as her ATP by her words and conduct. Mr. G[Redacted] commented that during his April 14, 2021 conversation with Claimant he mentioned he had previously sustained a Workers' Compensation injury, received treatment at the Concentra located on Chambers Road in Aurora and was satisfied with his care. Mr. G[Redacted] credibly testified that Claimant told him she wanted to treat at the Chambers Road Concentra because it was not far from her house and on her way to work. She specifically stated "I will go there." Although Mr. G[Redacted] reiterated that she could treat at any Concentra location, he understood that Claimant was selecting the Chambers Road Concentra facility. He noted that Claimant requested contact information for the Chambers Road Concentra and sent her the location details in a text message on the afternoon of April 14, 2021. Furthermore, Ms. P[Redacted] told Claimant she could obtain treatment at any Concentra or HealthOne in the region and enumerated several locations, including the Green Valley, Colfax and Chambers Road Concentra facilities. During the conversation, Claimant stated the Chambers Road Concentra was "the one that's close to my house. That's the one I am going to." She detailed that the location was most convenient for her and preferred to treat there. Ms. P[Redacted] remarked that she understood Claimant was selecting the Chambers Road Concentra facility as her authorized provider. The persuasive evidence in the record, as well as the credible testimony of Mr. G[Redacted] and Ms. P[Redacted] reflects that Claimant verbally chose the Chambers Road Concentra location for treatment. Although Claimant maintained that she did not select the facility, she acknowledged she had nowhere else to receive treatment and the facility was close to her house.

19. Claimant's conduct also reveals that she exercised her right of selection and chose the Chambers Road Concentra facility as her ATP. Claimant explained that from

April 15, 2021 through April 29, 2021 she visited the Chambers Road Concentra location for a total of three medical appointments and five physical therapy visits. She scheduled her own appointments, provided transportation and voluntarily presented for care. On April 15, 2021 Dr. Cava completed a Physician's Report of Workers' Compensation Injury in which she noted that Claimant suffered a right knee sprain when she slipped on a dust pan at work. Dr. Cava recommended a splint, provided work restrictions and scheduled follow-up treatment. The medical records reveal that Claimant subsequently visited PA-C Pete for medical treatment and DPT Kochevar for physical therapy. Furthermore, on April 22, 2021 Claimant told Insurer's Claims Adjuster Ms. W[Redacted] that she was treating at Concentra. Ms. W[Redacted] understood that Claimant would continue treating at the facility. Claimant did not express any dissatisfaction with her care, raise any concerns with the designation or request a change of physician.

20. Claimant testified that she was referred for an MRI and her therapist DPT Kochevar would "hold" her treatment until the MRI was completed. She noted that therapy sessions scheduled for the following week were then cancelled. Claimant waited for one month but the MRI was not been approved. She detailed that, because the requested MRI was not approved and she could not receive additional treatment, she sought legal representation and changed physicians to Dr. Yamamoto. Despite Claimant's testimony, the last therapy record from April 29, 2021 reflects that she would continue treating with Concentra. There is no suggestion that treatment would be suspended. The April 29, 2021 medical record specifically provides that Claimant reported a benefit from her treatment based on a reduction in symptoms. Notably, Claimant was a good candidate for therapy intervention and demonstrated a positive prognosis for improvement. Furthermore, Ms. W[Redacted] explained that Respondents never received an MRI referral and did not deny or fail to authorize any medical treatment through Concentra.

21. In the days after the April 13, 2021 work accident Claimant signified through her words and conduct that she had selected Concentra to treat her injuries. The credible testimony of Mr. G[Redacted], Ms. P[Redacted] and Ms. W[Redacted] reflects that Claimant had chosen the Concentra facility on Chambers Road for treatment. Furthermore, Claimant obtained either medical or physical therapy treatment through Concentra on at least eight occasions between April 15, 2021 and April 29, 2021. Accordingly, Claimant selected the Chambers Road Concentra facility as her ATP.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the

rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In Re of Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

5. In a medical emergency a claimant need not seek authorization from her employer or insurer before seeking medical treatment from an unauthorized medical provider. *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777, 781 (Colo. App. 1990). A medical emergency affords an injured worker the right to obtain immediate treatment without the delay of notifying the employer to obtain a referral or approval. *In Re Gant*, WC 4-586-030 (ICAO, Sept. 17, 2004). Because there is no precise legal test for determining the existence of a medical emergency, the issue is dependent on the particular facts and circumstances of the claim. *In re Timko,* WC 3-969-031 (ICAO, June 29, 2005). Once the emergency is over the employer retains the right to designate the first "non-emergency" physician. *Bunch v. Indus. Claim Appeals Office of State of Colorado*, 148 P.3d 381, 384 (Colo. App. 2006).

6. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the provider will be compensated by the insurer for treatment. *Bunch,* 148 P.3d at 383; *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of

fact for the ALJ. *Kilwein v. Indus. Claim Appeals Office,* 198 P.3d 1274, 1276 (Colo. App. 2008); *In re Bell*, WC 5-044-948-01 (ICAO, Oct. 16, 2018). If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. *In Re Patton*, WC's 4-793-307 & 4-794-075 (ICAO, June 18, 2010); *see Yeck v. Industrial Claim Appeals Office,* 996 P.2d 228, 229 (Colo. App. 1999); *Jewett v. Air Methods Corporation,* WC 5-073-549-001 (ICAO, Mar. 2, 2020) (determining that surgery performed by an unauthorized provider was not compensable because the employer had furnished medical treatment after receiving knowledge of the injury).

7. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck,* 996 P.2d at 229. However, the Colorado Workers' Compensation Act requires respondents to provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Specifically, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." §8-43-404(5)(a)(I)(A), C.R.S. W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

8. The term "select," is unambiguous and should be construed to mean "the act of making a choice or picking out a preference from among several alternatives." *Squitieri v. Tayco Screen Printing, Inc.,* WC 4-421-960 (ICAO Sept. 18, 2000); *see In re Loy*, W.C. No. 4-972-625-01 (ICAO, Feb. 19, 2016). Thus, a claimant "selects" a physician when she "demonstrates by words or conduct that [she] has chosen a physician to treat the industrial injury." *W[Redacted] v. Halliburton Energy Services,* WC 4-995-888-01 (ICAO, Oct. 28, 2016); *Loy v. Dillon Companies*, W.C. No. 4-972-625 (Feb. 19, 2016). The question of whether the claimant selected a particular physician as the ATP is one of fact for determination by the ALJ. *Squitieri v. Tayco Screen Printing, Inc.,* WC 4-421-960 (ICAO, Sept. 18, 2000).

9. As found, Claimant has established by a preponderance of the evidence that the right to select an ATP passed to her through Respondents' failure to provide a written list of at least four designated medical providers in violation of C.R.S. §8-43-404(5) and WCRP Rule 8-2. Initially, on April 13, 2021 Claimant suffered an admitted right lower extremity injury when she tripped over a dustpan. She immediately received emergency treatment at the Platte Valley Medical Center. Claimant subsequently had conversations with supervisors Mr. G[Redacted] and Ms. P[Redacted] about treatment options through Employer's designated providers Concentra and HealthOne. Mr. G[Redacted] commented that he advised Claimant that she could search for and treat at any Concentra facility she preferred. Moreover, Ms. P[Redacted] told Claimant she could obtain treatment at any Concentra or HealthOne facility in the region. Ms. P[Redacted]

specifically enumerated several locations, including the Green Valley, Colfax and Chambers Road Concentra facilities. Despite the verbal discussions between Claimant and her supervisors, the record is devoid of a written list of four designated providers. Furthermore, Respondents have conceded that they did not explicitly meet the requirements of WCRP 8-2 by tendering a written letter within seven days of the injury. The record also does not reveal any written list of providers. Because Respondents failed to provide Claimant with a written list of designated providers, the right to select an ATP passed to her.

10. As found, because the right of selection passed to Claimant, the central issue is whether she demonstrated by her words or conduct that she chose the Chambers Road Concentra location for treatment. The record reveals that Respondents have demonstrated by a preponderance of the evidence that Claimant selected the Concentra medical facility located at Chambers Road and I-70 as her ATP by her words and conduct. Mr. G[Redacted] commented that during his April 14, 2021 conversation with Claimant he mentioned he had previously sustained a Workers' Compensation injury, received treatment at the Concentra located on Chambers Road in Aurora and was satisfied with his care. Mr. G[Redacted] credibly testified that Claimant told him she wanted to treat at the Chambers Road Concentra because it was not far from her house and on her way to work. She specifically stated "I will go there." Although Mr. G[Redacted] reiterated that she could treat at any Concentra location, he understood that Claimant was selecting the Chambers Road Concentra facility. He noted that Claimant requested contact information for the Chambers Road Concentra and sent her the location details in a text message on the afternoon of April 14, 2021. Furthermore, Ms. P[Redacted] told Claimant she could obtain treatment at any Concentra or HealthOne in the region and enumerated several locations, including the Green Valley, Colfax and Chambers Road Concentra facilities. During the conversation, Claimant stated the Chambers Road Concentra was "the one that's close to my house. That's the one I am going to." She detailed that the location was most convenient for her and preferred to treat there. Ms. P[Redacted] remarked that she understood Claimant was selecting the Chambers Road Concentra facility as her authorized provider. The persuasive evidence in the record, as well as the credible testimony of Mr. G[Redacted] and Ms. P[Redacted] reflects that Claimant verbally chose the Chambers Road Concentra location for treatment. Although Claimant maintained that she did not select the facility, she acknowledged she had nowhere else to receive treatment and the facility was close to her house.

11. As found, Claimant's conduct also reveals that she exercised her right of selection and chose the Chambers Road Concentra facility as her ATP. Claimant explained that from April 15, 2021 through April 29, 2021 she visited the Chambers Road Concentra location for a total of three medical appointments and five physical therapy visits. She scheduled her own appointments, provided transportation and voluntarily presented for care. On April 15, 2021 Dr. Cava completed a Physician's Report of Workers' Compensation Injury in which she noted that Claimant suffered a right knee sprain when she slipped on a dust pan at work. Dr. Cava recommended a splint, provided work restrictions and scheduled follow-up treatment. The medical records reveal that Claimant subsequently visited PA-C Pete for medical treatment and DPT Kochevar for physical therapy. Furthermore, on April 22, 2021 Claimant told Insurer's Claims Adjuster

Ms. W[Redacted] that she was treating at Concentra. Ms. W[Redacted] understood that Claimant would continue treating at the facility. Claimant did not express any dissatisfaction with her care, raise any concerns with the designation or request a change of physician.

12. As found, Claimant testified that she was referred for an MRI and her therapist DPT Kochevar would "hold" her treatment until the MRI was completed. She noted that therapy sessions scheduled for the following week were then cancelled. Claimant waited for one month but the MRI was not been approved. She detailed that, because the requested MRI was not approved and she could not receive additional treatment, she sought legal representation and changed physicians to Dr. Yamamoto. Despite Claimant's testimony, the last therapy record from April 29, 2021 reflects that she would continue treating with Concentra. There is no suggestion that treatment would be suspended. The April 29, 2021 medical record specifically provides that Claimant reported a benefit from her treatment based on a reduction in symptoms. Notably, Claimant was a good candidate for therapy intervention and demonstrated a positive prognosis for improvement. Furthermore, Ms. W[Redacted] explained that Respondents never received an MRI referral and did not deny or fail to authorize any medical treatment through Concentra.

13. As found, in the days after the April 13, 2021 work accident Claimant signified through her words and conduct that she had selected Concentra to treat her injuries. The credible testimony of Mr. G[Redacted], Ms. P[Redacted] and Ms. W[Redacted] reflects that Claimant had chosen the Concentra facility on Chambers Road for treatment. Furthermore, Claimant obtained either medical or physical therapy treatment through Concentra on at least eight occasions between April 15, 2021 and April 29, 2021. Accordingly, Claimant selected the Chambers Road Concentra facility as her ATP. *See Murphy-Tafoya v. Safeway, Inc.*, WC 5-153-600 (ICAO, Sept. 1, 2021) (where right of selection passed to the claimant, six months of treatment with personal provider following her work injury demonstrated that the claimant had exercised her right of selection); *Rivas v. Cemex Inc*, WC 4-975-918 (ICAO, Mar. 15, 2016) (through his words and conduct in obtaining treatment from Workwell for five weeks the claimant selected Workwell as his authorized provider); *Pavelko v. Southwest Heating and Cooling*, WC 4-897-489 (ICAO, Sept. 4, 2015) (the claimant exercised his right of selection when he obtained treatment for two years from provider recommended by the employer); *Tidwell v. Spencer Technologies*, WC 4-917- 514 (ICAO, Mar. 2, 2015) (where the employer failed to designate an authorized medical provider and claimant obtained treatment from personal physician Kaiser for his industrial injury, the claimant selected Kaiser as his authorized treating physician through his words or conduct).

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. The right to select an ATP passed to Claimant through Respondents' failure to provide a written list of at least four designated medical providers

2. Claimant selected Concentra as her ATP through her words and conduct.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

ISSUES

- Did Claimant prove a C5-C7 surgery performed by Dr. Rauzzino on April 21, 2021 was causally related to his admitted September 1, 2020 work accident?

FINDINGS OF FACT

1. Claimant suffered admitted injuries to his right elbow and right shoulder on September 1, 2020. He was stepping up onto a concrete pad and his foot slipped, causing him to fall. He landed primarily on his right arm and right elbow. The impact also "jammed" his right shoulder. Claimant testified he fell awkwardly but conceded he noticed no specific trauma to his neck.

2. Claimant promptly reported the injury to his supervisor but did not seek immediate medical attention because he assumed he would recover quickly. However, his symptoms persisted and worsened, and after a few weeks he asked Employer to send him to a doctor.

3. Employer referred Claimant to Concentra. At his initial appointment on October 19, 2020, Claimant reported pain in his right elbow, and intermittent numbness and tingling in the fourth and fifth fingers of his right hand. There is no mention of any neck symptoms or symptoms in the thumb, index, or middle finger. X-rays of the right elbow were negative. Claimant was diagnosed with a right elbow contusion and possible ulnar nerve compression injury He was prescribed an NSAID cream and referred to physical therapy.

4. Claimant testified he first noticed intermittent neck pain "four or five weeks" after the accident. He further testified the neck pain "never was consistent. The issue wasn't so much the pain in my neck. It was a loss of use of my hand. And that's what was extremely concerning was that I was losing the use of my last two fingers. They were going weak."

5. On October 30, 2020, Claimant complained of worsening pain in his right shoulder. An MRI later confirmed a torn rotator cuff.

6. Claimant saw Dr. Christopher Joyce, an upper extremity surgeon, on December 23, 2020. Besides ongoing shoulder and elbow pain, Claimant reported "some new numbness that radiates down to the hand. It primarily is in the ulnar digits, however more recently has been in the medial digits as well." Examination showed decreased sensation in the right fourth and fifth fingers, the ulnar aspect of the hand, and the distal forearm. Sensation was normal in the C5, C6, and C7 distributions. Dr. Joyce diagnosed a rotator cuff tear and cubital tunnel syndrome. He recommended shoulder surgery but

wanted to wait for upper extremity electrodiagnostic testing to determine whether Claimant would need carpal tunnel or cubital tunnel surgery at the same time.

7. Claimant saw Dr. Fredric Zimmerman, a physiatrist, on December 31, 2020. Claimant reported numbness and tingling in the medial aspect of the right forearm and his third, fourth, and fifth fingers. Dr. Zimmerman noted Claimant had suffered a previous work-related neck injury in 2014, for which he ultimately received a 19% cervical spine rating. The review of systems referenced "chronic neck pain, which is unchanged from recent shoulder injury." Claimant exhibited decreased sensation to light touch primarily in the third, fourth, and fifth fingers. Right hand grip strength was mildly weaker than the left. Tinel's test was positive at the elbow. Cervical range of motion was "near normal," and Spurling's test was negative bilaterally. Dr. Zimmerman's diagnoses included right upper extremity paresthesias "consistent with ulnar neuropathy at the elbow," and "previous history of cervical fusion with no exacerbation of neck symptoms from this work-related injury." He ordered upper extremity electrodiagnostic testing.

8. At a January 5, 2021 follow up at Concentra, Claimant reported "[he] has new c/o right upper extremity weakness and increased numbness all fingers right hand. Patient states the new symptoms started after an exam technique by Dr. Zimmerman a little over a week ago." Examination of the right hand showed interosseous weakness, decreased sensation to light touch in all fingers, and reduced grip strength.

9. Claimant followed up with Dr. Zimmerman on January 7, 2021, and relayed "new complaints" of numbness and weakness in the right hand, particularly the thumb, index, and middle finger. Cervical range of motion was full, and Spurling's was normal. Dr. Zimmerman noted increased muscle tone and trigger points in multiple paracervical muscles. He diagnosed right upper extremity paresthesias "of unknown etiology" and ordered a cervical MRI.

10. Dr. McCranie performed the EMG/nerve conduction study on January 22, 2021. After describing the accident, Claimant told Dr. McCranie, "he later noted weakness in his right hand. This began in the 4th and 5th digits with tingling, and a couple weeks ago, he began having difficulty moving his index, middle finger, and thumb." The testing showed median and ulnar nerve abnormalities, most consistent with severe right carpal tunnel syndrome superimposed on diabetic peripheral neuropathy, and distal axonal ulnar neuropathy with reinnervation. There was no electrodiagnostic evidence of cervical radiculopathy.

11. The cervical MRI was completed on January 27, 2021. It showed disc osteophytes causing severe neuroforaminal narrowing and neural impingement from C5-6 though C7-T1, and severe spinal stenosis at C5-6 and C6-7.

12. Claimant returned to Dr. Zimmerman on February 4, 2021 to review the MRI findings. He continued to report decreased sensation and weakness in the right hand, including the thumb, index, and middle fingers. Dr. Zimmerman requested a repeat EMG/nerve conduction study and referred Claimant to Dr. Michael Rauzzino for a surgical

consultation. He also referred Claimant to Dr. Michael Madsen for a “second opinion” at Claimant’s request.

13. Claimant saw Dr. Madsen on February 9, 2021. His chief complaints were described as neck pain radiating to the parascapular region and right hand weakness. The physical examination was largely benign, except some right finger weakness. Dr. Madsen reviewed the MRI images and noted severe spinal canal stenosis at C4-6 secondary to large disc osteophyte complexes superimposed on a congenitally narrow canal. He thought Claimant was a good candidate for a C5-C7 decompression and fusion.

14. Claimant was evaluated by Dr. Rauzzino on February 16, 2021. Dr. Rauzzino documented:

> He fell, he landed on his right elbow and had tingling in the least 2 digits of his right hand. He had elbow soreness. He also had neck pain. The tingling began to improve in his right hand, but the hand itself continued to be weak and he noted worsening paresthesias after his fall in the first 3 digits of his right hand.

15. Dr. Rauzzino reviewed the MRI and noted disc herniations[1] at C5-C6 and C6-C7 causing severe stenosis. Claimant very concerned about the “constant and progressive” loss of use of his right hand. Dr. Rauzzino assessed “significant cervical radiculopathy with numbness and weakness in the distribution of C5-C6 and C6-C7 nerve roots.” He opined Claimant’s initial symptoms in the fourth and fifth fingers “was more of a stinger with the ulnar nerve in the ulnar tunnel.” He thought Claimant’s then-current symptoms were more likely related to cervical radiculopathy as opposed to “mild” carpal tunnel syndrome, although he acknowledged the possibility of a “double crush” syndrome. He recommended a C5-C7 decompression and fusion. Regarding causation, Dr. Rauzzino opined “he was clearly asymptomatic before the fall, not receiving treatment in any way for his neck or for his hand, and this fall clearly is the root cause to his need for surgery.”

16. Dr. John Aschberger performed repeat electrodiagnostic testing on March 2, 2021. It showed severe right carpal tunnel syndrome and ulnar neuropathy at the right elbow with significant slowing at the cross-elbow segment. There were also findings suggesting C6 radiculopathy, but no definitive denervation. Dr. Aschberger thought surgery was warranted given the severity of findings in the median and ulnar nerves and the progressive worsening compared with Dr. McCranie’s previous testing.

17. On March 8, 2021, Dr. Joyce responded to an email from Claimant about the timing of the multiple recommended surgeries. He told Claimant he could do the elbow procedure at the same time as the rotator cuff repair, but thought adding a carpal tunnel release would be “too much surgery for one arm into one sitting.” His preference was to perform the carpal tunnel and cubital tunnel surgeries of the same time, and do the shoulder surgery later.

[1] This finding is puzzling because the radiologist and Dr. Madsen saw osteophytes but no herniations.

18. Respondents had the request reviewed by Dr. Jonathan Sollender on March 11, 2021. Dr. Sollender assessed idiopathic carpal tunnel syndrome and posttraumatic cubital tunnel syndrome. He also diagnosed “superimposed diabetic neuropathy and cervical spine degenerative disc disease resulting in C6 radiculopathy on the right side.” Dr. Sollender concluded the cubital tunnel surgery was reasonably needed and related to the work accident but the right carpal tunnel syndrome was not casually related.

19. Dr. Neil Brown, a neurosurgeon, performed a record review for Respondents regarding the C5-7 ACDF recommended by Dr. Rauzzino. Dr. Brown agreed the surgery was reasonably necessary, but concluded it was not related to the September 1, 2020 work accident. Dr. Brown emphasized “the absence of any initial documentation of neck pain for several months (essentially five months) . . . .” He also noted Claimant’s initial upper extremity symptoms were confined to the fourth and fifth fingers, consistent with an ulnar injury from striking his right elbow in the fall. Dr. Brown was impressed by the severe multilevel degenerative changes in the cervical spine, which predated the work accident. He opined Claimant would have developed symptoms consistent with a cervical radiculopathy relatively quickly had the accident aggravated the pre-existing condition.

20. Dr. Rauzzino performed the surgery on April 21, 2021, under Claimant’s health insurance.

21. Dr. Brown authored an addendum report after reviewing medical records pertaining to Claimant’s 2014 work accident. The records included a November 2014 cervical CT scan that showed significant degenerative pathology very similar to that shown on the January 2021 MRI. The additional records solidified Dr. Brown’s opinion that the proposed cervical fusion but is not causally related to the September 2020 work accident. He reiterated his opinion that the delay between the accident and the initial onset of radicular symptoms “would not be consistent with an aggravation of pre-existing disorder.” He concluded, “Any sudden movement of the cervical spine in a patient with significant cervical spondylosis can result in a potential aggravation of their pre-existing condition, but . . . there is no plausible rationale for the delay in symptomatology and the cervical spine of approximately five months to substantiate a temporal causal relationship.”

22. Dr. Brown testified at hearing consistent with his reports.

23. Dr. Brown’s analysis and conclusions regarding causation are credible and persuasive.

24. Claimant failed to prove the cervical surgery performed by Dr. Rauzzino was causally related to his September 1, 2020 work accident.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Even if the respondents admit liability and pay for some treatment, they retain the right to dispute the reasonable necessity or relatedness of any other treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

The existence of a pre-existing condition does not preclude a claim for medical benefits if an industrial injury aggravates, accelerates, or combines with the pre-existing condition to produce the need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). A claimant need not prove an injury caused any objective structural change to their underlying anatomy to prove an aggravation. A purely symptomatic aggravation will suffice for an award of medical benefits if the symptoms were triggered by work activities and caused the claimant to need treatment he would not otherwise have required. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Cambria v. Flatiron Construction*, W.C. No. 5-066-531-002 (May 7, 2019). But the mere fact that a claimant experiences symptoms after a work accident does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). In evaluating whether a claimant suffered a compensable aggravation, the ALJ must determine if the need for treatment was the proximate result of the claimant's work or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant failed to prove the C5-7 surgery performed by Dr. Rauzzino was causally related to the September 1, 2020 work accident. There is no persuasive evidence the work accident caused any direct trauma to Claimant's neck. The MRI shows extensive pre-existing, multilevel degenerative changes in the cervical spine, with no persuasive indication of any acute injury. The accident did not cause or demonstrably change the underlying pathology. More important, Claimant experienced no upper extremity symptoms consistent with cervical radiculopathy until mid-to-late December, and reported no neck pain until February 2021. As Dr. Brown persuasively explained, the lengthy delay between the accident and the onset of radicular symptoms convincingly points away from a causal relationship. Dr. Rauzzino's brief and rather conclusory opinion about causation is premised in large part on the mistaken assumption that Claimant experienced neck pain immediately or shortly after the accident. None of Claimant's other treating physicians provided any specific discussion linking the cervical issues to the work accident. Although a claimant does not have to present expert opinion evidence to support his claim, the lack of such evidence is a legitimate factor to consider. Although Claimant's testimony was generally credible and appeared sincere, this case does not turn on Claimant's credibility; it hinges on a medical causation issue. The preponderance of persuasive evidence shows the need for surgery was caused by the natural progression of Claimant's pre-existing condition without contribution from the work accident.

ORDER

It is therefore ordered that:

1. Claimant’s request for medical benefits relating to the C5-7 surgery performed by Dr. Rauzzino is denied and dismissed.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with this order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail by sending it to the above address for the **Denver Office of Administrative Courts** within twenty (20) days after mailing or service of the ALJ’s order. In the alternative, you may file your Petition to Review electronically by email to the following email address: oac-ptr@state.co.us. If the Petition to Review is timely served via email, it is deemed filed in Denver pursuant to OACRP 26(A) and § 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not also be mailed to the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: October 8, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the lumbar surgery performed by Dr. Danylchuk on 8/23/2021 was reasonable, necessary, and related to the otherwise admitted work injury of 12/6/2019?

II. If said surgery is so found to be reasonable, necessary, and related, are Respondents responsible for Temporary Total Disability payments from 8/23/2021 and ongoing?

STIPULATIONS

The parties agreed that Claimant's Answers to Interrogatories #8 and #12 would be admissible without foundation. As a result of said Stipulation, Respondents would not continue to seek Claimant's attendance at this hearing.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Admitted Work Injury, and Subsequent Treatment

1. Claimant is a 51-year-old correctional officer. He sustained an admitted injury to his thoracic spine while bending over to pat down inmates on December 6, 2019. Claimant did not seek immediate medical treatment for the thoracic injury, although it was later admitted by Respondents.

2. Claimant now alleges an injury also occurred to his lumbar spine, either as a result of the same incident, or occurring during a separate incident during the same day, but this time resulted in ongoing bilateral radicular leg symptoms.

3. On December 3, 2019 (three days prior to the date of this alleged injury), Claimant visited Southern Colorado Clinic, P.C., for an "acute visit" with complaints involving bilateral leg pain radiating through the upper thighs down through the lower leg, left worse than right. (Ex. D, pp. 55-56). The patient history indicated that *"the symptoms began 5 days ago."* There was a diagnosis of sciatica on the left. *Id* at 57. It was noted that Claimant had a history of diabetes. *Id* at 56.

4. Claimant reported his (thoracic) injury to Employer on December 9, 2019. He saw Brendon Madrid, N.P., at CCOM in Pueblo, Colorado. (Ex. F, p.114). The report states that Claimant suffered a low back strain while patting down inmates, and that his job requires a lot of bending and standing. Claimant reported tingling to his

posterior thighs, bilaterally. Claimant's BMI was 41.1, with a height of 5' 5" and weight of 247 pounds, placing him in the "obese" category. *Id* at 115*.* Claimant reported no other injuries at this time.

5. X-rays of the lumbar spine showed no acute fracture, with moderate degenerative changes at the L1 through L4 level and mild degenerative changes at L4-5. (Ex. A, p. 11. There were also degenerative changes noted at the left SI joint. *Id*.

6. [According to the records review section of the IME report by Dr. Michael Rauzzino, MD, (Ex. B) Claimant saw Daniel Olson, M.D., at CCOM, on December 18, 2019. However, the ALJ was not provided copies of many of Dr. Olson's reports]. According to this IME report, "[Claimant] denied back pain previous to the incident." *Id* at 11. Claimant reported tingling into his legs and perineal area. X-rays showed degenerative changes in the left sacroiliac region with disc-space narrowing in the lumbar region and facet arthritis, particularly at L5-S1. Claimant was referred for physical therapy for a muscle strain. Id.

7. According to the IME report, *supra*, on January 7, 2020, Claimant returned to Dr. Olson, with continuing low back pain. *Id* at 12. Claimant reported little progress with therapy and noted ongoing numbness and tingling in both legs and a "shuffling" gait.

8. On January 21, 2020, at Dr. Olson's behest, Claimant underwent an MRI of the lumbar spine. (Ex. H). The following was indicated: L2-3 disc bulge with herniation and canal stenosis and foraminal narrowing bilaterally; L3-4 disc bulge with herniation and canal stenosis and bilateral foraminal narrowing; L4-5 disc bulge without stenosis but significant narrowing; L1-2 disc bulge with canal stenosis; and L5-S1 disc bulge with facet arthropathy, worse on right, without stenosis.

9. According, once again, only to the IME records review, Claimant returned to CCOM on January 23, 2020 for review of the MRI. He was then referred to Dwight Leggett, M.D., for steroid injections. (Ex. B, p. 13).

10. Then, on January 26, 2020, Claimant appeared at the Parkview Medical Center ER for complaints of back pain. (Ex. G). Claimant stated he was at work on December 6, 2019, when he felt something "pop" in his back, but he was not involved in any particular altercation or traumatic event. *Id* at 120. "He denies previous history of back problems."…. "PT reports left lower back pain and groin. States that pain sometimes radiates down both legs. Denies urinary complaints." *Id.*

11. [Respondents allege, via their IME records review only, that a number of visits occurred since the 1/26/2020 Parkview visit, *supra.* However, no such actual medical records were submitted into the record for the ALJ to review; only the IME's characterization of what they allegedly said, and without a cogent attribution. The ALJ will not indulge this practice further, and will not rely solely upon second-hand interpretations of medical records, which apparently exist, but were not submitted for review].

12. The first actual medical report submitted from orthopedist Kenneth Danylchuk, MD with Maple Leaf Orthopedics is dated 2/28/2020. (Ex. E, p. 65). By this point, a T7, T8, T9 laminectomy had already occurred two weeks prior. There was a large herniated disc "at that level" (?). *Id.* Claimant's symptoms had not appreciably improved, but his gait was better. A second surgery was a possibility, and a new MRI was ordered, with follow-up in two weeks.

13. On March 12, 2020, Dr. Danylchuk noted that Claimant was doing better and ordered a new MRI to assess recovery. Claimant was still having some leg pain that Dr. Danylchuk opined could certainly be due to the degenerative changes seen on MRI." *Id* at 67.

14. A thoracic MRI from March 27, 2020 showed laminectomy at T7-9 with edema and focal disc herniation at T6-7 without stenosis. (Ex. H, pp. 178-179). A disc bulge was present at the thoracolumbar junction. *Id*.

15. On April 2, 2020, Dr. Danylchuk followed up with Claimant, stating, in pertinent part:

> [Claimant] had an injury related to bending over a padding (sic) a prisoner down when he felt a sharp pain and pop in his back. According to Michael that heralded the onset of his current complaints……We did review the lumbar spine MRI that was done shortly before the admission [to St. Mary Corwin]. At that time I do not think there is sufficient stenosis to cause his symptoms…..Overall he's done well. He informs me today that his Workman's Compensation doctor does not think that *the area that we operated on was related to his Workmen's Compensation injury*, also he informs me that his attorney my also had dropped as Dr. Olson stated *that this is not the injury that was documented to be work related.* I certainly disagree. Patients are allowed to have more than one diagnosis. I think in this case. He clearly had 2 significant diagnosis, 1. severe thoracic spinal stenosis and 1. (sic) *Degenerative changes* of his lower lumbar spine associated with back and leg pain and numbness….Michael is confused by this. (Ex. E, p. 70)(emphasis added).

16. April 21, 2020, Dr. Danylchuk noted he believed the T8 thoracic injury was consistent with the mechanism of injury and that "the fact that he is significantly improved, however, not back to normal again gives evidence that that was the pain generator." (Ex. E, p. 72). On May 7, 2020, Dr. Danylchuk indicated he believe the initial injury was from bending over when Claimant "felt a sharp pop." *Id* at 73.

17. On June 4, 2020, Dr. Danylchuk recorded ongoing low back and bilateral leg symptoms. *Id*. Dr. Danylchuk stated "I feel strongly that he [had] no previous emergency room visits [for] being treated for low back pain . . . degenerative stenotic complaints. However, the presenting complaints cannot be explained by those

features, thoracic MRI revealed what I think was the symptoms generator in this patient." (Ex. E, p. 76).

Claimant Answers Interrogatories (sort of)

18. By counsel, *but never sworn to, nor notarized,* Claimant submitted Answers to Interrogatories to Respondents on May 22, 2020. (Ex. N). In pertinent part, Interrogatory #8 asked:

> …Specifically, identify any previous injury (including motor vehicle accidents, regardless of whether treatment was sought), **condition, or symptom(s)** experienced in the *lower back* ***or any other region of the body*** you claim to have been injured or otherwise affected by the alleged December 6, 2019 injury.
> ANSWER: ….the Claimant had no prior back injury, condition or symptom experienced to the low back prior to the work comp-related injury referenced in this claim. (emphasis added).

19. Interrogatory #12 asked, in pertinent part:

> ….Specifically, state whether you have treated at any time [in past 10 years] for *symptoms* involving the *low back* **and/or** *complaints of pain or neurological symptoms into the bilateral extremities*, in any state and at any time. For any treatment provided, please list the name and contact information of the provider through whom you were treated.
> ANSWER: Physician list has been previously provided. None these listed physicians had treated the Claimant for any lower back pain ***or complaints of pain or neurological symptoms*** into the bilateral lower extremities prior to the date of injury pertaining to this claim. (emphasis added).

While deflecting the significance of such omission, Claimant's counsel does not now dispute that such omission occurred, and that Claimant's 12/3/2019 treatment at Southern Colorado Clinic was not timely disclosed.

IME with Dr. Messenbaugh

20. Claimant submitted to a Respondents' IME with Robert Messenbaugh, M.D., orthopedic spine specialist, on June 11, 2020. At the time of the IME, Dr. Messenbaugh was not informed of the preexisting bilateral leg complaints or sciatica. This was not documented or considered in his report. *Claimant denied any prior back issues, evaluations, or treatments before December 6.* (Ex. C, p. 46). Claimant stated that his injury occurred at approximately 3:40 p.m., when he was leaning forward and twisting, patting down an offender "*when he felt a sudden pop* in his low back and felt pain in his upper and lower back regions with pain in his bilateral lower extremities." *Id* at 35.

21. Dr. Messenbaugh ultimately opined that the thoracic herniation and surgical procedure were related to the December 6, 2019 injury. *Id* at 50. He opined that, while Claimant strained/sprained his lumbar spine, “the lumbar MRI findings were insufficient to be the cause of persistent symptoms, specifically bilateral lower extremity burning and numbness.” *Id*. He further opined that a great deal of Claimant’s symptoms were attributable to the thoracic level; the lower extremity issues were attributable to degenerative pathology in the lumbar spine. *Id* at 51.

22. Dr. Messenbaugh stated that it was unclear why there were lingering symptoms, since there was no clear documentation identifying remaining pain generators. He recommended additional evaluation to determine the pain generators in the context of the thoracic versus lumbar pathology. Dr. Messenbaugh opined that Claimant was not a candidate for further surgery unless the precise cause of symptoms was clearly defined and all conservative measures exhausted. *Id*.

Treatment with Dr. Danylchuk / Maple Leaf Continues

23. On June 25, 2020, Dr. Danylchuk reviewed additional imaging which indicated degenerative disc disease in the lumbar spine, typical of Scheuermann’s disease. (Ex. E, p. 77). It was noted that ESIs had not helped in the long term. *Id*.

24. Claimant underwent facet injections of the lumbar spine on July 7, 2020 with some improvement. (Ex. E, pp. 79-80). On August 20, 2020, Dr. Danylchuk opined that Claimant could return to work on modified duty. *Id* at 82.

25. Respondents filed a General Admission of Liability (GAL) on August 24, 2020. (Ex. A).

26. On September 15, 2020, Dr. Danylchuk referred Claimant to Andrew Roberts, M.D. (also with Maple Leaf Orthopedics), for additional lumbar ESIs. (Ex. E, p. 86). It was noted that the prior ESIs with Dr. Bernauer did not work, nor did facet injections. *Id.* Lumbar ESIs at L4-5 were performed on October 1, 2020 with some improvement. Medial branch blocks were performed on November 3, 2020 and again on November 24, 2020 at L2-5. *Id* at 93-99.

27. On January 21, 2021, Dr. Danylchuk indicated that he did not think that Claimant’s presentation to the emergency room with severe weakness, peculiar gait, and bowl and bladder dysfunction could be easily attributable to the MRI of the low back and were instead due to the thoracic herniation. (Ex. E, p. 100. Dr. Danylchuk noted that Claimant had been seeking a “more definitive procedure” for the lumbar spine and Dr. Danylchuk indicated it was prudent to continue conservative treatment before any surgery. *Id*.

28. In a *Findings of Fact and Conclusions of Law* following a contested hearing in companion case WC 5-128-304-002, Dr. Danylchuk was subsequently designated the

Authorized Treating Physician by ALJ Edie in an Order dated January 29, 2021. At that time, this ALJ expressed concern that Dr. Danylchuk was not Level II accredited, should an impairment rating need to be assigned. The ALJ takes administrative notice of those proceedings.

29. On January 28, 2021, Claimant asked Dr. Roberts for something more definitive for his back and reported medial branch blocks had made him worse. (Ex. E, p. 102). Claimant now noted good results from the L4-5 ESI and stated his pain was below the L4 level. Dr. Roberts noted there was *no surgical pathology* at L4-5 or L5-S1. *Id*. On February 11, 2021, Claimant underwent L4-5 ESIs. *Id*.

30. Claimant returned to Dr. Danylchuk on February 16, 2021, who opined that the pain generators were related to L1-L4 but that there was also significant degeneration of the facet joints, specifically at the lumbosacral junction, and advised a second opinion. *Id* at 107. On April 15, 2021, Claimant requested additional lumbar ESIs from Dr. Danylchuk. *Id* at 109.

31. Claimant underwent multilevel lumbar laminectomy and fusion surgery with Dr. Danylchuk (L3-S1 levels) on or around August 23, 2021. [The reasonableness, necessity, and relatedness of this procedure now being at issue for this hearing]. Claimant has not worked since surgery.

IME by Dr. Rauzzino

32. On March 29, 2021, Claimant underwent an IME with neurosurgical spine specialist Michael Rauzzino, MD. Claimant reported he was injured on December 6, 2019 while patting down a prisoner and "felt a pop in his back and noted back and leg symptoms, although his leg symptoms did not develop for two or three days." (Ex. B, p. 24). Dr. Rauzzino noted that Claimant had seen his PCP three days before for sciatica, at which time he was prescribed medication*. Claimant purported to have no recollection of this at all. Id* at 24-25. Dr. Rauzzino noted there was a clear discrepancy between what was reported and what was in the records. Claimant stated he desired additional surgery. Claimant also told Dr. Rauzzino he never had trouble with his back prior to December 6, 2019.

33. Dr. Rauzzino opined that his main concerns were lack of appropriate mechanism of injury and lack of evidence of acute lumbar abnormality. *Id* at 31. Dr. Rauzzino opined that the lumbar MRI findings were not causally related to the work injury; further, no treatment for the lumbar condition was reasonably necessary or related. *Id* at 30. Dr. Rauzzino opined that there was not an appropriate pain generator identified which would be amenable to surgical intervention.

34. Dr. Rauzzino opined that the preexisting December 3, 2019 record reflected the onset of the same or similar symptoms which could be representative of a thoracic myelopathy as well as a lumbar disease. *Id*. He found it relevant that this was not disclosed to the treating providers, since a better causation analysis could have been

performed. *Id*. Dr. Rauzzino opined that he did not believe the mechanism was consistent with a thoracic herniation either. He noted that there was a lack of acute injury to the lumbar spine seen on the MRI studies, and that the eight weeks of therapy provided would have been sufficient to treat any muscle strain injury. *Id*.

35. Dr. Rauzzino further opined that the simple act of patting down a prisoner was not sufficient to have caused any acute structural injury to the lumbar spine, and there was no such injury seen on the imaging studies. *Id* at 31. Dr. Rauzzino opined that the mechanism was likewise insufficient to have aggravated or accelerated the preexisting degenerative condition or injury to have caused the need for treatment. He also indicated that the preexisting paresthesisas could have been evidence of a thoracic spinal cord compression. Dr. Rauzzino opined that if there were any significant acute injury that occurred in December 2019, one would have expected the same severity of the symptoms that Claimant later reported to the emergency room in February of 2020. *Id*.

Deposition of Dr. Rauzzino

36. Dr. Rauzzino testified as a board-certified neurosurgeon, specialist in spinal disorders, and Level II accredited physician. (Rauzzino Transcript) Tr. at 5. He reviewed imaging (including actual films) from Claimant's lumbar and thoracic spine, including x-rays and MRI studies. Tr. at 6. Dr. Rauzzino performed a physical examination and noted that Claimant presented with a cane. *Id*. Dr. Rauzzino testified that the ESIs which Claimant had received were ineffective, as they were not diagnostic to localize the source of pain and did not result if functional improvement. Tr. at 8.

37. Dr. Rauzzino testified regarding causation, summarized as follows: The mechanism of injury of bending to pat down inmates would not have exerted any specific axial load on the spine and the spine would not have been stressed beyond normal capacity based on the activity described. Tr. at 9-10. Repetitive motion of doing pat downs also would not be expected to stress the spine or cause permanent injury, especially a disc herniation or facet injury. Tr. at 10. X-rays from December 9, 2019 do not show acute injury. Tr. at 12. The lumbar MRI from January 21, 2020 showed no acute herniated disc or instability, only degenerative changes at multiple levels. *Id*. In comparison with the thoracic spine, where there was an acute process, there was no acute process in the lumbar spine. *Id*. The pain generator identified by Dr. Danylchuk from L1 to L4 level is not a pain generator, but simply a complaint of pain. *Id*. Dr. Rauzzino clarified that a pain generator is a specific structure or location that generates pain. *Id*. The degenerative changes may be attributable to pain, but there is no acute pain generator in connection with the mechanism of injury. Tr. at 13.

38. Dr. Rauzzino testified that as a practicing neurosurgeon and Level II physician, it is unlikely that two separate spinal processes would result from the single event provided by Claimant. Tr. at 13-14. There must be a force to produce an injury, and, like a stick, when a force is applied with enough intensity, this may break the stick but it only breaks at the weakest point. Tr. at 14. Dr. Danylchuk indicated that point was the

thoracic spine, where an acute injury existed, but that it was not medically reasonable for a separate lumbar injury to have occurred. *Id*.

39. Dr. Rauzzino testified that the most evident pain generator for ongoing symptoms would be the thoracic injury. Tr. at 15. Dr. Rauzzino posited that Claimant's obese body habitus puts undue stress upon the spine and causes degeneration, which is not an acute issue. Tr. at 16-17. Dr. Rauzzino opined that Claimant's ongoing symptomatology is not work related, instead they were much more likely to be explained by Claimant's degenerative changes occurring over time. Tr. at 57.

40. Dr. Rauzzino opined that the December 3, 2019 report indicated what he believed the cause of the symptoms were, not the work injury. Tr. at 20. Sciatica is a diagnosis of nerve root impingement of the nerves that makes up the sciatic nerve in the lumbar spine and involves the low back. Tr. at 54. The note involved a neurologic evaluation and the indication that the visit was an "acute visit" meant that something happened that changed the normal course of symptoms. Tr. at 54-55. The symptoms of bilateral leg pain were consistent with Claimant's presentation to his providers after the work injury. Tr. at 55. Dr. Rauzzino testified that Claimant was not an accurate medical historian. Tr. at 20. It is also relevant that Claimant claimed he did not develop symptoms immediately after the work injury, which Dr. Rauzzino testified would be expected with an acute event. Tr. at 56.

41. Dr. Rauzzino opined that the surveillance was relevant because it demonstrated Claimant simply carrying his cane but not actively using it. The video also demonstrated Claimant bending from the waist down in a fluid range of motion with no pain behavior as well as other movements without pain. Tr.at 21. These movements were not consistent with the antalgic gait presented during examination with Dr. Rauzzino, which was during the same period of time. Tr. at 22.

Deposition of Dr. Danylchuk

42. Dr. Danylchuk was deposed on August 17, 2021. He testified as an orthopedic surgeon, but is not Level II accredited. (Danylchuk Transcript) Tr. at 5. He testified a lumbar laminectomy and fusion at L3-S1 levels was scheduled for the near future (August 2021) but was unaware of the date. Tr. at 6. There was no request for prior authorization through the Workers Compensation process. *Id*.

43. Dr. Danylchuk testified that Claimant was at MMI for the thoracic spine condition. Tr. at 8-9. The thoracic injury was six levels away from the lumbar spine, at least three to four inches. Tr. at 13. Dr. Danylchuk maintained his opinion that there could be two separate spinal processes from the same injury. Dr. Danylchuk stated that he did not get into the specifics of the mechanism of injury with Claimant and "exactly what happened, God only knows." Tr. at 15. Dr. Danylchuk testified that he was unsure of the injury(ies) were the result of a single incident but probably the same mechanism, which he attributed to repetitive bending. Tr. at 16. He testified that "I think the way to explain it is, on the same day, if he's patting down inmates, it's *conceivable* that that mechanism can cause injury in two parts of the spine, maybe not exactly the same

pat-down movement. But that mechanism of injury for somebody who does a lot of that during the date is *compatible with* two injuries and two different parts of the spine." Tr. at 48.(emphasis added). He further indicated that injuring a spine in more than one place during one incident is "less likely", unless there was high velocity involved, such as a motor vehicle or skiing accident. Tr. at 14.

44. Dr. Danylchuk testified that sciatica generally involves pain originating from the low back, and that a diagnosis of sciatica generally evidences back pain and neurological pain into the legs. Tr. at 21-22. Dr. Danylchuk testified that Claimant's representation that he had no prior treatment for neurological symptoms into the bilateral lower extremities prior to the date of injury was inaccurate because Claimant was prescribed Prednisone and anti-inflammatories for his complaints on December 3, 2019. Tr. at 28-29. Dr. Danylchuk opined the pain generators were a combination of degenerative disc and facet joint disease, and neuroforaminal stenosis. Tr. at 35.

Hearing Testimony of Jennifer A[Redacted]

45. Ms. A[Redacted] testified as a witness for the Employer and human resources manager at the time Mr. Espinoza was injured. (Hearing Transcript) Tr. at 30. Ms. A[Redacted] testified that there are cameras throughout the Crowley County facility, including employee areas. Tr. at 31. These take video footage and can capture screenshots. Id. Ms. A[Redacted] observed Claimant, both personally and by camera. Tr. at 33-34; RHE K. Ms. A[Redacted] observed Claimant making intermittent use of his cane, not always utilizing the device to help him walk. Tr. at 33. Ms. A[Redacted] captured camera screenshots of intermittent use. Tr. at 34. Ms. A[Redacted] testified that it did not appear that Claimant depended on the cane to move around.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. The ALJ finds that each medical expert offering opinions has done so in good faith, and with a sincere effort to provide the ALJ valuable expert information. It is also noted that as a treating physician, Dr. Danylchuk recommended - and has now performed - treatment (with reservations as noted) that he sincerely believes might help Claimant address his symptoms. As such, the ALJ will determine these issues on the basis of *persuasiveness*, and not *credibility* per se.

D. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

A Word Regarding the IME's Summaries from Medical Reports

In this case, Respondents have made extensive citations to Dr. Rauzzino's IME report, which, in turn, purports to quote from medical reports by various treating providers of Claimant. The significant problem here is that many such medical records have not been received into evidence by the ALJ. This is concerning for two reasons: 1) The ALJ wants to see these primary sources for himself, to make certain such quotations are accurate, complete, and in context, and 2) Such medical records apparently exist, since Dr. Rauzzino references them, although the far better practice would have been for *him* to also cite the date and page number from each physician's report. This does not represent best practices. The ALJ, without corroboration, is reluctant to rely upon the IME report *standing alone* in support of a medical proposition of what some other physician allegedly said or did. There is no compelling reason not to provide and cite the primary sources.

A Word Regarding Claimant's Answers to Interrogatories

In reviewing his own 1/29/2021 Order in companion case WC 5-128-304-002 (Finding of Fact #28, *supra*), the ALJ notes that he found Claimant to have been credible in that case. There is nothing which requires such a finding of credibility to carry over into a subsequent case. In this instance, the ALJ emphatically does not. Claimant counsel's rationalizations aside, it strains credulity to think that Claimant went into the Southern Colorado Clinic on December 3, 2019, complaining of sciatica symptoms, injured his lumbar spine three days later, and then had no recall of this event to any medical provider or party to this case. Either he is a totally unreliable historian, both to the courts and his medical providers, or he did not want the participants in this case to have highly pertinent information.

In support of the latter, the ALJ notes that, for reasons unclear, Claimant never signed and attested his Interrogatory answers. For over a year. A review of the file and hearing transcript indicates that efforts to secure his simple cooperation in signing them as required were rebuffed. There is evidence strongly suggestive of Claimant dodging service of process. As it turned out, Respondents appeared satisfied with a stipulation on the authenticity of the Interrogatory answers; had Respondents wished Claimant to appear at hearing and be subject to cross-examination, the ALJ would have insisted upon it, and used every means at his disposal to assure it. A Claimant declining, of his own volition, to appear and testify in a case of this nature, while not required, is highly unusual, to say the least.

The purpose of discovery in every case is to assure the orderly and timely exchange of pertinent information. This requires dealing in good faith, even when it hurts. Claimant's purported distinction between sciatic symptoms and back symptoms does not get him a free pass for his failure to disclose. A cursory reading of Questions 8 and 12 meant *all symptoms*, not just his back. And yes, everyone in the Comp arena knows that lumbar problems and sciatica symptoms are inextricably linked. *When in doubt, disclose*. *The ALJ strongly disapproves of Claimant's inexcusable sins of omission, and subsequent stonewalling, and will not reward such conduct.*

Medical Benefits, Reasonable and Necessary, Generally

E. Claimant bears the burden of establishing entitlement to any specific medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

Reasonable and Necessary, as Applied

F. As an aside, a review of the surveillance video, still shots, and narrative report of Claimant's comings and goings in early 2021 reveals little that could greatly assist either party to this action. Sometimes Claimant used a cane, sometimes he didn't. Sometimes he appeared to walk with some sort of shuffle or altered gait, sometimes he appeared to manage OK. Still at other times, no significant activity could be observed at all. It can be inferred that Claimant was not likely aware that he was being observed; thus his actions were not faked for effect. People with certain maladies have good days and bad ones. Often they are partially, but not wholly dependent upon a cane. Such is the case here. It likely means Claimant has some occasional need for a cane, but the observed malady cannot be ascertained. More significantly, there is no way to infer from this visual evidence what *caused* any altered gait.

G. In this case, the ALJ is comfortable with Dr. Danylchuk's assessment that the surgery performed on 8/213/2021 was reasonable and necessary to help Claimant cure his then-existing lumbar condition. He suffered from degenerative lumbar conditions, wrought by weight issues and preexisting diabetes. He had some level of altered gait. He walked with a shuffle. Outside of Claimant's unreliability as a medical historian, there was sufficient extrinsic evidence that the surgery could be justified.

Medical Benefits, Related to Work Injury, Generally

H. Further, however, a Claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those that flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), simply because a Claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted, "[C]orrelation is not causation." Whether Claimant met the burden of proof to establish the requisite causal connection between the industrial injury and the need for medical treatment is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Related to Work Injury, as Applied

I. Regardless of the wisdom of proceeding with this rather complex procedure, Claimant has not shown that such procedure (even if it might later be shown to have helped considerably) is *causally related* to his alleged work injury. To his credit, Dr. Danylchuk did not oversell the relatedness issue. He is not Level II accredited, nor need he be to treat his patients effectively. At the end of the day, his position is that such a scenario posed by Claimant (two separate and discreet injuries to his spine-one thoracic, one lumbar- occurring during the course of one day of pat downs was *possible*, and *consistent* with the observed symptoms. Such possibilities do not constitute *medically probable.* In his experience, multiple fractures to the spine occurring in one day are more often associated with high velocity incidents. This makes sense.

J. Claimant's theory that he blew out his thoracic, then his lumbar discs (or vice versa) does not. His presentations were not consistent with what he now proposes. Dr. Danylchuk was himself skeptical along the way. He later became merely equivocal. If Claimant heard this alleged "pop", followed by pain, why did it take three days to report this to anyone? So he could keep working that day, and blow out another section of his spine? Why did his symptoms improve after Dr. Danylchuk addressed his thoracic complaints via surgery? Why does the imaging not support an acute lumbar finding? In the end, and leaving aside Claimant's serious credibility issues, Dr. Rauzzino makes a far more compelling case on the causation/relatedness component. Likewise for Dr. Messenbaugh. Claimant was given the benefit of the doubt on the 'pop' in his thoracic spine. He got a surgery, and will get a corresponding rating for that. That is all water under the bridge.

K. Nothing in the record, however, supports two 'pops' occurring the same day. What is supported is that Claimant voiced similar concerns to the Southern Colorado Clinic just three days before his alleged work incident - then promptly forgot about it every time he was asked by multiple medical providers – and by opposing counsel. Claimant has not met his burden of proof here. In fact, the ALJ finds that it is far more likely than not that Claimant did not injure his lumbar spine at work – on this or any other day. Instead, his lumbar symptoms, such as they are, are due to a constellation of health issues, not the least of which are degenerative conditions in his lumbar spine, wrought by diabetes and a poor BMI. Such degenerative condition was not rendered symptomatic by any work activities on any date.

L. Taking all the evidence into account, Claimant has not shown, by a preponderance of the evidence, that the lumbar condition he now complains of (whatever that might be) was proximately caused by his alleged work incident of 12/6/2019. The surgery performed by Dr. Danylchuk on 8/23/2021 was not related to Claimant's work injury.

Temporary Disability Payments

M. Since any temporary disability Claimant might have suffered as a result of the 8/23/2021 is not due to a work injury, Claimant's claim for Temporary Total Disability payments is denied and dismissed.

ORDER

It is therefore Ordered that:

1. Claimant’s request for reimbursement for Dr. Danylchuk’s 8/23/2021 lumbar surgery is denied and dismissed.

2. Claimant’s request for Temporary Total Disability payments is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, in order to best assure prompt processing of your Petition, it is **highly recommended** that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: November 1, 2021

Colorado Springs, Colorado 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-163-728-001

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she sustained compensable injuries to her lower back, right hip and right leg on February 4, 2021.

II. Whether Claimant established, by a preponderance of the evidence, that she is entitled to reasonable, necessary and related medical treatment to cure and relieve her of the effects of her alleged injuries.

III. Whether Claimant established, by a preponderance of the evidence, that she is entitled to temporary total disability (TTD) benefits beginning February 5, 2021 and ongoing.

IV. Claimant's Average Weekly Wage (AWW).

At the conclusion of Claimant's testimony, Respondents withdrew the issue of offsets as Claimant testified that she has not received any benefits or payments from any source, including unemployment benefits that would give rise to any offset under the Colorado Workers' Compensation Act.

PROCEDURAL MATTERS/STIPULATIONS

At the outset of hearing, Respondents raised the following procedural matters and the parties reached the following stipulations:

- Respondents reserved, without objection, the Colorado Workers' Compensation Medial Benefit Fee Schedule for all medical treatment (benefits) awarded, ordered and/or paid.

- The parties stipulated that should the ALJ find the claim compensable, the medical treatment provided to Claimant on or after February 19, 2021 by Concentra Medical Centers and providers to whom they referred Claimant for treatment would be deemed reasonable, necessary, and causally related to Claimant's alleged February 4, 2021 injuries. The parties also stipulated that if Claimant's injuries were found compensable, her evaluation and treatment in the emergency room at St. Francis Medical Center on February 5, 2021 would be considered reasonable, necessary and related to her February 4, 2021 accident.

- Concerning temporary disability benefits, the parties stipulated that should the claim be found compensable, Claimant would be entitled to TTD benefits beginning February 5, 2021, and continuing.

The above referenced reservation and stipulations are accepted by the ALJ and are made part of this Order.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Finn, the ALJ enters the following findings of fact:

Background and Claimant's Testimony

1. Claimant was hired by Employer as a new house painter on February 3, 2021. As a painter, Claimant's duties included climbing ladders, painting walls, painting trim and cleanup.

2. Claimant alleges an injury to her low back, right hip and leg occurring February 4, 2021. According to Claimant, she was carrying a bucket of paint down a freshly washed driveway to another job site when she slipped on a glaze of ice that had formed on the concrete due to the prevailing air temperature. Claimant testified that she fell onto her buttocks and low back developing severe pain and numbness in her hips and low back. Per Claimant, her back pain and leg numbness were so severe that she was unable to get to her feet. Claimant testified that she lay on the driveway for approximately 10 minutes before getting assistance from a co-worker to stand up. Claimant testified that she returned to the house and once inside, informed her boss of her fall. She took some Tylenol and called her daughter to pick her up because she was in too much pain to drive home.

3. Claimant waited until the following morning (February 5, 2021) to seek medical attention. She testified she sought treatment at Penrose-St. Francis hospital the next morning because her pain did not abate overnight despite the use of medication. Claimant testified that she did not seek care immediately after the fall because she thought her condition would improve. She also suggested that her boss told her to wait and see if the pain subsided. When her pain did not subside, Claimant testified that she went to the emergency room for treatment.

4. Claimant testified that her initial symptoms included pain in her back and hip that traveled downward to the bottom of her feet. Claimant indicated that she attended physical therapy approximately four times with no relief. According to Claimant, physical therapy aggravated her condition and made her symptoms worse. Consequently, her physical therapy was stopped. Claimant testified she was given home exercises to do but she also stopped performing these movements as they were aggravating her condition. Claimant also testified that she was referred to Dr. Kenneth Finn who administered an injection into her low back that provided no relief.

5. Claimant testified that her current symptoms include pain in her back that

radiates down both legs into her feet – right greater than left. She described her current pain as stabbing and pinching. She reported experiencing burning and pricking pain, like needles in her back and legs. She testified to a pain level of 7/10 in the legs and back, noting further than her pain increases with prolonged walking/standing, cleaning, mopping and sweeping.

6. Claimant testified to a prior history of back pain after suffering a prior injury that occurred 20 years ago. She was unable to recall specifics about the event or the cause of this back pain. Nonetheless, she testified that she would suffer rare episodes of back pain that would manifest every few years at an intensity level much lower than her current pain. Indeed, Claimant reported that when she experienced back pain in the past, it would present at a 2/10 pain level as compared to the 7/10 intensity she currently experiences. Claimant also testified that she suffered a fall from a ladder in 2019, which caused temporary back pain. According to Claimant, she was able to return to work three days after this fall. Claimant testified she saw Dr. Barent on January 17, 2020 for low back pain and was referred to physical therapy, which she attended twice. Claimant reported that she stopped going to physical therapy because her pain subsided and she was working and did not have the time to go.

7. Claimant testified that in the months leading up to her February 4, 2021, slip and fall on the driveway; she had no pain in her low back, hips or legs. She also reported that she had no problems working or limitations concerning her activities of daily living due to back or hip pain in the year prior to her February 4, 2021 fall.

8. Claimant testified that she was paid $16/hour as a painter and that she was hired to work from 8 a.m. to 5 p.m., Monday through Friday. She testified her average weekly wage was $640 per week ($16 × 40 hours/week = $640/week) and that she was only able to work one day before her fall on February 4, 2021. Claimant testified that she has not returned to work since her injury. She stated she was never offered a modified duty position and that she was told by her boss, Mr. R[Redacted], that there was no more work for her because he already hired other personnel and the only work he had was "heavy."

9. During cross-examination, Claimant testified that she never told her medical providers about her fall from a ladder in 2019, because no one asked. She admitted that she sought treatment for back pain in January 2020, during which she purportedly told her doctor that she didn't know why she had pain. She rejected the suggestion that her pain was the result of falling from a ladder in 2019 and instead reiterated that she did not know what caused her pain at the time. She testified that she experienced pain for a couple of days in January 2020 before she sought treatment and that this pain was less intense than the pain she experienced when she fell from the ladder in 2019. Claimant also reiterated that she stopped going to physical therapy in 2020 after two visits because her pain responded to medication and went away. According to Claimant, she had no pain when she stopped attending physical therapy in 2020. Claimant stated she never filed a workers compensation claim for her fall from a ladder in July 2019, because her injury wasn't that bad and she returned to work. Claimant testified that prior to February

4, 2021; she had never undergone imaging of her back/hips.

Claimant's Medical Records

10. Claimant initially reported to St. Francis Medical Center on February 5, 2021. Her chief complaint was a fall. (Claimant's Submissions- Bate# 00001-0002) Claimant stated she was walking on a sidewalk when she slipped on ice, falling backwards. Claimant indicated she hit her right side, which caused pain in the right leg, back, and neck. Claimant stated her pain was worse the following morning. (Claimant's Submissions- Bate# 00016). Physical exam indicated tenderness to palpation at the lumbar spine and tenderness bilaterally over the tronchanter. (Claimant's Submissions- Bate# 00019- 00020). Claimant was diagnosed with a back strain, contusion of left shoulder, and a hip strain. Assessment by Certified Physician Assistant (PA-C) Chelsea Raby indicated, "with reasonable medical certainty this patient has multiple contusions after a ground-level fall that occurred yesterday while the patient was at work . . . no red flags." Assessment noted low back pain, bilateral hip pain, and left elbow pain. (Claimant's Submissions- Bate# 00022- 00027). Claimant was told she could return to work on February 8, 2021. (Claimant's Submissions- Bate# 00045).

11. Claimant presented to Dr. Peterson on February 19, 2021. Claimant reported slipping on ice on a driveway outside a home she was working at when she landed on her buttocks. Claimant stated the medication prescribed by the hospital on February 5, 2021 provided her no relief. Claimant described pain in her whole back, but mainly in her low back as well as pain in the anterior hips. Claimant reported no improvement in her condition. Physical exam revealed tenderness in the lumbar spine at the L2, L3, L4 and L5, tenderness in the sacroiliac joint bilaterally, and tenderness to the right and left facet joints. Assessment indicated fall from slipping on ice and lumbosacral strain. Claimant was given medication and referred to physical therapy for 3 times a week for 2 weeks. Restrictions indicated no lifting over 10 pounds; no walking or standing over 2 hours per day; no sitting over 4 hours per day. (Claimant's Submissions- Bate# 00047- 00054)

12. Claimant returned to Dr. Peterson on March 1, 2021. Chief complaint included lower back pain and pain in both hips. Claimant described her pain as constant. Claimant had not started physical therapy, was still not working, and was still having pain. Physical exam indicated tenderness to the lumbar spine, tenderness to the right sacroiliac join and right facet joint along with right sided muscle spasms. Range of motion testing was painful. Assessment remained unchanged. Dr. Peterson indicated the objective findings were consistent with her history and/or the described work-related mechanism of injury. (Claimant's Submissions- Bate# 00055-00057).

13. Claimant was seen by Dr. Peterson on March 8, 2021 for a follow-up. Claimant reported lower back pain that radiated to the bilateral hips. Claimant stated her back got worse 3 days ago but she did not have a new injury. Claimant also reported numbness in her feet bilaterally as well as numbness when driving for over 30 minutes. Claimant reported a prior work injury from 2 years ago with low back pain but stated it resolved with therapy. Assessment included bilateral lumbar radiculopathy and worsening

pain. A lumbar spine MRI was ordered to rule out a herniated disc. (Claimant's Submissions- Bate# 00058- 00061).

14. Claimant started physical therapy on March 12, 2021. Claimant described her mechanism of injury (MOI) as slipping on ice while walking down a driveway, which caused her to land on her buttocks and then her back. Claimant reported lower back pain, which radiated into the bilateral legs. She also reported weakness in her right leg causing it to give away when she walks. Pain was described as worse in the right leg. Physical therapist, William Birch stated "[patient]" had prior injury to low back years ago but recovered quickly without any functional deficits." (Claimant's Submissions- Bate# 00062-00066). Claimant had additional PT on March 19, 2021. Claimant reported her back felt the same and she only got relief when lying on her side using a heat pack. (Claimant's Submissions- Bate# 00071- 00073).

15. Claimant had an MRI of the lower back on March 22, 2021. This MRI demonstrated a central/left central 4 mm focal disc protrusion uplifting the posterior longitudinal ligament, which had migrated millimeters caudally from the disc space at L4-5. At L5-S1, the MRI demonstrated a similarly herniated disc with 2 mm of caudal migration from the disc space. Along with the above described disc herniation, the MRI mild to moderate hypertrophic changes of the articular facets at L4-5 and L5-S1. (Claimant's Submissions- Bate# 00099-00100).

16. Claimant reported to Dr. Peterson on March 24, 2021. Dr. Peterson noted that the MRI was positive for disc herniation at the L4-5 and L5-S1 spinal segments. Claimant was referred to Dr. Finn for further evaluation. (Claimant's Submissions- Bate# 00079-00082)

17. Claimant presented to Dr. Finn on March 29, 2021. She reported she slipped and fell at her employer after 2 days on the job. Claimant indicated PT caused increased pain and that medication had not helped. Dr. Finn noted that the lumbar spine MRI did show some disc abnormalities at L4-5 and L5-S1 and an injection was recommended. Claimant's lumbar spine symptoms were described as central right sided, constant in nature, fluctuating in severity, and radiating to the hip, buttock, right and left leg, and her foot. Claimant described numbness and tingling in her foot with weakness in the legs. Claimant's reported symptoms were described as being consistent with a L5-S1 distribution. Aggravating factors included work activities, household activities, driving, walking, standing, and sitting. Physical exam revealed limitations in all planes of spinal movement. Sensory exam showed a decrease in the L4, L5, and S1. Assessment included low back pain, spondylosis, and intervertebral disc degeneration of the lumbosacral region. Treatment plan consisted of one LESI at the right L5-S1 for mechanical/discogenic lower back pain and encouragement of a home exercise program. (Claimant's Submissions- Bate# 000110- 000112).

18. Dr. Finn administered a lumbar interlaminar epidural steroid injection to Claimant at the L5-S1 on April 19, 2021. (Claimant's Submissions- Bate# 000114-000115).

19. Claimant returned to Dr. Peterson on April 26, 2021. Claimant reported receiving an injection from Dr. Finn with no improvement. Dr. Peterson stated the MRI suggested discogenic pain. Claimant described numbness and tingling in the right anterior thigh that went down into the feet. Assessment and treatment plan did not change. (Claimant's Submissions- Bate# 00085- 00088).

20. Claimant presented to Dr. Peterson on May 2, 2021. Dr. Peterson stated further information was provided by company lawyers showing a long history of chronic back issues and that Claimant was under the care of her PCP on January 17, 2020, for complaints of low back, right buttock, and right hip pain. Dr. Peterson noted that a question of causality had been raised by company lawyers and Pinnacol Assurance. Dr. Peterson further clarified that the causality evaluation would seem to turn on the question of verifying whether Claimant did indeed slip on ice and fall on her back on February 4, 2021 as she claims. If she did, “then she clearly has a MOI that would typically make a pre-existing back complaint worse.” Dr. Peterson noted during her presenting exam she had signs, symptoms, and exam findings consistent with either facetogenic pain and/or SIJ mediated pain both of which would be consistent with an axial loading injury. Dr. Peterson noted that Claimant’s initial visit with her PCP was more suggestive of a disc issue or a hip labral tear. Lastly, Dr. Peterson stated if there was evidence that Claimant did not slip and fall on February 4, 2021, that her current complaints are likely her pre-existing symptomatic baseline. Claimant’s assessment and treatment plan remained unchanged. (Claimant's Submissions- Bate# 00089- 00093).

21. Claimant returned to Dr. Finn on May 11, 2021 for a follow-up. Claimant reported her previous L5-S1 IL ESI did not alleviate her pain. Claimant described right sided lumbar pain that was constant and which radiated to her right hip, buttock, leg, and foot in an L5 and S1 distribution. Physical exam of the lower back showed no pain behavior. Claimant was tender to palpation at the L4-S1, with paravertebral tenderness, SI joint tenderness, trochanteric tenderness. Patrick’s maneuver and Faber’s maneuver were positive. Assessment included pain in the right hip and lower back pain. Dr. Finn noted that Claimant’s pain was worsening in the right hip. He ordered an MRI of the hip and stated if it was unremarkable, he would consider a right hip SI joint injection for sacroiliitis and a possible referral to a chiropractor. (Claimant's Submissions- Bate# 000116- 000117).

22. Claimant was seen by Dr. Johnson on May 12, 2021. Claimant stated she had an injection at Dr. Finn’s office the day before, which was not helpful. Claimant reported continued lower back pain that was no better from the last visit. This pain was described as worse when she walks, mops, or lifts. Claimant described some radiation of pain into the legs. Claimant was noted as not being able to continue with PT due to pain. Physical exam showed continued tenderness at the L3-4 lumbar spine, right and left sacroiliac joint, and bilateral muscle spasms. Claimant’s restrictions included no lifting over 10 pounds, walking 2 hours per day, standing 2 hours per day, and bending only 3x an hour. (Claimant's Submissions- Bate# 00094- 00097)
