Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Opinion on MMI

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S. A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* WC 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment including surgery to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* WC 4-356-512 (ICAO, May 20, 2004).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* WC 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., WC 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., WC's 4-532-166 & 4-523-097 (ICAO, July 19, 2004). Rather, it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016). When a DIME physician issues conflicting or ambiguous opinions concerning MMI, the ALJ may resolve the inconsistency as a matter of fact to determine the DIME physician's true opinion. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Licata v. Wholly Cannoli Café* WC 4-863-323-04 (ICAO, July 26, 2016).

Claimant contends that Dr. Counts' own recommendation that Claimant undergo psychological treatment, which he believes will improve Claimant's symptoms, contradicts a determination of MMI. The evidence does not establish it is highly probable Dr. Counts' DIME opinion on MMI is incorrect. Dr. Counts' discussion of additional psychiatric treatment, specifically medication, could be done as maintenance care. Dr. Counts' statement that Claimant's symptoms may improve as his anxiety is treated was made in the context of discussing his decision to not assign a lumbar spine rating in the presence of significant depression and indications of a possible somatoform disorder, as related to Claimant's subjective reporting of symptoms. Dr. Counts proceeded to assign an impairment rating for Claimant's brain injury and explained the difference in his reasoning from that of Dr. Primack. Dr. Counts did not indicate the rating he assigned for brain/cognitive impairment was meant to be provisional.

Dr. Counts' finding of MMI is supported by the opinion of Dr. Primack, who is familiar with Claimant's presentation, conditions and course of treatment as Claimant's ATP. Dr. Primack credibly and persuasively opined that Dr. Counts' recommendations for maintenance care do not change Claimant's MMI status, and that Claimant remains at MMI with respect to both his physical and psychological condition. While Dr. Goldman opined that Dr. Primack overstated Claimant's ability and functional status, Dr. Goldman did not review Dr. Primack's September 3 or October 29, 2019 reports, at which Claimant's reported functioning was at an overall high level. Although Dr. Goldman recommends Claimant undergo significantly more treatment before being placed at MMI, his opinion represents a mere difference of opinion with the DIME physician that does not rise to the level of clear and convincing evidence.

Overcoming the DIME Opinion on Impairment

The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury*.* *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000).

A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *See Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO, April 3, 2009); *Linda Vuksic v. Lockheed Martin Corporation* W.C. No. 4-956-741-02 (ICAO, Aug. 4, 2016). Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In re Goffinett,* W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. Wackenhut Corp. v. Industrial Claim Appeals Office, 17 P.3d 202 (Colo. App. 2000); Paredes v. ABM Industries W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. See Gonzales v. Browning Ferris Industries of Colorado, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); Licata v. Wholly Cannoli Café W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

Claimant argues Dr. Counts erred in failing to assign a lumbar impairment rating pursuant to the AMA Guides and the Impairment Rating Tips. Dr. Goldman opined that Dr. Counts should have provided a provisional Table 53 rating and performed additional range of motion measurements at a second visit before invalidating the measurements.

Section 3.3 of the AMA Guides discusses impairment of the spine. Section 3.3a provides that impairment of the spine begins with using either Table 53 or Table 50 to obtain a diagnosis-based percentage of impairment. Next, regional range of motion should be tested. The AMA Guides state that if consistency requirements are not met after six measurements, the physician should consider the test invalid and reexamine at a later date or disqualify that part of the examination.

Paragraph 1 of the Spinal Rating Section of the Impairment Rating Tips provides:

> Table 53 and Application of Spinal Range of Motion: In order to be assigned a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment rating of greater than zero under Table 53. Spinal range of motion impairment must be completed and applied to the impairment rating only when a corresponding Table 53 diagnosis has been established. (References: *Spine section of the AMA Guides, 3rd Edition (rev.)*; Level II Accreditation Curriculum, Spine and Pelvis Impairment).
>
> In unusual cases with established severe shoulder pathology accompanied by treatment of the cervical musculature, an isolated cervical range of motion impairment is allowed if it is well justified by the clinician. Otherwise, there are no exceptions to the requirement for a corresponding Table 53 rating.

Paragraph 2 of the Spinal Rating Section provides:

> Table 53 and 0% Impairment Rating with Six Months or More Treatment: Whenever 6 months of treatment of the spine has occurred and a Table 53 zero percent rating is assigned, the physician must provide justification for the zero percent rating, based on the lack of physiologic findings. The rating physician shall be aware that a zero percent rating in this circumstance implies that treatment was performed in the absence of medically documented pain and rigidity.

Paragraph 12 of the Spinal Rating Section of Impairment Rating Tips provides:

> Invalidation of Spinal Range of Motion (cervical, thoracic, lumbar): To invalidate spinal range of motion impairment, due to internal or straight leg raise validity, or for physiologic reasons, claimants must have two visits. Two sets of three measurements must be taken on each visit (12 measurements total).

In his DIME report, Dr. Counts specifically addressed why he did not assign a lumbar spine impairment rating. While he noted Claimant’s lumbar spine MRI revealed bulging discs with mild bilateral foraminal stenosis at L3-4 and L4-5 and no significant facet arthropathy, Dr. Counts attributed Claimant’s persistent low back pain to a left SI joint strain. He opined that it would be unusual for such a strain to last 2.5 years. Dr.

Counts' opinion on lumbar impairment is supported by Dr. Primack, who also did not assign a lumbar impairment rating. Dr. Primack credibly explained that in Claimant's case, there is no specific Table 53 diagnosis or specific deficits. He further credibly explained that, although Claimant reported lumbar symptoms in excess of six months and received treatment for the lumbar spine, there was no rigidity or spasms and no clinical correlation of a defined area of pathology to rate. Although Dr. Counts did not conduct a second visit to invalidate Claimant's range of motion measurements, without a corresponding Table 53 diagnosis, such measurements alone could not be the basis for an impairment rating. Accordingly, based on the totality of the credible and persuasive evidence, Dr. Counts' failure to perform additional measurements in this case does not mandate a conclusion that his impairment rating was incorrect. Again, Dr. Goldman's opinion represents a mere difference of opinion, which does not rise to the level of clear and convincing evidence to overcome the DIME opinion.

ORDER

1. Claimant failed to overcome Dr. Counts' DIME opinion on MMI and impairment by clear and convincing evidence. Claimant reached MMI on January 16, 2019 with a 22% whole person impairment, as determined by Dr. Counts.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 26, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant prove his right shoulder injury caused functional impairment beyond the arm and distinct from the admitted cervical impairment?

- Did Claimant prove his AWW should be increased to $1,072 effective July 1, 2018?

STIPULATIONS

Respondent filed a Final Admission of Liability (FAL) on August 4, 2020 admitting for the 11% whole person cervical rating and 13% scheduled shoulder rating assigned by the DIME. The admitted AWW is $1,010.48. Claimant reached MMI on March 25, 2019. The FAL includes a general award of reasonably necessary and related medical treatment after MMI from authorized providers. Claimant accepts the general award and there are no disputed issues regarding specific treatment at present. Respondent retains the right to contest any specific treatment in the future. The parties agreed to reserve the issue of disfigurement until OAC resumes in-person hearings.

FINDINGS OF FACT

1. Claimant works for Employer as a Labor and Employment Specialist. He suffered admitted injuries to his right shoulder and neck on March 30, 2018 while moving flats of water at a job fair. One of the flats fell, which jerked his right arm. Claimant felt immediate pain in his neck and right shoulder.

2. An MRI of the right shoulder showed acute rotator cuff tendonitis, moderate to advanced AC joint osteoarthritis, a Type II SLAP tear, and probable biceps anchor pathology.

3. Claimant was referred to Dr. David Walden, an orthopedic surgeon. Dr. Walden initially recommended conservative treatment. Dr. Walden ultimately recommended surgery because therapy and multiple cortisone injections failed to resolve Claimant's symptoms. On October 10, 2018, Dr. Walden performed a right shoulder arthroscopic biceps tenodesis, a subacromial decompression with coracoacromial ligament resection and acromioplasty, and debridement of rotator cuff fraying.

4. Claimant's shoulder improved after surgery but remained symptomatic. Post-surgery pain diagrams show continued pain in the right upper pectoralis region, superior and lateral shoulder, trapezius, upper back, and neck. Claimant also noted pain and paresthesias in the right forearm and hand.

5. Claimant's ATP, Dr. John Reasoner, put Claimant at MMI on March 25, 2019 with a 12% extremity / 7% whole person impairment for the right shoulder. Dr.

Reasoner assigned permanent work restrictions including no lifting over 20 pounds and no overhead reaching with the right arm.

6. Dr. Tashof Bernton performed an IME for Respondent on May 7, 2019. Claimant reported ongoing right shoulder and neck pain with associated headaches. Dr. Bernton opined Claimant's symptoms were consistent with his history of shoulder surgery. Dr. Bernton saw no evidence of a separate injury to the cervical spine. He recommended electrodiagnostic testing for the right upper extremity symptoms "on a nonwork-related basis." Dr. Bernton calculated a 13% extremity / 8% whole person rating for right shoulder ROM deficits. Dr. Bernton indicated the ROM measurements may have been inflated by "submaximal" effort on Claimant's part, but his supposition is unpersuasive given the highly consistent measurements obtained by Dr. Reasoner, Dr. Bernton, and the DIME.

7. In August 2019, Claimant sought treatment at the St. Thomas More emergency department for severe neck and shoulder pain. A cervical MRI was recommended but apparently not performed. The emergency department records are not in evidence but the ALJ infers this visit occurred in mid- to late-August 2019.

8. On August 28, 2019, Claimant's PCP, Dr. Robert McCurry, documented persistent symptoms related to Claimant injury including right shoulder pain, bilateral trapezius pain and spasm, neck pain, sleep disturbance, headaches, right arm weakness, and paresthesias in the fourth and fifth fingers of the right hand. Claimant was also experiencing depression and anxiety from a combination of ongoing symptoms and workplace conflicts.

9. Claimant saw Dr. John Tyler for a DIME on October 1, 2019. Dr. Tyler opined Claimant suffered a specific injury to his cervical spine that warranted a rating in addition to the shoulder rating. Examination of the cervical spine showed markedly increased myofascial tone with active trigger points in the bilateral scalenes, right posterior scalenes, right clavicular portion of the sternocleidomastoid, right splenius capitis, and bilateral suboccipitals. Dr. Tyler appreciated segmental dysfunction at C3 and C5 markedly restricting the mobility of the C3-4 and C5-6 facet joints, which Dr. Tyler believed were the "primary generators" of Claimant's posterolateral cervical spinal pain on the right side. Dr. Tyler diagnosed cervical facet syndrome with overlying areas of myofascial pain, which provided the basis for a Table 53 cervical rating.

10. Examination of Claimant's right shoulder showed upslope of the shoulder girdle complex due to increased myofascial tone and active trigger points within the superior trapezius on the right side, forward of the right shoulder due to structural tightness and active trigger points in the right pectoralis minor, and multiple "easily" palpable trigger points within the infraspinatus and superior medial parascapular musculature. The ALJ infers from the structure of Dr. Tyler's report he associated Claimant's trapezius symptoms more with the shoulder injury than the neck injury.

11. Dr. Tyler assigned an 11% whole person rating for the cervical spine and a 13% extremity / 8% whole person rating for the right shoulder. The overall combined

whole person rating was 18%. Dr. Tyler opined the myogenic TOS symptomatology caused no ratable impairment.

12. Respondent filed a FAL admitting for Dr. Tyler's whole cervical rating and the scheduled shoulder rating.

13. Dr. Carlos Cebrian performed an IME for Respondent on December 16, 2020. In contrast to Dr. Tyler's examination, Dr. Cebrian found no spasms or trigger points around the right shoulder or cervical spine. Nevertheless, he noted cervical tenderness to palpation and reduced range of motion and included "cervical spine myofascial pain" in his list of injury-related diagnoses. Dr. Cebrian opined Claimant's shoulder rating "should remain a scheduled impairment" because he saw no functional impairment beyond the arm. Dr. Cebrian opined the muscle "tightness" around Claimant's shoulder girdle does not give rise to functional impairment beyond the glenohumeral joint, and the cervical spine impairment accounts for any complaints extending beyond the glenohumeral joint. He opined the subacromial decompression does not cause functional impairment beyond the arm because "a subacromial decompression does not have any negative effect on a person's function."

14. Dr. Cebrian's examination findings are less credible than those of Dr. Tyler. Dr. Cebrian's opinions Claimant's shoulder impairment is limited to his right arm and any proximal limitations are fully captured by the cervical rating are not credible or persuasive.

15. Claimant's testimony regarding his ongoing injury-related symptoms and associated functional limitations was credible and persuasive.

16. Claimant proved his right shoulder injury caused functional impairment beyond the arm that is not captured by the admitted cervical spine rating.

17. The admitted AWW of $1,010.48 is based on Claimant's earnings at the time of his injury.

18. Claimant received a pay raise on July 1, 2018, which corresponds to an AWW of $1,072. Respondent produced no contradict or refute Claimant's credible testimony regarding the wage increase.

19. The admitted AWW does not accurately reflect the reduced earning capacity caused by Claimant's injury when he reached MMI on March 1, 2019. Claimant proved his average weekly wage should be increased to $1,072 effective July 1, 2018.

CONCLUSIONS OF LAW

A. Claimant proved his shoulder injury caused whole person impairment

Whether a claimant has sustained scheduled or whole person impairment is a question of fact for determination by the ALJ. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). In resolving this question, the ALJ must determine "the situs of the functional impairment," which is not necessarily the site of the injury itself.

Id. The schedule of disabilities refers to the loss of "an arm." Section 8-42-107(2)(a). In other words, if the claimant has a functional impairment to part(s) of his body other than the "arm," he has sustained a whole person impairment and must be compensated under § 8-42-107(8).

Although the opinions of physicians can be considered when determining this issue, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Olson v. Foley's*, W.C. No. 4-326-898 (ICAO, September 12, 2000). There is no requirement that functional impairment take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (ICAO, June 30, 2008). Referred pain from the primary situs of the initial injury may establish proof of functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (ICAO, December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (ICAO, August 9, 1996).

Pain and limitation in the trapezius and scapular area can functionally impair an individual beyond the arm. *E.g. Steinhauser v. Azco, Inc.*, W.C. No. 4-808-991 (January 11, 2012) (pain and muscle spasm in scapular and trapezial musculature warranted whole person impairment); *Franks v. Gordon Sign Co.*, W.C. No. 4-180-076 (March 27, 1996) (supraspinatus attaches to the scapula, and is therefore properly considered part of the "torso," rather than the "arm"); *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (ICAO, June 30, 2008) (pain affecting the trapezius and difficulty sleeping on injured side supported ALJ's finding of whole person impairment). Limitations on overhead reaching can also consitute functional impairment beyond the arm in appropriate cases. *E.g*., *Brown v. City of Auror*a, W.C. No. 4-452-408 (October 9, 2002); *Heredia v. Marriott*, W.C. No. 4-508-205 (September 17, 2004).

If a claimant has ratable impairment of the cervical spine and also seeks a whole person rating for the shoulder, the functional impairment used to "convert" the shoulder rating must be distinct from the cervical impairment. *Warthen v. Industrial Claim Appeals Office*, 100 P.3d 581 (Colo. App. 2004); *Steinhauser v. Azco, Inc*., W.C. No. 4-808-991-02 (January 11, 2012).

As found, his right shoulder injury caused functional impairment beyond the arm that is not captured by the admitted cervical spine rating. First, the injury and resulting surgery permanently altered anatomical structures that are not part of his arm. Claimant underwent a subacromial decompression and acromioplasty. These procedures are performed proximal to the glenohumeral joint and therefore above the "arm." Although the anatomical situs of the injury or treatment is not dispositive, it is a valid factor to consider when determining whether a claimant has a scheduled or whole person impairment. *See, e.g., Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008) ("The [claimant's] subacromial decompression was done at the acromion and the coracoacromial ligament in order to relieve the impingement, which is all related to the scapular structures above the level of the glenohumeral joint").

Second, and more important, Dr. Tyler's examination showed objective evidence of functional impairment in the chest and scapular area, including forward positioning of the shoulder due to structural tightness and active trigger points in the right pectoralis minor, and diffuse myofascial trigger points within the infraspinatus and superomedial parascapular musculature. The structural tightness in Claimant right anterior chest wall is compressing and irritating the brachial plexus, causing symptoms consistent with myogenic TOS. These findings are distinct from the cervical spine impairment. The right-sided trapezius pain may overlap to some degree with the cervical injury but is probably primarily related to the shoulder injury. Claimant's headaches are probably at least partially related to the right shoulder symptoms. The clinical findings documented by Dr. Tyler are consistent with and supported by the medical records and pain diagrams and Claimant's credible testimony.

B. Claimant's AWW is $1,072 effective July 1, 2018

Section 8-42-102(2), C.R.S. provides that compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that is most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

PPD benefits are intended to compensate a claimant for a permanent loss of future earning capacity. *Broadmoor Hotel v. Industrial Claim Appeals Office*, 939 P.2d 460 (Colo. App. 1996). Accordingly, the discretionary authority to deviate from the "default" AWW formula extends to PPD benefits. *Pizza Hut v. Industrial Claim Appeals Office*, 18 P.3d 867 (Colo. App. 2001).

As found, Claimant proved his AWW should be increased to $1,072 effective July 1, 2018. Because of the pay raise, Claimant's rate of pay at time of the injury no longer provided an accurate measure of his future earning capacity when he reached MMI on March 1, 2019.

ORDER

It is therefore ordered that:

1. Claimant's average weekly wage is $1,072 effective July 1, 2018.

2. Respondent shall pay Claimant PPD benefits based on the DIME's combined whole person rating of 18%. Respondent may take credit for any PPD benefits previously paid in connection with this claim.

3. Respondent shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

4. Respondent shall cover all reasonably necessary and related medical treatment after MMI from authorized providers, consistent with the parties' stipulation.

5. The issue of disfigurement is reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: March 26, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-137-551-002

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that that he sustained a compensable injury in the course and scope of his employment.

II. Whether Claimant has proven by a preponderance of the evidence that the medical care and treatment he received was reasonable and necessary and related to his employment and that he is entitled to a general award of medical benefits.

III. Whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary disability benefits.

STIPULATIONS

- The parties agreed that if the claim is found to be compensable and temporary disability benefits are awarded, they will attempt to work out and resolve Claimant's average weekly wage and the amount of temporary total and temporary partial disability benefits payable to Claimant.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant, who was born on May 14, 1958, alleges he suffered a compensable back injury on April 22, 2020.
2. Claimant has been continuously employed by Employer as a delivery driver since September 2019. His job duties include loading, driving, and unloading heavy materials.
3. On April 22, 2020, his job duties included picking up, delivering, and unloading landscaping "baffles," which are large rolls of webbing that are woven with straw and seed. The baffles are approximately 12 feet long, weighed approximately 200 pounds each, and all three bundles totaled between 2,000 and 2,100 pounds.
4. Claimant picked up the baffles in Denver, Colorado. When the baffles were loaded, they were sorted into three separate bundles and wrapped with nylon banding. Claimant delivered them to Fountain, Colorado. During transit, two of the three bundles split open and resulted in the baffles being strewn throughout the bed of his semi-truck.
5. When Claimant arrived in Fountain, Colorado, he was responsible for unloading the baffles. He did so with the help of an individual from the delivery site.

6. To unload the baffles, Claimant had to get onto the bed of the truck and maneuver around the loose baffles. He then had to untangle the loose baffles one-by-one. As he would untangle a baffle, he would then bend over, lift it up the end, and push the baffle off the bed of the truck onto a nearby forklift. The forklift then drove the baffles to where they were to be stored.

7. Claimant testified that he does not recall tweaking, popping, pulling, or injuring his back while unloading the baffles. He testified he did not recall experiencing pain at that point in time. Claimant drove back to the Employer's yard to return his truck and finish his day. The road in Fountain, Colorado Claimant had to drive over was extremely bumpy. This caused Claimant to twice strike his head on the top-interior of the cabin of his truck. Claimant testified he did not feel back pain after hitting his head while driving on the bumpy road.

8. Claimant returned to the Employer's yard located in Denver, Colorado, safely. He then performed his closing duties, clocked out, and drove home to Aurora, Colorado. Claimant did not suffer any accidents on the way home. Once home, he parked, spoke to his wife, got ready for bed in the bathroom, and then went to bed.

9. After going to bed, Claimant woke up between 1:30 a.m. and 2:00 a.m. to use the restroom. He rolled over to get out of bed and felt extreme stiffness in his lower back. The pain caused him to have to use the wall to get out of bed. He had to move cautiously to the bathroom due to the pain. After using the restroom, Claimant returned to bed.

10. Claimant went back to sleep and then woke up at 5:30 a.m. and his back pain had worsened. He called Employer to inform his boss he would not be at work that day because his back was in a lot of pain. Claimant testified that he informed Employer he was not sure exactly how he injured his back, but he believed he did it the day prior at work while either driving on the bumpy road or unloading the baffles.

11. Claimant was provided a designated provider list from Employer. He chose to treat at Denver Aviation and Occupational Medicine.

12. Claimant presented to Denver Aviation Occupational Medicine on April 27, 2020. He was evaluated by Nazia Javed, M.D. Claimant reported lumbar pain that began on April 22, 2020. It was noted by Dr. Javed that Claimant stated that "he was driving on dirt roads and his truck was bouncing up and down and he felt low back pain." It was also noted that Claimant stated that while unloading heavy landscaping stuff he felt a sharp pain in his low back. Dr. Javed concluded that Claimant's mechanism of injury was possibly hitting his head on the interior of his truck cabin due to the rough road or unloading heavy landscaping materials. Dr. Javed diagnosed Claimant with a lumbar strain and sprain. Dr. Javed recommended physical therapy and placed work restrictions on Claimant's activity which precluded Claimant from performing his regular job duties. Cl. Ex. 3.

13. Claimant missed approximately three months of work due to his injury. Hearing Transcript, p. 31.

14. Claimant remained on restricted duty throughout his treatment. As time went on, Claimant's restrictions were modified, and he was able to return work and perform in a limited capacity. Cl. Ex. 3 and 9.

15. Claimant underwent a course of treatment from April 27, 2020 to August 28, 2020, inclusive of evaluations, x-rays, physical therapy, home exercise program, MRI, and medications. Cl. Ex. 3.

16. Claimant was placed at maximum medical improvement ("MMI") and released to full duty work on August 28, 2020. Cl. Ex. 3.

17. Claimant underwent a medical evaluation with Allison Fall, M.D., at the request of Respondent on October 28, 2020. Dr. Fall opined that Claimant did not suffer a compensable work injury because he did not notice pain while performing his work activities on April 22, 2020. Dr. Fall further opined that is it impossible for her to know what led to Claimant's lumbar symptoms.

18. Dr. Fall testified at hearing in accordance with her report. She also testified that a lumbar sprain or strain is an acute injury that would not appear on an x-ray or MRI. She further acknowledged that Claimant's medical diagnosis is a lumbar sprain and strain. She testified that the activities Claimant performed on April 22, 2020 could result in a lumbar strain or sprain. She also testified that a lumbar strain or sprain could result in the complaints that Claimant had, including pain and stiffness.

19. Prior to April 22, 2020, Claimant never had issues with his back. He did not have back pain. He did not have functional loss in his back. He had never injured his back prior to April 22, 2020 or sought medical treatment for his low back.

20. Claimant's statements contained in his medical records and his hearing testimony is found to be credible. Claimant's testimony regarding his work activities on April 22, 2020 aligns with his reporting to Dr. Javed and Dr. Fall. Moreover, the Respondents did not offer any testimony to contradict Claimant's statements and testimony regarding his work activities on April 22, 2020.

21. It is more probable than not that Claimant's lumbar injury was caused by his work activities on April 22, 2020.

22. The injury occurred while Claimant was on the clock and within the course and scope of his employment.

23. The injury occurred while Claimant was performing a work duty that arose out of his employment contract with Employer.

24. Claimant is entitled to reasonable and necessary medical treatment to cure and relieve him from the effects of his work injury.

25. The medical treatment provided up through the date of the hearing and documented in the hearing exhibits is found to be reasonable and necessary to determine the extent of Claimant's work injury and to cure Claimant from the effects of his work injury.

26. Claimant's work injury and restrictions precluded him from performing his regular job duties and he missed more than three shifts of work, starting April 23, 2020. As a result, Claimant is entitled to temporary disability benefits.

27. The extent, however, of Claimant's wage loss is not clear from the record as the parties agreed to resolve such dispute should the claim be found compensable.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant has proven by a preponderance of the evidence that that he sustained a compensable injury in the course and scope of his employment.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). An injury that results from a risk of employment that is directly tied to the work itself is compensable. *See City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). A finding of causation need not be proven or supported by expert medical evidence. Rather, the claimant's testimony alone may support a finding of causation despite conflicting medical evidence or testimony. *See Lymburn v. Symbios* Logic, 952 P.2d 831 (Colo. App. 1997).

As found, Claimant was clocked-in, at a location he was supposed to be at in Fountain, Colorado, when he injured his lower back.

As found, Claimant's work activities on April 22, 2020 involved moving heavy, awkwardly shaped baffles, and driving on a rough road. Claimant moved roughly 2,000 pounds of baffles within 30 minutes. Moving the baffles required Claimant to bend, lift, and push. As testified to by Dr. Fall, all of these activities can result in a muscle strain or sprain to the low back.

The ALJ finds Claimant's hearing testimony to be credible and persuasive for a number of reasons. First, Claimant testified he has never suffered a low back injury or sought medical treatment to his lower back prior to April 22, 2020. This is supported by the medical records.

Second, Claimant's testimony establishes he works a labor-intensive job that requires loading and unloading heavy materials, as well as driving long distances. Claimant's testimony establishes he was able to work his full work duties, free from back pain or functional issue, up until 1:30 a.m. the morning of April 23, 2020.

Third, Claimant's testimony regarding the mechanism of injury is reasonably consistent throughout the claim. The first time Claimant sought medical treatment from Dr. Javed she noted that he felt some pain while driving on the bumpy road and while unloading the truck. Claimant did, however, testify that he did not notice pain in his back until, approximately, 1:30 a.m. on April 23, 2020. The ALJ does not find this discrepancy to be fatal to Claimant's claim or credibility. It must be borne in mind that inconsistencies are not uncommon to the adversary process which, of necessity, must rely upon the sometimes contradictory and often incomplete testimony of human observers in attempting to reconstruct the historical facts underlying an event. *See People v. Brassfield*, 652 P.2d 588 (Colo. 1982).

Claimant described the only activities that could have injured his back, which was striking his head against the interior of the cab of his truck and moving the heavy landscaping baffles.

Fourth, there is no other reasonable explanation as to how Claimant began experiencing back pain in the early morning on April 23, 2020, other than his work activities on April 22, 2020. Claimant credibly testified he did not suffer any accidents or injuries on his way home from work on April 22, 2020, or once he got home. Claimant credibly testified that he drove home after clocking out, walked in his house, got ready for bed, and then went to bed. The only reasonable explanation is that Claimant suffered lower back injury at work on April 22, 2020.

Therefore, the ALJ concludes Claimant established by a preponderance of the evidence that he injured his lumbar spine during the course and scope of his employment while performing a work activity on April 22, 2020.

II. Whether Claimant has proven by a preponderance of the evidence that the medical care and treatment he received was reasonable and necessarily related to his employment and that he is entitled to a general award of medical benefits.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As found, Claimant suffered a compensable injury on April 22, 2020. In order to determine the nature and extent of his injury, Claimant selected to treat with one of the designated providers on the list provided by Employer - Denver Aviation Occupational Medicine. Claimant went to Denver Aviation and Occupational Medicine and was evaluated by Dr. Javed. Claimant complained of pain in his lumbar spine. As a result, Dr. Javed evaluated Claimant and ultimately diagnosed Claimant with a lumbar strain and sprain. Dr. Javed recommended physical therapy and placed work restrictions on Claimant's activity. Claimant underwent a course of treatment from April 27, 2020 to August 28, 2020, which included evaluations, x-rays, physical therapy, home exercise program, an MRI, and medications to cure Claimant from the effects of his work injury.

As a result, the ALJ finds and concludes that Claimant established by a preponderance of the evidence that the medical treatment provided up through the date of the hearing and substantiated by the medical records submitted at the hearing was reasonable and necessary to cure Claimant from the effects of his injury.

The ALJ further finds and concludes that Claimant established by a preponderance of the evidence that he is entitled to a general award of medical benefits to cure Claimant from the effects of his work injury.

III. Whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary disability benefits.

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Se*e Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont*

Toyota, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits.

The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co*., 964 P.2d 595, 597 (Colo. App. 1998) (citing Ricks v. Industrial Claim Appeals Office, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant’s testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. § 8-42-105(3)(a)-(d), C.R.S.

As found, Claimant’s compensable lumbar injury resulted in an actual wage loss as of April 23, 2020. The records submitted at hearing demonstrated Claimant was provided work restrictions that precluded Claimant from performing his regular job duties. Moreover, Claimant’s testimony and wage records demonstrate Claimant missed more than three days of work due to his work injury.

Therefore, the ALJ finds and concludes Claimant established by a preponderance of the evidence that the industrial injury caused a disability lasting more than three days or work shifts, that Claimant left work as a result of the disability, and that the disability resulted in an actual wage loss. As a result, the ALJ finds and concludes Claimant established by a preponderance of the evidence that he is entitled to temporary disability benefits as of April 23, 2020.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury to his back on April 22, 2020.
2. Respondents shall pay for Claimant’s reasonable and necessary medical treatment that is related to his industrial injury to cure Claimant from the effects of his work injury.
3. Claimant is entitled to temporary disability benefits as of April 23, 2020. The exact amount of temporary disability benefits, however, is reserved. As indicated at the beginning of the hearing, the parties agreed to attempt to

resolve such issue if the Claim was found compensable and the Claimant awarded temporary disability benefits. If the parties are unable to reach an agreement regarding Claimant's average weekly wage and the amount of temporary disability benefits payable to Claimant, either party may file an application for hearing and set the matter for a hearing to have the issues resolved by an ALJ.

4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 29, 2021.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-126-258-001

ISSUE

1. Whether Claimant proved by a preponderance of the evidence that he sustained an injury to his right hand arising out of the course of his employment with Employer on November 25, 2019.

2. Whether Claimant proved by a preponderance of the evidence an entitlement to a general award of reasonable and necessary medical benefits causally related to his November 25, 2019 injury.

3. Whether Claimant established by a preponderance of the evidence that the treatment he received from UC Health, Denver Health and Lutheran Medical Center was reasonably necessary to cure or relieve the effects of an industrial injury.

4. Whether Claimant established an entitlement to temporary total disability benefits (TTD).

5. Claimant's average weekly wage.

6. Whether Respondents established by a preponderance of the evidence that Claimant was responsible for termination of his employment and the resulting wage loss from his termination.

7. Whether Respondents established by a preponderance of the evidence that they are not liable for treatment Claimant received because such treatment was not prescribed by an authorized treating provider, pursuant to §8-43-404 (7), C.R.S.

FINDINGS OF FACT

1. Claimant is a 40-year-old male who was employed by Employer as a roofer from September 2019 until November 2019. Claimant was paid $22.00 per hour and worked approximately 30-35 hours per week.

2. On November 25, 2019, Claimant sustained an injury to his right hand as the result of an altercation Claimant initiated with two fellow employees, Isaac A[Redacted], and Michael R[Redacted]. Claimant was initially involved in an argument or physical altercation with Mr. A[Redacted]. Mr. R[Redacted], who was the job foreman, approached Claimant and directed him to leave the job site for the day, with the intent of addressing the situation at a later time. Claimant then falsely accused Mr. R[Redacted] of having a relationship with Claimant's wife and began punching Mr. R[Redacted] in the head and face. As a result, Mr. R[Redacted] sustained injuries to his eye and face and was left

briefly unconscious. Claimant then left the job site in his car and never returned to work for Employer.

3. Mr. R[Redacted] reported the matter to the Parker, Colorado police department, and Claimant was later arrested and charged regarding the altercation. The record does not reflect the crime or crimes with which Claimant was charged or the date of his arrest.

4. On November 27, 2019, Claimant was seen at the UC Health emergency room where he reported that he injured his thumb "trying to protect myself" and reported to the ER physician that his right thumb got caught in a second person's hoodie bending his thumb back and causing a "pop." Claimant was diagnosed with closed displaced fracture of the right thumb. (Ex. 3).

5. On December 11, 2020, Claimant filed a Worker's Claim for Compensation with the Division, and described his injury as occurring "while attempting to get into the back house while going through the door fell [sic]." (Ex. 2). Prior to December 11, 2020, Claimant did not notify Employer or Insurer that he sustained any injury arising out of the course of his employment with Employer.

6. On December 12, 2020, Claimant was seen at in the Denver Health Hand Clinic and reported that his injury occurred "when he was going through a door and fell, and his thumb hyperextended." (Ex. 4).

7. At hearing, Claimant's testimony regarding the way his injury occurred was vague, inconsistent, and confusing. Claimant testified he fell backward on ice resulting in an injury to his hand. Claimant also testified that he injured (or further injured) his hand when he removed his sweatshirt to examine the area. Claimant denied any altercation with Mr. A[Redacted] or Mr. R[Redacted] occurred, but also testified he "had words" with either Mr. R[Redacted] or Mr. A[Redacted], but did not clarify the nature of the interaction. Claimant's testimony was not credible or persuasive.

8. At hearing, Mr. R[Redacted] testified that Claimant was involved in an altercation with another employee, and Mr. R[Redacted], as the foreman, directed Claimant to go home from the job site and return the following day. Claimant then initiated an altercation with Mr. R[Redacted], and struck him numerous times with both hands, knocking Mr. R[Redacted] to the ground and leaving him briefly unconscious. As a result of the altercation, Mr. R[Redacted] sustained injuries to his face. Mr. R[Redacted] testified that Claimant never indicated to him that Claimant had injured his hand at any time on November 25, 2019. The ALJ finds Mr. R[Redacted]'s testimony credible.

9. As a result of the altercation, Employer terminated Claimant's employment shortly after November 25, 2018.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see*

City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985). “Arising out of” and “in the course of” employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641.

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury “has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee’s service to the employer in connection with the contract of employment.” *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equipment Company,* W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

Claimant has failed to establish that the injury to his right hand arose out of the course of his employment with Employer. Claimant asserts he injured his hand when he fell on a deck outside of a house while starting work on the morning of November 25, 2019. Claimant’s description of the events of November 25, 2019 was not credible and conflicts with his contemporaneous report to UC Health on November 27, 2019. As found, it is more likely than not that Claimant injured his hand while striking Mr. R[Redacted]. If, as Claimant asserted, he injured his hand falling, given the nature of the injuries, Claimant would not likely have been able to strike Mr. R[Redacted] with his right hand. The physical altercation, initiated by Claimant, did not arise from his employment with Employer because the injury had no connection to Claimant’s work-related functions, and was not sufficiently related to his work functions to be considered part of his service to Employer. The injury also did not occur “in the course” of Claimant’ employment, because Claimant assaulting his supervisor was not an activity that had any connection with his work-related functions.

MEDICAL BENEFITS

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Because Claimant has failed to establish a compensable injury, Claimant is not entitled to an award of general or specific medical benefits.

TEMPORARY TOTAL DISABILITY BENEFITS & AVERAGE WEEKLY WAGE

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Because Claimant has failed to establish a compensable injury, Claimant is not entitled to an award of temporary disability benefits. Consequently, the ALJ makes no determination of Claimant's average weekly wage.

RESPONSIBILITY FOR TERMINATION AND AUTHORIZED TREATMENT

Because Claimant has failed to establish a compensable injury, the issues Claimant's responsibility for his termination and Claimant's treatment was prescribed by an authorized treating provider are moot.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits relating to his November 25, 2019 right-hand injury is denied and dismissed.

2. Claimant's claims for medical benefits are denied and dismissed.

3. Claimant’s claim for temporary disability benefits is denied and dismissed.

4. All remaining matters are moot.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 29, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-142-821-001

ISSUE

1. Whether Claimant proved by a preponderance of the evidence that on or about June 8, 2020 she sustained a compensable injury to her right upper extremity arising out of the course of her employment with Employer.

2. Whether Claimant proved by a preponderance of the evidence an entitlement to reasonable and necessary medical benefits causally related to a work-related injury.

3. Whether Claimant proved by a preponderance of the evidence an entitlement to temporary total disability benefits.

4. Whether Claimant proved by a preponderance of the evidence an entitlement to temporary partial disability benefits.

FINDINGS OF FACT

1. Claimant is a 41-year-old right-hand-dominant female who was employed by Employer as a sales associate at Employer's convenience store. Claimant's job duties include customer service, cashier, and stocking product. The parties stipulated that Claimant's average weekly wage as of June 8, 2020 was $425.14 per week. The parties stipulated that Claimant's employment with Employer voluntarily terminated on September 5, 2020.

2. On June 8, 2020, Claimant was working for Employer and retrieving product from the walk-in refrigerator at Employer's store. In the course of doing so, a partially-full box containing plastic bottles of iced tea fell from a shelf, with the corner of the box striking Claimant in the right elbow.

3. Claimant mentioned the incident to her supervisor, but did not believe she had sustained any significant injury, and did not complete an incident report. Over the following week, Claimant's pain did not diminish as she expected. After approximately two weeks, when Claimant's elbow pain had not resolved, Claimant reported the injury to Employer and was advised to go to the emergency room for evaluation. Muhammad C[Redacted], owner of Employer, testified he had heard from another employee that Claimant had sustained an injury approximately 4-6 days after the initial incident, but Claimant did not report the incident to him until approximately June 21 or June 22, 2020.

4. On June 23, 2020, Claimant was seen at UCHealth by Danielle Mianzo, M.D., for a right elbow injury. Claimant reported a box full of ice fell on her right forearm striking her right elbow. (The ALJ infers that Dr. Mianzo's reference to "a box full of ice" is an error, and that it is meant to reference "a box full of iced tea."). Claimant reported having elbow pain and difficulty lifting things since that time. On exam, Dr. Mianzo found

tenderness in the proximal forearm distal to the antecubital fossa, and discomfort moving the right elbow. X-rays of Claimant's right elbow were normal. (Ex. 5).

5. On June 29, 2020, Claimant saw Sarah Curzon, PA-C, at SCHC Monfort Family Clinic, where she reported continuing pain with bending and twisting of her shoulder to elbow and elbow to forearm. Ms. Curzon found mild swelling, tenderness over the medial aspect of the elbow and pain with extension. Ms. Curzon noted that although Claimant's x-rays were negative, she would refer Claimant for an orthopedic evaluation due to limited mobility and pain reports being out of proportion to the injury. (Ex. 4).

6. On July 2, 2020, Claimant had an x-ray of her right elbow performed at Advanced Medical Imaging Consultants, for evaluation of her right elbow. The x-ray was ordered by Ms. Curzon. (Ex. 7).

7. Claimant returned to the SCHC Monfort Family Clinic on July 9, 2020, where she continued to report right elbow pain. (Ex. 4).

8. On July 16, 2020, Claimant was seen at UCHealth by Michael Deitz, PA-C. Claimant reported difficulty using her right hand and denied any numbness, tingling or dysesthesias. Claimant's description of her injury was consistent with the mechanism initially reported to Dr. Mianzo. Claimant was diagnosed with work-related contusion of the right forearm with lateral epicondylitis, noting that Claimant had swelling, tenderness and decreased range of motion. Mr. Dietz provided Claimant with work restrictions, including limiting her lifting, carrying, pushing, and pulling to three pounds for her right hand. (Ex. 5).

9. On July 17, 2020, Respondents filed a Notice of Contest, noting that Claimant's claim was contested for further investigation to determine compensability. (Ex. A).

10. Claimant received physical therapy at ProActive Physical Therapy and Sports Medicine on July 22, 2020 and July 27, 2020. (Ex. 7).

11. On July 30, 2020, Claimant returned to work subject to work restrictions, including no lifting more than 7 pounds. (Ex. 3).

12. Claimant returned to UCHealth on August 21, 2020, where she was seen by Oscar Sanders, M.D. At that time, Claimant reported that her symptoms had improved with near complete resolution with only minimal stiffness and pain to the lateral aspect of the right elbow with gripping and grasping activities. Claimant had completed physical therapy and was engaged in a home exercise program. Dr. Sanders opined that Claimant may have sustained a temporary exacerbation of underlying lateral epicondylalgia secondary to her injury, which would likely slowly spontaneously abate, and advised Claimant to advance her activity as tolerated. (Ex. 5).

13. On September 22, 2020, Claimant returned to Dr. Sanders, and reported persistent minor aching with increased activities. Additionally, Claimant noted she did not feel her then-current work was exacerbating her symptoms. Dr. Sanders recommended Claimant consult with an orthopedic surgeon. (Ex. 5).

14. On September 22, 2020, Claimant saw Jeffrey Wunder, M.D., for an independent medical examination requested by Respondents. Based on the provided history and his examination, Dr. Wunder opined that within a reasonable degree of medical probability, Claimant's right lateral epicondylitis is work-related. Dr. Wunder noted that Claimant had objective findings and subjective complaints consistent with her injury, including localized swelling and tenderness of the lateral epicondyle and proximal extensor musculature and tendons in the forearm.

15. The parties stipulated that if Claimant sustained a compensable injury, she would be entitled to temporary total disability (TTD) benefits for the period of June 29, 2020 to July 30, 2020, and temporary partial disability (TPD) benefits for the period of July 31, 2020 to September 5, 2020.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641.

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equipment Company,* W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

Claimant has established by a preponderance of the evidence that she sustained an injury to her right elbow arising out of the course of her employment with Employer on June 8, 2020. The evidence demonstrates that Claimant sustained an injury to her right elbow when a box fell from a shelf in Employer's store while Claimant was in the course and scope of her employment. Claimant's testimony regarding the mechanism of injury was credible and was not contradicted by other credible evidence. Similarly, Claimant's explanation that she did not immediately report the incident as a work injury was credible, given that Claimant did not immediately appreciate that she sustained a significant injury that would require medical treatment. Mr. C[Redacted]'s testimony that he heard from another employee that Claimant had sustained an injury approximately 4-6 days after June 8, 2020, but that Claimant did not report it to him until later is congruent with Claimant's explanation of the delay in reporting the injury. In addition, Dr. Wunder concluded that Claimant's symptoms were consistent with her description of her injury and opined that she sustained a work-related injury. The ALJ concludes that Claimant sustained a compensable injury to her right elbow on or about June 8, 2020.

MEDICAL BENEFITS

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Because Claimant has established a compensable injury, Claimant has established by a preponderance of the evidence that she is entitled to a general award of medical benefits. In addition, Claimant received medical services from UC Health, the SCH Monfort Family Clinic, Advanced Medical Imaging Consultants and ProActive Physical Therapy limited to evaluation and treatment of Claimant's right elbow. No credible evidence was presented to demonstrate that the medical services Claimant received were not related to her work injury. The ALJ concludes that the medical services Claimant received from these providers was reasonable and necessary to cure or relieve the effects of Claimant's work injury. \

TEMPORARY DISABILITY BENEFITS (TOTAL AND PARTIAL)

To prove entitlement to Temporary Total Disability (TTD) benefits, Claimant must prove her industrial injury caused a disability lasting more than three work shifts, she left work as a result of the disability, and the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by Claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999).

The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) TTD benefits ordinarily continue until terminated by the occurrence of one of the criteria listed in § 8-42-105 (3), C.R.S. The existence of disability is a question of fact for the ALJ. No requirement exists that a claimant produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

Because Claimant established a compensable injury, pursuant to the parties' stipulation, Claimant has established an entitlement to TTD Benefits for the period of June 29, 2020 to July 30, 2020, and TPD benefits for the period of July 31, 2020 to September 5, 2020.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury to her right elbow arising out of the course of her employment with Employer on June 8, 2020.

2. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of Claimant's right elbow injury, including medical expenses incurred from UC Health, SCH Monfort Family Clinic, Advanced Medical Imaging Consultants, and ProActive Physical Therapy.

3. Claimant is entitled to TTD benefits for the period of June 29, 2020 to July 30, 2020, based on Claimant's average weekly wage of $425.14.

4. Claimant is entitled to TPD benefits for the period of July 31, 2020 to September 5, 2020, based on Claimant's average weekly wage of $425.14.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, Colorado, 80203

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the spinal fusion surgery recommended by Dr. Wade Ceola is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 30, 2018 work injury.

FINDINGS OF FACT

1. On November 30, 2018, the claimant was performing his normal job duties as a trash collector and driving a roll off truck. While working to set down a trash can, the claimant twisted while reaching for a hook and felt a pop and pain in his back. The claimant testified that the pain was immediate, sharp, and stabbing. The claimant reported this incident to the employer and was referred for medical treatment.

2. The claimant's authorized treating provider (ATP) for this claim is Dr. Daniel Smith. The claimant was first seen by Dr. Smith on November 30, 2018. On that date, the claimant reported left lower thoracic pain. Dr. Smith opined that the claimant's pain was muscular in nature. He placed the claimant under work restrictions that included only driving.

3. The claimant returned to Dr. Smith on December 7, 2018, and reported continuing thoracic back pain. Dr. Smith listed the claimant's diagnosis as thoracic back sprain. He referred the claimant to physical therapy and prescribed Tramadol.

4. On December 21, 2018, the claimant was seen by Dr. Smith. On that date, Dr. Smith determined that the claimant could return to full duty at work.

5. The claimant returned to Dr. Smith on January 31, 2019. On that date, Dr. Smith noted that the claimant had "mostly thoracic pain", but was also reporting "some more low back discomfort with some radicular symptoms down legs". The claimant reported that physical therapy was helping and he was able to perform his work duties.

6. On February 27, 2019, the claimant was again seen by Dr. Smith. On that date, the claimant reported persistent pain that traveled down both legs, with numbness and cramping into his buttocks. Dr. Smith added the diagnosis of "low back pain with radicular component" and ordered a magnetic resonance image (MRI) of the claimant's lumbar spine.

7. On March 11, 2019, a lumbar spine MRI was performed. The MRI showed, *inter alia*, multilevel spondylosis and stenosis; a mild broad disc bulge and mild thecal sac

narrowing at the L1-L2 level; moderate disc space narrowing with a moderate asymmetric disc bulge at the L2-L3 level; and a mild disc bulge at the L4-L5 level.

8. On March 28, 2019, the claimant was seen by Dr. David Miller for consultation. Dr. Miller noted that the claimant had low back pain with bilateral radicular symptoms into his legs. Dr. Miller also noted that the lumbar spine MRI showed degenerative changes at all lumbar levels. Dr. Miller opined that surgery would not be beneficial to treat the claimant's condition. He also recommended that further physical therapy and injections would likewise not be beneficial. Subsequently, Dr. Smith referred the claimant to Dr. Wade Ceola for a surgical consultation.

9. On July 26, 2019, the claimant was seen by Dr. Ceola. At that time, the claimant reported persistent and significant back and leg pain. Dr. Ceola noted that the claimant had been through physical therapy without relief. Dr. Ceola noted the MRI results and opined that it was possible that the L4-L5 level was the pain generator. As a result, he recommended the claimant undergo injections to at that level. Dr. Ceola did not believe the claimant was a surgical candidate at that time.

10. In August and September 2019, Dr. Michael Campion administered bilateral L4-5 and L5-S1 facet injections. On September 4, 2019, the claimant was seen by Dr. Campion and reported that he did not experience any relief from the facet joint injections. Dr. Campion opined that it was possible that the claimant had bilateral L5 radiculopathy.

11. On October 24, 2019, the claimant as seen in Dr. Smith's practice by Andrew Henrichs, PA-C. At that time, the claimant reported that he could not continue working. As a result, PA Henrichs restricted the claimant from all work.

12. On November 8, 2019, the claimant returned to Dr. Ceola and reported that he had undergone injections, but the injections did not provide any relief. Dr. Ceola noted that the injections were not helpful from a diagnostic standpoint. On that date, Dr. Ceola referred the claimant to Dr. Kenneth Lewis for consideration of a spinal cord stimulator (SCS). Dr. Ceola also referenced the possibility of a future spinal fusion surgery.

13. On November 15, 2019, the respondents filed a General Admission of Liability (GAL).

14. On January 8, 2020, the claimant was evaluated by Dr. Kenneth Lewis for consideration for a SCS. Dr. Lewis opined that the claimant was not a candidate for SCS as he had symptoms of mechanical back pain.

15. On January 9, 2020, the claimant was seen by Dr. Smith. At that time, Dr. Smith noted that the claimant was not a candidate for a SCS. He opined that the claimant should obtain a second opinion from a surgeon.

16. On February 4, 2020, claimant was seen by Thomas Scruton, PA-C at Atlas Arch Neurosurgery. On that date, the claimant reported low back and extremity pain; right greater than left. PA Scruton opined that the claimant's pain was "multifactorial" and recommended diagnostic injections at the sacroiliac (SI) joint.

17. On March 2, 2020, Dr. Lewis performed the recommended SI joint injections. Subsequently, the claimant reported no improvement in his symptoms following the SI joint injections.

18. At the request of the respondents, Dr. Brian Castro performed a review of the claimant’s medical records. In his March 29, 2020 report, Dr. Castro opined that on November 30, 2018, the claimant suffered a lifting sprain/strain injury. He also noted that the claimant’s initial presentation was of lower thoracic/upper lumbar spine symptoms. It was not until later that the claimant began to report lower lumbar and hip symptoms. Dr. Castro further opined that the claimant’s hip symptoms were not related to the November 30, 2018 work injury.

19. On May 7, 2020, the claimant returned to Dr. Ceola. At that time, Dr. Ceola noted that the claimant’s pain generator had not been determined. Dr. Ceola recommended the claimant undergo a computed tomography (CT) scan and a psychological evaluation.

20. On May 19, 2020, a lumbar spine CT scan was performed. The CT scan showed mild to moderate loss of disc height and broad disc bulges at L1-L2; L2-L3; L3-L4; L4-L5; and L5-S1; and mild multilevel neural foraminal narrowing.

21. On June 11, 2020, the claimant was seen by Dr. Ceola and the results of the CT scan were discussed. In the medical record of that date, Dr. Ceola noted that the CT scan did not identify “surgically significant pathology”. At that time, Dr. Ceola recommended the claimant undergo a discogram to determine if a surgical fusion would be appropriate.

22. On June 23, 2020, Dr. Giora Hahn performed a five level lumbar discogram. In the medical report, Dr. Hahn identified concordant discs at the L3-L4 and L5-S1 levels.

23. Following the discogram, Dr. Ceola recommended the claimant undergo surgery consisting of MIS TLIF[1] at both the L5-S1 and L3-L4 levels.

24. On July 8, 2020, Dr. Castro issued a second report related to his further review of the claimant’s medical records. Dr. Castro was specifically asked to state an opinion with regard to whether the recommended spinal fusion is reasonable, necessary and related to the claimant’s November 30, 2018 work injury. In his report, Dr. Castro noted that the claimant has demonstrated “somewhat of a nonphysiologic presentation”. In addition, Dr. Castro stated his opinion that a discogram is not an accurate assessment of pain, and “is known to be a very subjective test”. Dr. Castro opined that the claimant suffered a thoracic sprain/strain injury, for which the claimant had reached maximum medical improvement (MMI). He also noted that all of the claimant’s imaging studies show chronic degenerative changes. With regard to the recommended fusion surgery, Dr. Castro opined that the surgery is not related to the November 20, 2018 work injury. Based upon Dr. Castro’s opinions, the respondents denied the requested lumbar fusion surgery.

25. Dr. Castro’s testimony by deposition was consistent with his written reports. Dr. Castro testified that the claimant suffered a “mostly thoracic” sprain/strain injury. Dr.

[1] Minimally invasive transforaminal lumbar interbody fusion.

Castro also reiterated his opinion that the recommended spinal fusion surgery is not causally related to the claimant's November 30, 2018 work injury. In support of this opinion, Dr. Castro also testified that the claimant's initial complaints related to his thoracic spine. Dr. Castro also testified that the imaging studies show chronic degenerative changes, but that the claimant's radicular leg symptoms were not dermatomal in nature. Dr. Castro noted that the diagnostic injections the claimant received provided no relief at the same levels to be addressed by the surgery. Dr. Castro opined that the lack of relief from the injections go "directly against the discogram".

26. The claimant testified that he wants to proceed with the recommended surgery.

27. The ALJ credits the medical records and the opinions of Dr. Castro over the contrary opinions of Dr. Ceola. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the spinal fusion surgery recommended by Dr. Ceola is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 30, 2018 work injury. The ALJ specifically credits Dr. Castro's opinion that the claimant's initial injury was to his thoracic spine, and he has reached MMI related to that injury. The ALJ also notes that the various injections that were intended to be diagnostic support Dr. Castro's opinion that the claimant's pain generator has not been ascertained.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the spinal fusion surgery recommended by Dr. Wade Ceola is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 30, 2018 work injury. As found, the medical records and the opinions of Dr. Castro are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant's request for a spinal fusion surgery, as recommended by Dr. Wade Ceola, is denied and dismissed.

2. All matters not determined here are reserved for future determination.

Dated this 30th day of March 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment?

- If Claimant has proven a compensable injury, whether Claimant has proven by a preponderance of the evidence that the medical treatment from Aspen Family Medical Care and physical therapy are reasonable medical treatment necessary to cure and relieve the Claimant from the effects of the industrial injury?

FINDINGS OF FACT

1. Claimant was employed with Employer in their snowmaking operation on December 30, 2018. Claimant testified that he would begin snowmaking at A[Redacted] Mountain at the beginning of the year, and then shift his work to snowmaking on B[Redacted] Mountain later in the year. Claimant testified that on December 30, 2018, he was working at B[Redacted] Mountain during the night shift making snow. The ALJ finds the testimony of Claimant in this regard to be credible.

2. Claimant testified that snowmaking is a rough job as it is often cold and dark and he is exposed to difficult elements, including avalanches, water pressure issues and air pressure issues. Claimant testified that the employees making the snow during the night are often the only employees on the mountain. The ALJ finds the testimony of Claimant in this regard to be credible. However, the rough nature of Claimant's job is immaterial with regard to the alleged work injury in this case, as Claimant's alleged injury was not caused by an avalanche, water pressure issues or air pressure issues.

3. Claimant testified that snowmaking involves a lot of physical work and minor injuries are common. Claimant testified that snowmaking employees are trained as to snowmobile operations and use the snowmobiles to access different parts of the mountain where the snowmaking operations take place. Claimant testified that in operating the snowmobiles at night, the employees must deal with varying terrain and often times maneuver around chunks of snow that are commonly found on the paths used by the snowmobiles. The ALJ finds the testimony of Claimant in this regard to be credible. However, Claimant did not testify as to any particular mechanism of injury that involved maneuvering the snowmobile.

4. Claimant testified that on December 30, 2018, he was working for Employer making snow. Claimant testified he was in the control room and then needed to go out and check the snowmaking guns. Claimant testified that the snowmaking guns draw water from a creek and it becomes necessary to check the filters on the guns. Claimant testified that he came upon a snowmaking gun that was buried in the

snow and blowing the snow back on itself. Claimant testified that when this happens, you need to dig out the snowmaking gun with a shovel. Claimant provided pictures of the type of snowmaking gun that was buried to demonstrate the size of the snowmaking gun. Claimant testified that in digging out the snowmaking gun, he had to pick up a lever to rotate the upper portion of the gun to aim the gun in the proper direction. Claimant testified that after doing these tasks he got back on the snowmobile and felt "something" in his shoulder. The ALJ finds the testimony of Claimant in this regard to be credible. However, Claimant did not testify as to any action he performed in digging out the gun that led to Claimant developing symptoms in his shoulder.

5. Claimant testified he drove the snowmobile to the next snowmaking gun that was located on a tower. Claimant testified he climbed the ladder on the tower, reached out on to the gun to pull the lever to maneuver where the gun was aimed, and felt an acute pain in his right arm when he reached out to pull the lever. Claimant testified he then changed to use his left arm to adjust the lever. The ALJ finds the testimony of Claimant in this regard to be credible.

6. Claimant testified he reported his injury to his supervisor, Mr. D[Redacted]. The Employer's First Report of Accident filled out by Mr. D[Redacted] indicates that Claimant was "feeling slight pain in his right shoulder diving snowmobiles and while performing other like tasks". The First Report of Accident also indicated that Claimant was unsure of what caused the injury and he had not seen a doctor, as Claimant was waiting to see if the pain subsides.

7. Claimant was eventually evaluated by Physicians' Assistant ("PA") Kiehnbaum on January 11, 2019. PA Kiehnbaum noted an accident history of Claimant noticing symptoms while performing his snowmaking job on December 30, 2018. PA Kiehnbaum reported no specific activity or trigger that caused his pain, but noted that Claimant's job is very active. Claimant reported his pain was aggravated with turning snow guns or pushing/pulling levers. Claimant was diagnosed with a right rotator cuff strain with possible labral pathology. PA Kiehnbaum recommended six sessions of physical therapy ("PT") and non-steroidal anti-inflammatories (NSAID's) or ice as needed. Claimant was provided with work restrictions of no pushing or pulling greater than 25, pounds. The ALJ credits the report of an onset of pain while at work in the medical records to be credible. The ALJ further finds that the description in the medical records that there was no specific activity or triggering cause for Claimant's pain to be credible and persuasive.

8. Claimant returned to PA Kiehnbaum on January 24, 2019 and reported he had started PT and that his physical therapist believed that Claimant's symptoms were related to the biceps head. PA Kiehnbaum noted that there was not a clear work trigger to the pain, although the pain began while Claimant was at work riding a snowmobile downhill. The ALJ finds that this report of an onset of symptoms is consistent with Claimant's testimony at hearing that he felt "something" in his shoulder when Claimant got back on the snowmobile. The ALJ further finds that this is consistent with PA Kiehnbaum's finding that there was no clear work trigger to the pain. PA Kiehnbaum

further noted that Claimant is very active at work and performs frequent pushing and pulling movements.

9. PA Kiehnbaum noted in her January 24, 2019 report that shoulder injuries are often multifactorial given the anatomy and complexity of the joint. PA Kiehnbaum also noted that there was no clear triggering event for the right shoulder pain and opined that it cannot be assumed that the work incident on December 30, 2018 was the sole cause of Claimant's shoulder condition. PA Kiehnbaum noted that Claimant had a history of a prior right shoulder SLAP tear repair in 2002, and that while this is not directly known to cause glenohumeral osteoarthritis, it could contribute to other symptoms in the shoulder such as a biceps tendinopathy, which Claimant appeared to have. PA Kiehnbaum further noted that Claimant performed a lot of repetitive movements and heavy lifting at work which over time could cause shoulder pathology.

10. Claimant was again examined by PA Kiehnbaum on February 12, 2019. Claimant reported his shoulder felt about the same and he still had pain along the biceps tendon head. PA Kiehnbaum recommended Claimant continue with PT and noted she would consider a referral to an orthopedic specialist if there was no improvement.

11. Claimant was examined by Dr. Scheuer on March 1, 2019. Dr. Scheuer noted that while this visit and prior visits were covered by workers' compensation, future visits would not be covered, nor would future PT appointments. Dr. Scheuer released Claimant to return to work without restrictions.

12. Respondents presented the testimony of Mr. J[Redacted], the workers' compensation manager for Employer. Mr. J[Redacted] testified that following Claimant's injury, Claimant returned to work for one day on January 17, 2019 driving a snow cat. Mr. J[Redacted] testified that Claimant returned to work later in March at one of the restaurants and in a ski shop, before returning to work in the snowmaking department on May 13, 2019. Claimant disputed Mr. J[Redacted]'s testimony regarding the work he performed for Employer in March of 2019 and the date of his return to the snowmaking department. The ALJ credits the testimony of Mr. J[Redacted] over the testimony of Claimant regarding the work performed by Claimant after he returned to work with Employer.

13. With regard to the issue of compensability, Claimant was at work when he first noticed pain in his shoulder. Claimant testified he noticed the pain while operating the snowmobile. Claimant testified he felt pain in his shoulder while at work in an area he had not felt pain before.

14. Unfortunately, the development of pain while on the job does not necessarily lead to a compensable workers' compensation injury. Claimant must establish that an injury occurred arising out of and in the course of his employment with employer. While the onset of pain while at work may establish that an injury occurred "in the course of" his employment with employer, Claimant must also establish that the injury "arose out of" his employment with employer.

15. In this case, Claimant has failed to establish how his work activities resulted in an injury to his right shoulder. Claimant testified he first noticed “something” in his shoulder while operating a snowmobile, but failed to establish how operating the snowmobile would lead to the injury identified by PA Kiehnbaum in this case. As noted by PA Kiehnbaum, Claimant has a prior history of a right shoulder injury resulting in a SLAP tear repair. PA Kiehnbaum further noted that this prior history could contribute to a biceps tendinopathy, which Claimant appeared to have. The ALJ credits the medical records and finds that Claimant has failed to establish that it is more likely than not that Claimant’s work activities aggravated, accelerated or combined with Claimant’s pre-existing condition to cause the need for medical treatment. The ALJ finds that Claimant’s need for medical treatment is more likely related to his prior SLAP tear repair.

16. The ALJ notes that if Claimant’s work injury aggravates a pre-existing condition, the workers’ compensation claim is compensable. However, in this case, there is a lack of credible evidence as to the development of any pain being related to work activities associated with Claimant’s employment. Claimant testified at hearing that he noticed the pain while operating a snowmobile, but did not establish that the use of the snowmobile resulted in an injury to the Claimant’s shoulder. Nor did Claimant explain how operating the snowmobile and maneuvering the snowmobile would result in an injury to his right shoulder. Claimant’s testimony that he later felt pain while attempting to reach out and move the lever on the snowmaking gun likewise does not establish that Claimant sustained an injury to his right shoulder arising out of his employment. Pursuant to Claimant’s testimony, he had already noticed the pain in his right shoulder while operating the snowmobile, and again noticed the pain while reaching out to pull the lever on the snowmaking gun. While Claimant began experiencing pain in his right shoulder while at work on December 30, 2018, the facts in this case fail to establish that the cause of that pain was related to Claimant’s work for employer.

17. Due to the fact that Claimant has failed to establish that his right shoulder injury arose out of and in the course of his employment with employer, his claim for compensation must be dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A Claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2018.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. A compensable injury is one which arises out of and in the course of employment. Section 8-41-301(1)(b), C.R.S. (2017). The "arising out of" test is one of causation. It requires that the injury have its origin in an employee's work-related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. In this regard, there is no presumption that injuries which occur in the course of a worker's employment arise out of the employment. *Finn v. Industrial Commission*, 165 Colo. 106, 437 P.2d 542 (1968); Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. Section 8-43-201, C.R.S. 2002; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989).

5. As found, Claimant has failed to establish by a preponderance of the evidence that he sustained an injury arising out of and in the course of his employment with employer. As found, the mere fact that Claimant began to experience pain in his right shoulder while operating a snowmobile is insufficient under the facts of this case to establish that he sustained an injury arising out of and in the course of his employment with employer. As found, Claimant has failed to establish that his injury had it's origin in Claimant's work related functions. Instead, the facts establish only that Claimant began experiencing pain in his right shoulder while at work on December 30, 2018, but fail to establish that the cause of that pain was related to Claimant's work for employer. As found, Claimant has failed to establish that his work activities aggravated, accelerated, or combined with his pre-existing condition to cause the need for medical treatment.

6. The ALJ recognizes that Claimant argued at hearing that the purpose of the Workers' Compensation Act indicates that facts should be construed liberally in favor of the injured workers to ensure that they receive the benefits they are entitled to

under the Act. However, this recitation of the law is incorrect. Facts involving the compensability of a claim cannot be interpreted liberally in favor of an injured worker or the employer.

7. Due to the fact that Claimant has failed to prove by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer, Claimant's claim for benefits must be denied.

ORDER

It is therefore ordered that:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

DATED: March 31, 2021

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered compensable injuries during the course and scope of her employment with Employer on January 26, 2018.

2. Whether Claimant has established by a preponderance of the evidence that she received reasonable, necessary and causally related medical treatment for her January 26, 2018 injuries.

3. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive Temporary Partial Disability (TPD) benefits for the period January 26, 2018 through February 13, 2018.

4. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Claimant worked for Employer as a Trimmer. Claimant's jobs duties involved trimming the tails from cows who reached her position on Employer's production line. She also placed a shackle on the cow's leg before the cow continued down the line. Before the cow reaches a trimmer, air has been injected into its head to render the cow senseless. Moreover, an employee has cut the cow's jugular vein to cause the cow to bleed to death. The time between when a cow is rendered senseless and reaching Claimant's position on the production line is approximately five minutes.

2. Claimant worked full time or 40 hours per week for Employer and earned $15.45 per hour. Her wages in the 12 weeks prior to January 26, 2018 totaled $11,251.86 for an Average Weekly Wage (AWW) of $937.66.

3. Claimant explained that on January 26, 2018 she was using scissors to cut off a cow's tail using scissors at work. She detailed that, while the cow was hanging upside down by one leg, it began moving and kicking. Claimant moved backwards away from the cow and struck a sink with her left upper buttock area. She did not fall to the ground and continued to perform her job duties. During her break she reported the incident to her supervisor and went to Employer's nursing station. Claimant received Ibuprofen and an ice pack then completed her work shift.

4. Claimant continued to follow-up at Employer's clinic but did not receive additional treatment. She noted that her hip and lower back symptoms failed to improve. Claimant commented that she was unable to perform her regular job duties because of her symptoms.

5. On February 13, 2018 Claimant visited Carlos Cebrian, M.D. at Employer's clinic. Claimant reported that she suffered injuries at work about two weeks earlier when she was cutting cow tails. She specifically noted that the cow's movements caused her to move backwards and strike her left buttock area against a sink. She did not fall to the ground. Claimant remarked that she was still experiencing pain in the area and bending caused pain into her hamstring. Dr. Cebrian noted that Claimant had full lumbar range of motion and was tender to palpation over the left gluteal muscle. He assessed Claimant with a left buttocks contusion. Dr. Cebrian determined that Claimant had reached Maximum Medical Improvement (MMI) without permanent impairment and released her to regular duty employment.

6. On March 20, 2018 Claimant returned to Dr. Cebrian for an examination. She reported worsening pain in her left hip and buttocks area. Claimant felt that repeated bending at work worsened her symptoms. Dr. Cebrian reiterated that Claimant had left hip/buttock pain and requested x-rays of the "left hip buttocks/coccyx and lumbar spine. He directed Claimant to continue working and recommended reassessment after x-rays.

7. On March 27, 2018 Claimant visited Kathy D'Angelo, M.D. at Employer's clinic. Claimant reported that on January 26, 2018 she struck her buttocks on the corner of a table at work. Dr. D'Angelo noted reports of tenderness to Claimant's left buttock region since the injury. On physical examination Claimant did not exhibit any pain to the area and had minimal complaints. A physical examination of Claimant's lumbar spine did not reveal any pain or tenderness to the sacrum or coccyx.

8. On April 17, 2018 Claimant returned to Dr. D'Angelo for an "evaluation of her lumbar spine issues." Dr. D'Angelo ordered a lumbar MRI due to Claimant's subjective complaints of pain. An April 23, 2018 MRI of her lumbar spine showed degenerative disc disease and facet arthropathy, worst at L4, and grade 1 degenerative anterolisthesis at L4-5 measuring 3 mm. The study also revealed an irregular posterior margin of the distal sacrum that could have been related an old chronic fracture or a subacute, nearly healed fracture.

9. On June 19, 2018 Claimant returned to Dr. D'Angelo for an evaluation. Claimant reported slight pain when she twisted at the waist, but no other difficulties. Dr. D'Angelo released Claimant at MMI to regular duty because she had completed physical therapy for her lumbar spine.

10. Dr. D'Angelo next evaluated Claimant on February 12, 2019 for a January 9, 2019 date of injury. Claimant complained of radiculopathy in the left leg down to the calf. She provided Dr. D'Angelo with several histories of injury. One was that her pain stemmed from a prior injury in 2018 when she hit her left buttock on a sink. Claimant reported her pain improved following the 2018 incident, but worsened in approximately November 2018 when she switched to a different job. The next history Claimant provided was that her pain never improved, but simply worsened. Finally, Claimant reported her pain began three months earlier when she was working in a specific job that required lifting. Dr. D'Angelo remarked that, "[e]very time [Claimant] was asked a question, the history seemingly changed." She commented that there was simply no mechanism of

injury. Dr. D’Angelo could not explain Claimant’s current complaints of radiculopathy in her left leg and down her calf based on a contusion to the left buttock. Claimant’s symptoms also could not be explained based on the lumbar MRI. Although Claimant requested massage therapy, Dr. D’Angelo concluded there was no work-related claim and thus could not refer her for treatment.

11. On April 16, 2019 Claimant returned to Dr. Cebrian for an evaluation. He noted that Claimant had visited Dr. D’Angelo in Employer’s clinic on February 12, 2019. She reported continued left buttock pain and attributed her symptoms to the January 26, 2018 incident when she struck a sink. Dr. Cebrian noted that diagnostic testing had revealed “some irregular findings in the sacrum that were possibly related to a subacute/acute fracture/chronic fracture of the sacrum.” Claimant remarked that walking worsened her condition but working did not cause too much of a problem. After conducting a physical examination Dr. Cebrian diagnosed Claimant with lumbar spine pain. Dr. Cebrian could not state whether Claimant’s symptoms were related to work activities and recommended x-rays of the lumbar spine and sacrum.

12. On April 30, 2019 Claimant again visited Dr. Cebrian. He noted that x-rays had revealed “stable diffuse multilevel degenerative disc space disease with an L4-5 spondylolisthesis which showed mild hypermobility with flexion.” Dr. Cebrian concluded that Claimant’s lumbar radiculopathy in her left leg and x-ray findings with spondylolisthesis were not related to, or aggravated by, her work activities for Employer. He noted that her prior Workers’ Compensation injury had resolved and “she has had no injury or exposure that would explain” her symptoms. Dr. Cebrian discharged Claimant from care for her “non-work-related condition.”

13. Claimant subsequently visited personal physician Elias Hernandez, M.D. for an evaluation. Dr. Hernandez recommended a spinal surgical evaluation with Anant Kumar, M.D. On September 20, 2019 Dr. Kumar performed a surgical evaluation. He noted a two year history of back pain and lower left leg radiculopathy in the five distribution with associated weakness. Claimant completed paperwork at the evaluation. One question asked, “[w]hen did and what caused your symptoms to improve or worsen?” Claimant responded “[a]t work when asked to walk up/down stairs more often approximately a year ago-worsened.”

14. Dr. Kumar ordered a comparison MRI for diagnostic purposes. On September 27, 2019 Claimant underwent a repeat MRI of her lumbar spine. The study revealed moderate central canal stenosis and mild bilateral neural foraminal stenosis at L4-L5, secondary to grade 1/2 anterolisthesis, a mild to moderate circumferential disc bulge, and severe facet arthropathy with ligamentum flavum hypertrophy. Compared with the prior MRI, Claimant had developed a 2 mm anterolisthesis with severe facet arthrosis at the L5-S1 level. The MRI also reflected additional mild diffuse degenerative disc disease and facet arthropathy with mild bilateral neural foraminal stenosis at L3-L4. Dr. Kumar planned a L4-S1 posterior fusion, a L4-S1 decompression, and a L4-5, L5-S1, T1 interbody fusion with posterior instrumentation.

15. On November 13, 2019 Dr. Kumar performed a posterior interbody lumbar fusion on L4-L5 and L5-S1. Postoperative x-rays reflected stability of the L4 through S1 posterior fusion. A July 1, 2020 MRI showed decreased stenosis at L4-L5 and L5-S1.

16. On February 12, 2021 the parties conducted the post-hearing evidentiary deposition of Dr. Kumar. He explained that it was not medically probable that Claimant's condition was caused by backing into a counter and striking her left hip and gluteal region on January 26, 2018. Dr. Kumar acknowledged that it was medically probable that Claimant's description of backing into a sink possibly caused a bruise to her back. However, her condition had returned to baseline. He remarked that most bruises heal uneventfully with Tylenol, Advil and ice to help discomfort. Dr. Kumar agreed with the assessments of Drs. Cebrian and D'Angelo that there was no causal relationship between Claimant's spondylolisthesis and the January 26, 2018 work incident.

17. On December 3, 2020 Claimant underwent an independent medical examination with Allison M. Fall, M.D. She also testified at the hearing in this matter. Based on her review of the records and evaluation of Claimant, Dr. Fall concurred with Drs. Kumar, Cebrian, and D'Angelo that Claimant's current condition is the result of degenerative disc disease in her lumbar spine and the surgery to address her condition. She emphasized that Claimant did not require any medical treatment for the January 26, 2018 work incident. Dr. Fall concluded that Claimant's current symptoms are unrelated to the January 26, 2018, work incident.

18. During the examination Dr. Fall asked Claimant to point to the area where she was injured. Claimant pointed to the upper, outer corner of her buttock on the left side. She did not report striking her lumbar spine on January 26, 2018. Dr. Fall determined that, when Claimant backed up and hit her upper buttock area on a sink on January 26, 2018, she would have suffered a contusion of the soft tissue that would not have changed any underlying pathology in her lumbar spine and hip joints. Claimant's contusion constituted a self-limited condition and resolved over time without treatment.

19. On December 14, 2020 Claimant underwent an independent medical examination with John S. Hughes, M.D. He determined that Claimant sustained a "high energy crush mechanism injury" to her lumbosacral spine on January 26, 2018 that caused her spondylolisthesis to become symptomatic. Dr. Hughes concluded that all of the treatment Claimant has received for her lumbar spine, including her fusion surgery, was related to the January 26, 2018 work incident.

20. Claimant has failed to demonstrate that it is more probably true than not that she suffered compensable injuries during the course and scope of her employment with Employer on January 26, 2018. Initially, Claimant explained that on January 26, 2018 she was using scissors to cut off a cow's tail at work. She detailed that, while the cow was hanging upside down by one leg, it began moving and kicking. Claimant moved backwards away from the cow and struck a sink with her left upper buttock area. She did not fall to the ground and continued to perform her job duties. Although Claimant presented to Employer's on-site clinic on the date of the incident and reported striking her buttock and hip on the edge of a sink, she received only conservative treatment including

ice and over-the-counter anti-inflammatory medications. Claimant returned to work and completed her shift.

21. On February 13, 2018 Claimant visited Dr. Cebrian at Employer's clinic. Claimant reported that she suffered injuries at work about two weeks earlier when she was cutting tails from cows. She remarked that she was still experiencing pain in the area and bending caused pain into her hamstring. Dr. Cebrian diagnosed Claimant with a left buttock contusion. Claimant treated her contusion with non-medical modalities, including ice, heat and over-the-counter painkillers. After performing a physical examination, Dr. Cebrian determined that Claimant had reached MMI without permanent impairment and released her to regular duty employment. His only recommendation was to use ice in the area as needed. He did not mention pain in Claimant's lumbar spine. When Claimant returned to Dr. Cebrian on March 20, 2018 her symptoms involved the lumbar spine. Claimant's treatment from that point forward, including a lumbar MRI, focused on her lumbar spine and not on a contusion to her left hip and buttock that resolved without medical treatment.

22. On April 17, 2018 Claimant visited Dr. D'Angelo at Employer's clinic for an evaluation of her lumbar spine issues. On June 19, 2018 Dr. D'Angelo released Claimant at MMI to regular duty because she had completed physical therapy for her lumbar spine. Claimant returned to Dr. D'Angelo on February 12, 2019 for a January 9, 2019 date of injury. She complained of radiculopathy in the left leg down to the calf and provided several histories of her injury. However, Dr. D'Angelo reasoned that there was simply no mechanism of injury and could not explain Claimant's symptoms of radiculopathy in her left leg down her calf based on a contusion to the left buttock. Claimant's symptoms also could not be explained based on the lumbar MRI. Although Claimant requested massage therapy, Dr. D'Angelo concluded there was no work-related claim and thus could not refer her for treatment. On April 30, 2019 Dr. Cebrian noted that x-rays had revealed "stable diffuse multilevel degenerative disc space disease with an L4-5 spondylolisthesis which showed mild hypermobility with flexion." Dr. Cebrian concluded that Claimant's lumbar radiculopathy in her left leg and x-ray findings with spondylolisthesis were not related to, or aggravated by, her work activities for Employer. He noted that her prior Workers' Compensation injury had resolved and "she has had no injury or exposure that would explain" her symptoms. Dr. Cebrian discharged Claimant from care for her "non-work-related condition."

23. Claimant was subsequently diagnosed with significant degenerative lumbar pathology. Dr. Kumar noted that Claimant had developed a 2 mm anterolisthesis with severe facet arthrosis at the L5-S1 level. The MRI also reflected additional mild diffuse degenerative disc disease and facet arthropathy with mild bilateral neural foraminal stenosis at L3-L4. On November 13, 2019 Dr. Kumar performed a posterior interbody lumbar fusion on L4-L5 and L5-S1.

24. Dr. Kumar explained that it was not medically probable that Claimant's lumbar spine condition was caused by backing into a counter and striking her left hip and gluteal region on January 26, 2018. Although he acknowledged that it was medically probable that Claimant's description of backing into a sink possibly caused a bruise to her

back, Claimant’s condition had returned o baseline. He remarked that most bruises heal uneventfully with Tylenol, Advil and ice to help with discomfort. Dr. Kumar agreed with the assessments of Drs. Cebrian and D’Angelo that there was no causal relationship between Claimant’s spondylolisthesis and the January 26, 2018 work incident. Moreover, Dr. Fall concurred with Drs. Kumar, Cebrian, and D’Angelo that Claimant’s current condition was the result of degenerative disc disease in her lumbar spine and the surgery to address her condition. She emphasized that Claimant did not require any medical treatment for the January 26, 2018 work incident. Notably, Drs. Kumar and Fall persuasively explained that Claimant’s buttock contusion at work was self-limiting and resolved with the passage of time. In fact, Claimant continued to work her regular shift without restrictions after the incident until undergoing surgery to address her degenerative disc disease.

25. In contrast, Dr. Hughes determined that Claimant sustained a “high energy crush mechanism injury” to her lumbosacral spine on January 26, 2018 that caused her spondylolisthesis to become symptomatic. Dr. Hughes concluded that all of the treatment Claimant has received for her lumbar spine, including her fusion surgery, was related to the January 26, 2018 work incident. However, Dr. Hughes failed to explain how striking her buttock and hip on the edge of a sink caused Claimant to suffer a “high energy crush injury.” Based on a review of the medical records and persuasive medical opinions of Drs. Cebrian, D’Angelo, Kumar and Fall, Claimant did not likely suffer an injury requiring medical treatment, resulting in lost time or permanent physical impairment on January 26, 2018. Moreover, Claimant has failed to demonstrate that she aggravated a pre-existing condition when she bumped into a sink while backing away from a cow carcass. Accordingly, Claimant’s claim for Workers’ Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24,

2020); *see Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered compensable injuries during the course and scope of her employment with Employer on January 26, 2018. Initially, Claimant explained that on January 26, 2018 she was using scissors to cut off a cow's tail at work. She detailed that, while the cow was hanging upside down by one leg, it began moving and kicking. Claimant moved backwards away from the cow and struck a sink with her left upper buttock area. She did not fall to the ground and continued to perform her job duties. Although Claimant presented to Employer's on-site clinic on the date of the incident and reported striking her buttock and hip on the edge of a sink, she received only conservative treatment including ice and over-the-counter anti-inflammatory medications. Claimant returned to work and completed her shift.

9. As found, on February 13, 2018 Claimant visited Dr. Cebrian at Employer's clinic. Claimant reported that she suffered injuries at work about two weeks earlier when she was cutting tails from cows. She remarked that she was still experiencing pain in the area and bending caused pain into her hamstring. Dr. Cebrian diagnosed Claimant with a left buttock contusion. Claimant treated her contusion with non-medical modalities, including ice, heat and over-the-counter painkillers. After performing a physical examination, Dr. Cebrian determined that Claimant had reached MMI without permanent impairment and released her to regular duty employment. His only recommendation was to use ice in the area as needed. He did not mention pain in Claimant's lumbar spine. When Claimant returned to Dr. Cebrian on March 20, 2018 her symptoms involved the lumbar spine. Claimant's treatment from that point forward, including a lumbar MRI, focused on her lumbar spine and not on a contusion to her left hip and buttock that resolved without medical treatment.

10. As found, on April 17, 2018 Claimant visited Dr. D'Angelo at Employer's clinic for an evaluation of her lumbar spine issues. On June 19, 2018 Dr. D'Angelo released Claimant at MMI to regular duty because she had completed physical therapy for her lumbar spine. Claimant returned to Dr. D'Angelo on February 12, 2019 for a January 9, 2019 date of injury. She complained of radiculopathy in the left leg down to the calf and provided several histories of her injury. However, Dr. D'Angelo reasoned that there was simply no mechanism of injury and could not explain Claimant's symptoms of radiculopathy in her left leg down her calf based on a contusion to the left buttock. Claimant's symptoms also could not be explained based on the lumbar MRI. Although Claimant requested massage therapy, Dr. D'Angelo concluded there was no work-related claim and thus could not refer her for treatment. On April 30, 2019 Dr. Cebrian noted that

x-rays had revealed "stable diffuse multilevel degenerative disc space disease with an L4-5 spondylolisthesis which showed mild hypermobility with flexion." Dr. Cebrian concluded that Claimant's lumbar radiculopathy in her left leg and x-ray findings with spondylolisthesis were not related to, or aggravated by, her work activities for Employer. He noted that her prior Workers' Compensation injury had resolved and "she has had no injury or exposure that would explain" her symptoms. Dr. Cebrian discharged Claimant from care for her "non-work-related condition."

11. As found, Claimant was subsequently diagnosed with significant degenerative lumbar pathology. Dr. Kumar noted that Claimant had developed a 2 mm anterolisthesis with severe facet arthrosis at the L5-S1 level. The MRI also reflected additional mild diffuse degenerative disc disease and facet arthropathy with mild bilateral neural foraminal stenosis at L3-L4. On November 13, 2019 Dr. Kumar performed a posterior interbody lumbar fusion on L4-L5 and L5-S1.

12. As found, Dr. Kumar explained that it was not medically probable that Claimant's lumbar spine condition was caused by backing into a counter and striking her left hip and gluteal region on January 26, 2018. Although he acknowledged that it was medically probable that Claimant's description of backing into a sink possibly caused a bruise to her back, Claimant's condition had returned o baseline. He remarked that most bruises heal uneventfully with Tylenol, Advil and ice to help with discomfort. Dr. Kumar agreed with the assessments of Drs. Cebrian and D'Angelo that there was no causal relationship between Claimant's spondylolisthesis and the January 26, 2018 work incident. Moreover, Dr. Fall concurred with Drs. Kumar, Cebrian, and D'Angelo that Claimant's current condition was the result of degenerative disc disease in her lumbar spine and the surgery to address her condition. She emphasized that Claimant did not require any medical treatment for the January 26, 2018 work incident. Notably, Drs. Kumar and Fall persuasively explained that Claimant's buttock contusion at work was self-limiting and resolved with the passage of time. In fact, Claimant continued to work her regular shift without restrictions after the incident until undergoing surgery to address her degenerative disc disease.

13. As found, in contrast, Dr. Hughes determined that Claimant sustained a "high energy crush mechanism injury" to her lumbosacral spine on January 26, 2018 that caused her spondylolisthesis to become symptomatic. Dr. Hughes concluded that all of the treatment Claimant has received for her lumbar spine, including her fusion surgery, was related to the January 26, 2018 work incident. However, Dr. Hughes failed to explain how striking her buttock and hip on the edge of a sink caused Claimant to suffer a "high energy crush injury." Based on a review of the medical records and persuasive medical opinions of Drs. Cebrian, D'Angelo, Kumar and Fall, Claimant did not likely suffer an injury requiring medical treatment, resulting in lost time or permanent physical impairment on January 26, 2018. Moreover, Claimant has failed to demonstrate that she aggravated a pre-existing condition when she bumped into a sink while backing away from a cow carcass. Accordingly, Claimant's claim for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: March 31, 2021.

WORKERS' COMPENSATION NO. 5-115-274-001

ISSUES

I. Whether Landow Performance invoices for services dated October 28, 29, 30, 31, 2019 and November 1, 2019 were for reasonable, necessary, and related medical benefits to Claimant's work injury and thus are the responsibility of Respondents for payment?

II. Whether maintenance medical benefits are reasonable, necessary, and related to Claimant's work injury?

III. Whether maintenance medical treatment from Sports Rehab LA is reasonable, necessary, and related to Claimant's admitted industrial injury?

IV. Whether Claimant sustained permanent disfigurement because of his work injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. On May 13, 2019, Claimant sustained an admitted work-related injury while working for Employer as a professional football player. **Ex. K:25**. He was participating in drills that involved a change of direction. **Ex. C:10**. He went from back pedaling to rapidly accelerating forward and felt a pop in the back of his left heel and calf, which was an Achilles tendon tear. **Exs. A:1, A:5, C:10**.
2. On the date of his injury, Claimant saw the team physician, Martin Boublik, M.D. **Ex. C:10**.
3. Dr. Boublik referred Claimant to Joshua A. Metzl, M.D., for surgical treatment of his injury.
4. On May 15, 2019, Dr. Metzl performed a left Achilles tendon repair. **Ex. D:11**.
5. On June 19, 2019, Claimant began working with a team trainer and started a rehabilitation program for his Achilles injury at the [Redacted]' - Employer's - strength training facility.
6. On September 12, 2019, Dr. Boublik documented Claimant was doing well. He noted Claimant was building strength and increasing his activity level. Lastly, he indicated Claimant was going to begin a more aggressive physical therapy program.
7. On October 24, 2019, Claimant was advised by Employer's head trainer, Steve Antonopulos, that he could no longer perform his rehabilitation at Employer's facility. Therefore, Claimant went to Landow Performance to complete his rehabilitation.

8. Claimant continued his rehabilitation program for his work injury at Landow Performance and attended 5 rehabilitation sessions on October 28, 2019, October 29, 2019, October 30, 2019, October 31, 2019, and November 1, 2019 at a cost of $75.00 per session. **Ex. 6:12.** However, because Claimant was required to obtain and continue his rehabilitation treatment on his own, there is no indication Claimant or Landow Performance was informed by Respondents where to send the bills for his ongoing rehabilitation treatment that was reasonable and necessary for Claimant to reach MMI.

9. On October 31, 2019, Dr. Metzl recommended that Claimant participate in "performance strength training with a strength coach in order to continue rehab in conjunction with physical therapy."

10. On January 9, 2020, Claimant returned to Dr. Metzl. At this appointment, Dr. Metzl concluded Claimant was doing quite will. He noted Claimant had been increasing his activity level and had been diligent with his therapy. Dr. Metzl further noted that Claimant was 8 months post-surgery and cleared to play football. He concluded that:

    > At this point he has made tremendous progress. He is fit to play professional football. I have cleared him from an Achilles perspective to resume any activity as tolerated. ***He will see me back on as as-needed basis***. (Emphasis added.) **Ex. 4:6.**

11. Based on Dr. Metzl's January 9, 2020 report, it was concluded that Claimant reached MMI as of January 9, 2020. As a result, on January 9, 2020, Dr. Metzl concluded Claimant should be allowed the opportunity to return for future medical treatment on an as needed basis should Claimant need additional medical treatment to relieve Claimant from the effects of his work injury, to maintain maximum medical improvement, or to assess a possible increase in symptoms. Thus, although a specific course of treatment was not recommended, Dr. Metzl did state that Claimant should be allowed to return for additional medical treatment if needed. As a result, Dr. Metzl's statements equate to a recommendation that Claimant be provided a general award of maintenance medical treatment as of January 9, 2020, which is the date Claimant was placed at MMI.

12. Once Claimant was no longer allowed to train in Employer's facility, he returned to his home in California. Claimant was initially unable to continue training due to closing of facilities following the start of the COVID pandemic.

13. Claimant, however, re-started his rehabilitation and strengthening for his Achilles injury in approximately June 2020. At that time, Claimant still had pain in the region of his left Achilles, loss of motion/tightness and weakness with swelling after activity. Moreover, Claimant had not regained full muscle mass in his left calf following his post-surgery atrophy.

14. Claimant started rehabilitation and strengthening at the Sports Rehab LA facility in California. Claimant described strengthening and mobility exercises, as well as medical treatment including electrical stimulation, ultrasound, manual stretching and

massage following his exercises to address pain, tightness and swelling of his left Achilles region. Claimant testified this treatment allowed him to recover from his work-out and allowed him to perform his rehabilitation exercises 4-5 days per week and maximize the benefits from strengthening and agility exercises.

15. Claimant, however, also engaged in overall strengthening and conditioning at the Sports Rehab LA facility in order to be fit to play professional football. Moreover, the treatment records from Sports Rehab LA were not admitted into evidence. As a result, the record was not fully developed regarding the amount of treatment directed specifically towards Claimant's Achilles injury. Based on Claimant's testimony, it appears that the treatment directed towards Claimant's Achilles was a small portion of Claimant's overall strengthening and conditioning program at Sports Rehab LA that was required to maintain his ability to play professional football. Plus, Claimant failed to provide any prescription outlining specific maintenance treatment for his Achilles injury and the provision of such treatment at Sports Rehab LA. Therefore, based on the record, the ALJ is unable to determine whether any of the treatment Claimant received at Sports Rehab LA is reasonable, necessary, and related maintenance treatment to relieve Claimant from the effects of his work injury.

16. On July 16, 2020, Dr. Boublik completed a WC164 form, stating that Claimant reached maximum medical improvement ("MMI") on January 9, 2020, the date he was last seen by Dr. Metzl, with no permanent impairment. **Exs. F:15; 3:5**.

17. Shortly thereafter, on July 27, 2020, Dr. Boublik examined Claimant for a 2020 preseason physical examination. **Ex. G:17**. He authored a narrative report stating that Claimant's left Achilles repair was fully recovered and that Claimant was fit to play professional football. **Ex. G:16**.

18. On July 28, 2020, the day after Dr. Boublik stated Claimant had fully recovered and was fit to play profession football, Claimant was terminated by the [Redacted]. **Ex. J:24**. Since then, as Claimant testified, he has attended multiple try-outs to be signed to another professional football team. He continues to maintain his body in professional-ready football shape in hopes of playing professional football.

19. On August 7, 2020, and despite Dr. Metzl stating that Claimant should be allowed to return on an as needed basis, Respondents filed a Final Admission of Liability denying maintenance medical benefits and admitting to no impairment. **Ex. K:27**.

20. On October 21, 2020, Claimant filed an Application for Hearing and endorsed the issue of "Medical Benefits, Authorized provider, Reasonably necessary, and Maintenance Medical Treatment."

21. Respondents filed a Response to Application for Hearing.[1] Respondents did not, however, endorse any affirmative defenses.

22. On December 23, 2020, Claimant attended a Respondent-sponsored independent medical examination ("IME") by video with Barry A. Ogin, M.D. **Exs. A-B**. Dr. Ogin

[1] Although Respondents' Response indicates it is in response to Claimant's October 21, 2020, Application for Hearing, the Response is dated as being mailed/served on October 20, 2020 – the day before Claimant filed his Application. Therefore, the exact date the Response was filed cannot be discerned from the record. Regardless, the date it was filed is irrelevant to any issue before the court.

reported that Claimant made various different statements regarding the focus of his workouts, but admitted, “that most of the training course is whole body training,” (**Ex. A:7**) and “even if he had never had the ankle injury, *he would still be doing the strength training and conditioning at the same rate on an independent basis* regardless.” (**Ex:A:8**, emphasis in original). Dr. Ogin agreed with Dr. Boublik, that Claimant is at MMI and does not require formal maintenance care. **Ex. A:9**.

23. At hearing, Claimant testified that he continues to work out 5-days a week and admitted that he never called Dr. Boublik and expressed his opinion that he required additional medical care or treatment. His workouts include speed and powers drills designed to enhance position specific movements, positional workouts to help dial in technique to allow for better on the field transfer, metabolic conditioning specific per position, recovery, and regeneration strategies to help aid in recovery, and corrective exercises, myofascial maintenance strategies, active isolated mobility and muscle activation techniques. He also testified that he has had tendinitis since he was in high school, which required orthotics and shoes consistently.

24. Claimant’s testimony was consistent and supported by the records submitted at hearing. As a result, the ALJ finds Claimant’s testimony to be credible and persuasive.

25. Drs. Boublik and Ogin testified at hearing that the 1-on-1 personal training at Landow Performance on October 28, 2019, October 29, 2019, October 30, 2019, October 31, 2019, and November 1, 2019 that occurred prior to MMI was reasonable, necessary, and related to the work injury, but that Claimant does not require ongoing maintenance medical care related to this claim. They agreed that Claimant should continue to physically exercise to maintain his body in professional level football shape, but that the training is not related to his Achilles injury despite that there may be a portion of that training that includes the Achilles. Dr. Ogin testified that Claimant may be, in fact, overtraining, causing whatever discomfort he may physically have. Further, they agreed that at the time of MMI, Claimant did not have an examination that revealed a tendinitis issue that would result in the need for orthotics, shoes, or ongoing care and treatment.

26. The ALJ credits that portion of Dr. Ogin’s testimony that concluded the treatment Claimant received at Landow Performance was reasonable, necessary, and related to treat Claimant from the effects of his work injury. The ALJ also credits that portion of Dr. Ogin’s testimony that Claimant may be overtraining and developing a tendinitis. The fact that Claimant might be overtraining supports a finding that Claimant needs maintenance medical treatment to relieve him from the effects of his work injury and maintain MMI. In essence, it is the lack of medical guidance that is resulting in Claimant overtraining and possibly developing tendonitis. As indicated by Dr. Metzl on January 9, 2020, when Claimant was placed at MMI, Claimant should be able to see him “on as as-needed basis.” The ALJ finds that Claimant needs to see Dr. Metzl, or another physician, so that a physician can guide Claimant’s conditioning in a manner that allows Claimant to maintain MMI and relieve him from the effects of his work injury.

27. In addition, Dr. Boublik testified that Claimant may never regain the bulk he lost in his calf. Claimant, however, testified that he is trying to rebuild his muscle and bulk in his calf. This type of medical "advice" provided at the hearing is the type of maintenance medical treatment Claimant requires to maintain MMI and relieve him from the effects of his injury. In other words, Claimant needs maintenance medical treatment provided by a physician to guide his ongoing workouts in a manner that prevents overtraining, reinjury, and allows him to maintain his MMI status.

28. Due to his surgery, Claimant sustained a scar that is disfiguring on his left foot/ankle. Based on the photographs submitted by Claimant, the scar is in the shape of the letter J. The skin color of the scar is darker than the surrounding skin. The scar is approximately 3 inches long with the hook of the J being approximately 1 ½ inches long. The width of the scar is approximately ½ of an inch. Therefore, the total scar is approximately 4 ½ inches long by ½ inch wide.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Landow Performance invoices for services dated October 28, 29, 30, 31, 2019 and November 1, 2019 were for reasonable, necessary, and related medical benefits to Claimant's work injury and thus are the responsibility of Respondents for payment?

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997).

As found, On May 15, 2019, Dr. Metzl performed a left Achilles tendon repair. On June 19, 2019, Claimant began working with a team trainer and started a rehabilitation program at the Employer's strength training facility. On September 12, 2019, Dr. Boublik documented Claimant was doing well. He noted Claimant was building strength and increasing his activity level. Lastly, he indicated Claimant was going to begin a more aggressive physical therapy program. On October 24, 2019, Claimant was advised by Employer's head trainer, Steve Antonopulos, that he could no longer perform his rehabilitation at Employer's facility. Therefore, Claimant went to Landow Performance to complete his rehabilitation.

As found, Claimant continued his rehabilitation program at Landow Peformance and attended 5 rehabilitation sessions on October 28, 2019, October 29, 2019, October 30, 2019, October 31, 2019, and November 1, 2019 at a cost of $75.00 per session. Ex. 6:12. Moreover, on October 31, 2019, Dr. Metzl recommended that Claimant participate in "performance strength training with a strength coach in order to continue rehab in conjunction with physical therapy."

Drs. Boublik and Ogin testified at hearing that the 1-on-1 personal training at Landow Performance on October 28, 2019, October 29, 2019, October 30, 2019, October 31, 2019, and November 1, 2019 that occurred prior to MMI was reasonable, necessary, and related to the work injury - and the ALJ credits that portion of their testimony.

Respondents contend, in their post-hearing proposed order, that even though the treatment is reasonable, necessary, and related, they are not responsible for the treatment because the services were not properly or timely billed pursuant to W.C.R.P. 16-8-1 and 16-8-2(A).

W.C.R.P. 16-8-1 governs what a provider is required to do when seeking reimbursement – without a hearing. As a result, Claimant is not required to submit billing records consistent with W.C.R.P. 16-8-1 for an ALJ to find a Respondent liable for the underlying treatment.

Moreover, the billing requirements of W.C.R.P. 16-8-2(A), which requires a provider to submit bills within 120 days, is also inapplicable for several reasons. First, the provider is not seeking reimbursement – Claimant is. Second, even if W.C.R.P. 16-8-2(A) is applicable, such Rule is an affirmative defense and it was not raised by Respondents prior to the hearing. Rules of this type are analogous to statutes of limitation which create affirmative defenses to a claim for benefits. Affirmative defenses are waived unless raised prior to the hearing. *Kersting v. Industrial Commission*, 39 Colo.App. 297, 567 P.2d 394 (1977). Only with advance notice can the party against whom a defense is raised prepare to meet the asserted bar. *Kersting v. Industrial Commission*, 567 P.2d at 396; *Reese v. Cripple Creek Mountain Estates Country Club*, Colo.App. No. 91CA0291, November 29, 1991 (not selected for publication). *Grubbs v. Simmons Elec*., W.C. 3-859-532, 3-905-277, 3-979-946, (Dec. 5, 1991). Third, there is no indication Respondents complied with Rule 16-8-2(C) and advised Claimant or Landow Performance that they were covering the expense and where to send the bills. Fourth, Respondents' interpretation appears inconsistent with C.R.S. 8-42-101(6) which would appear to allow Claimant to merely pay the Landow Performance bills and then seek reimbursement from Respondents - without any limitation of the billing limitations set forth in W.C.R.P. 16-8-1 and 16-8-2(A).

As a result, the ALJ finds and concludes that Claimant established by a preponderance of the evidence that Respondents are liable for the Landow Performance bills.

II. Whether maintenance medical benefits are reasonable, necessary, and related to Claimant's work injury?

The need for medical treatment may extend beyond the point of maximum medical improvement where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

As found, on January 9, 2020, Dr. Wetzl evaluated Claimant. It was concluded that as of this appointment, Claimant reached MMI. Dr. Wetzl also indicated Claimant should be able to see him on "an as-needed basis." The only way Claimant can see Dr. Wetzl on an "as-needed" basis after being placed at MMI is if Claimant is provided a general award of maintenance medical benefits.

Plus, the ALJ credited that portion of Dr. Ogin's testimony that concluded Claimant may be overtraining and developing a tendinitis. The fact that Claimant might be overtraining supports a finding that Claimant needs maintenance medical treatment to relieve him from the effects of his work injury and maintain MMI. In essence, it is the lack of medical guidance that is resulting in Claimant overtraining and possibly developing tendonitis. As indicated by Dr. Metzl on January 9, 2020, when Claimant was placed at MMI, Claimant should be able to see him "on as as-needed basis." The ALJ finds that Claimant needs to see Dr. Metzl, or another physician, so that a physician can guide Claimant's conditioning in a manner that allows Claimant to maintain MMI and relieve him from the effects of his work injury.

Moreover, as found, according to Dr. Boublik, Claimant may never regain the bulk he lost in his calf. Claimant, however, testified that he is trying to rebuild his muscle and bulk in his calf. This type of medical "advice" provided at the hearing by Dr. Boublik is the type of maintenance medical treatment Claimant requires to maintain MMI and relieve him from the effects of his injury. In other words, and Claimant needs maintenance medical treatment from a physician to guide his ongoing workouts in a manner that prevents overtraining, reinjury, and allows him to maintain his MMI status.

Therefore, the ALJ finds and concludes that Claimant established by a preponderance of the evidence that he is entitled to a general award of maintenance medical treatment.

III. Whether maintenance medical treatment from Sports Rehab LA is reasonable, necessary, and related to Claimant's admitted industrial injury?

Respondents are liable to provide maintenance medical treatment that is reasonable and necessary relieve the effects of the industrial injury or maintain MMI. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As found, the majority of the treatment Claimant received at Sports Rehab LA is related to his general and overall conditioning to enable Claimant to play professional football. There is, however, a component of his treatment at Sports Rehab LA that is directed towards relieving him from the effects of his work injury and maintaining MMI. The record, however, was not fully developed regarding this issue so that only a portion of that treatment can be ordered. Therefore, this issue is reserved for future determination.

IV. Whether Claimant sustained permanent disfigurement as a result of his work injury.

The ALJ finds and concludes that because of his work injury, Claimant sustained a surgical scar that is disfiguring on his left foot/ankle. Based on the photographs submitted by Claimant, the scar is in the shape of the letter J. The skin color of the scar is darker than the surrounding skin. The scar is approximately 3 inches long with the hook of the scar – the J portion - being approximately 1 ½ inches long. The width of the scar is approximately ½ of an inch. Therefore, the total scar is approximately 4 ½ inches long by ½ inch wide.

As a result, Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation. Section 8-42-108 (1), C.R.S. The ALJ concludes that Claimant shall be awarded $2,000 for disfigurement benefits.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay the Landow Performance invoices for the following dates of service:
   a. October 28, 2019.
   b. October 29, 2019.
   c. October 30, 2019.
   d. October 31, 2019.
   e. November 1, 2019.
2. Claimant is awarded a general award of maintenance medical benefits.
3. Whether maintenance medical treatment from Sports Rehab LA is reasonable, necessary, and related to Claimant’s admitted industrial injury is reserved for future determination.
4. Respondents shall pay Claimant $2,000.00 in disfigurement benefits. The Respondents shall, however, be given credit for any amount previously paid for disfigurement in connection with this claim.
5. Any other issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 18, 2021.

Denver, CO 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence she sustained a compensable industrial injury on January 29, 2019.

II. If Claimant has proven a compensable injury, whether Claimant proved by a preponderance of the evidence that the medical treatment she received from Concentra was reasonable and necessary to cure and relieve Claimant from the effects of the industrial injury.

III. If Claimant has proven a compensable injury, determination of authorized provider.

FINDINGS OF FACT

1. Claimant is a 40-year-old female who worked for Employer as a teaching instructor. Claimant was also in a doctorate program.

2. Claimant has a long-standing history of adjustment disorder with mixed anxiety and depressed mood, bipolar II disorder, ADHD and borderline personality disorder. Claimant's primary care records with Kaiser Permanente document headache and light sensitivity issues, left hip, left shoulder, and neck complaints in 2012; left shoulder complaints in 2014; and blurry vision in 2016-2018. As of January 21, 2019, Claimant was continuing to treat for anxiety and depression. Her primary care physician at Kaiser, Brownie K. Flesche, M.D., noted Claimant's reports of stress, difficulty focusing and concentrating. Dr. Flesche noted Claimant was suffering from caregiver stress, as Claimant was caring for her husband, who is a double amputee.

3. On January 29, 2019, Claimant slipped and fell on ice while crossing the street from the employee parking lot to her work location on campus. The incident occurred at approximately 8:30 a.m. Claimant testified she landed on her back and left side, and does not recall hitting her head. Claimant got up and proceed to her work location, where she notified Employer of the incident.

4. Claimant subsequently presented to Valerie Skvarca, PA-C at Concentra at 10:53 a.m. that morning. Claimant reported slipping and falling straight back, hitting the back of her head, left elbow and low back. Claimant denied loss of consciousness but stated she was unable to get up right away due to dizziness. She complained of pain in her left shoulder, left elbow, left lower back radiating into her left hip, headaches, dizziness, and confusion. On examination, Claimant's head/face was noted to be normocephalic and atraumatic with no external swelling and no evidence of trauma. Examination of the left shoulder, left upper extremity, left hip and lumbosacral spine

were normal. PA-C Skvarca noted impaired attention, impaired concentration, impaired judgment and impaired thought initiation, decreased responsiveness, and slow speech. PA-C Skvarca gave an assessment of closed head injury and contusions of the left elbow, left shoulder, and lumbar spine. She referred Claimant to the emergency department for an emergent neurology evaluation and head CT.

5. Claimant was transported to Porter Adventist Hospital by the paramedics who noted a Glasgow Coma score of 15.

6. Claimant arrived at Porter Adventist Hospital at 12:22 p.m. Her Glasgow Coma score was again noted to be 15. The medical record documents Claimant reported slipping and falling on her left side and back and hitting her head but denied loss of consciousness; however, the triage notes state Claimant denied striking her head. Claimant complained of headache, nausea, fatigue, resolved confusion, neck and lower back pain. On examination, diffuse tenderness in the midline and left lateral paraspinal soft tissue of the neck was noted, as well as midline discomfort in the lumbar region and lateral soft tissue tenderness. Neurologic and psychologic examination was normal with "no appreciable traumatic amnestic properties or other altered cognition." Claimant's eyes were normal and her head was atraumatic. There was no evidence of scalp hematoma, contusion, or depression. A CT scan of the head and x-rays of the cervical and lumbar spine demonstrated no acute findings. Claimant was diagnosed with a concussion without loss of consciousness and muscle strain, prescribed medication for nausea, pain and muscle relaxation, and advised to rest for 48 hours and avoid exertion, computer and screen time.

7. Claimant continued to treat with Concentra. On January 31, 2019, Claimant saw Michael Roberts, PA and reported some improvement, but occasional photophobia and dizziness, resolved headaches, and continued lower back pain. Physical examination was normal with the exception of tenderness at the coccygeal area. No findings were noted regarding the cervical spine. PA Roberts noted slow speech and slowness in serial subtraction, but normal judgment, insight and memory. Claimant was referred to physical therapy for a neck strain. At physical therapy on February 4, 2019, Claimant reported increased pain and discomfort into the left shoulder, left neck and head pain, as well as difficulty engaging in mentally taxing activities and dizziness with increased head movements due to medication use. The physical therapist noted Claimant's signs and symptoms were consistent with acute to subacute post cervical/shoulder injury after fall. She noted Claimant's shoulder range of motion was normal but painful, and cervical range of motion was increased but limited into right side bending with discomfort. She further noted negative symptoms associated with any severe ligamentous injury to the cervical spine, but hypersensitivity into left lateral cervical musculature with palpation.

8. On February 6, 2019, Claimant reported to PA-C Skvarca having difficulties focusing at work, but believed her cognitive deficits may be due to an increase in her pre-existing anxiety. PA-C Skvarca noted that Claimant's psychosocial factors may contribute to her lack of progress. She encouraged Claimant to contact her psychiatrist.

9. On February 12, 2019, Claimant attended vestibular therapy with complaints of issues with concentration, feeling woozy, difficulty reading music, a throbbing sensation in the left eye, ear popping, light and sound sensitivity, eye pressure when reading, and vertigo. The therapist noted Claimant reported previous impairment to affected area with functional deficits. Claimant reported that her psychological medications made her slightly dizzy when she first started taking it. Visual convergence was noted.

10. On February 13, 2019, Claimant saw Stephen Danahey, M.D. at Concentra with reports of increased pain. Claimant reported that she did not feel she hit her head during the January 29, 2019 fall. She reported feeling “awful”, and complaining of a sensation of a "twisting knife in her right ear" and like there is "something sticking in her left eye". Claimant further reported that her posterior neck felt very tense and that she felt like her spine was bruised. She stated she was having a very difficult time trying to teach, with issues focusing and making decisions. Physical examination was normal. Dr. Danahey specifically noted no spasms, normal sensation, normal grip and negative spurling regarding the cervical spine.

11. Dr. Danahey wrote, “There are certainly some red flags here, but having said that her presentation and demeanor appear genuine. It sounds like she is having a very difficult time at work. I will see if being away from teaching for a bit results in any functional gain on her part.” (Ex. 4, p. 53-54).

12. On February 25, 2019, Claimant reported to Dr. Danahey experiencing anxiety over grading deadlines. Examination of the cervical and lumbar spine revealed tenderness with full range of motion. No spasms were noted. He referred added adjustment reaction to Claimant’s diagnoses and referred her for psychological evaluation with Ron Carbaugh, Psy.D.

13. On February 28, 2019, Claimant reported to Dr. Danahey that her left arm had been “wobbly” and moving spontaneously on its own, for which Dr. Danahey noted he knew no etiology. She reported no other major complaints besides constant fatigue, and noted she was going to speak to her psychiatrist to adjust her medications.

14. Claimant first presented to Dr. Carbaugh on February 26, 2019. Dr. Carbaugh tested Claimant and found Claimant’s depression score significantly above the score for the average pain patient, suggesting serious depression. Claimant’s anxiety score was more than the average pain patient’s, while somatization scores were close to the scores of the average pain patient. Dr. Carbaugh opined it is very likely Claimant’s depression is involved in her symptomatology, and noted that efforts for long-term rehabilitation may be hampered by Claimant’s emotional symptoms. He noted Claimant’s reports of other significant stressors in her life, and concluded that Claimant’s emotional distress is not solely attributable to the January 29, 2019 slip and fall. Dr. Carbaugh recommended Claimant undergo biofeedback therapy, follow-up with her personal psychiatrist, and a brief course of pain and adjustment counseling. He cautioned that Claimant’s providers

> [s]hould be aware of the role of psychological and other none-injury related factors impacting her overall presentation, her pain and symptom perception, and response to appropriate medical care. She is the type of patient who will request additional intervention, and have a poor response to treatment, specifically interventional strategies. In sum, in [Claimant's] case more so than generally is the case, treatment should focus on signs and not symptoms. (Ex. G, p.272).

15. At a follow-up evaluation with Dr. Danahey on March 8, 2019, Claimant reported word-finding difficulty, an increase in dizziness, and left arm twitching, which Claimant felt might be a "pain/anxiety feedback loop." Claimant reported experiencing explosive moods. She had uncertainty about whether she was taking her medications too frequently.

16. On March 8, 2019, Claimant sought treatment at St. Joseph's hospital with complaints of paresthesia, headache, persistent dizziness and increased anxiety. Examination was negative for any focal neuro deficits. Claimant was given pain medication and discharged.

17. At the request of Claimant, on March 22, 2019, Dr. Danahey drafted a handwritten letter. Dr. Danahey stated Claimant sustained a slip and fall injury on ice and was diagnosed with a closed head injury, multiple musculoskeletal contusions, and an adjustment reaction to her injury with some aggravation of pre-existing emotional and psychological symptoms. He noted Claimant had experienced some difficulty with short-term memory and concentration. He stated that Claimant has been progressing well with treatment, but that her injury had an effect on her ability to teach, attend classes, and complete her coursework. Dr. Danahey concluded, "I think it is reasonable that she has been functionally impaired with respect to her school work, both as an instructor and as a student given her injury. I expect resolution of her injury and resumption of all regular activity within the next several weeks." (Ex 4, p. 78).

18. Claimant began biofeedback therapy with William Beaver, M.A, L.P.C., on March 25, 2019.

19. At a follow-up appointment with Dr. Danahey on April 5, 2019, Dr. Danahey noted Claimant had multiple complaints but acknowledged doing very well overall. She reported that her optometrist had diagnosed her with a convergence disorder. Claimant reported issues with bright lights and screen time. Dr. Danahey referred Claimant for vision/convergence therapy.

20. On May 17, 2019, Dr. Danahey noted Claimant was doing better with therapy but was waiting for her vision therapy to be approved. Claimant reported 4/10 neck pain in posterior neck but only when her eyes are open and she is turning her neck. With her eyes closed there is no discomfort and she has full neck motion. She reported improvement with her headaches, but issues with words. She was exhausted with

teaching and felt overwhelmed. Dr. Danahey added convergence insufficiency and binocular vision disorder with convergence insufficiency to Claimant's diagnoses.

21. On June 10, 2019, Claimant was discharged from biofeedback therapy. Mr. Beaver noted Claimant had made some gains in therapy.

22. On June 12, 2019, Claimant saw Dr. Danahey and reported worsening vision complaints. Dr. Danahey referred Claimant for a neuropsychology evaluation with Kevin Reilly, Psy.D., an ophthalmology evaluation, and a physical medicine and rehabilitation evaluation with John Sacha, M.D.

23. Claimant presented to Dr. Sacha on June 25, 2019. Regarding the mechanism of injury, Dr. Sacha noted Claimant slipped and landed flat on her back. Claimant denied losing consciousness and was unclear if she hit her head. She reported experiencing an acute onset of neck pain, headaches, dizziness, blurry vision, and ringing in the ears as well as some mental fogginess. Claimant reported experiencing pain that was fairly constant in nature and localized to bilateral neck with headaches starting in the occipital area, pain at the periorbital area bilaterally. She further reported intermittent dizziness, intermittent blurry vision, some photophobia, and some problems with concentration and memory. On examination, Dr. Sacha noted Claimant appeared anxious with pressured speech, but good concentration, memory, attention to task, and ability to follow complex commands without difficulty. Examination of the neck showed cervical paraspinal spasm and segmental dysfunction in the mid to upper cervical spine. Deep palpation reproduced Claimant's headaches and dizziness. There was pain with extension and limitations in range of motion. Dr. Sacha's impression was: cervical facet syndrome, posttraumatic in nature; whiplash-associated disorder with symptoms of blurry vision, photophobia, occipital neuralgia, and dizziness; occipital neuralgia; secondary adjustment disorder; no evidence of closed head injury.

24. Dr. Sacha opined that there was no evidence of closed head injury in Claimant's case but that Claimant did sustain a "very simple" whiplash-associated disorder with all the symptoms consistent with an upper cervical whiplash, including the dizziness, blurry vision, ringing in ears, and photophobia. He noted that patients who are bipolar frequently have an increase in anxiety, and difficulty handling the increased stimulation. Dr. Sacha explained that, in patients with bipolar disorder, when cervical spine symptoms improve and are treated, all of the other whiplash symptoms tend to go away, cognition stabilizes, and bipolar symptoms also get back to their baseline levels. Accordingly, Dr. Sacha strongly recommended obtaining a cervical spine MRI and then beginning some chiropractic and acupuncture treatment for symptom control. He strongly recommended against any type of vestibular treatment or optometry treatment, and recommended holding off on neuropsychological testing until Claimant's cervical condition resolved.

25. On July 8, 2019, Dr. Reilly sent a letter to Dr. Danahey stating Claimant had cancelled multiple appointments with him and appeared to be avoiding evaluation.

26. During physical therapy on July 10, 2019, Claimant fell off of a treadmill onto her behind. She experienced some bruising to her right elbow and right knee.

27. On July 16, 2019, Claimant saw Ronald Wise, M.D. at UC Health. Dr. Wise noted Claimant's optometry records revealed problems dating back to January 29, 2016. His assessment was convergence and insufficiency, accommodative insufficiency, and irregular astigmatism of the left eye. He opined that causation as related to the slip and fall accident on January 29, 2019 was uncertain, particularly given Claimant's near vision complaint starting 3.5 years prior.

28. On July 18, 2019, Claimant sought treatment at the emergency department at Sky Ridge Medical Center with complaints of headaches, dizziness, visual changes, blurry vision and left lateral neck pain. Claimant reported falling on ice in January 2019 and falling in physical therapy a week prior. Claimant stated she was unsure if she struck her head. Claimant further reported experiencing worsening head and neck pain after a chiropractic adjustment the day before, and worsening headaches and neck pain after sexual intercourse the night prior. Physical examination was normal. CT scans of the head and neck were negative for acute abnormalities.

29. Claimant returned to Dr. Sacha on July 23, 2019. Dr. Sacha noted that Claimant fell during physical therapy on July 10, 2019 and that the incident, “markedly increased this patient's anxiety, irritability and even felt-lightheaded.” Claimant reported a marked increase in anxiety and confusion, but no specific areas of worsening pain. Dr. Sacha wrote,

> In reviewing this patient's case, the patient's anxiety and mania from her bipolar seems to be very much out of control at this point. This can occur with Whiplash injuries, but more importantly because of the intervening event, the patient's anxiety has gone so high that at this point, she needs med adjustments and an eval with her psychiatrist. All care needs to be on hold because any care would be counterproductive at this point because of this patient being so far so unstable from a psychological standpoint. (Ex. 4, p. 11).

30. On July 24, 2019, Claimant saw her primary care physician, Dr. Flesche, reporting that she had fallen again about a week prior, this time actually hitting her head. Claimant reported needing to ice her neck after the recent fall. Claimant did not report this fall to her workers' compensation providers. Claimant told Dr. Flesche that the recent fall was making her anxiety worse. She indicated that she had an appointment with her psychiatrist to discuss her medication. It was following this event that her medication was increased and she was provided restrictions.

31. On July 31, 2019, Dr. Sacha noted that Claimant's psychiatrist had adjusted her medications and that Claimant was getting back to her baseline of symptoms with far less mania and anxiety. An MRI of the cervical spine showed straightening of her cervical lordosis and minimal degenerative disc disease and facet spondylosis with no

other abnormalities. On examination, Dr. Sacha noted cervical paraspinal spasm, segmental dysfunction in the mid to upper cervical spine, pain with extension and external rotation. Deep palpation reproduced Claimant's occipital neuralgia. He recommended proceeding with a trial of bilateral C2-C5 facet injections, as well as a neuropsychological evaluation.

32. On August 6, 2019 Dr. Sacha sent a request to Insurer for prior authorization of cervical facet injections.

33. On August 14, 2019, Respondents filed a Notice of Contest indicating no injury arose from the work incident.

34. On August 15, 2019, Insurer notified Concentra that liability for the claim was denied and treatment was not authorized.

35. On December 9, 2019, Kathleen D'Angelo, M.D. performed an independent medical examination ("IME") at the request of Respondents. Dr. D'Angelo interviewed and examined Claimant and reviewed Claimant's records dated June 5, 2009 through November 14, 2019. Claimant complained of neck pain and tightness; increased dizziness; headaches; memory loss; depression; anxiety; adjustment disorder; vision issues/double/blurred vision/difficulty tracking; right knee and shoulder pain; fatigue; mood swings; intermittent numbness in left arm; balance issues; vertigo; right elbow and shoulder pain. Dr. D'Angelo noted that the initial records after Claimant's alleged injury disputes the occurrence of any traumatic brain injury ("TBI"). She noted that symptoms of a TBI/concussion are at their worst immediately following a head injury and gradually reduce over time. She noted Claimant reported not striking her head and that Claimant early records documented Claimant was oriented to time, person, event and place, the absence of any, head contusion, a normal Glasgow score of 15/15, and a normal cervical spine exam.

36. Dr. D'Angelo recommended that Claimant undergo evaluation with Kevin Reilly, Psy.D. to allow for better classification of Claimant's claims, in light of the complications of Claimant's bipolar 2 diagnosis and metastasizing complaints. She wrote,

> Ultimately, if the patient's psychometric testing is negative; it is difficult for me to isolate a specific physiological injury. The patient's post fall treatment course was significant for copious subjective complaints but no true objective findings. Her radiological studies were negative and she had normal neurological evaluations; particularly in her post fall course. (Ex. A, p. 61).

37. Claimant presented to Dr. Reilly on December 12, 2019. Dr. Reilly interviewed Claimant, administered multiple neuropsychometric tests, and reviewed records dated April 5, 2019 through December 2, 2019. Claimant reported ongoing symptoms of headaches, neck tightness, vision problems, intermittent dizziness, light and sound sensitivity, fatigue, word finding difficulties, decreased attention and concentration and

short-term memory problems. Dr. Reilly noted Claimant's pre-existing conditions included bipolar II disorder and anxiety. Following his testing, Dr. Reilly concluded,

> The results of this evaluation are strongly indicative of non-organic factors influencing symptom production and/or maintenance. Performance validity testing indicated negative response bias and probable coaching. Symptom validity testing indicates exaggeration and non-credible responding. The patient's description of her slip and fall injury would not predict any long-term neuropsychological sequela. There is no objective data to support the patient's continuing symptoms. There is strong objective data for intentional symptoms magnification. (Ex. B, p. 162).

38. Dr. Reilly noted that Claimant's description [emphasis not added] of her injury is "potentially" consistent with a mild traumatic brain injury, as Claimant reported a head injury in the form of a concussion with no loss of consciousness and some confusion/disorientation. He noted there was no significant identified anterograde or retrograde amnesia, a Glasgow Coma score of 15 at the scene of the injury, and negative brain neuroimaging studies. Dr. Reilly explained that the natural history of a mild TBI/post concussive syndrome is neurocognitive symptoms are worst immediately after, with rapid improvement without any formal treatment interventions. He noted Claimant's clinical course was notable for persistent symptoms in the form of chronic pain, somatic and cognitive symptoms.

39. Dr. Reilly emphasized that "symptom validity measure indicate that self-report (symptoms) are exaggerated. The patient's reported history and symptoms (somatic/cognitive/emotional) must be evaluated considering this exaggeration. Diagnosis and treatment responses need to be based on objective indicators rather than self-report." (Ex. B, p. 162). Dr. Reilly indicated that his testing showed "robust" indication of non-organic factors mediating symptoms production and maintenance. He noted, "Medical documentation indicates a significant history for psychiatric conditions in addition or psychosocial and financial stressors." He indicated that secondary gain plays a significant role in claimant's reported symptoms and that there is no valid objective data to support her chronic mild traumatic brain injury claims. Dr. Reilly diagnosed malingering [as evidenced by medicolegal context of presentation, symptom exaggeration, performance/symptoms invalidity and external incentives]. He opined that Claimant's visual disturbances were a part of Claimant's symptom exaggeration and recommended Claimant's reported visual symptoms be objectively evaluated by an ophthalmologist.

40. On January 4, 2020, Dr. Reilly reviewed additional medical records dated January 29, 2019 through June 12, 2019. He opined that the additional records documented a clinical course of increasing symptoms and disability, which he noted is a strong indication for secondary gain factors. He further noted that Claimant's providers extensively relied on Claimant's self-report. Dr. Reilly again opined that Claimant's clinical course is consistent with the diagnosis of malingering.

41. On January 7, 2020, Dr. Reilly testified at a pre-hearing deposition as an expert in neuropsychology and clinical psychology. Dr. Reilly explained that he used standard protocols and guidelines for the administration of Claimant's tests and the interpretation of Claimant's test results. He testified that redundant measures are built into the tests which reveal if there is a pattern of performance that is consistent or inconsistent with a condition. He explained that Claimant did very well on one of the performance validity tests while failing some of the other performance validity tests. Dr. Reilly stated that Claimant's

> [c]linical presentation, as well as the symptom validity testing, indicates symptom exaggeration. What that means is that the symptoms are being exaggerated across the board, so the patient self-report is exaggerated. And so when you look at medical records and the person's history over time, you need to do so with the understanding that a lot of these records are documented based solely on the patient's self-report, which the test indicates is unreliable and invalid. (Reilly Depo. P. 13, l. 2-11; P. 18, l. 2-4).

42. Dr. Reilly testified it was "potentially possible" Claimant suffered a concussion, but if so, the concussion would be very mild. He explained that the medical records did not document any objective indicators of a concussion of any significance, again noting the Glasgow score of 15 and lack of complaints of memory issues or physical signs of a traumatic injury in the initial medical records. Dr. Reilly explained that Claimant's pattern of increasing symptoms over time strongly indicate secondary gain factors. Dr. Reilly noted the principle of "worse first" with respect to mild traumatic brain injuries. Dr. Reilly testified that Claimant's visual complaints were slowly but surely increasing in terms of severity and impairment, which he opined was more a sign that there is secondary-gain factors. Regarding Claimant's visual complaints, he testified that, in his experience, if a person who has had a concussion presents with photophobia or posttraumatic vision syndrome or convergence, there is a very high probability they are going to fail all validity testing, as he does not see this as an established or recognized diagnosis.

43. During his testimony, Dr. Reilly explained the context of his diagnosis of malingering. He explained that malingering is the intentional production or exaggeration of symptoms for external gain. He indicated that he only finds that diagnosis about one percent of the time in patients he evaluates. He explained that in Claimant's case, there are numerous preexisting conditions that influence her complaints, including prior diagnoses of bipolar disorder II, adjustment disorder with depressed mood, borderline personality disorder, prior hospitalization for depression, psychosocial stressors, caregiver stress, and that the psychological records reflect that she has been consistently unable to achieve her dissertation and complete her degree requirements.

44. In reference to Dr. Danahey's March 22, 2019 letter in which Dr. Danahey indicated Claimant had functional impairment from the January 29, 2019 incident, Dr. Reilly testified that Dr. Danahey was reporting what Claimant was reporting to him, and did not have the opportunity to objectively evaluate these statements. Dr. Reilly opined

that, based upon the objective testing, there is not any functional impairment with respect to Claimant's school work or as an instructor caused by the January 29, 2019 incident.

45. On January 8, 2020, Dr. D'Angelo testified by pre-hearing deposition as a Level II accredited expert in internal medicine and occupational medicine. Dr. D'Angelo opined that Claimant did not sustain an injury as a result of the January 29, 2019 slip and fall incident. Dr. D'Angelo explained that there was no objective evidence of any acute injury, noting CT scans and x-rays were negative for acute traumatic injuries. She testified that there was no evidence of whiplash or TBI. Dr. D'Angelo testified there was no evidence of acute injury at the Concentra visit, with the EMTs, or in the emergency department on the date of the incident. She explained that Claimant's Glasgow score of 15 meant that Claimant showed no physical, verbal, or orientation deficits. Dr. D'Angelo stated that Claimant's complaints are not physiologically consistent. She opined that the slip and fall accident did not cause disability or the need for medical treatment.

46. At the request of Claimant, Mark H. Zacharewicz, Ph.D. performed an independent review of Dr. Reilly's report and evaluation notes, including Dr. Reilly's raw data and audio of Dr. Reilly's interview of Claimant. Dr. Zacharewicz did not review Claimant's records or conduct any tests on Claimant. Dr. Zacharewicz issued a report dated June 17, 2020. Dr. Zacharewicz noted several perceived issues with Dr. Reilly's report and conclusions. He opined that Dr. Reilly's report omits clinically relevant complaints reported by Claimant in her interview, including reports of experiencing various acute concussion-related symptoms, such as dizziness, wooziness, confusion, feeling goofy, and visual issues. Dr. Zacharewicz noted that many of the post-injury related symptoms reported by Claimant are symptoms often observed with a mild TBI and postconcussion syndrome. He noted Dr. Reilly also omitted other reported issues, such as convergence insufficiency. Dr. Zacharewicz opined that Dr. Reilly's omission of clinically important information was potentially misleading, interfered with the ability to clarify diagnostic and prognostic issues, and was inconsistent with the standard of care and assessment and guidelines for the practice of neuropsychology.

47. Regarding Dr. Reilly's raw data, Dr. Zacharewicz opined there was incomplete documentation regarding the administration of certain tests. He disagreed with Dr. Reilly's diagnosis of malingering. Dr. Zacharewicz felt Dr. Reilly over-interpreted the significance of Claimant's performance on the performance validity tests, and noted issues with one of the tests in particular, the DAT, which he noted was an experimental/preliminary performance validity measure. He noted that the only performance validity test on which Claimant performed in a potentially abnormal range was the DAT.

48. Dr. Zacharewicz wrote,

> While her demonstrated neurocognitive findings are consistent with residual symptoms that may be observed with a MTBI/concussion history, it is noted that based upon available information her presentation and

> pattern of test performances may also be confounded by suspected psychological/psychiatric issues, medical issues, somatic issues (e.g. visual symptoms, pain, fatigue), poor psychological coping abilities and/or combination of some or all of these potential influences. (Ex. 8, p. 154).

49. Dr. Zacharewicz concluded that the January 29, 2019 incident resulted in a MTBI/concussion. He opined that Dr. Reilly's neurocognitive testing revealed objective cognitive difficulties and functional impairments which are "further intertwined with [Claimant's] ongoing somatic and psychological/psychiatric symptoms" and super-imposed on Claimant's pre-existing vulnerabilities and stressors. (Id.)

50. Claimant testified at hearing that when she fell on January 29, 2019, she hit her left side, shoulder and hip and does not recall hitting her head. Claimant testified she has a history of bipolar II disorder and anxiety. She stated that in 2019, she had several stressors including financial stressors, caretaking for her husband, and participating in a degree program. Claimant testified that, prior to the January 29, 2019 incident, she had previous experience of neck pain that was not chronic, occasional shoulder pain related to an injury several years prior, and low back pain that felt more like tightness as opposed to achiness after the work incident. She stated she also had prior experiences with headaches, confusion and dizziness, but those symptoms only happened one time together. She stated that her dizziness now feels like the room spinning. Claimant explained that prior to the work incident she suffered from occasional impaired concentration, and after the incident she suffered from issues with judgment and speech, light sensitivity, issues focusing on words, and tracking.

51. Dr. Zacharewicz testified at hearing as an expert in neuropsychology and clinical psychology. Dr. Zacharewicz testified consistent with his report and identified several issues he found with Dr. Reilly's report. Dr. Zacharewicz testified that Dr. Reilly's performance validity testing absolutely does not support a diagnosis of malingering. He explained that the DAT test used by Dr. Reilly is in preliminary stages and not ready to be used. He opined that one failed performance validity test does not invalidate the test or mean an individual is malingering. Dr. Zacharewicz explained that two or more tests are required to invalidate test results, and there must also be a pattern, which does not exist in Claimant's case. Dr. Zacharewicz testified that Dr. Reilly did not follow strict guidelines of standardized administration. He did agree that it was reasonable for Dr. Reilly to use clinical judgment. Dr. Zacharewicz acknowledged that Claimant's pattern of symptom endorsements on other portions of the MMPI-2 reflect likely over-reporting and/or exaggeration of her somatic and cognitive symptoms. Dr. Zacharewicz testified that he could not say what is causing Claimant's continued complaints without his own evaluation, and agreed that there could be a variety of reasons, including stress and other emotional issues. He agreed that the side effects of medications being taken by a patient should be considered when trying to understand what the etiology is for claimant's continued complaints, which he did not consider.

52. Dr. Zacharewicz asserted that, based upon the initial diagnosis provided in this case on the date of injury, Claimant had a mild traumatic brain injury. Dr. Zacharewicz

agreed that Claimant now states she did not hit her head on January 29, 2019. Nonetheless, his opinion remained the same as he determined that Claimant's condition could be due to a whiplash-type injury. During his testimony, Dr. Zacharewicz confirmed the conclusions of the World Health Organization ("WHO") are:

> The evidence shows that mild cognitive complaints do occur after whiplash, but are not specific to MTBI and are not likely due to a brain injury *per se*. There same cognitive complaints are also reported in patients with chronic pain, depression, anxiety, post-traumatic stress disorder, chronic fatigue syndrome, malingering and in patients involved in personal injury litigation. (Ex.9, Bates 208).

53. Dr. Reilly offered rebuttal testimony at a post-hearing deposition on August 13, 2020. He disagreed with Dr. Zacharewicz's contention that his testing and report did not meet the standard of care for psychological and neuropsychological assessments. He testified he included information he considered clinically relevant in his notes and report. He explained that he administered the full subtests of the NAB screening module battery and used his professional judgment to not perform additional testing. Dr. Reilly explained that the DAT is the Denver Attention Test, which is a new performance validity test he created. Dr. Reilly noted the DAT is not widely used but has been examined using multiple performance validity measures. He testified that Dr. Zacharewicz is dismissing and undervaluing the implications of the test results, and continued to opine there is no evidence of a head injury. Dr. Reilly acknowledged He testified that he did not base the diagnosis of malingering on Claimant's test results.

54. Dr. Zacharewicz provided surrebuttal testimony at a post-hearing deposition on August 13, 2020. Dr. Zacharewicz reiterated that Claimant's report of some acute accident-related symptoms were important to document because they have diagnostic and prognostic utility. He explained that the diagnostic criteria for determining a mild TBI or concussion includes those exact symptoms and omitting those means you are potentially missing that information that can help clear up diagnostic questions.

55. The ALJ credits the opinions of Drs. D'Angelo and Reilly, as supported by the medical records, over the opinion of Drs. Zacharewicz, Danahey and Sacha.

56. Claimant failed to prove it is more probable than not she sustained a compensable industrial injury on January 29, 2019.

57. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991)*.* The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015).

As found, Claimant failed to prove she sustained a compensable injury as a result of the slip and fall incident on January 29, 2019. The existence of Claimant's longstanding bipolar II disorder, anxiety, and other psychosocial factors do not negate the possibility Claimant sustained a compensable injury. However, as Drs. Carbaugh and Reilly credibly opined, such factors underscore the necessity of focusing on signs and objective findings as opposed to subjective reports of symptoms in Claimant's case. The preponderant evidence establishes that, while Claimant was involved in an accident on January 29, 2019, the accident did not cause disability or the need for medical treatment.

There is insufficient credible and persuasive evidence of an acute injury or aggravation. As noted by Drs. D'Angelo and Reilly, the medical records reflect that much of the evaluation, treatment and restrictions recommended for Claimant appear to be based on Claimant's extensive subjective complaints and self-reported restrictions. Shortly after the accident, the Concentra records note Claimant's physical examination was normal. Although PA-C Skvarca noted impaired attention/concentration/judgment and decreased responsiveness, when Claimant was transported to Porter Adventist and upon her arrival at the hospital, Claimant's Glasgow Coma Score was 15, which Drs. D'Angelo and Reilly both explained indicated no verbal or orientation deficits. Upon examination at Porter Adventist Hospital, there was no appreciable traumatic amnestic properties or other altered cognition. Tenderness of the cervical and lumbar spine was noted, which would be based on Claimant's reports. Imaging demonstrated no acute findings. On January 31, 2019, physical examination was normal with the exception of reported tenderness at the coccygeal area. No findings were noted regarding the cervical spine. On February 13, 2019, Dr. Danahey specifically noted there were no cervical spine spasms. Objective evidence of any physical findings are limited to spasms and segmental dysfunction noted by Dr. Sacha on two of his evaluations which, in light of the totality of the evidence, is insufficient to establish the fall caused disability or the need for medical treatment.

Dr. Danahey's opinion that Claimant sustained functional impairment with respect to her schoolwork as a result of the work accident is, again, based on Claimant's self-reports. There is insufficient evidence the accident caused functional impairment or restrictions, particularly considering that approximately one week before the accident, Claimant was complaining of significant stressors and difficulty focusing and concentrating. The record reflects Claimant has previously experienced issues with headaches, vision and dizziness. To the extent the results of Dr. Reilly's neurocognitive testing indicates neurocognitive issues, the preponderant evidence does not establish that such issues were caused or aggravated by the accident.

Drs. D’Angelo and Reilly credibly and persuasively opined that Claimant did not sustain an injury as a result of the January 29, 2019 slip and fall. Dr. D’Angelo’s opinion is based on a comprehensive review of medical records, examination of Claimant, and interview with Claimant. Dr. Reilly’s opinion is based on his interview of Claimant, review of records and neuropsychological testing. Although Dr. Zacharewicz identified several perceived issues with Dr. Reilly’s testing, Dr. Reilly addressed such issues and, in light of other evidence, the ALJ does not find Dr. Reilly’s opinion wholly unpersuasive. Based on the totality of the evidence, Claimant failed to prove it is more probable than not the January 29, 2019 accident resulted in disability or the need for treatment.

ORDER

1. Claimant failed to prove she sustained a compensable industrial injury on January 29, 2019. Claimant’s claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 26, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that treatment of his cervical spine (including cervical facet injections, as recommended by Dr. Giora Hahn) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted October 23, 2017 work injury.

2. Whether the claimant has demonstrated, by a preponderance of the evidence, that treatment of his right knee (including arthroscopic surgery as recommended by Dr. Christopher George) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted October 23, 2017 work injury.

3. At hearing, the respondents confirmed that this is an admitted claim. The admitted body parts are: rib fractures, a sternum fracture, right hip, and right knee.

FINDINGS OF FACTS

1. The claimant worked for the employer as a roofer. On October 23, 2017, the claimant was performing his normal job duties when he fell through rotted boards on a roof. The claimant estimates that he fell 13 to 15 feet to the ground.

Medical Treatment Prior to October 23, 2017

2. Prior to this work injury, the claimant underwent medical treatment for his **left** knee, including arthroscopic left knee surgery on January 13, 2015. The claimant has been treated by his primary care provider, Dr. Michael Vargas, since February 2015. The claimant has seen Dr. Vargas for various chronic pain symptoms, including treatment for his left knee and low back. Dr. Vargas has noted that the claimant has osteoarthritis in his bilateral knees. Claimant's history of chronic osteoarthritis is also documented in medical records from Mountain Family Health Centers.

Medical Treatment Beginning October 23, 2017

3. On October 23, 2017, the claimant was immediately transported to Valley View Hospital for medical treatment. At that time, the claimant was seen by Dr. Brad Nichol. The claimant reported that when he fell he landed on his left side, shoulder, and head. The claimant's symptoms were recorded to be left sided chest pain. Dr. Nichol ordered computed tomography (CT) scans of the claimant's cervical spine, head, chest, abdomen, and pelvis. The results of those scans showed left sided rib fractures (1 through 8). There were no fractures or dislocation found in the cervical spine. In addition, there was no cranial fracture, facial fractures, or intracranial hemorrhage. Dr. Nichol noted

that the claimant was a “chronic narcotic user for his lower back pain”. Dr. Nichol recommended the claimant’s admission to the hospital for observation.

4. After he was released from Valley View Hospital the claimant was seen by Dr. Vargas on October 30, 2017. On that date, the claimant reported falling through a roof on October 23, 2017. The claimant also reported multiple rib fractures and a sternal fracture. Dr. Vargas renewed the claimant’s standing prescription for oxycodone. In addition, he prescribed the muscle relaxant, baclofen.

5. On November 7, 2017, the respondents filed a General Admission of Liability (GAL). In that document the respondents admitted for the claimant’s fractured ribs. In addition, temporary total disability (TTD) benefits were noted to have begun on October 24, 2017.

6. Dr. David Lorah is the claimant’s authorized treating provider (ATP) for this claim. The claimant was first seen by Dr. Lorah on November 8, 2017. At that time, the claimant reported continuing chest wall pain on the left side.

7. The claimant returned to Dr. Lorah on December 8, 2017. The claimant reported that he was experiencing pain in his right shoulder and left hip. Based upon this report, Dr. Lorah referred the claimant to physical therapy to address these right shoulder and left hip symptoms.

8. On December 20, 2017, the claimant returned to Dr. Nichol. At that time, Dr. Nichol noted that the claimant’s rib fractures were healing and he could resume activity,as tolerated.

9. On April 4, 2018, Dr. Lorah ordered magnetic resonance imaging (MRI) of the claimant’s right shoulder and right hip. The MRI of the claimant’s right shoulder showed a rotator cuff tear. The right hip MRI showed a labral tear. Based upon the MRI results, on April 20, 2018, Dr. Lorah referred the claimant to Dr. Christopher George for an orthopedic evaluation.

10. On May 8, 2018, the claimant was seen by Dr. George and Dr. Ferdinand Liotta. At that time, the claimant described his October 23, 2017 fall. The MRI results of the claimant’s right shoulder and right hip were addressed. In the medical record of that date, it was noted that the claimant wanted to proceed with shoulder surgery, as he felt that his shoulder was more limiting than his hip.

11. On July 28, 2018, Dr. Liotta performed arthroscopic surgery on the claimant’s right shoulder. The surgery included debridement of hypertrophic synovitis; subacromial decompression; distal clavicle excision; and coracoid decompression and subscapularis tendon repair. Following the right shoulder surgery, the claimant attended physical therapy.

12. Thereafter, it was determined that the claimant would also undergo right hip surgery. On April 4, 2019, Dr. George performed a right hip arthroscopy and labral debridement. The claimant attended physical therapy following that surgery.

13. On May 10, 2019, the claimant reported to his physical therapist, Codi Fruhmann, PT/DPT, that he had fallen up the stairs at home. The medical record of that date specifically provides that the claimant "did try to catch himself with bilateral upper extremities. He reports increased soreness anteriorly in pectorals and long head of biceps tendon." In a similar physical therapy record also dated May 10, 2019, PT Fruhmann noted that the claimant "feels he refractured a rib on the left side… He heard a pop when landing right on this rib on the stairs…"

14. On May 16, 2019, the claimant was seen by Dr. Liotta. At that time, the claimant reported "falling down some stairs" on approximately May 9, 2019. Since that fall, the claimant was experiencing increased pain and tightness in his right shoulder. Thereafter, Dr. Liotta determined that the claimant had reinjured his prior repair, requiring surgery. On June 25, 2019, Dr. Liotta performed a revision subscapularis tendon repair on the claimant's right shoulder.

15. With regard to all of the above medical appointments, the ALJ finds no mention of right knee or neck related complaints.

16. Following a referral from Dr. Vargas, on June 21, 2019, claimant began treatment with Colorado Injury & Pain Specialists[1] to address various chronic pain conditions. The medical record of that date states that the claimant was seeking treatment for his right shoulder, right knee, and back pain. Specifically, the pain in the claimant's "right shoulder and hip began in 2013 after falling through a roof while working construction…The back and right knee pain began in 2008 after he was run over by a truck… He reports sustaining a L2 [fracture] of his low back. He also had to have the meniscus removed from his right knee. He states that he could not get a right knee replacement because of his age…"

17. The claimant testified that the June 21, 2019 medical record is incorrect. He testified that he injured his left knee in 2008.

18. The claimant first reported right knee symptoms to Dr. Lorah on July 21, 2019. On that date, the claimant reported that his right knee was bothering him while doing his hip exercises. Dr. Lorah opined that the claimant had sprained his right knee and that it was "unlikely he would have sustained a major injury and if he has a meniscal tear or something else is probably not related to his workers comp injury".

19. The claimant first reported cervical symptoms to Dr. Lorah on September 9, 2019. In the medical record of that date, Dr. Lorah noted "[T]oday he is complaining of cervical [crepitus] and pain with left-sided rotation. I don't recall that he has ever mentioned this nor do I see this in our previous encounters although he assures me this has been happening since the time of the injury… He tells me that he has been complaining of this ever since the time of the initial injury. I reviewed basically all of our

[1] At hearing, the claimant confirmed that this treatment is paid for by Medicaid and is not part of this workers' compensation claim.

notes since that time and don't see mention of it. I don't see mention of it in his physical therapy notes either."

20. On September 27, 2019, the claimant reported right knee complaints to Dr. George. Specifically. the claimant reported right knee pain, clicking, and popping over "the last several months". Dr. George opined that it was a possible lateral meniscus tear.

21. Subsequently, Dr. Lorah ordered a cervical spine x-ray. The x-ray was performed on October 9, 2019 and showed no acute bony findings; multilevel mild to moderate degenerative changes (most severe at the C4-C5 level); and moderate to marked foraminal narrowing at the right C4-C5 level (with moderate at the left C4-C5 level).

22. In addition, Dr. Lorah ordered a right knee MRI. That MRI was performed on October 19, 2019 and showed tears of the posterior horn and posterior root of the medial meniscus; partial tear versus ganglion of the anterior cruciate ligament (ACL); minimal lateral subluxation of the patella; and mild osteoarthritis of the medial compartment and proximal tibiofibular joint.

23. On December 3, 2019, the claimant was seen by Dr. George. At that time, Dr. George opined that the claimant's right knee was injured when he fell on October 23, 2017. Dr. George recommended arthroscopic surgery. On December 5, 2019, Dr. George submitted a request for authorization of a right knee arthroscopy and medial meniscectomy.

24. At the request of the respondents, Dr. David Orgel reviewed the surgical request. In a report dated December 17, 2019, Dr. Orgel recommended denial of the surgery. Based upon Dr. Orgel's report, the respondents denied the right knee surgery.

25. On January 31, 2020, Dr. George authored a letter of appeal related to the requested right knee surgery. Dr. George stated that the claimant had experienced right knee pain since his October 23, 2017 work injury. Dr. George opined that primary focus of treatment was on the claimant's hip and shoulder because those symptoms were more severe than those in his right knee. Dr. George also opined that the claimant's mechanism of injury was consistent with a medial meniscus tear.

26. Following Dr. George's appeal, the respondents asked Dr. Jon Erickson to review the surgical request. In his February 14, 2020 report, Dr. Erickson agreed with Dr. Orgel's recommendation to deny the surgery. In support of this opinion, Dr. Erickson noted that the claimant had not reported right knee symptoms between October 23, 2017 and July 5, 2019. Dr. Erikson also referenced the claimant's May 2019 fall on stairs "and yet at that time there was no complaint of any knee pain." Based upon Dr. Erickson's report the respondents denied the right knee surgery.

27. During this same period of time, the claimant continued to report right shoulder symptoms. On May 26, 2020, Dr. Liotta performed "manipulation under anesthesia" to address adhesive capsulitis of the right shoulder.

28. On February 12, 2020, a cervical spine MRI was performed. The MRI showed straightening of the cervical lordosis; minimal posterior spondylolisthesis at C4; degenerative changes of the cervical spine resulting in mild canal stenosis and slight impingement of the spinal cord at the C4-C5 level; and foraminal compression of the right C5 nerve root.

29. On February 25, 2020, the claimant was seen by Dr. George regarding his right hip. On that date, Dr. George opined that the claimant would not benefit from further arthroscopic surgeries. Instead he recommended a right hip replacement. With regard to the claimant's cervical spine, Dr. George noted that the claimant "[d]id mention some disc issues in his neck".

30. On March 4, 2020, the claimant was seen by Dr. Vargas regarding chronic pain. In the medical record of that date, Dr. Vargas noted, *inter alia*, that the claimant suffered from chronic degenerative cervical spinal stenosis and lumbar radiculopathy.

31. Following a referral by Dr. Lorah, on March 6, 2020, the claimant was seen by Dr. Giora Hahn for consultation. On that date, Dr. Hahn noted that the claimant had experienced right neck pain "for 2 years since he fell off a roof". Dr Hahn noted the cervical spine MRI results and diagnosed cervical degenerative disc disease with facet arthropathy. Dr. Hahn recommended the claimant undergo cervical facet injections. Dr. Hahn also opined that radiofrequency ablation could be a potential future treatment for the claimant. Dr. Hahn submitted a request for authorization of the recommended injections.

32. At the request of respondents, Dr. Joseph Fillmore reviewed the request for cervical facet injections. In a report dated March 18, 2020, Dr. Fillmore opined that the claimant did not suffer an injury to his cervical spine as a result of his fall on October 23, 2017. Dr. Fillmore also noted that the first reference of neck symptoms was made by Dr. Lorah on September 9, 2019. Dr. Filmore recommended denial of the injections. Based upon Dr. Fillmore's report, the respondents denied authorization.

33. On July 23, 2020, the claimant attended an independent medical examination (IME) with Dr. Robert Messenbaugh. In connection with the IME, Dr. Messenbaugh reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Messenbaugh opined that the claimant did not injure his cervical spine or his right knee on October 23, 2017. In support of these opinions Dr. Messenbaugh noted that the claimant did not report any neck or right knee related complaints "for an extremely lengthy period of time" after his October 23, 2017 fall. Dr. Messenbaugh also opined that the degenerative changes in the claimant's cervical spine predated his work injury. Dr. Messenbaugh's testimony was consistent with this written report. During his testimony, Dr. Messenbaugh reiterated his opinion that the claimant did not injure his right knee or cervical spine when he fell on October 23, 2017.

34. On October 29, 2020, Dr. George performed a right total hip arthroplasty.

35. On November 17, 2020, Dr. Vargas authored a letter regarding his review of his treatment of the claimant. In the letter, Dr. Vargas stated that he "found there to be no mention of treatment for right knee or cervical neck pain prior to the accidental fall in October of 2017." Dr. Vargas also noted that these symptoms were first reported to him in March 2020.

36. The claimant testified that when he was seen by Dr. Vargas on October 30, 2017, he had pain in his right knee and neck. The claimant further testified that he has experienced pain in his right knee and neck throughout this claim. The claimant testified that he wishes to undergo the recommended knee surgery and neck treatment so that he can return to work.

37. The ALJ does not find the claimant's testimony regarding the onset of his right knee and cervical spine symptoms to be credible or persuasive. The ALJ credits the medical records and the opinions of Drs. Orgel, Erickson, Fillmore, and Messenbaugh over the contrary opinions of Drs. George and Hahn. In crediting these opinions, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that his need for right knee and cervical spine treatment is reasonable, necessary, and related to the admitted October 23, 2017 work injury. The ALJ specifically credits the medical records that demonstrate that the claimant did not report right knee or cervical spine symptoms until long after his work injury. The ALJ is not persuaded that the claimant injured either of these body parts on October 23, 2017. The ALJ finds that there is no persuasive evidence on the record to support a finding that the fall on October 23, 2017 aggravated, accelerated, or combined with any preexisting condition in the claimant's right knee or cervical spine to warrant the need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See H & H Warehouse v. Vicory, 805 P.2d 1167 (Colo. App. 1990); see also Subsequent Injury Fund v. Thompson, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." See H & H Warehouse v. Vicory, supra.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that treatment of his cervical spine (including cervical facet injections, as recommended by Dr. Hahn) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the October 23, 2017 work injury. As found, the medical records and the opinions of Drs. Fillmore, and Messenbaugh are credible and persuasive.

7. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that treatment of his right knee (including arthroscopic surgery as recommended by Dr. George) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the October 223, 2017 work injury. As found, the medical records and the opinions of Drs. Orgel, Erickson, and Messenbaugh are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant's request for treatment of his cervical spine (including cervical facet injections, as recommended by Dr. Hahn) is denied and dismissed.

2. The claimant's request for treatment of his right knee (including arthroscopic surgery as recommended by Dr. George) is denied and dismissed.

3. All matters not determined here are reserved for future determination.

Dated this 1st day of April 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

- Did Claimant overcome the DIME's 15% whole person lumbar spine impairment rating by clear and convincing evidence?

- Did Claimant prove by a preponderance of the evidence his right shoulder impairment should be converted to whole person?

- If Claimant has whole person impairment to his shoulder, did he overcome the DIME's shoulder rating by clear and convincing evidence?

- Did Claimant prove by a preponderance of the evidence he suffered scheduled impairment greater than the ratings assigned by the DIME and admitted by Respondent?

- Did Claimant prove he is eligible for indemnity benefits greater than $87,470.18 because his combined whole person impairment rating is greater than 25%?

- Disfigurement.

- Claimant withdrew the endorsed issue of "Grover Medical Benefits" because the FAL admits for a general award of medical benefits after MMI and there is no current dispute regarding any specific treatment.

STIPULATIONS

1. Claimant is entitled to TPD benefits from August 31, 2019 through March 12, 2020, and from March 20, 2020 to June 2, 2020. The parties will calculate the specific amount of TPD benefits owed to Claimant, if necessary based on the outcome of this hearing. Additional TPD benefits are subject to the statutory cap on indemnity benefits pursuant to § 8-42-107.5.

2. Respondent has paid Claimant temporary disability and permanent partial disability benefits totaling $87,470.18, which is the maximum amount of indemnity benefits payable under § 8-42-107.5 when the final rating is 25% or less. Respondent will not owe any additional indemnity benefits unless Claimant's final whole person rating is determined to be 26% or greater.

3. Respondent may take a credit equal to the amount of PPD benefits previously paid to Claimant against any additional PPD benefits the ALJ may award. Respondent may assert the overpayment reserved in the August 4, 2020 Final Admission of Liability against any additional TPD benefits that owed to Claimant.

FINDINGS OF FACT

1. Claimant works as a grocery clerk at one of Employer's stores in Pueblo.

2. On August 20, 2017, Claimant suffered admitted injuries when he fell down a staircase at work. He injured multiple parts of his body, including his right arm, right shoulder, low back, right knee, and face.

3. Claimant's most severe injuries were a displaced and comminuted right proximal humeral fracture and mid shaft fractures of the right radius and ulna. Claimant was hospitalized at Memorial Hospital in Colorado Springs and underwent ORIF surgery for the humerus, radius, and ulnar fractures by Dr. Augusta Kluk. Claimant was discharged from the hospital on August 25, 2017.

4. Claimant was referred to Dr. Phillip Marin in October 2017 for evaluation of scarring on his right cheek from the injury. Dr. Marin noted hypertrophic scarring and step off which probably would not improve with time. Dr. Marin performed a revision with surgical excision and closure of Claimant's right cheek scar.

5. In March 2018 Dr. Kluk determined Claimant had a nonunion of the ulna and probable bone infection.

6. Dr. Wallace Larson performed an IME for Respondent on March 29, 2018. Dr. Larson agreed Claimant was not at MMI and required additional treatment for the nonunion and infection. Dr. Larson also noted some "non-physiologic findings" related to superficial palpation of the neck and back.

7. On April 3, 2018, Dr. Kluk removed the hardware and debrided the nonunion.

8. Dr. J. Douglas Bradley has been Claimant's primary ATP throughout this claim. On August 3, 2018 Dr. Bradley opined Claimant was approaching MMI and ordered an FCE.

9. Dr. Bradley placed Claimant at MMI on August 30, 2018. He used ROM measurements obtained during the FCE to calculate the following impairment ratings:

Right shoulder:	13% upper extremity after normalization
Right elbow:	5% upper extremity
Right wrist:	3% upper extremity
Right knee:	5% lower extremity after normalization
Lumbar spine:	19% whole person (excluding invalid flexion)
Total combined rating:	29% whole person

10. Dr. Bradley assigned no rating for lumbar flexion because Claimant did not meet the straight leg raise validity criteria.

11. Respondent disagreed with Dr. Bradley's rating and initiated the DIME process.

12. On September 3, 2018, Dr. Kluk opined Claimant was still suffering from a hypertrophic nonunion. This was later confirmed by a CT scan on October 4, 2018. Dr. Kluk performed an ORIF with bone graft on December 4, 2018. The parties agreed Claimant was not at MMI and Respondent abandoned the DIME.

13. The surgery was successful with eventual resolution of the infection and steady bone callus formation, although Claimant continued to have pain in the right forearm and restricted motion.

14. Dr. Bradley again placed Claimant at MMI on June 18, 2019. Dr. Bradley calculated new ratings for Claimant's right elbow and right wrist based on measurements taken at an FCE on April 5, 2019.[1] He otherwise reused the August 2018 data and assigned the same ratings for Claimant's other injuries. Dr. Bradley's revised final ratings were:

Right shoulder:	13% upper extremity after normalization
Right elbow:	8% upper extremity after normalization
Right wrist:	9% upper extremity
Right knee:	5% lower extremity after normalization
Lumbar spine:	19% whole person (excluding invalid flexion)
Total combined rating:	33% whole person

15. Respondent requested a DIME to contest Dr. Bradley's impairment rating.

16. On September 11, 2019, Dr. Kluk indicated Claimant's symptoms appeared to have stabilized compared to previous visits. Claimant was working full time but still had "vague achy pain" in his right arm and limited pronation and supination. X rays showed continued bone healing and no evidence of any hardware issues. Dr. Kluk released Claimant to follow up as needed.

17. Claimant saw Dr. Dwight Caughfield for a DIME on September 13, 2019. Dr. Caughfield determined Claimant was not at MMI and recommended additional workup. Specifically, he recommended a right shoulder MRI to evaluate possible rotator cuff pathology, upper extremity electrodiagnostic testing for possible radial sensory neuropathy, and a lumbar MRI. Although Claimant was not at MMI, Dr. Caughfield performed an "advisory" impairment rating consistent with Division policy. Dr. Caughfield noted multiple inconsistencies and "non-physiological" findings including "variable and nondermatomal sensory changes, variable and giveway weakness in both his right hand/arm as well as his right leg, large observed discrepancies in range of motion observed versus measured, and wide variability in range of motion noted on repeat testing

[1] The FCE report is not in evidence but was described in Dr. Burris' IME report. The reliability of the FCE appears questionable because Claimant only passed 14 of 20 reliability and consistency measures.

and between those done in his record. His non-physiological factors appear to be impacting the examination findings and potentially functional tolerances."

18. Dr. Caughfield noted other specific issues pertinent to the disputed ratings, including:

- When measuring right pronation with the elbow at 90 degrees he has less than 10 degrees of motion but with neurological testing of rapid alternating hand motion (transition from palm up to palm down) he has much greater motion which is measured at over 65 degrees.

- With initial range of motion evaluation, he only flexes the knee to 72° but once I discussed with him how in seated posture he has 90° or more of range we repeat the measurements [and] he does demonstrate slightly over 90° of flexion . . . but that does not correlate with the ROM findings 2018 FCE done per AMA guidelines nor the ROM reported in Dr. Larson's IME of 2019.

- Self-limited range of motion in all lumbar planes without accompanying spasm or muscle guarding.

- Low back motion is ratcheting was shaking and sudden 5 to 10° changes in flexion/extension.

19. Claimant failed the straight leg raise validity criteria for a lumbar flexion rating and Dr. Caughfield had him return for a second set of measurements on a different day. Claimant again failed to demonstrate valid flexion measurements.

20. Dr. Caughfield assigned a 25% whole person advisory rating, calculated as follows:

Right shoulder:	13% upper extremity after normalization
Right elbow:	9% upper extremity
Right wrist:	3% upper extremity
Right knee:	0% lower extremity after normalization
Lumbar spine:	13% whole person (excluding invalid flexion)
Total combined rating:	25% whole person

21. Respondent accepted the determination Claimant was not at MMI and authorized additional treatment.

22. A lumbar MRI on December 27, 2019 was unremarkable with no significant structural pathology and only mild disc degeneration. A right shoulder MRI that same date showed subdeltoid bursitis and supraspinatus tendinopathy but no rotator cuff tear.

23. Upper extremity electrodiagnostic testing on January 15, 2020 showed radial neuropathy in the mid forearm.

24. Claimant was evaluated by Dr. Gregg Martyak, a hand surgeon, on January 16, 2020. Claimant reported numbness in his right thumb, index, and middle fingers that started after his fall. Dr. Martyak noted supination to 60° and pronation -10°. Dr. Martyak's clinical examination was consistent with mild radial tunnel but also carpal tunnel syndrome. He administered a carpal tunnel injection, which provided "definite improvement" in Claimant's numbness and tingling for a few weeks. Dr. Martyak recommended surgery.

25. Dr. Martyak performed a right radial nerve neuroplasty and right carpal tunnel release on March 13, 2020. The numbness in Claimant's fingers resolved after surgery and his pain decreased.

26. Claimant's final visit with Dr. Martyak was June 1, 2020. Dr. Martyak noted Claimant's preoperative symptoms had improved but he still had problems rotating his right hand. Claimant demonstrated 135 degrees of elbow flexion, 80 degrees of supination, and only 5 degrees of pronation. Dr. Martyak did not think the pronation would improve but did not recommend another procedure because that might make Claimant worse. He released Claimant at MMI with no specific follow-up.

27. Dr. Bradley put Claimant at MMI on June 2, 2020. Confusingly, Dr. Bradley's report states Claimant was released from care with no impairment. The ALJ infers this notation was a mistake because Dr. Bradley testified he believes Claimant has permanent impairment and requires maintenance care. Nevertheless, Dr. Bradley provided no contemporaneous analysis of impairment when Claimant reached MMI.

28. Dr. Caughfield performed a follow-up DIME on July 7, 2020. He determined Claimant was at MMI and provided an impairment rating. As he had at the first DIME, Dr. Caufield again found significant inconsistencies in Claimant's presentation then examination findings. Dr. Caughfield wrote,

> He demonstrates severe non-physiological findings on examination such as sudden, large amplitude oscillations in joint and spine position that he attributes to joint and spine pain (such sudden and large movement should exacerbate pain and be avoided in physiological based pain behaviors), significant passive range of motion variation on examination versus active measured range without findings of neurological deficits, weakness to less than antigravity that does not resolve with gravity eliminated or gravity assist postures on direct examination but is not noted was observed spontaneous movement, and no loss of muscle bulk that is expected with non-antigravity muscle strength. . . . Wrist extension strength is variable and non-antigravity and active range but then resists wrist flexion strongly. . . . His lumbar flexion is once again invalidated by straight leg measurements (this is his 5th set of measurements with me) and non-physiological examination with jerking oscillating motion that is atypical for someone with back pain.

29. Regarding the right elbow, Dr. Caughfield stated, "His active elbow flexion and forearm pronation range is very inconsistent with observed spontaneous motion and

passive range even after discussion of my concerns with him and I therefore did not find them are liable for the purpose of providing impairment due to loss of range. His supination was reasonably consistent and for 70° I assigned 0% UE impairment." With respect to the right knee, Dr. Caughfield stated, "His knee range of motion is symmetric with the left while his strength testing is non-physiological. No impairment is assigned." Dr. Caughfield also noted:

> [Claimant] has multiple inconsistencies in the record and on repeated examinations that indicate non-physiological aspects to his presentation. This significantly complicates the assignment of impairment as maximal volitional effort is required for both neurological and range of motion impairment assessment. That being said, he has objective evidence of significant trauma that would be expected to impact upper limb motion (radial and ulnar fracture with a nonunion, greater trochanter humorous fracture that can produce shoulder range loss) as well as EDX findings of a radial neuropathy with axonal loss which can lead to neurological functional loss. I have assigned values for his impairment based upon the most consistent range of motion in his loss of motor axons on his EMG. For his low back pain, he has had consistent pain complaints and repeated treatment that merits impairment due to specific disorders. His range of motion is non-physiological inflection but does have some consistency between repeated measurements for extension and lateral flexion and therefore impairment is assigned for range of motion loss as well as specific disorder.

30. Dr. Caughfield's final ratings were:

Right shoulder:	13% upper extremity after normalization
Right elbow:	0% ROM
Radial nerve impairment:	3% upper extremity
Right wrist:	2% upper extremity
Right knee:	0% after normalization
Lumbar spine:	15% whole person (excluding invalid flexion)
Total combined rating:	24% whole person

31. Dr. Caughfield's documented clinical findings and rationale for his rating are credible and persuasive.

32. Respondent filed a Final Admission of Liability on August 4, 2020 based on Dr. Caughfield's ratings.

33. Dr. John Burris performed an IME for Respondent on January 5, 2020 and was impressed by similar inconsistencies as Dr. Caughfield. He noted, "the examination today exhibits similar findings in measurements documented by Dr. Caughfield. Specifically, there are multiple non-physiologic findings present, the lumbar range of motion is invalid based on straight leg raise criteria, and there is no impairment of the right knee after normalization." He pointed out Dr. Caughfield took a total of 15 lumbar

spine range of motion measurements over three separate visits. Dr. Burris opined Dr. Caughfield's rating was accurate and consistent with the AMA Guides and Level II training. Dr. Burris' opinions are credible and persuasive.

34. Dr. Bradley testified at hearing regarding Claimant's impairment. He stood by his rating but agreed Dr. Caughfield's rating was reasonable based on the findings at the DIME. Dr. Bradley admitted he had no specific basis to contest or disagree with Dr. Caughfield's ratings. He found Claimant's presentation generally straightforward and consistent with his exam findings but acknowledged Dr. Caughfield's different impression. He agreed Dr. Caughfield had discretion to not rate Claimant's elbow because he believed the measurements were inconsistent. He also agreed it was within Dr. Caughfield's discretion whether to have Claimant return for another set of lumbar ROM measurements given the repeated inconsistencies and invalidity.

35. Claimant failed to overcome Dr. Caughfield's lumbar spine rating by clear and convincing evidence.

36. Claimant failed to prove by a preponderance of the evidence he is entitled to any scheduled ratings above those assigned by Dr. Caughfield.

37. Claimant's overall combined whole person rating is 24%, as determined by Dr. Caughfield.

38. The issue of right shoulder "conversion" is moot because Claimant's overall rating is less than 26% and he has already received the maximum indemnity benefits payable for his date of injury.

39. Claimant's injuries caused significant scarring in multiple areas normally exposure to public view. He has: (1) a 5-inch long by ¼ inch wide, curved, partially indented, partially raised, discolored scar extending from nose across the right cheek; (2) a 6-inch long by ½ to ¾ inch wide, curved, irregularly shaped, partially indented, partially raised, discolored surgical scar on the proximal right biceps extending onto the right pectoralis muscle; (3) a 2-inch long by ½ inch wide partially indented, partially raised, discolored surgical scar on the on distal dorsal forearm; (4) a 6-inch long by ½ wide, irregularly shaped, partially indented, partially raised, discolored surgical scar on the outer right forearm; (5) an 8-inch long by ½ to ¾ inch wide, irregularly shaped, partially indented, partially raised, discolored surgical scar on the inner right forearm; and (6) a 4-inch long by ¼ to ½ inch wide surgical scar on the lateral right elbow with a "puncture" in the center. The skin in the center of scar #6 is thin and opens periodically (it appeared somewhat open during the hearing). Claimant's scars are quite irregularly shaped, significantly discolored, and generally more noticeable than the "typical" scars this ALJ has observed during many disfigurement evaluations. Claimant suffered "extensive" scarring that entitles him to an enhanced award. The ALJ finds Claimant should be awarded $7,500 for his disfigurement.

CONCLUSIONS OF LAW

A. Claimant failed to overcome the DIME's lumbar spine rating

A DIME's determination regarding whole person impairment is binding unless overcome by "clear and convincing evidence." Section 8-42-107(8)(C). Clear and convincing evidence is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" the impairment rating is incorrect. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Deviations from rating protocols outlined in the *AMA Guides* are relevant but not dispositive in determining whether the DIME rating has been overcome. *Corley v. Bridgestone Americas, Inc*., W.C. No. 4-993-719-004 (February 26, 2020). Similarly, the ALJ may consider but is not bound by the Division's Impairment Rating Tips or the Level II accreditation curriculum. *Vuksic v. Lockheed Martin Corporation*, W.C. No. 4-956-74 one-02 (August 4, 2016) (rating "Tips" are not "merely guidance" and "not binding rules").

As found, Claimant failed to overcome the DIME's 15% whole person rating for the lumbar spine. The only specific error Claimant alleged regarding the lumbar rating is Dr. Caughfield's "failure" to have Claimant return for a second set of measurements. Although the Rating Tips unequivocally state "claimants must have two visits" before spinal ROM measurements can be invalidated, the *AMA Guides* give the examiner discretion on this issue.[2] Notwithstanding the dogmatic language of the Rating Tips, a DIME is not invariably required to obtain a second set of measurements in all cases. *Corley, supra*. Dr. Caughfield believed having Claimant return for another set of measurements would be fruitless because he had already failed to the SLR validity testing on multiple occasions, including five sets of measurements performed by Dr. Caughfield personally. There was no reason to think another set of measurements would produce valid results, and it was reasonable for Dr. Caufield to conclude the DIME without doint so.[3] Dr. Burris and Dr. Bradley agreed Dr. Caughfield was within his discretion to forego another set of measurements under the circumstances.

B. Claimant failed to prove a scheduled other than those assigned by the DIME

The DIME procedure does not apply to scheduled impairment ratings. Section 8-42-107(8)(a); *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000). The claimant is not required to overcome a DIME's scheduled rating by clear and convincing evidence but must only prove a rating under the preponderance standard.

[2] The instructions in the AMA Guides (p.79) are: "If consistency requirements are not met, perform additional tests up to a maximum of six until reproducibility criteria are satisfied. If testing remains inconsistent after six measurements, consider the test invalid and **reexamine at a later date or disqualify that part of the examination**." (Emphasis added).

[3] This assumption was subsequently borne out by Claimant's inability to provide valid measurements at the IME with Dr. Burris.

Wagoner v. City of Colorado Springs, W.C. No. 4-817-985-03 (Oct. 21, 2013), *aff'd Wagoner v. Industrial Claim Appeals Office*, Colo. App. No. 13CA1983 (Oct. 23, 2014)(NSOP). The DIME's determination regarding scheduled impairment is not entitled to special weight and is merely another opinion to consider when evaluating the preponderance of the evidence. If a claimant has multiple impairments, the clear and convincing standard applies to the whole person components and the preponderance standard governs any scheduled ratings. *Alaya v. Reinerth Enterprises, Inc*., W.C. No. 4-999-925-003 (December 3, 2020).

As found, Claimant failed to prove he suffered any ratable scheduled impairment beyond that found by Dr. Caughfield. Dr. Caughfield's thoughtful and detailed explanations are highly persuasive. His conclusions are buttressed by Dr. Burris' persuasive opinions and Dr. Bradley's testimony. Dr. Bradley could point to no specific errors in the DIME report and conceded Dr. Caughfield "followed the protocol of the AMA Guides to the letter." Dr. Bradley agreed it was permissible and appropriate for Dr. Caughfield to reject range of motion measurements he considered non-physiologic and inconsistent with observed behaviors and movements during the examination. Indeed, Dr. Bradley has done that himself when warranted. Dr. Bradley's June 18, 2019 impairment rating advocated by Claimant is not persuasive because it was based on measurements obtained long before MMI and before Claimant underwent additional surgery. Although such an outdated rating might be useful in certain cases, it is not helpful here because Claimant's measurements have varied so widely over time. Additionally, because Dr. Bradley did not personally perform the range of motion measurements use used for his rating, he cannot persuasively speak to their reliability.

There is no doubt Claimant suffered serious injuries that caused ongoing symptoms and permanent impairment. But translating symptoms and limitations into a numeric rating requires reliable data, which Dr. Caughfield was unable to obtain despite multiple good faith attempts. Claimant's argument that Dr. Caughfield "intended" to keep the rating under 26% is not persuasive. Instead, Dr. Caughfield appears to have given Claimant the benefit of the doubt and provided the highest rating he could reasonably justify in light of the numerous inconsistencies and non-physiologic findings. Although Claimant may have some permanent impairment related to elbow and forearm motion, his inconsistent effort and lack of reliable measurements prevents establishing any specific rating to the level of "more likely than not." Additionally, Dr. Caughfield's determination Claimant has no knee impairment after normalization is consistent with measurements obtained at both DIME appointments and Dr. Burris' evaluation.

C. Shoulder conversion is moot

Section 8-42-107.5 limits the combined total of temporary disability and permanent partial disability benefits a claimant may receive based on their final impairment rating. The applicable cap for a whole person rating under 26% for Claimant's date of injury is $87,470.18. As found, Claimant's overall final whole person rating is 24% and Respondent has already admitted and paid Claimant $87,470.18 in temporary and permanent partial disability benefits. Because Claimant failed to prove he has impairment greater than 25% whole person, a determination of whether his shoulder rating represents a scheduled or whole person impairment will have no impact on his compensation. Accordingly, Claimant’s request to convert the shoulder is moot and will not be addressed.

D. Disfigurement

Section 8-42-108(1) provides for a disfigurement award if a claimant is “seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view.” Subsection 108(2) permits an additional award if the disfigurement includes extensive facial scars or facial burn scars, extensive body scars or burn scars, or stumps due to loss or partial loss of limbs. Disfigurement awards are subject to maximum limits tied to the date of injury. The maximum limits in effect on Claimant’s date of injury are $5,019.83 and $10,037.89. There is no set formula for disfigurement awards within the applicable range and the appropriate amount is left to the ALJ’s discretion. *Garcia v. Colorado Department of Corrections*, W.C. No. 4-827-794-01 (May 17, 2012).

As found, Claimant’s disfigurement includes extensive body and facial scars, which entitles him to an enhanced award under § 8-42-108(2). *The American Heritage College Dictionary, 3d. Edition* (1993) defines extensive as “large in extent, range or amount.” *Merriam-Webster* defines extensive as “having wide or considerable extent.” The word “extent” means “the amount of space or service that something occupies.” Those definitions accurately describe the scarring affecting large portions of Claimant’s right arm, chest, and face. The multiple large, irregularly shaped, and highly discolored surgical scars were easily noticeable on video and probably much more obvious in person. Additionally, the facial scar crosses most of Claimant’s cheek and is located on the front of his face where people commonly train their gaze during interpersonal interactions. Claimant shall be awarded $7,500 for disfigurement.

ORDER

It is therefore ordered that:

1. Claimant’s request for additional PPD benefits beyond those already admitted by Respondent is denied and dismissed.

2. Claimant’s request to convert his shoulder impairment to the whole person equivalent is denied and dismissed as moot.

3. Respondent shall pay Claimant $7,500 for disfigurement.

If you are dissatisfied with the Judge’s order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address:

oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

Office of Administrative Courts

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he is entitled to a change in his average weekly wage ("AWW").

STIPULATIONS

Claimant stipulated that the wage records contained in Respondents' Exhibit A (Bates 8-9) are a fair and accurate representation of his pre-injury income with Employer.

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury on September 10, 2020.

2. On December 10, 2020, Respondents filed a General Admission of Liability ("GAL") admitting for an AWW of $1,143.42, based on Claimant's earnings of $16,007.81 over the 14 week period of 5/31/2020 - 9/5/2020.

3. Respondents' Exhibit A includes an Average Weekly Wage Report documenting the total hours and gross wages, including all overtime, Claimant worked for weeks ending 6/8/2019 - 9/12/2020. Claimant earned $31.00/hour and $46.50/hour for hours worked more than 40 hours per week. Claimant's hours varied, from 70 hours a week to 20.75 hours a week. Claimant's hours and wages as documented in the wage records are detailed below:

Week Ending	Total Hours	Gross Wages Including All Overtime
6/8/2019	51.75	$1,826.98
6/15/2019	50.50	$1,803.65
6/22/2019	50.05	$1,832.13
6/29/2019	47.75	$1,751.76
7/6/2019	45.00	$1,583.28
7/13/2019	51.00	$1,751.50
7/20/2019	51.00	$2,876.84
7/27/2019	44.00	$1,426.00
8/3/2019	45.25	$1,956.25
8/10/2019	50.50	$1,786.83
8/17/2019	68.00	$2,566.07
8/24/2019	70.00	$3,065.13
8/31/2019	41.25	$1,732.05

9/7/2019	54.75	$2,128.88
9/14/2019	50.50	$1,972.43
9/21/2019	53.25	$2,017.95
9/28/2019	51.00	$1,809.50
10/5/2019	50.25	$1,886.73
10/12/2019	51.25	$1,821.25
10/19/2019	54.50	$2,351.23
10/26/2019	55.75	$2,162.04
11/2/2019	43.25	$1,451.13
11/16/2019	54.50	$2,067.47
11/23/2019	53.00	$2,190.30
11/30/2019	45.25	$1,568.81
12/14/2019	51.00	$1,751.50
12/21/2019	51.75	$1,786.38
12/28/2019	51.75	$1,541.85
1/4/2020	45.50	$1,622.31
1/11/2020	54.50	$2,058.00
1/18/2020	65.75	$2,516.73
1/25/2020	55.25	$2,060.68
2/1/2020	53.50	$1,902.83
2/8/2020	55.00	$1,987.50
2/15/2020	60.75	$2,304.93
2/22/2020	44.00	$1,589.85
2/29/2020	40.00	$1,498.75
3/7/2020	44.00	$1,426.00
3/14/2020	44.00	$1,301.53
3/21/2020	40.00	$1,469.40
3/28/2020	40.00	$1,301.53
4/4/2020	44.00	$1,539.28
4/11/2020	43.00	$1,397.33
4/18/2020	40.00	$1,240.00
4/25/2020	40.00	$1,360.15
5/2/2020	40.00	$1,533.83
5/9/2020	40.00	$1,240.00
5/16/2020	43.75	$1,834.71
5/23/2020	34.25	$1,349.80
5/30/2020	27.75	$1,005.73
6/6/2020	33.75	$1,046.25
6/13/2020	33.75	$879.85
6/20/2020	32.00	$992.00
6/27/2020	39.75	$1,282.25
7/4/2020	34.25	$1,061.75
7/11/2020	34.21	$1,275.66
7/18/2020	37.75	$1,185.75
7/25/2020	20.75	$894.50

8/1/2020	42.00	$1,758.51
8/15/2020	42.50	$1,510.93
8/22/2020	45.00	$1,522.50
8/29/2020	45.75	$1,507.38
9/5/2020	45.75	$1,091.48
TOTAL	2972.01	$107,866.96

4. Due to the variability of Claimant's hours and weekly wages, the preponderant evidence establishes that a fair and accurate approximation of Claimant's wage loss and diminished earning capacity is based on a period of 52 weeks (weeks ending 9/7/2019 – 9/5/2019). Claimant earned a total of $81,908.49 during this time period, resulting in an AWW of $1,575.16.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

AWW

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell*, 867 P.2d at 82. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Id.; see e.g. Burd v. Builder Services Group Inc*., WC 5-085-572 (ICAO, July 9, 2019) (determining that signing bonus claimant received when he began employment is not a "similar advantage or fringe benefit" specifically enumerated under §8-40-201(19)(b) and therefore cannot be added into claimant's AWW calculation); *Varela v. Umbrella Roofing, Inc.*, WC 5-090-272-001 (ICAO, May 8, 2020) (noting that a claimant is not entitled to have the cost or value of the employer's payment of health insurance included in the AWW until after the employment terminates and the employer's contributions end).

Claimant's wage records reflect that Claimant's total hours and gross wages per week varied. The AWW of $1,143.42 admitted to by Respondents in the December 10, 2020 GAL reflects Claimant's earnings during a period of time in which Claimant worked significantly fewer hours as compared to prior weeks. Based on the wage records, an AWW calculated using the 52-week period prior to Claimant's injury results in a fair approximation of Claimant's wage loss and diminished earning capacity. Dividing Claimant's gross wages of $81,908.49 by 52 weeks (weeks ending 9/7/2019 – 9/5/2020) results in an AWW of $1,575.16.

ORDER

1. Claimant's AWW is $1,575.16.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 2, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant proved by a preponderance of the evidence the trigger point injection recommended by John Sacha, M.D. is reasonable, necessary, and causally related maintenance medical treatment.

FINDINGS OF FACT

1. Claimant is a 58-year-old male who works for Employer as a package handler.

2. Claimant sustained an admitted industrial injury on September 12, 2012 when he picked up a box and felt a pop in his low back.

3. Claimant underwent medical treatment for the work injury. On January 30, 2014, authorized treating physician ("ATP") Dr. Sacha noted, "There is nothing further to do other than just maintenance, medicines, and a home exercise program for the next year."

4. Claimant was placed at maximum medical improvement ("MMI") by DIME physician Scott Hompland, D.O. on January 30, 2014.

5. Respondent filed a Final Admission of Liability admitting for "reasonable and necessary related care from an authorized treating doctor."

6. Claimant continued to see Dr. Sacha for maintenance treatment.

7. Claimant was involved in a motor vehicle accident ("MVA") on April 1, 2014, when he was rear-ended by another vehicle.

8. Claimant saw Dr. Sacha on April 2, 2014. Dr. Sacha noted Claimant reported increased low back pain plus leg pain after the MVA. Claimant was scheduled to see Dr. Blau for evaluation and treatment related to the MVA. Dr. Sacha discharged Claimant from the workers' compensation claim, and stated, "Whenever there is a permanent exacerbation of a pre-existing problem, care will transfer over to the work-related motor vehicle accident."

9. On April 23, 2014, Claimant saw Dr. Blau for the MVA. Dr. Blau noted Claimant had sharp and throbbing pain in both his neck and his lower back. Claimant saw Dr. Blau again on May 28, 2014. Dr. Blau noted that Claimant reported his back pain worsened after the MVA.

10. Claimant testified at hearing that he did not experience any increase in low back pain after the MVA.

11. Despite Dr. Sacha's previous statement regarding discharging Claimant from his care for the September 12, 2012, he resumed providing maintenance care to Claimant for the work injury. On August 21, 2014, Dr. Sacha noted Claimant had lumbosacral radiculopathy and "multiple other injured body parts not related to this work comp claim but related to a separate motor vehicle accident." He further noted, "Once the motor vehicle accident has been completed and all the care has been rendered, as maintenance care under the work comp claim he should be allowed a gym pool pass and medications for a 12-month period as maintenance care under the work comp claim."

12. Dr. Sacha continued to provide maintenance care to Claimant, including numerous epidural steroid injections, medications, facet injections, and chiropractic care.

13. On December 30, 2014, Dr. Sacha recommended a lumbar transforaminal epidural steroid injection which was authorized by Respondent and which provided Claimant with relief.

14. On July 2, 2015, Dr. Sacha administered trigger point injections to Claimant. At a follow-up evaluation on July 23, 2015, Claimant reported experiencing good relief for approximately one week, with his symptoms subsequently returning.

15. Claimant testified that the trigger point injections he receive in July 2015 provided three to four months of relief.

16. On November 2, 2015, Dr. Sacha was deposed on the issue of maintenance care. Dr. Sacha testified that Claimant had a diagnostic and therapeutic response to previous transforaminal epidurals and "excellent lasting relief," along with physical exam findings that corroborate radicular pain and radiculopathy. Dr. Sacha testified that the July 2015 trigger point injections provided Claimant only temporary relief. Dr. Sacha opined Claimant continued to need maintenance medical treatment as such treatment allowed Claimant to work and better function.

17. On January 7, 2016, Dr. Sacha performed an L5 transforaminal epidural steroid injection/spinal nerve block as well as a left S1 transforaminal steroid injection which provided relief.

18. On January 28, 2016, Claimant underwent a "left greater trochanteric bursa corticosteroid injection with ultrasound guidance" which provided relief.

19. On September 15, 2016, Claimant underwent an L5 transforaminal steroid injection and left S1 transforaminal steroid injection with Dr. Sacha which provided relief.

20. By April 14, 2017, Claimant was reporting to Dr. Sacha a flare in low back pain with radiation to the left leg and increased numbness and tingling. Dr. Sacha prescribed Claimant an oral steroid, which only provided minimal relief to Claimant.

21. On April 26, 2017, Dr. Sacha performed a L5-S1 transforaminal epidural steroid injection/spinal block, which Dr. Sacha noted was maintenance care. Dr. Sacha noted the injection was diagnostic and therapeutic.

22. Claimant returned to Dr. Sacha on October 19, 2017. Dr. Sacha noted that Claimant's care had been interrupted due to having a myocardial infarction a few months prior. He noted Claimant had undergone a lumbar MRI that showed minimal changes from a prior MRI. Dr. Sacha's plan was to check with Claimant's cardiologist to confirm if Claimant was clear to undergo left L5 and S1 transforaminal epidural injections/spinal nerve root blocks.

23. On December 21, 2017, Dr. Sacha noted that the lumbar epidural was not performed because Claimant's cardiologist recommended Claimant not undergo any interventional, surgical or procedural treatment for a year, and also refrain from the use of any corticosteroids in that time frame.

24. Claimant was subsequently cleared by his cardiologist and, on May 3, 2018 returned to Dr. Sacha. Dr. Sacha noted that Claimant was returning under maintenance medical care for the "same distribution as his current pain" and performed an L5 transforaminal epidural steroid injection/nerve block as well as an S1 transforaminal epidural steroid injection/nerve block. At a follow-up evaluation on May 11, 2018, Claimant reported no significant improvement.

25. On September 20, 2018, Dr. Sacha performed another L5 transforaminal epidural steroid injection/nerve block as well as an S1 transforaminal epidural steroid injection/nerve block.

26. On October 4, 2018, Claimant returned to Dr. Sacha who indicated that Claimant had a diagnostic response to the injection at the L5 level, consistent with L5 radiculopathy, and placed a request for a repeat left L5 transforaminal injection. Dr. Sacha also recommended chiropractic and acupuncture treatment.

27. On February 7, 2019, Claimant underwent a left L5 transforaminal epidural steroid injection/spinal nerve block performed by Dr. Sacha which provided relief.

28. On July 11, 2019, with Kathleen D'Angelo, M.D. performed an independent medical examination ("IME") at the request of Respondent. Dr. D'Angelo concluded that the Claimant has had two significant intervening events prior to any objective evidence of true lumbar radiculopathy, which included the automobile accident of 2014 and the passage of time. Dr. D'Angelo opined that Claimant's maintenance and active treatment should have stopped immediately after Dr. Hompland's second DIME report. She opined that the need for treatment within the prior two years, and any need for futher treatment, was not casually related to the work injury, but rather to intervening degenerative changes or Claimant's 2014 MVA. Dr. D'Angelo further opined that Dr. Sacha's recommendations for treatment at the time were not causally related to the 2012 work injury.

29. On August 28, 2019, Claimant again underwent a left L5 transforaminal epidural steroid injection/spinal block which provided relief.

30. On October 31, 2019, Dr. Sacha noted that a surgeon recommended against surgery due to multiple medical issues. Claimant was to continue treating for symptom control with chiropractic and acupuncture treatment and medication.

31. On July 16, 2020, Dr. Sacha performed bilateral lumbar trigger point injections. Claimant returned to Dr. Sacha for repeat trigger point injections on August 6, 2020. When Claimant attempted to follow-up for his third trigger point injections on September 1, 2020, Dr. Sacha noted that the insurance carrier had denied the trigger point injections.

32. Claimant testified that the trigger point injections permit him to work and perform the activities of daily living. He stated that, without the injections, he has problems reaching, grabbing, and bending over.

33. The ALJ finds Claimant's testimony and the opinion of Dr. Sacha, as supported by the medical records, more credible and persuasive than the opinion of Dr. D'Angelo.

34. Claimant proved it is more probable than not the lumbar trigger point injection recommended by Dr. Sacha are reasonably necessary to relieve the effects of Claimant's September 12, 2012 work injury.

35. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Maintenance Medical Treatment

Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services,* W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Respondents are not liable if the need for treatment was caused as the direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002). The question of whether disability and need for treatment was caused by the industrial injury or an intervening cause is a question of fact. *Id*.

Respondents argue that the need for the recommended trigger point injection, as well as any further medical care, is no longer related to the September 12, 2012 work injury due to the intervening 2014 MVA and ongoing natural degenerative changes. Respondents further argue that the trigger point injection is not reasonable and necessary based on Dr. Sacha's deposition testimony that prior trigger point injection did not provide lasting relief.

The ALJ is not persuaded the 2014 MVA was an intervening injury that severed the causal relationship between the work injury and Claimant's need for treatment. Despite Dr. Sacha's earlier statements regarding limited maintenance treatment around the time Claimant was placed at MMI, and his statements regarding discharging Claimant from his care around the time of the 2014 MVA, subsequent to the 2014 MVA, Dr. Sacha has continued to provide several years of maintenance care to Claimant related to the 2012 work injury. This maintenance care has included multiple injections, including trigger point injections and transforaminal epidural steroid injections. Dr. Sacha has been Claimant's ATP for several years and is familiar with Claimant's condition. He administered additional trigger point injections in July 2020 and August 2020, and recommended additional trigger point injections to relieve Claimant's symptoms. Dr. Sacha's 2015 testimony that trigger point injections administered in July 2015 only provided temporary relief is insufficient, in light of the totality of the evidence, to persuade the ALJ that the injections currently recommended are not reasonable, necessary and related to the 2012 work injury. Claimant credibly testified that the trigger point injections provided relief and increased his ability to function. Claimant proved by a preponderance of the evidence the trigger point injections recommended by Dr. Sacha are reasonable and necessary maintenance treatment.

ORDER

1. Respondents shall authorize and pay for the trigger point injection recommended by ATP Sacha.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 2, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant prove by a preponderance of the evidence she suffered a compensable occupational disease caused by her work for Employer?

- If Claimant proved a compensable occupational disease, is she entitled to reasonably necessary treatment to cure and relieve the effects of the injury?

FINDINGS OF FACT

1. Claimant works for Employer as a seamstress processing uniforms for commercial customers. She has worked at this job for approximately three and one-half years. Her normal duties include adjusting the length of pant legs, detaching and attaching bar codes, sewing emblems onto garments, assigning and sewing RFID chips into garments, scanning orders, covering garments with plastic bags, and entering completed orders into a computer system. Claimant typically worked four nine-hour shifts per week.

2. On January 17, 2019, Claimant suffered an admitted work injury to her left index finger. She primarily treated with Dr. Jessica Leitl and PA Anna Printy at HealthOne. Claimant was put on work restrictions of no use of her left hand and use a splint. Employer accommodated Claimant's restrictions with modified duty.

3. Claimant's initial modified duty assignment was trimming emblems, which involves cutting threads from the backside of embroidered emblems. Claimant provided conflicting testimony regarding this task. She initially testified she removed emblems with pliers for her entire nine-hour shifts for three months. She testified she removed emblems using only her right hand and worked with her arms at shoulder height. She later agreed she was actually removing threads from emblems rather than removing emblems. She also conceded she performed other tasks but continued to assert she typically spent her entire day trimming emblems while on modified duty.

4. Claimant's supervisor, Mr. O[Redacted}, credibly testified Claimant performed a variety of tasks on modified duty because Employer did not have sufficient emblem production to keep Claimant busy her entire shift for three months. Mr. O[Redacted} assigned Claimant to assist other employees with tasks within her restrictions rather than re-assigning other employees from their regular duties to provide Claimant with modified work. The tasks included trimming threads from emblems, making and stacking emblems, trimming paper from embroidered garments, and removing RFID chips from old garments before they were discarded. Claimant generally performed at least three different duties each day for no more than three hours per duty.

5. HealthOne records document hand and arm symptoms after Claimant started modified duty, primarily on the left side, although the right arm was mentioned briefly. A January 24, 2019 report documented “her right hand is getting overused now and with some use of the fingers of her left hand, by the end of the workday her finger hurts worse.” By the next visit on January 31, 2019, Claimant reported “her right hand is much less painful now with breaks during work. Work is going well. Abiding by restrictions.”

6. A February 14, 2019 report states, “was doing much better, but yesterday was taking off letters and using [ ] her left forearm to hold down fabric as she tore the names from fabric. After a few hours her 2nd and 3rd digits and wrist became very inflamed. She said the pain was intolerable and went to boss who put her on different work. Took 600 mg Ibuprofen yesterday and put heat on forearm and wrist and did the exercises Rx’d by OT. Feeling much better now.” The corresponding physical examination documented pain extending from the second digit to the dorsum of the left hand, wrist, and forearm, but there was no mention of any issues with the right hand. Mr. O[Redacted} corroborated that Claimant told him her hands were “tired” from trimming emblems, so he re-assigned her to make supplemental emblems and remove RFID chips from old garments. He continued to assign rotating modified duties thereafter while Claimant remained on restrictions. Mr. O[Redacted} credibly testified Claimant never made any subsequent comments or complaints about pain or difficulty performing modified or regular duties.

7. On February 26, 2019, Claimant complained to Dr. Leitl about pain and paresthesias in her left hand, wrist, and fingers on February 26, 2019 Dr. Leitl advised Claimant to wear a brace and indicated she would consider electrodiagnostic testing for possible carpal tunnel syndrome (CTS) if the symptoms persisted. There was no mention of any problems with the right arm.

8. The next day Claimant told the occupational therapist her pain was improving.

9. At a follow-up appointment on March 20, 2019, Dr. Leitl again documented left arm symptoms consistent with CTS, but opined “I would not expect the original injury to have caused this condition, however there is question of a secondary injury 2/13 (as documented per 2/14 encounter). There is no documented injury to the right hand.” She ordered an EMG “to evaluate for CTS vs distal medial nerve injury.”

10. On April 11, 2019, Claimant told Dr. Leitl her left wrist, thumb, and index finger symptoms were no better and she was starting to have pain in her upper arm. Dr. Leitl noted “she attributes this to ‘lifting’ more frequently, however her restrictions have not changed . . . . Since her last visit, she has been tasked to remove a chip from a piece of clothing, remove the clothing from a hanger and place the clothing into the garbage, but otherwise adhering to her 2lb lifting restriction.” Dr. Leitl opined the wrist and arm symptoms were consistent with CTS and possibly mild medial epicondylitis and biceps tendonitis. She did not believe the symptoms were related to the original injury and advised Claimant to pursue treatment under health insurance or consider filing a separate claim if Claimant believed the symptoms were work-related.

11. Claimant was put at MMI for the left finger injury on May 10, 2019. She was released with no restrictions and no need for maintenance care.

12. Claimant returned to her regular work on May 10, 2019 and has continued in that position to present.

13. Dr. David Yamamoto performed an IME for Claimant on January 14, 2020. Her primary complaints were bilateral hand pain and numbness in a median nerve distribution. Phalen's and Tinel's tests were positive at the left wrist but negative on the right. Dr. Yamamoto diagnosed bilateral CTS from "overuse . . . caused by changes in her work activity after she injured her left index finger." Dr. Yamamoto was under the impression Claimant's modified duties "involved cutting fabric, often with the wrists in frequent positions of flexion." Dr. Yamamoto opined "this change in her job duties was . . . the cause of her current bilateral [CTS]." The report gives no indication Dr. Yamamoto thought Claimant's regular pre-injury duties were causative. He recommended lab work to investigate possible metabolic or other underlying conditions, a jobsite analysis "including analysis of her work when she was cutting fabric," an EMG study to verify the diagnosis of CTS, and evaluation with a hand specialist.

14. The conclusions in Dr. Yamamoto's report were based on bad information that led to several inaccurate assumptions about Claimant's modified duty work tasks. Claimant told Dr. Yamamoto she was cutting fabric for seven months until August 2019, even though she returned to regular work on May 10, 2019. Claimant was merely trimming small threads on the edges of emblems rather than "cutting fabric." Claimant gave Dr. Yamamoto the impression she was performing a singular task all day, but she only trimmed emblems a few hours each day. Dr. Yamamoto's report indicates Claimant was holding clothing with the third and fourth fingers of her left hand. Claimant testified at hearing that she was using her thumb and pinky finger because she work a brace that prevented use of her other fingers. Dr. Yamamoto admitted he did not obtain a clear history regarding what and how Claimant was doing, he simply understood that she was cutting in an awkward position for several months.

15. Joseph Blythe performed a job demands analysis (JDA) at Insurer's request on August 25, 2020. Claimant had already returned to regular duties and was alleging the modified duty tasks caused her bilateral CTS, so Mr. Blythe observed other employees performing the tasks Claimant had done while on modified duty. Mr. Blythe evaluated Claimant's work under the risk factor framework outline in the CTD MTGs. The observed tasks potentially implicated two of the five categories of risk factors: (1) force and repetition/duration, and (2) awkward posture and repetition/duration. None of the tasks satisfied the thresholds for any primary risk factors or secondary risk factors to be considered causative under the MTGs.

16. Dr. Jonathan Sollender performed an IME for Respondents on September 8, 2020. Claimant told Dr. Sollender the modified duty assignment required her to trim emblems "the whole day." She later acknowledged she trimmed paper from emblems at times. On examination, Tinel's test was equivocal and Phalen's was negative bilaterally. Median nerve compression test was positive bilaterally. Claimant was diffusely tender

about both wrists. The lateral left elbow was mildly tender to palpation and resisted left wrist flexion caused minor lateral elbow pain. Dr. Sollender diagnosed left lateral epicondylitis, bilateral CTS, and diffuse wrist pain with no focused diagnosis. He noted the diagnoses were based entirely on subjective data (reported symptoms and response to examination) with no objective support (such as electrodiagnostic testing). Dr. Sollender saw no work-related explanation for any of Claimant's reported upper extremity issues. Based on his review of the JDA, his discussion with Claimant, and analysis of the CTD MTGs, Dr. Sollender concluded Claimant's job exposed her to no occupational risk factor sufficient to cause, contribute to, or aggravate her condition.

17. Based on Dr. Yamamoto's report and Claimant's discovery responses, Respondents were initially under the impression Claimant was only alleging an injury from modified duties. But Claimant expanded her theory of causation to encompass her regular work for Employer. As a result, Mr. Blythe conducted another JDA in January 2021 to evaluate Claimant performing her regular work.

18. Claimant's regular work implicates three potential risk factors under the MTGs: (1) force and repetition/duration, (2) awkward posture and repetition/duration, and (3) computer use. Based on Mr. Blythe's objective analysis, none of the tasks exposed Claimant to any primary or secondary risk factors considered causative of CTDs.

19. Dr. Sollender reviewed the JDA and opined,

> [None of the work tasks] exposed her to anywhere near a significant amount of time to any risk factor known to cause/contribute to upper extremity pathology. In short, these positions would not lead to the development of any upper extremity cumulative trauma conditions such as carpal tunnel syndrome or lateral epicondylitis. These other jobs, in addition to the original positions evaluated previously, did not cause, contribute, aggravate, or accelerate her left lateral epicondylitis, bilateral carpal tunnel syndrome, or diffuse bilateral wrist pain without focused diagnosis.

20. Dr. Sollender's analysis and opinions are credible and more persuasive than the contrary opinions offered by Dr. Yamamoto.

21. Mr. O[Redacted}'s description of Claimant's modified and regular work duties is credible and more persuasive than any contrary descriptions offered by Claimant.

22. Claimant failed to prove she suffered a compensable occupational disease proximately caused by her work for Employer.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove they are a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201.

The Act imposes additional requirements for compensability of a claim based on an occupational disease. A compensable occupational disease must meet each element of the four-part test mandated by § 8-40-201(14), which defines an occupational disease as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

The "equal exposure" element effectuates the "peculiar risk" test for occupational diseases and requires that the injurious hazards associated with the employment be more prevalent in the workplace than in everyday life or other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The employment must expose the claimant to the risk causing the disease "in a measurably greater degree and in a substantially different manner than are persons in employment generally." *Id.* at 824. The conditions of employment need not be the sole cause of the disease, but must cause, intensify, or aggravate the condition "to some reasonable degree." *Id*. *Id*. at 824. If the condition resulted from multiple or concurrent causes, the respondents may mitigate their liability by proving an apportionment of benefits. *Id*. If the claimant proves that the hazards of employment caused, intensified, or aggravated the disease process "to some reasonable degree," the burden shifts to the respondents to prove the existence of nonindustrial causes and the extent to which they contribute to the disability or need for treatment. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992); *Vigil v. Holnam, Inc*., W.C. No. 4-435-795 & 4-530-490 (August 31, 2005).

The Division has adopted Medical Treatment Guidelines (MTGs) to advance the statutory mandate to assure quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers. WCRP 17, Exhibit 5 addresses Cumulative Trauma Conditions (CTD MTGs), and was most recently updated in December 2016. Under § 8-42-101(3)(b) and WCRP 17-2(A), medical providers must use the MTGs when furnishing medical treatment. The ALJ may consider the MTGs as an evidentiary tool but is not bound by the MTGs when determining if requested medical treatment is reasonably necessary or work-related. Section 8-43-201(3); *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011).

As found, Claimant failed to prove she suffered a compensable occupational disease involving her upper extremities. The argument Claimant was injured by her modified duty work is unpersuasive for multiple reasons. Claimant initially reported right hand pain within a week of starting modified duty. It is not plausible Claimant developed CTS or any other CTD in her right arm after only one week of light duty. In any event, the symptoms improved a week later and there is no further mention of any right upper extremity symptoms in HealthOne records thereafter. Nor is it plausible Claimant injured the left arm by working primarily with her right arm. Claimant was performing a variety of light duty tasks each day, which further reduces the likelihood the work caused any upper extremity issues. The JDAs objectively show that neither the modified work nor Claimant's regular duties exposed her to any risk factors set forth in the MTGs. Even though Mr. Blythe evaluated workers other than Claimant for the first JDA, the persuasive evidence shows the tasks he observed were fairly representative of the work Claimant was performing. Moreover, Claimant was the subject for the second JDA regarding her regular job. The JDAs provide the most accurate assessment of Claimant work tasks. Claimant's variable and imprecise descriptions do not provide a reliable basis to quantify her duties in the context of a causation analysis. Dr. Sollender's thorough analysis and conclusions are persuasive. Dr. Yamamoto's opinions are not persuasive because they are based on erroneous information and unsupported assumptions about Claimant's work activities.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 3, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant overcome the DIME's 15% whole person lumbar spine impairment rating by clear and convincing evidence?

- Did Claimant prove by a preponderance of the evidence his right shoulder impairment should be converted to whole person?

- If Claimant has whole person impairment to his shoulder, did he overcome the DIME's shoulder rating by clear and convincing evidence?

- Did Claimant prove by a preponderance of the evidence he suffered scheduled impairment greater than the ratings assigned by the DIME and admitted by Respondent?

- Did Claimant prove he is eligible for indemnity benefits greater than $87,470.18 because his combined whole person impairment rating is greater than 25%?

- Disfigurement.

- Claimant withdrew the endorsed issue of "Grover Medical Benefits" because the FAL admits for a general award of medical benefits after MMI and there is no current dispute regarding any specific treatment.

STIPULATIONS

1. Claimant is entitled to TPD benefits from August 31, 2019 through March 12, 2020, and from March 20, 2020 to June 2, 2020. The parties will calculate the specific amount of TPD benefits owed to Claimant, if necessary based on the outcome of this hearing. Additional TPD benefits are subject to the statutory cap on indemnity benefits pursuant to § 8-42-107.5.

2. Respondent has paid Claimant temporary disability and permanent partial disability benefits totaling $87,470.18, which is the maximum amount of indemnity benefits payable under § 8-42-107.5 when the final rating is 25% or less. Respondent will not owe any additional indemnity benefits unless Claimant's final whole person rating is determined to be 26% or greater.

3. Respondent may take a credit equal to the amount of PPD benefits previously paid to Claimant against any additional PPD benefits the ALJ may award. Respondent may assert the overpayment reserved in the August 4, 2020 Final Admission of Liability against any additional TPD benefits that owed to Claimant.

FINDINGS OF FACT

1. Claimant works as a grocery clerk at one of Employer's stores in Pueblo.

2. On August 20, 2017, Claimant suffered admitted injuries when he fell down a staircase at work. He injured multiple parts of his body, including his right arm, right shoulder, low back, right knee, and face.

3. Claimant's most severe injuries were a displaced and comminuted right proximal humeral fracture and mid shaft fractures of the right radius and ulna. Claimant was hospitalized at Memorial Hospital in Colorado Springs and underwent ORIF surgery for the humerus, radius, and ulnar fractures by Dr. Augusta Kluk. Claimant was discharged from the hospital on August 25, 2017.

4. Claimant was referred to Dr. Phillip Marin in October 2017 for evaluation of scarring on his right cheek from the injury. Dr. Marin noted hypertrophic scarring and step off which probably would not improve with time. Dr. Marin performed a revision with surgical excision and closure of Claimant's right cheek scar.

5. In March 2018 Dr. Kluk determined Claimant had a nonunion of the ulna and probable bone infection.

6. Dr. Wallace Larson performed an IME for Respondent on March 29, 2018. Dr. Larson agreed Claimant was not at MMI and required additional treatment for the nonunion and infection. Dr. Larson also noted some "non-physiologic findings" related to superficial palpation of the neck and back.

7. On April 3, 2018, Dr. Kluk removed the hardware and debrided the nonunion.

8. Dr. J. Douglas Bradley has been Claimant's primary ATP throughout this claim. On August 3, 2018 Dr. Bradley opined Claimant was approaching MMI and ordered an FCE.

9. Dr. Bradley placed Claimant at MMI on August 30, 2018. He used ROM measurements obtained during the FCE to calculate the following impairment ratings:

Right shoulder:	13% upper extremity after normalization
Right elbow:	5% upper extremity
Right wrist:	3% upper extremity
Right knee:	5% lower extremity after normalization
Lumbar spine:	19% whole person (excluding invalid flexion)
Total combined rating:	29% whole person

10. Dr. Bradley assigned no rating for lumbar flexion because Claimant did not meet the straight leg raise validity criteria.

11. Respondent disagreed with Dr. Bradley's rating and initiated the DIME process.

12. On September 3, 2018, Dr. Kluk opined Claimant was still suffering from a hypertrophic nonunion. This was later confirmed by a CT scan on October 4, 2018. Dr. Kluk performed an ORIF with bone graft on December 4, 2018. The parties agreed Claimant was not at MMI and Respondent abandoned the DIME.

13. The surgery was successful with eventual resolution of the infection and steady bone callus formation, although Claimant continued to have pain in the right forearm and restricted motion.

14. Dr. Bradley again placed Claimant at MMI on June 18, 2019. Dr. Bradley calculated new ratings for Claimant's right elbow and right wrist based on measurements taken at an FCE on April 5, 2019.[1] He otherwise reused the August 2018 data and assigned the same ratings for Claimant's other injuries. Dr. Bradley's revised final ratings were:

Right shoulder:	13% upper extremity after normalization
Right elbow:	8% upper extremity after normalization
Right wrist:	9% upper extremity
Right knee:	5% lower extremity after normalization
Lumbar spine:	19% whole person (excluding invalid flexion)
Total combined rating:	33% whole person

15. Respondent requested a DIME to contest Dr. Bradley's impairment rating.

16. On September 11, 2019, Dr. Kluk indicated Claimant's symptoms appeared to have stabilized compared to previous visits. Claimant was working full time but still had "vague achy pain" in his right arm and limited pronation and supination. X rays showed continued bone healing and no evidence of any hardware issues. Dr. Kluk released Claimant to follow up as needed.

17. Claimant saw Dr. Dwight Caughfield for a DIME on September 13, 2019. Dr. Caughfield determined Claimant was not at MMI and recommended additional workup. Specifically, he recommended a right shoulder MRI to evaluate possible rotator cuff pathology, upper extremity electrodiagnostic testing for possible radial sensory neuropathy, and a lumbar MRI. Although Claimant was not at MMI, Dr. Caughfield performed an "advisory" impairment rating consistent with Division policy. Dr. Caughfield noted multiple inconsistencies and "non-physiological" findings including "variable and nondermatomal sensory changes, variable and giveway weakness in both his right hand/arm as well as his right leg, large observed discrepancies in range of motion observed versus measured, and wide variability in range of motion noted on repeat testing

[1] The FCE report is not in evidence but was described in Dr. Burris' IME report. The reliability of the FCE appears questionable because Claimant only passed 14 of 20 reliability and consistency measures.

and between those done in his record. His non-physiological factors appear to be impacting the examination findings and potentially functional tolerances."

18. Dr. Caughfield noted other specific issues pertinent to the disputed ratings, including:

- When measuring right pronation with the elbow at 90 degrees he has less than 10 degrees of motion but with neurological testing of rapid alternating hand motion (transition from palm up to palm down) he has much greater motion which is measured at over 65 degrees.

- With initial range of motion evaluation, he only flexes the knee to 72° but once I discussed with him how in seated posture he has 90° or more of range we repeat the measurements [and] he does demonstrate slightly over 90° of flexion . . . but that does not correlate with the ROM findings 2018 FCE done per AMA guidelines nor the ROM reported in Dr. Larson's IME of 2019.

- Self-limited range of motion in all lumbar planes without accompanying spasm or muscle guarding.

- Low back motion is ratcheting was shaking and sudden 5 to 10° changes in flexion/extension.

19. Claimant failed the straight leg raise validity criteria for a lumbar flexion rating and Dr. Caughfield had him return for a second set of measurements on a different day. Claimant again failed to demonstrate valid flexion measurements.

20. Dr. Caughfield assigned a 25% whole person advisory rating, calculated as follows:

Right shoulder:	13% upper extremity after normalization
Right elbow:	9% upper extremity
Right wrist:	3% upper extremity
Right knee:	0% lower extremity after normalization
Lumbar spine:	13% whole person (excluding invalid flexion)
Total combined rating:	25% whole person

21. Respondent accepted the determination Claimant was not at MMI and authorized additional treatment.

22. A lumbar MRI on December 27, 2019 was unremarkable with no significant structural pathology and only mild disc degeneration. A right shoulder MRI that same date showed subdeltoid bursitis and supraspinatus tendinopathy but no rotator cuff tear.

23. Upper extremity electrodiagnostic testing on January 15, 2020 showed radial neuropathy in the mid forearm.

24. Claimant was evaluated by Dr. Gregg Martyak, a hand surgeon, on January 16, 2020. Claimant reported numbness in his right thumb, index, and middle fingers that started after his fall. Dr. Martyak noted supination to 60° and pronation -10°. Dr. Martyak's clinical examination was consistent with mild radial tunnel but also carpal tunnel syndrome. He administered a carpal tunnel injection, which provided "definite improvement" in Claimant's numbness and tingling for a few weeks. Dr. Martyak recommended surgery.

25. Dr. Martyak performed a right radial nerve neuroplasty and right carpal tunnel release on March 13, 2020. The numbness in Claimant's fingers resolved after surgery and his pain decreased.

26. Claimant's final visit with Dr. Martyak was June 1, 2020. Dr. Martyak noted Claimant's preoperative symptoms had improved but he still had problems rotating his right hand. Claimant demonstrated 135 degrees of elbow flexion, 80 degrees of supination, and only 5 degrees of pronation. Dr. Martyak did not think the pronation would improve but did not recommend another procedure because that might make Claimant worse. He released Claimant at MMI with no specific follow-up.

27. Dr. Bradley put Claimant at MMI on June 2, 2020. Confusingly, Dr. Bradley's report states Claimant was released from care with no impairment. The ALJ infers this notation was a mistake because Dr. Bradley testified he believes Claimant has permanent impairment and requires maintenance care. Nevertheless, Dr. Bradley provided no contemporaneous analysis of impairment when Claimant reached MMI.

28. Dr. Caughfield performed a follow-up DIME on July 7, 2020. He determined Claimant was at MMI and provided an impairment rating. As he had at the first DIME, Dr. Caufield again found significant inconsistencies in Claimant's presentation then examination findings. Dr. Caughfield wrote,

> He demonstrates severe non-physiological findings on examination such as sudden, large amplitude oscillations in joint and spine position that he attributes to joint and spine pain (such sudden and large movement should exacerbate pain and be avoided in physiological based pain behaviors), significant passive range of motion variation on examination versus active measured range without findings of neurological deficits, weakness to less than antigravity that does not resolve with gravity eliminated or gravity assist postures on direct examination but is not noted was observed spontaneous movement, and no loss of muscle bulk that is expected with non-antigravity muscle strength. . . . Wrist extension strength is variable and non-antigravity and active range but then resists wrist flexion strongly. . . . His lumbar flexion is once again invalidated by straight leg measurements (this is his 5th set of measurements with me) and non-physiological examination with jerking oscillating motion that is atypical for someone with back pain.

29. Regarding the right elbow, Dr. Caughfield stated, "His active elbow flexion and forearm pronation range is very inconsistent with observed spontaneous motion and

passive range even after discussion of my concerns with him and I therefore did not find them are liable for the purpose of providing impairment due to loss of range. His supination was reasonably consistent and for 70° I assigned 0% UE impairment." With respect to the right knee, Dr. Caughfield stated, "His knee range of motion is symmetric with the left while his strength testing is non-physiological. No impairment is assigned." Dr. Caughfield also noted:

> [Claimant] has multiple inconsistencies in the record and on repeated examinations that indicate non-physiological aspects to his presentation. This significantly complicates the assignment of impairment as maximal volitional effort is required for both neurological and range of motion impairment assessment. That being said, he has objective evidence of significant trauma that would be expected to impact upper limb motion (radial and ulnar fracture with a nonunion, greater trochanter humorous fracture that can produce shoulder range loss) as well as EDX findings of a radial neuropathy with axonal loss which can lead to neurological functional loss. I have assigned values for his impairment based upon the most consistent range of motion in his loss of motor axons on his EMG. For his low back pain, he has had consistent pain complaints and repeated treatment that merits impairment due to specific disorders. His range of motion is non-physiological inflection but does have some consistency between repeated measurements for extension and lateral flexion and therefore impairment is assigned for range of motion loss as well as specific disorder.

30. Dr. Caughfield's final ratings were:

Right shoulder:	13% upper extremity after normalization
Right elbow:	0% ROM
Radial nerve impairment:	3% upper extremity
Right wrist:	2% upper extremity
Right knee:	0% after normalization
Lumbar spine:	15% whole person (excluding invalid flexion)
Total combined rating:	24% whole person

31. Dr. Caughfield's documented clinical findings and rationale for his rating are credible and persuasive.

32. Respondent filed a Final Admission of Liability on August 4, 2020 based on Dr. Caughfield's ratings.

33. Dr. John Burris performed an IME for Respondent on January 5, 2020 and was impressed by similar inconsistencies as Dr. Caughfield. He noted, "the examination today exhibits similar findings in measurements documented by Dr. Caughfield. Specifically, there are multiple non-physiologic findings present, the lumbar range of motion is invalid based on straight leg raise criteria, and there is no impairment of the right knee after normalization." He pointed out Dr. Caughfield took a total of 15 lumbar

spine range of motion measurements over three separate visits. Dr. Burris opined Dr. Caughfield's rating was accurate and consistent with the AMA Guides and Level II training. Dr. Burris' opinions are credible and persuasive.

34. Dr. Bradley testified at hearing regarding Claimant's impairment. He stood by his rating but agreed Dr. Caughfield's rating was reasonable based on the findings at the DIME. Dr. Bradley admitted he had no specific basis to contest or disagree with Dr. Caughfield's ratings. He found Claimant's presentation generally straightforward and consistent with his exam findings but acknowledged Dr. Caughfield's different impression. He agreed Dr. Caughfield had discretion to not rate Claimant's elbow because he believed the measurements were inconsistent. He also agreed it was within Dr. Caughfield's discretion whether to have Claimant return for another set of lumbar ROM measurements given the repeated inconsistencies and invalidity.

35. Claimant failed to overcome Dr. Caughfield's lumbar spine rating by clear and convincing evidence.

36. Claimant failed to prove by a preponderance of the evidence he is entitled to any scheduled ratings above those assigned by Dr. Caughfield.

37. Claimant's overall combined whole person rating is 24%, as determined by Dr. Caughfield.

38. The issue of right shoulder "conversion" is moot because Claimant's overall rating is less than 26% and he has already received the maximum indemnity benefits payable for his date of injury.

39. Claimant's injuries caused significant scarring in multiple areas normally exposure to public view. He has: (1) a 5-inch long by ¼ inch wide, curved, partially indented, partially raised, discolored scar extending from nose across the right cheek; (2) a 6-inch long by ½ to ¾ inch wide, curved, irregularly shaped, partially indented, partially raised, discolored surgical scar on the proximal right biceps extending onto the right pectoralis muscle; (3) a 2-inch long by ½ inch wide partially indented, partially raised, discolored surgical scar on the on distal dorsal forearm; (4) a 6-inch long by ½ wide, irregularly shaped, partially indented, partially raised, discolored surgical scar on the outer right forearm; (5) an 8-inch long by ½ to ¾ inch wide, irregularly shaped, partially indented, partially raised, discolored surgical scar on the inner right forearm; and (6) a 4-inch long by ¼ to ½ inch wide surgical scar on the lateral right elbow with a "puncture" in the center. The skin in the center of scar #6 is thin and opens periodically (it appeared somewhat open during the hearing). Claimant's scars are quite irregularly shaped, significantly discolored, and generally more noticeable than the "typical" scars this ALJ has observed during many disfigurement evaluations. Claimant suffered "extensive" scarring that entitles him to an enhanced award. The ALJ finds Claimant should be awarded $7,500 for his disfigurement.

CONCLUSIONS OF LAW

A. Claimant failed to overcome the DIME's lumbar spine rating

A DIME's determination regarding whole person impairment is binding unless overcome by "clear and convincing evidence." Section 8-42-107(8)(C). Clear and convincing evidence is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" the impairment rating is incorrect. *Qual-Med v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Deviations from rating protocols outlined in the *AMA Guides* are relevant but not dispositive in determining whether the DIME rating has been overcome. *Corley v. Bridgestone Americas, Inc*., W.C. No. 4-993-719-004 (February 26, 2020). Similarly, the ALJ may consider but is not bound by the Division's Impairment Rating Tips or the Level II accreditation curriculum. *Vuksic v. Lockheed Martin Corporation*, W.C. No. 4-956-74 one-02 (August 4, 2016) (rating "Tips" are not "merely guidance" and "not binding rules").

As found, Claimant failed to overcome the DIME's 15% whole person rating for the lumbar spine. The only specific error Claimant alleged regarding the lumbar rating is Dr. Caughfield's "failure" to have Claimant return for a second set of measurements. Although the Rating Tips unequivocally state "claimants must have two visits" before spinal ROM measurements can be invalidated, the *AMA Guides* give the examiner discretion on this issue.[2] Notwithstanding the dogmatic language of the Rating Tips, a DIME is not invariably required to obtain a second set of measurements in all cases. *Corley, supra*. Dr. Caughfield believed having Claimant return for another set of measurements would be fruitless because he had already failed to the SLR validity testing on multiple occasions, including five sets of measurements performed by Dr. Caughfield personally. There was no reason to think another set of measurements would produce valid results, and it was reasonable for Dr. Caufield to conclude the DIME without doint so.[3] Dr. Burris and Dr. Bradley agreed Dr. Caughfield was within his discretion to forego another set of measurements under the circumstances.

B. Claimant failed to prove a scheduled other than those assigned by the DIME

The DIME procedure does not apply to scheduled impairment ratings. Section 8-42-107(8)(a); *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000). The claimant is not required to overcome a DIME's scheduled rating by clear and convincing evidence but must only prove a rating under the preponderance standard.

[2] The instructions in the AMA Guides (p.79) are: "If consistency requirements are not met, perform additional tests up to a maximum of six until reproducibility criteria are satisfied. If testing remains inconsistent after six measurements, consider the test invalid and **reexamine at a later date or disqualify that part of the examination**." (Emphasis added).

[3] This assumption was subsequently borne out by Claimant's inability to provide valid measurements at the IME with Dr. Burris.

Wagoner v. City of Colorado Springs, W.C. No. 4-817-985-03 (Oct. 21, 2013), *aff'd Wagoner v. Industrial Claim Appeals Office*, Colo. App. No. 13CA1983 (Oct. 23, 2014)(NSOP). The DIME's determination regarding scheduled impairment is not entitled to special weight and is merely another opinion to consider when evaluating the preponderance of the evidence. If a claimant has multiple impairments, the clear and convincing standard applies to the whole person components and the preponderance standard governs any scheduled ratings. *Alaya v. Reinerth Enterprises, Inc*., W.C. No. 4-999-925-003 (December 3, 2020).

As found, Claimant failed to prove he suffered any ratable scheduled impairment beyond that found by Dr. Caughfield. Dr. Caughfield's thoughtful and detailed explanations are highly persuasive. His conclusions are buttressed by Dr. Burris' persuasive opinions and Dr. Bradley's testimony. Dr. Bradley could point to no specific errors in the DIME report and conceded Dr. Caughfield "followed the protocol of the AMA Guides to the letter." Dr. Bradley agreed it was permissible and appropriate for Dr. Caughfield to reject range of motion measurements he considered non-physiologic and inconsistent with observed behaviors and movements during the examination. Indeed, Dr. Bradley has done that himself when warranted. Dr. Bradley's June 18, 2019 impairment rating advocated by Claimant is not persuasive because it was based on measurements obtained long before MMI and before Claimant underwent additional surgery. Although such an outdated rating might be useful in certain cases, it is not helpful here because Claimant's measurements have varied so widely over time. Additionally, because Dr. Bradley did not personally perform the range of motion measurements use used for his rating, he cannot persuasively speak to their reliability.

There is no doubt Claimant suffered serious injuries that caused ongoing symptoms and permanent impairment. But translating symptoms and limitations into a numeric rating requires reliable data, which Dr. Caughfield was unable to obtain despite multiple good faith attempts. Claimant's argument that Dr. Caughfield "intended" to keep the rating under 26% is not persuasive. Instead, Dr. Caughfield appears to have given Claimant the benefit of the doubt and provided the highest rating he could reasonably justify in light of the numerous inconsistencies and non-physiologic findings. Although Claimant may have some permanent impairment related to elbow and forearm motion, his inconsistent effort and lack of reliable measurements prevents establishing any specific rating to the level of "more likely than not." Additionally, Dr. Caughfield's determination Claimant has no knee impairment after normalization is consistent with measurements obtained at both DIME appointments and Dr. Burris' evaluation.

C. Shoulder conversion is moot

Section 8-42-107.5 limits the combined total of temporary disability and permanent partial disability benefits a claimant may receive based on their final impairment rating. The applicable cap for a whole person rating under 26% for Claimant's date of injury is $87,470.18. As found, Claimant's overall final whole person rating is 24% and Respondent has already admitted and paid Claimant $87,470.18 in temporary and permanent partial disability benefits. Because Claimant failed to prove he has impairment greater than 25% whole person, a determination of whether his shoulder rating represents a scheduled or whole person impairment will have no impact on his compensation. Accordingly, Claimant's request to convert the shoulder is moot and will not be addressed.

D. Disfigurement

Section 8-42-108(1) provides for a disfigurement award if a claimant is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." Subsection 108(2) permits an additional award if the disfigurement includes extensive facial scars or facial burn scars, extensive body scars or burn scars, or stumps due to loss or partial loss of limbs. Disfigurement awards are subject to maximum limits tied to the date of injury. The maximum limits in effect on Claimant's date of injury are $5,019.83 and $10,037.89. There is no set formula for disfigurement awards within the applicable range and the appropriate amount is left to the ALJ's discretion. *Garcia v. Colorado Department of Corrections*, W.C. No. 4-827-794-01 (May 17, 2012).

As found, Claimant's disfigurement includes extensive body and facial scars, which entitles him to an enhanced award under § 8-42-108(2). *The American Heritage College Dictionary, 3d. Edition* (1993) defines extensive as "large in extent, range or amount." *Merriam-Webster* defines extensive as "having wide or considerable extent." The word "extent" means "the amount of space or service that something occupies." Those definitions accurately describe the scarring affecting large portions of Claimant's right arm, chest, and face. The multiple large, irregularly shaped, and highly discolored surgical scars were easily noticeable on video and probably much more obvious in person. Additionally, the facial scar crosses most of Claimant's cheek and is located on the front of his face where people commonly train their gaze during interpersonal interactions. Claimant shall be awarded $7,500 for disfigurement.

ORDER

It is therefore ordered that:

1. Claimant's request for additional PPD benefits beyond those already admitted by Respondent is denied and dismissed.

2. Claimant's request to convert his shoulder impairment to the whole person equivalent is denied and dismissed as moot.

3. Respondent shall pay Claimant $7,500 for disfigurement.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address:

oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that continuing medical maintenance benefits in the form of chronic opioid medications are reasonable, necessary and causally related to her August 28, 2005 industrial injuries.

2. Whether Claimant has established by a preponderance of the evidence that medical maintenance benefits in the form of Ketamine infusions are reasonable, necessary and causally related to her August 28, 2005 industrial injuries.

3. Whether Claimant is entitled to recover attorney's fees and costs because Respondents' offer of a detoxification facility for opioid reduction is not ripe for adjudication.

FINDINGS OF FACT

1. Claimant worked for Employer as a hairstylist and manager. On August 28, 2005 Claimant sustained a compensable injury to her left elbow when she slipped and fell at work. On February 10, 2010 ALJ Cannici issued an Order concluding that Claimant was permanently and totally disabled. Respondents began paying benefits pursuant to the Order and filed a Final Admission of Liability (FAL) on May 5. 2010. Claimant continued to receive maintenance care from her treating physicians. She had a spinal cord implant prior to reaching Maximum Medical Improvement (MMI).

2. On August 25, 2020 Respondents filed an application for hearing challenging the reasonableness and necessity of medical maintenance care. Respondents' specifically disputed the reasonableness and necessity of opioid medications and Ketamine infusions that have been prescribed by Claimant's current treating physician Paul S. Leo, M.D.

3. Respondents retained Nicholas K. Olsen as their medical expert in the present matter. On February 23, 2021 the parties conducted the post-hearing evidentiary deposition of Dr. Olsen. He explained that Claimant has been chronically using opioid medications since the date of her injury. In a report dated April 3, 2017 Dr. Olsen noted that Claimant had been on high opioids for over eight years. He also commented that there was no evidence that her function had improved or the opioids had decreased her pain levels.

4. The medical records frequently reference MME levels. Dr. Olsen testified that MME stands for Morphine Milligram Equivalent. Each opioid has a conversion to MME. The MME thus serves as a standard to compare the strength of different opioids. Dr. Olsen remarked that it is generally accepted that the MME levels should be no higher than 60-90.

5. In 2017 Claimant received care from Authorized Treating Physician (ATP) Peter N. Reusswig, M.D. By April 11, 2017 Claimant was taking several medications that included 20 MG tablets of Oxycodone every six hours and a Fentanyl patch of 62.5 MCG/HR. Dr. Reusswig noted that Claimant's Spinal Cord Stimulator (SCS) had been effective prior to her pregnancy and she was interested in getting the system working again. He remarked that Claimant expressed the desire to decrease opioid use.

6. On July 25, 2017 ATP Amar Patel, M.D. replaced Claimant's SCS. By August 31, 2017 Dr. Reusswig noted that Claimant had been able to cut down 25% on oral opiates with return of stimulation to the left upper extremity.

7. On November 27, 2017 Claimant saw Physician's Assistant Brittany L. D'Orio at Dr. Reusswig's office. P.A. D'Orio remarked that Claimant was waiting for approval of a second SCS.

8. On July 11, 2018 Claimant visited Dr. Patel for an examination. Dr. Patel commented that Claimant had been on high dose opioid therapy for quite some time and was going to need to be weaned from her opioids because the dose was simply too high. When Claimant returned to Dr. Patel on September 4, 2018 he again stated that Claimant's opioids were too high and it was necessary to start the weaning process.

9. On October 2, 2018 Claimant saw Physician's Assistant Joseph Shankland at Dr. Patel's office. PA-C Shankland reported that Claimant had the second SCS implant about three weeks before the appointment. Claimant had noticed about a 50% improvement in her pain. She was taking Hydromorphone 2 MG tablets and using five different fentanyl patches. PA-C Shankland remarked that: "Pt has already started a self taper at this time. Coming into today MME= 190, after today it is MME= 182. Will need to continue downward trend to get the pt below MME= 120 or lower, overall goal is MME= 90."

10. On December 4, 2018 Claimant returned to Dr. Patel for an evaluation. He explained that the second SCS device was helping with Claimant's back pain. In addressing weaning from opioids Dr. Patel remarked, "she has been on high dose opiates pending placement of this device (done by Dr. Beasley at BNA). Accordingly, we are going to continue weaning her. Today, Fentanyl TD reduced by 12 mcg. We will CONTINUE TO WEAN MONTHLY TO AN OME < 90. Continue Hydromorphone by mouth for now. Follow-up in 1 month. The patient appears to be using opiates appropriately, without evidence of misuse or diversion."

11. Claimant returned to Dr. Patel's office on January 9, 2019 and visited Nurse Practitioner Susan Miget. NP Miget had a discussion with Claimant regarding slowly weaning from opioids. The goal was to discontinue opioids or reach a very low dose.

12. On February 5, 2019 Claimant saw Dr. Patel for an evaluation. Dr. Patel noted that "after turning on the SCS implant for her legs from the last visit that [Claimant]

has seen about 40-50% reduction in pain." He also explained that he had a long discussion with Claimant and her husband about the goal of weaning and engaging in a minimum 4-6 week opiate free period. Dr. Patel remarked that Claimant could consider a Ketamine infusion that "would be excellent to assist with continuing to reduce opiates. We will see if this can get approved w/her insurance carrier."

13. Claimant returned to Dr. Patel's office on May 14, 2019 and visited NP-C Miget. Claimant remarked that the newly placed SCS was not helping with her pain and the current level of medications was not working. NP-C Miget started Claimant on Buprenorphine (generic for Suboxone). Dr. Patel testified that Suboxone does not have an abuse potential like other opioids because it does not create a "high" sensation.

14. On May 21, 2019 Claimant returned to NP-C Miget for an examination. Claimant reported body pain and repeated that her SCSs were not helping with pain. She reported pain levels of 8 out of 10. Claimant commented that Suboxone was making her feel sick and drunk. NP-C Miget switched Claimant off of Suboxone and started her on Nucynta.

15. Claimant returned to Dr. Patel on July 2, 2019 for an examination. Dr. Patel noted that he and Claimant discussed the goal of weaning her completely off opioids within the next three months. Moreover, he also had an extensive discussion with Claimant and her husband about the reasonable option of Ketamine infusions based on her positive response to Nucynta. He also remarked that they had tried many other medications, including Gabapentin, Lyrica and Cymbalta, that were all discontinued due to side effects. Dr. Patel reduced Claimant's Nucynta from 100 mg to 50 mg per day and Oxycodone from four to three per day.

16. On July 16, 2019 Claimant again visited NP-C Miget for an evaluation. Claimant reported that her pain levels were 8 out of 10. NP-C Miget recounted that Claimant's husband specified Claimant had suffered severe pain since Dr. Patel had reduced her opioid medications. She detailed that

> Every attempt that we have made to even slightly lower her opioids has resulted in immediate clinic follow-up visit to adjust her medications back. I have asked [Claimant] several times to give any changes we make a few weeks to determine how the new plan will address her needs.

> . . .
>
> Over the past several months, I do not see a significant benefit from her medication regime, her activity remains limited, and [Claimant's] husband reports that she spends most of her days "laying in bed."

> I have offered her a multitude of medication options, all of which she has either failed or has reactions to.

At the end of the visit, NP-C Miget adjusted Claimant's long-acting Nucynta back to 100 mg.

17. On July 17, 2019 Dr. Patel issued a letter notifying Claimant she was fired from his practice. In a report dated August 20, 2019 Dr. Patel provided the following explanation for his decision.

> [Claimant] and her husband wanted to dictate the care of [Claimant]. Our intention was to continue her opioids to off as we felt that medically, she no longer required them. This was not an acceptable treatment plan for the patient, nor the husband. Our practice cannot condone patients attempting to dictate care, and particularly when other alternatives are being offered and being denied.

18. Dr. Patel testified that it was apparent Claimant was fixated on staying on opioids. He remarked that during a July 2, 2019 clinical visit Claimant was displeased with his attempts to wean her off her opioids. Furthermore, Claimant and her husband had resisted all attempts to reduce opioids. Dr. Patel summarized that Claimant needs to be completely weaned from opioid medications.

19. Claimant subsequently began treatment with ATP Paul S. Leo, M.D. On October 30, 2019 Dr. Leo reported that Claimant was getting relief from her SCSs and stated that "[i]f we can assure that she will have a Ketamine infusion we can then continue to decrease medications if that infusion is successful."

20. By January 17, 2020 Claimant saw Dr. Leo. He noted that Claimant's MME dose was 110. Dr. Leo remarked that the SCS's were doing reasonably well. He was still trying to get information about the Ketamine infusion center.

21. On May 26, 2020 Claimant again saw Dr. Leo. He recounted she was taking Nucynta extended release 100 mg twice a day and oxycodone 5 mg four times per day when necessary. He summarized that Claimant's MME dose was 110.

22. On June 3, 2020 Dr. Leo responded to a letter from Respondents' counsel. He remarked that Claimant's Oxycodone had been decreased to 5 mg or a 30 MME equivalent. Dr. Leo also mentioned that Nucynta Extended Release 100 mg twice a day equals 80 MME. He also explained that, based on Claimant's good, short term response to Ketamine, a trial of IV Ketamine was warranted. On June 23, 2020 Dr. Leo issued a formal referral order for Ketamine infusions.

23. On November 17, 2020 Claimant returned to Dr. Leo for an examination. He recounted that Claimant suffered from Chronic Regional Pain Syndrome (CRPS) and chronic pain syndrome. Dr. Leo encouraged Claimant to follow-up with Boston Scientific

for stimulator reprogramming. He recorded that Claimant was taking Nucynta ER 100 mg tablets twice a day and oxycodone 5 mg tablets with a maximum of four tablets per day.

24. On October 28, 2020 Richard Larson with the Ketamine Wellness Centers sent Insurer a request for authorization of Ketamine infusions. On November 6, 2020 Respondents' counsel sent a letter to Mr. Larson stating that the prior authorization request for Ketamine treatment was denied.

25. On January 13, 2021 the parties conducted the pre-hearing evidentiary deposition of Dr. Leo. He noted that he is Claimant's current treating physician. Dr. Leo testified that Claimant has "severe three limb CRPS of the left upper extremity and bilateral lower extremities." He explained that Claimant's current medication regimen is reasonable and necessary to treat her work injuries. Dr. Leo commented that Ketamine infusions would hopefully help relieve Claimant's pain and reduce her dependence on opioids.

26. Dr. Patel testified at the hearing in this matter. He recounted Claimant's treatment history. He maintained that Claimant needed to be completely weaned of opioid medications. Dr. Patel emphasized that the goal of opioid reduction is to reach the lowest possible dose that achieves pain relief and maintains function. Nevertheless, Dr. Patel acknowledged that Claimant had consistently appropriately used opioid medications. He explained that Ketamine infusions constituted a reasonable treatment option to reduce Claimant's opioid reliance.

27. Claimant testified at the hearing in this matter. She remarked that she still suffers from pain as a result of her work injuries. Claimant explained she is no longer using Fentanyl patches and has reduced her opioid use. She emphasized that she has consistently followed the recommendations of her physicians in reducing her opioid medications. After receiving care from Dr. Patel, Claimant began treating with Dr. Leo and is happy with his care. She would like to proceed with Ketamine infusions hoping that the treatment will reduce her medications and alleviate her pain.

28. On February 23, 2021 the parties conducted the post-hearing evidentiary deposition of Dr. Olsen. Based on his evaluations of Claimant over the years, as well as a review of the extensive medical records, Dr. Olsen agreed with Dr. Patel that Claimant needs to be weaned from her opioid medications. He explained that, given Dr. Patel's experience with Claimant and her husband during Dr. Patel's attempt to wean her from opioids, the weaning process could not be performed on an outpatient basis. Instead, weaning had to be done at an in-patient detoxification center. Dr. Olsen reasoned that, if Claimant did not accept the offer to attend an in-patient detoxification program, it would be unreasonable to allow Claimant to continue taking opioids.

29. Dr. Olsen explained that Claimant suffers from a Substance Use Disorder (SUD). He specifically noted concerns about Claimant's reports of side effects for all prescribed non-narcotic medications including Gabapentin, Lyrica and Cymbalta. Claimant also had reported side effects to Suboxone or the opioid medication that would

not cause a “high.” Dr. Olsen reasoned that, although Claimant may have an intolerance to one of the preceding medications, it is extremely unlikely that she would be intolerant to all of the medications. He concluded that Claimant’s intolerance to all of the preceding medications suggest that she seeks to remain on opioid medications.

30. Dr. Olsen testified that Ketamine treatment is experimental under the Medical Treatment Guidelines (MTG). He explained that an experimental treatment means “there are not enough scientific studies to verify its efficacy as treatment for pain.” Dr. Olsen detailed that there is a lack of evidence, based on medical literature, that Ketamine can do what the providers in the present matter suggest it can do. He reasoned that, even if Ketamine treatment was considered an appropriate form of medical treatment under the MTG, it still would not be appropriate and reasonable for Claimant. Claimant needs to be weaned from opioids through an in-patient detoxification program before determining whether Ketamine is reasonable and necessary.

31. Respondents do not seek to terminate all of Claimant’s medical maintenance benefits, but only her opioid medications. Claimant thus has the burden to prove the challenged treatment is reasonable, necessary and related to the industrial injury. However, Claimant has failed to prove that it is more probably true than not that continuing medical maintenance benefits in the form of chronic opioid medications are reasonable, necessary and causally related to her August 28, 2005 industrial injuries. The record reflects that a weaning process to reduce Claimant’s opioid medications is reasonable and necessary to treat her symptoms as a result of her industrial injuries.

32. Initially, on August 28, 2005 Claimant sustained a compensable injury to her left elbow when she slipped and fell at work. Dr. Olsen persuasively explained that Claimant has used opioids dating back to her industrial injury. In a report from April 3, 2017 Dr. Olsen specified that Claimant had been on high doses of opioids for over eight years. He remarked that it is generally accepted that MME levels should be no higher than 60-90. Dr. Olsen also commented that there is no evidence that her function has improved or her pain levels have decreased. By July 11, 2018 ATP Dr. Patel also remarked that Claimant had been on high dose opioid therapy for quite some time and was going to need to be weaned. The medical records reveal that he continued to discuss the opioid weaning process with Claimant and her husband. Dr. Patel testified that it was apparent Claimant was fixated on staying on opioids. He remarked that Claimant and her husband had resisted all attempts to reduce opioids. Dr. Patel summarized that Claimant needs to be completely weaned from opioid medications. He emphasized that the goal of opioid reduction is to reach the lowest possible dose that achieves pain relief and maintains function. Finally, based on his evaluations of Claimant over the years, as well as a review of the extensive medical records, Dr. Olsen agreed with Dr. Patel that Claimant needs to be weaned from opioid medications.

33. In contrast, Claimant’s current ATP Dr. Leo testified that Claimant suffers from severe three limb CRPS. He explained that Claimant’s current medication regimen is reasonable and necessary to treat her work injuries. However, the medical records, in conjunction with the persuasive opinions of Drs. Patel and Olsen, reflect that Claimant

requires opioid weaning to the lowest possible dose to achieve pain relief and maximize function. Accordingly, Claimant has failed to establish that her current opioid use is reasonable and necessary to treat her August 28, 2005 industrial injuries. Therefore, Claimant shall be weaned from opioids as directed by her current ATP Dr. Leo.

34. Claimant has established that it is more probably true than not that medical maintenance benefits in the form of Ketamine infusions are reasonable, necessary and causally related to her August 28, 2005 industrial injuries. The bulk of the evidence demonstrates that Ketamine infusions will reduce Claimant's reliance on opioid medications and thus aid in the weaning process.

35. In a February 5, 2019 examination, Dr. Patel had a long discussion with Claimant and her husband about the goal of weaning and engaging in a minimum 4-6 week opiate free period. He remarked that Claimant could consider a Ketamine infusion that "would be excellent to assist with continuing to reduce opiates." Dr. Patel also testified that Claimant has consistently appropriately used opioid medications. He explained that Ketamine infusions constituted a reasonable treatment option to reduce Claimant's opioid reliance. On October 30, 2019 Dr. Leo reported that Claimant was getting relief from her SCSs and stated that "[i]f we can assure that she will have a Ketamine infusion we can then continue to decrease medications if that infusion is successful." Furthermore, Dr. Leo testified that Ketamine infusions would hopefully help relieve Claimant's pain and reduce her dependence on opioids. Finally, Claimant noted she would like to proceed with Ketamine infusions with the hope that the treatment will reduce her medications and alleviate her pain.

36. In contrast, Dr. Olsen testified that Ketamine treatment is experimental under the MTG. He explained that there is a lack of evidence suggesting that Ketamine can do what the providers in the present matter suggest it can do. He reasoned that, even if Ketamine treatment was appropriate under the MTG, it still would not be reasonable for Claimant because she needs to be weaned from opioids through an in-patient detoxification program before determining whether Ketamine is reasonable and necessary. Despite Dr. Olsen's opinion, the medical records in conjunction with the persuasive opinions of ATPs Drs. Patel and Leo, reveal that Ketamine treatment is a reasonable and necessary modality to reduce Claimant's reliance on opioids and facilitate the weaning process. Accordingly, medical maintenance benefits in the form of Ketamine infusions are reasonable, necessary and causally related to Claimant's August 28, 2005 industrial injuries. Respondents shall be financially responsible for Ketamine infusions as part of Claimant's opioid weaning process.

37. Claimant has failed to demonstrate that she is entitled to recover attorney's fees and costs because Respondents' offer of a detoxification facility for opioid reduction is not ripe for adjudication. Claimant asserts that, because none of her ATPs have recommended a detoxification program for opioid mediations, the issue is unripe for hearing. In contrast, Respondents assert that Dr. Olsen has suggested Claimant needs a detoxification program to wean from opioids. Respondents thus seek to make the detoxification program available in the event Claimant's opioid medications are

terminated. Because the record reflects that the issue of a detoxification facility for weaning is ripe for adjudication, Claimant's request for attorney's fees and costs is denied and dismissed.

38. The record reflects that the issue of whether Claimant should attend an in-patient detoxification facility is real, immediate, and fit for adjudication. The central issue in the present case is whether Claimant should be weaned from opioid medications. Relying on the opinion of Dr. Olsen, Respondents have offered an in-patient detoxification facility as an option to aid in the weaning process. Dr. Olsen explained that, based on Dr. Patel's experience in attempting to wean Claimant from opioids, the weaning process could not be performed on an out-patient basis. Dr. Olsen reasoned that, if Claimant did not accept the offer to attend an in-patient detoxification program, it would be unreasonable to allow her to continue taking opioids. Because in-patient treatment is an option for weaning Claimant from opioids, the issue is sufficiently immediate and real to warrant adjudication. There is no legal impediment to immediate adjudication. Accordingly, Claimant's request for attorney's fees and costs is denied and dismissed.

39. Although Respondents have offered an in-patient detoxification program to help wean Claimant from opioids, Claimant is not required to attend the program. Instead, as noted earlier in this opinion, Claimant shall be weaned from opioids as directed by her current ATP Dr. Leo. If Claimant and Dr. Leo believe that an in-patient detoxification program is the best method for weaning, Claimant shall have the option to attend the program at Respondents' expense.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical Maintenance Benefits

4. Generally, to prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988). However, when respondents file a final admission of liability acknowledging medical maintenance benefits pursuant to *Grover* they can seek to terminate their liability for ongoing maintenance medical treatment. *See* §8-43-201(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). When the respondents contest the liability for a particular benefit, the claimant must prove that the challenged treatment is reasonable, necessary and related to the industrial injury. *Id.* However, when respondents seek to terminate all post-MMI benefits, they shoulder the burden of proof to terminate liability for maintenance medical treatment. *In Re Claim of Arguello*, W.C. No. 4-762-736-04 (ICAO, May 3, 2016); *In Re Claim of Dunn*, W.C. No. 4-754-838 (ICAO, Oct. 1, 2013). Specifically, respondents are not liable for future maintenance benefits when they no longer relate back to the industrial injury. *See In Re Claim of Salisbury*, W.C. No. 4-702-144 (ICAO, June 5, 2012).

Opioid Medications

5. As found, Respondents do not seek to terminate all of Claimant's medical maintenance benefits, but only her opioid medications. Claimant thus has the burden to prove the challenged treatment is reasonable, necessary and related to the industrial injury. However, Claimant has failed to prove by a preponderance of the evidence that continuing medical maintenance benefits in the form of chronic opioid medications are reasonable, necessary and causally related to her August 28, 2005 industrial injuries. The record reflects that a weaning process to reduce Claimant's opioid medications is reasonable and necessary to treat her symptoms as a result of her industrial injuries.

6. As found, initially, on August 28, 2005 Claimant sustained a compensable injury to her left elbow when she slipped and fell at work. Dr. Olsen persuasively explained that Claimant has used opioids dating back to her industrial injury. In a report from April 3, 2017 Dr. Olsen specified that Claimant had been on high doses of opioids for over eight years. He remarked that it is generally accepted that MME levels should be no higher than 60-90. Dr. Olsen also commented that there is no evidence that her function has improved or her pain levels have decreased. By July 11, 2018 ATP Dr. Patel also remarked that Claimant had been on high dose opioid therapy for quite some time and was going to need to be weaned. The medical records reveal that he continued to discuss the opioid weaning process with Claimant and her husband. Dr. Patel testified that it was apparent Claimant was fixated on staying on opioids. He remarked that Claimant and her husband had resisted all attempts to reduce opioids. Dr. Patel summarized that Claimant needs to be completely weaned from opioid medications. He emphasized that the goal of

opioid reduction is to reach the lowest possible dose that achieves pain relief and maintains function. Finally, based on his evaluations of Claimant over the years, as well as a review of the extensive medical records, Dr. Olsen agreed with Dr. Patel that Claimant needs to be weaned from opioid medications.

7. As found, in contrast, Claimant's current ATP Dr. Leo testified that Claimant suffers from severe three limb CRPS. He explained that Claimant's current medication regimen is reasonable and necessary to treat her work injuries. However, the medical records, in conjunction with the persuasive opinions of Drs. Patel and Olsen, reflect that Claimant requires opioid weaning to the lowest possible dose to achieve pain relief and maximize function. Accordingly, Claimant has failed to establish that her current opioid use is reasonable and necessary to treat her August 28, 2005 industrial injuries. Therefore, Claimant shall be weaned from opioids as directed by her current ATP Dr. Leo.

Ketamine Infusions

8. As found, Claimant has established by a preponderance of the evidence that medical maintenance benefits in the form of Ketamine infusions are reasonable, necessary and causally related to her August 28, 2005 industrial injuries. The bulk of the evidence demonstrates that Ketamine infusions will reduce Claimant's reliance on opioid medications and thus aid in the weaning process.

9. As found, In a February 5, 2019 examination, Dr. Patel had a long discussion with Claimant and her husband about the goal of weaning and engaging in a minimum 4-6 week opiate free period. He remarked that Claimant could consider a Ketamine infusion that "would be excellent to assist with continuing to reduce opiates." Dr. Patel also testified that Claimant has consistently appropriately used opioid medications. He explained that Ketamine infusions constituted a reasonable treatment option to reduce Claimant's opioid reliance. On October 30, 2019 Dr. Leo reported that Claimant was getting relief from her SCSs and stated that "[i]f we can assure that she will have a Ketamine infusion we can then continue to decrease medications if that infusion is successful." Furthermore, Dr. Leo testified that Ketamine infusions would hopefully help relieve Claimant's pain and reduce her dependence on opioids. Finally, Claimant noted she would like to proceed with Ketamine infusions with the hope that the treatment will reduce her medications and alleviate her pain.

10. As found, in contrast, Dr. Olsen testified that Ketamine treatment is experimental under the MTG. He explained that there is a lack of evidence suggesting that Ketamine can do what the providers in the present matter suggest it can do. He reasoned that, even if Ketamine treatment was appropriate under the MTG, it still would not be reasonable for Claimant because she needs to be weaned from opioids through an in-patient detoxification program before determining whether Ketamine is reasonable and necessary. Despite Dr. Olsen's opinion, the medical records in conjunction with the persuasive opinions of ATPs Drs. Patel and Leo, reveal that Ketamine treatment is a reasonable and necessary modality to reduce Claimant's reliance on opioids and facilitate the weaning process. Accordingly, medical maintenance benefits in the form of Ketamine infusions are reasonable, necessary and causally related to Claimant's August 28, 2005

industrial injuries. Respondents shall be financially responsible for Ketamine infusions as part of Claimant's opioid weaning process.

Ripeness

11. In *Olivas-Soto v. Industrial Claim Appeals Office*, 143 P.3d 1178 (Colo. App. 2006) the court noted that generally the test to assess whether an issue is ripe for adjudication is when an issue is real, immediate, and fit for adjudication. Under that doctrine, adjudication should be withheld for uncertain or contingent future matters that suppose a speculative injury that may never occur. The Panel discussed the meaning of the term "ripe for hearing" and noted that the term refers to a disputed issue concerning which there is no legal impediment to immediate adjudication. Ripeness requires an actual case or controversy between the parties that is sufficiently immediate and real to warrant adjudication. *Jessee v. Farmers Ins. Exch*., 147 P.3d 56 (Colo. 2006); *Beauprez v. Avalos*, 42 P.3d 642 (Colo. 2002). In general, under the doctrine of ripeness, courts will not consider uncertain or contingent future matters because the injury is speculative and may never occur. *Stell v. Boulder County Dep't of Social Svcs.,* 92 P.3d 910, (Colo.2004).

12. As found, Claimant has failed to demonstrate that she is entitled to recover attorney's fees and costs because Respondents' offer of a detoxification facility for opioid reduction is not ripe for adjudication. Claimant asserts that, because none of her ATPs have recommended a detoxification program for opioid mediations, the issue is unripe for hearing. In contrast, Respondents assert that Dr. Olsen has suggested Claimant needs a detoxification program to wean from opioids. Respondents thus seek to make the detoxification program available in the event Claimant's opioid medications are terminated. Because the record reflects that the issue of a detoxification facility for weaning is ripe for adjudication, Claimant's request for attorney's fees and costs is denied and dismissed.

13. As found, the record reflects that the issue of whether Claimant should attend an in-patient detoxification facility is real, immediate, and fit for adjudication. The central issue in the present case is whether Claimant should be weaned from opioid medications. Relying on the opinion of Dr. Olsen, Respondents have offered an in-patient detoxification facility as an option to aid in the weaning process. Dr. Olsen explained that, based on Dr. Patel's experience in attempting to wean Claimant from opioids, the weaning process could not be performed on an out-patient basis. Dr. Olsen reasoned that, if Claimant did not accept the offer to attend an in-patient detoxification program, it would be unreasonable to allow her to continue taking opioids. Because in-patient treatment is an option for weaning Claimant from opioids, the issue is sufficiently immediate and real to warrant adjudication. There is no legal impediment to immediate adjudication. Accordingly, Claimant's request for attorney's fees and costs is denied and dismissed.

14. As found, although Respondents have offered an in-patient detoxification program to help wean Claimant from opioids, Claimant is not required to attend the program. Instead, as noted earlier in this opinion, Claimant shall be weaned from opioids as directed by her current ATP Dr. Leo. If Claimant and Dr. Leo believe that an in-patient

detoxification program is the best method for weaning, Claimant shall have the option to attend the program at Respondents' expense.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant shall be weaned from opioids as directed by her current ATP Dr. Leo.

2. Respondents shall be financially responsible for Ketamine infusions as part of Claimant's opioid weaning process.

3. The issue of whether Claimant should attend an in-patient detoxification facility is ripe for adjudication. Claimant's request for attorney's fees and costs is thus denied and dismissed. Claimant shall have the option of attending an in-patient detoxification program at Respondents' expense.

4. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

ISSUES

1. Whether Claimant has proven by a preponderance of the evidence that continuing medical maintenance benefits in the form of chronic opioid medications are reasonable, necessary and causally related to her August 28, 2005 industrial injuries.

2. Whether Claimant has established by a preponderance of the evidence that medical maintenance benefits in the form of Ketamine infusions are reasonable, necessary and causally related to her August 28, 2005 industrial injuries.

3. Whether Claimant is entitled to recover attorney's fees and costs because Respondents' offer of a detoxification facility for opioid reduction is not ripe for adjudication.

FINDINGS OF FACT

1. Claimant worked for Employer as a hairstylist and manager. On August 28, 2005 Claimant sustained a compensable injury to her left elbow when she slipped and fell at work. On February 10, 2010 ALJ Cannici issued an Order concluding that Claimant was permanently and totally disabled. Respondents began paying benefits pursuant to the Order and filed a Final Admission of Liability (FAL) on May 5. 2010. Claimant continued to receive maintenance care from her treating physicians. She had a spinal cord implant prior to reaching Maximum Medical Improvement (MMI).

2. On August 25, 2020 Respondents filed an application for hearing challenging the reasonableness and necessity of medical maintenance care. Respondents' specifically disputed the reasonableness and necessity of opioid medications and Ketamine infusions that have been prescribed by Claimant's current treating physician Paul S. Leo, M.D.

3. Respondents retained Nicholas K. Olsen as their medical expert in the present matter. On February 23, 2021 the parties conducted the post-hearing evidentiary deposition of Dr. Olsen. He explained that Claimant has been chronically using opioid medications since the date of her injury. In a report dated April 3, 2017 Dr. Olsen noted that Claimant had been on high opioids for over eight years. He also commented that there was no evidence that her function had improved or the opioids had decreased her pain levels.

4. The medical records frequently reference MME levels. Dr. Olsen testified that MME stands for Morphine Milligram Equivalent. Each opioid has a conversion to MME. The MME thus serves as a standard to compare the strength of different opioids. Dr. Olsen remarked that it is generally accepted that the MME levels should be no higher than 60-90.

5. In 2017 Claimant received care from Authorized Treating Physician (ATP) Peter N. Reusswig, M.D. By April 11, 2017 Claimant was taking several medications that included 20 MG tablets of Oxycodone every six hours and a Fentanyl patch of 62.5 MCG/HR. Dr. Reusswig noted that Claimant's Spinal Cord Stimulator (SCS) had been effective prior to her pregnancy and she was interested in getting the system working again. He remarked that Claimant expressed the desire to decrease opioid use.

6. On July 25, 2017 ATP Amar Patel, M.D. replaced Claimant's SCS. By August 31, 2017 Dr. Reusswig noted that Claimant had been able to cut down 25% on oral opiates with return of stimulation to the left upper extremity.

7. On November 27, 2017 Claimant saw Physician's Assistant Brittany L. D'Orio at Dr. Reusswig's office. P.A. D'Orio remarked that Claimant was waiting for approval of a second SCS.

8. On July 11, 2018 Claimant visited Dr. Patel for an examination. Dr. Patel commented that Claimant had been on high dose opioid therapy for quite some time and was going to need to be weaned from her opioids because the dose was simply too high. When Claimant returned to Dr. Patel on September 4, 2018 he again stated that Claimant's opioids were too high and it was necessary to start the weaning process.

9. On October 2, 2018 Claimant saw Physician's Assistant Joseph Shankland at Dr. Patel's office. PA-C Shankland reported that Claimant had the second SCS implant about three weeks before the appointment. Claimant had noticed about a 50% improvement in her pain. She was taking Hydromorphone 2 MG tablets and using five different fentanyl patches. PA-C Shankland remarked that: "Pt has already started a self taper at this time. Coming into today MME= 190, after today it is MME= 182. Will need to continue downward trend to get the pt below MME= 120 or lower, overall goal is MME= 90."

10. On December 4, 2018 Claimant returned to Dr. Patel for an evaluation. He explained that the second SCS device was helping with Claimant's back pain. In addressing weaning from opioids Dr. Patel remarked, "she has been on high dose opiates pending placement of this device (done by Dr. Beasley at BNA). Accordingly, we are going to continue weaning her. Today, Fentanyl TD reduced by 12 mcg. We will CONTINUE TO WEAN MONTHLY TO AN OME < 90. Continue Hydromorphone by mouth for now. Follow-up in 1 month. The patient appears to be using opiates appropriately, without evidence of misuse or diversion."

11. Claimant returned to Dr. Patel's office on January 9, 2019 and visited Nurse Practitioner Susan Miget. NP Miget had a discussion with Claimant regarding slowly weaning from opioids. The goal was to discontinue opioids or reach a very low dose.

12. On February 5, 2019 Claimant saw Dr. Patel for an evaluation. Dr. Patel noted that "after turning on the SCS implant for her legs from the last visit that [Claimant]

has seen about 40-50% reduction in pain." He also explained that he had a long discussion with Claimant and her husband about the goal of weaning and engaging in a minimum 4-6 week opiate free period. Dr. Patel remarked that Claimant could consider a Ketamine infusion that "would be excellent to assist with continuing to reduce opiates. We will see if this can get approved w/her insurance carrier."

13. Claimant returned to Dr. Patel's office on May 14, 2019 and visited NP-C Miget. Claimant remarked that the newly placed SCS was not helping with her pain and the current level of medications was not working. NP-C Miget started Claimant on Buprenorphine (generic for Suboxone). Dr. Patel testified that Suboxone does not have an abuse potential like other opioids because it does not create a "high" sensation.

14. On May 21, 2019 Claimant returned to NP-C Miget for an examination. Claimant reported body pain and repeated that her SCSs were not helping with pain. She reported pain levels of 8 out of 10. Claimant commented that Suboxone was making her feel sick and drunk. NP-C Miget switched Claimant off of Suboxone and started her on Nucynta.

15. Claimant returned to Dr. Patel on July 2, 2019 for an examination. Dr. Patel noted that he and Claimant discussed the goal of weaning her completely off opioids within the next three months. Moreover, he also had an extensive discussion with Claimant and her husband about the reasonable option of Ketamine infusions based on her positive response to Nucynta. He also remarked that they had tried many other medications, including Gabapentin, Lyrica and Cymbalta, that were all discontinued due to side effects. Dr. Patel reduced Claimant's Nucynta from 100 mg to 50 mg per day and Oxycodone from four to three per day.

16. On July 16, 2019 Claimant again visited NP-C Miget for an evaluation. Claimant reported that her pain levels were 8 out of 10. NP-C Miget recounted that Claimant's husband specified Claimant had suffered severe pain since Dr. Patel had reduced her opioid medications. She detailed that

> Every attempt that we have made to even slightly lower her opioids has resulted in immediate clinic follow-up visit to adjust her medications back. I have asked [Claimant] several times to give any changes we make a few weeks to determine how the new plan will address her needs.
>
> . . .
>
> Over the past several months, I do not see a significant benefit from her medication regime, her activity remains limited, and [Claimant's] husband reports that she spends most of her days "laying in bed."

> I have offered her a multitude of medication options, all of which she has either failed or has reactions to.

At the end of the visit, NP-C Miget adjusted Claimant's long-acting Nucynta back to 100 mg.

17. On July 17, 2019 Dr. Patel issued a letter notifying Claimant she was fired from his practice. In a report dated August 20, 2019 Dr. Patel provided the following explanation for his decision.

> [Claimant] and her husband wanted to dictate the care of [Claimant]. Our intention was to continue her opioids to off as we felt that medically, she no longer required them. This was not an acceptable treatment plan for the patient, nor the husband. Our practice cannot condone patients attempting to dictate care, and particularly when other alternatives are being offered and being denied.

18. Dr. Patel testified that it was apparent Claimant was fixated on staying on opioids. He remarked that during a July 2, 2019 clinical visit Claimant was displeased with his attempts to wean her off her opioids. Furthermore, Claimant and her husband had resisted all attempts to reduce opioids. Dr. Patel summarized that Claimant needs to be completely weaned from opioid medications.

19. Claimant subsequently began treatment with ATP Paul S. Leo, M.D. On October 30, 2019 Dr. Leo reported that Claimant was getting relief from her SCSs and stated that "[i]f we can assure that she will have a Ketamine infusion we can then continue to decrease medications if that infusion is successful."

20. By January 17, 2020 Claimant saw Dr. Leo. He noted that Claimant's MME dose was 110. Dr. Leo remarked that the SCS's were doing reasonably well. He was still trying to get information about the Ketamine infusion center.

21. On May 26, 2020 Claimant again saw Dr. Leo. He recounted she was taking Nucynta extended release 100 mg twice a day and oxycodone 5 mg four times per day when necessary. He summarized that Claimant's MME dose was 110.

22. On June 3, 2020 Dr. Leo responded to a letter from Respondents' counsel. He remarked that Claimant's Oxycodone had been decreased to 5 mg or a 30 MME equivalent. Dr. Leo also mentioned that Nucynta Extended Release 100 mg twice a day equals 80 MME. He also explained that, based on Claimant's good, short term response to Ketamine, a trial of IV Ketamine was warranted. On June 23, 2020 Dr. Leo issued a formal referral order for Ketamine infusions.

23. On November 17, 2020 Claimant returned to Dr. Leo for an examination. He recounted that Claimant suffered from Chronic Regional Pain Syndrome (CRPS) and chronic pain syndrome. Dr. Leo encouraged Claimant to follow-up with Boston Scientific

for stimulator reprogramming. He recorded that Claimant was taking Nucynta ER 100 mg tablets twice a day and oxycodone 5 mg tablets with a maximum of four tablets per day.

24. On October 28, 2020 Richard Larson with the Ketamine Wellness Centers sent Insurer a request for authorization of Ketamine infusions. On November 6, 2020 Respondents' counsel sent a letter to Mr. Larson stating that the prior authorization request for Ketamine treatment was denied.

25. On January 13, 2021 the parties conducted the pre-hearing evidentiary deposition of Dr. Leo. He noted that he is Claimant's current treating physician. Dr. Leo testified that Claimant has "severe three limb CRPS of the left upper extremity and bilateral lower extremities." He explained that Claimant's current medication regimen is reasonable and necessary to treat her work injuries. Dr. Leo commented that Ketamine infusions would hopefully help relieve Claimant's pain and reduce her dependence on opioids.

26. Dr. Patel testified at the hearing in this matter. He recounted Claimant's treatment history. He maintained that Claimant needed to be completely weaned of opioid medications. Dr. Patel emphasized that the goal of opioid reduction is to reach the lowest possible dose that achieves pain relief and maintains function. Nevertheless, Dr. Patel acknowledged that Claimant had consistently appropriately used opioid medications. He explained that Ketamine infusions constituted a reasonable treatment option to reduce Claimant's opioid reliance.

27. Claimant testified at the hearing in this matter. She remarked that she still suffers from pain as a result of her work injuries. Claimant explained she is no longer using Fentanyl patches and has reduced her opioid use. She emphasized that she has consistently followed the recommendations of her physicians in reducing her opioid medications. After receiving care from Dr. Patel, Claimant began treating with Dr. Leo and is happy with his care. She would like to proceed with Ketamine infusions hoping that the treatment will reduce her medications and alleviate her pain.

28. On February 23, 2021 the parties conducted the post-hearing evidentiary deposition of Dr. Olsen. Based on his evaluations of Claimant over the years, as well as a review of the extensive medical records, Dr. Olsen agreed with Dr. Patel that Claimant needs to be weaned from her opioid medications. He explained that, given Dr. Patel's experience with Claimant and her husband during Dr. Patel's attempt to wean her from opioids, the weaning process could not be performed on an outpatient basis. Instead, weaning had to be done at an in-patient detoxification center. Dr. Olsen reasoned that, if Claimant did not accept the offer to attend an in-patient detoxification program, it would be unreasonable to allow Claimant to continue taking opioids.

29. Dr. Olsen explained that Claimant suffers from a Substance Use Disorder (SUD). He specifically noted concerns about Claimant's reports of side effects for all prescribed non-narcotic medications including Gabapentin, Lyrica and Cymbalta. Claimant also had reported side effects to Suboxone or the opioid medication that would

not cause a “high.” Dr. Olsen reasoned that, although Claimant may have an intolerance to one of the preceding medications, it is extremely unlikely that she would be intolerant to all of the medications. He concluded that Claimant’s intolerance to all of the preceding medications suggest that she seeks to remain on opioid medications.

30. Dr. Olsen testified that Ketamine treatment is experimental under the Medical Treatment Guidelines (MTG). He explained that an experimental treatment means “there are not enough scientific studies to verify its efficacy as treatment for pain.” Dr. Olsen detailed that there is a lack of evidence, based on medical literature, that Ketamine can do what the providers in the present matter suggest it can do. He reasoned that, even if Ketamine treatment was considered an appropriate form of medical treatment under the MTG, it still would not be appropriate and reasonable for Claimant. Claimant needs to be weaned from opioids through an in-patient detoxification program before determining whether Ketamine is reasonable and necessary.

31. Respondents do not seek to terminate all of Claimant’s medical maintenance benefits, but only her opioid medications. Claimant thus has the burden to prove the challenged treatment is reasonable, necessary and related to the industrial injury. However, Claimant has failed to prove that it is more probably true than not that continuing medical maintenance benefits in the form of chronic opioid medications are reasonable, necessary and causally related to her August 28, 2005 industrial injuries. The record reflects that a weaning process to reduce Claimant’s opioid medications is reasonable and necessary to treat her symptoms as a result of her industrial injuries.

32. Initially, on August 28, 2005 Claimant sustained a compensable injury to her left elbow when she slipped and fell at work. Dr. Olsen persuasively explained that Claimant has used opioids dating back to her industrial injury. In a report from April 3, 2017 Dr. Olsen specified that Claimant had been on high doses of opioids for over eight years. He remarked that it is generally accepted that MME levels should be no higher than 60-90. Dr. Olsen also commented that there is no evidence that her function has improved or her pain levels have decreased. By July 11, 2018 ATP Dr. Patel also remarked that Claimant had been on high dose opioid therapy for quite some time and was going to need to be weaned. The medical records reveal that he continued to discuss the opioid weaning process with Claimant and her husband. Dr. Patel testified that it was apparent Claimant was fixated on staying on opioids. He remarked that Claimant and her husband had resisted all attempts to reduce opioids. Dr. Patel summarized that Claimant needs to be completely weaned from opioid medications. He emphasized that the goal of opioid reduction is to reach the lowest possible dose that achieves pain relief and maintains function. Finally, based on his evaluations of Claimant over the years, as well as a review of the extensive medical records, Dr. Olsen agreed with Dr. Patel that Claimant needs to be weaned from opioid medications.

33. In contrast, Claimant’s current ATP Dr. Leo testified that Claimant suffers from severe three limb CRPS. He explained that Claimant’s current medication regimen is reasonable and necessary to treat her work injuries. However, the medical records, in conjunction with the persuasive opinions of Drs. Patel and Olsen, reflect that Claimant

requires opioid weaning to the lowest possible dose to achieve pain relief and maximize function. Accordingly, Claimant has failed to establish that her current opioid use is reasonable and necessary to treat her August 28, 2005 industrial injuries. Therefore, Claimant shall be weaned from opioids as directed by her current ATP Dr. Leo.

34. Claimant has established that it is more probably true than not that medical maintenance benefits in the form of Ketamine infusions are reasonable, necessary and causally related to her August 28, 2005 industrial injuries. The bulk of the evidence demonstrates that Ketamine infusions will reduce Claimant's reliance on opioid medications and thus aid in the weaning process.

35. In a February 5, 2019 examination, Dr. Patel had a long discussion with Claimant and her husband about the goal of weaning and engaging in a minimum 4-6 week opiate free period. He remarked that Claimant could consider a Ketamine infusion that "would be excellent to assist with continuing to reduce opiates." Dr. Patel also testified that Claimant has consistently appropriately used opioid medications. He explained that Ketamine infusions constituted a reasonable treatment option to reduce Claimant's opioid reliance. On October 30, 2019 Dr. Leo reported that Claimant was getting relief from her SCSs and stated that "[i]f we can assure that she will have a Ketamine infusion we can then continue to decrease medications if that infusion is successful." Furthermore, Dr. Leo testified that Ketamine infusions would hopefully help relieve Claimant's pain and reduce her dependence on opioids. Finally, Claimant noted she would like to proceed with Ketamine infusions with the hope that the treatment will reduce her medications and alleviate her pain.

36. In contrast, Dr. Olsen testified that Ketamine treatment is experimental under the MTG. He explained that there is a lack of evidence suggesting that Ketamine can do what the providers in the present matter suggest it can do. He reasoned that, even if Ketamine treatment was appropriate under the MTG, it still would not be reasonable for Claimant because she needs to be weaned from opioids through an in-patient detoxification program before determining whether Ketamine is reasonable and necessary. Despite Dr. Olsen's opinion, the medical records in conjunction with the persuasive opinions of ATPs Drs. Patel and Leo, reveal that Ketamine treatment is a reasonable and necessary modality to reduce Claimant's reliance on opioids and facilitate the weaning process. Accordingly, medical maintenance benefits in the form of Ketamine infusions are reasonable, necessary and causally related to Claimant's August 28, 2005 industrial injuries. Respondents shall be financially responsible for Ketamine infusions as part of Claimant's opioid weaning process.

37. Claimant has failed to demonstrate that she is entitled to recover attorney's fees and costs because Respondents' offer of a detoxification facility for opioid reduction is not ripe for adjudication. Claimant asserts that, because none of her ATPs have recommended a detoxification program for opioid mediations, the issue is unripe for hearing. In contrast, Respondents assert that Dr. Olsen has suggested Claimant needs a detoxification program to wean from opioids. Respondents thus seek to make the detoxification program available in the event Claimant's opioid medications are

terminated. Because the record reflects that the issue of a detoxification facility for weaning is ripe for adjudication, Claimant's request for attorney's fees and costs is denied and dismissed.

38. The record reflects that the issue of whether Claimant should attend an in-patient detoxification facility is real, immediate, and fit for adjudication. The central issue in the present case is whether Claimant should be weaned from opioid medications. Relying on the opinion of Dr. Olsen, Respondents have offered an in-patient detoxification facility as an option to aid in the weaning process. Dr. Olsen explained that, based on Dr. Patel's experience in attempting to wean Claimant from opioids, the weaning process could not be performed on an out-patient basis. Dr. Olsen reasoned that, if Claimant did not accept the offer to attend an in-patient detoxification program, it would be unreasonable to allow her to continue taking opioids. Because in-patient treatment is an option for weaning Claimant from opioids, the issue is sufficiently immediate and real to warrant adjudication. There is no legal impediment to immediate adjudication. Accordingly, Claimant's request for attorney's fees and costs is denied and dismissed.

39. Although Respondents have offered an in-patient detoxification program to help wean Claimant from opioids, Claimant is not required to attend the program. Instead, as noted earlier in this opinion, Claimant shall be weaned from opioids as directed by her current ATP Dr. Leo. If Claimant and Dr. Leo believe that an in-patient detoxification program is the best method for weaning, Claimant shall have the option to attend the program at Respondents' expense.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and

actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical Maintenance Benefits

4. Generally, to prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988). However, when respondents file a final admission of liability acknowledging medical maintenance benefits pursuant to *Grover* they can seek to terminate their liability for ongoing maintenance medical treatment. *See* §8-43-201(1), C.R.S.; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). When the respondents contest the liability for a particular benefit, the claimant must prove that the challenged treatment is reasonable, necessary and related to the industrial injury. *Id.* However, when respondents seek to terminate all post-MMI benefits, they shoulder the burden of proof to terminate liability for maintenance medical treatment. *In Re Claim of Arguello*, W.C. No. 4-762-736-04 (ICAO, May 3, 2016); *In Re Claim of Dunn*, W.C. No. 4-754-838 (ICAO, Oct. 1, 2013). Specifically, respondents are not liable for future maintenance benefits when they no longer relate back to the industrial injury. *See In Re Claim of Salisbury*, W.C. No. 4-702-144 (ICAO, June 5, 2012).

Opioid Medications

5. As found, Respondents do not seek to terminate all of Claimant's medical maintenance benefits, but only her opioid medications. Claimant thus has the burden to prove the challenged treatment is reasonable, necessary and related to the industrial injury. However, Claimant has failed to prove by a preponderance of the evidence that continuing medical maintenance benefits in the form of chronic opioid medications are reasonable, necessary and causally related to her August 28, 2005 industrial injuries. The record reflects that a weaning process to reduce Claimant's opioid medications is reasonable and necessary to treat her symptoms as a result of her industrial injuries.

6. As found, initially, on August 28, 2005 Claimant sustained a compensable injury to her left elbow when she slipped and fell at work. Dr. Olsen persuasively explained that Claimant has used opioids dating back to her industrial injury. In a report from April 3, 2017 Dr. Olsen specified that Claimant had been on high doses of opioids for over eight years. He remarked that it is generally accepted that MME levels should be no higher than 60-90. Dr. Olsen also commented that there is no evidence that her function has improved or her pain levels have decreased. By July 11, 2018 ATP Dr. Patel also remarked that Claimant had been on high dose opioid therapy for quite some time and was going to need to be weaned. The medical records reveal that he continued to discuss the opioid weaning process with Claimant and her husband. Dr. Patel testified that it was apparent Claimant was fixated on staying on opioids. He remarked that Claimant and her husband had resisted all attempts to reduce opioids. Dr. Patel summarized that Claimant needs to be completely weaned from opioid medications. He emphasized that the goal of

opioid reduction is to reach the lowest possible dose that achieves pain relief and maintains function. Finally, based on his evaluations of Claimant over the years, as well as a review of the extensive medical records, Dr. Olsen agreed with Dr. Patel that Claimant needs to be weaned from opioid medications.

7. As found, in contrast, Claimant's current ATP Dr. Leo testified that Claimant suffers from severe three limb CRPS. He explained that Claimant's current medication regimen is reasonable and necessary to treat her work injuries. However, the medical records, in conjunction with the persuasive opinions of Drs. Patel and Olsen, reflect that Claimant requires opioid weaning to the lowest possible dose to achieve pain relief and maximize function. Accordingly, Claimant has failed to establish that her current opioid use is reasonable and necessary to treat her August 28, 2005 industrial injuries. Therefore, Claimant shall be weaned from opioids as directed by her current ATP Dr. Leo.

Ketamine Infusions

8. As found, Claimant has established by a preponderance of the evidence that medical maintenance benefits in the form of Ketamine infusions are reasonable, necessary and causally related to her August 28, 2005 industrial injuries. The bulk of the evidence demonstrates that Ketamine infusions will reduce Claimant's reliance on opioid medications and thus aid in the weaning process.

9. As found, In a February 5, 2019 examination, Dr. Patel had a long discussion with Claimant and her husband about the goal of weaning and engaging in a minimum 4-6 week opiate free period. He remarked that Claimant could consider a Ketamine infusion that "would be excellent to assist with continuing to reduce opiates." Dr. Patel also testified that Claimant has consistently appropriately used opioid medications. He explained that Ketamine infusions constituted a reasonable treatment option to reduce Claimant's opioid reliance. On October 30, 2019 Dr. Leo reported that Claimant was getting relief from her SCSs and stated that "[i]f we can assure that she will have a Ketamine infusion we can then continue to decrease medications if that infusion is successful." Furthermore, Dr. Leo testified that Ketamine infusions would hopefully help relieve Claimant's pain and reduce her dependence on opioids. Finally, Claimant noted she would like to proceed with Ketamine infusions with the hope that the treatment will reduce her medications and alleviate her pain.

10. As found, in contrast, Dr. Olsen testified that Ketamine treatment is experimental under the MTG. He explained that there is a lack of evidence suggesting that Ketamine can do what the providers in the present matter suggest it can do. He reasoned that, even if Ketamine treatment was appropriate under the MTG, it still would not be reasonable for Claimant because she needs to be weaned from opioids through an in-patient detoxification program before determining whether Ketamine is reasonable and necessary. Despite Dr. Olsen's opinion, the medical records in conjunction with the persuasive opinions of ATPs Drs. Patel and Leo, reveal that Ketamine treatment is a reasonable and necessary modality to reduce Claimant's reliance on opioids and facilitate the weaning process. Accordingly, medical maintenance benefits in the form of Ketamine infusions are reasonable, necessary and causally related to Claimant's August 28, 2005

industrial injuries. Respondents shall be financially responsible for Ketamine infusions as part of Claimant's opioid weaning process.

Ripeness

11. In *Olivas-Soto v. Industrial Claim Appeals Office*, 143 P.3d 1178 (Colo. App. 2006) the court noted that generally the test to assess whether an issue is ripe for adjudication is when an issue is real, immediate, and fit for adjudication. Under that doctrine, adjudication should be withheld for uncertain or contingent future matters that suppose a speculative injury that may never occur. The Panel discussed the meaning of the term "ripe for hearing" and noted that the term refers to a disputed issue concerning which there is no legal impediment to immediate adjudication. Ripeness requires an actual case or controversy between the parties that is sufficiently immediate and real to warrant adjudication. *Jessee v. Farmers Ins. Exch*., 147 P.3d 56 (Colo. 2006); *Beauprez v. Avalos*, 42 P.3d 642 (Colo. 2002). In general, under the doctrine of ripeness, courts will not consider uncertain or contingent future matters because the injury is speculative and may never occur. *Stell v. Boulder County Dep't of Social Svcs.,* 92 P.3d 910, (Colo.2004).

12. As found, Claimant has failed to demonstrate that she is entitled to recover attorney's fees and costs because Respondents' offer of a detoxification facility for opioid reduction is not ripe for adjudication. Claimant asserts that, because none of her ATPs have recommended a detoxification program for opioid mediations, the issue is unripe for hearing. In contrast, Respondents assert that Dr. Olsen has suggested Claimant needs a detoxification program to wean from opioids. Respondents thus seek to make the detoxification program available in the event Claimant's opioid medications are terminated. Because the record reflects that the issue of a detoxification facility for weaning is ripe for adjudication, Claimant's request for attorney's fees and costs is denied and dismissed.

13. As found, the record reflects that the issue of whether Claimant should attend an in-patient detoxification facility is real, immediate, and fit for adjudication. The central issue in the present case is whether Claimant should be weaned from opioid medications. Relying on the opinion of Dr. Olsen, Respondents have offered an in-patient detoxification facility as an option to aid in the weaning process. Dr. Olsen explained that, based on Dr. Patel's experience in attempting to wean Claimant from opioids, the weaning process could not be performed on an out-patient basis. Dr. Olsen reasoned that, if Claimant did not accept the offer to attend an in-patient detoxification program, it would be unreasonable to allow her to continue taking opioids. Because in-patient treatment is an option for weaning Claimant from opioids, the issue is sufficiently immediate and real to warrant adjudication. There is no legal impediment to immediate adjudication. Accordingly, Claimant's request for attorney's fees and costs is denied and dismissed.

14. As found, although Respondents have offered an in-patient detoxification program to help wean Claimant from opioids, Claimant is not required to attend the program. Instead, as noted earlier in this opinion, Claimant shall be weaned from opioids as directed by her current ATP Dr. Leo. If Claimant and Dr. Leo believe that an in-patient

detoxification program is the best method for weaning, Claimant shall have the option to attend the program at Respondents' expense.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant shall be weaned from opioids as directed by her current ATP Dr. Leo.

2. Respondents shall be financially responsible for Ketamine infusions as part of Claimant's opioid weaning process.

3. The issue of whether Claimant should attend an in-patient detoxification facility is ripe for adjudication. Claimant's request for attorney's fees and costs is thus denied and dismissed. Claimant shall have the option of attending an in-patient detoxification program at Respondents' expense.

4. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

WORKERS' COMPENSATION NO. 4-975-067-002

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that his claim should be reopened due to a worsening of condition?

II. Whether Claimant has proven by a preponderance of the evidence that a total knee replacement surgery is reasonable, necessary, and related to the industrial accident?

III. Whether Claimant has proven by a preponderance of the evidence that medical treatment for his low back and hip complaints are reasonable, necessary, and related to the industrial accident?

IV. Whether Claimant has proven by a preponderance of the evidence entitlement to temporary total disability ("TTD") benefits from May 4, 2020 ongoing.

V. Whether Respondent has proven by a preponderance of the evidence that Claimant was responsible for his separation from employment.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

Claimant's preexisting back condition before January 2015 compensable right knee injury.

1. Before Claimant sustained a compensable injury to his right knee on January 21, 2015, Claimant suffered from chronic back pain.

2. On May 28, 2010, Claimant called his personal physician at Kaiser Permanente ("Kaiser") and requested a refill of Percocet. He stated, "I know my body, I know what is wrong with my back, I've had this pain for years, and just tweaked it this week, and need pain medication to get me through it." **Ex. D:48**. He said, "I don't want to come in just to hear that I have a herniation in my L5, and that I have arthritis in fascia." **Ex. D:48**.

3. Claimant's back pain continued. On January 3, 2012, he emailed Dr. Rears at Kaiser and stated, "My back is acting up again, can you prescribe me some pain meds please? As soon as you can?" **Ex. D:51**.

4. Claimant went to Kaiser on July 14, 2012 and received a referral to neurosurgery for thoracic and lumbar spine pain. **Ex. D:55**.

5. By October 21, 2013, he had been diagnosed with chronic nonmalignant pain, chronic opioid use, abuse potential low, chronic low back pain, and severe obesity. **Ex. D:61**.

It was reported that he was told he had arthritis in his back and a history of back injury since age 13 due to wrestling. **Ex. D:60**.

6. Claimant consistently treated with pain medications prescribed by treaters at Kaiser, since 2012 and after the date of injury of this workers' compensation claim.

Date	Medication	Reason
1/4/2012	Percocet (20 tablets)	Low Back Pain
8/23/2013	Tramadol (30 tablets)	Low Back Pain
9/16/2013	Tramadol (30 tablets)	Low Back Pain
9/27/2013	Baclofen (90 tablets)	Low Back Pain
9/27/2013	Tramadol (30 tablets)	Low Back Pain
10/21/2013	Naproxen (120 tablets)	Pain and Inflammation
10/21/2013	Nortriptyline (60 tablets)	Pain
10/21/2013	Tramadol (112 tablets)	Severe Pain
1/13/2014	Tramadol (112 tablets)	Chronic Pain Syndrome
2/6/2014	Tramadol (112 tablets)	Chronic Pain Syndrome
3/7/2014	Tramadol (112 tablets)	Chronic Pain Syndrome
4/4/2014	Tramadol (112 tablets)	Chronic Pain Syndrome
8/21/2014	Tramadol (112 tablets)	Chronic Pain Syndrome
WC INJURY: 1/21/2015		
2/6/2015	Tramadol (112 tablets)	Chronic Pain Syndrome
6/25/2015	Tramadol (112 tablets)	Chronic Pain Syndrome
10/16/2015	Tramadol (112 tablets)	Chronic Pain Syndrome
1/7/2016	Tramadol (112 tablets)	Chronic Pain Syndrome
1/7/2016	Tramadol (112 tablets, duplicate fill)	Chronic Pain Syndrome
3/10/2016	Tramadol (112 tablets)	Chronic Pain Syndrome; Chronic Low Back Pain > 3 Months

Ex. D.

Claimant suffered a compensable injury
involving his right knee on January 21, 2015.

7. On January 21, 2015, Claimant sustained a compensable injury to his right knee. Claimant was running down a ramp to respond to a call for deputy assistance when he heard a pop and felt pain in his right knee at that time. (Tr. 18:2-16). He explained that it is critical to respond to these calls timely, as there may be inmates fighting, a deputy being assaulted, and so forth. (Tr. 18:17-25). If Claimant does not respond timely, a deputy could be seriously injured or even killed, stressing the importance of how quickly he needed to run and respond to calls such as these. (Tr. 19:19-24).

8. Claimant did not have any issue performing the duties of his job, particularly being able to run at full speed to respond to an emergency, prior to the work injury. He would have been a liability. Claimant testified that he had responded to "hundreds" of these types of calls while working for the employer, and again, he never had any issue with either of his knees and no credible evidence was presented to the contrary. (Tr. 19:24 – 20:4). He elaborated that in late 2014, shortly before this injury occurred in January 2015, he was working 13-hour shifts, requiring him to be on his feet for 80% of the shift. He was also doing Sunday traffic work, which means he would stand for another five hours on his feet in the street on top of his normal daily duties. Claimant could perform all of these activities with no limitations due to pain or functional loss of either knee. (Tr. 20:2 – 20:11). Claimant did admittedly have a previous right knee meniscal tear at around the age of 20 years old, but that was fixed, and Claimant had no functional loss afterwards, and there are no records to dispute Claimant's testimony. (Tr. 20:12 – 21:8). Claimant began working for the Employer in July 2004 after he had recovered from this injury during his youth and remained employed without issue until the work incident in January 2015. (Tr. 21:9-16). Claimant's physical from July 20, 2004 confirms the veracity of his testimony. (Clmt. Ex. 4, p. 11). There is another physical from June 2005 indicating Claimant can perform all of his job tasks without restriction. *Id.* at 12.

9. Claimant began treating with his ATP, Dr. Brian Beatty, for his right knee injury on January 23, 2015, 2 days after the incident. (Clmt. Ex. 10, p. 47). It was documented that Claimant injured his right knee while "running full speed down a ramp" to another when the knee pain occurred. *Id.* Claimant disclosed to Dr. Beatty his prior knee surgery at the first appointment. *Id.* Claimant was diagnosed with only a right knee sprain at this time and was instructed to rest and ICE his knee. *Id.* at 48. However, by January 30, 2015, the knee pain had worsened and also began feeling "unstable," noting that it was worse by the end of his workday and work week. *Id.* at 51. The right knee was tender laterally with effusion and a questionably positive McMurray's test. Dr. Beatty noted Claimant's antalgic gait and also ordered a right knee MRI given Claimant's symptoms. *Id.* at 52.

10. Claimant underwent the MRI on February 6, 2015. (Clmt. Ex. 9, pp. 34-35). The MRI revealed "a diffuse degenerative tear of the posterior horn and body of the lateral meniscus and also a tear of the anterior horn of the lateral meniscus." *Id.* at 34. It also identified arthritis, and joint effusion and synovitis. *Id.* The MRI was performed because of a "Running injury January 21, 2015. Popping sensation. Swelling and sensation of instability." *Id.* Dr. Beatty referred Claimant to surgeon Dr. Phillip Stull. (Clmt. Ex. 10, p. 57).

11. Claimant presented to Dr. Stull for his first visit on February 17, 2015. (Clmt. Ex. 11, p. 269). Claimant reported the same mechanism of injury along with ongoing pain, swelling, stiffness, and a catching sensation, all causing functional loss, especially ability to climb stairs. *Id.* He diagnosed Claimant with a torn lateral meniscus and "mild patellofemoral arthritis" of the right knee. *Id.* It was recommended that they proceed with a right knee arthroscopy with partial meniscectomy. *Id.* Claimant underwent surgery on March 12, 2015. (Resp. Ex. F). The operative report documented grade II and III arthritic changes of the patellofemoral joint, which was extensively debrided as

part of the surgery and the partial lateral meniscectomy. *Id.* at 85. There was in fact a complex tear of the posterior horn that was unstable and displaceable. A partial meniscectomy of this piece, along with resecting the torn portion of the lateral meniscus. *Id.*

12. Claimant followed up with Dr. Stull on March 20, 2015. (Clmt. Ex. 11, p. 282). He was reporting slow progress. *Id.* Claimant was referred to begin outpatient physical therapy at this time. *Id.* Claimant called Dr. Stull's office on March 22, letting them know that he was having drainage at his portal sites, for which he was prescribed Keflex. *Id.* at 288.

13. Claimant's next appointment with Dr. Stull was on April 24, 2015, when Claimant reported persistent aching pain in his right knee, including popping and grinding. (Clmt. Ex. 11, p. 295). On May 25, 2015, Claimant unfortunately reported ongoing activity related pain and grinding and popping in the right knee. *Id.* at 291. Dr. Stull stated that his residual symptoms were likely the result of moderate arthritic change of the right knee, for which a cortisone injection was recommended. *Id.* Claimant had no documented right knee arthritic pain before the January 2015 work injury. Claimant testified at hearing that his knee was "never the same after that first surgery. It just always hurts and always ached. In fact… Dr. Stull came and told my wife that I would need a knee replacement because there was too much debridement or too much to take out. (Tr. 22:2-9). There is a clear line drawn on January 21, 2015 between the lack of pain and functional loss before January 21, 2015, and the significant level of pain and functional loss that began on January 21, 2015 and has persisted to this date with no intervening events.

14. Dr. Beatty continued following up with Claimant for ongoing management of the claim. (Clmt. Ex. 10, p. 78). Dr. Beatty documented on May 1, 2015 that Claimant continued to have intermittent swelling of the knee, that he has felt a click in his knee, and that they had been working harder in physical therapy. *Id.* Claimant still noted functional loss, particularly with stairs. Claimant's symptoms persisted through his June 1, 2015 visit with Dr. Beatty. *Id.* at 86. Dr. Beatty referred Claimant to Dr. Thomas Noonan at the Steadman-Hawkins Clinic at this time. *Id.* at 87.

15. Dr. Noonan and his physician's assistant, Gary Sakryd, evaluated Claimant on June 18, 2015. (Clmt. Ex. 12, p. 298). Claimant stated that he never recovered, despite the surgery and 9 weeks of post-operative therapy, and the cortisone injection that did not help. *Id.* Claimant was wondering about further treatment options given his continued pain. Of note, on physical exam that where mild to moderate patellofemoral crepitus and some pain with "trapping." *Id.* Dr. Noonan indicated he spoke at length with Claimant about his condition and treatment options moving forward. *Id.* at 299. Dr. Noonan specifically stated, "We have counseled him that most likely his arthritis has been longstanding and that likely his injury was an exacerbation of his arthritis." *Id.* They discussed conservative treatment options, such as rest, ice, anti-inflammatories, physical therapy, cortisone injections, hyaluronic acid injections, and unloader bracing of the knee. *Id.* That said, it was already anticipated at this time, as early as June 2015, that Claimant would need a total knee replacement, and that the replacement would be due to the arthritis aggravated at work. *Id.* The plan was to try conservative care first. *Id.*

16. Claimant was referred to the particular specialist within the Steadman-Hawkins Clinic, Dr. Braden Mayer, by Dr. Noonan. (Clmt. Ex. 12, p. 304). Dr. Mayer examined Claimant on August 17, 2015. *Id.* Dr. Mayer documented the history of the running incident at work, the subsequent surgery, and the "continued significant pain following his surgeries." Despite these treatments, along with the cortisone injections, viscosupplementation injections, and unloader brace, there was no noted significant improvement. *Id.* "He has had difficulty returning to work and he is here today to discuss further treatment options." *Id.* Examination documented patellar grind and compression with mild retro patellar crepitus. Dr. Mayer diagnosed Claimant with right knee pain and swelling, mild-to-moderate right degenerative joint disease, worse in the patellofemoral and lateral compartments, and IT band syndrome. *Id.*

17. Claimant and Dr. Mayer discussed the option of a total knee replacement at the visit on August 17, 2015. (Clmt. Ex. 12, pp. 304-05). They discussed ongoing conservative care, but also noted that the ongoing conservative care was not helping, as Claimant "continues to have significant pain despite conservative treatment." *Id.* at 304. Dr. Mayer stated that the definitive treatment for Claimant's condition, at that time, as early as August 2015, was a total knee replacement; however, it was not recommended for Claimant at that time solely due to his young age and prior activity level as a police officer. *Id.* at 304.

18. On October 5, 2015, Dr. Mayer reiterated, "Ultimately, the patient may require replacement-type surgery. However, due to his young age, I would try to put this off for as long as possible. He agrees with this plan." (Clmt. Ex. 12, p. 306). Dr. Mayer made it clear in his notes from 2015 that Claimant had ongoing symptoms that began with the work injury, and that the definitive treatment for said ongoing symptoms is a total knee replacement. Claimant testified consistently with this note: "[A]ccording to Dr. Mayer, he wanted to make sure that I didn't need a knee revision in my fifties. He said I could go as long as I could. He wanted me to wait until closer to fifty, but this last past year I – I have a hard time even going to the grocery store." (Tr. 24:2-9).

19. There have been no subsequent intervening events regarding the right knee since Dr. Mayer concluded that a total knee replacement was the only treatment option left to improve Claimant's condition, but that Claimant would need to wait as long as possible to have it done, given his age.

20. Claimant's left knee became symptomatic over the course of his treatment as a direct result of overcompensating for his injured right knee. Respondents disputed the relatedness of the left knee and Dr. Mayer's request for left knee surgery. Nevertheless, ALJ Kara Cayce's March 9, 2017 Order found that Claimant's left knee condition and need for surgery was reasonable, necessary, and related to the work incident. (Resp. Ex. I, pp. 121-30).

21. Claimant was placed at MMI on September 21, 2017 by Dr. Beatty with a 22% scheduled rating for each knee. Respondents filed a final admission of liability accordingly. (Resp. Ex. I, p. 167). Dr. Beatty stated in his closing report, "At this point he is still not a candidate for knee replacement surgery and is now felt to be at maximum medical improvement." *Id.* at 181. Dr. Beatty states that Claimant was truly only at MMI because he was too young for the knee replacement at that time. Dr.

Beatty also provided permanent restrictions of 1-2 hours of walking per day with no crawling, kneeling, squatting, or climbing, and he may work up to 5 hours per day. Orthotics were recommended for maintenance care, along with a pool pass for one year; however, Claimant testified at hearing that he never received a pool pass. *Id.* at 183.

22. When Claimant was placed at MMI on September 21, 2017, Claimant's restrictions prevented him from performing his regular job duties as a deputy sheriff. As a result, Respondent offered to Claimant three different employment positions approved by Dr. Beatty: Communications Technician I, Records Clerk, and Communications Technician II. **Ex. K:240**.

23. Claimant declined the offered opportunities for a civil job, and despite Respondent wanting to retain Claimant as an employee, he was separated from employment effective January 2, 2018. **Ex. L; TR. 74:12-20.** Claimant had a chance to appeal the separation to the Sheriff, which he did not do. **TR. 68:18-24**. He applied for and received long term disability benefits and social security disability benefits. **TR. 41:21-25; 42:1-2**.

24. On January 23, 2018, claimant returned to Dr. Beatty for a maintenance visit. At this appointment, Claimant said that his symptoms were about the same but possibly a little worse with regard to his right knee. Claimant did, however, indicate that he felt more unstable and had trouble going down any type of hill. Despite Claimant's complaints, there is no indication Dr. Beatty changed Claimant's. At this time, Claimant was limited to part-time work for 5 hours per day. **Ex. B:27. Ex. 10:246-248.**

25. On October 10, 2018, Dr. Reichhardt performed an IME on behalf of Respondent and addressed Claimant's low back and hip complaints. He assessed whether Claimant's back and hip pain relates to his work injury. Dr. Reichhardt concluded that Claimant's low back pain does not result from the January 21, 2015 work injury. **Ex. B:30**. Despite the Kaiser records showing otherwise, Claimant told Dr. Reichardt that his back pain developed between April and October 2017. **Ex. B:30**. Dr. Reichardt also contended that Claimant's hip pain, right thigh, and bilateral lower leg symptoms and sensory loss did not relate to the January 21, 2015 injury. **Ex. B:30**.

26. During his IME with Dr. Reichhardt, Claimant also described his ability to engage in certain activities, including grocery shopping. As of October 18, 2018, Claimant said that his underlying work conditions prevented him from completing all of his grocery shopping in one visit. Instead, Claimant alleged he was only able to just "pick up a few items." **Ex. B: 29.**

27. On April 9, 2019, Claimant returned to Dr. Beatty. At this appointment, Claimant complained of worsening right knee pain. At this appointment, Dr. Beatty noted abnormal range of motion wit swelling. At this appointment it was also noted Claimant was not working. In the end, Dr. Beatty did not modify Claimant's work restrictions. He did, however, write a prescription for orthotics and a pool pass. **Ex. 10: 247-252**.

28. On May 9, 2019, Claimant returned to Dr. Beatty. At this appointment, Claimant said his knee pain was the same, but that he was developing some low back pain over the last several months. At this appointment, Dr. Beatty did not provide Claimant any additional work restrictions. Claimant was still limited to working part time – 5 hours per day. **Ex. 10: 253-254.**

29. On March 11, 2020, Claimant saw Dr. Beatty and said at this appointment that "on occasion, his right knee will become severely painful and he is unable to walk on it." At this appointment, Dr. Bain still maintained Claimant's work restrictions and did not provide additional restrictions. **Ex. 10: 265-266**.

30. On May 4, 2020, Claimant was evaluated by Dr. Braden Mayer. At this visit, it was concluded that conservative treatment – the hyaluronic acid injections – were no longer providing any relief and Claimant's pain was worse. As a result, Claimant's condition had worsened to the point where the next option was a knee replacement. **Ex. 12: 356-358**.

31. Claimant filed a petition to reopen his claim on August 3, 2020, asserting a "Change in medical condition" per the required form. (Clmt. Ex. 1, p. 1). Claimant asserted the claim should be reopened as his condition had changed or worsened to require a knee replacement per his surgeon. *Id.* Dr. Braden Mayer's May 4, 2020 note was attached to the petition to reopen. *Id.* at 3-5. Under history of present illness, Claimant stated that he has continued to have the ongoing right knee pain that has not subsided since the date of the injury. *Id.* at 3. He has been treating conservatively for years, but Claimant began noticing a diminishing effect with his recent hyaluronic acid injections. *Id.* "At this point in time [Claimant] has failed to respond to conservative treatments and wishes to discuss definitive treatment with total knee arthroplasty." Dr. Mayer and Claimant agreed that the knee replacement was the best way to proceed forward medically. *Id.* at 5. Respondents denied the surgery. (**Clmt. Ex. 2**). Claimant testified that, since being placed at MMI, the pain in his right knee has become worse. (**Tr. 25:1-6**).

32. Claimant underwent an IME with Dr. James Lindberg at the request of Respondents on June 30, 2020. (Clmt. Ex. 8). Dr. Lindberg stated that Claimant has significant osteoarthritis of the right knee, and to a lesser extent his left knee. Dr. Lindberg goes so far as to say that Claimant's initial surgery for the torn meniscus was "clearly" not claim related and that it was degenerative, despite Respondent's approval of this surgery. *Id.* at 32. However, this is moot as Respondents accepted liability for the knee and the surgery performed. *Id.* Dr. Lindberg further opined that Claimant's back and bilateral hip symptoms were not related to Claimant's work injury or a consequence thereof. *Id.* at 33. Dr. Lindberg was asked if the surgery for the knee was "necessary," to which he replied, possibly, but that it was unrelated in his opinion. He felt the only evidence of a causal relationship was the timing. *Id.* Dr. Lindberg also opined on October 15, 2020 that the orthovisc injections that Claimant had been receiving for years were not work related. *Id.* at 15.

33. On August 18, 2020, Claimant returned to Dr. Beatty. At this appointment, Claimant complained of worsening knee pain which worsened with any significant walking or standing. It was also noted that due to Claimant's pain complaints, Dr. Mayer had recommended a right knee replacement. **Ex. 10: 267.**

34. Although Dr. Beatty did not comment on Claimant's restrictions at this appointment, Claimant's ability to walk and stand decreased based on the pain in his knee. This evidence combined with the recommendation for a knee replacement by Dr. Mayer further supports a finding that Claimant's condition has worsened and that additional medical treatment is necessary to cure Claimant from the effects of his work injury.

35. Claimant has undergone multiple IMEs with Dr. Timothy Hall at the request of Claimant's counsel. Of record, there is an August 31, 2018 IME, a January 30, 2020 IME, and a November 3, 2020 records review. (Clmt. Exs. 6-8). Claimant has been reporting ongoing back and bilateral hip pain related to his work condition for years. At the examination with Dr. Hall on August 31, 2018, Claimant informed Dr. Hall that he had been complaining of his hips to his providers, but they would not listen to him. (Clmt. Ex. 5, p. 14). Claimant felt that his symptoms began about a year and a half ago because of his ongoing pain in both knees. Claimant had lower back pain, more right sided than left in the thoracolumbar area. Claimant reported pain of the posterior/superior iliac spine/SI joint. *Id.*

36. Dr. Hall stated that Claimant's hip and lower back symptoms were directly caused by the injury to his knees and his gait disturbance since. (Clmt. Ex. 5, p. 15). "Having a lack of push-off in stance phase necessitates pulling one's leg through, which one does with hip flexors/psoas, which is where his pain is. I doubt it is the hip joints, although they do need looking into, but there are obvious abnormalities on exam consistent with psoas spasm." Claimant's back and hips remained untreated. (Clmt. Ex. 6, p. 16). Claimant went to an IME with Dr. Hall again on January 30, 2020 to address this issue and the knee replacement. (Clmt. Ex. 6). Claimant told Dr. Hall that he has been continuing to treat for his knees but that his back and hip pain had been increasing. Dr. Hall maintained that these problems were caused by Claimant's abnormal gait and postural dysfunction caused by the knees. *Id.* at 16. He explained that in the notes that do not mention abnormal gait, it is because it is often not observed or tested. In the tests that were observed, such as the FCE and then the evaluation with Dr. McCeney both documented abnormal gait[1]. *Id.*

37. As for the right total knee replacement, Dr. Hall opined "It is clear he needs the joint replacement." (Clmt. Ex. 6, p. 18). He felt that one would not ideally want to do it at a young age, but "sometimes there are not options. He may require revision in the future but better that than to have him continue now in such pain and with such devastating consequences from a functional perspective." *Id.* Dr. Hall stated that Claimant's back and hip issues were likely musculature in nature, not discogenic or anything more severe. *Id.* Dr. Hall felt manual therapies would be appropriate, such as physical therapy and massage therapy *Id.*

38. Dr. Hall testified at hearing consistently with his authored report. He explained that Dr. Lindberg was wrong regarding the initial meniscal tear resulting from Claimant's obesity and his previous surgery 20 years ago. Dr. Hall agreed neither of those factors is "helpful" for Claimant, but it remains evident that the precipitating factor that caused Claimant's need for treatment was him running down the hall in response to a call and

[1] *See* Clmt. Ex. 15, p. 522, noting altered gait, and Claimant reporting pain in his lower back and hip from same.

injuring his knee while doing so. It was this event that likely caused the tear and exacerbated the arthritis. (Tr. 43:8-24). Claimant's previous surgery from approximately 20 years ago could have left his knee in a weakened state, but that only increases the probability that Claimant would have severely injured his knee while running and increased the probability of him needing a total knee replacement. (Tr. 44:3-16).

39. There is much discussion and argument from Respondent regarding the amount of pre-existing arthritis that was in Claimant's knee; however, this largely remains irrelevant since there is no evidence to suggest his knee was symptomatic prior to January 21, 2015. As Dr. Hall explained, many people have severe arthritis but do not have severe pain or functional loss, and you should not perform a knee replacement on somebody simply because of "arthritis." The surgery is performed to alleviate pain and increase function due to the arthritis. Claimant did not have pain or functional loss before this incident. Claimant has had pain and functional loss since the incident. (Tr. 45:1-17). Dr. Hall testified that Claimant sustained a "permanent" aggravation to his underlying arthritis in his knee on January 21, 2015 and that the surgery was reasonable, necessary, and appropriate. (Tr. 46:1-19). Dr. Hall also commented on the opinions of Dr. Lindberg and his reliance on information indicating "overcompensation" injuries were not actually a thing. Dr. Hall pointed out that the article cited by Dr. Lindberg was in reference to contralateral extremities, not altered gait from an extremity causing hip or lower back issues. (Tr. 48:1-13).

40. Dr. Lindberg testified at hearing on behalf of Respondents. It was his opinion that Claimant's previous meniscectomy from decades ago and his weight where the "causative factors" in Claimant's injury. (Tr. 77:1-13). When asked by Respondents counsel his opinion on whether running down the ramp exacerbated an underlying, non-symptomatic degenerative knee condition, he responded, "More than likely it was a manifestation of his underlying osteoarthritis." (Tr. 76:2-7). It is unclear what this means, but at a minimum, Dr. Lindberg opined that Claimant's osteoarthritis "manifested," or became symptomatic, while running down the ramp; however, the "cause" of the need for treatment for the arthritis in Dr. Lindberg's eyes are Claimant's obesity and a surgical history two decades old.

41. Dr. Lindberg himself at least twice testified that Claimant's underlying arthritic condition was aggravated by the work injury or treatment. On direct examination, Dr. Lindberg testified that "doing a scope for a meniscectomy for degenerative arthritis is almost always unsuccessful in solving the problem." (Tr. 78:7-11). He elaborated that after the surgery, you still have the underlying arthritis. "You take out more of the cushion so there's more articular cartilage rubbing against articular cartilage. It's already damaged. So, it accelerates the issue." (Tr. 78:12-17). As a result, Dr. Lindberg admitted that the first surgery Claimant underwent for his work condition "accelerates" the arthritis.

42. Dr. Lindberg admitted on cross-examination that there is no record of Claimant treating for his knee between roughly 2001 and 2015. (Tr. 86:15-25). Of critical importance is Dr. Lindberg's second statement that Claimant sustained a permanent aggravation of his underlying osteoarthritis as a result of the work injury. Dr. Lindberg was asked whether he agreed with Dr. Hall that Claimant sustained a permanent

aggravation or a temporary aggravation. "Well, he's still complaining of pain. The underlying disease was already there. The fact that he's still painful, it's reasonable to think that he has a permanent aggravation." (Tr. 87:17-25).

43. Ms. Jhanadu Gaza testified on behalf of Respondents in her capacity as the risk manager for the Employer that handles their workers' compensation Claims. (Tr. 66:8-21). Ms. Gaza testified that, after Claimant had reached MMI with permanent restrictions, he was offered three different job assignments that were approved by Dr. Beatty. She testified that Dr. Beatty said Claimant could do all the jobs, but that Claimant declined, and because he declined, they had to separate employment. (Tr. 67:9 – 68:5). There is no documentation that a formal modified job offer was made to Claimant. Exhibit L, Bates 240, of Respondents' exhibits documents that Dr. Beatty indicated Claimant could work any of the three jobs presented, but there was nothing in the letter indicating what the job duties were. There was also no formal modified job offer mailed to Claimant. The record reflects that Dr. Beatty responded on December 21, 2017. The next letter is from Respondents' - Exhibit L - dated January 2, 2018, documenting that Claimant supposedly declined the modified job offer that does not exist in the record.

44. Ms. Gaza testified that Claimant never responded to the letter. Claimant testified that he was contacted by Chief Etheridge about work, but only to notify him that they could not accommodate his restrictions and the employment would be ending. (Tr. 38:1-7). Claimant testified that it was December 2017 when he was formally terminated from his employment by Chief Etheridge because they could no longer continue to accommodate his restrictions. Claimant believed his last day of work was either December 21 or December 23 of 2017. (Tr. 26:22 – 27:18).

45. Claimant's testimony was internally consistent and consistent with the underlying medical records. As a result, the ALJ finds Claimant to be credible.

46. Claimant did not have any significant functional limitation related to his right knee before the work injury on January 21, 2015. Claimant did not have any ongoing significant pain in his right knee before the work injury on January 21, 2015. Claimant could perform the full duties of his job prior to the work injury; a job that requires near constant use of the knee to stand, walk, or run. The opposite has been true since January 21, 2015. Claimant's function has not returned. Claimant's rather severe pain continues. Claimant remains unable to perform his job duties. According to Dr. Lindberg's own words, the incident caused a permanent aggravation of Claimant's underlying arthritis that now requires a knee replacement.

47. The evidence supports that Claimant has proven by a preponderance of the evidence that his medical condition has worsened and that his claim should be reopened pursuant to the Act.

48. The evidence supports that Claimant has proven by a preponderance of the evidence that the request for the right total knee replacement by Dr. Mayer is reasonable, necessary, and related to the January 21, 2015 work injury.

49. The ALJ finds that Claimant has failed to establish that the increase in his knee pain has caused additional disability. While Claimant has complained of more pain since

being placed at MMI, the ALJ finds Claimant has failed to establish that the increase in pain has caused additional restrictions or additional disability that further diminishes his ability to work. The ALJ finds that Claimant's chronic knee pain severely restricted Claimant from working when he was placed at MMI and the added knee pain has not caused additional wage loss. As a result, the ALJ finds Claimant has not established a change in his disability since being placed at MMI and up through the date of the hearing.

50. While the ALJ finds Dr. Hall's opinions regarding the cause of Claimant's need for medical treatment for his knee to be persuasive, the ALJ does not credit his opinion about Claimant's need for medical treatment for his low back and hip. Instead, the ALJ credits the opinion of Dr. Reichhardt regarding Claimant's low back and hip. Claimant had chronic low back pain before and after his work injury. Moreover, since being placed at MMI, Claimant has remained fairly inactive and has not worked. As a result, the ALJ finds that Claimant's back condition and hip condition was not caused or aggravated by his work injury and antalgic gait.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant has proven by a preponderance of the evidence that his claim should be reopened due to a worsening of condition?

Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim, the claimant shoulders the burden of proving his condition has changed and is entitled to benefits by a preponderance of the evidence. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* WC 4-358-465 (ICAO, Oct. 25, 2006). Reopening is appropriate if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* WC 4-543-945 (ICAO, July 19, 2004).

The ALJ finds and concludes that the evidence presented has established by a preponderance of the evidence that Claimant had a change in his condition under the meaning of § 8-43-303, C.R.S. The evidence reflects that Claimant was placed at MMI at the end of 2017, not because there were no treatment options left available, but because neither Claimant nor his surgeon, Dr. Mayer, wanted to perform a knee replacement at that time. They both wanted to wait as long as possible to have the knee replacement. The evidence reflects that Claimant received consistent, ongoing maintenance care, including ongoing viscosupplementation injections. Claimant eventually informed his surgeon, Dr. Mayer, that he was no longer receiving the same relief from these conservative measures. Given his increased pain – worsened condition - Claimant and Dr. Mayer made the decision together that it was finally time to move forward with the knee replacement since other modalities were no longer providing significant relief and Claimant was now simply suffering. The ALJ finds and concludes Claimant requires additional medical treatment in the form of a total knee replacement, and the claim shall be reopened effective May 4, 2020, the date Dr. Mayer recommended the total knee replacement based on Claimant's changed medical condition.

II. Whether Claimant has proven by a preponderance of the evidence that a total knee replacement surgery is reasonable, necessary, and related to the industrial accident?

Respondents are liable for medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

The ALJ finds and concludes that there is no reliable and credible evidence to suggest Claimant had any significant pain or functional limitation of his right knee before the admitted work injury. Although Claimant almost assuredly had arthritis in his knee before January 21, 2015, it was the incident at work that directly caused his knee to become symptomatic, and Claimant's knee remained symptomatic after the initial surgery. There is no suggestion if or when Claimant would have required a total knee replacement but for the work incident. As stated by Dr. Hall, and by Dr. Lindberg, Claimant sustained a permanent aggravation of his underlying arthritis. The pain and functional loss now being caused by the permanent aggravation of the underlying arthritis has worsened to the point of requiring a total knee replacement. If the need for the knee replacement is unrelated to the work injury, the only other explanation based on the evidence presented is that Claimant's knee would have come to this point, as fast as it did, without the work injury. The weight of the evidence does not support this alternative theory. As a result, the ALJ finds and concludes Claimant has established by a preponderance of the evidence that the knee replacement recommended by Dr. Mayer is reasonable, necessary, and related.

III. Whether Claimant has proven by a preponderance of the evidence that medical treatment for his low back and hip complaints are reasonable, necessary, and related to the industrial accident?

Respondents are liable for medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

While the ALJ found Dr. Hall's opinions about the cause of Claimant's need for medical treatment for his knee to be persuasive, the ALJ does not credit his opinion about Claimant's need for medical treatment for his low back and hip. Instead, the ALJ credits the opinion of Dr. Reichhardt regarding Claimant's low back and hip. Claimant had chronic low back pain before and after his work injury. Moreover, since being placed at MMI, Claimant has remained fairly inactive and has not worked. As a result, the ALJ finds that Claimant's back condition and hip condition was not caused or aggravated by his work injury and antalgic gait. Thus, the ALJ finds and concludes Claimant has failed to establish by a preponderance of the evidence that he is entitled to medical treatment under this claim for his back and hip.

IV. Whether Claimant has proven by a preponderance of the evidence entitlement to temporary total disability ("TTD") benefits from May 4, 2020 on.

Section 8-42-105(4), C.R.S. does not bar TTD wage loss claims after a termination for which the employee was responsible when the worsening of a work-related injury causes a subsequent wage loss. *Anderson v. Longmont Toyota, Inc.*, 102 P.3d 323, 326 (Colo. 2004). This is limited to cases in which the "claimant's condition worsens after the termination of employment and prevents or diminishes the claimant's ability to work" rather than where the wage loss is the result of the voluntary or for-cause termination of the regular or modified employment. *Gilmore v. Industrial Claim Appeals Office,* 187 P.3d 1129 (Colo. App. 2008); *Grisbaum v. Indus. Claim Appeals Office*, 109 P.3d 1054, 1056 (Colo. App. 2005). A subsequent increase in work restrictions is not per se evidence of a worsening of condition and whether a worsened condition caused the claimant's wage loss is a factual question for the ALJ. *See Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630, 632 (Colo.App.2014). An ALJ may consider several factors in determining that a worsened condition, and not an intervening termination of employment, caused the claimant's wage loss. *Id.* at 633.

The ALJ finds and concludes that Claimant has failed to establish that the increase in his knee pain has caused additional disability and wage loss since being placed at MMI. While Claimant has complained of more pain since being placed at MMI, the ALJ finds Claimant has failed to establish by a preponderance of the evidence that the increase in pain has caused additional restrictions or additional disability that further diminishes his ability to work. The ALJ finds and concludes that Claimant's chronic knee pain severely restricted Claimant from working when he was placed at MMI and the additional knee pain has not caused any additional wage loss. As result, the ALJ finds Claimant has not established a change in his disability since being placed at MMI and up through the date of the hearing. Claimant has therefore failed to establish by a preponderance of the evidence that he is entitled to temporary total disability benefits at this time.

V. Whether Respondent has proven by a preponderance of the evidence that Claimant was responsible for his separation from employment.

The ALJ does not find this issue to be relevant given the above findings and conclusions.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request to reopen his claim is GRANTED.
2. Respondents shall authorize and pay for the right total knee replacement recommended by Dr. Braden Mayer to cure Claimant from the effects of his work injury.

3. Claimant's claim for medical benefits for his back and hip is denied and dismissed.

4. Claimant's claim for TTD benefits from May 14, 2020, through the date of the hearing is denied and dismissed.

5. All matters not determined herein, and not closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 5, 2021.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that treatment of his cervical spine (including cervical facet injections, as recommended by Dr. Giora Hahn) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted October 23, 2017 work injury.

2. Whether the claimant has demonstrated, by a preponderance of the evidence, that treatment of his right knee (including arthroscopic surgery as recommended by Dr. Christopher George) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted October 23, 2017 work injury.

3. At hearing, the respondents confirmed that this is an admitted claim. The admitted body parts are: rib fractures, a sternum fracture, right hip, and right **shoulder**.

FINDINGS OF FACTS

1. The claimant worked for the employer as a roofer. On October 23, 2017, the claimant was performing his normal job duties when he fell through rotted boards on a roof. The claimant estimates that he fell 13 to 15 feet to the ground.

Medical Treatment Prior to October 23, 2017

2. Prior to this work injury, the claimant underwent medical treatment for his left knee, including arthroscopic left knee surgery on January 13, 2015. The claimant has been treated by his primary care provider, Dr. Michael Vargas, since February 2015. The claimant has seen Dr. Vargas for various chronic pain symptoms, including treatment for his left knee and low back. Dr. Vargas has noted that the claimant has osteoarthritis in his bilateral knees. Claimant's history of chronic osteoarthritis is also documented in medical records from Mountain Family Health Centers.

Medical Treatment Beginning October 23, 2017

3. On October 23, 2017, the claimant was immediately transported to Valley View Hospital for medical treatment. At that time, the claimant was seen by Dr. Brad Nichol. The claimant reported that when he fell he landed on his left side, shoulder, and head. The claimant's symptoms were recorded to be left sided chest pain. Dr. Nichol ordered computed tomography (CT) scans of the claimant's cervical spine, head, chest, abdomen, and pelvis. The results of those scans showed left sided rib fractures (1 through 8). There were no fractures or dislocation found in the cervical spine. In addition, there was no cranial fracture, facial fractures, or intracranial hemorrhage. Dr. Nichol noted

that the claimant was a “chronic narcotic user for his lower back pain”. Dr. Nichol recommended the claimant’s admission to the hospital for observation.

4. After he was released from Valley View Hospital the claimant was seen by Dr. Vargas on October 30, 2017. On that date, the claimant reported falling through a roof on October 23, 2017. The claimant also reported multiple rib fractures and a sternal fracture. Dr. Vargas renewed the claimant’s standing prescription for oxycodone. In addition, he prescribed the muscle relaxant, baclofen.

5. On November 7, 2017, the respondents filed a General Admission of Liability (GAL). In that document the respondents admitted for the claimant’s fractured ribs. In addition, temporary total disability (TTD) benefits were noted to have begun on October 24, 2017.

6. Dr. David Lorah is the claimant’s authorized treating provider (ATP) for this claim. The claimant was first seen by Dr. Lorah on November 8, 2017. At that time, the claimant reported continuing chest wall pain on the left side.

7. The claimant returned to Dr. Lorah on December 8, 2017. The claimant reported that he was experiencing pain in his right shoulder and left hip. Based upon this report, Dr. Lorah referred the claimant to physical therapy to address these right shoulder and left hip symptoms.

8. On December 20, 2017, the claimant returned to Dr. Nichol. At that time, Dr. Nichol noted that the claimant’s rib fractures were healing and he could resume activity,as tolerated.

9. On April 4, 2018, Dr. Lorah ordered magnetic resonance imaging (MRI) of the claimant’s right shoulder and right hip. The MRI of the claimant’s right shoulder showed a rotator cuff tear. The right hip MRI showed a labral tear. Based upon the MRI results, on April 20, 2018, Dr. Lorah referred the claimant to Dr. Christopher George for an orthopedic evaluation.

10. On May 8, 2018, the claimant was seen by Dr. George and Dr. Ferdinand Liotta. At that time, the claimant described his October 23, 2017 fall. The MRI results of the claimant’s right shoulder and right hip were addressed. In the medical record of that date, it was noted that the claimant wanted to proceed with shoulder surgery, as he felt that his shoulder was more limiting than his hip.

11. On July 28, 2018, Dr. Liotta performed arthroscopic surgery on the claimant’s right shoulder. The surgery included debridement of hypertrophic synovitis; subacromial decompression; distal clavicle excision; and coracoid decompression and subscapularis tendon repair. Following the right shoulder surgery, the claimant attended physical therapy.

12. Thereafter, it was determined that the claimant would also undergo right hip surgery. On April 4, 2019, Dr. George performed a right hip arthroscopy and labral debridement. The claimant attended physical therapy following that surgery.

13. On May 10, 2019, the claimant reported to his physical therapist, Codi Fruhmann, PT/DPT, that he had fallen up the stairs at home. The medical record of that date specifically provides that the claimant "did try to catch himself with bilateral upper extremities. He reports increased soreness anteriorly in pectorals and long head of biceps tendon." In a similar physical therapy record also dated May 10, 2019, PT Fruhmann noted that the claimant "feels he refractured a rib on the left side… He heard a pop when landing right on this rib on the stairs…"

14. On May 16, 2019, the claimant was seen by Dr. Liotta. At that time, the claimant reported "falling down some stairs" on approximately May 9, 2019. Since that fall, the claimant was experiencing increased pain and tightness in his right shoulder. Thereafter, Dr. Liotta determined that the claimant had reinjured his prior repair, requiring surgery. On June 25, 2019, Dr. Liotta performed a revision subscapularis tendon repair on the claimant's right shoulder.

15. With regard to all of the above medical appointments, the ALJ finds no mention of right knee or neck related complaints.

16. Following a referral from Dr. Vargas, on June 21, 2019, claimant began treatment with Colorado Injury & Pain Specialists[1] to address various chronic pain conditions. The medical record of that date states that the claimant was seeking treatment for his right shoulder, right knee, and back pain. Specifically, the pain in the claimant's "right shoulder and hip began in 2013 after falling through a roof while working construction…The back and right knee pain began in 2008 after he was run over by a truck… He reports sustaining a L2 [fracture] of his low back. He also had to have the meniscus removed from his right knee. He states that he could not get a right knee replacement because of his age…"

17. The claimant testified that the June 21, 2019 medical record is incorrect. He testified that he injured his left knee in 2008.

18. The claimant first reported right knee symptoms to Dr. Lorah on July 21, 2019. On that date, the claimant reported that his right knee was bothering him while doing his hip exercises. Dr. Lorah opined that the claimant had sprained his right knee and that it was "unlikely he would have sustained a major injury and if he has a meniscal tear or something else is probably not related to his workers comp injury".

19. The claimant first reported cervical symptoms to Dr. Lorah on September 9, 2019. In the medical record of that date, Dr. Lorah noted "[T]oday he is complaining of cervical [crepitus] and pain with left-sided rotation. I don't recall that he has ever mentioned this nor do I see this in our previous encounters although he assures me this has been happening since the time of the injury… He tells me that he has been complaining of this ever since the time of the initial injury. I reviewed basically all of our

[1] At hearing, the claimant confirmed that this treatment is paid for by Medicaid and is not part of this workers' compensation claim.

notes since that time and don’t see mention of it. I don’t see mention of it in his physical therapy notes either.”

20. On September 27, 2019, the claimant reported right knee complaints to Dr. George. Specifically. the claimant reported right knee pain, clicking, and popping over “the last several months”. Dr. George opined that it was a possible lateral meniscus tear.

21. Subsequently, Dr. Lorah ordered a cervical spine x-ray. The x-ray was performed on October 9, 2019 and showed no acute bony findings; multilevel mild to moderate degenerative changes (most severe at the C4-C5 level); and moderate to marked foraminal narrowing at the right C4-C5 level (with moderate at the left C4-C5 level).

22. In addition, Dr. Lorah ordered a right knee MRI. That MRI was performed on October 19, 2019 and showed tears of the posterior horn and posterior root of the medial meniscus; partial tear versus ganglion of the anterior cruciate ligament (ACL); minimal lateral subluxation of the patella; and mild osteoarthritis of the medial compartment and proximal tibiofibular joint.

23. On December 3, 2019, the claimant was seen by Dr. George. At that time, Dr. George opined that the claimant’s right knee was injured when he fell on October 23, 2017. Dr. George recommended arthroscopic surgery. On December 5, 2019, Dr. George submitted a request for authorization of a right knee arthroscopy and medial meniscectomy.

24. At the request of the respondents, Dr. David Orgel reviewed the surgical request. In a report dated December 17, 2019, Dr. Orgel recommended denial of the surgery. Based upon Dr. Orgel’s report, the respondents denied the right knee surgery.

25. On January 31, 2020, Dr. George authored a letter of appeal related to the requested right knee surgery. Dr. George stated that the claimant had experienced right knee pain since his October 23, 2017 work injury. Dr. George opined that primary focus of treatment was on the claimant’s hip and shoulder because those symptoms were more severe than those in his right knee. Dr. George also opined that the claimant’s mechanism of injury was consistent with a medial meniscus tear.

26. Following Dr. George’s appeal, the respondents asked Dr. Jon Erickson to review the surgical request. In his February 14, 2020 report, Dr. Erickson agreed with Dr. Orgel’s recommendation to deny the surgery. In support of this opinion, Dr. Erickson noted that the claimant had not reported right knee symptoms between October 23, 2017 and July 5, 2019. Dr. Erikson also referenced the claimant’s May 2019 fall on stairs “and yet at that time there was no complaint of any knee pain.” Based upon Dr. Erickson’s report the respondents denied the right knee surgery.

27. During this same period of time, the claimant continued to report right shoulder symptoms. On May 26, 2020, Dr. Liotta performed “manipulation under anesthesia” to address adhesive capsulitis of the right shoulder.

28. On February 12, 2020, a cervical spine MRI was performed. The MRI showed straightening of the cervical lordosis; minimal posterior spondylolisthesis at C4; degenerative changes of the cervical spine resulting in mild canal stenosis and slight impingement of the spinal cord at the C4-C5 level; and foraminal compression of the right C5 nerve root.

29. On February 25, 2020, the claimant was seen by Dr. George regarding his right hip. On that date, Dr. George opined that the claimant would not benefit from further arthroscopic surgeries. Instead he recommended a right hip replacement. With regard to the claimant's cervical spine, Dr. George noted that the claimant "[d]id mention some disc issues in his neck".

30. On March 4, 2020, the claimant was seen by Dr. Vargas regarding chronic pain. In the medical record of that date, Dr. Vargas noted, *inter alia*, that the claimant suffered from chronic degenerative cervical spinal stenosis and lumbar radiculopathy.

31. Following a referral by Dr. Lorah, on March 6, 2020, the claimant was seen by Dr. Giora Hahn for consultation. On that date, Dr. Hahn noted that the claimant had experienced right neck pain "for 2 years since he fell off a roof". Dr Hahn noted the cervical spine MRI results and diagnosed cervical degenerative disc disease with facet arthropathy. Dr. Hahn recommended the claimant undergo cervical facet injections. Dr. Hahn also opined that radiofrequency ablation could be a potential future treatment for the claimant. Dr. Hahn submitted a request for authorization of the recommended injections.

32. At the request of respondents, Dr. Joseph Fillmore reviewed the request for cervical facet injections. In a report dated March 18, 2020, Dr. Fillmore opined that the claimant did not suffer an injury to his cervical spine as a result of his fall on October 23, 2017. Dr. Fillmore also noted that the first reference of neck symptoms was made by Dr. Lorah on September 9, 2019. Dr. Filmore recommended denial of the injections. Based upon Dr. Fillmore's report, the respondents denied authorization.

33. On July 23, 2020, the claimant attended an independent medical examination (IME) with Dr. Robert Messenbaugh. In connection with the IME, Dr. Messenbaugh reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Messenbaugh opined that the claimant did not injure his cervical spine or his right knee on October 23, 2017. In support of these opinions Dr. Messenbaugh noted that the claimant did not report any neck or right knee related complaints "for an extremely lengthy period of time" after his October 23, 2017 fall. Dr. Messenbaugh also opined that the degenerative changes in the claimant's cervical spine predated his work injury. Dr. Messenbaugh's testimony was consistent with this written report. During his testimony, Dr. Messenbaugh reiterated his opinion that the claimant did not injure his right knee or cervical spine when he fell on October 23, 2017.

34. On October 29, 2020, Dr. George performed a right total hip arthroplasty.

35. On November 17, 2020, Dr. Vargas authored a letter regarding his review of his treatment of the claimant. In the letter, Dr. Vargas stated that he "found there to be no mention of treatment for right knee or cervical neck pain prior to the accidental fall in October of 2017." Dr. Vargas also noted that these symptoms were first reported to him in March 2020.

36. The claimant testified that when he was seen by Dr. Vargas on October 30, 2017, he had pain in his right knee and neck. The claimant further testified that he has experienced pain in his right knee and neck throughout this claim. The claimant testified that he wishes to undergo the recommended knee surgery and neck treatment so that he can return to work.

37. The ALJ does not find the claimant's testimony regarding the onset of his right knee and cervical spine symptoms to be credible or persuasive. The ALJ credits the medical records and the opinions of Drs. Orgel, Erickson, Fillmore, and Messenbaugh over the contrary opinions of Drs. George and Hahn. In crediting these opinions, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that his need for right knee and cervical spine treatment is reasonable, necessary, and related to the admitted October 23, 2017 work injury. The ALJ specifically credits the medical records that demonstrate that the claimant did not report right knee or cervical spine symptoms until long after his work injury. The ALJ is not persuaded that the claimant injured either of these body parts on October 23, 2017. The ALJ finds that there is no persuasive evidence on the record to support a finding that the fall on October 23, 2017 aggravated, accelerated, or combined with any preexisting condition in the claimant's right knee or cervical spine to warrant the need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See H & H Warehouse v. Vicory, 805 P.2d 1167 (Colo. App. 1990); see also Subsequent Injury Fund v. Thompson, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." See H & H Warehouse v. Vicory, supra.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that treatment of his cervical spine (including cervical facet injections, as recommended by Dr. Hahn) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the October 23, 2017 work injury. As found, the medical records and the opinions of Drs. Fillmore, and Messenbaugh are credible and persuasive.

7. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that treatment of his right knee (including arthroscopic surgery as recommended by Dr. George) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the October 23, 2017 work injury. As found, the medical records and the opinions of Drs. Orgel, Erickson, and Messenbaugh are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant's request for treatment of his cervical spine (including cervical facet injections, as recommended by Dr. Hahn) is denied and dismissed.

2. The claimant's request for treatment of his right knee (including arthroscopic surgery as recommended by Dr. George) is denied and dismissed.

3. All matters not determined here are reserved for future determination.

Dated this 5th day of April 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

- Did Claimant prove the average weekly wage (AWW) should be increased from the admitted AWW of $1,141.77?

- If so, what is the appropriate AWW?

- Temporary partial disability benefits.

FINDINGS OF FACT

1. Claimant works for Employer as a carpenter. He suffered an admitted injury to his left arm on May 18, 2020.

2. Claimant missed work after the accident from May 19, 2020 through June 30, 2020. Insurer admitted for TTD benefits.

3. Claimant returned to modified duty on June 30, 2020. He suffered a partial wage loss because of reduced hours.

4. Claimant missed 6 days of work from October 16 through October 21, 2020. Insurer admitted for TTD benefits.

5. Claimant returned to modified duty on October 22, 2020. He suffered a partial wage loss because of reduced hours.

6. Claimant was again off work starting November 19, 2020 because of surgery. He returned to modified duty on February 10, 2021 at reduced hours.

7. Insurer has admitted and paid TTD for all periods Claimant was off work. Insurer has paid no TPD benefits.

8. Claimant proved he is entitled to TPD benefits from June 30, 2020 through November 18, 2020, and from February 10, 2021 until terminated by law.

9. The admitted AWW is $1,141.77. Insurer's claim notes state the AWW is based on 13 weeks of earnings in the total amount of $14,843.06. This appears to be a computational error because the ALJ could not find any combination of 13 weeks that totals $14,843.06. In any event, in their post-hearing brief, Respondents advocate using the 12 weeks immediately before Claimant's injury.

10. Claimant worked overtime when available. Based on Employer's work rules, he earned overtime wages in some weeks even though he worked less 40 hours.

11. Claimant's overtime hours fluctuated widely, from a low of zero some weeks to a high of 30 in one week. In the 12 weeks before the injury, Claimant's hours were:

Pay date	**Reg Hrs**	**OT Hrs**
3/6/2020	38.5	12.5
3/13/2020	40	30
3/20/2020	40	14.5
3/27/2020	34	10
4/3/2020	8	1
4/10/2020	37.5	16
4/17/2020	40	6
4/24/2020	22	5
5/1/2020	36.5	0
5/8/2020	40	5
5/15/2020	40	21.5
5/22/2020	40	20
AVERAGE	34.71	11.79

12. There is no persuasive evidence the general pattern of hours and overtime availability shown above would have changed significantly after Claimant's injury.

13. Claimant received a pay raise to $24.76 per hour effective May 4, 2020, with a corresponding overtime rate of $37.14. All wages Claimant has lost since the date of injury would otherwise have been earned at the hourly rates of $24.76 and $37.14.

14. Respondents' proposal to compute the AWW using the 12 weeks of earnings before Claimant's accident is reasonable and appropriate. Claimant's proposal to use only two weeks before the injury is not persuasive.

15. Claimant's AWW is $1,297.30, calculated as follows:

$24.76 x 34.71 avg reg hours:	$859.42
$37.14 x 11.79 avg OT hours:	$437.88
Total:	**$1,297.30**

16. The corresponding TTD rate is $864.87.

17. Based on the AWW of $1,297.30, Claimant is owed TPD benefits as follows:

Pay period end	Gross wages	Diff from AWW	TPD Owed
7/5/2020	$940.88	$356.42	$237.61
7/12/2020	$1,213.24	$84.06	$56.04
7/19/2020	$1,213.24	$84.06	$56.04
7/26/2020	$1,250.38	$46.92	$31.28
8/2/2020	$1,176.10	$121.20	$80.80
8/9/2020	$1,176.10	$121.20	$80.80
8/16/2020	$1,176.10	$121.20	$80.80
8/23/2020	$792.32	$504.98	$336.65
8/30/2020	$990.40	$306.90	$204.60
9/6/2020	$1,008.97	$288.33	$192.22
9/13/2020	$792.32	$504.98	$336.65
9/20/2020	$990.40	$306.90	$204.60
9/27/2020	$990.40	$306.90	$204.60
10/4/2020	$990.40	$306.90	$204.60
10/11/2020	$990.40	$306.90	$204.60
10/18/2020	$792.32	$504.98	$336.65
10/25/2020	$445.68	$851.62	$567.75
11/1/2020	$990.40	$306.90	$204.60
11/8/2020	$990.40	$306.90	$204.60
11/15/2020	$594.24	$703.06	$468.71
11/22/2020	$396.16	$901.14	$600.76
TOTAL:		**$7,342.45**	**$4,894.97**

18. Insurer admitted for TTD from October 16, 2020 through October 21, 2020. But that period spans less than one full week and straddles two pay periods. Because the parties only submitted weekly pay records, the ALJ finds it more efficient to incorporate the October 16 through October 21 wage loss into the longer period of TPD. The net result is the same. Insurer can simply take a credit for $652.87 in TTD previously paid when determining the past-due TPD.

CONCLUSIONS OF LAW

A. Average weekly wage

The term "wages" is defined as "the money rate at which the services rendered are recompensed under the contract of higher in force at the time of the injury." Section 8-40-201(19)(a). "Wages" includes per diem payments that are included in the claimant's federal taxable wages. Section 8-40-201(19)(c). Section 8-42-102(2) provides that compensation shall be based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

As found, Claimant's AWW is $1,297.30. Claimant was an hourly worker whose schedule varied based on the available work. Therefore, his earnings must be averaged over a reasonable period to account for the typical fluctuations in his hours, including overtime. The 12-week period immediately preceding the injury give a representative sample and fairly approximates Claimant's average hours "at the time of the injury." Claimant's proposal to use only the two weeks before the injury would artificially inflate the AWW and overstate the injury's impact on his earning capacity. Although Claimant coincidentally worked more overtime those weeks than average, the general pattern of available work going forward would probably been more consistent with the 12-week average.

B. Temporary partial disability benefits

A temporarily partially disabled claimant is entitled to two-thirds of the difference between their AWW and their reduced earnings during the period of disability. Section 8-42-106. As found, Claimant suffered a partial wage loss while working modified duty Claimant is owed $4,894.97 from June 30, 2020 through November 18, 2020 (reduced by $652.87 in TTD already paid). Claimant is also entitled to TPD benefits commencing February 10, 2021 and continuing until terminated by law.

ORDER

It is therefore ordered that:

1. Claimant's average weekly wage is $1,297.30.

2. Insurer shall pay Claimant TTD benefits at the rate of $864.87 per week from May 19, 2020 through June 29, 2020, and November 19, 2020 through February 9, 2021. Insurer may take credit for any TTD benefits already paid for those periods.

3. Insurer shall pay Claimant $4,894.97 in TPD benefits from June 30, 2020 through November 18, 2020. Insurer may take credit for any temporary disability benefits already paid for that period.

4. Insurer shall calculate and pay Claimant TPD benefits commencing February 10, 2021 and continuing until terminated by law.

5. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

6. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: April 6, 2021

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-144-892-001

ISSUES

I. Whether Claimant established he suffered a compensable injury on July 29, 2020.

II. Whether Claimant established that he is entitled to a general award of medical benefits.

III. Whether Claimant is entitled to temporary total disability benefits as of July 29, 2020.

IV. Whether Claimant is at-fault for his wage loss and not entitled to temporary total disability benefits.

V. Whether Claimant violated a safety rule.

VI. Offset for unemployment benefits.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Clamant testified at hearing. *Hrg. Audio 1, 30:45.* He is a CDL driver and was driving for Employer on July 29, 2020.
2. On the night of July 28, 2020, Claimant's foreman Julian C[Redacted] informed Claimant that he wanted Claimant to pick up a truck and meet him at a jobsite the next morning. The morning of July 29, 2020, Claimant picked up the truck, VT-5. This is a manual shift HydroVac truck, with a tank on the back and a boom and hoses mounted on the top. *Ex. J, Bates 333-337.* Claimant had driven that truck multiple times. Claimant knew that it required a 13-foot clearance. Claimant used the Google pin drop to obtain directions to the worksite, as he had done before. Claimant described his route. He started in Greeley and drove about 45 minutes. He testified that he was driving West on what he thought was Highway 32 and approached the two bridges of Highway I-25 that go over that road. The bridges were marked as providing 12 feet, 10 inches of clearance. *Ex. J, Bates 328.* There were other routes that Claimant could take to get to the jobsite. *Ex. J. Bates 314, 315; Exhibit R.* Claimant testified that he thought he could make it under the bridges. This testimony contradicts what he has said before. "He wondered whether he could clear the bridges, but he proceeded on." *Ex. A, Bates 2.* He testified he went under the first bridge but hit the top of his truck on the second bridge. He testified that he was going 25-30 mph, and that he knew this because he

was in 3rd or 4th gear. He testified that his truck came almost to a complete stop, and his head jerked forward really hard and back, while he held on to the steering wheel. He specifically denied the truck stopping. He testified that he shifted down into second gear and he drove the truck through the bridge and heard scraping. *Hrg. Audio 1 1:01.11.* He testified that he never stopped the truck and never pulled over. *Hrg. Audio 1 1:02:40.* This testimony contradicts what he told his providers. "Patient notes he then exited his vehicle and noted extensive damage to the bridge." *Ex. F, Bates 62.* Instead, he testified that he did not stop and drove up to the jobsite and saw his supervisor Julian C[Redacted]. He testified that Mr. C[Redacted] came about 5 minutes after he did to the jobsite and called him to tell him he was at the jobsite. This testimony is contrary to what Claimant told his providers. "Patient notes he then existed his vehicle and noted extensive damage to the bridge. He subsequently notified his supervisor, who came to the accident scene and instructed him to drive back to the work site." *Ex. F, Bates 62.*

3. Claimant testified that he told Mr. C[Redacted] right away when Mr. C[Redacted] met him at the jobsite. He said that he pulled his truck up behind Mr. C[Redacted], he got out, met Mr. C[Redacted] between the vehicles, and he told Mr. C[Redacted] immediately. Claimant testified that he told Mr. C[Redacted]. "I hit the bridge." He testified that is all he said. He did not say what bridge or anything else. *Hrg. Audio 1 1:03:00-1:04:20.* He testified that Mr. C[Redacted] went on top of the truck and told him that he did $10,000 in damage to the truck. Claimant testified that no one tried to operate the truck when it was on site. *Hrg. Audio 1 1:15:05.* He testified Mr. C[Redacted] told him to stand right there, while Claimant was standing at the front of the truck, and Mr. C[Redacted] walked over into the field and made a phone call Claimant could not hear. *Hrg. Audio 1 38:50-40:00.* He was on the phone for about 5 minutes. Mr. C[Redacted] came back and told him to go back to the office. When he got to the office, Claimant said he was told to help another employee clean. He did this all day. *Hrg. Audio 1 40:30.* When asked how he felt, he said he just felt "shocked" all day. He left the shop and drove in his car for lunch and returned. *Hrg. Audio 1 1:23:35.*

4. At about 2:00 p.m. he took a urinalysis test and then returned to working in the shop. At about 3:30 p.m. he was told by Cat U[Redacted] that he had to go to the office. He went to the office and met with Cat U[Redacted] and Nichole T[Redacted] and was terminated. *Hrg. Audio 1 40:30-41:50.* Claimant testified that no one talked to him all day about the incident, and no one inquired how he felt. According to Claimant in his direct examination, no one said anything to him all day. He was adamant this was the case. He said no one asked him what happened or asked him to explain. *Hrg. Audio 1 1:08:30.* When confronted during cross-examination, he corrected this, and he stated that Cat U[Redacted] told him to get the scissor lift and help a co-worker. He then added that Mr. U[Redacted] then told him to go to the office. He testified that, although these exchanges occurred, Mr. U[Redacted] did not ask him anything about what happened or whether he was hurt. *Hrg. Audio 1 1:10:36.*

5. Claimant testified that when he was terminated, he was only told he was being let go and to turn in his stuff. He testified was given no reason. No one talked to him all day and no one got his side of the story. *Hrg. Audio 1 43:00-45:00.* He agreed that he told no one that he was injured while he was at the shop on July 29, 2020. *Hrg. Audio 1*

1:15:25-50; 1:20:15.

6. Claimant testified that he went home and talked to his roommate on the night of July 29, 2020. He testified that he was "OK" the next day, and then later on at about 4 or 5 p.m. of January 30 he felt a headache like he had never had before. He felt dizzy and then he "caught a migraine." This was a Friday. This headache lasted 5-10 minutes. *Hrg. Audio 1 45:00-46:18.* During cross-examination, Claimant's interrogatory responses were reviewed, in which Claimant provided a different history, stating, "the following day I woke up feeling dizzy and had a migraine headache." Claimant testified that he went back to the employer before noon on July 30, 2020, the next day. He testified that he did not tell them that he had woken up feeling dizzy with a migraine. He testified that he did not speak to anyone at the employer on July 30, 2020 and they did not speak to him. *Hrg. Audio 1, 1:21.*

7. Claimant said his symptoms over the next couple of days were just brief headaches and the accompanying dizziness. *Hrg. Audio 1 47:00.* He went to Monfort Family Clinic Monday to make sure he was OK. When asked why he did not seek treatment through workers' compensation at that time, he said, "Because I didn't experience it until later on. I didn't know." *Hrg. Audio 1 48:10.* The history given to the Monfort Family Clinic, however, is that he "was in car accident in work truck." *Ex. H, Bates 210.* This is contrary to his testimony and shows he clearly was making the connection at the time of this visit. Claimant treated through the Monfort Clinic for almost a month. *Ex. H.* Although he was treated for other things, Claimant testified that the work-related treatment he sought from the Monfort Family Clinic was for his headaches. *Ex. H; Hrg. Audio 1 1:26:00.* The "thunderclap" headaches are what he continues to relate to the work incident. *Hrg. Audio 1, 1:26:50.*

8. Claimant testified that he still gets migraines, but at the time of the hearing, he was feeling OK. Claimant testified that he had experienced 2 migraines the week prior to the hearing. He said he gets dizzy, the headache hits him, and it lasts for 5-10 minutes and then spontaneously resolves. After it goes away, he sits for a few minutes and feels normal again, but tensed up. *Hrg. Audio 1, 50:00.*

9. Claimant testified that he did not hit his head on July 29, 2020. He did not immediately feel any dizziness. He did not vomit. He did not have any memory problems. He remembers everything that happened before and everything that happened after. He is not having any attention or concentration problems day to day. *Hrg Audio 1, 55:40.*

10. Claimant testified that he had driven this truck before and knew that it was 13 feet tall. *Hrg. Audio 1 1:12:00.* The bridge was marked with a sign that said it was 12 feet, 10 inches. *Ex. J, Bates 328.* He testified that he had received the employee handbook. *Ex. J, Bates 247-285.* This includes the directive, "It is the responsibility of every employee to drive safely and obey all traffic, vehicle safety, and parking laws or regulations. Drivers must demonstrate safe driving habits at all times." *Ex. J. Bates 277.* Claimant is a DOT driver and agreed that he needed to know the DOT rules, and the precautions for driving under bridges. Claimant agreed that he was supposed to know the height of the bridge. If the height is posted, he agreed he is supposed to pay attention to the posting. He agreed according to the DOT rules, he was not supposed to go under a bridge that is too short for the height of his vehicle if he was not sure. *Ex. J.*

Bates 329. Based on Claimant's testimony, it is found that he was aware of the employer safety rule, that he knew that the bridge only had clearance of 12 feet 10 inches, and that he knew that he should not drive the VT-5 truck, requiring 13 feet of clearance, under that bridge. The evidence supports that "He wondered whether he could clear the bridges, but he proceeded on." It is found that Claimant intentionally chose to drive under the bridge when he did not know if his truck could clear it. Based on the evidence of record, this was an intentional violation of the employer's safety rule.

11. Claimant agreed that there was a stop sign immediately before the bridge. *Hrg. Audio 1 1:22:30; Ex. R.* According to aerial photographs admitted into evidence, and using the vehicles pictured in those photographs as reference, one can see the approximate distance Claimant traveled before encountering the bridges. After crossing the street from the stop sign, the first bridge is encountered after a little over one car length in distance and the second bridge is approximately 5-7 car lengths from the same place. *Ex. R.* As discussed below, witnesses Julian C[Redacted] and Catarino U[Redacted] credibly testified that Claimant could not reach his claimed speed of 25-30 mph driving the VT-5 truck over that distance.

12. Julian C[Redacted] testified at hearing. *Hrg. Audio 3, starting 2:15.* He is Claimant's foreman and was present with Claimant on the jobsite on July 29, 2020. Based on his credible testimony, the ALJ finds:

    a. Mr. C[Redacted] sent Claimant the drop pin for the location of the jobsite on July 28, 2020. He told Claimant to be at the shop in Greeley at 6:30 a.m. to pick up the VT-5 truck so he could be at the jobsite at 8 a.m. He did not see Claimant at the shop the morning of July 29, 2020. He spoke to Claimant around 7:30 a.m. when he called to ask where Claimant was. Claimant said he was on Highway 66 and was about 5 to 10 minutes away.

    b. Claimant was at the jobsite when Mr. C[Redacted] arrived there. When Mr. C[Redacted] drove to the jobsite, Claimant was on 32nd facing west, about a block from the job location. He thought the direction that Claimant was facing was a little odd, because he would have expected Claimant to take another route. He signaled Claimant to move his truck to where Mr. C[Redacted] was. Claimant moved his truck. Mr. C[Redacted] got out of his own truck and met with the customer. He then went to Claimant's truck, climbed up on the driver's side step to Claimant in the truck to tell him where they needed to go on the jobsite. He then signaled Claimant and directed Claimant to the position the truck to the area on the jobsite where the truck would be used. At this time, about 30 minutes had passed since Mr. C[Redacted] first saw Claimant that morning. Mr. C[Redacted] again went up to Claimant's truck, stepped on the step of the rig and spoke to Claimant through the window. He told him to raise the boom on the top of the truck. Claimant tried to raise the boom and told Mr. C[Redacted] that the boom was not working. Claimant handed the remote to the boom to Mr. C[Redacted]. Mr. C[Redacted] went into the cab of the truck and noticed that the settings for the boom operation were incorrect. He changed the settings and got out of the truck with the boom remote. When he hit the remote, hydraulic fluid shot into the air from the truck and splashed on him and Claimant. Claimant was standing next to him. Mr. C[Redacted] then climbed to the top of the truck and found concrete on the truck and the top of the boom had been skimmed along the top. Up to this point in the morning, Claimant had not mentioned any incident with the truck, and did not indicate he had any idea why there would be problems with the truck.

c. Because of what Mr. C[Redacted] saw when he got on top of the truck, his first assumption was that Claimant had gone under a bridge or hit something. He asked Claimant if he had gone under a bridge, and Claimant said no. Mr. C[Redacted] showed Claimant the piece of concrete and Claimant said he was not sure what happened. Mr. C[Redacted] further questioned Claimant, saying that he must have gone under a bridge. He asked Claimant if he had felt anything, and Claimant said no. Mr. C[Redacted] did not believe Claimant did not go under a bridge and did not feel anything and felt that Claimant was being dishonest. Mr. C[Redacted] then took pictures and sent them to supervisors and H.R. Mr. C[Redacted] had listened to Claimant's testimony that Claimant had told him that he hit a bridge and that Mr. C[Redacted] did not ask him any other questions. Mr. C[Redacted] testified that neither of these things were true.

d. Mr. C[Redacted] sent a text to his supervisor and the office manager at 8:19 a.m. which stated, "He needs to be let go. Most definitely written up there is no excuse for this especially sense [sic] he lied saying he didn't feel anything and I have to cancel my job for GLJ a customer who has been good to us." *Ex. J, Bates 326.* Based on the credible testimony of Mr. C[Redacted], along with the documentation at the time of the event, it is found that Claimant was dishonest with Mr. C[Redacted] at the time of the event of July 29, 2020, by first withholding information about the damage to the truck and then representing that he did not know what had happened to the truck. Claimant's testimony to the contrary is rejected as incredible.

e. After informing the customer, Mr. C[Redacted] told Claimant to go back to the shop. They drove back to Greeley to the shop. Claimant did not appear injured. He did not appear dizzy. Claimant drove without difficulty. When they arrived at the shop, Claimant came to Mr. C[Redacted] and asked him if he was going to be fired. Mr. C[Redacted] said he did not know and advised Claimant that the important thing was to be busy and not stand around.

f. Mr. C[Redacted] confirmed the truck involved in the incident was a Unit VT-5, a HydroX Unit. He is familiar with the truck and its performance. He had driven that particular truck. He explained that, based on his experience, Claimant could not have been going 25-30 MPH when he was going under the second bridge. It takes 5th gear to get to 30 miles an hour. In looking at the distance between the stop signs and the bridges, the truck could not have been going that fast. This unit is not built for speed, it is built for "hauling heavy."

g. Mr. C[Redacted] was familiar with the safety rules of the company. In his work with Claimant, Claimant knew that the Unit VT-5 truck required 13 feet of clearance. After the employer had figured out what bridge Claimant had gone under, Mr. C[Redacted] learned that the bridge was marked with a sign showing it was 12 feet, 10 inches. *Ex. J, Bates 329.* Mr. C[Redacted] believed that driving the 13-foot truck under a 12-foot 10-inch bridge was a safety rule violation.

13. Catarino U[Redacted] testified at hearing. *Hrg. Audio 3, starting 28:15.* He is the field

supervisor. Based on his credible testimony, the ALJ finds:

a. He first heard about the damage to the truck when he received Mr. C[Redacted]'s text. He was on another job site in Golden, Colorado. When he learned of the incident, he drove from Golden to the location where he suspected Claimant had gone under a bridge. Mr. U[Redacted] used to live nearby the jobsite and the bridge and was familiar with the area. Claimant had not identified where an incident occurred. When Mr. U[Redacted] arrived at the bridge, he parked his truck. He found the boom lid and a small piece of the electric coil from on top of the VT-5 HydroX truck on the road laying on County Road 32 on the west side of I-25. *Ex. J, Bates 328, 330, 331, 332.*

b. Mr. U[Redacted] took pictures then drove to the shop in Greeley. He saw Claimant sweeping the floor in the shop. He went up to Claimant and asked him if he was OK. Claimant assured him that he was OK. Mr. U[Redacted] asked Claimant if he was sure, and asked Claimant what happened. Claimant said, "I guess I went underneath a bridge. I didn't feel nothing." Mr. U[Redacted] asked Claimant again if he was OK, and if he needed to see a doctor. Claimant said, no, he was good. Mr. U[Redacted] then said, OK, if you are good, then we need you to move the unit into the bay and clean it. Claimant did not identify the location of the bridge and did not indicate at any time that he had felt the impact of the truck under the bridge. Based on the credible testimony of Mr. U[Redacted], along with other evidence of record, it is found that Claimant was dishonest with Mr. U[Redacted] about the events of July 29, 2020 in declaring that he did not know what happened.

c. Mr. U[Redacted] encountered Claimant a little bit before Claimant went for his drug test. He told Claimant that he needed to go to the office.

d. The next time Mr. U[Redacted] spoke with Claimant, it was right before Claimant was going to clock out. He went up to Claimant and asked him again if he was doing OK. Claimant said he was. Mr. U[Redacted] told Claimant that he needed him to come to the office with him. When waiting to go upstairs to the office, Claimant approached him and tried to give him the keys to the shop and the credit card, saying that he knew he was going to be fired. Mr. U[Redacted] told him to wait for the meeting.

e. Mr. U[Redacted] was present during the termination meeting. At no time during the meeting did Claimant explain what happened or indicate that he felt the impact of the truck. He did not say he was injured and did not appear injured.

f. Based on his Mr. U[Redacted]'s familiarity with the VT-5 Unit and the road by the bridge, he credibly testified that it was not possible for Claimant to be driving 25-30 MPH when he got to the bridges.

g. In Mr. U[Redacted]'s opinion, driving the VT-5 truck under the short bridges was a violation of a safety rule.

14. Based on the credible testimony of Mr. U[Redacted] and Mr. C[Redacted], the ALJ finds Claimant was not going 25-30 miles per hour when he struck the bridge. Instead, the ALJ finds Claimant was going much slower.

15. Nichole T[Redacted] testified at hearing. *Hrg Audio 2, staring 1:00.* She is the office

manager and handles workers' compensation and human resources issues for the employer. Based on her credible testimony, the ALJ finds:

a. She learned of the incident about 8:30 a.m. on July 29, 2020 through a text message. *Ex. J, Bates 325-327.* After learning of the incident, she investigated the possible location of the incident. She had to do this because Claimant said he did not know what had happened or what he had hit. *Ex. J, Bates 312-315; Ex. R.* By doing this, she identified a bridge off Highway 1-25 that is built over Adams Avenue and County Road 32. *Id.* Ms. T[Redacted] indicated that Claimant was terminated for dishonestly - Claimant did not disclose what had occurred or where it had occurred.

b. She credibly testified that Claimant's testimony that no one asked him what had occurred was not true. She credibly testified that they did give Claimant the opportunity during his exit interview to explain what happened. She also credibly testified that they had asked him if he was injured at that time, and he denied that – and Claimant did not appear to have any physical problems.

c. She saw Claimant again on July 30, 2020 when he brought his safety harness in before noon. She spoke to him at that time. Claimant again did not say anything about being injured, did not explain the incident, and did not appear to be injured. He did not tell her that he had woken up in pain. *Ex. J. Bates 338.*

d. After his termination, Claimant sent Ms. T[Redacted] a text asking for the name of the doctor "that you guys require." She did not understand what this was for and asked him "Doctor that we require? For what?" She did not get a response and assumed that Claimant had sent her a text by mistake and this was associated with a new job screening. *Ex. J, Bates 340.*

e. According to Ms. T[Redacted], on the employer's termination form, there is no box to check for lying, so she did not include that in that form. She did, however, include that in the unemployment "request for facts" response, completed on August 17, 2020. She indicated that Claimant had done damage to a truck before and was not fired. The difference was, that time there was no problem about him being honest about what had occurred.

16. Based on the credible testimony of Ms. T[Redacted], it is found that Claimant was terminated for the dishonesty he displayed after he drove the VT-5 truck under the 12-foot, 10-inch bridge. It is found that he was not terminated because of the accident or any injury occurring as a result of the accident.

17. Claimant did not report for medical treatment until August 3, 2020. At that time, he went to his PCP SCHC Monfort Family Clinic. He reported that he had neck pain and whiplash symptoms for three days. He described being in a "car accident in work truck" and that his head was whipped "violently forward and then back." He reported that he was not sure if he lost consciousness or not, and that he does not remember much. He reported a severe thunderclap headache, described as frontal lasting five minutes, along with dizziness for the past 4 days. *Ex. H, Bates 210.* Because of the history of memory loss and abnormal eye tracking that was interpreted as neurologic symptoms, a CT scan of the head was performed on August 3, 2020. This showed no acute processes. *Ex. I.*

18. Claimant filed a workers' claim for compensation and a first report of injury on August 10, 2020. *Ex. P, Q.*

19. After filling with the Division, Claimant was sent to UCHelath and seen by Dr. Oscar Sanders. In his initial visit of August 28, 2020, he reported headaches of 5 to 6 minutes with spontaneous resolution. Claimant estimated to Dr. Sanders that he had experienced approximately 4 of these since the accident of July 29, 2020. He was not having one at the time of the examination. *Ex. F, Bates 63.* Claimant reported dizziness at the time of the headaches, but not otherwise. He also complained of neck pain. Claimant described the events of July 29, 2020 to Dr. Sanders. He said he was driving 20 to 30 miles per hour on the interstate when he misjudged the height of the bridge in relation to his truck. He described a sudden stopping/jerking force that caused him to snap forward and backwards in his seat. He denied a head strike or loss of consciousness. Claimant told Dr. Sanders that he exited his vehicle and noted extensive damage to the bridge. He said he notified his supervisor, who came to the accident scene and instructed him to drive back to the work site. Dr. Sanders diagnosed a "likely" cervical WAD, cervical/thoracic myofascial strains, and "potentially" strain of the left shoulder. He also stated, "Patient may also have sustained an mTBI, although this was somewhat unclear given his lack of head strike/LOC/PTA or altered consciousness (i.e., day/confused) [sic] at the time of the injury." *Ex. F, Bates 74.* Dr. Sanders recommended physical therapy and massage, Tylenol for headaches, and muscle relaxant. He noted for Claimant's work status "employment terminated." *Ex. F, Bates 62.* Dr. Sanders was sent the statements of Mr. C[Redacted] and Mr. U[Redacted] which described a different history than Claimant provided, with Claimant denying feeling anything on the date of the incident. Dr. Sanders indicated in response to questions that he relied primarily on Claimant's self-report, and based on that self-report, he felt Claimant had a whiplash-type injury. *Ex. F, Bates 123-126.*

20. Dr. Sanders referred Claimant to Dr. Gregory Reichhardt, who saw Claimant first on November 30, 2020. To Dr. Reichhardt, Claimant described driving his truck on I-25 when the top of his truck hit the bottom of the bridge. He said he was going 25 to 30 miles per hour. *Ex. B, Bates 21.* Unlike the description given on August 3, 2020 to the Monfort Clinic PA, he had good memory of the events before, during and after the accident. He said that his head was jerked, but that he had no symptoms immediately after the accident. Dr. Reichhardt diagnosed "Possible cervicogenic headaches." *Ex. B, Bates 21-24.* Dr. Reichhardt provided trigger point injections.

21. Dr. Elizabeth Bisgard evaluated Claimant for respondents on January 11, 2021 and provided a written report. *Ex. A.* She testified as an expert in occupational medicine and as a Level II accredited physician via deposition. Her conclusion is that there was no injury requiring medical treatment or causing disability that occurred on July 29, 2020. *Ex. A, Bates 9; Bisgard Depo., P. 26, l. 3-14.* Dr. Bisgard testified that at the time of Claimant's examination with her, he was feeling well. There were no objective findings and no subjective complaints. *Bisgard Depo. P. 13, l. 1-11; Ex. A, Bates 8.* There were no trigger points in his cervical area at the time of her examination. *Id. P. 23, l. 9-13.* Claimant told Dr. Bisgard that, although he has been prescribed Imitrex, nortriptyline and Flexeril, he has not taken them, because he is "scared" of pills and prefers not to. *Ex. A, Bates 8.* Dr. Bisgard explained that Claimant's reported

"thunderclap" headaches, resolving after 5 minutes, are not migraines. *Ex. H, Bates 210 (Monfort Clinic 8/2/20 "severe thunderclap headache (frontal x 5 min)"); Bisgard Depo, P. 20.* As noted, in his first evaluation at the Monfort Clinic, Claimant described these headaches occurring in the frontal region. Dr. Bisgard explained that this would not be a cervicogenic headache being caused by neck injury. *Bisgard Depo. P. 20-22.* She explained that none of the mechanisms discussed could medically explain Claimant's thunderclap headache complaints. This is true for the whole spectrum of reported mechanism: from feeling nothing to violently being thrust back in forth in the seat after a "sudden stopping/jerking". Dr. Bisgard explained that there was no concussion or traumatic head injury, based on the mechanism and the history. Effects of a concussion or a traumatic brain injury manifest immediately. Claimant gave no history of any relevant symptoms and was able to work the entire day with no reported symptoms. Claimant had indicated that he was in "shock" from the incident, implying that prevented him from noticing any symptoms. Dr. Bisgard explained that symptoms of concussion or traumatic brain injury would manifest regardless of shock. *Bisgard Depo. P. 15, l. 12 – P. 18, l. 9.*

22. Dr. Bisgard discussed the conclusions of Monfort Clinic's Lauren Stewert, PA, that indicated that Claimant had headaches and associated neurologic symptoms. She explained that this was inaccurate. Dr. Bisgard explained that there were no injury-related neurologic symptoms. Claimant has a congenital "lazy eye." PA Stewert noticed this upon her first visit and interpreted this as "abnormal eye tracking caused by the reported incident. She was not corrected by Claimant, even as Claimant submitted to a CT scan. PA Stewert said, "pt reporting thunderclap headache since Friday on and off, worst headache of his life after work truck accident where he may or may not have lost consciousness, eyes not tracking appropriately today." *Ex. H, Bates 212.* It was because of the report of lost consciousness and the "neurological" symptom of abnormal eye tracking that Ms. Stewert referred Claimant for a CT scan. *Id, Bates 212, 214 (Problems include: "concussion with loss of consciousness of unspecified duration.")* Claimant denied loss of consciousness to all other providers and under oath. Dr. Bisgard explained that the lazy eye has nothing to do with the injury. "It may be an abnormal neurological finding, but it was present before this incident." *Bisgard Depo. P. 19, 7-24.* Dr. Bisgard is found to be credible and her testimony is found persuasive.

23. On August 12, 2020, Claimant was evaluated at the Monfort Family Clinic. Claimant requested a letter stating he was on driving restrictions. *Ex. H, Bates 224.* On August 14, 2020, PA Stewert wrote that Claimant was seen for a concussion/head injury secondary to a motor vehicle accident and that he was "experiencing significant symptoms with even minor activities, and as a result, is unable to work." *Ex. H. Bates 227.* Dr. Bisgard explained that nothing in the medical records justified this statement. *Bisgard Depo. 24, l. 9- P. 26, l. 2.* She testified that it does not make medical sense for Claimant to be taken entirely off work. There is nothing in the medical records that justifies a conclusion that he was disabled because of the events of July 29, 2020. *Bisgard Depo. P. 24, l. 24-P. 26, l. 14.* He requested a release and was accommodated by the PA. There is no indication that the PA did a causation analysis or carefully considered whether restrictions were medically appropriate. *Bisgard Depo. Id.*

24. Dr. Bisgard's report was sent to both Dr. Sanders and Dr. Reichhardt. They were asked

if Claimant was at MMI work his work injury, and if not, what further treatment was necessary. Dr. Reichhardt replied that he felt that Claimant should be offered additional trigger point injections. If Claimant does not want to pursue facet injections, that would be reasonable, and he would be approaching MMI. Dr. Reichhardt deferred MMI and impairment to Dr. Sanders. He did not comment on causation. *Ex. B, Bates 37.*

25. Mr. U[Redacted], Mr. C[Redacted], and Ms. T[Redacted] are determined to be credible. Based on the conflicts with the credible testimony of others, the conflicts with his prior statements, and logical problems raised by Claimant's assertions, Claimant's testimony which conflicts with Mr. U[Redacted], Mr. C[Redacted], and Ms. T[Redacted] is found to be not credible. As a result, the ALJ does not find Claimant's assertions, statements to medical providers, and testimony to be credible.

26. Dr. Bisgard's opinions are internally consistent and consistent with the credible and persuasive testimony of the Employer witnesses about the low-speed nature of the accident and Claimant's lack of complaints after the accident. Moreover, her opinions are found to be a plausible interpretation of the information she reviewed and used in rendering her opinions. As a result, the ALJ finds her opinions to be credible and persuasive.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the Claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established he suffered a compensable injury on July 29, 2020.

For a claim a claim to be compensable under the Act, a Claimant has the burden of proving that he or she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. Section 8-41-301(1) (c), C.R.S.; *Snyder v. ICAO,* 942 P.2d 1337 (Colo. App. 1997); *In re Swanson,* W.C. No. 4-589-645 (ICAO, September 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp*., 961 P.2d 571, 574 (Colo. App. 1998); *Tiner v. PeopleCare LLC, W.C. No. 5-115-369 (* ICAO August 7, 2020).

The Act distinguishes between the terms "accident" and "injury." The term "accident" refers to an unexpected, unusual, or undesigned occurrence. Section 8-40-201(1), *supra*. By contrast, an "injury" refers to the physical trauma caused by the accident. Thus, an "accident" is the cause and an "injury" the result. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). The mere fact that an accident occurs does not rise to the level of compensability unless the accident resulted in an injury. *Leary v. Vail Resorts, Inc.* W.C. 5-075-399-002 (ICAO, April 24, 2020)[1.] No benefits flow to the victim of an industrial accident unless the accident results in a compensable injury. A compensable industrial accident is one which results in an injury requiring medical treatment or causing disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The fact that medical treatment occurred, does not require a finding that medical treatment was required because of a work incident. *Washburn v. City Market,* W.C. 5-109-470 (ICAO June 3, 2020); *Reynolds v. U.S. Airways, Inc.* WC Nos. 4-352-256 and 4-391-859 (ICAO May 20, 2003); *Dugan v. Mondelez Internation Inc.* W.C. No. 5-092-091 (ICAO May 6, 2020). The need for that medical treatment must be proven by a preponderance to be proximately caused by an injury arising out of and in the course of employment. *Salazar v. 3ATS,* W.C. No. 5-128-144-001 (ICAO March 3, 2021).

A condition is not compensable merely because a Claimant sought treatment after a work incident. *Leary v. Vail Resorts, Inc.* W.C. 5-075-399-002 (ICAO, April 24, 2020); *Dugan v. Mondelez Internation Inc* W.C. 5-092-091 (ICAO May 6, 2020). The

[1] There were two *Leary v. Vail Resorts* decisions issued by the ICAO on April 24, 2020.

development of an increase in complaints after a work incident does not necessarily support a finding that a compensable injury occurred. *Leary, supra.* The fact that an employer tenders treatment is not dispositive of whether an injury is compensable, and does not serve as a waiver of the right to contest liability. *Grapham v. Anderwood Court Carecener*, W.C. No 4-624-138 (ICAO June 29, 2005); *Yeck v. ICAO,* 996 P.2d 228 (Colo. App. 1999). Restrictions from work do not mandate a finding of compensability. If, as is the case here, the inability to perform work is due to circumstances other than a work incident, then it is not a work related disability. *Lopez Pando v. Martin Marietta Materials, Inc.* W.C. No. 5-081-406 (ICAO, May 15, 2020). Claimant did not have work restrictions until he requested them from the physician's assistant at his PCP. They were provided by a PA Stewert at his request, without scrutiny as to their necessity and gave reasoning that is not supported by the medical record. Based on Dr. Bisgard's credible opinion, it is found that the restrictions provided to Claimant by any of the treating providers were not because of a work-related disability.

There have been several recent ICAO decisions that provide guidance in disputes over whether a work "accident" resulted in a compensable "injury." In *Leary v. Vail Resorts,* Claimant fell from a gondola. She appeared to her provider with "fairly extensive bruising" and proceeded on a long course of treatment with several body parts. *Supra.* Nonetheless, the ALJ denied the claim for benefits related to that fall. Claimant argued that it was undisputed that a fall occurred, and that treatment following that fall proved compensability as a matter of law. The ICAO rejected the argument, stating, "Claimant appears to advance a temporal narrative suggesting that merely because the Claimant sought treatment after a fall, and because the treatment was provided by a designated physician, it renders such treatment compensable." In *Washburn*, Claimant fell at work. *Supra.* She complained of upper back pain, said she was not sure if she hit her head, and complained of aches in her shoulder, arms and right hip. She reported intermittent numbness in both hands and legs, and contracture of both hands. CT scans of the head and spine showed no traumatic injury, only degenerative conditions. The ALJ found that an incident occurred at work, but that the incident did not result in the need for the medical treatment Claimant had received. The Claimant appealed, arguing that the undisputed incident and subsequent treatment supported the conclusion that she sustained an injury while subject to an employment risk, and therefore suffered a compensable injury. The ICAO rejected this *post hoc ergo proper hoc* causation reasoning and affirmed the ALJ. In *Lopez,* the ICAO rejected the argument that restriction from work established a compensable claim. *Lopez, supra, p. 4.* Treatment ordered by providers reasonably based on a Claimant's subjective complaints does not necessarily prove that there was a compensable work injury. This is because, "In the situation where a medical provider is initially engaged in a patient's physical complaints of distress, the provider has little information other than the patient's subjective statement to guide a response. Accordingly, the provider's' reaction is conservative..." *McCarty v. Target Corporation,* W.C. No. 5-131-093 (ICAO, March 11, 2021)

Much like these cases, although Claimant sought and received treatment, and requested and received work restrictions, he did not experience a compensable injury. According to his testimony, Claimant alleges that his "thunderclap" headaches, or "migraines" as he labels them, are his work injury.

Based on the conflicting evidence, the ALJ found that Claimant could not have been going 25-30 miles per hour when the top of his truck scraped the bottom of the bridge. Claimant's statements about whether the impact stopped the truck or did not stop the truck are in conflict. Claimant's assertion that he was "violently" thrown inside the cab of the truck is found not credible.

Claimant's characterization of the mechanism is the basis for his doctor's diagnosis, treatment, and restriction recommendations. The initial recommendation for a CT scan and the diagnosis of whiplash and concussion stemmed from Claimant's initial assertions of a sudden and violent impact in a "car accident", that he did not know if he had been knocked unconscious and he did not remember anything, along with a misunderstanding of the origin of Claimant's "lazy eye." Claimant now verifies that he was not unconscious, has memory of all events, and the true nature of his "abnormal eye tracking." Dr. Sanders explains that his conclusions and recommendations depend on the history given to him by Claimant, which is found incredible. Like a house built on sand, an expert's opinion is no better than the facts and data on which it is based. *See Kennemur v. State of California*, 184 Cal. Rptr. 393, 402–03 (Cal. Ct. App. 1982).

Based on the credible opinions set forth by Dr. Bisgard, the ALJ finds and concludes that there is no credible medical basis for an injury causing the need for medical treatment or disability.

The ALJ is mindful that causation may be established entirely through circumstantial evidence. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). The ALJ is also mindful that medical evidence is neither required nor determinative of causation. A claimant's testimony, if credited, may alone constitute substantial evidence to support the ALJ's determination concerning the cause of the claimant's condition. *See Apache Corp. v. Industrial Commission*, 717 P.2d 1000 (Colo. App. 1986) (claimant's testimony was substantial evidence that his employment caused his heart attack); *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); see also *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997) (lay testimony sufficient to establish disability).

In this case, however, Claimant's statements to medical providers and testimony are not credited. As a result, the ALJ finds and concludes Claimant has not proven by a preponderance of the credible evidence that the incident that occurred on July 29, 2020 caused the need for medical treatment or caused any disability. As a result, the ALJ finds and concludes Claimant failed to establish by a preponderance of the credible evidence that he suffered a compensable work injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a work-related injury during the course and scope of his employment with Employer.

2. As Claimant failed to meet his burden to establish a compensable injury, the remaining issues are not addressed.

3. Claimant's claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 7, 2021.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on September 22, 2020, he suffered an injury arising out of and in the course and scope of his employment with the employer.

2. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment he has received, including bilateral carpal tunnel release surgeries performed by Dr. James Rose, constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

3. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits from September 23, 2020 through December 21, 2020.

4. If the claimant proves a compensable injury, what is the claimant's average weekly wage (AWW)?

FINDINGS OF FACT

1. The claimant began his employment with the employer on June 7, 2020. The employer operates in the oil and gas industry. During his employment with the employer, the claimant worked in North Dakota performing maintenance on gas wells.

2. On September 22, 2020, the claimant was working in North Dakota. His job duties on that date involved pulling rods out of a well. This activity included separating lines of pipe at the coupling mechanism. If the couplers are too tight to open with the wrench, it is necessary to hit the couplers with hammers. These couplers are placed every 30 feet of the pipe and are commonly referred to as "rod boxes".

3. The claimant testified that on September 22, 2020, he was tasked with repeatedly striking the rod boxes with hammers weighing four pounds each. The claimant demonstrated how he would hold a hammer in each hand, swing his arms outward in a wing-like motion, then simultaneously bring the hammers together to strike the rod box in front of his person. The claimant also testified that he engaged in this activity for 10 to 12 hours on September 22, 2020.

4. After completing his shift on September 22, 2020, the claimant noticed that both of his hands were swollen and painful. The claimant testified that the swelling made his hands appear "inflated". The claimant further testified that he has experienced symptoms related to a carpal tunnel diagnosis. However, the condition of his hands on September 22, 2020 were unlike any symptoms he had previously experienced.

Symptoms and Medical Treatment Prior to September 22, 2020

5. The claimant worked for many years as a mechanic. That work involved a great deal of twisting and turning of wrenches.

6. In 2018, the claimant was experiencing numbness and tingling in his fingers and sought medical treatment for those symptoms. On December 20, 2018, the claimant was seen by his primary care provider (PCP) Christopher Weaver. On that date, the claimant reported pain, tingling, numbness, and clumsiness in both hands. The claimant also reported that the onset of these symptoms was "year(s) ago". Dr. Weaver opined that the claimant had bilateral carpal tunnel syndrome and referred the claimant for electromyography (EMG) testing.

7. On January 21, 2019, Dr. Mitchell Burnbaum performed EMG testing and nerve conduction studies (NCS) of the claimant's bilateral upper extremities. In his report of that same date, Dr. Burnbaum noted that the claimant had "very significant right carpal tunnel syndrome and mild to moderate left carpal tunnel syndrome".

8. On January 23, 2019, the claimant returned to Dr. Weaver to discuss the results of the EMG/NCS testing. On that date, Dr. Weaver recommended surgical intervention to address the claimant's carpal tunnel syndrome and referred the claimant for a surgical consultation.

9. On February 22, 2019, the claimant was seen by Dr. James Rose for a surgical consultation. On that date, Dr. Rose opined that the claimant had bilateral carpal tunnel, (right greater than left), based upon the claimant's symptoms on exam and the EMG testing results. Dr. Rose recommended that the claimant undergo a right carpal tunnel release. However, that procedure was not scheduled at that time.

10. At the time that he was diagnosed with carpal tunnel in 2019, the claimant was employed with Helmrich and Payne (H&P), another oil and gas company. The claimant testified that he did not undergo the surgery recommended by Dr. Rose in 2019 because needed to keep his employment with H&P.

11. The claimant also testified that he was able to continue to work both in his position at H&P and during his employment with the employer. The claimant further testified that he was able to do so because of the ability to switch duties with members of his crew. In addition, the claimant testified that he had no other treatment for carpal tunnel symptoms until his work activities on September 22, 2020.

Medical Treatment After September 22, 2020

12. Due to his hand symptoms, the claimant sought medical treatment on September 23, 2020 at McKenzie County Urgent Care in Watford City, North Dakota. At that time, the claimant reported bilateral hand pain and swelling. The medical record of that date also states that the claimant reported that he was returning to Colorado and

would see his surgeon at that time The claimant was prescribed prednisone and instructed to follow up with his surgeon in Colorado.

13. The claimant testified that while he was en route to the urgent care facility, he contacted Dr. Rose's office in Colorado to report his symptoms.

14. On September 30, 2020, the claimant was seen by Dr. Rose. On that date, Dr. Rose recommended bilateral carpal tunnel release surgeries. In addition, he noted that the claimant could return to work without restrictions, pending the surgeries.

15. Although Dr. Rose indicated that the claimant could return to work without restrictions, the respondents scheduled a "fit for duty" evaluation with Erica Herrera, PA-C. The claimant was seen by PA Herrera for this evaluation on October 12, 2020. At that time, the claimant reported constant bilateral hand pain that was "now resolved". Following a physical exam and a functional capacity evaluation (FCE), PA Herrera opined that the claimant should undergo surgery to address his carpal tunnel symptoms before returning to full duty. PA Herrera also noted that the claimant's "recent significant flare in his condition" posed a risk to his workplace.

16. Following the evaluation by PA Herrera, the employer ended the claimant's employment. In a document dated, October 15, 2020, Rhonda Cejka, Office Manager, indicated that the claimant's employment was terminated due to a "[f]ailure to return from leave or unable to perform duties due to illness or injury"; and "Violation of Company Policy or Procedure".

17. Mr. Keith Duke Lord, Safety Manager with the employer, testified that he was in North Dakota at the time that the claimant was engaged in the duties involving the rod boxes. Mr. Lord's testimony with regard to the need to hammer the rod boxes was consistent with the claimant's testimony on that issue. Mr. Lord also testified that the claimant and his crew worked approximately 10 hours on September 22, 2020 hammering the rod boxes. Mr. Lord saw the claimant at the urgent care facility in North Dakota and observed that the claimant's hands appeared to be swollen. Mr. Lord testified that he believed that the claimant suffered a "first aide" type injury and he did not prepare an incident report.

18. Ms. Cejka testified that the claimant's medical treatment after September 22, 2020 was handled through the employer's medical insurance. In addition, Ms. Cejka assisted the claimant with obtaining short term disability benefits through the employer.

19. On November 4, 2020, physician advisor for the insurer, Dr. Gary Zuehlsdorff reviewed the requested release surgeries. In his report, Dr. Zuehlsdorff recommended that the insurer deny authorization for the requested surgeries. In support of this opinion Dr. Zuehlsdorff noted that the claimant was diagnosed with bilateral carpal tunnel syndrome on January 21, 2019 following the EMG studies performed by Dr. Burnbaum.

20. Based upon the opinions of Dr. Zuehlsdorff, the respondents denied authorization for recommended bilateral carpal tunnel release surgeries.

21. On November 10, 2020, Dr. Rose performed bilateral carpal tunnel release surgeries. The claimant testified that the surgery was paid for by his personal medical insurance. In addition, the claimant paid out of pocket for his deductible. The claimant further testified that since the surgeries he has not had a return of his symptoms of numbness and tingling.

22. The claimant testified that he obtained employment as a mechanic with RCR Performance on December 23, 2020. In this new employment the claimant uses hand tools such as wrenches and cordless drills. The claimant testified that he has not had any carpal tunnel symptoms in this position.

23. On January 25, 2021, Dr. Jonathan Sollender reviewed the claimant's medical records and issued a report regarding the reasonableness, necessity, and relatedness of the carpal tunnel releases to the claimant's work activities on September 22, 2020. In his report, Dr. Sollender opined that the claimant's bilateral carpal tunnel syndrome is not related to the claimant's job duties. He further opined that the claimant's carpal tunnel syndrome is pre-existing and was not caused by his work activities on September 22, 2020.

24. With regard to his wages, the claimant testified that while employed with the employer, he was paid $22.00 per hour, with an increase to $33.00 per hour for overtime. The claimant testified that the employer did not pay him any wages after September 22, 2020.

25. Wage records entered into evidence demonstrate that the claimant had total earnings of $22,378.96 during his employment with the employer. Based upon the claimant's start date of June 7, 2020, and his last day earning wages of September 22, 2020, the ALJ calculates this to be a period of 108 days. The ALJ calculates that when the claimant's total wages are divided by 108 days and then multiplied by seven days in a week, it results in an average weekly wage (AWW) of $1,450.47.

26. Records entered into evidence demonstrate that the claimant received short term disability benefits. He received these benefits as follows: on November 25, 2020 a payment in the amount of $1,179.02; and on December 10, 2020, a payment in the amount of $4,042.36. This is a total of $5,221.38.

27. The claimant also received unemployment insurance benefits (UIB) from the Colorado Department of Labor and Employment (CDLE). Documents entered into evidence at hearing demonstrate that the claimant received UIB benefits in the amount of $618.00 each week he was eligible for UIB.

28. In a decision dated January 6, 2021, a hearing officer with the CDLE determined that the claimant was not eligible to receive UIB for the dates of November 8, 2020 through January 2, 2021. In that same order, the hearing officer found that the claimant was eligible to receive UIB beginning January 3, 2021.

29. The ALJ credits the claimant's testimony regarding his carpal tunnel symptoms and is persuaded that although the claimant has a long history of carpal tunnel symptoms, he was able to continue to perform his normal job duties for his prior employer

H&P and the employer. The ALJ further credits the claimant's testimony regarding his job duties on September 22, 2020 and the condition of his hands following that work. Specifically, the ALJ is persuaded that the symptoms the claimant experienced after his shift of September 22, 2020 were worse than any of his prior symptoms. The ALJ finds that the nature of the claimant's job duties on September 22, 2020 resulted in this increased symptomatology. The ALJ also credits the testimony of Mr. Lord regarding his observation of the claimant's swollen hands at the urgent care facility in North Dakota.

30. The ALJ also credits the medical records, and specifically the records of Dr. Rose and PA Herrera and finds that the claimant suffered an aggravation of his carpal tunnel related symptoms on September 22, 2020. The ALJ also finds that this aggravation necessitated medical treatment. The ALJ is not persuaded by the opinions of Drs. Zuehlsdorff and Sollender that the events of September 22, 2020 did not aggravate, accelerate, or combine with the claimant's pre-existing carpal tunnel syndrome. The ALJ finds that the claimant has successfully demonstrated that it is more likely than not that on September 22, 2020, he suffered an injury arising out of and in the course and scope of his employment with the employer. Specifically, the ALJ finds that if not for the act of repeatedly striking rod boxes with hammers on September 22, 2020, the claimant's carpal tunnel related symptoms would not have become so aggravated so as to necessitate medical treatment.

31. The ALJ finds that, despite his pre-existing carpal tunnel syndrome, the claimant was able to perform all of his normal job duties until the September 22, 2020 aggravation of his pre-existing condition. The ALJ credits the opinion of PA Herrera that the claimant was not to return to full duty until undergoing carpal tunnel surgery. The ALJ also finds that the claimant has successfully demonstrated that it is more likely than not that the bilateral carpal tunnel release surgeries constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

32. The ALJ credits the opinion of PA Herrera that the claimant was not to return to full duty until undergoing carpal tunnel surgery. The ALJ also credits the employer records that demonstrate that the claimant's employment with the employer ended because the claimant was "unable to perform duties due to illness or injury". Therefore, the ALJ finds that the claimant has successfully demonstrated that it is more likely than not that he suffered a wage loss due to his injury. This wage loss began on September 23, 2020 and continued until December 23, 2020 when he began new employment.

33. The ALJ also finds that the respondents are entitled to statutory offsets for the claimant's receipt of short term disability benefits and UIB.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of

the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has demonstrated, by a preponderance of the evidence, that on September 22, 2020, he suffered an injury arising out of and in the course and scope of his employment with the employer. As found, the claimant's testimony, the testimony of Mr. Lord, the medical records, and the opinions of Dr. Rose and PA Herrera are credible and persuasive on this issue.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

7. As found, the claimant has demonstrated, by a preponderance of the evidence, that medical treatment he has received, including bilateral carpal tunnel release surgeries performed by Dr. Rose, constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the medical records, and specifically the records of Dr. Rose and PA Herrera, are credible and persuasive on this issue.

8. To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by a claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that a claimant establish physical disability through a medical opinion of an attending physician; a claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

9. As found, the claimant has demonstrated, by a preponderance of the evidence, that as a result of his work injury, he suffered a wage loss beginning September 23, 2020 through and including December 22, 2020. As found, the opinion of PA Herrera and the records of the employer are credible and persuasive.

10. Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's average weekly wage (AWW) on his earnings at the time of the injury. Under some circumstances, the ALJ may determine the claimant's TTD rate based upon his AWW on a date other than the date of the injury. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

11. As found, the claimant's average weekly wage (AWW) is calculated to be $1,450.47. As found, the wage records are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant suffered a compensable injury on September 22, 2020.

2. The respondents shall pay for reasonable and necessary treatment of the claimant's bilateral carpal tunnel syndrome, including the bilateral carpal tunnel release surgeries performed by Dr. Rose.

3. The claimant is entitled to TTD benefits for the period of September 22, 2020 through and including December 22, 2020.

4. The respondents are entitled to statutory offsets for the claimant’s receipt of short term disability benefits and UIB.

5. The claimant’s AWW is $1,450.47.

6. All matters not determined here are reserved for future determination.

Dated this 8th day of April 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-925-175-001

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that she is entitled to an award of the specific post-MMI medical benefits - bilateral viscosupplementation injections in both knees - as requested by authorized treating physician (ATP) Michael Hewitt, M.D.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. In 2013 Claimant worked for Employer as a small package handler working in the warehouse when on July 17, 2013, she suffered an admitted workplace injury when her foot got caught in a load net and she fell down hitting both knees on the cement. Claimant's authorized treating physician (ATP) Michael Hewitt, M.D., eventually performed surgery on the left knee, but did not operate on the right knee.
2. On December 19, 2014 Claimant was placed at maximum medical improvement (MMI) by her treating physicians with a recommendation for ongoing maintenance medical care. *See* Claimant's Exhibit Tab 3, Bate Stamp (BS) 6-19.
3. Claimant subsequently underwent a Division-sponsored independent medical evaluation (DIME) and, thereafter, was again released at MMI, this time on August 17, 2015, again with a recommendation for ongoing maintenance medical care. *See* Claimant's Exhibit Tab 4, BS 20-31.
4. At both of the times that the Claimant was released at MMI, the Final Admission of Liabilities left her claim open for maintenance medical care and the admission to maintenance medical care placed no time limit on when that care would end.
5. The maintenance medical care Claimant was receiving after original placement at MMI and up through November 3, 2017 included oral medications provided through her authorized treating physician (ATP) Allison Fall, M.D. *See* Claimant's Exhibit Tab 5, BS 32-54.
6. Claimant credibly testified that around November 2017 she stopped treating with ATP Fall as the medications she was taking were not providing relief.
7. ATP Fall's last record of November 3, 2017 sets forth:

   > I do recommend proceeding with the viscosupplementation. She has already had this through the workers' compensation system.

   See Claimant's Exhibit Tab 4, BS 53.

8. Claimant has been receiving bilateral viscosupplementation injections as maintenance medical care since her original placement at MMI on December 19, 2014, after the amended placement at MMI on August 17, 2015, and after she ceased taking oral medication with ATP Fall in November 2017.

9. On August 14, 2016 ATP Hewitt put in a request for repeat Synvisc injections. *See* Claimant's Exhibit Tab 3, BS 69.

10. On October 3, 2016 Claimant presented and received her second bilateral knee viscosupplementation injections from ATP Hewitt. "She tolerated the initial injections well." *See* Claimant's Submission Tab 6, BS 71.

11. On November 28, 2016 ATP Hewitt noted that the bilateral viscosupplementation injections provided "70% to 80% improvement in knee pain." *See* Claimant's Exhibit Tab 6, BS 70.

12. On August 28, 2017 Claimant returned to ATP Hewitt who noted:

> HISTORY: [Claimant] is a 30-year-old female well-known to this office presenting for follow up of bilateral knee pain with bilateral knee chondromalacia. She was last evaluated in the office approximately 10 months prior. She underwent viscosupplementation injection last October with significant improvement in the knee symptoms. She has had a gradual return of pain over the past six to eight weeks without acute trauma. She has been attempting to exercise. The knees have been limited her activities.
>
> * * *
>
> PLAN: Treatment options were rediscussed with the patient in detail today. She has been attempting to maintain a healthy body weight, but notes difficulty as the viscosupplementation injection affect wears off. After much discussion, the patient states she would like to proceed with repeat injections**. Given her excellent response in the past, I do feel repeat bilateral injections are medically reasonable and appropriate.** We rediscussed the risks and benefits as well as expected results. We will await authorization.

See Claimant's Exhibit Tab 6, BS 72 (Emphasis added).

13. On September 7, 2017 ATP Hewitt put in a request for "ORTHOVISC 30mg #6 – to be injected into bilateral knees weekly for 3 weeks by MD in office. Requesting auth for injections and visits." *See* Claimant's Exhibit Tab 6, BS 74.

14. On January 8, 2018 Claimant returned to ATP Hewitt who noted:

> HISTORY: [Claimant] follows up for her bilateral knee pain. She was last evaluated in August 2017. She has been followed for bilateral knee chondromalacia. She has had good responses to viscosupplementation injections, her

> most recent was October 2016. She has decided to proceed with repeat viscosupplementation injections.
>
> * * *
>
> PLAN: Under sterile conditions, Orthovisc was injected from the anterolateral approach bilaterally. She tolerated the procedure well. She will ice tonight and tomorrow, monitoring for signs of infection. She will follow-up next week for her second injection, all questions were answered.

See Claimant's Exhibit Tab 6, BS 75.

15. On January 15, 2018 Claimant returned to ATP Hewitt for her second injection which she tolerated well. *See* Claimant's Exhibit Tab 6, BS 76.

16. On January 22, 2018 Claimant returned to ATP Hewitt for bilateral viscosupplementation which she tolerated well. *See* Claimant's Exhibit Tab 6, BS 77.

17. On March 5, 2018 ATP Hewitt noted:

> HISTORY: [Claimant] presents for follow up approximately 6 weeks status post bilateral viscosupplementation injection for her knees. She tolerated the injections well and has noted greater than 50% improvement in pain and swelling with activities of daily living.
>
> * * *
>
> PLAN: The patient is progressing well. She continues to note a positive response from viscosupplementation injections. She understands the importance of maintaining a healthy body weight and good lower extremity strength. She will follow up with this clinic as needed all questions were answered.

See Claimant's Exhibit Tab 6, BS 78.

18. On September 25, 2019 Respondent authorized Claimant to be evaluated by ATP Hewitt and provided him with the report of Kathleen D'Angelo, M.D., in which Dr. D'Angelo concludes that the viscosupplementation injections are no longer related to Claimant's admitted July 17, 2013 claim. *See* Claimant's Exhibit Tab 6, BS 80.

19. On August 17, 2020 ATP Hewitt issued a report setting forth in pertinent part:

> HISTORY: [Claimant] is a 33-year-old female, presenting for evaluation of bilateral knee pain. The patient has been followed for bilateral patellofemoral chondromalacia and underwent viscosupplementation injections in November 2019. She noted 60-70% improvement in knee pain, with a gradual return over the last month. She denies fevers, chills, respirator complaints or further knee injury.

* * *

> PLAN: The patient has been focusing on home exercises and has lost over 50 pounds since her last visit. She noted significant improvement from the viscosupplementation injections, but her symptoms are returning. **She is nine months from injections and wishes to proceed with repeat injections. With her previous improvement, I do feel this is medically reasonable and appropriate.** We re-discussed risks, benefits, and expected results, and we will await authorization.

See Claimant's Exhibit Tab 6, BS 81 (Emphasis added).

20. Claimant credibly testified that the viscosupplementation injections permit her to perform the activities of daily living, including her current position as a truck driver, driving both single and tandem semis for her new employer Cecil Elkins. Claimant credibly testified that she has had no intervening events since her original injury and subsequent surgery on the left knee from the injury which occurred on July 17, 2013.

21. Respondent had Claimant evaluated by Kathleen D'Angelo, M.D., who concluded that the need for the injections is no longer causally related to Claimant's original industrial injury. Dr. D'Angelo relies in part on the workers' compensation lower extremity treatment guidelines, from the Colorado Medical Treatment Guideline, to conclude that Claimant's maintenance treatment for the duration for viscosupplementation has been exceeded.

22. Claimant challenges Dr. D'Angelo's most recent report of November 4, 2020, stating that her knee was swollen although Dr. D'Angelo said, "it was not swollen" when Dr. D'Angelo examined Claimant. Claimant also stated she had pain with movement during her examination which she says Dr. D'Angelo did not acknowledge and that Dr. D'Angelo said that Claimant was morbidly obese, although Claimant credibly testified that she has lost 61 pounds since her last visit with Dr. D'Angelo and even with the weight loss, her knee pain remains.

23. Claimant's testimony was internally consistent and consistent with the underlying medical records. As a result, the ALJ finds Claimant's testimony to be credible and persuasive.

24. Claimant's treating providers, including the DIME physician, to the extent his report is readable, never restricted the number of viscosupplementation injections Claimant could undergo.

25. The injections provide Claimant relief and make it possible for her to complete her activities of daily living - making her more functional.

26. The ALJ credits and finds persuasive Dr. Hewitt's findings and conclusions that the prior injections provided Claimant relief from the effects of her work injury and that additional injections are reasonable and necessary to treat and relieve Claimant from the effects of her work injury. The ALJ finds his conclusions to be credible and persuasive because his findings are consistent with the Claimant's medical records

and are consistent with Claimant's prior ATP – Dr. Fall – who found prior injections to be reasonable and necessary to treat Claimant from the effects of her work injury.

27. The viscosupplementation injections are found to be reasonable and necessary to relieve Claimant from the effects of her work injury and maintain MMI. As a result, the viscosupplementation injections are also related to Claimant's work injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant proved by a preponderance of the evidence that she is entitled to an award of the specific

post-MMI medical benefits - bilateral viscosupplementation injections in both knees - as requested by authorized treating physician (ATP) Michael Hewitt, M.D.

D. Colorado recognizes the "chain of causation" analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury. Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability or the need for additional treatment such disability and need for treatment represent compensable consequences of the industrial injury. *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970); *Jarosinski v. Industrial Claim Appeals Office*, 62 P.3d 1082 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). However, no compensability exists if the disability or need for treatment was caused as a direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002). The question of whether the need for medical treatment was caused by the industrial injury or by an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office, supra*.

E. When the Respondents file a FAL admitting for ongoing medical benefits after MMI, it retains the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.*, 77 P.3d 863 (Colo. App. 2003). When Respondent challenges Claimant's request for specific medical treatment, Claimant bears the burden of proof to establish entitlement to the benefits. *Ford v. Regional Transportation District*, W.C. No. 4-309-217 (ICAO February 12, 2009). The question of whether Claimant proved that specific treatment is reasonable and necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

F. Respondent argues that Claimant's need for viscosupplementation has exceeded the medical treatment guidelines and that her need is no longer causally related to the original industrial injury, relying on the report of Dr. D'Angelo.

G. As it relates to the medical treatment guidelines, the Judge considered the broader question of whether the Medical Treatment Guidelines ("*Guidelines*") applied to the requested bilateral viscosupplementation injection in both knees. The *Guidelines* are contained in W.C. Rule of Procedure 17-2(A), 7 Code Colo. Regs. 1101-3, and provide that health care providers shall use the *Guidelines* adopted by the Division of Workers' Compensation (Division). The Division's *Guidelines* were established by the Director pursuant to an express grant of statutory authority. See § 8-42-101(3.5)(a)(II), C.R.S. 2008. In *Hall v. Industrial Claim Appeals Office*, 74 P.3d 459 (Colo. App. 2003) the Court noted that the Guidelines are to be used by health care practitioners when furnishing medical aid under the Workers' Compensation Act. *See* Section 8-42-101(3)(b), C.R.S. 2008.

H. The *Guidelines* are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). It is appropriate for an ALJ to consider the *Guidelines* in deciding whether a certain medical treatment is reasonable and necessary for the claimant's condition. *Deets v. Multimedia Audio Visual*, W.C. No. 4-327-591 (March 18, 2005); see *Eldi v. Montgomery Ward*, W.C. No. 3-757-021 (October 30, 1998) (medical treatment guidelines are a reasonable source for identifying the diagnostic criteria). However, an ALJ is not required to award or deny medical benefits based on the *Guidelines*. In fact, there is generally a lack of authority on whether the *Guidelines* require an ALJ to award or deny benefits in some cases. Thus, the ALJ has discretion to approve medical treatment even if it deviates from the *Guidelines*. *Madrid v.Trinet Group, Inc*., W.C. 4-851-315 (April 1, 2014)

W.C.R.P. 17-5(C) provides in relevant part:

> The treatment guidelines set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate. For cases in which the provider requests care outside the guidelines the provider should follow the procedure for prior authorization in Rule 16-9.

I. It is quite clear from the medical records of Claimant's treating providers, including the DIME physician, to the extent his report is readable, that there was never a limitation placed upon viscosupplementation injections.

J. As found, the injections are providing Claimant relief from the effects of her work injury. Moreover, the viscosupplementation injections provided Dr. Hewitt makes it possible for Claimant to complete her activities of daily living - making her more functional.

K. Moreover, the medical records of Claimant's treating physicians, including to the extent readable the DIME report issued by Yusuke Wakeshima, M.D. make no time limitation on the viscosupplementation injections which Claimant has been receiving since being placed at MMI.

L. The ALJ finds and concludes that Claimant's need for the bilateral visco-supplementation is reasonable and necessary maintenance medical care related to the July 17, 2013 injury. This ALJ was highly persuaded by the fact that the July 17, 2013 injury was caused by a direct blow on hard cement to both of Claimant's knees – and caused an osteochondral defect of the left knee - which ATP Hewitt has been treating with viscosupplementation. The ALJ has considered the Respondent's requested medical evaluation written by Dr. D'Angelo and for the reasons set forth above dismisses her conclusion that Claimant's maintenance medical care should be limited based on the Colorado Medical Treatment Guidelines and that Claimant's viscosupplementation should be "pursued through private health insurance." Claimant's need for the viscosupplementation is a direct result of the admitted industrial injury. Those injections have been providing relief. The Medical Treatment Guidelines are guidelines only. Claimant has credibly testified that she has worked on losing weight and continues to work on losing weight. Despite that fact, she continues to have severe debilitating knee pain. For these reasons and other as set forth above, the ALJ rejects the opinions of Dr. D'Angelo as it relates to the relatedness of the need for viscosupplementation.

M. Thus, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that the viscosupplementation injections are reasonable and necessary maintenance medical treatment to relieve Claimant from the effects of her work injury and maintain MMI.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant remains entitled to maintenance medical treatment.
2. Respondent shall pay for the viscosupplementation injections recommended by ATP Michael Hewitt, pursuant to the Colorado Workers' Compensation medical fee schedule.
3. The injections shall be provided as maintenance medical treatment.
4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 9, 2021.

Denver, CO 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence her claim should be reopened due to a change in condition.

II. Whether Claimant proved by a preponderance of the evidence additional medical treatment of the left knee, including the left osteotomy and lateral retinacular reconstruction with fresh frozen allograft recommended by James Genaurio, M.D., is reasonable, necessary and causally related to her July 25, 2016 industrial injury.

III. Whether Claimant proved by a preponderance of the evidence she is entitled to temporary disability benefits.

IV. Determination of Claimant's average weekly wage ("AWW").

FINDINGS OF FACT

1. Claimant is a 38-year-old female who has worked for Employer for the past 20 years as a customer service agent. Claimant's job duties require, *inter alia*, lifting, tagging, and moving luggage. Claimant estimates the average piece of luggage weighs approximately 50 pounds, and that she squats and lifts luggage several times in any given work day. Claimant spends the majority of her shift standing.

2. Claimant testified she works 35 to 45 hours per week for Employer and is paid on an hourly basis. Since her date of hire, Claimant has received raises in her hourly rate of pay at least once a year. Claimant's current hourly rate is $30.94.

3. Claimant has a history of a prior left knee work injury on September 28, 2010, for which she underwent a left knee arthroscopic chondroplasty of the patella and lateral release on August 20, 2012.

4. The subject of this claim is a July 25, 2016 industrial injury to Claimant's left knee.[1] Claimant sustained the industrial injury when she was standing and pivoting with baggage and experienced pain and swelling. Respondents initially denied liability for the injury. ALJ Peter J. Cannici determined the injury was compensable in a Findings of Fact, Conclusions of Law and Order issued on April 7, 2017. ALJ Cannici further determined Claimant's AWW was $1,222.41, based on Claimant's pay rate of $29.88 per hour.

5. Claimant was diagnosed with a left knee chondral defect of the patella with associated patella-femoral pain. She underwent physical therapy and injections with no

[1] ALJ Cannici's April 7, 2017 refers to a July 25, 2016 date of injury, while the medical records refer to a July 26, 2016 date of injury.

significant relief. Claimant ultimately underwent a left knee arthroscopic debridement with chondral grafting on December 16, 2016, performed by James Genuario, M.D.

6. Claimant reported improvement in her left knee symptoms after the surgery with some persistent pain. March 2 and April 11, 2017 evaluations with Dr. Genuario document reports of 4/10 and 3/10 achy pain with prolonged standing or walking, with no locking, popping or instability.

7. Authorized treating physician ("ATP") Matthew Lugliani. M.D. placed Claimant at maximum medical improvement ("MMI") on May 15, 2017. Claimant reported persistent minimal aching left knee pain, localized to the lateral side of her knee, worse with prolonged standing or walking. On examination, Dr. Lugliani noted that Claimant ambulated with a normal gait. Knee flexion measured at 120 degrees, and extension at 0 degrees. Dr. Lugliani assigned 11% impairment for range of motion deficits and 5% impairment for arthritis under Table 4 of the AMA Guides for specific disorders, resulting in a total left lower extremity impairment of 15%. Dr. Lugliani recommended Claimant follow-up with orthopedics for six months for flare-ups and undergo five additional sessions of physical therapy for strengthening. He released Claimant to work full duty with no restrictions.

8. Claimant underwent a left knee MRI on November 3, 2017. The MRI revealed: full-thickness cartilage erosion involving the inferior aspect of the lateral patellar facet without healing fibrocartilage; exposed subchondral bone on the inferior aspect lateral patellar facet without chondral fill with no subchondral edema; thinning and attrition of the lateral retinaculum without complete dehiscence; and attrition of the medial patellofemoral ligament adjacent to the femoral attachment site.

9. On June 2, 2020, Claimant underwent another left knee MRI. The MRI report notes a clinical history of persistent patellar pain and swelling. The radiologist's impression included: severe chondral thinning to bone grade 4 along the patella lateral facet inferiorly with subchondral bone sclerosis and flattening and edema; undermining and a possible small chondral flap along the peripheral margins of that region toward the median ridge; chondral thinning grade 3 along the superior lateral peripheral margin of the trochlea; scarring of the lateral retinaculum with scattered susceptibly artifact which may be from stated history of previous reconstruction postoperative change; thinning and fluid signal outpouching of the lateral retinaculus anterior to the iliotibial band; mild patella alta; and a large effusion.

10. On July 24, 2020, Claimant saw Dr. Genuario, who remarked that Claimant initially did well after her surgery but that her symptoms had returned. The medical record notes that physical examination was unchanged from the June 12, 2020 examination.[2] Dr. Genuario noted the recent MRI showed progression with loss of the retinacular graft and articular cartilage with a new cartilage defect. He gave an assessment of left knee pain with grade 4 lateral patellar changes and loss of lateral retinacular graft with relative lateral patellar offset. Dr. Genuario opined that Claimant's condition "is a sequela from her

[2] The record does not include notes from the June 12, 2020 evaluation referenced by Dr. Genuario.

previous injury," noting the graft did not take. (Ex. C, p. 58). Dr. Genuario recommended Claimant undergo a medialization tibial tubercle osteotomy with de novo grafting and a lateral retinacular reconstruction. Dr. Genuario's July 24, 2020 medical note does not address a release to work or any work restrictions.

11. On November 10, 2020, Timothy S. O'Brien, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. O'Brien previously conducted an IME of Claimant on November 11, 2016, at which time he opined that Claimant did not sustain an injury as a result of the July 25, 2016 work incident. Claimant reported to Dr. O'Brien doing well after her 2016 knee surgery and then experiencing a return of knee pain and swelling in the last eight months. Claimant reported 6/10 pain, swelling, instability, soreness, tightness, throbbing, catching, stiffness, achiness, weakness and locking. She further reported having difficulties working and performing activities of daily living. Dr. O'Brien continued to opine that Claimant did not sustain a work injury. Dr. O'Brien explained that Claimant has pre-existing underlying arthritis and patellofemoral malalignment. He opined that the 2016 left knee surgery was unrelated to the July 2016 work incident, and that the proposed revision surgery is also not work-related. Dr. O'Brien further opined that the proposed revision surgery is experimental, will not work, and is not a viable treatment option for Claimant. Dr. O'Brien explained that the vast majority of revision cases do "less well" than the primary surgery, and performing additional surgeries will make a subsequent undertaking of a total knee arthroplasty much more complex and the outcome much less predictable.

12. In a letter dated December 11, 2020, Dr. Genuario responded to Dr. O'Brien's IME report. Dr. Genuario explained that he diagnosed Claimant diagnosed with a recurrent chondral injury on the patella and a lateral retinacular failure. He noted Claimant had persistent pain and swelling and weakness with activities of daily living, which had prevented her from returning to work. Dr. Genuario explained his basis for recommending surgery for Claimant, stating:

> I referred [Claimant's case to] knee surgeon experts across the country as she has a very difficult problem with a chondral defect patella maltracking and a lateral retinacular defect from the previous lateral release done by the outside physician. The consensus of the expert panel of knee surgeons across the country was to realign the patellar tracking with a tibial tubercle osteotomy, chondral procedure patella, and a lateral retinacular reconstruction with a fresh frozen allograft.
>
> With all due respect to Dr. Timothy O'Brien's level of expertise in these areas as a foot and ankle surgeon is not nearly the breadth and depth of the panel of expert knee surgeons across the country who we have been at Lee (*sic*) disagree with his opinion. [Claimant] is a 38-year-old active female with a focal cartilage defect. This is not an indication for a total knee arthroplasty and in fact [Claimant] would do very poorly with this procedure and have a lifelong limitation of activity. As such it is both my opinion, and the opinion of an expert panel of multiple expert surgeons from across the

> country that this is not the appropriate treatment for [Claimant] and in fact they would recommend a realignment procedure cartilage procedure and retinacular reconstruction. (Ex. 24, p. 10).

Dr. Genuario opined Claimant was unable to return to work, noting Claimant tried to do so at some point in the fall, but continued to have pain and swelling with activity.

13. Claimant testified at hearing that, at and being placed at MMI, she felt good, that she was able to perform her job duties, and that she was not seeking continuing treatment for her left knee. She testified that around April 2020 she began experiencing increased pain and significant swelling of her left knee, for which she subsequently sought evaluation and treatment. Claimant testified that Dr. Genuario placed her on restrictions on July 24, 2020 removing her from work due to her knee. Claimant stated has been off of work since July 24, 2020 as a result of her symptoms and restrictions and that she has not received any wages since that time. Claimant testified that she went on a voluntary COVID leave from approximately May 2020 to late July 2020, during which time Employer paid her 22 hours every two weeks to cover medical insurance. Claimant testified she is unable to work due to her left knee condition.

14. Dr. O'Brien testified by post-hearing deposition as an expert in orthopedic surgery. Dr. O'Brien testified consistent with his November 11, 2020 IME report and continued to opine that the surgery proposed by Dr. Genuario is not reasonable, necessary or work-related. Dr. O'Brien clarified that his experience was not only limited to performing foot and ankle surgeries, but also hip and knee surgies. Dr. O'Brien explained that Claimant's pain and instability is likely being caused by her pre-existing patellofemoral arthritis and patellofemoral malalignment. Dr. O'Brien testified that there were no great surgical solutions for patellofemoral malalignment, and that there was no science published which would prove that the surgery proposed by Dr. Genuario would be effective in treating Claimant's current condition. Dr. O'Brien opined that the proposed surgery would be ineffective because the best chance at curing pain due to patellofemoral arthritis is the first surgical option and revision surgeries are never as successful as the original surgery. Because Claimant has had multiple surgeries on the left knee, Dr. O'Brien opines that the proposed surgery would be ineffective. In addition, the arthritis in Claimant's knee is more advanced and extensive.

15. Dr. O'Brien also testified that Claimant's previous chondral grafting and lateral retinaculum reconstruction from December of 2016 was a failure, as Claimant experienced barely two years of pain relief following the surgery. Dr. O'Brien noted that Claimant was not released from the surgery until 2017, and she had presented back in June of 2020 reporting eight months of pain. Dr. O'Brien explained that the surgery proposed by Dr. Genuario would reduce the good outcome of a total knee replacement Dr. O'Brien testified that Claimant's condition has worsened since being place at MMI in May 2017, but that he attributes Claimant's condition to a personal health issue. He further explained that, with Claimant's knee condition, pain and intermittent swelling is unavoidable, and opined that Claimant is able to work her regular job duties with no restrictions.

16. Claimant's wage records indicate that Claimant received the benefits she described as COVID leave from May 1, 2020 through August 31, 2020.

17. Records from the Colorado Department of Labor and Employment indicate that Claimant received benefits through the standard unemployment insurance program from May 10, 2020 through August 15, 2020.

18. The ALJ finds the opinion of Dr. Genaurio, as supported by the medical records and Claimant's testimony, more credible and persuasive than the opinion of Dr. O'Brien.

19. Claimant proved it is more probable than not she sustained a worsening of her left knee condition causally related to her July 2016 work injury, and is thus entitled to reopen her claim.

20. Claimant proved it is more probable than not additional medical treatment, including the left knee surgery proposed by Dr. Genuario, is reasonable, necessary and causally related to the July 2016 work injury.

21. Claimant proved it is more probable than not her worsened left knee condition resulted in a disability causing Claimant to leave work for more than three shifts and lose wages. As Claimant received COVID leave and unemployment insurance benefits, Respondents are entitled to applicable offsets.

22. As Claimant's wages have increased since the date of injury, a fair approximation of Claimant's current wage loss and diminished earning capacity is an AWW of $1,237.60 (40 hours x $30.94).

23. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Reopening Due to Change in Condition

Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim, the claimant shoulders the burden of proving his condition has changed and is entitled to benefits by a preponderance of the evidence. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* WC 4-358-465 (ICAO, Oct. 25, 2006). Reopening is appropriate if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* WC 4-543-945 (ICAO, July 19, 2004).

As found, Claimant proved it is more probable than not she sustained a worsening of her July 25, 2016 knee condition after being placed at MMI on May 15, 2017. Dr. Lugliani's medical note documents Claimant's reports of persistent left knee pain at the time of MMI; however, such pain was noted to be minimal. Moreover, Claimant credibly testified that, up until April 2020, she was doing well, she was able to perform her job duties, and she was not seeking medical treatment for her left knee. There is no evidence refuting Claimant's testimony. The November 2017 left knee MRI is the only evidence of any additional evaluation of the left knee that occurred between MMI and June 2020. Claimant credibly testified that in April 2020 she began experiencing significant pain and swelling which affected her ability to function. The June 20, 2020 MRI revealed progressive findings and postoperative changes. Dr. Genuario credibly opined that Claimant's current condition and need for additional treatment, including surgery, is sequela of the July 2016 work injury.

Dr. O'Brien agrees Claimant's condition has worsened since being placed at MMI, although he attributes Claimant's original condition and any subsequent worsening to a personal health condition and not any work-related event. The ALJ is not persuaded Claimant's worsening condition is solely the result of a personal health condition and unrelated to the work injury. As found, ALJ Cannici determined the July 2016 work injury was compensable, and Claimant underwent treatment approved by Respondents, including the December 2016 surgery performed by Dr. Genaurio. Dr. Genaurio credibly opined that the graft from the 2016 failed and that Claimant requires additional treatment. The preponderant evidence establishes Claimant's claim should be reopened, as she has suffered a change in condition that related to the work injury, requiring additional medical treatment and disability benefits.

Medical Treatment

Respondents are liable for medical treatment that is causally related and reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

Claimant proved it is more probable than not that additional treatment, including the left knee surgery proposed by Dr. Genaurio, is reasonable, necessary and related to the July 2016 work injury. As one of Claimant's authorized providers, Dr. Genaurio is familiar with Claimant's condition and course of treatment. Based on evaluation of Claimant and review of the June 2020 left knee MRI, Dr. Genaurio assessed Claimant with left knee pain with grade 4 lateral patellar changes and loss of lateral retinacular graft with relative lateral patellar offset. He credibly opined that Claimant's condition is sequela from the work injury, noting the graft did not take. Claimant is currently experiencing a worsening of her knee condition for which she underwent surgery in July 2016 and the graft subsequently failed. Dr. Genaurio acknowledges that Claimant's condition is complicated. He addressed Dr. O'Brien's IME opinion and continues to opine that the proposed surgery is reasonable and necessary to address Claimant's condition at this time. Based on the totality of the evidence, the ALJ is more persuaded by Dr. Genaurio's opinion, as he has treated Claimant for several years and is familiar with her condition and course of treatment.

Temporary Total Disability

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Notably, an insurer is legally required to continue paying claimant temporary disability past the MMI date when the respondents initiate a DIME, However, where the DIME physician found no impairment and the MMI date was several months before the MMI determination, all of the temporary disability benefits paid after the DIME's MMI date constituted a recoverable overpayment. *Wheeler v. The Evangelical Lutheran Good Samaritan Society*, WC 4-995-488 (ICAO, Apr. 23, 2019).

The ALJ notes that Dr. Genuario's July 24, 2020 medical note is devoid of any discussion of a restrictions or a release to work. Respondents are correct in their contention that a recommendation for surgery, alone, is insufficient to establish entitlement to TTD benefits. Nonetheless, Claimant credibly testified that, since July 24, 2020, she has been unable to perform her job duties due to her worsening left knee condition. Claimant's job requires standing for several hours and lifting/moving luggage. Claimant suffers from significant pain, tightness and swelling in the left knee. In his December 2020 letter, Dr. Genuario opined that Claimant's current condition rendered her unable to perform her work duties. Claimant was initially on COVID leave and remained on COVID leave until August 31, 2020. She has suffered wage loss as a result of the disability due to the worsening left knee condition. Accordingly, Claimant has proven by a preponderance of the evidence she is entitled to TTD benefits July 24, 2020 and ongoing. Respondents are entitled to an offset of COVID leave pay and unemployment insurance benefits received by Claimant during this applicable period of time.

Average Weekly Wage

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's AWW on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell*, 867 P.2d at 82. Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply §8-42-102(3), C.R.S. and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Id.; see e.g. Burd v. Builder Services Group Inc*., WC 5-085-572 (ICAO, July 9, 2019) (determining that signing bonus claimant received when he began employment is not a "similar advantage or fringe benefit" specifically enumerated under §8-40-201(19)(b) and therefore cannot be added into claimant's AWW calculation); *Varela v. Umbrella Roofing, Inc.*, WC 5-090-272-001 (ICAO, May 8, 2020) (noting that a claimant is not entitled to have the cost or value of the employer's payment of health insurance included in the AWW until after the employment terminates and the employer's contributions end).

As found, Claimant proved it is more probable than not she is entitled to an increase in her AWW. ALJ Cannici found an AWW of $1,222.41, which was based on Claimant's then-pay rate of $29.88 per hour. Claimant credibly testified that her earnings have increased since the date of injury due to raises for cost of living, and that her current pay rate is $30.94. Claimant works between 35 and 45 hours per week. Based on an average 40-hour work week, a fair approximation of Claimant's current wage loss and diminished earning capacity is an AWW of $1,237.60.

ORDER

1. Claimant's petition to reopen her claim due to a worsening of her left knee condition is granted.

2. Respondents are liable for reasonable and necessary medical treatment related to Claimant's July 2016 work injury, including the left knee surgery recommended by Dr. Genuario.

3. Respondents shall pay Claimant TTD benefits beginning July 24, 2020 and ongoing, subject to offsets for COVID leave and unemployment insurance benefits.

4. Claimant's AWW is $1,237.60.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 9, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that the right hip arthroplasty and gluteus medius tendon repair requested by Clifford Clark, M.D. is reasonable, necessary and causally related to her August 4, 2018 admitted industrial injuries.

FINDINGS OF FACT

1. Claimant worked for Employer as a Certified Nursing Assistant and Activity Assistant. On August 4, 2018 Claimant suffered admitted industrial injuries during the course and scope of her employment. Specifically, Claimant slipped on a wet floor while walking sideways between two tables. She fell and took a "hard jolt" on her left side. Claimant landed on the left corner of her hip and left shoulder. Claimant remained on the ground for a few minutes and the director of nursing came over because she heard the fall. Claimant stood up without assistance then walked down to the emergency room because Employer's facility was connected to a hospital.

2. At the emergency room Claimant reported left lateral neck, shoulder and hip pain. She had decreased neck range of motion, back pain, shortness of breath and the inability to walk or use her arms. An examination revealed full range of motion of the spine with no spinal tenderness. Imaging did not reflect any fractures. The treating provider did not list a specific diagnosis, but noted that Claimant had fallen on her left side with left or right-sided pain in the hip, knee, elbow and left shoulder. Claimant subsequently underwent a course of physical therapy.

3. On August 7, 2018 Claimant received medical treatment from Authorized Treating Physician (ATP) Robyn A. Zehr, D.O. Dr. Zehr recounted the slip and fall as well as Claimant's emergency room visit. She noted ongoing pain in the left neck, shoulder, hip and back. When detailing Claimant's symptoms, Dr. Zehr noted pain in the lower left hip/back, but emphasized that the left shoulder pain was the worst. Dr. Zehr's report did not mention right hip symptoms.

4. On September 6, 2018 Claimant underwent a left shoulder MRI. The imaging reflected a full-thickness tear of the supraspinatus tendon with infraspinatus tendinosis, subscapularis tendinitis and mild AC joint degenerative changes with subacromial bursitis.

5. Because of continued symptoms, Claimant underwent an MRI of the lumbar spine on November 1, 2019. The MRI revealed d mild-to-moderate disc height loss at L1-2 and L2-3 with circumferential disc bulging and mild neuroforaminal stenosis at all levels.

6. On November 12, 2018 Claimant underwent a left shoulder arthroscopic rotator cuff repair and a subacromial decompression. After the procedure, Claimant received physical therapy, chiropractic care and massage therapy.

7. On December 19, 2018 Frederick P. Scherr, M.D. performed an independent medical examination of Claimant. Dr. Scherr specified that Claimant suffered left shoulder and lower back injuries on August 4, 2018. Claimant also mentioned that injures to her left thumb and left hip had resolved. She believed the only remaining injuries involved her left shoulder and lower back. Dr. Scherr did not mention any injuries to Claimant's right hip.

8. On January 10, 2019 Claimant returned to Dr. Zehr for an evaluation. Dr. Zehr noted that Claimant's back symptoms were put on hold with the shoulder surgery and she continued to have concerns with her lower back pain. Claimant also had aching in her lower back/buttock that was worse with pronged positioning. Her sciatica symptoms had resolved.

9. Claimant mentioned recurrent sciatica-type symptoms when she started attending chiropractic treatments in January 2019. Claimant's first mention of anterior right hip pain occurred on January 24, 2019 and in some subsequent chiropractic treatment notes. Claimant continued intermittent complaints of pain in the right hip and left hip throughout the spring of 2019.

10. On April 30, 2020 Claimant underwent a repeat MRI of the lumbar spine. There were no changes from November 1, 2019 with multilevel degenerative disc disease, minimal disc bulging and evidence of a right hemilaminectomy at L5-S1.

11. On June 25, 2020 Claimant underwent an impairment rating evaluation with Gregory Reichhardt, M.D. However, because Claimant had not reached Maximum Medical Improvement (MMI), Dr. Reichhardt did not assign an impairment rating.

12. On July 17, 2020 Claimant followed-up with Dr. Reichhardt for lower back pain. Claimant specified a 4-5/10 level for right groin pain and a 5-6/10 level for right posterior thigh pain. Dr. Reichhardt noted that Claimant stated she had experienced groin pain since the original injury. The right groin pain appeared to be coming from the right hip. Dr. Reichhardt ordered an MRI/arthrogram of the right hip.

13 On August 12, 2020 Claimant underwent a right hip MRI. The MRI showed a non-displaced tear in the lateral superior labrum of the right hip with advanced degenerative changes at the L5-S1 level and mild right trochanteric bursitis with mild tendinitis of the left gluteus medius insertion.

14. In an August 13, 2020 follow-up visit Dr. Reichhardt noted Claimant suffered sporadic right leg pain with back pain. The right leg pain was "a zinger" that extended from the buttocks down to the posterior thigh into the foot. An EMG/nerve conduction study showed no significant abnormalities.

15. On September 24, 2020 Claimant visited Joshua Snyder, M.D. to evaluate her right hip pain. She told Dr. Snyder that her right hip pain began immediately after the August 4, 2018 work injury. Dr. Snyder noted that most of Claimant's pain was in the buttocks and groin. In reviewing radiological studies, Dr. Snyder determined that Claimant was suffering right hip pain secondary to a combination of hip arthritis and a gluteus medius tear. Dr. Snyder referred Claimant to Clifford Dana Clark, M.D. for a right hip evaluation.

16. Dr. Clark reviewed the radiographs and determined that Claimant had severe gluteal medius with minimus tearing and tendinopathy in the setting of moderate hip arthrosis. He agreed with Dr. Snyder's statement that Claimant would not improve without surgery. On November 3, 2020 Dr. Clark submitted a prior authorization request for a right anterior total hip arthroplasty and gluteus medius tendon repair. Respondents denied the right hip replacement surgery on November 10, 2020 pending the results of a Rule 16 independent medical examination with Mark S. Failinger, M.D.

17. On December 3, 2020 Claimant underwent an independent medical examination with Dr. Failinger, He recounted that Claimant had a history of "bilateral hip pain including right leg pain that was 'incapacitating' along with right-sided buttock pain on 03-12-2014 with recurrent complaints of bilateral hip pain when the patient was seen by Dr. Guy Vanderwerf on 10-27-2015." Dr. Failinger detailed that x-rays of the pelvis from May 24, 2016 showed minimal degenerative changes of the hips with some mild joint space narrowing and subchondral sclerosis. He reasoned that Claimant's recurrence of right hip symptoms in late 2018 was consistent with the natural course of hip osteoarthritis. Notably, an increase in symptoms followed by the lessening or resolution of symptoms is the most common presentation for ongoing osteoarthritis. Therefore, based on Claimant's prior complaints of right hip pain and the imaging showing degenerative changes in 2016, Dr. Failinger determined that Claimant's right hip symptoms were consistent with the natural progression of osteoarthritis.

18. Based on his physical examination and review of the medical records, Dr. Failinger concluded that Dr. Clark's request for a right hip arthroplasty and a gluteus medius tendon repair might be reasonable and necessary, but was not related to Claimant's August 4, 2018 slip and fall at work. He remarked that Claimant's need for the gluteus medius tendon repair is, with very high medical probability, due to ongoing degeneration. The need for surgery was not caused by a tear that occurred during the work accident. In fact, if an acute tear had occurred, Claimant would have complained of significant right hip pain shortly after the incident. Dr. Failinger noted that generally gluteus medius tears are degenerative in nature, and the hip abductor musculature is often referred to as "the rotator cuff" of the hip. He thus summarized that there is no reasonable connection between Claimant's August 4, 2018 work accident and the request for a right hip arthroplasty.

19. Based on Dr. Failinger's independent medical examination, Respondents' submitted a final denial of the requested surgery to Dr. Clark and Claimant on December 23, 2020.

20. Respondents sent Dr. Failinger's independent medical examination report to authorized medical provider Dr. Reichhardt. In a January 11, 2021 report Dr. Reichhardt noted that Dr. Failinger had concluded that the proposed hip surgery was not related to Claimant's work injury. Dr. Reichhardt remarked that Dr. Failinger conducted a comprehensive records review and "clearly has more records available than I do." He concluded that, if the record review performed by Dr. Failinger was correct, there were questions about the causality of Claimant's hip complaints,

21. Claimant testified at the hearing in this matter. She noted that two years prior to the work accident she had pain in her hips that she attributed to a change in the weather. Hip x-rays revealed mild degenerative arthritis. Claimant remarked that she was not having any difficulties performing her job duties prior to the August 4, 2018 slip and fall. She wishes to have the surgery recommended by Dr. Clark because it will improve her symptoms.

22. Claimant has failed to demonstrate that it is more probably true than not that the right hip arthroplasty and gluteus medius tendon repair requested by Dr. Clark is reasonable, necessary and causally related to her August 4, 2018 admitted industrial injuries. Initially, Claimant slipped and fell on her left side at work. She reported pain in her left neck, shoulder, hip and back to ATP Dr. Zehr. Claimant subsequently underwent a left shoulder arthroscopic rotator cuff repair and subacromial decompression. In a December 19, 2018 examination with Dr. Scherr Claimant believed that her only remaining injuries involved her left shoulder and lower back. Dr. Scherr's report did not mention an injury to Claimant's right hip. On April 30, 2020 Claimant underwent a repeat MRI of her lumbar spine that was unchanged from a November 1, 2019 MRI. There was multilevel degenerative disc disease, minimal disc bulging and evidence of a right hemilaminectomy at L5-S1.

23. Claimant maintains that she began suffering right lower extremity symptoms after the August 4, 2018 accident. However, the medical records reveal that Claimant's first mention of anterior right hip pain occurred on January 24, 2019 and continued through subsequent chiropractic treatment. Claimant also mentioned intermittent complaints of pain in the right hip and left hip throughout the spring of 2019. Dr. Clark reviewed radiographic studies and determined that Claimant had severe gluteal medius with minimus tearing and tendinopathy in the setting of moderate hip arthrosis. He determined that Claimant would not improve without surgery. On November 3, 2020 Dr. Clark thus submitted a prior authorization request for a right anterior total hip arthroplasty and gluteus medius tendon repair.

24. Based on his physical examination and review of the medical records, Dr. Failinger concluded that Dr. Clark's request for a right hip arthroplasty and a gluteus medius tendon repair was not related to Claimant's August 4, 2018 slip and fall at work. Dr. Failinger detailed that x-rays of the pelvis from May 24, 2016 showed minimal degenerative changes of the hips with some mild joint space narrowing and subchondral

sclerosis. He reasoned that Claimant’s recurrence of right hip symptoms in late 2018 was consistent with the natural course of hip osteoarthritis. Dr. Failinger thus determined that Claimant’s need for surgery is not due to a tear that occurred during the work accident. In fact, if an acute tear had occurred, Claimant would have complained of significant right hip pain shortly after the incident. He summarized that, after carefully reviewing the medical records, there is no reasonable connection between Claimant’s August 4, 2018 work accident and the request for a right hip arthroplasty.

25. The medical records, in conjunction with the persuasive opinion of Dr. Failinger, reveal that Claimant’s need for right hip surgery is not causally related to her August 4, 2018 work accident. Notably, Claimant slipped and fell on her left side and did not complain of right hip pain until approximately five months after the date of injury. Claimant’s testimony regarding prior right hip pain and communication of right hip pain to medical providers is inconsistent with the medical records. In fact, medical records reveal that Claimant had degenerative changes in her right hip in 2016 and the current pain complaints constitute a natural progression of her pre-existing right hip arthritis. Therefore, Claimant’s need for right hip treatment cannot be considered a direct and natural consequence of the August 4, 2018 work injury. Claimant has thus failed to demonstrate that the requested right anterior total hip arthroplasty and gluteus medius tendon repair is related to the admitted work injuries of August 4, 2018.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a preexisting condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

5. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the right hip arthroplasty and gluteus medius tendon repair requested by Dr. Clark is reasonable, necessary and causally related to her August 4, 2018 admitted industrial injuries. Initially, Claimant slipped and fell on her left side at work. She reported pain in her left neck, shoulder, hip and back to ATP Dr. Zehr. Claimant subsequently underwent a left shoulder arthroscopic rotator cuff repair and subacromial decompression. In a December 19, 2018 examination with Dr. Scherr Claimant believed that her only remaining injuries involved her left shoulder and lower back. Dr. Scherr's report did not mention an injury to Claimant's right hip. On April 30, 2020 Claimant underwent a repeat MRI of her lumbar spine that was unchanged from a November 1, 2019 MRI. There was multilevel degenerative disc disease, minimal disc bulging and evidence of a right hemilaminectomy at L5-S1.

6. As found, Claimant maintains that she began suffering right lower extremity symptoms after the August 4, 2018 accident. However, the medical records reveal that Claimant's first mention of anterior right hip pain occurred on January 24, 2019 and continued through subsequent chiropractic treatment. Claimant also mentioned intermittent complaints of pain in the right hip and left hip throughout the spring of 2019. Dr. Clark reviewed radiographic studies and determined that Claimant had severe gluteal medius with minimus tearing and tendinopathy in the setting of moderate hip arthrosis. He determined that Claimant would not improve without surgery. On November 3, 2020 Dr. Clark thus submitted a prior authorization request for a right anterior total hip arthroplasty and gluteus medius tendon repair.

7. As found, based on his physical examination and review of the medical records, Dr. Failinger concluded that Dr. Clark's request for a right hip arthroplasty and a

gluteus medius tendon repair was not related to Claimant's August 4, 2018 slip and fall at work. Dr. Failinger detailed that x-rays of the pelvis from May 24, 2016 showed minimal degenerative changes of the hips with some mild joint space narrowing and subchondral sclerosis. He reasoned that Claimant's recurrence of right hip symptoms in late 2018 was consistent with the natural course of hip osteoarthritis. Dr. Failinger thus determined that Claimant's need for surgery is not due to a tear that occurred during the work accident. In fact, if an acute tear had occurred, Claimant would have complained of significant right hip pain shortly after the incident. He summarized that, after carefully reviewing the medical records, there is no reasonable connection between Claimant's August 4, 2018 work accident and the request for a right hip arthroplasty.

8. As found, the medical records, in conjunction with the persuasive opinion of Dr. Failinger, reveal that Claimant's need for right hip surgery is not causally related to her August 4, 2018 work accident. Notably, Claimant slipped and fell on her left side and did not complain of right hip pain until approximately five months after the date of injury. Claimant's testimony regarding prior right hip pain and communication of right hip pain to medical providers is inconsistent with the medical records. In fact, medical records reveal that Claimant had degenerative changes in her right hip in 2016 and the current pain complaints constitute a natural progression of her pre-existing right hip arthritis. Therefore, Claimant's need for right hip treatment cannot be considered a direct and natural consequence of the August 4, 2018 work injury. Claimant has thus failed to demonstrate that the requested right anterior total hip arthroplasty and gluteus medius tendon repair is related to the admitted work injuries of August 4, 2018.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for a right hip arthroplasty and gluteus medius tendon repair is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see*

Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms.

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the right rotator cuff surgery recommended by Dr. Mitchell Copeland is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted April 19, 2020 work injury.

FINDINGS OF FACT

1. The claimant worked for the employer as a truck driver. His job duties entailed driving a semi truck full of US Mail between Grand Junction, Colorado and Denver, Colorado. The claimant would also load and unload this mail.

2. On April 19, 2020, the claimant was unloading his work semi truck when one of the cargo nets fell, causing the claimant to fall onto his right shoulder. The outside of the claimant's right shoulder struck the ground.

Prior Treatment

3. The claimant testified regarding prior surgeries to his bilateral shoulders. He estimates that his first right shoulder surgery was done 15 years ago. That surgery was performed by Dr. Mitchell Copeland and involved a rotator cuff repair. The claimant also recalls that following that surgery he developed an infection that necessitated revision surgery. Those records were not included in the hearing exhibits. There is some indication in the record that due to the age of these records, they were not easily obtained. However, the ALJ notes that both the claimant and Dr. Copeland provided testimony regarding a prior right shoulder procedure.

4. The ALJ notes that there are several instances in the claimant's more recent medical records that reference prior bilateral shoulder surgeries. It is unclear to the ALJ if that information was obtained by the providers' review of prior records or directly from the claimant's own report.

5. On November 14, 2011, the claimant sought treatment in the emergency department (ED) at Community Hospital for chest pain. The claimant's diagnoses were listed as, *inter alia*, chronic right shoulder pain, uncontrolled hypertension, tobacco abuse, and obesity. In addition, it was noted that the claimant "most likely has diabetes mellitus".

6. In a medical record dated April 1, 2014, Nermin Imsirovic, PA-C noted that the claimant had Type 2 diabetes and a history of "multiple surgeries involving both shoulders".

7. On May 14, 2014, Dr. Brian Witwer performed a cervical spine fusion at the C4-C5 level.

8. On December 3, 2014, the claimant reported a “ripping sensation in the right bicep in August of 2014.” The claimant also reported he had had “multiple surgeries” and was requesting a referral to orthopedics.

9. On May 28, 2019, Dr. Witwer performed a posterior cervical fusion and laminectomy at the C3, C4, and C5 levels.

10. The claimant testified that that following his prior right shoulder procedures he fully recovered and did not seek right shoulder treatment until the April 19, 2020 incident.

Post-Injury Treatment

11. Following the April 19, 2020 fall, the claimant began treatment with Dr. James McLaughlin. Dr. Mclaughlin is the claimant’s authorized treating provider (ATP) for this claim. The claimant was first seen by Dr. McLaughlin on April 20, 2020. At that time, the claimant reported that a net fell down and tripped him, causing him to fall onto his right shoulder. The claimant also reported to Dr. McLaughlin that he had undergone “right shoulder surgery multiple times” with the most recent occurring approximately 14 years prior. X-rays were taken of the claimant’s right shoulder and showed no shoulder dislocation. Dr. McLaughlin opined that the claimant might have injured his labrum, or suffered a rotator cuff tear, or strain. He ordered a right shoulder magnetic resonance image (MRI). Dr. McLaughlin also referred the claimant to Dr. Copeland for consultation.

12. The recommended right shoulder MRI was but not performed for some time because of claimant’s claustrophobia.

13. On May 13, 2020, the claimant was seen in the ED at Community Hospital because of left foot swelling. At that time, the claimant reported that his left foot became stuck in a car door, resulting in the swelling. The claimant also reported that he was a daily tobacco user and drank between 12 and 18 beers per day. It was noted that the claimant had uncontrolled diabetes. The claimant’s diagnosis was identified as sepsis secondary to left foot cellulitis. The claimant was admitted to the hospital for observation. Thereafter, it was necessary for the claimant’s left foot to be incised and drained by Dr. Joshua Thun. The claimant was diagnosed with a MRSA infection and given a wound vac.

14. On May 28, 2020, the claimant was seen at Primary Care Partners to establish care. In the medical record of that date, the claimant’s “active problems” were listed as: alcoholism, benign essential hypertension, diabetic infection of the left foot, hypertension associated with diabetes, and uncontrolled Type 2 diabetes mellitus. Jessica Harrington, FNP recommended the claimant obtain treatment at a behavioral health clinic (BHC) to address his alcoholism. The claimant declined to pursue that recommendation.

15. The claimant had follow up appointments with Dr. Thun regarding his left foot on June 16, 2020; June 23, 2020; and June 30, 2020. In each of those medical reports, Dr. Thun noted that the claimant was noncompliant with his directive of no weight bearing on the left foot.

16. On June 26, 2020, the claimant returned to Dr. McLaughlin. With regard to his left foot wound, the claimant reported being bitten by a brown recluse spider, that resulted in the need for hospitalization and surgery. With regard to his right shoulder, the claimant reported some improvement. Dr. McLaughlin again recommended an MRI and consultation with Dr. Copeland. In addition, he recommended the claimant begin physical therapy.

17. On July 28, 2020, the claimant was seen by Dr. McLaughlin. On that date, the claimant reported that physical therapy was helpful and he was ready to return to work. It was also discussed that the claimant's left foot had healed to the point that he could see Dr. Copeland. Dr. McLaughlin noted that if the claimant was doing well at their next appointment he would consider placing him at maximum medical improvement (MMI).

18. On August 19, 2020, the claimant again returned to Dr. McLaughlin . At that time, the claimant reported that he had returned to full duty work and was "generally okay". However, he noted an increase in his pain when doing more with his right arm. Dr. McLaughlin opined that the claimant had not reached MMI due to this worsening. In addition, Dr. McLaughlin opined that the claimant could continue working full duty as a driver.

19. On September 8, 2020, the respondents filed a General Admission of Liability (GAL).

20. On September 2, 2020, the claimant was seen by Dr. Copeland. On that date, the claimant reported right shoulder symptoms that included pain, popping, grinding, weakness, and sleep disturbance. Dr. Copeland was concerned that the claimant had re-torn his rotator cuff. Dr. Copeland recommended a right shoulder MRI.

21. A right shoulder MRI was performed on October 12, 2020. The MRI report identified the following:

> 1. Complete full-thickness tear of the supraspinatus tendon which appears chronic, as there is muscle bundle atrophy. 2. Tear involving the superior fibers of the subscapularis tendon. 3. Atrophy of the infraspinatus and teres minor muscle. The tendons remain intact. 4. Diffuse degenerative changes of the superior glenoid labrum. 5. Postop changes rotator cuff repair and subacromial decompression.

22. Following the MRI, Dr. Copeland recommended surgical repair of the claimant's right rotator cuff tendons.

23. Dr. Copeland testified via deposition. In his testimony, Dr. Copeland stated that the claimant had recurrent tearing of his rotator cuff and the supraspinatus, with some tearing of the subscapularis and infraspinatus. Dr. Copeland opined that the claimant had an "acute on chronic event" when he fell at work on April 19, 2020. In support of this opinion, Dr. Copeland testified that prior to April 19, 2020, the claimant's right shoulder was functioning. Then following April 19, 2020, the claimant had a "dramatic decline in function". In his testimony, Dr. Copeland reiterated that his recommendation is a repair to

the right rotator cuff tendons. Dr. Copeland further opined that there is a 50 percent chance that the recommended surgery will be successful. It is the opinion of Dr. Copeland that the right shoulder surgery he has recommended is related to the claimant's work injury.

24. At the request of the respondents, Dr. Timothy O'Brien reviewed the claimant's medical records. In a report dated October 21, 2020, Dr. O'Brien opined that the claimant suffered a minor right shoulder sprain/strain on April 19, 2020. Dr. O'Brien further opined that this sprain/strain temporarily aggravated the claimant's pre-existing rotator cuff arthropathy, but there was "no substantial aggravation and no acceleration" of the claimant's pre-existing shoulder condition. In addition, Dr. O'Brien opined that the claimant reached MMI as of July 19, 2020. With regard to the surgery recommended by Dr. Copeland, Dr. O'Brien opined that the claimant is not a candidate for surgery. In support of this opinion, Dr. O'Brien noted his understanding that the claimant had failed "numerous prior surgeries". Dr. O'Brien also noted that the claimant is a diabetic and a smoker. Finally, Dr. O'Brien opined that if the claimant were to undergo a shoulder surgery (unrelated to the work injury) he would recommend a reverse total shoulder and not the surgery recommended by Dr. Copeland.

25. Dr. O'Brien's testimony by deposition was consistent with his written report. Dr. O'Brien reiterated his opinion that the surgery recommended by Dr. Copland is not reasonable, necessary, or work related. In support of his opinions, Dr. O'Brien testified that the MRI results show atrophy, retraction, and fatty infiltration in the claimant's right shoulder. Dr. O'Brien explained that these phenomena take years to occur. Dr. O'Brien also testified that there was no acute injury to the claimant's right shoulder evident in the MRI results. Dr. O'Brien further noted that the claimant was able to return to full duty in August 2020, which is indicative of the claimant's recovery from the April 19, 2020 incident. Dr. O'Brien also testified regarding the claimant's mechanism of injury. The claimant did not fall onto an outstretched hand. Rather he fell onto the outside of his right shoulder. Dr. O'Brien noted that this mechanism of injury would not result in any new tissue breakage in the shoulder.

26. The claimant testified that he has pre-diabetes. He also testified that he has never been referred for treatment of alcoholism. The claimant testified that the injury to his left foot in May 2020 was the result of a spider bite. The ALJ does not find the claimant's testimony to be credible or persuasive.

27. The ALJ credits the medical records and the opinions of Dr. O'Brien over the contrary opinions of Dr. Copeland. The ALJ specifically credits the opinion of Dr. O'Brien that the claimant suffered a minor injury to his right shoulder, and he has recovered from that minor injury. The ALJ finds that the claimant's need for a right shoulder surgery is not related to his April 19, 2020 work injury, but rather related to his pre-existing and chronic condition of his right shoulder. The ALJ is not persuaded that the claimant's fall on April 19, 2020 aggravated, accelerated, or combined with the claimant's pre-existing right shoulder condition to necessitate surgery. Therefore, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the right shoulder surgery recommended by Dr. Copeland is reasonable medical treatment

necessary to cure and relieve the claimant from the effects of the April 19, 2020 work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the right rotator cuff surgery recommended by Dr. Copeland is reasonable medical treatment necessary to cure and relieve the claimant from the effects

of the admitted April 19, 2020 work injury. As found, the medical records and the opinions of Dr. O'Brien are credible and persuasive.

ORDER

It is therefore ordered that the claimant's request for a right shoulder surgery, as recommended by Dr. Copeland, is denied and dismissed.

Dated this 12th day of April 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-145-996-001

ISSUE

1. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury arising out of course of his employment with Employer on or about June 23, 2020.

2. Whether Claimant established by a preponderance of the evidence that he is entitled to an award of general medical benefits for a work-related injury arising out of the course of his employment with Employer on or about June 23, 2020.

FINDINGS OF FACT

1. Claimant is a 41-year-old man who worked as mason and bricklayer for approximately six years. He was employed in that role with Employer beginning on approximately March 24, 2020. Claimant had worked in a similar position for a different company for approximately 14 months prior to working for Employer. Claimant is a native Spanish-speaker, and does not speak, read, or write English. As part of Claimant's hiring process, Employer provided Claimant with an employment manual, written in Spanish, which included instructions that employees report all injuries immediately to the employee's supervisor. On March 24, 2020, Claimant signed an acknowledgement indicating he had received and reviewed the manual. Additionally, Claimant viewed a video (also in Spanish) in which workers' compensation was explained. (Ex. P).

2. On Tuesday, June 23, 2020, Claimant was working for Employer a project known as the "Marion Project." Claimant asserts that on June 23, 2020 at approximately 12:30 p.m., he was working on the Marion Project laying concrete block. Claimant testified he was crouching down with is knees on the floor or a scaffold and lifting a block weighing approximately 30-40 pounds when he felt a "pop" in his lower back. There were no witnesses to Claimant's injury, other than Claimant. Claimant did not report his purported injury to Employer on June 23, 2020.

3. Claimant left the Marion Project on June 23, 2020 at approximately 2:30 p.m., to attend a chiropractic appointment he had scheduled several days earlier with Alvin Padua, D.C., at Aim High Chiropractic. Claimant reported pain in his right hip and lumbar area, which he described as beginning approximately one month earlier without a known origin. Claimant also indicated he had similar symptoms 8-10 years earlier. On pain diagrams Claimant completed, he indicated pain and tenderness in his anterior and posterior right leg extending from his right buttock to calf. Claimant reported his pain was worst in the morning, with more stiffness, and aggravated by "almost any movement." Dr. Padua noted that Claimant had difficulty putting on his shows and socks. Claimant also reported his symptoms were relieved with over-the-counter medication and stretching. Dr. Padua diagnosed Claimant with low back pain, lumbar radiculopathy, muscle spasms

and segmental and somatic dysfunctions of the lumbar, sacral, and thoracic regions. (Ex. A).

4. Claimant did not work for Employer on Wednesday, June 24, 2020, but did work for Employer on June 25, 2020 and June 26, 2020. Claimant did not return to work for Employer after June 26, 2020.

5. Claimant returned to Dr. Padua for additional follow up visits on June 26, 2020, June 29, 2020, and July 14, 2020, and reported similar complaints as his initial visit. (Ex. A). On July 14, 2020, Claimant reported to Dr. Padua that he had injections performed in his right gluteal area while in Mexico. (Ex. A).

6. On July 20, 2020, Claimant was seen at Swenson Family Chiropractors for low back and right-sided leg pain. Claimant reported receiving an injection for pain on July 19, 2020. Claimant reported the onset of his symptoms was the "first part of June 2020." Claimant attended two additional chiropractic appointments at Swenson Family Chiropractors on July 20, 2020 and July 31, 2020. On July 31, 2020, Claimant was referred for a lumbar MRI. (Ex. B).

7. On August 6, 2020, Claimant had a lumbar MRI performed at Simon Med. Radiologist Munib Sana, M.D. interpreted the MRI as showing a large right paracentral disc extrusion at L5-S1 compressing the right SI nerve root. (Ex. C).

8. On August 7, 2020, Claimant contacted one of Employer's supervisors and notified him that he had sustained an injury on the job. Claimant testified he had not previously reported an injury to Employer because he believed his condition would improve with chiropractic treatment, and he did not appreciate the significance of his injury until he received the results of his MRI report.

9. On August 24, 2020, Claimant filed a Worker's Claim for Compensation (WCC) with the Division of Workers' Compensation (Division). Therein, Claimant indicated he sustained a disc injury to his lower back while laying brick for Employer on June 24, 2020 at 1:00 p.m. In the WCC, Claimant indicated Employer was notified of his injury on August 5, 2020. (Ex. D).

10. On August 26, 2020, Employer filed a First Report of Injury or Illness with the Division consistent with Claimant's WCC. (Ex. E).

11. On September 2, 2020, Respondents filed a Notice of Contest with the Division contesting compensability of Claimant's injury as not work-related. (Ex. 1).

12. On September 2, 2020, Claimant saw Marc Steinmetz, M.D. at Midtown Occupational Health Services. Claimant reported back and right leg pain and indicated that he hurt his back while lifting a heavy box at work. (The records do not indicate whether an interpreter was present). Claimant reported that he had no previous similar problems or any other injuries. Dr. Steinmetz diagnosed Claimant with a back strain with a herniated disc and right S1 sciatica, causation undetermined. Claimant was referred

for a surgical consult and for an EMG. Insurer denied authorization for both procedures. (Ex. G).

13. When Claimant returned to Dr. Steinmetz on September 9, 2020, Dr. Steinmetz recommended Claimant go to the emergency room with his MRI report and seek a referral to a back specialist due to the denial. Claimant saw Dr. Steinmetz five additional times between October 5, 2020 and December 14, 2020. Dr. Steinmetz made no determination regarding whether Claimant's condition was work-related, indicating that the claim was under investigation by insurer. (Ex. G).

14. Claimant reported to the emergency room at UC Health on October 9, 2020, seeking a referral for a surgical consult. The ER physician provided Claimant with a referral to a spine center and for interventional pain and rehabilitation medicine. (Ex. 6).

15. On October 14, 2020, Claimant filed an Application for Expedited Hearing with the Office of Administrative Courts. (Ex. I). Respondents filed their Response to the Application for Hearing on October 23, 2020. (Ex. K).

16. On December 4, 2020, Claimant underwent an independent medical examination (IME) performed by John Raschbacher, M.D., at Respondents' request. Claimant described the mechanism of injury consistent with his testimony (i.e., occurring while working with concrete blocks around pipes). Claimant reported low back and right leg symptoms which were constant, but temporarily improved with physical therapy and massage. Claimant also was using lidocaine patches for pain. Dr. Raschbacher opined that Claimant's diagnosis and symptomatology were consistent with his described mechanism of injury. Claimant reported no previous similar injuries or symptoms. (Ex. M).

17. On December 8, 2020, Claimant underwent an IME performed by Mark Winslow, D.O., at Claimant's request. Dr. Winslow opined that Claimant's disc herniation is a work-related injury. Dr. Winslow noted that Claimant has no documented history of lower back pain, had worked in the heavy labor position as a mason/bricklayer for approximately six years, and was working without restrictions as of June 2020. He opined that Claimant's clinical examination, objective evidence and imaging were consistent with lifting a cinder block in an awkward position. (Ex. N).

18. On December 22, 2020, Dr. Raschbacher issued a follow-up report following his review of additional records from Aim High Chiropractic. (Ex. O). In his testimony, Dr. Raschbacher opined that Claimant's symptoms were consistent with the mechanism of injury described by Claimant. He also indicated that his opinions were subject to revision if the Claimant's description of the mechanism of injury was not accurate, and that after review of testimony and additional records, Dr. Raschbacher indicated that he did not trust the Claimant's testimony. Dr. Raschbacher also correctly observed that the determination of the Claimant's credibility is the purview of the administrative law judge. Ultimately, Dr. Raschbacher opined that Claimant's back condition is likely a chronic problem, and not the result of an acute injury.

19. Prior to his employment with Employer, Claimant sought treatment at Aim High Chiropractic on December 10, 2019 and December 13, 2019. At that time, Claimant reported his primary problem was in his right shoulder and right wrist, which he attributed to holding onto falling bricks six months earlier. Claimant's pain diagram identified pain and tenderness in his right shoulder and trapezius area. No other areas of pain were reported. (Ex. 2). Claimant testified that prior to his alleged injury on June 23, 2020, he had experienced pain in his right leg, but he was able to work by taking "pills." He testified that the pain he experienced after June 23, 2020 was different than the pain he previously experienced. Claimant testified that he made the appointment with Dr. Padua to address issues with his leg.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641.

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equipment Company,* W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

Claimant has failed to establish by a preponderance of the evidence that he sustained an injury to his lower back arising out of the course of his employment with Employer on June 23, 2020. The retained experts for both Claimant and Respondent (Drs. Winslow and Dr. Raschbacher, respectively), agree that Claimant's lower back injury is consistent with the mechanism of injury described by Claimant. However, there is a significant dispute over whether Claimant sustained an injury in the course and scope of his employment with Employer on June 23, 2020. The evidence does not establish it more likely than not that Claimant sustained an injury on June 23, 2020 while working for Employer as claimed.

Claimant alleges he was injured at approximately 12:30 p.m. on June 23, 2020, and was seen by Dr. Padua within a matter of hours. While Claimant reported hip and lumbar pain on that day, multiple entries in Dr. Padua's June 23, 2020 chiropractic record demonstrate the injury did not occur on June 23, 2020. Specifically, Claimant indicated that the pain started approximately one month earlier. Had Claimant experienced a "pop" in his back resulting in immediate pain, it stands to reason that Claimant would have indicated an onset only hours earlier. Dr. Padua's notation that the origin of the injury was "unknown" contradicts Claimant's assertion that the injury occurred while lifting blocks that day. Claimant's report that he noticed the pain in the morning, when he experienced more stiffness and that the condition made it "very hard to work," indicates that the Claimant's condition began sometime before that day, rather than on June 23, 2020 as alleged. Additionally, Claimant's report that his pain was relieved by over-the-counter medication and stretching is inconsistent with an acute injury with an onset only hours earlier. At Swenson Chiropractic, on July 20, 2020, Claimant reported his onset of symptoms was the first part of June 2020, consistent with his report to Dr. Padua that his symptoms had an onset approximately one month prior to his June 23, 2020 visit.

Notwithstanding the expert opinions that Claimant's injury is consistent with the described mechanism of injury, the ALJ finds that Claimant has failed to establish that an injury occurred as claimed. The ALJ finds that Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury to his lower back on June 23, 2020.

MEDICAL BENEFITS

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970).

Because Claimant has failed to establish a compensable injury, Claimant is not entitled to an award of medical benefits.

ORDER

It is therefore ordered that:

1. Claimant's claim for worker's compensation benefits for an alleged injury to his lower back on June 23, 2020 is denied and dismissed.

2. Claimant's claim for medical benefits is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Steve R. Kabler

DATED: April 14, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that the right total hip replacement performed by Dr. Louis Stryker was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

2. Whether the claimant has demonstrated, by a preponderance of the evidence, that bilateral L5-S1 transforaminal epidural steroid injections (TFESIs) recommended by Dr. Kirk Clifford constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

3. At hearing, the parties agreed that the ALJ would adopt Findings of Fact paragraph 30 contained in the ALJ's June 1, 2020 Findings of Fact, Conclusions of Law, and Order regarding testimony of the claimant's martial arts instructor, Toni Miller.

FINDINGS OF FACT

1. The claimant works as an attorney. On December 12, 2018, the claimant was in his office taking a banker's box of paper to be recycled when he tripped, falling head first with his body horizontal to the floor. His left thigh fell on the banker's box impacting his left testicle and left hip. The claimant's right hip impacted the ground. The claimant testified that when he fell, he slightly crushed the banker's box. The claimant also testified that the door was open about one and one-half feet and his head hit the edge of the door. In addition, his right hand struck the drywall with enough force to create a hole in the wall.

2. The claimant further testified that he briefly lost consciousness due to the incident. When he "came to his senses" he asked his secretary to find information regarding how to make a workers' compensation claim. In addition, the claimant scheduled an appointment with Western Valley Family Practice.

3. The claimant testified that immediately after his fall, his symptoms included a headache; aching in his right wrist and right shoulder; an electrical shock type pain down both legs into his feet; and left thigh, left groin, and left testificle pain. The claimant clarified that when he identified left groin pain, he described pain from his pelvis area out toward his hip.

4. On December 12, 2018, the claimant was seen by Dr. Thomas Motz at Western Valley Family Practice. At that time, the claimant reported his symptoms as dizzy, tired, pain in his neck, right arm, and lower back. In addition, the claimant reported pain in the right side of his groin that radiated down the outside of this right leg. Dr. Motz diagnosed acute thoracic back pain and rib pain. Dr. Motz also noted the claimant's fall

resulted in a loss of consciousness. Dr. Motz ordered a head computed tomography (CT) scan and imagining of the claimant's thoracic spine.

5. The claimant underwent the recommended head CT after seeking treatment at the emergency department (ED) at Community Hospital. At the ED, the claimant was seen by Dr. Julie McCallen. At that time, the claimant described the tripping incident and reported his symptoms as significant soreness on the left side of his neck, right side of this low back, and groin. The head CT showed no acute intracranial process.

6. On December 21, 2018, the claimant returned to Western Valley Family Practice and was seen by Dr. Kurtis Holmes. On that date, the claimant reported pain in his low back with pain radiating down the outside of his left leg. In addition, the claimant reported numbness and tingling in his left lower extremity. On the right side, the claimant described some pain in his right buttock and down the inside of his right leg. Dr. Holmes diagnosed a lumbar strain with radiculopathy. In addition, Dr. Holmes ordered a magnetic resonance image (MRI) of the claimant's lumbar spine and referred the claimant to physical therapy.

7. On December 31, 2018, a lumbar spine MRI was performed and showed multilevel degenerative disc and facet disease.

8. Thereafter, the claimant continued to treat with Dr. Holmes. On March 28, 2019, the claimant was seen by Dr. Holmes and reported ongoing pain and numbness in both legs. On that date, Dr. Holmes listed the claimant's diagnoses as strain of the lumbar region, obesity, concussion with loss of consciousness, bilateral leg paresthesia and left testicular pain. Dr. Holmes referred the claimant to Dr. Kirk Clifford, an orthopedic spine specialist, for evaluation.

9. On April 19, 2019, the claimant was seen by Dr. Clifford and reported a combination of low back and radiating leg pain. On that date, an x-ray of the claimant's lumbar spine showed moderate to severe bilateral hip degenerative joint disease with osteophyte formation and joint space narrowing. Dr. Clifford diagnosed bilateral hip degenerative joint disease and L5-S1 foraminal stenosis with bilateral radiculopathy. Dr. Clifford recommended that the claimant undergo bilateral L5-S1 transforaminal epidural steroid injections (TFESIs). In addition, Dr. Clifford referred the claimant to Dr. Louis Stryker for consultation of the claimant's hip arthritis. Dr. Clifford opined that the claimant's hip condition could be the result of osteoarthritis and radiation treatment the claimant underwent to treat a sarcoma.

10. The medical records indicate that the claimant underwent radiation treatment due to a sarcoma in his left groin area. On December 11, 2013, an MRI of the claimant's pelvis was performed, which showed a small amount of fluid in the left hip joint. On December 18, 2014, a CT scan of the claimant's abdomen and pelvis showed degenerative joint disease in both hips.

11. A request for authorization of bilateral L5-S1 TFESIs was submitted to the insurer on May 5, 2019.

12. On May 16, 2019, the claimant was seen by Dr. Stryker. On that date, the claimant reported bilateral groin pain radiating down the lateral aspect of both of his hips and into his feet. The claimant also described experiencing limited range of motion that resulted in difficulty putting on socks. Dr. Stryker ordered hip x-rays which were done on that same date. These x-rays showed "complete obliteration" of joint space in both hips with subchondral sclerosis and osteophyte formation, and CAM lesions of both femoral heads. Dr. Strker opined that the claimant had long standing arthritic changes in his hips, that are likely due to femoral acetabular impingement. Dr. Styker also opined that the claimant's hip condition was exacerbated by his fall at work on December 12, 2018. Dr. Stryer discussed treatment opinions with the claimant. Those treatment modalities included gait aids, the use of antiinflammatories, physical therapy, intra articular joint injections, and total hip replacement.

13. On May 22, 2019, the claimant reported to Dr. Holmes that Dr. Stryker had recommended bilateral hip replacements.

14. On May 29, 2019, Dr. Clifford administered bilateral L5-S1 TFESIs.

15. On June 20, 2019, the claimant was seen by Dr. Holmes. At that time, the claimant reported that the injections reduced his low back and upper leg pain. Despite this improvement, the claimant continued to report numbness and burning in his lower legs.

16. On July 15, 2019, the claimant returned to Dr. Clifford and reported that the injections provided 60 percent overall relief of his symptoms. The claimant further reported that he had 85 percent improvement of his thigh pain and 45 percent relief of his calf and toe pain. Dr. Clifford suggested possible repeat injections if the claimant's pain symptoms returned.

17. On July 24, 2019, the claimant returned to Dr. Stryker and reported excellent relief from the TFESIs. On that date, Dr. Styker recommended proceeding with a total hip replacement. On July 26, 2019, a request for authorization was submitted to the insurer for a left total hip arthroplasty.

18. On August 2, 2019, Dr. Jon Erickson reviewed the surgical request. Dr. Erickson recommended that the surgery be denied, pending an MRI of the claimant's left hip. In support of this recommendation, Dr. Erickson noted that there was some indication in the medical records that the claimant has "radiation-induced" hip arthritis, but without an MRI he could not opine regarding whether the claimant's left hip condition was related to the December 12, 2018 fall at work.

19. On August 19, 2019, the claimant was seen by Dr. Clifford. At that time, the claimant reported 95 percent relief of his back pain. The claimant requested another injection before undergoing a left hip replacement. On August 20, 2019, Dr. Clifford's office submitted a request for authorization of repeat bilateral L5-S1 TFESIs.

20. On September 16, 2019, an MRI of the claimant's left hip showed advanced osteoarthritis, with no evidence of avascular necrosis.

21. On September 18, 2019, Dr. Clifford administered the recommended repeat bilateral L5-S1 TFESIs.

22. Claimant testified that the injections only provided one to two weeks of relief from his back pain. He also testified that by the end of summer 2019, his radiating leg pain had returned.

23. On September 27, 2019, Dr. Erickson again reviewed the request for a left hip replacement. Dr. Erickson noted that the left hip MRI showed evidence of degenerative tearing of the acetabular labrum and advanced degenerative osteoarthritis. Dr. Erickson recommended continued denial of the surgery, to allow him the opportunity to review the MRI with a musculoskeletal (MSK) expert radiologist.

24. Dr. Erickson did review the claimant's MRI with an MSK expert and on October 29, 2019 he issued his third report related to the requested left hip replacement. Dr. Erickson recommended denial of the recommended surgery. Dr. Erickson noted that the MRI showed advanced bone on bone arthrosis and "huge" periarticular osteophytes in both of the claimant's hips. Dr. Erickson opined that no fall or trauma would worsen the degenerative condition of the claimant's left hip.

25. On November 7, 2019, the claimant was seen by Dr. Holmes. On that date, Dr. Holmes noted that Dr. Erickson's opinion was that "the degenerative arthritis of [the claimant's] hips is so profound that no accident could have made either of them worse". Dr. Holmes noted that the claimant would seek a second opinion from a surgeon in Vail.

26. On February 21, 2020, Dr Elizabeth Carpenter authored a letter regarding the claimant's September 16, 2019 left hip MRI. Dr. Carpenter noted that the MRI showed advanced bilateral hip osteoarthritis, with bone on bone contact (left greater than right). Dr. Carpenter noted that she had also reviewed a pelvic MRI taken on December 24, 2013 and an abdominal and pelvic CT scan performed on December 18, 2014. Dr. Carpenter noted that left hip osteoarthritis with bone on bone contact was present at the time of those prior imaging studies. Dr. Carpenter opined that there is no evidence of an acute injury indicated by the September 16, 2019 left hip MRI.

27. On January 21, 2020, Dr. James Lindberg performed a review of the claimant's medical records. On February 25, 2020, Dr. Lindberg issued a report in which he noted that the claimant has severe osteoarthritis in both hips, including bilateral and symmetrical osteophytes on the acetabulum and femur. Dr. Lindberg opined that the claimant's December 12, 2018 slip and fall did not cause this osteoarthritis. In his report, Dr. Lindberg opined that the claimant should have bilateral hip replacements. However, the claimant's need for hip replacement was not related to the December 12, 2018 work injury.

28. On March 27, 2020, Dr. Stryker authored a letter in which he disputed the opinions of Dr. Lindberg. Dr. Stryker argued that while the claimant has degenerative changes in his hips, he was asymptomatic prior to the December 12, 2018 fall. Therefore, it is Dr. Stryker's opinion that the claimant's symptoms were exacerbated by his fall at work.

29. The claimant testified that prior to his fall on December 12, 2018, he was able to perform midline kicks in his martial arts training. In addition, he could ride a bicycle and take hikes on rocky terrain. The claimant further testified that since his fall, he is unable to engage in these activities.

30. The parties went to hearing on May 6, 2020 before the undersigned ALJ regarding a left total hip replacement. The ALJ issued an order on that matter on June 1, 2020. At the May 6, 2020 hearing, the claimant's martial arts instructor provided testimony. As agreed by the parties in the present matter, the ALJ adopts the following paragraph 30 from her June 1, 2020 order. Those findings are restated herein as follows:

> Ms. Miller was the claimant's martial arts instructor from approximately 2003 through October 2018. Ms. Miller testified that the claimant progressed in his martial arts training. In October 2018, the claimant was able to complete "midline" kicks. Ms. Miller also testified that the claimant was able to perform warm up exercises involving "opening" his hips. Ms. Miller testified that she recalls last seeing the claimant in class in approximately October 2018. She further testified that the claimant has not returned to martial arts training since that time.

31. On June 3, 2020, Dr. Stryker performed a left total hip arthroplasty. This surgery was paid for by the claimant's personal medical insurance.

32. On July 1, 2020, Dr. Stryker submitted an authorization request for a right total hip arthroplasty. The request was reviewed by Dr. Erickson on July 13, 2020. Dr. Erickson opined that the right total hip arthroplasty should be denied as there was no evidence in the medical records that the right hip was damaged in the claimant's fall at work.

33. On July 13, 2020, Dr. Stryker performed a right hip total arthroplasty. This surgery was paid for by the claimant's personal medical insurance.

34. On August 17, 2020, the claimant returned to Dr. Clifford and reported that after the left hip arthroplasty, he started using a cane due to left sided symptoms secondary to lumbar radiculopathy. The claimant also reported that he did not have these symptoms prior to the work injury. Dr. Clifford opined that the claimant's pain was related to the injury he sustained at work in December 2018. In support of this opinion, Dr. Clifford noted that the claimant did not have any symptoms prior to the fall. Dr. Clifford recommended left sided L4-5 and L5-S1 TFESIs. Dr. Clifford submitted an authorization request for these injections on August 19, 2020.

35. On August 26, 2020, Dr. Stryker performed a revision of the left hip arthroplasty because of the stem "subsiding". This surgery was paid for by the claimant's personal medical insurance.

36. On August 27, 2020, Dr. Erickson reviewed the request for additional TFESIs. In that report, Dr. Erickson noted that he had previously addressed the claimant's low back pain complaints in his July 13, 2020 review. Dr. Erickson reiterated his opinion that the claimant's low back pain was exacerbated by his total hip

arthroplasties. As it is his opinion that neither hip arthroplasty related to the claimant's December 12, 2018 fall, the injections should be denied as unrelated to his work injuries.

37. The claimant was seen by Dr. Clifford on November 2, 2020, reporting his lumbar spine symptoms were "the same" with pain across the lumbar area, left buttock, left hip, and left groin. He also reported radiating pain into the lateral aspect of his bilateral thighs, calves, and feet. Dr. Clifford counseled the claimant on the importance of weight loss and the effects it can have in regards to his back. He recommended that the claimant continue conservative treatment including core strengthening, stretching, anti-inflammatories, and ice. Dr. Clifford opined that the claimant would benefit from bilateral L5-S1 TFESIs.

38. On November 12, 2020, Dr. Erickson reviewed the request for additional TFESIs. In his report, Dr. Erickson opined that the claimant's back pain was likely due to progressive degenerative changes. As the MRI failed to show evidence of any acute trauma relating to the work injury, Dr. Erickson recommended that the claimant pursue treatment under his private health insurance.

39. On February 1, 2021, the claimant attended an independent medical examination with Dr. Jack Rook. In connection with the IME, Dr. Rook reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Rook opined that the claimant sustained injuries to his low back, both legs, and both hips due to his fall of December 12, 2018. His opinion was based upon the claimant's statement that he was unrestricted in his performance of all activities prior to his work injury. Dr. Rook further opined that the claimant's history was consistent with a permanent aggravation of osteoarthritis of both hips and that his need for bilateral hip replacements was a reflection of that permanent aggravation. Dr. Rook also opined that the claimant's back condition was caused by the fall due to the acute rotation of his trunk to the right after his left hip/groin struck the box. Therefore, the claimant's symptoms of bilateral lower extremity lumbar radiculopathy were related to his fall at work.

40. A second record review was done by Dr. Lindberg on February 8, 2021. Dr. Lindberg agreed with Dr. Erickson's assessment that the claimant's most recent low back pain was likely related to a gait disturbance that the claimant developed after his left total hip arthroplasty (and subsequent revision). Therefore, since the left hip was unrelated to the claimant's work injury, the claimant's current radicular complaints are likewise unrelated to the work injury. Regarding the claimant's right hip condition and resulting arthroplasty, Dr. Lindberg noted that the claimant was a candidate for bilateral hip replacements based upon the x-rays taken shortly after the accident. Dr. Lindberg further opined that the claimant's fall did not cause any permanent damage to the claimant's hip or back.

41. The claimant testified that he always had back pain after his December 12, 2018 fall. He also testified that his back pain worsened after his left hip replacement and the need for the revision left hip surgery. However, that back pain is now back to the level it was right after the December 12, 2018 fall. The claimant testified that the reason he

did not go back to Dr. Clifford for further back treatment was that he did not intend to do anything more with his back until his hip surgeries were completed.

42. Dr. Erickson testified at the hearing. During his testimony, Dr. Erickson noted that he had reviewed the x-rays of the claimant's right and left hips. He opined that this is some of the worst arthritis he has ever seen. Dr. Erickson also noted that the imaging of the right hip identified arthritis that was "end stage, bone on bone." Regarding claimant's reported level of functioning prior to the injury, Dr. Erickson noted that although he usually defers to the patient in these situations, it would be "extremely unusual for a person with this level of arthritis to be completely asymptomatic."

43. Dr. Erickson also noted that there was evidence of the claimant's pre-existing bilateral hip arthritis in the imaging done in follow up for his cancer treatment that showed bilateral degenerative arthritis of both hips. Therefore, it was known he had the condition before the fall. Dr. Erickson also testified that there must be objective evidence of some aggravation, worsening, or acceleration of the claimant's pre-existing condition. Dr. Erickson further explained that this analysis has nothing to do with the claimant's subjective pain complaints. It is Dr. Erickson's opinion that it is more likely that the increased symptoms in the claimant's right hip came about because of the natural progression of the advanced arthritis in his right hip and not because of his fall at work. In addition, Dr. Erickson found no evidence of an aggravation or acceleration of the claimant's right hip arthritis as a result of the claimant's fall at work.

44. Dr. Erickson also provided testimony with regard to the claimant's low back pain and the request for additional TFESIs Dr. Erickson noted that the claimant underwent two TFESIs to address bilateral leg tingling. Dr. Erickson noted that Dr. Clifford's medical reports indicate that these injections were extremely successful. Dr. Erickson opined that the claimant likely suffered a low back sprain/strain when he fell on December 12, 2018. That sprain/strain caused some symptoms of radiculopathy, but following the successful injections, that problem was resolved. Dr. Erickson further opined that when the claimant began having ambulation difficulties (as a result of his joint replacements), his back pain returned. As it is Dr. Erickson's opinion that neither hip is related to the work injury, the claimant's development of back pain after the bilateral hip replacements is not work related.

45. Dr. Lindberg testified at the hearing. Dr. Lindberg stated that due to the severe degenerative end stage osteoarthritis present in the claimant's right hip, the right total hip arthroplasty was medically reasonable and necessary. Dr. Lindberg also testified that it is his opinion that the claimant's work injury did not cause, aggravate, or accelerate the claimant's right hip arthritis. In support of this opinion, Dr. Lindberg noted that in the medical records immediately following the claimant's fall, the claimant's right groin pain went from the groin down the outside of the claimant's leg to his ankle. Dr. Lindberg explained that this is not hip pain. On the contrary, osteoarthritis hip pain is felt from the groin and down the inside of the leg and the thigh. Pain that goes down the leg into the ankle is not consistent with hip joint pain. It is Dr. Lindberg's opinion that the first indication that there was an issue in the claimant's right hip was when Dr. Clifford noted anterior groin and lateral thigh pain on April 19, 2019. Dr. Lindberg also testified that

lateral thigh pain is not indicative of hip joint pain. Dr. Lindberg testified that if the claimant had experienced an acute injury to his hips on December 12, 2018, it would have been obvious. Dr. Lindberg further opined that it is more likely that the claimant's arthritis has worsened with time, which is the progressive nature of arthritis.

46. The ALJ credits the medical records and the opinions of Drs. Erickson and Lindberg over the contrary opinions of Drs. Stryker and Rook. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the right total hip replacement performed by Dr. Stryker was necessary to cure and relieve the claimant from the effects of the work injury. While a right total hip replacement was medically necessary to treat the claimant's pre-existing right hip arthritis, the need for surgery was unrelated to the claimant's fall at work on December 12, 2018. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that the claimant's fall on December 12, 2018 aggravated or accelerated the claimant's pre-existing right hip condition.

47. The ALJ credits the medical records and the opinions of Drs. Erickson and Lindberg over the contrary opinions of Drs. Stryker, Clifford, and Rook. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that bilateral L5-S1 TFESIs (as recommended by Dr. Clifford) constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. The ALJ is persuaded that the claimant had experienced a temporary exacerbation of his underlying degenerative spine condition, and that temporary condition was effectively treated with injections. The ALJ also finds that the claimant's current low back complaints are related to his bilateral hip replacements and a related gait disturbance. Therefore, the claimant's current low back symptoms are not related to his December 12, 2018 fall at work.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

7. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that the right total hip replacement performed by Dr. Stryker constituted reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the medical records and the opinions of Drs. Erickson and Lindberg are credible and persuasive.

8. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that additional bilateral L5-S1 TFESIs (as recommended by Dr. Clifford) constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the medical records and the opinions of Drs. Erickson and Lindberg are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant's request for a right total hip arthroplasty (as performed by Dr. Stryer) is denied and dismissed.

2. The claimant's request for additional bilateral L5-S1 TFESIs is denied and dismissed.

3. All matters not determined here are reserved for future determination.

Dated this 15th day of April 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

- Did Claimant overcome the DIME's determination of MMI by clear and convincing evidence?

- Did Claimant overcome the DIME's impairment rating by clear and convincing evidence?

- If Claimant overcame the DIME regarding impairment, what is the appropriate rating?

FINDINGS OF FACT

1. Claimant works for Employer as an eligibility specialist helping patients apply and qualify for various benefit programs. She suffered admitted injuries on November 8, 2018 when she slipped on a wet or greasy floor in the cafeteria. Claimant "did the splits" with her right leg in front of her and the left leg behind her. Despite bracing herself with her left arm, Claimant landed on her perineal area hard enough to cause a coccygeal dislocation and fracture. She experienced severe pelvic and low back pain that made it difficult to walk.

2. Claimant was taken to the emergency department at Rose Medical Center. The documented physical examination shows pain in the low back, left SI joint, and right knee. Claimant also reported tingling in the left toes. She reported no neck pain and examination of her neck showed no tenderness. The ER physician opined there was "no evidence of any fracture." He diagnosed soft tissue strains "due to unusual stretching of her muscles in this fall." He thought the tingling in the toes was probably related to some peripheral nerve stretching.

3. Claimant was referred to Concentra for authorized treatment. She saw PA Nathan Adams at her initial visit on November 14, 2018. Claimant reported pain in her back and neck and numbness and tingling in her toes. She was also having difficulty emptying her bladder. Examination of the low back showed paraspinal muscle tenderness, muscle spasms, and limited range of motion. The left extensor hallucis longus muscle was weak. Claimant's neck was described as "supple" with no masses. Mr. Adams diagnosed a low back "strain." He ordered physical therapy for the low back and an abdominal MRI to evaluate the bladder issue. No treatment was recommended for the neck pain.

4. Claimant followed up at Concentra on November 20, 2018 and saw Dr. Kristina Robinson. Claimant again described neck and low back pain and tingling in her toes. The back pain radiated to the left groin. Physical examination was limited to the low back and left leg. There is no indication Claimant's neck was examined. Dr. Robinson

recommended Claimant continue PT for her back. She offered no treatment for Claimant’s neck pain.

5. Claimant underwent a lumbar MRI on December 10, 2020. It showed multilevel degenerative changes causing mild canal and foraminal stenosis. No acute pathology was identified.

6. Claimant saw Dr. Robinson on December 11, 2020. She felt “about the same as last visit.” The report states she had “no neck pain.” Claimant described significant ongoing pelvic and tailbone pain, so Dr. Robinson ordered x-rays of the sacrum and coccyx. Someone from Concentra contacted Claimant later that afternoon and told her the x-rays showed a coccygeal subluxation.

7. Claimant returned to Concentra on December 12, 2020 and saw Mr. Adams. She was having “really bad” pain in her neck and left arm. Cervical x-rays were taken, which showed multilevel degenerative changes. Mr. Adams’ report documents, “Pt states that after the MRI, her neck hurt and she has n/t and coldness of her left hand. She did state that when she fell, she partially caught herself with her hands, mostly on the left. I explained that this may be an exacerbation of underlying OA . . . .” Mr. Adams’ report could be interpreted as suggesting Claimant’s neck pain started during or after the MRI. However, that would be inconsistent with neck pain already documented at her first two Concentra appointments. Claimant’s neck pain was probably present from the start of treatment at Concentra but was aggravated during the MRI.

8. Claimant followed up with her PCP, Dr. Morse, on December 14, 2018. Dr. Morse reviewed Claimant’s x-rays and advised she had a displaced coccygeal fracture and dislocation.

9. Claimant was understandably upset that Concentra failed to diagnose a displaced coccygeal fracture for six weeks, so she pursued a change of provider. The parties ultimately agreed on a change of physician to Dr. David Reinhard.

10. Claimant’s initial evaluation with Dr. Reinhard was on December 19, 2018. Dr. Reinhard took a detailed history and performed a thorough examination. Claimant testified Dr. Reinhard give her the opportunity to describe all the problems she attributed to the accident. Claimant reported stabbing and burning pain in both legs with numbness and a cold sensation in her feet. She described a needle-type sensation along the sides of her thighs and over the lateral hip. She reported bilateral gluteal pain, worse on the left, low back pain, and SI joint pain. She described pain along the left side of thoracic and cervical region and intermittent electric-type pains in the left upper extremity. Motor examination of Claimant’s lower extremities was “difficult” because of pain, particularly around the hips. Dorsiflexion and plantar flexion strength were normal. Sensation was intact to light touch. Her gait was antalgic. Cervical range of motion was mildly decreased for rotation with tenderness along the left cervical paraspinal musculature and along the medial border of the left scapula. She had normal strength and range of motion and her upper extremities. Passive internal rotation of the left hip produced exquisite hip and groin pain. She had exquisite tenderness to palpation of the SI joints and gluteal musculature,

and over the greater trochanteric regions particularly on the left. She also exhibited severe tenderness over the tip of the coccyx.

11. Dr. Reinhard diagnosed a coccygeal fracture, a lumbar strain with bilateral sacroiliitis, myofascial pain, trochanteric bursitis, a left hip contusion with possible internal derangement, bilateral sciatica, and cervical and thoracic pain, predominantly left-sided, of unclear etiology. He ordered lower extremity nerve conduction studies and an MRI of the left hip. He specified the hip MRI as non-contrast because Claimant is allergic to gadolinium.

12. The hip MRI was completed in late December 2018 and was normal.

13. Dr. Reinhard performed lower extremity nerve conduction testing on January 2, 2019. The results were normal with no evidence of radiculopathy, plexopathy, or peripheral neuropathy.

14. Claimant participated in physical therapy and massage therapy with some improvement. She eventually received more benefit form osteopathic manipulation.

15. On April 22, 2019, Dr. Reinhard ordered a cervical MRI "to see why she is still having significant problems with left-sided neck and suprascapular pain. We may want to do some trigger point injections for the left upper trapezius as another option."

16. The cervical MRI showed only some small disk bulges from C4-C7 "of no particular significance." Dr. Reinhard recommended Claimant continue with physical therapy and massage therapy.

17. Dr. Reinhard provided treatment for Claimant's neck pain the duration of his time as primary ATP. The MRI showed no underlying structural abnormality and Dr. Reinhard thought the pain was related to a "chronic cervical strain." He consistently included the neck in his list of work-related diagnoses. Although Dr. Reinhard initially stated Claimant's neck pain was "of unknown etiology," the ALJ infers he ultimately concluded it was causally related to the work accident.

18. Dr. Reinhard put Claimant at MMI on March 17, 2020 with permanent impairment ratings for the lumbar and cervical spines. He assigned an 18% lumbar rating and a 15% cervical rating, for a combined overall rating of 30% whole person. Dr. Reinhard also recommended maintenance treatment.

19. Respondents requested a DIME to challenge Dr. Reinhard's rating.

20. Dr. William Watson performed the DIME on June 23, 2020. Dr. Watson assigned the same Table 53 lumbar rating as Dr. Reinhard but the overall computed to 12% lumbar rating because Claimant's range of motion was slightly better. Dr. Watson did not provide a cervical rating because he determined the neck was unrelated to the work accident. He explained the basis for his conclusion as,

> [Claimant] also reports she injured her neck as a result of the fall. Her initial evaluation on the date of injury at Rose Medical Center is significant in that they examined her neck and she was asymptomatic. She was treated at Concentra but did not report any neck pain until 12/12/2018, 5 weeks after her injury. When she did report the neck pain, she said it had occurred while she was lying on the MRI table for the MRI of her lumbar spine. She told her providers at Concentra she thought she injured her neck [in the] fall although this is not supported by the medical records. At her initial visit with Dr. Reinhard she also reported the neck pain. However, Dr. Reinhard stated the etiology was unclear. After reviewing the medical records there is no clear mechanism of injury for a cervical spine. There is also no temporal relationship between the date of injury and the onset of her neck pain. It is my opinion that her complaints of neck pain are not related to this injury.

21. Respondents filed a Final Admission of Liability on July 30, 2020 admitting for Dr. Watson's 12% lumbar spine rating. The FAL also admitted to maintenance care after MMI.

22. Claimant saw Dr. Sander Orent for an IME at the request of her counsel. The IME was conducted in a virtual format because of COVID. Claimant described ongoing pain in her neck, low back, and coccyx. The neck pain radiated to her shoulder and the middle of her back. She also reported pain in the left hip and buttock. Dr. Orent could not perform a physical examination but Claimant pointed to an area of tenderness over the greater trochanteric bursa on the left hip and also demonstrated where she had pain in her shoulder and pain in her trapezius on the left. Dr. Orent opined Claimant's neck pain was related to the accident and noted she reported it to providers at Concentra from the outset. He opined Claimant is not at MMI because of (1) "worsening radicular symptomatology in her lower extremity," (2) left shoulder pain that "has not been addressed," and (3) a possible undiagnosed labral tear in the left hip. Dr. Orent recommended needed repeat electrodiagnostic testing, an orthopedic evaluation and possible MRI of the shoulder, and another MRI of the left hip using a high Tesla machine.

23. Dr. Orent testified at hearing consistent with his report. He acknowledged Claimant demonstrated no neck pain at the ER but emphasized she had reported neck pain from her first visit at Concentra. Citing his 14 years of experience in emergency medicine, he opined patients commonly focus on their most severe injuries immediately after an accident, and only notice more minor issues over the ensuing few days. Dr. Orent also explained that lying flat for the lumbar MRI could reasonably aggravate Claimant's neck pain, particularly given her severe pelvic pain. Dr. Orent opined Dr. Watson clearly erred in determining Claimant's neck pain was not causally related to the accident.

24. In his hearing testimony, Dr. Orent reiterated Claimant is not at MMI for the reasons specified in his report. Regarding impairment, he generally agreed with Dr. Reinhard's rating for the lumbar and cervical spines.

25. Claimant failed to overcome the DIME's determination of MMI by clear and convincing evidence. Dr. Orent's opinions regarding MMI reflect mere differences of

opinion with Dr. Reinhard and Dr. Watson. Claimant already had an MRI of the left hip, which was entirely normal. She cannot undergo an MR arthrogram or a contrast MRI because of her gadolinium allergy. Although another noncontrast MRI might show a labral tear, such a finding is not probable. There is no persuasive evidence Claimant reported discrete left shoulder issues to any providers before Dr. Orent's IME. Any pain in her left parascapular area is at least as likely related to her chronic cervical strain as opposed to any specific shoulder pathology. Finally, any recent worsening of Claimant's radicular symptoms does not persuasively call the original MMI date into question.

26. Claimant's testimony regarding her neck injury was credible and persuasive. Dr. Orent's opinions regarding causation of Claimant's neck pain are credible and persuasive. Claimant proved Dr. Watson's causation determination regarding causation of her neck pain is highly probably incorrect. Claimant injured her neck in the accident and her persistent symptoms and limitations despite treatment warrant a cervical rating.

27. Dr. Reinhard's impairment rating is more persuasive than Dr. Watson's rating.

28. Claimant proved by a preponderance of the evidence she suffered a 30% whole person impairment as determined by Dr. Reinhard.

CONCLUSIONS OF LAW

A. Claimant failed to overcome the DIME regrading MMI

A DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c). The party challenging a IME physician's conclusions must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). A "mere difference of medical opinion" does not constitute clear and convincing evidence. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. A finding of MMI is premature if there is a course of treatment that has "a reasonable prospect of success" and the claimant is willing to submit to the treatment. *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080, 1081-82 (Colo. App. 1990). A finding of not-at-MMI can also rest on need for additional diagnostic testing if such testing has a reasonable prospect of diagnosing the claimant's condition and suggesting further treatment. *Soto v. Corrections Corp. of America*, W.C. No. 4-813-582 (February 23, 2012).

As an initial matter, it must be noted Dr. Orent's IME was conducted remotely rather than in-person. While that arrangement was understandable considering the ongoing pandemic, it means Dr. Orent has no hands-on clinical data on which to base his conclusions. Additionally, Dr. Orent is not recommending specific treatment but merely diagnostic testing that might or might not point the way to additional treatment. Although Dr. Orent makes some reasonable arguments, none rise to the level of "highly probable." Admittedly, Claimant's mechanism of injury could have caused a labral tear, and Dr. Reinhard's initial examination suggested possible internal derangement of the left hip. But Dr. Reinhard promptly obtained an MRI, which was normal. Claimant cannot undergo an MR arthrogram or an MRI with contrast because of her gadolinium allergy. A high Tesla MRI might show a labral tear, but the evidence presented does not persuade the ALJ such a finding is probable. It is at least as likely Claimant's hip pain reflects ongoing SI joint dysfunction and residual effects of her coccygeal fracture.

Nor did Claimant prove by clear and convincing evidence she has an undiagnosed left shoulder condition overlooked by multiple providers. There is no persuasive evidence Claimant reported discrete left shoulder issues to anyone before Dr. Orent's IME. Dr. Reinhard gave Claimant an opportunity to describe all her injury-related conditions, but she did not mention any symptoms that indicated a left shoulder injury. Any pain in Claimant's left shoulder and parascapular area are more probably related to her chronic cervical strain as opposed to specific shoulder pathology.

Finally, although worsening of Claimant's radicular symptoms might suggest she is no longer at MMI, it does not persuasively call the original MMI date into question.

B. Claimant overcame the DIME regarding cervical impairment

As with MMI, the DIME's whole person rating can only be overcome by clear convincing evidence. Section 8-42-107(8)(c). Determining the cause of a claimant's impairment is an "inherent" part of the diagnostic assessment that comprises the DIME. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1988). Therefore, the DIME's determination that a particular impairment is or is not related to the industrial injury is binding unless overcome by clear and convincing evidence. *Id*.

As found, Claimant overcame the DIME's causation determination regarding cervical impairment by clear and convincing evidence. Dr. Watson's most significant rationale for not rating the neck – his belief Claimant "did not report any neck pain until [ ] 5 weeks after her injury" – is demonstrably incorrect. It appears Dr. Watson simply overlooked the documented reports of neck pain at Claimant's first two Concentra appointments. This oversight caused Dr. Watson to improperly discount Claimant's credible statements regarding the onset and origin of her neck pain. Although Dr. Watson is correct that Claimant did not report neck pain at the ER, Dr. Orent convincingly explained why she would not have felt neck pain immediately given the more severe injuries to other areas of her body. Moreover, the ER failed to diagnose a displaced coccygeal fracture, which does not speak well for the thoroughness of their evaluation. Finally, Dr. Orent provided a reasonable and biologically plausible mechanism by which Claimant's fall could have injured her neck. Claimant's neck pain is predominantly on the left side, which correlates with the mechanism described by Dr. Orent. There is no persuasive evidence of any pre-injury neck problems and it is highly unlikely Claimant spontaneously and coincidentally developed neck pain shortly after a significant fall. To the contrary, it is highly probable the neck pain was proximately caused by the work accident. Claimant overcame Dr. Watson's causation determination regarding Claimant's neck impairment by clear and convincing evidence.

C. Dr. Reinhard provided the most appropriate and persuasive rating

Once the DIME's whole person rating is overcome "in any respect," the proper rating becomes a factual matter for determination based on a preponderance of the evidence. *Mosley v. Industrial Claim Appeals Office*, 78 P.3d 1150 (Colo. App. 2003); *Serena v. SSC Pueblo Belmont Op Co., LLC*, W.C. No. 4-922-344-01 (December 1, 2015). Multiple factors persuade the ALJ to adopt Dr. Reinhard's rating. Dr. Reinhard's longitudinal perspective based on a lengthy treatment relationship puts him in the best posture to assess Claimant's impairment. Dr. Reinhard's records reflect close attention to and familiarity with Claimant's condition. Additionally, his rating was contemporaneous with the established MMI date and therefore most accurately captures Claimant's level of impairment when her condition became "permanent." Dr. Reinhard and Dr. Watson utilized the same basic methodology in constructing their ratings, and Dr. Orent persuasively opined Dr. Reinhard's rating is consistent with rating protocols. And having found Dr. Watson's rating was overcome, the ALJ is disinclined to adopt his lumbar rating and cobble together a hybrid by combining it with Dr. Reinhard's cervical rating.

ORDER

It is therefore ordered that:

1. Claimant's request to set aside the DIME's determination of MMI is denied and dismissed.

2. Insurer shall pay Claimant PPD benefits based on Dr. Reinhard's 30% whole person impairment rating. Insurer may take credit for any PPD benefits previously paid in connection with this claim.

3. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to

Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: April 15, 2021

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant was an employee or independent contractor of the putative employer, [Employer C Redacted].

II. If Claimant was an employee, whether Claimant proved by a preponderance of the evidence he sustained a compensable industrial injury on May 25, 2017.

III. If Claimant proved he sustained a compensable injury, whether Claimant proved by a preponderance of the evidence he is entitled to temporary total disability benefits ("TTD") and reasonable and necessary medical treatment related to the industrial injury.

FINDINGS OF FACT

1. Claimant is a welder with several years of experience dating back to 2005, when he worked as an employee welder for [Employer D]. Claimant worked as a welder for [Employer A Redacted] beginning in 2008, and [Employer B Redacted] from 2011 to 2016. Claimant obtained his welding certification through [Employer E]. As of May 2017, Claimant had been certified by [Employer E] for 8 years, and had taken various tests through [Employer E] for recertification.

2. [Employer E] is an oil extraction company that owns all of the oil field batteries on which Claimant worked. As a general contractor in oil field work, [Employer E] enters into contracts with "roustabout" companies to build and maintain oil field battery sites and equipment. These roustabout companies enter into master service contracts with [Employer E]. Only companies with a master service contract with [Employer E] can be paid by [Employer E]. [Employer D], [Employer A] and [Employer B] are roustabout companies.

3. The putative employer, [Employer C], is a roustabout company that constructs and maintains gas and oil battery facilities. [Employer C] has a master service contract with [Employer E].

4. On May 25, 2017 Claimant sustained severe burns in an explosion and fire while performing welding services at the Sekich battery facility owned by [Employer E]. [Employer C] paid Claimant for his services at this site. The roustabout company contracting for services with [Employer E] at the Sekich site was [Employer F], not the putative employer.

5. Claimant was offered work at the Sekich battery site on May 25, 2017 by Justin L[Redacted]. Mr. [Redacted], an employee of [Employer E], arranges for construction and maintenance services at [Employer E] battery facilities. Claimant became acquainted with

Mr. L[Redacted] while he was working for [Employer A] at [Employer E] battery facilities and Mr. L[Redacted] was working for another company.

6. Claimant became acquainted with Brian K[Redacted], owner of [Employer C], around the same time he met Mr. L[Redacted]. At the time, Mr. K[Redacted] worked in a supervisory position at [Employer E].

7. Claimant testified Mr. L[Redacted] and Mr. K[Redacted] suggested that Claimant form his own company so that Claimant could have more opportunity to work on [Employer E] sites. Claimant testified he could not work directly for [Employer E] due to his immigration status. Claimant wanted to have more opportunities to work with [Employer E], so he proceeded to research how to form his own company and personally spoke to a banker and accountant about doing so.

8. Claimant subsequently formed [Employer G], filing articles of organization with the Secretary of State of Colorado in March 2014. Claimant was the owner, sole proprietor, registered agent and sole employee of the company. Colorado Secretary of State documents show periods of delinquency and cure for the company.

9. Claimant used his personal address as the address for [Employer G]. Claimant signed documents on behalf of [Employer G] as the owner/operator of the company, including promissory notes. [Employer G] had a business email address. Claimant did not advertise, rent office space, or print business cards for the company.

10. [Employer G] held a Gold Business Services Package with Wells Fargo Bank. Through this business account Claimant paid taxes and insurance for [Employer G]. He also used this business account to purchase welding supplies and equipment, internet, telephone services and trash hauling services needed in the field, and food for Claimant while working. Claimant also charged several personal expenses to this account.

11. Claimant used a 2002 Dodge Ram for transportation to and from worksites. Claimant purchased the vehicle from a former employer. The vehicle is equipped with oil field welding equipment, estimated at $20,000 or more. Claimant insured the truck through [Employer G].

12. Claimant testified that welding requires special gas for the welder, as well as a fire extinguisher, welding helmets, gloves, grinders, welding rods and monitors. All of these items were purchased by Claimant for his use through the [Employer G] bank account. Photographs of the site of the May 25, 2017 explosion show a fire extinguisher, welding stands, and the remains of a tent, all of which were confirmed by Claimant to belong to [Employer G].

13. Claimant testified that his welding work in the oil field needed to be inspected every day. Inspection was done with special equipment, including x-ray machines. [Employer E] is in charge of inspection and is responsible for bringing in the specialized company to perform the inspections in the field. [Employer C] did not inspect Claimant's

work. Claimant carried [Employer E] Welder Qualification Procedure Guidelines with him in his work truck because his welding had to be completed within [Employer E] specifications.

14. Claimant obtained a commercial general liability insurance policy for [Employer G] with National American Insurance Co. A January 25, 2016 Commercial Insurance Application lists the nature of [Employer G]'s business as "contractor." Separate applications for insurance completed by Claimant represent that [Employer G]'s gross receipts were $90,000 and that Claimant, as the owner/operator, was paid $31,500 from that amount. At the time of the explosion on May 25, 2017, a general liability policy was in place for [Employer G], effective September 28, 2016 through September 28, 2017. Claimant had similarly secured general liability insurance for [Employer G] before this policy period. Claimant also applied for general liability insurance for [Employer G] after the events of May 25, 2017. Repeatedly on his insurance applications, Claimant responded to the question "Provide a list of companies for which you operate under contract or agreement", by saying "TBD at the moment as the applicant has a few options to consider." Ex. O, Bates 418, 459.

15. Claimant applied for a federal tax identification number [Employer G] on October 10, 2016.

16. Claimant signed a Declaration of Independent Contractor Status Form on October 11, 2016, identifying [Employer G] as the trade name. This form states Claimant is not required to work exclusively; that a company contracting with Claimant does not establish a quality standard for Claimant; that Claimant is not paid a salary or hourly rate; that a company contracting with Claimant does not have the ability to terminate Claimant's work except for failure to meet specifications; that Claimant was not provided more than minimal training, that tools are not provided to Claimant; that time of performance was not dictated to Claimant; that Claimant was not paid as an individual; and that Claimant's business operations were not combined with any company contracting with Claimant. The form provides that Claimant is not entitled to workers' compensation benefits, is obligated to pay all federal and state income taxes for his business, and is required to provide workers' compensation insurance for all workers he hired. Such language was not in larger, bold, or underlined font. The document was not signed by the putative employer.

17. Subsequent to Claimant forming [Employer G], Mr. L[Redacted] assisted Claimant in setting up a system by which Mr. L[Redacted] assigned Claimant work at [Employer E] sites, and Claimant would submit invoices for his services to a roustabout company contracted with [Employer E]. These companies would pay [Employer G] for Claimant's services and then charge [Employer E] for the amount paid to [Employer G], even if they were not the roustabout company on the location of the [Employer E] site at which Claimant was performing his services. Claimant had this payment arrangement with JB Services and Ultimate Services. In 2016, Claimant established the same arrangement with [EMPLOYER C], pursuant to which he submitted invoices for his work on [Employer E] properties to [EMPLOYER C], who paid Claimant and invoiced [Employer E], with an additional fee.

18. Claimant testified that Mr. L[Redacted] knew of his skills and sought him out to do work for [Employer E]. Mr. L[Redacted] contacted Claimant and informed him of available work at various [Employer E] battery sites. Claimant testified that, "sometimes" Mr. K[Redacted] would contact Claimant and notify him that Mr. L[Redacted] wanted Claimant to perform work at a certain site. Mr. L[Redacted] determined what work was available for Claimant and assigned or offered Claimant that work. Mr. L[Redacted] communicated general plans and specifications of the work to be performed. Claimant testified that he was performing welding services only at [Employer E] battery facilities and only work arranged by Mr. L[Redacted] and Mr. K[Redacted] leading up to and on the date of injury.

19. Claimant testified that, during 2016 and 2017, he was only paid by [Employer C] and that he did not obtain contracts or work for any other companies during that time period.

20. Claimant testified that, on days there was bad weather and he was unable to perform welding in the field, he did some welding for an individual named Joe (no last name provided) who manufactured separators. He testified that he did this after May 25, 2017.

21. Claimant charged $70.00 per hour in full hour increments for his services. Claimant submitted invoices for his services to [Employer C] under his company name [Employer G]. Claimant testified that Mr. L[Redacted] would tell him how many hours to charge for his work. Claimant notified Mr. L[Redacted] when he was finished with a particular task and ask if there was more work. [Employer C] did not review or audit the time and amounts charged by [Employer G] for Claimant's work. [Employer C] charged [Employer E] for what was paid to Claimant, plus a handling fee. [Employer C] paid Claimant by check to [Employer G].

22. [Employer C] issued 1099-Misc forms to [Employer G]. The 1099 form for tax year 2016 notes $40,595.00 in nonemployee compensation. The 2017 1099 form documents nonemployee compensation of $50,187.50.

23. Claimant used an accountant to file taxes on his behalf and the behalf of [Employer G]. Claimant's 2016 and 2017 tax returns include a Schedule C, Profit and Loss Form, listing [Employer G] as the business name, as well as Schedule SE Self Employment Tax Forms. The 2016 Schedule C lists gross income as $58,860.00, and various expenses for contract labor, vehicles, machinery and equipment, repairs and maintenance, supplies, insurance, and legal and professional services. The 2017 Schedule C lists gross income as $50,188.00 and similar categories of expenses as 2016.

24. The May 25, 2017 explosion killed one individual and injured three others. [Employer C] was responsible for providing fire watch men on the ground. The fire watch man who accompanied Claimant to the Sekich battery on the date of the explosion was Roberto Y[Redacted], an employee of [Employer C]. The May 25, 2017 explosion resulted in an investigation by the Occupational Safety and Health Administration ("OSHA")

[Employer G], [Employer C], [Employer F], and [Employer E]. OSHA issued penalties to the companies, including penalties to [Employer G]. [Employer G] was represented by counsel through the OSHA process.

25. After the events of May 25, 2017, Claimant, on behalf of [Employer G], obtained a new policy of general liability insurance, again representing that he was the owner and employee of [EMPLOYER G] and obtained a salary from the gross receipts of the company.

26. On January 4, 2018, Claimant filed Articles of Organization for [Employer H].

27. Claimant filed a rejection of coverage form for [Employer G] with the Division of Workers' Compensation on March 26, 2018.

28. Claimant filed articles of dissolution for [Employer G] with the Colorado Secretary of State on April 23, 2018.

29. Claimant filed a claim for workers' compensation on May 9, 2019. An Employer's First Report of Injury was filed on May 23, 2019.

30. Angel K[Redacted] testified at hearing on behalf of [Employer C]. Ms. K[Redacted] is the office manager and is responsible for all operations except the physical labor. Ms. K[Redacted] has several years of experience working in the oil field. She explained oil field batteries and the various types of companies involved in the creation and maintenance of oil field batteries. She testified that [Employer E] paid for Claimant's welding certifications and recertifications, not [Employer C]. Ms. K[Redacted] explained that [Employer C] does not perform welding and does not have welding equipment. She testified that [Employer C] has invoiced [Employer E] for multiple other welders. She testified that most roustabout companies do not have their own welders and contract out for welding services. Claimant did not clock in or out for [Employer C]. [Employer C] did not assign work to Claimant, instruct Claimant how to weld or inspect his work. Claimant was not required to work exclusively for [Employer C].

31. Ms. K[Redacted] testified that Claimant invoiced [Employer C] through [Employer G]. Ms. K[Redacted] used Claimant's invoice to create an invoice for [Employer E], and then submit the invoice for approval to [Employer E] for an approval number. Ms. K[Redacted] explained that this was [Employer E]'s policy to assure that the subcontractor was assigned to the work charged and worked the hours charged. For the Sekich site, the invoice for [Employer G] was provided to Mr. L[Redacted] of [Employer E]. Once an approval number was received, [Employer C] would formally submit an invoice to [Employer E]. Once the invoice was paid, [Employer C] would provide [Employer G] a check. [Employer C] charged an additional $10.00 to [Employer E] for this billing service.

32. Ms. K[Redacted] testified that [Employer C] was not the roustabout on the Sekich site and [Employer C] received no financial benefit for the work done on that site. She testified that when Mr. L[Redacted] assigned work to Claimant, he did not ask permission

from [Employer C] to do so [Employer C] did not have the right to tell Claimant that he could not do a job assigned by Mr. L[Redacted]. While the nature of constructing a battery requires completion of items in a certain order, [Employer C] did not dictate the times that Claimant worked or require Claimant to arrive at [Employer C]'s office at any particular time. Claimant could take time off as he desired and did not need to ask permission of [Employer C] to do so. Ms. K[Redacted] testified that there are many specifications that must be followed in the oil field and that [Employer C] did not establish quality standards for Claimant's work. [Employer C] did not have the authority to terminate Claimant from the Sekich battery site, or any of the other sites on which Mr. L[Redacted] arranged for Claimant to work. [Employer C] held monthly safety meetings per federal and state requirements. Claimant was not required to attend those. U.S. Services did not share resources or overhead with [Employer G], such as office space, office equipment, software, administrative services, or bank accounts. They did not provide a telephone to Claimant or [Employer G].

33. Ms. K[Redacted] explained the federally governed safety forms required for work in the oil field, including the forms completed by Claimant and found in [Employer G]'s truck. She explained that [Employer C] provides forms to anyone that wants them to make sure that the required forms are available. She explained that when [EMPLOYER G] is doing welding in the field, [Employer G] is responsible for completing the forms, as required by OSHA.

34. Brian K[Redacted] testified at hearing. He testified that Mr. L[Redacted] of [Employer E] did not contact him for permission to contact Claimant to do work. He testified that when Mr. L[Redacted] contacted Claimant with work assignments, Mr. K[Redacted] was not able to prevent Claimant from doing that work. Despite Claimant's testimony to the contrary, he testified that he did not contact Claimant to tell him that Mr. L[Redacted] wanted him to work at any particular site. He testified that he did not control how Claimant performed his services. He testified that, unlike his employees, he did not require Claimant to be at his shop at any particular time.

35. The ALJ finds the testimony of Mr.L[Redacted] and Ms. K[Redacted] more credible and persuasive than Claimant's testimony.

36. The preponderant credible and persuasive evidence establishes Claimant was an independent contractor of [Employer C].

37. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Independent Contractor

Pursuant to §8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the services, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent . . . business related to the service performed."

Section 8-40-202(2)(b)(II), C.R.S. enumerates nine factors to be considered in evaluating whether an individual is deemed an employee or independent contractor. To prove independence, it must be established that the person for whom the services are performed does not:

A. Require the individual to work exclusively for the person for whom services are performed (except that the individual may choose to work exclusively for that person for a finite period of time specified in the document);

B. Establish a quality standard for the individual (except that such person can provide plans and specifications regarding the work but cannot oversee the actual work or instruct the individual as to how the work will be performed);

C. Pay a salary or at an hourly rate instead of at a fixed or contract rate;

D. Terminate the work during the contract period unless the individual violates the terms of the contract or fails to produce results that meet the specifications of the contract;

E. Provide more than minimal training for the individual;

F. Provide tools or benefits to the individual (except that materials and equipment may be supplied);

G. Dictate the time of performance (except the completion schedule and range of mutually agreeable work hours may be established);

H. Pay the individual personally, instead of making checks payable to the trade or business name of the individual; and,

I. Combine their business operations in any way with the individual's business, or maintain such operations as separate and distinct.

Section 8-40-202(b)(IV), C.R.S., provides that a written document may create a rebuttable presumption of an independent contractor relationship if it meets the nine criteria listed in Section 8-40-202(b)(II), C.R.S. and includes language in larger or bold-faced or underlined font, that the worker is not entitled to workers' compensation benefits and is obligated to pay all taxes on moneys earned pursuant to the contract relationship. The document must be signed by both parties and duly notarized.

The test considered by the Colorado Supreme Court in the unemployment insurance case of *Industrial Claim Appeals Office v. Softrock Geological Services*, 325 P.3d 560 (Colo. 2014) concerning whether a worker is an employee or an independent contractor also applies to workers' compensation claims. The test requires the analysis of not only the nine factors enumerated in §8-40-202(2)(b)(II), C.R.S. but also the nature of the working relationship and any other relevant factors. *Pella Windows & Doors, Inc. v. Industrial Claim Appeals Office*, 458 P.3d 128 (Colo. App. 2020). The *Softrock* decision noted indicia that would normally accompany the performance of an ongoing separate business in the field and included whether: the worker used an independent business card, listing, address, or telephone; had a financial investment such that there was a risk of suffering a loss on the project; used his or her own equipment on the project; set the price for performing the project; employed others to complete the project; and carried liability insurance. *Softrock Geological Services*, 325 P.3d 565.

Although the Declaration of Independent Contractor Status Form addresses the nine factors in Section 8-40-202(b)(II), C.R.S., the form fails to create a rebuttable presumption of an independent contractor relationship, as it is not signed by both parties and does not include certain language in larger, bold-faced, or underlined font. Accordingly, it is Respondents burden of proof to establish by a preponderance of the evidence Claimant was not an employee.

As found, Respondents met their burden of proof. Analysis of the nine factors set forth in Section 8-40-202(2)(b)(II), C.R.S, along with of the nature of the working relationship and other factors, establish that Claimant was an independent contractor and not an employee of [Employer C].

Claimant was not required to work exclusively for [Employer C]. Although the majority of Claimant's reported income in 2016 and 2017 was paid by [Employer C], this was pursuant to the payment arrangement established by Claimant with [Employer C], in which Claimant invoiced [Employer C], [Employer C] paid Claimant, and in turn invoiced [Employer E]. [Employer C] paid Claimant for welding services performed on [Employer E] sites even when [Employer C] was not the roustabout company contracted to construct or maintain a particular site. Claimant chose this arrangement and was not required to exclusively perform services for [Employer C].

[Employer C] did not establish a quality standard for Claimant's work. Mr. L[Redacted] at [Employer E] determined what work was available for Claimant and offered Claimant the work. Mr. L[Redacted] communicated general plans and specifications of the work to be performed. There is no evidence [Employer C] oversaw Claimant's work or instructed Claimant how to perform his work. Claimant's welding was to be within standards and specifications set by [Employer E], not [Employer C]. [Employer E], not [Employer C], was responsible for ensuring Claimant's work was properly inspected.

[Employer C] did pay Claimant at an hourly rate. Claimant invoiced [EMPLOYER C] for full-hour increments as discussed with Mr. L[Redacted] at [Employer E], and Mr. L[Redacted] approved the invoices before formal submission. [EMPLOYER C] did not have the authority to terminate the work as assigned by Mr. L[Redacted] at [Employer E]. [EMPLOYER C] did not provide training to Claimant. Claimant had several years of experience as a welder, and was certified and recertified through [Employer E]. [EMPLOYER C] did not pay for Claimant's training or certification. Claimant was not required to attend safety meetings held by [EMPLOYER C].

Claimant provided his own work truck, tools, materials and equipment, which he purchased through his company, [EMPLOYER G]. There is no evidence [EMPLOYER C] provided Claimant any work, health or fringe benefits. [EMPLOYER C] did not dictate the time of performance of Claimant's services. As discussed, Mr. L[Redacted] at [Employer

E] offered Claimant work at various [Employer E] sites under different roustabout companies.

Claimant invoiced [EMPLOYER C] for his services through his business, [EMPLOYER G]. [EMPLOYER C] did not pay Claimant paid personally, but by check payable to [EMPLOYER G]. [EMPLOYER C] issued Claimant 1099 tax forms in his company's name. There is no evidence [EMPLOYER C] and [EMPLOYER G] combined their business operations. [EMPLOYER C]'s business operations were separate and distinct from those of Claimant's company, [EMPLOYER G].

Claimant was free from direction and control in the performance of his services for [EMPLOYER C]. [Employer E], not [EMPLOYER C], trained and certified Claimant. [Employer E], not [EMPLOYER C], was responsible for ensuring Claimant's work was properly inspected. Mr. L[Redacted], an employee of [Employer E], offered Claimant work and communicated the specifications, determined how many hours Claimant should invoice for his work, and approved draft invoices for his work.

Although Claimant did not have an office, advertise his business, or employ others, there is indicia of a separate business operated by Claimant. [EMPLOYER G] invested in equipment, supplies, cell phone, internet and trash hauling services, and maintained a business account and taxes. As the sole employee of [EMPLOYER G], insurance applications and tax records show that Claimant was provided a salary out of the profits of that company. [EMPLOYER G] purchased and maintained liability insurance before and after the explosion. Claimant, on behalf of his company [EMPLOYER G], has been involved in and represented by counsel as a defendant in personal injury litigation stemming from the incident. [EMPLOYER G] was investigated and fined as a separate entity by OSHA as a result of this incident. Claimant chose to form and operate [EMPLOYER G] so that he could have more opportunities to work at [Employer E] sites.

The nature of the working relationship between [EMPLOYER C] and Claimant, through [EMPLOYER G], was effectively a payment arrangement pursuant to which [EMPLOYER C] paid Claimant's invoices for work he performed for [Employer E]. Claimant could not contract directly with [Employer E] due to his immigration status. Claimant created his company to work for [Employer E], on any site determined by Mr. L[Redacted], regardless of the roustabout company contracted on a particular site. [EMPLOYER G] used at least two other roustabout companies for invoicing in this same manner. At the time of the May 25, 2017 explosion, Claimant was working on a site with a different roustabout company. Based on the totality of the evidence, Claimant was an independent contractor and not an employee of [EMPLOYER C].

As Respondents proved it is more probable than not Claimant was an independent contractor and not an employee, the remaining issues of compensability, medical benefits, and temporary indemnity benefits are moot.

ORDER

1. Respondents proved by a preponderance of the evidence Claimant was an independent contractor for [EMPLOYER C] at the time of his May 25, 2017 injury. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 16, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Thomas G. Fry, M.D. that Claimant has not reached MMI as a result of his July 22, 2017 left wrist injury.

2. Whether Claimant has demonstrated by a preponderance of the evidence that the left wrist distal radioulnar stabilization surgery requested by Authorized Treating Physician (ATP) Andrew C. Trueblood, M.D. is reasonable, necessary and causally related to his July 22, 2017 industrial injury.

FINDINGS OF FACT

1. Claimant works for Employer on an oil rig in the Gulf of Mexico. As a Rig Worker, Claimant is engaged in physically demanding activities. On July 22, 2017 Claimant injured his left wrist when he felt a pop and strain while lifting a 240 pound slip from a well. Claimant resides outside the state of Colorado and has been receiving medical treatment from Authorized Treating Physician (ATP) Andrew C. Trueblood, M.D. in Missouri.

2. Claimant was initially diagnosed with a left wrist triangular fibrocartilage complex (TFCC) tear on October 12, 2017. On November 2, 2017 Claimant underwent a left wrist arthroscopy with intra-articular debridement and repair of the TFCC. Following the procedure Dr. Trueblood noted that Claimant's DRUJ was "fully stabilized in a reduced position in pronation and supination and neutral positions."

3. By November 16, 2017 Claimant's instability at the DRUJ had completely resolved. On December 14, 2017 Dr. Trueblood noted that Claimant would return to his office in six weeks for what was likely the final follow-up visit. Claimant was released to work with temporary restrictions of no lifting over five pounds and no pushing/pulling with the left upper extremity.

4. On January 25, 2018 the restrictions regarding pushing/pulling were eliminated and Claimant could lift up to 20 pounds with his left upper extremity. By March 8, 2018 Claimant's work restrictions allowed him to lift up to 50 pounds with his left upper extremity.

5. On April 12, 2018 Claimant reported to Dr. Trueblood that he was able to return to regular duty work without restrictions. Dr. Trueblood anticipated that Claimant would reach Maximum Medical Improvement (MMI) in two months from the date of the visit. The 50 pound lifting restriction remained in effect.

6. Claimant did not attend a scheduled appointment with Dr. Trueblood on October 3, 2018. He next visited Dr. Trueblood on February 14, 2019. Medical records reveal that Claimant did not undergo any treatment from April 12, 2018 until February 14, 2019.

7. On February 14, 2019 Claimant visited Dr. Trueblood for an examination. He noted that Claimant had returned to work and was "lost to follow up since April of 2018 at which time he had no substantial symptoms and had completed work conditioning." Claimant told Dr. Trueblood that he developed recurrent left wrist pain that was not caused by any specific injury. Claimant exhibited a mildly positive piano key sign. Dr. Trueblood summarized that Claimant was a "39-year-old male with left wrist TFCC repair lost to follow-up and passed the point of maximum medical improvement now with recurrent symptoms in disuse of his left hand."

8. On February 26, 2019 Claimant underwent an MRI of the left upper extremity. Dr. Trueblood's treatment record from March 5, 2019 noted the MRI findings demonstrated evidence of central perforation of the TFCC. However, there was no evidence of a full-thickness peripheral rim tear in the DRUJ. All tests of Claimant's left wrist were negative, with the exception of a mildly positive piano-key test. Dr. Trueblood did not assign Claimant any restrictions, but considered an intra-articular steroid injection to mitigate pain.

9. On May 17, 2019 Dr. Trueblood performed a second left wrist surgery. The procedure involved a repair of a full thickness tear of the peripheral rim of the TFCC. The surgery resolved Claimant's DRUJ instability.

10. On August 14, 2019 Claimant visited Dr. Trueblood for an evaluation. Dr. Trueblood directed Claimant to return in six weeks for a re-evaluation and advancement of activity. He remarked that the six week follow-up would most likely be Claimant's last visit. By September 25, 2019 Claimant again had a stable DRUJ on piano-key testing.

11. On November 8, 2019 Dr. Trueblood reported "I do not find any evidence of clinical instability at his DRUJ and see no mechanical reason why he should not be able to progress" when discussing an aggressive strengthening program. He anticipated MMI one year from the time of the last surgery or May of 2020.

12. On December 11, 2019 Claimant followed-up with Canadace N. Emmendorfer, PA-C. Claimant reported he had not been lifting more than 25 pounds and noted he had not participated in ballistic training. He was unsure if he would be able to return to regular duty due to a feeling of instability with any grip strengthening greater than 140 pounds of pressure. PA-C Emmendorfer reported some laxity with instability at Claimant's DRUJ and the possible need for an MRI.

13. On December 19, 2019 Claimant returned to Dr. Trueblood for an examination. Claimant reported occasional instability when lifting weights. A physical examination revealed a negative ulnar carpal compression test and a stable ECU tendon. Claimant also demonstrated a stable DRUJ on a piano-key test. Dr. Trueblood

recommended advanced weight-bearing activity as tolerated and a return to full duty work without restrictions. He again anticipated MMI one year from the revision surgery or approximately May 17, 2020.

14. On February 19, 2020 Claimant returned to Dr. Trueblood for an evaluation. Claimant mentioned that he was building a retaining wall approximately two weeks earlier at home. He reported a popping sensation in the left wrist. He exhibited a [p]ositive piano-key test with gross instability." Dr. Trueblood remarked that Claimant had gross instability at his DRUJ and would benefit from graft reconstruction of the distal radial ulnar joint.

15. On May 5, 2020 Claimant underwent an MRI arthrogram of his left upper extremity. He was diagnosed with a traumatic tear of the left wrist TFCC.

16. On July 21, 2020 Claimant's counsel wrote a letter to Dr. Trueblood regarding the request to perform a distal radioulnar stabilization with tendon graft. He specifically inquired whether the procedure was reasonable, necessary and related to Claimant's July 22, 2017 work injury. Dr. Trueblood responded that the work-related injury caused or accelerated the need for the distal radioulnar stabilization with tendon graft.

17. On July 22, 2020 Claimant visited Allison M. Fall, M.D. for an independent medical examination. Claimant reported that his surgeon let him "loose" following the second surgery. He explained that he injured his left wrist at home when stacking rocks to build a retaining wall. Claimant specified that he picked up a rock and felt a burning pain as he rotated his left wrist. Dr. Fall reasoned that Claimant had rehabilitated after the second surgery and been released to activities as tolerated. Building the retaining wall constituted a subsequent event that caused the need for a third surgery. Dr. Fall thus concluded that, while a third left wrist surgery might be medically reasonable and necessary, it is not related to the July 22. 2017 work injury.

18. On October 27, 2020 Claimant underwent a Division Independent Medical Examination (DIME) with Thomas G. Fry, M.D. After performing a physical examination and reviewing Claimant's medical records, Dr. Fry concluded that Claimant had not reached MMI. He reasoned that, within a reasonable degree of medical certainty, Claimant had never completely healed from the July 22, 2017 work incident. In considering Claimant's medical records, Dr. Fry noted that on February 19, 2019 Claimant "relate[d] he was lifting a 30-40 pound rock" using two hands. In fact, Claimant held most of the weight with his right wrist. Dr. Fry remarked that the episode "was relatively minor for an individual of his activity level and specifically was a rock that was mostly lifted with the right hand and balanced by the left." The retaining wall event thus simply constituted an aggravation of an underlying problem and not a new injury. Accordingly, Dr. Fry determined that it was appropriate for Claimant to undergo the third left wrist surgery proposed by Dr. Youngblood.

19. Dr. Fall testified at the hearing in this matter. She maintained that, based on the medical records and objective findings of Dr. Trueblood, Claimant reached MMI on December 19, 2019 for his July 22, 2017 industrial injury. Specifically, the reassuring exam and the report reflecting a stable joint suggested Claimant had reached MMI for his

left upper extremity injury. Dr. Fall reasoned that there was no initial plan for a third surgery and Claimant had been released to full duty with no restrictions. She commented that Dr. Trueblood again assigned work restrictions after the retaining wall incident. Moreover, Dr. Fall reiterated that Dr. Trueblood was never asked whether his opinion regarding the proposed third surgery was caused or aggravated by Claimant's work on the retaining wall. Finally, she commented that Dr. Fry downplayed the retaining wall injury.

20. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Fry that Claimant has not reached MMI as a result of his July 22, 2017 left wrist injury. Specifically, Respondents have not demonstrated that it is highly probable that Dr. Fry's MMI determination is incorrect. Initially, on July 22, 2017 Claimant injured his left wrist at work when he felt a pop and strain while lifting a 240 pound slip from a well. On November 2, 2017 Claimant underwent a left wrist arthroscopy with intra-articular debridement and repair of the TFCC. On May 17, 2019 Dr. Trueblood performed a second left wrist surgery. The procedure involved a repair of a full thickness tear of the peripheral rim of the TFCC. The surgery resolved Claimant's DRUJ instability.

21. Following the second left wrist surgery Claimant had no clinical signs or symptoms of instability in the left wrist. Claimant's work restrictions varied over the next several months. By November 8, 2019 Dr. Trueblood found no medical evidence of instability at the DRUJ and there were no mechanical impediments to Claimant's progress. He anticipated that Claimant would reach MMI one year from the time of the last surgery or May of 2020. On December 19, 2019 Dr. Trueblood discharged Claimant to full duty work without restrictions. A physical examination revealed a negative ulnar carpal compression test and a stable ECU tendon on wrist range of motion. Moreover, Claimant had a stable DRUJ on the piano-key test. Dr. Trueblood reiterated that he anticipated MMI in one year from the revision surgery or approximately May, 2020. However, on February 19, 2020 Claimant mentioned to Dr. Trueblood that he was building a retaining wall approximately two weeks earlier at home and noted a popping sensation in his left wrist. Dr. Trueblood determined that Claimant had gross instability at his DRUJ and would benefit from graft reconstruction of the distal radial ulnar joint. In response to a letter from Claimant's counsel regarding the surgical request, Dr. Trueblood determined that the work-related injury caused or accelerated the need for the proposed third surgery.

22. In his DIME opinion Dr. Fry concluded that Claimant had not reached MMI because he had never completely healed from the July 22, 2017 work incident. In considering Claimant's medical records, Dr. Fry noted that on February 19, 2019 Claimant "relate[d] he was lifting a 30-40 pound rock" using two hands. In fact, Claimant held most of the weight with his right wrist. Dr. Fry remarked that the episode "was relatively minor for an individual of his activity level and specifically was a rock that was mostly lifted with the right hand and balanced by the left." The retaining wall event simply constituted an aggravation of an underlying problem and not a new injury. Accordingly, Dr. Fry determined that it was appropriate for Claimant to undergo the third left wrist surgery proposed by Dr. Youngblood. In contrast, Dr. Fall reasoned that Claimant had rehabilitated after the second surgical repair and been released to activities as tolerated. Building the retaining wall constituted a subsequent event that caused the need for a third

surgery. Furthermore, Dr. Trueblood again assigned work restrictions after the retaining wall incident. Dr. Fall thus concluded that the proposed third left wrist surgery was not related to the July 22. 2017 work injury. Finally, Dr. Fall explained that Claimant reached MMI on December 19, 2019.

23. Although Dr. Fall concluded that Claimant has reached MMI as a result of his July 22, 2017 industrial injury, she failed to identify Dr. Fry's specific error or improper application of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*). Notably, the medical records of Dr. Trueblood reflect that Claimant was not expected to reach MMI until approximately one year from the revision surgery or approximately May, 2020. Furthermore, Dr. Trueblood noted that the work-related injury caused or accelerated the need for the distal radioulnar stabilization with tendon graft. Dr. Fry agreed that Claimant had not reached MMI and reasonably determined that he had never completely healed from the July 22, 2017 work incident. The opinion of ATP Dr. Trueblood and the medical records support Dr. Fry's DIME opinion and reflect that Claimant has not attained MMI. Dr. Fall's contrary determination is a mere difference of medical opinion that does not constitute clear and convincing evidence to overcome Dr. Fry's opinion. Accordingly, Respondents have not produced unmistakable evidence free from serious or substantial doubt that Dr. Fry's conclusion that Claimant has not reached MMI is incorrect.

24. Claimant has demonstrated that it is more probably true than not that the left wrist distal radioulnar stabilization surgery requested by ATP Dr. Trueblood, is reasonable, necessary and causally related to his July 22, 2017 industrial injury. Initially, on February 19, 2020 Claimant visited Dr. Trueblood for an evaluation. Claimant mentioned that he was building a retaining wall approximately two weeks earlier at home. He reported a popping sensation in the left wrist. He exhibited a [p]ositive piano-key test with gross instability." Dr. Trueblood remarked that Claimant had gross instability at his DRUJ and would benefit from graft reconstruction of the distal radial ulnar joint. In response to an inquiry from Claimant's counsel, Dr. Trueblood explained that the work-related injury caused or accelerated the need for the distal radioulnar stabilization with tendon graft.

25. Although Claimant's industrial injury may not have been the sole cause of his disability it was a significant, direct, and consequential factor in his need for a third left wrist surgery as recommended by Dr. Trueblood. Moreover, as DIME Dr. Fry explained, the retaining wall episode simply constituted the aggravation of an underlying problem as opposed to a new injury. Claimant's July 22, 2017 industrial injury left him in a weakened condition that produced the need for a third left wrist surgery.

26. Dr. Fall acknowledged that the proposed third left wrist surgery was reasonable and necessary, but it was not related to the July 22, 2017 event. Instead, building the retaining wall at home constituted a subsequent event that caused the need for a third surgery. Dr. Fall's opinion is thus predicated on a lack of causal connection between Claimant's original industrial injury and need for a third surgery. However, the medical records, in conjunction with the persuasive opinions of Drs. Trueblood and Fry, reveal that Claimant's need for a third left upper extremity surgery is causally related to

his July 22, 2017 work injury. The original injury left Claimant’s body in a weakened condition. The retaining wall incident aggravated his symptoms and caused the need for a third surgery. Accordingly, the left wrist distal radioulnar stabilization surgery requested by ATP Dr. Trueblood, is reasonable, necessary and causally related to Claimant’s July 22, 2017 industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. MMI is primarily a medical determination involving a diagnosis of the claimant’s condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). MMI exists at the point in time when “any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition.” §8-40-201(11.5), C.R.S. A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant’s medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* WC 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment including surgery to improve his injury-related medical condition by reducing pain or improving function is inconsistent

with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* WC 4-356-512 (ICAO, May 20, 2004);

5. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAO, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

6. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; *see Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Subparagraph (II) is limited to parties' disputes over "a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI]." §8-42-107(8)(b)(II). "Nowhere in the statute is a DIME's opinion as to the cause of a claimant's injury similarly imbued with presumptive weight." *See Yeutter*, 2019 COA 53 ¶ 18. Accordingly, a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment. *Id.* at ¶ 21.

7. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

8. As found, Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Fry that Claimant has not reached MMI as a result of his July 22, 2017 left wrist injury. Specifically, Respondents have not demonstrated that it is highly probable that Dr. Fry's MMI determination is incorrect. Initially, on July 22, 2017 Claimant injured his left wrist at work when he felt a pop and strain while lifting a 240 pound slip from a well. On November 2, 2017 Claimant underwent a left wrist arthroscopy with intra-articular debridement and repair of the TFCC. On May 17, 2019 Dr. Trueblood performed a second left wrist surgery. The procedure involved a

repair of a full thickness tear of the peripheral rim of the TFCC. The surgery resolved Claimant's DRUJ instability.

9. As found, following the second left wrist surgery Claimant had no clinical signs or symptoms of instability in the left wrist. Claimant's work restrictions varied over the next several months. By November 8, 2019 Dr. Trueblood found no medical evidence of instability at the DRUJ and there were no mechanical impediments to Claimant's progress. He anticipated that Claimant would reach MMI one year from the time of the last surgery or May of 2020. On December 19, 2019 Dr. Trueblood discharged Claimant to full duty work without restrictions. A physical examination revealed a negative ulnar carpal compression test and a stable ECU tendon on wrist range of motion. Moreover, Claimant had a stable DRUJ on the piano-key test. Dr. Trueblood reiterated that he anticipated MMI in one year from the revision surgery or approximately May, 2020. However, on February 19, 2020 Claimant mentioned to Dr. Trueblood that he was building a retaining wall approximately two weeks earlier at home and noted a popping sensation in his left wrist. Dr. Trueblood determined that Claimant had gross instability at his DRUJ and would benefit from graft reconstruction of the distal radial ulnar joint. In response to a letter from Claimant's counsel regarding the surgical request, Dr. Trueblood determined that the work-related injury caused or accelerated the need for the proposed third surgery.

10. As found, in his DIME opinion Dr. Fry concluded that Claimant had not reached MMI because he had never completely healed from the July 22, 2017 work incident. In considering Claimant's medical records, Dr. Fry noted that on February 19, 2019 Claimant "relate[d] he was lifting a 30-40 pound rock" using two hands. In fact, Claimant held most of the weight with his right wrist. Dr. Fry remarked that the episode "was relatively minor for an individual of his activity level and specifically was a rock that was mostly lifted with the right hand and balanced by the left." The retaining wall event simply constituted an aggravation of an underlying problem and not a new injury. Accordingly, Dr. Fry determined that it was appropriate for Claimant to undergo the third left wrist surgery proposed by Dr. Youngblood. In contrast, Dr. Fall reasoned that Claimant had rehabilitated after the second surgical repair and been released to activities as tolerated. Building the retaining wall constituted a subsequent event that caused the need for a third surgery. Furthermore, Dr. Trueblood again assigned work restrictions after the retaining wall incident. Dr. Fall thus concluded that the proposed third left wrist surgery was not related to the July 22. 2017 work injury. Finally, Dr. Fall explained that Claimant reached MMI on December 19, 2019.

11. As found, although Dr. Fall concluded that Claimant has reached MMI as a result of his July 22, 2017 industrial injury, she failed to identify Dr. Fry's specific error or improper application of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*). Notably, the medical records of Dr. Trueblood reflect that Claimant was not expected to reach MMI until approximately one year from the revision surgery or approximately May, 2020. Furthermore, Dr. Trueblood noted that the work-related injury caused or accelerated the need for the distal radioulnar stabilization with tendon graft. Dr. Fry agreed that Claimant had not reached MMI and reasonably determined that he had never completely healed from the July 22, 2017 work

incident. The opinion of ATP Dr. Trueblood and the medical records support Dr. Fry's DIME opinion and reflect that Claimant has not attained MMI. Dr. Fall's contrary determination is a mere difference of medical opinion that does not constitute clear and convincing evidence to overcome Dr. Fry's opinion. Accordingly, Respondents have not produced unmistakable evidence free from serious or substantial doubt that Dr. Fry's conclusion that Claimant has not reached MMI is incorrect.

Proposed Left Wrist Surgery

12. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a preexisting condition, or the subsequent aggravation or acceleration of that condition, is itself a question of fact. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

13. Section 8-41-301(1)(c), C.R.S. requires that an injury be "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Thus, the claimant is required to prove a direct causal relationship between the injury and the disability and need for treatment. However, the industrial injury need not be the sole cause of the disability if the injury is a significant, direct, and consequential factor in the disability. *See Subsequent Injury Fund v. Industrial Claim Appeals Office,* 131 P.3d 1224 (Colo. App. 2006); *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). Thus, if an industrial injury leaves the body in a weakened condition and the weakened condition proximately causes a new injury, the new injury is a compensable consequence of the original industrial injury. *Price Mine Service, Inc. v. Industrial Claim Appeals Office,* 64 P.3d 936 (Colo. App. 2003); *Lanuto v. Amerigas Propane, Inc.,* WC 4-818-912, (ICAO, July 20, 2011). The preceding principle constitutes the "chain of causation analysis" and provides that a subsequent injury is compensable if the "weakened condition played a causative role in the subsequent injury." *In Re Fessler*, WC 4-654-034 (ICAO, Dec. 19, 2007); *see Martinez v. City of Colorado Springs*, WC 5-073-295 (ICAO, Sept. 12, 2019) (an infection that resulted from claimant's weakened condition was compensable because it was a natural, although not necessarily a direct, result of the work-related injury).

14. As found, Claimant has demonstrated by a preponderance of the evidence that the left wrist distal radioulnar stabilization surgery requested by ATP Dr. Trueblood, is reasonable, necessary and causally related to his July 22, 2017 industrial injury. Initially, on February 19, 2020 Claimant visited Dr. Trueblood for an evaluation. Claimant

mentioned that he was building a retaining wall approximately two weeks earlier at home. He reported a popping sensation in the left wrist. He exhibited a [p]ositive piano-key test with gross instability." Dr. Trueblood remarked that Claimant had gross instability at his DRUJ and would benefit from graft reconstruction of the distal radial ulnar joint. In response to an inquiry from Claimant's counsel, Dr. Trueblood explained that the work-related injury caused or accelerated the need for the distal radioulnar stabilization with tendon graft.

15. As found, although Claimant's industrial injury may not have been the sole cause of his disability it was a significant, direct, and consequential factor in his need for a third left wrist surgery as recommended by Dr. Trueblood. Moreover, as DIME Dr. Fry explained, the retaining wall episode simply constituted the aggravation of an underlying problem as opposed to a new injury. Claimant's July 22, 2017 industrial injury left him in a weakened condition that produced the need for a third left wrist surgery.

16. As found, Dr. Fall acknowledged that the proposed third left wrist surgery was reasonable and necessary, but it was not related to the July 22, 2017 event. Instead, building the retaining wall at home constituted a subsequent event that caused the need for a third surgery. Dr. Fall's opinion is thus predicated on a lack of causal connection between Claimant's original industrial injury and need for a third surgery. However, the medical records, in conjunction with the persuasive opinions of Drs. Trueblood and Fry, reveal that Claimant's need for a third left upper extremity surgery is causally related to his July 22, 2017 work injury. The original injury left Claimant's body in a weakened condition. The retaining wall incident aggravated his symptoms and caused the need for a third surgery. Accordingly, the left wrist distal radioulnar stabilization surgery requested by ATP Dr. Trueblood, is reasonable, necessary and causally related to Claimant's July 22, 2017 industrial injury.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to overcome the DIME opinion of Dr. Fry. Claimant has not reached MMI for his July 22, 2017 left wrist injury.

2. Claimant's request for a left wrist distal radioulnar stabilization surgery requested by ATP Dr. Trueblood is granted.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

ISSUE

1. Whether Claimant established by clear and convincing evidence that the Division Independent Medical Examination (DIME) opinion of Jade Dillon, M.D., that Claimant reached maximum medical improvement (MMI) from her December 23, 2018 work injury is incorrect.

2. Whether Claimant established by clear and convincing evidence that the DIME opinion Dr. Dillon, that Claimant has no whole person permanent impairment related to her December 23, 2018 work injury is incorrect.

3. Whether Claimant established by a preponderance of the evidence that treatment of her left shoulder is reasonably necessary to cure or relieve the effects of her work injury.

4. Whether Claimant has proven by a preponderance of the evidence an entitlement to additional temporary disability benefits.

FINDINGS OF FACT

1. Claimant is a 53-year-old woman who was employed by Employer as a bus driver.

2. On December 23, 2018, Claimant was the restrained driver of a shuttle bus that was hit on the front driver's side by a pickup truck in the course of her employment with Employer. The collision broke a window in the driver's compartment of the bus and broke off the driver's side rear-view mirror of the bus. At the time of the collision, Claimant had both hands on the steering wheel of the bus and was wearing a Iap belt. Video of the incident demonstrates that Claimant did not strike any object on the interior of the bus, was not violently jerked in any direction and neither her head nor her shoulder moved significantly as a result of the collision. The bus did not stop abruptly as a result of the collision, and Claimant was able to drive the bus to the roadside and park the bus. (Exs. M-O).

3. Following the collision, Claimant was ambulatory at the scene and was evaluated by paramedics. Claimant complained of left lateral neck pain and requested to be placed in a cervical collar. Claimant was assessed by paramedics as having an injury of the neck and was transported by ambulance to UC Health for evaluation. (Ex. 8).

4. At UC Health on December 23, 2018, Claimant was evaluated in the emergency department and diagnosed with a neck strain. Claimant reported no areas of injury, other than her neck. Claimant was discharged with instructions to take ibuprofen and acetaminophen as needed and to follow up with occupational health. (Ex. 9).

5. On December 24, 2018, Claimant began a course of treatment and assessment by Darla Draper, M.D., at Concentra. Initially, Claimant reported that she had sustained injuries to her neck and back and was experiencing headaches. Dr. Draper diagnosed Claimant with cervical strain, thoracic myofascial strain, head contusion (although Claimant did not report striking her head) and post-traumatic headaches. Claimant was referred for physical therapy and started on metaxalone (a muscle relaxant). Dr. Draper assigned work restrictions to include lifting, pushing, and pulling up to 10 pounds, and restricted Claimant from driving a company vehicle due to functional limitations. Dr. Draper indicated Claimant could work her entire shift. She was referred for physical therapy and provided a prescription for metaxalone (a muscle relaxant). (Ex. D).

6. On December 24, 2018, Claimant initiated physical therapy at Concentra. Claimant reported symptoms in her neck and across her bilateral shoulders and cervical paraspinal muscles. The physical therapy evaluation included evaluation of Claimant's scapular position and cervical range of motion. (Ex. 10).

7. On December 31, 2018, Claimant returned to Dr. Draper and reported that her cervical/thoracic pain had increased with prolonged sitting and writing on a clipboard at work. Claimant reported that her headaches were improved and were now minimal. Dr. Draper's diagnosis was unchanged, and she referred Claimant for massage therapy. Claimant's work restriction were adjusted to allow Claimant to work a maximum of six hours per day. (Ex. D).

8. Claimant returned for physical therapy on December 28, 2018, reporting that she had no overall improvement in her symptoms. At physical therapy, in addition to cervical therapy, Claimant was also instructed to perform therapy directed at her scapula, including prone scapular retraction (i.e., "prone scap retraxn") as part of a home exercise program. (The physical therapy records designate exercises performed in the clinic with "CL;" exercises performed at home with "HE" and exercises performed both in the clinic and at home as "CL/HE.") (Ex. 10).

9. On January 3, 2019, Claimant returned to physical therapy for her fourth visit. Claimant presented with pain in the left shoulder and indicated she had not been performing exercises. Claimant received therapy for her cervical spine and shoulder area, including exercises performed in the clinic for her shoulder. (Ex. 10).

10. On January 8, 2019, Claimant returned to Concentra and saw physician assistant Rammohan Naidu, PA-C. Claimant reported having left-sided neck pain with radiation into the left shoulder and arm. Cervical x-rays were negative. PA Naidu again referred Claimant for physical therapy and instructed Claimant to return to the clinic in two weeks. PA Naidu adjusted Claimant's work restrictions to return to full-time duty (10 hours per day).

11. Claimant returned to Concentra on January 11, 2019 for an unscheduled visit with Dr. Draper. Claimant reported increasing pain with increased work hours, and Dr. Draper re-adjusted her work restrictions to 6 hours per day. Claimant again reported neck and upper back pain, left greater than right and denied headaches. Cervical x-rays were again

negative. Dr. Draper noted full cervical range of motion, with pain on bending, and limited thoracic range of motion in all planes. (Ex. D).

12. On January 11, 2019, Claimant returned to physical therapy reporting increased pain in her left shoulder and bilateral sides of the neck due to working 7 hours prior to therapy. Claimant received scapulothoracic soft tissue mobilization, and performed shoulder exercises, including shoulder shrug/arm elevation and shoulder shrugs with weight, and additional shoulder exercises "for proper shoulder retraction". (Ex. 10).

13. On January 28, 2019, Claimant again returned to Dr. Draper. At that time, Claimant reporting being much better with only infrequent "little" headaches. She reported tightness of the left upper chest, pain in the left upper back, and posterior neck pain only when flexing her neck to write. Dr. Draper's cervical examination was essentially normal, with no tenderness and no muscle spasms noted. Thoracic spine examination showed tenderness on the left greater than right, with normal motor tone. (Ex. D).

14. On February 1, 2019, Claimant returned to Dr. Draper for an unscheduled visit. Claimant reported experiencing right upper back/shoulder pain radiating into her right arm that began following physical therapy and massage therapy the previous day. Claimant reported tingling in both extremities, but denied numbness. At the time of her visit, Claimant indicated she was primarily experiencing pain in the left neck and upper back, with "a little pain" in the left upper back/shoulder. Dr. Draper's examination of Claimant's upper extremities was essentially normal. Examination of Claimant's cervical spine was normal, without tenderness or spasm, but with mildly decreased range of motion on lateral bend/rotation to the left. Examination of the cervical spine was normal. (Ex. D).

15. On February 13, 2019, Claimant saw Dr. Draper in follow up. Claimant reported sometimes getting numbness and tingling from the upper back down the arm and into her fingers, left more often than right. Claimant reported that she had started feeling depressed two weeks earlier. Dr. Draper recommended a psychological evaluation for evaluation of possible adjustment disorder and also referred Claimant for a physiatry evaluation. (Ex. D).

16. On February 20, 2019, Claimant saw John Aschberger, M.D., for a physical medicine evaluation. Claimant reported intermittent headaches and symptoms of numbness in her right arm and a tingling sensation in her left hand, but denied radicular symptoms. Dr. Aschberger evaluated Claimant's shoulders noting full range of motion bilaterally with equivocal impingement testing on the left with mild irritation, and tenderness at the anterior shoulder bilaterally. He found mild tightness to palpation at the trapezius and no distinct trigger points. Cervical range of motion was full. Dr. Aschberger's assessment was mild findings suggesting irritation at the shoulders but with full range of motion and no deficits identified. He recommended additional physical therapy to address poor posture and irritation and additional massage therapy. He noted that Claimant's findings were "mild" and did not anticipate any significant residual or impairment. (Ex. D).

17. On February 22, 2019, Claimant returned to Dr. Draper reporting intermittent tingling of bilateral fingers, and headaches three times per week. Claimant further reported that her symptoms had not improved with physical therapy, massage therapy or medications. Physical examination of Claimant's cervical spine and thoracic spine were normal. Dr. Draper also noted Claimant cried frequently and diagnosed her with adjustment disorder. Dr. Draper also ordered EMG testing to evaluate Claimant's paresthesia symptoms and a cervical spine MRI. (Ex. D).

18. On February 26, 2019, Claimant saw Ron Carbaugh, Psy.D., for a psychological assessment on referral from Dr. Draper. Claimant reported that the treatment she had received to date, including physical therapy, massage therapy, and a home exercise had provided no benefit to her. Dr. Carbaugh opined that psychological or other non-physiologic factors were impacting Claimant's symptom perception and response to care. He diagnosed Claimant with adjustment disorder with anxiety and depressed mood. He recommended six to eight psychological sessions to provide Claimant with cognitive and behavioral coping strategies. (Ex. D).

19. On March 1, 2019, Claimant saw Dr. Draper for an unscheduled visit. Claimant reported that she woke one week earlier with symptoms in her left middle finger and neck. Dr. Draper indicated that Claimant's left finger symptoms were not work related. Claimant's other complaints and symptoms were unchanged. Claimant indicated that she was not going to physical therapy as directed by Dr. Aschbacher and did not want to return to massage therapy indicating that the therapies increased her pain. Claimant reported that her pain was also increased by her modified work duties which included moving papers from one side of her body to the other to put paper into a shredder. Dr. Draper adjusted Claimant's work restrictions to include no lifting, pushing, or pulling more than 5 pounds occasionally, no bending or twisting and working no more than 4 hours per day. Physical examination of Claimant's cervical and thoracic spine was normal, with the exception of very mild decreased lateral rotation and bending to the right of the cervical spine. (Ex. D).

20. On March 5, 2019, Claimant returned to Dr. Aschbacher for a follow up visit. On examination, Dr. Aschbacher noted that Claimant limited passive motion at the shoulder, although eventually full motion was obtained. Active abduction and flection were restricted to 90 degrees. Impingement testing resulted in increased pain "but not well localized to the shoulder." He noted that Claimant had pain and provocative testing at the shoulder, but her examination was nonspecific. He indicated that if there was continued localized irritation, she would be a candidate to consider shoulder MRI, but it was not warranted based on his examination. Dr. Aschbacher assessed Claimant has having myofascial pain affecting the upper back. (Ex. D).

21. On March 8, 2019, Claimant saw Dr. Draper. Claimant reported that she was working with restrictions but not tolerating writing due to neck pain, and riding as a passenger in a bus. Dr. Draper again adjusted Claimant's work restrictions to include additional restrictions that she could not be a passenger in a company vehicle, and to limit writing to 10 minutes with a 3-minute break from that activity. (Ex. D).

22. On March 10, 2019, Claimant was seen at the St. Joseph Hospital emergency room for complaints of neck pain and headaches, with a new onset of bilateral upper extremity paresthesias. On examination, the ER physician, found Claimant to have normal range of motion of the neck with diffuse tenderness of the paraspinal musculature primarily in the upper neck region, with midline tenderness at C4. A cervical CT was performed and was negative. (Ex. I).

23. On March 11, 2019, Claimant underwent an electrodiagnostic evaluation with nerve conduction studies and needle EMG, performed by Allison Fall, M.D. Dr. Fall concluded that the studies were unremarkable, and that Claimant's appropriate diagnosis was myofascial pain of the upper back. (Ex. D).

24. Claimant underwent psychological therapy sessions with Dr. Carbaugh on March 12, 2019, March 20, 2019, April 10, 2019, May 8, 2019, June 4, 2019, July 3, 2019, and July 30, 2019. (Ex. D). Dr. Carbaugh's diagnosis throughout remained adjustment disorder with anxiety and depressed mood. (Ex. D).

25. On March 22, 2019, Claimant had a cervical MRI performed at Health Images, ordered by Dr. Draper. The MRI was interpreted as showing mild degenerative changes without central canal stenosis at any level and without significant neural foraminal narrowing. (Ex. L).

26. On March 29, 2019, Claimant saw Dr. Draper. Claimant noted that her physical symptoms were unchanged although she was "emotionally improved." She continued to report pain in her upper back and neck, increased with prolonged flexion of the neck. Claimant's pain diagram for this visit included diffuse pain anteriorly from the left side of the neck to her waist, and from the top of her head to her back posteriorly. Claimant now reported daily occipital headaches, and numbness and tingling in the fourth and fifth digits of her left hand. Dr. Draper's physical examination was unchanged from the previous visits. Claimant requested a change again in her work restrictions. Dr. Draper modified Claimant's work restrictions to include limiting writing to 10 minutes at a time with a 5-minute break from the activity. (Ex. D).

27. On April 5, 2019, Claimant returned again to Dr. Draper for an unscheduled visit. Claimant complained of pain in the back of the neck and upper back after physical therapy taped her left shoulder, and requested pain medication. Dr. Draper prescribed Norco. Claimant also began crying when discussing work. Dr. Draper recommended a neuropsychological assessment with Dr. Reilly. (Ex. D).

28. On April 8, 2019, Claimant saw Dr. Fall for a physiatry follow-up appointment, requesting pain medication. Dr. Fall's assessment was myofascial pain of the upper back. Dr. Fall prescribed a Lidoderm patch and Lunesta for sleep, and referred Claimant for chiropractic care. (Ex. D).

29. On April 12, 2019, Claimant saw Don Aspegren, D.C., for a chiropractic consultation. Dr. Aspegren noted positive cervical compression test and cervical normal range of motion with achiness in the cervical spine. Thoracic and lumbar range of motion

were normal, with thoracic stiffness in extremes of flexion. He diagnosed Claimant with myofascial pain, upper back, and performed chiropractic manipulations. Claimant returned to Dr. Aspegren for additional chiropractic treatment on April 17, 2019, and May 3, 2019, completing three of six recommended visits. (Ex. D). At Claimant's May 3, 2019 visit, she reported improvement in her cervical and upper thoracic symptoms, but that "activities such as going to work will flare her symptoms." (Ex. D).

30. On April 19, 2019, Claimant saw Dr. Draper. At that time, she reported taking only Lunesta for sleep and the lidocaine patch prescribed by Dr. Fall. Claimant reported that she started having left-sided chest pain 1 ½ months after her injury, which was now going toward the right side. She indicated that the pressure increased with use of her arms, but not with walking. Claimant reported an ER visit five days prior for burning of the left shoulder and upper arm, but apparently was informed it was not cardiac related. Claimant reported the ER provided muscle relaxers which claimant took for two days. Dr. Draper opined that Claimant's chest pressure was most likely not work-related. (Ex. D).

31. On April 26, 2019, Claimant saw Stephen A. Moe, M.D., a psychiatrist, on referral from Dr. Draper. Claimant reported her symptoms were localized in her neck and that her pain increased progressively with activity, such as work. Although Claimant has previously med with Dr. Carbaugh on at least four occasions, she reported to Dr. Moe that she had not met with a psychotherapist. Dr. Moe opined that Claimant had developed symptoms of depression and anxiety after her December 23, 2018 accident, which were not severe, but adversely affecting her functioning and sense of well-being. He diagnosed Claimant with adjustment disorder with depression and anxiety, and prescribed Cymbalta. Cymbalta was shortly discontinued and substituted with Celexa due to Claimant's report of side-effects. (Ex. F).

32. On April 30, 2019, Claimant saw Kevin Reilly, Psy.D., for a psychological consultation on referral from Dr. Draper. At that point in time, Claimant was performing office work 4 hours per day for Employer. Claimant reported pain in her neck and across her shoulders. Dr. Reilly indicated Claimant was referred for a neuropsychological assessment, but was not reporting any cognitive difficulties, only issues with chronic pain and disturbance of mood. Dr. Reilly recommended adding behavior medicine treatment and biofeedback for management of Claimant's pain complaints. He diagnosed Claimant with somatic symptom disorder with predominant pain and adjustment disorder with mixed anxious and depressed mood. After learning Claimant was also seeing Dr. Carbaugh, Dr. Reilly terminated his care as redundant. (Ex. G).

33. On May 13, 2019, Claimant returned to Dr. Moe and reported side-effects from both Cymbalta and Celexa. Dr. Moe prescribed Buspirone a substitute medication for anxiety and depression. (Ex. F).

34. On May 15, 2019, Claimant saw Dr. Aschberger. Claimant initially reported a low pain level, but upon further questioning by Dr. Aschberger reported no pain at the time of her examination. On examination, Dr. Aschberger found Claimant to have normal cervical and thoracic contours, full cervical range of motion and full shoulder range of motion. Claimant tolerated palpation without complaints of pain. Dr. Aschberger characterized

Claimant's examination as "negative." Dr. Aschberger recommended a work conditioning program and that Claimant increase her work hours. (Ex. D).

35. On May 23, 2019, Claimant returned physical therapy. Records indicate that as of May 23, 2019, Claimant had attended 25 physical therapy appointments. Claimant was educated on sleeping position and possible causes of shoulder pain and tingling in her fingers. (Ex. 10).

36. Beginning on May 24, 2019, Claimant began a course of biofeedback therapy with William Beaver, MA, LPC. After five sessions, Claimant made no progress and therapy was discontinued. Claimant was discharged from biofeedback on June 14, 2019. (Ex. H).

37. Claimant returned to Dr. Draper on May 29, 2019 for a follow up examination. Dr. Draper's physical examination of Claimant's left shoulder showed full range of motion without pain, no tenderness and normal to palpation. Examination of Claimant's cervical spine was normal, with no tenderness, no spasms and full range of motion. Examination of the thoracic spine was normal with the exception of mild decreased lateral rotation bilaterally. Dr. Draper adjusted Claimant's work restrictions to include a maximum of two hours per day of writing and computer work. (Ex. D).

38. On June 4, 2019, Claimant returned to Dr. Moe, reporting that her neck pain had not improved and requesting medication for sleep. Dr. Moe noted that Claimant had a generally positive affect and did not appear depressed, and prescribed Ambien. (Ex. F).

39. On June 5, 2019, Claimant saw Dr. Aschberger. On examination, he noted full cervical range of motion, full passive shoulder motion in all ranges, and no localized tenderness in the trapezial or parascapular musculature, with strength intact. He assessed Claimant has having complaints of upper back and cervical myofascial irritation. Dr. Aschberger opined that he saw nothing to indicate a permanent impairment. Dr. Aschberger released Claimant from his care at that time. (Ex. D).

40. On June 19, 2019, Claimant saw Dr. Draper. Claimant reported no change in symptoms or pain. Dr. Draper's examination of Claimant's left shoulder was normal, with no tenderness, palpation normal and full range of motion without pain. Cervical spine and thoracic examination results were unchanged from Dr. Draper's May 29, 2019 visit. (Ex. D).

41. On July 10, 2019, Claimant returned to Dr. Draper. Again, Claimant reported no change in symptoms or pain, with intermittent numbness and tingling of the distal digits in both hands. Dr. Draper examined Claimant's bilateral shoulders and noted no tenderness and full range of motion without pain. Examination of the cervical spine and thoracic spine was unchanged from Dr. Draper's May 29, 2019 visit. (Ex. D).

42. On July 16, 2019, Claimant saw Dr. Moe for a routine follow-up. She reported that Buspirone had been only minimally helpful for anxiety, and that her neck pain continued. She reported that she had undergone a trial of biofeedback that was not tolerated well and was discontinued. Dr. Moe's impression was adjustment disorder "possibly with an

undercurrent of histrionic traits as suggested by her tendency to use hyperbole, in her emotional reactivity and in her exquisite tendency to develop physical symptoms in response to medications, biofeedback, other factors." Dr. Moe switched Claimant's medication to Prozac. (Ex. F).

43. On July 30, 2019, Claimant saw Dr. Carbaugh. Claimant requested pain medications, which Dr. Carbaugh (as a psychologist) could not provide. Dr. Carbaugh noted that Claimant's subjective reports of pain "would be considered entirely inconsistent with her pain behavior. She moves her arms freely when discussing issues. She clearly is catastrophizing regarding her pain and her prognosis is poor for the assumption of more self[-]responsibility for symptom management." Dr. Carbaugh opined that it would be appropriate for Claimant to have four to six sessions of psychological counseling as maintenance care over the following six months. (Ex. D).

44. On August 14, 2019, Claimant saw Paula Pook, M.D., at Concentra. Dr. Pook examined Claimant's shoulders and noted no tenderness, full range of motion, normal strength, and no signs of impingement. Examination of the cervical and thoracic spine was normal, with full range of motion noted for both. Dr. Pook requested an MRI of Claimant's cervical spine and noted that if the MRI were negative Claimant's case would be closed as there would be nothing to treat. (Ex. D).

45. On August 19, 2019, Claimant underwent an independent medical examination (IME) performed by Lawrence Lesnak, M.D., at Respondents' request. Claimant reported no improvement in her symptoms and no benefit from any of the treatment she had received to date. Claimant reported her then-current symptoms included left greater than right posterior neck and bilateral suprascapular pain and discomfort. In addition, she noted daily tingling sensations in her fingers bilaterally. Dr. Lesnak reviewed Claimant's medical records and performed a physical examination. On examination, Dr. Lesnak found Claimant had full range of motion in her cervical spine and thoracic spine in all planes without reproduction of symptoms. Cervical provocative testing was also negative. In addition, Dr. Lesnak found Claimant had full active and passive range of motion for each shoulder. Rotator cuff impingement signs were negative bilaterally. Dr. Lesnak noted that Claimant had diffuse tenderness to palpation of her cervical paraspinal and suprascapular musculature, without trigger points or spasms. He characterized his examination as "completely normal." (Ex. B).

46. Based on his examination and record review, Dr. Lesnak opined that Claimant possibly sustained a mild cervical/trapezius strain/sprain as a result of her December 23, 2019 accident. He further opined that Claimant had no then-current clinical evidence of cervical or thoracic radiculitis, radiculopathies or myelopathy, and no evidence of symptomatic intrinsic shoulder joint pathology or rotator cuff impingement signs. He characterized Claimant as having "ongoing subjective complaints without any reproducible objective findings whatsoever." He further opined that Claimant also had "probably a significant degree of somatization/functional overlay, consistent with a symptom somatic disorder/somatoform disorder." He opined that if Claimant had sustained a soft tissue injury to her cervical/trapezial musculature, it "would have

completely resolved within several weeks to no more than two months following the occupational incident of 12/23/2018."

47. With respect to psychological issues, Dr. Lesnak opined that "it is possible that [Claimant] may have had a brief symptomatic adjustment disorder as a result of the occupational incident; however, this is not a permanent condition whatsoever and most likely not even symptomatic currently." He later stated that "the most accurate current psychologic/diagnosis would be that of a symptom somatic disorder/somatoform disorder." Dr. Lesnak opined that Claimant was at MMI, and that Claimant would not qualify for a permanent impairment rating. (Ex. B).

48. On August 23, 2019, Claimant returned to Concentra for an unscheduled visit seeking a refill of Flexeril. Dr. Draper noted that Claimant was resistant to any change in her work restrictions and her symptoms were unchanged except for stiffness in her neck. Dr. Draper cancelled the scheduled MRI because a prior MRI was performed on March 22, 2019. Dr. Draper noted that Claimant was close to MMI. (Ex. D).

49. On August 27, 2019, Claimant saw Dr. Moe in follow-up and reported a very positive response to Prozac, indicating she was not longer becoming irritable or angry with others and that she felt much calmer. Claimant reported no change in her neck symptoms and indicated her physical condition prevented her from working. Dr. Moe reiterated his diagnosis of adjustment disorder and noted Claimant was to follow up in two months and "likely to be at psychiatric MMI, and appropriate for a mental impairment rating, at that time." (Ex. F).

50. On September 13, 2019, Claimant returned to Dr. Pook. Dr. Pook's examination of Claimant's cervical and thoracic spine were normal, without tenderness or restrictions in range of motion. Dr. Pook placed Claimant at MMI and noted that she was ready for discharge. She completed a Physician's Report of Worker's Compensation Injury indicating that Claimant was able to return to work at full duty on September 13, 2019 without restrictions, and discharged Claimant from care, noting no need for further medical, psychiatric, or psychological care. Dr. Pook placed Claimant at MMI with no permanent impairment rating. (Ex. D).

51. Claimant returned to Dr. Reilly on September 17, 2019 for psychological care because Dr. Carbaugh had retired. Claimant reported her pain was so much that she could not return to work activities. Dr. Reilly reiterated his previous diagnosis of somatic symptom disorder with predominant pain and adjustment disorder with mixed anxious and depressed mood. (Ex. G).

52. On October 1, 2019, Claimant filed an application for Division Independent Medical Examination (DIME), In the application, Claimant requested that the DIME physician evaluate Claimant's right and left hand, left wrist, left elbow, and right and left shoulder, cervical and thoracic spine, and her psychological condition. (Ex. 15).

53. On February 4, 2020, J.E. Dillon, M.D., performed the requested DIME examination. In the "scope of exam" portion of the DIME report, Dr. Dillon noted that the

exam would “address issues with the cervical spine and upper extremities related to the occupational injury in question, including neurological issues, and also psychiatric issues that might have arisen from this occupational injury. This is consistent with what is listed on the Application for a Division Independent Medical Examination.” (Ex. A).

54. Dr. Dillon documented a physical examination of Claimant’s cervical region, and upper extremities. The ALJ infers that Dr. Dillon’s reference to Claimant’s “upper extremities” in her report encompassed the Claimant’s hands, wrist, elbow, and shoulders. Based on her examination and review of records, Dr. Dillon concluded that Claimant sustained cervical strain, myofascial only. She noted that “significant persistent symptoms well out of proportion to underlying pathology. Cervical strain is considered to be an injury [that] proceeds to resolution with time and no other injury has been identified. With symptoms only in the absence of any ratable underlying condition this does not qualify for an impairment rating.” Dr. Dillon determined that Claimant had no ratable condition of her cervical spine or any other ratable condition. She opined that Claimant reached MMI on August 21, 2019. In explaining her rationale, Dr. Dillon noted that “he Guides are clear that symptoms only with no associated underlying pathology that reasonably explains those symptoms does not constitute a ratable condition.” S

55. Dr. Dillon also conducted a psychological assessment of Claimant. In doing so, she reviewed the records from Drs. Carbaugh, Moe and Reilly. She diagnosed Claimant with somatic disorder/somatoform disorder with underlying histrionic personality disorder, and determined that the diagnosis was unrelated to her occupational injury and did not constitute a ratable condition. She also found that Claimant possibly had a component of adjustment disorder related to her injury and symptoms, that may have been an issue early in her treatment. However, she did not “consider a persistent adjustment disorder related to a condition for which there was no underlying pathology to explain her persistent symptoms.” She opined that Claimant has no mental, psychiatric, or psychological impairment. Dr. Dillon’s opinion demonstrates that she arrived at the conclusion that Claimant had a somatic disorder/somatoform disorder because there was no underlying pathology to explain her symptoms.

56. On March 11, 2019, Claimant underwent and electrodiagnostic evaluation with nerve conduction studies and needle EMG, performed by Allison Fall, M.D. Dr. Fall concluded that the studies were unremarkable, and that Claimant’s appropriate diagnosis was myofascial pain of the upper back. (Ex. 10).

57. On May 1, 2020, an MRI of Claimant’s left shoulder was performed at the request of Claimant’s primary care provider, Carlos Rodriguez, M.D. Dr. Rodriguez is not an authorized treating provider, and no records or reports from Dr. Rodriguez were offered or admitted into evidence. The MRI was interpreted as showing mild tendinosis with mild undersurface and interstitial tearing of the supraspinatus and infraspinatus tendons, with no full-thickness rotator cuff tear identified. The MRI also showed mild hypertrophic changes of the acromioclavicular joint with mild subacromial subdeltoid bursitis, and mild thinning of the articular cartilage overlying the glenoid and humeral head. (Ex. L). None of Claimant’s treating providers have opined that the findings on Claimant’s May 1, 2020 MRI were causally related to the December 23, 2018 motor vehicle accident.

58. David Yamamoto, M.D., was admitted to testify as an expert in occupational medicine and family medicine. At Claimant's request, Dr. Yamamoto performed an independent medical examination on July 28, 2020, and issued a report of his findings and opinions related to that IME. Dr. Yamamoto's IME included a physical examination of Claimant and a review of Claimant's medical records, including Dr. Dillon's DIME report, and Dr. Lesnak's August 21, 2019 report.

59. Dr. Yamamoto's examination of Claimant's left shoulder showed left shoulder anterior tenderness with positive impingement, and range of motion measurements. His examination of the cervical spine demonstrated tenderness in the midline, primarily over the posterolateral aspect with tenderness extending into the left trapezius. He also performed range of motion measurements of Claimant's cervical spine. Based on his examination and review of records, Dr. Yamamoto diagnosed Claimant with "1. Cervical strain/mechanical neck pain with ongoing symptoms with greater than 6 months of documented pain and rigidity with or without muscle spasms, associated with none to minimal degenerative changes on structural tests.; 2. Left shoulder partial rotator cuff tear with ongoing pain and decreased range of motion; 3. Anxiety and depression secondary to the work-related injury of 12/23/2018." (Ex. C).

60. Dr. Yamamoto opined that Claimant qualified for a Table 53 impairment for the cervical spine, and also has a left shoulder injury which he characterized as "not yet been investigated." In support of his opinion that Claimant had an as-yet uninvestigated left shoulder injury, Dr. Yamamoto noted that Claimant's pain diagrams, including those from December 31, 2018 and February 1, 2019 showed left shoulder involvement. At hearing, Dr. Yamamoto testified that Claimant's May 1, 2020 MRI demonstrated pathology in Claimant's left shoulder that her treating providers "just missed." With respect to Claimant's qualification for a Table 53 impairment rating, Dr. Yamamoto testified that Claimant had tenderness and loss of range of motion which he characterized as objective signs of injury.

61. Dr. Yamamoto also evaluated Claimant for a psychiatric impairment and assigned Claimant a 5% whole person impairment for anxiety and depression. He assigned a 4% whole person impairment based on Table 53 (II)(B) of the AMA Guide to the Evaluation of Permanent Impairment, and 7% impairment for loss of cervical range of motion, which combined for an 11% whole person impairment. For Claimant's left shoulder, he assigned a 10% range of motion impairment, which converts to a 6% whole person impairment. The cervical, shoulder and psychiatric impairment ratings assigned by Dr. Yamamoto equal a 20% whole person impairment.

62. Dr. Yamamoto opined that Claimant is not at MMI and that she had experienced a worsening of her condition. He opined that Claimant requires a functional capacity evaluation and that she "clearly cannot work without restrictions as a result of her 12/23/2018 injury." Further, recommended that Claimant undergo an orthopedic evaluation of the left shoulder and "may require surgery." He also recommended that Claimant be reevaluated by Dr. Moe.

63. On September 22, 2020, Dr. Lesnak issued an addendum to his August 21, 2019 IME report after reviewing additional records, including Dr. Dillon's DIME report, Dr. Yamamoto's IME report and Claimant's May 1, 2020 left shoulder MRI. Dr. Lesnak was admitted to testify as an expert in physical medicine and rehabilitation and occupational medicine. Dr. Lesnak reviewed Claimant's May 1, 2020 left shoulder MRI films and opined that the MRI showed mild, appropriate, age-related changes, with no evidence of trauma-related pathology or injury to the left shoulder. He opined that Claimant has some interstitial tearing of the shoulder tendons representing "typical, age-related fraying of some of the fibers of the rotator cuff tendons." The ALJ finds Dr. Lesnak's interpretation of Claimant's left shoulder MRI credible. Dr. Lesnak also opined that Claimant requires no treatment for her left shoulder, "regardless of causality."

64. Dr. Lesnak testified that at his examination of Claimant in August 2019, Claimant exhibited no objective signs of injury other than subjective complaints and his examination was normal. He testified that Claimant had no left shoulder complaints at his physical examination. He opined that Claimant has no ratable condition from her December 23, 2018 accident because there are no objective findings to support her diagnosis.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

OVERCOMING DIME - MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000); *Kamakele v. Boulder Toyota-Scion,* W.C. No. 4-732-992 (ICAO, Apr. 26, 2010).

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 *P.2d 1090 (Colo. App. 1990); Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (ICAO, Mar. 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *In Re Villela,* W.C. No. 4-400-281 (ICAP, Feb. 1, 2001).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect, and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

Claimant has failed to establish by clear and convincing evidence that the DIME physician's determination that Claimant was at MMI on August 21, 2019 is incorrect. Dr. Dillon's opinion is consistent with consistent with the opinions of Dr. Draper, Dr. Pook and Dr. Aschberger, each of whom found Claimant at, or near, MMI in August or September 2019.

With respect to Claimant's cervical spine, neither the Claimant's treating physicians nor Dr. Yamamoto have opined that Claimant requires additional treatment to cure or relieve the effects of her cervical injury. Accordingly, Claimant has not established that she is not at MMI with respect to her cervical complaints.

Claimant contends she is not at MMI because she sustained an injury to her left shoulder that required further evaluation and treatment. Claimant has not, however, demonstrated that she sustained a work-related shoulder injury that requires further evaluation and treatment. Claimant's position is based, in part, on Dr. Yamamoto's opinion that Claimant sustained an untreated, unevaluated partial tear of her rotator cuff as a result of her accident. Claimant contends her authorized treating physicians did not address her alleged shoulder injury, thereby necessitating additional evaluation.

The evidence does not support that Claimant sustained an injury to her left shoulder in the December 23, 2018 accident that requires additional evaluation. Claimant's shoulder complaints throughout her treatment were primarily complaints of diffuse pain throughout her upper back. The records do not reflect any complaints of pain in the shoulder joint. Although the May 1, 2020 MRI demonstrates some objective findings, the ALJ credits Dr. Lesnak's opinion that Claimant's left shoulder MRI demonstrates only mild, appropriate age-related changes and no evidence of traumatic or acute pathology.

Dr. Yamamoto's opinion that the December 23, 2018 accident was an acceleration-deceleration accident that resulted in a left shoulder partial rotator cuff tear is not supported by the evidence. The accident videos show that Claimant's bus was struck on the driver's side, which did not result in a sudden deceleration of the vehicle or any significant movement of Claimant's upper body or shoulder. Claimant's body was only slightly jarred in the collision, and the bus did not come to a sudden stop. Claimant was able to continue driving the bus a short distance and park it on the side of the road. The ALJ does not find that the damage sustained to the other vehicle to be evidence of significant forces imparted on Claimant.

Contrary to Dr. Yamamoto's testimony, Claimant's ATPs did examine, assess, and treat her shoulder over the course of approximately nine months until she was discharged by Dr. Pook. Claimant began physical therapy, which addressed Claimant's cervical and shoulder complaints within five days of the accident. Although only five physical therapy records were offered and admitted into evidence, the records demonstrate that Claimant attended 25 physical therapy sessions between December 24, 2018 and May 23, 2019. The physical therapy records show that Claimant received therapy for her shoulders, including home exercises. At Claimant's April 5, 2019 visit with Dr. Draper, she reported that physical therapy had taped her shoulder, indicating that her shoulder symptoms were addressed in physical therapy, and not "missed" as Dr. Yamamoto suggests. When Claimant saw Dr. Draper on February 1, 2019, her examination of Claimant's upper extremities was essentially normal. Dr. Aschberger also evaluated Claimant' shoulders multiple times and noted non-specific findings and equivocal provocative testing. On February 20, 2019, Dr. Aschberger referred Claimant for additional physical therapy to address her complaints of shoulder irritation. On March 5, 2019, Dr. Aschberger noted his consideration of a shoulder MRI, but determined that the Claimant's examination and findings did not warrant evaluation by MRI at that time. On May 15, 2019, Dr. Aschberger evaluated Claimant's shoulder and noted full range of motion and a negative examination. Similarly, on May 29, 2019, June 5, 2019, June 19, 2019, July 10, 2019, and August 14, 2019, Claimant's providers examined Claimant's left shoulder and found no deficits. None of Claimant's treating providers recommended additional treatment for Claimant's shoulder, or diagnosed Claimant with an injury to her left shoulder. The ALJ finds that Claimant has not established by clear and convincing evidence that Dr. Dillon's opinion regarding MMI for Claimant's physical complaints is incorrect.

With respect to Claimant's claim of psychiatric impairment, Dr. Dillon reviewed Claimant's relevant records and determined that Claimant was at MMI from a psychiatric perspective. Dr. Yamamoto did not persuasively address why he does not consider Claimant to be at MMI from a psychiatric perspective, other than to indicate he recommends additional follow up with Dr. Moe. Dr. Dillon's determination that Claimant is at MMI is consistent with Dr. Moe's note on August 27, 2019 that Claimant was likely to be at MMI at her next scheduled appointment. The ALJ concludes that Claimant has failed to establish by clear and convincing evidence that Dr. Dillon's opinion that Claimant was at MMI on August 21, 2019 to be incorrect.

OVERCOMING DIME - IMPAIRMENT

The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

Cervical Spine

Claimant has failed to establish by clear and convincing evidence that Dr. Dillon's determination that Claimant has no ratable condition of her cervical spine is incorrect. Claimant contends, based on Dr. Yamamoto's testimony, that she qualifies for a cervical impairment rating pursuant to the AMA Guide, Table 53 (II)(B). The Division's Desk Aid #11 – Impairment Rating Tips, under the heading "Table 53 and Application of Spinal Range of Motion" provides: "In order to be assigned a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment rating of greater than zero under Table 53. Spinal range of motion impairment must be completed and applied to the impairment rating only when a corresponding Table 53 diagnosis has been established." (Emphasis original).

Under Table 53 (II)(B), of the AMI Guide and Desk Aid #11 "the examiner may assign an impairment value for impairment or a specific disorder of the lumbar or cervical regions of the spine, so long as the medical evidence establishes the presence of a specific diagnosis, objective pathology, and six months of medically documented pain and rigidity." *In re Bryant*, W.C. No. 5-058-044-001 (ICAO, June 5, 2019). The term "objective pathology" cited in Desk Aid #11 refers to "the identification of a problem, injury, disorder, condition or disease that can be identified by virtue of objective signs or analysis." *Id*.

"Rigidity" is an elusive term without an accepted definition, but, in any event, need not be "objective." *Id*.

With respect to Claimant's cervical spine, she meets the requirement of a specific diagnosis, by virtue of the diagnosis of a cervical strain by Dr. Draper. Despite the diagnosis, the evidence does not demonstrate the presents of any "objective pathology," in Claimant's cervical spine that is causally related to her December 23, 2018 accident. Claimant's two cervical x-rays were negative, as were her cervical MRI and EMG study. The physical examinations by Claimant's treating providers document only subjective findings, such as complaints of tenderness, and with the exception of mildly limited range of motion, Claimant's physical examinations were normal. Dr. Draper's approximately 16 physical examinations of Claimant's spine were normal to palpation. Although Dr. Yamamoto's IME found tenderness in the cervical spine, patient reports of diffuse tenderness are subjective. The only arguably "objective" finding on examination is Dr. Aspegren noting a positive cervical compression test, but Dr. Aspegren's diagnosis was "myofascial pain, upper back," which is not a specific diagnosis. Moreover, no evidence was offered to explain the significance of such testing and whether it constitutes an "objective sign or analysis" of an injury. The medical records support Dr. Dillon's conclusion that Claimant presented with symptoms only with no associated underlying pathology that reasonably explains those symptoms" and therefore does not have a ratable condition of the cervical spine. Because Dr. Dillon determined Claimant had no ratable condition, she was not obligated to perform range of motion measurements. Accordingly, the ALJ concludes that Claimant has not established by clear and convincing evidence that Dr. Dillon's opinion that Claimant has no ratable condition of her cervical spine to be incorrect.

Shoulder

Claimant contends that Dr. Dillon's DIME is incomplete because she did not specifically address Claimant's left shoulder in her report, and that the failure to assign an impairment rating for Claimant's shoulder was incorrect. Claimant's DIME request sought evaluation of her hands, left wrist, left elbow, and shoulders, in addition to her cervical and thoracic spine. The ALJ infers from Dr. Dillon's statement in her report that the exam would "address issues with the cervical spine and upper extremities related to the occupational injury in question…" that Dr. Dillon intended the phrase "upper extremities" to encompass Claimant's request for evaluation of her hands, wrist, elbow, and shoulders. Dr. Dillon documented an examination of Claimant's upper extremities, which the ALJ infers included an examination of the shoulders. Nonetheless, Dr. Dillon diagnosed Claimant with only a cervical strain, which indicates she found no shoulder injury causally related to Claimant's December 23, 2018 accident. "The DIME physician's opinion concerning causation is an inherent part of a rating." *In Re Ortivez*, W.C. No. 4-846-292-02 (ICAP, November 26, 2012). Therefore, it is incumbent upon the Claimant to establish by clear and convincing evidence that the DIME's failure to find a compensable shoulder injury was incorrect. As discussed above, Claimant has failed to establish that she sustained a compensable injury to her left shoulder in the December 23, 2018 work accident. The ALJ finds that Claimant has failed to establish by clear and convincing evidence that the DIME physician's examination was incomplete or that the failure to assign an impairment rating for Claimant's left shoulder was error.

Psychiatric/Psychological rating

Claimant further contends that Dr. Dillon was incorrect in finding that Claimant does not have a permanent mental, psychiatric, or psychological impairment. Again, Claimant has failed to establish by clear and convincing evidence that the DIME physician's determination was incorrect. Dr. Dillon reviewed Claimant's medical records and determined that Claimant's psychiatric diagnosis was "somatic disorder/somatoform disorder with underlying histrionic personality disorder," which she determined were unrelated to Claimant's occupational injury and not a ratable condition. She considered the diagnosis of adjustment disorder and determined that there was no mental, psychiatric, or psychological impairment. Dr. Dillon's diagnosis was based on the assessments of Drs. Moe, Carbaugh and Reilly, and the fact that Claimant had no underlying pathology to explain her complaints. Dr. Yamamoto's opinion to the contrary is a mere difference of opinion with Dr. Dillon and does not constitute clear and convincing evidence that Dr. Dillon's opinion is incorrect.

CLAIMANT'S REQUEST FOR SHOULDER EVALUATION AND TREATMENT

Claimant seeks an order authorizing an orthopedic evaluation of Claimant's shoulder. Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002)." *In the Matter of the Claim of Bud Forbes, Claimant*, No. W.C. No. 4-797-103, 2011 WL 5616888, at *3 (Colo. Ind. Cl. App. Off. Nov. 7, 2011). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009).

Claimant has failed to establish by a preponderance of the evidence that an orthopedic evaluation of Claimant's left shoulder is reasonable and necessary to cure or relieve the effects of an industrial injury. As noted above, the Claimant has failed to establish that the treatment and evaluation provided by her authorized treating providers was inadequate. Claimant's contention that her left shoulder was "missed" by her medical providers is incorrect.

At various times during Claimant's treatment for the injuries sustained in the December 23, 2018 accident, Claimant reported to her authorized treating providers diffuse pain in the left "shoulder" area. Claimant's first mention of "shoulder" pain was on January 8, 2019, when she complained of pain radiating from her neck into the left shoulder and arm. For example, on February 20, 2019, Dr. Aschberger evaluated Claimant's left shoulder and noted there were mild findings suggestive of irritation, but full range of motion and no deficits identified. He recommended physical therapy and massage, which Claimant resisted. At Dr. Aschberger's March 5, 2019 visit, he again evaluated Claimant's left shoulder and noted that there was no basis for a shoulder MRI at that time given her non-specific findings. Throughout, none of Claimant's authorized treating providers requested an orthopedic evaluation of Claimant's shoulder. Such an examination is only recommended by Dr. Yamamoto, who is not an authorized treating provider. The ALJ lacks authority to order an ATP to provide a particular form of treatment which has not been prescribed or recommended the ATP. *Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (ICAO, May 15, 2018) *citing Short v. Property Management of Telluride*, W.C. No. 3-100-726 (ICAP May 4, 1995).

ADDITIONAL TEMPORARY TOTAL DISABILITY BENEFITS

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* 8-42-105(1). C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Because Claimant has failed to overcome the DIME opinion that she was at MMI on August 21-, 2019, Claimant's entitlement to TTD benefits terminated on that date pursuant to § 8-42-105 (3)(a) – (d), C.R.S. As such, Claimant has failed to establish an entitlement to additional TTD benefits.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by clear and convincing evidence that the DIME physician's opinion that Claimant reached MMI on August 21, 2019 was incorrect.

2. Claimant has failed to establish by clear and convincing evidence that the DIME physician's opinion that Claimant has no permanent impairment is incorrect.

3. Claimant's request for an orthopedic evaluation of her left shoulder is denied and dismissed.

4. Claimant's request for additional temporary total disability benefits is denied and dismissed.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm

DATED: April 20, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on August 9, 2020, she suffered an injury arising out of and in the course and scope of her employment with the employer.

2. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment she received from St. Mary's Hospital is reasonable, necessary, and related to the work injury.

3. The issues of average weekly wage (AWW), temporary total disability (TTD) benefits, and temporary partial disability (TPD) benefits were also endorsed for hearing. The parties stipulated that these issues are reserved for future consideration, if the claim is found compensable.

DEPOSITION OBJECTIONS

1. The testimony of Crystal Lambrakos, Lifeguard Supervisor, was taken via deposition. In the respondents' position statement, the ALJ was asked to address two objections that were raised during the deposition. The ALJ addresses these objections here.

2. The first objection was raised by the claimant with regard to deposition exhibit D[1] offered by the respondents during the deposition. The ALJ hereby overrules the objection and the respondent's deposition exhibit D is part of the record.

3. The second objection was made by the respondents regarding a question asked by the claimant's counsel on cross examination of Ms. Lambrakos. Specifically, Ms. Lambrakos was asked "Do you understand how a 16 year old girl might believe that she had to attend?" The ALJ hereby overrules the objection and the witness's response to the question is part of the record.

FINDINGS OF FACT

1. The employer operates a public swimming pool in Hotchkiss, Colorado. The claimant began working for the employer when she was 14 years old. On August 9, 2020, the claimant was 16 years old. At the time of the hearing the claimant was 17 years old. During her employment, the claimant assisted with swim lessons, taught swim lessons, and was a lifeguard. The claimant worked in a seasonal position. The 2020 season was from June 2020 until Labor Day 2020.

[1] This deposition exhibit D is different from the respondents' exhibit D that was admitted into evidence at hearing.

2. The employer requires all lifeguards to hold valid Red Cross certification. During her employment with the employer, the claimant was certified by the Red Cross. The claimant's certification was scheduled to expire in May 2021.

3. On Sunday, August 9, 2020, the claimant attended a Red Cross certification class at the employer's pool facility. This was not a normally scheduled work shift for the claimant. The claimant was not paid for the time she was present at the Red Cross certification on that date. All participants in that class were charged $38.00. This cost was the amount the Red Cross charged the employer for each participant of the certification class.

4. Crystal Lambrakos, Lifeguard Supervisor, testified via post-hearing deposition. Ms. Lambrakos testified that she was the lifeguard supervisor on August 9, 2020. Ms. Lambrakos also testified that she notified the pool's lifeguards of the certification class that would be offered at the employer's facility on August 9, 2020. The employer offered the class at that time, because it was unclear with COVID-19 related restrictions, whether a later class could be offered. Ms. Lambrakos further testified that the certification class was not mandatory. If a lifeguard was unable to attend, they would need to find a certification class at another time.

5. The claimant and Ms. Lambrakos spoke regarding the August 9, 2020 class. The ALJ finds as persuasive Ms. Lambrakos's testimony that she specifically clarified with the claimant that the class was not mandatory. In addition, Ms. Lambrakos sent notification to all lifeguards that the class was not mandatory.

6. The claimant testified that she believed that the certification class was mandatory.

7. During the August 9, 2020, certification class, the participants were practicing rescue drills. In one drill, the claimant played the part of the "victim". During that drill, the claimant was placed on a backboard. While other participants were liffing the backboard, the claimant fell from the backboard, striking her head on the concrete.

8. Immediately following her fall, the claimant was unable to move her arms or legs. The claimant was airlifted from the employer's location to St. Mary's Hospital in Grand Junction, Colorado.

9. The ALJ credits the testimony of Ms. Lambrakos over the contrary testimony of the claimant. The ALJ finds that the Red Cross certification class on August 9, 2020 was a voluntary class. The claimant's subjective belief that the class was mandatory does not change the fact that the class was voluntary. As the claimant's certification was not set to expire until May 2021, the ALJ is further persuaded that her decision to go to the class on August 9, 2020 was voluntary. Furthermore,the ALJ notes that the class participants were not paid by the employer for the time they attended the class. On the contrary, participants were charged a fee to attend the class. These facts support the respondents' position that the claimant's injury did not "arise out of", nor did it occur "in the course and scope of" the claimant's employment with the employer. Based upon all of the foregoing, the ALJ finds that the claimant has failed to demonstrate that it is more

likely than not that she suffered an injury arising out of and in the course and scope of her employment.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. To establish a compensable injury an employee must prove, by a preponderance of the evidence, that his injury arose out of the course and scope of employment with his employer. Section 8-41-301(1)(b), C.R.S. (2006); see *City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991).

5. The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its “origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee’s service to the employer.” *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999

(Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015).

6. Section 8-40-201(8), C.R.S., provides that the term "employment" shall not "include the employee's participation in a voluntary recreational activity or program, regardless of whether the employer promoted, sponsored, or supported the recreational activity or program." Similarly, Section 8-40-301(1), C.R.S., defines the term "employee" to exclude any person employed by an employer "while participating in recreational activity, who at such time is relieved of and is not performing any duties of employment.

7. In *White v. Industrial Claim Appeals Office,* 8 P.3d 621 (Colo. App. 2000), the court held that the statutory term "recreational activity" should be given its plain and ordinary meaning as an activity that "has a refreshing effect on either the mind or the body." Determining whether an activity is "recreational" depends on consideration of the circumstances including whether the activity occurred during working hours, whether the injury occurred on the employer's premises, whether the employer initiated the activity, whether the employer exerted control over the employee's participation in the activity and whether the employer stood to benefit from the employee's participation in the activity. The question of whether an activity was "recreational" is one of fact for determination by the ALJ. *Lopez v. American Lumber Construction,* W.C. No. 4-434-488 (ICAO Oct. 29, 2003).

8. Determination of whether the claimant's participation in a recreational activity was "voluntary" requires consideration of the claimant's "motive" for participation in the activity. Compensability must be denied if participation in the activity was voluntary, even though the employer promoted, sponsored or supported the activity. When determining whether the claimant's participation was voluntary the ALJ may consider various factors including whether the activity occurred during working hours, whether the activity occurred on or off the employer's premises, whether the employer initiated, organized, sponsored or financially supported the activity and whether the employer derived benefit from the activity. *See Price v. Industrial Claim Appeals Office*, 919 P.2d 207 (Colo. 1996); *Dover Elevator Co. v. Industrial Claim Appeals Office,* 961 P.2d 1141 (Colo. App. 1998); *Finn v. United Parcel Service, Inc.* W.C. No. 4-757-425 (ICAO, Jan. 13, 2009). The *Price* court determined that the first two factors carry greater weight than the other factors because the time and place of injury are particularly strong indicators of whether an injury arose out of and in the course of the employee's employment. *Id.* at 211. Ultimately, the question of whether the claimant's participation in the recreational activity was voluntary is one of fact for determination by the ALJ. *In re Schniedwind*, W.C. No. 5-051-507-03 (ICAO, Mar. 12, 2109); *Kvale v. Infinity Systems Engineering,* W.C. No. 4-588-521 (ICAO, Mar. 23, 2005).

9. The ALJ recognizes that a Red Cross certification class is not necessarily a "recreational activity". However, the ALJ finds that Sections 8-40-201(8) and 8-40-301(1), C.R.S. and the related case law provide some guidance in the resolution of the present case. Here, the claimant voluntarily attended a certification class at the employer's facility. The claimant was not compensated for her time, and was charged a fee for the

cost of the class. These facts taken together lead the ALJ to conclude that on August 9, 2020, the claimant was not engaged in an activity arising out of and in the course and scope of her employment with the employer.

10. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that on August 9, 2020, she suffered an injury arising out of and in the course and scope of her employment with the employer. As found, the testimony of Ms. Lambrakos is credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits is denied and dismissed.

Dated this 20th day of April 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

- Did Claimant prove he suffered compensable injuries on July 29, 2020 arising out of and in the course of his employment?

STIPULATIONS

If the claim is compensable, medical treatment Claimant received at Vail Health Hospital on July 29, 2020 was reasonably needed and related, and therefore should be covered under this claim. The issues of average weekly wage and temporary disability benefits are reserved for future determination, if necessary.

FINDINGS OF FACT

1. Employer is a small technology company that designs, installs, and services audiovisual, security, network, and lighting systems in custom homes and businesses. Employer is headquartered in Denver but it maintains offices in other locations, including a mountain office in Edwards, Colorado.

2. Claimant worked in the Edwards office service technician since May 2018. His job involved installing, programming, and servicing low voltage systems, including AV and security systems. Claimant typically travelled to customers' premises to perform these tasks.

3. Employer maintains a fleet of trucks that its technicians use to travel to their various job sites. Sometimes a technician needed to use their personal vehicle for service calls, and on those occasions, they were reimbursed for mileage. There is no persuasive evidence to suggest technicians were ever expected to travel to or from job sites at their own expense.

4. Employer's technicians are allowed personal use of the company vehicles "as a convenience." This includes taking vehicles home overnight or using company vehicles on weekends. Employees in the Denver office used the company vehicles after hours more frequently than did employees in the Edwards office. Nevertheless, Claimant made personal use of company vehicles at times.

5. The locations from which Claimant started his workdays varied based on the first scheduled job. Some days he commuted to Employer's office in Edwards to obtain his daily assignments. On other days he drove directly from his home to the first job site.

6. On July 29, 2020, Claimant was scheduled to meet a Sony repair technician at 8:00 a.m. at a customer's home in East Vail. Claimant took a company vehicle home the night of July 28 because he was going to drive directly to the customer's home without first going to the office in Edwards.

7. Claimant lives west of I-70 in Avon, Colorado. He left his home at approximately 7:30 a.m. on July 29 and began traveling toward the job site. On the way, he stopped at Loaded Joe's, a coffee shop adjacent to the I-70 interchange. This was Claimant's usual morning routine because he generally passed by Loaded Joe's regardless of whether he was driving to the office or straight to a service call. Claimant purchased a take-out cup of coffee got back in his truck to resume his journey.

8. Upon leaving Loaded Joe's, Claimant had two primary options to reach the job site in East Vail. He could have immediately gotten on eastbound I-70, or he could have driven slightly south on Avon Road, turned east on Highway 6, and joined I-70 a bit later. Employees have discretion regarding their routes, and there is no requirement they take the "shortest" or "fastest" route. Claimant testified he probably would have taken the Highway 6 option. Claimant's supervisor, Matthew M[Redacted], confirmed Highway 6 would not have taken appreciably longer because "it's not like there's a lot of traffic you're trying to avoid."

9. Claimant never made it to the customer's home in East Vail. At approximately 7:48 a.m., his truck went off the road when he suffered an epileptic seizure. Claimant suffered multiple, severe injuries and was transported by ambulance to the Vail Health Hospital. Shortly thereafter, he was taken to a hospital in Denver, where he underwent surgery for an unstable L1 burst fracture.

10. Claimant has no recollection of the accident. He recalls being "out the door with my coffee" at Loaded Joe's, but remembers nothing else until he "woke up" in the hospital in Denver.

11. At the time of the accident, Claimant was travelling westbound on Highway 6 in the direction of Employer's office in Edwards. He has no idea why he was driving west instead of going east toward the job site. Claimant had not planned to go to the office before meeting the Sony technician. He had all the tools and equipment he needed and there was no reason to go to the office.

12. Claimant spoke with Mr. M[Redacted] some days after the accident. Claimant did not understand why he was traveling westbound toward the office because he had the meeting with the Sony technician in the other direction that morning. Neither Claimant nor Mr. M[Redacted] could think of any reason Claimant would have gone to the office the morning of July 29. They both expected him to drive directly to the meeting with the Sony technician at the customer's home in East Vail. At the hearing, Mr. M[Redacted] confirmed he had scheduled the appointment for Claimant and did not ask Claimant to come to the office that morning.

13. Claimant later had a similar conversation with Arielle R[Redacted], who was Employer's Chief Executive Assistant in the Denver headquarters at the time of the accident. Claimant told Ms. R[Redacted] it appeared he was heading to the Edwards office at the time of the accident based on his direction of travel but he could not think of any reason he would have been doing so rather than driving to his scheduled appointment in East Vail.

14. In March 2020, Employer had implemented a tracking system known as "T-Sheets" to track employee's hours for payroll and client billing purposes. The T-Sheets system includes a smart phone app that allows employees to clock in and log their hours in "real-time."

15. Claimant did not immediately adopt the T-Sheets system. Instead, he continued to write his time in a personal notebook or on a piece of paper during the day. He would then enter his time in T-Sheets at the end of the day, or week, or at least before the end of the pay period.

16. Before July 27, 2020, Employer's clock-in, clock-out policy had been somewhat unclear. To clarify the policy and standardize the procedures for employees across all offices, Ms. R[Redacted] she sent a company-wide email advising, "Here is our timesheet policy moving forward: When going to a **job directly from your home in the morning**: clock in when you leave the house, clock out when you leave the job. When going to the **office directly from your home in the morning**: clock in when you arrive at the office, clock out when you leave the job." (Emphasis in original).

17. On July 28, 2020, Claimant emailed Ms. R[Redacted] to confirm he read her email and understood the policy.

18. Despite acknowledging the new policy, Claimant did not clock in with T-Sheets on Juy 29 before leaving his home to meet the Sony technician. Claimant thought he was clocked in that morning, and continued maintained that belief for several months after the accident. But Ms. R[Redacted] confirmed there are no entries in T-Sheets on July 29, and no documentary evidence Claimant clocked in using any other method.

19. Had Claimant met the Sony technician as planned that morning, he would still have been paid from the moment he left his home despite neglecting to clock in through T-Sheets.

20. On August 21, 2020, Claimant gave a recorded statement to Crystal G[Redacted], a claims representative for Insurer. He stated,

> My game plan that morning was, I was supposed to meet a Sony repairman over at a client's house at 8:00 in the morning. So, I left my house and went and grabbed some coffee as I usually do. And I was apparently—supposed to be headed to the job site, but for some reason I was headed to our office. And I was trying to kinda figure that out with my boss. I couldn't really figure out why I headed to the office. But like I said I don't really have much recollection of that morning. The last thing I really remember was getting my coffee from the coffee shop. And that's kinda the last thing I remember before waking up in the hospital.
>
> . . .

> So apparently, what happened was I guess I was driving from the coffee shop to the office for some reason. At which point I had a seizure and I ran off the road, rolled my truck . . . .
>
> . . .
>
> [Ms. G[Redacted]] What vehicle were you driving, you were driving in the work truck, right?
>
> Yeah, I was driving the work truck. Like I said, I was supposed to go straight to a job site that morning. . . . I don't know, I must've somehow got turned around. I don't know. . . . I'm just trying to figure it out. I don't know why I was headed to the office and not to the job site. But, yeah, I had taken my truck home the night before so I could drive straight there.

21. Claimant was questioned at hearing about his prior statements he was "heading to" or "toward the office" at the time of the accident. He testified,

> Q. You told [Mr. M[Redacted]] that you were headed toward the Conundrum office at the time of the accident?
>
> A. That may be true. I may have said that. That I was headed in that direction based on the police report and the information that I gathered, yes.
>
> Q. Isn't it true that when you talked to Mr. M[Redacted] you stated you had no idea why you were headed toward the Conundrum office instead of headed toward your first appointment?
>
> A. That's correct. Mr. M[Redacted] had scheduled me to meet at the residence at 8 o'clock in the morning. The direction was inconsistent with the schedule.
>
> Q. And you don't have any recollection of why you might have been headed to the office. Is that correct?
>
> A. That's correct . . . There was no reason for me to head to the office that morning. Like I said, I didn't need tools, I didn't need anything. I was supposed to be going to East Vail.
>
> . . .
>
> Q. In the recorded statement, you were heard stating, "I was supposed to head to the job site but for some reason I was headed to our office." . . . Do you recall providing a statement of that nature to Ms. G[Redacted] about three weeks after the accident?
>
> A. I recall making a statement of that nature. As I stated, I don't think I was headed to the office. The argument can be made that I was headed in the

> direction of the office. But like I said, I did not—I was not—I had no reason to go to the office.
>
> Q. OK. You had no reason to go to the office, but you were recorded stating, “I was headed to the office.”
>
> A. It would seem based on the police report and the direction that I was headed, I mean, that’s the direction I was going. I was not going to the office though. I was going to the job site. That was what I was scheduled to do and that’s where I was going.

22. Claimant’s explanation regarding his intended meaning when he said he was “heading to” the office is credible and persuasive.

23. Claimant, Mr. M[Redacted], and Ms. R[Redacted] all provided credible testimony. Except for some minor (and ultimately inconsequential) differences, they agree on the important facts regarding this matter.

24. There is no persuasive evidence of any personal reason for Claimant to have been traveling westbound on Highway 6 at the time of the accident.

25. Claimant proved he was travelling for work at the time of his accident and not merely commuting to the office. Claimant planned to meet the Sony technician in East Vail and had no intention of going to Employer’s office that morning. He was not engaged in a substantial personal deviation. Claimant was probably traveling west instead of east because of a mistake. Claimant proved he suffered compensable injuries arising out of and in the course of his employment.

CONCLUSIONS OF LAW

To establish a compensable claim, a claimant must prove he suffered an injury arising out of and in the course of employment. Section 8-41-301(1)(b); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The “course of employment” requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee’s job-related functions.” *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). An injury “arises out of” employment when it “has its origin in an employee’s work-related functions and is sufficiently related to those functions to be considered a part of the employee’s employment contract.” *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The claimant need not actually be performing work duties at the time of the injury, nor must the activity be a strict employment requirement or confer an express benefit on the employer. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Rather, the question is whether the activity “is sufficiently interrelated to the conditions and circumstances under which the employee generally performs the job functions that the activity may reasonably be characterized as an incident of employment.” *Id*. at 210; *see also Panera Bread LLC v. Industrial Claim Appeals Office*, 141 P.3d 970 (Colo. App. 2006). Whether an injury arises out of and in the course of employment are questions of fact for the ALJ, based on the totality of circumstances. *Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141 (Colo. App. 1998).

Under the “going and coming rule,” injuries sustained while commuting to and from work are not compensable unless “special circumstances” create a sufficient nexus to the employment beyond the mere fact of the employee’s arrival at work. *Madden v. Mountain West Fabricators*, 977 P.2d 861 (Colo. 1999). *Madden* established an analytical framework centered on four “variables” to determine whether the requisite “special circumstances” exist. Those variables are: (1) whether the travel occurred during working hours, (2) whether the travel occurred on or off the employer’s premises, (3) whether the travel was contemplated by the employment contract, and (4) whether the obligations or conditions of employment created a “zone of special danger” out of which the injury arose. *Id.* at 864. If the claimant establishes only one of the four variables, “recovery depends on whether the evidence supporting the variable demonstrates a causal connection between the employment and the injury such that the travel to and from work arises out of and in the course of employment.” *Id*. at 865.

Claimant’s accident did not occur during working hours or on Employer’s premises, and the conditions of employment created no “zone of special danger” around commuting to work. Accordingly, the key question is whether the travel was contemplated by the employment contract. *Madden* cited examples of situations that satisfy this factor, such as (a) when a particular journey is assigned or directed by the employer, (b) when the employee’s travel is at the employer’s express or implied request or when such travel confers a benefit on the employer beyond the sole fact of the employee’s arrival at work, and (c) when travel was singled out for special treatment as an inducement to employment. The court emphasized those examples were “not an exhaustive list” of situations where travel can be considered part of the employment contract.

The “traveling employee” doctrine represents a well-established exception to the “going and coming” rule, consistent with the *Madden* framework. If the employer requires an employee to travel beyond a fixed location for performance of their duties, that travel is part of the job and any injuries during such travel are compensable. *Staff Administrators, Inc. v. Industrial Claim Appeals Office*, 958 P.2d 509 (Colo. App. 1997). Here, Claimant was instructed to travel directly from his home to meet the Sony technician in East Vail the morning of July 29, 2020. Had Claimant been following the expected and intended route when he had the seizure, compensability would have been clear and the case may not have even come to litigation.

The confounding factor, of course, is that Claimant was heading in the opposite direction of his morning assignment when the accident occurred. The direction of travel, coupled with his failure to sign in with T-Sheets, could support an inference Claimant was commuting to the office. But the preponderance of persuasive evidence shows he was probably in travel status rather than commuting to work at the time of the accident. Neither Claimant nor anyone affiliated with Employer has come up with any reason he would have been going “to” the office at the time of the accident. Claimant knew he was supposed to meet the Sony technician at 8:00 a.m., and planned to do so. He took the company truck home the previous night because he was going straight to the East Vail property in the morning. When Claimant left his home on July 29, he believed he was driving to meet the Sony technician. He had no reason to go to the office beforehand and did not intend to do so. Claimant was en route to the off-site appointment and became misdirected for unknown reasons. Claimant proved he was traveling for work and not commuting to the office the morning of July 29.

Having determined Claimant was in travel status that morning, the next question is, did he engage in a substantial deviation from his employment by turning the wrong direction and heading west on Highway 6?

Traveling employees generally enjoy continuous workers' compensation coverage except when they make "a distinct departure on a personal errand." *Wild West Radio, Inc. v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). The deviation must also be "substantial" to remove an employee from the course and scope of employment. *Kelly v. Industrial Claim Appeals Office*, 214 P.3d 516, 519 (Colo. App. 2009). The ultimate question is "whether a claimant's conduct constituted such a deviation from the circumstances and conditions of the employment that the claimant stepped aside from his job and was performing an activity for his sole benefit." *Panera Bread, LLC v. Industrial Claim Appeals Office*, 141 P.3d 970, 972 (Colo. App. 2006).

Claimant's memory loss prevents us from knowing for certain why he was heading west on Highway 6 rather than east. But there is no persuasive evidence to suggest he was traveling toward any "personal" destination or activity, such as shopping or visiting a friend. Claimant has consistently and credibly maintained he was going to meet the Sony technician and there is no reason he would have been traveling "to" the office. Had he actually arrived at the office, Mr. M[Redacted] probably would have been displeased because that was not where Claimant was supposed to be. The only inference that makes sense to this ALJ is that Claimant simply made a mistake and turned the wrong direction at the roundabout at Avon Road and Highway 6. The travel in which he was engaged when he had the seizure was sufficiently interrelated with and incidental to his assigned duties to have arisen out of and occurred in the course of his employment.

ORDER

It is therefore ordered that:

1. Claimant's claim for injuries suffered on July 29, 2020 is compensable.

2. Insurer shall cover the treatment Claimant received at Vail Health Hospital on July 29, 2020, consistent with the parties' stipulation.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: April 21, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-860-214-002

ISSUES

I. Whether Claimant established by a preponderance of the evidence that her condition has worsened, and her claim should be reopened for medical and temporary total disability benefits.

II. Whether Claimant established that the Bioness peripheral nerve stimulator (BPNS) is reasonable and necessary medical treatment to cure or relieve Claimant from the effects of her work injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant suffered a work injury on June 24, 2011. (Cl's Ex. 7 at 41). Her foot fell asleep at her desk, and when she stood up, this caused her foot to twist and Claimant to fall. (Cl's Ex. 5 at 23). Claimant had immediate onset of left ankle pain, which caused her to pass out. *Id.* The injury developed into significant issues with Complex Regional Pain Syndrome (CRPS). (Cl's Ex. 8 at 69-70).

2. Daniel S. Bennett, M.D., is board certified in both anesthesia and interventional pain medicine. Tr. at 28:3-4. He has been treating Claimant's CRPS for many years--well before MMI. At the hearing, he explained the disease.

> Complex regional pain syndrome (CRPS) is a disease of the spinal cord and brain. It's an abnormal rewiring after a peripheral injury where... the cord and brain become the problem. It affects multiple areas of the nervous system. It affects vascularity… There's a part of [the] nervous system that's call[ed] the sympathetic and parasympathetic, which are out of [conscious] control, that react to conditions physiologically and then change blood flow. So the hallmark of CRPS is… neuropathic pain. You see vascular dysfunction – meaning that the extremity will become blue and cold because [the individual has] clamped down or become hot or warm because [the individual] dilate[s]. You also see myoclonic activity – shaking of the extremity that is out of the control of the individual. And, if the brain becomes involved, you begin to see strange phenomena such as pain memory, where you push on the individual's extremity, and they feel your touch for minutes to an hour or longer afterwards, which is not a normal finding. You can see trophic changes, where the skin begins to lose its elasticity. Nails become brittle, and the begin to deform, if you will. And, eventually, as brain gets more involved, you begin to see contractures of that extremity, where the toes or the fingers will turn in, and we call that… [CRPS].
>
> Tr. at 47:21-48:14.

Health Status at Time of MMI

3. Linda Mitchell, M.D., performed a division independent medical exam (DIME) on November 4, 2016. She put Claimant at MMI as of that date and provided her a 10% whole person impairment for the CRPS, a 2% psychiatric impairment rating "for continued medication use," and an 11% extremity rating (which converted to a 4% whole person impairment) for the lower extremity. (Cl's Ex. 8 at 69). Dr. Mitchell noted that Claimant had a spinal cord stimulator, and that Claimant "has done well with the neurostimulator." *Id.* Claimant reported to Dr. Mitchell that her back pain was improving. *Id.* Dr. Mitchell recommended physical therapy for 12 weeks, a follow-up with Dr. Bennett every three months to adjust the nerve stimulator, and up to 10 acupuncture treatments a year for the CRPS. *Id.* at 69-70. She noted that Marilyn Myers, Psy.D., indicated that Claimant was stable and that psychological treatment would be tapered off over the next six months, but that Claimant should see a physician every three to six months to monitor medication use. *Id.* at 70. Finally, Dr. Mitchell stated that "[Claimant] is able to perform her regular job, although at times, works from home. I believe she is capable of working in a light category. She may need to periodically stay off her feet and elevate the left lower extremity." *Id.;* Tr. at 32:19-20, 32:22-24.

4. When Claimant went to the DIME, she mentioned she "finally felt human because the stimulator was working, I was getting good pain coverage. I was in therapy – I mean, things were going well. And I was working full-time… I was doing well at work that – over that period of time. I – I had minor accommodations, and I was able to work full-time." Tr. at 157:18-158:1 She had previous ups and downs with the stimulator, which required fixes and maintenance, and she was never back to normal or pain-free following the diagnosis of CRPS, but the stimulator was working when she saw the DIME. Tr. at 158:9-20. Between 2013 and the time of the DIME, with the exceptions of the surgeries, Claimant, for the most part, could work full time, and had continued to work full time. Tr. at 159:4-8.

5. Respondents filed a final admission following the DIME and admitted for a 12% whole person rating and an 11% scheduled rating, as well as maintenance medical treatment. Claimant filed an application for hearing seeking to overcome the DIME endorsing, among other issues, relatedness of the neuromas and medical benefits because many of the maintenance treatment recommended by Dr. Mitchell had not been approved by Respondents. (Cl's Ex. 4 at 15). In March 2017, Claimant answered several interrogatories in preparation for the hearing to overcome the DIME. At the time, she was contending that the neuromas on the bottom her foot were a part of the workers' compensation injury. Tr. at 195:18-23. Many of her answers in the interrogatories pertained to those neuromas. Tr. at 195:24-196:4. She was also struggling with movement and pain. Although Respondents got Claimant to agree that she stated in her interrogatories "Makes walking on inclines very problematic," Respondents later recognized that Claimant also stated, "stimulator helps to reduce pain." Tr. at 196:21-197:3. The parties entered into a stipulation to resolve the issues on May 2017. In the stipulation, the neuromas were removed from being a related condition, and the parties agreed that an electric wheelchair was not currently reasonable or necessary. Tr. at 196:1-4; (Cl's Ex. 4 at 15). Further, Respondents agreed to provide 8 different maintenance treatments through the stipulation that they had not been providing. Tr. at

198:7-11; (Cl's Ex. 4 at 16). Claimant stated that most of her pain that she reported in the interrogatories was either from the neuromas on her foot, or because she was not receiving maintenance care. For example, Claimant testified that she had an inability to do exercises since her physical therapy had been stopped before the strengthening phase; however, she was allowed to go back to physical therapy after the stipulation. Tr. at 197:8-25. Her doctors were also able to do trigger point injections following the stipulations and this helped eliminate Claimant's muscle spasms. Tr. at 197:22-25. She noted, "I still had some issues. But the stipulation allowed me to get most of those issues taken care of, but not all because [Respondents] didn't let everything in the stipulation." Tr. at 198:1-3. "A lot of what was in the interrogatories, I had fixed." Tr. at 203:6-20.

6. Dr. Bennett specializes in neuromodulation, which is spinal cord stimulation. Tr. at 28:12-15. His research also heavily focuses on neuromodulation and, in particular, neuropathic pain, and complex regional pain syndromes. *Id.* Neuromodulation is when an electric field is placed over an area of the spinal cord or brain to alter the way the excitatory or inhibitory compounds are transmitted, which can decrease pain. Tr. at 28:20 – 29:4. A constant current field essentially functions as a pacemaker for the spinal cord and brain. Tr. at 29:2-4. Dr. Bennett provides all phases of treatment for CRPS: intervention, physical, and surgical application of neuromodulation. Tr. at 30:20-23. Dr. Bennett used to be Level II certified in workers' compensation but chose not to continue his certification because his time was devoted between active patients and research. Tr. at 31:18-23.

7. Dr. Bennett first examined Claimant in August 2013, and eventually implanted a spinal stimulator to help control the pain from Claimant's CRPS. Cl's Ex. 8 at 55, 58. Shortly after the DIME when Dr. Mitchell placed Claimant at MMI, Dr. Bennett saw Claimant again on January 3, 2017. At the time, Dr. Bennett noted that Claimant was doing well surgically and had adequate stimulator coverage. Tr. 22 at 19-22; Cl's Ex. 9 at 111. "With the stimulator on, the neuropathic pain indications on examination were not present. And the vascular, of the blood flow, to the [left lower] extremity had normalized." Tr. at 34:7-9. Claimant also had no exaggeration of response to pain, abnormal responses to sensation, nor windup; and she had normal capillary refill. Tr. at 34-35; Cl's Ex. 9 at 111. Based on the examination, Dr. Bennett's overall impression was that Claimant had normal findings in the left lower extremity. Tr. at 36:7-11. He felt that surgically Claimant remained at MMI with open medical for IPG (battery replacements) every five years. Tr. 22 at 19-22; Cl's Ex. 9 at 111. At that appointment, Dr. Bennett also noted that Claimant remained working full-time. (Cl's Ex. 9 at 110, 111).

8. Claimant noticed some mild changes starting around the summer of the stipulation, but mainly because she had not yet stabilized on her new medications. She was still working full-time and was promoted at the end of 2017 with a large raise to a mentally demanding position. Tr. at 160:13-19, 159:10-13, 19-20; Tr. at 183:12-22 (she does not remember the title due to brain fog). She set up a new system to automate the roll out of trucks when they needed line repairs or to fix the hardware in the field. Tr. at 200:15-19. Claimant was laid off from her company on May 18, 2018 due to a large merger,

along with over 500 other people in her company, although she does not entirely remember the number of layoffs. 161:4-162-10.

Worsening of Condition -- Malfunction and Eventual Failure of the Stimulator

9. Before the layoff—somewhere around the Spring of 2018—Claimant noticed she was having physical issues, and it was around the time of the layoff in mid-May that she recognized the stimulator was acting up. Tr. at 160:21-161:1. Claimant had first started treating with Ellice Goldberg, D.O., in 2012, and had continued treatment for maintenance care with Dr. Goldberg after reaching MMI. Around that time of the layoff, Claimant recognized that the stimulator was having problems and her pain was increasing, and so Dr. Goldberg increased Claimant's restrictions for work on May 17, 2018, by taking Claimant completely off work. *Id.* at 162:20-163:1; Cl's Ex. 12 at 435, 438. Throughout Claimant's continuing appointments in 2018 with Dr. Goldberg, Claimant presented with increased aching back pain, aching foot pain that moved into stabbing pain, and instability; the constant pain from her foot also started creeping up her leg. *Id.* at 447, 464, 472, 478, 481, 490, 496 & 511.

10. Even after the layoff, Claimant still wanted (and felt able) to work, so she was looking for a job. Tr. at 163:20-164:3. Claimant contacted the Colorado Division of Vocational Rehabilitation and was working with them to find work. Cl's Ex. 27 at 424. Claimant noted that Dr. Bennett's team was working on some reprogramming of the stimulator, and she was hoping they could figure it out. *Id.* She had had some malfunctions with the stimulator before and waited through those times, and "just figured this would be the same thing." Tr. at 164:10-12. "I'd just wait through that and get it working and continue on." Tr. at 164:12-13. From the summer of 2018 through the end of 2018, Dr. Bennett and his team were working on the stimulator, yet the coverage was becoming less and less. Tr. at 165:18-165:3. Dr. Goldberg was also providing osteopathic manipulations around the spinal cord stimulator insert, which Claimant thought helped the foot, circulation, and gait. Tr. at 165:20-166:5. There was a slow and steady increase of pain, and Claimant was not getting better. Tr. at 166:10-17. Sometimes, the stimulator would start working again for a week, but then it would stop again.

11. On August 9, 2018, based on a request by Claimant, Dr. Goldberg changed Claimant's restrictions from May 2018 and stated that Claimant "has worsened in the last few months from MMI and she needs an electric wheelchair…[Claimant] has work restrictions with no lifting greater than 15 pounds[.] No walking over 1000 feet." Cl's Ex 12 at 513. Dr. Goldberg also recommended an increase in osteopathic manipulation and referred Claimant for regular massages and more acupuncture. Cl's Ex 12 at 513. The following visit, Dr. Goldberg stated that the back was continuing to worsen, and Claimant was having spasms and was unable to twist or bend. *Id.* at 521. The frequency of episodes was daily and increasing, and Claimant found them "incapacitating." *Id.* Despite a change in restrictions, the ALJ finds Claimant still had a decrease in her earning capacity as of May 17, 2018, based on her worsened condition.

12. Claimant had a follow-up visit with Dr. Bennett on October 16, 2018, as "[t]here had been a change in the programmability of her system." Tr. at 36:25-37:1. The neurophysiologist, during routine programming for the stimulator, realized that there were certain electrodes that he could not access. Tr. at 37:4-6; Cl's Ex. 9 at 114.

Claimant was still getting some coverage from the spinal cord stimulator, but not complete coverage. Tr. at 38:16-22; Cl's Ex. 9 at 115. The neurophysiologist could reprogram and obtain coverage briefly, but Claimant would report that would fade within days of leaving the office. Tr. at 39:21-24; *see, e.g.*, 39:25-40:1; Cl's Ex. 9 at 120. Dr. Bennett became "concerned about the stability of the hardware, itself." Tr. at 37:7-10, 40:6-11. The only option was to return to the operating room to disconnect the battery of the stimulator from the electrode and paddles to determine where in the circuit the problem was occurring. Tr. at 38:2-5. The operation occurred on January 7, 2019, and, upon analysis of the battery and the paddle, Dr. Bennett determined the problem was with the lead in the paddle, and not the IPG (battery). Tr. at 38:8-14; Cl's Ex. 9 at 125-27. The stimulator had stopped functioning. Tr. at 50:19-51:1, 57:8-14, 75:19-22, 171:24-25. Further, an X-ray of the thoracic spine at the level where the paddle had been placed (T-10) showed some degenerative changes at that level. Tr. at 41:14-22. The finding by Dr. Bennett regarding the malfunctioning of the stimulator corroborates Claimant's statements to her medical providers and testimony that her physical and mental condition worsened as of May 17, 2018 as well as Dr. Goldberg's decision to remove Claimant from work.

13. Dr. Bennett referred Claimant to neurosurgery because the lead sitting over the spinal cord needed to be taken out and cleaned, a new paddle needed to replace the non-working paddle, and there would be an extensive area of scar and adhesions that would need to be removed under microscope. Tr. at 41:3-12; Cl's Ex. 9 at 135.

14. In March 2019, Claimant received a letter from Mr. Talbage at the Division of Vocational Rehabilitation stating her file had been closed because of her pending surgeries. Cl's Ex. 27 at 424. Claimant has not reached back out to Mr. Talbage, because she is still waiting for something that would provide her with relief from the pain. Tr. at 168:13-22.

15. Claimant then started experiencing brain fog. Tr. at 167:11-12. She first thought it was just from the surgery, "[b]ut it – it just never ended." *Id.*

16. Dr. Bennett again saw Claimant on June 11, 2019. Dr. Bennett recommended a referral to neurosurgery, Dr. Beasley, for consideration of revision of the paddle versus replacement of the paddle. Tr. at 42:6-11.

17. Dr. Beasley ultimately gave the opinion of re-trialing below the paddle to see if they could capture new nerve fibers. Dr. Robinson, who Dr. Bennett referred Claimant to for a second opinion, determined that revision of the spinal cord stimulator was not appropriate, but suggested that Dr. Bennett could place a trial lead lower on the cord, and then Dr. Robinson could just place a new paddle beneath the old one without having to expose the old surgical site, and thus reduce complication. Tr. at 51:4-12; Cl's Ex. 9 at 181. Dr. Robinson recommended a trial of lead revision one level below the current spinal cord stimulator construct. Cl's Ex. 9 at 171, 174; Tr. at 56:3-5. Dr. Bennett noted "This is NOT normal maintenance of the SCS system," but rather a revision. Cl's Ex. 9 at 171.

18. Dr. Bennett also took Claimant off work status on January 30, 2020 – effective February 10, 2020 - because the extremity was worsening, she could not perform work with the pain, and he was going to implant a new stimulator lead for a trial. Tr. at 57:8-14; Cl's Ex. 9 at 191.

19. On February 10, 2020, Dr. Bennett performed the trial and implanted a new lead at the cauda margin of T-10. Cl's Ex. At 192-193; Tr. at 192. Claimant had a 70% reduction in pain, her temperatures normalized following the trial, and there was a significant decrease in the neuropathic findings. Tr. at 55:13-17; Cl's Ex. 9 at 197, 200. Unfortunately, Claimant also began receiving shocking and intermittent jumping of the signal. Tr. at 51:24-52:2; Cl's Ex. 9 at 200. As a result, by February 20, 2020, Dr. Bennett decided to pull the trial lead out. Tr. at 52:3; Cl's Ex. 9 at 201. Although Dr. Bennett still considered placing a paddle at a different level, he could not guarantee that Claimant would not continue to have intermittent shocking from the system. Tr. at 53:1-4. Thus, Dr. Bennett referred Claimant for removal of the spinal cord stimulator. Cl's Ex. 9 at 201. COVID delayed that procedure, but it was eventually performed. Cl's Ex. 9 at 222, 243.

20. Claimant brought up a peripheral nerve stimulator (PNS) to Dr. Bennett and asked if it was an option, and Dr. Bennett determined that Claimant should consider a trial of a peripheral stimulation *Id.*; Tr. at 184:11-15, 17-20. He requested Dr. Goldberg make an appropriate referral. *Id.* It would be less invasive than either of the plans from Drs. Robinson or Beasley. Tr. at 53:6-11.

21. In March of 2020, Dr. Bennett noted that Claimant "has not been able to work since January 2019"; the limited reduction of pain "is not enough to permit meaningful engagement at work." Cl's Ex. 9 at 205. Dr. Beasley finally removed the non-functioning spinal stimulator on June 16, 2020. Depo. Goldman at 79:18-25.

22. Greg Reichhardt, M.D., performed several medical exams on behalf of Respondents over the years regarding Claimant and her need for treatment. Although he originally stated in his testimony that there were no objective findings that Claimant had gotten worse, Dr. Reichhardt agreed that Claimant's spine cord stimulator was non-functioning as of January 2019 and was ultimately removed. *Id.* at 28:23-29:3. He also admitted that there was a CT myelogram on June 21, 2019 that noted mild flattening of the dorsal sacroiliac at the level of the spinal cord stimulator at T10. *Id.* at 29:6-7; *id.* at 34:16-21. Finally, while he had for years stated throughout the claim that Claimant did not have CRPS (even following Dr. Mitchell's determination that Claimant was at MMI for CRPS), by April 10, 2019, Reichhardt admitted that Claimant appeared to have CRPS of left foot, and her spinal stimulator was currently not working. Depo. Reichhardt at 69:8-15, 75:1-9; Rs' Ex A at 50.

Worsening of Condition – Opioid Treatment

23. Claimant had not been on opioids for chronic pain during her treatment of CRPS, except for following surgical procedures. Tr. at 43:2-5. However, on March 14, 2019, Dr. Bennett prescribed opioids to Claimant because of the breakdown of the spinal cord stimulator, severe break through pain into Claimant's lower extremity, and because she had tried multiple other medications in the past without benefit. Cl's Ex. 9 at 137-38; Tr. at 43:6-12, 75:19-25. Claimant had been experiencing flares of 8 out of 10 on a daily basis, which were negatively affecting her function. Cl's Ex. 9 at 138. Dr. Bennett hoped that the opioids would allow Claimant to continue work and function during the determination of a neurological solution for the stimulator. Tr. at 42:23-43:1; Cl's Ex. 9 at 140. Dr. Bennett wanted "to keep her from ending up in bed, I want to have her up and

about." Tr. at 57:5-7. Claimant noted that after the January surgery, "The – the pain increased" and so Claimant "finally relented" and went on opioids. Tr. at 167:12-14.

24. At each visit thereafter, Dr. Bennett continued to perform physical tests on Claimant for the CRPS, as well as perform screens for how the opioids were affecting Claimant. Tr. at 43:22-44:9. Dr. Bennett's goal was to maintain as much function as Claimant had at the time of her original DIME examination, with the absence of a functioning stimulator. Tr. at 45:7-12.

25. Claimant noted that "The opioids take the edge off. That's really all it does is take the edge off. It doesn't get rid of the pain." The opioids allow Claimant to sleep, but she will still wake up from the pain every, two, three, or four hours. Tr. at 169:12-17. They have also increased her brain fog, "it's not something that I would wish on anyone." Tr. at 169:7-8. She has been finding herself more overwhelmed and having a harder time cognitively. Tr. at 170:5-8. In contrast, with the stimulator, Claimant could almost entirely get rid of the pain–even down to a zero or one on the pain scale. Tr. at 169:20-22. She was also able to walk a reasonable distance, and both work and function "pretty normally." Tr. at 169:2-5.

26. While waiting for the trial to be re-approved, Dr. Bennett recognized that there was not going to be a way to put in a full new spinal cord stimulating unit, so on December 10, 2019, he tried an EMG-guided nerve block of the peripheral nerve to control the pain without the need to increase the opioid. Cl's Ex. 185; Tr. at 54:2-6. That was effective for several months. *Id.*; Cl's Ex. 9 at 189. "Blocks are never a long-term solution," but they are good for intermittent pain control, "primarily during flares, when everything else fails to bring the flare under control." Tr. at 54:8-13.

27. "Opioids can have widespread effects on the body." Depo. Reichhardt at 28:6-7; Tr. at 44:4-5 (Dr. Bennett); Depo. Goldman 84:5-21. "It is preferable to avoid opioids, if possible." Depo. Reichhardt at 28:10-11. Dr. Goldman, another record-only RME, noted that when a patient takes opioids, the physicians must be vigilant in assessing head to toe symptoms, especially in CRPS. Depo. Goldman 84:5-21. Further, Drs. Bennett and Goldman agreed that, at best, opioids provide usually only a 30% diminution of pain, on good days maybe up to 40%. Depo. Goldman at 84:5-21. Dr. Reichhardt reported that Claimant would need to continue opioid use as a bridge until she could undergo revision of the spinal cord stimulator or implantation of a classical proximal peripheral nerve stimulator. Depo. Goldman at 81:8-25; Rs' Ex. B at 97. Both Drs. Bennett and Goldman agree that while opioid medication can help reduce pain, they cannot primarily treat the vascular components of CRPS. Depo. Goldman at 84:22-85:6.

Worsening of Condition – Complaints and Exam Findings

28. On May 17, 2018, Claimant presented to Dr. Goldberg. At this appointment, Dr. Goldberg noted that Claimant's chief complaints included the following:

    - Increased pain with her leg being very painful.
    - Increased depression, but no active suicidal thoughts but wishing she was dead.
    - Desire of Claimant to go on short term disability.

29. At the May 17, 2018, Dr. Goldberg evaluated Claimant and performed a physical examination and noted that Claimant had "toes echhymotic and cold" on her left lower extremity, and diffuse pain and changes--these became constant findings in Dr. Goldberg's future records. *See, e.g.*, Cl's Ex. 12 at 441, 445 & 462.

30. Based on her assessment, Dr. Goldberg provided these diagnoses:

    - Complex regional pain syndrome of the left lower extremity.
    - Generalized anxiety disorder.
    - Mood disorder due to known physiological condition with depressive features.

    Based on Claimant's worsening medical and psychological condition, Dr. Goldberg took Claimant off work immediately and specified Claimant should go on short-term disability. She also advised Claimant to call if she had any suicidal ideations so Claimant could be hospitalized. Based on Claimant's worsening condition and being removed from work – Claimant had an increase in her disability and an actual decrease in her earning capacity since being placed at MMI. Cl's Ex.12, BS 439-442.

31. On May 18, 2018, Claimant returned to Dr. Goldberg. At this visit, Dr. Goldberg restated that she put Claimant on short term disability – the day before - because of Claimant's increase in pain and increased depression, i.e., worsened condition since being placed at MMI. Cl's Ex. 12, BS 443.

32. In January 2019, Dr. Bennett noted that Claimant was having allodynia, hyperpathia and mild windup. Cl's Ex. 9 at 136. Dr. Bennett continued to note that Claimant's left lower extremity was now positive for allodynia, hyperpathia, and mild windup. Tr. at 43:2-5. Dr. Bennett again saw Claimant on June 11, 2019. His physical examination showed a return of neuropathic symptoms. Tr. at 42:1-2. Again, Claimant had allodynia, hyperpathia and mild windup. Cl's Ex. 9 at 148. He also noted that trophic changes were present. *Id.*

33. Dr. Bennett confirmed that temperature changes of .5 degrees Celsius between extremities is significant; reaching one or two degrees Celsius, quite significant. He also noted her blue toes. Tr. at 55:5-7 & 69:19-23; *see, e.g.*, Cl's Ex. 9 at 210, 216, 222 & 255.

34. Dr. Bennett confirmed hypersensitivity to light touch--hyperpathia, consistent with CRPS. Tr. at 69:9-13.

35. By October 20, 2020, Dr. Bennett's findings demonstrated Claimant continued to worsen and her symptoms now included moderate-marked allodynia, windup with one-second separated brushstrokes, mottled skin, and dark blue fourth and fifth toes, coupled with significant temperature differences between the left and right lower extremity. Cl's Ex. 9 at 255.

36. Dr. Bennett noted a concern with diminished muscle tone and width when compared with the other extremity. Cl's Ex. 9 at 255; Tr. at 60:22-61:1. Muscular atrophy in CRPS appears as the syndrome progresses; "when you start seeing those changes, they're often irreversible." Tr. at 61:5-10. Along with the physical exams and temperature differences, this is showing "the CRPS is not getting better, [i]t's actually worsening without treatment." Tr. at 61:11-14.

37. When the stimulator started failing, Claimant noted that her gait changed. She started walking on her heel, instead of pushing off with her toes. Her posture also got worse, and as the pain got worse, “it just spiraled.” Tr. at 172:11-21. After the stimulator fully failed, Claimant began to notice that her foot was cold, and sometimes the coldness would go above her knee. Tr. at 173:3-4. The discoloration and pain got worse. Tr. at 173:5-6. Her left calf was remarkably different, showing atrophy. Tr. at 173:17:20. She recently measured her calves, and her right is 34 1/2 centimeters, her left is now down to 32 1/2 centimeters; the left atrophy has been “progressively getting worse since the stimulator has gone.” Tr. at 174:22-175:3.

38. By October 12 of 2020, even Dr. Reichhardt noted that Claimant was reporting her pain in her left foot as 8-9 out of 10, and that she was having significant symptoms from CRPS. *Id.* at 34:3-7; Rs’ Ex. B at 69, 74. Dr. Reichhardt admitted in his report of November 13, 2019 that Claimant’s prognosis without replacement of the spinal cord stimulator was “fair,” but with the spinal cord stimulator, it “would be better.” *Id.* at 30:5-12; Rs’ Ex. B at 109. He stated that he was “hopeful that she could be back to where she was prior to the malfunction of her spinal stimulator.” Rs’ Ex. B at 109; Depo. Reichhardt at 30:13-18.

39. Dr. Goldman noted that objective physical findings of worsening of CRPS would include wasting of the foot, a two-centimeter difference in girth in the calf muscles measured side to side, and visualization of soft tissue and the quality of the skin and fascia. Depo. Goldman at 96:21-97:20. However, in this case he was only able to make determinations regarding physical findings of trophic changes or atrophy changes to Claimant’s left lower extremity by reviewing other physicians’ observations. Depo. Goldman at 82:7-14. Dr. Goldman, as noted earlier, never examined Claimant.

Worsening of Condition – Psychological

40. On May 17, 2018, around the time that stimulator was starting to fail, Dr. Goldberg became concerned about Claimant psychologically, noting Claimant’s mood disorder due to a known physiological condition with depressive features, and so she decided to entirely restrict Claimant from work as of that date. Cl’s 12 at 441-42. Dr. Goldberg noted that Claimant presented for her appointment “with increase depression and pain and declining overall since MMI one year ago.” *Id.* at 439.

41. Following the failure of the stimulator, and Dr. Bennett placing Claimant on opioids, Dr. Bennett performed a brief battery for BHI 2 on July 11, 2019. Tr. at 88:9-21. Dr. Bennett recognized that Claimant was experienced a diminishment or decrease in function due to psychological issues. Cl’s Ex. 9 at 152. He referred Claimant to John Disorbio, M.D., for further evaluation. Tr. at 45:1-9; Cl’s Ex 9 at 156-58. Dr. Bennett had collaborated with Dr. Disorbio for many years on difficult cases, including a large number of CRPS and neuropathic pain cases. Tr. at 64:11-16.

42. Dr. Disorbio is a licensed clinical psychologist, who has worked in the field of pain medicine psychology for over 34 years and has treated “[t]housands of workers’ compensation patients, and, in particular, many patients with CRPS.” Tr. at 85:12-18. He is the co-author of the Battery for Health Improvement 2 (BHI 2), as well as the medical intervention risk report, an evidenced-based measure. Dr. Bennett referred Claimant to Dr. Disorbio because he was “very concerned” that she had been

"deteriorating from an emotional perspective." Tr. at 86:22-23. "[S]he was actually struggling to the degree of where she was having difficulty from a cognitive perspective as well as a physical perspective." Tr. at 86:24-87:1.

43. Dr. Disorbio first evaluated Claimant on August 23, 2019. When he first saw her, Claimant was reporting 9 out of 10 on the pain scale, but Dr. Disorbio felt Claimant still "was hopeful that we could get something done to reduce her pain and improve her function. But over the time that I started to treat her, it – she deteriorated over time because she became rather hopeless." Tr. at 89:19-23, 97:14-24. "She has struggled mightily." Tr. at 89:19. Compared to the two percent psychiatric impairment for continued medication use that Dr. Mitchell provided Claimant when she reached MMI, and Marilyn Myers, Psy.D., indication that Claimant was stable before MMI; Dr. Disorbio stated that "From my perspective, I have observed [Claimant], over the time that I've been treating her, that she has deteriorated from an emotional perspective… problems with memory, concentration, and she definitely has the vegetative signs of depression." *Compare* Tr. at 90:4-15 *with* Cl's Ex. 8 at 70. "She has difficulties with recall and just functioning, and I've watched her just struggle mightily at this point." When Dr. Disorbio saw her, he determined that she was not at MMI from a psychological perspective, but rather, worse than when she had presented for a DIME with Dr. Mitchell. Tr. at 92:10-14, 18-23; Tr. at 96:19-23 (Dr. Disorbio reviewed the DIME report after his initial evaluation of Claimant). The testing and treatment that Dr. Disorbio performed were designed as part of a multi-disciplinary approach to treat her diagnosed condition of CRPS. Tr. at 115:16-20 & Tr. at 93:19-22.

44. Claimant noted at hearing that she did not feel like she had a mental issue at the time of the DIME because "I was still able to work full-time. I was still functioning – a functioning human being." Tr. at 171:19-21. When asked to attribute her current depression and anxiety to her injuries or to something else, Claimant responded, "I would say 90 percent of it is to the injury, because it's like, you increase the pain. You lower the sleep because of the pain. You don't function as well, and the add the – the medications on top of it, and – I mean, it – and the medication's all for the pain." Tr. at 176:6-10. Claimant noted that she also had financial struggles, and there were so many issues still up in the air about getting her dysfunctional, non-operational stimulator being taking out. Tr. at 114:11-3; Cl's Ex. 11 at 376. She also noted, "I have to be careful, because there are times where I'm more focused on the pain than what I am doing." Tr. at 176:13-14. She named her biggest stressor as the brain fog, and noted that "sure, the litigation stuff adds to it." Tr. at 175:13-23. She does not believe she would be able to complete her previous work now, "I mean, I – if I can't even figure out the screens for a meeting, I'm – I'm sorry. You know, I mean, things – things have totally changed." Tr. at 200:20-24.

45. While Dr. Disorbio noted some of Claimant's distress was caused by the litigation process, the ALJ finds that this distress is not a factor in Claimant's worsening psychological condition. Instead, the ALJ finds that the malfunction of the stimulator with the associated increase in pain and disability is the cause of Claimant's worsened psychological condition.

Dr. Goldman – RME Record Only Review

46. L. Barton Goldman, M.D., is a non-shareholding physician of Rehab Associates of Colorado. Depo. Goldman 7:23-8:2. Dr. Reichhardt, who performed multiple RMEs and testified for Respondents in the claim, is the current president and shareholder of Rehab Associates of Colorado, and therefore, Dr. Goldman's supervisor. *Id.* at 7:15-21.

47. Dr. Goldman never personally examined Claimant, and stated in his report, "the patient's subjective history, the patient's pain questionnaire responses, physical examination, and any other data or information pertinent to this evaluation that I will be able to weigh the various commentaries within the most accurate and integral perspective and thereby provide the most comprehensive, accurate, and medically probable conclusions and recommendations towards the end of this document." (R's Exhibit A, pg. 6). *Id.* at 8:8-12. Dr. Goldman did not have access to these acknowledged pieces of important data from an actual physical exam and interview of Claimant.

Medical Treatment Reasonable, Necessary and Related -- Peripheral Nerve Stimulator

48. Lynn Zang, M.D., a neurologist who saw Claimant for new numbness of her left foot on Feb 25, 2019 and April 5, 2015, found that the numbness was likely a clinical worsening of her CRPS. Depo. Goldman at 73:5-9; (Cl's Ex. 16 at 196, 1103). However, she also gave the possible diagnosis of tarsal tunnel of the left lower extremity, after an NCV/EMG study. (Cl's Ex. 16 at 196, 1103).

49. Therefore, on May 20, 2019, Claimant saw Gregory P. Still, D.P.M, for consultation of possible tarsal tunnel of the left lower extremity. Cl's Ex. 10 at 265. Dr. Still thought Claimant may have some degree of tarsal tunnel and recommended a diagnostic block. *Id.* at 267. He also determined that surgery was not a good option because of her CRPS, but noted that with her CRPS she may be a candidate for a peripheral nerve stimulator. *Id.* at 266-67.

50. Gregory Paul Still, DPM, is board certified in foot and ankle surgery. He is a private practice podiatrist and does not usually take workers' compensation cases. Tr. at 130:7-8. Although Claimant first saw Dr. Still on her own (she had looked him up after hearing the possible diagnosis of "tarsal tunnel"), Dr. Goldberg specifically referred Claimant to him for evaluation of a peripheral nerve stimulator, and Dr. Still agreed to keep seeing Claimant "despite being work comp." Tr. at 130:9-10, 186:22-187:1; 74:15-16.

51. After initially ruling out some other potential causes of Claimant's pain, his focus became determining whether a peripheral nerve stimulation would help her. Tr. at 122:4-7. He performed some peripheral nerve blocks on different nerves to try to determine which were the biggest contributors to her pain. Tr. at 122:7-8, 16-22. Throughout 2019, her performed blocks on 3 of the 4 nerves in the lower extremity, below the knee. Tr. at 122:23-123:2. Claimant received relief with selective nerve blocks as well as blocks with more than one nerve. Tr. at 123:1-7. "Even though her pathology of her pain was mediated by more than one nerve, and that's common with CRPS, she got quite a bit of relief… at times, 70 percent of more relief of pain." Tr. at 123:8-11, 20-21. Dr. Still focused primarily on the tibial nerve and the superficial peroneal nerve because "those are the main nerves that provide both sensation and motor function in the leg." Tr. at 124:2-5. "I do think she has pain that is caused also by the sural nerve,

but that's a small sensory nerve, and I feel that is one that possibly could be… not treated right now, and –- and we could still probably obtain 70 to 90 percent relief of her pain. Tr. at 124:7-12. The outcomes of the various blocks focused Dr. Still toward considering a peripheral nerve stimulator, a minor surgery. Tr. at 124:14-18. He did not feel that she would benefit from any major surgical procedures on her leg or foot because doing surgery on someone with CRPS could make them worse. Tr. at 125:19-22. "She didn't have too many options left for treatment." Tr. at 125:5-6.

52. A peripheral nerve stimulator is a small device – an external pulse transmitter, like a battery pack. Tr. at 127:10-12. It is about the size of a thumb, and it is attached to the outside of a patient's extremity. Tr. at 127:11-13. It can be removed for showering/bathing/swimming and before bed. Tr. at 127:13-15. It is initially placed in a minor procedure and the leads do not need to be moved "very often with peripheral nerve stimulation because they stay in place pretty well. The catheter has a little anchor that deploys it into the soft tissue." Tr. at 138:2-5. Additional invasive procedures are not necessary because the batteries are contained in the external pack and can be charged overnight. 137:22-18:1. Peripheral nerve stimulators have been used for CRPS for over 30 years, but they are under-utilized because "let's face it, doctors typically don't get paid that much to do these stimulators." Tr. at 128:22-34. However, "there's more and more research indication that this is a great option. And – and not just recent research, but 25, 30 years' worth."[1]

53. Dr. Still performed a brief trial for the peripheral nerve stimulator on May 18, 2020. Tr. at 125:9; Tr. at 125:25. "[T]here's valid criticism in that a trial that did was only about an hour long or --- or maybe even 45 minutes, but that was all I was authorized to do by the workman's comp company." Tr. at 125:13-16. There are trials that are more extensive and accurate that can be done for 3-7 days, but those were not authorized by the workers' compensation company. Tr. at 125:9-21.[2] Dr. Still determined that even though Claimant did not have the longer trial, that the peripheral nerve stimulator was a good option, because she had already tried surgery, medications, and a spinal cord stimulation, and "[s]he doesn't have too many options left." Tr. at 128:12-15. "The risks are relatively low, and the cost is relatively low," "I feel the risk to benefit ratio on this is – is worth taking the risk." Tr. at 128:15-17.

[1] One of the studies referenced was paid for by Bioness. Dr. Still commented, of course they are studies funded by companies, "that's what we have to deal with in medicine. It's. . . unfortunate and fortunate." Tr. at 151:21-152:2. Dr. Goldman expressed concern over the Bioness study, but also stated, "It's not uncommon for the very first studies to be industry subsidized." Depo. Goldman at 87:1-2. Dr. Still also referenced a study of PNS from September 2020, a 30-year review of 165 patients treated with PNSs, "so the research is ongoing." Tr. at 151:15-17.

[2] Both Drs. Reichhardt and Goldman note that the Guidelines suggest that a longer trial of the peripheral nerve stimulator is necessary before they Guidelines recommend authorization of the peripheral nerve stimulator. Tr. at 35:18-24; Depo. Goldman at 18:20-22. However, Respondents refused to authorize a longer trial. Respondents cannot have it both ways. They cannot fail to authorize a longer trial, and then use the doctor's failure to perform a longer trial against the Claimant.

54. The trial peripheral stimulator targeted the tibial nerve and the superficial peroneal nerve, both located above the ankle level. Tr. at 126:1-5. Dr. Still acknowledged that there has been some criticism in the past of peripheral nerve stimulation being used for CRPS because it is a multi-nerve problem. And, even Dr. Reichhardt, stated that peripheral nerve stimulation could only address one nerve (although he also admitted that he does not have independent expertise regarding spinal cord stimulators and the difference in models and compatibility issues and was unable to find scientific support, Tr. at 32:17-33:20). Tr. at 131:10-12. However, the Bioness nerve stimulator could target two of the three nerves causing pain in Claimant's leg. Tr. at 126:6-10. When performing the trial with the Bioness trial stimulator, it yielded an estimated 90% relief of Claimant's pain that day. Tr. at 126:11-14. Based on the results of the trial, Dr. Still submitted a request for a peripheral nerve stimulator for Claimant. Tr. at 126:18-21.

55. Dr. Still learned about the workers' compensation medical treatment guidelines after the insurer denied the peripheral nerve stimulator. He noted that the guidelines are just that, guidelines. Tr. at 130:2-3. "We don't have randomized, double-blinded placebo… or controlled trials for many things in medicine." Tr. at 130:12-14. In his response to the insurance carrier after the denial, he was frustrated and blew off some steam at the workers' compensation process. Tr. at 135:23-136:6, 150:4-7 (Respondents were holding the treatment guidelines 'as such high dogma or like their bible was – yes, I mean, I understand I – I was unfortunately being over passionate about trying to care for the pa[tient]. "The American Society of Regional Anesthesia and Pain Medicine, on their website, they recognize that peripheral nerve stimulation is . . . a legitimate treatment option for CRPS type 2. And oftentimes, CRPS type 2 responds very robustly to directly stimulating a peripheral nerve." Tr. at 131:4-8. Additionally, Claimant's CRPS symptoms are localized in her left lower extremity, and so a peripheral nerve stimulator can target that area. Tr. at 131:19-132:6. If the CRPS had spread or would spread to her other extremity, the peripheral nerve stimulator would not be part of the discussion. *Id.* Without the peripheral nerve stimulator, all Dr. Still can offer Claimant is temporary relief through additional peripheral nerve blocks. Tr. at 135:1-6.

56. Dr. Bennett concurred with Dr. Still by stating he did not consider the workers' compensation medical treatment guidelines to be definitive for the standard of care for diagnosis or treatment of CRPS. Tr. at 82:10. "Guidelines are meant to – as a checklist to make sure you've thought of all of the elements. But guidelines, in general, are behind the science. The science is always advancing faster than the guideline. So in practice in clinical medicine, I use the latest science, the latest data, and the latest peer-reviewed journals to determine the best treatment in both diagnosis and treatment of CRPS." Tr. at 82:11-17. [3]

[3] Dr. Goldman testified that the Colorado medical treatment guidelines for the treatment of CRPS have not been adopted by the medical pain interventional groups. Depo. Goldman at 94:1-4, 13-15. Further, he stated that there is no gold standard for the evaluation, diagnosis, and treatment of CRPS in the field – there are always different views. Depo. Goldman at 94:19-95:2.

57. Dr. Bennett believes the peripheral stimulation is reasonably alternative to treat Claimant's injury. Claimant has an "excellent response to neuromodulation." Tr. at 59:9. There have been technical problems, not physiologic problems. She had a good response to the initial stimulator, the percutaneous trial done in conjunction with Dr. Robinson, and from the peripheral stimulation. Tr. at 59:11-15. "So electrical neuromodulation for [Claimant] would be the preferred method of treatment." Tr. at 59:15-17. Putting in a new spinal cord stimulator is very invasive because the doctors would have to remove parts of the anatomy to get a new lead in; there is also increased risk of bleeding because they would need to remove the scar from the space (both Drs. Robinson and Beasley's concerns), and the peripheral stimulation is less invasive and had a good reaction. Tr. at 59:18-60:2.

58. "The summary of my opinion, after following [Claimant] now since 2013, is that prior to failure of stimulation, she had normalized her exam. She was working full-time. She was functional, active human being. At this point in time, she has degrad[ed] way past that baseline. And we know that neuromodulation is effective in treatment of this disease, and it, particularly in her case, was very effective in treating her CRPS. Adding to that, she responded with peripheral stimulation identically to how she responded to central cord stimulation. That method's the least [invasive], and it's my opinion she would do very, very well and go back to her state at the DIME evaluation." Tr. at 63:7-19; *and see* Depo. Goldman at 9:17-19 ("[Claimant's] response to her stimulators is as good as I've seen in my career, actually").

Worsening of Condition – Wheelchair

59. On August 9, 2018, Dr. Goldberg determined that Claimant "has worsened in the last few months from MMI and she needs an electric wheelchair… No walking over 1000 feet." Cl's Ex 12 at 513. Although both parties had stipulated that an electric wheelchair was not reasonable or related at the time of MMI, by May 20, 2019, Respondents agreed that an electric wheelchair was reasonable and related, and approved it for Claimant's use. Depo. Goldman at 73:10-14; Rs' Ex. A at 47. Claimant began presenting to appointments in an electric wheelchair. *See, e.g.*, Depo. Goldman at 82:2-6.

Overall Opinions Concerning Worsening of Condition

60. Dr. Bennett's opinion is that treating a patient requires a team approach. Tr. at 53:15. Dr. Goldberg as the primary, Dr Bennett as the interventionist, Dr. Disorbio works with the biopsychosocial aspects of the disease; and Dr. Still is the surgical expert who also does peripheral nerve stimulation. Tr. at 53:17-22.

61. Dr. Bennett testified that he believes that Claimant's condition has worsened since she was at MMI. He noted that with CRPS, a patient can have spontaneous flare-ups that often last a day or two, or even up to a week. Tr. at 50:10-14. Flares can often be treated using different signals on the stimulator. Tr. at 50:14-15. After Dr. Bennett determined the malfunction of the spinal cord stimulator on January 7, 2019, he was concerned that Claimant was experiencing flares, but then the symptoms continued, "And there's been a – a continual devolution, if you will, of this – in symptoms," which "is directly attributable to the lack of neuromodulation at the present time." Tr. at 50:20-51:1. "There's been a steady diminishment in the left lower extremity's ability function.

There's been increase in neuropathic pain. That's the allodynia, hyperpathia, windup that we talked about earlier. And there is greater dysfunction psychologically, which is why Dr. Disorbio and I have co-managed that in order to maintain as much function as possible." Tr. at 58:3-10. "She has florid CRPS of the left lower extremity….It's only worsened over time. The only thing [Claimant] hasn't developed, which is my concern, is inturning or contraction of the extremity." Tr. at 58:17-21. If the continuation of the lack of blood flow continues, the calcium from the bones will be leached off, which is irreversible, and would compromise the extremity. Tr. at 59:1-6; (Cl's Ex. 9 at 259). Right now, Claimant's CRPS is localized to her left lower extremity. Tr. at 49:1-2.

62. Even Respondents' doctors have made findings that Claimant's condition has worsened. First, Dr. Reichhardt has now finally agreed that Claimant has CRPS. Depo. Goldman at 69:8-15, 75:1-9; (R's Ex A at 50). Additionally, in his examination of Claimant, he stated that Claimant's prognosis without placement of a spinal cord stimulator is only fair, but with a spinal cord stimulator, he anticipated her prognosis to be somewhat better. Depo. Goldman at 84:4-16. Further, if Claimant were to receive some kind of neuromodulation or neurostimulation, she could likely reduce or get off the opioid medication completely. *Id.* at 83:17-23. Dr. Goldman determined that Claimant received about two years of symptomatic and functional benefit from her spinal cord implantations between September 2014 and early 2017. 78:5-10; Rs' Ex A at 65. In the little over two-year period that she received both symptomatic and functional benefit from the spinal cord stimulator, Claimant did so without being on chronic opioid medication. Depo. Goldman at 80:21-81:2. Dr. Goldman determined as of one year ago that Claimant carries a primary clinical diagnosis of CRPS type two .Tr. at 80:1-5; Rs' Ex. A at 62. He also determined that Claimant was better off when she was getting pain reductions and functional gain from the spinal stimulator than she is now on opioid medication. Depo. Goldman at 92:2-8. "If we could put her back where she was in that very first stimulator and recreate that, she would be better off." *Id.* at 92:8-10. Dr. Goldman also expressed concern that the CRPS has migrated from just her lower leg into her foot, based on the physical findings of the examining doctors. Depo. Goldman at 79:5-7.

Unrelated Car Accident

63. Claimant was involved in a car accident in October 2019. Tr. at 185:8-10. The accident hurt her neck, shoulder, right wrist, and right knee. Tr. at 185:17-20. She reported levels of pain from 6-10 out of 10 to her chiropractor who treated her for the car accident. Tr. at 185:24-186:2. She also reported the accident to her primary care, Dr. Goldberg. Tr. at 186:15-21. She did not report it to other doctors because it was not part of her workers' compensation injury. *Id.* She did not receive any overlapping treatment for her left lower extremity. Tr. at 201:2-7. Claimant noted that her workers' compensation doctors would isolate the pain scale to pain in her foot or pain in her back. Tr. at 202:6-14. Claimant did not suffer an injury her left lower extremity in this accident and it is not relevant here.

TTD Rate

64. Claimant's TTD rate is $810.67 per week. (Cl's Ex. 5 at 19).

Overall Persuasiveness of the opinions of Drs. Reichhardt and Goldman

65. The ALJ considered the detailed reports and testimony of Drs. Reichhardt and Goldman. Nonetheless, the ALJ did not find their opinions to be as persuasive as Claimant's treating providers when it comes to whether Claimant's condition has worsened and whether the PNS is reasonable and necessary.

66. First, Drs. Reichhardt and Goldman were hired by Respondents. Although merely being hired by one party does not automatically demonstrate bias, in this case it appears to this ALJ that both experts seemed to engage in a form of confirmation bias by mainly looking at factors that did not support a worsening of condition or did not support a finding that the PNS was a reasonable option for this Claimant based on her unique circumstances.

67. Second, it appears to this ALJ that that both experts seemed to rely exclusively on the *Guidelines* to support their opinion that the PNS was not reasonable and necessary. However, by focusing exclusively on the *Guidelines*, they discounted the unique circumstances of Claimant's limited treatment options based on the failure of her prior stimulator and the inability to replace the broken leads. As a result, their heavy reliance on the *Guidelines* appears to be at the expense of considering Claimant's unique circumstances and limited treatment options.

68. Third, Drs. Reichhardt and Goldman relied heavily on the fact that the trial for the PNS performed by Dr. Still was not conducted over a 5–7-day period as set forth in the Guidelines. However, Dr. Still did perform a trial and Claimant did get good relief which was consistent with Claimant responding positively to neuromodulation treatment in the past. And, while not a perfect trial, it was still a trial that factored into Dr. Still's opinion - which the ALJ finds persuasive - to recommend the PNS.

Ultimate Findings

69. Claimant has suffered a change in her physical and mental condition, which is causally connected to the original compensable injury.

70. Claimant's worsening of condition has caused an increase in her disability based on a decrease in her work capacity – an actual wage loss – as of May 17, 2018, when Dr. Goldberg took Claimant off work because of the effects of Claimant's work injury. As a result, Claimant is entitled to temporary total disability benefits as of May 18, 2018.

71. The ALJ also finds that based on Claimant's worsening of condition, Claimant needs additional medical treatment, in the form of the PNS, to cure her from the effects of her work injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

1. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a

reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

2. The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

4. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Reopening

5. Section 8-43-303(1), C.R.S., provides that at any time within six years after the date of injury "any award" may be reopened on the ground a change in condition, and both compensation and medical benefits previously ordered may be increased. *See Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186, 189 (Colo. App. 2002); *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 220 (Colo. App. 2008). A change of condition sufficient to justify reopening refers "to a change in the condition of the original compensable injury or to a change in claimant's physical or mental condition, which can be causally connected to the original compensable injury." *Chavez v. Industrial Commission,* 714 P.2d 1328, 1330 (Colo. App. 1985). The power to reopen under the provisions of § 8-43-303 is permissive and left to the sound discretion of the ALJ.

6. As more fully set forth in the findings of fact above, the ALJ finds and concludes based on the persuasive medical evidence and testimony presented by the Claimant and Drs. Bennett, Disorbio, and Still, and even some of the opinions expressed by Respondents' medical experts, that the Claimant has established by a preponderance of the evidence

that her compensable physical and mental conditions have worsened from the time she was placed at MMI by Dr. Mitchell. All of the findings of fact set forth above support this conclusion, but the ALJ highlights the following evidence in support of this conclusion.

- The Claimant was receiving good coverage from the spinal cord stimulator (SCS) at the time of MMI. Dr. Bennett's records near that same time confirm that good coverage. By the Spring 2018, the Claimant's condition was deteriorating with Dr. Goldberg noting increasing symptoms/problems and taking Claimant off work on May 17, 2018.
- By January 7, 2019, Dr. Bennett confirmed that the SCS was no longer functioning.
- In March 2019, Dr. Bennett started the Claimant on chronic opioid medications; medications that she had not taken on a regular basis before for her work condition and medications that only treat her pain, not the other problems/symptoms/complications of CRPS.
- The Claimant's physical exam findings with reference to the specific markers for CRPS worsened during this time as well; her CRPS become florid in her left lower extremity.
- Her psychological screening tests deteriorated and demonstrated a clear reduction in mental/psychological functioning based on her worsening CRPS, as well as opioid side effects.
- In response to her worsening condition Claimant required and obtained a wheelchair reflecting clear limitations in her ability to ambulate effectively.

Worsened Work Restrictions and Work Capacity

7. Worsening of condition after MMI entitles an injured worker to additional temporary disability benefits if the worsened condition caused a "greater impact" on a claimant's temporary work capacity than existed at the time of MMI. *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). The critical issue in cases controlled by *City of Colorado Springs* is not whether the worsened condition actually resulted in additional temporary wage loss, but whether the worsened condition has had a greater impact on a claimant's temporary work "capacity." *See El Paso County Department of Social Services v. Donn,* 865 P.2d 877 (Colo. App. 1993); *Kreimeyer v. Concrete Pumping Inc.*, W.C. No. 4-303-116 (ICAO, March 22, 2001); *Ridley v. K-Mart Corp.,* W.C. No. 4-263-123 (ICAO, May 27, 2003).

8. Here, the Claimant has actually suffered additional wage loss from increased work restrictions, as well as loss of work capacity. At the time of MMI, Dr. Mitchell noted that the Claimant was working full-time in the light-duty category. As more fully set forth in the findings of fact above, the Claimant has essentially worked full time during most of this claim, despite the serious nature of her work injury. Dr. Goldberg imposed new restrictions and declared the Claimant disabled on May 17, 2018 when she restricted Claimant from working which was right around the same time that the Claimant was laid off from her job. The medical evidence supports reinstating TTD benefits as of May 18, 2018 based on the opinions of Claimant's authorized treating physician Dr. Goldberg.

Claimant's ongoing disability was further established in January 2019 when Dr. Bennett performed the procedure that confirmed the non-functioning spinal cord stimulator. Dr. Bennett was clear that this process was not maintenance, such as the replacement of a SCS battery. Although the Claimant tried to find work after the layoff, she has additional work restrictions and a loss of work capacity at this time compared to her light-duty work capacity at the time of MMI. Moreover, the failure of the SCS corroborates Claimant's contention that she was getting worse after being placed at MMI and further supports Dr. Goldberg's decision to remove Claimant from work on May 17, 2018. As a result, the ALJ finds and concludes Claimant has established by a preponderance of the evidence that her condition has worsened since being placed at MMI, that her claim should be reopened, and that she is entitled to TTD benefits as of May 18, 2018.

PNS as Reasonable and Necessary

9. The ALJ ultimately determines whether the Claimant demonstrated that it is more likely than not that the recommended PNS is reasonable medical treatment necessary to cure and relieve her from the effects of the admitted work injury. If so, the ALJ will order Respondents to pay for the recommended PNS pursuant to the Colorado Medical Fee Schedule.

10. It is appropriate for an ALJ to consider the Medical Treatment Guidelines (MTGs) in deciding whether a certain medical treatment is reasonable and necessary for claimant's condition*. See Deets v. Multimedia Audio Visual,* W. C. No. 4-327-591 (ICAO, March 18, 2005), *aff'd Deets v. Industrial Claim Appeals Office*, No. 05CA0719 (Colo. App. May 17, 2007) (NSOP) (medical treatment guidelines are a reasonable source for identifying the diagnostic criteria). The ALJ's consideration of the MTGs may include deviations from them where there is evidence justifying the deviations. *Logiudice v. Siemans Westinghouse,* W.C. No. 4-665-873 (ICAO, January 25, 2011). There is no authority mandating that an ALJ deny medical benefits based on the MTGs. *Thomas v. Four Corners Health Care*, W.C. No. 4-484-220 (ICAO, April 27, 2009); *see also Burchard v. Preferred Machining,* W.C. No. 4-652-824 (ICAO, July 23, 2008) (declining to require application of medical treatment guidelines for carpal tunnel syndrome in determining issue of PTD); *Jones v. T.T.C. Illinois, Inc.,* W.C. No. 4-503-150 (ICAO, May 5, 2006), *aff'd Jones v. Industrial Claim Appeals Office*, No. 06CA1053 (Colo. App. March 1, 2007) (NSOP) (it is appropriate for the ALJ to consider the guidelines on questions such as diagnosis, but the guidelines are not definitive). The MTGs also do not constitute evidentiary rules, and an expert's compliance with them does not dictate whether the expert's opinions are admissible, or whether they may constitute substantial evidence supporting a fact finder's determinations. *See also* § 8-43-201(3), C.R.S. (when deciding whether certain medical treatment is reasonable, necessary and related "[t]he director or administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations.")

11. While the ALJ has considered the MTGs in connection with the findings of facts and these conclusions - along with the medical evidence and testimony provided by the Respondents' medical experts - the ALJ finds and concludes Claimant has established by a preponderance of the evidence that the PNS is reasonable, necessary, and related to the work injury. In addition, the PNS is not maintenance treatment, but medical

treatment designed to cure Claimant from the effects of her work-related CRPS. The ALJ bases this conclusion primarily on the credible and persuasive testimony presented by Dr. Still. Dr. Still is a foot and ankle specialist. He carefully evaluated the Claimant's condition and did his best to isolate the two nerves involved that will provide her with the most relief from a peripheral nerve stimulator (PNS) of up to 90%. He confirmed that the MTGs are just that: guidelines. They are not the state-of-the-art with respect to the evaluation and treatment of CRPS. A PNS is the Claimant's last, best chance to receive pain relief from neuromodulation. She has responded well to neuromodulation in the past. She deserves the opportunity to have this limited, minor invasive procedure to seek relief from her pain, as well as the other CRPS symptoms/complications in her left lower extremity. The Claimant's CRPS symptoms are isolated in her lower left extremity. The PNS provides an opportunity to the Claimant to either be once again free from opioid pain medication or, at least, reduce the amount of her current opioid pain medication. A PNS will also treat the non-pain related symptoms of CRPS and, hopefully, avoid the cascade of bone loss described by Dr. Bennett. As a result, the ALJ finds and concludes Claimant has established by a preponderance of the evidence that the PNS is reasonable, necessary, and related medical treatment to cure her from the effects of her work injury and Respondents are ordered to pay for the PNS under the medical fee schedule.

TTD Rate

12. Claimant's TTD rate is $810.67 per week.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is reopened for a documented and established worsening of condition.
2. Respondents shall pay for the peripheral nerve stimulator recommended by Dr. Still as reasonable, necessary, and related medical treatment to cure Claimant from the effects of her work injury.
3. Claimant established her entitlement to TTD benefits beginning on May 18, 2018.
4. Respondents shall pay Claimant TTD benefits at the rate of $810.67 per week – subject to any offsets - beginning May 18, 2018 and continuing until terminated by operation of law.
5. Respondents shall pay interest at 8% per annum on all benefits not paid when due.
6. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 28, 2021.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-123-084-001

ISSUE

1. Whether Claimant established by a preponderance of the evidence that her average weekly wage (AWW) should be increased from the amounts admitted by Respondents.

STIPULATIONS

At hearing, the parties stipulated that Respondents would recalculate Claimant's previously paid Temporary Partial Disability payments without considering Claimant's personal time off (PTO) as earned wages.

FINDINGS OF FACT

1. Claimant sustained an admitted injury in the course of her Employment with Employer on November 3, 2019.

2. Claimant began working for Employer in June 2018 and her initial hourly pay rate was $13.25. Over the course of her employment, Claimant received periodic increases in her hourly pay rate. At the time of her injury, Claimant's hourly wage with Employer was $14.65 per hour. Following her injury, Claimant continued to work for Employer and received a raise to of $.37 per hour to $15.02 per hour effective March 15, 2020. (Ex. 2 and D).

3. On December 5, 2019, Respondents filed a General Admission of Liability (GAL) with respect to Claimant's workers' compensation Claimant and admitted for temporary partial disability benefits and calculated Claimant's AWW as $400.44. (Ex. A). On November 17, 2020, Respondents filed a second General Admission of Liability which increased Claimant's AWW to $517.34. The increase was effective August 1, 2020 to account of Claimant's cost of COBRA at the rate of $116.90 per week. (Ex. B).

4. During the ten full pay-periods prior to Claimant's injury (from May 26, 2019 to October 26, 2019), Claimant earned an average weekly wage of $406.36 and worked an average of 27.74 hours per week. (Ex. 2 and D). The ALJ finds that the average weekly wage over this time period is a fair approximation of Claimant's AWW.

5. The ALJ further finds that a fair approximation of Claimant's AWW beginning on March 15, 2020 should include her $.37 per hour raise because Claimant's actual wage loss for each hour she did not work due to her work-related injury increased by that amount. Considering Claimant's raise, her AWW increased by $10.26 per week effective March 15, 2020 (i.e., $.37 x 27.74 hours) . Thus, Claimant's AWW beginning March 15, 2020 was $416.62 (i.e., $406.36 + 10.26).

6. Claimant’s cost of COBRA benefits was $116.90 per week, beginning August 1, 2020. (Ex. E). As such, Claimant’s average weekly wage effective August 1, 2020 was $533.52 (i.e., $416.62 + $116.90).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers’ compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers’ compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

AVERAGE WEEKLY WAGE

Section 8-42-102(2), C.R.S. (2016) requires the ALJ to calculate Claimant's average weekly wage (AWW) based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating Claimant's AWW. However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S. (2016) affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. § 8-42-102(3), C.R.S. establishes the so-called "discretionary exception". *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp*., supra; *Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007). Where the Claimant's AWW at the time of injury is not a fair approximation of Claimant's later wage loss and diminished earning capacity, the ALJ is vested with the discretionary authority to use an alternative method of determining a fair wage. *See id*.

Claimant has established by a preponderance of the evidence that the AWWs admitted by Respondents in the GALs filed on December 5, 2019 and November 17, 2020 are not fair approximations of Claimant's wage loss or diminished earning capacity. The ALJ concludes that Claimant's AWW at the time of injury is best calculated using the hourly rate she was earning at the time of her injury ($14.65 per hour), multiplied by her average weekly hours worked during the twenty weeks prior to her injury or 27.74 hours. As found, Claimant's AWW at the time of injury was, therefore, $406.62 per week. After March 15, 2020, Claimant's hourly wage increased, and her wage loss for each hour lost due to her injury increased commensurate with that raise of ($.37/hour). Thus, after March 15, 2020 Claimant's AWW is best determined by using her actual pay rate of $15.02 per hour, not $14.65 per hour, multiplied her average hours worked pre-injury. As such, a fair approximation of Claimant's AWW as of March 15, 2020 is $416.62.

As of August 1, 2020, Claimant was entitled to the inclusion of her cost of COBRA benefits as part of temporary disability benefits, as Respondents admit in their November 17, 2020 GAL and acknowledged at hearing. Accordingly, as found, Claimant's AWW as of August 1, 2020 is $533.52.

ORDER

It is therefore ordered that:

1. Claimant AWW from the date of injury until March 14, 2020 was $406.36

2. Claimant's AWW from March 15, 2020 until July 31, 2020 was $416.62.

3. Claimant's AWW beginning on August 1, 2020, is $533.52.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 10, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Wallace K. Larson, M.D. that he reached Maximum Medical Improvement (MMI) on December 8, 2017 with no permanent impairment as a result of his October 2, 2016 industrial injuries.

2. If Claimant has not overcome Dr. Larson's DIME opinion, a determination of the appropriate repayment schedule for an overpayment of Permanent Partial Disability (PPD) benefits.

STIPULATIONS

The parties agreed that, if Claimant fails to overcome Dr. Larson's DIME opinion, there is an overpayment in the amount of $4894.29 in PPD benefits.

FINDINGS OF FACT

1. Claimant is a 47-year-old male who works for Employer as a Youth Corrections Officer in Greeley, Colorado. On October 2, 2016 he responded to a unit in which two residents were threatening to assault staff. He approached one resident who was standing while other staff and his supervisor physically engaged the other youth. The standing resident stepped on top of Claimant's right foot and hit him in the chest. Claimant's right leg twisted and he fell to ground. He landed on his right hip, buttock and lower back. Once the resident was secured, Claimant realized he could not place weight on his right leg. Claimant was transported to North Colorado Medical Center's Emergency Room for treatment.

2. When Claimant reported his injuries to Employer he explained that his "right ankle buckled when I stepped back when a code red was called. Knee and ankle both hurt, abrasions on ankle and knee, swelling in ankle in knee, along with pain in ankle and knee." Claimant did not list or mention any concerns involving his lower back or hips.

3. At the emergency room medical providers noted that Claimant had suffered injuries to his right ankle and knee. He was having difficulty ambulating. X-rays of the knee and ankle were normal. Claimant received pain medications and crutches. Providers advised him to follow-up with occupational medicine.

4. On October 3, 2016 Claimant visited Authorized Treating Physician (ATP) Kevin Patrick Vlahovich, M.D. at Banner Occupational Health for an examination. Claimant's reported pain was "mostly lateral right knee and top of foot." A physical examination revealed only mild swelling with no bruising. Dr. Vlahovich diagnosed

Claimant with a sprain of unspecified parts of the right knee and a sprain of an unspecified ligament in the right ankle.

5. On October 21, 2016 Claimant returned to Dr. Vlahovich for a second evaluation. Dr. Vlahovich noted that Claimant continued to ambulate with crutches as well as knee and ankle braces. He referred Claimant to physical therapy and advised him to start weaning off his crutches and brace. Claimant subsequently returned to full time, modified employment.

6. On October 25, 2016 Claimant attended his first physical therapy session. Claimant reported that he had been on crutches for two weeks but had been weaning off of them. Claimant's reported pain levels were 0/10 at rest and 4-5/10 with a pivot. He did not mention hip or back pain.

7. On October 31, 2016 Claimant attended his second physical therapy appointment. Claimant reported that his leg swelled up work two nights earlier. He noted that his right hip was hurting more than his knee and remarked that he might have injured his hip during the October 2, 2016 altercation at work.

8. On November 22, 2016 Claimant returned to Dr. Vlahovich for an examination. Claimant reported the onset of right hip and lower back pain after starting physical therapy. Upon examination, Dr. Vlahovich noted tenderness and pain over the lateral right hip with movement. He referred Claimant to orthopedics for an evaluation of his right hip pain.

9. On November 28, 2016 Claimant visited Ryan Nettles, P.A., at Banner Orthopedics. P.A. Nettles administered a steroid injection in the trochanteric bursae of Claimant's right hip. He noted Claimant's knee and ankle had improved, but he suffered the delayed onset of right lateral hip pain. P.A. Nettles determined that, "[i]n my opinion, the onset of his symptoms could be in some part due to some trauma in the initial fall, but are more likely related to the knee and ankle injuries."

10. Claimant subsequently attended physical therapy treatment from early December 2016 through mid-January 2017. He also received chiropractic treatment during December 2016.

11. On January 13, 2017 Claimant returned to Dr. Vlahovich for an evaluation. Dr. Vlahovich reported that Claimant was participating in physical therapy and chiropractic care. However, Claimant suffered increasing symptoms in his right lower back and lateral thigh. Dr. Vlahovich found significant right back pain with straight leg raises and pain over the lateral hip with movement. He recommended continued physical therapy and chiropractic care. Dr. Vlahovich referred Claimant for a physiatry consultation.

12. Based on Dr. Vlahovich's referral, Claimant visited physiatrist Gregory Reichhardt, M.D. for an evaluation on February 15, 2017. Dr. Reichhardt recounted that a youth corrections resident stepped on top of Claimant's foot and knocked him to the ground. Claimant noted that he might have twisted to the right somewhat as he fell. He suffered the immediate onset of pain and swelling in the right ankle and right knee. At the

emergency room, Claimant received an ankle brace and a knee immobilizer. After about four weeks ATP Dr. Vlahovich referred him to physical therapy. Claimant mentioned right hip, gluteal and lower back pain. After considering Claimant's medical records Dr. Reichhardt commented that Claimant's right ankle and knee pain had largely resolved. A physical examination of the lumbar spine revealed tenderness to palpation at the LS-S1 level on the right side of the lower lumbar spine. Claimant was also mildly tender to palpation over the lateral aspect of the right hip. He exhibited normal intemal and external rotation of the hips.

13. At the February 15, 2017 evaluation Dr. Reichhardt discussed the possibility of a hip MRI with Claimant but noted that "any significant abnormalities would not likely be related to his work-related injury given the late onset of his symptoms." After the visit, Dr. Reichhardt spoke with ATP Dr. Vlahovich. Dr. Reichhardt summarized that Dr. Vlahovich's notes reflected Claimant's

> right lateral hip pain began about six weeks after his injury, his left leg numbness about two and a half months after, and the back pain about three months after. Given this, it would be difficult to explain any diagnosis other than perhaps some myofascial pain as being related to his work-related injury. As such, if his left leg numbness persists, it would be appropriate for him to follow up privately for a lumbar MRI.

14. On February 20, 2017 Claimant again visited Dr. Vlahovich for an examination. Dr. Vlahovich remarked that Claimant developed right hip pain about six weeks after his industrial injury and lower back pain three months after his injury. Claimant reported worsening pain in his lower back and right hip. Dr. Vlahovich advised Claimant that he could not explain why the pain was developing in his lower back and right hip. Dr. Vhalovich recounted he agreed with Dr. Reichhardt that, while there might be a work-related myofascial component to Claimant's lumbar pain, he should follow up with his family physician for treatment.

15. On February 27, 2017 Claimant returned to Dr. Reichhardt for an examination. Dr. Reichhardt addressed the causation of Claimant's hip symptoms. He summarized that

> after discussing this with Dr. Vlahovich, it sounded like the low back and hip may not be work-related other than perhaps some muscle pain associated with his gait deviation. [Claimant] states that he had pain over the right lateral hip since the initial date of the injury, but that when he was seen in the ER, they told him it was just a bruise from landing on that area when he fell, He did not bring it up with Dr. Vlahovich until later, however.

Dr. Reichhardt also noted that he spoke with Dr. Vlahovich about the cause of Claimant's hip symptoms. He explained that "[w]e were both of pretty much the same opinion as outlined in my last note on 2/15/17 that he might have some myofascial pain associated with the injury, but beyond this, it would be difficult to outline a medically probable work-related cause for his pain. We both agreed that it would be appropriate for him to follow up with a private primary care physician."

16. On March 8, 2017 Claimant visited Mark McFerran, M.D. at the Orthopaedic & Spine Center of the Rockies for an evaluation of his ongoing right hip pain. In performing a physical examination Dr. McFerran noted that the right hip was tender over the trochanteric bursa laterally. He remarked that "[t]his all looks like trochanteric bursitis, and 50% of the time this does not get better with cortisone. It is a deep injury. He may have split the bursa…This may always be an issue for him." Dr. McFerran characterized Claimant's condition as "chronic, traumatic hip bursitis."

17. On August 31, 2017 Claimant underwent a right hip MRI. The MRI revealed a "superolateral right hip acetabular labrum which extends to the junction with the anterior labrum suspicious for an acetabular labral tear." On September 5, 2017 Claimant received a second, fluorscopically guided, right hip injection.

18. On December 8, 2017 Claimant returned to Dr. Vlahovich for an examination. Dr. Vlahovich determined that Claimant reached Maximum Medical Improvement (MMI) as of the date of the examination. He recounted that Claimant twisted his right leg and fell while restraining two residents when working at a correctional facility. Dr. Vlahovich remarked that Claimant developed right hip pain during physical therapy. A right hip MRI revealed a labral tear. He diagnosed Claimant with a right knee sprain, a right ankle sprain, trochanteric bursitis of the right hip and a sprain of the right hip with an acetabular labral tear. In addressing causation, Dr. Vlahovich commented that the objective findings were consistent with Claimant's mechanism of injury. He specified that there was a greater than 50% probability that Claimant suffered knee and ankle sprains at work. Relying on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*), Dr. Vlahovich assigned Claimant an 8% permanent impairment rating for his right lower extremity. The impairment was based on right hip range of motion deficits. The rating converted to a 3% whole person impairment. Dr. Vlahovich also determined that claimant was entitled to receive medical maintenance benefits.

19. On January 5, 2018 Respondent filed a Final Admission of Liability (FAL) acknowledging Dr. Vlahovich's MMI, impairment and medical maintenance determinations. Claimant timely filed an objection and requested a Division Independent Medical Examination (DIME).

20. On March 15, 2018 Claimant underwent an independent medical examination with Anjmun Sharma, M.D. Dr. Sharma reviewed Claimant's medical records and performed a physical examination. Based on Claimant's mechanism of injury, Dr. Sharma determined that Claimant's lumbar back and hip symptoms were related to his October 2, 2016 work injury. He noted that Claimant suffered significant pain in his back that likely caused a delayed recovery. Relying on the *AMA Guides*, he assigned Claimant a 5% whole person impairment rating for the right hip. Dr. Sharma also assigned a 12% whole person rating for the lumbar spine that consisted of 7% pursuant to Table 53 of the *AMA Guides* "due to arthritis and other underlying conditions of the lumbar spine and

significant degenerative disc disease" and 5% for range of motion deficits. He also noted that Claimant had reached MMI and might require medical maintenance care.

21. On August 14, 2018 Claimant underwent a DIME with Wallace K. Larson, M.D. Dr. Larson recounted that on October 2, 2016 a resident at a correctional facility where Claimant works lowered his head and rammed into Claimant's chest. Claimant's right knee and ankle gave out and he fell to the floor. Claimant was transported to the emergency room with chief complaints of right ankle and knee injuries. Dr. Larson reviewed Claimant's medical records and conducted a physical examination. He concluded that Claimant reached MMI on December 8, 2017 with no ratable impairment or need for medical maintenance care. Dr. Larson specified that Claimant's right knee condition had resolved. He explained that Claimant's right hip and back symptoms were not related to his occupational exposure. He detailed that "[i]t is not reasonable to assume a minimal strain of his right knee and ankle resulted in the delayed development of any type of temporary or permanent pathology in the hip and or lumbar spine."

22. Dr. Sharma testified at the hearing in this matter. He maintained that Claimant's right hip and lower back injuries were causally related to his October 2, 2016 industrial incident. He noted that a positive c-sign reflected pathology in the hip that was consistent with Claimant's subjective complaints and MRI finding of an acetabular labral tear. Dr. Sharma explained that, absent the industrial accident and fall on October 2, 2016, there was no other possible cause of Claimant's right hip labral tear. Because of Claimant's fall at work and the MRI findings it would be erroneous not to provide an impairment rating for the right hip. Dr. Sharma also maintained that Claimant developed pathology in his lumbar spine as a result of his lower extremity injuries and an antalgic gait. He reasoned that, based on Claimant's ongoing gait abnormalities secondary to the right hip labral tear, there was increased wear and tear on the lumbar spine that accelerated over time. Therefore, Claimant suffered a permanent impairment to the lumbar spine as a result of the October 2, 2016 industrial accident.

23. Claimant testified at the hearing in this matter. He explained that he never had any lumbar or hip problems prior to his industrial injuries on October 2, 2016. He testified that when a resident pushed him to the ground at work he landed on his right side, hip and lower back. Claimant further stated that, due to his knee and ankle injuries, he did not begin weight-bearing activities and participating in physical therapy until about four weeks after his date of injury. He remarked that he still limps while performing his 12 hour work shifts. Claimant contended that his lower back symptoms are related to his October 2, 2016 industrial injury because of a change in his gait.

24. Claimant also testified that he is currently employed and earns a gross pay of $4,015 per month or $3,200 per month after taxes. The parties stipulated that, in the event Claimant fails to overcome Dr. Larson's DIME opinion, he received an overpayment of $4,894.29 in Permanent Partial Disability (PPD) benefits.

25. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Larson that he reached MMI on December 8, 2017 with no

permanent impairment as a result of his October 2, 2016 industrial injuries. Initially, during an October 2, 2016 altercation at the correctional facility where Claimant works, he fell to the ground and landed on his right hip, buttock and lower back. When Claimant reported his injuries to Employer, he noted only right knee and ankle symptoms. Claimant did not list or mention any concerns involving his lower back or hips. ATP Dr. Vlahovich diagnosed Claimant with a sprain of unspecified parts of the right knee and a sprain of an unspecified ligament of the right ankle. Claimant first mentioned right hip symptoms on October 31, 2016 at his second physical therapy appointment. He specifically noted that his right hip was hurting more than his knee and remarked that he might have injured his hip during the October 2, 2016 altercation at work. On November 22, 2016 Claimant reported to Dr. Vlahovich the onset of right hip and lower back pain after starting physical therapy.

26. On February 15, 2017 Dr. Reichhardt noted that Claimant's right lateral hip pain began about six weeks after his injury, left leg numbness about two and a half months after the altercation and back pain about three months after the incident. Based on the delayed reported symptoms, Dr. Reichhardt commented "it would be difficult to explain any diagnosis other than perhaps some myofascial pain as being related to his work-related injury." By February 27, 2017 Claimant told Dr. Reichhardt that he had been suffering right hip pain since the date of his industrial injuries. However, Dr. Reichhardt explained that he and Dr. Vlahovich agreed that Claimant might have some myofascial pain associated with the injury, but "it would be difficult to outline a medically probable work-related cause for his pain." By December 8, 2017 Dr. Vlahovich determined that Claimant reached MMI. Dr. Vlahovich remarked that Claimant developed right hip pain during physical therapy and a right hip MRI revealed a labral tear. He diagnosed Claimant with a right knee sprain, a right ankle sprain, trochanteric bursitis of the right hip and a sprain of the right hip with an acetabular labral tear. He specified that there was a greater than 50% probability that Claimant suffered knee and ankle sprains at work. Dr. Vlahovich assigned Claimant an 8% permanent impairment rating for the right lower extremity based on right hip range of motion deficits.

27. On August 14, 2018 Claimant underwent a DIME with Dr. Larson. Dr. Larson reviewed Claimant's medical records and conducted a physical examination. He agreed that Claimant reached MMI on December 8, 2017 with no ratable impairment or need for medical maintenance care. Dr. Larson specified that Claimant's right knee condition had resolved. He explained that Claimant's right hip and back symptoms were not related to his occupational exposure. He detailed that "[i]t is not reasonable to assume a minimal strain of his right knee and ankle resulted in the delayed development of any type of temporary or permanent pathology in the hip and or lumbar spine." In contrast, Dr. Sharma maintained that Claimant's right hip and lower back injuries were causally related to his October 2, 2016 industrial incident. He explained that, absent the industrial accident and fall on October 2, 2016, there was no other possible cause of Claimant's right hip labral tear. Because of Claimant's fall at work and the MRI findings it would be erroneous not to provide an impairment rating for the right hip. Dr. Sharma also maintained that Claimant developed pathology in his lumbar spine as a result of his lower extremity injuries and an antalgic gait. He reasoned that, based on Claimant's ongoing gait

abnormalities secondary to the right hip labral tear, there was increased wear and tear on the lumbar spine that accelerated over time. Dr. Sharma thus assigned Claimant a 5% whole person impairment for the right hip and a 12% whole person rating for the lumbar spine.

28. Despite Dr. Sharma's opinion, the record reflects that Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Larson's MMI and permanent impairment determinations are incorrect. Claimant has failed to demonstrate that Dr. Larson improperly applied the *AMA Guides* or otherwise erred in concluding that Claimant did not suffer a permanent impairment as a result of the October 2, 2016 work incident. Dr. Sharma's contrary determination is insufficient to demonstrate that Dr. Larson's conclusion is clearly erroneous. Notably, Dr. Sharma failed to identify significant flaws with the opinions of Dr. Reichhardt or Dr. Larson that Claimant's hip and lower back symptoms were not work-related. Moreover, even ATP Dr. Vhalovich did not assign a permanent impairment rating for Claimant's lumbar spine and only assigned a range of motion rating for right hip symptoms. Claimant's delayed reporting of any hip or lumbar spine symptoms, in conjunction with the persuasive opinion of Dr. Reichhardt, support Dr. Larson's DIME determination that Claimant did not suffer any permanent impairment as a result of his October 2, 2016 industrial accident. Dr. Sharma's contrary determination constitutes a difference of opinion that is insufficient to render Dr. Larson's DIME opinion clearly erroneous. Accordingly, Claimant reached MMI on December 8, 2017 with no ratable impairment.

29. The parties agreed that, if Claimant failed to overcome Dr. Larson's DIME opinion, there is an overpayment of $4894.29 in PPD benefits. Claimant testified that he is currently employed and earns a gross pay of $4,015 per month or $3,200 per month after taxes. Respondent seeks recovery of the overpayment at $75 per week or $325 per month. This would result in repayment of the overpayment in 16 months. Claimant has not presented evidence that the amount would be unreasonable, unaffordable, or injurious. Accordingly, Claimant shall repay Respondent $325 per month in overpaid TPD benefits until recovered in full.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAO, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

6. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; *see Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Both determinations require the DIME physician to assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury. *See Eller v. Indus. Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo.App. 1998). Consequently, when a party challenges a DIME physician's determination of MMI or impairment rating, the determination on causation is also entitled to presumptive weight. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo.App. 1998).

7. “Clear and convincing evidence” is evidence that demonstrates that it is “highly probable” the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, “there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt.” *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

8. Claimant asserts that he must prove the causal nature of his lumbar spine and right hip conditions under a preponderance of the evidence standard. However, because the threshold issue of compensability is not in dispute, the DIME physician's opinions regarding causation are accorded presumptive weight. *See Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 400 (Colo. App. 2009) ("[A]n inquiry into the relatedness of a particular component of a claimant's overall impairment will carry presumptive effect when determined by a DIME," unless the "threshold showing necessary to prove compensability" is at issue.); *see also Leprino Foods*, 134 P.3d at 482 (a DIME physician's opinion concerning causation will be given presumptive weight because MMI and impairment "inherently require the DIME physician to assess, as a matter of diagnosis, whether the various components of the claimant's medical condition are causally related to the industrial injury."). Here, Respondent filed a FAL consistent with ATP Dr. Vlahovich’s MMI, impairment and medical maintenance determinations. Therefore, the threshold issue of compensability is not in dispute. The salient issue is thus whether Claimant has produced clear and convincing evidence to overcome Dr. Larson’s DIME opinion.

9. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Larson that he reached MMI on December 8, 2017 with no permanent impairment as a result of his October 2, 2016 industrial injuries. Initially, during an October 2, 2016 altercation at the correctional facility where Claimant works, he fell to the ground and landed on his right hip, buttock and lower back. When Claimant reported his injuries to Employer, he noted only right knee and ankle symptoms. Claimant did not list or mention any concerns involving his lower back or hips. ATP Dr. Vlahovich diagnosed Claimant with a sprain of unspecified parts of the right knee and a sprain of an unspecified ligament of the right ankle. Claimant first mentioned right hip symptoms on October 31, 2016 at his second physical therapy appointment. He specifically noted that his right hip was hurting more than his knee and remarked that he might have injured his hip during the October 2, 2016 altercation at work. On November 22, 2016 Claimant reported to Dr. Vlahovich the onset of right hip and lower back pain after starting physical therapy.

10. As found, on February 15, 2017 Dr. Reichhardt noted that Claimant’s right lateral hip pain began about six weeks after his injury, left leg numbness about two and a half months after the altercation and back pain about three months after the incident. Based on the delayed reported symptoms, Dr. Reichhardt commented “it would be difficult

to explain any diagnosis other than perhaps some myofascial pain as being related to his work-related injury." By February 27, 2017 Claimant told Dr. Reichhardt that he had been suffering right hip pain since the date of his industrial injuries. However, Dr. Reichhardt explained that he and Dr. Vlahovich agreed that Claimant might have some myofascial pain associated with the injury, but "it would be difficult to outline a medically probable work-related cause for his pain." By December 8, 2017 Dr. Vlahovich determined that Claimant reached MMI. Dr. Vlahovich remarked that Claimant developed right hip pain during physical therapy and a right hip MRI revealed a labral tear. He diagnosed Claimant with a right knee sprain, a right ankle sprain, trochanteric bursitis of the right hip and a sprain of the right hip with an acetabular labral tear. He specified that there was a greater than 50% probability that Claimant suffered knee and ankle sprains at work. Dr. Vlahovich assigned Claimant an 8% permanent impairment rating for the right lower extremity based on right hip range of motion deficits.

11. As found, on August 14, 2018 Claimant underwent a DIME with Dr. Larson. Dr. Larson reviewed Claimant's medical records and conducted a physical examination. He agreed that Claimant reached MMI on December 8, 2017 with no ratable impairment or need for medical maintenance care. Dr. Larson specified that Claimant's right knee condition had resolved. He explained that Claimant's right hip and back symptoms were not related to his occupational exposure. He detailed that "[i]t is not reasonable to assume a minimal strain of his right knee and ankle resulted in the delayed development of any type of temporary or permanent pathology in the hip and or lumbar spine." In contrast, Dr. Sharma maintained that Claimant's right hip and lower back injuries were causally related to his October 2, 2016 industrial incident. He explained that, absent the industrial accident and fall on October 2, 2016, there was no other possible cause of Claimant's right hip labral tear. Because of Claimant's fall at work and the MRI findings it would be erroneous not to provide an impairment rating for the right hip. Dr. Sharma also maintained that Claimant developed pathology in his lumbar spine as a result of his lower extremity injuries and an antalgic gait. He reasoned that, based on Claimant's ongoing gait abnormalities secondary to the right hip labral tear, there was increased wear and tear on the lumbar spine that accelerated over time. Dr. Sharma thus assigned Claimant a 5% whole person impairment for the right hip and a 12% whole person rating for the lumbar spine.

12. As found, despite Dr. Sharma's opinion, the record reflects that Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Larson's MMI and permanent impairment determinations are incorrect. Claimant has failed to demonstrate that Dr. Larson improperly applied the *AMA Guides* or otherwise erred in concluding that Claimant did not suffer a permanent impairment as a result of the October 2, 2016 work incident. Dr. Sharma's contrary determination is insufficient to demonstrate that Dr. Larson's conclusion is clearly erroneous. Notably, Dr. Sharma failed to identify significant flaws with the opinions of Dr. Reichhardt or Dr. Larson that Claimant's hip and lower back symptoms were not work-related. Moreover, even ATP Dr. Vhalovich did not assign a permanent impairment rating for Claimant's lumbar spine and only assigned a range of motion rating for right hip symptoms. Claimant's delayed reporting of any hip or lumbar spine symptoms, in conjunction with the persuasive opinion of Dr. Reichhardt, support Dr. Larson's DIME determination that Claimant did not suffer

any permanent impairment as a result of his October 2, 2016 industrial accident. Dr. Sharma's contrary determination constitutes a difference of opinion that is insufficient to render Dr. Larson's DIME opinion clearly erroneous. Accordingly, Claimant reached MMI on December 8, 2017 with no ratable impairment.

Overpayment

13. Section 8-40-201(15.5), C.R.S, defines "overpayment" as "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles." There are thus three categories of possible overpayment pursuant to §8-40-201(15.5). *In Re Grandestaff,* No. 4-717-644 (ICAP, Mar. 11, 2013). An overpayment may occur even if it did not exist at the time the claimant received disability or death benefits. *Simpson v. ICAO,* 219 P.3d 354, 358 (Colo. App. 2009). Therefore, retroactive recovery for an overpayment is permitted. *In Re Haney,* W.C. No. 4-796-763 (ICAP, July 28, 2011).

14. When the parties are unable to agree upon a repayment schedule, the ALJ is empowered by §8-43-207(q), C.R.S. to conduct hearings to "[r]equire repayment of overpayments." In *Simpson v. Industrial Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev'd on other grounds*, the Colorado Court of Appeals determined that the ALJ has discretion to fashion a remedy with regard to overpayments. Further, the ALJ has the authority to decide the terms of repayment and the ALJ's schedule for recoupment will not be disturbed absent an abuse of discretion. *See Louisiana Pacific Corp. v. Smith*, 881P.2d 456 (Colo. App. 1994).

15. As found, the parties agreed that, if Claimant failed to overcome Dr. Larson's DIME opinion, there is an overpayment of $4894.29 in PPD benefits. Claimant testified that he is currently employed and earns a gross pay of $4,015 per month or $3,200 per month after taxes. Respondent seeks recovery of the overpayment at $75 per week or $325 per month. This would result in repayment of the overpayment in 16 months. Claimant has not presented evidence that the amount would be unreasonable, unaffordable, or injurious. Accordingly, Claimant shall repay Respondent $325 per month in overpaid TPD benefits until recovered in full.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to overcome Dr. Larson's DIME opinion that he reached MMI on December 8, 2017 with no permanent impairment.

2. Claimant shall repay Respondent $325 per month in overpaid TPD benefits until recovered in full.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: April 28, 2021.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-145-299-001

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that he suffered an injury arising out of and in the course and scope of his employment with the employer.

2. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment he has received (including two surgeries performed by Dr. Wade Ceola) is reasonable, necessary, and related to the work injury.

3. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) benefits and/or temporary partial disability (TPD) benefits beginning July 1, 2020 and ongoing.

4. If the claimant is found to be entitled to TTD and/or TPD benefits, whether the respondents have demonstrated, by a preponderance of the evidence, entitlement to a statutory offset.

FINDINGS OF FACT

1. The claimant is employed with the employer as a sheet metal worker. The claimant testified that in June or July 2020, he injured his back at work. He further testified that he was bending over to pick up a piece of duct work when he felt a pain in his back. This pain was initially "not real bad", but became worse. The claimant does not recall the exact date of this event.

2. The claimant testified that this back pain was similar to pain he had experienced one year prior. With regard to his prior experience, the claimant testified that he saw a chiropractor and did some exercises at home. He also testified that these activities relieved that prior back pain.

3. The claimant testified that after experiencing back pain in June or July 2020, he sought chiropractic care. He was seen by a chiropractor twice, and also attended physical therapy. When neither of these treatments were effective in resolving his pain, the claimant reported the incident to the employer.

4. On July 30, 2020, the employer prepared a First Report of Injury or Illness. That form identifies the date of the claimant's incident as July 1, 2020. The claimant testified that date was utilized because at that time, he believed that the incident occurred

approximately three weeks before July 30, 2020. The form also states that the injury occurred when the claimant was installing duct pieces.

Medical Treatment Prior to July 30, 2020

5. On February 19, 2016, the claimant was seen by chiropractor, Dr. David Jensen. On that date, the claimant reported deep and aching low back pain that had started one week prior. Dr. Jensen noted that the claimant had "no specific injury to the lower back". Dr. Jensen recommended ongoing chiropractic treatment for the claimant's low back.

6. There is a second medical record from Dr. Jensen also dated February 19, 2016. In that medical record, the claimant reported severe neck and upper back pain. Dr. Jensen also recommended ongoing chiropractic treatment for these symptoms. The claimant returned to Dr. Jensen on February 26, 2016. At that time, the claimant continued to report deep and aching low back pain.

7. In 2018, the claimant's primary care provider (PCP) was Dr. Bruce Bowen. On February 8, 2018, the claimant was seen by Dr. Bowen and reported bilateral tingling from his shoulders to his elbows. The medical record of that date indicates that this was a six month follow up regarding these symptoms. Dr. Bowen recommended that the claimant see a neurosurgeon for consultation for "radiculopathy of the neck with constant neck pain and numbness."

8. On June 8, 2018, the claimant was seen by Dr. Bowen. In the medical record of that date, Dr. Bowen noted that the claimant was referred to Dr. Wade Ceola in February 2018 for cervical spine radiculopathy and numbness. Dr. Bowen also noted that the claimant had an appointment "conflict and was not seen [by Dr. Ceola]".

9. On October 27, 2019, the claimant sought treatment at Aspen Valley Hospital After Hours Medical Care. At that time, the claimant reported left lower back and hip pain. The claimant also reported that the pain started while he was shoveling compost at his home.

10. On November 4, 2019, the claimant returned to Dr. Jensen. On that date, the claimant reported the same low back symptoms as those he had in 2016. Dr. Jensen again noted that the claimant did not have a specific low back injury. Dr. Jensen also noted that the claimant engaged in recurring lifting at work and at home. Dr. Jensen recommended the claimant continue chiropractic treatment, with physical therapy. Dr. Jensen also provided the claimant with exercises he could do at home.

11. The claimant testified that he does not recall undergoing massage and physical therapy at that time. However, he does recall the exercises provided to him by a chiropractor.

12. On June 29, 2020, the claimant sought chiropractic treatment with Dr. Amy Denicke. In the medical record of that date, the claimant reported acute low back pain radiating down his left leg and into his left foot. Dr. Denicke noted that the claimant's pain

originated in early June “as an insidious onset.” Dr. Denicke recommended that the claimant obtain magnetic resonance imaging (MRI) of his low back and see an orthopedic surgeon.

13. Medical records entered into evidence indicate that the claimant was seen by Dr. Denicke a second time on July 6, 2020. On that date, the claimant reported that he continued to have left low back pain that was radiating into his left leg.

14. On July 10, 2020, the claimant was seen by his new PCP, Dr. Michael Plachta. The claimant testified that Dr. Platcha took over Dr. Bowen’s practice. On July 10, 2020, the claimant identified his complaint as a pinched nerve in his leg. Dr. Plachta noted the claimant had “acute on chronic back pain”. Dr. Plachta recorded that the claimant “woke with acute pain 6-7 weeks ago, no known trauma.” Dr. Plachta also recorded that the claimant had a history of “3-4 years of back pain that has progressively worsened and began to include left sided [sciatica].” The claimant reported that he had undergone chiropractic treatment and physical therapy. However, those modalities were not improving his symptoms. Dr. Plachta prescribed tramadol and a lumbar spine MRI.

15. On July 27, 2020, the claimant underwent a lumbar spine MRI. The MRI showed, *inter alia*, an L4-L5 disc herniation that was impinging on the left L4 nerve root, and a synovial cyst at the L5-S1 level.

16. The ALJ finds no reference in the foregoing medical records of the claimant’s belief that he injured himself at work.

Medical Treatment After July 30, 2020

17. On July 31, 2020, the claimant contacted Dr. Plachta’s practice regarding a referral to Roaring Fork Physical Therapy. On that date, Dr. Plachta issued the requested referral.

18. In addition to the physical therapy request, on July 31, 2020, the claimant also asked Dr. Plachta to provide him with a “work note”. Dr. Plachta authored the requested letter on that same date. In the July 31, 2020 letter, Dr. Plachta noted that the claimant’s pain “started several years ago and comes and goes.” Dr. Plachta also noted that the claimant “woke from sleep with back pain about 7 weeks prior.” Dr. Platcha noted the results of the MRI and stated that the claimant would be undergoing medical therapy and physical therapy. He also indicated that a referral to a surgeon and/or pain specialist could be necessary.

19. On August 6, 2020, the claimant attended physical therapy at PRC Carbondale. At that time, the claimant was seen by Coby Jones, DPT. The claimant reported that his back pain started about seven weeks prior and was progressively worse. He also reported that his leg was hurting “one day”.

20. The claimant’s authorized treating provider (ATP) for this claim is Dr. Glenn Kotz. The claimant was first seen by Dr. Kotz on August 12, 2020. In the medical record of that date, Dr. Kotz recorded that the claimant “woke up one day with back pain,

radiculopathy to [left] leg and progressed to [left lower extremity] weakness and foot drop". Dr. Kotz listed the claimant's diagnoses as lumbar disc herniation with radiculopathy, synovial cyst, and lumbar spine degenerative disc disease. Dr. Kotz took the claimant off of all work and referred him to neurosurgeon, Dr. Wade Ceola.

21. The claimant testified that he did not report to any medical provider that he just "woke up" with this pain.

22. On August 19, 2020, the claimant was seen at Roaring Fork Physical Therapy by Caitlyn, Tivy, DPT. At that time, the claimant reported left lateral hip and back pain. The claimant also reported that the pain started a year ago. In addition, Therapist Tivy recorded the following history from the claimant: "the pain had improved [on] its own for a while and then came back after a drive to Missouri. [Patient] sought medical treatment from his physician (Plachta) - was diagnosed with drop foot at that time."

23. The claimant testified that when he travels to see family in Missouri he will drive. He is unsure of the date of a 2020 Missouri trip. The claimant testified that it was possible he drove to Missouri in June 2020.

24. On August 21, 2020, the claimant was seen by Dr. Ceola. At that time, the claimant reported chronic back pain for years, becoming much more acute in July. The claimant also reported that he then developed left leg weakness. Dr. Ceola reviewed the July 27, 2020 MRI and noted a left L4-L5 disc impinging on the L4 nerve root, and a posterior synovial cyst at the L5-S1 level. On exam, Dr. Ceola noted a profound left sided foot drop and quadricep weakness. Dr. Ceola proposed a possible posterior hemilaminotomy with discectomy at L4-L5. However, prior to proceeding with surgery, Dr. Ceola referred the claimant for electromyography and nerve conduction studies (EMG/NCS).

25. On August 24, 2020, the claimant returned to Dr. Kotz. At that time the claimant reported that his pain was worsening and Dr. Ceola wanted to do surgery.

26. On September 2, 2020, the respondents filed a Notice of Contest regarding a July 1, 2020 work injury.

27. On September 23, 2020, Dr. Kotz authored a notation of a different mechanism of injury. Specifically, Dr. Kotz noted "we initially saw Mr. Jones 8/12/20; we transcribed the injury incorrectly. He first felt his back pain at work when standing up from bent over (at waist) position".

28. On September 29, 2020, the claimant was seen by Dr. Jeffrey Thornton for EMG/NCS testing. Dr. Thornton performed the testing on the claimant's left lower extremity. In his report, Dr. Thornton noted the testing showed left common peroneal neuropathy of the fibular head and lumbar radiculopathy.

29. On October 1, 2020, the claimant returned to Dr. Ceola. At that time, Dr. Ceola noted that the EMG/NCS results confirmed radiculopathy and severe peroneal neuropathy of the fibular head. Based upon this information, Dr. Ceola recommended

two surgeries. First, a laminotomy, decompression, and partial facetectomy and/or disc removal at the left L4-L5. Second, an exploration and decompression of the left common peroneal nerve.

30. On October 1, 2020, Dr. Ceola submitted a request for authorization of the recommended lumbar spine surgery. In addition, a request for a left knee MRI was also submitted.

31. At the request of the insurer, Dr. Joseph Fillmore reviewed the requests for lumbar surgery and left knee MRI. In his October 7, 2020 report, Dr. Fillmore recommended denial of both the lumbar surgery and left knee MRI. In support of this recommendation, Dr. Fillmore noted that the claimant had a three to four year history of chronic low back pain, with a report of increased back pain when he woke up. Dr. Fillmore opined that the claimant's low back condition is a progression of the chronic low back pain. Dr. Fillmore also found no specific injury to the claimant's left knee.

32. On October 7, 2020, Dr. Ceola performed a far lateral transpedicular resection of the herniated disc at left L4-L5, with discectomy and medial decompression of the L5 nerve root. The claimant testified that this surgery was paid for by his private health insurance.

33. On November 3, 2020, Dr. Ceola performed a decompression of the left common peroneal nerve. The claimant testified that this surgery was paid for by his private health insurance.

34. On November 12, 2020, the claimant returned to Dr. Ceola. In the medical record of that date, Dr. Ceola noted that the claimant continued to have radiating leg pain, foot drop, and numbness, but that the pain was "markedly better". The claimant reported that he was returning to work on Monday and Dr. Ceola placed him on a 25 pound lifting restriction. Dr. Ceola also recommended the use of a lumbar corset and a lace up ankle brace.

35. On March 8, 2021, the claimant attended an independent medical examination (IME) with Dr. Michael Rauzzino. In connection with the IME, Dr. Rauzzino reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Rauzzino identified the claimant's diagnoses as chronic low back pain, lumbar degenerative disc diseases, left foot drop (likely due to peroneal neuropathy), and left sided sciatica (likely due to the L4-L5 disc bulge). Dr. Rauzzino opined that the condition of the claimant's low back and left knee are not work related. Dr. Rauzzino was asked to opine regarding the reasonableness and necessity of the recommended lumbar and left knee surgeries. Dr. Rauzzino noted that he was not provided with the results of the EMG testing. However, he noted that if Dr. Ceola felt that the EMG results showed significant peroneal neuropathy and lumbar radiculopathy, then the surgeries would be medically necessary. Dr. Rauzzino reiterated that even if medically necessary, the surgeries are not related to the alleged July 1, 2020 work incident.

36. On March 17, 2021, Dr. Rauzzino issued a supplement to his IME report. The reason for the supplement was that Dr. Rauzzino was provided with Dr. Thornton's EMG/NCS report. In his March 17, 2021 report, Dr. Rauzzino reiterated his opinions that the claimant did not sustain a work injury that necessitated treatment of his lumbar spine and left knee.

37. The claimant testified that his current symptoms include pain, foot drop, and numbness in his left leg from the knee down.

38. Larry A[Redacted] Senior Claims Representative with the insurer, has handled the claimant's claim since it was initiated. Mr. A[Redacted] testified that on August 9, 2020, he had a telephone conversation with the claimant. During that call, the claimant stated that he twisted and then felt pain in his back. The claimant also stated that he bent over and felt back pain when he stood up. During this same August 9, 2020 call, the claimant denied having any prior low back issues.

39. The claimant testified that as of the date of the hearing, he was paid $39.00 per hour. He further testified that he typically works 45 to 46 hours per week. The claimant also testified that his W-2 "the year before" shows that he made $99,000.

40. The claimant testified that he stopped working for the employer on approximately August 15, 2020.

41. Wage records entered into evidence indicate that the claimant was off of work during the pay period beginning August 19, 2020 and into the pay period ending November 10, 2020. The claimant testified that since returning to work in November 2020, he works full time.

42. The ALJ does not find the claimant's testimony regarding the onset of his low back and radiculopathic symptoms to be credible or persuasive. The ALJ credits the contemporaneous medical records that indicate that the claimant woke up with low back pain approximately two months prior to his July 10, 2020 appointment with Dr. Plachta. The ALJ further credits the medical records and finds that the claimant did not assert that he was injured at work until after he had obtained the July 27, 2020 lumbar spine MRI.

43. The ALJ credits the medical records and the opinions of Drs. Rauzzino and Fillmore. Specifically, the ALJ credits Dr. Rauzzino's opinion that the condition of the claimant's low back and left knee are not work related. Therefore, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that he suffered a low back injury at work. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that he suffered a left knee injury at work. Additionally, the ALJ finds no persuasive evidence on the record to support a finding that any preexisting low back condition and/or left knee condition were aggravated or accelerated during a lifting incident at work, resulting in the need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that he suffered an injury arising out of and in the course and scope of his employment with the employer. As found, the medical records and the opinions of Drs. Rauzzino and Fillmore are credible and persuasive.

6. All remaining endorsed issues are dismissed as moot.

ORDER

It is therefore ordered that the claimant's claim is denied and dismissed.

Dated this 29th day of April 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that Respondents failed to timely designate an Authorized Treating Physician (ATP) in Wisconsin upon notice that she had moved out of state.

FINDINGS OF FACT

1. Claimant worked for Employer as an Assistant General Manager. On September 24, 2019 she sustained a work-related injury when she was reaching for a sauce bottle and felt a crack/pop sensation in her spine. Claimant specifically suffered a neck injury in the form of a herniated C5-C6 disc.

2. Claimant subsequently received medical care through Concentra Medical Centers and specialist referrals from October 10, 2019 through March 5, 2020. Respondents discovered that Claimant failed to attend an appointment at Concentra on March 19, 2020 and subsequently did not schedule any follow-up appointments.

3. On September 22, 2020 the parties attended a hearing before ALJ Goldman on the issues of compensability, medical benefits and Temporary Total Disability (TTD) benefits. ALJ Goldman's October 29, 2020 Order found the claim compensable and ordered Respondents to initiate ongoing TTD benefits.

4. On October 29, 2020 Respondents scheduled a demand appointment for Claimant to be evaluated at Concentra, 3300 28th St., Boulder, CO 80301 on November 12, 2020 at 11:00 AM. However, on the same day, Claimant's counsel informed Respondents that Claimant would be unable to attend the demand appointment because she had moved to Wisconsin. The correspondence reflects that Respondents were unaware that Claimant had moved until October 29, 2020. Although Respondents were informed that Claimant had relocated to Wisconsin, they lacked sufficiently detailed information to designate an Authorized Treating Physician (ATP).

5. On November 2, 2020 Respondents' counsel wrote to Claimant's counsel requesting Claimant's new address and the date she moved to Wisconsin. On November 9, 2020 the parties exchanged e-mails regarding Claimant's move and new address. Claimant's counsel responded that Claimant's home address "is 317 E. South Street, Lake Geneva, WI 53417." He also noted "[y]es it appears she moved in August . . . we didn't know either." The preceding correspondence reveals that, as of November 9, 2020, Respondents had a duty to designate an ATP in Wisconsin.

6. On November 10, 2020 Respondents sent a letter to Claimant's counsel stating that Claimant's treating physician Dr. Meza had not designated a new medical provider in Wisconsin. Respondents therefore selected an occupational medicine physician willing to assume care in Wisconsin. Respondents specifically designated

James C. Foster, M.D. of United Occupational Medicine at 9555 76th St., Pleasant Prairie, WI, 53158. The letter stated that Respondents would schedule an appointment and "provide all medical records to the newly-designated ATP, Dr. Foster."

7. Claimant's counsel immediately objected in writing to Respondents' designation and specified "the right to select an ATP passed to Claimant." Claimant also noted that she "was never seen by Dr. Meza." Finally, Claimant informed Respondents that the visit with Dr. Foster "appears to clearly be a 8-43-404 RIME request" and sought transportation to the examination.

8. Respondents scheduled an appointment for Claimant to visit new ATP Dr. Foster on November 24, 2020. Respondents sent a letter notifying Claimant and counsel of the appointment on November 11, 2020.

9. Respondents sent a letter to Dr. Foster on November 30, 2020 and included a copy to Claimant's counsel. The letter confirmed Dr. Foster's willingness to assume the role of ATP and summarized the medical treatment that Claimant had already received under the claim.

10. On December 8, 2020 Claimant's counsel sent a letter to Dr. Foster asserting that he was not the ATP because Claimant had not agreed to the designation. He also advised Dr. Foster that his office should obtain medical records and not use the summary from Respondents' counsel. Claimant's counsel requested a copy of any medical records Dr. Foster had obtained. In a follow-up letter to Dr. Foster dated December 9, 2020, Respondents reiterated that Dr. Foster's treatment recommendations would be authorized to the extent "such treatment is medically reasonable, necessary, and related to the September 24, 2019 cervical spine injury."

11. On December 15, 2020 Claimant filed an Application for Hearing that listed the following two issues: (1) the right of selection of the treating physician had passed to Claimant and (2) Respondents were attempting to dictate treatment in violation of §8-43-503(3), C.R.S. Claimant subsequently withdrew the penalty claim.

12. On December 22, 2020 Dr. Foster wrote a letter to counsel for both parties. Dr. Foster stated that he saw Claimant on December 4, 2020 but did not provide any treatment. He understood from Claimant that she "was not presenting for treatment" and "it is not even clear to me if there was a physician-patient relationship." Dr. Foster noted that, following the December 4, 2020 appointment, he had "left several messages" for Claimant but she had not responded. He remarked that "[i]t is not even clear to me she wanted me to treat her, or that she even wanted treatment." Dr. Foster commented that he had completed a written report, but he would not release the report "until it is clear to me what I am required to do."

13. On December 29, 2020 Claimant's counsel wrote to Respondents and noted that "Claimant is working on finding a good ATP for her ongoing neck problems. I will advise you who that is as soon as I know." As of the March 30, 2021 hearing in the

present matter Claimant had not provided the name of a physician or facility that should be authorized in Wisconsin.

14. On January 19, 2021 the parties attended a *Samms* conference with Dr. Foster. Dr. Foster subsequently released his December 20, 2020 written report addressing Maximum Medical Improvement (MMI), maintenance medical benefits and permanent impairment. Respondents received Dr. Foster's report on January 20, 2021. On the following day Respondents disclosed a copy of Dr. Foster's December 20, 2020 report to Claimant's counsel.

15. Dr. Foster's December 20, 2020 report specified that Claimant presented at his office on November 24, 2020 and December 4, 2020. At the first visit, Dr. Foster had no medical records. Claimant commented that she was under the impression that she was visiting Dr. Foster for an independent medical examination and he responded "that was definitely not my understanding." He also informed Claimant that "at least in the State of Wisconsin, she had the right to choose her provider and, from my perspective, did not need to see me." Claimant then signed records releases for multiple providers and scheduled a follow-up appointment for December 4, 2020.

16. Dr. Foster explained in the December 20, 2020 report that by December 4, 2020 he had obtained Claimant's medical records from Respondents' counsel as well as records he had independently requested. Dr. Foster thoroughly reviewed Claimant's medical records and performed a physical examination. He concluded that Claimant reached MMI on December 4, 2020 with no permanent impairment or need for medical maintenance benefits. He detailed that Claimant stated her symptoms had not changed substantially in close to one year. Specifically, Claimant's disc herniation from the September 24, 2019 industrial incident was "not a significant problem at this point, or the cause of her symptoms." Dr. Foster remarked that there were no objective findings to justify any permanent restrictions. He determined that no future treatment would be related to the September 24, 2019 incident.

17. On January 29, 2021 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Foster's December 20, 2020 report. Respondents' attached a completed WC164 form to the FAL.

18. Claimant testified at the hearing in this matter that she was in the process of establishing care for her neck in Wisconsin but had been unsuccessful because of issues with housing and transportation. During the two months prior to the March 30, 2021 hearing, Claimant obtained the following treatment for her neck injury: Dr. Gary Myron, a primary care physician at Mercy Health, a cervical MRI at Mercy Health, and a phone appointment with Merle S. Rust, M.D., a neurosurgeon, who had reviewed her scan and declined to provide further treatment.

19. Claimant has failed to demonstrate that it is more probably true than not that Respondents failed to timely designate an ATP in Wisconsin upon notice that she had moved out of state. The record reflects that Respondents satisfied their obligation to timely designate a replacement ATP in Wisconsin willing to assume care. Respondents

first became aware that Claimant had relocated out-of-state on October 29, 2020. Specifically, Claimant's counsel responded that Claimant was unable to attend a demand appointment scheduled for November 12, 2020 at Concentra in Boulder, CO because she had moved to Wisconsin. The correspondence reflects that Respondents were unaware the Claimant had moved until October 29, 2020. Although Respondents were apprised that Claimant had relocated to Wisconsin, they lacked sufficiently detailed information to designate an ATP.

20. On November 2, 2020 Respondents' counsel wrote to Claimant's counsel requesting Claimant's new address and the date she moved to Wisconsin. On November 9, 2020 the parties exchanged e-mails regarding Claimant's move and new address. Claimant's counsel responded that Claimant's home address "is 317 E. South Street, Lake Geneva, WI 53417." He also noted "[y]es it appears she moved in August . . . we didn't know either." The preceding correspondence reveals that, as of November 9, 2020, Respondents had a duty to designate an ATP in Wisconsin.

21. In a November 10, 2020 letter to Claimant's counsel Respondents timely designated Dr. Foster as the new ATP. On the following day Respondents sent a letter notifying Claimant of an appointment scheduled for November 24, 2020. In a December 20, 2020 report Dr, Foster specified that Claimant presented at his office on November 24, 2020 and December 4, 2020. By December 4, 2020 he had obtained Claimant's medical records from Respondents' counsel as well as records he had independently requested. Dr. Foster thoroughly reviewed Claimant's medical records and performed a physical examination. He concluded that Claimant reached MMI on December 4, 2020 with no permanent impairment or need for medical maintenance benefits. He determined that no future treatment would be related to the September 24, 2019 incident.

22. A review of the record reveals that Respondents timely designated a physician willing to offer treatment in Wisconsin. On November 9, 2020 Respondents had some knowledge of facts that would lead a reasonably conscientious person to believe that Claimant relocated to Lake Geneva, WI and required medical treatment, Respondents were thus required to timely tender the services of a physician willing to assume care. On November 10, 2020 Respondents selected occupational medicine physician Dr. Foster to assume care in Wisconsin. Because Respondents timely designated Dr. Foster to treat Claimant in Wisconsin, he is Claimant's ATP.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the

rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). The statute implicitly contemplates that the respondent will designate a physician who is willing to provide treatment. *See Ruybal v. University Health Sciences Center*, 768 P.2d 1259, 1260 (Colo. App. 1988). If the employer fails to timely tender the services of a physician, the right of selection passes to the claimant and the selected physician becomes an ATP. *See Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987); *Garrett v. McNelly Construction Company, Inc.*, WC 4-734-158 (ICAO, Sept. 3, 2008). Whether the ATP refused to treat the claimant for non-medical reasons, whether the insurer received notice of the refusal to treat and whether the insurer "forthwith" designated a physician who was willing to treat the claimant are questions of fact for the ALJ*. Garrett v. McNelly Construction Company, Inc.*, WC 4-734-158 (ICAO, Sept. 3, 2008); *see Ruybal*, 768 P.2d at 1260.

5. If upon notice of the injury the employer timely fails to designate an ATP, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987). The employer's obligation to appoint an ATP arises when it has some knowledge of the accompanying facts connecting an injury to the employment such that a reasonably conscientious manager would recognize the case might result in a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006).

6. When a claimant relocates to a new state and an existing ATP refers her for additional medical care in the new state, the new physician becomes authorized. *See Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985). However, in the absence of a referral from the existing ATP, the respondents have a duty to designate a physician willing to assume care in the new state upon notice of the claimant's relocation. Specifically, when the respondents have some knowledge of facts that would lead a reasonably conscientious person to believe that the claimant is relocating to another state and requires treatment, the respondents must timely tender the services of a physician

willing to assume care. *Ries v. Subway of Cherry Creek*, W.C. No. 4-674-408 (ICAO, Aug. 4, 2011); *see Jones v. Adolph Coors Co*., 689 P.2d 681 (Colo. App. 1984) (noting that the respondents' duty is triggered once the employer or insurer has some knowledge of facts that would lead a reasonably conscientious manager to believe the case may involve a claim for compensation). If the respondents fail to timely designate an ATP, the right of selection passes to the claimant. The question of whether the respondents failed to timely tender the services of a physician is a determination of fact for resolution by the ALJ. *See Ruybal v. University of Colorado Health Sciences Center*, 768 P.2d 1259 (Colo. App. 1988); *Buhrmann v. University of Colorado Health Sciences Center*, W.C. No. 4-253-689 (ICAO, Nov. 4, 1996).

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that Respondents failed to timely designate an ATP in Wisconsin upon notice that she had moved out of state. The record reflects that Respondents satisfied their obligation to timely designate a replacement ATP in Wisconsin willing to assume care. Respondents first became aware that Claimant had relocated out-of-state on October 29, 2020. Specifically, Claimant's counsel responded that Claimant was unable to attend a demand appointment scheduled for November 12, 2020 at Concentra in Boulder, CO because she had moved to Wisconsin. The correspondence reflects that Respondents were unaware the Claimant had moved until October 29, 2020. Although Respondents were apprised that Claimant had relocated to Wisconsin, they lacked sufficiently detailed information to designate an ATP.

8. As found, on November 2, 2020 Respondents' counsel wrote to Claimant's counsel requesting Claimant's new address and the date she moved to Wisconsin. On November 9, 2020 the parties exchanged e-mails regarding Claimant's move and new address. Claimant's counsel responded that Claimant's home address "is 317 E. South Street, Lake Geneva, WI 53417." He also noted "[y]es it appears she moved in August . . . we didn't know either." The preceding correspondence reveals that, as of November 9, 2020, Respondents had a duty to designate an ATP in Wisconsin.

9. As found, in a November 10, 2020 letter to Claimant's counsel Respondents timely designated Dr. Foster as the new ATP. On the following day Respondents sent a letter notifying Claimant of an appointment scheduled for November 24, 2020. In a December 20, 2020 report Dr, Foster specified that Claimant presented at his office on November 24, 2020 and December 4, 2020. By December 4, 2020 he had obtained Claimant's medical records from Respondents' counsel as well as records he had independently requested. Dr. Foster thoroughly reviewed Claimant's medical records and performed a physical examination. He concluded that Claimant reached MMI on December 4, 2020 with no permanent impairment or need for medical maintenance benefits. He determined that no future treatment would be related to the September 24, 2019 incident.

10. As found, a review of the record reveals that Respondents timely designated a physician willing to offer treatment in Wisconsin. On November 9, 2020 Respondents had some knowledge of facts that would lead a reasonably conscientious person to believe that Claimant relocated to Lake Geneva, WI and required medical treatment, Respondents were thus required to timely tender the services of a physician willing to assume care. On November 10, 2020 Respondents selected occupational medicine physician Dr. Foster to assume care in Wisconsin. Because Respondents timely designated Dr. Foster to treat Claimant in Wisconsin, he is Claimant's ATP.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents timely designated Dr. Foster to serve as Claimant's ATP in Wisconsin effective November 10, 2020.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at* https://oac.colorado.gov/resources/oac-forms.

DATED: April 29, 2021.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-123-792-001

ISSUE

1. Whether Claimant sustained a compensable injury to his left shoulder arising out of the course of his employment on August 20, 2019.

2. Whether Claimant sustained a compensable injury to his cervical spine arising out of the course of his employment on August 20, 2019.

3. Whether Claimant sustained a compensable traumatic brain injury arising out of the course of his employment on August 20, 2019.

4. Whether Claimant is entitled to medical benefits for his left shoulder, cervical spine and/or brain injury.

5. Claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant is a 62-year-old airplane mechanic who worked for Employer from July 15, 2019 through December 18, 2019. During his employment, Claimant's hourly wage was $22.81 per hour. (Ex. V).

2. Claimant was paid bi-weekly by Employer. Between Claimant's date of hire, and August 9, 2019 (the pay period ending immediately prior to Claimant's injury), Claimant earned gross wages of $5,314.24. (Ex. W). For this period of 3 4/7 weeks, Claimant's average weekly wage was $1,430.75.

3. On August 20, 2019, Claimant sustained an admitted injury to his head (laceration) and coccyx arising out of the course of his employment with Employer. Claimant was working as an airplane mechanic for Employer and was asked to take a part to a plane using a four-wheeled motorized utility vehicle (the "cart"). The injury occurred when Claimant was driving the cart through a tunnel when another vehicle he was following stopped abruptly, and Claimant rear-ended the other vehicle. As a result of the collision, Claimant sustained an approximately 3-inch laceration on the top of his head. The evidence was conflicting as to the exact mechanism of injury, with Claimant variously reporting that he struck his head on the cart's roof or windshield, that he struck his head on a concrete wall, that he struck a curb with his head, and that his head struck the ground.

4. Paramedics were called to the scene and Claimant was evaluated. Claimant reported striking his head on the curb and also striking his head on the roof of the cart. Claimant denied pain to his neck and back, and did not report shoulder pain. Claimant denied loss of consciousness, head pain, nausea, vomiting or vision changes.

Examination of Claimant's cervical spine was negative. Claimant was then transported by ambulance to the emergency department at UC Health. (Ex. 9).

5. At the emergency department, Claimant's scalp laceration was sutured, and he was diagnosed with a closed head injury and laceration of the scalp. Claimant was then discharged with care instructions for a head injury and laceration. (Ex. 9).

6. Claimant next saw Gary Scofield, PA-C, at Concentra for suture removal and evaluation on September 4, 2019. At that time, Claimant reported pain in his lower back and coccyx (i.e., tailbone), and experiencing intermittent dizziness since the August 20, 2019 accident. Claimant denied loss of consciousness, vision issues (other than pre-existing blindness in his right eye), nausea or vomiting. Claimant reported he had been performing his regular job duties since the August 20, 2019 injury with no apparent functional difficulties. Claimant completed a pain diagram at the visit indicating pain in the back of his head and lower back/tail bone. PA Scofield diagnosed Claimant with a laceration of the scalp, closed head injury and contusion of coccyx. PA Scofield indicated that Claimant had a "possible mild concussion with post-concussion intermittent dizziness" and that PA Scofield would "keep case open for two weeks to reassess dizziness and sore tailbone." (Ex. B).

7. On September 20, 2019, Claimant returned to Concentra and was seen again by PA Scofield. Claimant reported mild intermittent dizziness and mild lower back pain. He denied nausea, vomiting or vision issues, and reported performing his regular job duties. Claimant requested and was provided a referral for chiropractic to address stiffness in his lower back. PA Scofield diagnosed Claimant with a closed head injury, contusion of coccyx, laceration of scalp, and strain of the lumbar region. It was noted that Claimant was "not at end of healing," and Claimant was advised to return for a follow up with PA Scofield visit on October 7, 2019. The evidence was unclear as to the reason, but Claimant did not return for the follow-up visit referenced by PA Scofield. (Ex. C).

8. On October 23, 2019, Claimant was seen at Conley Family Chiropractic by Darwin Stjernholm, D.C. In conjunction with that visit, Claimant completed a "Confidential Patient Case History" containing check boxes for Claimant to indicate symptoms he had at that time or previously. Claimant indicated he was experiencing frequent and constant dizziness, frequent pain or numbness in his hands, arthritis in his right ankle, and frequent pain in his tail bone. Claimant did not check boxes for neck pain or stiffness, pain between shoulders, pain or numbness in his shoulders, or headaches. In addition, Claimant indicated he had been involved in a motorcycle accident approximately one year previously. (Ex. 5).

9. On November 5, 2019, Claimant saw a dentist, Cindy Herbert, DDS, for a dental examination. Claimant reported hitting his head "about 2 weeks ago" when he fell out of a carrier at work. He reported that he was continuing to experience dizziness from that event. Dr. Herbert recommended that Claimant have an MRI or CAT scan before she performed any tooth extractions due to Claimant's reported dizziness. (Ex. 5). On December 2, 2019, Dr. Herbert performed extractions of three teeth. (Ex. 5).

10. Claimant returned to Dr. Stjernholm on November 5, 2019 for further treatment. At the November 5, 2019 visit, Dr. Stjernholm noted that Claimant's complaints included pain, stiffness and paresthesias in "head region," "cervical region," "thoracic region," "lumbar region," "sacral region," and "pelvic region," each with a pain level of "5." (Ex. 5). Claimant had no further chiropractic appointments with Dr. Stjernholm.

11. In December 2019, Employer terminated Claimant for violation of company policy. (Ex. U).

12. Respondents filed a General Admission of Liability (GAL) on January 10, 2020, admitting for medical benefits, and denying for other benefits. (Ex. 3).

13. Sometime in approximately March 2020, Claimant relocated to Florida.

14. On May 14, 2020, Claimant was seen by Glenn Tobias, D.O., at Concentra in Florida. Claimant indicated he was ejected from the cart after hitting the windshield during the August 20, 2019 and then hit his head and back on a concrete median. Claimant also reported injuries to his neck, back and shoulders. Claimant reported constant neck pain rating 7/10, blurred vision, dizziness, and photophobia. Dr. Tobias diagnosed Claimant with closed head injury and cervical pain. He requested a MRI of the cervical spine and physical therapy for Claimant's cervical pain and a neurologist referral for evaluation of Claimant's for a closed head injury. (Ex. D).

15. On May 21, 2020, Respondents informed Dr. Tobias that the request for a cervical MRI and neurologist were denied or contested due to the services not being related to the admitted injuries in the claim, and that compensability of the cervical spine had not been established. (Ex. 10).

16. On August 26, 2020, B. Andrew Castro, M.D., performed a medical record review at the request of Respondents. Based on his review of Claimant's medical records, Dr. Castro opined that the Claimant was likely at MMI from his work-related injuries and that no further treatment was reasonable or necessary. Dr. Castro noted that Claimant had no cervical complaints at the time of his injury and denied nausea, vomiting, vision issues or loss of consciousness. Dr. Castro indicated that as of the date of his review, "the patient is not having any neurologic findings of any worrisome neurologic condition." The basis of this conclusion, however, is questionable because Dr. Castro did not examine Claimant in August 2020, and the most recent medical record from May 14, 2020 documents blurred vision, dizziness, and photophobia. Dr. Castro concluded that further imaging of Claimant's head or neck was not indicated because Claimant "did not sustain a cervical spine injury or head injury as a result of this accident." Dr. Castro's opinion that Claimant did not sustain a spine injury is credible and persuasive. However, the opinion that Claimant did not sustain a head injury is not persuasive. (Ex. A).

17. On September 14, 2020, Claimant returned to Concentra in Florida and saw Jonetta Troyer, PA-C. Claimant reported being thrown from the Cart during the collision and hitting his head on a concrete wall. Claimant also reported experiencing memory issues, dizziness, and headaches. For the first time, Claimant reported limited range of

motion in his left shoulder and indicated he had seen an orthopedic surgeon who informed Claimant he had a “torn muscle” in the shoulder limiting movement. The record does not contain records of the referenced orthopedic consultation. PA Troyer assessed Claimant has having a contusion of the scalp, post-concussive syndrome, radiculopathy of the arm, and an acute neck strain. She requested a head MRI for assessment of a closed head injury, a cervical MRI, a neurology referral, and an orthopedic referral for assessment of Claimant’s left shoulder. (Ex. E).

18. On September 16, 2020, Respondents wrote PA Troyer and Dr. Tobias to communicate Respondents’ denial of the authorization of the requested cervical MRI, neurology referral and orthopedic referral. Respondents indicated that the requested referrals were not related to the admitted injuries, and that compensability of the closed head injury, cervical spine and left shoulder had not been established. (Ex. 11).

19. On September 30, 2020, Respondents’ counsel sent Dr. Tobias a letter requesting his opinion concerning the medical evidence supporting the diagnoses of closed head injury with dizziness, neck injury with shoulder pain and a shoulder injury. Dr. Tobias indicated that the medical evidence supporting a diagnosis of closed head injury with dizziness included Claimant having “daily persistent dizziness and [headaches] that he never had prior to [the August 20, 2019] injury.” With respect to the medical evidence supporting a diagnosis of a neck injury with shoulder pain, Dr. Tobias wrote “After the 8/20/19 [date of injury] – [Claimant] has had persistent L shoulder and cervical pain with L arm radiculopathy that he did not have prior to this injury.” Dr. Tobias’ characterization that Claimant had had “persistent” left shoulder and cervical pain with left arm radiculopathy, is not supported by the evidence, and is not credible or persuasive. Conversely, his opinion that Claimant sustained a closed head injury, based on persistent dizziness is credible. (Ex. 6).

20. Respondents also requested that Dr. Tobias indicate the medical evidence supporting a referral for a head MRI, neck MRI, orthopedist referral and neurologist referral. In response, Dr. Tobias wrote “Due to the issues [Claimant] is having the head/cervical MRI & orthopedist & neurologist are needed to get a complete understanding of his diagnosis & to confirm causality. This cannot truly be done at this level of care. Higher level diagnostics and specialists are needed due to the complexity of this case.” Dr. Tobias also opined that Claimant was not at maximum medical improvement (MMI). The ALJ finds credible Dr. Tobias’ opinion that Claimant was not at MMI with respect to his head injury, and that additional diagnostic testing and a neurological referral was reasonable and necessary to diagnose and assess Claimant’s condition. (Ex. 6).

21. On October 1, 2020, Claimant underwent a brain MRI, which was interpreted as normal for Claimant’s age. (Ex. N).

22. Between October 13, 2020 and November 30, 2020, Claimant saw Dr. Tobias on four occasions. At each visit, Claimant reported continued dizziness, neck pain, right shoulder pain and right arm numbness, without any significant changes. (Ex. G, H, I and

J). At Claimant's November 30, 2020 visit, he reported falling asleep on his left arm resulting in functional difficulties with his left wrist and tingling in his left thumb. (Ex. J).

23. On February 8, 2021, Claimant participated in a virtual independent medical examination (IME), with Sander Orent, M.D., due to the constraints of a virtual examination, Dr. Orent did not physically examine Claimant. Dr. Orent issued a report dated February 8, 2021, setting forth his opinions. (Ex. 4). Dr. Orent was admitted to testify as an expert in occupational, emergency, and internal medicine. Claimant reported to Dr. Orent that immediately following the August 20, 2019 accident he had immediate dizziness, a severe headache, nausea, balance issues and that he lost consciousness. Claimant further reported experiencing severe left arm pain and neck pain on the date of accident. Claimant also reported being the victim of a dog attack in 2017 in which he sustained a significant injury to the left shoulder, which Claimant apparently reported was "never investigated" beyond basic care. (Ex. 4).

24. At the time of his IME with Dr. Orent, Claimant reported experiencing left-sided headaches 3-4 times per week with photophobia, memory loss, and no history of similar symptoms before August 20, 2019. Claimant reported constant pain in his neck, numbness in his left arm into his fingers, which he indicated started at the time of accident, with additional biceps symptoms. Claimant reported his left shoulder pain had worsened as a result of the August 20, 2019 accident, and that he was experiencing leg weakness, difficulty squatting and an occasional "dragging foot." (Ex. 4).

25. Based on his IME and review of Claimant's medical records, Dr. Orent opined that Claimant has "substantial neurologic symptomology which is very disconcerting." He opined that Claimant was manifesting symptoms of weakness and radiculopathy in the left arm and "probably both legs." He opined that an EMG nerve conduction study is "absolutely mandatory at this time" to evaluate possible compression of the spinal cord due to a C4-5 herniated disc. Dr. Orent opined that Claimant requires additional treatment, including a surgical consultation, evaluation at a headache clinic and an ENT consultation. (Ex. 4).

26. In addressing the lack of any contemporaneous documentation of neck symptoms at the time of the accident, Dr. Orent opined that Claimant was confused and disoriented following the accident, and in pain from his tailbone injury, and therefore presumably did not report other symptoms. Dr. Orent acknowledged that his opinion on this issue was speculation. The ALJ finds that Dr. Orent's opinion on this issue is not credible or persuasive. While it is plausible that Claimant may not have reported some symptoms on the date of his accident, the medical records document Claimant's affirmative denial of pain in his neck and back, nausea, and loss of consciousness, not merely that such issues were not reported. Additionally, Claimant's only consistently-reported symptoms to other health care providers prior to May 2020 were lower back/tailbone pain and dizziness. (Ex. 4).

27. On February 1, 2021, Dr. Castro performed a IME at Respondents' request, including an examination of Claimant and medical record review. Dr. Castro was admitted to testify as an expert in orthopedic surgery. He testified by deposition consistent with his

reports. Claimant reported a history of headaches, neck pain, upper, mid, and lower back pain, buttock pain, left leg pain, leg numbness, left arm pain, finger triggering, memory loss, problems thinking, insomnia, depression, and stress. Claimant indicated that in the August 20, 2019 accident he landed head-first on his left side striking his left shoulder. Claimant described his then-current symptoms as dizziness, memory loss, left shoulder pain, neck pain, back pain, chronic tailbone pain, left arm numbness, loss of use of left hand and daily headaches. Based on his examination and review of medical records, Dr. Castro's opinions expressed in his August 26, 2020 report remained largely unchanged. Dr. Castro opined that Claimant's cervical spine, shoulder and lower back symptoms were not accident related, and that Claimant's report of symptoms in these areas were not consistent with his original presentation and had changed since the accident. He did agree that evaluation of Claimant's reported cervical radiculopathy was reasonable, albeit not related to Claimant's work injury. (Ex. A).

28. With respect to Claimant's head injury, Dr. Castro noted that he is not a traumatic brain injury or concussion specialist, but that Claimant's medical records did not document "substantial brain injury-type symptomatology." In testimony, Dr. Castro noted the absence of neurological findings consistent with a head injury, such as loss of consciousness, and abnormal mental status. Dr. Castro opined that it was "unclear" whether Claimant "sustained any substantial traumatic brain injury and needs any treatment moving forward…" Dr. Castro deferred to a brain injury specialist with respect to whether Claimant sustained "a substantial brain trauma," and opined that "at most" Claimant sustained a mild concussion. (Ex. A)

Prior Treatment/Conditions

29. In 2017, Claimant was the victim of a dog attack. Following the attack, Claimant underwent a series of imaging studies. Including MRIs of his cervical spine, right elbow, right ankle, and left shoulder. Claimant testified that the owner of the dog was a physician who requested the MRI studies as a precaution, and that Claimant had no treatment for his head, neck, or left shoulder. Claimant's testimony as to the reasons for conducting the MRI studies is not credible, and fails to explain why specific body parts were examined if Claimant had no significant symptoms in these body parts. Notwithstanding, Claimant's left shoulder MRI, taken on October 18, 2017, showed a full thickness tear of the supraspinatus tendon with moderately large joint effusion and hypertrophic changes of the acromioclavicular joint. The cervical MRI, taken November 9, 2017, showed herniated discs with spondylotic changes at C3-4, C4-5, C5-6 and C-6-7 with encroachment, a bulging disc with anterior vertebral offset at the C7-T1 level, and spinal stenosis with cord encroachment and compressive myelomalacia at the C-4-5 level.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See*

§ 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY AND MEDICAL TREATMENT

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641.

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co.*

v. Blair, 812 P.2d at 641; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equipment Company,* W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be considered a "medical benefit" it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995)*; Karim al Subhi v. King Soopers, Inc.,* W.C. No. 4-597-590, (ICAO, July 11, 2012). Medical treatment which has a "reasonable prospect" of diagnosing or defining a Claimant's condition to suggest a course of further treatment constitutes a compensable medical benefit. *Churchill v. Goodyear Tire and Rubber Co.*, W.C. No. 4-203-686 (ICAP, Jan. 25, 2007). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006).

CERVICAL SPINE/NECK

Claimant has failed to establish by a preponderance of the evidence that he sustained a cervical spine/neck injury as the result of his August 20, 2019 work accident. Claimant was seen by multiple different health care providers in the three months following the August 20, 2019 accident. On the day of the accident, Claimant was seen by paramedics and an emergency room physician. The medical records demonstrate that Claimant denied neck pain to the paramedics, and did not report neck pain to the ER physician. Claimant was then seen twice at Concentra by PA Scofield, on September 4, 2019 and September 20, 2019. Again, Claimant did not report any neck pain or symptoms at these visits, and his complaints were limited to dizziness and lower back/coccyx pain.

When Claimant saw Dr. Stjernholm on October 23, 2019, he completed medical history form, in which he noted dizziness and a painful tail bone. Notably, Claimant did not indicate he was experiencing neck pain or stiffness or pain between his shoulders.

Claimant's first documented complaint of neck pain was not until May 14, 2020, approximately nine months after the August 20, 2019 accident. Claimant's position that until May 14 ,2020, Claimant's providers failed to document his alleged complaints of neck pain is not persuasive or supported by credible evidence. Dr. Orent's opinion that Claimant was experiencing neck pain at the time of his injury is, by his own admission, speculation and therefore not persuasive. Further, Dr. Orent's opinion regarding Claimant's neck injury is based on the Claimant's reports, which are inconsistent with Claimant's contemporaneous medical records.

Because Claimant has failed to establish that he sustained a compensable injury to his cervical spine as a result of the August 20, 2019 work accident, any treatment of Claimant's cervical spine is not reasonable and necessary to cure or relieve the effects of a work injury.

LEFT SHOULDER

Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury to his left shoulder as the result of his August 20, 2019 work accident. Claimant's first documented complaint of left shoulder pain was on September 14, 2020, more than one-year after his work-related accident. Between the date of the accident and September 14, 2020, Claimant was evaluated by multiple health care providers and did not report any symptoms in his left shoulder. Although Claimant reported to Ms. Troyer that an orthopedic surgeon had diagnosed Claimant with a "torn muscle" resulting in limited range of motion to his shoulder, no records of such an examination or opinion are in the record. If Claimant sustained an acute injury to his left shoulder in the August 20, 2019 accident, it is more likely than not that the symptoms would have manifested immediately or shortly after the accident rather than approximately 13 months later. Claimant's report to Dr. Orent in February 2021 that he landed on his left shoulder is the first report of this mechanism of injury, and is not credible. Because Claimant has failed to establish that he sustained a compensable injury to his left shoulder as a result of the August 20, 2019 work accident, any treatment of Claimant's cervical spine is not reasonable and necessary to cure or relieve the effects of a work injury.

TRAUMATIC BRAIN INJURY

Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his head in addition to the admitted laceration arising out of the course of his employment with Employer. Claimant was diagnosed with a closed head injury and a possible concussion with post-concussion symptoms, and has consistently reported experiencing dizziness since shortly after August 20, 2019, to multiple providers both within and outside the workers' compensation system. Given the continued reports of dizziness over a significant period of time, as well as the relatively early diagnosis of a possible concussion, the ALJ concludes that it is more likely than not that Claimant's head injury was not limited to a scalp laceration.

Although Claimant did not initially report significant symptomatology of a severe brain injury, such as loss of consciousness, vision disturbances, nausea, vomiting, or memory loss. Claimant's records from Concentra on September 4, 2019 and September 20, 2019 document continued dizziness that had not resolved as of his last examination. At subsequent visits with other health care providers, including chiropractic visits with Dr. Stjernholm in October and November 2019, and a dental visit with Dr. Herbert in November 2019, Claimant continued to report dizziness. Claimant's report of dizziness to Dr. Herbert is credible evidence of continued dizziness, because Claimant saw Dr. Herbert for treatment unrelated to his workers' compensation claim. Claimant continued to report dizziness when he saw Dr. Tobias in May 2020.

The specific nature of Claimant's injury, however, has not been determined, in part, because Respondents denied Dr. Tobias' request for a neurological consultation to further evaluate Claimant's head injury. Although Dr. Castro opined that Claimant has not sustained a "substantial" brain injury, he also acknowledge that Claimant possibly sustained a mild concussion and would defer to a brain injury specialist to determine whether there is any substantial brain trauma resulting from Claimant's work injury.

The ALJ concludes that Claimant has established it more likely than not that he sustained a concussion as a result of the August 19, 2019 work accident, and further evaluation and treatment of that injury is reasonable and necessary to relieve or cure the effects of that injury. Toward that end, the MRI requested by PA Troyer and/or Dr. Tobias was a diagnostic procedure with a reasonable prospect of diagnosing or defining Claimant's condition. In addition, Dr. Tobias' request to refer Claimant to a neurologist is also reasonable and necessary to cure or relieve the effects of Claimant's work injury.

Claimant has established by a preponderance of the evidence an entitlement to an award of general medical benefits related to a concussion, and that the neurologic consultation and brain MRI requested by Dr. Tobias constitute compensable medical treatment.

AVERAGE WEEKLY WAGE

Section 8-42-102(2), C.R.S. (2016) requires the ALJ to calculate Claimant's average weekly wage (AWW) based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily, hourly, or other earnings. This section establishes the so-called "default" method for calculating Claimant's AWW. However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S. (2016) affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. § 8-42-102(3), C.R.S. establishes the so-called "discretionary exception". *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp*., supra; *Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007).

Claimant's average weekly wage for the 3 4/7 weeks preceding his injury was $1,430.75. The ALJ finds this to be a fair approximation of Claimant's average weekly wage.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained injuries to his left shoulder or cervical spine as the result of his August 20, 2019 work accident.

2. Claimant's request for medical benefits for treatment of his cervical spine and left shoulder is denied and dismissed.

3. Claimant has established by a preponderance of the evidence that he sustained a concussion arising out of the course of his employment with Employer on August 20, 2019.

4. Respondents are liable for medical treatment that is reasonable and necessary to cure and relieve the effects of his occupational injury

5. Respondents are liable for the October 1, 2020 brain MRI and evaluation by a neurologist, requested by Dr. Tobias as medical treatments reasonable and necessary to cure or relieve the effects of Claimant's work injury.

6. Claimant's average weekly wage as of August 20, 2019 was $1,430,75.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 3, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-150-145-001

ISSUES

- Did Claimant prove she suffered a compensable injury on September 5, 2020?

  If the claim is compensable, the ALJ will address the following issues:

- Did Claimant prove treatment at the Memorial Hospital emergency department on September 5, 2020 was compensable emergency treatment?

- Is Claimant entitled to TTD benefits from September 6, 2020 and ongoing?

- Did Respondents prove Claimant was responsible for termination of her employment?

STIPULATIONS

Claimant's average weekly wage is $355.00. Dr. Miguel Castrejon is the primary ATP.

FINDINGS OF FACT

1. Claimant worked as a housekeeper at Employer's Days Inn hotel.

2. Cecilia "Cecy" G[Redacted] is the manager for Employer. Ms. G[Redacted] supervises all hotel staff, including Claimant. Ms. G[Redacted] also manages an adjacent Super 8 hotel. The Days Inn and Super 8 hotels share a common parking lot and it is a quick walk between the two. Ms. G[Redacted] commonly moves back and forth between the two properties during her shift. Ms. G[Redacted] is readily accessible to employees at either hotel on her cell phone. She communicates regularly with employees, including Claimant, regarding schedules and work assignments.

3. On September 5, 2020, Claimant was cleaning rooms for Employer. She moved a heavy TV stand to clean behind it and felt pain in her anterior right shoulder. Shortly thereafter, Claimant developed pain in her low back when she moved the TV stand back to its original position.

4. Claimant estimated the initial injury occurred between 3:00 p.m. and 4:00 p.m. She continued working and cleaning rooms after the injury, during which time her pain slowly intensified. At one point, another housekeeper, Ms. Ortega, passed by and spoke to Claimant. Claimant told Ms. Ortega she had injured herself and Ms. Ortega helped Claimant carry out the trash.

5. Claimant cleaned all her assigned rooms except Room 213. By all accounts, Room 213 was in poor condition, including a broken toilet seat. Ms. G[Redacted]

estimated it would have taken one housekeeper approximately 45 minutes to clean the room. Claimant was unhappy about having to clean Room 213.

6. Ms. A[Redacted] works for Employer in the laundry. Claimant testified she went to the laundry twice and asked Ms. A[Redacted] for assistance moving the TV stand but Ms. A[Redacted] declined to help. Claimant testified she told Ms. A[Redacted] she had injured her shoulder during the second trip to the laundry. Ms. A[Redacted] credibly testified Claimant came into the laundry for supplies but did not ask for help and mentioned no injury. Claimant complained to Ms. A[Redacted] about Room 213, stating that it was too dirty for only one housekeeper to clean. Claimant told Ms. A[Redacted] she was not going to clean Room 213. Ms. A[Redacted] advised Claimant to contact Ms. G[Redacted] about the situation.

7. Instead of speaking with Ms. G[Redacted], Claimant called a co-worker named Norma who was not working that day and not at the property. Norma is another housekeeper with no supervisory or managerial duties. Claimant asked Norma to contact Ms. G[Redacted] and ask Ms. G[Redacted] to send someone to help clean Room 213. Claimant told Norma she (Claimant) had suffered a work injury and asked Norma to tell Ms. G[Redacted] about the injury. Norma did not contact Ms. G[Redacted] after speaking with Claimant.

8. Claimant did not clean Room 213. Instead, she simply went home. Claimant left the hotel at approximately 6:00 p.m. She made no contact with Ms. G[Redacted] or any other manager before leaving. When questioned about her behavior at the hearing, Claimant testified she had not previously registered Ms. G[Redacted]'s number with the "Hey Google" feature of her phone and it was easier to call Norma. When asked why she did not take the short walk across the parking lot to speak with Ms. G[Redacted], Claimant testified she was in pain and wanted to go home. Claimant's explanations of why she did not contact Ms. G[Redacted] are not credible.

9. Ms. G[Redacted] was later alerted by the front desk that Room 213 had not been cleaned. She contacted Claimant at approximately 7:00 p.m. and instructed Claimant to return to the hotel to clean the room. Claimant protested that the room was too dirty and she was unwilling to return. Although Claimant testified she also told Ms. G[Redacted] about the injury, Ms. G[Redacted] persuasively denied Claimant mentioned any injury. Ms. G[Redacted] advised Claimant she had abandoned her job and was terminated. Ms. G[Redacted] could not recall if the conversation was conducted verbally or via text. Claimant testified the conversation was via text. Claimant testified she deleted the text messages and offered no explanation for doing so. Ms. G[Redacted]'s account of the conversation is more credible than Claimant's account.

10. Ms. G[Redacted] called several other housekeepers after Claimant refused to come back and clean Room 213. She had difficulty reaching anyone because of the Labor Day holiday. The only housekeeper to answer her phone was Ms. Ortega. Ms. Ortega was at a party but agreed to return to the hotel and clean Room 213. Ms. Ortega had been driven to the party by her daughter and was without her own vehicle; Ms.

Ortega's daughter drove Ms. Ortega to the Employer. Ms. Ortega did not tell Ms. G[Redacted] that Claimant had sustained an injury earlier that day.

11. Employees are required to report all work injuries to Ms. G[Redacted]. Ms. G[Redacted] credibly testified her standard practice when an employee reports an injury is to refer them to one of Employer's designated providers and file a report with Insurer.

12. Claimant went to the Memorial Hospital emergency department at 9:00 p.m. on September 5. Her chief complaints were right shoulder pain and low back pain. Claimant stated, "She was at work today, doing cleaning, she was lifting a very old, heavy, TV stand, and while doing this, she felt a sharp pain in the anterior aspect of her shoulder. Patient also complains of low back pain that developed about an hour after the incident. Patient denies any prior injuries in the low back or shoulder." Examination of the right shoulder showed diffuse interior tenderness and decreased strength secondary to pain. There was no swelling, no spasm, and range of motion was normal. Examination of the low back showed tenderness of the bilateral lumbar paraspinals but no palpable spasm and normal range of motion. X-rays of the right shoulder were normal. Claimant was diagnosed with a right shoulder "sprain" and acute bilateral low back pain without sciatica. The ER physician recommended Claimant utilize OTC NSAIDs and apply ice to her shoulder and back, and follow up with her PCP in a few days. Claimant was not given any work restrictions.

13. Claimant saw her PCP, Dr. Bradley Stokes, at Peak Vista Community Health Centers on September 8, 2020. She complained of ongoing right shoulder and low back pain, with some burning in the right leg. Claimant stated the problems "started three days ago due to an injury. She was moving some very heavy items away and first hurt her right shoulder. She then stretched it out and felt a popping motion and heard a sound in her right shoulder. Since then she has had a lot of shoulder pain. She tried to move the item a second time and that hurt her low back." Rotator cuff testing showed pain, "a little weakness," and crepitus. Dr. Stokes thought the injury was "likely muscular." Claimant's low back was very tender to palpation and she had some weakness in the right lower extremity consistent with a painful effort. Dr. Stokes diagnosed acute right shoulder pain and low back pain. He prescribed a Medrol Dosepak and muscle relaxers. Dr. Stokes assigned no work restrictions.

14. Claimant returned to Dr. Stokes on September 15, 2020. The muscle relaxers were helpful but the prednisone was of no benefit. Claimant reported worsening pain particularly regarding her low back and right leg. Rotator cuff testing demonstrated pain and weakness. Her low back was tender to palpation. Dr. Stokes noted "significant" weakness while testing the right leg and positive straight leg raise test on the right. Dr. Stokes ordered MRIs of the right shoulder and low back to evaluate a possible rotator cuff tear and lumbar nerve root impingement.

15. Claimant underwent a right shoulder MRI on September 28, 2020. It showed a Grade 1 strain of the subscapularis muscle, an intermediate grade sprain of the anteroinferior glenohumeral capsular ligament, and a low-grade partial-thickness tear of the supraspinatus myotendinous junction.

16. Claimant returned to Employer to pick her last paycheck on September 25, 2020 or October 10, 2020. Ms. G[Redacted] gave Claimant her check and had Claimant sign for it. Claimant voiced no concern or disagreement about her termination. Claimant said nothing to Ms. G[Redacted] about her injury or the medical treatment she was receiving. She exhibited no outward signs of injury or limitation. Nothing about the encounter would reasonably have prompted Ms. G[Redacted] to suspect a work injury or refer Claimant to a medical provider.

17. Claimant followed up with Dr. Stokes on October 26, 2020. Her right shoulder pain was "worse" and radiating down her right arm. Examination showed right leg weakness and restricted right shoulder range of motion. Dr. Stokes referred Claimant to an orthopedist to evaluate the partial rotator cuff tear shown on the MRI. Claimant had been unable to obtain the lumbar MRI because of cost and lack of insurance. He noted, "she claims this was due to work and that they should have to pay for this imaging. She does have objective findings of weakness on exam."

18. Claimant filed a workers' compensation claim with the Division on October 19, 2020. It is not clear exactly when Insurer received notice of the claim. Shortly thereafter, Brazee Smith, a claims representative with Insurer, contacted Ms. G[Redacted] about the injury. Ms. G[Redacted] had no knowledge of Claimant's injury before the call from Ms. Smith. After speaking with Ms. Smith, Ms. G[Redacted] asked her staff whether they had any information about the injury. Ms. Ortega confirmed Claimant had told her about the injury while working on September 5.

19. The parties agreed to Dr. Miguel Castrejon as the primary ATP. Claimant's initial evaluation with Dr. Castrejon took place on November 12, 2020. Claimant told Dr. Castrejon "she was moving a heavy wooden cabinet that was situated over a carpeted surface. . . As she did so, she experienced a sharp pain to the anterior and lateral aspect of the shoulder. The patient then bent forward and attempted to lift and move the cabinet. This resulted in moderate sharp low back pain extending into the right leg." Claimant described sharp, stabbing pain to the anterior, superior, and lateral right shoulder extending to the upper arm. She had difficulty reaching away from her body and lifting items heavier than a gallon of milk. She also described constant low back pain radiating to the right leg. Her symptoms were "becoming worse and more limiting in her day to day activities." Examination of Claimant's back revealed tenderness, hypertonicity, muscle spasm, and limited range of motion. Straight leg raise was positive on the right. Strength and sensation were intact. Her right shoulder was tender over the anterior capsule, deltoid, and superior trapezius. Flexion and abduction were limited because of pain. Empty can and impingement tests were positive, and she had infraspinatus weakness. Dr. Castrejon opined Claimant's subjective complaints were supported by objective findings and "directly related to the activity described [at work.] The mechanism of injury is consistent with injury to the right shoulder and lumbar spine." Dr. Castrejon's examination suggested a rotator cuff tear, but the MRI report was not available for his review. He referred Claimant to Dr. Chris Jones, an orthopedic surgeon, for evaluation of her shoulder. He also ordered a lumbar MRI. Dr. Castrejon took Claimant "off work" until her next appointment.

20. Claimant followed up with Dr. Castrejon on November 30, 2020. Her pain was continuing to worsen. Examination of the lumbar spine once again showed hypertonicity, muscle spasm, and limited range of motion. Claimant had undergone the lumbar MRI but did not know the results and the report was unavailable. She had not been contacted by Dr. Jones' office. The medications Dr. Castrejon prescribed at the first visit were not helping and Claimant was "concerned." Dr. Castrejon maintained Claimant's "off work" status and asked her to return in two weeks.

21. Claimant did not see Dr. Castrejon again because Insurer implemented a "hard denial" of all additional treatment, including diagnostics and conservative care.

22. Claimant proved she suffered compensable injuries to her right shoulder and low back on September 5, 2020.

23. Claimant failed to prove the treatment she received at the Memorial Hospital emergency room on September 5, 2020 resulted from a "bona fide emergency." Claimant worked for several hours after the injury and drove herself home. She then waited several more hours before going to the emergency room. Had Claimant followed Employer's policies and reported the injury to Ms. G[Redacted], she would have been immediately referred to a designated provider. There is no persuasive reason Claimant could not have reported the injury before going to the emergency room. Claimant's trip to the emergency room was necessitated by her failure to notify Employer of the injury and not any "emergency."

24. Claimant failed to prove Dr. Stokes or Peak Vista are authorized. Claimant sought treatment at Peak Vista before reporting the injury to Employer.

25. Claimant failed to prove she left work because of her injury on September 5, 2020. Claimant continued cleaning rooms after the accident and left before finishing her assignment because she did not want to clean Room 213. Despite her injury, Claimant probably could have finished her duties on September 5 had she not had to clean Room 213.

26. Respondents proved Claimant was responsible for termination of her employment on September 5, 2020. Claimant walked off the job without notifying her supervisor. That volitional act justified her termination.

27. Claimant proved her condition worsened as of November 12, 2020 and caused a greater impact on her earning capacity than existed at the time of her termination. Medical providers documented progressive worsening of Claimant's symptoms and limitations in September, October, and November 2020. Dr. Castrejon's clinical findings were objectively worse than documented by earlier providers, particularly when compared to the emergency room records. And Dr. Castrejon reasonably restricted Claimant from all work as of November 12, 2020, whereas no prior provider thought she required work restrictions. Claimant is entitled to TTD benefits commencing November 12, 2020.

CONCLUSIONS OF LAW

A. Claimant proved a compensable injury

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove entitlement to benefits by a preponderance of the evidence. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is evidence that leads the ALJ to find a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the claimant or the respondents. Section 8-43-201.

As found, Claimant proved she suffered compensable injuries to her right shoulder and low back on September 5, 2020. She has consistently described the accident to medical providers, representatives of Respondents, and at hearing. Claimant's testimony regarding the accident was generally credible despite inconsistencies in other aspects of her testimony. The claimed injuries are reasonably consistent with the clinical findings documented by the emergency room, Dr. Stokes, and Dr. Castrejon. The shoulder MRI objectively demonstrated soft tissue "strain" and "sprain," consistent with a recent acute injury. There is no persuasive evidence Claimant had any right shoulder or low back problems before September 5, and no persuasive evidence of any other activity that more likely could have caused the injuries. Claimant's failure to tell Ms. G[Redacted] about the injury is baffling but does not negate the preponderance of persuasive evidence in favor of compensability.

B. Respondents are not liable for treatment at the Memorial Hospital emergency department

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is recently necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to disputed medical benefits by a preponderance of the evidence. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

Besides proving treatment is reasonably necessary and related, the claimant must prove the treatment was "authorized." *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). Authorization refers to a provider's legal right to treat the claimant at the respondents' expense. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993). Providers typically become authorized by the initial selection of a treating physician, agreement of the parties, or upon referrals made in the "normal progression of authorized treatment." *Bestway Concrete v Industrial Claim*

Appeals Office, 984 P.2d 680 (Colo. App. 1999); *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

Emergency treatment for a work-related injury is authorized without regard to whether the claimant had a referral or prior approval from the respondents. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990); *see also* WCRP 8-2. The emergency exception is not necessarily limited to life-threatening situations, and the existence of a "bona fide emergency" is a question of fact for the ALJ. *Hoffman v. Wal-Mart Stores*, W.C. No. 4-774-720 (January 12, 2010).

As found, Claimant's trip to the Memorial Hospital emergency room was not necessitated by a "bone fide emergency." Instead, it resulted from Claimant's failure to notify Ms. G[Redacted] or any other supervisor about her injury.

C. Dr. Stokes and Peak Vista are not authorized providers

Under § 8-43-404(5)(a)(I)(A), the employer has the right to choose the treating physician in the first instance. The employer must tender medical treatment "forthwith, " or the claimant has "the right to select a physician or chiropractor." *Id*.; *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). The employer's obligation to offer medical treatment is triggered by "some knowledge of accompanying facts connecting the injury or illness with the employment and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Jones v. Adolph Coors Co*., 689 P.2d 681, 684 (Colo. App. 1984). Notice of an injury can be given to "employee's foreman, superintendent, manager," or "other person in charge." Section 8-43-102(1.5)(a); *Frank v. Industrial Commission*, 43 P.2d 158 (Colo. 1935); *Ferris v. King Soopers, Inc.*, W.C. No. 3-884-707 & 3-895-561 (April 5, 1990); *Zanini v. King Soopers*, W.C. No. 3-870-72 & 3-887-766 (December 4, 1989). As found, Claimant did not report the injury to Respondents after she started treating with Peak Vista. Although she filed her claim with the Division on October 19, 2020, there is insufficient persuasive evidence to establish Employer knew about the injury before Claimant's October 26, 2020 appointment with Dr. Stokes. The treatment she received at Peak Vista was not authorized.

D. Claimant was responsible for termination of her employment

Sections 8-42-103(1)(g) and 8-42-105(4)(a) provide, "where . . . a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." A claimant's responsibility for termination not only provides a basis to terminate temporary disability benefits, but also limits the initial eligibility for TTD. Section 8-42-103(1)(g); *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002); *Valle v. Precision Drilling*, W.C. No. 5-050-714-01 (July 23, 2018). The respondents must prove the claimant was terminated for cause or responsible for the separation from employment by a preponderance of the evidence. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised “some degree of control over the circumstances which led to the termination.” *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The concept of “volitional conduct” is not necessarily related to moral turpitude or culpability but merely requires the exercise of some control or choice in the circumstances leading to the discharge. *Richards v. Winter Park Recreational Association*, 919 P.2d 983 (Colo. App. 1996). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for his termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

As found, Respondents proved Claimant was responsible for termination of her employment. Claimant’s volitional acts provided ample justification for termination, notwithstanding her injury. She walked off the job without completing her work and without telling her manager or any other person at the hotel. Claimant regularly communicated with Ms. G[Redacted] by calls and texts, and could have easily used either method to inform Ms. G[Redacted] she would not finish her assigned tasks. There is no persuasive evidence to suggest Claimant was so incapacitated by pain she could not have made the short walk across the parking lot to speak with Ms. G[Redacted]. Claimant’s explanation for not contacting Ms. G[Redacted] before leaving the property was neither credible nor persuasive. Claimant’s testimony she later told Ms. G[Redacted] she could not come back to the hotel because of any injury is similarly unpersuasive. Claimant simply refused to return, and Ms. G[Redacted] had to scramble and find another employee who could return to the hotel and clean the room.

E. Claimant’s condition worsened and caused a greater impact on her earning capacity as of November 12, 2020

Termination for cause is not a permanent bar to receiving temporary disability benefits, and a claimant can reestablish eligibility for TTD by showing a worsened condition that caused a subsequent wage loss. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004). A post-termination wage loss is “caused by a worsened condition” if the worsening results in limitations which did not exist at the time of the termination, and cause a limitation on the claimant’s temporary earning capacity that did not exist at the time of the termination. *Martinez v. Denver Health*, W.C. No. 4-527-415 (August 8, 2005). The imposition of new work restrictions does not automatically establish a worsening, but is simply one factor to consider when evaluating the preponderance of evidence. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630 (Colo. App. 2014). The burden of proof to establish a subsequent worsening of condition and consequent wage loss is on the claimant who has been found responsible for a termination. *Green v. Job Site, Inc.*, W.C. No. 4-587-025 (July 19, 2005).

Claimant proved her condition worsened as of November 12, 2020 and caused a greater impact on her earning capacity than existed at the time of her termination. Medical providers consistently documented progressive worsening of Claimant’s symptoms and limitations in September, October, and November 2020. Dr. Castrejon’s clinical findings were objectively worse than documented by earlier providers, particularly when compared to the initial emergency room records. No provider before Dr. Castrejon thought Claimant required work restrictions. Dr. Castrejon reasonably restricted Claimant from all work as of November 12, 2020 based on his clinical findings and evidence of progressive worsening without treatment. Claimant is entitled to TTD benefits commencing November 12, 2020.

ORDER

It is therefore ordered that:

1. Claimant suffered compensable injuries to her right shoulder and low back on September 5, 2020.

2. Claimant's average weekly wage is $355 per week, with a corresponding TTD rate of $236.67.

3. Dr. Castrejon is the ATP.

4. Insurer shall cover medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury.

5. Claimant's request for medical benefits related to the September 5, 2020 treatment at Memorial Hospital is denied and dismissed.

6. Claimant's request for medical benefits for treatment received at Peak Vista is denied and dismissed.

7. Claimant's request for TTD benefits from September 6, 2020 through November 11, 2020 is denied and dismissed.

8. Insurer shall pay Claimant TTD benefits at the rate of $236.67 per week commencing November 12, 2020 and continuing until terminated according to law.

9. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

10. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: May 5, 2021

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered compensable injuries during the course and scope of her employment with Employer on July 29, 2020.

2. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive Temporary Partial Disability (TPD) or Temporary Total Disability (TTD) benefits for the period August 27, 2020 until she reached Maximum Medical Improvement (MMI) on February 1, 2021.

3. Whether Respondents have established by a preponderance of the evidence that Claimant was responsible for her August 27, 2020 termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes").

FINDINGS OF FACT

1. Claimant worked for Employer as a Logistics Manager. On July 29, 2020 Claimant was closing Employer's store for the day when she was attacked by three shoplifters. One of the shoplifters swung a machete at Claimant during the robbery while she was also repeatedly rammed with a shopping cart by another perpetrator. Claimant feared for her life when she was attacked with the machete and did not realize the perpetrators were attempting to steal merchandise until the altercation had ended.

2. Officer Haden Jonsgaard provided the following description of the July 29, 2020 robbery. He explained:

> [Claimant] was standing in the breezeway or vestibule of the store waiting for the males to pay for their merchandise. One male suddenly began trying to push the cart through the breezeway without having paid for the items in the cart. The male rammed her with the cart. The other male subject then swung his machete at [Claimant] and she jumped back to avoid being hit. This subject then pushed the other male with the shopping cart which in turn caused [Claimant] to be rammed into the door and pinned by the shopping cart.

3. Employers' First Report of Injury specifically provided that Claimant "states waiting to lock front door, customers stealing pushed cart into [her] shoving her into wall, scrapes/bruising to both shins." Claimant's injury was characterized as a lower leg contusion.

4. On the date of the altercation Claimant was concurrently employed at a U-Pump-It gas station. Claimant worked 11 hours each week and earned $12.00 per hour. Claimant has continued to work at U-Pump-It during the duration of the present claim.

5. Claimant did not immediately seek medical treatment. On August 13, 2020 she visited AFC Urgent Care and reported “shin pain, leg pain and anxiety.” She explained that she was struck by a cart during the course of a store robbery. Claimant’s left shin had developed swelling and drainage. Claimant also remarked that she had experienced nightmares and anxiety since the incident. After conducting a physical examination, John Vermilyen diagnosed Claimant with a left lower leg abrasion/contusion, cellulitis of the left leg and anxiety. She received antibiotics and was advised to elevate her lower extremities for two days.

6. Claimant provided a written statement to American Family Care on August 13, 2020 at the request of her medical provider. The statement noted:

> 2 guys pushed a shopping cart into the right side of my body. After being hit I turned and grabbed the shopping cart to push it off me then 1 of the guys swung a machete at me. As I moved back to avoid the machete I was again hit in the front by the cart pushing me back approximately 10 feet into a glass wall.

7. Claimant followed-up with AFC Urgent Care and visited Gary Cantrell, D.O. on August 15, 2020. The treatment plan was to address Claimant’s cellulitis of the left lower leg from an abrasion/contusion when she was struck by a cart on July 29, 2020. Dr. Cantrell referred Claimant to a mental health professional for anxiety and depression.

8. On August 20, 2020 Claimant returned to AFC Urgent Care and received treatment from Thomas Dickey, P.A. He diagnosed Claimant with shin abrasions and Post-Traumatic Stress Disorder (PTSD). P.A. Dickey released Claimant to full duty employment.

9. On August 27, 2020 Employer terminated Claimant. The termination was predicated on Claimant’s violation of Employer’s “Shoplifter Prevention Violation” policy. Specifically, Claimant “block[ed] the shoplifter’s path, and exit[ed] the building in response to a shoplifting incident” on July 29, 2020.

10. On September 3, 2020 Claimant returned to AFC Urgent Care for a follow-up regarding shin and leg pain. Claimant reported bilateral shin pain, lower lumbar and right hip pain. Claimant had undergone a spinal lumbar fusion approximately four years earlier, but remarked “this is a different pain.” Mr. Vermilyen diagnosed Claimant with PTSD/anxiety, gradually improving shin pain, back and right hip pain. Mr. Vermilyan remarked that the back and right hip pain were “consistent with strain due to the injuries received to the lower extremities.”

11. On September 10, 2020 Claimant returned to AFC Urgent Care for treatment. Claimant again reported PTSD, bilateral shin pain, lower lumbar and right hip

pain as a result of the July 29, 2020 altercation at work. Edward Hansmeier assessed Claimant with a right lower lumbar strain and anxiety.

12. On September 17, 2020 Claimant visited Hyeran Lee, NP at AFC Urgent Care. NP Lee noted that Claimant's cellulitis of the lower left leg was healing. NP Lee also remarked that Claimant had a strain of the muscle, fascia and tendon of the right hip. NP Lee thus recommended physical therapy twice per week. Finally, NP Lee directed Claimant to follow-up with her psychologist for anxiety.

13. By October 29, 2020 Claimant continued to report lower back pain and anxiety. Kara Carpino noted that Claimant's shin pain had resolved. She assessed Claimant with anxiety and a right lower lumbar pain/strain. Ms. Carpino commented that Claimant's hip pain was gradual and constant. Claimant continued to undergo physical therapy for lower back and right hip pain. Ms. Carpino diagnosed Claimant with: (1) PTSD; (2) a strain of the muscle, fascia and tendon of the right hip and (3) right lower lumbar pain and strain.

14. On December 17, 2020 Claimant returned to NP Lee for an examination. Claimant reported shin, leg and back pain. After conducting a physical examination, NP Lee diagnosed Claimant with a right lower lumbar pain/strain and right shin pain.

15. On January 18, 2021 Claimant visited Henry M. Johnston, II, M.D. at AFC Urgent Care for an examination. He reviewed Claimant's medical history and performed a physical examination. Dr. Johnston diagnosed Claimant with: (1) PTSD; (2) right shin pain and; (3) right lower lumbar pain and strain.

16. On February 1, 2021 Claimant returned to Dr. Johnston for an evaluation. Dr. Johnston characterized Claimant's work-related diagnoses as PTSD and lower back pain. He determined that Claimant had reached Maximum Medical Improvement (MMI) effective February 1, 2021. However, no Level II impairment rating has been scheduled. Claimant remains on medications prescribed through the chain of referral.

17. Claimant testified at the hearing in this matter. She noted that her current physical symptoms include right lower extremity pain, right hip locking, loss of balance and right lower back pain. She also suffers tightness in her lower back from trying to protect her hip. Claimant's mental symptoms include panic attacks and nightmares. She takes panic attack medication, sleeping pills and antidepressants. Claimant explained that her current work restrictions include no more than five hours standing or sitting, no lifting in excess of 25 pounds and no pushing/pulling in excess of 15 pounds.

18. Claimant remarked that she is still employed by U-Pump-It. She currently works 22 hours each week and earns $12.00 per hour. Claimant operates a cash register but does not have to lift or stock any products.

19. Claimant has demonstrated that it is more probably true than not that she suffered compensable injuries during the course and scope of her employment with Employer on July 29, 2020. Initially, on July 29, 2020 Claimant was closing Employer's store for the day when she was attacked by three shoplifters. One of the shoplifters swung

a machete at Claimant while she was also repeatedly rammed with a shopping cart by another perpetrator. Claimant was diagnosed with a left lower leg abrasion/contusion, cellulitis of the left leg and anxiety. By September 3, 2020 Claimant returned to AFC Urgent Care and reported bilateral shin pain, lower lumbar and right hip pain. Mr. Vermilyen diagnosed Claimant with PTSD/anxiety, gradually improving shin pain, back and right hip pain. He remarked that the back and right hip pain were "consistent with strain due to the injuries received to the lower extremities." By September and October of 2020 Claimant's left lower extremity symptoms had resolved. However, she continued to undergo physical therapy for lower back and right hip pain. Ms. Carpino diagnosed Claimant with: (1) PTSD; (2) a strain of the muscle, fascia and tendon of the right hip and (3) right lower lumbar pain and strain. On February 1, 2021 Dr. Johnston determined that Claimant had reached MMI.

20. The preceding chronology reflects that Claimant's work-related injuries included left lower extremity abrasions/contusions that have resolved. Claimant has also suffered: (1) PTSD; (2) a strain of the muscle, fascia and tendon of the right hip and (3) right lower lumbar pain and strain. As noted in the medical records, Claimant's back and right hip pain symptoms were consistent with a strain caused by her lower extremity injuries. Therefore, the medical records in conjunction with Claimant's credible testimony, demonstrate that she suffered a variety of injuries as a result of the July 29, 2020 work incident in which she was attacked by shoplifters. Accordingly, Claimant's work activities on July 29, 2020 aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment.

21. Claimant has proven that it is more probably true than not that she is entitled to receive TPD or TTD benefits for the period August 27, 2020 until she reached MMI on February 1, 2021. The record reveals that Claimant's July 29, 2020 industrial injuries caused a disability lasting more than three work shifts, she left work as a result of the disability and the disability resulted in an actual wage loss. Moreover, Claimant had concurrent employment with U-Pump-It when she suffered her work injuries and continued to work there during the duration of her claim. The record reveals that Claimant suffered numerous injuries as a result of the July 29, 2020 robbery that either eliminated or decreased her ability to earn wages, Accordingly, Claimant is entitled to receive TPD or TTD benefits as a result of her July 29, 2020 work injuries.

22. Respondents have failed to establish that it is more probably true than not that Claimant was responsible for her August 27, 2020 termination from employment under the termination statutes. Initially, on August 27, 2020 Claimant was terminated for violating Employer's "Shoplifter Prevention Violation" policy. Specifically, Claimant "block[ed] the shoplifter's path, and exit[ed] the building in response to a shoplifting incident" on July 29, 2020. However, in describing the July 29, 2020 robbery of Employer's store, Claimant credibly detailed that she was attacked by three shoplifters. One of the shoplifters swung a machete at Claimant during the robbery while she was also repeatedly rammed with a shopping cart by another perpetrator. Claimant feared for her life and did not realize the perpetrators were attempting to steal merchandise until the altercation had ended. The police report of Officer Jonsgaard and Claimant's written statement to American Family Care support her description of the July 29, 2020 incident.

23. The preceding descriptions of the July 29, 2020 robbery reflect that Claimant did not exercise control over the circumstances surrounding her termination from employment. Instead, Claimant feared for her life during a violent altercation and robbery. Claimant's actions on July 29, 2020 reflect that she did not precipitate her employment termination by a volitional act that she would reasonably expect to cause the loss of employment. Claimant was thus not responsible for her August 27, 2020 termination from employment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms. It does not follow that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *cf. Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has demonstrated by a preponderance of the evidence that she suffered compensable injuries during the course and scope of her employment with Employer on July 29, 2020. Initially, on July 29, 2020 Claimant was closing Employer's store for the day when she was attacked by three shoplifters. One of the shoplifters swung a machete at Claimant while she was also repeatedly rammed with a shopping cart by another perpetrator. Claimant was diagnosed with a left lower leg abrasion/contusion, cellulitis of the left leg and anxiety. By September 3, 2020 Claimant

returned to AFC Urgent Care and reported bilateral shin pain, lower lumbar and right hip pain. Mr. Vermilyen diagnosed Claimant with PTSD/anxiety, gradually improving shin pain, back and right hip pain. He remarked that the back and right hip pain were "consistent with strain due to the injuries received to the lower extremities." By September and October of 2020 Claimant's left lower extremity symptoms had resolved. However, she continued to undergo physical therapy for lower back and right hip pain. Ms. Carpino diagnosed Claimant with: (1) PTSD; (2) a strain of the muscle, fascia and tendon of the right hip and (3) right lower lumbar pain and strain. On February 1, 2021 Dr. Johnston determined that Claimant had reached MMI.

9. As found, the preceding chronology reflects that Claimant's work-related injuries included left lower extremity abrasions/contusions that have resolved. Claimant has also suffered: (1) PTSD; (2) a strain of the muscle, fascia and tendon of the right hip and (3) right lower lumbar pain and strain. As noted in the medical records, Claimant's back and right hip pain symptoms were consistent with a strain caused by her lower extremity injuries. Therefore, the medical records in conjunction with Claimant's credible testimony, demonstrate that she suffered a variety of injuries as a result of the July 29, 2020 work incident in which she was attacked by shoplifters. Accordingly, Claimant's work activities on July 29, 2020 aggravated, accelerated or combined with her pre-existing condition to produce a need for medical treatment.

Temporary Partial/Temporary Total Disability Benefits

10. Section 8-42-106(1), C.R.S. provides for an award of TPD benefits based on the difference between the claimant's Average Weekly Wage (AWW) at the time of injury and the earnings during the continuance of the Temporary Partial Disability (TPD). Specifically, an employee shall receive 66.66% of the difference between his wages at the time of his injury and during the continuance of temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury caused the disability and consequent partial wage loss. §8-42-103(1), C.R.S.; *see Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury). Section 8-42-106(2), C.R.S. provides that TPD shall continue until either of the following occurs: "(a) The employee reaches maximum medical improvement; or (b)(I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment." *See Evans v. Wal-Mart*, WC 4-825-475 (ICAO, May 4, 2012).

11. To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity

evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

12. As found, Claimant has proven by a preponderance of the evidence that she is entitled to receive TPD or TTD benefits for the period August 27, 2020 until she reached MMI on February 1, 2021. The record reveals that Claimant's July 29, 2020 industrial injuries caused a disability lasting more than three work shifts, she left work as a result of the disability and the disability resulted in an actual wage loss. Moreover, Claimant had concurrent employment with U-Pump-It when she suffered her work injuries and continued to work there during the duration of her claim. The record reveals that Claimant suffered numerous injuries as a result of the July 29, 2020 robbery that either eliminated or decreased her ability to earn wages, Accordingly, Claimant is entitled to receive TPD or TTD benefits as a result of her July 29, 2020 work injuries.

Termination for Cause

13. Under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

14. As found, Respondents have failed to establish by a preponderance of the evidence that Claimant was responsible for her August 27, 2020 termination from employment under the termination statutes. Initially, on August 27, 2020 Claimant was terminated for violating Employer's "Shoplifter Prevention Violation" policy. Specifically, Claimant "block[ed] the shoplifter's path, and exit[ed] the building in response to a shoplifting incident" on July 29, 2020. However, in describing the July 29, 2020 robbery of Employer's store, Claimant credibly detailed that she was attacked by three shoplifters. One of the shoplifters swung a machete at Claimant during the robbery while she was also repeatedly rammed with a shopping cart by another perpetrator. Claimant feared for her life and did not realize the perpetrators were attempting to steal merchandise until the altercation had ended. The police report of Officer Jonsgaard and Claimant's written statement to American Family Care support her description of the July 29, 2020 incident.

15. As found, the preceding descriptions of the July 29, 2020 robbery reflect that Claimant did not exercise control over the circumstances surrounding her termination from employment. Instead, Claimant feared for her life during a violent altercation and robbery. Claimant's actions on July 29, 2020 reflect that she did not precipitate her employment termination by a volitional act that she would reasonably expect to cause the loss of employment. Claimant was thus not responsible for her August 27, 2020 termination from employment.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered compensable injuries during the course and scope of her employment with Employer on July 29, 2020.

2. Claimant is entitled to receive TPD or TTD benefits as a result of her July 29, 2020 work injuries.

3. Claimant was not responsible for her August 27, 2020 termination from employment.

4. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see*

Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 5, 2021.

ISSUE

I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion of Dr. Higginbotham regarding Claimant's Impairment Ratings for her Thoracic and Lumbar spine?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Initial Work Injury / Subsequent Treatment

1. This is an admitted claim. Claimant worked as a caseworker with [Redacted Employer]. On July 8, 2019, Claimant was involved in a motor vehicle accident while returning to the office after transporting foster children. She was rear-ended by another vehicle, which in turn caused her vehicle to hit the one in front of her. (Ex. A)

2. Claimant presented to CCOM Pueblo later that same day where she was seen by Buddy Leckie, PA-C. Claimant reported pain in the neck, abdomen and both wrists. Claimant further reported that although the driver's side air bags deployed, she was able to exit her vehicle, and walk and talk 'normally' following the accident. Upon learning that Claimant had not yet been evaluated in the emergency room, PA Leckie directed Claimant to go to the emergency room for a more complete evaluation. (Ex. F, pp. 64-65)

3. On that date, Claimant was seen in the emergency room at St. Mary-Corwin Medical Center. According to the ER report, Claimant was complaining of headache, neck pain, right-sided chest wall pain, and lower abdominal pain. Claimant also had a small area of ecchymosis to her left knee, but had good range of motion. (Ex. I, p. 254)

4. A CT scan of the head showed no acute intracranial hemorrhage. (Ex. I, pp. 259-260) A CT scan of the chest, abdomen and pelvis identified no acute findings. *Id* at 260-262. The CT of the cervical spine showed no evidence of an acute cervical spine fracture. *Id* at 263-263. Claimant was diagnosed with 'motor vehicle collision', strain of neck muscle, abdominal wall pain and contusion of left knee. She was discharged with prescriptions for naproxen and Norflex, and directions to apply ice and to perform gentle stretching and range of motion. *Id* at 254.

5. Claimant returned to PA Leckie on July 10, 2019. PA Leckie wrote that Claimant's primary problem was pain located in the neck, abdomen, and left and right wrists. Claimant also *reported* back pain/*stiffness* from the lumbar region to her neck, headache and trouble sleeping. On exam, PA Leckie noted that Claimant appeared in discomfort and was tender to palpation over her entire low back and cervical region.

6. PA Leckie's diagnoses included: (1) strain of muscle, fascia and tendon at neck level; (2) driver injured in collision with unspecified motor vehicles in traffic accident; (3) unspecified injury of muscle, fascia and tendon of right hip; (4) unspecified injury of muscle, fascia and tendon of left hip; and (5) sprain of ligaments of cervical spine. PA Leckie referred Claimant to physical therapy, directed Claimant to apply ice and heat, and to use Tylenol. He also imposed temporary work restrictions. (Ex. F, pp. 74-75).

7. Claimant underwent physical therapy at Centura Center for Rehabilitation from July 10, 2019 through September 10, 2019. (Ex. H).

8. On July 26, 2019, PA Leckie noted that Claimant had returned to modified duty work, but was reporting some cognitive dysfunction. PA Leckie referred Claimant for a neurology evaluation and took Claimant off work until she was cleared by neurology. (Ex. F, pp. 89-90).

Claimant is seen by Dr. Olsen / Additional Referrals

9. On July 30, 2019, Claimant was first seen by Dr. Daniel Olson at CCOM, who noted that Claimant was being followed post-MVA for some postconcussive type symptoms, some generalized back and neck pain, and some headaches. Claimant requested to see a chiropractor. A referral was made to Dr. Dressen. Claimant was also scheduled to see Dr. Ales in neurology later that week. Dr. Olson began Claimant on nortriptyline to help with sleep and headaches. (Ex. F, pp. 97-98)

10. Claimant underwent chiropractic treatment with Dr. Donald Dressen from August 5, 2019 through November 25, 2020. (Ex. G).

11. At her initial appointment with Dr. Dressen on August 5, Claimant's pain diagram marked her cervical, thoracic, and lumbar regions on her back, and circled "Tenderness" "Muscle Spasms" "Weakness", and "Stiffness". *Id* at 174.

12. On subsequent visits, Claimant was highly, if not completely, consistent in continuing to mark each of these three regions of her spine, and circling, at a minimum, "Tenderness", and "Stiffness" on the following dates: Aug 7, 15, 19, 21, 26; September 3, 11, 18, 25; October 2, 16, 31; November 13; December 2, 23; [In 2020]: January 8; February 3, 17; March 2, 16, 18, 25: April 13, 16, 28, 30; May 13; June 1, 15, 29; July 13; August 5, 31; November 25. (Ex. G, pp. 171-211, Ex. 5, pp. 56-108).

13. Additionally, there were references to Thoracic and Lumbar *myospasms,* which appeared sporadically throughout these same dates, including her most recent visit. *Id.*

14. On September 10, 2019, Clamant was discharged from physical therapy. In the Discharge Evaluation report, the physical therapist noted that Claimant had improved her range of motion, strength, and pain levels for all body parts, but continued to struggle primarily with balance and prolonged activities. Claimant was discharged to a home exercise program. (Ex. H, pp. 246—248).

15. In a report dated October 1, 2019, PA Leckie wrote that Claimant reported that she was moving and walking better, but was still having trouble with mental focus and concentration, Her headaches, light sensitivity and nausea have all decreased. On physical exam, PA Leckie noted slight tenderness to palpation over the bilateral upper traps. Claimant could turn her head in both directions without pain. There was active full range of motion in the low back and no pain with raising her arms above her head. There were no low back or cervical trigger points or nodules noted on palpation. PA Leckie again released Claimant to return to modified duty work at four hours per day. (Ex. F, pp. 138-139)

16. On November 21, 2019, Dr. Olson saw Claimant for reevaluation. Dr. Olson noted that Claimant appeared significantly improved compared to his last visit. Dr. Olson wrote that Claimant appeared to be making excellent progress, and advanced her to regular duty with no restrictions. (Ex. F, pp. 149-151)

17. Claimant continued to follow up with her providers at CCOM, with continued conservative treatment through the fall and winter of 2019, and into the spring of 2020. On April 1, 2020, Dr. Olson noted that Claimant was working full-time. She reported still getting some tightness in her traps as well as her mid scapular area. However, she felt the therapy cane was helping.

18. On exam, Dr. Olson found that neck range of motion showed full flexion and extension. There continued to be some tightness in both traps. Although there was some discomfort on palpation of the mid scapular area, there were no trigger points identified. (Ex. F, pp. 158-160)

19. On May 5, 2020, PA Leckie wrote that Claimant reported improving with chiropractic care. Claimant reported that although she still got some *tightness* in her upper back and neck, it was "much better". (Ex. F, pp. 162-164).

Dr. Olsen Places Claimant at MMI, with No Impairment

20. On June 9, 2020, Claimant saw Dr. Olson in follow up. Dr. Olson noted that Claimant continued to see Dr. Dressen every other week. He was working on some strengthening, that this was causing some achiness in her upper trunk muscles, but he opined that it was more of an achiness, and not an injury.

Claimant's functional scores were improving. Dr. Olson placed Claimant at maximum medical improvement and recommended maintenance care with Dr. Dressen two times a month for the next six months. (Ex. F, pp. 167-169) Dr. Olson further indicated that no permanent impairment was warranted. (Ex. F, p. 165).

21. On June 11, 2020, Respondents filed a Final Admission of Liability, consistent with Dr. Olson's June 9, 2020 determinations of MMI and permanent impairment. (Ex. B). Claimant timely objected to the Final Admission of Liability, and requested a DIME. On her Notice and Proposal and Application for a Division Independent Medical Examination, Claimant identified cervical spine, right and left hips, and traumatic brain injury. Claimant did not originally identify the thoracic or lumbar spines as areas that she wished to be evaluated as part of the DIME. (Ex. C).

Dr. Higginbotham's DIME Report

22. Dr. Thomas Higginbotham was selected as the DIME physician, and performed the DIME evaluation on October 6, 2020. (Ex. E) Dr. Higginbotham documented that Claimant reported that her headaches were, for the most part, gone or manageable. Reported discomforts were worse about the neck and upper thoracic area. Dr. Higginbotham noted that Claimant reported that the neck discomforts were present most of the time. Claimant further reported that the discomforts were present in thoracic areas *intermittently*, and in the lumbar spine *occasionally*, and related to increased physical activity. (Ex. E, pp 44-45)

23. Dr. Higginbotham conducted an in-person physical examination as part of his DIME evaluation of Claimant. Dr. Higginbotham observed that Claimant was able to get on and off the exam table, walk and stand up without difficulties. (Ex. E, p. 45). On the postural exam, the pelvic crests were noted to be dislevel, with the left slightly higher than the right. The shoulders were level. There was no gross scoliotic curve or lordosis. The skin of the back was noted to be normal. The chest was non-tender. There was negative axial loading and Spurling's maneuvers bilaterally. (Ex. E, pp. 45-46)

24. On palpatory examination, Dr. Higginbotham documented the degree of tenderness that was noted in various areas throughout the spine. Out of 15 areas, Dr. Higginbotham noted "none" for 13 areas and "mild" for 2 areas (thoracic paraspinal and lumbar paraspinal). Dr. Higginbotham also documented that there was no muscle tone asymmetry or spasm. Dr. Higginbotham observed that Claimant was able to get up from sitting without deficit, and got up in a sit-up manner from supine position without concern. (Ex. E, p. 46)

25. For Claimant's thoracic and lumbar spines, Dr. Higginbotham provided diagnoses of persistent thoracalgia with *mild myofascial strain*, and persistent lumbalgia with *mild lumbar myofascial* strain. (Ex. E, p. 48). Dr. Higginbotham agreed that Claimant reached MMI as of June 9, 2020. (Ex. E, p. 48). He assigned a total impairment of 11% whole person for the cervical spine (based on 4% for specific disorders under Table 53.II.B. plus 7% for ROM deficits). He assigned 5% whole person for the thoracic spine (based on 2% for specific disorders under Table 53.II.B, plus 3% for ROM deficits), He also assigned 6% whole person for the lumbar spine (based on 5% for specific disorders under Table 53.II.B, plus 1% for ROM deficits). The total combined whole person impairment rating was 20%. (Ex. E, p. 49).

26. Under the heading titled "Rationale For Your Decision" and a subheading of "IR", Dr. Higginbotham wrote: "No range of motion measurements were made by the WC provider at the time of declaring MMI. Chiropractic care and physiotherapy was directed to *discomforts* about the cervical, thoracic *and* lumbar spines." (Ex. E, p. 49)(emphasis added).

Dr. Primack's IME Report

27. Dr. Scott Primack conducted an IME pursuant to Respondents' request on November 23, 2020. (Ex. D). Dr. Primack noted in his report that Claimant advised him that she does not have pain every day at every part of her spine. Rather, she would periodically have problems at the neck, mid back or lower lumbar spine. Dr. Primack reported that the area that appeared to have the most consistency of discomfort was at the cervical spine. The secondary area that bothered her appeared to be at the lower lumbar spine, which included her back and hips. Dr. Primack noted that Claimant did not even describe any thoracic spine problems to him during his evaluation. (Ex. D, p. 25)

28. Dr. Primack also conducted a physical examination of Claimant. Regarding the cervical spine, Dr. Primack noted that range of motion was restricted in rotation, and facet loading was positive at the cervical spine. Regarding the thoracic spine, Dr. Primack found pain with palpation, but no abnormalities with rotation or with thoracic facet loading. At the lumbar spine, Dr. Primack wrote that flexion was normal and there was no increased tone, no spasms, and no limitations in rotation*. Id.* Straight leg raise in the supine position was negative. Rotation around the pelvis did not elicit significant discomfort. *Id* at 26.

29. For Claimant's cervical spine, Dr. Primack provided a diagnosis of cervical facet syndrome at C4-5 and C5-6, with some deficits in rotation. Regarding the thoracic spine, Dr. Primack opined that while Claimant may have tenderness, there was no evidence of any type of pain with facet loading, nor was there kyphosis or scoliosis. Regarding the lumbar spine, Dr. Primack wrote that

Claimant had no specific area of pain in the lumbar spine from her initial evaluation. (Ex. D, p. 26).

30. Dr. Primack opined that Claimant did not have a thoracic spine diagnosis. He further noted that, while there were areas of tenderness on his exam in the lumbar spine, Claimant did not have any compromise to the facet joints or discs at the lumbar spine. Dr. Primack noted that in Dr. Higginbotham's clinical exam, there was similarly only tenderness, and this was seen in only one area of the paraspinal muscles, and was described as "mild". Otherwise, Dr. Primack noted, Dr. Higginbotham documented that there was no tenderness at the midline of the lumbar spine, the midline at the sacroiliac joint, the iliolumbar gluteal area, the sciatic notch, or the IT band. *Id* at 27.

31. Dr. Primack noted that, as documented in Dr. Higginbotham's own report, Claimant only had problems at the lumbar spine *occasionally* and at the thoracic spine *intermittently*. Dr. Primack opined that Claimant did not have a permanent residual impairment to either the thoracic or lumbar spines that would warrant an impairment rating. However, Claimant did qualify for an impairment rating for the cervical spine based on her cervical facet syndrome. Dr. Primack assessed a 7% impairment of the whole person for the cervical spine (based on 4% for specific disorders under Table 53.II.B, plus 3% for ROM deficits). Dr. Primack further wrote that Dr. Higginbotham's documentation of the level of permanent impairment was in error. *Id* at 27, 32-33.

Dr. Primack Testifies at Hearing

32. Dr. Primack testified at hearing. He further explained his opinions and conclusions and the bases for same. He agreed with the statement in the Impairment Rating Tips issued by the Division of Workers' Compensation that, *in order to provide a permanent impairment rating, you need a specific diagnosis supported by objective pathology.* (*also see* Ex. J, p. 270). Dr. Primack explained that under our system of rating impairment, pain itself is not an impairment. Rather, one must not only identify the source of the pain, but one must go on to establish, based on the clinical exam, a specific diagnosis that would be considered permanent.

33. Dr. Primack testified that the system of impairment is based upon pathology, not just pain. "So you have to go with the diagnosis and pathology." (Hrg. Tr. p. 4). Otherwise, Dr. Primack commented, if impairment were based on discomfort alone, the entire state during ski season would be walking around with an impairment. *Id.*

34. Dr. Primack testified that the clinical exam is one of the cornerstones of making the diagnosis. He further testified that in someone who has myofascial pain or strain, evidence of objective pathology would be findings of tone, spasms and trigger points, which Dr. Primack characterized as the hallmarks of someone

who is having a strain. Dr. Primack explained that these findings are objective because they are things that providers can palpate for and feel, and are independent of a patient's reported symptomatology.

35. In contrast, tenderness to palpation does not constitute evidence of objective pathology, because this just means that the patient is *saying* that the area is tender. While a report of pain alone may help in directing further investigation for correlative findings, tenderness on palpatory exam alone is not an objective finding and does not mean that the patient has pathology. Rather, it is just the patient saying "ouch". Dr. Primack opined that reports of discomfort, such as stiffness, tightness or pain, are similarly subjective symptoms, and do not constitute evidence of objective pathology.

36. Dr. Primack explained that there are some components of permanent impairment ratings that are not contained in the *AMA Guides to the Evaluation of Permanent Impairment*, 3rd Ed. Revised, but that are specific to the Level II accreditation system. Dr. Primack further testified that the requirements under Level II for a specific diagnosis and objective pathology are on top of the requirements for 6 months of pain and rigidity set forth in Table 53 of the *AMA Guides*.

37. In reviewing Dr. Higginbotham's documented findings on clinical exam regarding the thoracic and lumbar spines, Dr. Primack testified that he saw no evidence of rigidity. Further, Dr. Primack testified, according to Dr. Higginbotham's report, although Claimant had mild tenderness with palpation, there was no increased muscle tone or asymmetry or spasm, which is the objective part. Dr. Primack testified that the notation in Dr. Higginbotham's report that Claimant was able to go from sit to stand and stand to sit without deficits meant that all those muscles in her spine were contracting in a fairly normal manner.

38. Dr. Primack testified that on his own clinical examination of Claimant, he also did not find anything constituting evidence of objective pathology for either the thoracic or the lumbar spines.

39. Regarding Dr. Higginbotham's diagnoses of persistent thoracalgia and persistent lumbalgia, Dr. Primack testified that these diagnoses are not sufficient to support a permanent impairment rating for the thoracic and lumbar spines. Dr. Primack explained that thoracalgia and lumbalgia are simply *descriptors* that indicate that someone has pain. However, our system of impairment is not based upon pain, but rather pathology. Dr. Primack further testified that these terms do not say anything about the condition that is causing the pain.

40. Specifically, Dr. Primack testified, these diagnoses are not based on tenderness, but rather upon tone, spasm, and latent trigger responses, which

are independent of the patient saying “ouch”. Dr. Primack testified that Claimant does not have permanent mild thoracic or lumbar myofascial strains because these diagnoses have to be supported by objective findings, and they did not meet criteria in this case. There are no components of Dr. Higginbotham’s clinical exam, he opined, that are independent of the patient saying “ouch”.

41. Dr. Primack reiterated that the documentation of clinical findings in Dr. Higginbotham’s report does not support the diagnoses of thoracic and lumbar myofascial strains. Further, he testified, based upon his review of the other medical records in this case, he did not find any specific diagnosis by anyone other than Dr. Higginbotham that would support a permanent impairment rating for the thoracic and lumbar spines. And, Dr. Primack reiterated, on his own physical exam, he did not find anything to indicate a specific diagnosis, strain or otherwise.

42. Dr. Primack testified that it appeared that Dr. Dressen directed some chiropractic treatment to all areas of Claimant’s spine because that was where Claimant reported pain. However, Dr. Primack testified, the fact that Dr. Dressen directed treatment at all areas of Claimant’s spine does not constitute objective evidence of pathology of an injury to all areas of her spine, and does not mean that Claimant had permanent impairment.

43. Regarding range of motion, Dr. Primack testified that you cannot perform range of motion as a component of the impairment rating unless you first have a diagnostic-specific permanent residual impairment to that body part. Dr. Primack testified that under the AMA Guides, you cannot utilize range of motion measurements to satisfy the criteria for rigidity under Table 53. Rather, you must make the diagnosis first, and then you can evaluate range of motion.

44. Dr. Primack testified that, beyond a mere difference of professional opinion, Dr. Higginbotham was wrong in assigning impairment ratings for the thoracic and lumbar spines in this case. Dr. Primack opined that Dr. Higginbotham erred because his impairment rating assessment was not consistent with his clinical exam and with how the system works. Specifically, Dr. Primack stated, you have to have a specific diagnosis which must be permanent and which must correlate with your clinical examination, and that was not the case here.

45. In addition, Dr. Primack reiterated, Dr. Higginbotham erred because you cannot use range of motion without first establishing pain and rigidity. Here, although Claimant had pain, she did not fulfill the criteria for rigidity because per the Division of Workers’ Compensation guidelines, you cannot use range of motion as your criteria for rigidity.

46. Dr. Primack testified, consistent with his written report, that in his opinion, the appropriate impairment rating for the thoracic and lumbar spines was 0% in this case.

Dr. Higginbotham Testifies at Hearing

47. Dr. Higginbotham also testified at hearing. Several aspects of Dr. Higginbotham's testimony were in alignment with the testimony provided by Dr. Primack: Dr. Higginbotham agreed with the statement in the Division of Workers' Compensation Impairment Rating Tips that impairment ratings are given when a specific diagnosis and objective pathology are identified.

48. Dr. Higginbotham agreed that, in order to provide an impairment rating for the spine under Table 53, you have to have a valid diagnosis and that diagnosis must be supported by objective findings or objective pathology.

49. Dr. Higginbotham also agreed that for the spine, if you do not have a basis for an impairment rating for a specific disorder under Table 53, no impairment rating should be provided, even if the patient had range of motion deficits.

50. Dr. Higginbotham agreed with Dr. Primack's statement that the clinical exam is important and is the cornerstone of an evaluation. He also agreed with Dr. Primack that the "ouch" elicited on palpation is not objective. However, he stated that such subjective findings can lead us to look further to determine if, for example, the complaints are psychogenic, behavioral, or if there is something deeper going on.

51. Dr. Higginbotham also agreed that the condition requiring a valid diagnosis supported by objective findings or pathology in order to provide an impairment rating is a requirement, and are not discretionary with the physician. Dr. Higginbotham agreed that, if someone had a non-surgical injury that fully resolved, that person would not qualify for a permanent impairment rating.

52. Dr. Higginbotham clarified that the mechanism of injury alone does not qualify for impairment. Similarly, Dr. Higginbotham stated, the need for ongoing care is not really relevant to the determination of a permanent impairment rating.

53. Dr. Higginbotham testified that a strain is a pull-type injury to a tendon or a muscle. Dr. Higginbotham explained that if you call a strain mild or moderate, this implies that there has been some tissue tearing. If you call a strain severe, there has to be probable tissue or muscle disruption. Dr. Higginbotham explained that this was why Claimant's strain was labeled as mild, to minimize the degree of the strain that was present. Dr. Higginbotham also verified that Claimant did not sustain any discogenic, bony, vascular, or neurologic problems or any structural injury as a result of the work injury.

54. Despite the ‘mild’ categorization of Claimant’s strains, Dr. Higginbotham nevertheless testified that it was his opinion that the myofascial strains that he diagnosed were of a *permanent* nature. In explaining why he felt there was some degree of permanency from the work injury, Dr. Higginbotham discussed what he believed was a significant mechanism of injury, the consistency of Claimant’s complaints, and the reproducibility of complaints on his exam.

55. Dr. Higginbotham testified that a myofascial strain can carry with it a tender spot that can be found on palpation and is a recognition of the symptoms by the patient when you palpate that tender area. He further stated that, as physicians do not have a way to measure the degree of tension and tightness and tone, you have to have some sort of “verifiable acceptance” of a patient’s complaint. Dr. Higginbotham noted that he found Claimant to be “verifiable” and felt that her mechanism of injury was consistent.

56. Dr. Higginbotham also testified that the objective pathology has to be determined with your hands. Dr. Higginbotham stated that he felt that the strain patterns set up the tender areas that led him to further evaluate and find some limitations with motion and with pain. Dr. Higginbotham testified, “So, you know, those are the objectiveness that I – that I find.”

57. Dr. Higginbotham did testify that while he did not find evidence of tonicity on clinical exam, he did find evidence of “tautness” that he felt on palpation and that elicited the reports of pain. When asked the difference between tonicity and tautness, he responded:

> It’s the tautness—it’s the **tautness** that **I felt on palpation**—that elicited the pain. And whether the pain causes tension or whether it’s actually increased tone, I…felt it had to do more with the eliciting the pain with the palpation that causes her to split or tight [sic.], and that was taut to me. (Hrg Tr., p. 99)(emphasis added).
>
> …So the …muscle tone appeared to be symmetrical. But on palpation, when it elicited discomfort, …*you* ***feel*** *a sense of banding. You* ***feel*** *a sense of tightness, tautness*. *Id* at 99-100.

58. Dr. Primack described tautness as an objective finding that they feel with their hands, and that is akin to findings of increased tone and spasms. Dr. Primack testified that as such, if actual tautness were present, one would expect it to be documented in the report. However, Dr. Primack noted, there was nothing *in Dr. Higginbotham’s report* that indicated tautness.

59. Dr. Higginbotham acknowledged that he did not document any findings of *tautness* in his written report. However, he also clarified that the evidence of *tonicity* that he found lacking was actually based upon a *visual observation*, in *looking* for symmetry in muscle tone. (Hrg Tr., p.101).

60. Dr. Higginbotham, however, distinguished *tautness* from an actual spasm, and made no findings of increased muscle tone, stiffness, muscle spasm or asymmetry.

61. Dr. Higginbotham also testified that he used range of motion as prima facie evidence of rigidity in order to establish an impairment rating under Table 53 Dr. Higginbotham testified that he felt the discussion regarding the appropriate manner for establishing tightness or rigidity for purposes of Table 53 was splitting hairs. "Rigidity, range of motion, I mean … what's the difference? You've got to have [loss of] range of motion if you're rigid. And if you find out that you have a loss of range of motion, you have a degree of rigidity." (Hrg. Tr. pp. 109-110,).

62. Upon redirect, Dr. Primack took issue with the lack of documentation of tautness in Dr. Higginbotham's DIME report, but acknowledged:

> *Tautness is something you feel with your hands.* That's not a subjective complaint. It's something that you feel. And [changing the subject]….that becomes a different issue because, in the medical treatment guidelines and how it's taught, you cannot utilize range of motion as a component of your rigidity. Because you have to have a Table 53 diagnosis before you can do range of motion. *Id* at pp. 104-105. (emphasis added).

63. Dr. Primack also acknowledged that while muscle strains are generally not of a permanent nature, *spinal myofascial strains* can indeed validly meet criteria for a Table 53 permanent diagnosis. Regarding thoracic myofascial strains, Dr. Primack stated:

> Thoracic myofascial strain, if it's permanent, for the rest of one's life, yes that would meet criteria. *Id* at 107 (emphasis added).

When asked about mild myofascial strain, Dr. Primack acknowledged:

> If you're calling something…mild *that will be mild for the rest of your life,* it that's what you feel, then that could meet criteria, yes. And *then,* you could use range of motion. *Id.*

64. Dr. Higginbotham agreed that there was not a way to test whether a person is giving good effort on range of motion testing. He further agreed that there is some subjectivity to the testing of range of motion. Dr. Primack concurred that range of motion testing is not entirely objective. As Dr. Primack explained, although you are using a goniometer, you are only as good as the patient saying that this is the best I can do.

65. While [albeit erroneously] defending his use of range of motion to support a finding of rigidity, Dr. Higginbotham summarized his findings at the end of the hearing, on Page 110 (with emphasis added).

> We're just splitting hairs. The only thing I cans say is that somebody who wasn't having problems before has a significant injury mechanism, soft tissue strain patterns happened, tearing of tissues – microtearing, because it wasn't a moderate strain. And we've had ongoing problems with it. We've had consistent treatment directed to this realm. Complaints have been continuous, and they still are...in that manner.
>
> Did I not put tautness in my exam? Shame on me. But I will tell you, *when you feel it, and you palpate* something and the pain is reproducible, there's tautness underneath that. I think as a[n] osteopath, Dr. Primack would definitely understand that all the more. It is part of the somatic dysfunction that we treat.
>
> I have nothing more to say about that. *(borrowing from, but not crediting, Forrest Gump).*
>
> {End of Hearing Testimony}

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). The ALJ finds that Dr. Primack and Dr. Higginbotham are both highly competent practitioners. Each performed their respective examinations to the best of their abilities. Each has testified in a sincere and credible manner. They are largely in agreement on the proper DIME process to follow, and the correct way to draw valid conclusions therefrom. Unsurprisingly, there are a few philosophical differences and interpretations of the AMA Guides, which the ALJ must now resolve. And, interestingly enough, both are DOs; thus are highly attuned to the very 'hands-on' nature of medical practice. Thus, the ALJ must weigh the *persuasiveness* of their respective positions (bearing in mind the applicable burden of proof in such cases) based upon the most accurate interpretation of the AMA Guides, and the case law which flows therefrom.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Overcoming the DIME, Generally

F. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In re Dazzio,* W.C. No. 4-660-149 (ICAO, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

G. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In re Gurrola,* W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

H. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to § 8-42-107(8)(b)(III), C.R.S.; *see Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Subparagraph (II) is limited to parties' disputes over "a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI]." § 8-42-107(8)(b)(II).

I. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

J. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

K. The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

Issues Not in Dispute

L In this case, there is no dispute between the ATP, the DIME physician, and the IME physician (and the parties also concur) that Claimant reached MMI on June 9, 2020. Further, while Dr. Primack reached different (lesser) ROM figures for Claimant's cervical spine, he took no issue with the higher ROM figures reached by Dr. Higginbotham, since he felt that the DIME physician had articulated a sufficiently valid basis in his DIME report for Claimant's placement onto Table 53 (II)(B) for her cervical spine. Any such ROM difference between the two would fall within a permissible margin of error, with deference to the DIME's figures. Correspondingly, using Dr. Primack's own logic [which this ALJ adopts], assuming Claimant were validly placed onto Table 53(II)(B), the DIME's own ROM figures would again prevail, since there has been no dispute of the accuracy of the actual measurements themselves; any such deviation from the IME's fall within a permissible margin of error.

What are the elements needed for valid Permanent Diagnosis?

M. Dr. Primack has stated that one must establish a permanent diagnosis, consisting of three components: a history in support, a clinical examination in support, and correlative imaging studies - if they exist. Dr. Higginbotham essentially concurs with this analysis, as does this ALJ. There are no imaging studies to correlate here (nor would any such studies likely be of great assistance for this diagnosis in any event), leaving the remaining two elements to be explored. In his report (consistent with his testimony) Dr. Higginbotham diagnosed Claimant with "Persistent thoracalgia, with mild *thoracic myofascial strain",* and "Persistent lumbalgia, with mild *lumbar myofascial strain".* All parties agree that thoracalgia and lumbalgia are merely descriptor of pain. However, Dr. Primack (with the ALJ's concurrence) agreed that *- if it is permanent - lumbar and thoracic myofascial strain can indeed constitute a valid diagnosis.* The devil is in the details.

Dr. Primack's Medico-legal Error

N. Dr. Primack insists that in order to constitute six months of documented rigidity, there must be *objective* evidence in the record of said rigidity. This ALJ would have agreed with Dr. Primack's contention – up until this ALJ's own visit to the woodshed in *Bryant v. Transit Mix Concrete,* WC #5-058-044-001 (ICAO, June 5, 2019). In overcoming Dr. Higginbotham's (yes-*that* Dr. Higginbotham) DIME opinion in that case, this ALJ placed the requirement of *objectivity* for the 6-month rigidity requirement, and ICAO made it clear that *such documentation of rigidity need not be objective in nature.* The case was thereby remanded to correct this ALJ's boo-boo. ICAO further clarified that, under Table 53 of the AMA Guides, there is currently not an accepted definition for rigidity.

Thus, while there must still be *specific diagnosis* and *objective pathology,* the documentation of the six-months of rigidity need not be *“objective”.*

O. In reviewing the medical records, there is ample evidence of medical documentation by the chiropractor (the ALJ concludes that chiropractic does quality as ‘medical’ documentation) that Claimant complained of “tenderness” (i.e., **pain**) and “stiffness” (i.e., **rigidity**) in her thoracic and lumbar spine from August, 2019 through November, 2020. Further, said reports also document periodic accounts of myospasms in both regions during this period. There are also (less frequent) complaints of pain and stiffness in the ATP’s records as well. Based upon ICAO’s holding in *Bryant*, the ALJ now concludes that there is sufficient medical documentation of *pain and rigidity* for at least six months to place Claimant onto Table 53 (II)(B).

Dr. Higginbotham’s Medico-legal Error

P. Dr. Primack opined that Dr. Higginbotham should never have performed range of motion at all, since Claimant never qualified for a Table 53 diagnosis. Dr. Higginbotham countered that range of motion is part and parcel of any clinical exam – not unlike checking vital signs, for example. The ALJ does not take issue with Dr. Higginbotham looking at range of motion (which could, of course, validly lead to looking closer for other clinical findings) as part of the exam, if he wishes to do so. However, Dr. Primack has the correct legal argument that a DIME physician cannot use limited range of motion to satisfy the rigidity requirement for a permanent diagnosis. There must be evidence in the clinical exam, independent of range of motion, before one can be placed onto Table 53. To do otherwise would, indeed, put the cart before the horse.

Q. Up until the end of the testimony, Dr. Primack held the upper hand. He was indeed correct that the four corners of the DIME report did not contain sufficient objective evidence of rigidity during the clinical exam to constitute a valid permanent diagnosis of myofascial strain. Dr. Higginbotham’s findings were less than, well…palpable. But then, Dr. Higginbotham finished testifying. While it did not appear in his written report – as is plainly should have – Dr. Higginbotham finally described **feeling** ***“tautness”*** during the clinical exam of Claimant. In Dr. Higginbotham’s case, he explained, he actually *looks for tonicity*, but *feels for tautness.* As noted in *Bryant*, supra, there is currently not an accepted definition for rigidity. However, in this case, the ALJ does conclude that, in the final analysis, the DIME physician did sufficiently describe *rigidity* (“tautness”) in his clinical exam – thus constituting sufficient objective evidence of rigidity to support a permanent diagnosis. Once that is established, any boo-boo in putting the ROM cart before the horse is mooted. The DIME’s ROM measurements are then to be given deference, absent an error in their actual administration or calculation.

R. Thus, Dr. Higginbotham has established a valid permanent diagnosis for mild myofascial strain of Claimant’s thoracic and lumbar regions. He has established sufficient medical documentation for six months of pain and rigidity to place Claimant onto Table 53(II)(B), and thereby, ultimately use her ROM figures. There are no math errors alleged, nor seen, by the ALJ in combining the figures to reach a whole-person impairment rating. Any deviations from the AMA Guides in reaching his conclusions are deemed by the ALJ to be technical in nature, and not material. The DIME opinion, therefore, is upheld.

ORDER

It is therefore Ordered that:

1. The DIME opinion of Dr. Higginbotham is upheld in its entirety.

2. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

Colorado Springs, Colorado 80906

ISSUES

I. In calculating Claimant's Average Weekly Wage in this case, should the ALJ use the "default" method provided by C.R.S. 8-42-102(2), or the "exception" method provided by C.R.S. 8-42-102(3)?

STIPULATED FINDINGS OF FACT

Based upon the Stipulation of the parties the ALJ makes the following Findings of Fact:

1. Claimant sustained a work injury to his left knee on August 14, 2017 while working as an Equipment Mechanic III for the State of Colorado/Department of Transportation. (Exhibit A)

2. Respondent admitted to an average weekly wage in the amount of $1,057.62 based on Claimant's gross monthly salary of $4,583.00 at the time of injury. (Exhibit B and C)

3. Claimant received a raise, effective 7/1/2018, raising his base pay to $5,222.00 a month. (Exhibit D)

4. Clamant received a raise, effective 7/1/2019, raising his base pay to $5,379.00 a month. (Exhibit D)

5. Claimant began receiving Temporary Total Disability benefits on 7/3/18 and received it until 9/3/18, a period of 9 weeks.

6. Claimant began receiving Temporary Partial Disability benefits on 9/4/2018 and received them until 10/31/2018, a period of 8 2/7 weeks.

7. Claimant was paid 6.5 hour of Temporary Partial Disability benefits for the period from 12/21/2018 to 12/27/18.

8. Claimant was paid 7.5 hours of Temporary Partial Disability benefits from 1/28/19 to 4/5/19.

9. Claimant was paid 10.5 hours of Temporary Partial Disability benefits from 5/9/19 to 6/6/19.

10. Claimant was paid 2 hours of Temporary Partial Disability benefits from 6/26/19 to 6/26/19.

11. Claimant was paid 4.5 hours of Temporary Partial Disability benefits for period ending 7/15/19.

12. Claimant began receiving Temporary Total Disability benefits on 10/29/19 and received them until 2/2/20, a period of 13 6/7 weeks.

13. Claimant was paid 2 weeks of Temporary Partial Disability benefits from 2/3/20 to 2/16/20 at the rate of $413.73 per week.

14. Claimant was paid 15.50 hours of Temporary Partial Disability benefits from 4/22/20 to 5/14/20.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Average Weekly Wage, Generally

1. § 8-42-102(2), C.R.S. (2016) requires the ALJ to calculate Claimant's AWW based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating Claimant's AWW.

2. However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S. (2016) affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. § 8-42- 102(3), C.R.S. establishes the so-called "discretionary exception". *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell,* supra; *Avalanche Industries v. ICAO,* 166 P.3d 147 (Colo. App. 2007).

Average Weekly Wage, Case Law

3. In *Campbell*, Claimant's initial injury occurred ten years before her deteriorating condition caused her to cease working. Her employer argued that her AWW should be based on the wages she earned at the time of her initial injury, rather than the higher wages she had earned through salary increases and promotions during the intervening years. The Colorado Court of Appeals determined that it would be "*manifestly unjust* to base Claimant's disability benefits in 1986 and 1989 on her *substantially* lower earnings in 1979", and determined that her AWW should be based upon the higher salary earned at the time her deteriorating condition caused her to stop working. The rationale for the Court's decision was one of fairness:

> The entire objective of wage calculation [under the Act] is to arrive at a *fair* approximation of the Claimant's wage loss and diminished earning capacity.

> Although [AWW] generally is determined from the employee's wage at the time of injury, if for any reason this general method *will not render a fair computation* of wages, the administrative tribunal has long been vested with discretionary authority to use an alternative method in determining a *fair* wage". Id at 82. (emphasis added).

It is noted that in *Campbell*, Claimant had received several promotions, and over the 10-year period, her earnings had more than doubled.

4. In the *Avalanche* case, Claimant's AWW had significantly increased between her date of injury and the date of disability (with a different employer, and with medical benefits now factored in), from 415 to $625 – more than a 50% increase. The Avalanche Court noted that the discretionary exception is limited to situations where the default provision *"results in an injustice."* (citing *Coates, Reid & Waldron v. Vigil*, 856 P. 2d 850 (Colo. 1993)). (emphasis added).

5. In *Pizza Hut v. /CAO,* 18 P.3d 867, (Colo. App. 2001), Claimant was injured while working as a delivery driver. He then obtained a second job at a hospital. Claimant concurrently held two jobs for a short period, and then quit the delivery job. The Colorado Court of Appeals affirmed the increase in Claimant's average weekly wage and reinforced the principle that the *ALJ had discretion* to calculate Claimant's wages based on earnings from a subsequent employer and not upon wages earned at the time of injury, as the former represented a better calculation of Claimant's AWW.

Average Weekly Wage, as Applied

6. In this case, Clamant received an approximate 11% monthly pay increase from the date of injury until 7/1/2018, and another 3% monthly increase for the fiscal year following. The cumulative increase for the two year period is approximately 17%, but with the bulk of the increase the first year, likely as a result of a promotion – although the reason is undisclosed by the record. There is no evidence of change in employer.

7. While Claimant's first year's wage increase is fairly substantial, the second year's increase is more modest, and in keeping with the market. Perhaps as time goes on, and Claimant were to receive regular, substantial increases through the ensuing years – and then suffer another worsening – this issue might be revisited. At such point, an argument might be made that Claimant's wages had so increased, over such a substantial period of time, that to base his TTD payments on his AWW from the date of injury would constitute an *"injustice".* Such is simply not the case at this juncture.

8. The ALJ will not apply the *exception* to the *default* provision in this case, at least at this time. As noted by Respondents, increasing average weekly wage every time an employee receives an annual wage increase would effectively allow the *exception* provision to swallow the *default* provision, and effectively turn the statutory provision on its head.

ORDER

It is therefore Ordered that:

1. Claimant’s Average Weekly Wage in this case is to be calculated based upon his date of original work injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

ISSUES

I. In calculating Claimant's Average Weekly Wage in this case, should the ALJ use the "default" method provided by C.R.S. 8-42-102(2), or the "exception" method provided by C.R.S. 8-42-102(3)?

STIPULATED FINDINGS OF FACT

Based upon the Stipulation of the parties the ALJ makes the following Findings of Fact:

1. Claimant sustained a work injury to his left knee on August 14, 2017 while working as an Equipment Mechanic III for the State of Colorado/Department of Transportation. (Exhibit A)

2. Respondent admitted to an average weekly wage in the amount of $1,057.62 based on Claimant's gross monthly salary of $4,583.00 at the time of injury. (Exhibit B and C)

3. Claimant received a raise, effective 7/1/2018, raising his base pay to $5,222.00 a month. (Exhibit D)

4. Clamant received a raise, effective 7/1/2019, raising his base pay to $5,379.00 a month. (Exhibit D)

5. Claimant began receiving Temporary Total Disability benefits on 7/3/18 and received it until 9/3/18, a period of 9 weeks.

6. Claimant began receiving Temporary Partial Disability benefits on 9/4/2018 and received them until 10/31/2018, a period of 8 2/7 weeks.

7. Claimant was paid 6.5 hour of Temporary Partial Disability benefits for the period from 12/21/2018 to 12/27/18.

8. Claimant was paid 7.5 hours of Temporary Partial Disability benefits from 1/28/19 to 4/5/19.

9. Claimant was paid 10.5 hours of Temporary Partial Disability benefits from 5/9/19 to 6/6/19.

10. Claimant was paid 2 hours of Temporary Partial Disability benefits from 6/26/19 to 6/26/19.

11. Claimant was paid 4.5 hours of Temporary Partial Disability benefits for period ending 7/15/19.

12. Claimant began receiving Temporary Total Disability benefits on 10/29/19 and received them until 2/2/20, a period of 13 6/7 weeks.

13. Claimant was paid 2 weeks of Temporary Partial Disability benefits from 2/3/20 to 2/16/20 at the rate of $413.73 per week.

14. Claimant was paid 15.50 hours of Temporary Partial Disability benefits from 4/22/20 to 5/14/20.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Average Weekly Wage, Generally

1. § 8-42-102(2), C.R.S. (2016) requires the ALJ to calculate Claimant's AWW based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating Claimant's AWW.

2. However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S. (2016) affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. § 8-42- 102(3), C.R.S. establishes the so-called "discretionary exception". *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell,* supra; *Avalanche Industries v. ICAO,* 166 P.3d 147 (Colo. App. 2007).

Average Weekly Wage, Case Law

3. In *Campbell*, Claimant's initial injury occurred ten years before her deteriorating condition caused her to cease working. Her employer argued that her AWW should be based on the wages she earned at the time of her initial injury, rather than the higher wages she had earned through salary increases and promotions during the intervening years. The Colorado Court of Appeals determined that it would be "*manifestly unjust* to base Claimant's disability benefits in 1986 and 1989 on her *substantially* lower earnings in 1979", and determined that her AWW should be based upon the higher salary earned at the time her deteriorating condition caused her to stop working. The rationale for the Court's decision was one of fairness:

> The entire objective of wage calculation [under the Act] is to arrive at a *fair* approximation of the Claimant's wage loss and diminished earning capacity.

> Although [AWW] generally is determined from the employee's wage at the time of injury, if for any reason this general method *will not render a fair computation* of wages, the administrative tribunal has long been vested with discretionary authority to use an alternative method in determining a *fair* wage". Id at 82. (emphasis added).

It is noted that in *Campbell*, Claimant had received several promotions, and over the 10-year period, her earnings had more than doubled.

4. In the *Avalanche* case, Claimant's AWW had significantly increased between her date of injury and the date of disability (with a different employer, and with medical benefits now factored in), from 415 to $625 – more than a 50% increase. The Avalanche Court noted that the discretionary exception is limited to situations where the default provision *"results in an injustice."* (citing *Coates, Reid & Waldron v. Vigil*, 856 P. 2d 850 (Colo. 1993)). (emphasis added).

5. In *Pizza Hut v. /CAO,* 18 P.3d 867, (Colo. App. 2001), Claimant was injured while working as a delivery driver. He then obtained a second job at a hospital. Claimant concurrently held two jobs for a short period, and then quit the delivery job. The Colorado Court of Appeals affirmed the increase in Claimant's average weekly wage and reinforced the principle that the *ALJ had discretion* to calculate Claimant's wages based on earnings from a subsequent employer and not upon wages earned at the time of injury, as the former represented a better calculation of Claimant's AWW.

Average Weekly Wage, as Applied

6. In this case, Clamant received an approximate 11% monthly pay increase from the date of injury until 7/1/2018, and another 3% monthly increase for the fiscal year following. The cumulative increase for the two year period is approximately 17%, but with the bulk of the increase the first year, likely as a result of a promotion – although the reason is undisclosed by the record. There is no evidence of change in employer.

7. While Claimant's first year's wage increase is fairly substantial, the second year's increase is more modest, and in keeping with the market. Perhaps as time goes on, and Claimant were to receive regular, substantial increases through the ensuing years – and then suffer another worsening – this issue might be revisited. At such point, an argument might be made that Claimant's wages had so increased, over such a substantial period of time, that to base his TTD payments on his AWW from the date of injury would constitute an *"injustice".* Such is simply not the case at this juncture.

8. The ALJ will not apply the *exception* to the *default* provision in this case, at least at this time. As noted by Respondents, increasing average weekly wage every time an employee receives an annual wage increase would effectively allow the *exception* provision to swallow the *default* provision, and effectively turn the statutory provision on its head.

ORDER

It is therefore Ordered that:

1. Claimant's Average Weekly Wage in this case is to be calculated based upon his date of original work injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-145-937-001

ISSUES

I. What is the correct average weekly wage?

STIPULATIONS

- The parties agree that the average weekly wage – and corresponding disability benefit rate – is subject to the applicable offsets.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. On August 10, 2020, Gerardo C[Redacted] suffered a compensable injury. **Ex. 1**.
2. On August 14, 2020, Gerardo C[Redacted] (decedent) died as a result of the industrial injuries he sustained on August 10, 2020. **Ex. 1.**
3. A General Admission for a Fatal Case was filed by Respondents on February 12, 2021. **Ex. 1.** The General Admission admitted to a date of injury of August 10, 2020 and death of August 14, 2020. The average weekly wage admitted was $1,112.67, putting the temporary rate at $741.78.
4. The dependents admitted on the General Admission included Angelica C[Redacted] (spouse), Daniella C[Redacted] (child), and Sofia Regina C[Redacted] (child). **Ex. 1.**
5. Wage records and the General Admission establish the decedent worked for Employer from about December 1, 2019 through August 10, 2020. **Ex. 1** and **2.** The exact date the decedent started his employment with Employer is unknown because the only evidence submitted at hearing about the decedent's dates of employment and his earnings are his wage records. His wage records, however, do not provide the amount he earned each day. Instead, his wage records provide the amount he earned each week. Moreover, the wage records provided end on August 1, 2020, and do not include the decedent's earnings from August 2, 2020 through August 10, 2020 – the date of his injury.
6. The decedent's first weekly pay period with Employer is from December 1, 2019 through December 7, 2019. During this period, the decedent only worked 9 hours. As a result, it appears the decedent only worked one day during the first weekly pay period with Employer.
7. In addition, although the decedent worked for Employer from about December 1, 2019 through August 10, 2020, the wage records submitted into evidence go from December 1, 2019, through August 1, 2020. **Ex. 2.**

8. Based on the decedent's wage records, the decedent's earnings were as follows:

Beginning Pay period	Ending Pay Period	Regular Hours	Regular Wages	Overtime Hours	Overtime Wages	Base Hourly Wage	Overtime Hourly Wage	Toal Weekly Hours	Holiday Pay	Total Wages
12/1/2019	12/7/20/19	9.00	$126.00	0.00	$0.00	$14.00	$0.00	9.00		$126.00
12/8/2019	12/14/2019	40.00	$560.00	8.50	$178.50	$14.00	$21.00	48.50		$738.50
12/15/2019	12/21/2019	40.00	$560.00	2.00	$42.00	$14.00	$21.00	42.00		$602.00
12/22/2019	12/28/2019	40.00	$560.00	10.00	$210.00	$14.00	$21.00	50.00		$770.00
12/29/2019	1/4/2020	40.00	$560.00	18.00	$378.00	$14.00	$21.00	58.00	$189.00	$1,127.00
1/5/2020	1/11/2020	40.00	$560.00	5.00	$105.00	$14.00	$21.00	45.00		$665.00
1/12/2020	1/18/2020	40.00	$560.00	9.00	$189.00	$14.00	$21.00	49.00		$749.00
1/19/2020	1/25/2020	40.00	$560.00	32.25	$677.25	$14.00	$21.00	72.25		$1,237.25
1/26/2020	2/1/2020	40.00	$560.00	25.00	$525.00	$14.00	$21.00	65.00		$1,085.00
2/2/2020	2/8/2020	40.00	$560.00	27.50	$577.50	$14.00	$21.00	67.50		$1,137.50

Total Earnings										**$38,149.25**

9. As found, and set forth in the table above, the decedent was paid either $14.00 or $15.00 per hour, and overtime at either $21.00 or $22.50 per hour, during the following periods:

- From December 1, 2019, through February 15, 2020, the decedent was paid $14.00 per hour, and $21.00 per hour for overtime.

- From February 16, 2020 through March 14, 2020, the decedent did not work.

- From March 15, 2020 through May 2, 2020, the decedent was paid $15.00 per hour, and $22.50 per hour for overtime.

- From May 3, 2020, through May 23, 2020, the decedent was paid $14.00 per hour, and $21.00 per hour for overtime.

- From May 24, 2020, through May 30, 2020, the decedent earned $15.00 per hour, and $22.50 per hour for overtime.
- Then from May 31, 2020, through August 1, 2020, the decedent went back to earning $14.00 per hour, and $21.00 per hour for overtime.

10. The reason the decedent was paid a different hourly rate for different periods of time is unknown.
11. The wage records reveal – and the ALJ finds – that the decedent did not work at all between February 16, 2020 and March 14, 2020.
12. The decedent worked overtime almost every single week. The decedent's overtime ranged from a mere 2 hours during one week in December 2019 up to a staggering 72 hours of overtime during one week in April 2020.
13. Excluding his first week of employment, and the 4 weeks the decedent did not have any earnings in February and March 2020, the decedent averaged about 32.5 hours of overtime per week during his employment.
14. However, starting in March 2020, the decedent's average overtime hours increased. Between March 15th and August 1st, the decedent averaged about 41.75 hours of overtime per week.
15. No credible evidence was presented establishing the decedent would not have continued to work significant overtime but for the industrial injury.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. What is the correct average weekly wage?

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3) establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

There are 245 days between December 1, 2019 and August 1, 2020. This equals 35 weeks. Merely averaging the decedent's earnings during that time period of $38,149.25 results in an AWW of $1,089.98. But such calculation understates the decedent's AWW because:

- He did not work a full week during his first pay period of December 1st through December 7th.
- He did not appear to work a full week during the February 9th through February 15th pay period.
- He did not work at all from February 16th through March 14th.

As found, the decedent worked overtime almost every single week. The decedent's overtime ranged from a mere 2 hours during one week in December 2019 up to a staggering 72 hours of overtime during one week in April 2020.

Excluding his first week of employment, and the 4 weeks the decedent did not have any earnings in February and March 2020, the decedent averaged about 32.5 hours of overtime per week during his employment.

However, starting in March 2020, the decedent's average overtime hours increased. Between March 15th and August 1st, the decedent averaged about 41.75 hours of overtime per week. Plus, during March 2020, the decedent started earning $15.00 per hour – during certain weeks.

Based on the totality of the circumstances, the ALJ finds that the most reasonable manner to determine the decedent's average weekly wage, i.e., his wage loss and diminished earning capacity at the time of his death, is to average his earnings from March 15, 2020, which is the week he came back to work after taking about a month off, through August 1, 2020. This 20-week period considers the decedent earning both $14.00 and $15.00 per hour for his regular wages and $21.00 and $22.50 per hour for his overtime wages. It also includes a week in which he worked only 10 hours of overtime and another week in which he worked a staggering 72 hours of overtime.

As set forth in the table below, from March 15, 2020 through August 1, 2020 - 20 weeks - the decedent earned $29,688. This results in an average weekly wage of $1,484.40.

Beginning Pay period	Ending Pay Period	Regular Hours	Regular Wages	Overtime Hours	Overtime Wages	Base Hourly Wage	Overtime Hourly Wage	Toal Weekly Hours	Holiday Pay	Total Wages
3/15/2020	3/21/2020	40.00	$600.00	10.00	$225.00	$15.00	$22.50	50.00	$0.00	$825.00

4/5/2020	4/11/2020	40.00	$600.00	50.00	$1,125.00	$15.00	$22.50	90.00	$0.00	$1,725.00
4/12/2020	4/18/2020	40.00	$600.00	72.00	$1,620.00	$15.00	$22.50	112.00	$0.00	$2,220.00
4/19/2020	4/25/2020	40.00	$600.00	39.50	$888.75	$15.00	$22.50	79.50	$0.00	$1,488.75
4/26/2020	5/2/2020	40.00	$600.00	52.50	$1,181.25	$15.00	$22.50	92.50	$0.00	$1,781.25
5/3/2020	5/9/2020	40.00	$560.00	32.00	$672.00	$14.00	$21.00	72.00	$0.00	$1,232.00
5/10/2020	5/16/2020	40.00	$560.00	54.25	$1,139.25	$14.00	$21.00	94.25	$0.00	$1,699.25
5/17/2020	5/23/2020	40.00	$560.00	40.00	$840.00	$14.00	$21.00	80.00	$0.00	$1,400.00
5/24/2020	5/30/2020	28.00	$420.00	56.00	$1,260.00	$15.00	$22.50	84.00	$270.00	$1,950.00
5/31/2020	6/6/2020	40.00	$560.00	48.00	$1,002.00	$14.00	$20.88	88.00	$0.00	$1,562.00
6/7/2020	6/13/2020	40.00	$560.00	64.00	$1,344.00	$14.00	$21.00	104.00	$0.00	$1,904.00
6/14/2020	6/20/2020	40.00	$560.00	7.00	$147.00	$14.00	$21.00	47.00	$0.00	$707.00
6/21/2020	6/27/2020	40.00	$560.00	40.00	$840.00	$14.00	$21.00	80.00	$0.00	$1,400.00
6/28/2020	7/4/2020	40.00	$560.00	40.00	$840.00	$14.00	$21.00	80.00	$0.00	$1,400.00
7/5/2020	7/11/2020	40.00	$560.00	40.00	$840.00	$14.00	$21.00	80.00	$0.00	$1,400.00
7/12/2020	7/18/2020	40.00	$560.00	40.00	$840.00	$14.00	$21.00	80.00	$0.00	$1,400.00
7/19/2020	7/25/2020	40.00	$560.00	28.00	$588.00	$14.00	$21.00	68.00	$0.00	$1,148.00
7/26/2020	8/1/2020	40.00	$560.00	32.00	$672.00	$14.00	$21.00	72.00	$0.00	$1,232.00
Total Wages over 20 Weeks										**$29,688.00**
AWW (Total/20)										**$1,484.40**

As a result, the ALJ finds and concludes that the decedent’s average weekly wage is $1,484.40.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The decedent’s average weekly wage is $1,484.40.

Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 7, 2021

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-101-089-001 and 5-148-953-001

ISSUES

- Whether Insurer 1 has proven by a preponderance of the evidence that they may withdraw their already-filed General Admissions of Liability in W.C. 5-101-089-001?

- If Insurer 1 failed to meet its burden of proof to withdraw its General Admissions of Liability, whether Insurer 1 proved by a preponderance of the evidence that Claimant's last injurious exposure occurred after Insurer 1's workers' compensation insurance policy lapsed, and therefore whether Insurer 2 is liable for Claimant's occupational disease?

- If Insurer 1 met its burden of proof to withdraw its General Admissions of Liability, whether Claimant has proven by a preponderance of the evidence that she sustained a compensable occupational disease with a date of onset of August 20, 2020 while Employer was insured by Insurer 2 (W.C. No. 5-148-953-001)?

- If Claimant has proven by a preponderance of the evidence that she sustained a compensable occupational disease with a date of onset of August 20, 2020, whether Claimant has proven by a preponderance of the evidence that the medical treatment she received from Work Partners was reasonable, necessary and authorized under the Colorado Workers' Compensation Act?

FINDINGS OF FACT

1. Claimant, a 65-year-old female, began working for Employer, an automobile sales dealership, in May 2016. Claimant's job was the controller of the accounting department of the dealership, which involved gathering information to produce financial statements. Claimant testified her job duties involved using a keyboard, mouse, and ten-key calculator operations, with occasional phone use. Claimant testified she worked seated at a desk with two computer screens. She testified that her workday was eight hours, and that she engaged with a computer 90% of her workday.

2. Claimant testified that even when she supervised other employees' data entry, she did so on her computer. She testified that when she is reviewing documents, she must frequently scroll through the documents using the mouse in her right hand.

3. On April 25, 2017, Claimant was evaluated by Dr. Michael Rooks. Claimant complained of bilateral wrist, forearm, and hand pain. Dr. Rooks noted in his report indicated that Claimant reported having these symptoms for years. Claimant testified at hearing that she did not recall seeing a doctor for similar complaints prior to 2017.

4. Claimant testified that in 2018, she began noticing shooting pains in her bilateral forearms, wrists, and hands. Claimant testified that her hands would also fall asleep at night and she began wearing hand braces to work for Employer due to the pain. Claimant testified that the dealership's owner, Mr. B[Redacted], observed her wearing the braces and inquired about the braces. Claimant testified that Mr. B[Redacted] advised her to file a workers' compensation claim after she explained why she needed the braces. Claimant testified that she did not want to file a workers' compensation claim due to the stigma of doing so, and the possibility that filing a claim would raise the cost of Mr. B[Redacted]'s insurance.

5. Claimant eventually did decide to pursue a workers' compensation claim, and Employer produced its first Report of Injury on October 4, 2018. Claimant completed the report herself, and noted that Mr. B[Redacted] was notified of the claim.

6. Claimant was referred to Dr. Lori Fay at Work Partners for treatment on October 19, 2018. Dr. Fay's note indicates Claimant's belief that she was injured due to repetitive computer work over her two years with Employer. Claimant reported an increase in bilateral wrist and hand pain, tingling, and numbness, as well as forearm aches and weakness about six months earlier. Dr. Fay opined Claimant had carpal tunnel syndrome, lateral epicondylitis, and deQuervain's tenosynovitis from cumulative trauma at work. Dr. Fay noted Claimant did not have other activities or hobbies that would aggravate the condition, and although she had a history of thyroid disease, she was not undergoing treatment for that condition. Dr. Fay ordered a Job Demands Analysis ("JDA") to help confirm causation.

7. Torrey Kay Beil, a vocational consultant, performed a JDA on Insurer 1's behalf on November 6, 2018. Ms. Biel observed Claimant's work in her workstation, concluding that Claimant worked at an ergonomically correct workstation for more than seven hours daily and used a mouse more than four hours day, which were risk factors for the development of cumulative trauma conditions. Ms. Beil also noted Claimant consistently had her bilateral elbows and wrists resting on the surface of her desk.

8. Claimant underwent an electromyelogram ("EMG") on December 17, 2018 with Dr. Dean. The EMG showed bilateral moderate carpal tunnel syndrome and bilateral mild cubital tunnel syndrome.

9. Claimant underwent surgery on her left upper extremity on February 21, 2019, under the auspices of Dr. James Rose. Claimant's surgery included carpal and cubital tunnel release procedures.

10. Claimant testified she continued to do her regular work after that surgery with help of a brace on her left side. Claimant testified that she had some relief of her symptoms after surgery, but not total relief: she still had numbness in the fourth and fifth fingers as well as shooting pains into the left hand. Claimant testified that her right hand also progressively worsened: pain in the wrist and tingling at night.

11. Insurer 1 filed a General Admission of Liability (“GAL”) on March 25, 2019 admitting for medical benefits only.

12. Claimant was subsequently referred to Dr. Randy Viola at the Steadman Clinic on October 21, 2019. Claimant testified that after she had surgery on her left upper extremity, the symptoms in her right upper extremity were getting progressively worse. Dr. Viola noted Claimant had a gradual and insidious onset of symptoms consistent with bilateral carpal tunnel syndrome, and had constant symptoms even after her prior surgery. Dr. Viola noted Claimant complained of a pain level of six out of ten. Dr. Viola noted Claimant had ongoing neuropathic pain, weakness, numbness, and tingling in the left hand, as well as untreated carpal and cubital tunnel syndrome on the right side. Dr. Viola opined Claimant was a potential surgical candidate to deal with the on the right side, including right sided carpal tunnel release and cubital tunnel release. Dr. Viola also recommended magnetic resonance image (“MRI”) scans of the left elbow and wrist.

13. Claimant underwent MRI scans of the left wrist and elbow at the Steadman Clinic on October 28, 2019. The MRI of the left elbow showed edema and perineural scarring of the subcutaneous transposed ulnar nerve. No muscle denervation change was noted. The MRI also showed moderate common flexor tendinopathy with chronic partial tearing and broad shallow partial stripping. Moderate common extensor tendinopathy with chronic thin interstitial partial tear was also noted. Additionally, laxity of the lateral ulnar collateral ligament with posterior radial head subluxation suggesting and old sprain was also reported. MRI of the left wrist showed severe pisiform triquetral arthrosis with marginating osteitis and effusion with synovitis; severe scaphoid trapezium arthrosis with diffuse cartilage loss to bone and osteitis; moderate scaphoid trapezoid arthrosis with joint space narrowing and bone edema and chondral thinning; mild first carpal metacarpal (“CMC”) arthrosis with volar marginal chondral loss to bone; large radioulnar and moderate radiocarpal and midcarpal effusions with synovitis; chronic ulnolunate abutment; chronic tear on the radial aspect of the triangular fibrocartilage; adjacent chondral loss to the bone and trace edema proximal ulnar aspect of lunate and neutral ulnar variance in neutral position; cystic decompression of joint fluid along the dorsal margin of the distal pole scaphoid, median nerve edema in the carpal tunnel post carpal tunnel release with scarring of the flexor retinaculum and palmar fascia; mild edema superficial thenar muscles concerning for neuropathy but no muscle atrophy was also noted.

14. Claimant underwent repeat EMG studies with Dr. Dean on November 13, 2019. Dr. Dean noted Claimant had a left carpal tunnel release and left cubital tunnel release in February 2019. In comparing the EMG results with the prior EMG, Dr. Dean opined that the left cubital tunnel was perhaps modestly better or about the same. Dr. Dean noted that the left carpal tunnel showed one measure that is nominally improved and one measure that is nominally worse. Dr. Dean opined that the left carpal tunnel may be minimally worse than one year ago. The right carpal tunnel was noted to by somewhat better and the right cubital tunnel was unchanged.

15. Claimant returned to Dr. Viola on April 20, 2020 with complaints of ongoing hand and wrist pain. Dr. Viola noted Claimant had no significant improvement since her surgery a year prior. Dr. Viola recommended bilateral hand and wrist surgeries and Claimant underwent those recommended surgeries with Dr. Viola on May 22, 2020.

16. Insurer 1 filed a second General Admission of Liability on June 19, 2020, admitting for one day of temporary total disability ("TTD") benefits.

17. Claimant testified that she worked closely with Mr. B[Redacted], Employer's owner, and communicated with him every day he was in the office. Claimant testified that she was familiar with the payment of Employer's workers' compensation insurance premiums, because she paid them. Claimant testified that Insurer 1's coverage for Employer ended on September 30, 2019. Claimant testified that she and Employer were made aware of Insurer 1's cessation of coverage by written notice. Claimant testified that Employer then obtained replacement coverage with Insurer 2.

18. Claimant testified after she was made aware that Insurer 1 was seeking to withdraw its admissions of liability in her claim by written notice in the mail in 2020, she filed a second Claim for Compensation against Insurer 2. Claimant's two claims were then consolidated for purposes of this hearing.

19. Claimant underwent an independent medical evaluation ("IME") at the request of Insurer 1 with Dr. J. Tashoff Bernton, on August 11, 2020. Dr. Bernton reviewed Claimant's medical records, including the JDA, obtained a medical history and performed a physical evaluation in connection with the IME. Dr. Bernton opined in his IME report that Torrey Beil's JDA report was internally inconsistent and flawed, and that in fact there were not occupational risk factors present for Claimant's carpal and cubital tunnel syndrome.

20. Dr. Bernton testified on Insurer 1's behalf at hearing consistent with his IME report. Dr. Bernton opined that Claimant had bilateral carpal tunnel syndrome, cubital tunnel syndrome, and arthritis of the wrist. Dr. Bernton testified that repetitive trauma occurs because a task is repeated consistently over time with sufficient force and frequency that there's no recovery from performing it before it has to be performed again. Dr. Bernton testified that aggravation of osteoarthritis could also lead to carpal tunnel syndrome due to increased amounts of inflammatory fluid in the area and compression of the carpal tunnel nerves.

21. Dr. Bernton testified about the calculation of time Claimant performed certain activities at work in Ms. Beil's JDA report. Dr. Bernton concluded that the report was flawed, and no repetitive injury risk factors actually existed in Claimant's occupational duties. Dr. Bernton opined in his testimony that Ms. Beil's report was way off base.

22. Dr. Bernton specifically testified about Ms. Beil's time calculations and took issue with the amount of time Claimant was observed working. Dr. Bernton

ultimately opined that Claimant’s carpal tunnel syndrome and cubital tunnel syndrome likely developed as an idiopathic condition.

23. Dr. Bernton testified he did not ever discuss apparent time discrepancies in the JDA with Ms. Beil.

24. Dr. Bernton also opined that if Claimant’s condition were related to her work her employer, Claimant’s continued full-duty work after September 2019 would represent a permanent worsening of her underlying upper extremity condition.

25. Insurer 2 referred Claimant for an IME with Dr. John Raschbacher on January 21, 2021. Dr. Raschbacher reviewed Claimant’s medical records, including the JDA and Dr. Bernton’s IME, obtained a medical history and performed a physical examination as part of his IME. Dr. Raschbacher opined Claimant had bilateral carpal tunnel and cubital tunnel syndrome, right worse than left, but did not relate those conditions to her work. The doctor related Claimant’s current diagnoses to preexisting, degenerative conditions, including osteoarthritis, and not to her work activities.

26. Dr. Raschbacher testified at hearing consistent with his IME report. Dr. Raschbacher testified that Claimant was predisposed to developing carpal and cubital tunnel syndrome, and that her work did not aggravate those conditions. Dr. Rashbacher testified that the JDA performed by Ms. Beil was not useful in determining whether Claimant’s condition was work related.

27. Dr. Raschbacher testified that the existence of a pre-existing condition does not prevent a claimant for receiving treatment for that condition if it’s aggravated by a new injury. Dr. Raschbacher testified that for a pre-existing condition to be aggravated, the employee must move off of their baseline condition. Specifically with carpal and cubital tunnel syndromes, Dr. Raschbacher testified that those conditions arise when there is a narrowing of those tunnels. The doctor testified that if risk factors for carpal tunnel or cubital tunnel syndrome are present in a workplace, it is more likely that a patient’s conditions are related to work activity.

28. Claimant testified that her job duties had not changed since Insurer 2 assumed coverage from Insurer 1 in September 2019. She testified that her symptoms had continued to progress, especially in her right hand and wrist, with her job duties. Claimant testified there had not been a day since she reported the claim in October 2018 where symptoms in her right or left hand or wrist had gone away completely. Claimant testified she does not engage in activities or hobbies outside of work that aggravate her bilateral upper extremity condition.

29. The ALJ notes that while both Dr. Raschbacher and Dr. Bernton both testified that the JDA performed by Ms. Beil was not helpful to determining whether claimant’s condition was related to her work for Employer, or aggravated by her work for Employer, neither Insurer 1 nor Insurer 2 sought a new JDA to determine the force used by Claimant and time spent keyboarding during a work day for Employer.

30. The ALJ notes that the Colorado Workers' Compensation Medical Treatment Guidelines set forth at W.C.R.P. 17-5(D)(1)(b) sets forth that the examining physician should assess the individual's ability to perform job duties. Specifically the Medical Treatment Guidelines state in pertinent part:

> This frequently includes a job site evaluation including an ergonomic assessment as well as the patient's description of the job duties. Job title alone is not sufficient information. The clinician is responsible for documenting specific information regarding repetition, force, other risk factors, and duration of employment. Refer to risk factors as listed in Section D.3.d Risk Factors Definitions Table and Section D.3.e Diagnosis-Based Risk Factors Table. A formal job site evaluation may be necessary. A formal job site evaluation may not be necessary when the physician is intimately familiar with the job position and associated work activities and there are no new job alterations.

31. In this case, while both IME physicians were critical of Ms. Biel's report, neither of the physicians sought clarification from Ms. Biel's report or requested a new JDA to assess Claimant's work activities, including the repetition, force or other risk factors and duration of employment. The ALJ rejects the opinions of both Dr. Bernton and Dr. Raschbacher as being not credible or persuasive as to the causation of Claimant's bilateral carpal tunnel and cubital tunnel syndrome.

32. The ALJ credits the reports from Dr. Viola, Dr. Fay, Dr. Rose, and the JDA from Torrey Beil and finds that Insurer 1 has failed to prove by that it is more likely than not that Claimant's condition is not to her work with Employer.

33. The ALJ credits the reports from Dr. Viola, Dr. Fay and Dr. Rose over the reports and contrary opinions of Dr. Bernton and Dr. Raschbacher, and finds that Insurer 1 has failed to prove by a preponderance of the evidence that it is entitled to withdraw its admissions of liability based on a finding that Claimant did not sustain an occupational disease while employed with Employer.

34. The ALJ further rejects the opinions of Dr. Bernton and finds that Insurer 1 has failed to prove that it is more likely than not that Claimant's continued work for Employer after September 2019 has resulted in a last injurious exposure that resulted in an aggravation that was both permanent and substantial.

35. The ALJ notes that the testimony of Dr. Bernton that Claimant's continued work with Employer resulted in her ongoing need for medical treatment after Insurer 2 began providing insurance coverage for Employer is undermined by his opinion that Claimant's work for Employer did not cause her condition.

36. The ALJ notes that the EMG studies performed by Dr. Dean on November 13, 2019, roughly two months after Insurer 1 stopped providing insurance coverage, demonstrated that the right upper extremity was in fact improved from an EMG standpoint when compared to the EMG studies from the previous year. The ALJ further

finds that the EMG study with regard to the left showed that Claimant's condition was only minimally worse. The ALJ therefore finds that Insurer 1 has failed to demonstrate that it is more likely true than not that there was a last injurious exposure with Employer that caused a substantial and permanent aggravation of her condition.

37. The ALJ relies on the EMG reports of Dr. Dean along with the medical records from Dr. Viola in concluding that Insurer 1 has failed to demonstrate that Claimant had a last injuries exposure that caused a substantial and permanent aggravation of her condition which would result in Insurer 2 becoming liable for the cost of Claimant's medical treatment.

38. Because the ALJ has found that Insurer 1 did not meet its burden of proof with regard to withdrawing the admission of liability, and has found that there is insufficient evidence to establish that a last injurious exposure occurred during the time Insurer 2 was providing workers' compensation insurance coverage, Claimant does not have a burden of proof to meet to establish an entitlement to benefits in W.C. 5-148-983-001.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2019. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*. A party seeking to modify an issue determined by a general of final admission of liability, a summary order or a final order shall bear the burden of proof for any such modification. Section 8-43-201, *supra.*

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical

condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test. The test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* The onset of a disability occurs when the occupational disease impairs the claimant's ability to perform his regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity. *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App.2002); *In re Leverenz*, WC 4-726-429 (ICAO, July 7, 2010).

6. Normally, the claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999. However, in this case, because Insurer 1 has filed an admission of liability admitting for the injury, it is Insurer 1's burden of proof to establish the basis for the modification that would allow Insurer 1 to withdraw the admission of liability. See Section 8-43-201, C.R.S.

7. As found, Insurer 1 has failed to establish by a preponderance of the evidence that Claimant's upper extremity condition was not a condition that resulted directly from Claimant's employment with employer or the conditions under which her work was performed. As found, the opinions expressed by Dr. Fay, Dr. Viola and Dr. Rose are found to be credible and persuasive with regard to this issue.

8. A claimant is allowed to recover from the last employer in whose employ the last injurious exposure occurred and resulted in an aggravation that is both permanent and substantial. *Monfort, Inc. V. Rangel*, 867 P.2d 122 (Colo. App. 1993). The addition of the phrase "substantial permanent aggravation" in effect limits liability for occupational diseases to those employers that caused the claimant to be exposed to a harmful concentration of a hazard, which exposure resulted in a substantial and permanent aggravation of the disease. *Robbins Flower Shop v. Cinea*, 894 P.2d 63 (Colo. App. 1995).

9. As found, Insurer 1 has failed to prove by a preponderance of the evidence that Claimant sustained a last injuries exposure that resulted in an aggravation that is both permanent and substantial. As found, the EMG records and reports from Dr. Dean along with the records from Dr. Viola are found to be credible and persuasive in this regard.

ORDER

It is therefore ordered that:

1. Insurer 1's request to withdraw their admission of liability is denied and dismissed.

2. Insurer 1's request that Insurer 2 be found liable for the ongoing medical and disability benefits under the Colorado Workers' Compensation Act based on the last injurious exposure is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

WORKERS' COMPENSATION NO. WC 5-031-585

ISSUES

I. Determination of the extent of Claimant's scheduled upper extremity rating.

II. Whether Claimant proved by a preponderance of the evidence her scheduled upper extremity impairment rating should be converted to a whole person impairment rating.

III. Whether Claimant is entitled to an award for disfigurement.

FINDINGS OF FACT

1. Claimant is a 75-year-old woman who works for Employer as a bank teller.

2. Claimant sustained an admitted industrial injury on November 18, 2016 when she slipped and fell on ice, landing on her left shoulder. Claimant was diagnosed with a closed fracture of the proximal left humerus and underwent an open reduction and internal fixation of the proximal humerus with Synthes with rotator cuff repair on November 19, 2016, performed by Patrick McNair, M.D.

3. Claimant subsequently complained of neck pain, headaches, and left arm pain.

4. On January 4, 2018, Claimant saw orthopedic surgeon Armodios Hatzidakis, M.D. upon the referral of her authorized treating physician (ATP) Dr. Ogrodnick. Claimant reported 6-7/10 left shoulder pain, disruption with sleeping, and difficulty performing activities of daily living. Dr. Hatzidakis noted Claimant admitted to having some referred cervical spine pain with diagnostically diagnosed degenerative disc disease at her mid-to-low cervical spine with spurring. Dr. Hatzidakis further noted that a CT scan of the left shoulder revealed evidence of healing of the tuberosities but the collapse of the humeral head with subsequent penetration of the hardware into the glenohumeral joint as well as end-stage glenohumeral osteoarthritis. He opined that Claimant was a good candidate for surgery.

5. On May 14, 2018, Claimant underwent a reverse left shoulder arthroplasty with hardware removal and biopsy and culture, performed by Dr. Hatzidakis.

6. Claimant subsequently reported continued pain in her left shoulder, shoulder blade and neck, as well as daily left-sided headaches. Exams noted tenderness along the distal clavicle, AC joint and trapezius. On April 11, 2019, Dr. Hatzidakis administered a diagnostic injection over the AC joint and recommended Claimant undergo evaluation for any infection. The injection provided Claimant minimal relief.

7. On June 13, 2019, Carlos Cebrian, M.D. performed an Independent Medical

Examination (IME) at the request of Respondents. Claimant reported pain in her left shoulder, left clavicle, and left shoulder blade, as well as pain up the left side of her neck and daily headaches. On examination, Dr. Cebrian noted full cervical range of motion with some discomfort on the left side, no tenderness to palpation over the paracervical muscles, and tenderness to palpation of the posterior left shoulder, posterior AC joint and clavicle. Dr. Cebrian opined that additional testing was reasonable to determine if Claimant had a low-grade infection. He noted that if the testing was unremarkable, Claimant would be at maximum medical improvement (MMI) with permanent impairment and restrictions. Dr. Cebrian anticipated permanent impairment for the reverse shoulder arthroplasty and range of motion deficits as well as permanent work restrictions of no lifting over 10 pounds with left upper extremity and no lifting above shoulder level.

8. Claimant continued to have left shoulder and neck pain and ultimately underwent a third left shoulder surgery on October 1, 2019. Dr. Hatzidakis performed a left shoulder arthroscopy with extensive debridement, arthroscopic subacromial decompression with arthroscopic greater tuberoplasty, and arthroscopic distal clavicle resection.

9. Claimant reported doing well after the October 2019 surgery. By November 15, 2019, Claimant reported being pain-free at rest, with a “twinge” of pain with some activities. On December 16, 2019, Claimant reported feeling as though she had “turned the corner” and was pleased with her better range of motion. She reported 3/10 pain at rest. On examination, Dr. Ogrodnick noted painful 85 degrees shoulder abduction and 150 degrees forward flexion. He opined that Claimant was approaching MMI.

10. On January 9, 2020, Claimant presented to Dr. Hatzidakis with an unrelated new complaint of right shoulder pain after injuring her right shoulder on January 2, 2020 while doing laundry and shaking out an item of clothing. Claimant reported pain in the anterolateral right shoulder radiating down the right upper extremity, decreased range of motion, difficulty sleeping, and cervical spine discomfort with pain that mostly radiates into the posterior superior shoulder into the trapezius. Claimant was subsequently diagnosed with a right full-thickness superior rotator cuff tear with associated retraction.

11. Claimant returned to Dr. Hatzidakis on January 14, 2020 for follow-up on her left shoulder. Claimant reported doing quite well and being pleased with the results of her left shoulder surgery although she continued to have some pain reaching across her body. On examination of the left shoulder, Dr. Hatzidakis noted minimal tenderness over the AC joint, 120 degrees forward flexion, 80 degrees abduction, 20 degrees external rotation, and internal rotation to the sacrum. He recommended Claimant increase activity as tolerated and continue physical therapy.

12. On January 20, 2020, Claimant reported 0/10 left shoulder pain to Dr. Ogrodnick. Claimant was working six four-hour shifts per week and wanted to increase her time. On examination of the left shoulder, Claimant had 132 degrees forward flexion and 63 degrees abduction. On February 7, 2020, Claimant reported to Dr. Ogrodnick that she was using her left shoulder much more of late due to her right shoulder injury. She reported being pleased with her shoulder agility out in the front of her body but not out to

the left side or behind her body.

13. Claimant returned to Dr. Ogrodnick on February 17, 2020, at which time he placed Claimant at MMI. On examination of the left shoulder, Dr. Ogrodnick noted 136 degrees forward flexion, 32 degrees extension, 9 degrees external rotation, 21 degrees internal rotation, 100 degrees abduction, and 24 degrees adduction. He noted remarkably solid rotator cuff strength, negative impingement findings and no biceps tenderness. Using the AMA Guides, Dr. Ogrodnick assigned Claimant 41% left upper extremity impairment rating, consisting of a 30% rating under Table 19 of the AMA Guides for implant arthroplasty, combined with a 15% rating for decreased range of motion. He noted that the 41% upper extremity rating converted to 25% whole person impairment. Dr. Ogrodnick released Claimant to work with permanent work restrictions limiting lifting with the left upper extremity to 8 pounds, and no overhead lifting with the left upper extremity. He opined that maintenance treatment was not required with the exception of annual post-operative exams with an orthopedist.

14. On March 10, 2020, Claimant saw Dr. Hatzidakis and reported that her left shoulder was doing much better and was now her dominant shoulder. Claimant reported having minimal pain in the left shoulder and being pleased with the result of the surgery. Claimant’s main complaint was her right shoulder. On examination of the left shoulder, Dr. Hatzidakis noted near full active range of motion without crepitation, weakness or instability. There was no tenderness over the AC joint. He opined Claimant had reached MMI for the left shoulder. Claimant was leaning towards proceeding with arthroscopic rotator cuff repair for her right shoulder. As of the date of hearing, Claimant had not undergone surgery to address her right shoulder condition.

15. Claimant worked modified duty between the date of injury and being placed at MMI. At the time Dr. Ogrodnick placed Claimant at MMI, she was working full duty with accommodations from Employer. Claimant continued to in such capacity until June 2020 when she took a leave of absence for unrelated low back issues.

16. On July 14, 2020, Greg Reichhardt, M.D. performed a Division Independent Medical Examination (“DIME”). As part of his evaluation, Dr. Reichhardt reviewed Claimant’s medical records Claimant reported pain over the left shoulder extending along the upper trapezius towards her neck at times and extending down the upper arm to the elbow. She rated the pain at 3.5-7.5/10, and reported the pain was aggravated by lifting, reaching, pulling, dressing, performing housework, bathing, and washing/blow drying her hair. She complained that the pain interfered with activities of daily living. On examination, Dr. Reichhardt noted no tenderness to palpation of the cervical spine, no cervical paraspinal muscle spasms, and normal cervical range of motion for Claimant’s age. There was moderate tenderness to palpation over the lateral aspect of the left shoulder, mild tenderness to palpation over the mid and distal aspect of the upper trapezius, and no scapular winging. He noted 90 degrees forward flexion, 50 degrees extension, 38 degrees adduction, 86 degrees abduction, 58 degrees internal rotation, and 60 degrees external rotation. There was mild supraspinatus and infraspinatus weakness.

17. Dr. Reichhardt agreed with Dr. Ogrodnick that Claimant reached MMI as of February 17, 2020. Dr. Reichhardt assigned 38% left upper extremity impairment using the AMA Guides, consisting of 12% impairment for range of motion deficits and 30% impairment for implant arthroplasty under Table 19 of AMA Guides. Dr. Reichhardt noted that the 38% combined left upper extremity impairment converted to 23% whole person impairment. He agreed with Dr. Ogrodnick's recommendations for work restrictions and maintenance care.

18. Dr. Cebrian performed a second IME of Claimant on January 7, 2021 and issued an IME report dated February 5, 2021. Dr. Cebrian interviewed and examined Claimant and reviewed additional medical records. Claimant reported pain at night when rolling over onto her left shoulder and with increased or repetitive activity. She reported pain located in the posterior aspect of the shoulder that went into the lateral deltoid, pain in the clavicle and up to the left trapezius, and occasionally down into her arm and into her fourth and fifth fingers. Claimant further reported difficulties reaching overhead. Dr. Cebrian noted Claimant's right shoulder had been bothering her since May 2019 and that Claimant had been diagnosed with a right torn rotator cuff. Examination revealed full cervical spine range of motion without tenderness to palpation. Dr. Cebrian noted the following left shoulder range of motion measurements: 116 degrees flexion, 46 degree extension, 98 degrees abduction, 40 degrees adduction, 62 degrees external rotation, and 60 degrees internal rotation. Claimant reported discomfort with movement over the clavicle, deltoid, and into the trapezius muscle. Dr. Cebrian agreed Claimant reached MMI on February 17, 2020, and agreed with the permanent work restrictions assigned by Dr. Ogrodnick.

19. Using the AMA Guides, Dr. Cebrian assigned Claimant 37% combined upper extremity impairment, consisting of 10% impairment for range of motion deficits combined with 30% impairment for implant arthroplasty under Table 19 of the AMA Guides. He noted that 37% upper extremity impairment converted to 22% whole person impairment. Dr. Cebrian opined that DIME physician Dr. Reichhardt did not err in his assignment of 38% upper extremity impairment. He noted that his own range of motion measurements were similar to Dr. Reichhardt's, while Dr. Ogrodnick found greater impairment for range of motion deficits.

20. Dr. Cebrian opined that Claimant did not evidence functional impairment beyond Claimant's left glenohumeral joint and there was no proximal disorder. He opined that the situs of Claimant's functional impairment is in her left proximal humerus and glenohumeral joint. Dr. Cebrian further opined that the performance of a distal clavicle resection does not have any negative effect on a person's function, and the distal clavicle resection did not cause Claimant functional impairment beyond the glenohumeral joint. He concluded that Claimant has had greater right shoulder and cervical spine complaints secondary to her unrelated right shoulder injury than she has had due to her left shoulder.

21. Dr. Cebrian testified by pre-hearing deposition as an expert in occupational medicine. Dr. Cebrian testified consistent with his IME reports. He opined that Claimant's functional impairment is isolated to her upper extremity at the shoulder joint. Dr. Cebrian explained that Claimant's original left shoulder work injury was to Claimant's left proximal

humerus, which is the upper part of the arm, just below the ball of the humeral head. A fracture in a proximal humerus would be located below the shoulder joint. Dr. Cebrian explained that the surgical repair of the fracture caused aggravation of Claimant's left shoulder joint, warranting a shoulder replacement.

22. Dr. Cebrian testified that Claimant has degenerative disc disease in the cervical spine, which is unrelated to the work injury and developed over a long period of time. He further testified that Claimant has history of pre-existing rheumatoid arthritis which can increase degenerative changes throughout the entire body. Dr. Cebrian testified that, per his review of the medical records, Claimant's left shoulder was doing well in 2020, noting that in December 2020 Claimant informed Dr. Hatzidakis that her left shoulder was 80% normal. Dr. Cebrian testified that the pathology resulting from the work injury is related to the proximal humerus and the shoulder/glenohumeral joint and does not extend to her neck or trunk. He explained that a distal clavicle resection involves the removal of a portion of the AC joint and is performed to reduce pain and has no bearing on function. He further explained that a reverse shoulder arthroplasty replaces the glenoid, which is an extension of the scapula, and attaches in the left upper quadrant of the back. Dr. Cebrian testified that it is common for people who undergo reverse total shoulder replacement to have pain in the left upper quadrant of the back, as well as decreased range of motion and difficulty with overhead activity.

23. Claimant testified at hearing regarding her symptoms and functional limitations. As a result of the left shoulder work injury, Claimant cannot reach overhead or behind her back with her left arm. Claimant has difficulties reaching across her body and trouble turning a steering wheel. Claimant can no longer lift heavy items and her left arm becomes weak and tires easily with the performance of household chores. Claimant has altered the way in which she performs certain activities of daily living as a result of her work injury. Claimant acknowledges she is pain-free at rest. Claimant's pain is exacerbated by activity, and is located at the top of her left shoulder extending into the left side of her neck, as well as in the left shoulder blade extending into her left upper back and neck. Claimant also continues to experience left-sided headaches and disruptions in her sleep when rolling onto her left shoulder at night.

24. Claimant was diagnosed with rheumatoid arthritis several years prior to the work injury, which mostly affected her hands. Claimant also has diabetes and unrelated issues with her low back, neck, right shoulder and hips, as well as pain in her knees. At times, Claimant experiences headaches unrelated to the work injury, which are different in nature than the headaches resulting from the left shoulder injury. Claimant describes the former describes as pain across her forehead and the latter as distinctly left-sided.

25. The ALJ specifically finds Dr. Reichhardt's assigned 38% scheduled impairment accurately represents the extent of Claimant's scheduled impairment.

26. The ALJ specifically finds Claimant's testimony regarding her pain and functional limitations, as supported by the medical records, more persuasive than Dr. Cebrian's opinion, which appears to be more focused on the situs of injury. Claimant proved it is

more probable than not she sustained functional impairment beyond the arm at the shoulder, entitling her to conversion of her scheduled impairment rating to a whole person impairment rating.

27. As a result of the November 16, 2018 work injury, Claimant has a visible disfigurement to the body consisting of a scar on Claimant's anterior left shoulder measuring approximately six inches in length. The scar and surrounding area are indented and discolored. Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, entitling her to additional compensation.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Scheduled Impairment Rating

The increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that "when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in §8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The court of appeals has explained that scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. Specifically, the procedures of §8-42-107(8)(c), C.R.S. only apply to non-scheduled impairments. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000); *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Gagnon v. Westward Dough Operating CO. D/B/A Krispy Kreme* WC 4-971-646-03 (ICAO, Feb. 6, 2018). Claimant has the burden of showing the extent of his scheduled impairment by a preponderance of the evidence. *Burciaga v. AMB Janitorial Services, Inc. and Indemnity Care ESIS Inc*., WC 4-777-882 (ICAO, Nov. 5, 2010); *see Morris v. Olson Heating & Plumbing Co.,* WC 4-980-171 (ICAO, May 20, 2019) (whether the claimant sustained a whole person or extremity impairment is one of fact for the ALJ and the DIME opinion on the issue is not entitled to any enhanced weight).

The preponderant evidence establishes the extent of Claimant's scheduled impairment is most accurately reflected by Dr. Reichhardt's 38% assigned scheduled impairment. The scheduled impairment ratings assigned by Drs. Ogrodnick, Reichhardt and Cebrian vary based on the impairment found for range of motion measurements on each of their examinations. Dr. Reichhardt's examination was performed approximately five months after Dr. Ogrodnick's February 17, 2020 impairment rating, and approximately six months before Dr. Cebrian's second IME on January 7, 2021. There is no indication Dr. Reichhardt's range of motion measurements or assigned rating is likely incorrect or that those of Dr. Ogrodnick or Dr. Cebrian are more likely correct. Based on these circumstances, the ALJ is persuaded Dr. Reichhardt's assigned 38% scheduled impairment most accurately represents the extent of Claimant's scheduled impairment.

Conversion of a Scheduled Impairment Rating to Whole Person Impairment Rating

Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. When an injury results in a permanent medical impairment not on the schedule of impairments, an employee is entitled to medical impairment benefits paid as a whole person. *See* §8-42-107(8)(c), C.R.S. The schedule includes the loss of the "arm at the shoulder." but the "shoulder" is not listed on the schedule of impairments. *See* §8-42-107(2)(a), C.R.S.

Because §8-42-107(2)(a), C.R.S. does not define a "shoulder" injury, the dispositive issue is whether a claimant has sustained a functional impairment to a portion of the body listed on the schedule of impairments. *See Strauch v. PSL Swedish Healthcare*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has suffered the loss of an arm at the shoulder under §8-42-107(2)(a), C.R.S., or a whole person medical impairment compensable under §8-42-107(8)(c), C.R.S., is determined on a case-by-case basis. *See DeLaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

The Judge must thus determine the situs of a claimant's "functional impairment." *Velasquez v. UPS,* WC 4-573-459 (ICAO Apr. 13, 2006). The situs of the functional impairment is not necessarily the site of the injury. *See In re Hamrick*, WC 4-868-996-01 (ICAO, Feb. 1, 2016). Pain and discomfort that limit a claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule of impairments. *In re Johnson–Wood*, WC 4-536-198 (ICAO, June 20, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (ICAO, Nov. 16, 2007).

Respondents contend that any functional impairment beyond Claimant's left shoulder is unrelated to the work injury, noting Claimant's unrelated conditions and complaints with respect to her hands, low back, neck, right shoulder, hips and knees. Respondents further point to Claimant's reported improvement after her October 2019 surgery, and to Dr. Cebrian's opinion that Claimant's pathology and functional impairment are limited to the proximal humerus and shoulder joint.

The ALJ notes the medical records do indicate Claimant reported improvement in her left shoulder symptoms and function after her October 2019 surgery, including references to being pain-free or 3/10 pain. However, documentation regarding the absence of pain or decreased pain specifically refer to Claimant being at rest. Although Claimant is admittedly pain-free at rest, functional impairment cannot be ascertained based on the claimant's pain level while idle, as functional impairment refers to the effect a medical impairment has on the claimant's activity level. *Copp v. City of Colorado Springs* WC 4-271-758 (ICAO, Jan. 24, 2001); *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996).

The medical records after her October 2019 surgery document Claimant's limitations reaching across, out to the side, behind and overhead, as well as a subsequent increase in pain in her left shoulder, clavicle, trapezius, and neck, aggravated with activities and interfering with her activities of daily living. Claimant credibly testified that she experiences left-sided headaches and pain and discomfort in her left shoulder extending to her neck and left upper back, exacerbated by activity. This pain and discomfort has limited her ability to reach overhead, out to the side, behind her back, and above shoulder height, as well as her ability to lift items of certain weight.

Claimant's ATPs, the DIME physician, and Respondents' IME physician all agree with permanent work restrictions prohibiting Claimant from overhead lifting and lifting more than eight pounds with the left upper extremity. These restrictions are the result of the work injury. While Claimant's injury and treatment was to the proximal humerus and shoulder joint, the situs of functional impairment is not necessarily the site of injury. The totality of the credible and persuasive evidence establish Claimant has suffered functional impairment beyond the list of scheduled disabilities and is entitled to permanent partial disability ("PPD") benefits based on a whole person impairment. Claimant credibly acknowledged she has prior and current unrelated conditions and complaints. The ALJ is not persuaded the functional limitations at the arm beyond the left shoulder are the result of Claimant's other conditions and not the work injury.

Disfigurement

Section 8-42-108(1), C.R.S. provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view."

As found, Claimant has sustained a serious permanent disfigurement to an area of the body normally exposed to public view, entitling her to additional compensation. The ALJ concludes Claimant shall be awarded $2,500.00 for this disfigurement.

ORDER

1. Claimant suffered functional impairment beyond the shoulder at the arm and off the schedule of injuries listed at § 8-42-107(2), C.R.S. Claimant is entitled to permanent partial disability benefits based upon a whole person impairment rating of 23%.

2. Insurer shall pay Claimant $2,500.00 for the disfigurement award. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

3. Insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 7, 2020

Kara R. Cayce
Administrative Law Judge

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-123-800-004

ISSUES

I. Whether Claimant is entitled to the 11% scheduled impairment rating provided by Dr. Reichhardt.

STIPULATIONS

- The parties agreed to reserve the issue of conversion of Claimant's impairment rating to a whole person.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was born on May 17, 1976 and was 43 years old on the date of injury. Moreover, Claimant's primary language is Spanish, and she does not speak English.
2. Claimant suffered a compensable injury on October 24, 2019, while moving packages of towels from a bin to a table. The bin contained 8 packages of clean towels and each package contained 18 towels. (*Cl. Ex., pg. 00259*). In order to move each package of towels, Claimant had to bend over and reach into the bottom of the bin and grab a package of towels. Once she grabbed the package of towels, she would then lift and move the package to a table that was about waist high. (*Cl. Ex., pgs. 00216, 00223).* Although Claimant was not lifting above shoulder height while standing straight up - the position of her body when reaching into the bin and grabbing a package of towels and lifting - resulted in an above shoulder lift. As she reached with arms outstretched for the last bundle, she felt a sharp pain in the right side of her neck. (*Cl. Ex., pg. 00223*). As a result, she could not turn her neck or lift her right arm. (*Transcript, pg. 85, lines 7-13*).
3. Claimant took her lunch break and by the time she was finished, she could not turn her head to the right. (*Cl. Ex. Pg. 00216*). She reported her injury to her supervisor but was not immediately sent for medical treatment. After some convincing, her supervisor called a supervisor to take Claimant to St. Joseph's Hospital Emergency Department. The supervisor was not present when Claimant injured herself. *Id*.
4. While at the hospital, the supervisor from work assisted Claimant by translating. Claimant was evaluated for neck pain. She reported recurrent headaches and neck pain that began 9:50 that morning while at work. It was noted that Claimant's pain began one hour after she bent over to pick up a pile of towels. Claimant denied suffering from any fall or trauma. Under neck exam, it was found that her neck was supple. The provider noted Claimant had pain localized to the right sternocleidomastoid, diagnosed her with neck pain, and discharged her to outpatient follow up. (*Cl. Ex. Pg. 0028-0034*).

5. On November 6, 2019, Claimant followed up with her primary care physician, Dr. Esteban Gallegos, at Kaiser Permanente. Dr. Gallegos, who was able to interpret, noted the following history:

   > About 2 weeks ago, she was lifting bags of towels at work at a gym. On one of them, she did a significant strain. About an hour later, she had severe pain that brought her to tears. She went to the ED. She was reassured and was given valium and ibuprofen. She was discharged with ibuprofen. She has also used patches and heat. She is doing better, but still has pain with rotation and bending toward her right. I asked about worker's comp, but she is not clear why her job did not send her there. Instead, she says they activated her insurance and she was able to come in today to be seen. She's been unable to work since that time. Has looked for a transfer to something that does not require such heavy lifting, but there are no vacancies." (Cl. Ex. Pg. 0040 and 42).

6. Claimant started treating at Concentra on November 18, 2019. (*Cl. Ex. Pg. 0046*). At this visit, Claimant was assessed with a cervical strain and right shoulder strain after providing the following history and being physically examined:

   > Pt reports she was performing a task she normally does not have to perform. Pt reports she was lifting heavy bags filled with towels and pt reports as she was lifting, she felt mild aching pain in her neck and right shoulder which gradually worsened with increased tension, soreness. *Id*.

   On exam, Claimant was found to have demonstrated tenderness in the right cervical paraspinals, right trapezius muscles, but not the cervical spine. And, consistent with a shoulder injury, her right shoulder exam revealed tenderness in the right trapezius and lateral shoulder. At this visit, the provider, PA-C Rasis, concluded that physical therapy was medically necessary to address objective impairment and functional loss and to expedite Claimant's return to full duty. PA-C Rasis also provided lifting restrictions. As a result, PA-Rasis found on her examination and evaluation of Claimant that there were sufficient findings to conclude Claimant suffered a shoulder injury, required restrictions, and required additional medical treatment in the form of physical therapy to cure and relieve her from the effects of her work injury. (*Cl. Ex. Pg. 46-48 and 00223-00229*).

7. On that same day, Claimant began physical therapy at Concentra. She was evaluated for cervical strain and right shoulder strain. She complained of continued tightness, aching and pain along her right neck and upper/posterior shoulder and pressure, indicating that she feels like she has limited motion. (*Cl. Ex. Pg. 0050-0052*).

8. A few days later, Claimant saw PA-C Rasis again. She was not working based on restrictions from her last visit - a five-pound limit for lifting, pushing, and pulling. (*Cl. Ex. 0061*). She reported ongoing neck stiffness on the right side, aching pain and soreness in the trapezius and lateral region, and shoulder pain with abduction. PA-Rasis noted: muscle pain, neck pain and joint stiffness. On physical examination at this appointment, Claimant had tenderness in the right paracervical, and trapezius

muscles and abduction shoulder range of motion measured 110 degrees. (*Cl. Ex. Pg. 0068-0069*).

9. Claimant completed five (5) physical therapy visits between November 20, 2019, and December 3, 2019. She reported consistent limited range of motion along with pain and soreness in her cervical spine and right shoulder. The soreness was worse after physical therapy. (*Cl. Ex. Pg. 00100*).

10. PA-C Rasis ordered an MRI of Claimant's right shoulder because she did not improve with physical therapy. She reported feeling like her arm was heavy. *Id*.

11. Claimant's right shoulder MRI had these findings: mild tendinosis of the supraspinatus and infraspinatus tendons; no rotator cuff tear; mild degenerative changes in the AC joint and in the humeral head: no signs of labral tear or biceps complex pathology. (*Cl. Ex. Pg. 00102-00103*).

12. Claimant returned to physical therapy and reported soreness and fatigue with carrying weight and after exercise. Notes reveal that she was having trouble improving her condition. However, she was tolerating more weight and exercise. (*Cl. Ex. Pg. 00261*).

13. Claimant continued to be off work and reported a slight improvement of her neck soreness. She had ongoing shoulder soreness, mild aching pain with increased pain while trying to lift anything heavy. (*Cl. Ex. Pg. 00113).* Based on Claimant's symptoms and PA-Rasis' assessment of Claimant's condition, PA-C Rasis prescribed Diclofenac. (*Cl. Ex. Pg. 00116*).

14. By January 6, 2020, Claimant was working with restrictions and reported improvement in her shoulder pain. (*Cl. Ex. Pg. 00119).* That said, Claimant returned the next day with aching and soreness along the upper lateral aspect of her right arm. (*Cl. Ex. Pg. 00124*).

15. Claimant's active range of motion for her cervical spine and right shoulder were recorded at her January 15, 2020 physical therapy visit. Notes indicate, "C/S ROM limited in left-sided flexion with reported pain along the right upper trap. Pain level 5 out of 10. Shoulder ROM; flexion 140, abduction 140. Left side bending 15 degrees, reported pain along the upper trap. Left rotation 40 degrees, right rotation 60 degrees." (*Cl. Ex. Pg. 00141*).

16. At her January 20, 2020 visit with PA-C Rasis, Claimant was not working due to restrictions and reported frustration with her physical therapy. She felt that she was being pushed too hard and it was causing increased tension in her shoulder. Thus, Claimant's reports of pain and soreness in her arm continued. (*Cl. Ex. Pg. 00144*).

17. Based on range of motion measurements at her January 23, 2020 visit, Claimant's right shoulder flexion was 120, abduction was 85, and her IR/ER rotation strength was 4-/5. (*Cl. Ex. Pg. 00147-00151*).

18. In late February, the physical therapy notes reflect some improvement. (*Cl. Ex. Pg. 00191-00192*).

19. On March 5, 2020, Claimant returned to physical therapy. At this visit, Claimant was fully engaged in community and life events, but that she was still under work

restrictions by her treating provider that limited her participation in one or more job functions. At this time, Claimant had not met fully regained the functional use of her right shoulder and was suffering from ongoing impairment. As demonstrated by the physical therapy notes, Claimant had only regained:

- 50% of her active range of motion (AROM) of her shoulder.
- 60% of her lifting capacity to perform her job – which required 40 pounds of lifting.
- 60% of her lifting carrying capacity to perform her job – which required 40 pounds of carrying. (*Cl. Ex. Pg. 00195-00196*).

20. On March 6, 2020, the following day, Claimant returned to Concentra and was seen by Dr. Trina Bogart. Despite Claimant not meeting all her physical therapy goals, and showing functional limitations and impairment the day before, Dr. Bogart noted that Claimant completed physical therapy and is comfortable with her home exercise program. The notes from this visit conflict with the physical therapy records from the day before and note Claimant has full function and requires no more intervention or ongoing monitoring. The final report from this visit also states Claimant understands and agrees to MMI. "On exam, she has no crepitus and no warmth." Abduction was noted to be over 120 degrees, but no specific measurement was provided. Moreover, even though Dr. Bogart's notes listed a cervical strain, there is no mention of neck pain or indication of a cervical exam in this evaluation. In the end, Dr. Bogart discharged Claimant at MMI with no restrictions and no impairment. The ALJ finds that Dr. Bogart placing Claimant at MMI without an impairment rating or permanent restrictions is inconsistent with the physical therapy records the day before – which reveal Claimant was still suffering from functional impairment involving her shoulder. As a result, the ALJ does not find Dr. Bogart's opinion that Claimant had no impairment on March 6, 2020 to be persuasive or consistent with the underlying medical records. (Cl. Ex. Pg. 00200-00201).

21. Claimant underwent an IME with Mark Paz, M.D., on August 18, 2020. Dr. Paz issued a report and testified at hearing.

22. Dr. Paz noted that Claimant reported that as she was lifting a package of towels, she felt a "sharp pain" in the back of her neck, indicated by pointing to her right posterior neck. *RHE at 11*. Claimant stated that the right-sided neck pain radiated to the lateral aspect of the right elbow and to the posterior aspect of the right arm. *Id*. Claimant was given a patch for her neck at the emergency department. *Id*. Claimant reported her therapy treatments were of no benefit in reducing the neck or upper extremity symptoms. *RHE at 12*. Claimant specifically stated that at the time of her last visit at Concentra on March 6, 2020, she was continuing to experience pain and felt no better. *Id*. Claimant reported that she had continued to experience right arm pain and weakness since that time. *Id*. Claimant stated that her pain was not as severe or intense as it was initially, as she had been staying within the assigned restrictions. *Id*.

23. Dr. Paz performed a physical examination of both the neck and right shoulder. According to Dr. Paz, Claimant had a negative empty can sign, negative Neer's,

negative Yergason's, and negative Speed's test. *RHE at 15*. During Hawkins maneuver, however, Claimant reported symptoms at the base of her posterior neck. *Id*. He noted that during active range of motion measurements of the cervical spine that Claimant demonstrated poor effort during direct measurements and on gross examination of the neck. *Id*. That said, there is no other credible evidence that any other physician observed and documented Claimant providing poor effort. Moreover, Dr. Paz did not document Claimant provided poor effort regarding range of motion of her shoulder. And, it is the shoulder that was rated by Dr. Reichhardt.

24. Dr. Paz concluded that Claimant did not have a diagnosis for the neck or right shoulder symptoms which were supported by objective findings on physical examination. *RHE at 17*. He stated in his report and during his testimony that neither ongoing complaints of neck pain nor right shoulder pain were supported by objective findings upon physical examination. *Id*. Dr. Paz opined that the diagnostic results of the shoulder MRI did not correlate with findings on physical examination. *Id*. Dr. Paz specifically concluded that the mechanism of injury reported by Claimant did not correspond to an objective diagnosis. *Id*. Pain is not a medical diagnosis. Id.

25. Dr. Paz agreed with the ATP that MMI was reached on March 6, 2020. *RHE at 18*. Claimant's restricted range of motion in the shoulder was self-limited and did not correspond to a medical diagnosis or warrant a permanent impairment rating. Id. There was likewise no Table 53 diagnosis corresponding to subjective complaints of neck pain and therefore no permanent impairment for the injury. Id. Dr. Paz noted a significant disparity in his range of motion measurements during direct and indirect examination of the Claimant. *Id.* Dr. Paz agreed with the ATP that no permanent restrictions or further medical care was necessary for the injury.

26. Dr. Paz's medical report and subsequent hearing testimony conflicts with the medical records, Claimant's statements, the AMA Guides, and the Shoulder Injury Medical Treatment Guidelines, Rule 17, Exhibit 4 (*Guidelines*).

27. After Dr. Paz performed his IME, Claimant underwent a Division Independent Medical Examination (DIME) with Dr. Gregory Reichhardt. Dr. Reichhardt reviewed Claimant's medical records, performed a physical examination, and provided Claimant an eleven percent (11%) scheduled impairment rating, which corresponds to a seven percent (7%) whole person rating, for her right shoulder injury.

28. Dr. Paz testified that Dr. Reichhardt did not properly complete his DIME report because he did not do any provocative testing. (*Transcript, Pg. 48, Lines 11-15*; *Pg. 42-43, Lines 24-3*). Later he asserted that Dr. Reichhardt only performed the Hawkins test in his DIME. (*Transcript, Pg. 48, Lines 11-15*) Even later, Dr. Paz testified that Dr. Reichhardt completed the Neer's and Hawkins tests, but not Speed's, empty can, or the painful arc. (*Transcript, Pg. 43, Lines 5-12*). The DIME report shows that Dr. Reichhardt performed the Hawkins, and Speed's test during his exam. (*Cl. Ex. Pg. 00228*).

29. Dr. Paz's testimony about the lack of additional provocative testing is not found persuasive when compared to the *Guidelines*. Physicians need not perform every provocative test, "Generally, more than one test is needed to make a diagnosis. Clinical judgement should be applied when considering which tests to perform as, it

is not necessary to perform all of the listed tests on every patient." (*Guidelines Rule 17, Exhibit 4, page 8*). Dr. Reichhardt performed two provocative tests on Claimant's shoulder and appears to have used his clinical judgement not to perform additional testing. Thus, Dr. Paz's assertion that there is a lack provocative testing is not found to be persuasive.

30. In addition, Dr. Paz challenged Dr. Reichhardt's analysis of the initial injury and the resulting impairment. He testified that a shoulder impingement results from overhead activities over time and Claimant was not performing overhead activities when she was injured. (*Transcript, pg. 48, Lines 2-5*). This analysis leaves out the fact that Claimant was bending over the cart with half of her body inside the bin of towels. When asked, Dr. Paz agreed that lifting from that position could replicate an overhead injury. (*Transcript, pg. 72, Lines 7-12*).

31. Dr. Paz testified that Dr. Reichhardt was the only physician that had positive findings for impingement. (*Transcript, pg. 45, Lines 11-20*). Interestingly, Dr. Paz's report states, "The Hawkins, maneuver, Ms. P[Redacted] reported symptoms at the base of the neck posterior and inferior columns." (*Cl. Ex. Pg. 00219*). Under the *Guidelines*, the Hawkins exam is positive for impingement when the maneuvers produce pain. (*Guidelines, Rule 17, Exhibit 4, pg. 11).* And, Dr. Paz's medical assistant recorded a positive result for the Hawkins maneuver. (*Cl. Ex. Pg. 00208*). Thus, Dr. Paz's claim that his exam did not yield any positive signs of impingement is also not persuasive.

32. Dr. Paz also testified that the MRI did not have significant objective findings to support shoulder impingement. The MRI findings were: mild tendinosis of the supraspinatus and infraspinatus tendons without rotator cuff tear; mild degenerative changes in the acromioclavicular joint and in the humerus head. (*Cl. Ex. Pg. 102-103*). Tendinosis is inflammation within the tendons. (*Transcript, pg.41-42, Lines 1-2*). On cross examination, Dr. Paz agreed that the *Guidelines* list tendinopathy as a symptom of impingement. (*Transcript, pg. 81, Lines 12-14*).

33. Dr. Paz testified that there is no connection between the sternocleidomastoid muscle and the shoulder. (*Transcript, pg. 32, Lines 1-3*). He states that the initial sternocleidomastoid strain reported to St. Joseph's Hospital could not have any relationship to the shoulder pain. Upon review, the *Guidelines* provide that the ipsilateral sternocleidomastoid and trapezius muscles are extremely important for scapular control and ultimately shoulder function. (*Guidelines* Rule 17, Exhibit 4, page 49.)

34. Dr. Paz testified that he was informed in training that an impairment worksheet should be completed for every alleged impairment, even if the impairment rating is zero percent (0%). (*Transcript, pg. 62, Lines 4-7).* During his exam, Dr. Paz took range of motion measurements of Claimant's neck and right shoulder but did not complete a worksheet for either injury. (*Transcript, pg. 62, Lines 17-21).* His assistant recorded the measurements for cervical range of motion (*Transcript, pg. 65-66, Lines 19-5*), and right shoulder range of motion (*Transcript, pg. 66, Lines 10-18; Cl. Ex. Pg. 00207*). When asked why he did not complete the worksheets he said, "[w]ell, first, there has to be an injury, a loss of use of, derangement of, and there wasn't." (*Cl. Ex. Pg. 66, Lines 20-24*). When asked to clarify whether he was

saying there was no injury and no impairment, Dr. Paz stated there was no impairment. (*Transcript, pg. 67, Lines 11- 16*).

35. Dr. Paz assessed Claimant with adjustment disorder despite having no psychology or psychiatry training. (Transcript, pg. 75-76, Lines 19-9). Although Claimant is not claiming any mental impairment, the AMA guides specify that evidence of mental impairments should be documented primarily on the basis of reports from individual providers, such as psychiatrists and psychologists, and facilities such as hospitals and clinics. (AMA Guides Third, § 14.2, pg. 236). He admitted that this diagnosis was based on his observations and he did not conduct a mental status exam, or even a mini mental status exam. (Transcript, pg. 75-76, Lines 19-9). No such evidence appears in Claimant's medical history. As a result, Dr. Paz assessing Claimant with an adjustment disorder without any supporting clinical evidence detracts from the reliability and persuasiveness of his opinion that Claimant has no ratable impairment.

36. Dr. Paz also assessed Claimant with right arm paresthesias reportedly due to Claimant's statement about numbness and tingling in her right arm. (Cl. Ex., pg. 00220) Dr. Paz, however, admitted that there is no history of numbness or tingling in his report or elsewhere and could not explain how this assessment came to be in his report. (Transcript, pg. 74-75, Lines 9-12).

37. Based on the findings above, the ALJ does not find Dr. Paz's testimony to be credible or persuasive in concluding that Claimant did not suffer any impairment to her right shoulder due to her work injury.

38. On September 3, 2020 and September 8, 2020, Claimant underwent a Division Independent Medical Examination (DIME) with Dr. Gregory Reichhardt. Dr. Reichhardt interviewed Claimant and obtained a history from Claimant similar to the history obtained by Dr. Paz. The following history was obtained by Dr. Reichhardt:

> [Claimant] indicates she was injured on 10/24/19 when she was sent to another area to take towels out of a container. She notes that she then placed them on a table. There were eight packages of 18 clean towels. As she was removing the last package from the bottom of the container (which required her to bend over with the upper half of her body in the container), she experienced intense pain in the neck and right arm. She took a break, but had difficulty moving her body.

39. Dr. Reichhardt also reviewed Claimant's medical records and performed a physical examination. After Dr. Reichhardt obtained a detailed history from Claimant, reviewed her medical records, and performed a physical examination, Dr. Reichhardt concluded Claimant suffered a shoulder injury when she lifted the towels at work. He also concluded Claimant's work injury caused these diagnoses:

    a. "right shoulder and periscapular pain" from "lifting towels."

    b. "right subacromial impingement with periscapular myofascial pain."

    (Cl. Ex, pg. 00228).

40. Dr. Reichhardt completed a shoulder worksheet with range of motion measurement and percentages of permanent impairment. (*Cl. Ex. Pg. 00230*). He concluded that based on her work injury, Claimant has an eleven percent (11%) scheduled rating for her right shoulder, which converts to a seven percent (7%) whole person impairment rating. *Id*. He did not complete a worksheet for her neck but noted that she has some symptoms along the upper trapezius and at the base of her neck. (*Cl. Ex. Pg. 00224*). "[S]ome symptoms extending up into the cervical spine, but this appears to be related to a myofascial pain associated with her shoulder injury and not a separately ratable cervical injury." (*Cl. Ex. Pg. 00229*).

41. Dr. Reichhardt's report has significant support in the record. Physical therapy records show an equivocal result for an empty can test on November 20, 2020. (*Cl. Ex. Pg. 0069*). A positive result for an empty can test on December 5, 2020. (*Cl. Ex. Pg. 00101).* Plus, a positive painful arc test on February 3, 2020. (*Cl. Ex. Pg. 00163*). Dr. Paz, Respondents Independent Medical Examiner (IME) had a positive response to his Hawkins test, even though that is not how it was characterized. (*Cl. Ex. Pg. 00219, Hearing Transcript*).

42. Dr. Reichhardt recorded the method of injury as "lifting towels," explaining that Claimant lifted the towels while she was bent over at the waist leaning into the cart to get the last package. While she was reaching into the cart, she experienced an intense pain in the right side of her neck and body. (Cl. Ex. Pg. 00259).

43. Dr. Reichhardt's opinion is bolstered by the MRI results. Claimant's MRI showed tendinosis of her right shoulder tendons. Tendinosis - swelling of the tendons - is a symptom of impingement syndrome. (*Guidelines*, *Rule 17, Exhibit 4, pg. 83*).

44. As a result, the ALJ finds Dr. Reichhardt's opinion to be credible and persuasive regarding Claimant's work-related injury and the rating he provided.

45. Other symptoms consistent with impingement are delayed presentation; complaints of functional losses due to pain, stiffness, weakness, and a catching sensation; and sleep complaints. (*Guidelines, Rule 17, Exhibit 4, pg. 84*). At first, Claimant reported pain in her neck and was treated for that issue at the emergency room. Whether it was because of a communication issue, distraction from her neck pain, or delayed onset of pain, Claimant's report of shoulder pain was not recorded until November 18, 2019. (*Cl. Ex. Pg. 0046*). That said, she consistently reported pain in her shoulder and neck throughout her treatment, although her level of pain varied. (*Cl. Ex. Pg. 00224-00227*). In addition, there are consistent reports of joint stiffness and some weakness. *Id.* Claimant notes weakness when she feels fatigued. *Id.* She also complains of pain interrupting her sleep. (*Cl. Ex. Pg. 00217*).

46. Throughout Claimant's treatment, tenderness to palpitation of her right lateral shoulder and trapezius muscle is consistently noted. (*Cl. Ex. Pg. 0047, 0069, 0075, 00105, 00114, 144-145, 163, 00181, 00228*). And there is no credible evidence from her treating providers that her shoulder tenderness was not consistent with her underlying injury.

47. Claimant's testimony also tracked her medical records and the findings of her medical providers. As a result, the ALJ finds Claimant to be credible.

48. The ALJ finds Claimant suffered a work-related injury to her right shoulder.

49. The ALJ also finds that Claimant suffered permanent impairment involving her right shoulder as found by Dr. Reichhardt. The permanent impairment consists of an eleven percent (11%) scheduled rating, which equates to a 7% whole person rating.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant is entitled to the 11% scheduled impairment rating provided by Dr. Reichhardt.

The increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that “when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in §8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The court of appeals has explained that scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. Specifically, the procedures of §8-42-107(8)(c), C.R.S. only apply to non-scheduled impairments. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000); *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Gagnon v. Westward Dough Operating CO. D/B/A Krispy Kreme* WC 4-971-646-03 (ICAO, Feb. 6, 2018). Claimant has the burden of showing the extent of his scheduled impairment by a preponderance of the evidence. *Burciaga v. AMB Janitorial Services, Inc. and Indeminity Care ESIS Inc*., WC 4-777-882 (ICAO, Nov. 5, 2010); *see Morris v. Olson Heating & Plumbing Co.,* WC 4-980-171 (ICAO, May 20, 2019) (whether the claimant sustained a whole person or extremity impairment is one of fact for the ALJ and the DIME opinion on the issue is not entitled to any enhanced weight).

As set forth above, the ALJ found Claimant to be credible and her testimony to be persuasive. The ALJ also found Dr. Reichhardt’s opinions to be credible and persuasive. The ALJ did not, however, find Drs. Paz and Bogart’s opinions to be credible and persuasive.

Based on the credible and persuasive testimony of Claimant and Dr. Reichhardt - the ALJ finds and concludes Claimant established by a preponderance of the evidence that she suffered a permanent impairment due to her work-related injury. The ALJ also finds and concludes that Claimant established by a preponderance of the evidence that she sustained an eleven percent (11%) scheduled impairment rating to her right shoulder as provided by Dr. Reichhardt.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered an 11% scheduled impairment rating of her right shoulder.

2. Whether Claimant’s 11% scheduled impairment rating should be converted to a whole person rating is reserved.

3. All other issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 8, 2021.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NOS. 4-958-955-03

ISSUES

The issues set for determination included:

- Did Claimant prove by a preponderance of the evidence that his cervical myelopathy condition and resulting fusion surgery was reasonable and necessary, as well as related to the August 18, 2014 work injury?

- If the cervical myelopathy condition was related to the MVA, are the requested physical therapy ("PT") treatments reasonable and necessary

1. There was no evidence in the record Claimant sustained prior injuries to his cervical spine before August 5, 2014. There were no records which documented treatment for the cervical spine before 2014. There was a reference to chronic back problems in the first evaluation done by Kevin Vlahovich, M.D.

2. On August 18, 2014, Claimant suffered an admitted industrial injury while working for Employer. Claimant was employed as a truck driver and was involved in a serious motor vehicle accident ("MVA"). Another vehicle crossed the center lane and struck his truck, which caused it to hit a concrete wall, cross an irrigation ditch and crash through a wood fence.

3. Claimant testified he remembered hitting his left arm, shoulder and hip on the driver's door and his knee hit the dash. He also thought he may have hit his head on the door. Claimant was restrained by a seatbelt at the time of the accident.

4. The photographs of the truck admitted into evidence corroborated Claimant's testimony that there was a significant impact. The ALJ concluded Claimant injured his head, neck, left arm and shoulder as a result of the MVA. He required medical treatment for these injuries.

5. Claimant was transported by ambulance to Longmont United Hospital, where he was examined in the Emergency Department ("ED"). Claimant reported diffuse tenderness to his neck, mild tenderness to his left wrist and snuff box area and mild tenderness to the left knee and popliteal fossa. No loss of consciousness was reported and Claimant's symptoms were characterized as "moderate". Claimant had no associated neurological symptoms.

6. X-rays were taken of Claimant's cervical spine at the ED. The films were read by William Wahl, M.D., who noted in the cervical vertebral body height and alignment were maintained. No compression deformity, subluxation or displacement was present. There was degenerative disease with disc space narrowing, plate sclerosis and ventral osteophyte at C3-C4, along with mild disc space narrowing at C5-C6. Claimant was discharged from the hospital and prescribed 800 mg ibuprofen and Norco tablets. He was also placed in a left thumb Spica Velcro wrist splint.

7. On August 25, 2014, Claimant was evaluated by Ken Frisbie, PA-C at Banner Health Occupational Medicine ("Banner Health"), the ATP for Employer. Claimant reported pain in the left arm and shoulder, as well as the neck and back. He did not report any numbness or tingling. PA-C Frisbie's diagnoses included: strain-cervical spine; lumbosacral sprain, lumbar spine, sprain, left wrist; contusion, multiple sites; post-concussion syndrome; headache; myofascial syndrome; pain left shoulder. PA-C Frisbie referred Claimant for treatment.

8. Claimant received treatment from Jordan Blakely, RMT at Medical Massage of the Rockies on September 2, 2014. At that time, Claimant reported a headache, neck pain (described as worst pain), along with pain in the mid low back and hip as well as left leg sciatica.

9. A General Admission of Liability ("GAL") was filed on behalf of Respondents on September 5, 2014. The GAL admitted for wage and medical benefits.

10. On September 10, 2014, Claimant was evaluated by E. Jeffrey Donner, M.D. At that time, he complained of pain in the posterior aspect of his neck and left shoulder, as well as diffuse intermittent numbness in the left arm. Dr. Donner noted Claimant did not appear to be in severe pain and found generalized tenderness around the proximal aspect of the humerus, as well as the rotator cuff. Claimant's cervical spine revealed tenderness in the posterior aspect around the C3-4 area, as well as decreased cervical range of motion ("ROM"). Dr. Donner's assessment was: shoulder pain; neck sprain; shoulder sprain; neck pain. He recommended MRI scans of the left shoulder and cervical spine.

11. Dr. Vlahovich (at Banner Health) oversaw Claimant's treatment beginning on November 14, 2014. Dr. Vlahovich adopted PA-C Frisbie's diagnoses and issued work restrictions. Claimant underwent a course of conservative treatment from August 2014-March 2015, which included medications, physical therapy ("PT") and massage therapy.

12. Claimant received twelve (12) massage therapy treatments through November 25, 2014. Those records reflected pain on the left side of neck, the left

shoulder (including rhomboid, scalene and trapezius muscles). The November 25, 2014 note reflected modest improvement in symptoms.

13. The PT records from North Colorado Medical Outpatient Rehab reflected that Claimant reported neck and left shoulder pain for which he received treatment from December 5, 2014 through June 30, 2015. Claimant received multiple modalities of treatment, which included hot pack, electrical stimulation and manual therapy. The treatment notes showed Claimant had pain in the cervical spine and left shoulder; with pain complaints that waxed and waned. Claimant received a total of thirty-five (35) treatments at this facility, including after the shoulder surgery.

14. On March 31, 2015, Claimant underwent a left shoulder arthroscopy, with subacromial decompression and resection of the distal clavicle, which was performed by Mark Grossnickle, M.D. The surgery was performed to address left shoulder impingement, with AC injury. Claimant received PT following the surgery.

15. On April 8, 2015, Dr. Vlahovich reported that "Since the [shoulder] surgery, James has been going to physical therapy. His arm symptoms have resolved, but he still has posterior shoulder/scapula complaints." In the May 11, 2015 evaluation, Claimant reported his shoulder pain was resolved and there were no specific complaints of pain, numbness or tingling in the arm. Claimant's neck was not sore and the cervical spine had full range of motion ("ROM"). There was diminished ROM in the left shoulder, but Claimant could raise his arm above his head. Bilateral upper extremity passive ROM was full. Claimant reported scapula pain. Under the Discussion section of the report, Dr. Vlahovich again specifically reported: "Left arm complaints have resolved".

16. The ALJ found the medical records showed Claimant did not report pain in cervical spine in the period from the date of injury to June 2015. No neurological problems referable to the cervical spine were documented in the medical records. He testified at hearing that he had neck and shoulder pain after the surgery.

17. Claimant was referred to Gregory Reichhardt, M.D. who evaluated him on June 1, 2015, who noted bilateral scapular winging and thought fascioscapulohumeral muscular dystrophy was a possibility. Claimant did not report numbness or tingling in the left arm. Dr. Reichhardt's impression included the fact Claimant had residual periscapular pain, some mild residual cognitive deficits and a history of a preexisting learning disability. A trial of trigger point injections was administered by Dr. Reichhardt, who also performed an EMG and referred Claimant to a neuromuscular clinic for further evaluation of the underlying neuromuscular disorder. Dr. Reichhardt did not offer an opinion on causation at this time, including on fascioscapulohumeral muscular dystrophy. The ALJ inferred Claimant's scapular symptoms were due, at least in part to the fascioscapulohumeral muscular dystrophy.

18. Dr. Vlahovich documented that Claimant's shoulder pain was resolved in the June 10, 2015 medical note and Claimant was diagnosed with fascioscapulohumeral muscular dystrophy, without facial weakness.

19. On July 6, 2015, Claimant underwent an MRI of his cervical spine. The films were read by Vincent Herlihy, M.D. Dr. Herlihy's impression was: diffuse congenital cervical central canal narrowing, with superimposed degenerative disc disease including a small focal central disc protrusion at C4-C5. There were also scattered areas of mild to moderate uncovertebral osteoarthritis at C5-C6 and C6-C7. There was moderate to severe central canal stenosis at C4-C5, with ventral cord contact in flattening, but no abnormal cord signal. There was moderate central canal stenosis at C3-C4 and C5-C6, with cord contact but no abnormal cord signal. There was mild central canal stenosis at C3-C4 and C5-C6. There was mild to moderate left and mild right neural foraminal stenosis at C2-C3 and C6-C7; moderate bilateral neural foraminal stenosis at C5-C6 and mild bilateral neural foraminal stenosis at C6-7. Dr. Herlihy also noted focal left prevascular neck lymphadenopathy. The ALJ inferred that the osteoarthritis and stenosis were degenerative conditions.

20. On September 17, 2015, Claimant returned to Dr. Reichhardt and complained of left shoulder pain. Tenderness to palpation was found in the shoulder region with decreased ROM. Dr. Reichhardt's impression was: left shoulder pain: mechanism of injury-8/8/14 work-related accident; left shoulder MRI demonstrated mild AC hypertrophy; 3/31/15 operative arthroscopy with subacromial decompression and resection of the distal clavicle; EMG/NCV on 6/18/15 demonstrated diffuse denevation in the upper and lower extremities and ideology unclear, potentially related to fascioscapulohumeral dystrophy; 7/6/15 cervical MRI: central cervical stenosis C2-to C7, moderate to severe at C4-6, disco-osteophyte complex at C3-4, focal disc protrusion at C4-5, disc bulges at C5-6, C6-6, multilevel uncovertebral arthritis; bilateral scapular winging, probably related to fascioscapulohumeral dystrophy; cognitive complaints, with neuropsychological evaluation by Dr. Thwaites in December 2014, demonstrating some mild residual cognitive deficits; chronic opioid use; tobacco use disorder. Claimant was to have a neurosurgical evaluation.

21. Dr. Reichhardt evaluated Claimant at regular intervals as his ATP and his diagnoses remained the same for the evaluations on October 6 and November 4, 2015. At the latter visit, Claimant reported neck, shoulder and periscapular pain. Dr. Reichhardt referred Claimant to Dr. Quickert for cervical spine injections.

22. Claimant was evaluated by Julie Quickert, APRN at Premier Vein and Pain Center on November 6, 2015 for left-sided neck and left shoulder pain On examination, she noted tenderness with palpation of the cervical spine most

pronounced at the left C5-6 level. She also found tenderness with palpation of the left trapezius and reduced ROM of the neck. APRN Quickert recommended a left C5-6 facet injection since the Claimant was not getting pain relief with conservative therapy.

23. On November 23, 2015, Timo Quickert, M.D. performed a left C5 and C6 medial branch block. He had wanted to do a C5-6 facet injection but was notified by The impression post procedure was that the left C5 and 6 medial branch blocks correlated to the left C5 and 6 facet joint innervation.

24. On December 2, 2015, Dr. Reichhardt evaluated Claimant, at which time Claimant rated his pain as 5/10. He continued to report pain over the left side of the neck and the left periscapular area. He reported that after the C5-C6 medial branch block, his pain went from a 5/10 to a 3.5 out of 10 to 4/10 on a short-term basis after that he experienced a temporary increase in his pain. Then pain went back to baseline at 5/10. Dr. Reichhardt characterized this response to the medical branch block as ”nondiagnostic”. Dr. Reichhardt recommended a C6–7 level block should be considered and performed trigger point injections focusing on paraspinals, left upper trapezius at the T-1 level and the right C6–7 cervical paraspinal using 1% lidocaine.

25. Claimant returned to Dr. Quickert on December 7, 2015, he noted Claimant reported great relief for 24 hours after the medial branch block. Claimant received a left C6–7 level block. Dr. Quickert recommended a left C5 and C6 nerve ablation/rhizotomy.

26. When Dr. Reichhardt examined Claimant on December 17, 2015, Claimant reported the set of trigger point injections over C6–7 gave him good relief for about one week to one and a half week to 2 weeks. On examination, Dr. Reichardt found tenderness to palpation over the periscapular muscles in the C6-7 area as well as decreased cervical range of motion. He also found crepitus over the left periscapular muscles particularly in the upper trap and elevator scapula area, as well as palpable trigger points over those areas. On December 30, 2015, Claimant continued with neck and periscapular pain as well as some achiness in his legs. On exam, Dr. Reichardt noted decreased cervical range of motion. Dr. Reichhardt noted there were no myelopathic findings on the exam.

27. When Dr. Reichhardt examined Claimant on January 13, 2016, at which time Claimant reported pain over his neck in the periscapular area and headaches were starting to come back. Dr. Reichhardt had a lengthy discussion with Claimant about the injection issues. He reviewed Claimant’s response to C5–C6 injection. Based on his previous review of Claimant’s pain diary and his response, he found that Claimant had a diagnostic response to the first block. Dr. Reichhardt said it was reasonable for Claimant to have a block at C6–7 and he referred Claimant for that injection. On

January 30, 2016, Dr. Quickert performed a C6–C7 medial branch block as requested by Dr. Reichhardt.

28. On or about January 20, 2016, a medical record review was prepared by Floyd Ring M.D. on behalf of Respondent-Insurer. This review was done in conjunction with the proposed injections at C6-7. Dr. Ring stated it would be reasonable to consider the injection at C-6–7. However, if there was no significant benefit, further injections would not be warranted and the patient should be seen by an IME to determine if this was related to his muscular dystrophy versus pathology related to the accident. The ALJ noted Dr. Ring raised the question whether Claimant's continued symptoms were related to the MVA injuries versus muscular dystrophy.

29. Dr. Vlahovich also noted in his that Claimant on February 19, 2016, at which time headaches had resolved but were returning, but Claimant was reporting leg weakness.

30. On April 5, 2016 Dr. Quickert performed a second left C6 and C7 medial branch block. Dr. Reichhardt evaluated Claimant the same day. Claimant brought his pain diary for the medial branch block which he had had three hours before. Dr. Reichhardt reported that the pain since the procedure had been 1/10 and on physical exam Dr. Reichhardt noted less tenderness to palpation of the cervical spine. Dr. Reichhardt discussed having a rhizotomy with Claimant. Dr. Reichhardt then referred Claimant back to Dr. Quickert for consideration of a rhizotomy.

31. On April 28, 2016, Claimant underwent an independent medical examination with Kathy McCranie, M.D. at the request of Respondents. At that time, Claimant reported left shoulder pain, which went around the entire shoulder blade and chest. He had a pins and needles type sensation going down his left arm, along with pain on the left side of his neck. He also had symptoms from periodic limb movement disorder, which manifested in twitching in the shoulders and legs. On examination, Claimant's deep tendon reflexes were +2 in the upper and lower extremities, with Hoffman negative bilaterally. There was no clonus and the motor exam was 5/5 in the bilateral upper and lower extremities. Sensation was normal to vibration in the upper and lower extremities, with decreased sensation reported in bilateral upper arms and in the left hand, predominantly middle finger.

32. Dr. McCranie's impressions were: chronic cervical pain and status post strain, left C6 and C7 facet-mediated pain, multilevel cervical degenerative disc disease; left shoulder pain; mild concussion; history of bilateral knee contusions, with complaints of left distal thigh pain; status post right wrist sprain, resolved; status post traumatic headaches resolved; probable fascialscapulohumeral muscular dystrophy non-work related; periodic limb movement disorder, non-work related. Dr. McCranie did not recommend further massage therapy, chiropractic care, acupuncture or PT. She opined

that Claimant's cervical stenosis was more likely due to normal degeneration considering the patient's age and smoking history. His examination was not suggestive of myelographic picture that would require surgical intervention. The ALJ noted Dr. McCranie attributed the spinal stenosis to normal degeneration and did not conclude the fascialscapulohumeral condition was related to the work injury. None of the physicians concluded the fascioscapulohumeral muscular dystrophy was caused by the MVA.

33. On May 10, 2016, Claimant underwent an IME performed by Richard Stieg, M.D. at his attorney's request. Dr. Stieg is board-certified in neurology and pain medicine. Claimant reported to Dr. Stieg his residual symptoms of this accident to be constant left shoulder pain aggravated by motion and weather changes and constant pain in the neck with headaches on occasion, much less severe than the shoulder pain. On examination, Claimant exhibited "intermittent numbness in both arms" which he could "shake out" in a few minutes. He had what was described as an "unphysiological" diminution to pinprick over the left entire upper quadrant of the body exclusive of the neck and face.

34. Although Dr. Stieg had not reviewed all of the records, his preliminary impressions included: status-post left shoulder injury (details unknown), Grade-I cerebral concussion with probable mild residual neurocognitive deficits, chronic myofascial pain syndrome, cervical area, and "unphysiological" sensory motor findings of the left upper quadrant, nighttime movement disorder by history. Regarding the sensory motor findings, Dr. Stieg added the following note: "This may be a reflection of the patient's anxiety and depression and/or reflect a somatic disorder secondary to the patient's painful musculoskeletal injuries". Claimant did not report dropping items, or weakness in his arm since the accident occurred to Dr. Stieg. The ALJ found Dr. Stieg also made no findings consistent with myelopathy.

35. On July 1, 2016, Claimant returned to Dr. Vlahovich. On examination, Dr. Vlahovich described Claimant's neck as mildly sore to palpation posteriorly, with no spasms present. Cervical active ROM was full and equal in all directions and mildly painful. Claimant had nearly full active ROM in the left shoulder. Dr. Vahovich's diagnoses were: strain of muscle, facia and tendon at neck level, subsequent encounter; other specified dorsopathies, lumbosacral region; strain of muscle(s) and tendon(s) of the rotator cuff to the left, subsequent encounter; other motor vehicle non-traffic accident involving collision with stationary on jacked; other recurrent depressive disorders. Claimant was referred for a second orthopedic opinion, as well as a neuromuscular evaluation for the scapular problems. Claimant had declined further genetic testing. The ALJ found there were no neurological abnormalities found in this examination.

36. In a follow-up evaluation with Dr. Vlahovich on August 8, 2016, similar findings were documented on physical exam. Dr. Vahovich's diagnoses included pain in left knee and left shoulder. Claimant was referred to Ronald Carbaugh, Psy.D.

37. On September 9, 2016, Dr. Reichhardt became concerned about Claimant's reflexes exhibiting spread of the biceps reflex to the finger extensors. This is abnormal and an indication of a central nervous system abnormality. Ultimately it was determined that this abnormality was related to the myelopathy condition and cord compression with which Claimant was diagnosed. The ALJ notes that this abnormal finding manifested approximately two years post-accident.

38. Claimant was evaluated Regina Bower, M.D. on October 27, 2016, whose assessment was cervical spondylosis with myelopathy; myelomalacia of spinal cord; Hoffman's reflex positive; gait disturbance; tobacco dependence. These were new diagnoses, which were not present when Kai Strobbe, PA-C conducted a neurological evaluation on June 9, 2016. Claimant was referred to a neurosurgeon.

39. Claimant returned to Dr. Donner on November 7, 2016 and was complaining of pain in the posterior cervical thoracic area, which was aggravated by neck movement. He also reported pain radiating into his left arm, associated with numbness in the older distribution but no weakness. On examination, the modified Spurling maneuver did not cause full radicular arm pain, but caused some proximal left arm pain. There were no Lhermittes findings and mild numbness was present in the ulnar distribution of his left hand, but no weakness or atrophy.

40. Dr. Donner reviewed the MRI scan and noted there were degenerative discs at C4-5, C5-6 and C6-7, with a hypertrophic and partially ossified posterior longitudinal ligament. It was not clear whether Dr. Donner had Claimant's other treatment records to review. Dr. Donner's assessment was: a worsening of his cervical condition, with increasing cervical stenosis and no significant improvement with conservative treatment over the past two years. Dr. Donner opined it would be reasonable to address all the pathology where he has stenosis from C4-5 through C6-7 with either anterior cervical decompression and fusions or artificial disc replacements. The ALJ inferred Dr. Donner's treatment recommendation was for the cervical stenosis condition and symptoms that were related to it.

41. On December 30, 2016, a physician review was conducted by Anant Kumar, M.D. on behalf of Respondent-Insurer. Dr. Kumar noted Claimant's condition was extremely complicated, as he had fascialscapulohumeral muscular dystrophy. Dr. Kumar noted most patients with this muscular dystrophy had neck and suprascapular area discomfort and he had not done well with a shoulder surgery. Dr. Kumar opined that the request for C3 to C5 cervical spine fusion should be denied, as there were better treatment options for him. Claimant had congenital stenosis and his spinal canal

was narrow to 7 mm. at C3-4, 6 mm. at C4, 8 mm. at C5-6 and 9 mm. at C6-7. Dr. Kumar stated a posterior laminoplasty would be a better approach to address all these have levels especially because the cervical spine fusion at C3-C5 would cause adjacent level degeneration and worsening of the C5–6 level. Dr. Kumar stated Claimant was neurologically intact and in such a patient, he recommended continued non-operative care, until he showed signs of neurological deficits or spasticity.

42. On December 30, 2016, a physician review was conducted by Jon Erickson, M.D. on behalf of Respondent-Insurer, which was an appeal of the denial based upon Dr. Kumar's opinion. Dr. Erickson noted Claimant had been diagnosed with fascioscapulohumeral muscular dystrophy, which was potentially complicating his recovery. That diagnosis had not been fully confirmed. Dr. Erickson reviewed the request for anterior cervical decompression discectomy, with fusion of C3-C4 and C4-C5. Dr. Erickson reviewed the MRI and stated there was nothing that would lead him to believe there was any form of acute injury. The ALJ found Dr. Erickson's opinion persuasive.

43. Dr. Erickson also cited the DOWC Medical Treatment Guidelines ("MTG") concerning potential cervical fusion indicated that injections had to be at least 80% effective in controlling pain before surgery can be suggested. The MTG also required every individual prior to any kind of cervical or low back surgery needed to undergo a forensic psychological/psychiatric evaluation to determine whether any further interventional treatments stood a potential to make him better. Dr. Erickson recommended a denial of any cervical spine surgery until the above recommendations were satisfied.

44. The ALJ found that the opinions expressed by Dr. Kumar and Dr. Erickson raised the issues of whether the proposed surgery was reasonable and necessary, as well as related to the industrial injury.

45. On January 11, 2017, Claimant was seen at the University of Colorado Hospital in the Neuromuscular Department by Vera Fridman, M.D. Claimant underwent an EMG and Dr. Fridman's impression was: "This is an abnormal study. There is electrophysiological evidence for widespread myotonia with mild myopathic changes seen in the left triceps muscle. Myotonia can be seen in the setting of myotonic dystrophy, myotonia congenita, or other channelopathies, as well as toxic, inflammatory and dystrophic myopathies". The report's clinical note indicated myotonic dystrophy type-I was suspected. It was recommended that Claimant have further evaluation for this condition. The ALJ found this was this first such detailed reference to electrophysiological evidence for myotonia and myopathic changes. Dr. Fridman did not offer an opinion regarding the cause of the myotonia and myopathic changes.

46. On April 26, 2017, Claimant underwent an independent medical examination with Brian Reiss, M.D. at the request of Respondents. He reviewed Claimant‘s treatment records, concluding that the MVA may have caused a cervical strain with pain, but the proposed surgery was not a treatment for that pain, but rather a treatment for the unrelated myelopathy. Dr. Reiss opined Claimant probably had scapular dyskinesia, which can be painful, but would not be improved by any cervical surgery. The scapular dyskinesia may or may not be related to Claimant‘s probable muscular dystrophy. Dr. Reiss concluded Claimant‘s pain complaints were probably related to the effects of the motor vehicle accident, but not his neurological complaints. He recommended a more specifically directed physical therapy, neuromuscular reeducation program for the myofascial pain and scapular dyskinesia.

47. On examination, Claimant was complaining of a headache, which was constant, as well as neck pain. He also had left shoulder pain, which was somewhat better since surgery. Dr. Reiss noted abnormal scapular motion with range of motion of the shoulder. He did not see any true scapular winging when he was leaning against the wall, stating it looked more like scapular dyskinesia. ROM on extension of Claimant‘s neck was 10°, with posterior neck pain. Flexion ROM was full with a little bit of neck pain; rotation right and left appeared to be full, with minor pain. Dr. Reiss' assessment was cervical strain with pain and scapular dyskinesia cervical stenosis and myelopathy.

48. When Dr. Reichhardt evaluated Claimant on July 18, 2017, Claimant had five out of five strength in the intrinsic muscles of the hand. Claimant did not report problems with his grip or dropping things. On August 16, 2017, Dr. Reichhardt wrote a letter answering questions posed by Respondents' counsel Lynda Newbold. Dr. Reichhardt had been asked to evaluate some neuromuscular clinic records and an IME prepared by Dr. Brian Reiss. Dr. Reichhardt opined "Based on the information that I've had available to me, I would consider his cervical stenosis to be in part related to his work–related injury and partially related to underlying degenerative changes. Neck surgery is most predominantly required as a result of the myelomalacia but there is also the potential that it will help his neck complaints. Somewhat less reliably, it may improve some of the upper back and periscapular area complaints". The ALJ noted Dr. Reichhardt stopped short of concluding the myomalacia was a condition caused or aggravated by the work injury and his use of the words most "predominantly" was significant, when explaining that the reason for neck surgery was due to myelomalacia.

49. Claimant returned to Dr. Vlahovich on September 27, 2017. At that time, Claimant reported worsening of numbness in both hands and arms, as well as the feeling of pressure. He also reported depression due to the restriction of his activities and was seeing Dr. Carbaugh. On examination, cervical active ROM was slightly limited and mildly painful. Claimant had nearly full ROM in both shoulders. Dr.

Vlahovich‘s diagnoses were: strain of muscle, fascia and tendon at neck level, subsequent encounter; low back pain; pain in left knee; pain in left shoulder; unspecified symptoms and signs involving cognitive functions and awareness.

50. Dr. Vlahovich spoke with Dr. Reichhardt about acute progressive changes in sensation in his upper extremities and Dr. Bower was to evaluate Claimant ASAP. Dr. Vlahovich also gave Claimant wrist splints and if improvement was noted, this problem would be more related to CTS, as opposed to the work injuries. Dr. Vlahovich ordered PT and a walker for the cervical myelopathy.

51. Claimant was initially evaluated by Michael Finn, M.D. on October 24, 2017. Dr. Finn stated the reason for the referral was cervical myelopathy. Claimant noted progressive decline, neurologic symptoms over the last month and more profoundly over the past week where he has noticed declining balance, progressive gait instability and problems with manual dexterity. Claimant’s October 9, 2017 MRI showed multilevel degenerative disc disease, most severe at C4-5, which was causing severe spinal canal stenosis and mild T2 hyperintensity in the spinal cord (that represented edema or myelmalcacia). Dr. Finn described him as being grossly myelopathic and hyperreflexic. Dr. Finn’s impression was that Claimant required an anterior cervical discectomy and fusion at C4-5, along with decompression at C3-4 and C5-6 because of the stenosis. Claimant was admitted for the surgery. The ALJ inferred Claimant‘s neurologic symptoms progressed as his stenosis worsened, which ultimately necessitated the surgery.

52. Claimant underwent surgery on October 26, 2017, which was performed by Dr. Finn. Dr. Finn described the reason for the referral for surgery as “acutely progressive myelopathy”. The preoperative and postoperative diagnoses were: cervical myelopathy with a cervical disc herniation, C4–5, and circumferential cervical stenosis, C3 to C5. The ALJ found Dr. Finn did not offer an opinion on the impact of the MVA on Claimant’s myelopathy.

53. On November 6, 2017, Dr. Vlahovich evaluated Claimant after the cervical surgery, which time the diagnoses remain the same. No orthopedic referral for the knee was planned at the time, but Claimant was to continue with cognitive therapy/psych with Dr. Carbaugh. Dr. Vlahovich noted Claimant‘s hand numbness may not resolve from surgery, as they might be due in part to carpal tunnel syndrome. Claimant was to continue with the duloxetine, gabapentin and ropinirole. Dr. Vlahovich also evaluated Claimant on November 13, December 4 and 19, 2017. The diagnoses remained the same and Dr. Vlahovich monitored Claimant‘s prescriptions, as well as post-surgical treatment.

54. Claimant returned to Banner Health on January 29, 2018 and was evaluated by Cathy Smith, M.D. This was twelve weeks after the cervical fusion and discectomy. Claimant reported his headaches were 90-95% better, with right arm strength, numbness and tingling much better. His left leg remains week and he still had pain/weakness in his left arm. Dr. Smith‘s impression of the work-related incident was: muscle strain, neck; low back pain; left knee pain. The diagnoses were the same as Dr. Vlahovich: strain of muscle, fascia and tendon at neck level, subsequent encounter; low back pain; pain in left knee; pain in left shoulder; unspecified symptoms and signs involving cognitive functions and awareness. Dr. Smith continued Claimant‘s work restrictions, prescribed ropinirole for periodic limb disorder from stenosis, Cymbalta, gabapentin and meloxicam.

55. The follow-up evaluation with Dr. Smith on February 26, 2018 was similar in terms of the findings on examination and the continuation of Claimant‘s prescriptions.

56. On March 7, 2018, Claimant was reevaluated by Dr. Reichhardt. At that time, he complained of pain in the neck and left shoulder area, with some numbness and tingling in the left hand, digits one through five. Claimant said he felt better than he had in a long time. On examination, Claimant had a normal gait, balance and coordination. Strength was normal in the upper and lower extremities. Reflexes continue to demonstrate speed of the finger flexors with biceps and pronator teres, with normal reflexes at triceps, patellae and Achilles. Sensation was diminished in left hand, digits one through five.

57. Dr. Reichhardt’s impression was: neck pain, left shoulder pain, upper and lower extremity paresthesias. Dr. Reichhardt stated Claimant’s cervical disorder, cervical cord compression myelopathy and subsequent need for treatment were related to his work–related accident.

58. Dr. Reichhardt testified as an expert in Physical Medicine and Rehabilitation at hearing. He is Level II accredited pursuant to the WCRP. Dr. Reichardt testified that Claimant had left arm symptoms briefly which then arose again later. He had some initially diffuse am symptoms that went away before the shoulder surgery. Dr. Reichhardt opined that there were pre-existing degenerative changes that were aggravated by the motor vehicle/semi-truck accident and this aggravation necessitated Claimant’s cervical surgery. Although some of the degenerative changes were pre-existing**,** but for the accident, Dr. Reichhardt said Claimant wouldn’t have required the surgery within the timeframe that involved the case. Dr. Reichhardt stated that the need for surgery was accelerated or hastened by the motor vehicle accident. On cross-examination, Dr. Reichhardt agreed spinal stenosis could progress cause symptomatic myelopathy without a specific injury.

59. Dr. Reiss testified as an expert on behalf of Respondents. He is a board-certified orthopedic surgeon and is Level II accredited, pursuant to the WCRP. His practice is limited to surgery and treatment of disorders of the spine, and he has been practicing in this area since 1988. Dr. Reiss examined Claimant in April 2017. Dr. Reiss listened to the hearing testimony of Dr. Reichhardt and confirmed that this testimony did not change the opinions expressed in his written report of April 26, 2017.

60. Dr. Reiss testified that, in general, cervical stenosis is an asymptomatic condition. It is usually discovered and investigated when it becomes symptomatic from natural progression causing myelopathy, or when another event such as a motor vehicle accident causes neck pain and an MRI performed for another reason identifies the stenosis on imaging. Dr. Reiss said stenosis was a degenerative condition, is very common, and is not caused by motor vehicle accidents. The myelopathy occurred because the area for the spinal cord becomes smaller and smaller due to the stenosis progression and neurological symptoms occur when the spinal cord has inadequate space for it to function. It is usually subtle at first and can worsen over time.

61. Dr. Reiss stated if patient has a motor vehicle accident and doesn’t have myelopathy signs or symptoms, that is because the cervical stenosis was there all along and had not been changed by the accident. In this case, Dr. Reiss posited Claimant had neck pain probably secondary to a cervical strain as a result of the accident. He did not have myelopathy as a result of the accident.

62. Dr. Reiss reviewed the available imaging. The initial MRI of July 6, 2015 showed nothing that appeared to be acute. Dr. Reiss testified if a person has acute narrowing of the canal (stenosis) the cord cannot adapt to that change. If the narrowing is occurring gradually, such as during progression of the underlying stenosis, the cord adapts to the change of space. If the space available for the spinal cord was acutely changed via trauma, almost always this causes symptoms and acute damage to the spinal cord. Dr. Reiss stated the lack of myelomalacia, any edema of the cord and no abnormal signal in July showed there was not an acute damage to the cord. This opinion was persuasive to the ALJ.

63. Dr. Reiss disagreed with Dr. Reichhardt’s opinion and said there was not a connection between the motor vehicle accident and the myelopathy which appeared more than two years post-accident. Dr. Reiss agreed Claimant had neck pain after the accident, but this did not in any way imply myelomalacia, myelopathy or stenosis. One year after the accident, Dr. Reichhardt documented a normal neurological exam (on June 1, 2015) with no evidence of myelopathy and no neurological deficits. Claimant was also evaluated at Banner Neurosurgery Clinic in October 2015 with no evidence of myelopathy. Dr. Reiss testified the natural history of myelopathy secondary to stenosis

is such that at some point it will start to cause symptoms, subtly at first, then slowly progressing.

64. Dr. Reiss noted Claimant complained of numbness in his ring and fifth fingers, which is an ulnar distribution and not a sign of cervical cord disorder, as that was a very specific nerve root distribution. Claimant developed numbness much later in the thumb and index finger which was related to the C6 nerve root and not the spinal cord. The medical records also reflected that there were no further arm symptoms after the surgery on his left shoulder, which then returned later. Dr. Reiss said if the spinal cord been damaged in the accident causing symptoms in his arm, those would not have gone away. There was a very high probability therefore that these symptoms were related to other conditions and a very low probability that these symptoms were transient but related to spinal cord damage. Dr. Reiss clarified that some of Claimant's symptoms were probably related to the underlying myotonic dystrophy condition. These included the abnormal movement of the scapula and some of his pain in the shoulder could also be related to that. The movement disorder was highly unlikely to be related to myelopathy, but would reasonably be related to the myotonic dystrophy disorder.

65. Dr. Reiss also disagreed with Dr. Reichhardt that Claimant had a herniated disc as result of the accident, which worsened over time. Dr. Reiss testified Claimant required surgery because of the spinal stenosis and the progressive narrowing of the canal. The ALJ credited Dr. Reiss' opinions with regard to the progression of Claimant's symptoms and his need for cervical surgery. In this regard, the ALJ found Dr. Reiss' explanation regarding the course of Claimant's myelopathy to be more credible. The ALJ also credited Dr. Reiss' conclusions that the initial MRI in July 2015 showed no evidence of trauma had Claimant suffered trauma to the spinal cord as a result of the accident, the symptoms would not have gone away.

66. Based upon the medical evidence and Dr. Reiss' opinions, the ALJ concluded the MVA did not cause or accelerate Claimant's spinal stenosis condition. Claimant required cervical surgery because this degenerative condition worsened and he developed symptoms related to myelopathy.

67. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Medical Benefits

In the case at bar, Claimant suffered injuries arising out of his employment. Respondents were therefore liable under the Act to provide treatment to cure and relieve the effects of the injury to each of the parts of Claimant's body that were injured in the MVA on August 18, 2014. § 8-42-101(1)(a), C.R.S. The issue to be determined in this case was whether Claimant met his burden of proof to show that cervical surgery was reasonable, necessary, as well as causally related to the industrial injury.

Accordingly, although there was no question Claimant injured his left arm and cervical spine, that did not end the inquiry, as Claimant bore the burden of proof of showing that the need for medical benefits were causally related to his work-related injury or condition. *Ashburn v. La Plata School District 9R,* W.C. No. 3-062-779 (ICAO May 4, 2007). This required a review of Claimant's progression of symptoms, as well as consideration of the expert opinions. Based upon the totality of the evidence, the ALJ concluded Claimant did not prove by a preponderance of the evidence that the MVA aggravated, accelerated, or combined with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). Rather, the ALJ determined Claimant's symptoms were caused by the stenosis in the cervical spine and the progression of that condition.

As a starting point, the ALJ found Claimant reported symptoms to the left arm and cervical spine after the MVA. This included at the ED, as well as his first appointment at Banner Health. (Findings of Fact 5, 7). X-rays that were taken at the time showed Claimant's cervical spine had degenerative changes. (Finding of Fact 6). Claimant was diagnosed as suffering a strain of the cervical spine. (Findings of Fact 7, 11). Based upon this evidence in the record, the ALJ concluded the MVA caused an injury to Claimant's left arm/shoulder and his cervical spine. (Finding of Fact 4).

As determined in Findings of Fact 8, 11-14, Claimant received treatment for symptoms in the cervical spine, as well as the left shoulder and Respondents were liable for said treatment. The diagnostic tests showed degenerative changes in the cervical spine, but as Dr. Reiss noted, there was no evidence of spinal cord injury in the June 2015 MRI. (Finding of Fact 62). No injury to the spinal cord was found in the acute phase and the records of Claimant's early treatment documented the fact that his neck symptoms waxed and waned, including showing some improvement. (Findings of Fact 12-13, 15).

Claimant did not have neurological symptoms and was not diagnosed with myelopathy, including when he was evaluated by Dr. Reichhardt in December 2015 and January 2016. (Findings of Fact 26-27). During this time, Dr. Reichhardt and Claimant's IME physician, Dr. Stieg confirmed there was no myelopathy, but there was a potential diagnosis of fascioscapulohumeral muscular dystrophy. *Id.* In addition, Respondents IME physician, Dr. McCranie found no myelopathy and concluded Claimant's symptoms were attributable to stenosis in the cervical spine, which was due to normal degeneration considering the patient's age and smoking history. (Finding of Fact 32). Thus, the evidence admitted at hearing showed Claimant had an underlying degenerative condition, as well as fascioscapulohumeral muscular dystrophy which impacted his symptoms and recovery. The ALJ found the fascioscapulohumeral muscular dystrophy was not caused by the MVA and the IME raised the question whether Claimant's symptoms were related to the non-occupational conditions. *Id.*

Admittedly, Claimant had a complicated clinical course, as reflected in the medical records. As determined in Findings of Fact 27-30, 35-38, Claimant received substantial treatment in 2015-2016, including injections. He was seen at regular intervals by Dr. Reichhardt and Dr. Vlahovich. The treatment Claimant received was provided to address symptoms in his neck, arm and left knee. However, the ALJ found it was the development of neurological problems, specifically those related to the myelopathy that lead to the cervical surgery. This was shown in the medical records from Dr. Finn, who noted the referral was for myelopathy and the basis for the surgery to Claimant's neck. (Findings of Fact 51-52).

The evidence in the record led the ALJ to conclude that the injuries Claimant sustained in the MVA did not cause his spinal stenosis or myelopathy, which ultimately necessitated the surgery. In this regard, the ALJ determined the myelopathy condition was not caused, aggravated or accelerated by the MVA. (Finding of Fact 66). Claimant did not have neurological symptoms after the accident. As found, Claimant did not develop myelopathy or myelomalacia until almost two years after the accident. (Finding of Fact 37). The testing done at the University of Colorado by Dr. Fridman confirmed myotonic changes and myelopathy, with suspected myotonic dystrophy as a diagnosis. (Finding of Fact 45).

The ALJ credited Dr. Reiss' expert testimony in which he provided a credible explanation for the progression of Claimant's symptoms. Dr. Reiss opined that Claimant's progression of symptoms was related to the stenosis and he developed myelopathy, not as a result of the accident, but because of degeneration. Dr. Reiss explained that Claimant's myelopathy occurred because the area for the spinal cord becomes smaller and smaller due to the stenosis progression and neurological symptoms occur when the spinal cord has inadequate space for it to function. Dr. Reiss testified Claimant's neurological symptoms were related to the stenosis and Claimant required surgery because of neurological deficits from the stenosis. The ALJ credited Dr. Reiss' testimony regarding the progression of the stenosis and the surgery was required to address the stenosis and resulting myelopathy. (Findings of Fact 60-65). It was Dr. Reiss' credible testimony that led the ALJ to conclude that it was the progression of the stenosis which directly led to the need for surgery, as opposed to the work injury. *Id.* In addition, Claimant's surgeon, Dr. Finn, never offered the opinion that the need for surgery was related to the MVA. (Finding of Fact 52). After considering all of the evidence, the ALJ was persuaded that the surgery was not related to the injury, as the evidence in the record led to the conclusion that surgery was performed because of the natural progression of Claimant's preexisting stenosis and the resulting myelopathy.

The ALJ considered Claimant's argument that the condition of his cervical spine was worsened by injuries suffered in the MVA and therefore, the medical treatment he received (including cervical fusion surgery and PT) was reasonable necessary to cure and relieve the effects of the work injury. Claimant cited Dr. Reichhardt's testimony and more particularly, his conclusion that the need cervical surgery was caused by the MVA. The ALJ found Dr. Reichhardt initially opined that the neck surgery was "most predominantly required as a result of the myelomalacia". (Finding of Fact 48). Later, Dr. Reichhardt stated the need for surgery was accelerated or hastened by the MVA. (Finding of Fact 57-58). The ALJ weighed the respective opinions of the experts and credited the opinion of Dr. Reiss, who is a surgeon. On this basis, Claimant's request for medical benefits was denied and dismissed.

ORDER

It is therefore ordered:

1. Claimant failed to establish the cervical surgery was related to the work injury.

2. Claimant's request for medical benefits, specifically for payment of the cervical fusion procedure is denied and dismissed. The request for authorization and payment of the PT treatment proposed by Dr. Finn is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the lumbar surgery proposed by Dr. Barker is reasonable, necessary, and related to her work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant's Prior Back Surgery

1. Claimant had a previous lumbar spine surgery with the same surgeon requesting surgery now, Dr. John Barker. Claimant initially reported to Dr. Barker on May 8, 2019 that she had reached over to plug in her cell phone when she felt a pop in her back, with immediate onset of severe left leg pain. (Ex. 1, p. 1). On her initial clinical exam, she was unable to perform heel walking, and her left anterior tibialis strength was down to 3/5 with reflexes at only 2+ throughout. *Id.* at 2.

2. An MRI performed on May 7, 2019, showed a "left paracentral disc extrusion that moves caudally at L4-5 which compresses the left transitioning L5 nerve root." *Id.* Claimant was diagnosed with lumbar disc extrusion at L4-5 and lumbar radiculopathy. "At this time, given [Claimant's] level of weakness she would like to undergo lumbar microdiscectomy for correction.

3. Claimant underwent the previous surgery on May 23, 2019. (Ex. 1, pp. 7-8). Dr. Barker performed a discectomy of the left L4-L5 with a left L5 hemilaminectomy. Claimant followed up with Dr. Barker on June 6, 2019, reporting that her left leg pain was "markedly improved." *Id* at 10. The weakness had already improved, though not yet to preoperative levels. Claimant did report that she was already able to walk three miles per day just two weeks after surgery.

4. Claimant was told her strength was returning and to keep walking as much as possible. Claimant planned to return to work July 1, 2020, noting there was no light duty in her profession as a nurse. *Id* at 11. The follow-up note reflects that they would see Claimant back only "if her symptoms worsen or her strength does not return to normal." *Id.* Claimant did not return for any additional care for this injury.

Claimant's Hearing Testimony

5. At hearing, Claimant testified that she had virtually returned to normal enough to perform the full duties of a job as a nurse without pain or limitation, at least until January 25, 2020. When asked how she felt by and leading up to January 25, 2020, Claimant stated, "I was

feeling almost back to normal. I mean, the pain went away very quickly after the surgery. I still had very mild left foot weakness, which is pretty common with that kind of injury. But I was – I was working full duty… doing everything that I was doing prior to the injury. I was exercising up to four times a week." (Tr. pp. 17-18)

6. On January 25, 2020, Claimant was working in the emergency room as a registered nurse, and she was getting ready to discharge one of her patients. The patient was a large woman, estimated to be about 300lbs. The woman was rather short, and the stretcher she needed to be moved from was particularly high. Claimant and her coworker, a CNA, attempted to perform what is called a "stand pivot transfer." Claimant positioned the wheelchair as close to the stretcher as possible. The CNA was behind the patient and Claimant was directly in front of the patient. Claimant then described the following:

> And the patient had her arms on my shoulders, and then I pulled her towards me to help get her feet to the floor. And when she came down off the stretcher, she stepped on my right foot. And so there was nothing I could do but – because I didn't want her to fall. So I did this whole *lifting and twisting,* and *we both fell* into the wheelchair onto the right side. (Tr. pp. 18-19) (emphasis added).

7. At hearing, Claimant distinguished her current symptoms from those from her first injury:

> Well, after I injured my back this time, it was a completely different pain. Very sharp to dull ache just continuously. If I turned the wrong way or twisted, it was severe. It's where I can't sleep at night. ...If I overdo it, if I walk too much, …just vacuuming the floor sometimes can set it off. I'll have spasms and pain all night long. And I never had that with my previous injury, it was just always…the nerve pain down my leg. So this is much worse. (Tr., pp. 16-17).

Claimant's Medical Treatment

8. Claimant reported the incident to her boss, who recommended that Claimant go see one of their workers' compensation doctors. Claimant saw Dr. Janette Javier on January 30, 2020. (Ex. 2, pp. 23-26). Claimant reported that since the work incident she had been having "left lower lumbar pain above the level of her previous microdiscectomy". *Id.* She described the pain as being in her back, and sharp, with only *some* of the symptoms extending into her leg. Dr. Javier was not sure of the extent of Claimant's injury, so she placed Claimant under restrictions, and cautioned her to watch for worsening pain. An MRI was also ordered.

9. The MRI was performed on February 25, 2020. (Ex. C). There were essentially no findings at L1-L2 and L2-L3. At L3-L4. There was a small broad-based posterior disc bulge with central annular tear, and bilateral ligamentum flavum and facet joint hypertrophy. At L4-L5, there was a "small to moderate broad-based posterior disc bulge, improved from prior study [from May 7, 2019], with mild to moderate narrowing of the left lateral recess". There

was a small broad-based posterior disc bulge at L5-S1 with bilateral facet joint hypertrophy. *Id.*

10. Claimant reported to Dr. Javier on March 3, 2020 that she felt the physical therapy was helping make her pain "somewhat better." (Ex. 2, p. 34). However, Claimant continued to have pain in the lower lumbar region, with extension into her left lower extremity. Dr. Javier ultimately referred Claimant back to Dr. John Barker, due to her relatively normal appearing MRI, yet with continued significant pain in her back with left lower extremity weakness.

11. Claimant first saw Dr. Barker on June 4, 2020. (Ex. 1, pp. 12-14). Dr. Barker documented that Claimant's leg pain had gone away after the previous surgery he performed "for an extruded fragment." *Id* at 12. She had had severe foot drop from the surgery, most of which had went away, along with her strength returning. "Unfortunately, she was lifting a patient on January 22, 2020 when she injured her back during the transfer." *Id* at 12. Claimant reported ongoing low back pain since the incident. The pain had improved over four months of physical therapy, but it had far from resolved. "She is no longer able to work in the emergency room and she now does a desk job with case management." *Id.*

12. Dr. Barker reviewed the February 25, 2020 MRI, and came to a different conclusion than the radiologist. (Ex. 1, p. 13). Dr. Barker found that she did not have any recurrent disc herniation; instead, she has degenerative disc disease at 3-4 and L4-5 with posterior *annular tears* at those levels. He further noted a severely degenerated disc at L5-S1 with Modic changes. Claimant also had facet arthropathy at L5-S1 and at L4-L5 to a lesser extent. *Id.*

13. Since the physical therapy and medications had not relieved her symptoms, Dr. Barker recommended facet injections at L4-5 and L5-S1. Dr. Barker wanted to avoid surgery if the injections helped. However, in the event they failed, he wanted to consider a discogram, and possible lumbar disc arthroplasty as opposed to a fusion. *Id.*

14. The facet blocks were performed on June 17, 2020 for *axial low back pain*. (Ex. 3). Bilateral facet injections were performed at the L4-L5 and L5-S1 levels. *Id.* at 63. Claimant described a level 3 / 10 pain prior to the injections, and 3 / 10 pain after the injections. *Id.* at 64. She returned to Dr. Barker on August 6, 2020, reporting that the injections did not help with her pain. (Ex. 2, p. 15). "She still has *severe low back pain.* She has some numbness in her leg but no pain." *Id.* Dr. Barker ordered a discogram, and was then to see her again to go over the results.

15. The discogram was performed on August 27, 2020. (Ex. I). It revealed severe findings. Dr. Barker requested authorization to perform disc replacement surgeries at L3-L4, and L4-L5. The discogram showed a grade 4 and a grade 5 annular tear at L3-L4. It showed a grade 5 annular tear at L4-5.

16. Dr. Barker further requested authorization to fuse L5-S1. The discogram showed that the L5-S1 "disc is *completely macerated* with contrast noted throughout the intervertebral space." *Id* (emphasis added).

17. Dr. Barker further explained his rationale in his note from the September 3, 2020 evaluation of Claimant. (Ex. 1, pp. 18-20). Dr. Barker stated that Claimant had concordant pain at L4-4 and L4-5, with minimal pain at L2-3, which was used as a control. *Id.* at 19. He further stated,

> She had grade 6 degeneration on the CT scan at L5-S1 with grade 5 degeneration at L4-5 and grade 3 degeneration at L3-4. She had minimal dye leakage on the discogram CT scan at L2-3. Based on these results, she needs an L3-S1 surgical procedure. We would like to avoid fusion as much as possible. We will plan on an L3-4 and L4-5 disc replacement. I told her we are not allowed to do a 3 level disc replacement so we will plan on an L5-S1 anterior lumbar interbody fusion." *Id.*

Dr. Barker's Proposed Surgery is Denied

18. Despite those findings, Respondents denied the requested L3-L4, L4-L5 disc replacement with L5-S1 fusion, pending a Rule 16 medical records review with Dr. Michael Rauzzino. (Ex. 4). Dr. Rauzzino authored his report on September 16, 2020, indicating the surgery was not reasonable, necessary, or related. Dr. Rauzzino stated that the specific request was not consistent with the Colorado Medical Treatment Guidelines ("Guidelines"). Dr. Rauzzino is asked if the current condition is related to the work incident, to which he replies, "I do not think it is *entirely* related to the single incident on 01/25/20 as she had preexisting lumbar issues, but *I do not have all of the records necessary* to make a *full* determination." (Ex. L, p. 005)(emphasis added).

19. In his report, Dr. Rauzzino cited the Guidelines, highlighting that he does not believe "all pain generators are adequately identified" and that the "spine pathology be limited to one level" in regard to the disc replacement. Dr. Rauzzino concludes that he would not recommend *any* additional care for Claimant, other than home exercise and working on her weight. *Id.* at 71. He also notes, regarding the relatedness of the proposed surgery to the work injury, that "…the mechanism of injury is simply not consistent with an injury to cause four separate discs to *fail."(*Ex. L, p. 006)(emphasis added).

20. In his report, Dr. Rauzzino opined that since she is not a surgical candidate, Claimant is at MMI, and since the MRI did not show a structural injury, she would have no permanent impairment. *Id* at 007.

Dr. Barker's Deposition Testimony

21. Dr. Barker testified via deposition on March 22, 2021. He is a board certified orthopedic surgeon. Prior to his deposition, Dr. Barker was provided a copy of Dr. Rauzzino's report for his own review. Dr. Barker testified that Claimant began seeing him as a patient on May 8, 2019 for her previous condition, a herniated disc in her lumbar spine. He treated her condition with an L4-5 discectomy. The primary purpose of the surgery was to treat Claimant's severe left leg pain versus back pain. Dr. Barker also noted that Claimant was able to walk three miles within two weeks of the surgery and that her leg pain was "markedly improved."

22. Dr. Barker testified that he did not see Claimant again until June 4, 2020, in connection with her work injury. He documented that she had injured herself lifting a patient and that she was "complaining of back pain more than leg pain." He reviewed the actual films of the MRI from May, 2019 to the MRI of February, 2020. He testified that the MRI shows annular tearing. Dr. Barker explained that annular tears cause back pain, which is why he is recommending that she have a disc replacement at L3-4 and L4-5 and a fusion at L5-S1.

23. The main reason for recommending this procedure was that a three level disc replacement is not an FDA approved procedure. Since a two level disc replacement is FDA approved, Dr. Barker opined that the best option was the two level disc replacement, with the one level fusion for the completely macerated disc. He further testified this is a procedure which is performed by many other surgeons in this community.

24. Dr. Barker clarified that this particular surgery was to help Claimant's axial back pain, instead of her previous condition that was primarily leg pain. He explained that the goal is to remove the pain generators, which he has personally identified to be the annular tears, and the degenerative discs.

25. Dr. Barker was asked to provide an opinion on causation. He testified that annular tears can show up simply through degeneration, or they can happen as a part of an injury, but it is impossible to say what truly caused the tear itself. Dr. Barker explained that you must correlate the patient's history with the findings to determine what either caused Claimant's tears, or caused them to become symptomatic. Dr. Barker explained:

    > According to what [Claimant] told me, it seems to me that the tears were either *caused by* the lifting incident **or** the tears were *preexisting* and were asymptomatic and then were *rendered symptomatic by the lifting incident.* (Barker Tr., pp. 13-14) (emphasis added).

    Dr. Barker explained the grades of annular tears, with 1 being the least severe and 5 being the worst. which Claimant has multiple of. (Barker Tr., p. 15).

26. Dr. Barker clearly disagreed with Dr. Rauzzino's assessment of the mechanism of injury as well. "So that's a pretty clear-cut mechanism of injury, and right after the lifting injury, the patient started complaining of back pain." (Barker Tr., p. 17). Dr. Barker also disagreed about the pain generators, and felt they had adequately been identified via the imaging, discogram, examination, and subjective reporting. *Id.* Dr. Barker again disagreed with Dr. Rauzzino's recommendation for home exercise and weight loss, as he felt that would do nothing for Claimant's condition after already 13 months. There is no additional treatment to improve her condition other than surgery. *Id* at 18.

Dr. Rauzzino's Deposition Testimony

27. Dr. Rauzzino testified via deposition on March 29, 2021. Consistent with his report, he opined that Claimant's need for surgery was not work related, nor was it reasonably necessary. (Rauzzino Tr. P. 9).

28. He testified that understanding the mechanism of injury is an important piece of the causation analysis. He testified that Claimant's injury is described as a twisting and falling injury based on representations from claimant in the medical records. There may have been a lifting component, but it was not heavy lifting and the injury was more of a twisting injury than a lifting injury. (*Id*., 9.)

29. Based on the described mechanism of injury, Dr. Rauzzino does not find it medically reasonable to believe that claimant injured three levels of lumbar discs during the twisting incident. (*Id*., 10.) Dr. Rauzzino testified that the forces involved in the incident were not powerful enough to injure claimant's spine at three levels. He noted that claimant had pre-existing lumbar spine issues, including a back surgery in 2019 and pre-existing multilevel lumbar degenerative dis disease. (*also see* Ex L, p. 5.)

30. Dr. Rauzzino testified that identification of the pain generators is imperative when treating a low back injury. He stated that failure to correctly identify the pain generators is the most common reason spine surgeries fail. He stated that is very important to understand where the pain is coming from so you can treat it accurately and effectively.

31. Dr. Rauzzino testified that the back is a complex structure with different muscles, nerves and bones and the presence of back pain does not mean there will be a good or simple surgery to correct the pain. This is why the Colorado Medical Treatment Guidelines require the identification of the pain generator to ensure reasonable outcomes from surgical intervention.

32. Dr. Rauzzino testified that he follows and consults the Colorado Medical Treatment Guidelines when examining and treating patients. The Medical Treatment Guidelines are based on scientific evidence and they are well controlled and well thought out studies. They exist for a reason and are useful in determining who might do well with surgery and who might not do well with surgery.

33. Dr. Rauzzino disputes the three possible pain generators listed by Dr. Barker. He acknowledged that discs, facet joints and nerves can all be pain generators, but stated that Dr. Barker left out the most common and important low back pain generator, which are myofascial injuries. People with sore or soft muscles tissue injures are the main cause of back pain.

34. Dr. Rauzzino stated that claimant has axial back pain, which is pain without radiation into the legs. This pain is very difficult to localize, and can be caused by many different things. In Claimant's case, she has multiple discs with degeneration spanning from L2-3, L3-4, L4-5 and L5-S1, but it is impossible to say whether those discs were her sole pain generator.

35. Dr. Rauzzino testified that the Colorado Medical Treatment Guidelines recommend that artificial lumbar disc replacement only be performed when the spine pathology is limited to one level, because there is not enough scientific evidence that two-level disc replacement would be successful. He opined that the surgery being requested by Dr. Barker is a two-level disc replacement and a lumbar fusion, which is essentially a three-level surgery. He testified that a three-level spinal surgery is not something that is typical or common, and is not something that is likely to be successful. A surgery at three levels of the spine has a success rate that is so low that it is not a reasonable thing to do.

36. Dr. Rauzzino further felt it was unreasonable to assume that all three of Claimant's discs were injured in that one particular incident. (Rauzzino Tr., p. 10). It was Dr. Rauzzino's opinion that Claimant's ongoing symptoms were "soft tissue and myofascial injuries, which is really where the vast, vast majority of back pain resides." (Rauzzino Tr. pp. 14-15).

37. Dr. Rauzzino summarized that, within a reasonable degree of probability, the requested back surgery is not related to the work incident of January 25, 2020. Dr. Rauzzino also opined that, within a reasonable degree of probability, the requested back surgery is not reasonable and necessary to treat the work incident of January 25, 2020 based on the Colorado Medical Treatment Guidelines.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing weight, credibility, and sufficiency of the evidence in Workers Compensation proceeding is the exclusive domain of administrative law judge.

University Park Care Center v. Industrial Claim Appeals Office, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The ALJ finds Claimant to have testified credibly in her hearing testimony, including describing, as best she could, her mechanism of injury. Further, the ALJ finds that Claimant has accurately reported her symptoms to her medical providers throughout her treatment, in a sincere effort to maximize her recovery. As a nurse, she is acutely aware of the need to do so. Claimant had recovered quite well from her original, non-work injury, but became symptomatic - with severe axial back pain - immediately following her work injury in 2020.

4. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, the ALJ has read the reports and sworn depositions of two medical experts. The ALJ finds that both experts have provided sincere, yet contrasting, professionally rendered medical opinions. As such, the ALJ will determine which experts are more *persuasive*, as opposed to per se *credible.*

Medical Benefits, Generally

5. The Claimant is not entitled to medical care that is not *causally related* to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, the Claimant has the burden to prove that the disputed treatment is *causally related* to the injury, and *reasonably necessary* to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

6. The Claimant has the burden to prove her entitlement to medical benefits by a preponderance of the evidence. §8-43-201, C.R.S. The Respondents are only liable for the medical treatment that is *reasonable and necessary* to cure and relieve the work-related injury. §8-42-101(1)(a), C.R.S.

Causation, Generally

7. The mere fact that a claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). The claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

8. In his report, Dr. Rauzzino notes that Claimant's "mechanism of injury is simply not consistent with an injury that would cause *four* [the ALJ notes that *three* discs, not *four* are actually proposed for repairs in this instance] separate discs to *fail."* Dr. Rauzzino's opinion on *causation* for the poor state of Claimant's discs is duly noted, and Dr. Barker does not disagree. However, as noted above, the evidence in this case points directly Claimant being *asymptomatic for axial back pain* up until the date of work injury, then being consistently, severely symptomatic from that point onwards - and for many months afterwards, at that. Clearly, her discs at L3/L4, L4/L5, and L5/S1 were likely in poor shape already, but as has been pointed out, patients can have remain symptom free for years, despite having imaging studies that appear alarming. While Dr. Rauzzino is Level II accredited, and Dr. Barker is not, the ALJ finds and concludes that Claimant has shown that her need for medical treatment is *causally related* to her work injury.

Medical Treatment Guidelines

9. Pursuant to WCRP 17-2 (A), 7 Code Colo. Regs. 1101-3, health care practitioners are to use the Medical Treatment Guidelines referenced as Exhibits at WCRP 17, 7 Code Colo. Regs. 1101-3 (the "Medical Treatment Guidelines") when furnishing medical aid under the Workers' Compensation Act. The ALJ may also appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse,* W.C. 4-665-873 (ICAO January 25, 2011). However, the ALJ is not required to grant or deny medical benefits based upon the Medical Treatment Guidelines. *Thomas v. Four Corners Health Care,* W.C. 4-484-220 (ICAO April 27, 2009).

10. The Medical Treatment Guidelines are not definitive, but merely guidelines, and the ALJ has the discretion to make findings and orders which follow or deviate from the Medical Treatment Guidelines depending upon the evidence presented in a particular case. *Jones v. T.T.C. Illinois, Inc.,* W.C. 4-503-150 (ICAO May 5, 2006), *aff'd Jones v. Industrial Claims Appeals Office,* N. 06CA1053 (Colo. App. March 1, 2007) (not selected for official publication); *Nunn v. United Airlines,* W.C. 4-785-

790 (ICAO September 9, 2011). Pursuant to Rule 17-5(C) of the Rules of Workers' Compensation, "The treatment guidelines set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

11. The applicable section of Rule 17, Exhibit 1 of the Medical Treatment Guidelines for Low Back Pain (Effective March 30, 2014) states, in its entirety:

11. ARTIFICIAL LUMBAR DISC REPLACEMENT:

a. Description: This involves the insertion of a prosthetic device into an intervertebral space from which a degenerated disc has been removed, sparing only the peripheral annulus. The endplates are positioned under intraoperative fluoroscopic guidance for optimal placement in the sagittal and frontal planes. The prosthetic device is designed to distribute the mechanical load of the vertebrae in a physiologic manner and maintain ROM.

General selection criteria for lumbar disc replacement includes symptomatic onelevel degenerative disc disease. The patient must also meet fusion surgery criteria, and if the patient is not a candidate for fusion, a disc replacement procedure should not be considered. Additionally, the patient should be able to comply with pre-and post-surgery protocol.

There is some evidence that disc replacement has a slight *advantage* over multidisciplinary intensive treatment - 60 hours over 5 weeks. Multi-disciplinary therapy of some type should always be trialed before surgical consideration given the inherent risks of surgery. There is *strong* evidence that disc replacement is not inferior to fusion at 24 months for relief of back pain, reduction of disability and provision of patient satisfaction. There is *good* evidence that the Charite disc is not inferior to allograft fusion with the BAK cage for single level disease and some evidence that the ProDisc is non –inferior to circumferential fusion with iliac crest autograft for single level disease.

There is *some* evidence that a two-level lumbar disc replacement is not inferior to circumferential fusion in patients with 2 level degenerative disc disease 24 months after surgery. However, at this time the FDA has approved this procedure for only one level.

Long-term follow-up studies for several of the current discs is lacking. Patients who had a lumbar ProDisc-L placed had lower scores at 5 years than previously, although 88% were satisfied or somewhat satisfied and 60% would undergo the procedure again. Seventeen-year follow up of Charite disc replacement found spontaneous ankylosis in 60% and reoperation in 11%. There was no adjacent level degeneration in in the 17% of functional implants. Patient with ankylosis were more satisfied than those without.

The ten year outcome for the Acro-flex lumbar disc replacement on a small series of patients reported a 39.3% rate of surgical revision most with conversion to fusion. The study also reported adjacent level disc degeneration in the majority of those with disc disease and 50% of those with fusion. There is *good* evidence from a comparison of ProDisc-L versus circumferential fusion that arthroplasty is not inferior to fusion and for preservation of motion over fusions. There is some evidence from a five year follow up of ProDisc-L versus circumferential fusion that arthroplasty reduces the risk of adjacent disease. This study found a three times lower rate of new adjacent disc disease for disc replacement (6.7% versus 23.8%). The rate of surgery at an adjacent level did not differ significantly. Both groups improved in most scores similarly.

Low Back Pain Exhibit Page Number 105

The theoretical advantage of total disc arthroplasty is that it preserves range of motion and physiologic loading of the disc. This could be an advantage for adults who are physically active. Studies do not demonstrate a long-term advantage of measured function or pain over comparison groups undergoing fusion. The longevity of this prosthetic device has not yet been determined. Significant technical training and experience is required to perform this procedure successfully. Surgeons must be well-versed in anterior spinal techniques and should have attended appropriate training courses, or have undergone training during a fellowship. Mentoring and proctoring of procedures is highly recommended. Reasonable pre-operative evaluation may include an angiogram to identify great vessel location. The angiogram may be either with contrast or with magnetic resonance imaging. An assistant surgeon with anterior access experience is required.

Informed decision making should be documented for all invasive procedures. This must include a thorough discussion of the pros and cons of the procedure and the possible complications as well as the natural history of the identified diagnosis. The purpose of surgery, is to facilitate active therapy by providing short-term relief through reduction of pain. Since most patients with these conditions will improve significantly over time, without invasive interventions, patients must be able to make well-informed decisions regarding their treatment.

b. Complications:

- Nerve and vascular injury.
- Dural tears.
- Sexual dysfunction (retrograde ejaculation).
- Mal-positioning of the prosthesis.
- Suboptimal positioning of the prosthetic may compromise the long-term clinical result.
- Complex Regional Pain Syndrome (CRPS).
- Complications from abdominal Surgery (e.g., hernia or adhesions).
- Re-operation due to complications.

c. Surgical Indications:

- Symptomatic one-level degenerative disc disease established by objective testing (CT or MRI scan followed by [positive provocation discogram]);
- Symptoms unrelieved after six months of active non-surgical treatment;
- All pain generators are adequately defined and treated;
- All physical medicine and manual therapy interventions are completed;

- *Spine pathology limited to one level;* and
- Psychosocial evaluation with confounding issues addressed.

d. Contraindications:

- Significant spinal deformity/scoliosis.
- Symptomatic facet joint arthrosis – If imaging findings and physical exam of pain on extension and lateral bending are present, exploration of facet originated pain should be completed prior to disc replacement.
- Spinal instability at the pathologic or adjacent level requiring fusion.
- Deficient posterior elements.
- Infection.
- Any contraindications to an anterior abdominal approach (including multiple prior abdominal procedures).
- Evidence of nerve root compression, depending on the device used.
- Previous compression or burst fracture.
- Multiple-level degenerative disc disease (DDD).

- Spinal canal stenosis.
- Spondylolysis.
- Spondylolisthesis greater than 3 mm.
- Osteopenia, osteoporosis or any metabolic bone disease.
- Chronic steroid use or use of other medication known to interfere with bone or soft tissue healing.
- Allergy to device components/materials.
- Depending on the device selected, pregnancy or desire to become pregnant.
- Morbid obesity (e.g., body/mass index [BMI] of greater than 40, over 100 pounds overweight).
- Active malignancy.
- Generalized chronic pain

e. Post-Operative Treatment: An individualized rehabilitation program based upon communication between the surgeon and the therapist and using the therapies as outlined in Section F. Therapeutic Procedures Non-Operative. In all cases, communication between the physician and therapist is important to the timing of exercise progressions. Bracing may be appropriate. A formal physical therapy program should be implemented post-operatively. Post-operative active treatment will frequently require a repeat of the therapy sessions previously ordered. The implementation of a gentle aerobic reconditioning program (e.g., walking) and back education within the first post-operative week is appropriate in uncomplicated post-surgical cases. Some patients may benefit from several occupational therapy visits to improve performance of ADLs. Participation in an active therapy program which includes restoration of ROM, core stabilization, strengthening, and endurance is recommended to be initiated at the discretion of the surgeon. Lifting and bending are usually limited for several months at least. Sedentary duty may be able to begin within six weeks in uncomplicated cases. The goals of the therapy program should include instruction in a long-term home based exercise program (refer to F.12. Therapy – Active). (emphasis added)

12. A cursory review of the Guidelines reveals that the prognosis for such procedure is mixed. It is noted that the current version of the Guidelines is just over seven years old, and techniques may well have advanced in the previous seven years. There is nothing in the record to update any updated on FDA approval, other than Dr. Barker's indication that a two-level - but not three level - disc replacement

is now FDA approved. He indicated that he, and others in the community, now perform this procedure. While it is clear that such procedure is not entirely within the current version of the Guidelines, those same Guidelines suggest a possible superior result to a fusion, largely, and not surprisingly, regarding range of motion issues. The criteria for defining success itself from such procedures is itself a work in progress.

13. The ALJ notes that Dr. Barker has significant advantages over Dr. Rauzinno in forming his opinion. He has actually reviewed the films, instead of just the narrative. As a treating physician, he has performed a *physical* examination – a task apparently not requested that Dr. Rauzzino perform. A question that must always ask is whether a *treating* physician would actually make a surgical recommendation without performing a *physical* exam on the patient in his office. And, if he is not willing to skip this step with his own surgical patients, how persuasive is a record reviewing physician's opinion?

14. The ALJ concludes that Dr. Barker has sufficiently identified a pain generator to recommend a surgery. Such process is inexact, but all reasonable steps have been taken in an attempt to do so. The ALJ does not find that further conservative treatment would likely improve Claimant's medical condition. And the ALJ does not find that it is reasonable to declare Claimant to be at MMI, and just give up on further treatment. A reasonable, if potentially risky, surgical alternative is being proposed by her own treating physician. In the end, the desired result may not be reached, but the ALJ finds that Claimant, in consultation with her own surgeon, deserves the chance to find out. A deviation from the Guidelines is warranted in this case, and the ALJ so finds.The surgery, as proposed, is reasonable and necessary to cure Claimant of her work injury.

ORDER

It is therefore Ordered that:

1. Respondents shall pay for the surgery as proposed by Dr. Barker.

2. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable mental impairment pursuant to §8-41-301, C.R.S. during the course and scope of his employment with Employer on February 7, 2017 in case number 5-038-340-004.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable head injuries during the course and scope of her employment with Employer on September 16, 2017 in case number 5-056-226-003.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period February 7, 2017 until terminated by statute.

FINDINGS OF FACT

Mental Impairment Claim (Case No. 5-038-340-004)

1. Claimant worked for Employer as a Construction Project Administrator. He was employed in the preceding capacity for approximately 29 years.

2. In early 2015 Employer's Manager of Network Operations Dennis P[Redacted] began supervising Claimant. Mr. P[Redacted] continued to supervise Claimant through May 2018.

3. Claimant's title was Supervisor of Regional Operations when Mr. P[Redacted] became his supervisor. Claimant's office was located in Glenwood Springs. Colorado. However, in October 2016 Claimant was transferred to Employer's facility in Eagle, Colorado. Because Claimant was living in Gypsum, Colorado at the time of the transfer, the length of his commute decreased. Moreover, because Respondents had designated Eagle as a "resort community," Claimant received a raise of approximately $1,000.00 per month.

4. Although Claimant worked at Employer's facility in Eagle, Mr. P[Redacted] was stationed at a facility in Fort Collins, Colorado. Mr. P[Redacted] explained that he physically saw Claimant about twice per month.

5. Claimant testified that his transfer to the Eagle facility was a demotion. He also felt his annual bonus had been significantly reduced. Claimant further noted that Employer had made untruthful allegations against him regarding his time card entries. He maintained that he was under a great deal of mental stress as a result of harassment from Mr. P[Redacted]. Claimant generally described a hostile work environment. He

explained that the extraordinary stress culminated in a sudden cardiac event that required emergency treatment on February 7, 2017.

6. On January 15, 2020 Claimant underwent a psychiatric independent evaluation with Gary S. Gutterman, M.D. Dr. Gutterman prepared a report dated February 12, 2020. He asked Claimant to identify the ways in which Mr. P[Redacted] failed to treat him appropriately after his transfer to the Eagle facility. The following is a list of Claimant's allegations against Mr. P[Redacted] prior to the February 7, 2017 incident:

- Mr. P[Redacted] watched him daily;
- Mr. P[Redacted] required him to attend early meetings;
- Mr. P[Redacted] called corporate security regarding Claimant's timesheets because he had concerns about false information regarding absences;
- Mr. P[Redacted] sent Claimant into the field despite work restrictions;
- Mr. P[Redacted] put rocks and leaves on the tires of Claimant's company car to determine whether he was leaving work;
- Mr. P[Redacted] gave Claimant an unfavorable review that significantly reduced his bonus and raise;
- Mr. P[Redacted] violated HIPPA laws by sharing Claimant's confidential medical information with other employees.

7. Mr. P[Redacted] testified at the hearing in this matter. He explained that, because he was based in Fort Collins and Claimant was located in Eagle, he only saw Claimant approximately two times per month. He could not watch Claimant on a daily basis or require him to attend early morning meetings. Furthermore, because of different work locations, Mr. P[Redacted] could not place rocks and leaves on Claimant's tires.

8. Mr. P[Redacted] remarked that he did not report Claimant to corporate security about false timesheets. Rather, Mr. P[Redacted] consulted with Claimant to validate that the actual time he had spent at doctors' appointments was accurately reflected on submitted timesheets. He also contacted the adjuster for Claimant's Workers' Compensation claims to reconcile Claimant's appointment times with timesheets.

9. Mr. P[Redacted] acknowledged that he occasionally required Claimant to go into the field despite his medical restriction of no driving. However, he explained that, if there was a need for Claimant to go into the field, he asked co-employees to drive Claimant. In fact, Mr. P[Redacted] believed that traveling with co-employees would be a good opportunity for Claimant to share his institutional job knowledge.

10. In addressing Claimant's unfavorable reviews, Mr. P[Redacted] explained that Employer developed a new evaluation process in 2015. The evaluation ranked employees on a behavioral axis and a performance axis. Mr. P[Redacted] remarked that he was attempting to make Claimant a better teammate and partner with his co-employees. Because Claimant was not progressing along the behavioral axis, Mr. P[Redacted] gave him a low rating. The evaluation adversely affected Claimant's raise and bonus.

11. Mr. P[Redacted] acknowledged that he received medical records from one of Claimant's authorized treating providers without requesting them. The medical records were M164 forms that are provided to supervisors of injured workers. Mr. P[Redacted] noted that, when he received questions from Claimant's co-employees asking about Claimant's status, he responded in a general manner.

12. Claimant also asserted that a major source of stress was related to a bathroom location. Claimant's co-employee Michelle Lake at the Eagle facility had an office on the main floor immediately adjacent to a bathroom. Ms. Lake asked Claimant to use the upstairs bathroom on occasion because of smells that permeated the hallway near her office. A trip to the upstairs bathroom required Claimant to walk up a flight of stairs then traverse 15 to 20 feet down another hallway.

13. Claimant also specifically identified Mr. P[Redacted]' initial decision not to permit him to have a cubicle door as an example of unfair treatment. Mr. P[Redacted] explained that he had reservations about Claimant's request for the installation of a door for two reasons. First, the cost of the door was not part of his overall budget. Second, he encouraged Claimant to interact with fellow employees at the Eagle facility to share his extensive job knowledge. Mr. P[Redacted] believed installing a door would defeat the purpose of sharing job knowledge. He also explained that an office with a door became available on the second floor of the Eagle facility. Moreover, the office was immediately adjacent to the upstairs bathroom. He offered Claimant the opportunity to move into the office but Claimant declined.

14. Respondents have established an Integrity Line that allows employees to express concerns about their direct supervisors. On January 12, 2017 Claimant contacted Kyleen H[Redacted] to disclose his concerns about Mr. P[Redacted]. Ms. H[Redacted] was an employee of Respondents' insurance broker. Her position involved advocating for injured workers to facilitate the Workers' Compensation process and address concerns. Ms. H[Redacted] testified that during a January 12, 2017 phone conversation with Claimant he mentioned only the following two problems: a co-employee had requested him not use a bathroom close to her office and; he was not permitted to have a door installed on his office.

15. On February 7, 2017 Claimant suffered what Dr. Gutterman diagnosed as an Acute Anxiety Disorder. According to the emergency room note, Claimant was reading an e-mail when he developed chest pain. The February 6, 2017 e-mail was from Employer's Human Resources Manager Monique Amundson. Ms. Amundson confirmed Claimant's Integrity Line concerns including the following: (1) the use of adjacent

bathroom facilities at the Eagle location; (2) his change in job title; and (3) the need for an office door.

16. Claimant detailed that by February 7, 2017 he was under a great deal of stress after being demoted and transferred to Employer's Eagle facility. He faced harassment, discrimination and isolation. Claimant described a hostile work environment. The extraordinary stress culminated in a sudden cardiac event on February 7, 2017 that required emergency treatment.

17. In Dr. Gutterman's February 12, 2020 report he diagnosed Claimant with an episode of Acute Anxiety Disorder that necessitated hospitalization on February 7, 2017. During his January 22, 2021 deposition, Dr. Gutterman remarked that chest pain from an episode of Acute Anxiety Disorder typically occurs due to a recent stressor as opposed to the accumulation of stressors over time. He explained that an individual maintains a certain level of emotional and psychological equilibrium. An acute stressor thus triggers a worsening of anxiety symptoms.

18. After reviewing the February 6, 2017 e-mail from Ms. Amundson to Claimant, Dr. Gutterman determined that the document was not a stressor that would evoke significant symptoms of distress in an individual in similar circumstances because the e-mail was "fairly benign." Dr. Gutterman explained that the e-mail simply outlined aspects of a discussion between Claimant and Ms. Amundson. They also set up an additional meeting on the following day to discuss other administrative issues. Dr. Gutterman remarked that there did not seem to be "anything critical or threatening in the e-mail, just again outlining information." He thus would not expect the e-mail to trigger an acute anxiety disorder or reaction in most individuals.

19. Dr. Gutterman believed that Claimant suffered an Acute Anxiety Disorder that caused his chest pain. These types of symptoms of acute anxiety are caused by situational stress as opposed to an accumulation of stressors. Dr. Gutterman noted that Claimant was reading an e-mail on February 7, 2017 when he experienced chest pain. He determined that reading the e-mail would not evoke significant symptoms of distress in an individual in similar circumstances. Dr. Gutterman did not believe that "any employment stress that [Claimant] enumerated has led to a permanent mental impairment or mental disorder." He remarked that several of the employment stressors Claimant mentioned were "either highly questionable" or "routine administrative requirements and routine aspects of employment."

20. In his February 12, 2020 report Dr. Gutterman stated that Claimant suffers the following: (1) an Adjustment Disorder with Mixed Emotional Features, and (2) an Acute Anxiety Disorder. Dr. Gutterman reasoned that Claimant's Adjustment Disorder was based on a combination of several stressors, both inside and outside of work. The stressors included the physical manifestations of previous Workers' Compensation claims, the death of his father, his relationship with Mr. P[Redacted], using an upstairs bathroom and not getting a door for his office. Dr. Gutterman commented that the February 7, 2017 emergency room visit resulted from situational incidents involving HR and company e-mails with a backdrop of other stressors. Dr. Gutterman concluded that the Adjustment Disorder was not caused by stress primarily in the work environment but

resulted from a multitude of stressors superimposed on the diagnosis of Adjustment Disorder.

21. Claimant has failed to establish that it is more probably true than not that he sustained a compensable mental impairment pursuant to §8-41-301, C.R.S. during the course and scope of his employment with Employer on February 7, 2017 in case number 5-038-340-004. Claimant's contention that he suffered from a mental impairment is largely predicated upon a succession of work events that provoked significant anxiety. The work events involved a job transfer from Glenwood Springs to Eagle, a change in job title that Claimant characterized as a demotion, the reduction of an annual bonus based on a performance review, the request to use an upstairs bathroom at the Eagle facility, not receiving a door for his office and harassment from his supervisor Mr. P[Redacted]. Claimant contends that the extraordinary stress culminated in a sudden cardiac event after reading a work-related e-mail that required emergency treatment on February 7, 2017. However, the evidence reveals that Claimant likely did not suffer a psychologically traumatic event that is generally outside of the usual experience of an individual in his job position and would evoke significant symptoms of distress in a worker in similar circumstances.

22. The succession of job events that Claimant described would not likely evoke significant symptoms of distress in a similarly situated individual. Dr. Gutterman persuasively concluded that Claimant did not meet the criteria for a work-related mental stress claim. He stated that Claimant suffers the following: (1) an Adjustment Disorder with Mixed Emotional Features, and (2) an Acute Anxiety Disorder. Dr. Gutterman reasoned that Claimant's Adjustment Disorder was based on a combination of several stressors, both inside and outside of work. The stressors included the physical manifestations of previous Workers' Compensation claims, the death of his father, his relationship with Mr. P[Redacted], using an upstairs bathroom and not getting a door for his office. Dr. Gutterman commented that the February 7, 2017 emergency room visit resulted from situational incidents involving HR and company e-mails with a backdrop of other stressors. He concluded that the Adjustment Disorder was not caused by stress primarily in the work environment but resulted from a multitude of stressors superimposed on the diagnosis of Adjustment Disorder. After reviewing the February 6, 2017 e-mail from Ms. Amundson to Claimant, Dr. Gutterman determined that the document was not a stressor that would evoke significant symptoms of distress in an individual in similar circumstances because the e-mail was "fairly benign." Dr. Gutterman explained that the e-mail simply outlined aspects of a discussion between Claimant and Ms. Amundson. He remarked that there did not seem to be "anything critical or threatening in the e-mail, just again outlining information." He thus would not expect the e-mail to trigger an acute anxiety disorder or reaction in most individuals.

23. Claimant's symptoms did not arise out of and in the course of employment because they involved job actions taken in good faith by Employer. As credibly detailed by Mr. P[Redacted], he was based in Fort Collins and Claimant was based in Eagle. He thus only saw Claimant approximately two times per month. He could not watch Claimant on a daily basis, require him to attend early morning meetings or place rocks and leaves on Claimant's tires. Mr. P[Redacted] also encouraged Claimant to interact with fellow employees at the Eagle facility to share his extensive job knowledge. He believed

installing a door would defeat the purpose of sharing job knowledge. He also explained that an office with a door became available on the second floor of the Eagle facility that was immediately adjacent to the upstairs bathroom. He offered Claimant the opportunity to move into the office but Claimant declined. Mr. P[Redacted]' testimony generally reveals that he acted in good faith while supervising Claimant. Any mental impairment that Claimant suffered can be attributed to a disciplinary action, work evaluation, job transfer, demotion or similar action. Based on the medical records, credible testimony of Mr. P[Redacted] and persuasive testimony of Dr. Gutterman, Claimant has failed to demonstrate that he suffered from a permanent mental impairment as a result of a psychologically traumatic event that was outside of a similarly situated worker's experience while working as a Supervisor of Regional Operations. Accordingly, Claimant's claim is denied and dismissed.

Head Injury (Case No. 5-056-226-003)

24. Claimant testified that on September 6, 2017 he sustained fall at work that resulted in a head injury. The September 6, 2017 fall is the subject matter of case number 5-056-226-003. Claimant was not sure if he lost consciousness during the fall since he was alone when it happened. He testified that after the fall he drove himself to the nearest fire station and was then transferred to Vail Valley Medical Center for emergency care. Claimant contends that the preceding head injury occurred during the course and scope of his employment with Employer.

25. Claimant has a prior history of Workers' Compensation injuries. On February 24, 2015 Claimant sustained a compensable work-related injury in case number 4-989-017 when he slipped and fell on ice. Claimant was evaluated on March 2, 2015 by Bruce Lippman Sr., M.D. Claimant reported that he landed on his buttocks and right upper extremity. He noted neck stiffness, right wrist discomfort, and a constant headache. Dr. Lippman assessed Claimant with a cervical strain and a right upper extremity contusion. Claimant did not report a head injury. On April 6, 2015 Dr. Lippman evaluated Claimant and remarked that his only remaining symptom was right wrist soreness. Claimant ultimately underwent right wrist surgery on August 12, 2015. The medical records after April are devoid of any reference to a head injury or head injury type complaints.

26. On January 11, 2016 Claimant sustained another compensable work-related injury in case number 5-004-904 when he again slipped and fell on ice. On January 18, 2016 Dr. Lippman evaluated Claimant. Claimant reported he fell on ice and hit the back of his head with no loss of consciousness. He noted dizziness, nausea, headaches and neck tightness. Dr. Lippman assessed Claimant with a concussion without loss of consciousness, a cervical strain and a lower back strain. He remarked that this was Claimant's first head injury or concussion.

27. On June 23, 2016 Claimant was rear-ended in a low-speed motor vehicle accident while working for Employer in case number 5-026-332. Claimant presented to Valley View Hospital with complaints of neck pain. He reported no loss of consciousness. The attending physician noted that a CT scan of the head was not warranted because Claimant did not exhibit seizures, vomiting, vision changes, gait instability or loss of consciousness. Claimant was diagnosed with a concussion and neck pain.

28. On October 4, 2016 Jeffrey Siegel, M.D. evaluated Claimant and administered a brain MRI. Dr. Siegel reviewed the brain MRI and noted no intracranial pathology. He assessed Claimant with dizziness after three concussive injuries over the past couple of years. Dr. Siegel found no acute or subacute neuropathology other than Claimant's reported residual concussive symptoms. He determined that no further treatment or diagnostic recommendations were necessary.

29. On December 20, 2016 Dr. Siegel again evaluated Claimant. Claimant reported that about six days earlier he bent down, experienced vertigo and fell forward into a cabinet wall. However, Claimant denied passing out. Dr. Siegel determined that it was unclear whether Claimant sustained another concussion.

30. On May 17, 2017 Claimant visited Marc Wasserman, M.D. at Blue Sky Neurology. Claimant told Dr. Wasserman that he had suffered head traumas in both February 2015 and December 2016. He also disclosed that, following the December 2016 incident, his symptoms progressively worsened. Dr. Wasserman believed that Claimant's neurological examination was "somewhat embellished" and believed there might be a psychological overlay. He thus ordered a neuropsychological evaluation.

31. On July 14, 2017 Claimant underwent a neuropsychological evaluation with Katherine Giles, Psy.D. Claimant reported that he hit his head on the ground during the February 2015, January 2016 and December 2016 incidents. He also experienced whiplash as a result of the June 2016 motor vehicle accident. Claimant reported that his cognitive problems began following the February 2015 slip and fall but progressively worsened with each subsequent concussive injury. Dr. Giles concluded that most of Claimant's evaluation scores were invalid and not interpretable. She commented that Claimant's scores fell below levels of patients with significant brain injuries and degenerative neurological conditions. The results were also inconsistent with Claimant's observed ability to provide a coherent history. Dr. Giles thus summarized that Claimant's clinical profile suggested a possible preoccupation with physical functioning and health matters. He tended to develop physical and cognitive symptoms in response to emotional distress or "conversion somatization." Dr. Giles diagnosed concussions without loss of consciousness, post-concussive syndrome, chiari malformation type 1 and depression. She noted that cognitive dysfunction is atypical in Chiari type 1 malformations but the structural abnormality could produce or exacerbate Claimant's symptoms. She recommended a follow-up with Marc Wasserman M.D.

32. On August 15, 2017 Claimant visited Dr. Wasserman for an evaluation. Dr. Wasserman commented that, because the July 14, 2017 neuropsychological evaluation showed validity measures outside typical parameters, interpretation was difficult. He also noted that Claimant reported severe depressive symptoms as well as tendencies towards conversion and somatization. He summarized:

> [Claimant] does have a Chiari malformation, but I do not think all of his current symptoms can be explained by that. He shows possible somatization as well as depression on his neuropsychological evaluation and I think psychological factors play a great deal into his current symptomology.

33. On February 10, 2021 the parties conducted the post-hearing evidentiary deposition of Nicholas K. Olsen, D.O. Dr. Olsen performed four independent medical evaluations of Claimant on the following dates: July 31, 2017; January 8, 2018; June 20, 2018 and; April 8, 2019. He testified that he reviewed over a banker's box of Claimant's medical records.

34. In the July 31, 2017 evaluation, Dr. Olsen reviewed medical records and performed a physical examination. Dr. Olsen noted that Claimant initially reported the inability to recall whether he struck his head or lost consciousness in the February 2015 incident but later claimed he sustained his first concussion at the time. Claimant also reported that a third incident occurred in December 2016 when he leaned over to work on a pedestal and fell over into snow with no head injury. Dr. Olsen determined that Claimant inaccurately portrayed his injuries compared to the medical records because there was no documented head injury until January 11, 2016. In fact, Dr. Olsen explained that Claimant suffered a mild concussion without loss of consciousness on January 11, 2016. The symptoms significantly improved prior to Claimant's June 2016 motor vehicle accident. Dr. Olsen also remarked that Claimant did not suffer any loss of consciousness in the June 2016 motor vehicle accident. He found the potential for conversion or somatization, as noted by Dr. Giles, to be a likely explanation for Claimant's current complaints. Dr. Olsen concluded there was little objective evidence to support further treatment for Claimant's January 11, 2016 injury or the June 23, 2016 motor vehicle accident.

35. On September 7, 2017 Claimant returned to Dr. Lippman for an evaluation. Claimant reported that on the prior day he squatted down to look at an electrical box at work and the next thing he knew he was flat on his back. He awoke dazed and confused. Dr. Lippman questioned whether Claimant sustained a head injury because it was unclear what precipitated the event.

36. In his January 8, 2018 report Dr. Olsen documented Claimant's history of the September 7, 2017 accident. Dr. Olsen specifically noted that Claimant "opened the box, squatted down to look at the cables, and from there I can't remember anything until I was on the ground." Claimant did not say that he struck his head, was lightheaded, smelled something or was overheated during the incident.

37. Dr. Olsen testified that Claimant did not need any medical treatment to cure and relieve the effects of the September 6, 2017 accident. Although Claimant drove himself to the emergency room, medical providers did not institute any treatment. Dr. Olsen could not state within a reasonable degree of medical probability that Claimant sustained any kind of work-related injury on September 6, 2017. He summarized:

> [Claimant] indicated that he couldn't remember striking his head on September 6, 2017. There was no worsening of the subject of complaints reported to me between the two evaluations, no difference between the report of cognitive complaints to myself and to Dr. Giles. And the medical records that I reviewed from Dr.

> Littman's report do not indicate him reporting head injuries as first seen, and he did not have any treatment recommended in the emergency room for an alleged head injury.

38. Claimant has failed to demonstrate that it is more probably true than not that he suffered compensable head injuries during the course and scope of his employment with Employer on September 6, 2017 in case number 5-056-226-003. The record reflects that Claimant has repeatedly asserted he suffered numerous head injuries while working for Employer. However, Claimant's complaints have been largely inconsistent with medical records and psychological testing. Claimant has not always been forthcoming with medical providers and misrepresented his degree of impairment. Claimant has exaggerated the number of his concussions by stating that he struck his head when hitting his head was not reflected in the medical records. He has also failed various validity measures during neuropsychological evaluations.

39. Dr. Olsen persuasively explained that on September 6, 2017 Claimant "opened the box, squatted down to look at the cables, and from there I can't remember anything until I was on the ground." Claimant did not say that he had struck his head during the incident. Although Claimant drove himself to the emergency room, medical providers did not institute any treatment. Moreover, on the day after the incident Claimant reported to Dr. Lippman that he had squatted down to look at an electrical box and the next thing he knew he was flat on his back. Dr. Lippman questioned whether Claimant sustained a head injury because it was unclear what precipitated the incident. The combination of Claimant's questionable reporting of prior accidents, failure of validity measures on psychological testing and persuasive medical opinion of Dr, Olson reflect that Claimant did not likely suffer a work injury on September 6, 2017. Claimant's work activities did not aggravate, accelerate or combine with a pre-existing condition to produce a need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Mental Impairment Claim (Case No. 5-038-340-004)

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). “Occupational disease” is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. The Workers’ Compensation Act has authorized recovery for a broad range of physical injuries, but has “sharply limited” a claimant’s potential recovery for mental injuries. *Mobley v. King Soopers*, WC No. 4-359-644 (ICAO, Mar. 9, 2011). Enhanced proof requirements for mental impairment claims exist because “evidence of causation is less subject to direct proof than in cases where the psychological consequence follows a physical injury.” *Davidson v. City of Loveland Police Department*, WC No. 4-292-298 (ICAO, Oct. 12, 2001), *citing Oberle v. Industrial Claim Appeals Office*, 919 P.2d 918 (Colo. App. 1996). A claimant experiencing physical symptoms caused by emotional stress is subject to the requirements of the mental stress statutes. *Granados v. Comcast*

Corporation, WC No. 4-724-768 (ICAO, Feb. 19, 2010); *see Esser v. Industrial Claim Appeals Office*, 8 P.3d 1218 (Colo. App. 2000), affd 30 P.3d 189 (Colo. 2001); *Felix v. City and County of Denver* W.C. Nos. 4-385-490 & 4-728-064 (ICAO, Jan. 6, 2009).

7. Section 8-41-301(2)(a), C.R.S. imposes additional evidentiary requirements regarding mental impairment claims. The section provides, in relevant part:

> A claim of mental impairment must be proven by evidence supported by the testimony of a licensed physician or psychologist. For purposes of this subsection (2), "mental impairment" means a recognized, permanent disability arising from an accidental injury arising out of and in the course of employment when the accidental injury involves no physical injury and consists of a psychologically traumatic event that is generally outside of a worker's usual experience and would evoke significant symptoms of distress in a worker in similar circumstances. A mental impairment shall not be considered to arise out of and in the course of employment if it results from a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the employer.

The definition of "mental impairment" consists of two clauses that each contains three elements. The first clause requires a claimant to prove the injury consists of: "1) a recognized, permanent disability that, 2) arises from an accidental injury involving no physical injury, and 3) arises out of the course and scope of employment. *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023, 1030 (Colo. 2004). The second clause requires the claimant to prove the injury is: "1) a psychologically traumatic event, 2) generally outside a worker's usual experience, and 3) that would evoke significant symptoms of distress in a similarly situated worker." *Id.*

8. Effective July 1, 2018 §8-41-301, C.R.S. was amended by House Bill 17-1229. The amendments broadened the category of compensable mental impairment injuries to include Post Traumatic Stress Disorder (PTSD) arising from events "within a worker's usual experience" where "the worker repeatedly visually witnesses serious bodily injury, or the immediate aftermath of serious bodily injury, or one or more people as the result of the intentional act of another person or an accident." §8-41-301(3)(b)(II)(C), C.R.S.; *see Montoya v. Fremont County Sheriff's Office*, W.C. No. 5-084-877 (ICAO Oct. 16, 2019). Additionally, the PTSD is not required to evoke symptoms of distress in a worker in similar circumstances. *Id*.

9. As found, Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable mental impairment pursuant to §8-41-301, C.R.S. during the course and scope of his employment with Employer on February 7, 2017 in case number 5-038-340-004. Claimant's contention that he suffered from a mental impairment is largely predicated upon a succession of work events that provoked significant anxiety. The work events involved a job transfer from Glenwood Springs to Eagle, a change in job title that Claimant characterized as a demotion, the reduction of an annual bonus based on a performance review, the request to use an upstairs bathroom

at the Eagle facility, not receiving a door for his office and harassment from his supervisor Mr. P[Redacted]. Claimant contends that the extraordinary stress culminated in a sudden cardiac event after reading a work-related e-mail that required emergency treatment on February 7, 2017. However, the evidence reveals that Claimant likely did not suffer a psychologically traumatic event that is generally outside of the usual experience of an individual in his job position and would evoke significant symptoms of distress in a worker in similar circumstances.

10. As found, the succession of job events that Claimant described would not likely evoke significant symptoms of distress in a similarly situated individual. Dr. Gutterman persuasively concluded that Claimant did not meet the criteria for a work-related mental stress claim. He stated that Claimant suffers the following: (1) an Adjustment Disorder with Mixed Emotional Features, and (2) an Acute Anxiety Disorder. Dr. Gutterman reasoned that Claimant's Adjustment Disorder was based on a combination of several stressors, both inside and outside of work. The stressors included the physical manifestations of previous Workers' Compensation claims, the death of his father, his relationship with Mr. P[Redacted], using an upstairs bathroom and not getting a door for his office. Dr. Gutterman commented that the February 7, 2017 emergency room visit resulted from situational incidents involving HR and company e-mails with a backdrop of other stressors. He concluded that the Adjustment Disorder was not caused by stress primarily in the work environment but resulted from a multitude of stressors superimposed on the diagnosis of Adjustment Disorder. After reviewing the February 6, 2017 e-mail from Ms. Amundson to Claimant, Dr. Gutterman determined that the document was not a stressor that would evoke significant symptoms of distress in an individual in similar circumstances because the e-mail was "fairly benign." Dr. Gutterman explained that the e-mail simply outlined aspects of a discussion between Claimant and Ms. Amundson. He remarked that there did not seem to be "anything critical or threatening in the e-mail, just again outlining information." He thus would not expect the e-mail to trigger an acute anxiety disorder or reaction in most individuals.

11. As found, Claimant's symptoms did not arise out of and in the course of employment because they involved job actions taken in good faith by Employer. As credibly detailed by Mr. P[Redacted], he was based in Fort Collins and Claimant was based in Eagle. He thus only saw Claimant approximately two times per month. He could not watch Claimant on a daily basis, require him to attend early morning meetings or place rocks and leaves on Claimant's tires. Mr. P[Redacted] also encouraged Claimant to interact with fellow employees at the Eagle facility to share his extensive job knowledge. He believed installing a door would defeat the purpose of sharing job knowledge. He also explained that an office with a door became available on the second floor of the Eagle facility that was immediately adjacent to the upstairs bathroom. He offered Claimant the opportunity to move into the office but Claimant declined. Mr. P[Redacted]' testimony generally reveals that he acted in good faith while supervising Claimant. Any mental impairment that Claimant suffered can be attributed to a disciplinary action, work evaluation, job transfer, demotion or similar action. Based on the medical records, credible testimony of Mr. P[Redacted] and persuasive testimony of Dr. Gutterman, Claimant has failed to demonstrate that he suffered from a permanent mental impairment as a result of a psychologically traumatic event that was outside of a similarly situated

worker's experience while working as a Supervisor of Regional Operations. Accordingly, Claimant's claim is denied and dismissed.

Head Injury (Case No. 5-056-226-003)

12. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

13. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

14. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

15. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms. It does not follow that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *cf. Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that

the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment”). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

16. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered compensable head injuries during the course and scope of his employment with Employer on September 6, 2017 in case number 5-056-226-003. The record reflects that Claimant has repeatedly asserted he suffered numerous head injuries while working for Employer. However, Claimant’s complaints have been largely inconsistent with medical records and psychological testing. Claimant has not always been forthcoming with medical providers and misrepresented his degree of impairment. Claimant has exaggerated the number of his concussions by stating that he struck his head when hitting his head was not reflected in the medical records. He has also failed various validity measures during neuropsychological evaluations.

17. As found, Dr. Olsen persuasively explained that on September 6, 2017 Claimant “opened the box, squatted down to look at the cables, and from there I can’t remember anything until I was on the ground.” Claimant did not say that he had struck his head during the incident. Although Claimant drove himself to the emergency room, medical providers did not institute any treatment. Moreover, on the day after the incident Claimant reported to Dr. Lippman that he had squatted down to look at an electrical box and the next thing he knew he was flat on his back. Dr. Lippman questioned whether Claimant sustained a head injury because it was unclear what precipitated the incident. The combination of Claimant’s questionable reporting of prior accidents, failure of validity measures on psychological testing and persuasive medical opinion of Dr, Olson reflect that Claimant did not likely suffer a work injury on September 6, 2017. Claimant’s work activities did not aggravate, accelerate or combine with a pre-existing condition to produce a need for medical treatment.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant’s claim in Workers’ Compensation case number 5-038-340-004 is denied and dismissed.

2. Claimant’s claim in Workers’ Compensation case number 5-056-226-003 is denied and dismissed.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-145-854-001

ISSUE

1. Whether Claimant established by a preponderance of the evidence that he sustained an injury to his right knee arising out of the course of his employment with Employer on May 21, 2020.

2. Whether Claimant established by a preponderance of the evidence an entitlement to an award of medical benefits for a work-related injury to his right knee arising out of the course of his employment with Employer on May 21, 2020.

3. Whether Claimant established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits.

4. Whether Respondents are entitled to an offset against Claimant's TTD benefits, if awarded, based on Claimant's receipt of unemployment benefits.

FINDINGS OF FACT

1. Claimant is a 55-year-old man who was employed by Employer as a maintenance technician for approximately seventeen years, ending on October 6, 2020.

2. Claimant's job duties included performing maintenance and cleaning at a multi-story apartment complex.

3. On May 21, 2020, while working for Employer, Claimant was carrying a ladder and toolbox up a flight of stairs to go to apartment units to perform maintenance services. Claimant stepped up the stairs when he hyperextended his right knee and felt a "pop" in the right knee. Claimant's supervisor was present when the injury occurred, assisted Claimant down the stairs and drove Claimant for medical treatment.

4. Prior to May 21, 2020, Claimant had no medical treatment for his right knee, no complaints of right knee pain, no restrictions and no diagnosis related to his right knee. Prior to May 21, 2020, Claimant's right knee had not impeded Claimant's ability to perform his regular duties as a maintenance technician for Employer. Claimant's testimony regarding the lack of prior symptoms and the mechanism of injury was credible.

5. On May 21, 2020, Claimant was seen at Concentra by Lacie Esser, PA-C. Claimant was accompanied during his visit with Ms. Esser by his supervisor, "Anthony." Claimant reported he was carrying tools and a ladder up some stairs when he stepped up with his right foot and his right knee buckled/shifted causing significant pain. Anthony reported to Ms. Esser that he witnessed the Claimant's injury and it "looked really bad." Ms. Esser's examination demonstrated effusion of the right knee with diffuse tenderness over the anterior knee and in the quadriceps tendon, with some deficit in active range of motion. Patellofemoral testing was positive for patellar grind and patellofemoral

apprehension testing. Ms. Esser diagnosed Claimant with a strain of the right knee and recommended that Claimant undergo an MRI of the right knee. Claimant was also provided with a right knee brace. Ms. Esser assigned work restriction to include no squatting, no kneeling, wearing a splint or brace on his right leg, no walking on uneven surfaces, no climbing ladders or stairs, and seated duty only. Ms. Esser's report was co-authored by Lori Long-Miller, M.D. (Ex. 2).

6. X-rays of Claimant's right knee performed on May 21, 2020 demonstrated no acute fracture or dislocation, degenerative changes, a bipartite patella, and several loose bodies in the suprapatellar bursa. (Ex. 2).

7. On May 27, 2020, Claimant again saw Ms. Esser at Concentra. Claimant's knee was still swollen and painful, and Claimant was working with restrictions. On examination, Claimant had right knee effusion grade of 2+ and swelling, with tenderness over the anterior knee. Ms. Esser characterized Claimant's range of motion as "severely limited" and ordered an MRI ordered STAT for concern of internal derangement. Work restrictions included no squatting, kneeling, wearing a brace, no stair climbing or ladder use, and "seated duty only." Ms. Essert noted that Claimant had significant difficulties with the physical requirements of his job. Claimant's supervisor was present for Claimant's examination. (Ex. 2).

8. An MRI of Claimant's right knee was performed on May 28, 2021, and was interpreted as showing no fracture or ligamentous or meniscus tear. With effusion, synovitis, and multiple chronic and degenerative findings. (Ex. D).

9. On June 8, 2020, Claimant saw Michael Hewitt, M.D., on referral from Ms. Esser. Dr. Hewitt observed that Claimant had an antalgic gait with decreased stance on the right leg, and that the right leg alignment was within normal limits. Claimant reported his knee hyperextended and "gave way" and he grabbed a railing to prevent a fall. Dr. Hewitt reviewed Claimant's MRI which showed moderate knee effusion and a large cyst within his distal femur. Claimant also has advanced patellofemoral chondromalacia with complete loss of patellofemoral articular cartilage. Dr. Hewitt diagnosed Claimant with right knee advanced patellofemoral chondromalacia with intraosseous and intraarticular ganglion cyst. He recommended conservative treatment and consideration of a cortisone injection in the future. (Ex. B).

10. On June 12, 2020, Claimant saw Thomas Corson, D.O., at Concentra for a re-check of his right knee. Claimant had not yet begun physical therapy and reported his symptoms were about the same. On examination, Dr. Corson noted effusion of the knee and diffuse tenderness over the knee, with pain on flexion. Dr. Corson indicated Claimant was approximately 25% of the way to meeting the physical requirements of his job and diagnosed Claimant with a strain of the right knee. Claimant was scheduled for physical therapy and advised to return in two weeks. Claimant's work restrictions remained in place and were unchanged. (Ex. 2).

11. On June 16, 2020, Claimant began physical therapy at Concentra. Over the course of the next three months (between June 16 and September 9, 2020), Claimant attended 19 physical therapy appointments. (Ex. 5).

12. On June 26, 2020, Claimant returned to Concentra and saw Ms. Esser. Claimant continued to have pain, tenderness, swelling of his right knee with limited range of motion, and an antalgic gait on the right. Claimant's work restrictions remained unchanged. (Ex. 2).

13. On July 14, 2020, Claimant saw Dr. Long-Miller at Concentra reporting slow improvement in his knee with continued swelling and pain. Dr. Long-Miller diagnosed a right knee strain and work restrictions remained unchanged for modified duty. (Ex. 5).

14. On August 3, 2020, Dr. Hewitt performed a right knee cortisone injection in Claimant's right knee, which was medically reasonable. (Ex. B). The following day, August 4, 2020, Dr. Hewitt noted that Claimant had experienced minimal improvement with conservative treatment, and that the final treatment option was knee arthroscopy to address the intraarticular ganglion cyst. Dr. Hewitt opined that the arthroscopy to address the cyst "is both medically reasonable and appropriate, given his acute working event." (Ex. B).

15. On August 5, 2020, Claimant reported to Ms. Esser that the injection performed by Dr. Hewitt had increased his pain and that he had to miss work due to the pain. (Ex. 5)

16. On August 18, 2020, Claimant was evaluated by Karen Hill, D.O., at Concentra. Dr. Hill noted mild effusion and swelling in the lateral aspect of the right knee with tenderness and crepitus. Claimant's work restrictions remained unchanged. (Ex. 5).

17. On August 20, 2020, Respondents filed a Notice of Contest asserting that Claimant's claimed injury was not work-related. (Ex. 1).

18. On August 26, 2020, Claimant saw Ms. Esser and reported he was no longer working because Employer could not accommodate his work restrictions. Claimant was still under the same work modifications and was referred to Cary Motz, M.D., for a second opinion regarding his knee. (Ex. 5).

19. On September 1, 2020, Dr. Hewitt submitted a surgery order to Insurer seeking authorization for an arthroscopic removal of a cyst of Claimant's right knee meniscus. (Ex. 3)

20. On September 8, 2020, Claimant saw Dr. Motz for a second opinion. Dr. Motz disagreed with Dr. Hewitt's recommendation for an arthroscopy. Instead, Dr. Motz posited that Claimant's symptoms were primarily related to patella patellofemoral arthritic issues which would not be addressed in the surgery proposed by Dr. Hewitt. Dr. Motz felt that a patellectomy or partial knee replacement would be more likely to address Claimant's symptoms. (Ex. 4).

21. On September 20, 2020, Claimant saw Ms. Esser. Claimant reported that he was not working and requested that his work restriction be revised to see if Employer would be able to accommodate them to allow him to return to work, but he also reported he could not perform his full duty. Ms. Esser modified Claimant's work restrictions to remove the "seated work only" restriction and amending it to "sit as needed." (Ex. 5)

22. On October 5, 2020, Dr. Hewitt noted that Claimant would like to proceed with arthroscopy, but authorization for surgery had been denied pending an independent medical examination regarding causality. (Ex. B).

23. On February 1, 2021, Claimant was examined by Timothy O'Brien, M.D., for an independent medical examination at the request of Respondents. Dr. O'Brien's examination demonstrated that Claimant's right knee had decreased range of motion when compared to the left, but was otherwise negative. Dr. O'Brien opined that Claimant did not sustain a work-related injury on May 21, 2020, did not aggravate or accelerate any underlying arthritic condition, that Claimant did not require any medical attention or treatment for his knee, and that claimant did not require any activity restrictions. Instead, Dr. O'Brien opined that the treatment Claimant received, and any future treatment is "causally related to [Claimant's] personal health and his current station in life." Dr. O'Brien opined that the forces of Claimant climbing stairs would not be sufficient to cause any injury or aggravate a pre-existing condition. Dr. O'Brien's opinion, however, does not address whether the actual reported mechanism of injury (i.e., hyperextension of Claimant's right knee) could result in an injury or aggravation of preexisting condition. (Ex. A). Dr. O'Brien's opinions are neither credible nor persuasive.

24. Dr. O'Brien's opinions are based on his examination and review of some medical records. However, Dr. O'Brien did not conduct a full review of medical records and in at least one instance, mischaracterized another provider's findings. For example, Dr. O'Brien's report does not indicate that he reviewed Claimant's May 21, 2020 Concentra visit in which Claimant's supervisor describes the incident as "really bad." Also, in discussing Dr. Hewitt's June 8, 2020 visit, Dr. O'Brien indicates Dr. Hewitt's examination "demonstrated that the right lower extremity was, **'…within normal limits**." (Emphasis original). Dr. Hewitt's report does not, however, conclude that the Claimant's right lower extremity was "within normal limits," but rather that Claimant's "right lower extremity alignment" was within normal limits. (Emphasis added). In reaching his opinions, Dr. O'Brien noted that although Claimant has no medical records which support Dr. O'Brien's opinions, Dr. O'Brien believes had Claimant's right knee "been examined by a trained orthopedic surgeon and that exam occurred anytime within the year that preceded the incident of May 21, 2020, the orthopedic exam and interview would have produced factual information that supports my opinion." Dr. O'Brien's opinion in this regard is speculative and not persuasive.

25. Claimant credibly testified that prior to May 21, 2020, he had worked for approximately 17 years without work restrictions. Additionally, prior to May 21, 2020, Claimant had no treatment for his right knee, no documented complaints, and no diagnosis of any condition existing in his right knee.

26. Claimant was terminated from his employment with Employer on October 6, 2020. At the time of his termination, Claimant continued to be subject to work restrictions which prevented him from performing his regular job duties. Upon termination of his employment, Claimant sustained actual wage loss due to his industrial injury and resulting disability. Claimant has not worked since October 6, 2020, and began receiving unemployment benefits beginning in November 2020. Claimant initially received $504.00 per week in gross unemployment benefits, which was increased to $804.00 per week sometime in 2021. At the time of hearing, Claimant's net unemployment benefits were $762.00 per week.

27. The parties stipulates that, if Claimant did sustain a compensable injury is entitled to temporary disability benefits from the date October 6, 2020, forward, Respondents are entitled to an offset in temporary disability benefits based on Claimant's receipt of unemployment benefits starting November 2020.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641. An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014). The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equipment Company,* W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

If the precipitating cause of an injury is a preexisting health condition that is personal to the claimant, the injury does not arise out of the employment unless a "special hazard" of the employment combines with the preexisting condition to contribute to the accident or the injuries sustained. *National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992); *Rice v. Dayton Hudson Corp.,* W.C. No. 4-386-678 (ICAO, July 29, 1999); *Alexander v. Emergency Courier Services,* W.C. No. 4-917-156-01 (ICAO, Oct. 14, 2014). This rule is based upon the rationale that, unless a special hazard of the employment increases the risk or extent of injury, an injury due to the claimant's preexisting condition lacks sufficient causal relationship to the employment to meet the arising out of employment test. *Ramsdell v. Horn*, 781 P.2d 150

(Colo. App. 1989); *Alexander v. Emergency Courier Services,* W.C. No. 4-917-156-01 (ICAO, Oct. 14, 2014). In order for a condition of employment to qualify as a "special hazard" it must not be a "ubiquitous condition" generally encountered outside the workplace. *Ramsdell v. Horn, supra*; *Briggs v. Safeway,* Inc. W.C. No. 4-950-808-01 (ICAO, July 8, 2015). Conversely, if the precipitating cause of the injury involves conditions or circumstances of the employment, there is no need to prove a "special hazard" for the injury to arise out of the employment. *Cabela v. Industrial Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008); *H&H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). "[T]here is no requirement that a particular activity of employment which aggravates the preexisting condition be unique to the employment, or that it constitute a 'special hazard" of the employment. To the contrary, the special hazard requirement applies only where the precipitating cause of an injury is a preexisting non-industrial condition which the claimant brings to the workplace." *Shelton v. Eckstein Electric Company*, W.C. No. 4-724-391 (ICAO, May 3, 2008).

Claimant has established by a preponderance of the evidence that he sustained an injury to his right knee arising out of the course of his employment with Employer on May 21, 2020. Claimant credibly testified that he had no prior knee diagnosis, symptoms, or restrictions on his ability to work, and was asymptomatic until May 21, 2020. While performing his job duties, Claimant hyperextended his knee while ascending stairs carrying tools and a ladder. Claimant's description of the mechanism of injury was consistent throughout his medical records, and the incident was witnessed by Claimant's supervisor who took him for his initial medical treatment and accompanied Claimant to the initial appointment. Dr. O'Brien's opinion that the incident was insufficient to cause any injury is not credible or persuasive. Given Claimant's underlying knee pathology, the ALJ concludes that Claimant's May 21, 2020 injury aggravated or combined with Claimant's pre-existing conditions to necessitate the need for medical treatment.

Respondents argue that Claimant's injury is not compensable because Claimant has a pre-existing, weakened condition and that there was no "special hazard" involved with the mechanism of injury. Respondents' contention that the "special hazard" rule applies under these circumstances is misplaced. No credible evidence exists that Claimant's underlying knee condition caused Claimant to hyperextend his knee. As such, there is no credible evidence that Claimant's underlying condition was the "precipitating cause" of his injury. Instead, as found, Claimant's work injury, sustained in the performance of his job duties, aggravated, or combined with his previously asymptomatic underlying condition to produce a need for medical treatment and disability that did not exist prior to May 21, 2020. Accordingly, the "special hazard" rule is not applicable in this case. Even if the "special hazard" rule were applicable, Claimant was not engaged in a "ubiquitous condition" because he was carrying tools and a ladder while ascending stairs. Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his right knee on May 21, 2020.

MEDICAL TREATMENT

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be considered a "medical benefit" it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Industrial Claim Appeasl Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995)*; Karim al Subhi v. King Soopers, Inc.,* W.C. No. 4-597-590, (ICAO, July 11, 2012). Medical treatment which has a "reasonable prospect" of diagnosing or defining a Claimant's condition to suggest a course of further treatment constitutes a compensable medical benefit. *Churchill v. Goodyear Tire and Rubber Co.*, W.C. No. 4-203-686 (ICAP, Jan. 25, 2007). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006).

Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his right knee arising out of the course of his employment with Employer on May 21, 2020. Consequently, Employer is liable for medical treatment that is reasonably necessary to cure or relieve the effects of Claimant's injury. The evaluation, care and treatment Claimant has received to date, including treatment at Concentra Medical Centers, treatment, and evaluation with Dr. Hewitt, a second opinion from Dr. Motz, and physical therapy, were reasonably necessary to cure or relieve the effects of Claimant's industrial injury.

TEMPORARY DISABILITY BENEFITS

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. The existence of disability is a question of fact for the ALJ.

Claimant has established an entitlement to temporary total disability benefits beginning October 6, 2020. Claimant was terminated from his employment on October 6, 2020. At the time of his termination, Claimant remained under work restrictions that prevented Claimant from resuming his prior pre-injury employment. Claimant is medically incapacitated with restrictions of bodily function that cause him to have work restrictions and impairment in his wage-earning capacity. Because none of the criteria set forth in § -42-105(3), C.R.S., have been fulfilled, Claimant has established by a preponderance of the evidence an entitlement to TTD benefits beginning October 6, 2020. Respondents have not endorsed the issue of whether Claimant is responsible for his own termination, and the ALJ makes no findings on that issue.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury to his right knee on May 21, 2020.

2. Respondents are liable for the medical treatment for Claimant's right knee rendered to date.

3. Respondents are liable for all medical treatment that is reasonably necessary to cure or relieve the effects of Claimant's industrial injury.

4. Claimant is entitled to temporary total disability benefits from October 6, 2020 until terminated by law.

5. Respondents are entitled to offset from Claimant's temporary disability benefits for unemployment benefits Claimant received.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 12, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-125-817-003

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that she suffered compensable injuries during the course and scope of her employment with Employer on November 15, 2019.

FINDINGS OF FACT

1. Claimant worked for Employer as a Security Guard. On November 15, 2019 Claimant was working at Medtronic Surgical Solutions in Boulder, Colorado.

2. On November 15, 2019 Claimant arrived at her job site approximately 15 minutes prior to the beginning of her shift. Claimant waited in her automobile until shortly before her shift began. She entered her work building, detected an odor that she perceived could be natural gas and opened a window. Claimant called the Boulder Fire Department to report the potential leak. Claimant then waited outside the building for the firefighters to arrive. She remained outside the building while the firefighters addressed the situation inside the building.

3. The date and time of the fire alarm at Medtronic was recorded by the Fire Department as 11:53:00 p.m. on November 15, 2019. The first firefighting unit arrived at Medtronic at 11:57 p.m. When the firefighters arrived, Claimant informed them she was not feeling ill.

4. The firefighters entered the building and noticed a "mild smell" of natural gas. They searched the lower floor and did not detect any smell and "nothing on TIFF." The firefighters moved to the main floor, arrived at the cafeteria and discovered three large gas appliances. The pilot light on one of the stoves was extinguished. Claimant explained that the door to the cafeteria was closed and locked before she provided the keys to the firefighters. Firefighter Lance Day shut off the gas to all three appliances, while Lt. Vineyard cleared "all other units" as the "gas smell began to dissipate."

5. Fire Department personnel located Claimant after resolution of the incident and explained the situation in the kitchen. The first Fire Department units departed Medtronic at 12:16 a.m. and the last unit left at 12:23 a.m. on November 16, 2019. Claimant worked the remainder of her overnight shift from November 15-16, 2019.

6. Claimant returned to the building, left the windows open and completed her work shift. However, she closed the windows at about 3:00 a.m. because the weather was cold. Claimant explained that by about 6:00 a.m. she started to feel "dazed and confused." Claimant's husband picked her up at about 8:00 a.m. and took her home.

7. On November 23, 2019 Claimant reported she had suffered a work injury due to an exposure to natural gas. Claimant listed the date of injury as November 23, 2019 on her Workers' Claim for Compensation.

8. On December 3, 2019 Claimant first sought treatment for her injuries at North Suburban Medical Center. Claimant reported intermittent dizziness and headaches that began two weeks earlier after a gas exposure at work. She also noted symptoms of nausea, vomiting, shortness of breath and subjective fever. Claimant remarked that worsening nausea and vomiting prompted her visit to the emergency department. Differential diagnoses included monoxide poisoning, chemical inhalation, anxiety, migraine headaches and tension headaches.

9. On February 5, 2021 J. Tashof Bernton, M.D. performed an independent medical examination of Claimant. He conducted a physical examination and reviewed Claimant's medical records. Dr. Bernton also testified at the hearing in this matter. He explained that there are four steps physicians are instructed to follow when assessing potential toxic exposures: (1) acquire as much information regarding the agent and mechanism of exposure as possible; (2) research what effects are known to occur based on exposure to the agent in question; (3) compare the patient's symptoms to the types of symptoms known to occur from an exposure; and (4) assess whether the symptoms described by the patient are consistent with the reported exposure. Applying the preceding analysis, Dr. Bernton concluded that Claimant did not suffer any injuries requiring medical treatment as a result of her natural gas exposure at work on November 15, 2019.

10. Dr. Bernton testified that the natural gas to which Claimant was exposed would have consisted of the following two components: (1) hydrocarbons that make up the natural gas and (2) mercaptans that are added to the natural gas to create an odor for safety. Mercaptans have a classic "rotten egg" smell that most people associate with a natural gas leak. Natural gas is a pure asphyxiant that does not have any toxic interaction with the body unless there is such a high concentration that a person cannot breathe. The concentration of mercaptans added to natural gas is 10 parts per million (ppm). The OSHA permitted level for exposure to mercaptans is 10 ppm. The concentration of mercaptans in pure natural gas is thus the approximate level that OSHA has set as a safe exposure to humans.

11. Dr. Bernton remarked that the complications of exposure to mercaptans involve sinus irritation, eye irritation and a "knockdown" phenomenon that can include a loss of consciousness. The preceding symptoms are acute with an immediate presentation. The symptoms of exposure to mercaptans do not manifest themselves over a period of time. When small amounts of natural gas are present, the concentration of mercaptans "is greatly below the level at which any toxic effects may occur."

12. Dr. Bernton explained that Claimant's exposure to natural gas was "quite slight" based upon the nature of the gas source, opening windows as soon as she arrived and the recorded observations of the Fire Department. He reasoned that Claimant's symptoms of headaches, dizziness, floaters in the eyes, aching in both legs, nasal

congestion and irritation were not medically probable manifestations of her low-level gas exposure on November 15, 2019. Dr. Bernton determined “with great confidence” that Claimant’s natural gas exposure for approximately 15-20 minutes did not constitute a toxic exposure with the potential to cause injuries.

13. Dr. Bernton summarized that it is not medically probable Claimant suffered an injury requiring medical treatment as a result of her exposure to natural gas at work on November 15, 2019. He testified that there is no acute or chronic toxicity to low concentrations of natural gas. Even at higher levels, the primary risk from natural gas exposure is asphyxiation from a large enough volume of gas so that oxygen has been displaced and an individual cannot breathe. Dr. Bernton commented that any effects from Claimant’s exposure to natural gas at work would not have required restrictions or caused any permanent impairment. The amount of natural gas emitted from a pilot light into a building with multiple rooms and open windows would not produce any toxic effect as an asphyxiant and there were not enough mercaptans to have a toxic effect. Dr. Bernton determined that an exposure to natural gas and mercaptans would require a significantly greater concentration and length of time to have a toxic effect.

14. Claimant has failed to demonstrate that it is more probably true than not that she suffered compensable injuries during the course and scope of her employment with Employer on November 15, 2019. Initially, Claimant entered her work building on November 15, 2019, detected an odor that she perceived could be natural gas and opened a window. Claimant called the Boulder Fire Department to report the potential leak. Firefighters entered the building and noticed a “mild smell” of natural gas. They discovered that a pilot light had been extinguished on one of the stoves. Firefighters shut off the gas to all three appliances, and the smell began to dissipate.

15. As persuasively explained by Dr. Bernton, Claimant’s symptoms and onset are inconsistent with an exposure to natural gas or mercaptans. The symptoms expected from a toxic exposure to natural gas and/or mercaptans would be acute and involve sinus irritation, eye irritation and a “knockdown” phenomenon that includes a loss of consciousness. Furthermore, Claimant did not report an injury until one week after the exposure and did not seek treatment until more than two weeks after the incident. Although Claimant initially reported headaches and dizziness, the preceding symptoms are not associated with exposure to natural gas or mercaptans. Claimant’s subsequent onset of “floaters” in her eyes, pain in her legs and nasal problems are also not associated with exposure to natural gas.

16. Dr. Bernton persuasively explained that it is not medically probable Claimant suffered an injury requiring medical treatment as a result of her exposure to natural gas at work on November 15, 2019. He testified that there is no acute or chronic toxicity to low concentrations of natural gas. Even at higher levels, the primary risk from natural gas exposure is asphyxiation from a large enough volume of gas so that oxygen has been displaced and an individual cannot breathe. Dr. Bernton commented that any effects from Claimant’s exposure to natural gas at work would not have required restrictions or caused any permanent impairment. The amount of natural gas and mercaptans emitted from a pilot light into a building with multiple rooms and open windows

would not produce any toxic effect. Dr. Bernton determined that any exposure to natural gas and mercaptans would require a significantly greater concentration and length of time to have an adverse effect. He concluded “with great confidence” that Claimant’s natural gas exposure for approximately 15-20 minutes did not constitute a toxic exposure with the potential to cause injuries.

17. Based on the medical records and persuasive opinion of Dr. Bernton, Claimant did not likely suffer an injury during the course and scope of her employment for Employer on November 15, 2019. Because there is no toxicity to low concentrations of natural gas, Claimant’s limited exposure could not have caused an injury at work on November 15, 2019. Claimant’s work activities on November 15, 2019 thus did not aggravate, accelerate or combine with her pre-existing condition to produce a need for medical treatment. Accordingly, Claimant’s request for Workers’ Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence

before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Although a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms. It does not follow that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *cf. Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered compensable injuries during the course and scope of her

employment with Employer on November 15, 2019. Initially, Claimant entered her work building on November 15, 2019, detected an odor that she perceived could be natural gas and opened a window. Claimant called the Boulder Fire Department to report the potential leak. Firefighters entered the building and noticed a "mild smell" of natural gas. They discovered that a pilot light had been extinguished on one of the stoves. Firefighters shut off the gas to all three appliances, and the smell began to dissipate.

9. As found, as persuasively explained by Dr. Bernton, Claimant's symptoms and onset are inconsistent with an exposure to natural gas or mercaptans. The symptoms expected from a toxic exposure to natural gas and/or mercaptans would be acute and involve sinus irritation, eye irritation and a "knockdown" phenomenon that includes a loss of consciousness. Furthermore, Claimant did not report an injury until one week after the exposure and did not seek treatment until more than two weeks after the incident. Although Claimant initially reported headaches and dizziness, the preceding symptoms are not associated with exposure to natural gas or mercaptans. Claimant's subsequent onset of "floaters" in her eyes, pain in her legs and nasal problems are also not associated with exposure to natural gas.

10. As found, Dr. Bernton persuasively explained that it is not medically probable Claimant suffered an injury requiring medical treatment as a result of her exposure to natural gas at work on November 15, 2019. He testified that there is no acute or chronic toxicity to low concentrations of natural gas. Even at higher levels, the primary risk from natural gas exposure is asphyxiation from a large enough volume of gas so that oxygen has been displaced and an individual cannot breathe. Dr. Bernton commented that any effects from Claimant's exposure to natural gas at work would not have required restrictions or caused any permanent impairment. The amount of natural gas and mercaptans emitted from a pilot light into a building with multiple rooms and open windows would not produce any toxic effect. Dr. Bernton determined that any exposure to natural gas and mercaptans would require a significantly greater concentration and length of time to have an adverse effect. He concluded "with great confidence" that Claimant's natural gas exposure for approximately 15-20 minutes did not constitute a toxic exposure with the potential to cause injuries.

11. As found, based on the medical records and persuasive opinion of Dr. Bernton, Claimant did not likely suffer an injury during the course and scope of her employment for Employer on November 15, 2019. Because there is no toxicity to low concentrations of natural gas, Claimant's limited exposure could not have caused an injury at work on November 15, 2019. Claimant's work activities on November 15, 2019 thus did not aggravate, accelerate or combine with her pre-existing condition to produce a need for medical treatment. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-975-232-005

ISSUE

1. Whether the ALJ should impose penalties against Claimant for violation of a May 19, 2020 Prehearing Order issued by a Prehearing Administrative Law Judge (PALJ).

FINDINGS OF FACT

1. On May 14, 2020, the parties participated in a prehearing conference before PALJ Gallivan. The issues identified for the prehearing conference were identified as: "1) Claimant's motion to compel production of a payment log and claim file; 2) Claimant's motion to compel Respondents to file a new final admission of liability; and 3) Claimant's motion to alter the name of the employer in Division records." (Ex. S).

2. On May 19, 2020, the PALJ issued a "Prehearing Order for Prehearing Conference Held on May 14, 2020," in which he denied Claimant's identified motions (the "May 19 PHC Order").

3. The May 19 PHC Order, indicates that Respondent objected to providing Claimant a copy of the claims file noting, among other things "Claimant's repeated contact with the adjuster despite having been previously instructed to communicate only with Respondents' counsel." PALJ Gallivan noted that "Respondents characterize Claimant's conduct in this case as 'harassment.'" (Ex. S.).

4. The PALJ further indicated that "Respondents' characterization of Claimant conduct has been supported by her actions following the prehearing, in which she engaged in improper *ex parte* communication with the undersigned, even after having been explicitly directed not to." (Ex. S). Based on the PALJ's statement, Claimant's *ex parte* communications took place between the conclusion of the May 14, 2020 PHC and the issuance of the May 19 PHC Order.

5. In addition to the May 19 PHC Order, the PALJ issued, *sua sponte*, a second "Prehearing Order for Prehearing Conference Held on May 14, 2020." (the "Sua Sponte Order." The Sua Sponte Order states: "This order is being issued *sua sponte* due to Claimant's conduct following the prehearing conference." (Ex. T).

6. In the Sua Sponte Order, the PALJ indicated Claimant had directly contacted the PALJ at his personal number leaving a voice mail, despite being directed not to contact the PALJ directly. The Sua Sponte Order also indicates that Claimant subsequently sent three emails on which the PALJ, the adjuster and several of Employer's employees were either the direct recipient or copied on the email. (Ex. T).

7. Based on this conduct, the PALJ issued the following orders:

a. "Claimant is hereby barred from contacting PALJ David Gallivan regarding this workers' compensation claim outside of a properly noticed prehearing conference. This includes any communication via telephone or electronic mail.

b. Claimant is hereby barred from contacting any employee of Sedgwick CMS[1] or [Redacted] regarding this workers' compensation claim. This includes telephone calls, electronic mail and extends to including any such individuals such as recipients on messages sent to counsel for Respondents.

c. Any violation of this order will be considered grounds for sanctions, including but not limited to dismissal of the workers' compensation claim and referral to the Director for the imposition of monetary penalties up to $1,000 per violation."

(Ex. T).

8. After the May 19, 2020 issuance of the Sua Sponte Order, Claimant sent multiple emails on which multiple employees of Sedgwick and [Redacted] were included. The emails and recipients are summarized in Respondents' Exhibit BB, and the emails themselves are contained in Respondents' Exhibit CC. The emails were sent by Claimant on seventeen dates between July 9, 2020 and March 18, 2021.

9. At hearing Claimant testified that the emails identified in Exhibit BB were not an exhaustive list of the emails on which she included employees of either Sedgwick or Employer after the issuance of the Sua Sponte Order. In addition, she testified that she had attempted to contact some individuals by telephone as well.

10. Claimant testified at hearing that she had no intention of complying with the Sua Sponte Order because she did not believe the Order to be valid. Claimant testified that the issue of her contact with Respondents' employees was not an issue identified for the May 14, 2020 Prehearing Conference.

CONCLUSIONS OF LAW

Claimant by her own admission, intentionally and repeatedly violated the Sua Sponte Order. Although Claimant's position statement indicates she is not challenging the validity of the Sua Sponte Order, the position statement does assert that the PALJ lacked jurisdiction and that the issue addressed in the Sua Sponte Order was not properly before the PALJ. Notwithstanding, "jurisdictional limitations cannot be waived or eliminated by consent and cannot be waived by estoppel In addition, jurisdictional issues may be raised *sua sponte* by a judge regardless of the arguments of the parties." *In re Claim of Villegas*, W.C. No. 4-88-298-002 (ICAO, Feb. 18., 2021) (internal citations omitted). Although Claimant's violation of the Sua Sponte Order would justify the imposition of penalties in other circumstances, the ALJ concludes the PALJ lacked

[1] Sedgwick CMS is the third-party administrator for Claimant's claim.

jurisdiction or statutory authority to enter the Sua Sponte Order. Consequently, the Sua Sponte Order was not a “lawful order” for which penalties may be imposed under § 8-43-304 (1), C.R.S.

Section 8-43-304(1) authorizes the imposition of penalties of not more than $1000 per day upon any person who violates the Act or who “fails, neglects, or refuses to obey any lawful order made by the director or panel.” This provision applies to orders entered by a PALJ. § 8-43-207.5, C.R.S. (order entered by PALJ shall be an order of the director and is binding on the parties); *Kennedy v. Industrial Claim Appeals Office,* 100 P.3d 949 (Colo. App. 2004). In cases where a party fails, neglects, or refuses to obey an order, penalties may be imposed under § 8-43-304(1), even if the Act imposes a specific violation for the underlying conduct. *Holliday v. Bestop, Inc.,* 23 P.3d 700 (Colo. 2001); *Giddings v. Industrial Claim Appeals Office,* 39 P.3d 1211 (Colo. App. 2001).

To form the basis for the imposition of a penalty, the order violated must be one within the jurisdiction and authority granted to the PALJ in the Act. *See e.g.*, *Muragara v. Sears Roebuck & Co.*, W.C. Nos. 4-726-134, 4-712-263 (ICAO, Sept. 8, 2015)(PALJ lacked authority to issue order barring a *pro se* claimant from filing applications for hearing without an attorney). “Prehearing ALJs and hearing ALJs are not judges of general jurisdiction.” *Id*. Instead, “the administrative tribunals which adjudicate workers’ compensation claims are created by statute, and the jurisdiction, powers, duties, and authority of these tribunals are limited to that provided by statute.” *Lewis v. Scientific Supply Co., Inc.*, 897 P.2d 905, 908 (Colo. App. 1995). Accordingly, an administrative law judge lacks authority to create a penalty where none exists. *Baker v. Weld County School District 6 and Pinnacol Assurance*, W.C. No. 4-993-326-004 (ICAO April 20, 2021).

Section 8-43-207.5, C.R.S. sets forth the jurisdiction and authority of PALJs. Under § 8-43-207.5 (1), C.R.S., PALJs have authority to conduct prehearing conferences on the limited issues of:

> Ripeness of legal, but not factual, issues for formal adjudication on the record before the director or an administrative law judge in the office of administrative courts; discovery matters; and evidentiary disputes.

In conjunction with prehearing conferences, § 8-43-207.5 (2) grants the PALJ authority to order parties to participate in prehearing conferences, issues interlocutory orders, issue subpoenas, make evidentiary rulings, permit depositions, approve settlement agreements, and “strike the application for hearing of a party for failure to comply with any provision of this section.”

The Sua Sponte Order purporting to bar Claimant from communicating with Respondent’s employees does not fall within the scope of prehearing conferences or the authority granted to PALJs under § 8-43-207.5, C.R.S. As such, the PALJ lacked jurisdiction and authority to issue the Sua Sponte Order. Consequently, a violation of the Sua Sponte Order does not form the basis for the imposition of a penalty against Claimant.

As with a PALJ, the authority and jurisdiction of hearing ALJs are also defined by statute in § 8-43-207 (1), C.R.S. As relevant to the present issue, § 8-43-207 (1), C.R.S., authorizes an ALJ to "Control the course of the hearing and the conduct of persons in the hearing room;" and to "Impose the sanctions provided in the Colorado rules of civil procedure, except for civil contempt pursuant to rule 107 thereof, for willful failure to comply with any order of an administrative law judge issued pursuant to articles 40 to 47 of this title." § 8-43-207 (1)(h) and (p). While Claimant's conduct likely constituted "contempt" as the term is defined in C.R.C.P. 107, civil contempt under C.R.C.P. 107 is expressly excluded from an ALJ's authority.

Despite the flagrant and intentional violation of the PALJ's order, the ALJ may not impose a penalty based on the violation of an order for which there is no authority under the Act, and the ALJ "has no authority to create a penalty where none exists. To the contrary, an ALJ's authority is limited to that which is conferred by the Act." *Baker v. Weld County School District 6 and Pinnacol Assurance*, W.C. No. 4-993-326-004 (ICAO April 20, 2021), citing *Dee Enterprises v. Industrial Claim Appeals Office*, 89 P.3d 430, 437 (Colo. App. 2003) (ALJ may not exercise jurisdiction, exert any powers, perform any duties, or assume any authority unless the right is granted by statute).

Because no authority exists under the Act, the PALJ lacked jurisdiction to impose restrictions on the Claimant's ability to contact the identified individuals. Consequently, the ALJ lacks authority to impose penalties under § 8-43-304 (1), C.R.S.

ORDER

It is therefore ordered that:

1. Respondent's request for penalties against Claimant is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 14, 2021

Steven R. Kabler
Administrative Law Judge

Denver, Colorado, 80203

ISSUES

I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion of Dr. Larsen on the issue of MMI?

II. If Respondents have overcome said DIME opinion, what is the correct scheduled Impairment Rating?

III. If the DIME opinion has not been overcome, has Claimant shown, by a preponderance of the evidence, that he is entitled the shoulder surgery as proposed by Dr. Walden?

III. If the DIME opinion has been overcome, has Claimant shown, by a preponderance of the evidence, that his scheduled shoulder Impairment Rating should be converted to that of the Whole Person?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Injury, and Subsequent Treatment

1. Claimant sustained an admitted work injury on February 11, 2019. Claimant was employed by the Respondents for over 14 years as a merchandiser, a job which required lifting cases of alcohol weighing between 35 and 75 pounds. Prior to the date of injury, Claimant was experiencing no problems with his left shoulder.

2. Claimant was seen on February 11, 2019 at Concentra Medical Centers by PA Ginsburg. His initial report reflects that Claimant was, "pulling 12 cases of liquor up the stairs and his left shoulder popped, causing severe left clavicle and A/C joint pain." PA Ginsburg noted a prior rotator cuff repair in 2004, which completely resolved. Claimant was prescribed hydrocodone and Ibuprofen 800mg. (Ex. 6, p. 108). Physical therapy also began on February 12, 2019. (Ex. 10, p. 273).

3. On March 5, 2019, PA Ginsberg ordered an MRI of the left shoulder, and referred Claimant to an orthopedic specialist (Ex. 6, p. 121). An MRI of the left shoulder on March 14, 2019 revealed a SLAP tear, mild tendinosis of the intra-articular portion of the long biceps, mild tendinosis of the subscapularis and mild tendinosis of the supraspinatus and infraspinatus. Osteoarthritis was noted at the acromioclavicular joint. (Ex. 7, p. 210).

4. Orthopedist Michael Simpson, MD examined Claimant on March 19, 2019. Dr. Simpson noted an injury to the left shoulder when pulling a dolly upstairs. He reviewed

the MRI and recommended an ultrasound guided injection (Ex. 6, pp 59-60). The left acromioclavicular joint and glenohumeral were injected on April 3, 2019 (Ex. 5, p. 66). Claimant continued to participate in physical therapy.

5. Claimant returned to Dr. Simpson on April 10, 2019. The injections did not provide relief, as Claimant was still experiencing shoulder pain. Since conservative treatment was unsuccessful, Dr. Simpson recommended surgery. (Ex. 5, Page 69). On May 9, 2019, Dr. Simpson performed arthroscopic surgery of the left shoulder, which included rotator cuff repair, biceps tendinosis, subacromial decompression and distal clavicle resection. (Ex. 5, pp. 76-77).

6. On June 20, 2019, Claimant returned to Dr. Peterson, his authorized treating physician at Concentra, 6-weeks post-surgery. (Ex. 6, pp. 139-142). Dr. Peterson noted Claimant was progressing well in physical therapy.

7. On July 10, 2019, Claimant followed up with Dr. Simpson. (Ex. 5, pp. 88-89). Dr. Simpson noted Claimant was doing very well. His motion was appropriate for two months out from the surgery he had. He was to continue therapy and could begin gradual strengthening as tolerated.

8. On July 18, 2019, Claimant followed up with Dr. Peterson. (Ex. 6, pp. 143-146). He was out of the sling and taking ibuprofen 800 mg only. His range of motion was improving slowly; however, he was still weak. Dr. Peterson referred him for additional PT.

9. On August 21, 2019, Dr. Simpson re-examined Claimant, and noted pain with abduction. Claimant was placed on a Medrol Dosepak, followed with 200 mg. of Celebrex twice daily. (Ex. 5 pp. 91-92). The Medrol Dosepak and Celebrex did not alleviate the pain on the top of his shoulder. The pain was constant, most notably after physical therapy, and when lifting his arm up and out to the side. Dr. Simpson ordered an MRI as well as a corticosteroid injection of the shoulder. (Ex. 5, pp. 93-95).

10. On September 11, 2019, Claimant followed up with Dr. Simpson. (Ex. 5, pp. 93-95). He reported the Celebrex and Medrol Deepak had not changed his symptoms. He described his pain as 5/10 on a pain scale, severe after physical therapy and lifting up and out on the side. It was sharp, tingling and felt like a pin was in it. His hand was going numb. Dr. Simpson noted he would like to do a corticosteroid injection for his shoulder but Claimant had a very bad reaction to the injection previously. Dr. Simpson referred Claimant for an MRI.

11. On September 16, 2019, the Claimant was re-examined by Dr. Peterson. His physical exam revealed tenderness in the A/C joint and trapezius muscle with a positive painful arc. He discontinued physical therapy until the MRI and follow-up appointment with Dr. Simpson. (Ex. 5, pp. 153-154).

12. The MRI took place on September 22, 2019. (Ex. 7, p. 204). Dr. Simpson opined that it showed postoperative repair, with no evidence of a re-tear. He administered a corticosteroid injection of the left subacromial bursa (Ex. 5, pp. 97-98). A second

injection was performed by Dr. Peterson on October 11, 2019. (Ex. 6, p. 157). Dr. Simpson noted on October 30, 2019 that neither injection relieved Claimant's pain. He then placed Claimant on a regime of Gabapentin, as well as a Lidoderm patch. Claimant's acromioclavicular joint was injected at Dr. Simpson's office on November 13, 2019, again with no relief. Claimant was subsequently referred to Dr. Walden. (Ex. 5, pp. 104-105 and 107-A).

Claimant is seen by Dr. Walden

13. Claimant was examined by Dr. Walden on December 12, 2019. Claimant described his pain as a sensation of "an icepick going into the front portion of the shoulder," as well as pain around the sternoclavicular joint. Dr. Walden recommended a diagnostic injection to the sub coracoid region. This occurred on the same date, but without immediate relief. (Ex. 3, pp. 27-28). Claimant was seen by Dr. Peterson on December 18, 2019, but there was still no improvement. (Ex. 6, p. 169).

14. On January 9, 2020, Claimant reported to PA Cerchia with Dr. Walden's Office that the pain around his corticoid had diminished, but continued in the subacromial area. A second lidocaine injection was administered into the left subacromial bursa. (Ex. 3, pp. 32-34).

15. On February 6, 2020, Dr. Walden noted that both injections were beneficial, but Claimant was still having difficulty raising his arm above head level in the adducted position. It was the opinion of Dr. Walden that this patient would benefit from arthroscopic subcoracoid decompression, as well as removal of scar tissue from the subacromial space. (Ex. 3, p. 36).

16. The surgery recommended by Dr. Walden was denied in a Peer Review Report. (Ex. 4, p. 55). Dr. Walden wrote to Respondents on March 2, 2020. (Ex. 4, p. 41). He provided literature on coracoid impingement syndrome, stating that one of the primary causes is post-operative rotator cuff repair. In addition to the MRI findings, a sub coracoid injection appeared to temporarily eliminate the pain. Finally, Claimant had undergone conservative measures including physical therapy, anti-inflammatory medication and sub coracoid injections, yet still was experiencing significant symptoms. Claimant, he opined, met the criteria for the surgical procedure, as detailed in the attached article.

17. Dr. Walden notes that he had been consulted as an expert with board certification in orthopedic surgery and sports medicine. It is his opinion that this medical intervention would allow the Claimant to return to more normal function. *Id* at 41.

18. Claimant saw Dr. Peterson on February 12, 2020. (Ex. 6, p. 179). He noted that the surgery had not been authorized. The physical exam revealed limited range of motion in all planes with pain.

Dr. Farber's IME

19. Claimant was subsequently referred by Respondents to orthopedist Adam Farber, MD, for an independent medical examination on April 28, 2020 (Ex. 8). Per Dr. Farber's report, Claimant complained of stabbing pain in the top of the shoulder, as well as pain into the neck and left trapezius. This was consistent with the pain diagram completed in the questionnaire. Claimant had difficulty with adduction of the left upper extremity above shoulder level (Ex. 8, p. 226). The physical exam included tenderness, positive medial border of the scapula, the scapular spine, the left trapezius and the left lateral side of the neck. In addition, Claimant's rotator cuff strength measured 5 out of 5 with resisted abduction, 5 out of 5 with resisted forward flexion, 5 out of 5 with resisted external rotation and 5 out of 5 with resisted internal rotation. There was 5 out of 5 strength with resisted biceps and triceps strength testing. The coracoid impingement test did not provide symptoms consistent with impingement (Ex. 8, p. 230).

20. It is the opinion of Dr. Farber that Claimant reached maximum medical improvement on February 12, 2020. He opined that Claimant has a 6% upper extremity impairment from loss of range of motion. He found no evidence of sub coracoid impingement, and no necessity for the surgery recommended by Dr. Walden (Ex. 8, p. 232).

21. Dr. Peterson examined the Claimant on March 11, 2020. He discussed Claimant's medical treatment, and performed a physical exam. In written correspondence to Respondents. Dr. Peterson placed Claimant at MMI effective April 28, 2020 (Ex. 1, p. 5). In his report of maximum medical improvement dated June 2, 2020, Dr. Peterson noted that, per Claimant, Dr. Farber did not do formal goniometer measurements, and used active assist to push Claimant's arm (Ex 6, p. 195). The physical exam noted pain with range of motion as well as tenderness throughout the shoulder region. The impairment for loss of range of motion for the left upper extremity was 12%. This combined with a 10% impairment rating for the distal clavicle resection resulted in an extremity impairment rating of 21%, converting, if applicable, to 13% of the whole person. Work restrictions included lifting 30 pounds occasionally with occasional overhead lifting of 10 pounds (Ex. 6, p. 199).

22. Respondents admitted for the 21% upper extremity rating in an Amended Final Admission of Liability dated June 17, 2020. (Ex. 1, p. 1). Claimant requested a DIME, which was performed by orthopedist Karl Larsen, MD on September 21, 2020. (Ex. 2).

Dr. Larsen's DIME Report

23. In his DIME report, Dr. Larsen notes Claimant's primary complaint is pain with forward elevation and abduction. The physical exam revealed tenderness diffusely over the anterior shoulder and lateral subacromial space, and not just the coracoid. There was no posterior or parascapular tenderness but mild tenderness in the area of the A/C joint along the surface of the clavicle as well as the sternal clavicular joint. (Ex. 2, pp. 18-19).

24. Range of motion measurements taken by Dr. Larsen yielded a 15% impairment. This was combined with a 10% impairment for the distal clavicle resection

for a 24% impairment rating of the upper extremity, converting, if applicable, to a 14% whole person (Ex. 2, p. 20).

25. It is the opinion of Dr. Larsen that [Claimant] is not at MMI. He provided a diagnosis of capsular contracture, which can produce a coracoid impingement. He notes this is a rare diagnosis, but added that Dr. Walden is an accomplished shoulder surgeon. It is the opinion of Dr. Larsen that the proposed capsular release and sub coracoid decompression would improve the function of Claimant's left shoulder. A posterior capsular release would also be of benefit to the Claimant (Ex. 2, p. 21).

Dr. Farber's IME Addendums

26. Dr. Farber prepared an addendum to his report dated June 22, 2020. (Ex. 8, p. 214). He reviewed the report of maximum medical improvement from Dr. Peterson. He did not address the statement of Dr. Peterson that Dr. Farber had not taken formal goniometer measurements or the difference in the range of motion. Rather, Dr. Farber disagreed with the 10% upper extremity rating provided by Dr. Peterson for the distal clavicle resection. Dr. Farber repeats his opinion that the preoperative MRI scan and lack of relief from the corticosteroid injection did not necessitate the need for distal clavicle resection surgery by Dr. Simpson. Dr. Farber further disagreed with Dr. Peterson concerning work restrictions (Ex. 8, p. 215).

27. In the second addendum dated January 27, 2021, Dr. Farber states it is his standard practice to use a goniometer during an independent medical evaluation. He further notes a discrepancy between the range of motion measurements of Dr. Peterson and Dr. Larsen, suggesting a lack of consistency. Once again, Dr. Farber states that the distal clavicle resection that was performed by Dr. Simpson was not warranted and the 10% upper extremity rating for this procedure is not correct (Ex. 8, pp. 212-21).

Dr. Larsen's Deposition

28. The deposition of Dr. Larsen was taken by the Respondents on January 11, 2021. (Ex. 9). Dr. Larsen testified that at the time of his examination, Claimant had not decided whether he wished to pursue the surgery recommended by Dr. Walden. (Ex. 9, p. 246). Should Claimant elect not to proceed with the surgery, he would be at maximum medical improvement with an effective date of February 5, 2020, which was his last physical therapy appointment. (Ex. 9, p. 249).

29. Dr. Larsen testified that Claimant likely had arthritis of the acromioclavicular joint, but which was likely aggravated by the work injury, and therefore required resecting the bone. This is why the surgery performed by Dr. Simpson was authorized. (Ex. 9, p. 252).

30. In his examination, Dr. Larsen noted tightness of the posterior shoulder capsule. This can be the result of pulling injuries or scarring from prior surgery. A posterior capsular tightness can produce sub coracoid impingement by anterior displacement of the labral head, though this is a rare diagnosis. (Depo. Transcript, p. 14).

31. It is the opinion of Dr. Larsen that Claimant would benefit from the surgery proposed by Dr. Walden. Dr. Walden performed a lidocaine challenge in the sub coracoid region, which seemed to provide improvement a positive sign that the surgery could be beneficial. (Depo. Transcript, p. 21). Dr. Larsen did not think the surgery would bring claimant "back to 100%, pain free, normal, shoulder function, but it would improve his condition.

Dr. Farber Testifies at Hearing

32. At hearing, Dr. Farber was qualified as an expert in orthopedic surgery, focusing on the shoulder, knee and elbow. He has been accredited by the Division of Workers' Compensation. He does not have hospital privileges in Colorado, but travels to Denver one day per month to perform independent medical examinations. (Hearing Transcript, pp. 13-14, 38-39).

33. Dr. Farber testified that the MRI taken of Claimant's left shoulder in 2004 noted some arthritis of the acromioclavicular joint. There is no evidence that the injury of February 11, 2019 required a distal clavicle resection. (Hearing Transcript, p.31).

34. The location of pain in the Claimant's left shoulder is not consistent with the diagnosis of coracoid impingement. Claimant had tenderness in multiple areas around his shoulder, not just localized to the coracoid process. (Hearing Transcript, pp. 22, 25). Claimant received a diagnostic injection of a local anesthetic and steroid, but did not have a positive response. The MRI scans did not support a diagnosis of coracoid impingement. *Id* at 22-23.

35. Dr. Farber also testified that the MRI scan from September 22, 2019 did not support Dr. Walden's recommendation for a bursectomy. The subacromial corticosteroid injection administered on January 9, 2020 did not provide symptomatic relief. (Hearing Transcript, p. 21). It is the opinion of Dr. Farber that the surgery recommended by Dr. Walden would not eliminate Claimant's symptoms. *Id* at 30. Dr. Farber reiterated that it is his practice to use a goniometer for range of motion measurements, that the appropriate impairment rating of Claimant's injury is 6% of the upper extremity. *Id* at 33, 36. He opined that it not appropriate to assign an impairment for the distal clavicle resection, because this condition was not originally work related.

36. Dr. Farber testified that Claimant's industrial injury did not cause a functional limitation beyond the upper extremity. There is no plausible explanation as to why he would be developing symptoms related to the trapezius or neck. (Hearing Transcript, pp. 37-38).

37. Dr. Farber acknowledged that he did not have the advantage of examining the Claimant prior to the shoulder surgery. He acknowledged that there is no indication in Dr. Peterson's or any other opinion in the medical record that the distal clavicle resection was improper. (Hearing Transcript, pp. 43-47).

38. Dr. Farber disagreed with the opinions of Dr. Larsen and Dr. Walden about the recommendation for additional surgery. He disagrees with the opinions of Dr. Larsen and Dr. Peterson concerning the 10% upper extremity rating for the distal clavicle resection. (Hearing Transcript, p. 48).

39. Dr. Farber explained that a subcoracoid decompression occurs when the prominence or a spur on the bone is shaved down. (Hearing Transcript, p. 16). He opined that the bone to be shaved down was not the result of any industrial injury, but rather is just how Claimant was born. (Hearing Transcript, p. 18).

40. Dr. Farber has over 550 pages of medical records, and acknowledged that there is no indication that Claimant was not compliant with treatment, or any indication of exaggeration of symptoms. (Hearing Transcript, p. 49).

Claimant Testifies at Hearing

41. Claimant testified that after surgery, he restarted physical therapy, but had difficulty regaining full range of motion in the left shoulder. He could not raise his left arm above shoulder level, and could not reach behind his back with his left arm past the center belt loop. (Transcript, p. 56). He testified that after approximately 40 visits, there was no further improvement in his range of motion. (Transcript, pp 57, 68).

42. Claimant clarified that he can only reach in back to the center belt loop. Physical therapy initially assisted with range of motion, but Claimant testified that he had reached a point that it would not increase any further. (Hearing Transcript, pp. 57, 70).

43. Claimant testified that he has pain like a constant icepick in the front and top of the shoulder and stiffness and soreness in the back of the shoulder. He also has pain going up into his neck around the outside of the shoulder. (Transcript, pp. 58-59). At the end of the physical therapy session, he would receive manipulation around the shoulder blade and up into his neck – "cracking my neck or moving my neck around to loosen things up." (Hearing Transcript, pp. 57-58).

44. Claimant testified that pain in the neck and soreness in the back of his shoulder is caused by vacuuming, carrying groceries, steering his vehicle with his left arm and sleeping. He will sleep on the couch, with pillows behind him, to avoid rolling over onto his left side. (Hearing Transcript, pp. 60-61).

45. Claimant testified that Dr. Walden administered a series of injections and he experienced relief after several days. He initially had some concerns about this proposed surgery, but after consultation with Dr. Walden, he now wishes to proceed with this treatment. (Hearing Transcript, pp. 61-62).

Physical Therapy Records

46. Beginning on June 5, 2019, the physical therapy notes provide that the Claimant was administered cervicothoracic spinal manipulation, CTJ HVLAT, as well as

instruction for sleep positioning and bed mobility techniques for minimization of irritation. (Ex. 10, p. 383). This spinal manipulation was continued on a repeated basis at Claimant's physical therapy appointments during the months of July and August of 2019.

47. On June 24, 2019, a physical therapist provided soft tissue mobilization for the infraspinatus, supraspinatus and deltoid muscles with active range of motion. (Ex. 10, p. 408). This exercise was repeated on a continuous basis through July and August, 2019.

48. The physical therapy records confirm the Claimant's testimony that he received treatment for the back of his shoulder and his neck. The pain diagram completed by the Claimant prior to the MRI on September 22, 2019 demonstrates symptoms in the back of the shoulder up into the neck (Ex. 7, p. 206). Seven months later April 28, 2020, the pain diagram completed by the Claimant still demonstrate symptoms in the same area (Ex. 8 p. 240).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this instance, the ALJ finds that Claimant has testified credibly at hearing – while still finding that, more likely than not, Dr. Farber used goniometers during his range of motion testing. Otherwise, Claimant provided accurate feedback to his medical providers throughout the process, in an attempt to improve the condition of his shoulder.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). The ALJ finds that each expert has rendered their opinions to the best of their ability, based upon the information they were provided. The real issue here is one of *persuasiveness.*

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Overcoming the DIME Opinion on MMI, Generally

F. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*; *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998); *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186, 189-190 (Colo. App. 2002); *Sholund v. John Elway Dodge Arapahoe,* W.C. No. 4-522-173 (ICAO October 22, 2004); *Kreps v. United Airlines,* W.C. Nos. 4-565-545 and 4-618-577 (ICAO January 13, 2005). The MMI determination requires the DIME physician to assess, as a matter of diagnosis, whether the various components of a claimant's medical condition are casually related to the injury. *Martinez v. ICAO*, No. 06CA2673 (Colo. App. July 26, 2007). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding the cause of a particular component of a claimant's overall medical impairment, MMI or the degree of whole person impairment, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAP, Oct. 4, 2001).

G. This enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008).

H. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

I. However, the mere fact that a Claimant suffers from a pre-existing condition does not disqualify a claim for compensation or medical benefits if the work-related activities aggravated, accelerated, or combined with the pre-existing condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). Moreover, an otherwise compensable injury does not cease to arise out of a worker's employment simply because it is partially attributable to the worker's pre-existing condition. *See Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990); *Seifried v. Industrial Comm'n*, 736 P.2d 1262, 1263 (Colo. App, 1986) ("[I]f a disability were [ninety-five percent] attributable to a pre-existing, but stable, condition and [five-percent] attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling.")

J. Generally, the Claimant must prove by a preponderance of the evidence that his symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009). However, in this instance, the DIME physician has concluded that Claimant's current symptoms were proximately caused by the work injury, rather than the inevitable, natural progression of his shoulder condition. Respondents must now overcome the DIME in this regard.

Overcoming the DIME on MMI, as Applied

K. In this instance, Dr. Farber has provided a number of opinions, which dispute the conclusions drawn by Dr. Larsen. He opines that the distal clavicle resection performed by Dr. Simpson was not necessitated by Claimant's work injury. He thus disputes the 10% assigned for that procedure. He opines that Claimant's current pain complaints are not consistent with Dr. Larsen's diagnosis of coracoid impingement. He feels that the September, 2019 MRI does not support the need for a bursectomy. He feels that Dr. Larsen's ROM measurements (15%) and Dr. Peterson's ROM measurements (12%) are inconsistent with one another [varying by 3%], and thus suspect. Instead, however, he urges the adoption of the 6% ROM that he measured himself – assuming he did so. In the final analysis, Dr. Farber's opinions, however well-informed they might be, are exactly that – his medical opinions. Respondents have presented insufficient evidence that Dr. Larsen *erred* in some critical fashion; instead, it is more of "that's not the way I think he should have done it." The ALJ finds that the mere difference in medical opinion as expressed by Respondents' expert does not rise to the level of overcoming the DIME opinion. Claimant is not yet at MMI, and will not achieve it until he attempts surgical intervention.

Medical Benefits, Generally

L. For a compensable injury, Respondents must provide all medical benefits that are reasonably necessary to cure and relieve the injury. C.R.S. § 8-42-101 (2020). Respondents are liable for reasonable and necessary medical treatment by a physician to whom a claimant has been referred by an authorized treating provider. *Rogers v. Industrial Commission*, 746 P.2d 565 (Colo. App. 1987). An aggravation of a pre-existing condition is compensable. *State v. Richards*, 405 P.2d 675 (Colo. 1965). The question of whether there has been a permanent aggravation is one of fact for determination by an ALJ. *Monfort Inc. v. Rangel*, 867 P.2d 122 (Colo. App. 1993).

Medical Benefits, as Applied

M. In this instance, the ALJ finds the cumulative opinions of the DIME physician, Dr. Larsen, and the referred orthopedist, Dr. Walden to be more persuasive than Respondent's IME physician, Dr. Farber. Dr. Walden is also an accomplished orthopedic surgeon, and has spent more time with Claimant than has the IME. The ALJ finds his rationale for the proposed surgery to be persuasive. Despite Claimant's extensive efforts at conservative care, he has essentially "topped out" without surgical intervention. Dr. Watson (with Dr. Larsen's concurrence) has sufficiently identified the pain generator to the ALJ's satisfaction. And while no one is promising a 100% shoulder, there is a reasonable likelihood that Claimant's condition can be improved with surgery. The ALJ further finds that there is sufficient evidence to conclude that the proposed surgery is related to the original work injury. At a minimum, Claimant's preexisting shoulder condition was rendered permanently aggravated by the work injury, such as to now require medical treatment.

Overcoming the DIME's Impairment Rating

N. Respondents have presented insufficient evidence that the Impairment Rating methodology by the DIME physician is suspect. However, since Claimant is not at MMI, that issue is moot for now. Once Claimant receives all reasonable, necessary, and related medical treatment, it is hoped that his need for an Impairment Rating for ROM might be reduced.

Conversion to Whole Person

O. Whether the Claimant sustained a "loss of an arm at the shoulder" within the meaning of § 8-42-107 (2) (a), C.R.S., or a whole person medical impairment compensable under § 8-42-107 (8), C.R.S. is one of fact for determination by the ALJ. In resolving this question, the ALJ must determine the situs of the Claimant’s "functional impairment," and the situs of the functional impairment is not necessarily the location of the injury itself. Langton v. Rocky Mountain Health Care Corp., supra; Strauch v. PSL Swedish HealthcaSystem, supra. Because the issue is factual in nature, we must uphold the ALJ’s determination if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; Walker v. Jim Fuoco Motor Co., 942 P.2d 1390 (Colo. App. 1997). This standard of review requires us to defer to the ALJ’s resolution of conflicts in the evidence, credibility determinations, and plausible inferences drawn from the record. Metro Moving and Storage Co. v. Gussert, 914 P.2d 411 (Colo. App. 1995).

P. Whether the Claimant has sustained an “injury” which is on or off the schedule of impairment depends on whether the claimant has sustained a “functional impairment” to a part of the body that is not contained on the schedule. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Functional impairment need not take any particular impairment. Discomfort which interferes with the claimant’s ability to use a portion of his body may be considered “impairment.” *Mader v. Popejoy Construction Company, Inc.*, W.C. No. 4-198-489, (ICAO August 9, 1996). Pain and discomfort which limits a claimant’s ability to use a portion of his body may be considered a “functional impairment” for determining whether an injury is on or off the schedule. *See, e.g., Beck v. Mile Hi Express Inc.*, W.C. No. 4- 238-483 (ICAO February 11, 1997).

Q. Implicit from this is that the ALJ cannot make this determination until Claimant has reached MMI. Until that occurs, it is not knowable exactly what functional limitations Claimant might actually have. For this reason, the ALJ will defer any findings on conversion, as being not ripe for adjudication at this time. Upon reaching MMI, Claimant may, potentially at least, re-raise this issue.

ORDER

It is therefore Ordered that:

1. Respondents have not overcome the DIME opinion of Dr. Larsen. Claimant is not at MMI.

2. Respondents shall pay for the shoulder surgery as proposed by Dr. Walden.

3. Claimant's request to convert his extremity rating for his shoulder is not ripe for adjudication at this time.

4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

Colorado Springs, Colorado 80906

ISSUES

1. Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Bryan Counts, M.D. that Claimant has not reached Maximum Medical Improvement (MMI) as a result of her August 20, 2017 industrial injury.

2. Whether Claimant has demonstrated by a preponderance of the evidence that the T11-12 thoracic fusion surgery performed by Jeffrey Donner, M.D. was reasonable, necessary and causally related to her August 20, 2017 industrial injury.

3. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits for the period April 21, 2020 until August 8, 2020 and Temporary Partial Disability (TPD) benefits for the period August 9, 2020 until February 19, 2021.

4. Whether Claimant has established by a preponderance of the evidence that she is entitled to a disfigurement award pursuant to §8-42-108, C.R.S.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $596.60.

FINDINGS OF FACT

1. Claimant worked for Employer as a flight attendant. On August 20, 2017 during a layover in Saint Louis, Missouri she sustained an industrial injury to her back when she slipped and fell in water on a bathroom floor.

2. Claimant immediately obtained medical care with the DePaul Hospital in Saint Louis. Providers documented that Claimant was complaining of lower midline back pain that radiated down her right lower extremity into her right foot.

3. After returning to Colorado Claimant received treatment from Concentra Medical Centers. Medical records consistently document midline to lower back pain with radiation to the right side.

4. From August into November 2017 Claimant received conservative treatment from Robert Nystrom, D.O. and Shimon Blau, M.D. Claimant underwent epidural steroid and trigger point injections. Dr. Blau recommended an MRI in November 2017 and Dr. Nystrom referred Claimant to William D. Biggs, M.D. for an orthopedic evaluation.

5. On November 6, 2017 Claimant underwent lumbar and thoracic MRIs. Mark Reese, M.D. interpreted the imaging. Regarding the lumbar spine, Dr. Reese described mild bilateral neuroforaminal narrowing at L3-L4, L4-L5 and L5-S1 in the setting of lower lumbar spine spondylolytic changes. More significantly, in the thoracic spine region Dr. Reese noted a right central and right lateral disc extrusion at T10-T11 that appeared to extend into the right neural foramen.

6. On November 13, 2017 Claimant returned to Dr. Blau for an examination. He recommended right-sided transforaminal epidural steroid injections. Dr. Blau performed the injections over the right T10-T11 and T11-T12 levels on December 21, 2017. However, as Dr. Blau documented in his January 2, 2018 report, the injections did not benefit Claimant.

7. On January 19, 2018 Dr. Biggs reviewed the MRI scans. He noted multilevel Scheuermann-type changes, worse in the lower thoracic spine, and agreed with Dr. Reese that Claimant had a disc herniation on the right side at T10-T11. He projected that a discectomy by itself would not be sufficient. Dr. Biggs concluded that “I think she would have to have a fusion. I would not recommend doing that, but I think that is probably her only surgical option at this point.”

8. In January 2018 Dr. Nystrom referred Claimant to Jeffrey Donner, M.D. Dr. Donner reviewed the scans and proposed a right T10-11 lateral discectomy.

9. On February 12, 2018 Claimant visited PA-C Chris Kottenstette for an evaluation. For the first time Claimant reported right radiating pain in a thoracic dermatome. PA-C Kottenstette noted that Claimant did not exhibit any left-sided symptoms.

10. On February 14, 2018 Claimant visited Dr. Donner for an examination. Dr. Donner reported that Claimant was “interested in surgical options due to unremitting intense right thoracolumbar pain unresponsive to extensive conservative management.” Dr. Donner specified that the pain radiated laterally into the posterolateral line on the right side and was aggravated by activities. After a physical examination, Dr. Donner assessed Claimant with a chronic right T10 radiculopathy due to a large right T10-T11 disc herniation that had been unresponsive to conservative treatment. He also noted a left-sided T11-T12 small herniation that was not clinically significant. Dr. Donner remarked that Claimant would proceed with a right T10-T11 lateral discectomy.

11. On March 20, 2018 Claimant underwent a right T10-T11 lateral discectomy. Claimant suffered wound dehiscence or separation and was placed on cephalexin as noted in a review by emergency medicine physician John Mathew Luttrell, M.D. During an April 6, 2018 examination providers noted that there was not much cellulitis or drainage and recommended discharge with pain medication.

12. By early 2019 Dr. Donner documented Claimant’s use of both oxycodone 15-mg strength and OxyContin 30- mg strength. He recommended a repeat MRI of the

thoracic spine region. The April 4, 2019 MRI revealed small disc protrusions at T10- T11, T11-T12, and T12-L1 as described by David Goodbee, M.D.

13. On April 11, 2019 Dr. Donner reviewed the thoracic spine MRI scans. He noted a right central disk protrusion at T11-T12 along with degeneration at T10-T11. He recommended thoracic fusion surgery involving T10-T11 and T11-T12.

14. On April 28, 2019 B. Andrew Castro, M.D. performed a medical records review. Dr. Castro determined that further surgical intervention was not reasonable based on minor MRI findings. Moreover, Claimant had a previous discectomy that had decompressed and only exhibited degenerative changes. Dr Castro summarized that "[a]n isolated thoracic fusion for back pain in a 25-year-old which has failed all attempts at conservative management for a treatment as well as a diagnostic regard with escalating narcotic pain medication usage is not indicated and not appropriate and will not benefit this patient from a functional or pain standpoint."

15. On May 22, 2019 Dr. Castro performed an independent medical examination of Claimant. He issued a report on June 3, 2019. Dr. Castro again concluded that fusion surgery was not warranted. He explained that "all clinical indicators lead to the conclusion the patient had a terrible outcome from the original surgery and doubling down with a more debilitating procedure will not benefit this patient from a pain or a functional standpoint." Respondents subsequently denied Claimant's request for the proposed thoracic surgery.

16. On January 14, 2020 Claimant underwent the proposed thoracic spinal fusion surgery through her personal insurance. In contrast to her first surgery, Claimant noted improvement with decreased pain that allowed her to decrease her use of opioid medications.

17. On March 24, 2020 Claimant underwent an evaluation with John T. Sacha, M.D. Dr. Sacha determined that Claimant had reached Maximum Medical Improvement (MMI) on January 10, 2020. Relying on Table 53 of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised)* (*AMA Guides*) he assigned Claimant a 5% whole person permanent impairment of her thoracic spine. He recommended maintenance care including a consultation and follow-up with a psychiatrist who specializes in medication management.

18. On April 21, 2020 Claimant underwent an evaluation with Authorized Treating Physician (ATP) Amanda Cava, M.D. at Concentra. She concluded that Claimant had reached MMI and assigned a 6% whole person permanent impairment of the thoracic spine. Dr. Cava noted that there were work restrictions unrelated to Claimant's industrial injury. Specifically, because Claimant's thoracic spinal fusion surgery was not covered by Workers' Compensation, ongoing restrictions should be assigned by Dr. Donner.

19. On September 9, 2020 Claimant underwent a Division Independent medical Examination (DIME) with Bryan Counts, M.D. After reviewing medical records and

performing a physical examination, he noted thoracic spine range-of-motion deficits. Dr. Counts concluded that Claimant had not reached MMI. He expressed that the January 14, 2020 thoracic spinal fusion surgery was “quite successful.” Dr. Counts reasoned that the surgery was both medically necessary and related to Claimant’s August 20, 2017 work-related injury. He noted that the Medical Treatment Guidelines authorize a spinal fusion after a failed discectomy. He specifically commented that the Lower Back Medical Treatment Guidelines permit revision surgery when previous operations have failed and significant functional gains are present. Dr. Counts recommended the completion of physical therapy and tapering off Percocet. He anticipated that Claimant would reach MMI in about four weeks.

20. Following the DIME, Claimant returned to Dr. Cava for an evaluation on November 5, 2020. Dr. Cava noted that Claimant’s pain and stiffness had worsened after physical therapy but she was demonstrating “functional improvement and tolerating therapy well.” Claimant was also weaning off oxycodone. Dr. Cava assigned work restrictions of not lifting in excess of 30 pounds constantly.

21. On December 29, 2020 Dr. Castro issued another records review. He referenced his prior evaluations and concluded that Claimant’s January 14, 2020 thoracic spinal fusion surgery was not reasonable, necessary or related to her work-related injury. Dr. Castro also explained that additional physical therapy would not provide functional benefit and Claimant should have been tapered from oxycodone. He reasoned that Claimant’s thoracic spinal fusion surgery addressing the T11-12 level was unrelated to her August 20, 2017 industrial injury.

22. On February 19, 2021 Dr. Cava determined that Claimant had reached MMI. She commented that Claimant was off pain medications for her work-related injury, but had an unrelated foot injury that was preventing her from returning to work. Dr. Cava assigned a permanent impairment rating but did not issue permanent physical restrictions. She recommended medical maintenance benefits in the form of two visits with Dr. Donner over the following 12 months.

23. On March 4, 2021 John S. Hughes, M.D. performed an independent medical examination of Claimant. After reviewing Claimant’s medical records and conducting a physical examination, he determined that Claimant’s thoracic spinal fusion surgery was reasonable, necessary, and causally related to her August 20, 2017 work-related injury. Dr. Hughes noted that Claimant had not reached MMI and agreed with Dr. Donner’s post-operative rehabilitation program.

24. In addition to issuing several reports, Dr. Castro testified at the hearing in this matter. He explained that Dr. Counts was incorrect in reasoning that Claimant’s second surgery was causally related to her August 20, 2017 industrial injuries. He detailed that thoracic fusion surgery is not warranted in the absence of instability, spinal canal compression, neural foraminal compression or substantial residual disc herniations. The preceding findings were confined to the T10-T11 level. At the T11-T12 level, there was only a small disc bulge on the left side that was unrelated to Claimant’s industrial injury

or symptoms. Dr. Castro remarked that Dr. Counts was incorrect in his causation assessment because Claimant's intractable pain complaints were likely related to her escalating doses of narcotics. He further testified that Dr. Counts incorrectly cited to the Division of Workers' Compensation Medical Treatment Guidelines for the Lower Back in support of his causation opinion because there are no thoracic Medical Treatment Guidelines and thoracic fusions rarely succeed.

25. Dr. Castro explained that Dr. Counts was wrong in concluding that Claimant had not reached MMI more than 10 months after her first surgery. Notably, the T11-12 level was not work-related. Claimant thus reached MMI within 10 months after her March 20, 2018 right T10-T11 lateral discectomy. Furthermore, Dr. Castro specified that Dr. Counts was incorrect in failing to place Claimant at MMI in his September 9, 2020 DIME because physical therapy would not likely have improved Claimant's condition 10 months after the second surgery. Finally, weaning off narcotics should have occurred six weeks to three months after the first surgery.

26. Dr. Castro summarized that Dr. Counts was incorrect in his DIME conclusions because Claimant reached MMI as determined by Dr. Cava on April 21, 2020 with a 6% whole person impairment rating. The thoracic fusion surgery performed by Dr. Donner and subsequent treatment was not authorized. The fusion was also not reasonable, necessary or related to Claimant's August 20, 2017 industrial injury.

27. Claimant testified at the hearing in this matter. She explained that when Dr. Cava determined she had reached MMI on April 21, 2020 she was unable to perform her regular job duties. Claimant commented that she had not completely healed from her second surgery. Furthermore, because her job required lifting up to 50 pounds and her work restrictions precluded lifting in excess of 35 pounds, she was unable to perform her regular job duties. Claimant was thus off of work from April 21, 2020 to August 8, 2020.

28. Claimant began working as a Customer Service Representative through Arrow Tech on August 9, 2020. For the period August 9, 2020 to February 19, 2021 or 189 days Claimant earned total wages of $13,772.57. During this same period of time at the admitted Average Weekly Wage (AWW) of $596.60 Claimant would have earned $16,108.20. Claimant thus suffered a wage loss of $2,335.63 for the period August 9, 2020 to February 19, 2021.

29. Claimant underwent a disfigurement evaluation at the hearing in this matter. As a result of her August 20, 2017 industrial injury, Claimant sustained permanent disfigurement from two surgeries. Both of the surgeries occurred in the same location and resulted in scarring. As a result, Claimant has a four inch long sunken scar down the midline of her back. Claimant testified that the second surgery did not change the scar except to make it about one inch longer. The disfigurement is serious, permanent and normally exposed to public view. Accordingly, Claimant is entitled to receive a disfigurement award in the amount of $800.00.

30. Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Counts that Claimant has not reached MMI as a result of her August 20, 2017 industrial injury. Specifically, Respondents have not demonstrated that it is highly probable that Dr. Counts' MMI determination was incorrect. Initially, on August 20, 2017 Claimant sustained an industrial injury to her back when she slipped and fell in water on a bathroom floor while working as a flight attendant. On March 20, 2018 Claimant underwent a right T10-T11 lateral discectomy. On April 11, 2019 Dr. Donner reviewed Claimant's thoracic spine MRI scans and recommended fusion surgery involving T10-T11 and T11-T12. Because Respondents denied the surgical request, Claimant underwent the thoracic spine fusion surgery through her personal insurance on January 14, 2020. In contrast to her first surgery, Claimant noted improvement with decreased pain that allowed her to decrease opioid medications. On April 21, 2020 Claimant's ATP Dr. Cava concluded that she had reached MMI and assigned a 6% whole person permanent impairment of the thoracic spine.

31. On September 9, 2020 Claimant underwent a DIME with Bryan Counts, M.D. After reviewing medical records and performing a physical examination, he noted thoracic spine range-of-motion deficits. Dr. Counts concluded that Claimant had not reached MMI. He noted that the thoracic fusion surgery was "quite successful." Dr. Counts reasoned that the second surgery was both medically necessary and related to Claimant's August 20, 2017 work-related injury. He remarked that the Medical Treatment Guidelines authorize a spinal fusion after a failed discectomy. He specifically noted that the Lower Back Medical Treatment Guidelines permit revision surgery when previous operations have failed and significant functional gains are present. Dr. Counts recommended physical therapy and tapering off Percocet.

32. In contrast, Dr. Castro explained that Dr. Counts was wrong in concluding that Claimant had not reached MMI more than 10 months after the first surgery. He detailed that thoracic fusion surgery was not warranted in the absence of instability, spinal canal compression, neural foraminal compression or substantial residual disc herniations. The preceding findings were confined to the T10-T11 level. At the T11-T12 level, there was only a small disc bulge on the left side that was unrelated to Claimant's work injury or symptoms. Dr. Castro emphasized that the T11-T12 level was not related to Claimant's original Workers' Compensation injury. He remarked that Dr. Counts was incorrect in his causation assessment because Claimant's intractable pain complaints were likely related to her escalating doses of narcotics. Dr. Castro further testified that Dr. Counts was incorrect in citing the Division of Workers' Compensation Medical Treatment Guidelines for the Lower Back in support of his causation opinion because there are no thoracic Medical Treatment Guidelines and thoracic fusions rarely succeed. Furthermore, Dr. Cava also determined that Claimant had reached MMI on April 21, 2020. She commented that Claimant was off pain medications for her work-related injury, but had an unrelated foot injury that was preventing her from returning to work.

33. Despite the opinions of Drs. Castro and Cava, Respondents have failed to demonstrate that Dr. Counts' DIME opinion was clearly erroneous. Although Drs. Castro

and Cava concluded that Claimant had reached MMI as a result of her August 20, 2017 industrial injury, they failed to identify Dr. Counts' specific error or improper application of the *AMA Guides.* Dr. Counts' determined Claimant had not reached MMI because she had not healed from the second surgery. The opinion of Dr. Hughes and the medical records support Dr. Counts' DIME opinion and reflect that Claimant has not attained MMI. Specifically, after reviewing Claimant's medical records and conducting a physical examination, Dr. Hughes determined that Claimant's thoracic spinal fusion surgery was reasonable, necessary, and causally related to her August 20, 2017 work-related injury. Dr. Hughes noted that Claimant had not reached MMI and agreed with Dr. Donner's post-operative rehabilitation program. Contrary determinations by Drs. Castro and Cava are mere differences of medical opinion that do not constitute clear and convincing evidence to overcome Dr. Counts' DIME opinion. Accordingly, Respondents have not produced unmistakable evidence free from serious or substantial doubt that Dr. Counts' conclusion that Claimant has not reached MMI is incorrect.

34. Claimant has demonstrated that it is more probably true than not that the thoracic fusion surgery performed by Dr. Donner was reasonable, necessary and causally related to her August 20, 2017 industrial injury. Initially, an April 4, 2019 thoracic MRI revealed small disc protrusions at T10-T11, T11-T12 and T12-L1. On April 11, 2019 Dr. Donner reviewed Claimant's thoracic spine MRI scans and noted a right central disc protrusion at T11-T12 along with degeneration at T10-T11. He recommended fusion surgery involving T10-T11 and T11-T12. Claimant underwent the procedure on January 14, 2020. In contrast to her first surgery, Claimant noted improvement with decreased pain that allowed her to diminish the use of opioid medications.

35. In addition to Dr, Donner's opinion, DIME Dr. Counts reasoned that the thoracic fusion surgery was medically necessary and related to Claimant's August 20, 2017 work-related injury. After reviewing Claimant's medical records and conducting a physical examination, Dr. Hughes also determined that Claimant's thoracic spinal fusion surgery was reasonable, necessary, and causally related to her August 20, 2017 work-related injury. In contrast, Dr. Castro emphasized that the T11-T12 level was not related to Claimant's original Workers' Compensation injury. However, the bulk of the medical records and persuasive medical opinions demonstrate that the thoracic spinal fusion surgery was causally related to Claimant's August 20, 2017 industrial injury. Accordingly, the January 14, 2020 thoracic fusion surgery performed by Dr. Donner was reasonable, necessary and causally related to Claimant's August 20, 2017 industrial injury.

36. Claimant has proven that it is more probably true than not that she is entitled to receive TTD benefits for the period April 21, 2020 until August 8, 2020 and TPD benefits for the period August 9, 2020 until February 19, 2021. Claimant explained that when Dr. Cava determined she had reached MMI on April 21, 2020 she was unable to perform her regular job duties. She commented that she had not completely healed from her second surgery. Furthermore, because her job required lifting up to 50 pounds and her work restrictions precluded lifting in excess of 35 pounds, she was unable to perform her regular job duties. Claimant was thus off of work from April 21, 2020 to August 8, 2020.

37. In contrast, Dr. Cava noted in her April 21, 2020 MMI determination that there were work restrictions unrelated to Claimant's industrial injury. Specifically, because Claimant's second surgery was not covered by Workers' Compensation, ongoing restrictions should be assigned by Dr. Donner. However, because Claimant's thoracic spinal fusion surgery was reasonable, necessary and related to her August 20, 2017 industrial injury, any restrictions and limitations from the surgery were causally related to her August 20, 2017 work injury. She was thus unable to perform her regular job duties because of her industrial injury. Claimant has demonstrated her disability and an impairment of earning capacity by her inability to effectively and properly perform her regular job functions. Accordingly, Claimant is entitled to receive TTD benefits for the period April 21, 2020 until August 8, 2020.

38. For the period August 9, 2020 to February 19, 2021 or 189 days Claimant earned total wages of $13,772.57. During this same period of time at the admitted AWW of $596.60 Claimant would have earned $16,108.20. Claimant thus suffered a wage loss of $2,335.63 for the period August 9, 2020 until Dr. Cava placed her at MMI on February 19, 2021. The medical records and Claimant's credible testimony thus reflect that her August 20, 2017 industrial injury caused her disability and consequent wage loss. Accordingly, Claimant is entitled to receive TPD benefits based on her wage loss of $2,335.63 during the period August 9, 2020 to February 19, 2021.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. MMI is primarily a medical determination involving a diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S. A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* WC 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment including surgery to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* WC 4-356-512 (ICAO, May 20, 2004);

5. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAO, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

6. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; *see Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Subparagraph (II) is limited to parties' disputes over "a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI]." §8-42-107(8)(b)(II). "Nowhere in the statute is a DIME's opinion as to the cause of a claimant's injury similarly imbued with presumptive weight." *See Yeutter*, 2019 COA 53 ¶ 18. Accordingly, a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment. *Id.* at ¶ 21.

7. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial*

Claim Appeals Office, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

8. As found, Respondents have failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Counts that Claimant has not reached MMI as a result of her August 20, 2017 industrial injury. Specifically, Respondents have not demonstrated that it is highly probable that Dr. Counts' MMI determination was incorrect. Initially, on August 20, 2017 Claimant sustained an industrial injury to her back when she slipped and fell in water on a bathroom floor while working as a flight attendant. On March 20, 2018 Claimant underwent a right T10-T11 lateral discectomy. On April 11, 2019 Dr. Donner reviewed Claimant's thoracic spine MRI scans and recommended fusion surgery involving T10-T11 and T11-T12. Because Respondents denied the surgical request, Claimant underwent the thoracic spine fusion surgery through her personal insurance on January 14, 2020. In contrast to her first surgery, Claimant noted improvement with decreased pain that allowed her to decrease opioid medications. On April 21, 2020 Claimant's ATP Dr. Cava concluded that she had reached MMI and assigned a 6% whole person permanent impairment of the thoracic spine.

9. As found, on September 9, 2020 Claimant underwent a DIME with Bryan Counts, M.D. After reviewing medical records and performing a physical examination, he noted thoracic spine range-of-motion deficits. Dr. Counts concluded that Claimant had not reached MMI. He noted that the thoracic fusion surgery was "quite successful." Dr. Counts reasoned that the second surgery was both medically necessary and related to Claimant's August 20, 2017 work-related injury. He remarked that the Medical Treatment Guidelines authorize a spinal fusion after a failed discectomy. He specifically noted that the Lower Back Medical Treatment Guidelines permit revision surgery when previous operations have failed and significant functional gains are present. Dr. Counts recommended physical therapy and tapering off Percocet.

10. As found, in contrast, Dr. Castro explained that Dr. Counts was wrong in concluding that Claimant had not reached MMI more than 10 months after the first surgery. He detailed that thoracic fusion surgery was not warranted in the absence of instability, spinal canal compression, neural foraminal compression or substantial residual disc herniations. The preceding findings were confined to the T10-T11 level. At the T11-T12 level, there was only a small disc bulge on the left side that was unrelated to Claimant's work injury or symptoms. Dr. Castro emphasized that the T11-T12 level was not related to Claimant's original Workers' Compensation injury. He remarked that Dr. Counts was incorrect in his causation assessment because Claimant's intractable pain complaints were likely related to her escalating doses of narcotics. Dr. Castro further

testified that Dr. Counts was incorrect in citing the Division of Workers' Compensation Medical Treatment Guidelines for the Lower Back in support of his causation opinion because there are no thoracic Medical Treatment Guidelines and thoracic fusions rarely succeed. Furthermore, Dr. Cava also determined that Claimant had reached MMI on April 21, 2020. She commented that Claimant was off pain medications for her work-related injury, but had an unrelated foot injury that was preventing her from returning to work.

11. As found, despite the opinions of Drs. Castro and Cava, Respondents have failed to demonstrate that Dr. Counts' DIME opinion was clearly erroneous. Although Drs. Castro and Cava concluded that Claimant had reached MMI as a result of her August 20, 2017 industrial injury, they failed to identify Dr. Counts' specific error or improper application of the *AMA Guides.* Dr. Counts' determined Claimant had not reached MMI because she had not healed from the second surgery. The opinion of Dr. Hughes and the medical records support Dr. Counts' DIME opinion and reflect that Claimant has not attained MMI. Specifically, after reviewing Claimant's medical records and conducting a physical examination, Dr. Hughes determined that Claimant's thoracic spinal fusion surgery was reasonable, necessary, and causally related to her August 20, 2017 work-related injury. Dr. Hughes noted that Claimant had not reached MMI and agreed with Dr. Donner's post-operative rehabilitation program. Contrary determinations by Drs. Castro and Cava are mere differences of medical opinion that do not constitute clear and convincing evidence to overcome Dr. Counts' DIME opinion. Accordingly, Respondents have not produced unmistakable evidence free from serious or substantial doubt that Dr. Counts' conclusion that Claimant has not reached MMI is incorrect.

Proposed Thoracic Fusion Surgery

12. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a preexisting condition or the subsequent aggravation or acceleration of that condition is a question of fact. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

13. As found, Claimant has demonstrated by a preponderance of the evidence that the thoracic fusion surgery performed by Dr. Donner was reasonable, necessary and causally related to her August 20, 2017 industrial injury. Initially, an April 4, 2019 thoracic MRI revealed small disc protrusions at T10-T11, T11-T12 and T12-L1. On April 11, 2019 Dr. Donner reviewed Claimant's thoracic spine MRI scans and noted a right central disc

protrusion at T11-T12 along with degeneration at T10-T11. He recommended fusion surgery involving T10-T11 and T11-T12. Claimant underwent the procedure on January 14, 2020. In contrast to her first surgery, Claimant noted improvement with decreased pain that allowed her to diminish the use of opioid medications.

14. As found, in addition to Dr, Donner's opinion, DIME Dr. Counts reasoned that the thoracic fusion surgery was medically necessary and related to Claimant's August 20, 2017 work-related injury. After reviewing Claimant's medical records and conducting a physical examination, Dr. Hughes also determined that Claimant's thoracic spinal fusion surgery was reasonable, necessary, and causally related to her August 20, 2017 work-related injury. In contrast, Dr. Castro emphasized that the T11-T12 level was not related to Claimant's original Workers' Compensation injury. However, the bulk of the medical records and persuasive medical opinions demonstrate that the thoracic spinal fusion surgery was causally related to Claimant's August 20, 2017 industrial injury. Accordingly, the January 14, 2020 thoracic fusion surgery performed by Dr. Donner was reasonable, necessary and causally related to Claimant's August 20, 2017 industrial injury.

Temporary Total/Partial Disability Benefits

15. To prove entitlement to Temporary Total Disability (TTD) benefits a claimant must demonstrate that the industrial injury caused a disability lasting more than three work shifts, she left work as a result of the disability, and the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

16. Section 8-42-106(1), C.R.S. provides for an award of TPD benefits based on the difference between the claimant's AWW at the time of injury and the earnings

during the continuance of the disability. Specifically, an employee shall receive 66.66% of the difference between her wages at the time of her injury and during the continuance of temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury caused the disability and consequent partial wage loss. §8-42-103(1), C.R.S.; *see Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury). Section 8-42-106(2), C.R.S. provides that TPD shall continue until either of the following occurs: the employee reaches MMI; or the attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin the employment." *See Evans v. Wal-Mart*, WC 4-825-475 (ICAO, May 4, 2012).

17. As found, Claimant has proven by a preponderance of the evidence that she is entitled to receive TTD benefits for the period April 21, 2020 until August 8, 2020 and TPD benefits for the period August 9, 2020 until February 19, 2021. Claimant explained that when Dr. Cava determined she had reached MMI on April 21, 2020 she was unable to perform her regular job duties. She commented that she had not completely healed from her second surgery. Furthermore, because her job required lifting up to 50 pounds and her work restrictions precluded lifting in excess of 35 pounds, she was unable to perform her regular job duties. Claimant was thus off of work from April 21, 2020 to August 8, 2020.

18. As found, in contrast, Dr. Cava noted in her April 21, 2020 MMI determination that there were work restrictions unrelated to Claimant's industrial injury. Specifically, because Claimant's second surgery was not covered by Workers' Compensation, ongoing restrictions should be assigned by Dr. Donner. However, because Claimant's thoracic spinal fusion surgery was reasonable, necessary and related to her August 20, 2017 industrial injury, any restrictions and limitations from the surgery were causally related to her August 20, 2017 work injury. She was thus unable to perform her regular job duties because of her industrial injury. Claimant has demonstrated her disability and an impairment of earning capacity by her inability to effectively and properly perform her regular job functions. Accordingly, Claimant is entitled to receive TTD benefits for the period April 21, 2020 until August 8, 2020.

19. As found, for the period August 9, 2020 to February 19, 2021 or 189 days Claimant earned total wages of $13,772.57. During this same period of time at the admitted AWW of $596.60 Claimant would have earned $16,108.20. Claimant thus suffered a wage loss of $2,335.63 for the period August 9, 2020 until Dr. Cava placed her at MMI on February 19, 2021. The medical records and Claimant's credible testimony thus reflect that her August 20, 2017 industrial injury caused her disability and consequent wage loss. Accordingly, Claimant is entitled to receive TPD benefits based on her wage loss of $2,335.63 during the period August 9, 2020 to February 19, 2021.

Disfigurement

20. Section 8-42-108, C.R.S. provides that a claimant may obtain additional compensation if he is seriously disfigured as the result of an industrial injury. As found, Claimant underwent a disfigurement evaluation at the hearing in this matter. As a result of her August 20, 2017 industrial injury, Claimant sustained permanent disfigurement from two surgeries. Both of the surgeries occurred in the same location and resulted in scarring. As a result, Claimant has a four inch long sunken scar down the midline of her back. Claimant testified that the second surgery did not change the scar except to make it about one inch longer. The disfigurement is serious, permanent and normally exposed to public view. Accordingly, Claimant is entitled to receive a disfigurement award in the amount of $800.00.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to overcome the DIME opinion of Dr. Counts that Claimant has not reached MMI for her August 20, 2017 industrial injury.

2. Claimant's request for Respondents to pay for the January 14, 2020 thoracic fusion surgery performed by Dr. Donner is granted.

3. Claimant earned an AWW of $596.60.

4. Claimant shall receive TTD benefits for the period April 21, 2020 until August 8, 2020.

5. Claimant shall receive TPD benefits based on her wage loss of $2,335.63 during the period August 9, 2020 to February 19, 2021.

6. Claimant shall receive a disfigurement award in the amount of $800.00.

7. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts.

For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms.

ISSUES

I. Whether Claimant sustained any permanent impairment, and if so, the extent of that impairment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following specific findings of fact:

PRIOR WORK INJURY AND SETTLEMENT OF CLAIM

1. Claimant, who is currently 30 years old, suffered a prior work-related back injury on February 16, 2018 while working for a prior employer. (Respondents' Hearing Submission A, pg. 2 and C, pg. 128) On the date Claimant was injured while moving beams. Claimant leaned over leaned over to pick up a beam and as he stood up, he experienced back pain. (Ex. B, pg. 11)

2. Between the date of injury and August 7, 2018, Claimant was neither taken off from work entirely nor placed on modified duty. Claimant was prescribed pain medications and underwent physical therapy, lumbar MRI and was referred to a chronic pain specialist. (Ex. B). He was diagnosed with herniated disc, chronic low back pain and depression. (Ex. B, pgs. 79 & 100)

3. On June 14, 2018, Claimant was seen for a psychological evaluation. At this time, Claimant was complaining of pain in both of his legs. Claimant stated that he had an annular tear at L5, pinched nerves and a herniated disc at L4 and that he was having ongoing functional limitations because the pain adversely effected "almost every aspect of his life." (Ex. B, pg. 103) Claimant was referred for 8 visits of cognitive behavioral therapy over a period of 8-12 weeks. (*Id*.)

4. On June 24, 2018, Claimant was seen by Eric M. Shoemaker, D.O., who diagnosed Claimant with an L5-S1 disc protrusion and bulge with central annular tear. (Ex. B, pg. 112)

5. On June 26, 2018, Claimant underwent a bilateral S1 transforaminal epidural steroid injection ("ESI") by Dr. Shoemaker for the diagnosis of "chronic pain syndrome." (Ex. B. pgs. 115-116)

6. On July 9, 2018, Dr. Jones reported that Claimant was not at MMI and would likely require permanent work restrictions. (Ex. B, pg. 118)

7. On July 20, 2018, Dr. Shoemaker recommended a second ESI, cognitive behavioral therapy, continued medications, and a follow up with Claimant in two weeks. (*Id*. at 121-122)

8. On August 2, 2018, Claimant underwent a second ESI with Dr. Shoemaker. (Ex. B, pg, 125)

9. On August 9 and 15, 2018, Claimant was seen for psychological counseling for chronic pain syndrome with Edward Cotgageorge, Ph.D. (Ex. B, pgs. 125-126)

10. On August 17, 2018, and before Claimant was placed at MMI, Claimant entered into a full and finale settlement agreement and settled his February 16, 2018 claim for (One Hundred Thousand Dollars) $100,000. The settlement agreement was approved by the Director of the Division of Workers' Compensation on August 17, 2018. The settlement agreement sets forth in detail the extent of Claimant's prior work injury. The settlement agreement specifically indicates Claimant's prior work injury included:

    a. Back injury including chronic low back pain.

    b. Lumbosacral strain.

    c. L4-S2 bilateral foraminal stenosis.

    d. L5 annular tear.

    e. Right greater than left radiculopathy.

    f. Depression.

    See (Ex. A, pgs. 2 & 8)

11. At the time of the settlement, Claimant was in active – and ongoing - medical treatment and had not been placed at MMI or evaluated for permanent impairment.

12. On December 27, 2018, Claimant was seen at SCHC Monfort Family Clinic complaining of worsened back pain with no additional injury, two episodes of urinary incontinence "one month ago and four months ago," the inability to sit or sleep without pain, limping with walking and inability to run. Claimant explained that he was not working due to his February 2018, injury, that he had done PT and steroid injections for the prior work injury "before considering surgery" and he had since settled this claim and no longer treating under workers' compensation. (Ex. N. pg. 402)

13. No evidence was presented that Claimant worked from the date of his February 16, 2018 injury through July 24, 2019.

CLAIMANT HIRED BY EMPLOYER ON JULY 25, 2019

14. On July 25, 2019, Employer hired Claimant as a sanitation driver. (Ex. C, pg. 128 & Ex. EE, pg. 841). Claimant's job required him to lift 50 pounds from ground level, bend, stand and sit, driving in a seated position for long periods of time, climb to heights and walk on uneven surfaces. (Ex. EE, pg. 841). Lance Norris ["Norris"], Employer Health Safety and Environment Director, testified that Claimant's job was to drive trucks, clean up wastewater, clean Porta Johns out, hook up hoses and that the job required a lot of physical activity, including a lot of lifting, bending, and twisting. (3/26/21 Hearing Transcript ["HT"] pg. 28 lns. 3-18)

CLAIMANT ALLEGES NEW
BACK AND SHOULDER INJURY ON SEPTEMBER 7, 2019.

15. On September 7, 2019, Claimant alleged he injury his "right back/shoulder" while picking up tools, hoses, and equipment. (Ex. C, pg. 128)

16. On September 9, 2019, Clamant reported to Employer that on September 7, 2019, he injured his "right back/shoulder picking up tools, hoses, and equipment. (Ex. C, pg. 128) There were no witnesses to this injury despite Employer's investigation. (Norris HT pg. 30 lns. 10-20) This injury is designated WC No. 5-118-981 and is a non-lost-time claim. Claimant was seen by Julie Parsons, M.D., who kept Claimant at full duty at all times for this injury. (Ex. L, pg. 232 – 314)

17. Between September 7, 2019 and October 21, 2019, Claimant underwent minimal conservative treatment consisting of massage, applying heat and had no work restrictions. In fact, Claimant was seen by Dr. Julie Parsons on October 2, 2019, complaining of back pain but stating that his neck felt better. (*Id*. at 233) Dr. Parsons diagnosed cervical and lumbar strains. (*Id*. at 236)

18. On October 23, 2019, Dr. Parsons placed Claimant at MMI without impairment. She also stated that Claimant was no longer taking medications for "this injury" and that Claimant did not require maintenance medical treatment. (*Id.* at 244)

19. Between September 7, 2019 and October 20, 2019, Claimant continued to work full duty as a regular sanitation driver for Employer at full wages, including overtime. (Ex. EE, pgs. 739 and Ex. NN, pg. 841) During this time period, no physician restricted Claimant from full duty, regular employment with Employer and Claimant never called in sick or otherwise complained to Employer or any medical provider that he was unable to perform or had difficulty performing any of his sanitation driver job duties. (Norris, HT pgs. 21-34)

SECOND INJURY WITH EMPLOYER ON OCTOBER 21 ,2019

20. On October 21, 2019, Claimant had a second injury with. On that date, while getting out of his truck, Claimant twisted his ankle. (Norris, HT pgs. 34-35) This injury is designated WC No. 5-135-641. This too was a non-lost-time claim. Following the left ankle injury, Claimant returned to modified duty for Employer working in the office where he could elevate his foot. (Norris, HT pg. 35) Claimant was seen by Dr. Parsons on October 23, 2019 at which time he was placed at MMI with no impairment and released to full duty. (Ex. L, pg. 247)

CLAIMANT TERMINATED FROM EMPLOYER ON OCTOBER 31, 2019

21. On October 31, 2019, Claimant was terminated from Employer. (Norris, HT pg. 36)

CLAIMANT STARTS NEW JOB WITH NEW EMPLOYER

22. On December 5, 2019, Claimant began work as a water truck driver for subsequent employer Kinetic Energy. (Ex. FF, pgs. 841A-842 & 850). Claimant's job qualifications include a Class A CDL which requires a fit for duty physical, involves getting out of the truck and connecting the tanker to the water source that is being loaded onto the truck, operating a pump to suck water into the tank and connecting a hose to the tank, and when the truck is full, closing the valves, taking the hose off, coiling it up and putting back onto the truck. (Ex. FF, pg. 841A & Norris, HT pgs. 36-37) Claimant's Kinetic Energy wage records show Claimant working full time with overtime from the time he was hired through February 18, 2020, when he was involved in a work related motor vehicle accident. (Ex. FF, pgs. 846-883)

23. On December 17, 2020, Claimant was seen by Dr. Shoemaker (who also treated Claimant for the prior February 2018, work related back injury Claimant settled for $100,000 with a different employer), who noted the two current work injuries with Employer. According to Dr. Shoemaker, Claimant's first injury on September 7, 2019 "occurred due to some heavy lifting that was unusual for his job" and the second injury occurred on October 27, 2019, when Claimant *"rolled his ankle and fell backwards landing on his back and his head whipping back hitting the ground*" and that Claimant may have sustained a concussion with head impact and no loss of consciousness although Claimant reported symptoms of increased drowsiness and headaches which are probably cervicogenic though there may be a post concussive component. (Ex. M, pgs. 324 & 341) Dr. Shoemaker repeats the October 27, 2019, mechanism of injury throughout his treatment records. (Ex. M) Regarding the lumbar spine, Dr. Shoemaker noted that Claimant's symptoms and recent lumbar MRI findings were identical to his symptoms and lumbar MRI findings from the February 2018 prior work injury. (Ex, M, pg. 341)

24. On May 20, 2020, Claimant underwent an IME with Scott Primack, D.O. Dr. Primack opined that Claimant was at MMI for his temporary exacerbation of his pre-existing back injury from his prior 2018 work injury on October 31, 2019, with no impairment. (Ex. K, pgs. 213-222)

25. On June 16, 2020, Dr. Shoemaker responded to a letter from Claimant's attorney and stated that he agreed with Dr. Primack that Claimant did not sustain any new lumbar spine injury or impairment on September 7 or October 21, 2019. Dr. Shoemaker, however, also opined that Claimant reached MMI for the lumbar spine on March 2, 2020 and MMI for the cervical spine on January 6, 2020. (Ex. J, pgs. 203-204). Dr. Shoemaker did not differentiate between the September 7 and October 21, 2019, injury dates other than to state his understanding that these two work injuries were combined into a single claim. (*Id*.at 203) Dr. Shoemaker further opined that Claimant had no lumbar spine impairment but he had a 21% WP cervical spine impairment, after combining a 4% specific disorder based upon Table 53.II.B of the AMA Guidelines with an 18% whole person for loss of range of motion. (Ex. J, pg. 204)

26. A prehearing conference was held on September 16, 2020, before PALJ Phillips who noted that both the September 7, 2019, and October 27, 2019, injuries were denied by Insurer. The ALJ granted Respondents' unopposed motion to consolidate both claims for one hearing on issues including compensability and/or to consolidate both claims for one Division IME ["DIME'] in the event final admissions of liability were filed. (Ex. G, pg. 145)

27. On October 14, 2020, Insurer filed a final admission of liability per Dr. Parsons October 23, 2019, report that Claimant reached MMI for his left ankle and low back pain and neck pain on that date with no impairment and attaching a copy of PALJ Phillips' prehearing conference order. (Ex. F, pg. 133)

28. One DIME for both claims was then scheduled with James P. Regan, which Claimant underwent on December 4, 2020. (Ex. H, pg. 176) Dr. Regan agreed with Dr. Shoemaker that Claimant reached MMI for the cervical spine in "January 2020" and he reached MMI for the lumbar spine on "3/2/20." (*Id.* at 184) Dr. Regan gave claimant a 31% WP impairment for the cervical and lumbar spine consisting of the following: 20% WP cervical spine impairment (4% for specific disorder based on Table 53 IIB plus 17% for loss of range of motion) combined with a 14% lumbar spine impairment (5% for specific disorder combined with 9% for loss of range of motion) (Ex. H, pg. 184) Dr. Regan did not specify which injury (September 7, 2019 or October 27, 2019) resulted in permanent impairment.

29. In his DIME report, Dr. Regan stated that claimant's neck and low back pain symptoms began on September 7, 2019, when Claimant lifted a case of gallon jugs of liquid and on October 21, 2019, claimant strained his left ankle when he was climbing down off of a truck and then fell backwards hitting his back on the ground and his head whipped back and hit the ground as well. (Ex. H, pg. 179)

According to Dr. Regan's DIME report, Claimant had a prior low back injury with two ESIs but per Claimant "the pain resolved after the second injection." (*Id*. at 179) No mention was made by Claimant (or referenced in Dr. Regan's DIME report) about Claimant's August 2018, $100,000 settlement of the February 2018, injury or the December 27, 2018, visit to SCHC Monfort Family Clinic (almost 5 months post settlement) where Claimant complained of back pain so bad he was unable to sit or sleep without pain, he could not run, he walked with a limp, and had two episodes of urinary incontinence "one month ago and four months ago." (Ex. N. pg. 402)

30. During his physical examination of Claimant, Dr. Regan reported that Clamant "is working and doing light lifting" and he has "modest low back pain but the neck is his greatest concern." According to Dr. Regan, Claimant "has worse pain if sitting an hour or standing an hour. He limits bending and will squat to get down. He has pain with any sideways movement of the neck or rotation of the neck. Upward gaze is difficult for him." (Ex. H, pg. 183) Dr. Regan was not aware that Claimant had been working full duty, regular work as a sanitation driver for Employer and as a water truck driver for Kinetic Energy since the date of the first injury except for a short period of time between his October 31, 2019 termination date from Employer and his December 5, 2019, start date with Kinetic Energy, where the ALJ infers Claimant was looking for employment. Nor did Dr. Regan have any information of the physical requirements both jobs entailed.

31. According to Dr. Regan's DIME report, Claimant "was only seen for the lumbar and cervical." Dr. Regan stated that "I feel he did not sustain a significant ankle injury on 9/7/19. The 10/21/19 visit was a follow up for the September event, not an additional injury to the ankle. . . I did not have the paperwork in hand regarding the ankle." (Ex. H, pg. 185)

32. In answers to interrogatories Claimant stated that ***on October 21, 2019, he "was getting off of his truck and twisted his left ankle" and that "this injury is only related to Claimant's left ankle."*** (Ex. G, pg. 170, No. 14) Claimant also stated that he "***has had no injuries to his neck, bilateral shoulders, bilateral upper extremities mid back or lower back after his September 7, 2019, injury."*** (Ex. G, pg. 170 No. 13) (emphasis added) This is completely different from the mechanism of injury that both Dr. Shoemaker and Dr. Regan have of Claimant twisting his left ankle after he fell from his truck and landed on this back and head after his head whipped around and hit the ground for which he may have had a concussion but no loss of consciousness.

33. The ALJ finds that the second injury on October 21, 2019 occurred when Claimant was getting off his truck and twisted his ankle. The ALJ finds that the mechanism of injury documented by Dr. Shoemaker and copied by Dr. Regan, *i.e.,* that Claimant *"rolled his ankle and fell backwards landing on his back and his head whipping back hitting the ground*" and sustained a concussion but no LOC did not happen. Dr. Primack explained that the medical treatment provided to Claimant for his neck by his treating physicians, including Dr. Shoemaker, after

October 21,2019, was based upon the erroneous belief that Claimant fell to the ground on his back and head, when in fact, he did not. None of the treatment following the October 21, 2019, injury would have been recommended or provided had the treating physician's known Claimant simply twisted his ankle coming down the truck as none of the treatment was related to the September 7, 2019 injury. (Primack HT, pgs. 75-82) The ALJ rejects the claim that Claimant sustained cervical spine impairment from the first injury and that the huge discrepancy in the mechanism of the second injury should be disregarded. The ALJ finds Claimant to be not credible.

34. Surveillance simply reiterated Dr. Primack's opinion that Claimant, who demonstrated no loss of function or physical difficulty, sustained no impairment from his lumbar and cervical strains. Surveillance shows Claimant walking normally, bending at the waist, walking a dog, climbing in and out of his Kinetic Energy semi-truck and driving, wearing a hard hat and removing large hoses from his truck and working for his subsequent employer with no difficulty or impediment to his lumbar and cervical spines. (Ex. DD, pgs. 723, 724 & 726 & Ex. K pgs. 221-222 & 231)

35. Dr. Regan attended the full day hearing in this claim, listened to the testimony of Dr. Primack and he also testified at hearing. After learning of Claimant's 2018, work injury and settlement, that Claimant was in active treatment with two incidences of incontinence from back pain in December 2018, the discrepancy with the mechanism of the second injury (spraining ankle coming down truck vs. spraining ankle after falling from truck and landing on back and having a whiplash type injury hitting head on the ground and suffering a concussion with no loss of consciousness), that Claimant worked full duty as a sanitation driver for Employer at all times post injury through termination date, that Claimant worked full duty as a water truck driver that required a CDL for a subsequent employer, one month post termination through ongoing, and after hearing Dr. Primack's testimony, Dr. Regan admitted that his DIME physician opinion that Claimant sustained a 31% WP impairment rating was wrong and that it violated Level II accredited teachings. Dr. Regan testified further that he changed his DIME opinion and now opined that Claimant has no permanent impairment as a result of the September 7, 2019, injury and Claimant has no permanent impairment as a result of the October 21, 2019, injury. Dr. Regan admitted that his original DIME opinion regarding permanent impairment of both injuries and to Claimant's lumber and cervical spines was wrong and inconsistent with Level II accredited teachings. Dr. Regan testified that his true and correct Division IME opinion is that Claimant sustained no impairment of any kind in both claims. (Regan HT, pgs. 213-215 & 219)

36. Dr. Regan also agreed that his original DIME opinion that Claimant had whole person cervical and lumbar spine impairments were wrong for another, independent reason: his initial opinion that Claimant sustained a lumbar and cervical spine impairment was incorrect based upon Table 53 II b of the AMA Guidelines, 3rd edition revised. That Table permits a physician to give a 4%

specific cervical disorder impairment and a 5% specific lumbar spine impairment for disc or soft tissue lesion with a minimum of six months of documented pain and rigidity. (Ex. II pg. 914) Dr. Primack explained that both Drs. Regan and Shoemaker opined that Claimant reached MMI for his cervical spine on January 6, 2020, 4 months after the first injury and 10 weeks after the second injury and MMI for his lumbar spine on March 2, 2020, less than 6 months after the first injury and 4 ½ months after the second injury). A Table 53 II b specific disorder for a cervical or lumbar spine impairment absent 6 months of documented pain and rigidity is wrong as both Drs. Primack and Regan testified to a hearing. (Regan HT, pgs. 175, 196-200 & 204-218). Dr. Regan also admitted that there was insufficient evidence in the records to support that Claimant had 6 months of documented pain and rigidity to the cervical and lumbar spines. *(Id.)* Both physicians agreed that because Claimant does not have impairment for a lumbar or cervical specific disorder, he cannot have impairment for loss of range of motion. (Regan HT, pgs. 199-201) The ALJ finds that Dr. Shoemaker's opinion that Claimant sustained a 21% cervical spine impairment (1% higher than Dr. Regan's initial cervical spine impairment for additional loss of range of motion) is wrong for these same reasons. Both Drs. Shoemaker and Regan opined that Claimant reached MMI for the cervical spine on January 6, 2020, much less than 6 months from the date of either injury. Consequently, Dr. Shoemaker's cervical spine impairment is also wrong and inconsistent with Level II accredited teachings.

37. Dr. Regan objected the notion that because his DIME actually took place more than 6 months from the date of either injury, this would somehow fulfill the 6 month requirement of documented pain and rigidity necessary for a Table 53 II b cervical or lumbar spine specific disorder. (Regan HT, pgs. 226-230). While Dr. Primack had explained that it may be appropriate for a rating physician at the time of MMI to project outward that an injured worker is anticipated to have 6 months of documented pain and rigidity even though 6 full months have not passed from date of injury until date of MMI, this projection is done at MMI. It is not appropriate per Level II accredited teachings for a physician examining an injured worker months AFTER MMI to include that time period in the 6 months because permanent impairment is determined "at MMI." (*Id*.)

38. Furthermore, Dr. Regan admitted that his original DIME physician opinion with regard to permanent lumbar impairment was wrong because it violated Level II accredited teachings with respect to causality and apportionment. Having learned about the extent of Claimant's 2018 back injury, the degree of medical treatment he had for that injury, the six-figure settlement and that Claimant continued in active treatment for significant back symptoms as late as December 2018 (none of which Dr. Regan was aware of at the time he rendered his original DIME physician opinion regarding permanent lumbar spine impairment), Claimant, in hindsight, factually had a 5% specific disorder to the lumbar spine as of December 27, 2018 (when he was seen for incontinence for back pain) for which he was compensated by prior settlement. Consequently, Dr. Regan agreed that another reason his original DIME physician opinion is wrong is that if Claimant

even had a 5% specific lumbar spine disorder from the injuries in this case (which Dr. Regan opined Claimant does not), that 5% would be apportioned to the 2018 injury as it was not caused by the 2019 injuries in this case resulting in no lumbar spine impairment in this case. (Regan HT, pgs. 173-180)

39. The ALJ finds that Dr. Regan changed his DIME physician opinion and that Dr. Regan's true and correct DIME opinion is that Claimant sustained no permanent impairment of any kind in these claims. Claimant failed to overcome Dr. Regan's opinion that he sustained no permanent impairment by clear and convincing evidence. The ALJ rejects Dr. Shoemaker's opinion regarding Claimant's permanent cervical impairment because it is not consistent with Level II accredited teachings for the same reasons Dr. Regan's original opinion admittedly fails. Moreover, Dr. Shoemaker's understanding of the mechanism of Claimant's second injury is wrong. As found, Claimant sprained his ankle coming out of his truck. Claimant did not sprain his ankle from falling from his truck, landing on his back, and having a whiplash injury where his head hit the ground and he did not have a concussion with no loss of consciousness as documented by Dr. Shoemaker.

40. Claimant chose to not testify; however, the ALJ finds that statements made by Claimant to his medical providers, including the DIME physician, regarding his mechanisms of injury and subsequent subjective pain complaints and alleged impact of the injuries on his level of function, activities of daily living and ability to work to be not credible. The ALJ finds testimony from Dr. Primack and Dr. Regan regarding his changed but true and correct DIME opinion that Claimant sustained no impairment in these claims to be credible and persuasive.

41. Claimant sustained no lumbar spine impairment as the 5% whole person lumbar spine specific disorder was not caused by the injuries in these claims.

42. Claimant sustained no cervical spine impairment as the 4% whole person cervical spine specific disorder was not caused by the injuries in these claims.

43. Claimant sustained no ankle impairment.

44. Claimant sustained no impairment to any other body part in these claims.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

1. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI, and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect, and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

6. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals*

Office, 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

7. If a party has carried the initial burden of overcoming the DIME physician's impairment rating by clear and convincing evidence, the ALJ's determination of the correct rating is then a matter of fact based upon the lesser burden of a preponderance of the evidence. *See Deleon v. Whole Foods Market, Inc*., W.C. No. 4-600-47 (ICAP, Nov. 16, 2006). The ALJ is not required to dissect the overall impairment rating into its numerous component parts and determine whether each part has been overcome by clear and convincing evidence. *Id.* When the ALJ determines that the DIME physician's rating has been overcome, the ALJ may independently determine the correct rating. *Lungu v. North Residence Inn*, W.C. No. 4-561-848 (ICAP, Mar. 19, 2004); *McNulty v. Eastman Kodak Co*., W.C. No. 4-432-104 (ICAP, Sept. 16, 2002)

8. Where an ALJ determines that a DIME physician changed his opinion concerning MMI or impairment, the party seeking to overcome that new opinion bears the burden of proof by clear and convincing evidence. *Dazzio,* W.C. No. 4-660-149 (ICAO June 30, 2008); *Clark v. Hudick Excavating, Inc.*, W.C. No. 4-524-162 (ICAO November 5, 2004).

9. As found, Dr. Regan changed his DIME opinion concerning impairment and testified that his true and correct DIME opinion is that Claimant sustained no impairment from the September 7, 2019, injury and no impairment from the October 21, 2019, injury. The ALJ accepts Dr. Regan's changed DIME opinion and finds that Claimant failed to overcome Dr. Regan's new DIME opinion by clear and convincing evidence and not even by a preponderance of the evidence.

10. As found, Dr. Primack persuasively explained that Dr. Regan failed to comply with the *AMA Guides*, specifically Table 53 II b and that Dr. Regan's 31% whole person impairment rating was contrary to the persuasive medical evidence. Instead, Dr. Regan primarily relied on Claimant's subjective complaints in assigning an impairment rating. Dr. Regan testified that he agreed with Dr. Primack that his original DIME rating was wrong. As found, Dr. Shoemaker also gave a 21% WP cervical spine impairment which Dr. Regan admitted he followed and provided a 20% WP rating finding 1% less for loss of ROM. As found, Dr. Primack and Dr. Regan agreed that Dr. Regan's cervical and lumbar impairment ratings did not comply with Table 53 II b which requires "an intervertebral disk or other soft tissue lesion, un-operated, with medically documented injury and a minimum of six months medically documented pain and rigidity. Dr. Primack testified that Claimant did not have six months of complaints of "pain" or "rigidity"

regarding his cervical and lumbar spines and was not expected to have ongoing pain and rigidity after MMI. Consequently, Claimant did not have a Table 53 II B diagnosis for his cervical or lumbar spines. Dr. Primack explained and Dr. Beatty agreed that without any impairment for a Table 53 specific disorder for the lumbar or cervical spines, Claimant cannot be given an impairment rating for loss of range of motion. In fact, Dr. Regan remarked that the objective pathology to support his opinion regarding the cervical and lumbar impairments was the range of motion testing he performed during his DIME. Moreover, he was unable to cite medical records to demonstrate six months of pain and rigidity in Claimant's cervical and lumbar spines pursuant to Table 53 II B of the *AMA Guides,* and admitted that six months of pain and rigidity for Claimant's cervical and lumbar spine does not exist in these claims. Accordingly, Dr. Regan's initial cervical and lumbar spine ratings were erroneous and do not comply with the *AMA Guides* as Dr. Regan himself admitted.

11. As found, Dr. Primack summarized that pursuant to the General Principles of the Colorado DOWC Impairment Rating Tips, impairment ratings should only be given "when a specific work-related diagnosis and objective pathology can be identified. He commented that Dr. Regan failed to identify any objective pathology to support a permanent impairment for his diagnoses of neck and back strain, knee contusion and wrist strain. Dr. Primack explained that it is wrong to assign an impairment rating based on a claimant's subjective complaints, particularly when such claimant is not credible Moreover, Dr. Primack detailed that Dr. Regan incorrectly performed his impairment rating. He explained that a DIME physician is supposed to begin with a pathological or anatomic diagnosis. Instead, Dr. Regan used range of motion deficits to ascertain or identify an objective pathology. Accordingly, Dr. Regan's initial approach was not consistent with Level II accredited teachings.

12. As found, Claimant sustained no lumbar spine impairment as the 5% whole person lumbar spine specific disorder was not caused by the injuries in these claims and/or would otherwise be apportioned to the 2018 work injury for which Claimant was compensated.

13. As found, Claimant sustained no cervical spine impairment as the 4% whole person cervical spine specific disorder was not caused by the injuries in these claims.

14. As found, Claimant sustained no ankle impairment.

15. As found, Claimant sustained no impairment to any other body part.

16. As found, Claimant's true and correct DIME physician opinion is Claimant sustained no permanent impairment of any kind in these claims. Claimant failed to overcome the DIME physician's opinion regarding permanent impairment by clear and convincing evidence and even by a preponderance the evidence.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to overcome Dr. Regan’s true and correct changed Division IME opinion that Claimant sustained no permanent impairment in both claims.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 15, 2021.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-132-708-001

ISSUES

The issues set for determination were:

- Whether Claimant demonstrated by a preponderance of the evidence that the March 15, 2019 motor vehicle accident occurred in the course and scope of his employment while on travel status.

- What was Claimant's Average Weekly Wage?

- Is Claimant is entitled to an award of medical benefits for treatment for injuries caused by the MVA?

- Is Claimant entitled to TTD benefits?

PROCEDURAL POSTURE

The ALJ issued a Summary Order on December 12, 2020. On or about December 22, 2020, Respondents requested a full Order.

Claimant filed a Motion for Corrected Order on December 29, 2020, to which there was no Response filed. The ALJ granted Claimant Motion for a Corrected Order and the Claimant's TTD rate was $987.84 per week, with benefits to begin on March 16, 2021.

STIPULATION

The parties stipulated at the onset of the hearing that Claimant's pay entitled him to the maximum TTD rate for his date of injury, $987.84 per week. This Stipulation was accepted by the Court and is made part of this Order.

FINDINGS OF FACT

1. Claimant is a licensed dentist and has worked in that capacity since 1964. Claimant lives in Niwot, Colorado.

2. Claimant began working for Respondent-Employer at its Fort Morgan office in 2018. He testified that his employment was pursuant to a written agreement. That agreement was not admitted into evidence.

3. Respondent-Employer is a dental practice owned and operated by S[Redacted employer name], DDS, his father, and others. The S[Redacted] own and operate dental clinics in three states including Colorado. M[Redacted] was an office manager who performs administrative work for these clinics, including the La Junta clinic where Claimant worked at the time of his accident. S[Redacted] testified Ms. M[Redacted] performed the HR function for the offices.

4. There was no dispute to the Claimant was an "employee", as that term is defined by the Act.

5. Claimant testified he was informed that the Fort Morgan office was closing and was contacted to work in the La Junta office. The evidence in the record established there were discussions regarding the terms of his employment.

6. Claimant and S[Redacted] discussed his employment in a series of emails they exchanged. Claimant requested reimbursement for mileage, which Employer declined. S[Redacted] confirmed this in his testimony and stated that mileage was included in the minimum guarantee. The ALJ found travel was a term negotiated by Claimant and Respondent-Employer during these communications.

7. The terms and conditions of Claimant's work at the La Junta office were memorialized in an email, dated August 22, 2018. That email specified:

- Starting September 4th work Monday, Tuesday, Wednesday, Thursday of the week.
- Start and end times to be determined and flexible, as you've indicated
- The minimum daily guarantee you have proposed is $600/day, **which also covers travels**.
- We have agreed that we will cover the cost of a hotel.
- 32% of production seems fair compensation with a minimum daily guarantee of $600 per day to start. During the middle of the month we will talk to determine if this will work out in the long term for both of us, and if so a long-term contract will be written up and agreed upon for both parties
- S[Redacted] will communicate with you regarding performance and how we perceive the situation working in the La Junta office. [Emphasis added].

8. The ALJ finds the wording of this email explicitly specified that the "minimum daily guarantee" encompassed compensation for travel.

9. The ALJ concluded that the employment agreement specifically contemplated Claimant driving from his home in Niwot to La Junta, Colorado. Employer was aware Claimant was required to travel to be employed. Employer included

Claimant’s mileage reimbursement in the minimum daily guarantee paid to Claimant. Employer paid for Claimant‘s hotel stays in La Junta during the time he worked there as part of the agreement.

10. Travel was part of the agreement between Claimant and Employer.

11. Claimant testified that he would drive from his home in Niwot to La Junta on Monday. Claimant would then work at the dental office in La Junta on Tuesday, Wednesday, Thursday, then drive back to Niwot after he completed his work on Thursday. Employer paid for the expense of his hotel stay while he was in La Junta. Claimant testified he worked under this agreement through March 2019.

12. Claimant received a W-2 Wage and Tax Statement form at year-end for his wages in 2018.

13. On October 23, 2018, Ms. Olson sent an email regarding issues at the La Junta office. Ms. Olson stated treatment planning needed to be done for every patient and patients were not to be referred out when the work could be done in the office. If the treatment could not be provided, that patient could be referred out. Production had to be increased and Ms. Olson specified the office needed to be producing $5000 per day.

14. On February 7, 2019, M[Redacted] (Regional Human Resource Director) sent an email to Claimant in which she specified that the practice opened at 8:30 a.m. and closed at 5:00 p.m. The email stated Claimant was expected to be in the office during these hours. Ms. Olson stated if Claimant was late coming into the office, Employer would not pay the daily rate, but according to the time Claimant arrived. M[Redacted] also said the hotel would not be booked until Claimant arrived in La Junta, that Employer planned on Claimant “being there on Monday the day before you start on Tuesday, this is each week”. The ALJ concluded Employer required Claimant to be in La Junta starting on Monday in order to work full days Tuesday through Thursday. By setting the starting time for Claimant to begin work on Tuesday morning, this necessitated his travel to La Junta the day before.

15. On February 18, 2019, S[Redacted] wrote Claimant to thank him for all of his hard work “so they could get the office open all last week to make up for a slower January”. S[Redacted] said Claimant‘s regular schedule would resume as normal, but he could work more than three days. S[Redacted] said they hoped to find someone soon for Mondays or Fridays. The ALJ inferred the office was short-staffed when Claimant was working in the La Junta office. Exhibit 5, which documented when various dentists worked supported this conclusion.

16. Based upon the staffing issues, the ALJ found Claimant's work in the La Junta office conferred a benefit on Employer.

17. Claimant wrote an email to S[Redacted] and Ms. M[Redacted] on February 24, 2019, expressing various concerns. These included question about the schedule and his pay checks. Claimant also was concerned that the office was not going to be open at various times.

18. Claimant testified the most direct route from La Junta to his home was to take Highway 60 from La Junta to I-25, then I-25 north to Highway 52 at the Erie, Colorado exit, then Highway 52 to Niwot.

19. During the week of March 11-14, 2019, Claimant traveled from Niwot to La Junta and worked at Employer's premises. There was inclement weather in Colorado that week, which delayed Claimant's return home after working in La Junta. Claimant testified there was a lot of snow because of a "cyclone blizzard" and there were road closures which prevented him from returning home on Thursday. He stayed an additional night (March 14, 2019) in La Junta and returned home on March 15, 2019. Employer paid for the additional night stay, which was confirmed by S[Redacted]. S[Redacted] testified he did not know about what was paid the week of March 11 through March 15, 2019, but he agreed that the receipt from the Holiday Inn where Claimant stayed the week of March 11 through March 11, 2019, was proof that Respondent paid the entire bill in one payment.

20. On March 15, 2019, Claimant was injured in a motor vehicle accident which occurred as he was traveling home. Claimant's injuries did not occur on Employer's premises and was outside his regular working hours.

21. The payroll transaction detail from September 18, 2018 through March 22, 2019 was admitted into evidence. During these months, Claimant was paid based upon his production at the dental office. For the paychecks dated September 18, 2018, October 3, 2018, October 15, 2018, October 29, 2018, and December 3, 2018, a $500.00 cash advance repayment was taken out. A $250.00 cash advance repayment was taken out in the checks on November 2, 2018 and November 13, 2018. The cash advance repayment was not taken out on the remaining paychecks through March 22, 2019. The ALJ noted Claimant's production exceeded his daily minimum during the period covered by the records and Employer benefitted by his production.

22. Claimant received treatment in the Emergency Department of Good Samaritan Medical Center on March 15, 2019. He was complaining of pain in his left shoulder and right ankle. At the ED, he was evaluated by Klementyna Breyer, M.D., whose clinical impression was: close fracture of one rib of left side, initial counter; sprain

of left shoulder, unspecified shoulder sprain type, initial encounter; injury of head, initial encounter.

23. On July 31, 2019, Claimant was evaluated by Julie Stapleton, M.D. for short term and attention issues arising out of the MVA. Dr. Stapleton‘s impression was: motor vehicle accident 3/15/2019; mild traumatic brain injury, post-concussive complaints, primarily neurocognitive fatigue; post-traumatic adjustment disorder, with mood and anxiety related to marked changes in his day-to-day experience, and lifestyle planning; post-traumatic memory impairment, further evaluate other cognitive challenges. Dr. Stapleton ordered neurofeedback, hyperbaric oxygen therapy, additional cognitive therapy, counseling, cognitive stimulants.

24. On April 5, 2019, Claimant was evaluated by Robert Leland, M.D. At the Boulder Centre for Orthopedics. At that time, he presented with left sided low back pain. Claimant reported his shoulder pain had generally resolved. Tenderness was found over the left shoulder on examination. Dr. Leland diagnosed a nondisplaced coracoid process fracture, left shoulder. Claimant was to follow-up as needed.

25. Claimant received hyperbaric treatments at the Hyperbaric Institute, Beginning on August 21, 2019.

26. The ALJ found Claimant required the medical treatment to cure and relieve the effects of the MVA.

27. Claimant received a W-2 Wage and Tax Statement form at year end for his wages in 2019.

28. On or about March 4, 2020, a Worker‘s Claim for Compensation was filed on behalf of Claimant. It stated Claimant injured his head, left shoulder and left ribs in a motor vehicle accident. On April 1, 2020, a Notice of Contest was filed on behalf of Respondents. The ground for denial was: injury/illness not work-related.

29. Claimant proved that he suffered an injury arising out of and in the course of his employment.

30. Pursuant to the Stipulation of the parties, Claimant‘s AWW was $ 987.84 per week.

31. Claimant has not worked since March 15, 2019 and is entitled to TTD benefits.

32. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Colorado Workers' Compensation Act (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. (2016). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Compensability

An injury must arise out of and in the course of the Claimant's employment to be compensable. 8-41-301(2)(b) and (c), C.R.S. Injuries sustained by employees going to and from work are usually not compensable. *Berry's Coffee Shop, Inc. v. Palomba*, 161 Colo. 369, 423 P.2d 2 (Colo. 1967). However, one exception to the coming and going exclusion is present when "special circumstances" create a causal relationship between the employment and the travel beyond the employee's arrival at work*. Madden v. Mountain West Fabricators*, 977 P.2d 861, 863 (Colo. 1992); *Monolith Portland Cement v. Burak*, 772 P.2d 688 (Colo. 1989). Where Claimant is injured while on travel status, under certain circumstances that injury is compensable. *SkyWest Airlines, Inc. v. Industrial Claim Appeals Office of State*, 2020 COA 131, 19CA1783 (August 27, 2020).

The *Madden* Court identified several factors to be evaluated to determine whether special circumstances exist. These factors include, but are not limited to, the following: (1) whether the travel occurred during working hours; (2) whether the travel occurred on or off the premises; (3) whether the travel was contemplated by the employment contract; and (4) whether the obligations or conditions of employment created a "zone of special danger" in which the injury arose. *Madden v. Mountain West Fabricators*, 977 P.2d at 865. The question of whether Claimant presented "special circumstances sufficient to establish the required nexus a factual determination to be resolved by the ALJ based upon the totality of circumstances. *Anthony Morrison v. Rock Electric, Inc.*, W.C. 4-939-901-03 (ICAO February 22, 2016).

In *Madden*, Claimant was injured in a motor vehicle accident while traveling from his home in Grand Junction to a construction site. The accident occurred before his shift started and he was not being paid. Claimant was not required to use his car for his employment and was not reimbursed for mileage expenses. The Court found Claimant failed to prove there was a nexus between his injuries and the employment, focusing on the fact that the travel did not occur during work hours and the accident did not occur on the employer's premises. In addition, Claimant was not earning a wage at the time of his injuries, nor was he paid for the travel. The Court concluded the travel did not confer a benefit on the employer apart from Claimant's arrival at work and the case was not compensable.

The Colorado Supreme Court applied the *Madden* factors in *Staff Adm'rs, Inc. v. Reynolds*, 977 P.2d 866, 867 (Colo. 1999). In that case, Claimant was injured in a MVA as he was driving to a temporary construction site operated by Employer-Armendariz Construction Company. Claimant did not meet with other workers at a service station in Grand Junction, Colorado, where Employer customarily paid for the cost of fuel. The ALJ concluded Employer expected Claimant to travel as part of his job and he performed services at a substantial distance from his home. The ALJ's decision that the claim was compensable was affirmed by the ICAO and then by the Court of Appeals. The Colorado Supreme Court also affirmed this decision. Chief Justice Mullarkey stated:

> "Applying these variables to the facts of this case, we find that there is no evidence that Reynolds' injury occurred during working hours or that it occurred on his employer's premises. In addition, there is no evidence in this case that Reynolds' injury occurred within a zone of special danger warranting recovery. However, there is sufficient evidence to support the ALJ's finding that travel was contemplated by Reynolds' employment contract with his employer, Armendariz Construction Company, to warrant recovery under the Workers' Compensation Act of Colorado". *Staff Adm'rs, Inc. v. Reynolds*, *supra,* 977 P.2d at 867.

As the Court in *Staff Adm'rs, Inc. v. Reynolds*, 977 P.2d 866 recognized, even where not all of the *Madden* factors were present, it was possible that an employee's injuries "arose out" of his/her employment. In the case at bar, after the factors articulated by the *Madden* Court were applied, the ALJ concluded travel was contemplated by the employment contract, although the first two factors were not present. As found, the travel did not occur during work hours (first factor) and the travel occurred off Employer's premises (second factor). (Finding of Fact 20).

As determined in Findings of Fact 6-10, the third *Madden* factor was present, as the travel was expressly contemplated by the employment contract and negotiated by Claimant and Dr. Sefcik. *Id.* As found, mileage was included in the daily minimum paid to Claimant and part of the negotiation on the agreement. (Finding of Fact 6-10). The question of reimbursement was addressed in the written terms of the employment agreement. (Finding of Fact 7). Employer also paid for the cost of Claimant's hotel when he worked in La Junta. (Finding of Fact 9). Under the specific facts of the case, Claimant's travel was the *sine qua non* of his employment, as without the travel he would not have worked for Employer. Therefore, the ALJ concluded travel was part of the agreement between Claimant and Employer. (Findings of Fact 9-10).

When considering the role travel played, the ALJ determined Claimant's travel to the La Junta office conferred a benefit on Employer, as at least during part of his employment the office was short-staffed and he may have been the only dentist present. Claimant's as an experienced dentist was also a benefit to Employer. (Finding of Fact 21). In addition, the evidence in the record showed Claimant was required to travel to La Junta on Monday, as he was expected to be in the office beginning on 8:30 a.m. on Tuesday. (Findings of Fact 14-16). But for this requirement under the contract, Claimant would not have travelled to La Junta and been injured in the collision on March 15, 2020. The ALJ concluded the accident occurred as a result of Claimant's employment at the dental clinic in La Junta.

The presence of the third factor made this case factually distinct from the circumstances in *Madden* and within the ambit of *Staff Adm'rs, Inc.* Under the totality of circumstances presented by this case, the ALJ concluded there was a causal connection between Claimant's travel to La Junta and his employment. Claimant's agreement with Employer specifically contemplated the travel to La Junta. Therefore, the injuries he sustained while traveling were compensable. *Loffland Brothers v. Baca*, 651 P.2d 431, 432-433 (Colo. App. 1982); *Cf. Lewis Essary v. General Dynamics,* W.C. 5-117-912 (ICAO December 1, 2020). This case is factually distinct from *Madden* and *Essary,* and accordingly, Claimant's injuries were compensable.

In coming to this decision, the ALJ considered Respondents' arguments that Claimant's employment as a dentist required no travel other than his commute from his home to work and work to home. When considering Respondents' argument that travel was not contemplated as part of the employment agreement, beyond ensuring Claimant's arrival at work and departure from work, the ALJ found to the contrary, as it was specifically negotiated by Claimant and S[Redacted]. (Findings of Fact 6-8).

Respondents also averred this commute provided no benefit to Employer other than Claimant's arrival at work and the commute did not constitute a special hazard, as it involved the same hazards to Claimant as to any person traveling from La Junta to Niwot. However, the ALJ found to the contrary, as Claimant worked in the La Junta office at the time Employer was short-staffed and this conferred a benefit on Employer. (Findings of Fact 15-16). Employer also benefited financially from Claimant's production. (Finding of Fact 21).

The ALJ concluded that under the specific facts of this case, Claimant's travel to La Junta was contemplated by the employment agreement and, in particular, the cost of the hotel was borne by Employer. (Finding of Fact 10). Mileage, although not a separate payment, was included in his remuneration. (Finding of Fact 6). As found, Employer set the starting time for Claimant to arrive at the office (on Tuesday), which necessitated his travel the day before (on Monday). (Finding of Fact 14). This position required Claimant to commute the day before and but for the trip to the La Junta office, Claimant would not have been injured on March 15, 2020. Accordingly, Claimant suffered a compensable injury and is entitled to benefits under the Colorado Workers' Compensation Act.

ORDER

It is therefore ordered:

1. Since Claimant suffered a compensable injury while in travel status, Respondents shall pay benefits under the Colorado Workers' Compensation Act.

2. Respondents shall pay for Claimant's medical treatment, pursuant to the Workers' Compensation Fee Schedule, to cure and relieve the effects of his injury.

3. Respondents shall pay Claimant TTD benefits at a rate of $ 987.84 per week from March 16, 2019 until terminated by law.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Timothy L. Nemechek

Administrative Law Judge

Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-093-609-002

ISSUES

I. Whether Claimant has overcome by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician Matthew Brodie, who found zero impairment due to no causation. If so, should Claimant be awarded the 17% whole person impairment assessed by Dr. Brodie.

II. Whether Respondents have proven by a preponderance of the evidence that they are entitled to recovery of a stipulated $25,740.62 payment of permanent impairment benefits, provided Claimant fails to overcome the opinion of the DIME, and if so, at what rate should the overpayment be repaid.

III. Whether Claimant has established by a preponderance of the evidence an entitlement to medical maintenance benefits.

STIPULATIONS

At the start of the first hearing, the parties stipulated that should Claimant fail to overcome DIME Dr. Brodie's opinions on causation and permanent impairment, then Respondents are owed an overpayment in the amount of $25,740.62.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is currently employed by Employer as an engineer. He had worked before for Employer from 2006 to 2016. He began his current period of employment in November 2017.
2. On 11/11/2018 Claimant was leaving work at 11:30 p.m. when he slipped on ice in the Employer's parking lot. He fell onto the concrete on his buttocks, then continued falling backwards, hitting the back of his head on the concrete. A co-worker helped him up. He was dazed because of hitting his head. The co-worker asked him questions to assess his mental functioning. "HT2, p. 49, l. 7, l. 19-25.
3. The accident admittedly arose out of and in the course and scope of employment. Respondents do not seek to withdraw their admission, HT1, p. 157 l. 4-6.
4. That night Claimant's "right glute was pretty sore." He had "a huge bump" on the back of his head. "I was thinking the right glute was killing me - was pretty sore. I had my wallet in my right back pocket. I thought that might have padded my fall at bit." HT2, p. 50, l. 5-10.

5. When Claimant got home, he woke up his wife, Kimberly F[Redacted]. She testified, "he woke me up, he was freaked out. He told me that he slipped and fell in the parking lot at work . . . he fell on his butt, landed, smacked his head on the concrete . . . his butt was really sore, he said he had a headache, and he did have a lump on the back of his head because I felt it," HT2, p. 41, l. 13-25 - p. 42, l. 1-2.

6. The next day Claimant called his sister, Fyll C[Redacted]. He told her, "Sister, I fell and hit my head and my butt on the ice." She testified, "I told him to make sure to watch for a concussion because I had fallen on the ice and hit my head and ended up with a concussion." HT2, p. 33, l. 25 - 34, l. 1, 2-5.

7. On his way to work the next day, Claimant stopped at the home of his friend, Deborah E[Redacted]. He told Ms. E[Redacted], "he had slipped and fell and his coworker saw him slip and fall," HT2, p. 10, l. 5-6. He told her "he was feeling very sore," HT2, p. 10, l. 9.

8. At work the next day, 11/12/2018, Claimant reported the accident to his supervisor. His supervisor completed a form entitled, "Accident Investigation Report," Cl. Exh. P. 40-41. The form reflected Claimant reported his accident on 11/12/2018 at 4:00 p.m. It showed the accident happened on 11/11/2018 at 11:35 p.m., when Claimant "was walking to car to leave for the night and slipped and feel *[sic]* in parking lot landed on back." The supervisor described the "nature of injury" as "No injuries at time just sore back side and bumped head." A witness was listed by name, address, and telephone number.

9. The ALJ finds Claimant had symptoms in his right gluteal area and head the night of the accident which continued the next day. This is based on the supervisor's accident report and the testimony of witnesses Ms. F[Redacted], C[Redacted], and E[Redacted], which are found to be credible.

10. A year and a half before the work accident, in May 2017, Claimant was injured in a non-work-related auto accident. He injured his neck and upper back. At the time of the work accident, he was in treatment for his auto accident injuries with chiropractor Dr. Kayla Bennett.

11. On 11/15/2018 Claimant attended a previously scheduled appointment with Dr. Bennett for his auto accident injuries. At that point in time, the swelling had gone down in his head and his headaches had subsided, but he still had pain in his right glute, HT2, p. 52, l. 9-15. According to Dr. Bennett's note, Claimant did not report his work accident to her.

12. Claimant does not remember the conversation he had with Dr. Bennett at that time. He does remember he didn't think his work injury "was too serious at the time. Again, I thought I would be okay. I didn't think I needed any medical attention either. I was just going to ride it out, and I was there for my neck," HT2, p. 52, l. 20-23. In the past he had had low back pain. He would do his stretches, ride it out, and it would go away. HT2, p. 53, l. 5-9.

13. Authorized treating physician ("ATP") Dr. John Sacha testified on behalf of Claimant. He noted that it is not uncommon for people who have previously had

pain to take a wait-and-see approach to seeking treatment. He testified, "Everyone has a little different tolerance for pain. And in someone in his case who has had chronic neck pain for a long time and chronic on-and-off low back pain, he had a little more tolerance. He is going to be a little more patient before he comes in," HT1, p. 133, l. 16-20.

14. Claimant's symptoms persisted and worsened. His wife recalled, "He was getting worse. He wasn't feeling well. He had headaches for a few days, but then they got better. His lower back was starting to hurt. He had some tingling. He started limping a little bit. Things just started developing gradually." HT2, p. 42, l. 17-21.

15. Claimant testified that on 11/16/2018 his pain in his "right glute transitioned over to my left glute, my lower back, like the thigh area, and down the calf" on his left side. HT2, p. 53, l. 14-18. He knew it happened on 11/16/2018 because he made a note of it, HT2, p. 53, l. 19-25.

16. Claimant had had a herniated disk in the year 2000, at L5-S1. Thereafter, he had occasional sciatica, which he described as a "zinger" from his back down his leg, but it would be temporary and go away. HT2, p. 54, l. 5-8. He did not need medical attention when this occurred: There are no medical records, dating back to 2009 reflecting any visit for "zingers" or sciatica in the leg.

17. Claimant's post-injury left leg symptoms were different. They were both more severe, more continuous down the leg, and persistent. Symptoms did not abate until surgery months later. HT2, p. 54, l. 16-20.

18. On 11/23/2018 Claimant was awakened from sleep by his left foot. "My foot kind of exploded. It went numb and tingling. The sensation that your foot fell asleep. I had some cramping. It was tight. And it was spasming a little bit, you know. And I tried to walk it off, and it wouldn't go away," HT2, p. 56, l. 15-19. He knew it happened on 11/23/2018 because he made a note of it, HT2, p. 56, l. 13.

19. He did not go to the doctor right away because he "wanted to give it more time," HT2, p. 57, l. 2. When he did go to the doctor it was because he "got scared and panicked," HT2, p. 57, l. 13. "[T]he numbing would not go away. I was concerned that my foot -- was not going to go away. It was new. It was different. And I -- you know, usually your foot falls asleep, you get it back. This -- you know, this never happened before that it would -- I couldn't get it to – you know, to stop," HT2, p. 57, l. 7-13.

20. On 11/28/2018, Claimant sought "answers" (HT2, p. 57, l. 24) from chiropractor Dr. Bennett. She wrote that he had "a new problem" in his left foot; that at night he had had a terrible cramp in the bottom of his foot that was "almost debilitating"; and that he's had a "constant numbness" since. He also had pain in his left buttock area." She wrote, "He denies any acute trauma to the foot or back." Resp. Exh. p. 70.

21. Dr. Bennett reported that Claimant's description of his pain as debilitating "would coincide with a patient in distress." In response to whether there was a specific question and answer regarding any acute trauma, she replied that she did not

recall the exact conversation she had with Claimant on 11/28/2018, but that "it can be likely that due to the 'debilitating' pain, the fall at work was just not mentioned." Cl Exh. p. 16. In general, she found Claimant to be "always genuine and sincere," Cl. Exh. p. 16.

22. Claimant also did not remember his exact conversation with Dr. Bennett. He thought he would have told her "it happened at home in bed while I was sleeping. My foot became -- it kind of freaked me out. So, my foot began to spasm. I thought I told her I slipped on ice at work. I understand she says I didn't. I don't recall a direct question." HT2, p. 58, l. 10-14.

23. That night Claimant went to the E.R. He was seen at 1:06 a.m., so it was the next day. He went because he was "scared"; he had never had "this constant numbness and tingling that was not going away," HT2, p. 60, l. 4-5. He had awakened his wife before he went; she described him as "freaking out," HT2, p. 43, l. 1.

24. He told the E.R. admitting nurse he fell at work. She advised him to contact his Employer, HT2, p. 60, l. 12-17. She wrote, "He fell on ice on 11/11 and had buttock pain, then started having left buttock pain radiating down his left leg on 11/16, and now has left foot numbness." Cl Exh. p. 48, p. 75. Dr. Brodie did not include this history in his DIME report. He had concluded that there is no record documenting that Claimant reported to anyone he had any symptoms before 11/23/2018, 12 days after the accident, HT2, 133, l. 7-8: HT2, p. 125, l. 20-22. This history is contrary to that conclusion.

25. The history set forth by the E.R. doctor was less clear. It included that Claimant had slipped and fallen on his back. It included that Claimant had a foot spasm a week earlier. But it mixed up the two ("Last week had spasm and whole foot went numb. Did slip and fall onto back a week ago.") The doctor noted Claimant had been in treatment for 1.5 years. Claimant's auto accident was 1.5 years earlier. The doctor thought Claimant had said he had "back spasms" for 1.5 years. This does not match any pre-injury medical record. (Chiropractor Dr. Bennett had regularly evaluated Claimant for spasms but none were documented in the lumbar spine.)

26. ATP Dr. Sacha testified, "Knowing [Claimant] and having him for a patient for a long period, he is a very anxious guy, and he has the flight of ideas.... And the way he overcomes it is he writes notes every time he comes into any event or any clinic visit. Writes copious notes. And he writes down all the things that he has to ask me that day because if you have to ask [Claimant], Hey, answer this question, he has a hard time doing it. He has a hard time focusing. So getting information out of him is difficult. . .. [He is an] anxious guy with flight of ideas and everything has to get out all at once. But if you slow him down, take your time, you look at the way he does things, writes notes, you realize that he is not a great historian, but he eventually gets to the story. . . And he has a way of dealing with his learning issue or learning disability or memory issue of taking aggressive notes and asking questions on the notes." HT1, p. 75, l. 6-17; 20-25; p. 76, l. 8-11.

27. In addition, in the E.R., "clearly he was in distress. He was on two types of oral steroids and an opioid analgesic in the emergency room. That doesn't occur. That is extremely rare," HT1, p. 76, l. 19-22.

28. DIME Dr. Brodie similarly reported that Claimant "didn't necessarily stay on topic." He was articulate but with "somewhat rapid and pressured speech with rapid topic changes," Cl. Exh. p. 35.

29. Dr. Sacha concluded, consistently with Dr. Bennett, that "the bottom line is, at every visit that he ever came in, he was perfectly upfront. He never hid anything. He never was evasive, even a little bit. He wasn't even a little bit slimy on any of the topics. And that is the most important thing," HT1, p. 76, l. 3-7.

30. The two steroids prescribed by the E.R. were dexamethasone and methylprednisolone, Cl Exh. p. 50. These are prescribed for acute disk herniations, HT1, Dr. Sacha, p. 49, l. 11-12. Claimant had not been prescribed these medications before the work injury, nor any opioid analgesic, except by his dentist, in connection with a procedure in 2016, HT2, p. 68, l. 11-12, 18-19.

31. On the advice of the E.R. nurse, Claimant contacted his employer on 11/29/2018. HT2, p. 60, l. 12-17. On 11/30/2018, the Employer asked him to complete a form entitled, "Employee's Statement of Accident Report." Claimant completed the form as follows (Cl. Exh. p. 42):

> "(11-11-18) I was leaving the building at the northwest entrance during cold, snowy weather. After exiting, I passed the steps and sidewalk, then slipped and fell back in the slick parking lot. I landed on my rear-end and the back of my head. The fall caused a lump to develop on the back of my head and pain/soreness in my right buttock. A few days later, the pain in my right buttock transferred over to my left buttock, followed by pain with a dull ache to the thigh, knee and calf area. (11-23-18) 9:30 p.m. - Experienced a severe spasm to the left foot which created numbness w/pins and needles sensation to the entire foot. There's pain and tightness in the arch of the foot. (11-29-18) 1:00 a.m. - Admitted myself to the E.R. to get checked out."

32. Also, on 11/30/2018, Employer supplied to Claimant a list of worker's compensation doctors. On the same date, he saw his personal physician, Dr. Collander. He told Dr. Collander he had "fairly generalized discomfort throughout the foot. numbness that has also been in his thigh and calf." "The precipitating event was a fall; the actual mechanism of injury appears to have been slipped on ice and fell onto his back on 11/11, noted lower back pain on 11/16. He went to the er 2 days ago, since it happened at work, they recommend he contact work comp which he has done." Cl. Exh. P. 78.

33. In support of his no-causation opinion, DIME Dr. Brodie wrote, "The medical records from November 29 and November 30th, 2018 document a slip-and-fall incident but do not describe a work exposure relationship." Cl. Exh. P. 38. Dr. Collander's November 30th, 2018 report does describe a "work exposure relationship" ("since it happened at work . . ."). Dr. Brodie reviewed this report

without noting the work-exposure portion. To the extent Dr. Brodie intended to imply that the accident did not happen, or did not happen at work, this is not correct. As a factual matter, the accident had been reported the next day, though that information had not been available to Dr. Brodie. As a legal matter, Respondents admitted the accident happened at work and do not seek to withdraw their admission, HT1, P. 157, l. 4-6. The November 30, 2018 report also contains a report of symptoms earlier than 12 days post-accident.

34. Following authorized medical treatment including lumbar surgery and admittedly compensable lost time (see Final Admission Cl. Exh. p. 18), Claimant was placed at maximum medical improvement and assessed by ATP Dr. Sacha to have 13% whole person lumbar permanent impairment, Cl. Exh. p. 174-177. Respondent admitted for 13% impairment and began paying PPD. Claimant was then evaluated in a DIME by Dr. Brodie. Though Dr. Brodie assessed impairment of 17%, he found no causation and therefore zero impairment related to the admitted work injury. Respondents filed a Final Admission claiming an overpayment of PPD in the stipulated sum of $25,740.62.

35. Dr. Brodie's no-causation opinion was based on two propositions: That Claimant had highly similar if not identical symptoms pre- and post-work injury; and that he had no symptoms or pain until 12 days after the work injury. In his testimony, he made a third proposal. He hypothesized that Claimant became symptomatic 12 days after the work injury due to a pre-injury asymptomatic herniated disk. These propositions are discussed below.

Differences in condition pre- and post-injury:
Left lower extremity radiculopathy.

36. In early December 2018, Claimant began treatment with the Employer's authorized physicians. By that time, he was "having problems walking." He testified he had "constant pain, continuous pain going down my leg, down to my foot, through the thigh and the calf," HT2, p. 64, l. 20-22. This is found credible as consistent with reports made to ATP physicians, as below.

37. On 12/3/2018, ATP Dr. Corson reported Claimant had "worsening pain in the lower back/ buttock with radiation into the LLE along with numbness and tingling in the "entire" left foot, from the toes to the heel." Dr. Corson's diagnosis on that date and on subsequent dates, was "Lumbar radiculopathy, acute," Cl. Exh. p. 80, 81.

38. The next day Claimant told the physical therapist he had "numbness/tingling in L posterior thigh, calf, and whole foot, unable to walk without limitations," Cl Exh. p. 85

39. On 12/18/2018, Dr. Corson reported Claimant's "pain radiates to left buttock, left thigh, left calf, left great toe, and left lateral foot," Cl. Exh. p. 91.

40. On 1/19/2019 Claimant told Dr. Sacha his pain was "constant in nature, bilateral low back, left buttocks, left leg numbness and tingling, diffuse over the left foot"; "Pain with straight leg raising, neural tension testing on the left side, positive bowstring test on the left," Cl. Exh. Pp. 100, 101.

41. On 2/4/2019 Claimant told Dr. Sacha he had "increasing radicular symptoms," and Dr. Sacha found on exam that he had "decreased muscle endurance with toe raising and walking on his heels," Cl. Exh. p. 107.

42. On 2/6/2019, Claimant told authorized surgeon Dr. Castro he had "left lower extremity, buttock, leg, posterior thigh, and calf pain, which is on the left side. Numbness, tingling, and pain in his left lower extremity," Cl. Exh. p. 109.

43. On 2/13/2109, Dr. Sacha noted "mild atrophy of the calf on the left compared to the right," Cl. Exh p. 112.

44. On 3/18/2019 ATP surgeon Dr. Gallizzi reported that "the patient describes his pain as an ache, burning, numbness, throbbing and radiating." His assessment was "severe left leg weakness from his disc protrusion," Cl. Exh p. 136

45. On 4/8/2019, Dr. Gallizzi noted, "Signs and symptoms of a left L5 and L4 radiculopathy as well as motor weakness," Cl. Exh p. 152.

46. On 4/30/2019, Claimant underwent lumbar surgery by Dr. Gallizzi.

47. DIME Dr. Brodie agreed that this evidence was evidence of left-sided radiculopathy; that Claimant's symptoms were consistent with the post-injury MRI; and that lumbar surgery was reasonable given these complaints and findings. HT2, p. 154, l. 4-16.

48. Dr. Brodie acknowledged that before the work injury, no provider had recommended a lumbar MRI, lumbar injections, or lumbar surgery, all of which occurred after the work injury. HT2, p. 154, l. 25- p. 155, l. 1-3.

49. In fact, pre-work injury, Claimant had been treating with an injection doctor, in connection with his neck. Dr. Sacha testified if he had needed lumbar injections pre-injury, that doctor "would have worked it up and treated it," HT1, p. 52, l. 20.

50. Dr. Brodie acknowledged the absence of any left lower extremity symptoms prior to the work injury, HT2, p. 130, l. 17-25:

    > "So I'm just scanning now to see if I see whether or not it is documented that he had left lower extremity symptoms. I'm not sure I see that. But it certainly can happen. Oh, there it is. Okay. Actually, no, I lied.
    >
    > "So I'm not sure that I see left lower extremity symptoms that have occurred prior to November 11th, but I certainly see bilateral buttocks and bilateral low back pain in the records."

51. Dr. Brodie equated pre-injury low back pain and buttocks pain with post-injury radiculopathy. He did not see how the post-injury condition could be "differentiated from the chronic history of back pain," HT2, p. 126, l. 6-7.

52. Dr. Sacha responded in rebuttal: "This patient did not have radiculopathy prior to the date of injury . . . there is a huge difference here on what his premorbid and postmorbid states are," Deposition Transcript, hereinafter "DT," p. 34, l. 2-3, 10-12.

53. In addition, DIME Dr. Brodie misconstrued the pre-injury extent of Claimant's back pain, which, as discussed below, he had misunderstood to have been treated by the chiropractor.

MRI - Acute, severe, large herniation

54. The post-injury lumbar MRI was described by ATP surgeon Dr. Castro on 2/6/2019 as follows: "There is acute disc herniation at the L4-L5 level causing severe lateral disc compression compressing the traversing L5 root." "Impression: Large disc herniation," Cl. Exh p. 110 - 111.

55. ATP surgeon Dr. Gallizzi also described Claimant's MRI as showing an extruded piece of disk which had "coursed to the pedicle level of L5," "pending his nerve against pedicle on left side," Cl. Exh. P. 136, 153.

56. Dr. Sacha testified that spine surgeons regularly look at the MRI images themselves, and develop an expertise in reading them, DT p. 11, l. 24-25, p.12, l. 1-6. As a spine specialist, Dr. Sacha also reads MRI images himself, and is able to interpret them, DT p. 11, l. 11-12. During his hearing testimony, Dr. Sacha had the MRI images on his screen, HT1, p.30, l. 11-12.

57. Dr. Brodie did not review the MRI images himself. He claimed surgeons had not told him before that MRIs can show a herniation to be "acute," "which implies that it happened recently," HT2, p. 147, l. 14. He testified (HT2, p. 149, l. 2-7):

> "I have communicated in the last 25 years with more neurosurgeons and back surgeons I could possibly even count, including Dr. Castro, and never have they specifically told me that they can read an MRI and say this just happened. And the literature doesn't say it either."

58. Dr. Castro's 2/6/2019 report, which was included in the DIME medical packet, "told" Dr. Brodie that he can "read an MRI and say this just happened," by virtue of his characterization of Claimant's herniation as "acute." Dr. Brodie reviewed his report, but his review omitted that Dr. Castro found Claimant's MRI to show his herniation to be acute. Cl Exh p 31.

59. Dr. Sacha testified that the principle that MRI findings can correlate with acuity is an accepted principle "in the radiology community as well as in the clinical spine community. It is not only standard of care, it is standard of care in all of the medical treatment guidelines as well," DT p. 10, l. 24-25, p. 11, l. 1-3. He commented, "I can't say why someone who is giving commentary, expert commentary, on spinal disease, doesn't know that," DT p. 8, l. 23-25.

60. As credibly and persuasively explained by Dr. Sacha, T2 weighted MRI images "light up" (HT1, p. 30, l. 25) in the presence of swelling, which shows that the herniation is acute, HT1, p. 31, l. 4-6. Dr. Sacha testified,

> "And what T2 weighting specifically looks for is fluid content. When you have an acute disk herniation where a piece breaks off or it is pinching on a nerve acutely, you see increased uptake of the MRI picture on the part of the disk that is herniated and on the spinal nerve that is being compressed**. . . .** He had acute swelling of the

> spinal nerve that was being pinched. He had acute swelling around the herniated free fragment that broke off." HT1, p. 31, l. 8-14, 17-19

61. Dr. Brodie stated that without a previous MRI for comparison, you can't tell when a herniation occurred. See Brodie report, Cl. Exh p. 37. Dr. Sacha testified, "We know it's an acute problem just based on the MRI alone . . .You don't need another MRI to tell you whether that is an acute disk herniation. You can see it on the actual findings of the MRI . . . someone with clinical experience in looking at spine MRIs, it is something you don't miss," HT1, p. 32, l. 13-14, 18-20, p. 33, l. 1-3.

62. The ALJ is persuaded by Dr. Sacha's testimony, which is consistent with Dr. Castro's finding, that the MRI showed that Claimant's herniation occurred acutely. Both physicians are spine specialists who regularly interpret MRI images themselves, as opposed to requiring the expertise of others. In addition, Dr. Sacha's explanation of how the MRI images correlate to acuity contains specific scientific detail which enhances the persuasiveness of his opinion.

63. In addition to characterizing Claimant's herniation as "acute," Dr. Castro also characterized it as "severe." Dr. Sacha credibly and persuasively explained that severe "means there is no room in the nerve root hole where the nerve exits to go to the back and down the leg . . . There was severe narrowing of the nerve root hole, which is the neuroforamen. He had swelling of the nerve root which shows that it is being acutely compressed. HT1, p. 35, l. 3-5, 8-10. That the compression was severe was corroborated by Dr. Sacha "when we did his diagnostic and therapeutic injections, we saw the severe narrowing and pinching of the nerve and had reproduction of the symptoms. His examination correlated with an acute severe pinched L5 nerve," HT1, p. 35, l. 11-15.

64. Patients with severe herniations tend to be more symptomatic, "Well, if you think of a nerve as a big bundle of wires, and running in those wires are pain fibers, motor fibers, sensory fibers, and even fibers that (inaudible) leg where they are at, which are proprioceptive fibers. When you pinch those, you start killing off individual pieces of nerve and you end up with more symptoms." HT1, p. 35, l. 21-25, p. 36, l. 1-2. Due to their level of symptoms, patients with severe nerve compression tend to seek medical care. HT1 p. 36, l. 14-15. Pre-injury, Claimant sought no medical care for lumbar discogenic pain.

65. The large size of Claimant's herniation is also relevant, but more significant is "that a chunk of it broke off and migrated away from the original position into the neuroforamen. So, it is the worst kind of disk herniation to have. You got a big piece of disk that breaks off and sits right on top the nerve. And that is what he had. It is called an extruded fragment that migrates. So not only is it a large disk herniation, it is a large, extruded fragment with a piece of it sitting on the nerve root." HT1 p. 37 l. 20-25, p. 38 l. 1-4.

Mechanism of injury

66. Both testifying experts agree that the mechanism of injury in this case is consistent with a herniated disk. Dr. Sacha credibly testified:

> "The main mechanisms we see for these lumbar disk herniations where you get the big, extruded fragments are either trauma, a fall, a trip, a slip-on ice, or a lift-and-twist injury when people are at extremes of flexion and twisting with heavy weights. Those are the two main -- those are the two main mechanisms we see for almost everyone that walks in the door, and he had one of those." HT1, p. 38, l. 18-25, p. 39, l. 1.
>
> "Pretty significant forces" are required to break "the entire disk off and put it onto the spinal nerve," HT1, p. 130, l. 4-19.

67. Dr. Brodie testified, "So a lot of times in medicine, someone will say, I fell on my butt. And then you find out that they have a herniated disk in their back. So that could be close to what this scenario is all about." HT2, p. 125, l. 12-15.

68. In addition, Claimant's clinical presentation, the MRI, and the diagnostic injections also correlated with an acute severe pinched L5 nerve, HT1, p. 35, l. 14-18; HT1, p. 51, l. 23-25, p. 52, l. 1. Dr. Brodie agreed Claimant's "symptoms are highly consistent with a herniated disk causing pressure into the nerve root," HT2, p. 127, l. 25, p. 128, l. 1.

Differences in condition
New findings/complaints post injury

69. Lumbar MRI, injections, surgery: As stated, the pre-work injury records contain no recommendations for a lumbar MRI, lumbar injections, or lumbar surgery. Even Dr. Brodie agreed there was no such documentation, "not in the records I have," HT2, p. 155, l. 3. Dr. Sacha testified, but for his work injury, Claimant would not have needed lumbar surgery, "It would not have been medically indicated prior to the work comp claim," HT1, p. 56, l. 19-20.

70. Work restrictions: On 1/22/2019 (Cl. Exh. p. 104) ATP Dr. Corson restricted claimant to four hours of work per day; and on 2/22/2019 (Cl Exh. p. 115) Dr. Corson reported that Claimant could "barely function" and he took him off all work entirely. On 3/27/2019, Dr. Sacha described Claimant as being "near debility," (Cl. Exh p. 141). Dr. Sacha testified, "if he didn't have the work injury, he wouldn't have needed any restrictions," HT1, p. 58, l. 15-16.

71. Dr. Brodie acknowledged pre-work injury, there were "no indications that there was some type of permanent restriction or limitation one way or the other. I don't think the records really talk about it much," HT2, p. 217, l. 19-22.

72. However, Dr. Brodie marked his apportionment chart (Cl. Exh. p. 22) to indicate that pre-injury, Claimant did have permanent restrictions. He acknowledged he was wrong: "Yeah, I - yep. You could say that I got over my skis on that, because technically, I don't have that specific information," HT2, p. 218, l. 5-7.

He also acknowledged he had no data regarding any pre-injury lost time, HT2, p. 219, l. 3.

73. Dr. Brodie also marked the apportionment chart (Cl. Exh. p. 22) to show Claimant had more than three episodes of functional disability in the prior year. He acknowledged there may be nothing in the record to support that "I didn't summarize functional changes in the records. It could be there. I just didn't summarize it. And maybe it's not there at all. I don't know for sure." HT2, p. 222, l. 18-21.

74. While this is not an apportionment case, these statements are relevant because they also reflect the extent of Claimant's prior condition, and whether it was the same pre-injury as post-injury, so as to support a finding of no causation.

75. These statements are also relevant as reflecting a methodology admittedly less than rigorous, in a process which, according to the governing authorities, demands attention, and care. If apportionment is done, "you have to have very good, sound objective reasons to meet all the rules," Sacha, HT1, p. 115, l. 20-21. As a matter of law, apportionment which is arbitrary and speculative cannot be sustained, *Matthews v. Industrial Commission*, 355 P.2d 300 (Colo. 1960). W.C.R.P. 12-3(B) requires, "If there is insufficient information to measure the change accurately, the physician shall not apportion." Dr. Brodie's apportionment chart reports data that is not actually in the medical records, according to his own admission. As observed by Dr. Brodie, when there is "inconsistency" between the "medical data" and what a person reports the data to say, that "adversely impacts" that person's "reliability," Brodie report, Cl. Exh p. 38 ("inconsistency of medical data adversely impacts reliability").

76. Limping/use of a cane: In successive appointments, ATP Dr. Corson documented that Claimant was limping, on 12/3, 12/26/2018, 1/4 and 1/22/2019, Cl. Exh. pp 81, 94, 98, 104. In addition, on 1/22/2019 Claimant reported he had trouble walking due to issues with his left leg and left foot, Cl. Exh. p. 103; on 2/18/2019 Claimant showed shuffling and antalgia on the left, Cl. Exh. p. 115; and on 2/22/2019, Dr. Corson reported Claimant to be dependent on his cane, Cl. Exh p. 115. Dr. Sacha testified, "He couldn't do toe raises in a rapid fashion or walk on his heel at all," HT1, p. 44, l. 11-13. There are no pre-injury records showing any limping or use of a cane. Dr. Sacha commented, "This is a huge clinical difference," HT1, p. 44, l. 15. Dr. Brodie "didn't pay attention" to limping, HT2, p. 166, l. 14.

77. Pain ratings: On 12/4/2018, the physical therapist reported Claimant had a pain level of 7, Cl. Exh. p. 86; On 1/9/2019, Dr. Sacha reported Claimant had "fairly severe back pain," Cl. Exh. p. 100; on 3/18/2019 ATP surgeon Dr. Gallizzi reported Claimant's pain level was 9, Cl. Exh. p. 125; and on 3/25/2019 Dr. Corson reported Claimant's pain level was 8, Cl. Exh. p. 138. The only pre-injury provider who documented any lumbar pain levels was chiropractor Dr. Bennett. Over the course of her 13-month pre-work injury treatment period, lumbar pain levels were either 2 or 3. Dr. Sacha characterized the pre- and post-injury discrepancy in pain levels as "a clear difference clinically, and it is a clear

difference functionally," HT1, p. 45, l. 24-25. Dr. Brodie had not noticed the difference, "Oh, I don't recall that specifically, but I hear what you are saying. And yeah, if that is what it is, then that is what it is. Yep, that is fine," HT2, p. 159, l. 22-24.

78. Restricted range of motion: Dr. Corson documented restricted and painful lumbar and thoraco-lumbar ranges of motion from 12/3/2018 - 4/1/2019, Cl. Exh. pp. 81, 86 (P.T.), 97-98, 104, 115, 123, 139, 144. Chiropractor Dr. Bennett is the only provider who documented lumbar range of motion pre-injury. It was consistently normal. Dr. Sacha testified about Claimant's post-injury restricted range, "It is very different than what he looked premorbid. The premorbid examination showed full range of motion and no functional deficits, HT1, p. 47, l. 14-17. Dr. Brodie did not remember seeing Dr. Bennett's record of full range of lumbar motion, "I don't remember seeing that, and it's not captured in my record review. And so I can't really say one way or another," HT2, p. 158, l. 1-3.

79. Oral steroids and opiate medications: As stated, oral steroids and opiates were prescribed post-injury but not pre-injury (except by Claimant's dentist in 2016). Dr. Sacha testified, "so there is another important piece of information because dexamethasone and a Medrol Dosepak, they are steroids that are given for acute disk herniations," HT1, p. 49, l. 9-12. Dr. Brodie acknowledged the absence pre-injury of either prescription "in the records that I have," HT2, p. 160, l. 12.

80. Muscle spasms: Both Dr. Sacha and Dr. Corson document persistent lumbar spasms spanning a period from 12/3/2018 through 4/10/2019, see Cl. Exh. Pp 81, 94, 97, 101, 104, 107, 112, 115, 118, 141 and 158. Dr. Sacha credibly testified, "Prior to him having the work injury, he never had any of these objective findings," HT1, p. 46, l. 12-13. As stated, spasms were regularly evaluated by chiropractor Dr. Bennett (in her section labeled "Palpable tenderness and muscle spasms") but none were found in the lumbar spine.

81. Left calf: On 2/4/2019 Dr. Sacha reported that Claimant had a noticeable cramp in his left calf and "some decreased muscle endurance with toe raising and walking on his heels," Cl. Exh. p. 107. On 2/13/2019 (Cl. Exh. p. 112) Dr. Sacha reported Claimant had "mild atrophy of the calf on the left compared to the right." Dr. Sacha explained, "Basically he is progressing because he was pinching on that nerve . . . the nerve gets irritated when it is pinched and so is hyperactive electrically and so the muscles clamp down. And when you start seeing that that is a really significant sign," HT1, p. 48, l. 4-5, 9-12. There is no similar pre-injury evidence.

82. Positive clinical testing: Dr. Sacha found Claimant had a positive "bowstring test" on the left. This is an "objective test that shows you have an acute pinched nerve," HT1, p. 39, l. 20-21.

83. On other clinical testing, Claimant had 0/5 "Waddell's." "This is the nonphysiological test that I just told you about. We always want to make sure patients are on the up-and-up. And in this case, he had nothing to indicate that he wasn't being perfectly truthful. And everything was very objective," Sacha, HT1, p. 41, l. 1-5.

84. Auto accident chiropractor Dr. Bennett also found that the nature, extent, and severity of Claimant's complaints and findings, pre- and post-injury, were different (Cl. Exh. p. 15)

> [Claimant] never presented with trouble walking, muscle spasms in the left lumbar spine, painful lumbar ranges of motion, pain ratings that were 8-9 out of 10 for the lumbar spine, cramping in the left calf, motor weakness on the left, positive lumbar nerve tests or poor functioning impacting his ability to work due to lumbar spine pain.
>
> "[Claimant] described any low back pain as a 3 out of 10 on 9/20/2017. He had no neurologic deficits upon exam in the lumbar spine on 9/20/2017. He had a normal active range of motion in flexion, bilateral lateral flexion, bilateral rotation and extension in the lumbar spine. He had no worsening of range of motion in the lumbar spine from 9/20/2017 to 10/18/2018. He had no documented muscle atrophy in the left calf, cramping in the left calf, or motor weakness on the left. He had no documented positive lumbar nerve tests. He never required the use of a cane to walk during his treatment in my office. There is no documentation that he missed work due to lumbar region pain from 9/20/2017 - 11/15/2018.

85. Dr. Brodie did not contend Dr. Bennett's statement based on her chart was factually incorrect, HT2, p. 228, l. 14.

86. Lay witnesses also attested to the difference in Claimant, pre- and post-work injury. Ms. E[Redacted] testified that Claimant had been able to move and set up rental furniture for a party, help carry couches, retrieve pails of holiday decorations (a two-person job), ride his motorcycle, golf, and take care of his yard, before his injury, but not after. The golf involved walking, which Claimant had no difficulty with, pre-injury, HT2, p. 15, l. 13-14. Witness Ryan G[Redacted] went skiing, rode motorcycles, played golf and Frisbee with Claimant, until he was injured at work, HT2, p. 26, l. 6, l. 21. Claimant's sister, Ms. C[Redacted], testified that she traveled to Colorado every four to eight weeks in connection with her business in Colorado. She testified that Claimant would pick her up at the airport, load, and unload three to four large suitcases, help her set up and tear down her workspace which involved a lot of lugging and dragging stuff, and moved things in and out of storage for her. On one occasion, pre-injury, in January 2018, Ms. C[Redacted] observed her brother tap-dancing. After his work injury, he was no longer able to help her. "He was moving really slow; he couldn't walk well; he had difficulty driving . . . He was in a lot of pain. He was crying a lot every time I talked to him. He just wasn't the same. He just wasn't living the same life he was before. Everything was - he was in constant pain. It was even hard for him to talk." To this day, "He is just not the same person." HT2, p. 36 l. 1-7, p.37 l. 4-5. Claimant's wife testified that before the work injury, Claimant took care of a big backyard which required constant work, raking, pruning, mowing; he shoveled snow; fixed things around the house; worked on their vehicles; he had been an avid skier, a huge motorcycle rider, he loved to

golf. After the work injury, he wasn't able to do those things. "It's actually been very depressing for him," HT2, p. 44, l. 24-25. After the injury, "He started limping. He was getting tingling and numbing all the time. He wasn't able to do his physical activities anymore . . . he would get really upset, and he would cry. And he would, was - it was very depressing for him. He wasn't able to do these things anymore," HT2, p. 45, l. 6-11, l. 13-14.

Differences in condition: Low back pain - Chiropractic chart

87. Based on chiropractic and massage records, Dr. Brodie stated in his report that "Claimant had received care for highly similar if not identical symptoms repetitively in the 12 months prior to November 11, 2018," Cl. Exh. p. 37.

88. He concluded, with respect to both charts, "that the claimant reported with low back symptoms, specifically requested low back treatment, and specifically received low back treatment," Cl. Exh. p. 38.

89. Chiropractor Dr. Bennett categorically denied that this was an accurate representation of her chart (Cl. Exh. p. 14-15):

> "This is not an accurate representation of my chart. [Claimant] never received chiropractic manipulative therapy to his lumbar spine from 9/20/2017-10/18/2018. He subjectively reported mild low back pain. He twice reported lower extremity weakness in 26 encounters. *My objective findings did not warrant treatment to be necessary for any low back pain*." [Emphasis added]

90. Dr. Bennett's notes were arranged in sections labeled subjective, objective, assessment, and plan. See for example, Cl. Exh. p. 248. The objective section is also divided into "visual inspection," "range of motion," "palpable tenderness and muscle spasm," and "chiropractic evaluation." The section labeled "plan" showed treatment rendered. On each date, the "plan" section began with the phrase, "Treatment today consisted of . . .."

91. At the first visit, Claimant reported a history of having had low back problems, which he described as "chronic." Cl. Exh. p. 245. Accordingly, Dr. Bennett listed under her subjective section, "complaint #3" to be low back pain, which she described as mild, with a pain level of 3. This was carried forward from visit to visit, but with occasional modifications.

92. Neither the assessment section, nor the plan section, ever included the lumbar spine (until 11/28/2018, i.e., after the work injury). Nor does the narrative subjective section contain any specific reference to the lumbar spine.

93. In the "palpable tenderness" section there were references on some dates to sacroiliac joint tenderness. In the "chiropractic evaluation" section reference was made to "segmental and somatic dysfunction" to include lumbar levels (until 1/30/2018, Cl. Exh. p. 274, when those levels were removed permanently).

94. In his report, Dr. Brodie's review of Dr. Bennett's notes (Cl. Exh. p. 27-30) make repeated references to tenderness at the sacroiliac joint and segmental dysfunction of lumbar levels, but no references at all to the absence of the

lumbar spine in Dr. Bennett's treatment section, nor to its absence in assessment section.

95. With regard to these lumbar-related entries, Dr. Bennett wrote as follows (Cl. Exh. p. 9):

> "I estimate less than 5 minutes per visit was spent on [Claimant's] low back from visits dated 9/26/17 - 10/18/18. [Claimant's] appointment times were scheduled for 30 minutes. Documented time for manual therapy as well as re-establishment of muscle strength, coordination and improvement of functionality focused only on the cervical and thoracic spine was 15 minutes. Subjective discussion, objective findings, and chiropractic manipulative therapy focused only on the cervical spine and thoracic spine likely took 10 minutes."

96. Dr. Bennett also wrote, "These entries were minimally significant. [Claimant's] primary complaints were neck pain and middle back pain throughout his treatment at my office." Cl. Exh. p. 10.

97. Dr. Brodie initially testified that "the chiropractic treatment notes were heavily weighted in my analysis," HT2, p. 144, l. 17-18, by which he found there was no causal relationship in Claimant's case. He "confronted" Claimant with the chiropractic records, stating to him, "look at these records, these records say you received treatment for your back and that you asked for it," HT2, p. 145, l. 7, l. 9-11.

98. When Dr. Brodie was confronted with Dr. Bennett's statements to the contrary, he insisted that her records "document the treatment occurred" (to the low back). He found her contrary statement to be "weird," HT2, p. 197, l. 1-3. But, he backed off from characterizing his reliance on her records to be "heavily weighted," "I'm not relying on the chiropractic notes for every, you know, kind of final rating of this causality opinion," HT2, p. 202, l. 2-3. He took refuge in the massage chart, "the massage therapist was definitely treating those areas in the same time interval, HT2, p. 204, l. 22-24. He acknowledged the chiropractic records may not document treatment, but alleged she was treating the low back without documenting it: "Claimant was receiving treatment [to the low back] regardless of whether the chiropractor was writing in her notes that she was giving treatment," HT2, p. 206, l. 8-9. He then accepted that she did not treat the low back at all, "Yeah, it may be – it could be that Dr. Bennett is correct. It certainly doesn't seem to jive with what the massage therapist is saying," HT2, p. 222, l. 9-11. He testified, "And if we assume she never did give treatment to the low back . . . I probably was again not perfectly clear because the massage therapy notes don't contradict my statement, HT2, p. 223, l. 20-25, p. 224, l. 1-2. He acknowledged for example that though chiropractic evaluation included reference to the sacroiliac joint (on 12/13/2017), "no treatment. That is correct. It certainly documents the symptoms, but no treatment," HT2, p. 227, l. 15-17. Dr. Brodie acknowledged that Dr. Bennett's assessment section, also did not include the lumbar spine, which again he characterized as "weird," HT2, p. 226, l. 16.

99. In addition, Dr. Brodie mis-quoted Dr. Bennett in his review of two of her notes. He made three changes in his review of Dr. Bennett's note dated 12/13/2017. The phrase "PP with continued neck and back pain. . ." was the first phrase in the narrative subjective section of each of her notes. (Her reference to back pain likely referred to thoracic pain, Cl Exh. p. 9.) Dr. Brodie inserted the word "low" before the word back, compare Cl. Exh. p. 266 (Bennett note) to Cl Exh. 28 (Brodie review of that note). He acknowledged the word "low" does not appear in the original, HT2, p. 210, l. 11. In the same note, Dr. Bennett wrote, Claimant "had the return of burning pain next to his spine in his lower *neck*." Dr. Brodie's review changed that to he "had the return of burning pain next to his spine in the lower *back*." He acknowledged, "that is probably an error on my part," HT2, p. 212, l. 12-13. In the same note, Dr. Bennett wrote, in reference to Claimant's neck, that "his burning pain *is back*." Dr. Brodie's review changed that to, Claimant had a "burning pain *in his back*." When asked, "Do you see that there is another change here?" He replied, "Um-hum. Yep. I sure do." HT2, p. 212, l. 23.

100. In another note, dated 10/25/2017, Cl Exh. p. 256, Dr. Bennett wrote, Claimant was "more sore this week and the pain feeling burning in his lower *neck.*" In his review of that note, Cl Exh. p. 27, Dr. Brodie wrote that her note "documents being more sore this week, the feeling of burning in his lower *back*." He acknowledged that he changed lower *neck* to lower *back*, "Yeah, I definitely was in error with putting – you know stating it that way," HT p. 213, l. 12-13.

101. The ALJ finds that Dr. Brodie's interpretation of the chiropractic chart as reflecting treatment of Claimant's low back was mistaken by his own admission. He apparently did not see the sections showing no lumbar treatment or assessment. As it pertains to his misquoting, his misperception also extended to errors in sections he did review.

102. Dr. Bennett stopped including the lumbar spine in any billing as of 1/16/2018, see Cl. Exh. p. 273 and every odd-numbered page thereafter through p. 297. But Dr. Brodie did not base his opinion on billing by Dr. Bennett: He "wasn't tracking billing." He said he was tracking what "was in her plan section" HT2 p. 198, l. 3-6 (though this was the section that showed no lumbar treatment). In any case, the billing is therefore immaterial to Dr. Brodie's understanding of the chiropractic chart.

103. Dr. Brodie reiterated in his report that Claimant's denial that he requested low back treatment from the chiropractor was inconsistent with the chiropractic record, and, that this inconsistency affected Claimant's reliability. Cl. Exh. p. 38. However, it was Dr. Brodie's statements that were inconsistent with the record. Using his own metric, that impacts his reliability.

Differences in condition: Prior low back and gluteal pain - Massage

104. Claimant was in massage therapy from 7/9/2017 to 3/11/2018. There is an appointment dated 2/17/2017 but the date is in error, Cl. Exh. p. 243. Twelve visit notes spanning these eight months are in evidence, Resp. Exh. H. In addition to treatment for his neck and upper back, Claimant was treated by

massage on some dates for his gluteal area, left and right, and his low back. The records contain no complaints pertaining to Claimant's left leg, foot numbness, limping, or any limitations or restrictions in function. Contemporaneous chiropractic notes show low back pain ratings of either a 3, or a 2. Cl. Exh. p. 245 - 280. Claimant had never complained of gluteal pain to his chiropractor, Cl Exh. p. 15.

105. Claimant testified his pre- and post-accident gluteal pain was different. His prior gluteal pain felt like a knot. Post-accident it "kind of felt, you know, connected. It kind of flowed down my leg," HT2, p. 56, l. 1-3, "After the fall it was constant, the sensation constantly down my lower back, into my glute, into my thigh, and down the leg," HT2, p. 55, l. 1-3.

106. Dr. Sacha testified, "We don't do massage on acute disk herniations. And the reason we don't is if you push on someone's gluteal area and they have an extruded fragment, you can actually make it far worse. The nerve is electrically excitable and pushing on the sciatic notch can actually really cause a lot of pain" HT1 p. 99, l. 16-23. Dr. Sacha clarified his testimony in his deposition, "You cannot tolerate deep tissue in the superior buttocks where the sciatic nerve runs. So, if the masseuse only rubbed the back, no big deal. If they rub the area where the sciatic nerve goes, the superior buttocks, and through the piriformis notch, then it will be severe and the patient won't tolerate it," DT p. 38, l. 17-23, but that it varies from patient to patient, DT, p. 38, l. 23-24. Dr. Brodie had also testified, "Massage therapy is typically pretty painful, regardless, if you have a herniated disk," HT2, p. 183, l. 10-11.

107. Massage records reflect treatment to the gluteal area but not with the precision of identifying the sciatic notch as the area of massage; nor is there data regarding Claimant's individual tolerance. However, Claimant's documented problems post-work injury were different and worse than those in the massage chart.

Differences in condition: Prior low back, other evidence

108. Claimant testified that before the work injury he had "had low back pain on and off" with "flareups now and then," HT2, p. 53, l. 5-6. He had "low level back pain. It would come and go. It was mild. It didn't stop me from doing anything . . . Yeah, it wasn't an issue, " HT2, p. 74, l. 15-19. The ALJ finds this testimony to be credible as corroborated by Dr. Bennett, Cl. Exh. P. 15 ("He subjectively reported mild low back pain . . . My objective findings did not warrant treatment to be necessary for any low back pain.")

109. Pre-work injury, Claimant testified he was not limited in either his job or any of his activities due to lumbar pain, gluteal pain, foot numbness, or any leg symptoms, HT2, p. 69. The ALJ finds Claimant's testimony to be credible as corroborated by Dr. Brodie's testimony that there is no pre-injury evidence of restrictions or functional disability; and as also corroborated by Dr. Bennett, Cl. Exh. p. 11, 12; and by the testimony of lay witnesses to Claimant's participation in physically demanding activities - before his work injury.

110. Medical providers for Claimant's auto accident also included physiatry/injections, Cl. Exh. 8, pp. 178-198; physical therapy, Cl. Exh. 9, pp. 199-222; and neurosurgery, Cl. Exh. 10, pp. 223-242. None of these providers evaluated or treated Claimant's low back. The neurosurgery chart included an intake checklist on which Claimant indicated he had had back pain and leg symptoms. But, his current problem list (Cl Exh. p. 223) did not include any lumbar problem, nor was any visit note directed to the lumbar spine, except his one report of "occasional right-sided lower extremity weakness, though it is rare and intermittent" (see below).

111. When Claimant began treatment at Concentra, he completed a checklist form pertaining to his medical history. While he testified his post-work injury condition was not the same as his previous condition, he also testified he would have checked the boxes which pertained to his prior back history, HT2, p. 110, l. 9-15. In fact, on 1/30/2019, ATP Dr. Corson had crossed out "he denies" in relation to whether Claimant had experienced "similar symptoms in the past." Cl. Exh. p. 81. Furthermore, Dr. Sacha, who saw Claimant at the same location (i.e., with the same chart) as Drs. Corson and Castro, was provided by Respondents with pre-injury medical records. HT2, p. 111, l. 1-9.

Differences in condition: Right leg weakness

112. Before his work injury, Claimant twice reported right leg weakness, i.e., on the contralateral side. It was different from his post-injury *left* leg radiculopathy. Claimant testified, "The right leg weakness was just temporary. It was there and gone. The left leg and that pain going down to my foot was continuous. Constant and continuous until I had surgery," HT2, p. 78, l. 5-9.

113. As stated, Claimant described his pre-injury right leg weakness to his neurosurgery provider as "rare and intermittent," Neurosurgery report 10/25/2018, Cl. Exh p. 239. Chiropractor Dr. Bennett commented on that report, that it "implies that the 'weakness' [Claimant] described was relatively insignificant in respect to his daily activities." Cl Exh p. 13. Dr. Sacha agreed: "It's not causing any distress. Doesn't need to be treated. Doesn't need to be evaluated. Isn't functionally limiting him," HT1 p. 107, l. 21-24.

114. Dr. Brodie agreed; and he agreed that Claimant's post-injury left-leg radiculopathy was considerably more significant (HT2, p 180, l. 13-25, p. 181, l. 1-3, 11-13):

> Q: Is it fair to state that while the evidence documents that [Claimant] had no significant functional disability on account of right leg weakness, in contrast, after the work injury, he was, quote, barely functioning and near debility due to his left leg radiculopathy?
>
> A. That seems true, yes.
>
> Q. And is it also true that Dr. Bennett's records of right leg weakness say nothing about numbness and tingling going all

> the way down the leg or achy pain in the thigh and calf or cramping in the calf or that whole litany of left-sided problems that were documented after the work injury were absent in Dr. Bennett's prework injury records concerning her two isolated mentions of right leg weakness? Is that a fair statement?
>
> A. Yes. Dr. Bennett's notes do not seem to document the lower extremity symptoms. So I believe I'm agreeing with you.

115. Dr. Brodie stated in his report that three chiropractic notes documented that Claimant was to see his neurosurgeon for right leg weakness or low back pain. This was allegedly inconsistent with Claimant's report that he was seen there for neck pain. This alleged inconsistency was discussed under Dr. Brodie's "rationale for your decision" section, Cl. Exh p. 38, last paragraph; see also p. 34. When Dr. Brodie testified, he claimed .that "at least one of" those three chiropractic notes documented that Claimant saw his neurosurgeon "because of back pain." HT2, p. 175, l. 6-7, namely the chiropractor's August 23, 2018 note, HT2, p. 175, l. 8-10. However, Dr. Bennett's 8/23/2018 note (Cl. Exh. p. 292) does not say Claimant saw his neurosurgeon for low back pain, which is corroborated by the neurosurgery note itself, Cl. Exh. p. 238-242.

116. The ALJ finds that Claimant's pre-injury episodes of right-leg weakness is not the same condition as his post-injury left leg radiculopathy.

Differences in condition: Left foot numbness

117. On 1/13/2016, i.e., almost three years before the 11/11/2018 work injury, Claimant saw his personal physician for left foot numbness. Claimant reported "throbbing at night, does not bother during the day." Claimant reported previous sciatica. The doctor concluded the foot numbness was a "residual neuropathy of prior sciatica." He was given a prescription and advised to call if there was no improvement in two weeks. Resp. Exh. p. 16-17.

118. Claimant did not call or return to his physician for foot numbness until nearly three years later - after the work injury that is the subject of this claim. He testified that he did not return because "I didn't have a problem. It was nothing to go to - go to him for. I didn't think I needed any medical attention. It was no issue." HT2, p. 76, l. 9-11. He testified that before the work injury, "It was – it was – you know, it was always there but the intensity would come and go. I felt it more at night in bed. Daytime, it was pretty mild during the daytime. I was usually unaware of it," HT2, p. 75, l. 5-8.

119. Claimant had reported his history to chiropractor Dr. Bennett when he met her in September 2017. He advised her that he had "constant numbness on his left lateral foot." Cl. Exh. p. 245. In the 13 months of pre-injury treatment thereafter, no discussion of his left foot appears in the narrative subjective section of the chiropractic notes. After the work injury, "His left foot pain was worse than had ever been reported in his previous visits," Dr. Bennett, Cl. Exh. p. 16.

120. In addition, Claimant testified his foot numbness was different, pre- and post-work injury. Previously, his numbness was with his “pinkie toe and “a little bit behind it on the outside of the left foot,” HT2, p. 74, l. 24-25, p. 75, l. 1. “Afterwards, the whole foot was numb. The top, bottom. The intensity went through the toes and the ball and the arch and went back to the heel. The sensation was coming down from my back. It was going all the way down to my foot. It was totally different. It was -- caused difficulty walking. Again, I recall being off my feet and seeing doctors. And, you know, it was a different experience.” HT2 p 76, l.25, p. 77, l. 1-7.

121. Dr. Sacha credibly testified that left lateral numbness is consistent with a disc injury at L5-S1. Claimant’s problem post-injury was at L4-5, “Lateral foot numbness is specifically in an S1 distribution. And he does have a little discogenic problem at L5-S1, and that might be why he had some old on-and-off symptoms, but that is not what we treated him for. We treated him for his L4-5 disk herniation, acute pinched nerve, acute extruded fragment, HT1, p. 110, l. 3-9.

122. Furthermore, even had the pre-injury left foot problem been in the same distribution, Claimant’s condition was aggravated after the work injury. As credibly and persuasively explained by Dr. Sacha (HT1, p. 108, l. 18-25; p. 109, l. 1-14):

> When you have a mild discogenic back problem that flares up here and there and causes a little bit of symptoms, you will have segmental issues. One little issue in one little place and one in another. So you could have like a little bit of foot something. You could have a little bit of buttocks something. You could have a little bit of back something.
>
> The more important thing is, is when it is not centralized -- it is called centralized pain. When it is not centralized and it is acute, it is consistent. It is a one long band of problems from the back all the way down to the foot.
>
> And post injury, he had this consistency of, I got a ton of back pain, ton of leg pain. It is consistent. It goes all the way down like a waterfall. It is numb. It is tingly. I don't even know where my foot is in space.
>
> Where it premorbidly occasionally had a little knickknack, very brief, not disconcerting type of symptoms that weren't even treated. They received no meds, no steroids, no opioid analgesics, and not any workup.

123. In connection with the 1/13/2016 report of Claimant’s personal physician, Dr. Brodie wrote that it reflected that Claimant had reported “highly similar, if not identical symptom pattern occurring as of January 13, 2016.” Cl. Exh p. 37. Dr. Brodie acknowledged in his testimony that Claimant’s post-injury left foot

symptoms were worse; that the 2016-foot complaint did not include any left leg radiculopathy; nor was Claimant restricted in any activities; nor did he seek medical care until he went to the E.R. after the work injury. HT2, p. 165, l. 9-25 - p. 166, 1-25.

124. The ALJ finds that Claimant's pre-injury foot numbness was not in the same location or the same severity as was his post-injury left foot numbness.

Onset and progression of symptoms

125. As found, Claimant's testimony regarding the onset of right gluteal and head pain the night of the accident and persisting thereafter is corroborated by the testimony of the lay witnesses, and by the supervisor's accident report the next day. His progression of symptoms thereafter is documented by the histories taken by the E.R. nurse (Cl. Exh. p. 48, 75); his personal physician (Cl. Exh. p. 78); the contemporaneous history he provided to his Employer (Cl. Exh. p. 42); the testimony of lay witnesses; and his contemporaneous notation of dates 11/16/2018 and 11/23/2018 as dates of worsening, which are then replicated in contemporaneous records.

126. Dr. Brodie maintained that symptoms should appear "within hours" or within "maybe a day" of the work accident, HT2, p. 123, l. 11, which in fact, they did. He contended Claimant had no pain and no symptoms for 12 days (HT2, p. 133, l. 7-8; HT2, p. 125, l. 20-22). But he also acknowledged Claimant had symptoms earlier (HT2, p. 120, l. 18-25, p. 121, l. 1-5):

> Q: [Claimant] testified this morning, and he testified that immediately after a slip-and-fall on November 11th, 2018, he hit his head, so he had head pain and headache, and he had right glute pain. He testified that he did not seek medical care for his low back or his lower extremities until November 28, 2018. Is that testimony consistent with what he conveyed to you at your Division Independent Medical Exam?
>
> A: I'm looking at the record that I had submitted to the Division. And that sounds pretty close.

127. The ALJ finds Dr. Brodie's understanding that Claimant had no symptoms, and no pain, until 12 days after his injury, is not consistent with the record, including, in part, his own testimony.

128. Dr. Brodie was asked if he went through a "sort of timeline when he [Claimant] said his symptoms occurred, and how they occurred?" Dr. Brodie answered yes, he had reviewed the records in advance and had some questions, "you know, the *prior history* was really important, the *prior history* of all the chiropractic treatment with the back pain, the butt pain, the lower extremity symptoms. And I wanted to clarify it. (emphasis added)" HT2, p. 135, l. 10-14.

129. Consistent with his focus on pre-injury records, as opposed to post-accident history, while Dr. Brodie's report itemized each and every pre-injury chiropractic

and massage note, he itemized only 15/50 or 30% of the post-injury records.[1] In his written report, he made repeated reference to two reports of right leg weakness (see, for example, Cl. Exh. p. 34, 38); which is of questionable relevance when post-injury records showed Claimant's herniation to be on his left.

130. Both Dr. Sacha and Dr. Brodie testified to an inflammatory process which can cause new symptoms over time. Dr. Sacha testified that progression of symptoms over time is common with disk herniations, HT1, p. 67, l.12-16. He explained that:

> [I]nflammatory mediators that rush to the disk and rush to the swollen nerve root which increases the swelling, causes more compression, and with time, that is when you start getting progressive killing off of those axons. So it is called an inflammatory cascade . . . you have a whole bunch of inflammatory mediators coming to cause a big raucous at the site, the nerve roots swell more, it becomes compressed more, and you start killing off individual axons. And so as you kill off each individual axon, that is why you start getting more symptoms. HT1, p. 68, l. 2-6, 9-15. See also HT1, p. 136, l. 10-25, p. 137, l. 1-2.

131. Dr. Brodie also testified to an inflammatory process. He was asked whether 12 days after an accident, symptoms can change sides. HT2, p. 128, l. 17-25; p. 129, l. 1-10 (though symptoms had changed sides earlier, on 11/16/2018). He answered that symptoms can change over time (HT2, p. 130, l. 11-18):

> "Can they -- the symptoms, you couldn't call them necessarily migratory, but at some point in time with a disk herniation, it is thought that the disk has inflammatory chemical mediators inside of the disks, the fluid inside the center of the disk, and it is thought that that disk leaking that fluid can irritate the nerve roots."

132. Dr. Sacha commented, "Dr. Brodie made the argument for us that it can occur, and it frequently does. And in fact, it almost – these types of symptoms getting worse is very common with larger disk herniations," DT p. 30, l. 18-21.

[1] See Brodie report, Cl. Exh. p. 31-32, Dr. Brodie reviewed 15 authorized physician notes. An additional 35 notes were submitted by Respondents as part of the DIME packet, see Resp. Exh. p. 152-155. These notes were not itemized in Dr. Brodie's written review:

Dr. Sacha: 1/9, 1/22, 2/4, 2/13, 2/27, 3/6, 4/10, 6/5, 6/26, 7/17, 10/9/2019, 3/9/2020
Dr. Corson: 12/6, 12/12, 12/26/2018, 1/4, 1/22, 2/1, 2/18, 3/5, 3/25, 4/1, 4/22, 5/8, 5/16, 5/31, 6/14, 6/28, 7/19, 7/26, 8/1, 8/14, 9/6, 10/1, 11/1/2019

133. In relation to Claimant being awakened from sleep due to foot numbness on 11/23/2018, Dr. Sacha testified that while sleeping cannot cause a disk to herniate, it can aggravate it, by certain positions during sleep. “First of all, you don’t get an extruded disk fragment sleeping. That doesn’t occur. It is impossible. It is clinically impossible,” HT1, p. 81, l. 9-11. He testified,

> You need something -- to get a large extruded fragment, you have to have a traumatic event. So you have to have landed on your buttocks. You have to have a traumatic event where you lift and twist with force because you are extruding a big piece of disk off the main portion of the disk. So it doesn't just occur with time. It is not a degenerative process. It is not an insidious process. It is not something that happens from just sitting in your chair. It occurs from an episode or an event, a traumatic event. And that has got to be pretty significant forces because you broke the entire disk off and put it onto the spinal nerve, HT1, p. 130, l. 4-19.

134. Nor can you herniate a disk while sleeping. Dr. Sacha testified he “did a full lit search” and “there is nowhere in any of the literature at any point where sleep causes disk herniations,” DT p. 47, l. 25, p. 48, l. 1-4; see also HT1, p. 82, l. 5-6.

135. However, certain positions while sleeping can cause a worsening of condition, DT p. 48, l. 12-13. Dr. Sacha testified that the position Claimant was in while sleeping aggravated his herniated disk and caused more symptoms, HT1, p. 82, l. 6-7. “Sleep doesn’t cause disk herniations. Sleep can aggravate disk herniations,” DT p. 48, l. 20-21. “You are increasing disk pressure, putting more pressure on the nerve, especially with a specific type of disk herniation that [Claimant] had from his work injury, an extrude fragment far lateral sitting on the nerve root.” DT p. 48, l. 24-25; p. 49, l. 1-3. As a result, sleeping did not cause Claimant’s work-related injury, it was merely the natural progression of the work injury that caused Claimant to become more symptomatic while sleeping.

136. Dr. Brodie proposed an alternative theory. Based on his proposal that an MRI cannot show a herniation to be acute, he speculated that Claimant may have had the same herniation pre-injury, but that it was asymptomatic until 12 days after the work injury when his foot awakened him from sleep. He testified that 30 to 40 percent of individuals have a herniated disk, but no symptoms, HT2, p. 127, l. 5-7; p. 132, l. 14-15; p. 133, l. 23-25; p. 147, l. 24-25. He testified that Claimant probably had a herniated disk before the work injury, HT2, p. 127, l. 20-22 (“he probably had this problem in his back, likely a herniated disk”), see also HT2, p. 151, l. 21-22; because he had the same symptoms before the work injury, HT2, p. 134, l. 1-2 ("we know before the work injury, he had the same symptoms;") HT2, p. 151, l. 21-24 ("records show a lot of similar symptoms"); HT2, p. 128, l. 11-12 (foot symptoms after the work accident "were similar to the symptoms before the fall event").

137. By definition Dr. Brodie’s theory requires an aggravation, if Claimant’s hypothetical pre-injury disk herniation was asymptomatic, or even just less symptomatic. But pre-injury, Claimant was active in a range of physically

demanding activities; he had also been in massage, which can "actually make it (a herniated disk) far worse," (Sacha, HT1, p. 99, l. 19-20). Yet none of these pre-injury activities aggravated this hypothetical pre-injury disk herniation. Instead, pursuant to Dr. Brodie's hypothetical, coincidently the aggravation spontaneously occurred after the work injury, but without any relationship to it. Logically, this is highly improbable.

138. In addition, Dr. Brodie's theory is contingent on Claimant having no symptoms for 12 days: and contingent on Claimant having the same symptoms pre-and post-injury. Both contentions are inconsistent with the factual information contained in Claimant's medical records, Claimant's testimony, and the testimony of the lay witnesses. Moreover, Dr. Brodie's theory is internally inconsistent (same symptoms pre- and post-injury; yet asymptomatic pre-injury).

139. The ALJ finds Dr. Brodie's theory is built on unnecessary speculation, and dependent upon a mistaken understanding of the facts. There is a known mechanism of injury involving the significant forces necessary to herniate a disk and break off a chunk of it; and an MRI which, as found, showed both the herniation and the extruded chunk of it to have been acute; a dramatic change in Claimant's condition post-injury consistent with his MRI findings; including symptoms which began right after the work accident.

140. The ALJ finds that Claimant herniated his disk when he fell on his buttocks at work, which, as expressed by Dr. Brodie, is "what this scenario is all about"; thereafter, the symptoms of that herniation and of the extruded disk progressed due to a process called an "inflammatory cascade"; and then progressed again while Claimant was sleeping. As a result, Claimant's symptoms, need for medical treatment, and his disability were caused by his work injury when he slipped and fell and herniated his disk – which extruded and resulted in a disk fragment impinging a nerve. Thus, the slip and fall was the primary causative factor of Claimant's symptoms, need for medical treatment, and his disability.

Medical Treatment Guidelines

141. Low back injury causation is discussed in the Division of Workers' Compensation, Low Back Medical Treatment Guidelines, Rule 17, Exhibit 1, p. 12, 7 CCR 1101-3. When evaluating causation, the ALJ may consider the provisions of the Guidelines because they represent the accepted standards of practice in worker's compensation cases and were adopted pursuant to an express grant of statutory authority. Although the ALJ is not bound by the Guidelines, the causation analysis it contains is reasonable and helpful in this case.

142. Page 12 of Rule 17, Exhibit 1, states that "most low back cases result from injuries" but it also acknowledges that aggravation of previously symptomatic conditions, or previously asymptomatic conditions are also compensable. The Guidelines state as follows:

> "Work-related conditions may occur from the following:
>
> - a specific incident or injury,

- aggravation of a previous symptomatic condition, or
- a work-related exposure that renders a previously asymptomatic condition symptomatic and subsequently requires treatment."

143. The aggravation principles in the Guidelines mirrors the law. "Few principles are more fundamental to the Worker's Compensation (Act) than the rule that 'this state does not distinguish between disabilities that are the result of employment-related aggravation of pre-existing conditions and those that are not.' Thus, where a 'pre-existing condition is aggravated by an employee's work, the resulting disability is a compensable industrial disability,' *Subsequent Injury Fund v. Thompson*, 793 P.2d 576, 579 (Colo. 1990)." *Weber v. Shiloh House*, W.C. 4-540-459 (ICAO 5/20/2005).

144. Dr. Sacha credibly and persuasively testified that:

> [F]rom a causality standpoint, clearly, the patient has at the very least a permanent exacerbation of a previous problem. That being said, all of the data in this case, including all the diagnostic studies, show that the acute extruded disk herniation was an acute event that is causally related to this gentleman's date of work comp injury. Nothing else. Again, it says right below those bullet points on -- in the Medical Treatment Guidelines that most low back cases result from injuries. He had an injury. Okay? And he had an injury that causes extruded disk fragments. DT p. 37, l. 11-22.

145. In addition, the Guidelines also state as follows (p. 13-14):

> Clinicians need to ask the following question: Would the recommended treatment for the condition be the same if the work-related exposure had never occurred? If the answer to this question is "no," the provider may consider that the non-occupational elements contributing to back pain do not play a major role in the medical analysis of most cases.

146. As found, Claimant would not have needed lumbar surgery or work restrictions if the work-related exposure – slip and fall - had never occurred.

Permanent impairment

147. ATP Dr. Sacha had found 13% whole person impairment, Cl. Exh. p. 175. Due to a clerical error, it should have been 14%, HT1, p. 121, l. 4-6.

148. Though he found no causation, Dr. Brodie assessed Claimant's lumbar permanent impairment to be 17% whole person. His Table 53 and neurological rating was the same as what Dr. Sacha found. The difference was in the range of motion, which was in the ballpark of reasonable variability. Dr. Sacha had found invalid forward flexion. He credibly testified that Claimant:

> [W]as worse when he saw me so he had a harder time doing the forward flexion. And he had improved a little bit as he got

> further away from his surgery when he did the Division IME. . .. So both impairment ratings are appropriate, both impairment ratings are done the right way, and they are both within a kind of plus-minus of what we see from practitioner to practitioner. He was - if he was slightly better when he saw me, he probably would have gotten the forward flexion as well. They might have been identical." HT1, p. 119, l. 15-25, p. 120, l. 1.

149. The ALJ finds that Dr. Brodie's 17% whole person lumbar impairment was correctly done.

Medical Maintenance

150. Dr. Sacha testified that Claimant was still under his care and has chronic residual nerve damage at L5. He testified Claimant needs to be kept on neuropathic pain medicines and muscle relaxers; he may need another injection or two if his pain worsens. Further invasive treatment is not contemplated at this time, with the hope that the neuropathic pain will "quiet down" but he does have permanent damage and axonal loss on the EMG. HT1, p. 121, l. 17 - p. 123, l. 8.

151. The ALJ finds these treatments are reasonably designed to relieve the effects of the injury or to prevent deterioration of the Claimant's present condition. This evidence is credible and persuasive.

Ultimate findings

152. The ALJ is persuaded that Claimant's condition before and after his work injury was not the same, nor was it highly similar. Claimant's debility post-injury is dramatically different from his pre-injury functioning, which involved participation in a wide range of physically demanding activities. If Claimant's condition had been the same pre-injury, he would not have been able to function at the level he was functioning.

153. In addition, Claimant's medical condition post-injury had a myriad of new attributes. As stated, DIME Dr. Brodie acknowledged Claimant had no prior left leg radiculopathy; no restrictions ("I got over my skis on that"); nor any functional disability ("Maybe it's not there [in the record] at all"); no prior prescriptions for oral steroids or opiates; no pre-injury recommendations for a lumbar MRI, lumbar injections, or lumbar surgery, despite that Claimant was involved with medical professionals in connection with an earlier auto accident.

154. Other new complaints and findings had not been noticed by Dr. Brodie. These included limping, which included dependence on a cane ("I didn't pay attention to that"); painful and limited range of motion ("I don't remember seeing that"); high pain ratings ("I don't recall that specifically"). Also, present post-injury but not pre-injury was positive neurological clinical testing; atrophy and cramping of the left calf; and persistent muscle spasms.

155. The ALJ finds that the specific symptoms identified by Dr. Brodie as evidence of the same condition, pre- and post-injury, were not the same. These were right leg

weakness, left foot numbness, and low back and gluteal pain. The right leg was the contralateral side. The symptoms were "rare and intermittent," as opposed to post-injury left leg symptoms that were persistent and continuous. Nor did the right leg have any other symptom, unlike the array of radicular complaints in the left leg post-injury; and it was not functionally disabling. The left foot was also not functionally disabling pre-injury; the severity of the foot post-injury was vastly increased, as was the scope of the numbness.

156. With regard to the low back, Dr. Brodie "heavily weighted" the chiropractic chart as evidence that Claimant's pre- and post-injury condition was "highly similar if not identical," one of his two predicates for his no-causation opinion. This was based on his understanding that the chart reflected that "claimant reported with low back symptoms, specifically requested low back treatment, and specifically received low back treatment," "repetitively in the 12 months before November 11, 2018.

157. However, Dr. Brodie's understanding of the chiropractic chart was radically incorrect. Not only was there no repetitive treatment of Claimant's low back over 12 months, but there was also no treatment. Despite that he had written individual reviews of each of more than two dozen chiropractic notes, he evidently never noticed that neither the treatment section, nor the assessment section, ever included the low back; his comment, when it was brought to his attention, in both instances, was that that was "weird."

158. Even had Dr. Brodie's mistaken understanding of the chiropractic chart been correct, it would still not support a finding of an equivalent condition, pre- and post-work injury. Absent from the chiropractic chart was any documentation of left leg radiculopathy nor any of the many complaints and findings associated with it, which were present post-injury. In addition, the ALJ credits chiropractor Dr. Bennett's description of Claimant's pre-injury low back pain as mild; not functionally limiting; and not requiring any treatment. In contrast, post-injury, Claimant presented with "fairly severe low back pain."

159. That leaves the massage provider as the only provider who treated Claimant's back or his gluteal area. However, Claimant's post-accident symptoms were different, and worse. Again, absent was any documentation of left leg radiculopathy, functional limitation, nor of any of the myriad of other findings documented post-injury. The fact that Claimant tolerated massage to his gluteal area may itself show the lack of a herniated disk.

160. In addition, following the last massage visit on March 11, 2018, no provider treated Claimant's low back or related symptoms, until after the work injury.

161. The ALJ finds the evidence is clear and unmistakable that Claimant's condition before and after his work injury was not the same. This is not a mere difference of expert opinion. Rather, the opposing opinions are based on different facts. Dr. Brodie had a mistaken understanding of both Claimant's pre- as well as his post-injury condition. Pre-injury, he misunderstood the chiropractic chart; in his written report he mistakenly focused on the right leg when Claimant's disk injury was on the left (see Cl. Exh. p. 38, last paragraph); and in any case, the post-

injury left leg was far more severe than the pre-injury right leg; he failed to appreciate the distinction in the left foot, pre- and post-injury. Post-injury, Dr. Brodie did not pay attention to, remember, or see many of the new findings documented in the ATP records.

162. Based on Dr. Brodie's mistaken and incomplete understanding of the facts about the nature, extent, and significance of Claimant's complaints and findings pre- versus post-injury, the ALJ finds his opinion that Claimant's condition was highly similar if not identical to be not credible and not persuasive.

163. Having found Claimant's condition to be different after his work injury, the next question is the cause of that difference. Dr. Sacha characterized this as a "bread and butter case," HT1, p. 6, l. 6, i.e., an obvious case of a work accident-causing injury. Indeed, Employer admitted liability. Dr. Brodie proposes a spontaneous activation of a hypothetical pre-injury asymptomatic herniated disk, coincidently contemporaneous with Claimant's work injury.

164. First, supporting work causation, both experts agree that the mechanism of injury is consistent with Claimant's disk injury, which, in turn, is consistent also with the MRI and Claimant's clinical presentation.

165. Second, as found, the ALJ is persuaded by the testimony of Dr. Sacha, which is consistent with that of Dr. Castro, that the MRI showed Claimant's herniation to be "acute." The ALJ is persuaded that the chunk of herniation which broke off also occurred acutely.

166. Third, the ALJ is persuaded by Dr. Sacha's testimony that "significant forces" are required to break "the entire disk off and put it onto the spinal nerve." The only such event in the record is the admitted work injury.

167. Fourth, as found, Claimant had both early and progressive symptoms from the date of accident through the date of medical care on 11/28/2018. As stated, this is corroborated by the supervisor's accident report the next day, the testimony of the lay witnesses; the histories taken by the E.R. nurse and the personal physician, as well as the history Claimant provided to his employer; and his contemporaneous recording of 11/16/2018 and 11/23/2018 as dates of worsening, which are then replicated in contemporaneous records.

168. As found, Dr. Brodie is not correct in finding that Claimant had no symptoms and no pain for 12 days. This is not a product of a mere difference of expert opinion. This is a difference of opinion based on different facts. While some of these facts were not available to Dr. Brodie when he prepared his DIME report, others were. In addition, Dr. Brodie acknowledged Claimant's early symptoms in his testimony.

169. Fifth, the ALJ finds the testimony of Dr. Sacha to be credible and persuasive that worsening symptoms from an acute disk herniation can develop over time due to a process called an "inflammatory cascade." Dr. Brodie testified to the same process, as accounting for new symptoms as long as 12 days after an injury. While the context was different Dr. Brodie endorsed the same process as causing a delay in the appearance of new symptoms.

170. Sixth, the ALJ finds the testimony of Dr. Sacha to be credible and persuasive that sleep can make disk injury more symptomatic, which occurred in this case; but that sleep can neither cause a herniation nor cause a chunk of herniation to break off.

171. Dr. Brodie's alternative hypothetical requires as underlying predicates that the MRI cannot diagnose a herniation as acute; that symptoms pre- and post-injury were the same; and that Claimant had no symptoms for 12 days post-injury. As found, none of these predicates are consistent with the facts can Dr. Sacha's credible and highly persuasive testimony.

172. Dr. Brodie's hypothetical also requires an aggravation to make the hypothetical asymptomatic herniation symptomatic. That fact that this allegedly occurred after the work injury is too coincidental to be probable, especially considering pre-injury opportunities for aggravation including Claimant's participation in physically demanding activities and potentially his exposure to massage.

173. As found, the ALJ is persuaded by the totality of the evidence that Claimant would not have needed lumbar surgery but for the admitted accident of 11/11/2018. As stated in the Medical Treatment Guidelines for the low back (p. 13-14), when treatment would not have been the same before the work injury, "the non-occupational elements contribution to back pain do not play a major role."

174. The ALJ finds the admitted traumatic work accident of November 11, 2018 caused Claimant's disk to herniate and caused the "free fragment" chunk of disk to break off. While Claimant may have had a pre-existing condition or susceptibility to injury due to that condition, the work accident aggravated, accelerated, or combined with that pre-existing condition so as to produce his need for medical treatment, disability, and his permanent impairment.

175. The ALJ finds the Claimant's lumbar impairment is due to a new acute injury or an acute aggravation that occurred on November 11, 2018 when he slipped and fell and is not due to the natural progression of any pre-existing condition.

176. Based on the totality of the evidence, the ALJ finds that Claimant has proven that it is highly probable, unmistakable, and free from serious or substantial doubt that DIME Dr. Brodie's zero impairment, based on no causation, is in error. The Claimant has overcome the DIME's zero impairment rating by clear and convincing evidence.

177. The ALJ finds the absence of a report of injury in two of the November 2018 chiropractic notes is insubstantial in relation to the weight of the other evidence. The ALJ finds Claimant's explanation as to the first appointment adequate and his explanation as to the second appointment supported by the chiropractor and mitigated by a report that night to the E.R. In general, it is well known that inconsistencies, contradictory evidence, and incomplete explanations are common in the legal process. *Cf., People v. Brassfield*, 652 P.2d 588 (Colo. 1982) (inconsistencies are not uncommon in the adversary process which, of

necessity, must rely on the sometimes contradictory and often incomplete testimony of human observers in attempting to reconstruct historical events).

178. As found, Dr. Brodie's 17% whole person impairment rating was correctly done. Respondents did not offer evidence to overcome this rating.

179. As found, future medical maintenance treatment is reasonably designed to relieve the effects of the injury or to prevent further deterioration of Claimant's condition. This evidence is credible and persuasive.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Unless specified otherwise, Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential*

Insurance Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant has overcome by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician Matthew Brodie, who found zero impairment due to no causation. If so, should Claimant be awarded the 17% whole person impairment assessed by Dr. Brodie.

The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, 6/25/2015).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO 11/29/2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO 1/12/2015). But see *Yeutter v. Industrial Claims Appeals Office,* 2019 COA 53, 18CA0498 (determining that a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment); and *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000) (DIME opinion concerning causation need not be overcome by clear and convincing evidence where dispute involved the "threshold requirement" that the claimant establish a compensable injury). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution oftlineby a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the *AMA Guides,* and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO 4/14/2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado,* W.C. No. 4-350-36 (ICAO 3/22/2000); *Licata v. Wholly Cannoli Cafe* W.C. No. 4-863-323-04 (ICAO 7/26/2016).

If an industrial disability is attributable to both a pre-existing condition and an occupational injury, the resulting disability and medical benefits are compensable if the injury has caused a pre-existing condition to become industrially disabling. See *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). Thus, a pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). This is because compensation is not dependent on the state of an employee's health or his freedom from constitutional weakness. *Peter Kiewit Sons' Co. v. ICAO*, 236 P.2d 296 (Colo. 1951).

As found, Claimant sustained a new injury on account of his admitted slip-and-fall at work, or at a minimum aggravated a pre-existing condition. As found, the evidence is unmistakable and free from serious or substantial doubt that Claimant's condition was not the same after his work injury; that the mechanism of injury and the objective MRI evidence was consistent with an acute injury; and that there were different clinical findings after the work accident consistent with the slip-and-fall and with the MRI.

DIME Dr. Brodie's no-causation opinion was significantly dependent on the proposition that Claimant's condition before and after his work injury was "highly similar if not identical." As found, the facts are unmistakable that Dr. Brodie was incorrect. As found, this is not a mere difference of professional opinion. Rather, Dr. Brodie's opinion was based on an incomplete and incorrect understanding of the facts as set forth in the underlying medical records. *Cf., Salazar v. Holiday Retirement Corp.,* W.C. 4-639-040 (ICAO 1/2/2007) (when DIME formed his opinion based on an incorrect understanding of the facts, it was more than a mere difference of opinion). Like a house built on sand, an expert's opinion is no better than the facts and data on which it is based. *See Kennemur v. State of California*, 184 Cal.Rptr. 393, 402–03 (Cal. Ct. App. 1982).

As found, it is highly unlikely that Claimant's dramatically different presentation occurred spontaneously as a natural progression of an underlying condition, such as an asymptomatic herniated disk, only coincidently contemporaneous with the work injury. Nor is there any evidence that Claimant, pre-injury, had an asymptomatic herniated disk.

As found, the aggregate evidence establishes that Claimant had ongoing and progressive symptoms from the date of the accident through the date of the first medical appointment. The DIME's no-causation opinion specifically relied on his understanding that Claimant had no pain and no symptoms for 12 days. This proposition is based on an incorrect understanding of the facts. For this reason, and the many other reasons found above, the DIME's opinion is not credible or persuasive.

An opinion which is unsupported by the aggregate medical evidence is not a mere difference of opinion; it is an opinion which lacks credibility. *King v. The Children's Hospital*, W.C. 5-004-801-02 (ICAO 10/11/2018).

As a result, the ALJ finds and concludes Claimant has overcome the opinion of Dr. Brodie that Claimant has no impairment due to no causation of the underlying injury

– disk herniation - by clear and convincing evidence. But, as found, Dr. Brodie's 17% permanent impairment rating was correctly done.

II. Whether Respondents have proven by a preponderance of the evidence that they are entitled to recovery of a stipulated $25,740.62 payment of permanent impairment benefits, provided Claimant fails to overcome the opinion of the DIME, and if so, at what rate should the overpayment be repaid.

As found, Claimant has overcome the zero-impairment finding of the DIME. Therefore, there is no overpayment.

III. Whether Claimant has established by a preponderance of the evidence an entitlement to medical maintenance benefits.

The need for medical treatment may extend beyond the point of maximum medical improvement where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claims Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award for Grover medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended, nor a finding that Claimant is actually receiving medical treatment. *Holly Nursing Care Center v ICAO*, 992 P.2d 701 (Colo. App. 1999). Claimant must prove entitlement to Grover medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc*., 865 P.2d 915 (Colo. App. 1993). Once a claimant establishes the probable need for future medical treatment, he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc*., 77 P.3d 863, 866 (Colo. App. 2003).

In *Milco Construction v. Cowan*, 860 P.2d 539 (Colo. App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission*, supra. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in Grover."

As found, the ALJ finds Dr. Sacha's testimony concerning Claimant's future medical needs to be persuasive and uncontroverted. Thus, Claimant has established his entitlement to medical maintenance benefits.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has overcome by clear and convincing evidence the zero-impairment rating of DIME Dr. Matthew Brodie.

2. Claimant’s low back injury and 17% rating for it is causally related to the admitted November 11, 2018 work injury. Respondents shall pay a PPD award in accordance with this rating.
3. Respondents shall pay for all reasonable, necessary, and related medical maintenance care.
4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
5. Respondents’ claim of an overpayment of PPD is denied and dismissed.
6. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 19, 2021.

Denver, CO 80203

ISSUES

I. Have Respondents successfully appealed the Order, dated 10/21/2020 by PALJ Phillips, which denied Respondents' Motion to Cancel the DIME process?

II. Have Respondents successfully appealed the Order, dated 11/6/2020 by PALJ Phillips, which then denied Respondents' Motion for a Stay of her Order Denying their Motion to Cancel the DIME process?

III. Assuming such appeals are not successful, have Respondents, by clear and convincing evidence, overcome the DIME opinion by Dr. Rook?

IV. Has Claimant shown that Penalties should be assessed against Respondents?

V. Has Claimant shown that Attorney Fees should be assessed against Respondents for pleading an unripe issue?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Procedural History

1. This is an admitted claim. Claimant injured his knee on July 2, 2018. Claimant treated for this injury and was later recommended for surgery, which was initially denied by Respondents. After a hearing, the ALJ ordered the surgery. Following surgery, Claimant continued to treat and was placed at Maximum Medical Improvement by Dr. Terrance Lakin on June 15, 2020, and was given a 16% scheduled impairment rating to the left knee. (Ex. B).

2. On June 29, 2020, Respondents' filed a FAL. This was based upon Dr. Lakin's, the ATP, MMI/rating report. Dr. Lakin found that he could return to full duty work with no restrictions. He noted that the Claimant told him on that date he had popping in his left hip "but is not painful, just bothersome." *Id.*

DIME Process Begins / So far, so good

3. On July 29, 2020, Claimant, through counsel, [Redacted], filed an Objection to FAL and requested a DIME. (Ex. 3).

4. On that same date, Claimant's Counsel filed a Notice and Proposal and Application for DIME. Claimant proposed either Jack Rook, M.D., Thomas Higginbotham, D.O., or Timothy Hall, M.D. to conduct the DIME. *Id.*

5. M[Redacted], Respondents' claims adjuster, did not agree with any of the proposed doctors, including Dr. Rook. On August 24, 2020, Respondents filed a Notice of Failed DIME Negotiations, indicating parties were unable to agree upon a physician.

6. On August 27, 2020, the DIME Physician Panel was issued, listing Dr. William Watson, Dr. Wallace Larson, and Dr. Jack Rook. (Ex. 4). Consistent with Rule 11-4(A)(5), this notice provided, in pertinent part:

> Within five (5) business days of issuance of the three-physician list, the *requesting party* **shall** *strike* one name *and inform the other party and the Division.* The other party **then** shall have five (5) business days to *strike one* of the *remaining* physicians and inform the DIME Unit in writing, with confirmation to the requesting party. (Ex. 4)(emphasis added).

Settlement takes the Forefront

7. Claimant's counsel did not exercise his strike as required. Instead, on August 31, 2020 at 11:44 a.m., Claimant's Counsel sent an email to Ms. M[Redacted], stating:

> *Mr. [Claimant] accepts the $10,000 settlement. Please send documents to me. Thank you.* (Ex. J-5).

8. On September 1, 2020, Ms. M[Redacted] sent settlement documents to Claimant's Counsel via email, stating, *"Here you go. Thanks.* (Exhibit J-6 to J-16).

9. Neither party *ever* submitted a DIME strike. As it was Claimant's DIME, he was to issue the first strike. Ms. M[Redacted] believed that the claim was resolved via settlement and that the DIME process was not proceeding, based upon the representation from Claimant's counsel.

DIME Process Continues in the Background

10. On September 14, 2020, the IME Unit issued a DIME Physician Confirmation and Invoice indicating Dr. Jack Rook would conduct the DIME. (Ex. 5, p. 21). This notice also invoiced Claimant for the DIME fee of $1400, noting that ***"Payment is due 14 days from the date of this invoice."*** *Id* at 22. This notice also stated:

*****IMPORTANT: MEDICAL RECORDS NEED TO BE SEND TO*****

Attention: Dr. Jack Rook

Address: 923 W Colorado Avenue

Colorado Springs, CO 80905 Id at 21.

11. Ms. M[Redacted] sent an email to Claimant's Counsel following up on the status of the settlement documents being signed by Claimant on September 16, 2020, stating, *"Hi [Redacted] Just checking on these. Has Mr. [Claimant] been able to sign these? Thanks." (*Ex. J, p. 18). Claimant's counsel never responded.

12. On September 22, 2020, Ms. M[Redacted] followed up, asking, *"Hi [Redacted]. Checking in again on these. Thanks!"* Again, Claimant's counsel never responded. (Ex. J. p. 18)

13. On September 29, 2020, Ms. M[Redacted] inquired again, *"Hi [Redacted]. Has your client been in to sign the settlement documents? Please let me know what's going on. Thanks."* (Ex. J, p. 17). Once again, Claimant's counsel never responded.

Settlement Discussions End

14. Then, on October 1, 2020, at 1:41 p.m., Claimant's Counsel's office sent an email to the IME Unit, with a copy to Ms. M[Redacted] that a DIME appointment had been scheduled for November 2, 2020 at 1:00 p.m. with Dr. Jack Rook.

15. One minute later, Ms. M[Redacted] (who testified that she was "very surprised" by the email) emailed Claimant's Counsel at 1:42 p.m., stating: *"This claim settled. We had an agreement to settle. What is going on? Please advise IMMEDIATELY."* (Ex. J, p. 21)(emphasis supplied).

16. This time, Claimant's Counsel promptly responded, stating that: *"Mr. [Claimant] simply backed out of settlement at the last minute and elected to go forward with the DIME."* (Exhibit J-20 and J-21).

M[Redacted] Testifies at Hearing

17. Ms. M[Redacted] testified that had she known that the DIME panel was proceeding, without a settlement, she likely would have struck Dr. Rook from the panel. Ms. M[Redacted] also testified, in her 22 years as an adjuster, she had never had a claimant back out of a settlement after the DIME was selected by the DIME unit.

18. When asked why she never received a DIME strike [from Claimant] during the process, Ms. M[Redacted] stated: *"I wasn't surprised because the claim had settled, but there was no DIME process going on."* (Transcript, p. 29).

19. Ms. M[Redacted] confirmed receipt of the DIME confirmation and invoice (dated 9/14/2020). When asked if she was surprised by this, she stated: *"I honestly didn't even realize the DIME was still going on because we settled."* (Transcript, p. 30).

20. Ms. M[Redacted] testified that she is not attempting to enforce the settlement, but is requesting to put the parties back in the position just prior to her detrimental reliance on Claimant counsel's representation that the claim had settled and the DIME would not go forward. In other words, Respondents request a new panel and an opportunity to exercise their DIME strike. Ms. M[Redacted] also testified [upon hearing Claimant complain of the extra costs in paying for a second DIME exam] that Respondents would agree to pay for the new DIME, if ordered.

Claimant Testifies at Hearing

21. Claimant testified that he was aware of the $10,000 settlement offer, but testified that he had not accepted it and that there was "an offer on the table and there was still further time before that offer was to come to pass." (Transcript, pp. 44-45).

22. Claimant testified that he did not advise his counsel that he accepted the offer but that he would *"think about it and talk it through with [his] family." Id* at 45. [The ALJ notes that any hint of 'uncertainty' now alleged by Claimant was never conveyed to Respondents until October 1, 2021].

23. Claimant initially denied that he gave his attorney authority to advise Respondents that he accepted the offer. (Transcript, p. 44). But minutes later, Claimant testified that he must have accepted the offer, if his attorney wrote the email stating that he did accept it. *Id* at 46.

24. Claimant testified that he decided not to accept the settlement and proceed with the DIME after Dr. Rook was selected as the DIME, but his reason was not because Dr. Rook was selected; in fact, it was not even a consideration:

> I didn't consider that, no. I had not known Rook. I hadn't talked to Rook any previous times. So he was a random doctor, like many other ones that I've seen. (Transcript, pp. 47-48).

25. Instead, Claimant claimed the reason was because:

> I backed out due to ongoing pain and it not getting any better. I have a father that – a couple car accidents in his day, and I watched him limp around the house every single day in excruciating pain. And I didn't want to end up like that late in my life or not be able to – not be able to achieve anything later in my life due to my pain. And I decided to put the monetary part aside and take care of myself first and foremost. (Transcript, p. 64).

Respondents Object to the DIME Process Moving Forward

26. On October 7, 2020, immediately after learning that Claimant "backed out of the settlement" and scheduled the DIME appointment with Dr. Rook, Respondents attempted to have the DIME with Dr. Rook cancelled by filing a Motion with the DOWC. On October 21, 2020, PALJ Phillips denied that Motion. (Exhibits I and J).

27. After receiving PALJ Phillips' Order, on October 26, 2020, Respondents filed a Motion to Stay the Order and an Application for Hearing to Appeal the ruling.

28. Respondents' Motion to Stay the DIME was pending when the DIME appointment on November 2, 2020 was scheduled. *Neither party submitted medical records to the DIME*. (Exhibit C-5). PALJ Phillips Order denying the Motion was entered on November 6, 2020. (Exhibit G).

The DIME Process Moves Forward Anyway

29. Instead of cancelling the November 2, 2020 appointment due to not having any medical records pursuant W.C.R.P. 11-4(B)(6), Dr. Rook proceeded with the DIME appointment. He concluded that Claimant was not at MMI, based solely on his physical examination and Claimant's subjective history. Based upon Claimant's assertions of pain in his left knee, left hip, and low back, Dr. Rook gave a provisional lower extremity rating of 44% based upon rating the hip in addition to the knee. He noted that Claimant had not received any treatment for the hip and low back, and recommended further evaluation including an MRI of the hip and knee and an orthopedic surgeon consultation for both areas. (Exhibit C).

30. Dr. Rook also noted in his DIME report the following:

> *No medical records* were forwarded to me for review prior to this DIME. As of the date of this dictation which is the day following the independent medical examination, *I have not been provided with any medical records for review. I had my staff contact the plaintiff's attorney in the week prior to the division independent medical examination and we have not heard anything from them.* I've also contacted the division of labor regarding this issue….This is a problem which needs to be rectified as *it puts the examiner at a disadvantage* when performing the independent medical examination. (Ex. C, p. 5)(emphasis added).

On the same page, Dr. Rook further noted:

> At the time of this dictation *I also had not received any paperwork from the DIME unit. I therefore am at a disadvantage with regards to knowing the areas to be addressed, the issues in the case, and even the parties that*

> *are to receive this report*……After discussing the pertinent issues with the patient, it seems to me that the pertinent issues would be maximum medical improvement, future treatment needs, impairment rating, and the areas to be addressed would include his low back, left hip, and left knee. Id. (emphasis added).

Penalty and Procedural Issues Ongoing

31. At a Prehearing Conference om December 15, 2020, Claimant had moved to compel a follow-up DIME; for Respondents to provide records for the follow-up DIME and pay for the follow-up DIME; and to strike Respondents' Application for Hearing. PALJ Phillips denied the motion to compel the follow-up DIME because W.R.C.P. 11-7(A) states that the follow-up DIME shall occur after Claimant has completed the recommendations by the DIME and that the recommended treatment had not yet occurred. (Exhibit F).

32. Regarding the Motion to Strike Respondents Application for Hearing, Claimant argued that the issue of holding the DIME in abeyance was not ripe. PALJ Phillips disagreed and found that Respondents raised equitable issues, including detrimental reliance, and hold the DIME in abeyance is necessarily encompassed in the appeal of her Orders denying the cancelling of the DIME and staying that prior order. (Id.).

33. Apparently dissatisfied with the Order from December 15, 2020, at another Prehearing Conference before a different PALJ, Claimant moved to reconsider the motion to strike the issue of holding the DIME in abeyance, strike the DIME process, and strike the DIME report. PALJ Broniak denied the motion with regard to holding the DIME in abeyance for the same reasons as PALJ Phillips. However, PALJ Broniak found that striking the DIME process and Dr. Rook's DIME report were duplicative of the appeal of PALJ Phillips Orders and therefore unripe for the sole reason that they were duplicative. PALJ Broniak struck those two issues. (Exhibit E).

34. During the prehearing process, Claimant was ordered to answer one supplemental interrogatory #17, which was answered [by Claimant's counsel] on January 27, 2021. (Ex. L).

> 17. Please provide the date when Claimant decided to back out of the settlement agreement for $10,000. Please also state what actions you took to communicate to Respondents that Claimant decided to back out of the settlement agreement and the dates of those actions.
>
> ANSWER: Objection. Irrelevant. Discussions of settlement are inadmissible as evidence.

> SUPPLEMENTAL ANSWER: Upon information and belief, the Claimant decided to reject the settlement agreement on or about *September 28, 2020*. This was communicated to Marchelle Robinson, claims representative, on or about October 1, 2020. (emphasis added).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

D. In this case, the ALJ finds that throughout the entire process, Ms. M[Redacted] acted with competence, diligence and professionalism in dealing with Claimant. She communicated with regularity, and documented it. The ALJ also finds that Ms. M[Redacted] testified credibly, and reasonably, in the hearing. Her stated reliance upon the representations made to her is credible, and any lack of even greater pro-action (as now argued by Claimant) is mitigated by her reasonable reliance on what she reasonably believed at the time.

ALJ's Authority to Review the Order of the PALJ

E. The propriety of a PALJ's order may be addressed at a subsequent OAC hearing by the ALJ, who may review such an order. *Industrial Claims Appeals Office v. Orth,* 965 P.2d 1246, 1254 (Colo. 1998). *See also Kilpatrick v. Industrial Claims Appeals Office,* 356 P.3d 1008, 1013 (Colo. App. 2015) (while it is true that a PALJ's order may be addressed at the subsequent OAC hearing and the ALJ has authority to override a PALJ's ruling, the statute authorizing a PALJ to decide certain issues does not make the ALJ review a prerequisite for appellate review). Such process is quite sensible; the PALJ herein was without a mechanism to fully develop the facts at a prehearing conference. Such luxury was afforded this ALJ at a full hearing, and any overrule of the PALJ's Order herein does not imply any deficiencies on the part of the PALJ. We all have our roles to play.

Candid Observations about the DIME Selection Process

F. The Workers Compensation Statutes, and the Rules promulgated in connection therewith, are a thorough, refined, and sincere effort to ultimately appoint an impartial, and fully informed physician to perform the examination and produce a report. Once a physician has successfully run that gauntlet, their opinions are given great deference, so that all parties, and ALJs, may reasonably rely upon the DIME. This affords greater predictability to the process; informed decisions may then be made, settlements reached. In volunteering for the DIME panels, physicians pledge to be neutral and objective. No doubt they are all sincere in their pledge. But one cannot ignore the fact that they each have their own, sincerely held, professional proclivities. Reputations are often developed over time for being favorably disposed towards Claimants or Insurers. While not always an exact science, a*ny legal practitioner - or adjuster - who ignores this reality is not practicing with due diligence.*

G. Hence, a bit of game theory comes into play with the DIME selection process – and ultimately with the settlement process itself. It is an open secret that Claimant's Counsel initially proposed a panel consisting of Drs. Rook, Higginbotham, and Hall for a sound reason. Having not been born yesterday, and monitoring her files with diligence, Ms. M[Redacted] timely demurred on that one. The Division *[which the ALJ finds to have acted correctly throughout this entire process]* then submitted a random list of three names, coincidentally, to include Dr. Rook once again. The most rational opening move would have been to timely strike the name of the least Claimant-oriented doctor, await the Respondent's strike, and take the guy in the middle. Or, if two of the three choices are not to your liking, consider abandoning the DIME process altogether – and save the $1400 buy-in. *A rational corollary would have been to inform one's client of who's who in this process.* It is for this reason that the ALJ views, with *great* skepticism, Claimant's assertion that Dr. Rook was "just another doctor", whose default selection by the Division had no effect on his decision to back out of the deal. Either Claimant is fudging his answer, or his attorney was not keeping him informed of critical stages in the DIME process. Pick your poison. An unanswered question is whether Claimant would be singing this same tune today if the Division had randomly selected, for example, Dr. Larson.

Equitable Estoppel in Workers Compensation Cases, Generally

H. Statutes may not stand in the way of equitable relief where the facts and circumstances demand an equitable remedy. *Johnson v. Industrial Commission*, 761 P.2d 1140, 1146 (Colo. 1988)(insurer did not waive the right to offset against future benefits payable to claimant one half amount of SSDI benefits when insurer was not adequately informed of the receipt of double benefits until immediately prior to seeking the offset). *See also Kremer v. Blue Star Investment and Colorado Comp Ins. Authority,* W.C. 3-778-925 (ICAO Feb 12, 1996)(ALJ applied equitable estoppel and found claimant detrimentally relied on insurer conduct, i.e. the adjuster authorizing care, which was later denied); *Martin v. Century Papers and Transportation Ins. Co.,* W.C. No. 3-955-480 (ICAO Aug. 11 1994)(ALJ applied equitable estoppel and found claimant detrimentally relied upon statement at the settlement conference that the third party settlement would have nothing to do with worker's compensation benefits and insurer was barred from taking a subsequent offset).

I. The doctrine of equitable estoppel has four elements which are: (1) the party to be estopped must know the relevant facts; (2) the party to be estopped must also intend that its conduct be acted on or must so act that the party asserting the estoppel has a right to believe the other party's conduct is so intended; (3) the party asserting the estoppel must be ignorant of the true facts; and (4) the party asserting the estoppel must detrimentally rely on the other party's conduct. *Johnson v. Industrial Commission*, 761 P.2d at 1146.

Equitable Estoppel, as Applied

J. Starting with element (3), the ALJ finds that Ms. M[Redacted] had no idea that the Claimant was even being indecisive, much less rejecting the deal, until it was too late. She had every reason to think this was just a settlement that was just taking longer than expected to consummate. Claimant's attorney *reached out to her* to accept the $10,000 offer – and he did so during his 5-day window to exercise his own strike. His failure to timely exercise his own first strike is the best evidence that he was not moving forward with the DIME process. Assuming, as Claimant now argues, that Respondent could just go ahead and exercise her own strike on the during days 6 through 10 [note* this ALJ notes that a *literal* reading of Rule 11-4(A)(5) does not necessarily allow for this], such a [non]-move by Claimant would then give him a 50/50 chance of getting his *last* choice to perform the DIME. Such a move is either negligent, irrational, or a breathtaking gambit. Pick your poison. On three occasions, Ms. M[Redacted] reached out to follow-up, and got …no response. The ALJ concludes that she was ignorant of the true fact that Claimant was, at first, *waffling*, then outright *rejecting* the deal – past the 11th hour.

K. Element (4) is easy; Ms. M[Redacted] relied upon Claimant's actions to her own detriment. She never exercised her strike of Dr. Rook – assuming the Rules even permitted her to do so. Claimant's camp ran out the clock on her, and now assert the defense from the movie Animal House: *"Come on, Flounder. You can't spend your whole life worrying about your mistakes. You [messed] up. You trusted us."* She relied upon the word of Claimant's counsel, with whom she had settled other cases without apparent incident. She exercised diligence in following up on the paperwork on three occasions, and was met with silence – instead of being told that the deal was either off, or at least in question. And, once again, she also detrimentally relied upon Claimant's failure to exercise his own preemptory strike to conclude that the DIME process was being abandoned.

L. Sufficient evidence supports element (1). The relevant facts in this case are that, initially, the $10,000 deal was *not a sure thing*, and later, that the deal was off entirely. The ALJ once again views with *great* skepticism Claimant's assertion that he never accepted the offer (despite his attorney's acceptance on his behalf via email), and was never tendered settlement documents. Then Claimant does a 180, and states he must have accepted the offer after all. Only one answer is correct, and the former implicates a serious miscommunication between attorney and client. But either way, whether this waffling was known to Claimant *and* his attorney, or to Claimant *only,* such waffling is imputed to Claimant as a party. And instead of communicating this uncertainty/rejection to Respondents in good faith, Claimant's camp kept it under wraps as long as possible (too long, in fact -*see* Conclusions P, Q, *infra*).

M. Element (2) has alternative theories of application. The second alternative has more benign implications, so we'll look at that. Claimant (as a party) *"must so act that the party asserting the estoppel has a right to believe the other party's conduct is so intended [that its conduct be acted on]".* Even Claimant acknowledges that his position morphed from *accepting* the $10,000 [with no counter-offer], to *waffling*, to *rejecting* it and pressing forward with the DIME. He now asserts [via Interrogatory] that he ultimately *rejected* the offer on September *28*, 2020. The ALJ, once again, views this answer with *great* skepticism. What actually happened is that Claimant was unexpectedly dealt a Blackjack on September *14*, 2020, when the Division randomly selected Dr. Rook as the DIME examiner. He then waited until the last minute (the 14th day deadline) to *accept* and pay on September 28, to have the DIME go on. Instead of informing Respondents, Claimant's camp stonewalled Ms. M[Redacted], and ran out the clock on her. She still had every right to believe, up until October 1, that there were just delays in getting the papers signed. Reasonably enough, she made no effort to stop the DIME process until that point, based upon Claimant's cumulative actions – and inactions.

N. The ALJ finds and concludes that Respondents have established the elements of Equitable Estoppel in this case. As a result of Claimant's conduct, the DIME process has been compromised. The only appropriate remedy is to put the parties back, *as much as practicable*, to the position they were in before Claimant's inequitable conduct. *Back to a new DIME panel*. Respondents have offered to pay the second $1400 fee to start over, since the first $1400 to Dr. Rook is a sunk cost. And Respondents have deeper pockets, so that's an acceptable compromise. While that somewhat alters the risk/benefit dynamics of the process, such is the best that can be accomplished. **The PALJ's Orders, dated October 21, 2020 and November 6, 2020 are hereby vacated.**

The DIME Process had been further Compromised, in any Event

O. No medical records were sent by either party to Dr. Rook. The reason Respondents did not do so is a matter of record. They still didn't think the DIME process was moving forward. Claimant has no such excuse. According to Dr. Rook's report, he tried to contact Claimant for records, and got….no answer. While Dr. Rook likely should have declined the exam until he got the records, he chose to go forward, but noted his protest in the process. And with good reason. He was left with a physical exam, and a patient-supplied history. That's it. He even had to guess at the issues involved. No checks and balances, in the form of the written medical records, which might have yielded issues of apportionment, for example. The process by which this all occurred was simply not clean.

P. While not explicitly raised by Respondents as their own Penalty Issue, the ALJ has also reviewed Rule 11-4(A)(8), which reads, in its entirety:

> The requesting party shall schedule the DIME with the physician *within fourteen (14) days of receiving the DIME physician confirmation. The* requesting party shall immediately notify the DIME Unit and the opposing party **in writing of the date and time of the examination.** Absent good cause as determined by the Director or an ALJ, failure to make the appointment **and advise all parties** within fourteen (14) days may result in a Director's order to show cause why the DIME process should not be terminated. (emphasis added).

Q. Claimant apparently paid his DIME fee on September 28 (the 14th day), but waited *three more days*, until October 1, 2020 *to inform Respondents* (Ex. J-21). It is duly noted that this was not a last-minute, Friday 'til Monday oversight. September 28, 2020 was a Monday. October 1, 2020 was a Thursday. Three more days of delay, right in the middle of the workweek, before informing Respondents that the DIME was moving forward. And on September 29, 2020, Ms. M[Redacted] was *still* inquiring, in good faith, (and still being ignored) where the settlement documents were. Claimant violated Rule 11-4(A)(8), thus further compromising the entire DIME process.

Overcoming the DIME on the Merits

R. This issue is moot. Because the DIME selection process was fatally flawed, the ALJ will not explore any alleged deficiencies in the DIME itself, unless so Ordered.

Penalties / Attorney Fees as Initially Alleged by Claimant

S. In his opening statement, Claimant's counsel was tepid, as best, in even pursuing any penalty issue. No evidence at hearing was adduced at all on this issue. Claimant did not even mention or argue penalties in his position statement. And, upon review what documents and pleadings that were entered as exhibits, the ALJ finds nothing to support a penalty for failure *by Respondents* to exercise a DIME panel strike. Respondents have shown far greater cause for not doing so than has Claimant. Lastly, nothing in the record suggests Respondents pled an unripe issue during the prehearing process. No penalties or attorney fees will be assessed against Respondents.

ORDER

It is therefore Ordered that:

1. The PALJ Orders dated 10/21/2020 and 11/6/2020 are vacated.

2. A new DIME panel shall be empaneled forthwith, and if pursued by Claimant, the cost of the exam shall be borne by Respondents.

3. Claimant's claim for Penalties is denied and dismissed.

4. Claimant's claim for Attorneys Fees is denied and dismissed.

5. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In* *addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],

Claimant,

v.

[Redacted],

Employer,

and

SELF-INSURED,

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 28, 2021, in Denver, Colorado. The hearing was recorded by Google Meets (reference: 4/28//21, beginning at 8:30 AM, and ending at 12:15 PM) .

The Claimant was present in person, virtually, and represented by [Redacted], Esq. [Redacted], Esq. represented the self-insured Respondent.

Hereinafter [Redacted] shall be referred to as the "Claimant." The [Redacted], shall be referred to as the "Employer." All other parties shall be referred to by name.

Claimant's Exhibits 1 through 19 were admitted into evidence, without objection. Respondents' Exhibits A through M were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on May 10, 2021. On May 12, 2021, Respondent indicated that it had no objections as to form. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern the causal relatedness and reasonable necessity of psychotherapy sessions from August 2,2020 for the Claimant's compensable injury on her left wrist and arm. The Claimant relies on the opinion of the authorizing treating physician (ATP) Kathryn Buikema, M.D., that the sessions are reasonably necessary to treat her work-related injury. Underlying the Claimant's theory is the proposition that the admitted, compensable injury aggravated and accelerated all of the Claimant's stressors, thus, warranting psychotherapy to cure and relieve the Claimant from the effects of the admitted injury. Respondent rely on the opinion of the Independent Medical Examiner (IME) Robert Kleinman, M.D. that the Claimant's need for the psychotherapy sessions are not related because her chronic pain is not the main stressor due to her work-related injury.

The Claimant bears the burden of proof, by a preponderance of the evidence, on all issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Procedural Posture/Findings

1. On January 28, 2021, the Claimant filed an Expedited Application for Hearing, endorsing the issue of medical benefits, specifically, whether the psychotherapy sessions are reasonably necessary and causally related to the Claimant's admitted August 2, 2020 injury to her left wrist.(Claimant's Exhibit 2, pp. 7-14).

2. On February 3, 2021, the Respondents filed a Response to the Application for Hearing, endorsing causation, relatedness, "CRS 8-42-101(1)(a); CRS 8-42-104; intervening injury/event, and offsets.

3. On January 14, 2021, the Respondent filed a General Admission of Liability (GAL) admitting for medical benefits, an average weekly wag (AWW) of $1,314.07 and temporary total disability (TTD) benefits OF $876.05 per week from January 5,2021 and "ongoing.". (Claimant's Exhibit 1, pp. 1-6).

Preliminary Findings

4. Claimant is a 27-year-old female police officer for the Employer.

5. On August 2, 2020, the Claimant was called to help other officers with arresting a violent suspect who was resisting arrest. The Claimant was attempting to place handcuffs on the suspect when the chain of the handcuffs twisted around her left wrist area, injuring her left wrist which was the subject of the GAL. After taking the violent suspect to the police station, placing the suspect ibn a cell and attempting to remove the handcuffs, the Claimant asserts that the suspect attempted to assault her, and in defending herself, the Claimant allegedly used unacceptable force with the suspect. The ALJ takes administrative notice of the fact that the Claimant is not a large woman.

6. As a result, of the incident in the jail cell, the Employer initiated an internal investigation of the Claimant's interaction with the suspect.

7. The Claimant is left-handed and has no prior history of left-hand pain or injury prior to the August 2, 2020 incident. As a result of the the left hand injury, the Claimant developed chronic pain, and a long-term placement in light duty desk duty for nine months and continuing, to which the Claimant credibly testified that she was depressed because being a patrol cop was her dream job. These results were directly and causally related to the Claimant's interactions with the drunk and violent suspect of August 2, 2020. The ALJ hereby finds that the consequences of the August 2, 2020 incident aggravated and accelerated all of the Claimant's stressors beyond normal life stressors, thus, warranting psychotherapy to help the Claimant recover from the effects of her admitted injury.

Medical

8. The Claimant was receiving medical treatment for the injury and underwent surgery on January 6, 2021. The surgery was to repair the Claimant's ulnar nerve which had been severely torn as a result of the handcuff chain when the Claimant was attempting to arrest the violent suspect.

9. The Claimant's ATP, Kathryn Elizabeth Buikema, D.O., recommended psychotherapy sessions as part of the medical treatment to relieve the effects of the work injury. In her November 16, 2020 report, Dr. Buikema noted from a functional standpoint, lack of psychological support will most likely lengthen the time it takes for her to achieve MMI (maximum medical improvement) and regain full function. (Claimant's Exhibit 2, p. 12).

10. A Prior Authorization Request for the psychotherapy sessions was made to the claims adjuster, Jackie Bonavida, and it was denied. The adjuster (who is not a medical professional) made her own medical diagnosis and claimed the sessions were not related to the physical injury (Claimant's Exhibit 14, p. 161).

11. Respondents also denied the sessions claiming since compensability (at the time) had not been established, they were denied for non-medical reasons (Claimant's Exhibit 7, pp. 24-25). Compensability has now been admitted.

Independent Medical Examination (IME) by Robert Kleinman, M.D.

12. Respondent sent the Claimant to undergo an IME with Dr. Kleinman, a psychiatrist. Dr. Kleinman stated the opinion that the main stressors in the Claimant's life were caused by the possibility of losing her job with the Employer due to an internal affairs investigation and criminal matter surrounding the arrest on the date of injury. Although Dr. Kleinman considered the Claimant's chronic pain a stressor, he minimized it as a stressor despite the fact that the Claimant told him that she was not that worried about the internal affairs investigation and the stressors in her private life were within normal bounds. Dr. Kleinman minimized the non-work related stressors and he made a judgment call to weigh the non-work related stressors against the work-related factor of chronic pain,. The ALJ finds that Dr. Kleinman, essentially and arbitrarily, slanted the non-work-related stressors against work-relatedness. Overall, the ALJ does not find Dr. Kleinman to be credible or persuasive. In fact, the ALJ finds the Claimant's ATP, Dr. Buikema more credible than Dr. Kleinman.

13. The Claimant was diagnosed with Adjustment Disorder with Mixed Anxiety and Depression by Rebekah Vint, M.A. The ATPs and Dr. Kleinman also agreed with this diagnosis, however, as found, he weighed this factor against work-relatedness.

14. Dr. Buikema, the ATP, testified at hearing on behalf of Claimant. It was her testimony that the psychotherapy sessions were reasonably necessary and causally related to the work incident. Regarding the internal affairs investigation, the Claimant testified that she was defending herself when arresting the suspect and subsequently fingerprinting the suspect when she he attacked. her. The ALJ finds her testimony credible, persuasive and a compelling reason why the Claimant was not worried about the internal affairs investigation, which likely would conclude, according to the Claimant, that her actions in defending herself were justified. The ALJ finds that Dr. Buikema's opinions concerning the Claimant's need for psychotherapy because of her admitted, work-related injury are amply supported by the Claimant's credible testimony. Dr. Kleinman's opinions are not supported by the Claimant's reported mental condition after her injury because Dr. Kleinman parlayed everyday stressors, in his opinion, to the major cause of the Claimant's need for psychotherapy. The ALJ does not find this persuasive.

15. The Claimant testified at hearing regarding her work injury, treatment received, her chronic pain due to the injury, and that the psychotherapy sessions were helpful to her recovery and she wanted to continue with them. The ALJ finds her testimony in this regard highly credible.

16. The Claimant has proven, by preponderant evidence that the medical care for her left arm and wrist and the recommended psychotherapy sessions, recommended by the ATPs, is causally related to the compensable injury and reasonable necessary to cure and relieve the effects thereof.

Ultimate Findings

17. The ALJ finds the opinions of Dr. Buikema on reasonable necessity and causal relatedness of the need for psychotherapy highly persuasive and credible. Indeed, the ALJ finds that Dr. Buikema's opinion concerning the Claimant's need for psychotherapy supports the fact that the consequences of the August 2, 2020 incident with the drunken, violent suspect aggravated and accelerated all of the Claimant's stressors, thus, warranting the need for psychotherapy to cure and relieve the effects of her admitted, compensable injury. The ALJ further finds the opinions of Dr. Kleinman to be lacking in credibility on the reasonable necessity and causal relatedness of the August 2, 2020 incident. This ALJ determines and finds Dr. Kleinman is not credible and the ATPs are credible since they "have no skin in the game" The ALJ further finds that Dr. Kleinman improperly minimized the consequences of the Claimant's admitted injury by trying to attribute the Claimant's present stressors to stressors of everyday life. Such an attribution flies in the face of the totality of the evidence.

18. Between conflicting medical and lay opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of ATPs Dr. Buikema on the reasonable necessity and causal relatedness of the psychotherapy sessions to the work injury, and to reject opinions to the contrary. Both Dr. Buikema and Dr. Peter established the work-relatedness of the left shoulder injury of August 2, 2020, from which the Claimant suffered continued pain and that the psychotherapy sessions are related to the work-injury.

19. The Claimant has proven, by preponderant evidence that the medical care for her left arm and wrist and the recommended psychotherapy sessions, recommended by the ATPs, is causally related to the admitted, compensable injury of August 2, 2020, and that it is reasonably necessary to cure and relieve the effects thereof.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Buikema on reasonable necessity and causal relatedness of the need for psychotherapy were highly persuasive and credible. Indeed, as found, Dr. Buikema's opinion concerning the Claimant's need for psychotherapy supports the fact that the consequences of the August 2, 2020 incident with the drunken, violent suspect aggravated and accelerated all of the Claimant's stressors, thus, warranting the need for psychotherapy to cure and relieve the effects of her admitted, compensable injury. As further found, the opinions of Dr. Kleinman were lacking in credibility on the reasonable necessity and causal relatedness of the August 2, 2020 incident. Dr. Kleinman was not credible and the ATPs were credible. Dr. Kleinman improperly minimized the consequences of the Claimant's admitted injury by trying to attribute her present stressors to stressors of everyday life. Such an attribution flies in the face of the totality of the evidence.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of ATP Dr. Buikema and to reject the opinions of Dr. Kleinman.

Aggravation and Acceleration of All Stressors

c. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Claimant's pre-existing stressors of daily life were aggravated and accelerated by the admitted industrial injury—to the point that Claimant needed psychotherapy.to recover from the effects of the admitted injury.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits, beyond those admitted.. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985);

Faulkner v. Indus. Claim Appeals Office, 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with respect to the psychotherapy recommended by her ATP, Dr. Buikema.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondent shall pay all of the the costs of the psychotherapy, recommended by Kathryn Buikema, D.O., the Claimant's authorized treating physician, at the hands of the psychotherapist whom the Claimant had been seeing, subject to any limitations imposed by statute.

B. The General Admission of Liability, dated January 14, 2021, shall remain in full force and effect.

C. Any and all issues not determined herein are reserved for future decision.

DATED this 20th day of May 2021.

Administrative Law Judge

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered compensable injuries during the course and scope of her employment with Employer on July 4, 2019.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of her July 4, 2019 industrial injuries.

FINDINGS OF FACT

1. Claimant is a New York-based actress and Employer is a theater company located in Aspen, Colorado. Employer conducted auditions in the New York City area for a play commencing on July 1, 2019 and ending on August 3, 2019. Claimant auditioned and received a part in the play.

2. On May 29, 2019 Claimant executed an employment contract with Employer. In pertinent part, the contract provided that Claimant's employment would begin on July 1, 2019 at 10:00 a.m. Claimant was required to report to Employer's rehearsal studio located at 403 AABC, Aspen, CO 81611. Because Claimant was required to travel over 100 miles to commence her employment, Employer provided roundtrip airfare and housing accommodations.

3. Claimant's employment duties required her to attend rehearsals and performances at Employer's studio and theater. Claimant remarked that the studio was approximately 4.7 miles from her residence. She was not required by her employment contract to work anywhere aside from the theater or rehearsal studio.

4. As an alternative to walking or taking public transportation Employer offered bicycles to employees. Claimant elected to check out a bicycle from Employer. She signed a waiver form acknowledging that she was borrowing the bicycle as a convenience and understood that Employer's insurance policies "do not include any coverage on this bicycle or me while this bicycle is in my possession."

5. On July 4, 2019 Claimant was riding her bicycle from her residence to rehearsal when the front wheel abruptly stopped and she fell. Claimant's right hand took the brunt of the fall and she suffered a non-displaced fracture of the scaphoid bone in her right wrist. Claimant also testified that she sustained contusions, cuts and abrasions on her legs, knees, feet, right arm and shoulder, both hands and right cheek as a result of the fall.

6. Two individuals cycling behind Claimant witnessed the accident and stopped to assist her. Claimant’s colleague and local roommate Alice Sherman came along on her bike several minutes later. Claimant was sitting and recovering on the side of the bike path. Ms. Sherman immediately sent a text message to Employer’s Stage Manager to inform him of the accident. Employer then provided Claimant with transportation to the Aspen Valley Hospital Emergency Room. Medical providers examined and treated Claimant’s injuries.

7. Claimant has demonstrated it is more probably true than not that she suffered compensable injuries during the course and scope of her employment with Employer on July 4, 2019. Initially, Claimant is a New York-based actor who auditioned and received a part in Employer’s Aspen, Colorado play. She accepted the role and relocated to Colorado for the period July 1 through August 3, 2019. Employer provided Claimant with roundtrip airfare and housing accommodations for the duration of the production. The preceding facts reflect that Claimant was a traveling employee under continuous coverage during her employment. Because Claimant’s employment required travel away from home, she was within the course of employment throughout the production unless she made a distinct departure or personal deviation from her work activities.

8. The record reveals that Claimant was not engaged in a deviation from her employment duties while riding her bicycle to the rehearsal studio on July 4, 2019. Claimant’s employment duties required her to attend rehearsals and performances at Employer’s studio and theater. The studio was approximately 4.7 miles from her residence. She was not required by her employment contract to work anywhere aside from the theater or rehearsal studio. Because Claimant was riding a bicycle to rehearsal, she was within the scope of the employment relationship. There was no evidence that Claimant’s injuries as a result of the bicycle accident occurred during a personal deviation. Because Claimant’s bicycle accident on July 4, 2019 occurred during her continuous coverage under the travel status doctrine, her injuries are compensable.

9. Claimant has established it is more probably true than not that she is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of her July 4, 2019 industrial injuries. When Claimant fell off her bicycle on July 4, 2019 her right hand took the brunt of the fall. She suffered a non-displaced fracture of the scaphoid bone in her right wrist. Claimant credibly explained that she also sustained contusions, cuts and abrasions on her legs, knees, feet, right arm and shoulder, both hands and right cheek as a result of the accident. Claimant subsequently received care and treatment at the Aspen Valley Hospital Emergency Room for her injuries. All of the preceding medical treatment was reasonable, necessary and related to Claimant’s July 4, 2019 industrial injuries. Employer is thus financially responsible for the payment of Claimant’s reasonable and necessary medical expenses for all medical treatment related to her July 4, 2019 work injuries.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with her employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991).

5. Generally, injuries sustained by employees while they are traveling to or from work are not compensable because travel is not considered the performance of services arising out of and in the course of employment. *Madden v. Mountain West Fabricators*, 977 P.2d 861, 863 (Colo. 1999). However, the travel status doctrine also applies in a broader context to employees who travel away from home in order to work in a temporary position or on a temporary project. *See Tatum--Reese Development Corp. v. Industrial Commission,* 30 Colo. App. 149, 490 P.2d 94 (Colo. App. 1971) (the “coming and going rule” denying compensation to an employee injured while on his way to or from work did not apply because the employee was in “travel status” required by the employer); *Burch v. Flint Energy Services, Inc.,* W.C. No. 4-643-153 (ICAO, Sept. 14, 2006).

6. An employee whose work requires travel away from home is within the course of employment continuously during the trip except when the employee makes a distinct departure on a personal errand. *See SkyWest Airlines, Inc. v. Industrial Claim*

Appeals Office, 2020COA131 ¶14 (Aug. 27, 2020) (quoting *Madden* for the proposition that "under the 'travel status' doctrine, 'if the employee's job duties require travel[,] . . . that travel is considered to be a part of the job, and any injury occurring during such travel will be compensable.'"); *Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo. App. 1995) (where the claimant was hired in Texas, transported by the employer to Colorado to work on a project and housed in temporary quarters, his injuries during a motor vehicle accident while returning to his temporary residence were compensable because he was a traveling employee under continuous coverage); *see also Continental Airlines v. Industrial Commission*, 709 P.2d 953 (Colo. App. 1994).

7. As found, Claimant has demonstrated by a preponderance of the evidence that she suffered compensable injuries during the course and scope of her employment with Employer on July 4, 2019. Initially, Claimant is a New York-based actor who auditioned and received a part in Employer's Aspen, Colorado play. She accepted the role and relocated to Colorado for the period July 1 through August 3, 2019. Employer provided Claimant with roundtrip airfare and housing accommodations for the duration of the production. The preceding facts reflect that Claimant was a traveling employee under continuous coverage during her employment. Because Claimant's employment required travel away from home, she was within the course of employment throughout the production unless she made a distinct departure or personal deviation from her work activities.

8. As found, the record reveals that Claimant was not engaged in a deviation from her employment duties while riding her bicycle to the rehearsal studio on July 4, 2019. Claimant's employment duties required her to attend rehearsals and performances at Employer's studio and theater. The studio was approximately 4.7 miles from her residence. She was not required by her employment contract to work anywhere aside from the theater or rehearsal studio. Because Claimant was riding a bicycle to rehearsal, she was within the scope of the employment relationship. There was no evidence that Claimant's injuries as a result of the bicycle accident occurred during a personal deviation. Because Claimant's bicycle accident on July 4, 2019 occurred during her continuous coverage under the travel status doctrine, her injuries are compensable.

Medical Benefits

9. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The question of whether a particular disability is the result of the natural progression of a preexisting condition or the subsequent aggravation or acceleration of that condition is a question of fact. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Finally, the determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual

determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

10. As found, Claimant has established by a preponderance of the evidence that she is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of her July 4, 2019 industrial injuries. When Claimant fell off her bicycle on July 4, 2019 her right hand took the brunt of the fall. She suffered a non-displaced fracture of the scaphoid bone in her right wrist. Claimant credibly explained that she also sustained contusions, cuts and abrasions on her legs, knees, feet, right arm and shoulder, both hands and right cheek as a result of the accident. Claimant subsequently received care and treatment at the Aspen Valley Hospital Emergency Room for her injuries. All of the preceding medical treatment was reasonable, necessary and related to Claimant's July 4, 2019 industrial injuries. Employer is thus financially responsible for the payment of Claimant's reasonable and necessary medical expenses for all medical treatment related to her July 4, 2019 work injuries.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered compensable injuries while working for Employer on July 4, 2019.

2. Employer is financially responsible for the payment of Claimant's reasonable and necessary medical expenses for all medical treatment related to her July 4, 2019 work injuries.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts.

For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-093-609-002

ISSUES

I. Whether Claimant suffered a compensable injury or illness due to exposure to mold at work.

II. Whether Claimant is entitled to a general award of medical benefits for all treatment provided for her injury or illness.

III. Whether Claimant is entitled to temporary total disability (TTD) benefits beginning June 2017.

IV. A determination of Claimant's average weekly wage (AWW).

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is employed with Respondents and began working for Respondents in 2016. (Hearing Testimony).
2. In early 2017, Claimant and her fellow employees were told they would be moving to a new building known as [Redacted]. (Hearing Testimony).
3. When Claimant visited [Redacted] before beginning work at that location, she was unhappy with the appearance and cleanliness of the building. (Hearing Testimony). The building did have some water damage on some walls and portions of the ceiling. (*See* Claimant's Exhibit 1). The Claimant also observed a substance that appears to be bacteria, but this substance was never tested. (*See* Claimant's Exhibit 1, Hearing Transcript).
4. Claimant began working at [Redacted] in June 2017. (Hearing Testimony).

Claimant's Alleged Illness and Diagnosis

5. Claimant contends that she began getting sick "almost instantly" after moving into the [Redacted] building. (Hearing Transcript p. 60, line 13).
6. Although Claimant alleges other employees in her building also complained of headaches or stomach aches, Claimant only presented one witness in support of this claim. This witness was a coworker of Claimant's who also worked in the [Redacted] building. This coworker, however, admitted that she had regular headaches before moving to the building. Plus, after she moved to the building, she did not find the increase in frequency or severity of her headaches significant enough to seek medical treatment for headaches. (Hearing Transcript p. 25, lines 12-17).
7. Respondents called Ms. Cari Z[Redacted] as a witness. She also worked at [Redacted]. She was unaware of any other employees with health complaints relating to the building. (Hearing Transcript p. 126).

8. Respondents did not receive any official complaints or claims of illness from any other employees working in the [Redacted] building. (Hearing Transcript).

9. Claimant's first alleged symptom that she noticed was a rash on her arm. (Hearing Transcript p. 61, line 7).

10. Claimant claimed this rash resulted from working in the building but did not provide any credible and persuasive medical evidence that the rash was related to mold exposure.

11. Claimant eventually developed other symptoms such as migraines, numbness and tingling, chronic pain in her limbs and stomach, constipation, and blood in her stools. Claimant attributes these symptoms to mold exposure. (Hearing Testimony).

12. The first time Claimant sought medical treatment for any symptoms allegedly related to mold exposure was October 10, 2018 at Parker Adventist Hospital Emergency Department, where she was treated for a migraine headache. (Claimant Exhibit 3). There, she told her treating providers that she had a history of migraines, but they had grown more frequent and more severe over the past six months. (*Id.*).

13. During this emergency visit, the cause of her migraine was not diagnosed. (See Claimant Exhibit 3, Hearing Transcript p. 65).

14. Claimant sought a specialist to diagnose the cause of her migraines, which led her to Neurology of the Rockies and Dr. Claude Fountin. (Hearing Transcript p. 66).

15. Dr. Fountin noted that Claimant may have "environmental exposure at her place of work," but it is not clear from these records if that supposition came from his evaluation and assessment or from Claimant's recounting of her suspicions. (Claimant's Exhibit 4). The records from Neurology of the Rockies do not suggest that any testing was done to support a notion that Claimant's headaches resulted from mold, or that her place of work was the cause of the headaches. (*Id*.).

16. Dr. Fountin recommended relocation based on "concerns regarding environmental toxins at her place of work," but did not officially restrict Claimant from returning to [Redacted] (*Id*.).

17. Based on her health concerns, Claimant began to work in a different building in March 2019. (Hearing transcript p. 75, lines 7-12).

18. Dr. Fountin ultimately could not diagnose Claimant. As a result, Claimant went to see Dr. Nancy Brown, who Claimant understood to be a mold specialist. (See Hearing Transcript p. 68).

19. Before seeing Dr. Brown, Claimant went to an allergy specialist for further testing. (Hearing Transcript p. 69, lines 10-11).

20. Claimant had an allergy skin test done to see if she was allergic to mold. (Hearing Transcript p. 69). Claimant tested negative for a mold allergy. (*Id.*) The specialist then allegedly told Claimant "there is no way to really determine" a mold allergy without a urine sample. (*Id*.) Claimant did not then do the urine test to test for mold. (Hearing Transcript p. 92 line 25). Claimant did not produce any medical records to support any interactions with this allergy specialist.

21. On January 25, 2019, Claimant was evaluated by Dr. Nancy Brown. At this first appointment, Dr. Brown indicated that Claimant's symptoms were consistent with mold toxicity. (Respondents Exhibit I at 070).

22. Claimant submitted to a urine test to test for mycotoxins on January 30, 2019. The results of this test revealed Claimant's level of Ochratoxin A was positive as was her level of Mycophenolic Acid. These reports, however, do not indicate whether the levels were considered high or minimal. Then, the test results contain an explanation of the cause of the Mycophenolic A. The documentation says that Ochratoxin A is a chemical produced by molds and that exposure is done mainly through water damaged buildings. That said, it also indicates that minimal exposure can occur through contaminated foods such as cereals, grape juices, dairy, spices, wine, dried fruit, and coffee. The documentation also indicates the other mycotoxin can be produced by the Penicillium fungus. But it says nothing about what causes the fungus. Moreover, the reliability of the definitions – and the cause of elevated levels – was not corroborated and supported by credible and persuasive evidence. (Respondents Exhibit I at Adventist.074-076; *see also* Hearing Transcript p. 37, lines 17-18).

23. Dr. Brown stated on March 1, 2019 that Claimant should not be "present at any time" in the [Redacted] building. (Claimant's Exhibit 6).

24. Claimant continued to see Dr. Brown throughout 2019 and 2020. Dr. Brown's notes indicate Claimant would sometimes report improvement, and sometimes report worsening of symptoms. (Respondents Exhibit I).

25. Dr. Brown's own assessment indicates that Claimant's diagnosis of mold toxicity "is confirmed by the fact that since removing herself from the building in question, and being treated appropriately for mold toxicity, her symptoms are improving." (Claimant's Exhibit 6). This statement was made in March 2019. On the other hand, Dr. Brown's notes from February 14, 2020 indicate that Claimant's symptoms are worse, and that she "only feels bad when she is at work." (Respondents Exhibit I, at Adventist.062). It should be noted that Claimant had not worked in the [Redacted] Building for over one year at that time. Moreover, Dr. Brown does not seek to reconcile these two conclusions – which are inconsistent - in any of her records. As a result, her opinion is not found to be reliable or persuasive.

26. Claimant claims to be continuing to see Dr. Brown regularly, as recently as one-month before the hearing. (Hearing Transcript p. 98, lines 17-20). That said, Claimant submitted just three pages of notes from Dr. Brown in support of her claim of mold toxicity.

27. Claimant has a history of taking phentermine, a weight loss drug, including during the time she worked at [Redacted]. (Hearing Transcript p. 83). Claimant stated that Dr. Brown instructed her to stop taking phentermine. (Hearing Transcript p. 96, lines 17-18).

28. Claimant provided a medical record that showed Dr. Florina Mata believed that phentermine was contributing to Claimant's symptoms. (Claimant's Exhibit 3, p. 9). This record was dated August 17, 2020. (*Id*.).

29. Claimant was evaluated by Dr. Michael Volz on September 4, 2020. (Respondents' Exhibit H). Dr. Volz is board certified in internal medicine and allergy and immunology. He is also Level II accredited. (Hearing Transcript p. 31).

30. Dr. Volz reviewed Claimant's symptoms, many of which were self-reported, as well as Claimant's medical records from 2017 to 2019. (*Id*.)

31. Dr. Volz noted that based on Claimant's urine screen, she had no elevated levels of mold, and only two types of mold were even present. (Hearing Transcript p. 37, lines 17-18).

32. Dr. Volz questioned whether the mycotoxins present in Claimant's urine came from mold exposure, since he would expect to see more types of mycotoxins if mold were the source. (Hearing Transcript p. 38, lines 1-8).

33. In his report, Dr. Volz noted that many of Claimant's symptoms can be attributed to phentermine use (Respondents Exhibit H at Adventist. 057-058), and the timing of her symptoms corresponded to the times Claimant was taking phentermine. (*Id*. at Adventist. 059). Because of this, Dr. Volz stated that the use of phentermine "cannot be dismissed as not being involved or having a limited effect." (*Id*).

34. Dr. Volz rejected Dr. Brown's conclusion that Claimant's chronic inflammation resulted from the toxic effects of mold: "this assertion is not supported by any objective test since there were just 2 mycotoxins measurable in her urine." (*Id.* at Adventist.058).

35. Dr. Volz stated that he was not presented with any studies to suggest that the mycotoxins present in Claimant's systems had affected her immune system, and that all of her immune system tests results have been normal. As a result, Claimant's alleged viral infection is not attributable to the workplace of [Redacted]. (*Id*. at Adventist.059).

36. Dr. Volz stated that when a patient is experiencing mold toxicity, their symptoms should resolve within a few weeks to a few months at the most. (Hearing Transcript p. 34, lines 12-13).

37. Dr. Volz stated that upon reviewing the mold assessment done at [Redacted], there was "NO objective information to support" the conclusion working in [Redacted] was the cause of Claimant's symptoms. (Respondents' Exhibit H at Adventist.059).

38. He also concluded that Claimant's use of Phentermine must be considered a factor to at least some of Claimant's symptoms – including her migraines. (*Id*. at 60).

39. In his report, Dr. Volz ultimately concluded that "there is a high degree of medical probability that molds alleged to have been [at] the former [Redacted] has not been established and is not responsible for the claimant's health." (*Id*. at 60).

40. When asked why he would be in a better position than Dr. Brown to determine whether Claimant's symptoms resulted from mold, he reiterated that there was "no objective information to support findings that there was mold in that environment." (Hearing Transcript p. 48, lines 21-23).

41. Claimant asked Dr. Volz if there had been a report from OSHA recommending a mold pull, it could possibly change Dr. Volz's evaluation. (Hearing Transcript p. 50). Dr. Volz indicated that it could possibly change. (*Id*.). That said, OSHA made no such

recommendation (discussed *infra*), so this statement is not relevant to Dr. Volz' ultimate conclusions.

Mold Testing of [Redacted]

42. Respondents hired Higgins & Associates to perform a mold assessment. (Hearing Transcript). This testing was conducted on January 11, 2019. (Respondents Exhibit G, at Adventist.037).

43. The testing from Higgins & Associates did not reveal a significant amplification of elevated levels of airborne mold compared to outside levels based on the time of year the tests were performed — the winter. (*Id*. at Adventist.038). In the end, the testing revealed the mold levels in the building were considered low and normal. (*Id.* Adventist.038).

44. The Occupational Safety and Health Administration (OSHA) does not have a permissible mold standard. But OSHA does recommend further investigation if there is 1,000 viable colony forming units per cubic meter. (Hearing Transcript p. 106, lines 5-12; Claimant's Exhibit 10 p. 3).

45. The levels measured inside [Redacted] ranged from 40 to 227 spores per cubic meter. (Respondents Exhibit G at Adventist.038), far below the OSHA recommendation.

46. Claimant stated during the hearing that she was unaware of any mold testing done as of March 2019. (Hearing Transcript p. 86, line 14-15). However, Respondents offered evidence that indoor mold testing was done, showing that Claimant was simply not privy to that information at the time.

47. After the testing done by Higgins & Associates, OSHA conducted an inspection of [Redacted]. (Claimant's Exhibit 10). This inspection found no violations of OSHA standards. (*Id.*).

48. Higgins & Associates did not do any surface testing as part of their January 19, 2021. (Hearing Transcript p. 107, line 19). Mr. G[Redacted] testified that outside of sterile environments, surface testing would be unusual unless mold is visible. (Hearing transcript pp. 107-108). Here, there was no mold growth observed during the evaluation. (Hearing Transcript p. 108, line 21).

49. Mr. G[Redacted] testified that he observed that there was water damage that was old but was told the damage was not recent (Hearing Transcript pp. 116-117). He observed these spots with infrared cameras, which revealed these spots were dry at the time of the evaluation. (Hearing Transcript p. 120, lines 1-6).

50. When asked why an ERMI or other air quality tests were not performed, Mr. G[Redacted] testified that they were asked to test for mold, specifically because there was an employee complaint related to "specific allergies to mold." (Hearing Transcript p. 112).

51. At hearing, Mr. G[Redacted] testified that he relied on a representative of Respondent Employer for information on where employees worked and how many employees had complained of symptoms. (Hearing Transcript pp. 113-114).

52. During the hearing, Claimant said to Mr. G[Redacted] that a subsequent OSHA report recommended "that a microorganism or a mold pull be done." (Hearing Transcript p. 118-119). However, the OSHA report referenced did not require such. (See Claimant's Exhibit 10, discussed further *infra*).

53. In March 2019, OSHA did an inspection of the [Redacted] building. (Claimant's Exhibit 10).

54. This OSHA inspection did not find any violations of standards. They did, however, offer suggestions to Respondents to reduce exposure. (*Id*.)

55. During the inspection, OSHA did not do any surface mold testing. The report also stated that the compliance officer did not observe any areas of mold growth. (*Id*.).

56. The OSHA investigation also revealed that their review of [Redacted]'s injury and illness logs "did not reveal a pattern of mold related illnesses." (*Id*.).

57. The report from OSHA acknowledged that [Redacted]'s prior report on mold spore assessment "did not reveal a pattern of mold spores in the building in excess of the amount found outdoors." (*Id*.).

58. The suggestions from the report included evaluating and optimizing ventilation, preventive maintenance for HVAC and heating symptoms, and further cleaning and disinfection. (*Id.*).

59. Claimant suggested that the report from OSHA requested Respondents conduct a mold report (Hearing Transcript p. 49, lines 23-25), however, no such request was made in the OSHA report. (Claimant's Exhibit 10). OSHA did recommend an indoor air quality inspection but acknowledged the results of Respondents' prior mold spore assessment. (*Id*. at page 3).

60. Claimant suggested that the report from OSHA recommended doing a "mold pull" in the building (Hearing Transcript p. 50, lines 3-5), but in fact there was no such recommendation in the report. (Claimant's Exhibit 10).

61. Claimant's home has not been tested for mold. (Respondents' Exhibit I at Adventist.065).

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

1. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights

of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency, or inconsistency of the witness's testimony and actions, the reasonableness, or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

I. Whether Claimant suffered a compensable injury or illness due to exposure to mold at work.

4. A claimant proves compensability by showing, by a preponderance of the evidence, that the injury arose out of and in the course of the claimant's employment. *Loofbourrow v. Indus. Claims Appeals Office*, 321 P.3d 548, 552, 2011 Colo. App. LEXIS 1632, *5, 2011.

5. Pursuant to § 8-40-201(14), C.R.S., a claimant sustains an occupational disease when the disease "results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment."

6. Claimant has not shown that it is probable that she has suffered from mold toxicity. Although Claimant submitted a few pages of records from Dr. Nancy Brown that allegedly supported Claimant's claim of mold toxicity, Respondents submitted more of Dr. Brown's notes which contained internal contradictions. Thus, the ALJ does not find Dr. Brown's opinions to be credible or persuasive.

7. This court finds Dr. Michael Volz to be a more credible and persuasive medical expert. Dr. Volz is Board Certified in internal medicine and allergy and immunology. He is also Level 2 accredited in the state of Colorado. Dr. Volz was also able to explain the

inability to attribute Claimant's symptoms to mold toxicity, rather than making conclusory and overly definite statements. Thus, Dr. Volz' determination that Claimant was not likely suffering from mold toxicity is found to be credible and persuasive.

8. Even if Claimant had proven that she was suffering from mold toxicity, Claimant has not shown that there were high levels of mold present in her workplace. The burden of proof is on the Claimant to show the existence of a hazard that resulted in her occupational disease. Claimant must show that her occupational disease "results directly from the employment or the conditions under which work was performed…" Claimant presented photographs of wet spots and bacterial growth in the [Redacted] building but did not provide any additional persuasive evidence of any mold growth related to these issues.

9. Respondents, on the other hand, presented a report and testimony from a professional well versed in mold testing, both of which confirmed that there were no elevated – above normal levels - of mold in the [Redacted] Building. Claimant's evidence of a further OSHA evaluation did not refute the findings of Respondent's evidence that there was no elevated level of mold in Claimant's place of work.

10. Claimant questioned the limited scope of Respondents' mold testing. But Claimant's only allegation of an occupational disease is her alleged mold toxicity. That a full air quality test was not performed does not affect whether there is excessive airborne mold in the building.

11. Because of Claimant's lack of evidence, and Respondents' evidence of normal indoor mold levels, this court is persuaded that even if Claimant were suffering from mold toxicity, that the mold toxicity did not come from her place of employment.

12. The ALJ therefore finds and concludes Claimant failed to establish by a preponderance of the evidence that she suffered a compensable injury in the form of an occupational disease.

13. Because this claim is not compensable, this order will not address the other issues raised by Claimant.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for Workers' Compensation Benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 21, 2021.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-140-596-001

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury on October 31, 2019?

II. If compensable, has Claimant shown, by a preponderance of the evidence, that the lumbar surgery being proposed by Dr. Stanton is reasonable, necessary, and related to his 10/31/2019 work injury?

STIPULATIONS

There is a second case involving these parties, WC5-140-597-001, with an injury date of 5/20/2020. This second case involved injuries to Claimant's cervical spine and shoulder. All issues in that case have been resolved. However, there are a number of medical records in the hearing packet for this case which relate to the 5/20/2020 injury. The parties stipulated that rather than the painstaking process of excising such records, the ALJ would simply disregard any medical records not related to this work injury.

The parties further stipulated to an Average Weekly Wage ("AWW") for this 2019 case of $735.00, and an AWW of $741.60 for the 2020 case. And TTD benefits (if compensable) will apply in this case for two days, November 4 and November 5, 2020.

The ALJ approved these stipulations.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Claimant's Hearing Testimony

1. On October 31, 2019 Claimant was a janitor for [Employer Redacted]. As a janitor, Claimant's duties included cleaning bathrooms, sweeping, vacuuming, mopping floors, and emptying trash cans. Claimant testified he was required to pick up items weighing between 20 to 25 pounds and to bend over to pick up trash cans and cleaning equipment. Claimant was working 40 hours a week on average. Claimant testified he had no assistance in the performance of his job duties. Claimant further testified he had no difficulty performing his job duties prior to October 31, 2019.

2. Claimant testified that he injured himself on October 31, 2019. He squatted down to pick up a mop bucket to empty it in the toilet. This mop bucket weighed approximately 20 to 25 pounds. At the top of the lift, Claimant

felt a sharp stabbing pain in his lower back, hips, and both legs. The pain went from Claimant's lower back down the back of both legs into his feet. Claimant rated his pain at 9 / 10. Claimant reported experiencing spasms with muscle tightening. These spasms were in the lower back, but not in the legs. The spasms felt to him like an electrical shock.

3. Claimant testified he put away the rest of his cleaning equipment and went to lunch, hoping the pain would go away. However, the pain did not go away. Right after lunch, Claimant then reported his injury to his supervisor Mr. F[Redacted]. Claimant's supervisor directed him to Optum Urgent Care to get treatment for his lower back. Claimant was taken off work for one week until November 8, 2019. When Claimant returned to work, he continued to have pain in both legs and his low back.

4. Claimant testified after initially seeking medical treatment from Optum Urgent Care, he was referred to Total Functional Physical Therapy. He testified he received PT from November 7, 2019 to December 18, 2019 and that he received between 10-12 sessions of physical therapy. Claimant testified physical therapy helped reduce some of the pain in his lower back; however, it did not help the pain in his legs. Claimant testified he continued to have pain down the back of his left leg but no pain in the right leg.

5. Claimant testified he later received a steroid injection in his lower back with Dr. Salek. He received no relief from this injection. Claimant testified he also received chiropractic care with Dr. Abercrombie from August 13, 2020 to October 20, 2020. He reported that the chiropractic treatment alleviated symptoms in his low back, but not in his left leg. Claimant indicated the pain in his low back improved to a 3-4 / 10. He stated he only had pain in his left leg upon discharge from chiropractic care, and no pain in the right leg. Claimant testified he was ultimately referred to Dr. Stanton who ordered a L4-5 microdiscectomy. Claimant never received this surgery because the Insurer denied it.

6. Claimant testified that he is not currently experiencing pain in his lower back. However, he testified he is still experiencing a constant achy pain in his left leg from his hamstring down to the calf muscle. At hearing, Claimant reported no current pain in his right leg. Bending at the waist, squatting down, or working on the floor aggravates his left leg. He stated that prior to this injury, he was able to lift weights 3 times a week up to 140 pounds without any pain or discomfort. Now, he is no longer lifting weights. Claimant testified he used to be able to run 2.5 to 3 miles for exercise with no pain or problems but he can no longer run due to his injury.

7. Claimant testified that he used to go hiking once or twice a week but that he is not able to go hiking as often. Claimant stated hiking causes pain

in his left leg and lower back. Claimant further testified that he has pain in his left leg with cleaning around the house and using the bathroom. According to Claimant, the pain in his left leg requires him to kneel while working as a janitor whereas prior to this injury he was able to squat or bend. He never had to kneel to perform work prior to this injury. Pain in his left leg and low back causes him to move slower at work and now requires him to take more breaks.

8. Claimant testified that he had also injured his low back in 2012 while lifting a cafeteria table. He received 8 weeks of physical and 2 weeks of chiropractic care. Claimant indicated he received no further treatment for this injury, and that his pain went away. Claimant also testified he had some pain in the lower back and hips upon wakening in 2015 for which he sought medical treatment. These symptoms came on gradually. Ultimately, Claimant received an MRI, which showed a herniated disc.

9. Claimant testified he received physical therapy, which lessened his pain, as well as injections, which did not help his symptoms. Claimant never had a surgery for this herniated disc and these symptoms resolved. Claimant did follow-up in 2017 with his family physician, Dr. Lesh, for muscle soreness in his low back from lifting weights. He had no other treatment for his 2017 low back muscle soreness, aside from medication, and this soreness resolved. Claimant was able to resume lifting weights, and he had no issues with his low back until October 31, 2019.

10. Claimant testified that prior to his October 31, 2019 injury he took on added responsibility, including working up to 6 days a week. He stated he had no pain or difficulty performing these extra duties. Claimant testified he never sought medical treatment of any kind for his low back or lower extremities while working for the City of Manitou Springs prior to October 31, 2019.

11. Claimant acknowledged that he had experienced low back pain since 2008. However, he stated this pain was localized in his low back towards the ball of his hip with occasional pain to the right leg. He stated he did complete a rehabilitative exercise program per Dr. Salek's recommendation. Specifically, Claimant testified he performed rehabilitative exercise with Dr. Abercrombie from August of 2020 to October 16, of 2020. Claimant further testified he continued with home exercise, based upon Dr. Abercrombie's discharge instructions. This included ball exercises, planks, and stretching 5 times a week. Claimant stated these exercises did not bother him like hiking, because they worked different muscles. Claimant testified no treatment to date has addressed the pain in his left leg. Claimant reported no left leg pain until this injury on October 31, 2019.

Claimant's Medical Treatment after the Work Injury

12. Claimant presented to Dr. Baptist on October 31, 2019. He reported

right sided back pain and lumbar radiculitis. A pain diagram indicated pain around a 7-8 / 10, which was described as stabbing and aching. Claimant was taken off work, referred to physical therapy, and prescribed medication. (Ex. C, pp. 20-25). Claimant followed up with Dr. Rudderow on November 6, 2019. He reported he was at work when he lifted a heavy mop bucket. When he bent over to put it down, he felt a pull and pain in the right lower back. Claimant also reported lower back pain in the past. He stated his pain was improved and down to a 5-6 / 10. (Ex. C, pp. 27-30).

13. Claimant was referred to Total Function Physical Therapy, and treated from November 7, 2019 to December 18, 2019. Claimant had 11 physical therapy sessions for his lower back and leg symptoms. At his initial visit, Claimant reported left hip, left leg, right leg, and low back pain. Pain from muscle spasms was a 10 / 10, pain in the leg was a 7 / 10, and pain in the butt was an 8 / 10.

14. Claimant reported experiencing pain hourly. Claimant indicated his symptoms were aggravated by bending. On December 16, 2019 Claimant reported that all his pain was on his left side. Claimant noted this pain went down into his left thigh. Claimant reported his left leg symptoms start when he first gets to work.

15. Claimant was discharged from physical therapy on December 18, 2019. Upon discharge he reported improvement with PT, and an easier time with work lifting, kneeling, and bending. However, Claimant indicated that driving over 45 minutes still caused him pain and any prolonged performance of a physical activity caused him pain. Claimant reported a flare up of pain in the anterior thigh, which he described as ‘dull and achy’. (Ex. 2, pp. 85-118).

16. Claimant returned to Dr. Rudderow on December 4, 2019. During this period, Claimant was doing physical therapy and home exercises. However, Claimant indicated that pain from this work injury was the worst pain he ever had. He stated his pain was minimal in the morning but it gets worse towards the end of the day, up to a 5 / 10. Claimant reported his pain is triggered from prolonged sitting or running. Claimant also reported pain in the left leg that radiates down to the knee along with occasional numbness on the bottom of his left foot. He described the numbness in his left foot as new. Pain diagrams from this date indicate pain in the left and right lower extremities at 6 / 10. Claimant was referred to physiatry. (Ex. C, pp. 34-38).

17. Claimant was seen again by Dr. Rudderow on February 19, 2020. Claimant reported continued pain of 6 / 10. Claimant reported he was working full time, and that lifting anything over 25 to 30 pounds triggered more pain. He reported difficulty with squatting. Claimant reported not much improvement or change since the last visit. He continued to do home exercises, but that he

finished physical therapy around Christmas. Claimant reported continued numbness on the bottom of his left foot and back pain that radiates around his thighs. Claimant stated that prior to being injured he would have some back pain and stiffness. However, this back pain would resolve once he got up and started moving. Claimant was given a referral to physiatry for possible injections in his back. (Ex. 1, pp. 15-17).

18. Claimant was seen by PA-C Aaron White at the Colorado Springs Orthopedic Group on February 27, 2020 for low back pain with radiation into the left lower extremity. Claimant reported an acute onset of back pain from moving a mop bucket. Claimant reported his initial pain did improve after a week, but he was now having radiation down both lower extremities, left greater than right. Claimant rated his pain as moderate, and described it as a dull, stabbing, aching pain. This was made worse with activity such as bending and lifting.

19. Physical exam revealed tenderness to palpation over the paraspinous musculature lumbosacral junction. The clinical impression noted greater than 51% probability the patient's condition was directly related to his duties at work. The treatment plan indicated that Claimant did not respond well to anti-inflammatory medications or formal physical therapy. PA-C White ordered an MRI of the lumbar spine. (Ex. 3, pp. 120-123).

20. Claimant returned to Colorado Springs Orthopedic Group on April 2, 2020. He was again evaluated by PA-C Aaron White. The MRI report revealed a significant disc desiccation and a disc herniation at the L4-5. PA-C White recommended an L4-5 epidural steroid injection. (Ex. 3, pp. 123-124).

21. Claimant returned to Dr. Rudderow on April 8, 2020. Claimant reported no change in his symptoms and continued pain at a 6 / 10. Claimant reported intermittent numbness and tingling in his left foot. He reported worsening pain on days that he works and less pain on days he does not work. Claimant reported he continued to do exercise at home including planking but that home exercises have not helped. (Ex. 1, pp. 19-21).

22. Claimant was seen by Dr. Salek for an epidural steroid injection on April 21, 2020. Claimant gave a history of acute onset of back pain while moving a mop bucket with symptoms radiating down both lower extremities, his left greater than right. Claimant described pain increasing with squatting, bending, and sitting. Physical exam revealed positive straight leg raise. Dr. Salek noted that Claimant seems to be "quite religious" with planks and other core strengthening modalities. The Left L4-5 interlaminar ESI was administered. (Ex. 5, pp. 142-145).

23. Claimant returned to Dr. Rudderow on May 6, 2020, with continued pain down his left leg. This was noted to be 6 / 10. Claimant reported he continued to do home exercises and stretches 3 times a week. Claimant indicated he would get help lifting items at work that are beyond his restrictions. Claimant stated he recently had an epidural shot but that injection did not provide any relief. (Ex. 1, pp. 55-57).

24. Claimant was initially seen by Dr. Stanton on May 7, 2020 for an evaluation of his lumbar spine. Claimant reported no great relief from his first injection. Physical exam was unchanged from his initial visit with PA-C Aaron White. Impression included an L4-5 herniated disc and left lower extremity radiculopathy. Dr. Stanton indicated that Claimant was still a reasonable candidate for an additional epidural injection. (Ex. 3, pp. 125-126).

25. Claimant returned to Dr. Salek on May 19, 2020 for a follow-up on his left L4-5 epidural steroid injection. According to this note, Claimant received minimal relief from the injection. Claimant reported his symptoms became worse for one week after the injection. Physical exam was positive for the straight leg raise. Claimant was having mostly left sided symptoms in the hip, which at times radiated into the posterior lateral aspect of his calf. (Ex. 5, pp. 146-148).

26. Dr. Salek noted at this visit:

> The critical nature of a good rehabilitation exercise program was emphasized with the patient. Certainly, this is always a primary objective to avoid more invasive treatments and/or surgery. In order to facilitate this, written instructions were provided as appropriate as well as possible referral to therapy, either formal or informal. In any event, the patient must continue a program on their own for core strengthening, flexibility, endurance, and mobility. This is critical for the recovery as well as for the long-term back wellness. Patient has verbalized understanding. *Id* at 148.

27. Claimant returned to Dr. Rudderow on May 27, 2020. Claimant's pain diagram indicated low back and left leg pain at a 7 / 10. Claimant told Dr. Rudderow his pain usually started after being at work for about 4 to 5 hours. The pain gets worse during the day. Claimant reported relief with being off work for a couple of days, but then the pain comes back with working again. Claimant stated flexing forward and squatting seemed to trigger more pain, and that this pain sometimes radiated down the left leg. (Ex. 1, pp. 73-75).

28. Claimant received a second epidural steroid injection from Dr. Salek on June 8, 2020. Claimant followed up with Dr. Salek to discuss his response to the ESI on June 22, 2020. Claimant reported moderate relief of

his symptoms for a few days after the procedure. Claimant indicated his symptoms started to progressively return when he went back to work. (Ex. 5, pp. 149-152).

29. Claimant returned to Dr. Rudderow on June 24, 2020 with the same complaints as noted on prior visits. (Ex. 1, pp. 79-83).

30. Claimant returned to Dr. Stanton for a follow-up on June 25, 2020. Claimant reported he was still having significant pain and weakness of his lower left leg. This pain and weakness were worse with work activities including bending, lifting, and twisting. Claimant indicated that the extensive bending he must do at work makes it difficult to complete a workday. He stated he is not feeling great in terms of his workday, and he is not recovering as well as he would like. Claimant's pain diagram indicated pain in the low back, left leg, right hip, and left foot. Pain was rated at a 6 / 10. Dr. Stanton noted that further review of Claimant's MRI revealed an L4-5 central extruded disk herniation, slightly eccentric left sided. Dr. Stanton recommended a L4-5 microscopic discectomy. (Ex. 3, pp. 127-133).

31. Claimant returned to Dr. Rudderow on July 29, 2020. Claimant reported he continued to have numbness and tingling that radiated down the back of his left leg to the bottom of his left foot. Claimant was given a referral for chiropractic treatment. Physical exam revealed Claimant's lumbar area was tender to palpation, left greater than right. (Ex. 2, pp. 87-90).

Dr. Reiss' IME

32. Claimant presented to orthopedic spine surgeon Brian Reiss, MD for an Independent Medical Exam on August 26, 2020. Claimant primarily complained of left lower extremity pain which was intermittent, and not present at the time of the examination. In his report, Dr. Reiss opined that a microdiscectomy would be likely to help his left lower extremity pain but unlikely to make a difference to any lower back pain. Dr. Reiss suggested a rehabilitation program directed at core strengthening, stretching, and aerobic conditioning. Dr. Reiss noted that if Claimant's lower extremity symptomatology became more symptomatic, then he would suggest repeating the MRI to reassess the status of the L4-5 disc. If the herniated disc is still compressing the L5 nerve root, then a microdiscectomy would be reasonable.

33. Dr. Reiss reviewed the March 19, 2020 MRI. He noted there was a herniated disc at L4-5 with contact of the left nerve root and no contact with the right nerve root. Dr. Reiss diagnoses indicated left lower extremity symptomatology and herniated disc at L4-5 that is apparently new and probably secondary to the work injury. Dr. Reiss noted previous back issues involved the

right lower extremity but there was no past history of left lower extremity complaints. Dr. Reiss stated that medical care has been reasonable and necessary and related to the October 31, 2019 work incident. Dr. Reiss opined surgical intervention at this time was not indicated, and he would reinstate a physical therapy, aerobic conditioning, and stretching program. Dr. Reiss wrote Claimant was not at maximum medical improvement but that Claimant would hopefully reach MMI with 2 months of exercise and conditioning with physical therapy. (Ex. B, pp.9-14).

Chiropractic Treatment with Dr. Abercrombie

34. Claimant reported to Dr. Abercrombie for chiropractic treatment on August 13, 2020. Claimant reported left posterior hip and lateral upper to lower leg pain with numbness on the bottom of the foot that is constant. Claimant reported intermittent lower back pain daily. Claimant indicated that squatting and bending causes pain as well as sitting too long. Pain was reported at a 5-7 / 10. Physical exam revealed segmental restriction at L3-4, L4-5, L5-S1, and a facet load test caused pain at the left greater than right L3-S1 segments. There was also hamstring tightness and numbness at the left foot. The treatment plan included flexibility exercises and McKenzie protocols. (Ex. 8, pp. 189-192).

35. Claimant returned to Dr. Abercrombie on August 21, 24, and 28, 2020. His symptoms and treatment remained unchanged. On September 2 and 4, 2020 Claimant reported some improvement in his left lower leg symptoms, with decreased pain and numbness as well as improvement with his lower back. However, Claimant noted symptoms in his upper leg and hip were unchanged. On September 10 and 23, 2020 Claimant reported aching hips in the morning upon awakening, but improved pain in the lower left leg. On September 25, 2020 Claimant presented with more tingling and achiness at the left lateral thigh. Claimant was instructed on a home exercise program.

36. On October 7, 2020 Claimant returned to Dr. Abercrombie and reported his lower back ached during workdays. Claimant indicated his back ached while on a hike. Claimant also reported tingling of the left posterior thigh that occurs while he is at work doing repetitive bending. Claimant reported pain levels at a 2 / 10 when not working and a 4-5 / 10 when working. On October 12, 2020 Claimant reported he had a spasm while doing laundry. He reported pain upon standing back up from a bend.

37. Claimant returned to Dr. Abercrombie on October 16, 2020 and stated his recent lower back flare up is better after having a setback doing laundry. Claimant reported a 20% improvement with his lumbar condition. Claimant’s diagnosis remained unchanged and Dr. Abercrombie opined that Claimant was likely at a plateau with conservative treatment. Dr. Abercrombie

indicated that Claimant was taught selective flexibility and lumbar strengthening -stabilization exercises using a physio-ball and will continue these exercises indefinitely. (Ex. 8, pp. 189-217).

Medical Evaluation / Treatment Continues

38. Claimant returned to Dr. Rudderow for a follow-up on September 9, 2020. Claimant stated he was feeling a bit better. Claimant reported his left hip pain was slightly worse and that the tingling on the bottom of his left foot was unchanged. (Ex. 2, pp. 97-99)

39. Claimant was seen by Dr. Rudderow on October 21, 2020. Claimant reported an exacerbation of his low back pain when he bent over to lift a laundry basket. However, Claimant indicated the aggravation of his symptoms was better after a week. Claimant stated he feels pretty good when he starts his workday but part way into it he starts to get achy and tired. He stated Dr. Abercrombie got him an exercise ball that he was using at home until he hurt his back lifting the basket a week and a half ago. Since that time, he was not doing home exercises. (Ex. C, pp. 108-112).

40. Claimant presented to Dr. Rudderow on December 2, 2020. Claimant reported he still had numbness going down the back of his left leg to his calf. He also reported continued numbness on the bottom of the left foot which was unchanged. He reported doing planks every other day as well as stretching daily. Claimant reported he still hikes but has trouble going downhill especially landing on the left foot. Claimant was told to continue with home exercises, stretches and to follow-up with Dr. Stanton for surgery. (Ex. C, pp. 117-123)

41. Claimant returned to Dr. Stanton on December 10, 2020. The recommended left sided L4-5 microdiscectomy had been denied by the Insurer. Claimant reported his left lower extremity radicular symptoms persisted. Claimant indicated he experienced little relief from physical therapy and chiropractic treatment. Dr. Stanton again recommended a left sided L4-5 microdiscectomy. (Ex. 3, pp. 134-136).

Further Records Review by Dr. Reiss

42. Dr. Reiss completed an additional records review at Respondents' request on January 11, 2021. Dr. Reiss opined that it was not probable that the discectomy would provide significant benefits. Dr. Reiss asserted that Claimant's primary complaint was low back pain. Dr. Reiss stated that Claimant should be doing core strengthening, aerobic conditioning, and stretching. Dr. Reiss said that when he evaluated Claimant there was no report of leg symptomatology. Further, as of October 2020,

Claimant did not have any leg symptomatology. Dr. Reiss stated it was not clear that [Claimant] was having significant left lower extremity pain.

43. Dr. Reiss reviewed MRI imaging from 2015, and stated it is not clear that there is any significant difference between the findings in 2015 and the findings in 2020. Dr. Reiss asserted that, at most, the work injury represents an aggravation of a pre-existing condition. Dr. Reiss concluded his report noting decompressive surgery in the lumbar spine should not be pursued, in the absence of any neurologic deficit, unless there is significant functionally limiting lower extremity pain which does not appear to exist in this case. Dr. Reiss also stated decompressive surgery is not indicated in the treatment of axial lower back pain, which would appear to be [Claimant] primary complaint. (Ex. B, pp. 16-18).

44. Claimant returned to Dr. Rudderow on January 13, 2021. Claimant reported his condition was unchanged from his prior visit. He continued to have pain at a 5 / 10. Claimant reported he continued to do home exercises and stretches. Claimant reported he tried to go running but that did not go well, and he later developed pain in the right leg as well. (Ex. C, pp. 124-127).

Claimant’s Preexisting Back Issues

45. Prior to this work injury, Claimant reported to NP Julie Klaker at UC Health on August 24, 2015 with reports of low back pain. Claimant reported an onset of back pain 6 years ago that was worsening. Location of pain was the hip with pain radiating to the right leg. There was no injury. Claimant reported pain upon awakening that improved during the day.

46. Claimant returned to NP Klaker at UC Health on October 1, 2015. NP Klaker noted lumbar back pain with radiculopathy affecting the right lower extremity. Claimant reported onset of back pain from 12 years ago. Claimant described his back pain as fluctuating but persistent. Claimant reported symptoms were relieved from over the counter medication. NP Klaker ordered an MRI to address the right sided radiculopathy. Claimant returned to NP Klaker on November 17, 2015 to discuss his MRI results. The MRI showed a lumbar disc herniation.

47. Claimant reported improvement in symptoms since not working and lifting. Claimant was referred to PT and a spinal surgeon for evaluation. Claimant returned to NP Klaker on February 1, 2016. Claimant described his symptoms as stable, occurring occasionally with pain in the lower back that radiates to the right thigh. Claimant reported completing 10 sessions of physical therapy. Claimant indicated he did not feel the need to continue with PT. He never called the spine specialist. (Ex. D, pp. 144-57)

48. Claimant presented to his PCP, Dr. Lesh at Colorado Springs Family Practice with reports of back pain on March 28, 2017. Claimant reported experiencing low back pain after working out. Claimant reported pain going down the right leg and muscle spasm. Claimant was given medication and told to follow-up. Claimant returned to Dr. Lesh's office on April 18, 2017. Claimant stated his back was better, he denied any tingling, numbness, or radicular symptoms. Claimant denied any medication. (Ex. D, pp. 131-136)

49. Claimant had an MRI of the lumbar spine prior to this work injury on October 26, 2015. According to Dr. Damien, that MRI revealed a small disc herniation at the L4-5. Client had another MRI on March 19, 2020. According to Dr. Melody, that MRI revealed a central disc extrusion at the L4-5 level which *contacts* the descending left L5 nerve root. Claimant received a third MRI on August 7, 2020. According to Dr. Carollo that MRI revealed moderate left paracentral disc herniation at the L4-5 level with an inferiorly extending extruded disc herniation. Dr. Carollo noted that disc intensity material *abuts* the descending L5 nerve root. (Ex. I, pp. 238-250)

Dr. Stanton's Deposition

50. Dr. Stanton testified by deposition on January 7, 2021 as an expert in orthopedic surgery. Dr. Stanton testified that Claimant's L4-/L5 disc herniation was probably related to the October 31, 2019 work injury. Dr. Stanton testified that a lumbar microscopic discectomy was appropriate, instead of more conservative treatment. Claimant had tried physical therapy, injections, and chiropractic treatment with little relief. Dr. Stanton testified that Claimant's prior low back disc herniation from 2015 did not change his opinion about the origin of Claimant's current symptoms, because it appeared there was an exacerbation of that disc disease with his current injury. Dr. Stanton referred to Claimant's injury as an acute on chronic phenomenon.

51. Dr. Stanton testified that he disagreed with Dr. Reiss' report that stated there was no neurologic deficit. Specifically, Dr. Stanton said Claimant's radiating pain down his leg constituted neurologic symptoms. Dr. Stanton agreed with Dr. Reiss that a microdiscectomy would be likely to help with Claimant's left lower extremity pain, but unlikely to make a difference to any low back pain. Dr. Stanton stated the nature of disc surgery is to relieve radicular pain as opposed to back pain. Dr. Stanton stated that if Claimant did not get the microdiscectomy that it was possible the injury would resolve on its own. However, he clarified that at this point he does not believe Claimant is progressing with conservative care and that surgery is the next logical option.

52. Dr. Stanton was asked if it was possible or probable that Claimant's

disc desiccation and herniation at the L5 with contact on the left nerve root was consistent with the mechanism of injury. He stated that it seemed probable. He further stated that if a patient has had conservative care and they say they're not recovering, that they're still hurting, and the symptoms are consistent with the imaging, then surgery is reasonable and indicated.

53. Dr. Stanton stated that Claimant's condition was unlikely to improve with additional physical therapy. Dr. Stanton also testified that Claimant's treatment with Dr. Abercrombie included active resistance of motion. Dr. Stanton was asked about Claimant's reported exacerbation and setback of his work-related injury on October 12, 2020. Dr. Stanton stated it would not be uncommon for someone with an injury of Claimant's nature, during simple activities of daily living, to have some sort of exacerbation. He stated that three months of chiropractic treatment and six weeks of physical therapy was reasonable conservative care for Claimant's injury.

Dr. Reiss' Deposition

54. Dr. Reiss testified by deposition as an expert in orthopedic surgery on February 18, 2021. Dr. Reiss testified that Claimant reported intermittent left lower extremity symptoms, constant lower back pain, and no right leg symptomatology. Dr. Reiss testified that an MRI of the lumbar spine from March 2020 showed a small disc protrusion that was close to and may have been touching the L5 nerve root without compressing or displacing it but potentially irritating it. Dr. Reiss opined that the March 2020 MRI had similar findings when compared to the 2015 MRI and there was little change. Dr. Reiss testified Claimant did not have a neurological *deficit* but possible neurological *irritation* of the L5 nerve root.

55. Dr. Reiss opined that Claimant's reported numbness in his left foot was not consistent with an L5 issue; rather, this would be consistent with an S1 distribution. As a result, any surgery targeting L4/L5 would not address Claimant's symptoms in his foot.

56. Dr. Reiss stated the size of the herniated disc does not necessarily indicate if the disc protrusion is causing pain. He clarified that a small protrusion does not necessarily mean it is not an irritant. Dr. Reiss opined that surgery was unlikely to be successful, because the disc protrusion was preexisting for 5 years. Dr. Reiss testified he did not know if the home exercise program given to Claimant at physical therapy was directed towards core strengthening or not. Dr. Reiss also stated Claimant did not carry through with an appropriate exercise program to keep his core strong, as he was not doing them "a whole heck of a lot." (Transcript, p. 17)

57. Dr. Reiss opined that surgery would not be likely to help Claimant, and that he would not suggest surgical intervention. Instead, he recommended an exercise program directed towards the lumbar spine. Dr. Reiss stated his January 11, 2021 report noted Claimant's major complaint was his lower back and not radicular symptoms. However, Dr. Reiss confirmed Claimant did not report low back pain during his August 26, 2020 exam and that Claimant primarily complained of left lower extremity pain. Dr. Reiss conceded that "basically every note" indicates persistent left lower extremity radicular symptoms.

Dr. Stanton's Rebuttal Deposition

58. Dr. Stanton testified for a rebuttal deposition on March 25, 2021. Dr. Stanton testified that he was able to review Dr. Reiss' most recent report dated January 11, 2021 as well as MRI images of Claimant's lumbar spine from October 26, 2015. Dr. Stanton testified that after reviewing the MRI from 2015, his previous opinion that Claimant's need for a L4-5 microdiscectomy was probably related to the October 31, 2019 injury remained unchanged. Dr. Stanton opined that there was an exacerbation of a previous injury, and that the L4-5 microdiscectomy was both reasonable and necessary to address Claimant's symptoms. He summarized:

> …his exam is consistent…So let me just kind of lay it out for you. He had a disc herniation – it was small—in 2015. Patient reported to me he had a new onset of pain following a work injury. New imaging showed an enlargement of that disc herniation consistent with his symptoms.
>
> So at that point in time he had undergone conservative care to that point, and he was not getting better. He was asking for help. The next smallest, most reasonable thing to do is a microdiscectomy to help that problem. (Transcript, p. 9)

59. Dr. Stanton testified that after reviewing the 2015 lumbar MRI it was evident Claimant had a small disc herniation. However, new imaging showed an enlargement of that disc herniation that is consistent with Claimant's current symptoms. Dr. Stanton stated that the sole indication for a microdiscectomy is not functional deficit and that it is reasonable to proceed with surgery if a patient has pain that is not responding to conservative care. Dr. Stanton stated Claimant's physical therapy from November 7, 2019 to February 8, 2020 as well as Claimant's chiropractic treatment from August 13, 2020 to October 2020 was reasonable. He stated Claimant's lumbar condition should have resolved with conservative care during that time if he did not need surgery.

60. Dr. Stanton reiterated that Claimant experienced an aggravation of a preexisting condition. Dr. Stanton disagreed with Dr. Reiss that Claimant's left

foot numbness could not be due to an L4/L5 disc bulge. Dr. Stanton stated the disc herniation at the L4/5 was, more likely than not, irritating the S1 nerve root, since the S1 nerve root traverses the disc herniation. (Transcript, p. 14). This causes Claimant's left foot numbness. He testified that Claimant's more recent MRI showed a disc herniation that is larger and protrudes more, which would result in more nerve root contact and an escalation of Claimant's symptoms. Dr. Stanton opined that the disc herniation on the 2020 MRI is clearly a larger herniation than the disc herniation shown on the 2015 MRI.

61. Dr. Stanton also clarified that there is also a corresponding inflammatory response that goes along with a larger disc herniation and that this inflammatory response is identified by Claimant's symptomatology rather than a MRI. Dr. Stanton testified it is not uncommon for a patient to have bilateral symptoms that eventually transition into primarily unilateral symptoms based on the mechanical location of the disc herniation.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In this instance, the ALJ finds Claimant to be sincere in recounting what occurred. Claimant has remained reasonably consistent with describing his mechanism of injury. He has, to the best of his abilities, described his symptoms to his treating providers, and the IME, in a sincere effort to get better. Not surprisingly, his described symptoms over the past 18 months are not entirely internally consistent; as is common, they sometimes wax and wane. His initial ambivalence about surgery helps demonstrate a lack of secondary gain motives, and his overall history suggests that Claimant, perhaps more than most, made earnest efforts to make conservative measures work for him.

D. The ALJ further finds that the medical experts in this case have all rendered sincere medical opinions, but as is not infrequent, such opinions differ. In final analysis, the ALJ must decide who is more *persuasive* (as opposed to *credible*, per se), in light of their respective expertise and access to all pertinent information. In this instance, the ALJ finds that, taken as a whole, Dr. Stanton has the more persuasive argument.

E. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability, Generally

F. A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Indus. Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

G. An aggravation of a preexisting condition is compensable. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. 1990). If there is a direct causal relationship between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Indus. Claim Apps. Office*, 107 P.3d 999 (Colo. App. 2004). However, there must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Indus. Comm'n*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show merely that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation.

H. The Workers' Compensation Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* WC 4-650-711 (ICAO February 15, 2007).

I. The mere fact that a claimant experiences pain at work does not necessarily require a finding of a compensable injury. In *Miranda v. Best Western Rio Grande Inn,* WC 4-663-169 (ICAO April 11, 2007), the panel stated "pain is a typical symptom caused by the aggravation of a pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable injury."

Compensability, as Applied

J. In this case, Claimant credibly testified that he injured his lumbar spine while lifting a mop bucket at work on October 31, 2019. Claimant's testimony, corroborated by the medical records, show that Claimant noticed an immediate onset of severe pain that started in the lower back and went down both legs. Claimant reported his injury to his supervisor the same day it occurred. As a result of this injury, Claimant had difficulty performing his job. Claimant credibly testified that bending, squatting, or working on the floor aggravates pain in his left leg and that this injury has slowed him down at work. Claimant also testified this injury caused him to alter how he performs certain tasks, such as having to kneel on the floor at work, whereas before the injury he could bend over.

K. Claimant credibly testified, again consistent with his medical records, that he was still experiencing pain in his left greater than right leg with no current pain in his lower back. Claimant reported a lumbar spine injury in 2015. However, Claimant testified, consistent with the records, that any pain or symptoms from his 2015 herniated disc resolved with chiropractic care and physical therapy. Although Claimant did return for 3 visits with his family physician in early 2017, he was released from care with no medication, denied needing additional physical therapy, and he made no mention of lower back or leg symptoms in his third and last visit. Claimant also testified that he had no pain or difficulty in his lower back or legs when performing his job as a janitor with the City of Manitou Springs until this October 31, 2019 injury.

L. Dr. Stanton testified that Claimant’s L4-5 disc herniation was probably related to the October 31, 2019 work injury. Dr. Stanton testified MRI imaging from 2015 did not change his opinion as to the etiology of Claimant’s current symptoms. Specifically, Dr. Stanton stated more recent imaging from the 2020 MRI showed an *enlargement* of the disc herniation when compared to the 2015 MRI that is consistent with Claimant’s escalating symptomatology. Dr. Reiss even opined “*at most* the work injury represents an aggravation of a pre-existing condition.” Further, Dr. Reiss noted that in his August 2020 report that Claimant’s *previous* back issues involved the right lower extremity, but there was no past history of left lower extremity complaints. The evidence, then, does not suggest Claimant’s current symptoms and imaging results are due to a pre-existing disc herniation. By a preponderance of the evidence, the ALJ concludes that Claimant has shown a compensable work injury.

Medical Benefits, Generally

M. Once a Claimant has established the compensable nature of his work injury, he is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission,* 759 P .2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office,* 797 P. 2d 777 (Colo. App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his need for medical treatment. *Merriman v. Indus. Comm'n,* 210 P. 2d 622 (197); *Standard Metals Corp.* V. *Ball,* 172 Colo. 510,474, P. 2d 622 (1970); *Section 8-41-301(1)(c), C.R.S.* Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of employment. *Snyder v. City of Aurora,* 942 P. 2d 1337 (Colo. App. 1997). Stated differently, occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball, supra.*

N. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Al/right Colorado, Inc.,* W.C. No. 4-117-758 (!CAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission,* 682 P. 2d 513 (Colo. App. 1984).

Medical Benefits, as Applied

O. Dr. Reiss stated that Claimant does not need a lumbar surgery because Claimant did not exhibit any neurological *deficit*. However, Dr. Stanton opined that the sole indication for a microdiscectomy is not functional *deficit* (defined as weakness). Instead, it is reasonable to proceed with surgery if the patient has *pain* that is not responding to conservative care. Dr. Reiss' opinion that Claimant is not a surgical candidate and that an exercise program directed towards the spine is more appropriate is not persuasive. Claimant already underwent a reasonable course of physical therapy, chiropractic treatment, and injections with no success. In addition, contrary to Dr. Reiss' contention, the medical records show Claimant followed his home exercise regimen that included core strengthening exercises such as planks, use of a flexion ball, and stretching. Claimant was also instructed in a home exercise program by Dr. Abercrombie. Dr. Stanton further indicated that the chiropractic treatment with Dr. Abercrombie included active resistance of motion and Dr. Salek commented that "Claimant seems to be "quite religious with planks and other core strengthening modalities."

P. Lastly, Dr. Reiss opined that Claimant is not a surgical candidate because a microdiscectomy is not intended to address axial lower back pain "which would appear to be [Claimant]' primary complaint." Dr. Reiss went on to state that as of October 2020, Claimant did not have any leg symptomatology. The ALJ is not persuaded. Claimant reported lower extremity symptoms in nearly every medical visit to date. Even Dr. Reiss acknowledged during his deposition that "basically every note" indicates persistent left lower extremity radicular symptoms. In his August 2020 report, Dr. Reiss notes that "he primarily complained of left lower extremity pain."

Q. Claimant has already shown that he sustained a lumbar spine injury while lifting a mop bucket on October 31, 2019. The ALJ finds that this compensable injury is the proximate cause of Claimant's need for medical treatment including, but not limited to, the proposed lumbar spine microdiscectomy. Dr. Stanton opines that Claimant has undergone a reasonable course of physical therapy, injections, and chiropractic care without lasting resolution of symptoms. He further opines that Claimant's condition was unlikely to improve with additional care and as a result surgery is *reasonable, necessary and related to* the original work injury of October 31, 2019. The ALJ concurs.

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable work injury to his lower back on October 31, 2019.

2. Respondents shall pay for all reasonable, necessary, and related medical treatment, including, but not limited to, the surgery as proposed by Dr. Stanton.

3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

STATE OF COLORADO

WORKERS' COMPENSATION NO. 5-134-649-001

ISSUES

The issues set for determination were:

- Did Claimant prove by a preponderance of the evidence that her need for shoulder surgery is reasonable, necessary and causally related to her industrial injury.

PROCEDURAL HISTORY

A Summary Order was issued on July 23, 2021. Following a Status Conference that was held on July 27, 2021, an Amended Summary Order was issued on August 3, 2021. Pursuant to § 8–42–503(3), C.R.S. (2020), the Amended Summary Order issued by the ALJ ordered Respondents to pay for a review of the plain x-ray and MRI films by a board-certified radiologist, who was asked to prepare a written report. James Piko, M.D. was the radiologist who conducted the review and prepared the report. Claimant requested a full Order on or about August 16, 2021.

Dr. Piko subsequently issued a report with regard to the x-rays and MRI-s taken of Claimant's right arm and shoulder, which was filed with the Court on September 24, 2021. The record was then closed and this Order follows.

FINDINGS OF FACT

1. Claimant was sixty-seven (67) years old (D.O.B. 7/27/53) as of the date of injury.

2. Claimant's medical history was significant in that she was treated for right shoulder pain prior to the injury. On June 2, 2017, Claimant underwent a right scapula x-ray for distal medial scapular pain that had been going into her right shoulder in the past month with no known injury.

3. Claimant began working for Respondent-Employer in February of 2018. Her job duties included working in shipping and receiving, putting merchandise in order, stocking product.

4. On June 5, 2018, a right shoulder x-ray was taken after Claimant fell. The radiologist's impression was: mild superior migration of the humeral head with respect to the glenoid; subacromial space narrowing at 6 mm and mild acromioclavicular and glenohumeral degenerative changes. Claimant was noted to have swelling, pain, tenderness by Cristen Mazzella, M.D. at Kaiser Permanente.

5. Claimant was seen for a follow-up evaluation at Kaiser on February 21, 2019 for shoulder pain. She was noted to be doing home exercises and referred for physical therapy ("PT").

6. Claimant testified she injured her shoulder when she fell at work in November 2019. She testified that she did not pursue a workers' compensation claim because she could not afford to go on workers' compensation benefits and take time off. Claimant testified she advised her boss of the injury.

7. On December 5, 2019, Claimant was evaluated at Kaiser after she was injured when she fell on ice (two weeks before) while getting the mail. Claimant was evaluated by Pamela Clift, P.A. at Kaiser and noted in the questionnaire that this was not related to "third party liability-workers' compensation. The exact location of this fall was not identified, however, the ALJ concluded it was not at work.

8. An x-ray of her right shoulder revealed an articular fracture of the humeral head; mild osteoarthritis of the glenohumeral joint; unremarkable acromioclavicular joint, probable rotator cuff tear, with an associated small degenerative bone spur arising from the anterior inferior aspect of the acromium and degenerative subcortical systic and sclerotic bone changes in the superior aspect of the greater tuberosity. Claimant was prescribed oxycodone and a Fentanyl patch.

9. An x-ray was taken of Claimant's right shoulder on January 6, 2020, which showed no interval changes since the previous study (December 11, 2019). The x-ray showed osteoarthritis and narrowing of the subacromial space consistent with rotator cuff pathology and a probable tear. The ALJ found these x-rays were objective evidence of degenerative changes in the right shoulder.

10. Claimant returned to Kaiser on January 29, 2020 and February 20, 2020, related to the right shoulder fracture and reported ongoing shoulder pain and weakness. Claimant was working on her motion and trying to use her left arm as much as possible, instead of her right arm. The ALJ inferred that the osteoarthritis and rotator cuff tear shown in the x-rays were the cause of shoulder pain and weakness.

11. The ALJ found the records from Kaiser before August 2020 documented Claimant's treatment for pain in the right shoulder. The x-rays showed degenerative

changes in Claimant’s right shoulder, including a probable torn rotator cuff. The x-rays also showed an articular fracture which was the result of trauma from the fall which occurred in November 2019.

12. Claimant denied that she had problems with her shoulder 2-3 months before her work injury. The Kaiser records showed Claimant was complaining of pain in her shoulder six months before the work injury.

13. There was no evidence in the record that Claimant had restrictions related to her prior shoulder injury. Claimant testified she was able to perform all of her job duties before August 2020, including stocking and reaching overhead. No physician recommended shoulder surgery before August 2020.

14. On August 2, 2020, Claimant was injured while working as a sales associate for Employer. She was attacked by a shoplifter and thrown to the ground. Claimant landed on her right side between two flower beds. The ALJ found Claimant injured her neck, shoulder, hips and head. This was a significant injury. Claimant’s Employer offered to take her to the emergency department, but Claimant declined to go because she feared catching COVID.

15. Claimant was evaluated by Tiffany Knudsen, P.A. in the Emergency Department at Kaiser Permanente on August 3, 2020. She was complaining of hip and shoulder pain. PA Knudsen noted a hematoma and tenderness to palpation along the IT band bilaterally, with no midline spinal tenderness. Claimant had tenderness to palpation on the right pelvis, as well as scapular winging. Tenderness to palpation was present on the proximal and distal humerus. X-rays taken of the right shoulder showed no acute osseous abnormality, but mild glenohumeral osteoarthritis was present. There was a loss of the acromial humeral distance consistent with a large rotator cuff tear.

16. On August 14, 2020, Claimant was evaluated by Diana Halat, N.P. at Concentra. She had pain in her neck, head, both thighs and right shoulder. On examination, Claimant‘s right shoulder had tenderness in the AC joint, with no crepitus and no warmth. NP Halat‘s assessment was: assault, cervical sprain, initial encounter; shoulder dislocation, right, initial encounter; sprain, lumbar, initial encounter; sprain hip/thigh, unspecified laterality, initial encounter. Claimant was prescribed acetaminophen and referred to Cary Motz, M.D. (orthopedic surgeon), as well as for PT. The report was countersigned by Sophia Rosebrook, D.O., who also signed the WCM 164.

17. Claimant was evaluated by Dr. Motz on August 18, 2020, who evaluated her right shoulder. Pain was noted when Claimant abducted and reached across her chest, with Dr. Motz noting significant crepitus in the shoulder. Claimant‘s range of

motion (“ROM”) was 100° forward flexion, 0° of abduction, 20° external rotation and 70° of abduction. Dr. Motz’ impression was: rotator cuff tear; possible glenohumeral arthritis. Dr. Motz did not have Claimant‘s X-rays from Kaiser at the time of the evaluation and an MRI was ordered.

18. Claimant returned to Concentra on August 19, 2020 and was evaluated by Kathy Okamatsu, N.P. At that time, she had pain in the head, right shoulder, bilateral hips, both thighs, neck and lower back. Bruising was noted on her legs. N.P. Okamatsu‘s assessment was the same as the evaluation on August 14, 2020. Claimant was noted to have attended one PT visit and was not cleared for a return to work.

19. On August 21, 2020, Claimant underwent an MRI of the right shoulder. The films were read by Munib Sana, M.D., whose impression was: ruptured and retracted long head biceps tendon; complete tear of the supraspinatus tendon, with significant retraction; high-grade partial tearing of the subscapularis tendon, with severe muscle atrophy; moderate grade interstitial tearing of the interior half of the infraspinatus tendon; high riding humeral head with acromial remodeling; moderate-sized joint effusion with synovitis. Dr. Sana stated those findings were age indeterminate and the ALJ inferred Dr. Sana was offering no opinion as to whether the findings were acute v. chronic, but severe muscle atrophy was present.

20. Claimant returned to Dr. Motz on September 2, 2020. Dr. Motz reviewed the MRI, which he said showed a massive retracted supraspinatus and infraspinatus tear, with significant atrophy. (It was unclear whether Dr. Motz reviewed the actual MRI and x-ray films.) He stated there was a significant loss of the acromiohumeral distance with remodeling of the head and some degenerative changes of glenohumeral joint. Dr. Motz‘ impression was: acute-on-chronic right massive rotator cuff tear; rotator cuff arthropathy. This description was persuasive to the ALJ.

21. Dr. Motz opined that clearly Claimant had a long-standing rotator cuff tear given the significant remodeling that was noted on the MRI, which was exacerbated with this fall. Dr. Motz performed a subacromial steroid injection at that time. Dr. Motz also noted Claimant had begun PT to work on her function, but there would limitations due to the chronic rotator cuff tear and arthropathy.

22. On September 3, 2020, a General Admission of Liability (“GAL“) was filed on behalf of Respondents. The GAL admitted for medical and temporary total disability benefits.

23. Dr. Motz re-evaluated Claimant on September 29, 2020, at which time she reported no significant change following the steroid injection. She was making progress with PT. Dr. Motz‘ impression was the same as the prior appointment. He believed that

Claimant would need a reverse total shoulder arthroplasty and characterized this as a chronic issue. Dr. Motz opined that the need for surgery was not related to the work injury two months ago and released Claimant from his care. There was no evidence Dr. Motz saw Claimant after that time. The ALJ inferred that Dr. Motz' opinion was that the surgery was reasonable and necessary, but not related to the industrial injury.

24. Claimant was evaluated by Nathan Faulkner, M.D. on October 2, 2020. At that time, she complained of persistent pain in the right shoulder, especially reaching across her body. She had not worked since the injury and denied any antecedent shoulder pain or dysfunction. This was not an accurate report of her prior medical history by Claimant. There was no evidence Dr. Faulkner had Claimant's prior treatment records from Kaiser at this evaluation.

25. Dr. Faulkner noted the MRI of August 21, 2020 showed a full-thickness tear of the supraspinatus and anterior infraspinatus retracted to the glenoid. There was a high-grade partial thickness tearing of the subscapularis with a large effusion. Grade 2 atrophy of the supraspinatus and subscapularis was present. Dr. Faulkner opined Claimant would benefit from an arthroscopic rotator cuff repair, as she had already ruptured her proximal biceps. In this report, Dr. Faulkner did not offer an opinion on relatedness or causation.

26. A surgery request was made by Dr. Faulkner on or about October 6, 2020. Authorization was requested for a right shoulder arthroscopy with debridement, subacromial decompression, rotator cuff repair, possible subscapular repair.

27. Respondents denied the request for authorization of the surgery.

28. Claimant was examined by John Sacha, M.D. on November 23, 2020. At that time, Dr. Sacha reviewed the MRI of the cervical spine, which showed straightening of her cervical lordosis and some mild disc degeneration at C5-6. On examination, cervical paraspinal spasm was noted, along with segmental dysfunction in the mid to lower cervical spine on the right side, with pain on extension, as well as extension rotation to the right. The examination of the right shoulder showed diminished range of motion and pain with Hawkins and Neer testing.

29. Dr. Sacha's impression was: cervical facet syndrome; history of rotator cuff tear; anxiety with adjustment disorder. Dr. Sacha misidentified the surgery proposed for Claimant-reverse arthroplasty. Dr. Sacha was concerned that Claimant was still wearing a shoulder sling and there was a high risk of Claimant developing adhesive capsulitis/worsening cervical symptoms due to prolonged use of a sling. Dr. Sacha was going to contact Dr. Faulkner to discuss discontinuing the sling.

30. Claimant returned to Dr. Sacha on December 14, 2020, at which time Claimant had cervical paraspinal spasm and segmental dysfunction was noted. Crepitus with ROM pain was noted with Hawkins and Neer testing. Dr. Sacha recommended right C4-7 facet injections.

31. On December 28, 2020, Dr. O'Brien performed an IME at the Respondents' request and concluded that Claimant had degenerative changes in her right shoulder, as evidenced by a high-riding humeral heard. Dr. O'Brien opined that this was an incurable condition, with symptoms of crepitus or pain that can wax and wane. These symptoms would progressively worsen until a reverse total shoulder arthroplasty is needed. Dr. O'Brien stated that the pre-injury MRI findings were consistent with a longstanding rotator cuff tear, including the findings of the high riding humeral head, re-mottling of the undersurface of the acromion, glenohumeral joint arthritic changes, moderate to severe subscapularis atrophy associated with fatty atrophy. He believed the August 2, 2020 assault was a temporary aggravation and she reached MMI on or before September 3, 2020, which was not a credible opinion to the ALJ.

32. Dr. O'Brien opined that the surgery Claimant required was a reverse total shoulder arthroplasty. This opinion about what procedure was required was consistent with Dr. Motz' opinion. Dr. O'Brien did not believe the arthroscopic surgery would succeed, which would potentially make a reverse total shoulder arthroplasty more difficult.

33. Sander Orent, M.D. was present as a medical chaperone during Dr. O'Brien's IME with Claimant. On January 5, 2021, Dr. Sander Orent drafted a Rebuttal to Dr. O'Brien's IME report. Dr. Orent disagreed with Dr. O'Brien's description of Claimant's functionality prior to the August 2, 2020 injury. Dr. Orent also disagreed with Dr. O'Brien's description of Claimant's current shoulder symptoms. Dr. Orent opined that Claimant suffered a major injury to her right shoulder on August 2, 2020 and that Claimant's need for right shoulder surgery was causally related to her injury on August 2, 2020. The ALJ noted Dr. Orent did not evaluate Claimant.

34. Dr. Faulkner testified by way of an evidentiary deposition that was taken on March 1, 2021. Dr. Faulkner was qualified as an expert in the field of orthopedic surgery and Level II-accredited. Dr. Faulkner testified that 60-70% of his practice is performing shoulder surgeries. Dr. Faulkner stated he reviewed the actual films of Claimant's right shoulder x-ray and MRI and noted that Claimant had a "full thickness tear of the supraspinatus, as well as infraspinatus and she had a high-grade partial tearing of her subscapularis, as well as proximal biceps rupture.

35. Dr. Faulkner said he believed that the findings were acute in a nature. However, Dr. Faulkner did not have Claimant's prior records from Kaiser Permanente to review and she denied any prior injuries when he evaluated her. Dr. Faulkner said that Claimant's rotator cuff tear was acute because she only had a mild amount of atrophy of the rotator cuff. Dr. Faulkner disagreed with the radiologist's reading of the August 21, 2020 MRI and stated the findings of severe muscle atrophy were wrong. Dr. Faulkner was well-qualified and his expertise in the area of shoulder surgery was persuasive to the ALJ. His opinion was hurt by his lack of review of the prior records from Kaiser.

36. Dr. Faulkner recommended Claimant undergo shoulder arthroscopy and rotator cuff repair surgery. Dr. Faulkner stated he recommended this type of surgery because of the acute traumatic nature of the rotator cuff tear and size. Dr. Faulkner said surgery was required to repair the structures in the shoulder. Dr. Faulkner also testified that Claimant had failed conservative treatment in the form of physical therapy and injections.

37. The ALJ found Dr. Faulkner did not discuss how potential contraindications would be addressed. Dr. Faulkner testified the criteria surgeons looked at to see if someone needed a replacement versus rotator cuff repair was the amount of humeral head subluxation versus how high-riding the humeral head was relative to the glenoid. He did not believe Claimant had mild humeral head migration. Dr. Faulkner agreed that in patients with more advanced cases of humeral head migration, these patients will not do well with rotator cuff repair that a reverse shoulder replacement was required.

38. Claimant testified the pain she felt in her right shoulder was worse after the August 2, 2020 fall. Claimant said she wanted to have the surgery recommended by Dr. Faulkner. Claimant was a credible witness when describing her pain.

39. On or about September 21, 2021, Claimant's medical images were reviewed by Dr. Piko, who prepared a report detailing his findings. Dr. Piko reviewed x-rays of the right shoulder from June 5, 2018 which showed osteopenia, a high-riding humeral head and acromial enthesophyte formation contributing to high grade subacromial arch stenosis; Impression-advanced osteoarthrosis. The December 5, 2019 x-ray showed persistent chronic osteoarthrosis and a high riding humeral head. The December 11, 2019 x-ray also showed persistent chronic osteoarthrosis and a high riding humeral head. The January 6, 2020 x-ray showed persistent chronic osteoarthrosis and a high riding humeral head; no acute fracture or dislocation.

40. Dr. Piko reviewed the films of the MRI of the right shoulder done on August 21, 2020, that showed a complete tear of the supraspinatus tendon, anterior infraspinatus tear, subscapularis tendon had diffuse partial thickness tearing, along with

attenuated biceps tendon. In addition, the superior labrum at the biceps labral anchor tendon was torn and the inferior axillary capsule had central disruption. The posterior banc of the inferior glenohumeral ligament was torn, consistent with a P-HAGL lesion. Low grade supraspinatus atrophy was present, along with fibrovascular marrow changes at the superior humeral head.

41. Dr. Piko concluded that Claimant had a chronic appearing rotator cuff tear. Cephalad migration of the proximal humeral head and high-grade subacromial arch stenosis was present, along with a large joint effusion and sub- deltoid/subacromial bursa fluid extravasation. A SLAP tear extended into the biceps tendon. While some fibers were present, this was essentially complete interstitial tear and the origin was indistinct. The subscapularis tendon had intermediate grade partial tearing.

42. Dr. Piko opined these findings appeared long-standing and the serial x-rays confirmed chronic rotator cuff tearing/insufficiency, as well as osteoarthrosis. Dr. Piko stated no significant changes over the course of these exams were present from before and after stated injury. Dr. Piko's opinion that Claimant's shoulder had no changes to the rotator cuff over the course of various x-rays and the MRI was persuasive to the ALJ.

43. Claimant proved surgery was required for her shoulder. Claimant did not prove that her need for arthroscopic shoulder surgery was reasonable and necessary and related to her work injury.

44. The ALJ concluded Claimant's need for surgery was the result of several factors, including her prior trauma, the preexisting degenerative changes in the right shoulder and the work injury of August 2, 2020.

45. The ALJ determined it was more probable than not that Claimant required a reverse total shoulder arthroplasty.

46. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, the question of whether Claimant was entitled to medical benefits turned on the opinions offered by the expert witnesses.

Medical Benefits

In the case at bench, Claimant had the burden of proof to show that the surgery proposed by Dr. Faulkner was reasonable, necessary and related to the industrial injury. Claimant asserted the injuries sustained when she was assaulted aggravated the underlying condition of her shoulder and necessitated the surgery. Claimant relied upon the expert opinion of Dr. Faulkner to support her claim that the work injury caused the need for surgery. Respondents, while admitting that she was injured on August 2, 2020, averred Claimant’s need for surgery was because of the degenerative changes in her shoulder. Respondents cited the opinions of Dr. Motz and Dr. O’Brien in support of their contentions. The question of whether Claimant proved by a preponderance of the evidence that they need for the arthroscopic surgery proposed by Dr. Faulkner was reasonable, necessary and related to her work injury required a review of her medical history, the trauma she sustained on August 20, 2020 and an evaluation of the respective opinions offered by the experts. The ALJ found Claimant did not meet her burden of proof that the surgery proposed by Dr. Faulkner was reasonable and necessary.

As a starting point, the ALJ found Claimant had degenerative changes in her right shoulder for which she required treatment before her August 2020 injury. As determined in Findings of Fact 2, 4-9, Claimant treated at Kaiser in 2017 and 2018 for right shoulder symptoms before her work-related injury. Claimant also required treatment in early 2019 and after a fall in November 2019, she treated in December 2019 and January 2020 at Kaiser for right shoulder issues. (Finding of Fact 7). The medical evidence in the record included x-rays taken in 2019 and 2020, in which the radiologist(s) noted the presence of a probable rotator cuff tear and osteoarthritis in the glenohumeral joint. (Findings of Fact 8-9). The ALJ concluded that these x-rays were objective evidence of degenerative changes in the right shoulder that were present before August 2020. No MRI was done before the 2020 injury.

Based upon the totality of the evidence, the ALJ found that the condition of Claimant‘s shoulder was the result of a combination of factors. (Finding of Fact 44). This included her degenerative changes and traumatic injury, as documented by the prior x-rays and need for treatment. *Id.* The ALJ also concluded Claimant suffered a significant injury on August 2, 2020 that caused an increase in her shoulder symptoms. (Finding of Fact 14). In this regard, the ALJ credited Claimant‘s testimony regarding her symptoms. (Finding of Fact 38). It is well-settled that a pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* (Colo. App. 1990). Therefore, while Claimant’s injuries on August 2, 2020 increased the symptoms in her shoulder, the objective evidence regarding damage to the structures of the shoulder showed that these were similar both before and after her injury. (Finding of Fact 42). As such, Claimant’s need for surgery was the result of all of these factors.

In this regard, the ALJ concluded that the evidence admitted at hearing established that surgery was required for Claimant’s right shoulder. (Finding of Fact 41). However, there was a conflict between the respective experts (Drs. Faulkner, Motz and O’Brien) as to what procedure needed to be performed and whether the condition of Claimant’s shoulder was related to the industrial injury. There were issue with regard to all of these experts’ credibility. Under the facts of this case, the ALJ concluded Claimant did not prove that an arthroscopic surgery was reasonable and necessary for her shoulder. The ALJ’s reasoning was two-fold. First, the ALJ determined that the surgical procedure required by Claimant was a reverse total shoulder arthroplasty. This was based upon the opinions of Dr. Motz (Finding of Fact 23), as well as Dr. O’Brien (Finding of Fact 32). Both experts concluded that Claimant had a high riding humeral head and this was the surgery she required. *Id.* The ALJ found these opinions more credible as to what surgery Claimant required.

The ALJ‘s conclusion was further based upon Dr. Faulkner‘s deposition testimony in which he agreed that if Claimant had a higher riding humeral head, a total shoulder arthroplasty was the procedure she required. (Finding of Fact 36). The ALJ determined the objective radiographic evidence established Claimant indeed had a high riding humeral head. This determination was based upon the final expert opinion of radiologist, Dr. Piko who, after reviewing all the films taken of Claimant‘s shoulder found, as follows:

- June 5, 2018: a high-riding humeral head; advanced osteoarthrosis.
- December 5, 2019: persistent chronic osteoarthrosis; a high riding humeral head.
- December 11, 2019: persistent chronic osteoarthrosis and a high riding humeral head.
- January 6, 2020: persistent chronic osteoarthrosis and a high riding humeral head.
- August 21, 2020 MRI: complete tear of the supraspinatus tendon; anterior infraspinatus tear, diffuse partial thickness tearing of subscapularis tendon; torn superior labrum at the biceps; torn labral anchor tendon; central disruption of inferior axillary capsule; torn posterior banc of the inferior glenohumeral ligament.

Accordingly, because the medical evidence showed that Claimant had a high riding humeral head, the ALJ concluded the proposed arthroscopic surgery was not reasonable and necessary.

Second, the ALJ also considered the DOWC MTG when evaluating the proposed surgery. Dr. Faulkner recommended a right shoulder arthroscopy with debridement, subacromial decompression, rotator cuff repair possible subscapular repair. (Finding of Fact 25). The Colorado Workers' Division of Workers' Compensation Medical Treatment Guidelines ("DOWC MTG") address surgical indications and potential contraindications for the surgery at issue here:

"Shoulder Injury Medical Treatment Guidelines

10. ROTATOR CUFF TEAR:

a. Description/Definition:

Partial or full-thickness tears of the rotator cuff tendons, most often the supraspinatus, can be caused by vascular, traumatic or degenerative factors or a combination. Further tear classification includes: a small tear is less than 1cm; medium tear is 1 to 3cm; large tear is 3 to 5cm; and massive tear is greater than 5cm, usually with retraction. Partial thickness cuff tears usually occur in age groups older than 30. Full-thickness tears can occur in younger age groups; however, they are uncommon. Approximately 25% of asymptomatic patients over 60 have full thickness tears and between 40-60% have partial thickness tears. About 50% of those with asymptomatic full thickness tears will become symptomatic with tear progression in 2 years. This is more common with larger initial tears. Only about 10% of partial tears increase in size over time. Tendons

> do not repair themselves over time. The patient usually complains of pain along anterior, lateral shoulder or posterior glenohumeral joint."

...

"f. Surgical Indications:

> "Goals of surgical intervention are to restore functional anatomy by re-establishing continuity of the rotator cuff, addressing associated pathology and reducing the potential for repeated impingement.

...

> If no increase in function for a partial tear is observed after 6 to 12 weeks, a surgical consultation is indicated. For full-thickness tears, it is thought that early surgical intervention produces better surgical outcome due to healthier tissues and often less limitation of movement prior to and after surgery. Patients may need pre-operative therapy to increase ROM.
>
> Full thickness tears are uncommon in the 40-60 age groups. About 25% of asymptomatic patients over 60 will have a full thickness tear. Full-thickness tears greater than 1 cm, in individuals less than 60 should generally be repaired. Smaller tears appear to show less likelihood of progression (25%). Only about 10 percent of partial tears increase in size over time. The recovery rate for those with a full thickness tear without surgery is 60%. **In patients over 65 the decision to repair a full rotator cuff tear depends on the length of time since the injury, the amount of muscle or tendon that has retracted, the level of fatty infiltration and the quality of the tendon.** For patients with lack of active elevation above 90 degrees, arthroscopic biceps tenotomy may be effective in returning some elevation. The recurrence rate may be up to 50% in older patients with multiple tendon full-thickness tears. Pseudo paralysis or severe rotator cuff arthropathy are contraindications to the procedure." [Emphasis added]

The foregoing section of the DOWC MTG set forth the criteria to be evaluated in patients over the age of sixty-five when rotator cuff repair is being considered. The evidence in the form of the MRI revealed multiple structures within the shoulder joint, which had tears and degeneration. (Findings of Fact 19, 41-42). As found, Dr. Faulkner's testimony did not address these conditions in detail and also did not address the concern about atrophy, other than to say he disagreed with the radiologist's interpretation as to the degree of muscle atrophy. (Findings of Fact 35-36). Dr. Faulkner did not explicitly articulate how potential contraindications would be addressed. In fact, Dr. Faulkner stated he would have additional x-rays taken and agreed if Claimant had a high riding humeral head, a reverse shoulder arthroplasty was required. (Finding of Fact 36). The contraindications referenced by the DOWC MTG were not addressed and the conclusion that Claimant requires a different surgical procedure provide an additional basis for denial. Accordingly, Claimant’s request for medical benefits will be denied.

ORDER

It is therefore ordered:

1. Claimant’s request for payment of the arthroscopic repair of the torn rotator cuff in her right shoulder is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

WORKERS' COMPENSATION NO. WC 5-064-648-002

ISSUES

1. Whether Claimant has proven by clear and convincing evidence that the DIME physician's opinion that Claimant has reached maximum medical improvement is incorrect.

2. If Claimant overcomes the DIME opinion regarding MMI, whether Claimant is entitled to temporary disability benefits.

3. If Claimant overcomes the DIME opinion, whether Claimant is entitled to medical benefits.

4. If Claimant fails to overcome the DIME, whether Claimant has overcome the DIME opinion with respect to permanent partial disability impairment rating.

5. If Claimant fails to overcome the DIME, whether Claimant has proven by a preponderance of the evidence that she is entitled to maintenance medical benefits.

6. Respondents' entitlement to offset for overpayments.

PRELIMINARY ISSUE

At hearing, the ALJ granted Claimant's oral motion to withdraw the issue of disfigurement without prejudice with leave to refile due to the fact that Claimant appeared by telephone without video sufficient to permit the ALJ to make a disfigurement ruling.

FINDINGS OF FACT

1. Claimant is a 57-year-old woman who worked for Employer for approximately 17 years. On September 26, 2017, Claimant was working in the mailroom for Employer when her foot became entangled in a floormat causing Claimant to fall into a large mail-sorting machine striking her shoulder and hip and twisting her right knee.

2. Claimant first sought medical treatment for her September 26, 2017 work accident at UC Health on October 27, 2017. Claimant reported injuries to her right knee, right hip, and right shoulder after tripping over a floor mat during the course of her employment. (Ex. C). On examination, Claimant had decreased range of motion in her right shoulder but no tenderness, swelling or deformity. Claimant's right hip showed decreased range of motion and tenderness with normal strength. Her right knee had normal range of motion without swelling or effusion, with tenderness over the MCL and patellar tendon. Assessment was fall with multiple contusions and strains to right foot, right knee, right hip and right shoulder." Physical therapy was recommended. (Ex. C).

3. Claimant began a course of physical therapy at Pro Active Physical Therapy and Sports Medicine and completed six sessions from November 1 through November 17, 2017. (Ex. C).

4. Over the course of the next three years, Claimant's authorized treating physician (ATP), was James Rafferty, M.D., at UC Health. Dr. Rafferty saw Claimant approximately twenty-nine times during this time frame, the first being in approximately June 2018. Prior to that time, Claimant was seen by other providers at UCH. No records from Dr. Rafferty or UCH are included in the Court record prior to May 20, 2019. (Ex. 1).

RIGHT KNEE

5. Around the first of November 2017, Claimant slipped and fell on ice while taking trash to a dumpster during the course of her employment with Employer. On November 17, 2017, Claimant returned to UCH and reported failing approximately two weeks prior, landing on her right knee, and twisting the medial aspect of her right knee. She noted that her hip discomfort had improved. (Ex. C).

6. On November 28, 2017, Claimant had an MRI of her right knee that showed a focal horizontal tear of the right knee medial meniscus and the junction of the body and the posterior horn and trace joint effusion. (Ex. 1).

7. On December 12, 2017, Claimant saw David Beard, M.D., at Orthopaedic & Spine Center of the Rockies (OSCR). Claimant's right knee had no obvious effusion, and was stable to testing, with some pain on McMurray's testing. Dr. Beard reviewed Claimant's November 28, 2017 MRI. Dr. Beard diagnosed Claimant with a right knee meniscal tear and recommended an arthroscopic partial medial meniscectomy. Dr. Beard's report from does not expressly state whether Claimant's right knee meniscal tear was related to her September 26, 2017 work accident. (Ex. 4).

8. On February 6, 2018, Dr. Beard performed a right knee arthroscopy with a partial medial meniscectomy. Dr. Beard's operative report indicates that he visualized the medial meniscus and there was only partial-thickness tearing of the superior surface of the posterior horn of the meniscus, and less than 5% of the meniscus was removed. Dr. Beard did not identify any additional meniscal pathology. (Ex. 4).

9. On March 23, 2018, Claimant again saw Dr. Beard, reporting that she fell on her right knee shortly after her sutures were removed. Dr. Beard indicated that Claimant would follow up with a different provider for "determination of her MMI and her impairment rating." Based on this statement, the ALJ infers that Dr. Beard attributed Claimant's knee injury to her September 26, 2017 work accident. (Ex. 4).

10. On May 2, 2018, Claimant saw Dr. Beard for a follow up on her right knee and he noted minor soft tissue swelling near the surgical incisions without ecchymosis or effusion. Claimant had full range of motion and negative testing, with tenderness to palpation along the medial femoral condyle. Dr. Beard recommended that Claimant follow up with her workers' compensation provider and return to him as needed. (Ex. 4).

11. On June 14, 2018, Claimant had a right knee MRI which showed an ill-defined tear of the medial meniscal body. (Ex. 1). (The medical records in evidence do not identify the provider who ordered the June 14, 2018 MRI or the indications for the MRI.)

12. On July 31, 2018, Claimant returned to Dr. Beard reporting persistent knee pain. On examination, Claimant had a small amount of soft tissue swelling around the surgical incisions, but an otherwise negative examination. Dr. Beard indicated that there was no indication for an additional surgery and that she should follow up with her workers compensation provider for determination of MMI and an impairment rating, "as deemed appropriate." (Ex. 4).

13. On November 7, 2018, Claimant saw Kirk Kindsfater, M.D. at OSCR for evaluation of continued right knee pain. (Claimant was referred to Dr. Kindsfater by Dr. Reichhardt for a shoulder evaluation, but Dr. Kindsfater did not evaluate Claimant's shoulder). Dr. Kindsfater reviewed Claimant's June 2018 right knee MRI and noted a potential intrasubstance tearing, although the MRI was of poor quality. The MRI showed moderate patellofemoral arthrosis and early advanced arthrosis along the medial patellofemoral articulation. Dr. Kindsfater recommended a repeat arthroscopic debridement of the right knee. (Ex. 4).

14. On January 4, 2019, Claimant had a right knee MRI performed which showed a radial tear of the posterior horn of the medial meniscus and mild adjacent stress-related edema. (Ex. 1). (The MRI report was ordered by Dr. Rafferty. However, no records from Dr. Rafferty before May 20, 2019 are in the record before the Court.).

15. On January 14, 2019, Dr. Kindsfater reviewed Claimant's January 4, 2019 MRI. He noted that Claimant had a radial tear of the posterior horn of the medial meniscus without other significant pathology, and recommended a right knee arthroscopy with partial medial meniscectomy. (Ex. 4).

16. Claimant returned to Dr Kindsfater on February 27, 2019 at which time he noted that Claimant was a good candidate for a right knee arthroscopy. Dr. Kindsfater did not address whether Claimant's knee pathology observed on the MRI and the need for treatment were related to her work-injury. (Ex. 4).

17. On March 4, 2019, Dr. Kindsfater performed a right knee arthroscopy for a "recurrent tear" of the posterior horn of Claimant's medial meniscus. In his April 11, 2019 report, Dr. Kindsfater referred to Claimant's surgery as "a Work Comp scope." Claimant continued to report pain in her knee following surgery in the medial side of the joint. Dr. Kindsfater's examination of Claimant's knee was unremarkable with the exception of mild effusion. He was unsure why Claimant continued to have pain while walking, and that grade II arthrosis was identified intraoperatively. (Ex. 4).

18. On May 2, 2019, Claimant again saw Dr. Kindsfater. On examination he noted medial joint line tenderness, and a small-to-moderate amount of effusion, but no other positive findings. X-rays demonstrated interval narrowing of the medial joint space and a mild subchondral irregularity and advancing chondrosis/chondrolysis (cartilage

breakdown) of the medial joint. He aspirated Claimant's knee and recommended a steroid injection. He noted that if Claimant had further progression of her chondrolysis, she would be a candidate for knee arthroplasty in the near future. The right knee steroid injection was performed on May 6, 2019. (Ex. 4).

19. Claimant returned to Dr. Kindsfater on June 3, 2019, with continued knee pain. She reported approximately one and one-half weeks of relief with the steroid injection. Claimant had mild effusion of the knee and mild limitations in range of motion with an audible, painful popping in the knee on a squatting and rotation movement. He noted that Claimant's knee appeared to be getting worse, with some advancement of right medial compartment arthrosis and a slight irregularity of the medial femoral condyle on x-rays. (Ex. 4). Due to the advancement in Claimant's right knee arthrosis, Dr. Kindsfater recommended that Claimant consider a total knee arthroplasty (TKA). On September 23, 2019, Dr. Kindsfater submitted a request to Insurer for authorization of a right knee total arthroplasty. The stated diagnosis was primary osteoarthritis of right knee, osteoarthritis of the right knee, and degeneration disease of medial meniscus of right knee.

20. On July 23, 2019, Claimant had a right knee MRI that showed longitudinal tearing of the posterior remnant, which was new when compared to the January 2019 MRI. Additionally, the MRI showed chondral thinning, fissuring and erosion of the peripheral portion of the medial tibia and femur with mild bone reactive changes, which had also progressed since the prior study. (Ex. 3).

21. In his August 30, 2019 treatment note, Dr. Rafferty noted although Claimant's knee arthritis was not caused by her accident on September 26, 20167, her TKA would be the only available option to cure her of the effects of her work-related injury. (Ex. 1).

22. On September 23, 2019, Claimant underwent a right hybrid TKA performed by Dr. Kindsfater. The operative report indicates that Claimant had a rapid progression of symptoms and had developed "endstage arthrosis." (Ex. 4).

23. On November 21, 2019, Dr. Kindsfater responded to a letter from Respondents' counsel and indicated Claimant was not at MMI , that the anticipated date of MMI was September 2020, and that Claimant's anticipated return to work was January 2, 2020. (Ex. 4).

24. On February 13, 2020, Dr. Kindsfater examined Claimant's right knee and noted a relatively benign examination, with excellent range of motion and mild soft tissue thickening, with some tenderness over the IT band and patella. His impression was stable knee arthroplasty on the right, with mild patellofemoral disease on the left. (Ex. 4).

25. Claimant was seen by Ian Weber, M.D., on referral from Dr. Rafferty for evaluation of her right knee on May 15, 2020, June 3, 2020, and August 21, 2020. At the May 15, 2020 visit, Dr. Weber reviewed x-rays of Claimant's right knee and noted that she had a Depew TKA, with correct positioning and correct alignment. He noted that the component sizes looked "excellent" and that there were "[n]o abnormalities with fractures or any other type of issues." Claimant reported some pain and swelling of the knee, and Dr. Weber

noted “a little mid flexion instability.” By her August 21, 2020 visit, Dr. Weber found Claimant had “severe valgus instability at about 45 she is gotten [sic] easily 5-10mm in each direction. She also has lack of full extension and she is short about 10°.” Dr. Weber recommended that Claimant undergo a knee revision and that he believed the “tibial component will be loose” and “this type of knee system does have a track record of early tibial loosening.” (Ex. 7).

RIGHT SHOULDER

26. X-rays of Claimant’s right shoulder were performed on November 17, 2017, which showed no acute bony abnormality of the shoulder, and moderate osteoarthritis of the AC joint with small subacromial enthesophyte and inferiorly directed osteophytes. (Ex. 1).

27. On November 28, 2017, Claimant had an MRI of her right shoulder which showed mild to moderate right shoulder insertional tendinopathy with shallow infraspinatus bursal-sided fraying and undersurface tearing at the insertion. No full thickness rotator cuff tear, trace subacromial-subdeltoid bursitis and acromioclavicular joint osteoarthritis with a small subacromial spur.

28. At her December 12, 2017, appointment with Dr. Beard, Claimant had full strength and range of motion of the right shoulder and a mildly positive Hawkins test. Other shoulder testing was negative. He reviewed Claimant’s November 28, 2017 MRI studies of her right shoulder and noted the MRI showed supraspinatus and infraspinatus tendinopathy, but no evidence of high-grade partial or full-thickness rotator cuff tearing, and some acromioclavicular joint osteoarthritis. The biceps tendon and labrum were normal. Based on his examination, Dr. Beard diagnosed Claimant with a right shoulder rotator cuff contusion without evidence of tearing. He indicated that no surgical intervention of the right shoulder was recommended. Dr. Beard’s report does not address whether Claimant’s right shoulder injury was work-related. (Ex. 4).

29. On February 13, 2018, Dr. Beard performed a steroid injection in Claimant’s right shoulder subacromial space. (Ex. 4). As a result of the injection, Claimant, who is diabetic, experienced an increase in her glucose levels, which disqualified her from additional steroid injections. (See Ex. 1, 4/1/20 Rafferty Note).

30. On March 23, 2018, Claimant again saw Dr. Beard and reported that the steroid injection in her right shoulder gave approximately one week or relief, but that her symptoms recurred. Dr. Beard did not recommend any further surgical intervention and recommended against another shoulder injection given the resulting increase in her glucose levels. He indicated that Claimant would follow up with a different provider for “determination of her MMI and her impairment rating.” Based on this statement, the ALJ infers that Dr. Beard attributed Claimant’s shoulder injury-to her September 26, 2017 work accident. (Ex. 4).

31. On June 21, 2018, Claimant saw Gregory Reichhardt, M.D., on referral from James Rafferty, M.D[1]. Claimant reported pain over the lateral shoulder with popping on

[1] No records from Dr. Rafferty

abduction and chest pain over the right periscapular area. Claimant also reported pain over her hip. Examination of Claimant's right shoulder demonstrated no tenderness to palpation over the shoulder, but tenderness over the right periscapular area with trigger points. Dr. Reichhardt diagnosed Claimant with right shoulder pain, right hip pain, and right knee pain, all of which he attributed to her September 26, 2017 work fall. (Ex. 2).

32. At appointments with Dr. Reichhardt on July 30, 2018, September 4, 2018 and September 20, 2018, Claimant's shoulder symptoms were primarily trigger points in the periscapular area, without reported symptoms in the shoulder joint. (Ex. 2).

33. On October 4, 2018, Dr. Reichhardt found a moderately positive right shoulder Hawkins' impingement sign, and mildly limited range of motion. Claimant continued to complain of right hip tenderness to palpation. (Ex. 2).

34. On December 18, 2018, Claimant saw Rose Christensen, PA-C, at Western Orthopaedics for evaluation of her right shoulder. Ms. Christensen is a physician assistant for Armodios Hatzidakis, M.D., and orthopedist. Ms. Christensen's diagnosis was a right shoulder strain with compounding post-traumatic stiffness of symptomatic AC joint arthrosis with possible rotator cuff pathology. Ms. Christenson ordered an MRI with gadolinium to evaluation Claimant's shoulder further. (Ex. 6).

35. Claimant returned to Dr. Reichhardt on December 19, 2019 for a follow up evaluation and reported continued pain over the right shoulder extending along the upper trapezius. Claimant requested a compounded cream for her shoulder and hip, which Dr. Reichhardt requested. He noted that if the compounded cream were not effective, Claimant would like to consider a PRP injection for her gluteal tendons. (Ex. 2). Insurer denied Claimant's request for a compounded cream and the PRP injection.

36. On February 18, 2019, Claimant had another right shoulder MRI performed. The MRI showed mild right shoulder supraspinatus and infraspinatus insertional tendinopathy, and no evidence of a rotator cuff tear. The radiologist noted that Claimant's tendinopathy appeared improved when compared to her 2017 MRI. The MRI also showed trace subacromial-subdeltoid bursitis, and mild acromioclavicular joint osteoarthritis. (Ex. 1)

37. On April 9, 2019, Claimant was seen by Armodios Hatzidakis, M.D., for evaluation of her right shoulder. Based on his examination, Dr. Hatzidakis diagnosed claimant with right shoulder adhesive capsulitis with degenerative joint disease of the acromioclavicular joint. He recommended that Claimant undergo physical therapy for her shoulder, and discussed arthroscopic manipulation under anesthesia to address the adhesive capsulitis. (Ex. 6).

38. On April 11, 2019, Claimant saw Dr. Reichhardt, and noted new tenderness over the lateral epicondyle of the right shoulder. Dr. Reichhardt also indicated Claimant had decreased shoulder range of motion, with 140 degrees of shoulder forward flexion. However, Claimant's shoulder forward flexion had improved from 90 degrees measured on February 26, 2019. (Ex. 2).

39. Between June 4, 2019 and September 29, 2020, Claimant saw Dr. Reichhardt three times, with essentially unchanged complaints of shoulder pain. At his July 24, 2019 visit, Claimant reported bilateral shoulder pain, and Dr. Reichhardt noted limitations in bilateral range of motion and positive Hawkins' impingement signs bilaterally. (Ex. 2).

40. Between June 17, 2019 and April 1, 2020, Claimant saw Dr. Rafferty approximately monthly, Dr. Rafferty documented physical examinations of Claimant's shoulder only on June 17, 2019 and June 25, 2019. On June 17, 2019, Dr. Rafferty's diagnosis of Claimant's right shoulder was impingement syndrome, acromioclavicular joint osteoarthritis, and myofascial strain trapezius muscle. On November 21, 2019, Dr. Rafferty added subacromial bursitis to his assessment of Claimant's right shoulder. As of April 1, 2020, Dr. Rafferty's assessment of Claimant's right shoulder was impingement syndrome, acromioclavicular joint osteoarthritis, myofascial strain and subacromial bursitis. (Ex. 1).

41. On May 5, 2020, Claimant saw Dr. Hatzidakis and Claudine Richter, PA-C. Dr. Hatzidakis discussed "definitive treatment" for Claimant's right shoulder being "arthroscopic debridement, distal clavicle resection with capsular scar release and manipulation under anesthesia." (Ex. 6).

42. On May 6, 2020, Dr. Rafferty authored a letter in response to correspondence from Respondents' counsel. Dr. Rafferty opined that Claimant has not yet reached MMI from her September 26, 2017 injuries. He indicated that there continued to be treatment available for Claimant's right shoulder impingement syndrome and AC joint osteoarthritis, including possible surgery recommended by Dr. Hatzidakis. Similarly, he indicated that additional treatment for Claimant's hip, including PRP injections and compounded cream, which had been recommended but denied by Insurer. With respect to Claimant's right knee, Dr. Rafferty indicated that Claimant required a second opinion from Ian Weber, M.D., regarding potential additional treatment for ongoing knee symptoms following her TKA. He opined that Claimant could return to work with restrictions, including a 20-pound lifting/carrying restriction, no repetitive lifting, no crawling, kneeling, squatting, or climbing, seated work only, and the ability to change positions at will. (Ex. 1).

43. Claimant saw Dr. Rafferty on May 8, 2020 and June 4, 2020, without documenting an examination of Claimant's right shoulder. (Ex, 2)

44. On July 2, 2020, Dr. Hatzidakis responded to questions posed by Respondents' counsel via letter. Therein he indicated that he did not believe Claimant was at MMI and that Claimant had a right shoulder strain and resultant symptomatic AC arthrosis and adhesive capsulitis which had not fully resolved with conservative care. He indicated that no permanent impairment could be assessed because Claimant was not at MMI and that maintenance medical care was appropriate, consisting of "continued conservative care vs. surgery as proposed." (Ex. 6).

45. On July 2, 2020, Dr. Rafferty issued a report in which he addressed causation of Claimant's right shoulder, right hip, and right knee injuries. With respect to Claimant's right shoulder, Dr. Rafferty attributed Claimant's right shoulder impingement syndrome

and myofascial strain to her work injury based on the timing of the complaints. He indicated that her acromioclavicular osteoarthritis "appeared to be work-related secondary to event at work on 09/26/17" without further analysis. He opined that Claimant's partial-thickness rotator cuff tear was unrelated to her work and that trace subacromial bursitis was "possibly work-related." (Ex. 1)

46. With respect to Claimant's right hip, he opined her piriformis syndrome, gluteus tendinopathy, trochanteric bursitis and possible labrum tear were work-related "secondary to work-related trauma; twisting left on planted right foot." (Ex. 1). He also opined that her right knee meniscus tear was work-related secondary to trauma, and her right knee osteoarthritis pathology was not work-related, but "appears to be a symptomatic aggravation of this condition." (Ex. 1).

RIGHT HIP

47. On March 20, 2018, Claimant had an x-ray of her right hip performed that showed mild right hip osteoarthritis. (Ex. 1).

48. On July 2, 2018, Dr. Reichhardt performed trigger point injections in Claimant's right hip and indicated if her hip pain did not improved, he would consider a hip MRI arthrogram. When Claimant returned to Dr. Reichhardt on July 30, 2018, she reported that her hip pain was improved, and he performed additional trigger point injections in the shoulder musculature. (Ex. 2).

49. On November 20, 2018, Claimant had a right hip MRI which showed bilateral gluteus medius and minimus tendinopathy with mild bilateral greater trochanteric bursitis. (Ex. 1). Dr. Reichhardt reviewed Claimant's right hip MRI at his November 26, 2018 office visit and noted that the MRI showed no labral tear. He revised his diagnosis of Claimant's hip to include possible trochanteric bursitis and insertional gluteus medius and minimis tendinopathy with possible myofascial involvement.(Ex. 2).

50. On June 4, 2019, Claimant saw Dr. Reichhardt. Claimant indicated she would like to consider a PRP injection for her right hip, and Dr. Reichhardt indicated she was a reasonable candidate for the procedure for treatment although the Colorado workers' compensation treatment guidelines do not discuss PRP for this purpose. Dr. Reichhardt also noted that Claimant could not have additional steroid injections because of adverse reactions related to Claimant's pre-existing diabetes. (Ex. 2). Later, in his July 24, 2019 note, Dr. Reichhardt indicated that the PRP is not a recommended treatment for gluteal tendinosis, but for ,

51. On June 29, 2019, Claimant saw Julie Quickert, APRN, for consideration of PRP injections. Ms. Quickert recommended a PRP injection in the right gluteal tendon insertion site. (Ex. 5).

52. On July 30, 2019, Dr. Rafferty authored a letter to Respondent's third-party administrator, advocating for a PRP injection for Claimant's right hip. He noted that Claimant has MRI evidence of gluteal tendon pathology and trochanteric bursitis, and had not responded to conservative measures. (Ex. 1).

53. On August 26, 2019, Dr. Reichhardt authored a letter to Respondents' counsel addressing questions posed to him. He deferred the determination of MMI to Dr. Rafferty, and indicated that while he would recommend PRP injections to her hip, he would defer to Dr. Rafferty on this issue as well. (Ex. 2).

54. On November 3, 2020, Respondents filed a Final Admission of Liability (FAL) admitting for medical and temporary disability benefits paid to date. Respondents asserted an overpayment of $9,396.04 for overpayment of TTD benefits. (Ex. A). The FAL states that Claimant was paid $64,699.13 in TTD when Claimant should have been paid $55,303.09. The FAL provides a calculation of Claimant's TTD benefits for the periods of December 20, 2017 through March 20, 2018, and March 4, 2019 through June 20, 2019 at $580.33 per week, and from July 1, 2019 to June 22, 2020 at the rate of $683.64 per week. Claimant did not present evidence or argument contesting overpayments for Claimant's TTD benefits. Claimant applied for social security disability (SSDI) benefits, but her claim was denied. Claimant appealed the denial in 2020, but has not received a response to the appeal. No evidence exists that Claimant has received SSDI benefits that would entitle Respondents to offsets against future benefits for SSDI benefits.

EXPERTS

DIME PHYSICIAN – BRADLEY ABRAHAMSON, M.D.

55. On October 20, 2020, Claimant underwent a Division Independent Medical Examination (DIME), with Bradley S. Abrahamson, M.D. Dr. Abrahamson opined that as a result of her September 26, 2017 work accident, Claimant's only injuries were contusions to the right shoulder, right hip, right knee and possibly the ankle. He further opined that Claimant had no permanent impairment as a result of her work accident. (Ex. 9).

56. Dr. Abrahamson opined that Claimant's right horizontal meniscal tear was degenerative in nature and not likely caused by Claimant's work injury. He indicated that a focal horizontal medial meniscus tear in a middle-aged to older adult is considered a degenerative tear and often an incidental finding. Despite his opinion that Claimant's horizontal meniscal tear was degenerative in nature, he opined that Claimant's initial knee arthroscopy was reasonable as a "diagnostic and potentially therapeutic work-related procedure." Because the meniscus was stable at the time of the initial arthroscopy, Dr. Abrahamson opined that the subsequent knee surgeries should not be considered work-related. He determined that while Claimant does need further care, including a likely revision to her TKA, such treatment is not work-related. (Ex. 9).

57. Dr. Abrahamson reviewed Claimant's imaging studies of her right shoulder and opined that the findings of insertional tendinopathy, bursitis and AC joint osteoarthritis were degenerative in nature. He opined that while the undersurface tearing at the insertion of the infraspinatus "could" be traumatic, but in his opinion, it would been more painful and limited Claimant from lifting a cup of coffee if it were traumatic.

58. Dr. Abrahamson also reviewed Claimant's right hip imaging studies and concluded that her right hip tendinopathy was likely the result of a long process of inflammation, and most likely chronic, non-traumatic findings.

59. With respect to Claimant's shoulder, hip and ankle, Dr. Abrahamson opined that Claimant sustained contusions to these areas that did not result in permanent impairment, and that physical therapy and physiatry consultations were reasonable and work-related. He found that Claimant had no work restrictions. (Ex. 9).

60. Dr. Abrahamson found that although he found that Claimant sustained only contusions, which should resolve within 8-10 weeks, Claimant continued to have pain beyond that point. He assigned an MMI date of June 23, 2020, in agreement with Dr. Farber.

ADAM FARBER, M.D.

61. Adam Farber, M.D., performed an independent medical examination (IME) at Respondents' request on June 23, 2020 and issued a report of the same date. Subsequently, Dr. Farber prepared eight addenda to his initial report between July 6, 2020 and January 18, 2021. (Ex. C). Dr. Farber was admitted as an expert in orthopedic surgery, and his testimony was presented through two depositions, dated September 30, 2020 and March 29, 2021. (Ex. E).

62. As part of his initial IME, Dr. Farber performed a physical examination of Claimant and reviewed medical records. Dr. Farber opined that, as a result of Claimant's September 26, 2017 work injury, she sustained contusions to the right knee, right hip, and right shoulder, each of which had resolved, as well as a right ankle sprain. He also noted "[d]iffuse multifocal complaints of multiple joints with subjective complaints out of proportion to objective findings." Dr. Farber also opined that Claimant's two partial meniscectomies and the TKA were work related, based on the fact that the surgeries were reportedly "covered" by her workers' compensation carrier. In addition, Claimant had the following pre-existing conditions:

- Fibromyalgia
- History of right shoulder adhesive capsulitis requiring manipulation under anesthesia
- Type 1 diabetes mellitus
- Right shoulder acromioclavicular joint osteoarthritis (degenerative)
- Mild right knee tricompartmental osteoarthritis (degenerative)
- Right shoulder rotator cuff tendinopathy (degenerative)
- Right knee horizontal medial meniscal tear (degenerative)

- Bilateral hand trigger fingers
- Bilateral hip gluteal tendinopathy (degenerative)

63. Dr. Farber opined that Claimant's described mechanism of injury is not consistent with the development of rotator cuff tendinopathy, shoulder impingement syndrome, or acromioclavicular arthrosis. Dr. Farber indicated that rotator cuff tendinopathy is "a degenerative condition affecting the tendons of the rotator cuff, but not a post-traumatic entity." He also opined that shoulder impingement syndrome is an overuse condition resulting from repetitive overhead arm activities, and not a post-traumatic condition. Acromioclavicular joint disease is also a degenerative condition that is not the result of trauma except where there is evidence of AC joint separation or a distal clavicle fracture, which did not occur. He indicated that Claimant's mechanism of injury is consistent with a right shoulder contusion, that imaging studies demonstrated no acute structural pathology. Ultimately, he opined that Claimant's right shoulder symptoms and examination are consistent with myofascial pain likely due to pre-existing fibromyalgia.

64. Dr. Farber opined that Claimant had reached MMI for her work-related conditions and that there was no evidence of any permanent impairment of her right shoulder, ankle, or hip. With respect to Claimant's right knee, Dr. Farber indicated that because her right knee procedures were related, he assigned a 34% lower extremity permanent impairment. In reaching his impairment rating, Dr. Farber assigned a 20% impairment for Claimant's TKA, and 14% for range of motion for a combined 34% lower extremity permanent impairment. Dr. Farber indicated that Claimant required no medical maintenance care for her right shoulder, ankle, or hip. However, he did believe that lifetime medical maintenance was warranted for arthroplasty surveillance purposes, consisting of annual orthopedic evaluation and x-rays of the knee. Additionally, should Claimant require surgical intervention for hardware failure, it would be considered maintenance medical care.

65. Dr. Farber indicated that PRP injections are not reasonable or necessary and that there is no convincing evidence in medical literature to support the use of such injections for non-arthritic hip pathology.

66. In his addenda, Dr. Farber disagreed with Dr. Hatzidakis' assessment of shoulder adhesive capsulitis. Although Claimant had radiographic evidence of AC joint arthrosis, such findings are common in the general population and usually an incidental finding. Dr. Farber did not feel that Claimant's clinical symptoms were consistent with symptomatic AC Joint arthrosis.

67. In his September 30, 2020 deposition, Dr. Farber testified that there is no objective medical evidence that Claimant requires surgical intervention of her right shoulder. Dr. Farber testified that Claimant's multiple shoulder complaints to not correlate with a diagnosis, and that the Claimant's response to trigger point injections in the trapezius and shoulder blade are "not indicative of an intra-articular problem that can benefit from surgery." He testified that Claimant's shoulder symptoms were more likely myofascial symptoms that cannot be addressed or fixed with surgery.

68. In his July 20, 2020 addenda and testimony, Dr. Farber opined that there was no objective evidence to support a diagnosis of mid-flexion instability of the right knee arthroplasty and that there was no objective evidence to support a revision to her total knee replacement regardless of whether the total knee replacement was causally related to her industrial injury.

JAMES RAFFERTY, M.D.

69. Dr. Rafferty's testimony was presented by deposition and he was admitted to testify as an expert in occupational medicine. Dr. Rafferty first saw Claimant on April 17, 2018, and prior to that she was seen by a UCH physician assistant on three occasions. (Records from these visits were not offered or admitted into evidence). Dr. Rafferty saw Claimant approximately 29 times. With respect to Claimant's right knee, Dr. Rafferty testified that Claimant had consistent pain since her initial visit that had not been relieved despite three knee surgeries, that Claimant been doing poorly since her TKA and that her symptoms were unusual in that they had not resolved. He opined that Claimant's right knee injury is work related, but offered no analysis or rationale for the opinion.

70. Dr. Rafferty testified that he agreed with Dr. Farber that none of the imaging study findings of Claimant's right knee were a direct result of Claimant's work-related injury. However, he disagreed that the symptoms Claimant has reported are not work-related. Dr. Rafferty testified that Claimant's September 26, 2017 work injury "aggravated, accelerated, or combined with her preexisting conditions to cete the necessity for treatment.

71. With respect to Claimant's right shoulder, Dr. Rafferty testified that Claimant failed all attempts at conservative care, including a subacromial injection in 2017 by Dr. Beard. Because of Claimant's diabetes, she is unable to receive additional injections. Dr. Rafferty testified that Claimant's right shoulder injury is work-related, but provided no analysis or rationale for the opinion.

72. With respect to Claimant's right hip, Dr. Rafferty testified that Claimant had not responded sufficiently to the treatment she had received for trochanteric bursitis, tendinopathy of the gluteus medius and minimus muscles. He testified that if Claimant were not diabetic, she would be a candidate for steroid injections. He testified he requested PRP (platelet rich plasma) injections because Claimant is not a candidate for steroid injections in her hip, and that such injections are supported by literature, although the use of PRP for trochanteric bursitis or gluteus medius tendinopathy is not addressed in the workers' compensation treatment guidelines. Additionally, he requested a compounded cream for trochanteric bursitis because Dr. Reichhardt requested the treatment. Dr. Rafferty testified that use of a compounded cream was "a crapshoot" and "[t]here is no way to predict whether or not one is going to respond satisfactorily to them. They are used on a trial basis." He testified that Claimant is a surgical candidate for her right hip as long as her diabetes is controlled.

73. Dr. Rafferty testified that Claimant's right knee, right shoulder and right hip injuries are work-related. When expressing the opinion, Dr. Rafferty did not provide a rationale for the opinion. With respect to Claimant's hip, he testified that Claimant's trochanteric bursitis was work related, but did not otherwise specify the diagnoses he attributed to her work injury. He opined that Claimant is not at MMI for these conditions because "there is still treatment available to her on each of those three conditions."

JOHN HUGHES, M.D.

74. On January 12, 2021, Claimant John Hughes, M.D., performed an independent medical examination of Claimant at Claimant's request and issued a report of the same date. Dr. Hughes' testimony was presented by deposition, and he was admitted to testify as an expert in occupational medicine.

75. Based on his examination and review of records, Dr. Hughes opined that Claimant sustained work-related right knee sprain/strain with development of a medial meniscal tear., a right shoulder contusion with development of symptomatic rotator cuff tendinopathy, subacromial bursitis, and acromioclavicular joint osteoarthritis. He also opined that Claimant sustained a contusion of the right hip with persistent trochanteric bursitis. Dr. Hughes opined that Claimant's right shoulder injuries were at MMI, and that she has a permanent impairment based on reduced ranges of motion of her right shoulder. Similarly, he opined that Claimant's right hip injury was at MMI and that she has a permanent impairment based on reduced active ranges of motion. With respect to Claimant's right knee, he opined that surgical treatment for her right knee, beginning March 4, 2019 was reasonable and related to her September 26, 2017 work accident, and that Claimant was not at MMI for her knee and that she merits right knee revision as proposed by Dr. Weber.

76. Dr. Hughes further opined that Dr. Abrahamson's failure to assign a permanent impairment for Claimant's right knee was in error because Dr. Abrahamson opined that the Claimant's initial surgery was work-related, but that she had no residual impairment. With respect to Claimant's right knee, Dr. Hughes credibly testified that the AMA Guides provide that the alteration of anatomic structure associated with a partial meniscectomy provides a medical basis for the assignment of a permanent impairment rating for the right knee.

77. Dr. Hughes testified that Claimant's meniscus tear, identified in the November 28, 2017 MRI was caused by Claimant's work accident, and that the work accident made Claimant's right knee arthritis symptomatic. He further opined that Claimant's work-related injuries "set in motion a progressive osteoarthritic degenerative cascade that was not solved by her first surgery, and she progressed and ultimately required a [re]placement arthroplasty of her right knee.

KATHLEEN D'ANGELO, M.D.

78. Kathleen D'Angelo, M.D., was retained by Respondents to perform an independent medical examination of Claimant. Dr. D'Angelo reviewed Claimant's medical records,

interviewed Claimant, and performed a physical examination. In conjunction with the IME, Dr. D'Angelo prepared a 201-page report. (Ex. F). On August 31, 2020, Dr. D'Angelo prepared a 34-page Addendum to her original IME report to address the propriety of PRP treatment based on her review of additional records (primarily physical therapy records). Dr. D'Angelo did not testify at hearing.

79. In her initial IME report, Dr. D'Angelo concluded that Claimant's work-related diagnoses were limited to myofascial irritation of the right shoulder, right knee, and right hip "due to contusion," and that all conditions were at MMI. She further opined that Claimant's right shoulder impingement syndrome, right knee medial meniscal tear, right knee osteoarthritis and chondromalacia, and right hip gluteal tendinopathy were not work related. (Ex. F).

80. With respect to Claimant's right knee, Dr. D'Angelo opined that Claimant's November 28, 2017 MRIs of her right shoulder and right knee demonstrated only degenerative changes with no evidence of acute traumatic findings. She indicated that that Claimant's right knee horizontal medial meniscal tear and her right shoulder tendinopathy (including fraying and undersurface tearing of the supraspinatus and infraspinatus tendons "are ubiquitous findings in any individual of [Claimant's] age at the time of her MRI studies." (Ex. F).

81. Citing medical literature, Dr. D'Angelo opined that traumatic tears of the medial meniscus typically involve a vertical tear, rather than a horizontal or complex tear, and that the posterior horn is the most common area for chronic degenerative tears of the meniscus. She further indicated that degenerative meniscal lesions are very common findings that can be considered early stage of osteoarthritis in middle-aged patients. Dr. D'Angelo concluded that in her opinion, Claimant's initial medial meniscal tear was a chronic in nature, and that it was "not medically probable" that the finding was causally related to Claimant's mechanism of injury.

82. With respect to Claimant's right shoulder, Dr. D'Angelo opined that positive results from trigger point injections in the tissue adjacent to Claimant's right shoulder indicate pain from a myofascial source, rather than any intraarticular pathology. Similarly, Claimant's positive response to right hip injections in July 2018 suggest that Claimant's hip symptoms are not due to intraarticular pathology.

83. In the Addendum, Dr. D'Angelo opined that Claimant's gluteal tendinopathy was not causally related to her September 26, 2017 work injury. She also indicated that there is no conclusive or definitive medical data to support the use of PRP for gluteal tendinopathy. (Ex. F).

84. Dr. D'Angelo did opine that Claimant's right knee required an impairment assessment based on the surgical intervention to Claimant's knee. Using range of motion measurement obtained by Dr. Kindsfater's office in April 2019, Dr. D'Angelo assigned Claimant a 7% lower extremity impairment rating for range of motion deficits, and a 10% impairment for AMA Guides Table 40 disorder (torn meniscus, meniscectomy, or partial meniscectomy), which combine for a 16% lower extremity permanent impairment rating.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming DIME on MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.;

Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000); *Kamakele v. Boulder Toyota-Scion,* W.C. No. 4-732-992 (ICAO, Apr. 26, 2010).

MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (ICAO, Mar. 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO, May 20, 2004). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect, and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office*, *supra*.

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

Claimant has failed to prove by clear and convincing evidence that Dr. Abrahamson's opinion on MMI is incorrect. DIME physician, Dr. Abrahamson concluded that Claimant was at MMI on June 23, 2020. Dr. Abrahamson's assignment of MMI for Claimant is based on his conclusion that Claimant's only work-related injuries were contusions of her right knee, right shoulder, and right hip, which do not require additional treatment. Claimant contends she is not at MMI due to the need for additional treatment to Claimant's right knee, right shoulder, and right hip. Specifically, that Claimant requires a revision to her TKA, surgery on her right shoulder and treatment for her hip, including PRP injections and potentially surgery.

Although Dr. Rafferty and Dr. Hughes disagree with Dr. Abrahamson's assignment of MMI, the evidence that Dr. Abrahamson's MMI opinion is incorrect is not "unmistakable and free from serious or substantial doubt."

Right Knee

Claimant contends her right knee is not at MMI because she requires a revision to her TKA. DIME physician, Dr. Abrahamson, opined that Claimant's initial meniscectomy was a reasonable diagnostic and potentially therapeutic procedure and, therefore work-related. However, Dr. Abrahamson also opined that because Claimant's meniscus was stable after her February 6, 2018 arthroscopy, subsequent knee surgeries were not work-related. Claimant has failed to establish that Dr. Abrahamson's opinion in this regard is incorrect. During the February 6, 2018 meniscectomy, Dr. Beard examined Claimant's medial meniscus and found only the partial tear he addressed during the surgery and did not identify any additional pathology of the medial meniscus. Dr. Kindsfater performed the March 9, 2019 arthroscopy for a "recurrent tear" of the posterior horn of Claimant's medial meniscus, described as a "radial tear." Thus, the tear Dr. Kindsfater addressed was, more likely than not, new pathology that was not present during the February 6, 2018 arthroscopy.

The indication for Claimant's total knee replacement was advancing arthritis of her knee, which had a rapid progression. Although Dr. Hughes testified that Claimant's knee injury caused a cascading effect that led to her later knee surgeries, his opinion on this matter was conclusory and did not persuasively explain how such a process was the result of the knee contusion Claimant sustained on September 26, 2017. None of Claimant's treatment providers offered a cogent or persuasive explanation relating the progression of Claimant's arthritis to her September 26, 2017 work injury, or how the removal of 5% of her medial meniscus on February 6, 2018 resulted in rapid progression of arthritis. Dr. Farber's opinion that each of Claimant's surgeries was related was not based on medical evidence, but apparently on insurance coverage issues. The ALJ does not find Dr. Farber's opinion on this issue to be persuasive.

Because Claimant has failed to establish that Claimant's TKA was reasonably necessary to cure or relieve the effects of her work injury, it follows that the revision recommended by Dr. Weber is also not established as work-related. Accordingly, the ALJ finds that Claimant has failed to establish by clear and convincing evidence that Dr. Abrahamson's opinion that Claimant's right knee is at MMI is incorrect.

Right Shoulder

With respect to Claimant's right shoulder, Dr. Abrahamson, Dr. Hughes, Dr. Farber, and Dr. D'Angelo each opined that Claimant's right shoulder is at MMI. Dr. Rafferty's opinion that Claimant's shoulder is not at MMI is primarily based on the surgical recommendation from Dr. Hatzidakis. The ALJ credits Dr. Farber's opinion that Claimant's right shoulder pathology is more likely than not degenerative in nature and not work-related, and that her symptoms are more likely than not myofascial in nature. Dr. Farber's opinion that such a condition is not one that can be repaired surgically was credible.

Right Hip

As with Claimant's right shoulder, Dr. Abrahamson, Dr. Hughes, Dr. Farber, and Dr. D'Angelo opined that Claimant's right hip is at MMI. Dr. Abrahamson determined that Claimant's hip pathology was also degenerative in nature and that as a result of her work injury, Claimant sustained a contusion to the hip. Dr. Hughes diagnosed Claimant with a hip contusion "with persistent trochanteric bursitis," and Claimant presented no persuasive evidence that the contusion to Claimant's hip resulted in hip pathology or that her hip contusion caused Claimant to develop trochanteric bursitis or insertional tendinopathy.

Regardless of whether PRP injections are recommended under the Treatment Guidelines, the evidence presented demonstrated that the efficacy of PRP treatments for gluteal tendinopathy is questionable at best. Similarly, Dr. Rafferty's testimony related to a compounded cream indicated that it was a "crapshoot" with indeterminate benefit. Accordingly, the ALJ concludes that the Claimant has failed to establish by clear and convincing evidence that further treatment to Claimant's hip is reasonably likely to improve the condition. Claimant has not established that Dr. Abrahamson's MMI opinion is highly probably incorrect.

Temporary Disability Benefits and Medical Benefits

Because Claimant has failed to establish by clear and convincing evidence that the DIME opinion on MMI is incorrect, Claimant is not entitled to further or ongoing temporary disability benefits or medical benefits.

Overcoming DIME On Impairment

Claimant seeks to overcome Dr. Abrahamson's determination that Claimant had no permanent impairment. As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo.

App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

Right Knee

Impairment of a lower extremity is a scheduled injury under § 8-42-107(2)(w) & (w.5), C.R.S. The increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that "when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in §8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The court of appeals has explained that scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. Specifically, the procedures of § 8-42-107(8)(c), C.R.S. only apply to non-scheduled impairments. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000); *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Gagnon v. Westward Dough Operating CO. D/B/A Krispy Kreme* W.C. No. 4-971-646-03 (ICAO, Feb. 6, 2018). Claimant has the burden of showing the extent of his scheduled impairment by a preponderance of the evidence. *Burciaga v. AMB Janitorial Services, Inc., and Indemnity Care ESIS Inc*., W.C. No. 4-777-882 (ICAO, Nov. 5, 2010); *Maestas v. American Furniture Warehouse and G.E. Young and Company*, W.C. No. 4-662-369 (ICAO, June 5, 2007).

Claimant has established by a preponderance of the evidence that she is entitled to a permanent impairment rating for her right knee and that Dr. Abrahamson's failure to assign a permanent impairment rating for Claimant's right knee is incorrect.[2] As noted above, Dr. Abrahamson determined that Claimant's February 6, 2018 meniscectomy was

[2] Although the clear and convincing standard is not applicable in this instance, the ALJ concludes that Claimant has established that Dr. Abrahamson's assignment of no impairment for Claimant's right knee was incorrect by clear and convincing evidence as well.

reasonably necessary to cure or relieve the effects of her industrial injury. Dr. Hughes, Dr. D'Angelo and Dr. Farber agree that Claimant should receive an impairment rating related to the February 6, 2018 meniscectomy. As Dr. Hughes testified, Table 40 of the AMA Guides provides for an impairment of the lower extremity for a torn meniscus, meniscectomy, or partial meniscectomy. See AMA Guides, p. 68. Table 40 provides for a lower extremity impairment of 0-10% for one meniscus. In addition, Claimant is entitled to an impairment rating for loss of range of motion to her left knee. Because Dr. Abrahamson determined that Claimant's initial, February 6, 2018 meniscectomy was work-related, Claimant is entitled to an impairment rating for that surgery. However, Claimant has not established an entitlement to an impairment rating associated with either her March 9, 2019 meniscectomy or the September 23, 2019 TKA, because Claimant has failed to establish that those surgeries were work-related.

Once the ALJ determines that the DIME's opinion has been overcome, the claimant's correct medical impairment then becomes a question of fact, and the ALJ is free to calculate Claimant's impairment rating based upon the preponderance of the evidence. *See Garlets v. Memorial Hosp.*, W.C. No. 4-336-566 (I.C.A.O. Sept. 5, 2001). "The only limitation is that the ALJ's findings must be supported by the record and consistent with the AMA Guides and other rating protocols." *Deleon v. Whole Foods Market, Inc.*, W.C. No. 4-600-477 (I.C.A.O. Nov. 16, 2006).

Although Dr. Abrahamson provided calculations for range of motion of Claimant's knee, he did not provide an impairment rating. Moreover, the range of motion measurements Dr. Abrahamson provided were taken after Claimant's TKA, and therefore, do not represent an accurate measurement of range of motion deficits attributable to Claimant's injury following the February 6, 2018 meniscectomy. Similarly, the impairment rating assigned by Dr. Farber includes a rating for Claimant's TKA and range of motion measurements taken after the TKA, which does not accurately reflect the impairment that resulted from Claimant's work-related conditions. Dr. Rafferty did not assess Claimant's impairment based on his opinion that Claimant was not at MMI as late as October 14, 2020.

The ALJ finds that Dr. D'Angelo's impairment rating, which utilized the range of motion of Claimant's knee as of April 11, 2019, and assigned ratings for Claimant's meniscectomies but not the TKA, is a reasonable and appropriate impairment rating for Claimant's right knee that is supported by the evidence and the AMA Guides. Specifically, the April 11, 2019 ranges of motion utilized by Dr. D'Angelo of 0° extension and 128° flexion were taken after Claimant's 2019 meniscectomy but are substantially similar to the measurements taken by Dr. Beard on March 23, 2018 (i.e., 0° extension and 125° flexion), and thus reflect the Claimant's range of motion deficits following the February 6, 2018 meniscectomy, and also yield a 7% range of motion impairment under the AMA Guides Table 39. The ALJ also finds that the assessment of a 10% impairment for a partial meniscectomy to be reasonable. The ALJ concludes that Claimant is entitled to a 16% right lower extremity permanent impairment rating.

Right Shoulder and Right Hip

With respect to Claimant's right shoulder and right hip, the ALJ finds that Claimant has not established by a preponderance of the evidence that Dr. Abrahamson's assignment of no impairment rating was incorrect.

Maintenance Medical Benefits

Respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." § 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, W. C. No. 4-471-818 (ICAO, May 16, 2002). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993); *Mitchem v. Donut Haus*, W.C. No. 4-785-078-03 (ICAO, Dec. 28, 2015). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Anderson v. SOS Staffing Services,* W. C. No. 4-543-730, (ICAO, July 14, 2006).

Claimant has failed to establish by a preponderance of the evidence she is entitled to reasonable, necessary, and related medical maintenance benefits designed to relieve the effects of his work-related injury or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n*, 795 P.2d 705 (1988). As found, Claimant has failed to establish that her total knee replacement was the result of her industrial injury, consequently, revision of the surgery is not designed to relieve the effects of or prevent further deterioration of Claimant's work-related knee injury. With respect to Claimant's shoulder, as found, the ALJ credits Dr. Farber's opinion that Claimant's right shoulder is at MMI and that surgery on the shoulder is not reasonably likely to relieve the effects of her myofascial injuries or shoulder contusion. Finally, Claimant has failed to establish that either PRP injections or compounded cream is reasonably likely to relieve the effects of her right hip contusion.

Offsets/Overpayment

Section 8-40-201(15.5), C.R.S., defines "overpayment" to include "money received by a claimant that exceeds the amount that should have been paid or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits." Respondents FAL indicates that Claimant received an overpayment of $9,396.04. Given the time gap between the DIME report of November 20, 2020 and that date of MMI of June 23, 2020, during which Respondents were obligated to continued to pay Claimant TTD benefits, and the fact that Claimant presented no evidence contradicting or challenging the FAL's calculation, the ALJ concludes it is more likely than not that Claimant received an overpayment as asserted by Respondents. However, the only evidence of the amount of overpayment is a conclusory calculation unsupported by testimony or other documentary evidence. Respondents are entitled to offset overpayment against future permanent disability payments. The parties are hereby required to confer on the issue of the amount of overpayment, if the issue is not resolved by agreement, either party may file an application for hearing to determine the amount of overpayment. Respondents have not established any additional basis for offsets.

ORDER

It is therefore ordered that:

1. Claimant attained MMI status on June 23, 2020.

2. As a result of her September 26, 2017 work injury, Claimant sustained a 16% permanent impairment to her right lower extremity.

3. Claimant is not entitled to permanent impairment ratings for her right shoulder or right hip.

4. Claimant has failed to establish by a preponderance of the evidence an entitlement to maintenance medical benefits.

5. Respondents are entitled to offset against permanent partial disability payments any overpayments previously made. The parties are directed to confer on the issue of the amount of overpayment. If the issue is not resolved, either party may file an application for hearing to determine the amount of overpayment.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 24, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- Did Claimant overcome the DIME determination of MMI by clear and convincing evidence?

- If Claimant has overcome the DIME as to MMI, did Claimant prove entitlement to additional diagnostic evaluations or treatment to bring her to MMI?

FINDINGS OF FACT

1. Claimant works for Employer as a city bus driver. She suffered admitted injuries on April 6, 2018 in a serious motor vehicle accident. An oncoming vehicle turned in front of the bus, causing a "T-bone" accident. The resulting impact caused the bus to jump the curb and collide with adjacent trees and fencing.

2. Claimant's bus was only equipped with a "lap belt" as opposed to a "tri-belt" that straps over the shoulder. As a result, Claimant's chest struck the steering wheel, her head struck the side window hard enough to break it, and she injured multiple other parts of her body, including her shoulders, neck, low back, and both knees.

3. As relates to her right knee specifically, Claimant struck her knee on a "big bar" near or on the steering column.

4. Claimant was initially seen at the UCHealth emergency department and diagnosed with multiple contusions and "strains." The ER provider documented left knee symptoms but for unknown reasons mentioned nothing about the right knee.

5. Employer referred Claimant to CCOM, where her care was primarily managed by Dr. Thomas Centi and PA-C Steven Byrne. At her initial visit on April 10, 2018, Claimant described pain in multiple areas of her body, including her bilateral knees. Dr. Centi's examination showed objective evidence of injury to the right knee, including swelling and bruising from the knee to the mid-calf. The initial diagnoses included "contusion of the right knee." X-rays of the right knee showed degenerative changes but no fracture or other acute bony injury. Claimant was tearful and having flashbacks from the accident, so Mr. Byrne referred her for counseling with Amy Alsum, LCSW.

6. Claimant followed up at CCOM on April 17, 2018. She was emotionally labile and distraught about the accident. The driver of the other vehicle was hospitalized in critical condition and Claimant was struggling with feelings of guilt even though the accident was not her fault. She was scheduled to see Ms. Alsum the following week. Examination of the right knee showed mild swelling, bruising, and tenderness around the patella and the medial joint line.

7. Claimant started seeing Ms. Alsum on April 24, 2018. Their sessions focused on anxiety triggers and exposing Claimant to driving again so she could return to work.

8. On April 26, 2018, Claimant's knee remained tender to palpation along the medial joint line. Claimant was attending therapy with Ms. Alsum and working on her fear of driving and ongoing emotional distress regarding the accident. Claimant was referred to physical therapy for her neck and back.

9. At her June 5, 2018 appointment, Claimant reported ongoing 4-5/10 medial right knee pain. Many of her other injuries had resolved, and her primary concerns related to the right knee, neck, low back, and injury-related anxiety. The right knee was mildly tender to palpation and the bruising was "resolving." The ALJ interprets this to mean bruising was visible after two months, which suggests significant blunt trauma associated with the initial accident.

10. Claimant saw Dr. Neubauer at CCOM on June 26, 2018. She was still having right knee pain mostly on the medial side. There was tenderness to palpation along the medial aspect of the right knee at the patella but no visible swelling or bruising. Dr. Neubauer extended Claimant's PT and amended the orders to include therapy for the right knee.

11. Claimant had her initial PT evaluation regarding the knee on August 1, 2018. She reported 5/10 right knee pain, with a range of 4-9/10. The knee was tender to palpation over the right medial patellar tendon. The therapist wrote, "[Claimant] presents with knee stiffness, weakness, and difficulty prolonged ambulating, and stair use. Patient will benefit from skilled physical therapy to restore mobility and strength."

12. On August 4, 2018, the therapist noted Claimant was "able to go up and down stairs at home with a little less pain."

13. At a follow-up appointment on November 15, 2018, Dr. Centi noted "essentially" full ROM of the right knee. Claimant reported significant benefit from psychological treatment with Ms. Alsum, and Dr. Centi thought Claimant was close to MMI.

14. Claimant returned to work on December 9, 2018. After driving while accompanied by a mentor for approximately one week, Claimant returned to full duties.

15. Dr. Centi placed Claimant at MMI on December 20, 2018. Claimant indicated she was "doing very well with [Ms. Alsum] and her sessions, has returned to driving and has done extremely well, very happy with her progress. She considers it to be almost gone." The right knee was described as "only mildly tender anteriorly, essentially FROM." Dr. Centi released Claimant with no impairment and no restrictions. He opined Claimant required no maintenance care but also recommended she "complete" her sessions with Ms. Alsum.

16. Claimant completed numerous pain diagrams during the time she treated at CCOM. Each pain diagram documented right knee pain.

17. Claimant requested a DIME, which was performed by Dr. John Tyler on April 3, 2019. Claimant described her "greatest difficulty" as "still struggling with the events from an emotional standpoint related to the accident and the fear factor about being back in the bus and driving although she feels confident and qualified to be a bus driver at this time. She has had no issues since she has returned to being a bus driver and absolutely loves her job." Dr. Tyler opined, "the working relationship she has currently with Amy Alsum is excellent and should be continued. . . . I believe the need for this counseling should be determined by Amy Alsum but should be completed within the next 6 months as well."

18. Claimant also reported aching in the right knee "to the point that she states she cannot stand or walk cooking and has to have a stool now in her kitchen as the knee joint has a throbbing and aching sensation which makes it difficult for her to put weight on it on a consistent basis." Dr. Tyler noted palpable "grinding" the anterior medial joint line. Anterior and posterior drawer signs were negative and patellar tracking was normal. There was no lateral or medial ligament instability. Dr. Tyler questioned the accuracy of Dr. Centi's records noting "[the] physical exam reports are identical and appear to be copy and pasted notes as they are identical in wording and location of every statement." Claimant also told Dr. Tyler that Dr. Centi did not actually examine her on December 20, 2018. Dr. Tyler's diagnoses included "possible worsening of left internal knee derangement based upon severity of trauma noted at the time of injury and based on pictures shown of the need to me today, as well as crepitation felt with in the anterior medial knee joint line (not fully evaluated)." (Emphasis added). Dr. Tyler stated,
