ISSUES

- Did Claimant overcome the DIME's determination she was at MMI as of June 1, 2019?

- Did Claimant overcome the DIME's 5% whole person rating by clear and convincing evidence?

- Did Claimant prove by a preponderance of the evidence the spinal cord stimulator trial requested by Dr. David Salek is reasonably needed and related to the January 3, 2017 work injury?

- Did Claimant prove entitlement to TTD benefits from May 9, 2017 to June 1, 2019?

- Did Respondents' prove Claimant is not entitled to TTD benefits after January 10, 2017 because she was responsible for termination of her employment?

- Disfigurement.

FINDINGS OF FACT

1. Claimant worked for Employer as a housekeeper. She suffered an admitted injury to her left elbow on January 3, 2017 when she slipped and fell while cleaning a bathtub.

2. Claimant went to the Penrose St. Francis emergency room after the accident. X-rays were negative but she was diagnosed with an occult fracture of the radial head and placed in a splint.

3. Claimant underwent a urine drug test the next day, which was positive for marijuana. Employer has a strict policy regarding drugs illegal under federal law, including marijuana. Claimant was made aware of the drug policy when she was hired in June 2016. Claimant knew failing a drug test would result in discipline, including potential termination. Employer received Claimant's positive drug screen report on January 9, 2017 and terminated her on January 10, 2017.

4. Claimant saw Dr. Douglas Bradley at Emergicare on January 27, 2017. She complained of left elbow pain radiating to the distal forearm. Dr. Bradley diagnosed a "sprain" and advised Claimant to rest and elevate her arm but stop wearing the splint. Dr. Bradley restricted Claimant to two pounds lifting with the left arm.

5. Claimant returned to Emergicare on February 3, 2017 and saw Dr. Erik Ritch. Her elbow was "a little better" with physical therapy, but still painful. Dr. Ritch continued Claimant's restrictions but indicated "it is okay for you to look for another job.

You just need to let any prospective job know that you have restrictions on your left arm use."

6. On February 16, 2017, Claimant was no better. She described pain in an ulnar nerve distribution. Dr. Ritch referred Claimant to Dr. Timothy Hart, an orthopedic surgeon.

7. Claimant saw Dr. Hart on February 22, 2017. He diagnosed a left elbow contusion with ulnar nerve lesion and recommended a left upper extremity EMG.

8. Dr. Katherine Leppard performed electrodiagnostic testing on March 8, 2017. Claimant described severe pain along the ulnar border and numbness and tingling in the left fourth and fifth fingers. On examination, Claimant had marketed tenderness to palpation over the medial aspect of the elbow. She was hypersensitive to pinprick in the left ulnar area. Dr. Leppard did not perform Tinel's testing because of Claimant's severe pain. The testing was abnormal with evidence of a moderate left ulnar mononeuropathy at the elbow.

9. Claimant followed up with Dr. Hart, who recommended surgery.

10. On March16, 2017, Dr. Ritch noted PT was on hold and Claimant was waiting for surgery to be approved. He released Claimant to work with no use of her left arm.

11. Dr. Hart performed a left ulnar nerve decompression with subcutaneous transposition on May 9, 2017. The surgery necessitated a 3.5-inch incision across the left elbow.

12. Claimant was in a splint for eight days after surgery. The sutures were removed on May 17, 2017. Claimant was unable to drive her truck and had to rely on her mother-in-law to take her to appointments.

13. Claimant's earning capacity was reduced after surgery compared to before surgery. She had a large active incision and her arm was in a splint at all times. Claimant needed assistance for basic ADLs, including driving. The surgery temporarily rendered her unable to work in any capacity.

14. Insurer paid Claimant TTD benefits commencing May 9, 2017, the date of surgery, through June 5, 2017.

15. Claimant followed up with Dr. Ritch on June 1, 2017. Her elbow pain was improved but she was having problems with her left shoulder. Claimant's physical therapist was worried about internal shoulder pathology. Dr. Ritch was "very concerned about the possibility of serious shoulder injury based on your mechanism of injury and the degree of shoulder limitations." He ordered an MRI and asked Claimant to follow-up in a week.

16. Claimant underwent a left shoulder MRI on June 6, 2017. It showed probable mild distal subscapularis tendinosis, mild biceps tendinosis, subacromial and subdeltoid bursitis with fluid accumulation, and strain of the medial glenohumeral ligaments.

17. On June 8, 2017, Claimant's left elbow pain was improving. Her shoulder was still painful, and Dr. Ritch administered a cortisone injection in the shoulder. He increased her restrictions to 15 pounds lifting.

18. Claimant saw Dr. David Walden for an orthopedic evaluation of her left shoulder on June 26, 2017. Dr. Walden's exam indicated left shoulder adhesive capsulitis. He thought Claimant a good chance of improvement with another injection and therapy. If not, she would be a candidate for arthroscopic capsular release and manipulation.

19. On August 17, 2017, Claimant reported aching and throbbing in the elbow and reduced range of motion. The therapist ordered a tension brace to be used at home three times per day.

20. Claimant followed up with Dr. Walden on September 5, 2017. She still had mild to moderate left shoulder adhesive capsulitis. Dr. Walden administered a steroid injection he recommended more PT.

21. On September 14, 2017, Claimant told Dr. Ritch "she feels like the bone in her elbow . . . is trying to protrude out of the skin and is still very bruised."

22. Dr. Ritch placed Claimant at MMI on January 18, 2018. Claimant was looking for work "but having a hard time doing so due to open work-comp case." He referred Claimant for an FCE.

23. Dr. Ritch completed a formal impairment rating on February 16, 2018. He provided a 24% extremity rating, which equates to 14% whole person. Based on the FCE, he assigned permanent work restrictions of 15 pounds lifting from floor to waist, 10 pounds lifting from waist to shoulder, no overhead lifting, 50 pounds pushing and 20 pounds pulling.

24. Claimant had a DIME with Dr. Fredrick Scherr on June 26, 2018. Dr. Scherr determined Claimant was not at MMI. He recommended a second orthopedic opinion regarding ongoing left elbow and shoulder complaints, and a repeat EMG of the left arm, focusing on the ulnar nerve. Dr. Scherr indicated MMI would be contingent on whether further surgery for the shoulder or elbow were recommended.

25. Dr. Michael Sparr performed electrodiagnostic testing on October 5, 2018. He indicated it was normal, showing improvement after the May 9, 2017 surgery.

26. On November 7, 2018, Claimant saw Dr. Scott Primack for evaluation of CRPS. Dr. Primack opined Claimant met three out of four Budapest criteria for CRPS. He recommended a thermogram and autonomic test battery.

27. Dr. Leppard performed repeat electrodiagnostic testing on January 16, 2019. Claimant reported burning pain in her elbow and numbness in the left fingers. Her arm felt weak and she had temperature change in the left hand. She was wearing a glove on the left hand, and it was slightly red compared to the right hand. The testing showed moderate left ulnar mononeuropathy, unchanged since the 2017 study.

28. On January 21, 2019, Claimant underwent CRPS testing with Dr. David Reinhard, including an autonomic testing battery. Dr. Reinhard opined the test results were positive for CRPS Type II of the left upper extremity.

29. On February 8, 2019, Dr. Primack recommended a stellate ganglion block. Claimant subsequently received stellate blocks on two occasions and reported moderate, temporary relief.

30. Dr. Ritch again placed Claimant at MMI on June 1, 2019 with a diagnosis of CRPS Type II. He recommended maintenance care with Lyrica over the next 2-3 years and repeat for CRPS within a year.

31. Dr. Scherr performed a follow-up DIME on August 26, 2019. He opined Claimant had received appropriate care for her confirmed diagnosis of CRPS and mononeuropathy of the left elbow. He agreed with Dr. Ritch's June 1, 2019 MMI date, and assigned a 9% whole person rating. The rating was based on 5% for CRPS under Table 1, page 109 of the AMA Guides, and 4% for elbow range of motion loss. He agreed with the maintenance care recommendations made by Dr. Ritch.

32. On October 1, 2019, Dr. Scherr amended his rating after receiving a request from the DIME Unit. He noted,

> I am told from the Division "ratings from the Spinal Cord Table 1 are considered neurologic ratings and thus should not be utilized in combination with ROM ratings as ROM is accounted for in the neurologic rating. An exception to this would be in cases where the ROM impairment is felt to be resulting from another pathology such as post-surgical/musculoskeletal limitations."
>
> Even though I cannot find on page 109 Table 1 or within the Chapter 4 where this is cited and believing the Impairment Rating tips only meant ROM to not be included if one was using the specific neurological ratings for Table 14/10. After consideration, the impairment rating will be amended to remove the ROM impairment as per the Division statement above.

33. Dr. Scherr amended the rating to 5% whole person.

34. Respondents filed a Final Admission of Liability (FAL) on October 24, 2019, admitting for Dr. Scherr's amended 5% whole person rating. The FAL also admitted for the closed period of TTD previously paid from May 9, 2017 through June 5, 2017. The FAL admitted for medical benefits after MMI.

35. On January 21, 2020, Claimant started seeing Dr. David Salek, a pain management specialist. Claimant was referred to Dr. Salek by Dr. Dallenbach, who took over for Dr. Ritch at Emergicare. Dr. Salek noted Claimant had previously undergone two stellate ganglion blocks and helped briefly but did not provide sustained benefit. Dr. Salek reviewed treatment options, including various medications, infusions, and spinal cord stimulation (SCS). Dr. Salek explained his protocol for a seven-day spinal cord stimulation trial, during which Claimant would try lifting, bending, twisting, and bathing. If Claimant did well with the trial, he would recommend a permanent stimulator implant. Dr. Salek sent Claimant home with literature regarding SCS for her to review. He started Claimant on Cymbalta and advised her to continue the Lyrica.

36. On February 5, 2020, Dr. Salek noted Claimant had reviewed all the SCS literature he provided and was ready to proceed with the trial. Dr. Salek noted Claimant first needed a psychological evaluation and a cervical MRI.

37. The cervical MRI was completed on February 19, 2020. It was unremarkable and showed no contraindication to SCS trial.

38. Claimant underwent a psychological evaluation with Dr. Glenn Kaplan on April 1, 2020. Dr. Kaplan opined Claimant is an appropriate candidate for SCS. She understands the nature of the procedure and has reasonable and rational expectations to produce and manage her pain and include the quality of her life. He appreciated no secondary gain issues. He stated, “she is pursuing this procedure to reduce and manage her pain and to improve her quality of life.” Dr. Kaplan did not think Claimant needed psychological treatment.

39. Dr. Salek requested authorization for an SCS trial on April 8, 2020. Respondents notified Dr. Salek on April 14, 2020 to stimulator was denied and an IME was scheduled with Dr. L. Barton Goldman. Respondents ultimately denied the request based on Dr. Goldman’s opinions.

40. On June 23, 2020, Dr. Salek noted Claimant’s overall condition appeared to be getting worse. Claimant reported “it will scare her when people touch her elbow because it hurts so bad.” Dr. Salek continued to recommend a trial SCS. He also recommended medical massage therapy.

41. Dr. Goldman evaluated Claimant on July 6, 2020. Dr. Goldman noted Claimant’s objective findings were mild and “much less than one would have anticipated based on review of her records and pain drawing.” Claimant described widespread pain affecting multiple areas of her body, many of which are not involved in her injury. Contrary to Dr Kaplan’s assessment, Dr. Goldman opined Claimant was “exceptionally somatically focused even by the standards of my typical chronic pain patient population.” He agreed with the diagnosis of CRPS Type II affecting the left upper extremity, but opined it was relatively mild. He opined she did not meet either the Budapest or Rule 17 clinical criteria for CRPS in the right upper extremity or legs. Dr. Goldman opined there were no objective diagnostic studies to make a CRPS diagnosis probable in Claimant’s other extremities.

Even though Dr. Goldman doubted the CRPS had spread, he recommended repeat testing including thermography and QSART testing for all four limbs.

42. Dr. Goldman opined Claimant is a poor candidate for SCS and predicted the likelihood she would be satisfied with the outcome was “exceedingly low.” Dr. Goldman opined Claimant was at high risk for a false positive response to a trial.

43. Dr. Timothy Hall performed an IME for Claimant on July 28, 2020. Dr. Hall noted considerable ongoing symptoms in the left arm mostly around the elbow, including hypersensitivity, burning pain, and weakness. Claimant had minimal functional use of the left hand. Claimant also reported some burning pain in the right leg and right arm, and was concerned about “spreading” of the CRPS. On examination, Dr. Hall appreciated no excessive pain behaviors. On casual observation, he noted Claimant did not use her left arm spontaneously. He appreciated some trophic changes and mottling distally in the left hand. She had essentially no functional grip on the left side. Temperature seemed symmetrical from right to left hands. Elbow and shoulder ranges of motion were reduced. Dr. Hall disagreed with Dr. Scherr’s rating and found it “unfortunate that Dr. Scherr was misled by the division and he subsequent a change his rating. . . . Her range of motion problems at the shoulder and elbow are not the consequences of the CRPS. They are the consequence of musculoskeletal and postsurgical limitations. I disagree and think Dr. Scherr was wrong when he adjusted his rating based on misinformation from the division.”

44. Dr. Hall opined 20% was a more appropriate rating because of Claimant’s significant limitations using her left arm for ADLs.

45. Dr. Hall opined a trial of spinal cord stimulation “is certainly appropriate in this situation.” Although he had not seen Dr. Kaplan’s report, “based on what I have seen in the record and my interaction with her today, I do not see any red flags from a psychological perspective.” He did not think the symptoms Claimant reported in her other extremities represented any significant spread of the CRPS.

46. On August 24, 2020, Dr. Tashof Bernton performed repeat stress thermography of Claimant’s upper and lower extremities. The lower extremity results were negative bilaterally. Dr. Bernton’s report stated the test was positive “in the upper extremities,” but he later clarified in an email the testing was only positive in the left upper extremity.

47. Claimant testified she wants to try the spinal cord stimulator to see if it helps with her symptoms. Claimant credibly testified the CRPS significantly limits her ability to perform routine activities. Claimant hopes the stimulator will relieve some of the burning pain and allow her to engage in more activities. Claimant credibly testified she will not pursue a permanent stimulator if the trial does not relieve her symptoms.

48. Dr. Hall testified at hearing consistent with his report. He maintained the stimulator trial is reasonably necessary. Dr. Hall opined Claimant is not a “perfect candidate” for spinal cord stimulator but explained not many patients are perfect candidates. Dr. Hall credibly opined Claimant has been cleared from a psychological

perspective and it is reasonable to perform the trial. Dr. Hall credibly explained the trial stimulator is not terribly invasive and in his experience patients report pretty quickly whether they find it helpful. He opined Claimant had "plateaued" in her recovery but would not be at MMI if the stimulator trial were approved. Dr. Hall reiterated his disagreement with Dr. Scherr's rating and opined Claimant should have received a 20% whole person rating based on difficulties with self-care.

49. Dr. Goldman testified Claimant has CRPS in the left upper extremity but the probability of spread to other extremities is low. He agreed Claimant was at MMI on June 1, 2019, and probably remains at MMI notwithstanding the more recent evidence of potential worsening. Dr. Goldman testified the DIME rating of 5% whole person was proper and Dr. Scherr made no error in his application of the *AMA Guides*. Dr. Goldman testified, "you have the choice in terms of the range to pick within a given category" and agreed with Dr. Scherr's selection. He testified that to reach the category of impairment suggested by Dr. Hall would require the patient have no dexterity at all in the nonpreferred extremity, which is not the case with Claimant. Dr. Goldman reiterated his belief the spinal cord stimulator is not reasonably necessary. He believes Claimant has unrealistic expectations regarding the level of pain reduction, and the stimulator will just substitute one distracting stimuli for another. He testified stimulator trials have a "very, very, very high false positive rate." He believes Claimant will probably have a placebo response to the trial and likely have a poor outcome from a permanent implant.

50. The ALJ held the record open for post-hearing evidentiary development, including Dr. Salek's deposition, clarification of Dr. Bernton's findings regarding the thermogram, QSART testing, and rebuttal opinions if necessary.

51. Dr. Berton clarified the thermogram findings in an email to Claimant's counsel on September 9, 2020. He stated there were no specific abnormalities suggesting CRPS in the right arm, with the caveat that "due to CRPS in the left upper extremity, a determination that right upper extremity CRPS is or is not present is difficult based on objective testing alone."

52. Dr. Salek testified in deposition on September 9, 2020. He credibly testified Claimant has failed conservative management. Dr. Salek is not Level II accredited or familiar with the MTGs, but did not believe that impacted the validity of his recommendation. He testified the questions about the MTGs "presuppose that I treat workers' compensation patient's different than I treat other patients, and I think that's incorrect. . . . I don't know the [Medical Treatment] Guidelines, but I've been specifically trained on interventional pain procedures to a wide variety of patients." He explained SCS is part of the CRPS treatment algorithm in patients who have failed conventional medical management. He believes Claimant meets guidelines from the FDA and national neural modulation forms and journals to undergo trial SCS. He answered "certainly not" when asked if he recommends SCS for everyone who is failed conservative therapy. Dr. Salek credibly testified,

> [E]veryone responds a little bit differently. The benefit with the stimulator system is that it's a trial before an implant; and so, of course, in patients

> who didn't feel as though they were able to come down off their opiates or weren't able to participate in physical therapy, we wouldn't really pursue an implant in those individuals. But patients who have had – usually 50 percent pain relief is the typical cut off that we use – it's generally considered tob e recommended to help facilitate participation in those occupational/physical therapy programs, and hopefully reduce symptoms thereafter.

53. Dr. Salek has developed a standardized form that patients use to track pain levels and functional outcomes during the trial. He uses this "to get a holistic picture of how the patient would actually respond to the implant device if it were to proceed." He opined "false positives" or a placebo response "is much less likely during a trial that lasts a week. It's much more likely in trial periods that last much shorter than that." Dr. Salek credibly testified he has had many patients with successful outcomes from SCS. He credibly explained the risks associated with the trial are less than 0.1% chance of nerve injury, bleeding, or an infection. He opined Dr. Goldman's opinions did not change his opinion "in the slightest."

54. The opinions and conclusions expressed in Dr. Salek's deposition are credible and persuasive.

55. On October 1, 2020, Dr. Bernton conducted QSART testing of all four limbs. He opined "this is a very strongly positive test for the presence of complex regional pain syndrome in the lower extremities." He also opined it is "clinically probable" Claimant's right upper extremity symptoms represent "early" CRPS but "there is simply no way to determine with certainty from the objective testing that bilateral upper extremity CRPS is present."

56. Dr. Goldman issued a supplemental report after reviewing the QSART results. Dr. Goldman opined Claimant's medications and/or nicotine and marijuana may have affected the QSART results and made interpretation difficult. He opined the results in the legs are highly atypical and "merit a certain amount of skepticism." Dr. Goldman does not believe the test confirmed multi-limb CRPS to within a reasonable degree of medical probability. Dr. Goldman opined the test results support his conclusion Claimant is a poor candidate for SCS because of the extent of her complaints and multi-regional pain presentation. Dr. Goldman opined Claimant's pain cannot be adequately covered by peripheral or central spinal cord stimulation. He opined Claimant is at risk for developing "full-blown" centralized CRPS if she has an implant.

57. Robin Boddy, Employer's Area Director, testified at hearing. Ms. Boddy did not directly supervise Claimant, but supervised Claimant's supervisor at the time of the work accident. Ms. Boddy explained all new employees are given the Associate Handbook outlining Employer's policies regarding drug use. Ms. Boddy testified it was Employer's policy to administer a drug test after a reported work injury and any positive drug test would result in immediate termination. Ms. Boddy explained Employer follows federal law and a positive test for marijuana is a violation of Employer's policy, even though marijuana is legal in Colorado. Ms. Boddy testified Employer typically accommodates injured workers with modified duty. Ms. Boddy speculated Employer

would have offered Claimant modified duty had she not been fired for failing the drug test. Ms. Boddy testified Employer would not re-hire a terminated employee simply to offer modified employment.

58. Claimant testified in rebuttal regarding a knee injury she suffered in 2016 while working for Employer. She was put on restrictions for approximately one week. She took paid time off that week because Employer could not accommodate her restrictions.

59. Claimant saw her PCP on May 9, 2016 for pain in her left forearm extending from her fingers to her elbow. The pain had been present for five days. She had suffered no injury and assumed the pain was related to repetitive use of her phone while applying for jobs. She was diagnosed with myofascial pain from overuse. She received no further treatment for the condition and there is no persuasive evidence of any permanent sequelae. This transient episode has no bearing on Claimant's injury-related condition, which involves CRPS following a traumatic injury. Claimant's failure to mention the 2016 treatment does not significantly detract from her credibility.

60. Dr. Goldman's opinions regarding MMI and Dr. Scherr's rating are credible and more persuasive than the contrary opinions offered by Dr. Hall.

61. Claimant failed to overcome the DIME regarding MMI or permanent impairment by clear and convincing evidence.

62. Dr. Salek and Dr. Hall's opinions regarding the reasonable necessity of a SCS trial are credible and more persuasive than the contrary opinions offered by Dr. Goldman.

63. Claimant proved by a preponderance of the evidence a trial SCS is reasonably needed to relieve symptoms and prevent deterioration of her condition.

64. Employer proved Claimant was responsible for termination of her employment on January 10, 2017.

65. Claimant proved her condition worsened on May 9, 2017 when she had surgery, which caused a greater impact on her earning capacity than existed before May 9, 2017.

66. Claimant proved she was entitled to TTD benefits commencing May 9, 2017 notwithstanding her previous termination.

67. Respondents failed to prove Claimant was not entitled to TTD benefits after January 10, 2017 because she was responsible for termination of her employment. Respondents failed to prove they properly stopped Claimant's TTD benefits on June 6, 2017.

68. Claimant demonstrated disfigurement at hearing consisting of: (1) an approximately 3.5 inch long by ⅛ inch wide surgical scar on the left elbow, (2) an area of discoloration surrounding the surgical scar, (3) a prominence (possibly tendon) on the

lateral aspect of the left elbow, and (4) noticeable discoloration and swelling of her left pinky finger. These disfigurements are normally exposed to public view. The ALJ finds Claimant shall be awarded $2,500 for disfigurement.

CONCLUSIONS OF LAW

A. Claimant failed to overcome the DIME determination she was at MMI on June 1, 2019.

A DIME's determinations regarding MMI and whole person impairment are binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S. The party challenging a DIME physician's conclusions must demonstrate it is "highly probable" the MMI and impairment findings are incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002).

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. A finding of MMI is premature if there is a course of treatment that has "a reasonable prospect of success" and the claimant is willing to submit to the treatment. *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080, 1081-82 (Colo. App. 1990). The determination of MMI inherently includes DIME's opinion regarding the date of MMI.

Claimant failed to overcome the DIME's determination she was at MMI on June 1, 2019. Claimant's condition had plateaued, and no further improvement was reasonably anticipated. Although multiple treating and examining physicians agreed Claimant needed ongoing care after June 1, 2019, that treatment was intended to relieve symptoms and prevent deterioration of her condition. Dr. Goldman is persuasive Claimant was appropriately considered at MMI on June 1, 2019. The evidence suggesting Claimant's condition subsequently worsened with the spread of CRPS is insufficient to overcome the DIME's determination Claimant was at MMI ***on June 1, 2019***. A change of condition after MMI does not show the original MMI date was incorrect. A claimant can pursue reopening for a change of condition under the preponderance of the evidence standard notwithstanding that she may have been put at MMI by a DIME. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). A necessary corollary of that rule is that a claimant cannot overcome the DIME's finding of MMI by showing a change of condition after MMI.

B. Claimant failed to overcome the DIME's 5% whole person rating.

Claimant failed to overcome the DIME's 5% whole person rating by clear and convincing evidence. The DOWC recommends CRPS be rated under Table 1, Section A, p. 109 of the *AMA Guides*. Dr. Scherr appropriately applied the "Use of upper extremities" section of Table 1 to rate Claimant's impairment. Dr. Scherr's reasonably gave gave Claimant the maximum rating under the category "some difficulty with digital dexterity" for a non-dominant extremity. Dr. Hall's opinion Dr. Scherr should have used the category, "Has difficulty with self-care" is not persuasive. As Dr. Goldman explained, the third category applies to a substantially higher degree of impairment than suffered by Claimant. Claimant does not even qualify for the middle category "Has no digital dexterity," so she does not fall into the category advocated by Dr. Hall.

C. Claimant proved a trial SCS is reasonably needed to relieve symptoms or prevent deterioration of her condition

Respondents are liable for authorized medical treatment reasonably needed to cure or relieve an employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if a claimant requires treatment to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Even if the respondents admit liability for medical benefits after MMI, they retain the right to dispute the reasonable necessity or causal relationship of any particular treatment. . *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003). The claimant must prove entitlement to disputed post-MMI medical benefits by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

Claimant proved by a preponderance of the evidence the spinal cord stimulator trial recommended by Dr. Salek is reasonably needed to relieve the effects of her injury and prevent further deterioration of her condition. Dr. Salek's opinions regarding the SCS trial are credible and more persuasive than the contrary opinions offered by Dr. Goldman. Neurostimulation is a recognized option for managing chronic pain associated with CRPS. Dr. Goldman's supposition Claimant will not benefit from neurostimulation is speculative and unpersuasive. The SCS trial allows the patient and provider to assess the efficacy of the procedure before pursuing a permanent implant. The ALJ is inclined to give Claimant the benefit of the doubt that she will not pursue a permanent stimulator if the trial is not helpful. Dr. Kaplan opined Claimant appears to have reasonable expectations regarding the procedure and is an appropriate candidate for a psychological perspective. Dr. Salek's protocols are reasonably likely to provide a reliable indication whether Claimant is a good candidate for a permanent implant, and the ALJ sees no reason to believe Dr. Salek would recommend a permanent stimulator if the trail is unsuccessful.

D. Respondents proved Claimant was responsible for termination of her employment on January 10, 2017

Sections 8-42-103(1)(g) and 8-42-105(4)(a) provide:

> In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury.

The respondents must prove that a claimant was terminated for cause or was responsible for the separation from employment by a preponderance of the evidence. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The concept of "volitional conduct" is not necessarily related to culpability, but instead requires the exercise of some control or choice in the circumstances leading to the discharge. *Richards v. Winter Park Recreational Association*, 919 P.2d 983 (Colo. App. 1996). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for her termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

As found, Respondents proved Claimant was responsible for termination of her employment. Claimant was terminated for a positive drug test in accordance with Employer's established policy. Even though marijuana is legal in Colorado, nothing precludes Employer from adhering to stricter federal drug laws. Claimant knew of Employer's anti-drug policy and the positive test was the result of the volitional act of ingesting marijuana.

E. Claimant was entitled to TTD benefits commencing May 9, 2017

A termination for cause does not permanently bar to receipt of TTD benefits where the claimant's condition subsequently worsens and the worsened condition causes greater impact on the claimant's earning capacity than existed at the time of termination. *Anderson v. Longmont Toyota, Inc*., 102 P.3d 323 (Colo. 2004). The preponderance of persuasive evidence shows Claimant's condition worsened on May 9, 2017 when she underwent surgery. She had a large active incision and was using an arm splint at all times. Claimant needed assistance for basic ADLs, including driving. The surgery temporarily rendered Claimant unable to work in any capacity. Claimant proved the worsening caused by surgery reduced her earning capacity and rendered her unable to engage in any work. Accordingly, Claimant was entitled to TTD benefits commencing May 9, 2017 notwithstanding her earlier termination. Additionally, Insurer admitted and paid TTD from May 9, 2017 through June 5, 2017, which undermines its current litigation position she was entitled to no TTD after January 10, 2017.

Once commenced, TTD benefits "shall continue" until one of the events enumerated in § 8-42-105(3), none of which occurred before she reached MMI on June 1, 2019. *E.g., Rutledge v. Academy School District 20*, W.C. No. 4-843-161 (December 22, 2011); *Stokes v. Nordstrom, Inc*., W.C. No. 4-782-170 (July 13, 2010); *Smith v. Walmart*, W.C. No. 4-751-887 (May 19, 2009). The mere fact Claimant was released to work with a 15-pound lifting restriction on June 8, 2017 is not dispositive because no modified duty was offered. A temporarily disabled claimant is under no obligation to affirmatively seek employment. *Denny's Restaurant, Inc. v. Husson*, 746 P.2d 63 (Colo. App. 1987); *Schlage Lock v. Lahr*, 870 P.2d 615 (Colo. App. 1993). The onus is on the employer to offer the claimant modified duty within her restrictions to mitigate its liability for TTD benefits. Employer could have, but chose not to, avail itself of that opportunity. Accordingly, Claimant proved she is entitled to TTD benefits from May 9, 2017 through May 31, 2019.

F. Disfigurement

Section 8-42-108(1) provides for additional compensation if a claimant is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant suffered visible disfigurement to her left arm and pinky finger. The ALJ concludes Claimant should be awarded $2,500 for disfigurement.

ORDER

It is therefore ordered that:

1. Claimant's request for to set aside the June 1, 2019 MMI date determined by the DIME is denied and dismissed.

2. Claimant's request to overcome the DIME regarding permanent impairment is denied and dismissed.

3. Insurer shall pay Claimant PPD benefits based on a 5% whole person rating. Insurer may take credit for any PPD benefits previously paid to Claimant.

4. Insurer shall pay Claimant TTD benefits from May 9, 2017 through May 31, 2019. Insurer may take credit for any TTD benefits previously paid to Claimant.

5. Insurer shall pay Claimant statutory interest of 8% per annum on all compensation not paid when due.

6. Insurer shall cover medical treatment after MMI from authorized providers reasonably needed to relieve the effects of Claimant's injury and prevent deterioration of her condition, including, but not limited to, the neurostimulator trial recommended by Dr. Salek.

7. Insurer shall pay Claimant $2,500 for disfigurement.

8. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: January 4, 2021

Office of Administrative Courts

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that the spinal cord stimulator ("SCS") recommended by Dr. Kenneth Lewis is reasonable medical treatment necessary to cure and relieve Claimant from the effects of her December 9, 2019 admitted work injury?

- Whether Claimant has proven by a preponderance of the evidence that in-home healthcare services recommended by Dr. Ellen Price is reasonable medical treatment necessary to cure and relieve Claimant from the effects of her December 9, 2019 admitted work injury?

FINDINGS OF FACT

1. Claimant is a 39-year-old female who sustained a work-related injury on December 9, 2019. Claimant worked as a Qualified Medication Administration Personnel ("QMAP") and provided healthcare and quality of life services to residents in an assisted living facility operated by employer.

2. Claimant testified on December 9, 2019 she had sat down to after she finished cooking and serving lunch when she saw a dog belonging to a resident on the back patio. Claimant testified she went to the resident's room to find the resident, but could not find the resident. Claimant testified she then went outside to look for the resident and slipped on a piece of white plastic on the ground. Claimant testified that she rolled her right ankle and foot and fell to the ground. Claimant testified she used her cell phone to call for assistance.

3. Claimant testified she sought medical treatment that day at St. Mary's Hospital's emergency room ("ER") after being referred by the authorized treating medical facility, St. Mary's Occupational Health Center.

4. Claimant consulted with Nurse Practitioner Harkreader at St. Mary's Occupational Heath on December 10, 2019, the day after her injury. Mr. Harkreader recommended x-rays, a CAM boot, ice, and elevation. Mr. Harkreader also provided Claimant with work restrictions that took Claimant off of work.

5. Claimant testified that she continued having significant pain in her right foot in the weeks following the injury. Claimant underwent a magnetic resonance image ("MRI") of her right foot on December 27, 2019. Claimant was referred by Mr. Harkreader to Dr. Thun. Dt. Thun examined Claimant on December 31, 2019 and reviewed her MRI. Dr. Thun noted that the MRI showed edema within the medial cunelform, 1st metatarsal, and along the cubold. Dr. Thun recommended recommended a computed tomography ("CT") scan.

6. Claimant subsequently underwent the CT scan which showed non-displaced fractures at the bases of the first and second metatarsals along the plantar aspect.

7. Claimant was referred for physical therapy in January 2020 by Mr. Harkreader. Claimant testified at hearing that it was her understanding that the therapy was intended to preserve her foot and ankle function, since she had not been able to bear weight.

8. Claimant was evaluated by Dr. Stagg on February 11, 2020. Dr. Stagg noted Claimant had been experiencing significant swelling whenever she stood up. Claimant testified that the swelling continued through the time of hearing. Dr. Stagg referred Claimant to Dr. Price, a physiatrist. Dr. Stagg issued a report dated February 17, 2019 after Claimant called in to the office in which he recommended Claimant undergo a venous Doppler to rule out a deep venous thrombosis.

9. Claimant returned to Dr. Stagg on February 27, 2020. Dr. Stagg noted Claimant was still having significant pain and swelling. Dr. Stagg referred Claimant to Dr. Reinhard to perform testing for potential Complex Regional Pain Syndrome ("CRPS"), including a QSART and thermagram.

10. Claimant was evaluated by Dr. Reinhard on April 20, 2020. Dr. Reinhard noted Claimant had issues with restricted motion in the foot since her date of injury, and she had swelling and a bluish discoloration. Dr. Reinhard noted Claimant had burning, stabbing, and aching pain with tingling in the midcalf distally and dorsal and plantar surface of the right foot. Claimant also described spontaneous pain without weightbearing and abnormal sensation to touch. Dr. Reinhard performed a set of tests to evaluated for a potential CRPS diagnosis. Dr. Reinhard noted that both the stress tomography and autonomic testing battery were positive for CRPS. Dr. Reinhard noted that with two positive tests, the testing meets the Colorado Division of Worker's Compensation criteria for CRPS. Dr. Reinhard recommended additional medical treatment related to the CRPS diagnosis.

11. Claimant was subsequently referred by Dr. Stagg to Dr. Lewis on April 29, 2020. Dr. Lewis initially examined Claimant on May 5, 2020. Dr. Lewis noted Claimant's medical history was consistent with the diagnosis of CRPS. Dr. Lewis recommended sympathetic block injections for treatment of the CRPS, but also noted that a dorsal column stimulator trial might be appropriate. Dr. Lewis subsequently noted that the dorsal column stimulator would be appropriate if they failed to achieve a durable treatment effect with a right L3 lumbar sympathetic block.

12. Dr. Lewis performed the lumbar sympathetic block on May 13, 2020. Dr. Lewis performed a right-sided L3 lumbar sympathetic block on May 21, 2020. Dr. Lewis noted Claimant did not have any relief from the first injection, C.E., p. 89.

13. Claimant returned to Dr. Thun on June 1, 2020. Dr. Thun noted that Claimant continued to have the manifestations of CRPS and recommended Claimant continue with physical therapy and pain management.

14. Claimant underwent a psychological evaluation with Dr. Kaplan on June 12, 2020 to obtain clearance for a SCS trial. Dr. Kaplan opined that Claimant was an appropriate candidate for an SCS trial.

15. Claimant returned to Dr. Lewis on June 23, 2020. Dr. Lewis again recommended Claimant undergo the SCS trial.

16. Respondents denied authorization for the SCS trial on July 2, 2020.

17. Claimant had been receiving psychological counseling with Dr. Carris through the course of her claim. Dr. Carris noted on April 16, 2020 that Claimant's distress was high and she was concerned about the lack of support. Dr. Carris recommended home assistance which she opined would be helpful in reducing the stress in her relationship, which increases personal distress and pain.

18. Claimant returned to Dr. Price on June 25, 2020. Dr. Price noted in her report that because of Claimant's severe pain, she was unable to walk and used a walking boot and bilateral crutches. Dr. Price noted that Claimant reported she has tried to do things at home, but needed help from her husband with cooking, cleaning, and getting around the house. Claimant reported she could dress herself but she has a hard time standing and doing any dishes or any other activities. Dr. Price recommended home healthcare services three times per week, two hours each day, to help with daily activities.

19. Respondents obtained an independent medical examination ("IME") with Dr. D'Angelo on October 19, 2020. Dr. D'Angelo reviewed Claimant's medical records, obtained a medical history and performed a physical examination in connection with her IME. Dr. D'Angelo opined in her report the Claimant did not meet the required criteria on physical examination to establish a diagnosis of CRPS. Dr. D'Angelo opined that Claimant did not have temperature changes between her right and left lower extremity. Dr. D'Angelo opined Claimant did not have tape measurements consistent with right lower extremity atrophy. Dr. D'Angelo opined that Claimant did not swelling or discoloration of her right foot and ankle. Dr. D'Angelo noted that Claimant did not have any help from her two sympathetic blocks performed by two separate physicians. Dr. D'Angelo further noted that the bone scan was negative for findings consistent with CRPS. Dr. D'Angelo diagnosed Claimant with somatic symptom disorder and recommended Claimant undergo a psychological forensic evaluation with Dr. Reilly.

20. Claimant testified at hearing that her foot and ankle was often discolored, and noted that she kept her foot elevated whenever possible to avoid swelling and discoloration. Claimant testified she had not been able to work or drive a car since the injury. Claimant noted she was only able to ambulate using forearm crutches.

21. Claimant testified that due to the difficulties Claimant experienced with her activities of daily living and difficulty ambulating, she was unable to do basic tasks at home, including cooking or cleaning. Claimant testified that her husband and 15 year old child were helping her at home.

22. The ALJ credits the testimony of Claimant at hearing along with the medical records and reports of Dr. Stagg, Dr. Price, Dr. Lewis, Dr. Reinhard, Dr. Carris, and Dr. Kaplan over the contrary opinions of Dr. D'Angelo. The ALJ therefore finds that Claimant has demonstrated that it is more probable than not that SCS trial is reasonable medical treatment necessary to cure and relieve Claimant from the effects of her work injury.

23. The ALJ finds that Claimant has failed to establish that it is more probable than not that the request for home health care services represent a compensable medical expense for which Respondents would be liable under the Colorado Workers' Compensation Act. The ALJ finds that there is insufficient evidence to establish that the home health care services would be necessary to allow Claimant to obtain medical treatment related to Claimant's injury.

24. While Claimant testified as to difficulties ambulating and doing cleaning and cooking, Claimant failed to establish how the home health care services would constitute a medical benefit as contemplated by the Colorado Workers' Compensation Act. Therefore, the request for home health care services must be denied.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2013. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been

contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. The Colorado Workers’ Compensation Medical Treatment Guidelines are regarded as accepted professional standards for care under the Workers' Compensation Act. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The statement of purpose of the Medical Treatment Guidelines is as follows: “In an effort to comply with its legislative charge to assure appropriate medical care at a reasonable cost, the director of the Division has promulgated these ‘Medical Treatment Guidelines.’ This rule provides a system of evaluation and treatment guidelines for high cost or high frequency categories of occupational injury or disease to assure appropriate medical care at a reasonable cost.” W.C.R.P. 17-1(A). W.C.R.P. 17-5(C) provides: “The treatment guidelines set forth care that is generally considered reasonable for most injured workers. However, the Division recognizes that reasonable medical practice may include deviations from these guidelines, as individual cases dictate."

5. While it is appropriate for an ALJ to consider the guidelines while weighing evidence, the Medical Treatment Guidelines are not definitive. *See Jones v. T.T.C. Illinois*, Inc., W.C. No. 4-503-150 (May 5, 2006); *aff'd Jones v. Industrial Claim Appeals Office* No. 06CA1053 (Colo. App. March 1, 2007) (not selected for publication) (it is appropriate for the ALJ to consider the guidelines on questions such as diagnosis, but the guidelines are not definitive); *see also Burchard v. Preferred Machining*, W.C. No. 4-652-824 (July 23, 2008) (declining to require application of medical treatment guidelines for carpal tunnel syndrome in determining issue of PTD); *see also Stamey v. C2 Utility Contractors et al*, W.C. No. 4-503-974 (August 21, 2008) (even if specific indications for a cervical surgery under the medical treatment guidelines were not shown to be present, ICAO was not persuaded that such a determination would be definitive).

6. As found, Claimant has proven by a preponderance of the evidence that the SCS recommended by Dr. Lewis is reasonable and necessary medical treatment related to the industrial injury. As found, Claimant’s testimony and the medical opinions of Claimant’s medical providers establish by a preponderance of the evidence that Claimant’s CRPS diagnosis giving rise to the recommended SCS was the result of the work-related injury.

7. Section 8-42-101(1)(a) requires Respondents to provide such “medical” and “nursing” treatment as may “reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee from the effects of the injury.” To be a compensable medical benefit, the service must be medical in nature or incidental to obtaining such medical or nursing treatment. *Country Squire Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995).

8. A service is medical in nature if it is reasonably needed to cure and relieve the effects of the injury and related to Claimant's physical needs. A medical prescription for attendant care services is not determinative of whether such services are reasonably necessary. Rather, a medical prescription of a physician's supporting testimony is merely some evidence the ALJ may consider in determining whether the requested services are "medical in nature." *See Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997). Services which have been found to be "medical in nature" can include home health care service3s in the nature of "attendant care" if reasonably needed to cure or relieve the effects of the industrial injury. *Atencio v. Quality Care, Inc.*, 791 P.2d 7 (Colo. App. 1990).

9. In this case, Claimant testified that she has not been able to drive and has difficulty performing activities around the house including cooking and cleaning. This difficulty has put added pressure on her family members to perform the required household tasks, such as cooking and cleaning. However, the home health care requested by Dr. Price is not medical in nature, as it does not assist Claimant in helping to cure or relieve the Claimant from the effects of the injury. Therefore, the request for home health services is denied.

10. As found, Claimant has failed to prove by a preponderance of the evidence that the set of in-home healthcare services recommended by Dr. Price is reasonable and necessary medical treatment related to the industrial injury.

ORDER

1. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve Claimant from the effects of the December 9, 2019 work injury, including the SCS recommended by Dr. Lewis pursuant to the Colorado Medical Fee Schedule.

2. Claimant's request for the Respondents to provide attendant care is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

Dated January 5,, 2021

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that the C5/C6 and C6/C7 Anterior Cervical Decompression performed on June 17, 2020 by Authorized Treating Physician (ATP) Beth N. Gibbons, M.D. was reasonable, necessary and causally related to her admitted December 13, 2019 cervical injury.

2. Whether Claimant has established by a preponderance of the evidence the she is entitled to receive Temporary Total Disability (TTD) benefits for the 13 day period between June 17, 2020 and June 29, 2020 when she missed time from work following her June 17, 2020 surgery.

3. Whether Respondents have proven by a preponderance of the evidence that they should be permitted to withdraw their General Admissions of Liability (GAL) filed on February 14, 2020.

FINDINGS OF FACT

1. Claimant is a 42 year-old female who works for Employer as a Registered Nurse Case Manager. She worked from home on a computer using two monitors.

2. On December 13, 2019 Claimant suffered an admitted industrial injury to her neck area. Specifically, near the end of her work shift Claimant was turning her head back and forth when she felt the sudden onset of left upper extremity numbness, tingling and pain in her outer arm. The pain radiated down her left forearm into her thumb and index finger.

3. Claimant did not immediately report her injury to Employer but sought chiropractic treatment on December 17, 2019 with Barry Hand, D.C. She noted neck and left shoulder pain that began approximately two weeks earlier that worsened in the prior five days. Claimant remarked that she had a slight loss of strength or coordination in her left hand and the pain disrupted her sleep. She mentioned a history of headaches but the intensity and frequency had increased over the prior six months. Dr. Hand noted that Claimant did not recall a history of trauma.

4. By January 3, 2020 Claimant's left upper extremity symptoms had not resolved. She thus visited John Beneck, PT at High Plains Physical Therapy for an evaluation. PT Beneck recorded the following mechanism of injury and treatment:

> This 41 y.o. female reports a long history of intermittent neck pain, which worsened significantly in November 20th when she was a passenger on bumpy off-road riding. Feels the bumps "jarred" her neck and symptoms worsened, which further worsened over the next several weeks. Current

> symptoms include L neck pain extending into the upper scapular and shoulder regions. Pain radiates to the anterior and lateral shoulder, with paresthesia to the middle fingers. Some improvement in past several days. Has had some improvement with chiropractic and massage.

5. Claimant testified that PT Beneck's history was inaccurate and incomplete. She specified that the January 3, 2020 report failed to reference the events of December 13, 2019 and PT Beneck incorrectly stated that she suffered a worsening on November 20, 2019. Claimant remarked that she had not been "off-roading" but was in her brother's pickup truck when he hit a patch of ice.

6. Claimant explained that over the holidays her symptoms failed to resolve. She spoke with her supervisor about her continuing symptoms. They mutually agreed to initiate a Worker's' Compensation claim.

7. Claimant subsequently visited Concentra Medical Centers for treatment. On January 21, 2020 Claimant underwent an evaluation with Nurse Practitioner Elver Saint. Claimant reported a new injury to her neck and left shoulder. She specified that after a full day of work at home she experiences pain when she turns her head. Claimant noted numbness in her left shoulder down to her fingers. NP Saint noted that Claimant's symptoms worsened about one month earlier after turning her head to look at a second monitor. Claimant specifically felt a pull in her neck. NP Saint diagnosed Claimant with a cervical strain and upper extremity weakness as a result of repetitive motion trauma. She referred Claimant for a worksite evaluation.

8. On January 26, 2020 NP Saint's supervisor Jeffrey T. Backer M.D. noted that Claimant's objective findings were consistent with a work-related mechanism of injury. Claimant continued to work with restrictions and commenced physical therapy. However, Claimant testified that physical therapy did not relieve her symptoms.

9. On February 5, 2020 Claimant commenced treatment with chiropractor Scott Parker, D.C. NP Saint had referred Claimant for a brief trial of manipulative treatment. Claimant reported that on December 13, 2019 she was performing normal data entry work duties. She detailed that, when she was typing on her computer, she moved her head to the right and experienced left-sided neck popping followed by pain. Dr. Parker diagnosed Claimant with a cervicothoracic strain/pain.

10. On February 5, 2020 Howard Fallik of Genex performed the Physical Demands Analysis and Risk Factor Assessment previously requested by NP Saint. On February 6, 2020 Mr. Fallik issued a Report. The Report specified that Claimant worked at home as a Registered Nurse using her primary monitor and a laptop monitor. The laptop monitor was lower and to the right of the laptop monitor. Claimant believed that turning her head to the right to view the laptop monitor caused her to develop a neck strain with symptoms radiating down her left arm.

11. On February 14, 2020 Respondents filed a General Admission of Liability (GAL). Respondents admitted to a cervical spine injury and an Average Weekly Wage (AWW) of $1,446.76.

12. On February 17, 2020 Claimant underwent a cervical spine MRI. The MRI revealed revealed severe spondylosis and stenosis at C5-C6 and moderate spondylosis and stenosis at C6-C7. She was subsequently referred to Authorized Treating Physician (ATP) Beth Gibbons, M.D. for an examination.

13. On April 6, 2020 Respondents filed a new GAL. The new GAL acknowledged that Claimant returned to full-duty work and had been paid Temporary Partial Disability (TPD) benefits from January 21, 2020 to March 29, 2020.

14. On April 15, 2020 Claimant underwent an evaluation with ATP Gibbons at Banner Health Neurosurgery. Claimant reported that she was working at home on her computer. She turned to the right and experienced sudden left upper extremity pain. Claimant then went to sleep and developed numbness into her left index finger. The numbness lasted until the middle of March. Dr. Gibbons noted that Claimant had undergone traction, dry needling, acupuncture, chiropractic care and physical therapy. She remarked that the MRI revealed a disc herniation at C5/6 and C6/7 on the left side that was the likely cause of Claimant's left arm pain and numbness. Dr. Gibbons diagnosed Claimant with neck pain, left arm pain, a herniated nucleus pulposus on the left at C5-6, a herniated nucleus pulposus on the left at C6-7 and cervical radiculopathy. She recommended continued physical therapy exercises, traction and dry needling as tolerated. Dr. Gibbons also referred Claimant for a "left C5/6 and C6/7 TFESI." She discussed possible surgery at C5/6 and C6/7 in the form of an Anterior Cervical Decompression.

15. On May 14, 2020 Dr. Gibbons submitted a request for surgical authorization. She specifically sought "cervical 4 view xrays and surgery request – C5/6, C6/7 anterior cervical decompression." On June 17, 2020 Claimant underwent the requested surgery with ATP Gibbons.

16. On October 5, 2020 Claimant underwent an independent medical examination with B. Andrew Castro, M.D. Dr. Castro reviewed Claimant's medical records and conducted a physical examination. Claimant reported an occupational injury that occurred on December 13, 2019. He characterized Claimant's work injury as pain turning her head during work that caused the sudden onset of left arm and neck symptoms. Dr. Castro also remarked that Claimant had developed pain after a full day of working. He commented that the two histories did not "substantially differ." He explained that Dr. Gibbons' surgical intervention was reasonable because it addressed Claimant's cervical radiculopathy and stenosis. However, Dr. Castro commented that rotating the neck is not an obvious source of a herniated disc or the sudden onset of substantial symptoms. He maintained that individuals periodically rotate their heads as a normal activity of daily living. Specifically, based on Claimant's description of her mechanism of injury, there were no substantial forces to cause an acute disc herniation.

17. Dr. Castro instead remarked that Claimant was involved in an incident on November 20, 2019 as described in the High Plains Physical Therapy initial evaluation. Specifically, Claimant may have been exposed to forces while off-roading that involved substantial jerking and axial loads of the neck that could have produced a disc herniation and cervical radiculopathy. Dr. Castro determined that, because of the different histories regarding the onset of symptoms, Claimant had not shown that the December 13, 2019 work incident caused her symptoms. He summarized:

> If indeed there is no history and no pre-existing conditions, then surgical intervention could be reasonably related, and if there is no other intervening event, then perhaps this is work-related; however, again, because of the substantial, in my opinion, differing histories in this case, certainly it goes directly to the issue of causality in this case. As it is, I do not believe there is substantial forces imparted to the neck with normal activities of daily living of a slight rotation of the neck that would cause a disc herniation in of itself and the history of substantial motions of the neck secondary to off-roading activity is much more likely cause of perhaps a disc herniation and ongoing symptoms.

18. Claimant testified that, if her cervical spine and left upper extremity symptoms had occurred when riding in her brother’s truck, she would have sought treatment. In contrast, she attributed her symptoms to her workplace injury when turning her head between two monitors. Claimant noted that she now works with only one screen and the surgery performed by ATP Gibbons on June 17, 2020 has relieved the symptoms. She noted that, following surgery, she missed work until June 29, 2020 or a period of 13 days. Claimant thus seeks reimbursement for Temporary Total Disability (TTD) benefits for the preceding 13 day period.

19. Dr. Castro also testified at the hearing in this matter. He maintained that the normal activity of daily living of slightly rotating the neck lacks substantial force to cause a disc herniation. Instead, Claimant’s history off-roading was a much more likely cause of her disc herniation and ongoing symptoms.

20. Claimant has failed to demonstrate that it is more probably true than not that the C5/C6 and C6/C7 Anterior Cervical Decompression surgery performed on June 17, 2020 by ATP Dr. Gibbons was reasonable, necessary and causally related to her admitted December 13, 2019 cervical injury. Initially, on December 13, 2019 Claimant suffered an admitted industrial injury to her neck area. Specifically, near the end of her work shift Claimant was turning her head back and forth between two monitors when she felt the sudden onset of left upper extremity numbness, tingling and pain. On January 3, 2020 Claimant visited PT Beneck at High Plains Physical Therapy for an evaluation. PT Beneck recorded that Claimant jarred her neck while off-roading on November 20, 2019. However, Claimant disputed PT Beneck’s account and testified she had not been “off-roading” but was in her brother’s pickup truck when he hit a patch of ice. Claimant subsequently reported her work injury to Employer and visited Concentra for treatment. In a January 21, 2020 evaluation with NP Saint Claimant noted numbness in her left

shoulder down to her fingers after turning to look at her second monitor while working from home about one month earlier. On January 26, 2020 NP Saint's supervisor Dr. Backer noted that Claimant's objective findings were consistent with a work-related mechanism of injury. ATP Dr. Gibbons subsequently noted that Claimant had undergone traction, dry needling, acupuncture, chiropractic care and physical therapy for her symptoms. She remarked that Claimant's MRI revealed a disc herniation at C5/6 and C6/7 on the left side that was the likely cause of her left arm pain and numbness. On June 17, 2020 Dr. Gibbons performed surgery at C5/6 and C6/7 in the form of an Anterior Cervical Decompression. Claimant noted that the surgery relieved her symptoms.

21. Dr. Castro performed an independent medical examination, reviewed Claimant's medical records and conducted a physical examination. He characterized Claimant's work injury as turning her head during work that caused the sudden onset of arm and neck symptoms. Dr. Castro explained that Dr. Gibbons' surgical intervention was reasonable because it addressed Claimant's cervical radiculopathy and stenosis. However, Dr. Castro commented that rotating the neck is not an obvious source of a herniated disc or the sudden onset of substantial symptoms. He maintained that individuals periodically rotate their heads as a normal activity of daily living. Specifically, based on Claimant's description of her mechanism of injury, there were no substantial forces to cause an acute disc herniation. He summarized that "I do not believe there is substantial force imparted to the neck with normal activities of daily living of a slight rotation of the neck that would cause a disc herniation." Instead, he remarked that Claimant's "substantial motions of the neck secondary to off-roading activity is much more likely cause of perhaps a disc herniation and ongoing symptoms."

22. A review of the medical records and persuasive opinion of Dr. Castro reveals that Claimant's activity of rotating her head while performing her work duties on December 13, 2019 did not likely cause a disc herniation and need for surgery. As Dr. Castro explained, the normal activity of daily living of slightly rotating the neck lacks substantial force to cause a disc herniation. Dr. Gibbons' surgery was thus not causally related to Claimant's December 13, 2019 industrial injury. Accordingly, Respondents are not financially liable for Claimant's June 17, 2020 Anterior Cervical Decompression surgery with Dr. Gibbons.

23. Claimant has failed to establish that it is more probably true than not that she is entitled to receive TTD benefits for the 13 day period between June 17, 2020 and June 29, 2020 when she missed time from work following her surgery. Claimant has not demonstrated that her June 17, 2020 surgery was causally related to her admitted December 13, 2019 industrial injury. Although Claimant did not work for the 13 day period between June 17, 2020 and June 29, 2020 because of the surgery, she did not suffer a wage loss that was causally connected to her industrial injury. Accordingly, Claimant's request for TTD benefits is denied and dismissed.

24. Respondents have failed to prove that it is more probably true than not that they should be permitted to withdraw their February 14, 2020 GAL acknowledging that Claimant suffered a cervical spine injury on December 13, 2019. Respondents assert that they are entitled to withdraw their GAL because Claimant supplied materially false

information upon which they relied in filing the GAL. Respondents specifically contend that the January 3, 2020 report of PT Beneck suggests that Claimant developed her symptoms when she jarred her neck while off-roading. However, despite PT Beneck's report, the record reveals that Claimant did not supply materially false information upon which Respondents relied in filing the GAL.

25. Initially, Claimant testified that PT Beneck's history was inaccurate and incomplete. She specified that the January 3, 2020 report failed to reference the events of December 13, 2019 and she had not been "off-roading" but was in her brother's pickup truck when he hit a patch of ice. More importantly, Claimant subsequently reported her work injury to Employer and was referred to Concentra for treatment. In a January 21, 2020 evaluation with NP Saint Claimant reported a new injury to her neck and left shoulder as a result of turning to look at her second monitor. Claimant specifically felt a pull in her neck. Based on a referral from NP Saint, Mr. Fallik of Genex performed a jobsite analysis and issued a Report on February 6, 2020. The Report specified that Claimant developed a neck strain with radiating left upper extremity symptoms when turning her head to the right to view her laptop monitor. Respondents did not file the GAL until February 14, 2020.

26. A review of the preceding chronology reflects that Respondents did not file the GAL until Claimant had repeatedly maintained she developed neck symptoms while turning her head performing work duties. Moreover, Claimant also underwent a job demands analysis in which she explained the cause of her symptoms. Although PT Beneck recorded that Claimant jarred her neck while off-roading, she credibly disputed the characterization. The record thus reveals that Claimant did not concoct a story or otherwise induce Respondents to file a GAL based on materially false representations. In the context of significant evidence to the contrary, the single document from PT Beneck is simply insufficient to suggest that Respondents relied on materially false statements in filing the GAL. Accordingly, Respondents request to withdraw the February 14, 2020 GAL is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to

a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

C5/C6 and C6/C7 Anterior Cervical Decompression Surgery

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

5. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the C5/C6 and C6/C7 Anterior Cervical Decompression surgery performed on June 17, 2020 by ATP Dr. Gibbons was reasonable, necessary and causally related to her admitted December 13, 2019 cervical injury. Initially, on December 13, 2019 Claimant suffered an admitted industrial injury to her neck area. Specifically, near the end of her work shift Claimant was turning her head back and forth between two monitors when she felt the sudden onset of left upper extremity numbness, tingling and pain. On January 3, 2020 Claimant visited PT Beneck at High Plains Physical Therapy for an evaluation. PT Beneck recorded that Claimant jarred her neck while off-roading on November 20, 2019. However, Claimant disputed PT Beneck's account and testified she had not been "off-roading" but was in her brother's pickup truck when he hit a patch of ice. Claimant subsequently reported her work injury to Employer and visited Concentra for treatment. In a January 21, 2020 evaluation with NP Saint Claimant noted numbness in her left shoulder down to her fingers after turning to look at her second monitor while working from home about one month earlier. On January 26, 2020 NP Saint's supervisor Dr. Backer noted that Claimant's objective findings were consistent with a work-related mechanism of injury. ATP Dr. Gibbons subsequently noted that Claimant had undergone traction, dry needling, acupuncture, chiropractic care and physical therapy for her symptoms. She remarked that Claimant's MRI revealed a disc herniation at C5/6 and C6/7 on the left side that was the likely cause of her left arm pain and numbness. On June

17, 2020 Dr. Gibbons performed surgery at C5/6 and C6/7 in the form of an Anterior Cervical Decompression. Claimant noted that the surgery relieved her symptoms.

6. As found, Dr. Castro performed an independent medical examination, reviewed Claimant's medical records and conducted a physical examination. He characterized Claimant's work injury as turning her head during work that caused the sudden onset of arm and neck symptoms. Dr. Castro explained that Dr. Gibbons' surgical intervention was reasonable because it addressed Claimant's cervical radiculopathy and stenosis. However, Dr. Castro commented that rotating the neck is not an obvious source of a herniated disc or the sudden onset of substantial symptoms. He maintained that individuals periodically rotate their heads as a normal activity of daily living. Specifically, based on Claimant's description of her mechanism of injury, there were no substantial forces to cause an acute disc herniation. He summarized that "I do not believe there is substantial force imparted to the neck with normal activities of daily living of a slight rotation of the neck that would cause a disc herniation." Instead, he remarked that Claimant's "substantial motions of the neck secondary to off-roading activity is much more likely cause of perhaps a disc herniation and ongoing symptoms."

7. As found, a review of the medical records and persuasive opinion of Dr. Castro reveals that Claimant's activity of rotating her head while performing her work duties on December 13, 2019 did not likely cause a disc herniation and need for surgery. As Dr. Castro explained, the normal activity of daily living of slightly rotating the neck lacks substantial force to cause a disc herniation. Dr. Gibbons' surgery was thus not causally related to Claimant's December 13, 2019 industrial injury. Accordingly, Respondents are not financially liable for Claimant's June 17, 2020 Anterior Cervical Decompression surgery with Dr. Gibbons.

TTD Benefits

8. To prove entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee

returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

9. As found, Claimant has failed to establish by a preponderance of the evidence that she is entitled to receive TTD benefits for the 13 day period between June 17, 2020 and June 29, 2020 when she missed time from work following her surgery. Claimant has not demonstrated that her June 17, 2020 surgery was causally related to her admitted December 13, 2019 industrial injury. Although Claimant did not work for the 13 day period between June 17, 2020 and June 29, 2020 because of the surgery, she did not suffer a wage loss that was causally connected to her industrial injury. Accordingly, Claimant's request for TTD benefits is denied and dismissed.

Withdrawal of GAL

10. Respondents first filed a GAL in the present matter on February 14, 2020. Because Respondents seek to withdraw their GAL, they bear the burden of proof. Section 8-43-201, C.R.S. provides that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification."

11. Respondents specifically seek to withdraw their GAL based on *Vargo v. Industrial Commission*, 626 P.2d 1164 (Colo. App. 1981). In *Vargo*, the claimant made fraudulent representations concerning his condition prior to the industrial injury. The representations induced the respondents to file a general admission of liability for temporary disability and medical benefits. When the respondents discovered the fraudulent representations, they filed a "denial of liability" and ceased payment of medical benefits, but continued temporary disability benefits until the claimant returned to work. The *Vargo* court upheld an order of the Industrial Commission that declared the admission of liability "void from the date of filing." The court observed that no provision of the Act authorizes "retroactive withdrawals of an admission of liability." Nevertheless, the court remarked that the "beneficial intent" of the Act is predicated on claimants providing accurate information. Therefore, the court concluded that, where the claimant supplies "materially false information upon which his employer and its insurer relied in filing an admission of liability, the referee is justified in declaring the admission void *ab initio*." *Id.* at 1166.

12. As found, Respondents have failed to prove by a preponderance of the evidence that they should be permitted to withdraw their February 14, 2020 GAL acknowledging that Claimant suffered a cervical spine injury on December 13, 2019. Respondents assert that they are entitled to withdraw their GAL because Claimant supplied materially false information upon which they relied in filing the GAL. Respondents specifically contend that the January 3, 2020 report of PT Beneck suggests that Claimant developed her symptoms when she jarred her neck while off-roading. However, despite PT Beneck's report, the record reveals that Claimant did not supply materially false information upon which Respondents relied in filing the GAL.

13. As found, initially, Claimant testified that PT Beneck's history was inaccurate and incomplete. She specified that the January 3, 2020 report failed to reference the events of December 13, 2019 and she had not been "off-roading" but was in her brother's pickup truck when he hit a patch of ice. More importantly, Claimant subsequently reported her work injury to Employer and was referred to Concentra for treatment. In a January 21, 2020 evaluation with NP Saint Claimant reported a new injury to her neck and left shoulder as a result of turning to look at her second monitor. Claimant specifically felt a pull in her neck. Based on a referral from NP Saint, Mr. Fallik of Genex performed a jobsite analysis and issued a Report on February 6, 2020. The Report specified that Claimant developed a neck strain with radiating left upper extremity symptoms when turning her head to the right to view her laptop monitor. Respondents did not file the GAL until February 14, 2020.

14. As found, a review of the preceding chronology reflects that Respondents did not file the GAL until Claimant had repeatedly maintained she developed neck symptoms while turning her head performing work duties. Moreover, Claimant also underwent a job demands analysis in which she explained the cause of her symptoms. Although PT Beneck recorded that Claimant jarred her neck while off-roading, she credibly disputed the characterization. The record thus reveals that Claimant did not concoct a story or otherwise induce Respondents to file a GAL based on materially false representations. In the context of significant evidence to the contrary, the single document from PT Beneck is simply insufficient to suggest that Respondents relied on materially false statements in filing the GAL. Accordingly, Respondents request to withdraw the February 14, 2020 GAL is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents are not financially liable for Claimant's June 17, 2020 Anterior Cervical Decompression surgery with Dr. Gibbons.

2. Claimant's request for TTD benefits for the 13 day period between June 17, 2020 and June 29, 2020 is denied and dismissed.

3. Respondents' request to withdraw the February 14, 2020 GAL is denied and dismissed.

4. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that the platelet rich plasma (PRP) injection recommended by Dr. Faulkner is reasonable medical treatment necessary to maintain Claimant at maximum medical improvement ("MMI")?

FINDINGS OF FACT

1. Claimant sustained a compensable workers' compensation injury on September 2, 2015 when he was crawling into an A/C bin and was trying to get into a squatting position when his right knee locked up. Claimant was referred for medical treatment Claimant subsequently underwent surgery on December 14, 2015 under the auspices of Dr. Papillion. The surgery consisted of an arthroscopy, chondroplasty and lateral release of the right knee.

2. Following the surgery, Claimant continued to complain of pain in his right knee. Claimant was referred to Dr. Weinerman for a second opinion. Dr. Weinerman evaluated Claimant and diagnosed Claimant with patellofemoral maltracking, chondromalacia and poor quadriceps function. Dr. Weinerman recommended another surgery which was performed on August 4, 2016. The surgery performed by Dr. Weinerman consisted of a medial patellofemoral ligament reconstruction with allograft. Claimant reported to Dr. Weinerman on January 10, 2017 that the surgery resulted in only somewhat improved symptoms.

3. Claimant was placed at maximum medical improvement by Dr. Lugliani on January 12, 2017. Dr. Lugliani provided Claimant with an 18% lower extremity impairment rating and recommended six months of follow up medical appointments along with ongoing medications. Dr. Lugliani also provided Claimant with permanent work restrictions that consisted of no crawling, kneeling, squatting, or climbing.

4. Claimant subsequently underwent a steroid injection performed by Dr. Weinerman on May 26, 2017. Claimant reported only 25 percent relief for about a month following the steroid injection.

5. Claimant's care was transferred to Dr. Faulkner on August 4, 2017. Dr. Faulkner noted Claimant returned with complaints of persistent right knee pain, weakness and intermittent catching. Dr. Faulkner recommended Claimant start an exercise program. Dr. Faulkner recommended Claimant undergo another magnetic resonance image ("MRI") of his knee. The MRI was performed on August 10, 2017.

6. Claimant returned to Dr. Faulkner on January 8, 2018. Claimant continued to complain of ongoing pain and quadriceps dysfunction and weakness. Dr. Faulkner

diagnosed Claimant with chondromalacia of the patella. Dr. Faulkner discussed the MRI with Claimant and recommended a platelet rich plasma (“PRP”) injection be performed, which was done on that day.

7. Claimant returned to Dr. Faulkner on March 30, 2018. Claimant reported that the PRP injection provided fifty percent (50%) relief. Claimant complained of pain over the anteromedial aspect of his knee. Dr. Faulkner recommended Claimant continue his home exercise program and return for follow up in eight weeks.

8. Claimant returned to Dr. Faulkner on June 11, 2018. Dr. Faulkner noted Claimant had significant atrophy of the quadriceps. Dr. Faulkner provided Claimant with a new knee brace and recommended another PRP injection. Claimant returned to Dr. Faulkner on July 9, 2018 for the PRP injection.

9. Claimant was again evaluated by Dr. Faulkner on October 3, 2018 and reported that the prior PRP injection helped significantly. Cliamant reported his pain was more rare now, but Claimant continued to experience significant quadriceps atrophy.

10. Claimant next returned to Dr. Faulkner on August 21, 2019 and reported that his pain was now a 6 to 7 out of 10. Claimant reported wearing his knee brace at work. Dr. Faulkner noted that Claimant reported that the prior PRP injection provided excellent pain relief until about six (6) weeks ago. Dr. Faulkner recommended another PRP injection and instructed Claimant to return to the office once it was approved.

11. Claimant returned to Dr. Faulkner on October 28, 2019 for the repeat PRP injection. Dr. Faulkner re-evaluated Claimant on July 29, 2020. Dr. Faulkner noted Claimant reported worsening symptoms in his right knee. Claimant reported the previous PRP injections in October provided good relief for about six (6) months. Claimant again reported pain of about 6-7 out of 10 in severity. Dr. Faulkner recommended another PRP injection.

12. Respondents obtained a records review independent medical examination with Dr. O’Brien on April 27, 2020. Dr. O’Brien had previously examined Claimant on December 14, 2017. Dr. O’Brien opined in his April 27. 2020 report that Claimant’s maintenance care should not include the H-wave device, nor should PRP injections be utilized. Dr. O’Brien opined that PRP injections should be considered experimental and until a Level I or multiple Level II studies have been peer-reviewed and published in journals, neither the H-wave device nor PRP injections have any scientific credibility and therefore should not be utilized in this case. Dr. O’Brien opined that Claimant required no further orthopedic treatment and there was no further surgery or modality that Dr. Faulkner can provide that will help Claimant. Dr. O’Brien further opined that until Claimant assumed full responsibility for the complete rehabilitation of his knee, he was not a candidate for further care. Dr. O’Brien opined that the only maintenance care that Claimant should be pursuing was that which Claimant controls through a daily home exercise regimen.

13. Claimant testified at hearing in this matter that he continues to be employed by Employer but has transferred to a new job to comply with his permanent work restrictions. Claimant testified that this work requires Claimant to climb stairs. Claimant testified he had PRP injections performed by Dr. Faulkner. Claimant testified that he has received relief from the injections. Claimant testified that he believes that the relief provided by the injections provides him with relief that allows him to continue to perform his work duties for Employer.

14. Dr. O'Brien testified at hearing in this matter as an expert in orthopedic surgery. Dr. O'Brien testified consistent with his report. Dr. O'Brien testified that the PRP injections were experimental and had not been around very long. Dr. O'Brien testified that the science on PRP injections was very soft. Dr. O'Brien testified that at the present time there was no science that showed that PRP injections were effective treatment. Dr. O'Brien testified that even if Claimant testified he received a benefit from the injections, there was still a lack of documentation of the effectiveness of the injections.

15. The ALJ credits the medical records from Dr. Faulkner along with the testimony of Claimant at hearing and finds that Claimant has demonstrated that it is more probable than not that the PRP injections recommended by Dr. Faulkner are reasonable medical treatment necessary to maintain Claimant at MMI. The ALJ notes that Claimant has consistently reported improvement in his symptoms following the PRP injections that has resulted in less of a need for medical appointments with Dr. Faulkner. The ALJ further credits Claimant's testimony that the PRP injections have continued to allow him to perform his work duties for Employer and finds that testimony to be credible and persuasive. The ALJ notes the contrary opinions of Dr. O'Brien, but finds the medical records from Dr. Faulknerr and testimony of Claimant at hearing to be more credible and persuasive regarding this issue.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2010. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d

385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

5. As found, Claimant has proven by a preponderance of the evidence that the PRP injections recommended by Dr. Faulkner are reasonable maintenance medical care pursuant to the Colorado Workers' Compensation Act. As found, the medical records from Dr. Faulkner and testimony of the Claimant at hearing are found to be credible and persuasive evidence with regard to this issue.

ORDER

It is therefore ordered that:

1. Respondents shall pay for the reasonable medical expenses necessary to maintain Claimant at MMI, including the PRP injection recommended by Dr. Faulkner. Respondents shall pay medical benefits pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. . **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

DATED: January 6, 2021

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- Did Claimant prove she suffered a compensable injury on December 7, 2019?

- If Claimant proved a compensable injury, is she entitled to reasonably necessary medical treatment for the injury?

- Did an ATP make a determination of MMI and does the ALJ have jurisdiction to adjudicate the surgery recommended by Dr. Simpson?

FINDINGS OF FACT

1. Claimant works for Employer as a CNA. Her job duties include caring for residents, assisting with feeding, bathing, changing, and ADLs.

2. Claimant alleges a work-related injury to her right ankle on December 7, 2019. Claimant testified she sprained her ankle while walking to her car after her shift. Claimant alleges she heard a pop and felt pain in the ankle.

3. Claimant testified she had the next three days off and did not return to work until December 11, 2019. Claimant testified she sat around the house, elevated her foot, and kept it wrapped, because it was painful and swollen.

4. Claimant attended a physical therapy session for an unrelated low back problem on December 11, 2019. The physical therapist sent Claimant to the emergency room because of concern for right ankle pain.

5. Claimant was seen in the St. Thomas More Hospital emergency department on December 11, 2019. Claimant reported "stepping wrong" on Saturday but denied any trauma or injury. The ER records make no reference to any incident at work. Claimant reported 10/10 pain in the right ankle. Examination showed tenderness to palpation over the lateral malleolus, but no pain elsewhere in the ankle or foot. There was no erythema, edema, or swelling. X-rays were negative for acute injury. The provider was "unsure why your ankle hurts," and no diagnosis was provided other than "ankle pain." Claimant was advised to take Tylenol and ibuprofen as needed and elevate her leg. Claimant declined an off work note and was released without restrictions.

6. Claimant alleges she told her supervisor, Connie A[Redacted], about her ankle pain on December 11, 2019. Claimant admitted she did not report it as a work injury.

7. Despite reporting 10/10 pain at the ER, Claimant worked her regular shift and perform her normal CNA duties on December 11, 2019.

8. Claimant continued working her normal job duties and schedule for the next several weeks.

9. Claimant saw her PCP on January 6, 2020 for a sore throat. Claimant made no mention of any right ankle problems and was noted to have normal gait and station.

10. Claimant saw her PCP again on January 21, 2020. For the first time, she described a work-related injury. The report states, “Rt foot pain x 1 month – rolled.” The report also notes, “Rt ankle: x 12/9/2019. Twisted at work.” The PCP noted swelling in the lateral aspect of the ankle. Claimant was advised to use a tall walking boot for six weeks.

11. Claimant admitted she experienced swelling in both ankles and lower extremities before the alleged December 7, 2019 incident.

12. Claimant testified she told Ms. A[Redacted] about her visit with the PCP on January 21, but again admitted she said nothing about a work injury.

13. Ms. A[Redacted] testified at hearing and disputed many aspects of Claimant’s testimony. Ms. A[Redacted] was the supervisor on-call for December 7, 8, and 9, 2019. She received no report from Claimant or anyone else on any of those dates regarding a work injury. Claimant’s time records show she worked her full 8-hour shift on December 10, 2019, contrary to her testimony she stayed at home resting until December 11. Ms. A[Redacted] worked on December 10, 2019 too, but Claimant never reported any ankle problems to her. Nor she did not observe Claimant having any problems performing her job duties. Ms. A[Redacted] also testified she worked with Claimant on December 11, 2019 but, contrary to Claimant’s testimony, Claimant provided no paperwork from the ER or mentioned any ankle injury on that date. Ms. A[Redacted] testified she had numerous opportunities to observe Claimant working during December 2019 and Claimant had no apparent difficulty performing her regular duties.

14. Ms. A[Redacted] first became aware Claimant had a problem with her right ankle problem January 21, 2020, when Claimant arrived at work with a prescription from her PCP requiring her to wear a boot on her right foot. However, Claimant still did not report a work-related injury at that time. Ms. A[Redacted] checked to see if Claimant could work with a boot and referred her to HR. Subsequently, Ms. A[Redacted] received an email from HR informing her Claimant had reported a work-related injury.

15. Employer referred Claimant to a designated provider, Centura Urgent Care. Claimant saw PA-C Steven Quakenbush at her initial visit on January 23, 2020. Claimant reported on December 7, 2019 she was walking in the parking lot of Employer’s facility and caught her right ankle on uneven asphalt. She stated she twisted her right ankle inward and heard a pop. Mr. Quakenbush noted Claimant walked with a limp. Examination of the right ankle showed swelling about the lateral malleolus and tenderness over the lateral malleolus and medial malleolus. She was also “minimally” tender into the anterior joint space bilaterally. Mr. Quakenbush diagnosed a right ankle sprain and opined the condition was work-related based on the history provided by

Claimant. He released Claimant to primarily sedentary duties wearing the walker boot. Mr. Quakenbush prescribed a Medrol Dosepak and ibuprofen.

16. A right ankle MRI performed on February 19, 2020 showed a partial tear of the distal posterior tibialis tendon at the insertion near the navicular bone, inflammation in the soft tissues with fluid along the tendon sheath, a partial tear of the peroneus brevis tendon, Achilles tendinitis, plantar fasciitis with mixed acute and chronic findings, strain of the anterior and posterior talofibular ligaments, a ganglion cyst near the talonavicular joint space along the dorsum of the foot, and degenerative changes in the subtalar joint and the midfoot.

17. Mr. Quakenbush referred Claimant to Dr. Michael Simpson, an orthopedic surgeon. Claimant was evaluated by Dr. Simpson's PA-C, Kimberly Shenuk, on March 10, 2020. Claimant described the alleged mechanism of injury in similar terms as reported to Mr. Quakenbush. Claimant described constant 8/10 pain in the ankle. On examination, Ms. Shenuk noted a significant pes planus deformity. There was no tenderness along the peroneal or posterior tibial tendon, but she had posterior tibial tendon weakness "as expected with a significant flatfoot deformity." Claimant had "pretty significant" tenderness along the anterior medial joint line, and mild to moderate tenderness laterally. Ms. Shenuk gave Claimant a cortisone injection. After reviewing the MRI, she opined,

> [Claimant] has quite a bit of pain along her anterior medial and anterior lateral joint line. Most of her pain is medial. She has no pain along her peroneal or posterior tibial tendons. She has a flatfoot deformity. I do feel that her peroneal and posterior tibial tendon tears are chronic, given she is not symptomatic. These are not work-related and are chronic conditions. I do feel that she sustained a sprain and is related to her work comp injury.

18. At her April 9, 2020 follow-up appointment with Mr. Quakenbush, Claimant denied any current pain, swelling, popping, clicking, numbness, or weakness of her ankle. Claimant's gait was normal, and she was able to stand on her toes. Claimant was released to full duty.

19. On April 23, 2020, Mr. Quakenbush noted Claimant was working full duty without significant problems. She has some swelling and pain in the right ankle at the end of the workday that resolved by the next morning. Claimant was not participating in any therapy or regularly taking any medication.

20. Claimant saw Dr. Simpson on April 29, 2020. Dr. Simpson's examination showed bilateral pes planus deformities, more severe on the right. She had tenderness at the posterior tibial tendon insertion and the sinus tarsi. Dr. Simpson noted Claimant could continue nonsurgical management "but she does not seem to be getting better." He discussed two surgical options. The first would be a "motion-preserving" operation with a calcaneal osteotomy, spring ligament repair, posterior tibial tendon repair with transfer, and a gastrocnemius rescission. The other surgical option was an arthrodesis. Although Claimant's morbid obesity put her at a greater risk of failure from the motion-preserving procedure, Dr. Simpson did not think arthrodesis was the best choice because Claimant

is relatively young and has no significant arthritis. Claimant wanted to proceed with surgery. Dr. Simpson offered no opinion about whether the proposed surgery is work-related.

21. On May 7, 2020, Dr. Simpson requested authorization surgery, which was denied by Respondent.

22. On June 23, 2020, Mr. Quakenbush noted surgery had been denied. Claimant was working within her restrictions with some increased left ankle swelling at the end of her shift. She was not taking medications regularly or participating in therapy, and no further diagnostics were planned. Mr. Quakenbush indicated further follow-up would be scheduled with his supervising physician, Dr. John Reasoner.

23. Claimant saw Dr. Reasoner on July 13, 2020. He opined Claimant had adequate time for healing and further therapy and surgery were denied. Dr. Reasoner put Claimant at MMI with no impairment and no recommendations for maintenance care. Dr. Reasoner also released Claimant to full duty.

24. Dr. William Ciccone II performed an IME for Respondent on September 30, 2020. Dr. Ciccone authored a report and testified via deposition. Claimant told Dr. Ciccone she was walking to her car at the end of her shift on December 7, 2019 and twisted her ankle and felt a pop. Claimant told Dr. Ciccone she had no pain at that time but first noticed pain two days later. The IME audio recording confirms Claimant stated she had no pain at the time of the accident four times during Dr. Ciccone's interview. Dr. Ciccone opined it is not probable Claimant suffered an ankle sprain on December 7, 2019 because she had no pain, and a sprain would have caused immediate pain. When asked about what she did after the accident, Claimant told Dr. Ciccone she "went about her weekend." She said she first noticed pain on December 11, 2019 as she was getting dressed for PT for her back. This conflicts with Claimant's testimony she spent the weekend after the incident elevating her leg and keeping it wrapped.

25. Dr. Ciccone accepted that Claimant had an "apparent incident" in Employer's parking lot on December 7, but opined it caused no injury that required medical treatment or caused disability. Claimant felt no pain for at least two days after the incident. At the ER, she denied any trauma or injury and merely stated she "stepped wrong." She worked full duties for six weeks after the incident. Dr. Ciccone agreed with Ms. Shenuk the MRI findings were pre-existing and not injury-related, except the possible mild strain of the anterior and posterior talofibular ligaments. He noted the radiologist did not even include the reference to a strain in the "impressions" section of the MRI report. Dr. Ciccone opined Claimant has an flatfoot deformity that commonly affects middle-aged, obese (Claimant's BMI is 50) women. He persuasively explained that on exam Claimant had posterior tibial tendon dysfunction, which appeared chronic in nature. She had loss of the medial longitudinal arch, which accompanies chronic conditions relating to the posterior tibial tendon. He opined the development of symptoms in Claimant's right ankle is related to her chronically progressive posterior tibial tendon dysfunction disease and is not a work-related condition.

26. Dr. Ciccone further testified the December 7, 2019 incident did not aggravate, accelerate, or exacerbate Claimant's underlying pre-existing condition. Dr. Ciccone explained the surgery recommended by Dr. Simpson is consistent with a chronic posterior tibial tendon dysfunction. The surgery involves cutting the bone to try to realign the foot; it is not just a matter of repairing the tendon. He explained there is no question Claimant had pre-existing posterior tibial tendon dysfunction, which leads to deformity of the hindfoot and loss of medial arch. This causes the heel to sit further and further to the outside because the tendon cannot maintain proper alignment. Dr. Ciccone explained the surgery recommended by Dr. Simpson is a common surgery done for late-stage tibial tendon dysfunction where you cut the heel to slide it back to try to take the valgus stress off the ankle to allow for attended to heal and try to repair some of the ligaments to support the medial arch. He explained this is typically done to address a chronic condition, not an acute injury. He opined the surgery is not intended to address any work-related condition.

27. Dr. Ciccone's opinions are credible and persuasive.

28. Ms. A[Redacted]'s testimony was credible and persuasive.

29. Claimant's testimony was not credible or persuasive.

30. Claimant failed to prove she suffered a compensable injury on December 7, 2019.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the claimant or the respondents. Section 8-43-201.

A pre-existing condition does not preclude a claim for compensation and an injury is compensable if an industrial injury aggravates, accelerates, or combines with the pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere fact that a claimant experiences symptoms after an incident at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition. *Finn v. Industrial Commission*, 437

P.2d 542 (Colo. 1968); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). The ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016).

As found, Claimant failed to prove she suffered a compensable injury on December 7, 2019. Although the incident in the parking lot may have occurred, there is no persuasive evidence it proximately caused a need for medical treatment or disability. Claimant felt no symptoms immediately after the incident and sought no treatment for several days. Claimant testified she rested and elevated her foot for three days but told Dr. Ciccone she went about her weekend and did not feel pain until December 11, 2019. Claimant worked her regular duties as a CNA on December 10 with no difficulty or observable signs of pain or injury. Claimant denied any injury or trauma at the ER. The examination in the ER showed pain but no swelling or ecchymosis, consistent with a chronic condition rather than an acute injury. Claimant did not mention a work-related to ankle injury during multiple conversations with her supervisor. Claimant worked without limitations for approximately six weeks after the alleged injury. The MRI shows extensive pre-existing pathology that could easily account for Claimant's symptoms and limitations independent of any work accident. Dr. Ciccone's causation opinions are credible and not contradicted by any persuasive evidence in the record. The pain and other symptoms in Claimant's right ankle starting in December 2019 reflect the natural progression of her pre-existing condition without contribution from her work activities. Although the treatment Claimant received was reasonably necessary, it was directed her pre-existing condition and not any work-related issue.

Accordingly, even though Claimant may have had an accident on December 7, 2019, she failed to prove it caused any "injury."

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: January 6, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUE

1. Whether Claimant established by a preponderance of the evidence that the following medical treatment is reasonably necessary to relieve the effects of his work-related injury or to prevent further deterioration of his work-related condition:

  a. Bier blocks;
  b. Ketamine infusions; and
  c. Psychiatric evaluation for purposes of a spinal cord stimulator ("SCS") trial.

  d. Medications:
    i. Opioids – Methadone and oxycodone;
    ii. Cymbalta (duloxetine);
    iii. Trazodone;
    iv. Motrin (ibuprofen);
    v. Gabapentin;
    vi. Androgel; and
    vii. Miralax.

2. Whether Claimant is entitled to a "medical care manager" per the terms of his settlement agreement.

3. Whether Claimant is entitled to an award of costs pursuant to § 8-42-101(5), C.R.S.

FINDINGS OF FACT

1. Claimant is a 67-year-old man who sustained an admitted work injury on February 8, 1990. Claimant was originally diagnosed with reflex sympathetic dystrophy, which is now known as "Complex Regional Pain Syndrome" ("CRPS").

2. In 1994, Claimant settled portions of his Workers' Compensation claim with Respondent through a settlement agreement ("Agreement"). Per the terms of the Agreement, Claimant's medical benefits remained open, "with the understanding that the claimant's medical care is to be managed by a medical care manager, to be agreed upon by all the parties." (Ex. 1). The Agreement submitted into evidence is not signed or approved by the Director or an Administrative Law Judge. (Ex. 1).

3. Claimant testified at hearing that he has been unable to work since his 1990 injury. He indicated he has not received treatment or blocks for "the last couple of years" and that he is non-functional in everyday life due to pain in his distal forearms and hands.

4. Claimant relocated to Tennessee in 2014. Prior to that, Claimant received treatment through Scott Hompland, D.O., in Colorado. Claimant testified that when he was under Dr. Hompland's care, he was taking Methadone (four per day), Percocet (six per day), Lyrica (for nerve pain); Motrin (for pain), Lexapro (for depression and nerve pain), Androgel (for testosterone replacement); Miralax (for constipation); and Ambien (for sleep). He testified that when his pain is controlled, he is able to function better, including helping around the house, doing dishes and yardwork.

5. Claimant testified Dr. Hompland also performed Bier blocks and ketamine injections for approximately four years prior to Dr. Hompland's retirement in 2014. Claimant testified that Dr. Hompland performed Bier blocks approximately every six to eight weeks in each arm.

6. When Claimant relocated to Tennessee in 2014, he began treating with Damien Dozier, M.D. Claimant testified Dr. Dozier continued the same treatment Dr. Hompland had prescribed, including Bier blocks, ketamine infusions and medications. At some point, Claimant no longer treated with Dr. Dozier because Dr. Dozier returned to working as an anesthesiologist in a hospital. Claimant then began treatment at Comprehensive Pain Specialists, which Claimant testified shut down after five months. Claimant then transferred his care to Nashville Pain Center. Claimant testified that his provider at Nashville Pain Center, Jason Hendon, M.D., would not do Bier blocks but did perform ketamine infusions in his office. Claimant testified the last ketamine injection he received was in July 2019. Dr. Herndon left the practice, and Dr. Madhu Yelameli because Claimant's authorized treating physician.

7. On August 21, 2018, Claimant was seen at Nashville Pain Center for a new patient evaluation by Jason Herndon, M.D. At that time, Claimant' medications included Methadone HCL and Oxycodone HCL. Claimant reported a history of successful treatment with Bier blocks. Dr. Herndon noted there was a significant safety concern of continuing Bier blocks especially in light of MTD [methadone] use and cardiac concerns, including an abnormal EKG for which his prior physician weaned Claimant's methadone dosage. Dr. Herndon recommended a ketamine infusion in the office with a interscalene block, to be performed 48 hours apart. Dr. Herndon noted there were no concerns regarding misuse of opioids based on a review of Claimant's prescription history (PMP), and an appropriate opioid agreement and treatment consent. Dr. Herndon prescribed Cymbalta, methadone, oxycodone, Ambien, and ibuprofen. (Ex. B)

8. On September 18, 2018, Claimant returned to Dr. Herndon. Dr. Herndon noted he would "strongly recommended that we discontinue prescribing [Androgel, fluticasone and Ambien] before the year was out if possible." He again recommended ketamine infusions. (Ex. B).

9. On October 29, 2018, Claimant saw Madhu Yelameli, M.D., at Nashville Pain Center. Dr. Yelameli continued to prescribe Methadone and Oxycodone. Dr. Yelameli's notes reiterate Dr. Herndon's recommendations with respect to ketamine infusions, discontinuation of certain medications (i.e., Androgel, and Ambien), and keeping Claimant at the lowest possible MEDD. (The ALJ infers that MEDD is the equivalent of morphine

milligram equivalent (MME)). Dr. Yelameli noted (as did Dr. Herndon) that Claimant had a “medium” opioid risk, and his risk of drug abuse was low. (Ex. B).

10. On November 13, 2018, Dr. Herndon performed an interscalene (IS) nerve block on Claimant. On November 20, 2018, Dr. Herndon performed a ketamine infusion on Claimant. At a follow up visit on November 27, 2018, Dr. Herndon noted the IS block and ketamine infusion significantly improved Claimant’s pain, and that Claimant wished to continue to pursue further management of his pain in the same manner. In the same note, Dr. Herndon noted that the 11/20/18 ketamine infusion was “not effective.” (The ALJ infers this was a dictation or transcription error, given the narrative description of the ketamine infusion as providing 50% reduction in pain). Dr. Herndon recommended a repeat ketamine infusion and consider a repeat left IS block. (Ex. B).

11. On December 26, 2018, Claimant saw Dr. Yelameli. Claimant reported the IS block and ketamine infusion worked, but “have already worn off.” Dr. Yelameli noted Claimant was scheduled for a repeat of the procedure again on January 8, 2019. Despite recommendations for discontinuation of Androgel, Dr. Yelameli refilled claimant’s Androgel prescription. (Ex. B).

12. On January 8, 2019, Claimant received a ketamine infusion from Dr. Herndon. (Ex. B). In a follow up appointment on January 22, 2019, Claimant reported the January 8, 2019 ketamine infusion gave better relief than his prior infusion. Claimant reported that Bier blocks worked better and requested to continue (or re-initiate) Bier blocks. Claimant’s medications, including methadone (10 mg 2x per day) and oxycodone (10 mg 3 x per day) remained the same as previously prescribed. (Ex. B).

13. On February 1, 2019, Claimant received another ketamine infusion performed by Dr. Herndon. (Ex. B). At a follow up appointment on February 26, 2019, Claimant reported that the ketamine infusion did not work as well as the previous infusion. Claimant continued to request Bier blocks.

14. On March 28, 2019, Claimant saw Dr. Yelameli. Claimant reported receiving a Bier block two weeks earlier from a different provider and that it helped his left forearm pain. At Claimant’s April 25, 2019 visit with Dr. Yelameli, he reported that he was not able to obtain a second Bier block “due to insurance issues.” Dr. Yelameli’s report from April 25, 2019 contains the same recommendation against Bier blocks that is contained in previous records from Nashville Pain Center. (Ex. B).

15. On May 16, 2019, Claimant received a ketamine infusion at Nashville Pain Center performed by Dr. Yelameli. At a follow up appointment on May 23, 2019, Claimant reported 60-70% improvement with the ketamine infusion. Dr. Yelameli indicated there were no concerns regarding Claimant’s medication use. (Ex. B).

16. On June 25, 2019, Claimant saw Dr. Yelameli. Claimant reported his prior ketamine infusion was more effective on his left than right. Dr. Yelameli noted his plan for Claimant included repeating the ketamine infusion to improve Claimant’s right sided

pain. Claimant continued to take Methadone (2 x per day); Oxycodone (3 x per day), Cymbalta, ibuprofen, Miralax and trazodone. (Ex. B).

17. On July 11, 2019, Claimant received a ketamine infusion performed by Dr. Yelameli. At a follow up appointment on July 25, 2019, Claimant reported the ketamine infusion helped sharp pain and he only had dull pain. Dr. Yelameli advised Claimant against ketamine infusions and recommended Claimant consider a spinal cord stimulator (SCS) for his neck and upper extremity pain. Dr. Yelameli indicated Claimant wanted to proceed with the SCS and referred Claimant for a psychiatric evaluation. (Ex. B).

18. On August 22, 2019, Claimant saw Dr. Yelameli. The medical record from that date of treatment indicates Claimant received another ketamine infusion on July 25, 2019 that provided significant relief. (The ALJ infers that this is a reference to the July 11, 2019 ketamine infusion, as no records for a ketamine infusion on July 25, 2019 based on the Claimant's medical records). Dr. Yelameli's record from August 22, 2019 reiterates that Claimant was advised against ketamine infusions. (Ex. B).

19. On September 24, 2019, Dr. Yelameli noted that Claimant reported his workers' compensation insurance would not pay for a SCS. Claimant returned to Nashville Pain Clinic on October 29, 2019, November 26, 2019, January 2, 2020, January 31, 2020, March 31, 2020, April 28, 2020, May 27, 2020, June 1, 2020, July 9, 2020, August 10, 2020, and October 6, 2020 at which visits his medications were monitored and refilled. None of Claimant's medical records from Nashville Pain Clinic indicate that any provider at Nashville Pain Clinic recommended further ketamine infusions or Bier blocks, or that Claimant was referred to another provider for the performance of either procedure. Each record between July 25, 2019 and April 28, 2020 includes and entry that Claimant was advised against ketamine infusions, and that a psychological evaluation as a precursor to implantation of an SCS was recommended. During this time period, Claimant's medication regimen was essentially unchanged, and included methadone, oxycodone, gabapentin, Cymbalta, ibuprofen, Miralax, and trazodone. Throughout Claimant's treatment at Nashville Pain Center, no concerns were noted about Claimant's abuse or misuse of opioid medication or that Claimant was at a risk for abuse. At Claimant's May 27, 2020 visit with Dr. Yelameli, it was noted that Claimant was "no longer able to do ketamine infusions. (Ex. B).

20. On January 16, 2020, Nashville Pain Clinic submitted a request tot Insurer for a psychological evaluation for a spinal cord stimulator. (Ex. B).

21. At Claimant's office visit with Dr. Yelameli on October 6, 2020, Dr. Yelameli noted that his office no longer performed ketamine infusions, and that Claimant was exploring going to a ketamine clinic. (Ex. B).

22. Claimant testified that Dr. Yelameli refused to perform ketamine injections and recommended that Claimant have a spinal cord stimulator implanted. He testified he is currently being prescribed trazodone, gabapentin, and Miralax, and that he is still getting the other medications he has been prescribed. Claimant testified that he cannot take gabapentin all of the time because it causes vision side effects. Claimant has not been

discharged from Nashville Pain Center, and he has not been referred to any other specific provider by Nashville Pain Center.

23. Tashof Bernton, M.D., was qualified as an expert in internal medicine and occupational medicine. Dr. Berton testified that he has extensive experience treating patients with complex regional pain syndrome. Dr. Bernton conducted a video interview/examination of Claimant and reviewed portions of Claimant's medical records. He relied, in part, on a summary of Claimant's prior medical history prepared by Dr. Cebrian. Dr. Bernton testified that in his opinion, it is reasonable for Claimant to receive ketamine treatments, based on the Claimant's history of receiving ketamine as a treatment for his condition. He also testified that the use of a spinal cord stimulator is reasonable and appropriate if Claimant were to have ketamine treatments and such treatments did not prove efficacious. Dr. Benton believes ketamine is a more reasonable approach for Claimant's condition than a spinal cord stimulator. Dr. Bernton was not aware that treating providers at Nashville Pain Center had advised Claimant against proceeding with ketamine infusions and was not aware of whether Claimant's treating health care providers had prescribed ketamine after January 2020.

24. Dr. Bernton testified that Bier blocks are not an appropriate treatment for Claimant. He testified that while Claimant was receiving ketamine infusions in the past, there was not a corresponding decrease in Claimant's opioid medications. He testified that should be done. Dr. Bernton was not aware of any specific recommendations from Claimant's treating health care providers that he receive ketamine injections or infusions. Dr. Bernton testified that if Claimant is to be considered for a spinal cord stimulator, a psychological evaluation should be performed to determine if he is an appropriate candidate according to the Colorado Medical Treatment Guidelines.

25. With respect to Claimant's medication prescriptions, Dr. Bernton testified that Claimant's opioid medications should be tapered to lower Claimant's morphine milligram equivalent (MME), but that Claimant's medications should not be discontinued. He indicated that treatment for CRPS is difficult and that providers may differ on the appropriate treatment regimen, but that medication management should include central-acting agents, antidepressants, and narcotic agents.

26. In his report, dated October 8, 2020, Dr. Bernton indicated that reasonable and necessary medical care for Claimant's CRPS includes re-implementation of ketamine infusions up to a maximum of six per year, based on past medical records and the Claimant's self-report of reduced symptoms with ketamine. He recommended continuation and tapering opioids to a total of 60 MME over a period of three to four months. He recommended a continuation of medications for constipation caused by opioids, and continuation of Cymbalta and trazodone. He opined that use of trazodone as a sleep aid is appropriate as an alternative to hypnotics such as Ambien. Dr. Bernton testified that use of antidepressants, in conjunction with opioids or narcotics is an appropriate therapy for CRPS and consistent with Colorado Medical Treatment Guidelines. With respect to gabapentin, Dr. Bernton indicated that "if it is helpful," gabapentin is consistent with Colorado Medical Treatment guidelines. He also recommended, continuation of trazodone and duloxetine, a trial of compounded topical

analgesics, and continuation of testosterone with an endocrinology consultation. He recommended discontinuation of ibuprofen.

27. Carlos Cebrian, M.D., was qualified as an expert in occupational and family medicine. Dr. Cebrian performed two record reviews of Claimant's medical records and issued three reports, dated October 28, 2019, April 20, 2020, and September 3, 2020.

28. Dr. Cebrian testified that he originally thought Claimant's diagnosis of CRPS was questionable but made his treatment recommendations based on the assumption that Claimant had a diagnosis of CRPS. Dr. Cebrian testified based on his review of Claimant's medical records, that there was no significant reduction in Claimant's pain medication that corresponded with Claimant's receipt of ketamine injections. He testified that Bier blocks were not appropriate for Claimant due to cardiac concerns. He also testified that Bier blocks were not being recommended by any current treating providers. Dr. Cebrian testified that ketamine injections are not currently being recommended, although such injections are a recognized treatment for CRPS under current treatment guidelines in certain situations for patients who are refractory to other injections. He testified it is unclear whether Claimant currently qualifies for ketamine injections because there have not been other treatments attempted other than those injections. He also indicated that Claimant should not receive ketamine injections while taking methadone.

29. Dr. Cebrian recommended that Claimant wean off opioid medications (i.e., Oxycodone and methadone). He recommended that Claimant wean off oxycodone over a period of twelve weeks, then begin tapering off of methadone over a period of twelve weeks. He also recommended psychological counseling to assist in weaning Claimant off these medications. He recommended Claimant ultimately replace opioid medications with other potential treatments, including topical medications or tramadol, or other over-the-counter medications.

30. Dr. Cebrian testified a psychological evaluation related to an SCS is not reasonable or necessary because Claimant had not completed all conservative therapies, and therefore an SCS is not reasonable or necessary. He testified that Claimant's use of trazodone was not reasonable or necessary because Claimant reported using it as a pain medication to assist him in sleeping. He further testified that that it should attempted to be weaned off of Cymbalta after he is able to wean off of opioid medications because Claimant has been taking it for an extended period of time. Dr. Cebrian recommended Claimant discontinue ibuprofen because of the potential side effect risk of the medication.

31. With respect to gabapentin, Dr. Cebrian testified that the typical dosage for gabapentin for patients with CRPS is approximately 1800 mg per day. However, Claimant was intermittently taking gabapentin at a low dose of 300 mg per day, and that Claimant was not likely receiving any therapeutic benefit from gabapentin. In Dr. Cebrian's opinion, Claimant was taking gabapentin for a sedative effect, rather than its intended use for treatment of nerve pain.

32. With respect to Androgel, Dr. Cebrian testified that he was not able to determine the cause of Claimant's low testosterone and noted that Claimant previously had been

diagnosed with gynecomastia, which was unlikely to be the result of opioid medications. Although, he testified, low testosterone may be linked to opioid usage. He further testified that an endocrinology evaluation was unlikely to reveal the cause of Claimant's low testosterone.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

MAINTENANCE MEDICAL BENEFITS

The need for medical treatment may extend beyond the point of MMI where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003); *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO, Nov. 15, 2012).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003); *Oldani v. Hartford Financial Services,* W.C. No. 4-614-319-07, (ICAO, Mar. 9, 2015). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009. The question of whether the claimant has proven that specific treatment is reasonable and necessary to maintain his condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant seeks specific care in the form of Bier blocks, ketamine infusions, and a psychological evaluation related to the proposed implantation of a spinal cord stimulator. Additionally, Claimant seeks authorization and payment for medications, including methadone, oxycodone, Cymbalta, trazodone, Motrin (ibuprofen), gabapentin, Androgel and Miralax.

Bier Blocks

Claimant has failed to establish by a preponderance of the evidence that Bier blocks are reasonably necessary to relieve the effects of his work-related injury or to prevent further deterioration of his work-related condition. Although Claimant's medical records indicate he previously received benefit from Bier blocks, Claimant's authorized treating physicians have not recommended Bier blocks. Because no authorized treating provider has recommended Claimant receive Bier blocks, the ALJ is without jurisdiction to authorize such treatment. *Potter v. Ground Services Co.*, W.C. No. 4-935-523-04 (ICAO, Aug. 15, 2018); *Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (ICAO, May 15, 2018) *citing Short v. Property Management of Telluride*, W.C. No. 3-100-726 (ICAP May 4, 1995). Claimant's request for authorization of Bier blocks is therefore denied.

Ketamine Infusions

Claimant has failed to establish by a preponderance of the evidence that ketamine infusions are reasonably necessary to relieve the effects of his work-related injury or to prevent further deterioration of his work-related condition. As with Claimant's request for

Bier blocks, the evidence does not demonstrate that Claimant's authorized treating physicians have recommended that Claimant receive ketamine infusions. The only physician currently recommending or endorsing ketamine infusions is Dr. Bernton, who is not an authorized treating physician. The ALJ lacks authority to order an authorized treating physician to provide a particular form of treatment which has been prescribed or recommended by one who is not an authorized treating physician. *Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (ICAO, May 15, 2018) *citing Short v. Property Management of Telluride*, W.C. No. 3-100-726 (ICAP May 4, 1995). Consequently, Claimant's request for authorization of ketamine infusions is denied.

Psychiatric Evaluation For SCS

Claimant has established by a preponderance of the evidence that a psychiatric evaluation for the determination of the appropriateness of the implantation of a spinal cord stimulator is reasonably necessary to relieve the effects of his work-related injury or to prevent further deterioration of his work-related condition. Dr. Yelameli recommended that Claimant be considered for the implantation of a spinal cord stimulator and requested that a psychiatric evaluation be conducted to determine whether Claimant is an appropriate candidate. Dr. Bernton testified that use of an SCS would be appropriate if ketamine infusions were not efficacious. Dr. Cebrian testified that an SCS is appropriate where a claimant has failed conservative treatment. The Colorado Medical Treatment Guidelines, WCRP 17, Ex. 9, (H)(1)(c), provides that the indication for SCS is a patient with established CRPS who has failed conservative therapy including active and/or passive therapy, pre-stimulator trial psychiatric evaluation and treatment, medication management and therapeutic injections.

Given the documentation in Claimant's medical records from Dr. Yelameli advising Claimant against further ketamine infusions, the transient effects of prior infusions, and the fact that Claimant's prior ketamine injections did not result in the reduction of pain medication, the ALJ finds that Claimant has failed conservative therapy and evaluation for an SCS is reasonably necessary to relieve Claimant's symptoms. The ALJ finds that such psychological evaluation is reasonably necessary to relieve the effects of Claimant's work-injury, and Claimant's request for authorization of a psychological evaluation is granted.

Specific Medications

Opioid Medications and Miralax

Claimant has established by a preponderance of the evidence that his continued use of opioid medications (oxycodone and methadone) is reasonably necessary to relieve the effects or prevent deterioration of his work-related injury. Claimant has been on long-term pain management for his work-related condition. The records and testimony demonstrate that Claimant's function is improved through the use of pain medications and that Claimant is not abusing or misusing such medications. While Dr. Bernton and Dr. Cebrian agree that Claimant's dosage of opioid medications should be decreased, the difference is one of degree. Dr. Bernton opined that Claimant's pain medications should be reduced to below 60 MME per day “if that’s possible,” and Dr. Cebrian believes Claimant should ultimately be tapered off the medications completely over a period of approximately six months. The ALJ finds Dr. Bernton’s recommendations to be the more reasonable approach with respect to opioid medications. The Colorado Medical Treatment Guidelines recommend that patients total MME per day remain at 50 or below. However, the ALJ does not find that there is sufficient evidence to permit the ALJ to order a specific tapering schedule or dosage of the medication that is most efficacious for the Claimant, which should be determined by Claimant’s authorized treating physician. Claimant’s request for authorization of oxycodone and methadone is granted.

The Colorado Medical Treatment Guidelines also indicate that “[s]ome level of constipation is likely ubiquitous among chronic opioid users.” A position with which both Dr. Bernton and Dr. Cebrian agree. Given Claimant’s long-term use of opioids, and the continued prescription of Miralax by Claimant’s treating providers, the ALJ finds that Miralax (or some other similar medication) is reasonably necessary to relieve the effects of his work injury.

(Testosterone Supplementation) Androgel

Claimant has not established by a preponderance of the evidence that Androgel is reasonably necessary to relieve the effects of or prevent deterioration of his work-related condition. Claimant’s medical record indicate he has been prescribed Androgel due to low testosterone. Claimant’s authorized treating physicians, Dr. Herndon originally recommended this medication be prescribed by Claimant’s primary care provider. Dr. Cebrian and Dr. Bernton agreed there is insufficient information to determine whether Claimant’s need for Androgel is related to his work injury or to some other condition. Claimant did not offer sufficient evidence to establish that it is more likely than not that Androgel is reasonable and necessary treatment for his work-related condition. Claimant’s request for authorization of Androgel is denied.

Antidepressant Medication (Cymbalta)

Claimant has established by a preponderance of the evidence that antidepressant medication is reasonably necessary to relieve the effects of his work injury or to prevent deterioration. Dr. Bernton credibly testified that antidepressant medication, in conjunction with other medications, is a reasonable treatment for CRPS and consistent with Colorado Medical Treatment Guidelines. Dr. Yelameli’s prescribed Cymbalta at Claimant’s October 6, 2020 office visit, and consistently prescribed it throughout his treatment of Claimant. The ALJ finds that Claimant has established that it is more likely that not that antidepressant medication is reasonably needed to relieve the effects of his work injury. Claimant’s request for authorization of antidepressants (Cymbalta) is granted.

Trazodone

Claimant has established by a preponderance of the evidence that trazodone is reasonably necessary to relieve the effects of his work injury or to prevent deterioration. Dr. Bernton credibly testified that use of trazodone as a sleep aid, as an alternative to hypnotics is reasonable and appropriate. Dr. Yelameli's prescribed trazodone at Claimant's October 6, 2020 office visit. The ALJ finds that Claimant has established that it is more likely that not that trazodone is reasonably needed to relieve the effects of his work injury. Claimant's request for authorization of trazodone is granted.

Ibuprofen (Motrin)

Claimant has not established that ibuprofen is reasonably necessary to relieve the effects of his work injury or to prevent deterioration of his condition. Both Dr. Cebrian and Dr. Bernton recommended that Claimant discontinue ibuprofen. No other persuasive evidence was offered to explain how or why ibuprofen relieves Claimant's work-related condition or prevents further deterioration. Further, in position statements, Claimant concedes that ibuprofen should be discontinued. Claimant's request for authorization of ibuprofen is denied.

Gabapentin

Claimant has not established by a preponderance of the evidence that gabapentin is reasonably needed to relieve the effects or prevent deterioration of his work injury. Claimant testified that he does not take gabapentin all the time and that it causes vision issues. Claimant's prescribed dosage of gabapentin is 300 mg per day. Dr. Cebrian testified that gabapentin is typically taken three times per day and that the recommended dosage is 1800 mg per day. This is consistent with the Colorado Medical Treatment Guidelines for Chronic Pain Disorders. Dr. Cebrian also testified that Claimant use of gabapentin is likely subtherapeutic. Dr. Bernton did not testify concerning gabapentin but indicates in his report that it "if it is helpful, it is clearly consistent with the Colorado Medical Treatment Guidelines." The ALJ finds Dr. Cebrian's testimony on this issue persuasive. Claimant's request for authorization of gabapentin is denied.

REQUEST FOR PAYMENT OF COSTS UNDER § 8-42-101 (5), C.R.S.

Section 8-42-101 (5), C.R.S., provides:

> If any party files an application for hearing on whether the claimant is entitled to medical maintenance benefits recommended by an authorized treating physician that are unpaid and contested, and any requested medical maintenance benefit is admitted fewer than twenty days before the hearing or ordered after application for hearing is filed, the court shall award the claimant all reasonable costs incurred in pursuing the medical benefit. Such costs do not include attorney fees.

Thus, to receive an award of costs, Claimant must establish 1) medical maintenance benefits were recommended by an authorized treating physician; 2) such benefits are unpaid and contested; and 3) the request was admitted less than 20 days before the hearing or benefits are ordered after an application for hearing is filed.

The ALJ finds that Claimant is entitled to costs incurred in pursuing a psychiatric evaluation associated with evaluation of the appropriateness of a spinal cord stimulator. Claimant is not entitled to costs incurred with respect to the other treatments sought.

CLAIMANT'S REQUEST FOR ENFORCEMENT OF SETTLEMENT AGREEMENT

At hearing, Claimant requested that the ALJ interpret and enforce paragraph 6 of the Settlement Agreement which provides that "The parties agree that medical expenses will remain open, with the understanding that the claimant's medical care is to be managed by a medical care manager, to be agreed upon by all the parties."

In position statements, Claimant argued that the ALJ is without jurisdiction to enforce the provision of the settlement agreement because the submitted agreement does not contain written approval of the Division or the ALJ as required by § 8-43-204 (3), C.R.S. The Agreement contemplates approval of the agreement by an Order issued by the Division of Workers' Compensation (Ex. 1, ¶ 5.b.). However, no evidence was presented to indicate that the Agreement was approved. Respondents argue that the Settlement Agreement is not enforceable pursuant to § 8-43-204 (3) because it is not signed by the Director or an ALJ.

Given the lack of evidence indicating that the Settlement Agreement complied with § 8-43-204(3), C.R.S., the ALJ finds that there is insufficient evidence to determine if the ALJ has jurisdiction to enforce or interpret the Agreement. As such, Claimant's request for an order requiring the appointment of a medical care manager is denied without prejudice.

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of Bier blocks is denied and dismissed.

2. Claimant's request for authorization of ketamine infusions is denied and dismissed.

3. Claimant request for authorization of a psychiatric evaluation for purposes of assessing the appropriateness of a spinal cord stimulator is granted.

4. Claimant's request for authorization of opioid medications, including methadone and oxycodone is granted.

5. Claimant's request for authorization of antidepressant medication is granted.

6. Claimant's request for authorization of trazodone is granted.

7. Claimant's request for authorization of gabapentin is denied and dismissed.

8. Claimant's request for authorization of testosterone supplementation is denied and dismissed.

9. Claimant's request for authorization of Miralax is granted.

10. Claimant's request for enforcement of the parties' settlement agreement is denied without prejudice.

11. Pursuant to § 8-42-101 (5), C.R.S., Claimant is entitled to reasonable costs incurred in pursuing a psychiatric evaluation associated with evaluation of the appropriateness of a spinal cord stimulator. Claimant shall submit a bill of costs itemizing the costs incurred in conjunction with pursuing the psychiatric evaluation only within 30 days of the date of this order.

12. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 6, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence treatment for TMJ dysfunction recommended by Dr. Kevin Berry is reasonably needed and causally related to his admitted work injury?

- Did Claimant prove emergency evaluation and extraction of tooth #14 was causally related to the work accident?

FINDINGS OF FACT

1. Claimant worked for Employer as a plumber. He suffered admitted injuries on July 18, 2019 when he hit his head on a low beam while descending a flight of stairs. Claimant recalls "flying in the air," and then "the next thing he knew, he was on the ground." Claimant lost consciousness for an undetermined period of time after the accident.

2. As a result of the accident, Claimant has been diagnosed with a mild traumatic brain injury, cognitive deficits, chronic headaches, cervical myofascial pain, possible cervical radiculopathy, anxiety, and depression. A few days after the accident, Claimant developed speech difficulties including a significant stutter. Imaging of Claimant's head and brain showed no acute findings, and several providers suspect the speech difficulties may represent psychological sequela rather than organic brain damage. Nevertheless, Claimant's speech difficulties appear genuine and not the result of conscious embellishment or malingering. Claimant's neck issues are complicated by a pre-injury diagnosis of cervical radiculopathy for which Claimant was treated before the work injury.

3. Claimant has undergone extensive treatment, including physical therapy, speech therapy, and injections. The specific details of his treatment are beyond the scope of this Order.

4. Claimant was evaluated by Dr. Roberta Anderson-Oeser on December 7, 2019. Examination of Claimant's neck showed significant soft tissue problems, including muscle spasm, postural distortion, range of motion loss, and positive facet loading. Claimant also exhibited problems with his balance and a positive Romberg sign. Dr. Anderson-Oeser referred Claimant for vestibular therapy and recommended he continue with speech therapy. She referred Claimant to Dr. William Boyd, a psychologist, for treatment of post-concussive syndrome.

5. Claimant followed up with Dr. Anderson-Oeser on February 6, 2020.[1] The physical examination findings were similar to the December 7, 2019 examination and

[1] The report from this visit is not in the record but is described in Dr. Ramaswamy's IME report.

again showed soft tissue problems and muscle spasm throughout the neck area. Dr. Anderson-Oeser also noted Claimant "continues to grind his teeth, and he has increased sensitivity in his mouth. He has not been seen by a dentist regarding his TMJ dysfunction." Dr. Anderson-Oeser referred Claimant to Dr. Kevin Berry, DDS to evaluate the "TMJ issues." Dr. Anderson-Oeser has offered no specific opinion regarding causation of the dental or TMJ issues.

6. Claimant returned to Dr. Anderson-Oeser on March 10, 2020. Claimant had not yet been contacted by Dr. Barry's office regarding his TMJ problems and hypersensitivity of his teeth.

7. Dr. Annu Ramaswamy performed an IME for Respondents on April 24, 2020. Dr. Ramaswamy noted Claimant was completely cooperative throughout the evaluation and gave his best effort in responding to all questions. The bulk of Dr. Ramaswamy's examination and analysis related to Claimant's other injuries, but he also evaluated the TMJ. Claimant told Dr. Ramaswamy he clenches his teeth and has done so ever since the injury. He stated he is awakened by pain and finds himself clenching his teeth. He primarily described hypersensitivity of his teeth, which he said began "soon after" the July 2019 work injury. Claimant only noted some "minor right lower jaw pain, but when we discussed TMJ pain during the physical examination today, he indicated that he was nontender in the TMJ joints." Facial examination showed no tenderness over the TM joints when Claimant opened his mouth and moved his mandible from side to side. Claimant noted some very minimal discomfort in the right lower jaw to palpation. Dr. Ramaswamy was unable to elicit any crepitus in the TM joints. Claimant noted generalized dental hypersensitivity, but Dr. Ramaswamy did not directly examine his teeth. Dr. Ramaswamy's diagnosed TMJ syndrome and teeth hypersensitivity, but did not believe these conditions were work-related. He opined stress and anxiety can promote teeth grinding, but he could not relate Claimant's stress and anxiety solely to the work injury. He was also unclear as to the etiology of the dental hypersensitivity but noted local dental conditions could contribute to these issues. He did not see a basis to relate the hypersensitivity to the injury from physiologic standpoint and recommended Claimant see his own dentist.

8. Claimant saw Dr. Berry on August 12, 2020. He complained of mild pain in the bilateral jaw joints. Claimant said he awakens in the morning and the right side of his cheeks and inside of his lips are chewed up. Claimant's teeth ache, and are "supersensitive" to cold air and liquids. The jaw pain was "difficult for him to describe" with specificity. He occasionally has sharp pains in the right TM joint when moving his jaw. Claimant hears popping in the left TM joint and "rice krispies" sounds in the right joint. Examination of Claimant's neck and muscles of mastication showed primarily "mild" tenderness of the bilateral capsules, stylomandibular ligaments, and medial pterygoids. The masseter muscles and temporalis tendons were moderately tender. There was 2 mm of right deviation on opening his mouth, 2 mm left deviation on closing, and 2 mm protrusive movement. Dr. Berry heard no abnormal sounds in the jaw joints. A panoramic x-ray of the TM joints showed bony remodeling of the right and left TM joints. Tooth #14 had a widened periodontal ligament space, and was abscessed and possibly fractured. Dr. Berry diagnosed cervical and masticatory muscle spasms, mandibular deviation on

opening, and bruxism. He opined tooth #14 needed emergent extraction because it was abscessed. The tooth appeared fractured/cracked which Dr. Berry believed was caused by clenching and grinding becase of the accident. Dr. Berry opined, “the result of these diagnostic tests strongly suggest that all of the symptoms are indeed resulting from injuries sustained in the above-mentioned work-related accident.” He recommended a splint to be worn during the day for 12 weeks, and another splint to use during sleep “for lifetime.” He anticipated approximately 8-9 office visits for orthotics therapy over an 8-10 month timeframe. Dr. Berry prescribed amoxicillin for the abscessed tooth and advised Claimant to see his dentist immediately.

9. A September 3, 2020 letter from Claimant’s personal dentist, Dr. Jason Van Wagenen, notes Claimant was seen for an emergency exam relating to tooth #14. Testing confirmed a fracture on the inside back corner of the tooth and a visible infection. The tooth was dead. Dr. Van Wagenen opined, “these can be the result of the fracture but they can be the cause of the fracture. Unable to determine Etiology.”

10. Dr. Michael Dougherty, DDS performed an IME for Respondents on September 28, 2020. In addition to interviewing and examining Claimant, Dr. Dougherty reviewed prior medical records and x-rays from Dr. Van Wagenen dating back to August 2015. He also obtained CT imaging of both TM joints, a full mouth STL scan of Claimant’s teeth to evaluate the degree of tooth wear and articulations, and a digital T-Scan to evaluate A-P mandibular repositioning and vector accommodations of Claimant’s worn occlusion. Dr. Dougherty noted a root canal had been recommended for tooth #14 in August 2015, which was not completed. In June 2016, Dr. Van Wagenen noted “those recommended RCT teeth are bothering him.” An x-ray from May 21, 2020 showed advanced bone loss around the roots of tooth #14, consistent with long-standing infection and non-vitality. In fact, Dr. Van Wagenen’s September 16, 2019 chart note indicates tooth #14 was non-vital “probably > 2-5 yr.” Dr. Dougherty opined it is “100% likely and much more likely than not that this tooth was nonvital before the claimed injury. It was not save-able and removed due to the advanced bone loss due to long-standing non-vitality and non-treatment.” CT images of Claimant’s TMJs were normal and showed no evidence of injury. Claimant had normal range of motion of his mandible and no lateral pole tenderness. Dr. Dougherty noted,

> [Claimant] exhibited a prominent antegonial notch. This morphology of the bone at the angle of the mandible is related to clenching and grinding of the teeth. This ostosis, bone formation, takes many years to form from the insertion of the Masseter and Pterygoid muscles. Palpation of his muscles of mastication shows the most discomfort in: the attachments of both Masseter muscles, slightly in the Digastric area left, and both medial Pterygoids. These muscles are active in clinching and grinding. My oral examination, digital scans, and photos documented an extreme grinding habit with tooth sensitivity. Desensitizing treatments were begun on [Claimant’s] posterior teeth on 6/19/17, 2 years before the accident in question, and again on 6/26/17 when another desensitizing treatment was performed. On 09/16/19, shortly after the accident, Dr. Van Wagenen recorded that the sensitivity of his posterior molars had continued and that

> [Claimant] could not tolerate ultrasonic cleaning of calculus. There is no evidence of a TMJ injury. The grinding habit is long standing and existed before 07/18/19. The amount of tooth loss attributable to a bruxing habit is more than could occur within one year.

11. Dr. Dougherty concluded the emergency treatment for tooth #14 and recommended treatment for TMJ were not causally related to the work accident.

12. Dr. Dougherty's analysis and causation opinions are credible and more persuasive than the opinions offered by Dr. Berry. In addition to a detailed physical examination, Dr. Dougherty obtained extensive imaging data and reviewed Claimant's past dental records. There is no persuasive evidence Dr. Berry had Claimant's prior records and appears to have relied solely on Claimant for the history. But Claimant's reliability as a historian is compromised by the physical and psychological sequelae of the injury. The infection and tooth death that necessitated emergent extraction of tooth #14 was the culmination of long-standing periodontal disease and not caused or aggravated by any injury-related condition. Similarly, Claimant has been bruxing for many years, as evidenced by the extensive tooth damage and bone morphology.

13. Claimant failed to prove the recommended TMJ treatment or treatment of tooth #14 are causally related to the work accident.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Even if the respondents admit liability and pay for some treatment, they retain the right to dispute the reasonable necessity or relatedness of any other treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

The existence of a pre-existing condition does not preclude a claim for medical benefits if an industrial injury aggravates, accelerates, or combines with the pre-existing condition to produce the need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The ultimate question is whether the need for treatment was proximately caused by an industrial aggravation or merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant failed to prove the recommended TMJ treatment or treatment for tooth #14 are causally related to the work accident. Dr. Dougherty's analysis and causation opinions are credible and persuasive. Dr. Dougherty performed a thorough examination, obtained extensive imaging data, and reviewed Claimant’s past dental records. There is no persuasive evidence Dr. Berry had Claimant’s prior records and appears to have relied solely on Claimant for the history. But Claimant’s reliability as a historian is compromised by the physical and psychological sequelae of the injury. Dr. Dougherty’s conclusions regarding causation of TMJ are supported by and consistent with Dr. Ramaswamy’s causation opinions. Although Dr. Anderson-Oeser referred Claimant to Dr. Berry, she provided no analysis or specific opinion regarding causation. The infection and tooth death that necessitated emergent extraction of tooth #14 was the culmination of long-standing periodontal disease and not caused or aggravated by any injury-related condition. Similarly, Claimant has been clenching bruxing for many years, as evidenced by the extensive tooth damage and bone morphology. Although tooth #14 clearly needed to be removed, and treatment for TMJ is probably reasonable, the persuasive evidence fails to show those conditions are causally related to the work accident.

ORDER

It is therefore ordered that:

1. Claimant’s request for treatment for TMJ recommended by Dr. Berry and dental treatment related to extraction of tooth #14 is denied and dismissed.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 11, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-031-884-003

ISSUES

I. Whether the November 9, 2018 Final Admission of Liability properly closed the claim.

II. Whether Claimant established that her compensable injury has worsened and that she is no longer at MMI.

III. Whether Claimant is entitled to reasonable and necessary medical treatment for CRPS.

IV. Whether Claimant is entitled to temporary disability benefits.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was injured on November 18, 2016 while employed as a painter. At the time of her injury Claimant had worked with the Employer for about 11 years in many business entities. Claimant's primary language is Spanish. At the time of her injury, Claimant was 44 years old. She is currently 48.
2. As a painter, Claimant prepped, prepared, and painted designated areas. Claimant had to bring ladders, tarps, buckets for paint, brushes, knives, paint handles and extensions to paint. Claimant also worked on various height ladders including extension ladders to reach high areas and paint ceilings.
3. Claimant was coming down a ladder when she reached the bottom, she stepped on the extension that she used to paint walls and twisted her right ankle. In order to keep from falling Claimant extended her right arm to grab onto the ladder and felt a pull in her right elbow.
4. Claimant was referred to Midtown Occupational Clinic and treated with Dr. Noel. He initially provided medical care and treatment for her right ankle and foot. Claimant was released to return to return to work without restrictions on December 20, 2016, but after 4 or 5 hours was having increased pain and swelling in her ankle while climbing ladders. She also had pain reaching with her right arm and hand to paint which caused pain and burning in her elbow. The pain in the elbow was so bad that she went to the emergency room. (Ex. 7, BS 274)
5. Claimant went to Lutheran Emergency Room on December 21, 2016 for pain in her elbow. X-rays were taken of her elbow and forearm and she was prescribed pain medication. Dr. Noel believed that Claimant's case should be reopened for treatment of both the ankle and elbow which resulted from the November 18, 2016 work injury. (Ex. 7, p 275; Ex. 8)
6. Claimant was diagnosed with right medial epicondylitis and received medical care and

treatment for her right elbow. Claimant was eventually referred to Dr. Sears, an orthopedic upper extremity specialist, because her right elbow condition continued to be problematic. Dr. Sears diagnosed traumatic medial epicondylitis and provided a cortisone injection. He later recommended a medial collateral ligament reconstruction with an allograft.

7. Pinnacol Advisor, Dr. Andrew Parker, recommended that the surgery be denied. On May 8, 2017 Dr. Sears responded to the denial stating:

> It should be noted that I strongly disagree with this. On my evaluation and what I documented in my charting have been clinical evaluation and testing consistent with an MCL attenuation that is not improving. These include positive milking maneuver, positive moving valgus stress test, and pain along the medial epicondyle and region of the medial collateral ligament. It is my clinical judgment that this patient would do very well with a medial collateral ligament reconstruction as I have outlined in my documentation and my recommendation stands that this patient should be a candidate for this procedure as I have stated and in contrast to the Independent medical evaluation by Dr. Parker during which he did not have the luxury of evaluating the patient clinically. (Ex. 10, p. 302)

8. Based on Dr. Parker's recommendation, the carrier denied the surgery.

9. Claimant was referred for an IME. The IME was performed by Dr. James Lindberg on August 15, 2017. At that time Claimant was complaining of medial elbow pain that felt like it was burning and pulling when she tried to lift or hold things. Dr. Lindberg noted that Claimant had developed a frozen shoulder secondary to disuse of the right elbow and numbness in the fourth and fifth fingers. He recommended an EMG and believed that significant psychological factors were affecting Claimant's recovery. He also recommended referral to another hand surgeon for a second opinion. (Ex. F, p. 143)

10. On June 6, 2017, Claimant returned to Dr. Noel. During this examination he noted Claimant had "a lot of subjective pain" complaints, but yet also documented myofascial tightness and tenderness on examination of Claimant's right upper arm and shoulder girdle. (Ex. 7, p. 279)

11. On September 7, 2017 Claimant was evaluated by Dr. Lesnak. Dr. Lesnak said that Claimant was complaining of constant right medial elbow pain and burning sensations with frequent diffuse aching and burning sensations through her entire right arm and axillary region along with frequent numbness in her little and ring fingers. (Ex. D, p. 59) Dr. Lesnak, however, had a difficult time performing a physical examination based on Claimant's apprehension of being physically examined. As a result, Dr. Lesnak proceeded directly to performing an EMG of Claimant's right upper extremity including the median, ulnar and radial nerves. The EMG showed mild to moderate diffuse peripheral poly neuropathy involving the right upper extremity. Dr. Lesnak thought the findings were most likely based on her diabetes mellitus. (Ex. D, p. 62) He believed that Claimant was not a surgical candidate for either her elbow or shoulder.

12. On September 26, 2017, Claimant started treating with Dr. Lupe Ledezma, a Spanish speaking psychologist. At this appointment, claimant told Dr. Ledezma, "Since the accident, she isolates in her room and keeps her curtains closed so that she does not

have to look outside. She has lost contact with friends and family members. Often, she avoids taking phone calls so that she does not have to talk to anyone. Her interest in formerly enjoyable activities has decreased." Ex. C, Bates 39. As part of her assessment, Dr. Ledezma performed psychological testing to help assess Claimant's psychiatric condition. Based on the test results, Dr. Ledezma concluded that "there was no evidence of [Claimant] trying to skew her responses in either a favorable or more negative light." Thus, Dr. Ledezma concluded the test results were valid. Based on the valid test results, Dr. Ledezma diagnosed Claimant with major depression, single episode, moderate; generalized anxiety disorder and psychological factors effecting other medical conditions. (Ex. C, p. 45) Dr. Ledezma also stated that Claimant's depression and anxiety were related to her work injury. Dr. Ledezma also stated that Claimant's depressive symptoms may make it difficult for her participate fully in treatment and that she may present as non-compliant. She also indicated that Claimant was noted to have poor pain tolerance. Based on her assessment, Dr. Ledezma provided recommendations for medical treatment modalities that may be effective given Claimant's psychological make up. (Ex. C, pp. 45-46)

13. Dr. Ledezma also stated that before her accident Claimant's self-esteem and identify were highly influenced by her ability to work in physically demanding jobs and that her present physical limitations created a sense of embarrassment, uselessness, hopelessness, anxiety and sadness. (Ex. C, p. 45)

14. On October 18, 2017, Claimant again reported to Dr. Ledezma her fear that she "will be unable to engage in any type of gainful employment because of her physical issues." "It is her assessment that she struggles with even household chores and activities of daily living."

15. On October 30, 2017, Dr. Ledezma also noted Claimant stated that "Based on consultations with her providers, she understands that their recommendation is that she not return to her previous line of work. This information was upsetting to her because she does not want to consider having another line of work [than painting]."

16. Soon after, on November 28, 2017, Claimant also told Dr. Ledezma that "Her main concern is the extent to which her physical issues will interfere with her ability to work in the future." (Ex. C, p. 51.)

17. On December 14, 2017, Claimant returned to Dr. Ledezma. At this appointment, Claimant advised Dr. Ledezma that it was her understanding that she is at MMI. As a result of being told she was at MMI, Claimant said that:

> This news was upsetting to her because she feels that there is still something wrong with her elbow, she is unclear' about her diagnosis and does not feel that she has exhausted all available treatment yet. Since learning about her MMI status, she has been increasingly angry, frustrated, worried, and generally upset. It is her belief that providers have not done everything possible to fix whatever is wrong with her. Moreover, it is her belief that either no one knows what is truly wrong with her or providers have ignored her symptoms. (Ex. C, p. 52.)

18. On December 15, 2017, Claimant returned to Dr. Noel. In his report from that visit, he noted that Claimant was referred to Dr. Lupe Ledezma for psychological care. He also

noted that Claimant was prescribed an antidepressant for her work-related depression. Yet upon increasing the dosage, Claimant developed headaches and stopped taking it. Dr. Noel concluded Claimant was doing quite a bit better psychiatrically. He concluded Claimant no longer needed to be on an antidepressant. As a result, he did not prescribe Claimant any antidepressant medication. (Ex. 7, p. 282) Thus, Dr. Noel recognized that Claimant was improving psychologically, and she was not as depressed as she first reported to Dr. Ledezma and Dr. Noel.

19. On January 22, 2018, Dr. Noel placed Claimant at maximum medical improvement (MMI). Upon placing Claimant at maximum medical improvement (MMI), Dr. Noel provided Claimant a 5% upper extremity impairment rating for loss of range of motion of the elbow, and a psychiatric impairment rating of 2%. He also recommended maintenance medical care. (Ex. 1, p. 8)

20. Upon placing Claimant at MMI, Dr. Ledezma recommended that additional psychological maintenance sessions continue along with continuation of antidepressant medications – even though Dr. Noel did not think Claimant needed to be on an antidepressant - and opined Claimant was likely to have permanent psychological impairment due to chronic pain and physical limitations. (Ex. C, p. 56)

21. On February 23, 2018, Respondents filed a Final Admission of Liability (FAL) based on Dr. Noel's January 22, 2018 MMI finding and rating. (Ex. GG) Claimant objected to the FAL and requested a Division Independent Medical Examination (Division IME).

22. On September 19, 2018, eight months after being placed at MMI by dr. Noel, Dr. William Watson performed the Division IME. At that time Claimant continued to complain of right arm pain located on the inside of the right arm which radiated from the elbow into the forearm and into the axilla of the right arm. She described it as burning and that touching the area was painful. Claimant was also complaining of numbness and tingling in the 4th and 5th digits. (Ex. A, p. 13) On physical examination Dr. Watson noted evidence of allodynia and hyperalgesia 18 cm above the elbow crease on the medial side and 10 cm below the medial epidcondyle on the medial forearm. (Ex. A, p. 14)

23. Dr. Watson diagnosed Claimant with elbow medial epicondylitis post injury, decreased shoulder range of motion secondary to decreased use because of extreme pain in the right elbow and medial upper arm and forearm. (Ex. A, p. 15) He noted that he found it a difficult case because of the extreme pain behaviors that he and other physicians observed. Based on his assessment, he thought that at the time of his evaluation, Claimant met some of the diagnostic components of clinical chronic regional pain syndrome (CRPS) which he identified as:

    a. Continued pain which is disproportionate to any inciting event.

    b. Sensory reports of hyperesthesia which is allodynia.

    c. Pseudomotor edema of the forearm along with decreased range of motion of the elbow.

    Dr. Watson also stated that no other diagnosis - other than CRPS - better explained Claimant's symptoms at that time. (Ex. A, p. 16) He did not, however, formally diagnose Claimant with CRPS at that time based on his clinical examination and findings. He also did not assess Claimant for any psychiatric impairment because he said that was outside his field of expertise. (Ex. A, p. 16)

24. Dr. Watson also addressed maintenance medical treatment. He stated that as part of maintenance care Claimant should have an appointment with a physician who is an expert in the diagnosis of CRPS. He also concluded that if the physician determines Claimant is a candidate for the diagnostic components to confirm CRPS, which would include a trophic test, vasomotor temperature test, pseudomotor test and sensory sympathetic nerve test, that Claimant would not be at maximum medical improvement and should have the tests and treatment. (Ex. A, p. 16)

25. Essentially, Dr. Watson affirmed MMI but concluded that if an expert in CRPS determines testing for CRPS is reasonable and necessary at some point, Claimant would not be at MMI at that time because she would need diagnostic treatment to determine the extent of her work injury and additional medical treatment to cure Claimant from the effects of her work injury.

26. On November 9, 2018, a post-DIME Final Admission of Liability (FAL) was filed which contained a copy of the Division independent medical examiner's report. (Ex. 2) Page 1 of the FAL admitted for permanent disability of 12% of the upper extremity and for a mental impairment of 0.00. In the overpayment area there is a "(see remarks)." Respondents also admitted for reasonable, necessary, and related maintenance medical treatment after MMI. (Ex. 2, p. 14) On page 4 of the FAL in the remarks section (Ex. A, p. 16) there is a statement "Pinnacol Assurance admits for mental impairment rating of 2%. Therefore, mental impairment is calculated as follows: 2% x 400 weeks x 1.3 x 313.47 = $3,260.09. Temporary benefits paid as a result of mental impairment =$0. $3260.09 - $0 = $3260.09." As a result, the FAL is inconsistent regarding the admission for mental impairment benefits.

27. Claimant completed an objection to the November 9, 2019, FAL and an application for hearing. That said, based on the documentation provided by Respondents, the objection and application were not timely. (Ex. AA and BB, pp. 337-341) And Claimant does not contend that her objection and application were timely.

28. On November 16, 2018, Dr. Jeffrey Raschbacher, in his capacity as a Pinnacol Advisor, reviewed the file at the request of Alesia G[Redacted] about the maintenance recommendation of the DIME doctor that recommended a CRPS evaluation. Without obtaining a detailed history from Claimant and physically evaluating her, Dr. Raschbacher summarily concluded that the evaluation should not be authorized because:

- The only physical finding was allodynia.
- Claimant had nonphysiologic behavior and pain behaviors which is not a clear call for a CRPS work up.
- CRPS is exceedingly rare.

29. Despite concluding that the workup for CRPS was not reasonable and necessary, Dr. Raschbacher's report lacked any meaningful analysis in support of his conclusion. (Ex. B, p. 20) Based on Dr. Raschbacher's report, the Insurer did not authorize Claimant to

undergo a CRPS evaluation at that time with a specialist in CRPS to see if Claimant's case should be reopened and CRPS testing performed based on a worsening of condition.

30. On November 26, 2018, William Quinones of the Colorado Division of Workers' Compensation Claims Management Unit sent a letter to Alesia G[Redacted] saying that the November 9, 2018 admission admitted for a 2% mental impairment rating, however the benefit total was left out of the benefit history. He requested correspondence about Pinnacol's position or the filing of an amended admission with new certification of mailing within 15 days of the letter. (Ex. 6, p. 121)

31. On December 11, 2018, Ms. G[Redacted] sent an email to Mr. Quinones which stated, "I received an error letter in regard to the 2% mental impairment. This was admitted upon the attached FA. The DIME did not assign mental impairment, we took credit for previously admitted PPD. Does this resolve this letter?" (Ex. 6, p. 105) Attached to the email was the pre-DIME FAL dated February 23, 2018 admitting for the mental impairment rating. (Ex. 6, pp. 107-118)

32. On January 14, 2019, Bert Sandoval, from the Colorado Division of Workers' Compensation, Claims Management Unit, e-mailed Liana D[Redacted] of Pinnacol Assurance following up on her phone call the previous week and asked Liana if she had a chance to look at the file. (Ex. 6, p. 104) Ms. D[Redacted] responded, "Yes, and per Alesia, William told her she didn't have to refile the admission. Are you saying that she needs to correct the admission." Ms. Sandoval responded to Ms. D[Redacted] stating that "William didn't realize that the copy Alesia sent was a duplicate copy, he thought it was a new filing." (Ex 6, p. 104) Ms. D[Redacted] responded, "Ok. So to clarify we need to send a new admission showing the pay rating?" Ms. Sandoval responded, "The remarks of the 11-9-2018 admission are not consistent with what appears in the benefit history. The remarks admit for the 2% psych of $3,260.00, but the benefit history did not reflect this. The total is 0.00 for mental impairment benefit. Is the adjuster admitting or not admitting to the 2% psych? A new admission clarifying this would be recommended." (Ex 6, p. 105)

33. On January 17, 2019, Mr. William Quinones from the Claims Management Unit sent a letter to Alesia G[Redacted] stating that "This is a follow up to my 11-26-2018 letter regarding the November 9, 2019 admission. I was seeking clarification regarding the mental impairment. The remarks section admits for 2% mental impairment; however, the benefit history showed a zero total." "When I received your email responded on 12-11-2018, I failed to realize the Final Admission included in the email was a copy of the previously admitted FA dated 2-23-2018." "It would be my recommendation that to file a new admission to clarify Pinnacol's position." Copies of the letter were sent to Nicole C[Redacted], Jeffrey Y[Redacted] and Maria P[Redacted]. (Ex 6, p. 103) Despite the recommendations, Pinnacol did not file a new FAL to clarify its position.

34. On January 15, 2019, approximately one year after being placed at MMI, and at Claimant's request, an evaluation was performed by Dr. Tashof Bernton. Dr. Bernton is an expert and specialist in the diagnosis, testing and treatment of CRPS. After physically examining Claimant, Dr. Bernton concluded that Claimant did have findings suggestive of the presence of complex regional syndrome and that further testing as

noted by the Independent Medical Examination by Dr. Watson was indicated at that time. Dr. Bernton recommended the testing to include autonomic testing battery (sometimes referred to as QSART) and stress thermography. (Ex. 15, p. 338) Dr. Bernton found that because Claimant did have the indications for testing at that time, she was no longer at MMI. (Ex. 15, p. 339)

35. On March 20, 2019, Claimant filed a Petition to Reopen her claim based on a change in medical condition and attached the January 15, 2019 report of Dr. Bernton. Then, on August 28, 2019, Claimant filed an Application for Hearing. Claimant endorsed the issue of Petition to Reopen Claim. Claimant did not, however, endorse the issue of medical benefits.

36. On May 10, 2019, approximately 16 months after Claimant was placed at MMI, Respondents had Claimant undergo an independent medical examination with Dr. John Raschbacher. In his report, Dr. Raschbacher noted that Claimant's fingers were getting worse and were "down more" or more contracted and that Claimant's right hand and finger symptoms were getting worse. Dr. Raschbacher allegedly asked Claimant if she reported all of these symptoms to Dr. Noel, which Claimant allegedly said she did. But it is not clear what "all of these symptoms" means in the context of whether her condition and symptoms were getting worse. He also noted that Claimant stated that her second and third digits of her right hand will not stretch or extend, and this occurred since they stopped doing therapy – which she said helped a lot.

37. Dr. Raschbacher then concluded by stating:

> I have little to add to the statement made as a reviewer on 11/16/ 18. True CRPS is exceedingly rare. Medical literature on the incidence or prevalence of CRPS in the population is very suggestive that true CRPS is an extremely rare diagnosis. The medical literature also suggests that malingering is a much more common entity than is CRPS. Therefore, the medical literature appears to suggest that malingering would be much more likely, medically, than CRPS, including and in particular in this case. Again, pain behaviors are not a reason to work up CRPS in the Workers' Compensation system.
>
> Besides the DIME and claimant's IME [with] Dr. Bernton, has any ATP recommended CRPS testing for claimant? (Ex. B, p. 29)

38. On August 13, 2019, Claimant returned to Dr. Bernton for a follow up examination and testing. Since her January 15, 2019, appointment with Dr. Bernton, Claimant's condition worsened even more. Dr. Bernton noted in his report that:

> The patient is concerned because she has noted that her fingers are "curling up," and she is unable to fully strengthen the fingers actively. She has noted progressive loss of strength in the hand also loss of range of motion in the shoulder and wrist and notes that she is "dropping things" with the right hand.

Dr. Bernton noted the following objective findings during his physical examination of Claimant:

- Fixed contractures of the right hand that Claimant can passively straighten but she cannot actively straighten the fingers fully.
- The second PIP has a 27-degree lag.
- The third PIP has an 18-degree lag, and
- The fourth finger PIP has a 15-degree lag.
- Minimal PIP lag in the fifth finger, but an 18-degree lag in the DIP joint.
- Slight, but definite fusiform swelling is present in the digits.
- The right hand was slightly darker than the left,
- Claimant had decreased range of motion of the wrist as well, with maximum flexion of the right wrist at 42 degrees, and maximum extension is 43 degrees
- Examination of the right shoulder demonstrated maximum flexion of 122 degrees and maximum abduction of 112 degrees, which was markedly decreased from the contralateral side.

Based on Dr. Bernton’s physical findings on examination, he assessed Claimant with the progression of findings consistent with complex regional pain syndrome with the development of some contractures at the proximal interphalangeal joints of the fingers and the presence of some fusiform swelling, shininess, and discoloration, consistent with complex regional pain syndrome. As a result, Dr. Bernton concluded Claimant was an appropriate candidate for testing for CRPS.

That same day, Dr. Bernton performed autonomic testing and stress thermography. Dr. Bernton concluded that:

- The autonomic testing battery was positive for the presence of CRPS with a laboratory scale of 4 and a clinical scale of 5.
- The stress thermography was also positive for CRPS.
- Claimant met the Colorado Division of Workers' Compensation diagnostic criteria for CRPS.

In summary, Dr. Bernton stated that he evaluated Claimant on January 15, 2019, and noted the presence of objective findings which could be consistent with complex regional pain syndrome and recommended testing. Then, he concluded:

> She has now returned [on August 13, 2019] with more evident findings on examination and positive testing for complex regional pain syndrome. She is not at Maximum Medical Improvement, and I think it is clear that she has not been. She does require treatment for complex regional pain syndrome to prevent progression of the disease and to improve her functional status and decrease her pain. This would include the use of antineuritic medications, sympathetic blockade, and topical analgesics as well as physical therapy.

> Determination of the time required to reach Maximum Medical Improvement will depend upon the patient's initial response to sympathetic blockade. I would recommend a series of three sympathetic blocks, no more than five to seven days apart to maximize the impact, in conjunction with physical therapy. Treatment is appropriate to prevent further progression of the patient's problems and to improve function and decrease pain levels.

Dr. Bernton's Testimony

39. Dr. Bernton was deposed. During his deposition, he went through his qualifications and expertise in diagnosing and treating patients with CRPS and his additional expertise and experience with thermography. He also discussed his assessment of Claimant and how he concluded Claimant developed CRPS as a result of her work injury and that her condition has worsened.

40. Dr. Bernton's reports and testimony included the following:

- On January 15, 2019, Claimant had physical findings consistent with CRPS, which included decreased range of motion of the right shoulder and wrist. There was some decreased range of motion of the fingers of the right hand with an extensor lag of the fourth finger. Dr. Bernton noted a slight color difference was present with the right side slightly darker than the left. There was some shininess of the skin noted, a finding often seen in complex regional pain syndrome, and a significant diagnostic finding. The elbow showed some diffuse tenderness and decreased range of finding. (Bernton Depo p. 8, ln. 1-9)

- Dr. Bernton was of the opinion that additional testing was necessary to confirm the diagnosis of CRPS because Dr. Lesnak had evaluated Claimant and found polyneuropathy as a potential diagnosis for Claimant's ongoing issues. Dr. Bernton explained that although diabetics can have loss of range of motion issues with injured joints, they generally do not have problems with the non-involved joints, complaints of persistent cold pain and hyperalgesia (increased sensitivity to light touch) (Bernton Depo p. 8, ln.10-25) He stated that based on a totality of Claimant's presentation that polyneuropathy or diabetes did not explain her clinical presentation but CRPS did. Claimant also had subjective complaints of sweating more on one side than the other and feeling one side is colder than the other. (Bernton Depo p. 9) Since Claimant met the clinical criteria for complex regional pain syndrome; he was of the opinion that it would be appropriate to perform objective testing to determine whether or not complex regional pain syndrome was present.

- The Medical Treatment Guidelines (MTG) recommend two objective tests which are tests that Dr. Bernton is qualified to and does perform. The first is an autonomic testing battery known as the QSART which stands for Quantitative Sudomotor Axonal Response Test. The second is stress thermography which is performed in a cold stress environment to evaluate the sympathetic response of the skin vasculature. (Bernton Depo p. 12, ln. 14-18) The advantage of the autonomic testing battery and stress thermography is that they are not subjective tests. There's nothing the patient can tell you that alters the findings. (Bernton Depo p. 12, ln 25 &

p. 13, ln. 1-5) The QSART uses objective measures of sweat function and the stress thermography involves thermographic images of the patient when they're exposed to a cold stress environment. Neither test relies on the representations made by Claimant. (Bernton Depo p. 15, ln. 11-12)

- Claimant returned for testing on August 13, 2019. Claimant had more evident findings of CRPS when she returned for testing of fusiform swelling of the digits of the hand, which is a fairly classic symptom of CRPS, which is a sausage type swelling of the digits of the hand. (Bernton Depo p. 16, ln. 12-16) Claimant met both the clinical and laboratory scales for the diagnosis of CRPS. Dr. Bernton testified that the scales used for QSART testing were researched and developed at the Mayo Clinic and are national standards that have been used for over ten years. (Bernton Depo pp. 17-19) The thermographic results were attached as Depo Exhibit 1 and Dr. Bernton noted the asymmetry between the two extremities present in the pictures. According to the doctor these test results in the presence of loss of range of motion of the effected limb, in particular the digits of the hand which is a classic finding of CRPS as well as the fusiform swelling of the fingers and the shininess of the skin support his findings. (Bernton Depo pp. 25-26) Dr. Bernton also noted a progression of clinical findings between January and August 2019 including the fingers "curling up" which is a frequent finding with CRPS but not diabetes or an injury to a specific nerve. (Bernton Depo pp. 26 & 27, ln. 14-25 & p. 28)

- Dr. Bernton was of the opinion that the work injury of an elbow strain or epicondylar strain from Claimant reaching to grab the ladder to keep herself from falling when she twisted her ankle on a paint roller worsened by the use of crutches which she used as part of the treatment of the ankle led to the development of CRPS of the upper extremity in this claim. (Bernton Depo p. 29, ln. 19-25 & p. 30 ln. 1-9) Dr. Bernton estimated she used crutches somewhere between 10 days and 4 weeks of her injury. (Bernton Depo p. 42, ln. 15-25) Dr. Bernton stated that Dr. Raschbacher's opinion that Claimant did not suffer from CRPS because there were no findings of disuse atrophy was not a basis to rule out CRPS. According to Dr. Bernton disuse atrophy is not a diagnostic criterion in either the MTGs or the Budapest criteria for the diagnosis of CRPS. He did state that it can be an indicator in more severe pathology that assists with the diagnosis of CRPS, but its absence does not mean that CRPS is not present. (Bernton Depo p. 30, ln. 10-25 & p. 31 ln. 1-4) He explained that disuse atrophy develops if you cannot move through a full range of motion, in other words if you still have some motion, you're not necessarily going to develop disuse atrophy if your range of motion is restricted. (Bernton Depo p. 40, ln. 18-24)

- Dr. Bernton was of the opinion that Claimant is not at maximum medical improvement because Claimant has a new diagnosed disorder as a result of her occupational injury that was not formally diagnosed until the tests performed in August 2019 that had not yet to be treated and as a result Claimant was not at maximum medical improvement. (Bernton Depo p. 31, 5-16) Dr. Bernton recommended initial treatment of oral and topical anti neuritic medications and physical therapy. (Bernton Depo p. 31, ln. 17-25) and other care of her neuritic pain along with an initial sympathetic block (Bernton Depo p. 32-33)

- Dr. Bernton disagreed with Dr. Raschbacher’s opinion that because CRPS is so rare and malingering is more common that is more medically probably that Claimant is malingering in this case and does not have CRPS as being illogical because you must look at the appropriate diagnostic criteria when making a diagnosis, and if you used Dr. Raschbacher’s logic then no one with a rare disorder would be diagnosed with the disorder but would rather be determined to be a malinger. (Bernton Depo p. 35) He also dismissed Dr. Raschbacher’s opinion that CRPS was over-diagnosed (statement from MTGs) because the guidelines require objective diagnostic testing which was done in this case and differential diagnoses ruled out. (Bernton Depo p. 36, ln. 9-25 & p. 37, ln. 1-15)
- On cross examination Dr. Bernton was questioned about general statements in the MTGs and selected medical literature articles from annotations of the CRPS MTGs. The first was a statement in the MTGs that the diagnosis of CRPS continues to be controversial. Dr. Bernton explained that he agreed that the statement was in the guidelines, not because the existence of CRPS was controversial, but in terms of how you diagnosis the condition and the specific criteria necessary to make the diagnosis. (Bernton Depo p. 50, ln. 18-25 & p. 51, ln. 1-5)
- Dr. Bernton was read random statements from a 2008 study titled Long Term skin Temperature measurements - A practical diagnostic tool in complex regional pain syndrome, which Dr. Bernton said was done to help establish whether individuals with significant psychological conditions or involved in workers’ compensation or litigation with secondary gain issues would affect the outcome of temperature testing as a variable of the study. (Bernton Depo p. 63, ln. 13-17) Dr. Bernton explained that the medical purpose of the study was to determine whether or not a particular temperature measurement which was less sophisticated than the stress thermography now used and more limited could successfully differentiate between patients with CRPS patients without it. (Bernton Depo p. 64, ln. 1-11) One of the variables they wanted to look at was whether the temperature differences could differentiate whether or not psychological pathology was present. That was the reason they separated that group out. There was no indication that effected the thermographic test results.
- When asked about the statement on page 16 of the MTGs that indicates “patient response testing can be problematic in medical legal settings” Dr. Bernton indicated that he agreed with the statement, but they were referring to subjective responses may be less reliable, but were not saying that objective testing is less reliable in a medical legal setting because that’s why you do it. You attempt to find criteria that is independent of the patient’s subjective response. (Bernton Depo p. 64, ln. 17-25 & p. 65, ln. 1-7)

41. The ALJ credits the opinions of Dr. Dr. Bernton as set forth in his reports and testimony. The ALJ finds his testimony to be credible and highly persuasive based on his expertise in diagnosing and treating CRPS and the fact that he based his opinions on his physical examination of Claimant and the CRPS test results which added an objective component to his assessment of Claimant’s condition.

Claimant's Testimony

42. Claimant testified that over time her condition has continued to deteriorate since being placed at maximum medical improvement. She began to notice color changes, and one hand felt colder than the other, and her pain has continued to intensify. She has more swelling and she has trouble gripping with the hand because her fingers are becoming harder to move.

43. Claimant testified that during her injury she became involved with a marketing company called Zurvita Zeal. Her mother was using the products which are dietary supplements, vitamins and other products made from natural ingredients such as plants.

44. She bought a membership to Zurvita on December 19, 2016. The company requires its members to buy samples for customers and then make sales. The company also required members to attend conventions to learn more about the products and how to sell them. Claimant testified that she was responsible for the payment of costs of travel, hotels, food and other expenses while at the conventions. These were not paid by the company.

45. Claimant testified that she would sign people up under her number to make sales and get credit for their sales as well as her own in the form of commissions. Claimant testified that when she signed her family up to make sales that was when she began making money selling Zurvita.

46. Claimant testified that physically this involved making phone calls and initially going out to potential customers with a trainer and then eventually on her own. Claimant testified it was not a physical job and the products were either directly shipped to the customers or she would deliver the light ones. Her husband would help her with any heavy items.

47. Claimant testified that she won a trip to Disneyland planned for June 2017 as a result of her Zurvita sales, she was unrepresented then and called Alesia G[Redacted] to let her know about the trip and that she needed to reschedule a medical appointment that was scheduled during the trip. Claimant did not, however, state that this trip was for work. Ms. G[Redacted] testified that the last conversation she had with Claimant before representation was on May 25, 2017. (G[Redacted] Depo p. 28)

48. Claimant testified that she travelled for Zurvita conventions in 2017, 2018 and part of 2019. She had to attend 3 conventions a year. The last Zurvita convention Claimant attended was in June 2019. In addition to the convention attendance, Claimant won trips as a result of her success in selling Zurvita and travelled with her family.

49. Claimant provided bank records documenting some of her Zurvita earnings but testified that she also had expenses associated with the trips that were not accounted for. Claimant did not, however, provide any records documenting her expenses. Based on the evidence submitted at hearing, the record relating to Claimant's earnings and expenses with Zurvita is incomplete. Thus, the ALJ cannot determine the net income Claimant earned after accounting for her expenses.

Credibility of Claimant

50. At hearing, Claimant was confronted with her Facebook history. At hearing, Claimant admitted that despite her statements to Dr. Ledezma, she was traveling extensively

throughout this time, in the U.S. and Mexico, to visit family and along with her work in sales selling a product called Zurvita Zeal. Claimant traveled to Las Vegas, Kansas City, Santa Fe, Disney in Orlando Florida, Puerto Vallarta Mexico, and Anaheim California the period of time between the date of injury and that statement made to Dr. Ledezma ("since the accident…isolates..keeps her curtains closed…lost contact...")

51. Following the first appointment with Dr. Ledezma, Claimant was traveling and appeared fairly active at the same time she was asserting that she could not function and could not work. Claimant represented to Dr. Ledezma that she was psychologically impacted by this situation. After making that representation to Dr. Ledezma, Claimant traveled to Memphis, Tennessee, back to Orlando Florida, Hollywood, California, Fort Worth, Texas, Dallas, Texas, Hawaii and Kansas City. She also went hiking, enjoyed the beach and tourist activities, posted live videos, published sales material, welcomed new team members, and joined the 2018 Grand Convention in Denver, Colorado for Zurvita. Comparison of the Facebook activity with representations and assertions to Dr. Ledezma and other providers suggests Claimant was not revealing all of her activities to her doctors. That said, despite all of her traveling and selling Zurvita supplements, Claimant's traveling and work does not appear to have exceeded her physical restrictions issued by Dr. Noel. It does, however, suggest that Claimant was more active than her medical records show. Despite the difference in Claimant's statements in her medical records – and her actual activities – the ALJ does not find Claimant is intentionally misrepresenting her symptoms or that her symptoms do not exist. Claimant's ability to travel and attempt to sell products does not negate from the fact that Claimant's work injury prevented her from performing the physical aspects of her occupation and that she was distressed, depressed, and worried about how she would make an income and support herself. The ALJ also finds that her distress was amplified when the surgery recommended by one of her treating physicians – to help her get back to work - was denied.

52. Moreover, in this case, the ALJ does not view the discrepancies in Claimant's medical records when compared to the documentation of her activities on Facebook to be persuasive evidence that Claimant remains at MMI and that her condition has not worsened. While the ALJ agrees that the reliability of Claimant's subjective complaints can be essential in determining a diagnosis and assessing causation, it would be false dichotomy to conclude that a finding that Claimant is overstating her symptoms and disability to some extent prevents finding that her condition has worsened. In other words, it is not an "A" or "B" analysis. Both can be true. Claimant can be overstating some of her symptoms to some extent and her condition can be worse.

53. The ALJ thus finds that Claimant overstated her psychological symptoms at times, but the ALJ further finds that she is not doing it intentionally to mislead her medical providers or to receive benefits. Instead, the ALJ finds that based on Dr. Ledezma's reports, Claimant's overstatements are more likely related to her underlying psychological makeup and her response to her injury which has prevented her from performing the types of manual labor she used to perform to make a living. The ALJ also finds that Claimant is not overstating her physical symptoms and limitations about her pain and limitations regarding her right upper extremity. As a result, the ALJ finds that Claimant's description of her worsening of her physical condition since being placed

at MMI is credible and persuasive. This finding is based primarily on the testimony and diagnosis of CRPS that was made by Dr. Bernton and supported by his physical findings and test results as well as Claimant's testimony and her statements contained in the medical records.

Dr. Raschbacher's Testimony

54. Dr. Raschbacher evaluated Claimant on May 10, 2019, reviewed the records, reviewed Claimant's Facebook material, watched Claimant's testimony, and testified as an expert. He discussed his examination of claimant. *Rasch. Depo. p. 11 -12.* Dr. Raschbacher noted that there was no disuse atrophy in the right upper extremity. His examination was in May 2019. She reported to him that she could not use her right upper extremity normally and exhibited that she could barely use it. Claimant had been complaining of such pain in her right upper extremity that it could not be examined by Dr. Lesnak in early September 2017. *Ex. D.* Given this situation, Dr. Raschbacher would expect disuse atrophy. *Rasch. Depo. p. 16-17.* Following his examination, he determined that she was not restricting the use of the right upper extremity as she had represented.

55. Dr. Raschbacher concluded that the difference in measurement in the forearms between the left and the right was because of muscle mass, not swelling. *Rasch. Depo. p. 20, l12-13.* His measurement was a .6 cm difference between the forearms. Dr. Raschbacher discussed his observation of Claimant when the parties appeared at the December 2019 hearing. He noted that he saw her shake hands with the interpreter using her right hand and to pick up a piece of paper with the right hand normally off the table in the OAC waiting room. He also noted that Claimant's actual activities do not show loss of function. As a result, it is Dr. Raschbacher's opinion that Claimant has not experienced a worsening of her work-related condition.

56. The ALJ, however, does not find Dr. Raschbacher's opinions to be credible or persuasive for several reasons.

First, through questioning of Dr. Raschbacher, Respondents point out that while the Medical Treatment Guidelines recommend thermography and autonomic testing to help diagnose CRPS, the test results may be affected by other medical conditions such as polyneuropathy - from which Claimant suffers. But absent from Dr. Raschbacher's testimony is whether – in this case – Claimant's polyneuropathy actually affected the test results. Also absent from Dr. Raschbacher's testimony is even if Claimant's polyneuropathy affected the test results, how did it affect the test results. There is nothing in the Guidelines or Dr. Raschbacher's testimony stating that Claimant's underlying polyneuropathy renders the test results ineffective in diagnosing CRPS.

On the other hand, Dr. Bernton did testify about how Claimant's polyneuropathy can affect the thermography results and whether they did in this case. And, according to Dr. Bernton, when polyneuropathy does affect the thermography results, you tend to see findings that are more symmetrical instead of asymmetric as found on Claimants' testing. As stated by Dr. Bernton:

> Well, with the polyneuropathy, you can see changes in the -- the sympathetic nerve runs along with the peripheral nerves. If you have disease of the peripheral nerves, you can have changes as well in the

> sympathetic nerve. However, they are generally symmetric with a peripheral polyneuropathy, and although it does make for a more -- you know, you have to look at it more and you have to take that into account when the interpretation is made.
>
> It was my assessment and remains my assessment that despite the presence of polyneuropathy, there are asymmetries in the temperature and also in the thermography that would not be expected to be seen in polyneuropathy but are more consistent with complex regional pain syndrome.
>
> As in any situation when there is a compounding variable, possible other diagnosis that can affect results to some degree, you need to very carefully look at it and then make an assessment of whether what you are seeing is consistent with polyneuropathy or whether it is most consistent with complex regional pain syndrome.
>
> It is most consistent with complex regional pain syndrome.

57. Second, during his deposition, Dr. Raschbacher was asked whether he agrees that Dr. Bernton is an expert in the "diagnosis, treatment, and evaluation of complex regional pain syndrome based upon his experience and training as a physician." Dr. Raschbacher answered by stating that "I suppose Dr. Bernton is as expert as anyone, particularly given that this is such a rare diagnosis for true CRPS." In essence, Dr. Raschbacher is saying two things. First, that Dr. Bernton is no more of an expert than he is. Second, because CRPS is rare, there can be no experts, there are no experts, and therefore Dr. Bernton is not an expert.

58. Yet earlier in his deposition, Dr. Raschbacher testified that he had reviewed Dr. Bernton's September 5, 2019, deposition on at least two occasions. Moreover, in his deposition, Dr. Bernton goes through his qualifications, expertise, and specialization as it relates to CRPS. For example, Dr. Bernton testified that he is:

    - Board certified in internal medicine.
    - Board certified in occupational medicine.
    - Board certified by the American Academy of Thermography.
    - A Diplomate of the American Academy of Thermography.
    - President of the American Academy of Thermography.
    - A member of the external review committee for the Chronic Regional Pain Syndrome Guidelines.
    - The director of his practice's laboratory which performs autonomic testing, also known as the QSART, and thermography.
    - Has performed hundreds of diagnostic evaluations for CRPS.
    - Receives a large number of referrals from other physicians in Colorado and other states to assess and treat patients for CRPS.

- Assesses 5-10 patients per month for CRPS.
- Although the condition is rare, he usually has 2-3 CRPS patients in his practice at any given time. The severity of which ranges from fairly mild to extreme.
- Level II Accredited.

Moreover, Dr. Bernton was admitted as an expert, without objection by Respondents, in:

- Internal medicine, and
- Occupational medicine, with a specialty in

  i. thermography, and

  ii. complex regional pain syndrome.

Thus, the record is clear that Dr. Bernton is a board-certified expert with additional training and expertise in the area of CRPS. That Dr. Raschbacher is unwilling to acknowledge that Dr. Bernton has more training and experience regarding the diagnosis and treatment of CRPS reveals a lack of objectivity by Dr. Raschbacher.

59. Third, although Dr. Raschbacher was admitted as an expert in occupational medicine based on his training and experience, he lacks any specialized training and experience in diagnosing CRPS and treating patients with CRPS. And he is not board certified in any area.

60. Fourth, during his deposition, Dr. Raschbacher was asked whether he is familiar with the *CRPS Guidelines*. In answering the question, he qualified his answers. For example, he testified that he is “reasonably familiar” with *Guidelines*. He qualified his answer even more by stating that the Guidelines are “extensive and have a lot of technical data.” As a result, the ALJ construes his answers to mean that he is not well versed in the foundation, interpretation, and application of the *CRPS Guidelines*.

61. Fifth, Dr. Raschbacher’s analysis is based on the rarity of the condition. As explained in his latest report, the primary foundation of Dr. Raschbacher’s analysis is based on these premises:

    i. CRPS is really rare.

    ii. Malingering is not as rare.

    iii. Thus, it is more likely Claimant is malingering and does not have CRPS.

The ALJ agrees with Dr. Raschbacher that the *CRPS Guidelines* are extensive and have a lot of technical information. For example, the CRPS Guidelines delineate to the various methods that can be used to help diagnose CRPS. And Dr. Raschbacher did not rely on those methods – as did Dr. Bernton. Moreover, after scouring the *CRPS Guidelines* in detail, the ALJ was unable to find any reference to the causation assessment relied on by Dr. Raschbacher. The *CRPS Guidelines* do not have any analytical framework to diagnose CRPS by comparing the rarity of the condition to the rarity of some other condition such as malingering. Instead, the *Guidelines* set forth concrete physical findings and testing that can be used to help diagnose CRPS. In the end, Dr. Raschbacher failed to adequately analyze the physical findings of other physicians and the test results performed by Dr. Bernton. He merely ignored the facts that did not support finding Claimant has CRPS and that her condition has worsened.

62. Sixth, in his IME, Dr. Raschbacher was asked whether anyone other than Dr. Watson and Dr. Bernton suggested testing for CRPS. After answering the question, he gratuitously added that not only did Dr. Bernton recommend the testing, but that Dr. Bernton "would do this testing in his office and bill for such." (Ex. B, p. 29) The ALJ infers that Dr. Raschbacher is insinuating that Dr. Bernton is only recommending the testing because he has a financial interest in making such a recommendation and not because the testing is medically reasonable and necessary. The ALJ, however, rejects making such an inference based on the evidence submitted in this matter.

63. In the end, the ALJ concludes that Dr. Raschbacher's "analysis" is more akin to name calling than the application of any expertise to the facts of this case. Thus, his observations, findings, and opinions are not found to be credible or persuasive.

64. On the other hand, Dr. Bernton is a qualified and expert in the diagnosis and treatment of CRPS. Moreover, his opinions are based on his physical evaluation of Claimant, his review of her medical records, and the results of his objective testing combined with his analysis of that information based on his expertise.

Ultimate Findings

65. The November 9, 2018 FAL was valid, and Claimant's case closed.

66. Based on the credible testimony of Claimant and the credible and persuasive testimony of Dr. Bernton, Claimant has suffered a change in medical condition. After Claimant was placed at MMI, her condition worsened, and she more fully developed chronic regional pain syndrome because of her work injury.

67. Based on the credible and persuasive testimony of Dr. Bernton, Claimant needs additional medical treatment to cure her from the effects of her work injury which has resulted in Claimant developing CRPS. The date Claimant's condition changed and worsened, and she needed additional medical treatment to cure her from the effects of her work injury, is January 15, 2019, the date Dr. Bernton evaluated Claimant and recommended testing for CRPS.

68. Claimant has also suffered a change in condition as it relates to her disability. Since being placed at MMI, Claimant has become more disabled because of the decreased strength in her right hand, contracture of her fingers, increased swelling, and overall decrease in function of her right upper extremity in general. The date Claimant suffered a change in condition as is relates to her disability is also found to be January 15, 2019.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether the November 9, 2018 Final Admission of Liability properly closed the claim.

The ALJ finds the case was properly closed. Section 8-43-203(2)(b)(II)(A) provides for the requirements of form and content for a valid FAL. These requirements are part of a statutory scheme designed to promote, encourage, and ensure prompt payment of compensation without the necessity of a formal administrative determination in cases not presenting a legitimate controversy. *Olivas–Soto v. Indus. Claim Appeals Office*, 143 P.3d 1178, 1179 (Colo.App.2006). In light of that intent, one purpose of the requirements is to put the claimant on notice of the exact basis of the admitted or denied liability so that the claimant can make an informed decision whether to accept or contest the final admission. *See Smith v. Myron Stratton Home*, 676 P.2d 1196, 1200 (Colo.1984) (an admission of liability serves to notify an injured worker of the legal ramifications associated with a claim). *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429, 432 (Colo. App. 2010). Whether a FAL is valid is a jurisdictional question, and the inadequacy of a FAL may be raised at any time. *Reed. V. Demetre Painting,* W.C. No. 3-069-138 (January 15, 1993).

On November 9, 2018, a post-DIME Final Admission of Liability (FAL) was filed which contained a copy of the Division independent medical examiner's report. Page 1 of the FAL admits for permanent disability of 12% of the upper extremity and for a mental impairment of 0.00. In the overpayment area there is a "(see remarks)." Respondents also admitted for reasonable, necessary, and related medical treatment after MMI. On page 4 of the FAL in the remarks section there is a statement "Pinnacol Assurance admits for mental impairment rating of 2%. Therefore, mental impairment is calculated as follows: 2% x 400 weeks x 1.3 x 313.47 = $3,260.09. Temporary benefits paid as a result of mental impairment =$0. $3260.09 - $0 = $3260.09." As a result, the FAL is inconsistent regarding the admission for mental impairment benefits. But such inconsistency does not invalidate the FAL. Instead, it created a ripe issue for which Claimant could have objected to the FAL and filed an application for hearing to address the inconsistency. Claimant, however, did not do either in a timely manner. As a result, her case was properly closed pursuant to the FAL.

Even if the "recommendations" of Mr. Quinones were found to create an obligation for Respondents to file an amended FAL, the effect would be limited. Claimant would not be allowed to address MMI or medical benefits following a finding that a portion of the FAL was inaccurate and had to be amended since there was not a timely objection to the November 9, 2018 FAL.

This is like the situation in *Leewaye v. Harrison Sch. Dist. #2,* W.C. 4-649-073 (ICAO October 13, 2006) *remanded regarding other issues*. In that matter, the Division wrote asking for a correction on the final admission, and the respondents complied. Claimant had not filed a timely objection to the FA. Claimant then asserted that her objection to the corrected FA allowed her to pursue questions of PPD and MMI. The ICAO stated, "The Division's correspondence to Respondents noting that there appeared to be an arithmetical, typographical, or clerical error with regard to the calculation of temporary total disability benefits did not invite a *general* reopening of all issues admitted or denied in the…final admission. Rather, the Division sought a correction of the calculation regarding that specific issue and no other. Under these circumstances, the claimant's failure to object in a timely fashion to the first final admission closed all issues except temporary total disability, which was voluntarily reopened pursuant to the corrected final admission." *Id.* In reaching this conclusion, the *Leeway* Panel referred to the case of *Drinkhouse v. Mountain Board of Cooperative Education Services*, W.C. No. 4-368-354 (February 7, 2003) *affirmed Drinkhouse v. Industrial Claim Appeals Office*, (Colo. App. No. 03CA0438, March 4, 2004) (not selected for publication). The finding of *Drinkhouse* was that an amended FA admitting for *Grover* medical benefits did not reopen other issues contained in a prior FA, which was not objected to by the claimant. *See also Friedland v. Oracle America Inc.,* W.C. No. 4-833-682-001 (ICAO December 20, 2019) *(footnote 1); Craig v. Minimart, Inc.* W.C. No. 4-604-109 (ICAO June 14, 2011); *Silva v. Poudre School Dist.,* W.C. No. 4-651-643 (ICAO April 30, 2008). Here, if Respondents had followed Mr. Quinones' "recommendation" to clarify the statements regarding mental impairment, the amended FAL would only reopen the issue of credit for permanent mental impairment and whether Respondents were admitting for permanent mental impairment.

As a result, Claimant's challenge to a new FAL, if filed, would have been limited to mental impairment benefits. It would not serve to reopen the question of any other issue, including the DIME's impairment rating or MMI determination. For that, Claimant would need to carry her burden to prove a worsening of condition – as she did. As a result, the FAL dated November 9, 2018, properly closed Claimant's case and Claimant had to prove a worsening of condition.

II. Whether Claimant established that her compensable injury has worsened and that she is no longer at MMI.

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the ground of, *inter alia*, change in condition. Claimant shoulders the burden of proving her condition has changed and her entitlement to benefits by a preponderance of the evidence. Section 8-43-201; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in Claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). Reopening is warranted if Claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988).

The question of whether Claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan, supra.* Similarly, the question of whether the disability and need for treatment were caused by the industrial injury or by an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office, 49 P.3d 1187 (Colo. App. 2002).*

As found, Claimant established by a preponderance of the evidence that there has been a change in her work-related condition and that her condition is worse. As found, due to her work-related injury, Claimant developed CRPS and needs additional medical treatment to cure her from the effects of her work injury. The date Claimant's condition worsened, and she became entitled to medical treatment to cure her from the effects of her work-related injury is January 15, 2019, which is the date Dr. Bernton determined Claimant needed additional testing to determine whether Claimant developed CRPS and required additional treatment to cure her from the effects of her work injury.

III. Whether Claimant is entitled to reasonable and necessary medical treatment for CRPS.

On March 20, 2019, Claimant filed a Petition to Reopen her claim based on a change in medical condition. Then, on August 28, 2019, Claimant filed an Application for Hearing. Claimant endorsed the issue of Petition to Reopen Claim. Claimant did not, however, endorse medical benefits.

At hearing, and in her post hearing filing, Claimant made a request for a general award of medical benefits to treat her CRPS. Respondents, however, objected to the issue of medical benefits going forward.

After reviewing the evidence and making detailed findings, the ALJ found that an authorized treating physician has not prescribed any specific treatment – which is currently at issue - to cure Claimant from the effects of her work injury. The only doctor who has commented on additional treatment to cure Claimant from the effects of her work injury is Dr. Bernton.

Dr. Bernton, however, is not an authorized provider. Thus, the ALJ is without jurisdiction to order Respondents to pay for any specific treatment that is not prescribed by an authorized provider. *See Potter v. Grounds Service Company*, W.C. No. 4-935-523-04 (Aug. 15, 2018); *Torres v. City and County of Denver*, W.C. No. 4-917-329-03 (May 15, 2018); and *Short v. Property Management of Telluride*, W.C. No. 3-100-726 (May 4, 1995). Such opinions hold that an ALJ may not order a Respondent to pay for treatment that has not been prescribed by an authorized provider unless it is requested pursuant to a DIME and is an "essential test' as referenced by WCRP 11-5(D).

Thus, because the treatment suggested by Dr. Bernton to treat Claimant for her worsened condition has not been prescribed by an authorized treating physician, the ALJ is without jurisdiction to order Respondents to pay for such. Thus, Claimant's request for a general award of medical benefits to treat her CRPS is denied, without prejudice.

IV. Whether Claimant is entitled to temporary total and temporary partial disability benefits.

Section 8-43-303(1), C.R.S. provides that a worker's compensation award may be reopened based on a change in condition. In seeking to reopen a claim the claimant shoulders the burden of proving his condition has changed and that she is entitled to benefits by a preponderance of the evidence. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63, 65 (Colo. App. 1986). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* W.C. No. 4-358-465 (ICAO, Oct. 25, 2006). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* W.C. No. 4-543-945 (ICAO, July 19, 2004).

As found, Claimant has also suffered a change in condition as it relates to her disability. Since being placed at MMI, Claimant has become more disabled based on the decreased strength in her right hand, contracture of her fingers, increased swelling, and overall decrease in function of her right upper extremity in general. The date Claimant suffered a change in condition as is relates to her disability is also found to be January 15, 2019.

Claimant thus has also established by a preponderance of the evidence that she is entitled to temporary disability benefits as of January 15, 2019. The record, however, is not clear, about the amount of net income Claimant earned from Zurvita since January 15, 2019. As a result, the ALJ is unable to award a specific amount of temporary disability benefits. Therefore, the issue regarding the amount of temporary disability benefits payable to Claimant as of January 15, 2019 and continuing is reserved.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The November 9, 2018 Final Admission of Liability properly closed the claim. As a result, Claimant had to establish a worsening of her condition to obtain additional medical benefits to cure her from the effects of her work injury and to obtain additional temporary disability benefits.

2. Claimant's petition to reopen is granted as of January 15, 2019.

3. Claimant's work-related injury has resulted in CRPS and Claimant's condition has worsened since being placed at MMI. That said, because an authorized treating physician has not prescribed any specific treatment, the ALJ is without jurisdiction to award specific treatment for Claimant

4. Claimant is entitled to temporary disability benefits as of January 15, 2019. The record, however, is incomplete for the ALJ to award a specific amount of temporary disability benefits. The parties are therefore ordered to attend a settlement conference at the Division of Workers' Compensation in an to attempt to resolve the amount of temporary disability benefits payable to Claimant. If the parties cannot resolve the issue, either party may file an application for hearing to have the amount of temporary disability benefits payable to Claimant resolved by an ALJ.

5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 11, 2021.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-122-992-001

ISSUE

1. Whether Claimant proved by a preponderance of the evidence that he sustained a compensable injury arising out of the course his employment with Employer on April 19, 2018.

2. Whether Claimant proved by a preponderance of the evidence that he is entitled to reasonable and necessary medical benefits arising out of his work-related injury on April 19, 2018.

3. Whether Claimant proved by a preponderance of the evidence that he is entitled to temporary disability benefits arising out of his work-related injury on April 19, 2018.

4. Whether Claimant proved by a preponderance of the evidence that he is entitled to an award for disfigurement.

5. Whether Claimant was entitled to elect his own authorized treating physician.

6. Claimant's average weekly wage.

7. Whether Claimant proved by a preponderance of the evidence an entitlement to penalties for:

    a. Employer's failure to maintain Workers' Compensation Insurance.

    b. Employer's failure to timely admit or deny liability;

    c. Employer's failure to pay temporary disability benefits

    d. Employer's failure to provide and furnish medical treatment; and/or

    e. Employer's failure to provide Claimant with a choice of physicians.

FINDINGS OF FACT

1. Claimant worked for Employer performing demolition, asbestos removal, and abatement. Employer is a staffing company that assigned Claimant to perform work for various other entities. On April 19, 2018, Claimant sustained a fracture of his left ankle while performing abatement work for Employer, subcontracted to [Redacted].

2. At the time of his injury, Claimant earned $22.00 per hour and worked approximately 40 hours per week.

3. Following the injury, Claimant notified Darrick B B[Redacted], owner of Employer, who instructed Claimant to go home and rest. After approximately 5-6 days, Claimant's condition had not improved, and Mr. B[Redacted] advised Claimant to seek treatment at Concentra. Employer did not provide Claimant with a choice of physicians to oversee Claimant's care.

4. Claimant went to Concentra on April 26, 2019 on instructions from Mr. B[Redacted]. (Ex. 11). Concentra performed x-rays, which revealed a Weber type B fracture of the left fibula with posterior and proximal displacement. (Ex. 11 and 13).

5. On May 8, 2018, Michael Zyzda, D.P.M., of Colorado Podiatry, performed an open reduction and internal fixation (ORIF) of Claimant's left fibula fracture at Summit View Surgery Center. (Ex. 14). Following surgery, Claimant was initially placed on crutches with no weight bearing. On May 31, 2018, Dr. Zyzda permitted Claimant to transition into a walking boot with "strict instructions" to remain non-weight bearing for an additional three weeks. (Ex. 14). On August 6, 2020, Dr. Zyzda opined that Claimant could progress to starting work "in the next week or so."

6. Claimant began physical therapy on July 2, 2018 at Concentra and attended approximately 28 physical therapy sessions between July 2, 2018 and October 15, 2018. In addition, Claimant underwent "work hardening" at Concentra. Claimant received care at Concentra through February 28, 2019.

7. On July 18, 2018, Jenelle Tittelfitz, PA-C, (Physician assistant for Amanda Cava, M.D.) authorized Claimant to return to work on modified duty, with restrictions, including remaining seated 90% of the time, no driving a company vehicle, no squatting, no kneeling, no walking on uneven terrain, and lifting/pushing/pulling restrictions of 10 pounds. (Ex. 11). On July 27, 2018, PA Tittelfitz noted that Claimant should elevate and ice his foot periodically, and that he should limit work to "office type work only, no construction sites. (Ex. 11).

8. On September 10, 2018, Claimant's medical restrictions were reduced to sitting 50% of the time, and no lifting over 20 pounds and no climbing ladders. (Ex. 11).

9. On November 3, 2018, an MRI of Claimant's left ankle was performed at Health Images. The MRI was interpreted as showing intermediate/high-grade tearing of the deltoid ligament, scarring of the lateral ankle ligaments, and edema in the sinus tarsi. (Ex. 12). Following the MRI, Ms. Tittelfitz referred Claimant back to Dr. Zyzda.

10. On December 19, 2018, Dr. Zyzda performed a celestone injection into Mr. [Claimant]'s sinus tarsi and switched Mr. [Claimant] from work hardening/physical therapy to pool therapy. (Ex. 11).

11. Claimant's work restrictions of sitting 50% of the time and no lifting more than 20 pounds remained in place until February 7, 2019, at which time Dr. Cava cleared Claimant to return to work full duty. (Ex. 11).

12. On February 28, 2019, Amanda Cava, M.D., placed Mr. [Claimant] at MMI, and recommended follow-up care with Dr. Zyzda 1-2 times over the following six to twelve months if needed. Dr. Cava assigned Claimant a 1% lower extremity impairment rating due to decreased range of motion in the hindfoot. (Ex. 11).

13. At the time of Claimant's injury, Employer did not have Workers' Compensation insurance. Employer paid a portion of Claimant's medical bills but paid no bills for treatment received after August 9, 2018. Claimant received bills from health care providers, including Health Images and Colorado Podiatry Consultants, P.C., including, but not limited to, those from Colorado Podiatry Consultants, PC, and Health Images. (Ex. 15).

14. On October 31, 2018, after receiving his first medical bills for his work-related injury, Claimant filed a Worker's Compensation claim. (Ex. 16). The Division subsequently determined Employer was uninsured. (Ex. 16).

15. As a result of his work-related injury, Claimant incurred medical expenses for reasonable and necessary treatment from Summit View Surgery Center, Concentra, Health Images and Colorado Podiatry totaling $35,939.10. Employer paid a total of $9.759.68, some of the balance was written off by providers, as discussed below.

16. Concentra billed $9,942.60 for Claimant's medical services and physical therapy. Employer or Mr. B[Redacted] paid Concentra $2,849.60 for Claimant's treatment. The remainder of Claimant's balance at Concentra was written off by Concentra as "bad debt." (Ex. 11).

17. Colorado Podiatry Consultants billed $3,004.00 for Claimant's podiatric treatment. Employer or Mr. B[Redacted] paid Concentra $1,984.25 for Claimant's treatment. Colorado Podiatry applied adjustments to payments for Claimant's treatment in the amount of $744.75, leaving an outstanding balance of $275.00. (Ex. 14).

18. Health Images billed $1,742.00 for Claimant's November 3, 2018 MRI of his left ankle. Neither Employer nor Mr. B[Redacted] has paid for Claimant's MRI. Claimant has an outstanding balance of $1,742.00 at Health Images and has received bills from Health Images. (Ex. 12).

19. Summit View Surgery Center billed $20,200.50 for Claimant's May 8, 2018 ankle surgery. Employer or Mr. B[Redacted] paid $4,925.80 to Summit View Surgery Center for Claimant's May 8, 2018 surgery. Summit View Surgery Center wrote off the balance of Claimant's medical expenses. (Ex. 13). (The Summit View Surgery Center invoice indicates "W/O Self Pay" which the ALJ infers was a write-off of Claimant's surgical expenses and not a payment).

20. Claimant testified he worked for various entities owned or controlled by Darrick B[Redacted], owner of Employer for four years, performing demolition, asbestos removal, and abatement. One such entity was named [Redacted]. Claimant testified that at [Redacted] he performed the same work as at Employer and both entities employed the same staff before his injury.

21. Claimant testified that in 2018, prior to his injury, he worked primarily for Employer, but he would also take side jobs at [Redacted], LLC and [Redacted], Inc. doing the same type of heavy labor work. From Employer, Claimant earned an average of $880 a week (40 hours per week at $22.00 per hour). (Ex. 5). Between January 1, 2018 and April 19, 2018, Claimant additionally earned a total of $833.25 for work performed for [Redacted], and $1651.00 from [Redacted]. The ALJ finds that Claimant's average weekly wage for all employment from January 1, 2018 until April 19, 2108 was $1,044.24. (Ex. 3, 4 & 5).

22. Claimant testified Employer periodically permitted Claimant to work and paid Claimant wages after his injury, sometimes for work performed, and other times without performing work, but did not otherwise provide temporary total or partial disability benefits. Claimant testified he requested his wage records from Darrick B[Redacted], but no records were provided. No evidence was offered or admitted that Employer offered Claimant modified employment in writing, although Claimant testified that he did return to work for Employer, doing office work periodically at approximately 8 hours per week at the rate of $15.00 per hour. Claimant also testified he then worked for [Redacted], another entity associated with Mr. B[Redacted], also performing office work at the rate of $15.00 per hour.

23. Employer is a Delaware corporation. On April 6, 2018, Employer filed a Statement Curing Delinquency with the Colorado Secretary of State listing its principal business address as 2851 S. Parker Road, Suite 1-1230, Aurora, CO 80014, and its mailing address as 4942 Altura Street, Denver, CO 80239. Darrick B[Redacted] was identified as the registered agent for Employer. (Ex. 8).

24. Claimant testified that sometime around October 2018, Employer switched its name to "[Redacted]," and after that time he no longer performed work for Employer but performed the same functions for [Redacted]. Claimant testified that [Redacted] and Employer operated out of the same office, had the same employees, and performed the same work. Claimant testified that both Employer and [Redacted] maintained offices at 5707 W. 6th Ave., Suite 211, Lakewood, CO 80214.

25. [Redacted], Inc. is a Colorado Profit Corporation incorporated on April 5, 2018. [Redacted]'s principal business address was 4942 Altura Street, Denver, CO 80239. [Redacted]'s registered agent is Venissa L. B[Redacted], whom Claimant testified is Darrick B[Redacted]'s daughter. Claimant testified that Mr. B[Redacted] was the owner of both Employer and [Redacted]. (Ex. 7).

26. From April 19, 2018 until December 31, 2018, Claimant was paid $12,015.50. by [Redacted] and Employer combined. (Ex. 1, Ex. 2, Ex. 19). In 2019, Claimant worked for [Redacted] until approximately January 25, 2019 and was paid $637.50. (Ex. 6 – YTD Regular Pay).

27. Claimant testified that he has a 3-inch surgical scar from his surgery on his left ankle with some discoloration. The scar visibly distinct from the surrounding skin and is located on the outside of Claimant's left ankle. (Ex. 21). The ALJ finds Claimant should be awarded $600.00 for disfigurement.

28. Correspondence related to Claimant's claim was sent to Employer c/o [Redacted] at 5707 W. 6th Ave, #211, Lakewood, CO 80214, including correspondence from Claimant, the Division, and the Office of Administrative Courts. (Ex. 9, 16, 17 and 18). Additionally, Claimant's counsel sent correspondence to Mr. B[Redacted] at 4942 Altura St., Denver, CO 80239. (Ex. 9). Claimant's counsel mailed copies of the exhibits for hearing by certified mail sent to Mr. B[Redacted] at 4942 Altura St., Denver, CO 80238 on October 1, 2020, was delivered and signed-for but the return receipt contains an incomplete date that appears to be either October 2 or October 22). A copy of the same letter sent to Employer c/o [Redacted] at 5707 W. 6th Ave, #211, Lakewood, CO 80217 was not claimed.

29. The Division sent notice of Claimant's claim to Employer on November 20, 2019 at 5707 W. 6th Ave., Suite 211, Lakewood, CO 80111, Employer has not submitted any documents to the Division of Workers' Compensation. (Ex. 16). On June 24, 2020, Claimant sent his Application for Hearing to Employer c/o [Redacted], 5707 W. 6th Ave., Suite 211, Lakewood, CO 80214 and also to Mr. B[Redacted] at Employer at 4942 Altura Street, Denver, CO 80239. (Ex. 17). On July 23, 2020, the Office of Administrative Courts sent a Notice of Hearing Employer c/o [Redacted], 5707 W. 6th Ave., Suite 211, Lakewood, CO 80214 and also to Mr. B[Redacted] at Employer at 4942 Altura Street, Denver, CO 80239. Employer has not responded to the Application for Hearing, appeared for hearing, or otherwise appeared in this matter.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential*

Insurance Co. v. Cline, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000)

COMPENSABILITY

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641.

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equipment Company,* W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

Claimant has established by a preponderance of the evidence that he sustained a compensable injury arising out of the course of his employment with Employer on April 19, 2018. The evidence establishes that Claimant sustained a left ankle fracture while performing abatement work for Employer on April 19, 2018.

MEDICAL BENEFITS

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be considered a "medical benefit" it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995)*; Karim al Subhi v. King Soopers, Inc.,* W.C. No. 4-597-590, (ICAO. July 11, 2012). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006).

Claimant has established by a preponderance of the evidence that the treatment he received from Concentra, Summit View Surgery Center, Health Images and Colorado Podiatry Consultants was work-related, reasonable, and necessary to cure or relieve the effects of the Claimant's work-related injury. The evidence demonstrates that Claimant has outstanding balances at Health Images ($1,742.00) and Colorado Podiatry ($275.00), totaling $2,017.00 , and $7,092.97 was written off by Concentra as "bad debt." Employer is liable for all medical expenses incurred from these providers arising out of his April 19, 2018 work injury.

AUTHORIZED TREATING PHYSICIAN

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

If upon notice of the injury the employer timely fails to designate an ATP, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987). The employer's obligation to appoint an ATP arises when it has some knowledge of the accompanying facts connecting an injury to the employment such that a reasonably conscientious manager would recognize the case might result in a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006).

Claimant has established by a preponderance of the evidence that Employer did not provide Claimant with a choice of four physicians after receiving notice of Claimant's injury. Consequently, Claimant may select an authorized treating physician of his choosing.

AVERAGE WEEKLY WAGE

Section 8-42-102(2), C.R.S. (2020) requires the ALJ to determine a Claimant's AWW based on his or her earnings at the time of injury. The ALJ must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. Pizza *Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). The objective when calculating the AWW is to arrive at a "fair approximation of the claimant's wage loss and diminished earning capacity." *Campbell v. IBM Corp*., 867 P.2d 77, 82 (Colo. App. 1993).

Claimant has established by a preponderance of the evidence that his average weekly wage was $1,044.24. The ALJ finds that this is a reasonable and fair approximation of Claimant's wage loss and diminished earning capacity.

TEMPORARY DISABILITY BENEFITS

To prove entitlement to Temporary Total or Partial Disability (TTD/TPD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* §§ 8-42-103 (1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD/TPD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Section 8-42-106(1), C.R.S., provides for an award of Temporary Partial Disability (TPD) benefits based on the difference between the claimant's AWW at the time of injury and the earnings during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury has caused the disability and consequent partial wage loss. Section 8-42-103(1), C.R.S.; *Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury).

Claimant has established by a preponderance of the evidence an entitlement to TTD/TPD benefits. The evidence demonstrates Claimant sustained a disability as a result of his work-related left ankle injury that lasted more than three work shifts and resulted in an actual wage loss.

Claimant was placed on significant work restrictions following his injury, including sitting 90% of the time, later reduced to 50% of the time and, for a time office work only. These restrictions prevented Claimant from performing his prior work until February 28, 2019, when restrictions were removed, and he was placed at MMI. §8-42-105(3)(a)-(d), C.R.S. Although Claimant did perform some modified work during this period of time, Claimant did not receive a written offer of modified work from Employer and received some wages from Employer, he was not compensated as required by the Act.

Claimant is entitled to temporary partial and/or total disability benefits from April 19, 2018 until February 28, 2019, a period of 45 weeks and one day. Because Employer refused to produce Claimant's wage records, the ALJ estimates the Claimant's disability benefits as follows: Claimant's AWW of $1,044.24 entitles Claimant to TTD/TPD benefits of $696.16 per week. Claimant is entitled to temporary benefits of $31,426.65 (i.e., $696.16 x 45 1/7 = $31,426.65), less the wages Claimant received from Employer during this time period of $12,653.00. Claimant is entitled to temporary disability benefits of $18,773.65. (i.e., $31,426.65 – $12,653.00 = $18,773.65).

DISFIGUREMENT

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant has sustained disfigurement as a direct and proximate result of his work injury, consisting a three -inch scars on his left ankle. Claimant should be awarded $600.00 for disfigurement.

PENALTIES

Claimant seeks penalties for multiple alleged violations of the Workers' Compensation Act. Whether statutory penalties may be imposed under § 8-43-304(1), C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to $1000 per day where the insurer "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel…" Thus, the ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* W.C. No. 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

The question of whether the insurer's conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see also Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party makes a *prima facie* showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *Pioneers Hospital v. Industrial Claim Appeals Office, supra*. If the claimant makes such *prima facie* showing the burden of persuasion shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra, Human Resource Co. v. Industrial Claim Appeals Office*, 984 P.2d 1194 (Colo. App. 1999). Here, Employer did not appear or otherwise present evidence demonstrating that its conduct or failure to provide benefits was reasonable.

When penalties are imposed under § 8-43-304(1), C.R.S., such penalties may include" a fine of not more than one thousand dollars per day for each offense, to be apportioned, in whole or part, at the discretion of the director or administrative law judge, between the aggrieved party and the Colorado uninsured employer fund created in section 8-67-105; except that the amount apportioned to the aggrieved party shall be a minimum of twenty-five percent of any penalty assessed."

Failure to Maintain Insurance

Claimant seeks penalties under § 8-43-408(1), C.R.S. Claimant's Position Statement argues for a penalty of fifty percent. Prior to July 1, 2017, Section 8-43-408(1), C.R.S., provided that in cases where the employer is subject to the provisions of the Colorado Workers' Compensation Act and has not complied with the insurance provisions required by the Act, the compensation or benefits payable to the claimant were to be increased fifty percent. Effective July 1, 2017, Section 8-43-408, C.R.S. was amended and the language regarding a fifty percent increase in claimant benefits was removed.

The version of Section 8-43-408 C.R.S. in effect at the time of Claimant's April 19, 2019 work injury states that in cases where the employer is subject to the provisions of the Colorado Workers' Compensation Act and has not complied with the insurance provisions required by the Act, the employer is subject to a penalty and additional twenty-five percent of the benefits ordered, which is payable to the Colorado uninsured employer fund.

Claimant has demonstrated by a preponderance of the evidence that the Employer did not have workers' compensation coverage at the time of Claimant's April 19, 2018 work injury. Employer failed to appear or present evidence to indicate that Employer's failure to maintain insurance was reasonable. For its failure to obtain and maintain workers' compensation insurance, the Employer shall pay penalties of $4,693.41 to the Colorado uninsured employer fund; (which is an amount equal to 25% of the total unpaid temporary disability benefits owed). Employer shall also pay penalties of $504.25 to the Colorado uninsured employer fund (which is an amount equal to 25% of the total unpaid, outstanding medical benefits of $2,107.00).

Failure to File First Report of Injury

The Act and WCRP require an employer to file a First Report of Injury with the Division within ten days after notice or knowledge of a lost-time injury to an employee in excess of three shifts or calendar days. §8-43-101(1), C.R.S. and Rule 5-2(B)(2). Claimant was injured on April 19, 2018, and Employer was obligated to file a First Report of Injury on or about May 2, 2018. To date, Employer has not filed First Report of Injury and the violation is continuing. (Ex. 16); See § 8-43-304(1), C.R.S. Employer failed to appear or present evidence to indicate that Employer's failure file a First Report of Injury was reasonable. The court finds that a penalty of $10 a day is appropriate, which amounts to $9,650.00 (965 days from May 22, 2018 until the date of this order), pursuant to § 8-43-101(1), C.R.S. This penalty is apportioned 50% to the uninsured employer fund and 50% to Claimant. Employer shall pay $4,825 to uninsured employer fund and $4,825.00 to Claimant.

Failure to Admit or Deny

The employer shall state whether liability is admitted or contested within 20 days after the date the employer's First Report of Injury is filed with the Division. § 8-43-203(2)(a), C.R.S. If an Employer's First Report of Injury should have been filed with the Division, but was not, the insurer's statement concerning liability is considered to be due within 20 days from the date the Employer's First Report of Injury should have been filed. W.C. Rules 5-2(c). An employer is liable for a penalty of up to one day's compensation for each day that the employer failed to notify, not to exceed 365 days' compensation. § 8-43-203(2)(a), C.R.S. Section 8-43-203(2)(a) provides that "[f]ifty percent of any penalty paid pursuant to this subsection (2) shall be paid to the subsequent injury fund created in section 8-46-101, and fifty percent to claimant."

Employer was aware of Claimant's work-related injury on April 19, 2018. Therefore, an admission or denial was due to the Division by May 22, 2018, at the latest. Employer has not admitted or denied liability, although Employer received a letter from the Division of Workers' Compensation regarding the claim on December 23, 2019, and

Employer or Mr. B[Redacted] paid a portion of Claimant's medical expenses. Employer is liable for a penalty of up to one day's compensation from May 23, 2018 forward in accordance with § 8-43-203(2)(a), C.R.S. This amounts to a total penalty of $54,300.48 for the maximum 365-day period (AWW x 52 weeks). Employer shall pay $27,150.24 to the subsequent injury fund, and $27,150.24 to Claimant.

Failure to Timely Pay Indemnity Benefits

In accordance with § 8-42-105(2)(a) and § 8-42-106, an employer "shall [pay compensation] at least once every two weeks" during the time of total or partial temporary disability. The ALJ finds and concludes that Employer failed to issue timely TTD or TPD benefits when Claimant was restricted from work from April 19, 2018 until February 7, 2019. Respondent failed to appear or present evidence demonstrating that its failure to timely pay was reasonable and refused to provide Claimant his payroll records. For this failure to pay timely benefits, the ALJ finds that a penalty of $10 a day is appropriate, which amounts to $9,650.00 (965 days from May 22, 2018 until the date of this order), pursuant to § 8-43-304(1), C.R.S. This penalty is apportioned 50% to the uninsured employer fund and 50% to Claimant. Employer shall pay $4,825 to Colorado uninsured employer fund and $4,825.00 to Claimant.

Failure to Furnish Medical Treatment

Section 8-42-101, C.R.S., requires every employer to furnish such medical treatment as may be reasonably needed at the time of the injury and thereafter during the disability to cure and relieve the employee from the effects of the injury. Although Employer or Mr. B[Redacted] paid some of Claimant's medical bills, Employer paid no medical expenses after August 9, 2018, resulting in $9,109.97 in unpaid medical bills which includes $2,017.00 unpaid outstanding amounts billed directly to Claimant, and the balance being written off by the provider as bad debt. For that reason, the Court imposes a penalty of $2,017.00 for Respondent's failure to furnish medical treatment. § 8-43-304(1), C.R.S. This penalty is apportioned 50% to the uninsured employer fund and 50% to Claimant. Employer shall pay $1,008.50 to Colorado uninsured employer fund and $1,008.50 to Claimant.

Statutory Interest

Pursuant to C.R.S. §8-43-410(2), all benefits due, not paid when due, bear interest at the rate of 8% per annum. Under § 8-43-410, interest on an award of compensation is a matter of statutory right and applies automatically on the date payment is due. *Beatrice Foods Co. v. Padilla*, 747 P.2d 685 (Colo.App.1987). The legislative purpose underlying the award of such interest is not to impose a penalty or award an additional benefit, but merely to secure to claimants the full value of the benefits to which they are entitled. See *Travelers Insurance Co. v. Savio*, 706 P.2d 1258 (Colo. 1985).

Requirement for Posting Bond

Pursuant to Section 8-43-408(2), C.R.S.: "In all cases where compensation is awarded under the terms of this section, the director or an administrative law judge of the division shall compute and require the employer to pay to a trustee designated by the director or administrative law judge an amount equal to the present value of all unpaid compensation or benefits computed at the rate of four percent per annum; or, in lieu thereof, such employer, within ten days after the date of such order, shall file a bond with the director or administrative law judge signed by two or more responsible sureties to be approved by the director or by some surety company authorized to do business within the state of Colorado. The bond shall be in such form and amount as prescribed and fixed by the director and shall guarantee the payment of the compensation or benefits as awarded. The filing of any appeal, including a petition for review, shall not relieve the employer of the obligation under this subsection (2) to pay the designated sum to a trustee or to file a bond with the director or administrative law judge." The term "compensation" refers to disability benefits. *In Re of Shier,* W.C. No. 4-573-910 (ICAP, Dec. 15, 2005). In this claim, it has been determined that Respondent was uninsured at the time of Claimant's injury; thus, the provisions of Section 8-43-408(2) are mandatory.

PIERCING THE CORPORATE VEIL

Claimant seeks to impose joint and several liability upon two non-parties – Darrick B[Redacted] and [Redacted], Inc. – for the liabilities of Employer, by piercing the corporate veil of Employer based on the theory that Mr. B[Redacted] and/or [Redacted] are alter egos of Employer. "In workers' compensation proceedings, an ALJ may disregard the corporate form and impose personal liability on corporate shareholders if they used the corporate form as a mere instrumentality for the transaction of their own business, or for the purpose of defeating or evading an important legislative policy, or to perpetrate a fraud or wrong on another." *In re Quick*, W.C. No. 4-365-810 (ICAP June 20, 2000). *Micciche v. Billings*, 727 P.2d 373 (Colo. App. 1986); see also § 8-43-207(1), C.R.S. Colorado also permits "horizonal piercing" which permits the imposition of liability of one entity against a "sister entity" that shares common ownership if the corporate veil is pierced for each corporate entity. *Dill v. Rembrandt Group, Inc.*, 2020 COA 69, 18CA1716 (Colo. App. April 16, 2020). The ALJ does not reach the issue of whether Claimant has established the legal elements of piercing the corporate veil against either Mr. B[Redacted] or [Redacted] because 1) the ALJ does not have personal jurisdiction over Mr. B[Redacted] or [Redacted]; and 2) neither Respondent, Mr. B[Redacted] nor [Redacted] has been provided adequate notice of the claim for piercing the corporate veil.

"A court's jurisdiction consists of two elements: jurisdiction over the parties, or personal jurisdiction, and jurisdiction over the subject matter of the issue to be decided, or subject matter jurisdiction." *In re Madison*, W.C. No. 4-807-513 (ICAP, July 11, 2011), *citing Leewaye v. Industrial Claim Appeals Office*, 178 P.3d 1254 (Colo. App. 2007). "Due process protections provide that the ALJ does not have personal jurisdiction over a party unless the party has been provided fair and adequate notice of proceedings which may result in an order for the payment of benefits." *In re Albert*, 4-368-088 (ICAP, Jun. 3, 1999); *In Re Guzman*, supra; *Romone Ford v. Katzson Bros., Inc.*, 7-790-320 (ICAP, June 16, 2009) (additional citations omitted); *see also In Re Ramos*, WC No. 4-309-179 (ICAP, Jan. 12, 1999) ("The fundamental tenets of due process require the parties be apprised of the evidence to be submitted or considered and afforded a reasonable opportunity in which to confront adverse witnesses and present evidence in support of their position.")

The ALJ does not have personal jurisdiction over Mr. B[Redacted] or [Redacted] because they have not been named as parties to this hearing . A court may not order the piercing of the corporate veil against persons or entities who are not parties to the action before the court. *See e.g.*, *Sheffield Services Co. v. Trowbridge*, 211 P.3d 714, (Colo. App. 2009). As noted above, due process requires that "all parties receive notice of administrative proceedings that could result in the deprivation of a significant property interest." *Romone Ford, supra*. Although documents were sent to Mr. B[Redacted] and [Redacted], neither Mr. B[Redacted] nor [Redacted] are identified as respondents in the pleadings or in the certificates of service associated with those pleadings. Claimant's Application for Hearing names Employer "c/o [Redacted]," but does not identify [Redacted] as a party. Mr. B[Redacted] is not listed in the caption or otherwise identified as a party. Because neither Mr. B[Redacted] nor [Redacted] are named parties in this action the ALJ lacks personal jurisdiction over them.

Further, even if both Mr. B[Redacted] and [Redacted] were named in the Application for Hearing, they would be deprived due process because the Application for Hearing does not provide notice that Claimant seeks to pierce the corporate veil. Neither Employer, Mr. B[Redacted] nor [Redacted] was provided adequate notice that the issue of alter ego liability or "piercing the corporate veil" would be adjudicated at hearing. Claimant's Application for Hearing endorses compensability, medical benefits, authorized treating provider, reasonably necessary, Average Weekly Wage, Disfigurement, TTD, TPD, permanent partial disability benefits and seven categories of penalties. Claimant's Application for Hearing does not include any statement that the ALJ would be asked to determine that Mr. B[Redacted] or [Redacted] would liable under any legal theory. Nor is the issue raised in Claimant's Case Information Sheet. None of the pleadings raise an issue that could reasonably be construed as a claim that Employer's corporate veil should be pierced, and liability imposed upon Mr. B[Redacted] or [Redacted].

Because the ALJ does not have jurisdiction over claims against Based on the foregoing, Claimant's claim for the imposition of liability against Darrick B[Redacted] and [Redacted], Inc., is denied and dismissed without prejudice.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury to his left ankle arising out of the course of his employment with Employer on April 19, 2018. Employer is liable for Claimant's injury-related medical treatment.

2. Claimant is entitled to reasonable and necessary medical benefits arising out of his work-related injury of April 19, 2018. Claimant's treatment at Concentra, Colorado Podiatry,

Summit View Surgery Center, and Health Images was reasonable, necessary, and related to his April 19, 2018 work-injury, and Employer shall pay for all associated costs of such treatment, subject to the Division of Workers' Compensation Fee Schedule.

3. Claimant is entitled to select a new authorized treating physician.

4. Claimant's average weekly wage is $1,044.24.

5. Claimant's claim for temporary disability benefits is granted. Employer shall pay to Claimant temporary disability benefits for the period of April 19, 2018 through February 7, 2019 in the amount of $18,773.65, representing 45 1/7 weeks of temporary disability payments, less the amounts previously paid to Claimant.

6. Claimant is awarded $600.00 for disfigurement.

7. Employer shall pay penalties pursuant to section 8-43-408(5), C.R.S. (for Employer's failure to maintain insurance), in the amount of $5,197.66 to the Colorado uninsured employer fund; (which is an amount equal to 25% of the total unpaid temporary disability benefits and 25% of outstanding unpaid medical benefits).

8. Employer shall pay penalties pursuant to section 8-43-203(2)(a), C.R.S., (for Employer's failure to admit or deny liability) in the aggregate amount of amount of $54,300.48. Employer shall pay 50% ($27,150.24) of said penalty to the Colorado Subsequent Injury Fund, and 50% ($27,150.24) to Claimant.

9. Employer shall pay penalties pursuant to section 8-43-304 (1) (a), C.R.S., (for Employer's failure file a First Report of Injury, failure to timely pay indemnity benefits and failure to furnish medical treatment) in the aggregate amount of $11,667.00. Employer shall pay 50% ($5,833.50) of said penalty to the Colorado uninsured employer fund 50% ($5,833.50) to Claimant.

10. Respondent shall pay statutory interest at the rate of 8% per annum on compensation benefits not paid when due.

11. In lieu of payment of the above compensation, penalties and benefits to Claimant, Respondent shall

    a. Deposit the sum of $100,188.54 adding 4% per annum with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Trustee; or

    b. File a bond in the amount of $100,188.54 with the Division of Workers' Compensation within ten (10) days of the date of this order:

        i. Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

        ii. Issued by a surety company authorized to do business in Colorado. The bond shall guarantee payment of the compensation and benefits awarded.

12. IT IS FURTHER ORDERED, Respondent shall notify the Division of Workers' Compensation of payments made pursuant to this order.

13. IT IS FURTHER ORDERED: That the filing of any appeal, including a petition for review, shall not relieve the employer of the obligation to pay the designated sum to a trustee or to file the bond. § 8-43-408(2), C.R.S.

14. Claimant's request that the ALJ pierce the corporate veil of Employer and impose joint and several liability upon Mr. B[Redacted] and/or [Redacted], Inc., is denied and dismissed without prejudice.

15. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 11, 2021

Steven R. Kabler
Administrative Law Judge

1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-103-760-002

ISSUE

1. Whether Claimant has proven by a preponderance of the evidence that the left-hand carpal tunnel release surgery requested by In Sok Yi, M.D., is reasonable, necessary, and related to the January 14, 2019 work injury.

FINDINGS OF FACT

1. On January 14, 2019, Claimant sustained an admitted work injury arising out of the course of his employment with Employer when he slipped and fell on ice onto his left side.

2. Claimant reported his injury to Michael M[Redacted], Employer's safety claims manager. Mr. M[Redacted] testified at hearing that he asked Claimant whether he wanted to go to the clinic, and Claimant declined. Three days later, Claimant requested to see a medical provider due to increasing shoulder pain.

3. On January 23, 2019, Claimant saw Julie Parsons, M.D. Claimant completed a pain diagram indicating symptoms in his left shoulder/trapezius region and the end of his left thumb. Claimant reported that he slipped on ice and landed on his left shoulder. Dr. Parson's noted that Claimant reported muscle aches and joint pain but no swelling, Claimant reported neck pain with left shoulder pain with "NT" (numbness and tingling) in the left arm. On examination, Dr. Parsons noted an essentially normal musculoskeletal examination, excepted for tenderness and limited ROM. Claimant's neck examination was positive for pain with motion. Dr. Parson's diagnosed Claimant with a neck sprain and contusion of the left shoulder. Claimant was referred for MRIs of the neck and left shoulder. In her Physician's Report of Worker's Compensation Injury, Dr. Parsons identified Claimant's work-related medical diagnoses as "Fall: cervical strain; radiculopathy; L shoulder contusion; strain." (Ex. D).

4. Claimant returned to Dr. Parsons on January 30, 2019. Claimant reported muscle aches and joint pain, that his neck was stiff and that his left shoulder had limited range of motion and pain. Claimant did not report any symptoms relating to his hands or wrists. Dr. Parsons reviewed Claimant's cervical MRI which was negative for acute injury but showed degenerative changes. Claimant's left shoulder MRI was interpreted as showing a partial biceps tear and labral tear. Dr. Parsons referred Claimant for orthopedic evaluation of the left shoulder. (Ex. D).

5. On February 12, 2010, Claimant saw Dr. Parsons again. Claimant reported continued pain in his left shoulder and that he was awaiting surgery. The medical record does not indicate that Claimant reported any symptoms in his hand or wrist. Dr. Parsons added "full thickness rotator cuff tear" to Claimant's list of diagnoses. (Ex. D).

6. On April 2, 2019, Claimant underwent arthroscopic repair of his left rotator cuff, degenerative glenoid labrum tear and partial tear of his left biceps tendon performed by Mitchel Robinson, M.D. (Ex. B).

7. On April 9, 2019, Claimant saw Dr. Parsons for a post-surgical follow-up visit. Claimant reported tenderness and limited range of motion in his left shoulder and pain with motion in his neck. The medical record does not indicate that Claimant reported any symptoms in his hand or wrist. (Ex. D).

8. On May 6, 2019, Claimant returned to Dr. Parsons. The medical record does not indicate that Claimant reported any symptoms in his hand or wrist. (Ex. D).

9. On June 12, 2019, Claimant saw Jonathan Salamat, PA-C of Panorama Orthopedics in follow up from his April 2, 2019 shoulder surgery. Claimant complained of aches and pains radiating from his elbow to his thumb. On examination, PA Salamat found Claimant's left elbow was tender to palpation at the lateral epicondyle, pain with resisted wrist extension radiating into the first dorsal compartment of the hand. PA Salamat prescribed a topical NSAID. (Ex. G).

10. On June 17, 2019, Claimant saw Dr. Parsons. Claimant's chief complaints were shoulder and neck pain. In her review of systems, Dr. Parsons noted "L thumb" but no other notations related to Claimant's hand or wrist. (Ex. D).

11. On July 11, 2019, Claimant saw Mitchel Robinson, M.D. for a post-surgical follow up examination. Claimant reported some subjective numbness and tingling from his elbow to thumb. Dr. Robinson recommended Claimant continue physical therapy. (Ex. G).

12. On July 18, 2019, Claimant reported to Dr. Parsons numbness in the left thumb, lateral forearm and lateral hand characterized as "constant since surgery." Dr. Parsons referred Claimant to Roberta Anderson-Oeser, M.D., for evaluation of Claimant's complaints of in his left arm "in light of the degenerative [cervical spine] changes on MRI and the constant [numbness and tingling] and pain in left forearm, hand, and thumb since surgery. Dr. Parsons added "paresthesia of skin" to Claimant's diagnosis list. (Ex. D).

13. On August 22, 2019, Claimant saw Dr. Parsons. Claimant reported "numbness and tingling in arm swelling comes and goes." Claimant also reported "NT [numbness and tingling] getting worse with weaker grip [left] hand." On examination, Dr. Parsons noted that Claimant's left grip was weaker, and he had decreased sensation to light touch of the left hand. (Ex. D).

14. On August 22, 2019, Claimant also saw Dr. Robinson. Claimant continued to complain of aches and pains from his elbow to his thumb and reported small improvements. Dr. Robinson noted that Claimant was doing well following shoulder surgery and discussed the possibility of a cortisone injection (presumably for Claimant's elbow to thumb symptoms). (Ex. D).

15. On October 2, 2019, Claimant saw Dr. Anderson-Oeser, and reported left forearm and hand pain and paresthesias and left leg pain and paresthesias. Claimant reported to Dr. Anderson-Oeser that at the time of his initial evaluation with Dr. Parsons, he had pain in his left shoulder, left hip, and left knee. Claimant also reported to Dr. Anderson-Oeser that prior to his left shoulder surgery, "he was having numbness in his left hand, but the symptoms became more pronounced postoperatively." Claimant also reported weakness in his left hand and dropping objects. Claimant reported pain from the left side of the neck into the left hand, and numbness, tingling and swelling into the left hand. Claimant attributed his symptoms to his work injury. On examination, Dr. Anderson-Oeser found a mildly positive Tinel's over the median nerve and the wrist on the left, and negative over the radial nerves and ulnar nerves. She noted no atrophy of the Claimant left forearm or hand muscles. (Ex. E).

16. Dr. Anderson-Oeser performed and EMG/NCS test which was abnormal. She indicated that Claimant's findings were consistent with a left median neuropathy at the wrist, mild to moderate in severity. She opined that Claimant "may have sustained a [] traumatic injury to the left median nerve when he fell and landed on his left side." She recommended a steroid injection into the left carpal tunnel for therapeutic purposes and advised Claimant to wear a resting hand splint at night. She also provided Claimant a prescription for massage therapy and a prescription for a trial of gabapentin to address neuropathic pain. (Ex. E).

17. On October 3, 2019, Claimant saw Dr. Robinson for a six-month post-operative visit. Claimant complained of continuing aches and pains radiating from his elbow to his thumb. Dr. Robinson did not opine as to the cause of Claimant's elbow to thumb symptoms. (Ex. G).

18. On October 8, 2019, Dr. Parsons saw Claimant and noted abnormal sensation and "+ CTC" in her neurologic examination. The ALJ infers that "CTC" is a reference to "carpal tunnel canal." Dr. Parson's diagnosis remained unchanged from previous diagnoses. (Ex. D).

19. On November 4, 2019, Claimant underwent an IME performed by Gary Zuehlsdorff, M.D. Dr. Zuehlsdorff's report was not offered or admitted into evidence, but portions of the report are described in reports from Dr. Anderson-Oeser and IME physician Dr. Paz. Claimant reported to Dr. Zuehlsdorff that he thought his left arm was extended when he fell on January 14, 2019. Dr. Zuehlsdorff opined that Claimant's left carpal tunnel syndrome was related to his work injury. (Ex. B).

20. On November 5, 2019, Claimant saw Dr. Anderson-Oeser and reported experiencing "aching, stabbing, burning, pins and needle sensation throughout the left upper extremity." In addition, Claimant complained of similar symptoms in his left lower back, buttocks, left foot, and leg. He indicated that his reported left leg symptoms had not been addressed because the focus had been on his left shoulder. He reported being unable to tolerate gabapentin for nerve pain and was given a prescription for trazodone for sleep and neuropathic pain. Dr. Anderson-Oeser recommended a steroid injection, splinting and occupational therapy for Claimant's left arm symptoms. (Ex. E).

21. On November 18, 2019, Claimant reported to Dr. Parsons experiencing numbness (hypesthesia), muscle aches and joint pains, pain on motion of his neck. Dr. Parsons added "delayed physical recovery" "other general symptoms and signs" to Claimant's list of diagnoses. (Ex. D).

22. On December 3, 2019, Claimant saw Dr. Anderson-Oeser and reported similar symptoms as his November 5, 2019 visit. Dr. Anderson-Oeser indicated that Claimant had undergone an IME with Dr. Zuehlsdorff, who recommended referral to a hand surgeon. Dr. Anderson-Oeser referred Claimant to In Sok Yi, M.D., to evaluate whether Claimant is a surgical candidate for decompression of the left median nerve at the wrist. (Ex. E).

23. Claimant attended visits (either in person or via telemedicine) with Dr. Anderson-Oeser on January 2, 2020 and January 30, 2020, March 4, 2020, April 2, 2020, April 30, 2020, May 28, 2020, and June 16, 2020 reporting no change in his symptoms. On January 30, 2020, Dr. Anderson-Oeser indicated that Claimant could return to work without restrictions. On March 4, 2020, Claimant completed a pain diagram with this visit on which he indicated pain from the left side of his neck, through his shoulder arm and hands, left hip, thigh, knee, calf, and foot. (Ex. E).

24. On February 11, 2020, Claimant saw In Sok Yi, M.D., on referral from Dr. Anderson-Oeser for evaluation of carpal tunnel symptoms. Claimant reported that he developed numbness and tingling "almost immediately after the fall" on January 14, 2019. Dr. Yi diagnosed Claimant with carpal tunnel syndrome of the right wrist. (The ALJ infers that Dr. Yi reference to the "right" wrist is an error and intended to refer to Claimant's left wrist). Dr. Yi performed an injection of Claimant's left carpal tunnel. He noted that if Claimant continued to have symptoms after six weeks, Dr. Yi would recommend a surgical release. (Ex. F).

25. On March 25, 2020, Claimant saw Dr. Yi's physician assistant, Timothy Johnson, PA-C. Claimant reported that following the injection performed by Dr. Yi on February 21, 2020, he had almost complete resolution of his symptoms for approximately one week. Claimant reported in the interim, his symptoms had returned to baseline as before the injection. PA Johnson recommended Claimant undergo a left endoscopic carpal tunnel release. A request for authorization of the recommended surgery was sent to Respondents. (Ex. F).

26. On April 8, 2019, Allison Fall, M.D., performed a Rule 16 record review requested by Respondents. Dr. Fall opined that Claimant's medical records do not support that Claimant sustained a traumatic injury to his median nerve. Dr. Fall opined that the Claimant's findings were consistent with a history of diabetes, and that the surgery recommended by Dr. Yi is not medically reasonable, necessary, and related to his work injury. She also opined that Claimant had probable underlying psychological issues, and had not failed conservative treatment, and thus, even if Claimant's condition were caused by his work injury, surgery would not be medically reasonable or necessary. (Ex. C).

27. On April 9, 2020, Respondents notified Claimant that authorization for carpal tunnel release surgery was denied based on Dr. Fall's Rule 16 review. (Ex. C).

28. On April 30, 2020, Dr. Anderson-Oeser conducted a telemedicine visit with Claimant. Dr. Anderson-Oeser reviewed Dr. Fall's IME report in which Dr. Fall opined that Claimant did not sustain a medial nerve injury due to his work-related fall. Dr. Anderson-Oeser stated: "It is my opinion, that [Claimant] could definitely of [sic] sustained trauma to the median nerve when landing on his left upper extremity. He reported pain throughout the left upper extremity with hand numbness and tingling shortly after the fall. A significant contusion of the median nerve is more likely than not to have caused the median neuropathy." Dr. Anderson-Oeser also stated "Within a reasonable degree of medical probability, it is my opinion that [Claimant] sustained an injury to the left median nerve with his fall which led to the median neuropathy." (Ex. E).

29. On October 23, 2020, F. Mark Paz, M.D., performed an Independent Medical Examination (IME) of Claimant requested by Respondents, and issued a report dated November 10, 2020. (Ex. B). Dr. Paz testified at hearing and was offered and accepted as an expert in occupational and internal medicine. Claimant reported to Dr. Paz that he fell at work on January 14, 2019 and immediately after the fall he developed left-sided neck pain and pain in the left arm extending to the left side of his neck. Claimant reported that his immediate pain included discomfort in the entire left hand, forearm, arm, left shoulder, and the base of the neck on the left side, and that his symptoms radiated from the neck to the fingers of his left hand. Claimant indicated that he experienced left arm numbness and tingling prior to his April 2019 surgery, but it was more severe after surgery. On examination, Dr. Paz noted that Claimant's left hand sensory was intact to light touch and pressure, without evidence of atrophy, reflexes and strength of his hands were full and symmetrical.

30. In his report, Dr. Paz opined that it is not medically probable that the diagnosis of left carpal tunnel syndrome is causally related to Claimant's January 14, 2019 work injury. Dr. Paz noted that multiple medical records and Claimant's direct history does not confirm trauma to his left wrist and that the records do not document a contusion of the left arm or wrist. He opined that the mechanism of injury and diagnosis of left carpal tunnel syndrome are incongruent. Dr. Paz also noted that based in part on his examination, that Claimant's left upper extremity symptoms were related to myofascial back pain. He further opined that Claimant was at maximum medical improvement and that his then-current clinical symptoms are clinically stable and not expected to improve with additional treatment.

31. Dr. Paz testified that in a case of traumatic carpal tunnel syndrome, the mechanism of injury is typically the result of blunt force trauma to the volar aspect of the wrist, such as falling forward with an outstretched hand, and that the records did not reflect an injury to Claimant's left hand. Dr. Paz also testified that the arthroscopic rotator cuff repair Claimant underwent would not cause carpal tunnel syndrome. Dr. Paz opined that Claimant's current symptoms are not consistent with carpal tunnel syndrome, because his symptoms are not limited to the median nerve distribution. Dr. Paz testified that if

Claimant does have carpal tunnel syndrome, it is not related to his January 14, 2019 injury, and that surgery for carpal tunnel syndrome is also unrelated.

32. Claimant testified at hearing that on January 14, 2019, he fell on ice and landed on his left side. Claimant testified that he fell on his left shoulder, left arm, left wrist, and left hip. Claimant testified that he noticed pain in his right shoulder down into his hand, left hip, and left knee. Claimant also testified that when he fell, his left arm was extended, and later admitted that he did not recall how he landed .

33. Claimant testified that Employer provided him with a "Case Coordinator" who attended five medical appointments with him – three with Dr. Parsons and two with Dr. Robinson. Claimant identified the Case Coordinator as "Mike," meaning Michael M[Redacted]. Claimant testified that he informed Mr. M[Redacted] that he had pain in his left shoulder into his arm, hip, and knee, but that Mr. M[Redacted] instructed Claimant only to report his shoulder symptoms and not to include other complaints on his pain diagram. Claimant also testified that when he was filling out his pain diagram at his initial visit with Dr. Parsons, Mr. M[Redacted] told Claimant to only include his shoulder pain "and we will deal with the other injuries once the shoulder has been repaired." Claimant testified that Mr. M[Redacted] interjected during visits with physicians and spoke with Claimant's physicians. After Claimant retained counsel, Counsel instructed Employer that Mr. M[Redacted] could not act as a Case Coordinator, and he did not attend any appointments after that time. Mr. M[Redacted] did not attend any appointments after Claimant's April 2, 2019 surgery. Claimant's testimony regarding Mr. M[Redacted]'s level of involvement and instructions not to report certain injuries is not credible.

34. Claimant testified that, at his January 23, 2019 visit with Dr. Parsons, he did not report injuries to his knee, wrists, or hip because he was intimidated by Mr. M[Redacted]. Claimant then testified that he specifically told Dr. Parsons of injuries to his knee, wrists, and hip, but that Dr. Parsons did not document them. He further testified that the pain diagram he completed did not accurately reflect the pain he had a that time. Claimant's testimony in this regard was not credible.

35. Claimant testified that prior to his surgery in April 2019, he had pins and needles sensation from his shoulder to his hands, rating 7/10. Claimant testified that he reported the pins and needles sensation to Dr. Parsons during his visits with her. Claimant indicated that after Mr. M[Redacted] was no longer attending visits, he reported to his health care providers that his wrist symptoms were "part of the slip and fall."

36. Mr. M[Redacted] testified at hearing in rebuttal. Mr. M[Redacted] testified he attended Claimant's first medical appointment with Dr. Parsons but did not direct Claimant on how to fill out his pain diagram, nor did he instruct Claimant on how to answer questions from Dr. Parsons. Mr. M[Redacted] testified Claimant reported only shoulder pain and he did not remember the Claimant reporting anything about his wrist, hip, or knee. He testified he did not try to influence Dr. Parsons regarding her diagnosis of Claimant. The ALJ finds Mr. M[Redacted]'s testimony credible and consistent.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SPECIFIC MEDICAL BENEFITS AT ISSUE

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be considered a “medical benefit” it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant’s physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).” *In the Matter of the Claim of Bud Forbes, Claimant*, No. W.C. No. 4-797-103, 2011 WL 5616888, at *3 (Colo. Ind. Cl. App. Off. Nov. 7, 2011). When the respondents challenge the claimant’s request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009).

Claimant has failed to establish by a preponderance of the evidence that the carpal tunnel release surgery requested by Dr. Yi is reasonable, necessary, or related to Claimant’s January 14, 2019 work injury. Claimant was injured when he fell on his left shoulder on January 14, 2019. At Claimant’s initial appointment with Dr. Parsons, other than circling his left thumb on his pain diagram, Claimant reported no symptoms or injuries that could have caused carpal tunnel syndrome. Claimant did not report any hand or wrist symptoms for several months after his injury.

Claimant’s testimony that Mr. M[Redacted] told Claimant only to report his shoulder injury and that his other issues could be addressed after his shoulder was “repaired” is not credible. Claimant testified Mr. M[Redacted] directed him not to report anything other than his shoulder condition while he was filling out his pain diagram before his visit with Dr. Parsons. Dr. Parsons initially diagnosed Claimant with a shoulder contusion and did not refer Claimant for a surgical consultation until one week later. It is not credible that before Claimant was even examined by Dr. Parsons, Mr. M[Redacted] knew that Claimant’s shoulder would need to be “repaired” and instructed Claimant to report only his shoulder injury to the exclusion of his other purported injuries.

Claimant’s testimony was also contradictory in that he testified he did not report his wrist, knee, and hip symptoms to Dr. Parsons because Mr. M[Redacted] intimidated him. But he also testified he did report injuries to his hip, knee, and wrist, but that Dr. Parson did not record them in her medical records. Claimant offered no theory to explain why Dr. Parsons would omit Claimant’s complaints of hip, knee, and wrist pain, if as Claimant testified, he defied Mr. M[Redacted] purported instructions and reported these injuries.

Notwithstanding, Dr. Anderson-Oeser attributed Claimant’s wrist diagnosis to his work injury. However, her records offer no explanation as to the mechanism of injury, other than to state that his call “could” have resulted in trauma to the median nerve when landing on his left arm. Dr. Anderson-Oeser's opinion relies, in part, on the incorrect premise that Claimant complained of pain, numbness and tingling throughout his left arm shortly after his fall. Claimant's contemporaneous medical records do not support Dr. Anderson-Oeser's assertion that Claimant complained of symptoms throughout his left arm shortly after his fall.

Claimant apparently reported to Dr. Zuehlsdorff that his left arm was extended when he fell. This is inconsistent with the mechanism of injury Claimant reported to others and his testimony. Initially, Claimant reported to Dr. Parsons that he fell on his left shoulder, he reported to Dr. Anderson-Oeser that he fell on his left side. Claimant then told Dr. Paz that he did not recall how he landed. At hearing, Claimant testified he landed on his "whole left side," left shoulder, left wrist, and left hip, and that he had the wind knocked out of him. Claimant later testified that his left arm was extended trying to stop his fall. Ultimately, Claimant admitted he could not remember how he fell or how he landed. Because Dr. Zuehlsdorff's report was not offered into evidence, the ALJ cannot determine the extent to which Dr. Zuehlsdorff relied on this information as a basis for his opinion that Claimant's carpal tunnel syndrome was related to his January 14, 2019 injury.

The ALJ does not find the opinions of Dr. Anderson-Oeser and Dr. Zuehlsdorff to be persuasive. These opinions are based, at least in part, on information provided by Claimant that is not corroborated by Claimant's contemporaneous medical records, or information that is inconsistent with Claimant's testimony.

Both Dr. Fall and Dr. Paz opined that Claimant's medical records and reported mechanism of injury do not support the conclusion that Claimant sustained an injury sufficient to cause carpal tunnel syndrome. Dr. Paz credibly testified that an acute carpal tunnel injury would result from a forward fall on the wrist. None of Claimant's medical records or testimony indicates that Claimant fell forward onto his wrist or that the mechanism of injury was consistent with a median nerve injury. The ALJ finds Dr. Paz and Dr. Fall's opinions to be the more credible and persuasive. Claimant has failed to establish by a preponderance of the evidence that the surgery proposed by Dr. Yi is reasonable, necessary, or related to Claimant's January 14, 2019 work injury.

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of carpal tunnel release surgery requested by Dr. Yi is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 12, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-091-950-002

ISSUES

I. Whether claimant has proven by a preponderance of evidence that he experienced a left shoulder occupational cumulative trauma injury.

II. Whether Claimant is entitled to reasonable and necessary medical treatment.

III. Whether Respondents are responsible for the left shoulder surgery performed by Dr. Grossnickle.

IV. Whether Claimant is entitled to temporary disability benefits.

a. Whether Claimant's termination from employment on January 18, 2019 prevents Claimant from receiving temporary disability benefits following that.

b. Whether subsequent employment starting July 24, 2020 serves as a return to work and terminates temporary disability benefits.

V. Whether Claimant's compensation should be reduced under 8-43-102(2) because of a late reporting of his occupational disease.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact

1. Claimant was a 42-year-old production operator for employer, working in March 2018, when he claims the onset of a cumulative left shoulder injury. He provided his date of onset as March 15, 2018. *Ex. O, P.* Claimant is now 45 years old.

2. On June 7, 2018, claimant appeared at his primary care physician (PCP), at SCHC Monfort Family Clinic as a walk in "c/o low back, shoulder pain for about a year, but has gotten worse...can't think of a specific time when he had an injury, more so has just been worsening w/ time." *Ex. H, Bates 66.* He was followed for these complaints until an MRI was ordered. *Ex. H, Bates 80.* The MRI showed evidence of a large labral tear, extending superior all the way to the 7 o'clock position, minimally displaced. *Ex. G, Bates 62, 82.* Claimant underwent surgery with Dr. Mark D. Grossnickle on October 18, 2019. The surgery was an arthroscopy left shoulder with repair of type II SLAP lesion and repair of anterior and posterior labral detachments, along with subacromial decompression. *Ex. F, Bates 33.*

3. Claimant had been in a motor vehicle accident (MVA) on February 19, 2018. *CL Test 57:20.* He was driving his car; he lost control and drove into a ditch. He hit his chest hard on the steering wheel, while he was hanging on to the wheel. *CL Test 2, 8:00.* He was taken off work for five days following the incident, from February 20,

2018 to February 25, 2018. He was then provided two more days off work, and a five-pound lifting restriction. *Ex. J, Bates 142, 143*. His declared date of onset for this left shoulder claim is a few weeks later, March 15, 2018.

4. Claimant completed FMLA paperwork with help from his providers. *Ex. J, Bates 154-157.* He had not missed any time because of his shoulder before the date of his surgery. *Ex J. Bates 151; Ex F, Bates 31; Cl Test 53:37.* Claimant's period of incapacity was estimated to be October 18, 2018 to January 18, 2018. Flare ups following surgery were not expected. *Id.* His doctors said that they anticipated restrictions for three months. *Ex. J, Bates 149.* Claimant worked with the employer to complete FMLA paperwork, and claimant was paid 80 hours of FMLA time after he left the job for his surgery. *Ex. J, Bates 151; CL Test 2, 1:30.*

5. Claimant completed and filed both a claim for compensation and a first report of injury November 5, 2018. *Ex. O, P.* Neither of these documents completed by claimant identify a specific incident or event. Instead, the first report of injury says, "Claimant was repetitively lifting and moving 45-pound crates" and "Claimant's work duties required the repetitive lifting and moving 45-pound crates of milk from which he developed pain in his left shoulder." The claim for compensation states the injury occurred because "Claimant's work duties required the repetitive lifting and moving 45-pound crates of milk from which he developed pain in his left shoulder." And "Repetitive lifting and moving crates of milk."

6. Following the claim for compensation, a Job Demands Analysis (JDA) was completed. This JDA, job site photographs and video of the work claimant did for the employer were admitted at hearing. *Ex. A, B, C.* Supervisor Dean C[Redacted] explained the physical requirements of claimant's assignments. These provide the ALJ with an understanding of the job duties concerned. Claimant was working as a Gallon Case Packer when he was first complained of shoulder problems. Because of those complaints and later medical restrictions, he was moved to the position of Leak Detecting and Rework. *Ex. A; Testimony of C[Redacted].* Case Packer was the job he had at the time he now claims that he sustained a cumulative trauma occupational disease of the shoulder.

7. Dr. Mark Failinger testified via deposition as an expert in orthopedic surgery, as Level 2 certified. He initially evaluated claimant on January 16, 2020 and issued a report. *Ex. D.* As set forth in his report, Dr. Failinger asked claimant several different times, and claimant confirmed that he did not have any specific event which caused his injury. "He stated multiple times there was not a specific work event that occurred, not a specific injury that occurred to his left shoulder." *Ex. D, Bates 26.* Claimant explained his work. Dr. Failinger referred to the Colorado Treatment Guidelines for Shoulder Treatment. He explained that these Guidelines do seek to analyze studies regarding the development of cumulative shoulder disorders. He noted that there are three situations, which the guidelines state, "it is reasonable to consider that there is some evidence for the association of the following causative risk factors for the development of shoulder tendon-related pathology." *Ex. D, Bates 27, 28.* After comparing the Guidelines with claimant's work activates, he concluded that claimant's work activities did not cause the development of the shoulder disorder. *Ex. D, Bates 28.*

8. Following his report, Dr. Failinger reviewed claimant's surgical report. He testified that the surgery showed a very extensive torn labrum and not the type of condition where repetitive use or lifting could be the cause. The whole labrum was torn, front all the way to the top to the back. *Failinger Depo. P. 14.* Dr. Failinger testified that this tear would have to be caused by a traumatic event like a fall or a massive traction force. *Failinger Depo. P. 11-13.* Dr. Failinger testified that there is no question that this would be an acute incident. *Id. P. 14, 25.*

9. Dean C[Redacted] testified at hearing. He was claimant's direct supervisor. He testified that claimant never reported a work injury to him. He testified that claimant told him that his shoulder hurt. At the time, he was assigned to work as a Case Packer. *Ex. J Bates 105.* Mr. C[Redacted] was involved in a conversation with Mr. Kevin G[Redacted] when he heard claimant say that he hurt his shoulder at home. *DC Test 49:00; See also Ex. J, Bates 117.* Claimant did not tell him that he injured his shoulder at work.

10. Claimant presented the IME report of Dr. Stephen Gray in support of his claim. If was Dr. Gray's conclusion that claimant had pre-existing left shoulder rotator cuff tendonitis, acromioclavicular osteoarthritis, glenohumeral osteoarthritis and a chronic labral tear, which was aggravated by repetitive lifting at work. This was based upon history provided to him by claimant, which included "Picking up boxes of product weighing between 45 and 50 lbs. from a pallet on the floor and putting the box onto a conveyor belt at about his upper chest height. He would bend and stoop to pick the box up by its bottom and lift it out in front of himself at upper chest height to put it onto the conveyor belt. He would do this many times per hour." Mr. C[Redacted] provided detailed testimony about the physical work required for the Case Packer, Leak Detect, and Rework positions. This testimony, coupled with the Job Demands Analysis (JDA), videos and photographs, show that the history given to Dr. Gray is incorrect and exaggerates the lifting required by claimant in any of his positions. Although Dr. Gray's report also reflects a history that an acute event occurred on or about March 20, 2018, claimant did not testify to this at hearing.

11. Statements made in claimant's IME report by Dr. Gray about claimant's reports to Mr. C[Redacted] were discussed with Mr. C[Redacted]. Although the Gray report says that on March 20, 2018, claimant experienced a popping sensation while at work followed by the onset of pain, and that he stopped work and advised Mr. C[Redacted], Mr. C[Redacted] testified that claimant did not tell him that he had a specific injury at work. He testified that claimant never asked him to send him to a doctor. He did not refuse to send claimant to a doctor. He did not ignore restrictions provided to claimant. He testified claimant did not ask him to complete an injury report. He testified that if someone comes to him to report an injury, he completes the paperwork. If claimant had reported an injury, he would have completed a report. He did not do so. Instead, claimant had indicated he injured his shoulder elsewhere. All of this conflicts with the history provided by claimant to Dr. Gray.

12. Facts in evidence show that the history that is the foundation of Dr. Gray's opinions is inaccurate. As a result, Dr. Gray's opinion is found to be less credible and persuasive than the opinion of Dr. Failinger.

13. Kevin G[Redacted] testified at hearing. He is a production manager for the employer and had supervisory authority over claimant. He testified about his meetings with claimant about his shoulder. Mr. G[Redacted] explained that he had historically communicated effectively with claimant without a translator. Mr. G[Redacted] explained that he spoke to claimant often and in detail, because Mr. G[Redacted] had spent time in Somalia, claimant's home country, during his military service. Mr. G[Redacted] also described incidents of conflict with other employees or complaints about his supervisor that he worked through with claimant, with no translator and no difficulty in claimant speaking or understanding English. Mr. G[Redacted] described his discussions with claimant about his shoulder. In his first discussion with claimant, when claimant asked to move to a new position because his shoulder hurt, Mr. G[Redacted] asked claimant specifically if he hurt it at work. Claimant told him, no, that he had hurt it at home. *KG Test. 15:10.* Mr. G[Redacted] recalls that claimant said this occurred in his garage. *Id; see also Ex. J. 118.* Mr. G[Redacted] testified that he was sure that he was clear with this question and that claimant understood the question, "without a doubt." *KG Test 15:30.*

14. There was a later meeting with claimant about his shoulder. Claimant came to Mr. G[Redacted]'s office and told him about his treatment and his MRI that was pending and told him that he did not have the $900 to pay for the co-pay for the MRI. *KG Test 28:20.* Claimant asked if the company would pay for it. Mr. G[Redacted] explained that no, this is through your private insurance, since you were hurt at home, and the company will not pay for that. Claimant then told him that he was going to claim that he hurt himself at work, so that the company would have to pay for it. Mr. G[Redacted] cautioned claimant at the time about insurance fraud. At that time, Mr. G[Redacted] reminded claimant of what he had told him before about how his shoulder was injured at home. Claimant then told Mr. G[Redacted] that he understood and that he decided not to make that assertion. *KG Test 18:30.* At no time during these two meetings did claimant tell Mr. G[Redacted] that he had actually injured himself at work, only that he thought he would claim that occurred in order to have his medical bills paid. Mr. C[Redacted] testified that he was present at this meeting also and confirmed Mr. G[Redacted]'s testimony and these statements of claimant. *DC Test. 57:40.* At no time during these meetings did Mr. G[Redacted] feel as claimant's supervisor that there was the responsibility to report a work injury. *KG Test 20:00.* Mr. G[Redacted] testified that he had seen the note provided by claimant about payment for the MRI. *KG Test 31:00.* After the MRI was ordered, claimant presented a letter saying that his medical insurance will not cover the whole bill for his MRI, and saying, because his shoulder problem started "while working in this company," "what is the best solution I can do because I can't afford to pay this bill if the company can assist [sic] to pay this bill I will appreciate." *Ex. J, Bates 116.* He testified that he did not interpret the note to indicate that claimant was alleging a work-related injury. Instead, he understood the note to say the shoulder problem started when he as an employee, which was true. *KG Test 32:25; 33:30.* At the time of receiving this note, Mr. G[Redacted] had already been told by claimant that he injured himself at home.

15. Claimant testified that his job as Case Packer required him to lift 50-pound boxes for milk cartons. *CL Test. 46:00, forward.* He testified that he had to do this constantly

for eight hours a day and had to lift the boxes quickly. Mr. G[Redacted] testified that claimant never lifted 50-pound boxes of milk. *KG Test. 16:43.* They do not have any boxes that weigh 50 pounds. The heaviest boxes that they have are boxes that hold four gallons of milk, which weighs 32 pounds. Once the gallons are in the boxes, the Case Packers do not touch the boxes. It is rare that one has to lift one of these 32-pound boxes off of the line. That is when there is a damaged box *KG Test 16:37.* Claimant testified that at some point, his left shoulder started bothering him. He testified that he mentioned that his shoulder was bothering him to Dean [C[Redacted]] in March of 2018. Claimant testified that Mr. C[Redacted] did not do anything.

16. Claimant's leave date began October 18, 2018, which is the date of his surgery. *Ex. J, Bates 156; Ex. F, Bates 33.* He had not missed any time because of his shoulder before that date. *Ex. J, Bates 151; Ex. F, Bates 31; CL Test 53:37.* His leave ended January 18, 2019. *Ex. J, Bates 156.* He was terminated when he did not return to work on January 18, 2019 and did not contact anyone at the plant. This was considered job abandonment. *Ex. J, Bates 127.* Claimant testified that he was angry with his employer because he felt that they had abandoned him and decided not to return to work with them when he was due to return on January 18, 2019 after his surgery. *CL Test 1, 1:02:15; 1:03:20; CL Test 2, 5:45.*

17. Based on the testimony of the employer witnesses, claimant admitted that his left shoulder was injured at home, and not at work. Claimant contacted the employer about paying for the MRI because he said he did not have the funds to pay for it. He did not assert it was a work-related claim. When he notified the employer that he wanted to bring a workers' compensation claim, he said that he needed to do that because he could not pay for the MRI. He was reminded of what he had said before, and informed of the consequences of bringing a false claim in the U.S. After that, claimant went forward with an FMLA application. He did not contact the employer or return to his job after his FMLA expired, and was terminated for abandonment of his job, in January 2019.

18. Claimant testified that he is currently employed with [REDACTED] in the meat packing plant, having started that position on July 24, 2020.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether claimant has proven by a preponderance of evidence that he experienced a left shoulder occupational cumulative trauma injury.

1. The claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

2. A claimant seeking benefits for an occupational disease must establish the existence of the disease and that it was directly and proximately caused by the claimant's employment or working conditions. *See, Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> *[A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to*

> *have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.*

This section imposes additional proof requirements beyond that required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). Simply because a claimant's symptoms occurred at work does not mean that his work activities caused his condition. The Guidelines outline specific criteria that must be satisfied to establish a causal connection between work activities and a cumulative trauma or shoulder condition.

3. The Division of Workers' Compensation's Shoulder Injury and Cumulative Trauma Conditions Medical Treatment Guidelines are the current best statement of the state of the medical literature dealing with causation of conditions claimed to have been caused by repetitive work. The Division expressly states that the provisions are, indeed, "guidelines." Nevertheless, the Division adopted the provisions as an enforceable rule, not simply an unofficial policy position of the Division. The Guidelines expressly acknowledge that one can deviate from the Guidelines in particular cases, but the deviation should be explained. The primary purpose is to advise and educate medical professionals and others about the current state of the medical literature. In so doing, the Guidelines provide a paradigm for decisions about causation of particular cumulative trauma diagnoses.

4. The Shoulder Injury Medical Treatment Guidelines were revised, effective February 1, 2015, and include a discussion of cumulative injuries and the shoulder. The Guidelines note that because there are a lack of prospective studies and other reasons, cumulative work-related causation for shoulder disorders is difficult to quantify. "The clinician should use this information judiciously." *Shoulder Guidelines, P. 14*

5. Dr. Failinger credibly opined that review of claimant's work duties shows that they do not support a cumulative trauma shoulder injury. However, more importantly, he testified that the severely torn condition of the labrum revealed in the surgical report shows that claimant experienced an acute injury. Dr. Failinger made clear that the damage in the shoulder would have to be caused by a significant acute force, such as falling or a sudden traction event. Simply lifting at work is not this kind of injury. Claimant repeatedly denied an acute injury at work to Dr. Failinger. Claimant did not testify that there was an acute injury at work. Claimant did not report an acute injury at work to his supervisors. Two witnesses credibly and persuasively testified that claimant did, instead, state that he had injured himself at home. The medical evidence is consistent with the testimony that there was an acute injury elsewhere. The respondents do not have the burden to prove an alternative explanation, but it is recognized that Claimant could have also injured or aggravated his shoulder during the MVA when claimant held the steering wheel and violently hit his chest on the steering wheel. That MVA was weeks from the claimed onset. Claimant has not

proven by a preponderance of the credible evidence that an acute injury occurred at work. Dr. Failinger's testimony establishes that the medical treatment provided to claimant, including surgical repair, was aimed at treating an acute left shoulder injury. Medical treatment and disability associated with the left shoulder are therefore related to an acute injury outside work and are not associated with a compensable work injury or occupational disease.

6. In deciding whether claimant has met his burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions; the motives of a witness; whether the testimony has been contradicted; and bias, prejudice or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936).

7. To the extent that claimant's testimony conflicts with the testimony of other witnesses and the medical evidence, claimant is found less credible. Based on the credible and persuasive testimony of Dr. Failinger, the surgical report established a torn labrum that was consistent with an acute injury and not an occupational disease as claimed by claimant. The findings during surgery were also consistent with the testimony from the two employer witnesses who each credibly testified claimant said he injured his shoulder at home - an acute injury.

8. The ALJ also does not find the ultimate opinions of Dr. Gray to be persuasive since his opinions are based on claimant's contentions – which the ALJ does not find credible. Like a house built on sand, an expert's opinion is no better than the facts and data on which it is based. *See Kennemur v. State of California*, 184 Cal. Rptr. 393, 402–03 (Cal. Ct. App. 1982).

9. As a result, claimant has not carried his burden to prove that he experienced an occupational disease or an acute injury at work. Two credible witnesses testified that claimant told them that he had injured himself outside work. Moreover, claimant was in a traumatic car accident, with his hands on the wheel when his chest was forced into the steering wheel. This was weeks before he claimed the onset of a repetitive use injury at work. Dr. Failinger credibly explained that, from the surgical report, we can see that there had to have been a traumatic injury since there was a complete labral tear. A job demands analysis and a review of the treatment guidelines had been done indicating that there were no risk factors for repetitive use injury in the any of the jobs that claimant did with the employer. This, however, becomes irrelevant given the state of the shoulder, as described in the operative report. There is no work injury. There is no repetitive use exposure at work. Thus, Claimant failed to establish by a preponderance of the evidence that he suffered a compensable work injury in the form of an acute injury or an occupational disease.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for compensation is denied.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 13, 2021.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-071-761-003

ISSUE

The sole issue for determination at hearing was:

- Whether the Claimant's right shoulder injury impairment should be compensated as a whole person?

PROCEDURAL POSTURE

The undersigned issued a Summary Order on June 26, 2020. Claimant filed a timely Request for Specific Findings of Fact and Conclusions of Law on July 8, 2020. Respondent filed amended proposed Findings of Fact and Conclusions of Law on July 20, 2020. An electronic copy of the hearing transcript was subsequently filed with the Court. This Order follows.

FINDINGS OF FACT

1. Claimant was employed by Employer in the warehouse. In this capacity, he would package product and load trucks. This job required Claimant to occasionally lift up to 30 pounds, as well as occasionally lifting floor to waist.[1]

2. There was no evidence in the record that Claimant injured his right shoulder before February 2018 or ever required treatment for the right shoulder.

3. On February 20, 2018, Claimant suffered a compensable injury when he injured his right shoulder while reaching overhead. He testified that he heard a pop and felt pain in his right shoulder.

4. Claimant initially treated in the Emergency Department at Aurora Medical Center.

5. Claimant treated with Annu Ramaswamy, M.D. at Rocky Mountain Medical Group, the designated provider for Employer and was evaluated on February 21, 2018. Dr. Ramaswamy's assessment was sprain of unspecified acromioclavicular joint, strain of unspecified muscle, fascia and tendon at the shoulder and upper arm level, right arm. Claimant was prescribed Norco and put on light duty.

6. On February 27, 2018, Claimant underwent an MRI of the right shoulder. The films were read by Vincent Herilhy, M.D. Dr. Herilhy's Impression was: moderate to marked grade III and IV chondromalacia throughout the glenoid and the posterior aspect of the medial humeral head, with extensive sub chondral cystic change and

[1] Exhibit 11, p. 229.

moderate subchondral bone marrow edema. There was a suspected mild to moderate poorly defined partial thickness articular sided tear of the anterior supraspinatus tendon located at 5 mm proximal to the insertional footprint. Moderate underlying tendinosis and frame without differential muscle atrophy was found. There was mild to moderate infraspinatus tendon gnosis with small interstitial tear of the anterior in social fibers, but no definite retraction or muscle atrophy. Possible scapular tendinosis without tearing was found, along with moderate acromioclavicular osteoarthritis with normal joint alignment and intact coraclavicular ligament.

7. On March 14, 2018, Claimant underwent a subacromial injection, which was performed by Michael Hewitt, M.D.

8. Claimant underwent an intraarticular injection administered by Dr. Hewitt on April 23, 2018.

9. Claimant also received physical therapy ("PT") at PT Select. That treatment was focused on the shoulder. Records from March 30, 2018 to April 24, 2018 were admitted into evidence

10. On June 18, 2018, Claimant was evaluated by Peter Weingarten, M.D., at the request of Respondents. Dr. Weingarten concluded Claimant was not at MMI and that the surgery proposed by Dr. Noonan was reasonable, appropriate and necessary.

11. On July 2, 2018, Claimant underwent arthroscopic surgery on his right shoulder, which was performed by Dr. Noonan. The preoperative diagnosis was right shoulder glenohumeral chondral degeneration, with impingement. Dr. Noonan performed a right shoulder arthroscopy, arthroscopic debridement of labral tearing, chondroplasty of the glenoid and humeral head, arthroscopic biceps release, arthroscopic capsular release and arthroscopic subacromial decompression. The post-operative diagnoses were: right shoulder grade 3 and 4 chondral change, glenohumeral joint; circumferential labral tearing; loss of motion; impingement.

12. After surgery, Claimant received further PT treatments at PT Select, beginning on July 12, 2018. The focus of the treatment Claimant received was to decrease pain, improve function and motor control, increase range of motion ("ROM") and strength. The PT records documented that Claimant problems were focused on the shoulder. Claimant received approximately six weeks of PT through May 5, 2018, at which time he was discharged.

13. Claimant's pain diagrams from DORN Innovative Healthcare Solutions, dated October 17, 2018 to November 21, 2018 primarily idetified a principal complaint of right shoulder pain.

14. On November 26, 2018, Claimant was reevaluated by Dr. Ramaswamy. At that time, Dr. Ramaswamy discerned minimal tenderness in the anterior portion of the biceps region and the rotator cuff. Minimal trigger point activity and tenderness

were present in the right trapezius/levator musculature. Claimant had limitations in his shoulder range of motion, with stiffness in the shoulder joint. Dr. Ramaswamy noted tenderness in the anterior portion of the biceps region, but otherwise stated that Claimant's impingement testing was negative. Finally, Dr. Ramaswamy determined that there was "some crepitus" in the shoulder joint, which he opined was likely related to Claimant's pre-existing, degenerative osteoarthritic changes.

15. Dr. Ramaswamy concluded Claimant was at MMI. A 6% scheduled upper extremity medical impairment was assigned to his right shoulder, which converted to a 4% whole person impairment. No recommendation was made for post-MMI medical treatment, other than Claimant was to keep up his home exercise program. Dr. Ramaswamy assigned a 60 lb. lifting and carrying restriction.

16. On December 20, 2018, a Final Admission of Liability ("FAL") was filed on behalf of Respondents. The FAL admitted for the medical impairment rating (extremity) issued by Dr. Ramaswamy.

17. On June 7, 2019, Dr. Raschbacher evaluated Claimant. At the time, Claimant completed a pain diagram, in which he showed burning, pins/needles and stabbing pain. The pain drawing completed by Claimant was confined to the shoulder, although he indicated he occasionally had pain going to his neck. On examination, Dr. Raschbacher obtained more restricted range of motion than measured by Dr. Ramaswamy.

18. Dr. Raschbacher's diagnosis was osteoarthritis of the right shoulder. Dr. Raschbacher opined that Claimant did not have any neck symptoms and no dysfunction more proximal than the shoulder. Dr. Raschbacher stated the conversion of the impairment rating was pursuant to Division protocol and he did not believe Claimant was entitled to a whole person impairment. Therefore, Claimant would not have impairment more proximal to the shoulder. Dr. Raschbacher concluded Claimant did not need additional medical treatment and had permanent work restrictions.

19. Claimant testified he continues to experience pain in his right shoulder. The pain limits his activities, including his ability to lift. He has to sleep on his right side, due to pain. Claimant was a credibile witness.

20. Ronald Swarsen, M.D. testified as an expert in Occupational Medicine on behalf of Claimant. He is level II accredited pursuant to the WCRP. Dr. Swarsen did not examine the Claimant, but testified based upon a review of the medical records.

21. Dr. Swarsen noted that Claimant's MRI indicated chondromalacia, which was a degeneration of the cartilage portion of the glenoid that was above the glenohumeral joint. He agreed the glenoid was part of the shoulder. Dr. Swarsen said the infraspinatus and supraspinatus were above the glenohumeral joint.

22. Dr. Swarsen noted the body parts which were being evaluated and treated by Dr. Ramaswamy, Dr. Noonan, or other treating physicians concluded that the portions of Claimant's body that were involved including the shoulder, the shoulder girdle itself, the components of the shoulder girdle and the rotator cuff, along with the very head of the humerus of the upper arm.[2] Dr. Swarsen opined that the situs of Claimant's functional impairment was within the shoulder girdle itself. More particularly, he was asked:

> " Q. Do you have an opinion, to a reasonable degree of medical probability, where the situs of functional impairment is here? And if you do, give it to us and tell us why.
>
> A. Yes, I do have an opinion that the primary loss or functional situs -- or situs of functional impairment is within the shoulder girdle itself. This is where the major portion of pathology exists that is -- that results in nonfunctioning or poor functioning of the shoulder girdle itself.[3]

23. Dr. Swarsen's ultimate conclusion was that Claimant's impairment was to the shoulder, including the joint components of the shoulder girdle and the rotator cuff, and the very head of the humerus of the upper arm. The ALJ noted this testimony did not persuade him that the situs of Claimant's impairment was beyond the shoulder.

24. Dr. Raschbacher testified as a medical expert witness on behalf of Respondents. He was board-certified in family medicine. He has practiced in the area of workers' compensation since 1988 and is Level II accredited pursuant to the WCRP. Dr. Raschbacher performed an IME of Claimant at the request of Respondents. On examination, Claimant did not have was disuse atrophy of the right forearm, which is often present when someone has a painful neck or shoulder. He noted Claimant presented in a straight-forward fashion. Dr. Raschbacher agreed with Dr. Swarsen's overall characterization of Claimant's shoulder anatomy, which he noted was also accurately described in the operative report itself.

25. Dr. Raschbacher testified that the various portions of the shoulder anatomy highlighted by Dr. Swarsen all served the primary purpose of moving the arm bone.[4] There were four joints in the shoulder, which included: the acromioclavicular joint, the sternoclavicular joint, the glenohumeral joint and the scapulothoracic articulation. Dr. Raschbacher said these joints were what Dr. Swarsen described when he was testifying about the shoulder girdle. The humeral head was part of the shoulder joint and it articulates with the glenoid fossa. Dr. Raschbacher stated that the shoulder joint was not an independently functioning part of the body. Its purpose was to move

[2] Dr. Swarsen utilized a Netter anatomical drawing to identify and describe the parts of the shoulder- Exhibit 15. Hearing Transcript ("Hr. Tr.") p. 37:7-11.

[3] Hr. Tr., p. 37:16-25.

[4] Transcript of Dr. Raschbacher's Evidentiary Deposition p. 18: 21-25.

and stabilize the arm. Dr. Rascbacher stated the function of the biceps tendon was to flex and supinate the elbow.

26. Dr. Raschbacher also testified that when conducting an impairment rating, the rating physician utilizes the arm as the diagnostic tool to measure resulting range of motion loss, whereby the measuring tool is placed on the arm bone. Dr. Raschbacher testified that conversion was appropriate when there was clear evidence of relation of the neck to the shoulder in terms of symptomatology, which was not present in this case.[5] Dr. Raschbacher opined Claimant's medical impairment was limited to the shoulder. The ALJ credited Dr. Raschbacher's opinions as to the situs of Claimant's impairment.

27. The situs of Claimant's impairment was the arm at the shoulder.

28. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. (2018). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. (2018).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. (2018). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In the case at bench, Claimant's entitlement to benefits turned on the credibility of expert witnesses.

[5] Raschbacher Deposition Transcript p. 7:4-12.

Conversion of Scheduled Impairment Rating

Section 8-42-107(1)(a), C.R.S. limits medical impairment benefits to those provided in §8-42-107(2), C.R.S. when a claimant's injury is one enumerated in the schedule of impairments. The schedule includes the loss of the "arm at the shoulder." *See* §8-42-107(2)(a), C.R.S. However, the "shoulder" is not listed in the schedule of impairments. *See Bolin v. Wacholtz*, W.C. No. 4-240-315 (ICAO, June 11, 1998).

If Claimant sustains an injury not found on the schedule, § 8-42-107(1)(b), C.R.S., provides Claimant shall "be limited to medical impairment benefits as specified in subsection (8)," or whole person medical impairment benefits. As used in these statutes, the term "injury" refers to the part or parts of the body that sustained the ultimate loss, not necessarily the situs of the injury itself. Thus, the term "injury" refers to the part or parts of the body that have been functionally disabled or impaired. *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004); *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996).

Under this test the ALJ is required to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Strauch v. PSL Swedish Healthcare System, supra.* Pain and discomfort that limit Claimant's use of a portion of the body may constitute functional impairment. *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005). The ALJ may also consider whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora,* W.C. No. 4-452-408 (ICAO October 9, 2002). The ALJ concluded Claimant did not meet his burden of proof to establish he was entitled to a whole person medical impairment rating.

The ALJ's conclusion was based first upon the medical evidence which provided objective evidence that Claimant did not report pain beyond the shoulder, including cervical pain. This was borne out in medical records admitted at hearing, which documented that Claimant's symptoms and treatment were generally confined to the shoulder. This was true in the treatment before shoulder surgery. (Findings of Fact 5, 7-10). This was also true in the medical records which documented Claimant's treatment after shoulder surgery. (Findings of Fact 12-15).

Second, both Dr. Swarsen and Dr. Raschbacher's expert testimony concluded that the anatomical structures at and around Claimant's shoulder girdle were involved. The ALJ was persuaded that Claimant's injury was limited to those structures and did not extend beyond the shoulder. The medical records in evidence documented pain complaints limited (with one exception) to the shoulder. The ALJ credited Dr. Raschbacher's opinion on this point and concluded that Claimant's impairment was limited to the arm at the shoulder. (Finding of Fact 27).

In coming to this conclusion, the ALJ considered Claimant's argument that he was entitled to the whole person medical impairment rating. Claimant argued he suffered functional loss to his right shoulder and the use of that shoulder was impaired.

Claimant testified the impairment of his right shoulder inhibits the Claimant’s ability to reach overhead, sleep on his right side, and to carry objects on his right shoulder. (Finding of Fact 19). Claimant also relied on Dr. Swarsen‘s testimony, specifically that portion in which he discussed what was described as the “shoulder girdle“, as evidence that structures beyond the shoulder joint itself were involved. Because Claimant’s right shoulder impairment is not on the schedule of injuries found at § 8-42-107(2), C.R.S., the situs of the Claimant’s functional impairment is not limited to “the arm at the shoulder”.

The ALJ reviewed both experts’ testimony on the situs of Claimant’s impairment and concluded it was on the schedule found at § 8-42-107(2), C.R.S. Although Claimant was a credible witness, there were not consistent complaints of structures beyond the shoulder in the medical records. The ALJ credited Dr. Raschbacher’s testimony as to the situs of Claimant’s medical impairment. (Finding of Fact 26). Therefore, based upon the totality of evidence presented at hearing, the ALJ determined Claimant failed to prove he sustained functional impairment beyond the shoulder and was not entitled to PPD benefits based upon the whole person rating.

ORDER

1. Claimant’s request for additional PPD benefits based upon conversion of his medical impairment rating for the shoulder is denied and dismissed.

2. Any issues not determined in this decision are reserved for future determination.

DATED: January 15, 2020

STATE OF COLORADO

Digital signature

Timothy L. Nemechek
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that additional psychological treatment with Dr. Dale Bowen is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted March 25, 2020 work injury.

2. Whether the claimant has demonstrated, by a preponderance of the evidence, that her average weekly wage (AWW) should be higher than the previously admitted to base AWW of $557.58, (and $828.27 for the period of July 1, 2020 through July 23, 2020 due to the COBRA adjustment).

3. Whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to the COBRA adjusted AWW for the period of June 1, 2020 through July 23, 2020.

FINDINGS OF FACT

1. The claimant has worked for the employer for approximately nine years. On March 25, 2020, she was working in her position as a barista in the employer's Starbucks department. On that date, the claimant was injured when three boxes of frozen sandwiches fell from a shelf and struck the claimant in the back of her head and neck.

2. The claimant's authorized treating physician (ATP) for this claim is Dr. James McLaughlin. The claimant first saw Dr. McLaughlin on March 25, 2020. At that time, the claimant reported a headache and some visual disturbances. Dr. McLaughlin diagnosed post concussive symptoms and tightness of the cervical spine. He took the claimant off of all work at that time.

3. On March 27, 2020, Dr. McLaughlin ordered a head computed tomography (CT) scan.

4. On March 31, 2020, the recommended head CT was performed. The results showed no acute intracranial pathology. In addition to the head CT, x-rays were taken of the claimant's cervical spine on March 31, 2020. The x-rays showed no fracture or bone lesion, and no spondylolisthesis.

5. On April 1, 2020, Dr. McLaughlin noted that the head CT and x-rays of the claimant's cervical spine were normal.

6. On April 20, 2020, Dr. McLaughlin indicated that the claimant could return to full duty work the following day (April 21, 2020).

7. On April 23, 2020, the respondent filed a General Admission of Liability (GAL) admitting for medical benefits and temporary total disability (TTD) benefits. The claimant's average weekly wage (AWW) was listed as $557.98.

8. On May 4, 2020, the claimant was seen by Dr. McLaughlin. At that time, the claimant reported that she felt very fatigued after working a full shift, with a headache and tightness in her neck. At that time, Dr. McLaughlin limited the claimant to working four hour shifts.

9. Due to limitations related to coronavirus (COVID-19), the claimant was not able to begin conservative treatment modalities such as physical therapy and massage. It was not until May 19, 2020, that Dr. McLaughlin was able to refer the claimant to physical therapy.

10. On May 14, 2020, the respondents filed a GAL again listing the claimant's AWW as $557.98. The GAL was issued because the claimant returned to restricted work on May 5, 2020. As a result, the respondent began paying temporary partial disability (TPD) benefits.

11. On June 15, 2020, the claimant continued to report overall improvement in her symptoms. On that date, Dr. McLaughlin recommended additional physical therapy of between six and twelve visits.

12. On June 22, 2020, the respondent notified Dr. McLaughlin that the additional physical therapy was denied.

13. On June 25, 2020, the claimant attended an independent medical examination (IME) with Dr. Tashof Bernton. In connection with the IME, Dr. Bernton reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Bernton opined that the claimant suffered a contusion to the cervical and occipital area with a minor muscle strain. Dr. Bernton further opined that the claimant's continuing symptoms were likely the result of anxiety, and depression (with somatoform complaints). In addition, he opined that the claimant had reached maximum medical improvement (MMI) as of the date of the IME.

14. On June 29, 2020, Dr. McLaughlin referred the claimant to Dr. Dale Bowen for a psychological consultation. The purpose of treatment with Dr. Bowen was listed as "to help with the distress as well as the post concussive symptomatology."

15. The claimant was seen by Dr. Bowen on July 9, 2020. In a medical record of that date, Dr. Bowen listed the claimant's diagnosis as adjustment disorder with mixed anxiety and depressed mood. He opined that the claimant would benefit from approximately eight therapy sessions. A request for authorization for that therapy was sent to the respondent on July 14, 2020.

16. On July 10, 2020, the respondents asked Dr. McLaughlin to review Dr. Bernton's IME report and indicate whether he agreed or not. In a document dated July 22, 2020, Dr. McLaughlin stated that he does not agree with Dr. Bernton's opinions. Specifically, Dr. McLaughlin did not agree that the claimant had reached MMI. For the

claimant to reach MMI, Dr. McLaughlin stated that she would need to continue with physical therapy and treatment with Dr. Bowen.

17. On July 16, 2020, the respondent denied additional treatment with Dr. Bowen. The respondent referred to the opinion expressed by Dr. Bernton in his IME report that the claimant had reached MMI, as the reason for the denial.

18. On July 23, 2020, the respondent filed a GAL that listed the claimant's AWW as $557.98/$828.27. The claimant's AWW was increased to $828.27 because her health insurance was cancelled on July 1, 2020. At that time, the respondent also noted that the claimant's health insurance was to be reinstated on August 1, 2020.

19. On July 31, 2020, Dr. McLaughlin released the claimant to full duty, with no work restrictions.

20. On August 31, 2020, Dr. McLaughlin referred the claimant to Brittany Matsumura for consultation. On September 14, 2020, the claimant was seen by Dr. Matsumura. At that time, the claimant reported occasional visual disturbances, increased migraine headaches, dizziness, and occasional memory issues. Dr. Matsumura noted the claimant's neurologic exam was normal. She recommended the claimant take propranolol to treat her headaches. Dr. Matsumura agreed with the claimant seeing Dr. Bowen for cognitive behavior treatment.

21. On October 15, 2020, the respondents filed a GAL admitting for medical benefits and TTD benefits. The AWW is listed on the GAL as $557.98/$828.73. In addition, the GAL includes language that the claimant's "health insurance was reinstated on 07/23/20. She was released to fully duty on 07/31/20 so TPD[1] was terminated."

22. In a medical record dated October 28, 2020, Dr. McLaughlin opined that four visits of physical therapy and continued treatment with Dr. Bowen would be reasonable and necessary treatment for the claimant. He also opined that such treatment complied with the Colorado Medical Treatment Guidelines.

23. The claimant testified that her current symptoms include horrible headaches that feel like her head "is in a vice", dizziness, as well as neck pain and tightness. The claimant also has memory issues, particularly with remembering numbers and dates. Prior to her March 25, 2020 injury, the claimant did not have any of these symptoms. The claimant also testified that physical therapy helped as did meeting with Dr. Bowen. The claimant testified that she would like to continue to see Dr. Bowen to help with her mental state and mental well being.

24. The claimant's spouse testified at hearing. His testimony was consistent with the claimant's testimony regarding the claimant's current symptoms. In addition, he testified that since her work injury the claimant is anxious, lethargic, and has difficulty concentrating. The claimant's spouse further testified that that since stopping physical therapy, the claimant has declined further.

[1] Temporary partial disability benefits.

25. In January 2020, the claimant's rate of pay was increased from $17.09 per hour to $17.44 per hour. On March 25, 2020, the claimant was paid $17.44 per hour. Based upon payroll records entered into evidence, in 2019 the claimant had total earnings of $28,517.70. When this amount is divided by 52 weeks it is equal to $548.42.

26. The respondent calculated the admitted AWW of $557.58 by reviewing the claimant's total wages of $7,248.16 for the 12 week period of December 22, 2019 through March 31, 2020.

27. In addition to her normal wages, in the pay period ending March 14, 2020, the claimant was paid $1,005.23 in "other earnings". The claimant testified that this might have been a store bonus. She also testified that such a bonus was based on how the store performed in meeting sales goals.

28. The claimant testified that due to the coronavirus (COVID-19) pandemic, the employer paid employees an additional amount per hour as "hero pay". This hero pay was an additional $2.00 per hour. The hero pay program began on April 1, 2020 and ended on May 16, 2020.

29. On June 14, 2020, the claimant was provided written notice that her health insurance was cancelled May 31, 2020. The claimant then received a second notice on July 14, 2020, that her health insurance was cancelled June 30, 2020.

30. The claimant's spouse testified that he and the claimant have medical insurance through the employer. He further testified that he believes that the health insurance was cancelled on May 31, 2020. He explained that in early June 2020 he had a medical appointment and was informed that he could not bill the insurance, as it had been cancelled. The claimant's health insurance was reinstated on July 23, 2020.

31. The claimant asserts that the bonus of $1,005.23 should be considered in calculating her average weekly wage (AWW). In addition, the claimant asserts that an additional $2.00 per hour in hero pay should be included in calculating the claimant's AWW for the period of April 1, 2020 through May 16, 2020.

32. The ALJ credits the medical records, the claimant's testimony, and the opinions of Drs. McLaughlin, Matsumura, and Bowen over the conflicting opinions of Dr. Bernton. The ALJ finds that the claimant has demonstrated that it is more likely than not that continued psychological treatment with Dr. Bowen is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

33. With regard to the claimant's AWW, the ALJ is not persuaded that her AWW should be recalculated to include the bonus of $1,055.23 and $2.00 per hour in hero pay. First, with regard to the "other earnings" of $1,055.23, the claimant testified that might have been a store bonus that is paid based on the store meeting goals. The ALJ finds that this is not an amount that the claimant had a reasonable expectation to receive. Therefore, it was appropriately excluded from the calculation of the admitted AWW. Second, with regard to the $2.00 per hour in hero pay, that additional pay did not go into effect until April 1, 2020. Therefore, that was not part of the claimant's wages at the time

of the March 25, 2020 injury. For all of the foregoing reasons, the ALJ finds that the admitted AWW of $557.98 accurately reflects the claimant's earnings at the time of her injury.

34. The ALJ credits the testimony of the claimant's spouse and the notices related to the cancellation of the claimant's health insurance and finds that the claimant has demonstrated that it is more likely than not that her health insurance was cancelled on May 31, 2020. Therefore, the claimant has successfully demonstrated that it is more likely than not that she is entitled to the COBRA adjusted AWW for the period of June 1, 2020 through July 23, 2020.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has demonstrated, by a preponderance of the evidence, that psychological treatment with Dr. Bowen is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found,

the medical records, the claimant's testimony, and the opinions of Drs. McLaughlin, Matsumura, and Bowen are credible and persuasive.

6. Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's average weekly wage (AWW) on his earnings **at the time of the injury**. In order for a particular payment to be considered "wages" it must have a "reasonable, present-day, cash equivalent value," and the claimant must have access to the benefit on a day-to-day basis, or an immediate expectation interest in receiving the benefit under appropriate, reasonable circumstances. *Meeker v. Provenant Health Partners*, 929 P.2d 26 (Colo. App. 1996). Under some circumstances, the ALJ may determine the claimant's TTD rate based upon his AWW on a date other than the date of the injury. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

7. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that her AWW should be recalculated to include the bonus of $1,055.23 and $2.00 per hour in hero pay. The "other earnings" amount that has been identified as a store bonus. Therefore,with regard to that amount, the claimant does not have "a day-to-day basis, or an immediate expectation interest in receiving the benefit". In addition, the increased hero pay was no part of the claimant's wages at the time of her injury. As found, the ALJ is not persuaded by the claimant's assertions. As found, the admitted AWW of $557.98 accurately reflects the claimant's earnings at the time of her injury.

8. As found, the claimant has successfully demonstrated, by a preponderance of the evidence, that she is entitled to the COBRA adjusted AWW for the period of June 1, 2020 through July 23, 2020. As found, the testimony of the claimant's spouse and the notices related to the cancellation of the claimant's health insurance are credible and persuasive.

ORDER

It is therefore ordered:

1. The respondents shall pay for the recommended psychological treatment with Dr. Bowen, pursuant to the Colorado Medical Fee Schedule.

2. The admitted AWW of $557.98 (and $828.27 due to the COBRA adjustment) is appropriate.

3. The claimant is entitled to the COBRA adjusted AWW for the period of June 1, 2020 through July 23, 2020.

4. All matters not determined here are reserved for future determination.

Dated this 6th day of January 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUE

1. Whether Respondents have overcome by clear and convincing evidence the DIME Physician's assignment of a 20% whole person permanent impairment.

2. Whether Respondents have overcome by clear and convincing evidence the DIME physician's determination that Claimant's date of maximum medical improvement for his January 13, 2009 work injury was July 13, 2020.

FINDINGS OF FACT

1. Claimant is a 47-year-old firefighter who was employed by Employer from approximately October 1998 until December 31, 2018.

2. On August 29, 2008, Claimant sustained an admitted injury to his back arising out of the course and scope of his employment with Employer ("2008 Injury").

3. On August 29, 2008, Claimant saw William Miller, M.D., at Union Medical, P.C., where he was diagnosed with work-related lumbar pain and left leg paresthesia. Dr. Miller recommended physical therapy. (Ex. 8).

4. On referral from Dr. Miller, Claimant received physical therapy at Performax PT starting on September 2, 2008. Claimant attended six physical therapy visits between September 2, 2008 and November 7, 2008. At Claimant's physical therapy visit on November 7, 2008, Claimant reported "feeling great" with minimal back pain. He continued to experience mild left lumbar stiffness localized at L2-4. (Ex. 11).

5. On November 14, 2008, Dr. Miller placed Claimant at maximum medical improvement (MMI) for the 2008 Injury without permanent medical impairment or work restrictions. (Ex. 13).

6. By Stipulation dated February 13, 2020, the parties agreed the 2008 Injury did not cause him to miss more than three regular scheduled shifts or calendar days of work, and therefore was not a lost time claim under § 8-43-101, C.R.S. Claimant also waived all claims for additional benefits, including medical, temporary disability, permanent partial disability, permanent total disability, disfigurement and penalties associated with the 2008 Injury. (Ex. 13).

7. On January 13, 2009, Claimant sustained another work injury to his lower back arising out of the course and scope of his employment with Employer ("2009 Injury"). (Ex. 13).

8. Following the 2009 Injury, Claimant was treated by F. Mark Paz, M.D., of Union Medical. Dr. Paz diagnosed Claimant with lumbar pain and directed Claimant to re-initiate physical therapy. (Ex. 8).

9. Claimant returned to Performax PT for physical therapy on January 15, 2009 and attended 14 physical therapy appointments between January 15, 2009 and July 21, 2009. (Ex. 11).

10. On March 9, 2009, Claimant saw Malcolm Slaton, PA-C (physician assistant for Dr. Paz), and was referred to chiropractor, Keith Graves, D.C., for up to six sessions. Claimant was cleared to return to work without restrictions. Claimant reported that he was working well without limitations but still had occasional back pain across the lower back at the L4-5 area. (Ex. 8).

11. Claimant attended seven chiropractic visits with Dr. Graves between March 23, 2009 and May 29, 2009. During this time, Claimant consistently reported pain in the lower back. (Ex. 10). In his May 8, 2009 report, Dr. Graves diagnosed Claimant with bilateral, right > left, lumbosacral junction sprain/strain. He noted that Claimant was responding to conservative therapy, but "poorly stabilizing." On May 29, 2009, Dr. Graves reported that Claimant was participating in a pool therapy program for core strengthening. (Ex. 10).

12. On April 8, 2009, Dr. Paz referred Claimant to Franklin Shih, M.D., for a physiatry consultation. (Ex. 8).

13. On May 8, 2009, Claimant saw Dr. Shih. At that time, Claimant reported ongoing low back symptomatology with occasional radiation to his buttocks but denied distal ration to the thighs or legs. On examination, Dr. Shih noted mild increase in symptomatology with palpation of the lower lumbar area, and a positive straight leg raise for hamstring tightness. Dr. Shih recommended that Claimant participate in an active exercise program. At this visit and his May 26, 2009 visit, Dr. Shih indicated that he would be hesitant to recommend more aggressive treatment options, such as selective injections or surgery. (Ex. 9).

14. On June 8, 2009, Dr. Shih recommended claimant have a lumbar MRI. (Ex. 9).

15. On June 11, 2009, Claimant had a lumbar MRI at Denver Integrated Imaging South. Radiologist Joseph Morgan, M.D., interpreted the MRI as showing early changes of disc degeneration at L4-5 and L3-4 without a focal abnormality, and an otherwise normal spine. (Ex. 6).

16. On June 18, 2009, Dr. Shih reviewed Claimant's MRI results and indicated that it showed some mild, nonspecific degenerative disc changes, but that he did not see any significant pathology. Dr. Shih stated: "I presented this to him as a good news/bad news situation. The good news is that there is no significant structural pathology. The bad news is that from a treatment standpoint I really have little else to offer to him." He recommended that Claimant complete his stabilization program and deferred to Dr. Paz with respect to Claimant's return to full work activity. (Ex. 9).

17. On July 16, 2009, Dr. Paz examined Claimant and discharged him from care. Claimant reported on July 16, 2009 that he had returned to his usual level of activity and had had a single episode of discomfort that resolved with physical therapy. Dr. Paz's assessment was "lumbar pain, resolved" and "leg paresthesia, resolved." Dr. Paz placed Claimant at MMI with no permanent impairment and no permanent restrictions. He authorized maintenance care for four sessions of physical therapy within the following three months. (Ex. 8).

18. Following placement at MMI, Claimant attended one physical therapy session at Performax on July 21, 2009, where he reported that his back was "feeling good" but he had mild increased stiffness through his spine, which resolved with treatment. (Ex. 11).

19. On August 12, 2016, Claimant was seen at Denver Physical Medicine & Rehab, by Mansi Dua, DPT. At his initial visit, Claimant reported his back pain started approximately three months earlier, and that he believed was "due to the work he does as a firefighter." PT Dua indicated a diagnosis of low back pain, pain in the right and left hips and muscle spasm of the back. The August 12, 2016 physical therapy record indicates that Claimant was referred for a pain management evaluation, and for an MRI. Claimant's "prognosis" was stated as "Fair- The patient can expect to have a reduction of their [sic] symptoms and may require ongoing rehabilitation." (Ex. 7). (The medical records in evidence do not indicate that Claimant underwent a pain management evaluation or MRI or received any medical care until he returned to Denver Physical Medicine and Rehab until October 3, 2017).

20. On October 3, 2017, Claimant returned to Denver Physical Medicine & Rehab and began a course of physical therapy with PT Dua. Between October 3, 2017 and August 23, 2018, Claimant attended approximately 75 physical therapy sessions. Physical therapy records indicate that from October 3, 2017 until December 29, 2017, Claimant's primary complaint was low back, with "Dull, Aching pain" rating between 3/10 and 6/10 during this time. On November 2, 2017, PT Dua noted "Patient reports of having a [sic] insidious flare up in their symptoms. No new injury reported." On November 9, 2017, Claimant reported his back was sore after working his shift. Physical therapy records during this time report no other incidents, and generally describe Claimant's pain at each visit as either "frequent (up to 75% of day) of" either "moderate" or "slight to moderate intensity" and "increased by walking, bending, lifting, sitting an stooping; decreased by stretching and rest." (Ex. 7).

21. Beginning on January 2, 2018, Denver Physical Medicine & Rehab records characterize Claimant's primary complaint at each visit as "Left pelvis, low back, right pelvis," rating between 2/10 and 6/10. On January 9, 2018, March 3, 2018, April 10, 2018, July 14, 2018, PT Dua again noted "Patient reports of having a [sic] insidious flare up in their symptoms. No new injury reported." (The reports of "insidious flare ups" in the Denver Physical Therapy Records correspond with each time Claimant reported a subjective increase in pain of 20%). At each visit, from October 3, 2017 through August 23, 2018, Claimant's prognosis is stated as "Fair- The patient can expect to have a reduction of their [sic] symptoms and may require ongoing rehabilitation." Claimant's

records from Denver Physical Medicine and Rehab do not indicate a referring physician or if Claimant was under the care of any physician during this time. (Ex. 7).

22. In December 2018, Claimant accepted a job offer with [Redacted] as a firefighter, to begin on January 1, 2019. Claimant understood he would be required to complete a job-required fitness test, including VO2 max testing.

23. On December 10, 2018, Claimant began working with Kent B[Redacted], an athletic trainer associated with [Redacted] in preparation for the job-required VO2 max test with [Redacted]. Claimant reported having back issues for approximately ten years, and that he did physical therapy with no resolution of his symptoms. Claimant reported "seeking treatment on and off for this whole time." Mr. B[Redacted] noted that Claimant stated he has been doing core strengthening "but does not understand how to demonstrate basic core strength work." Between December 10, 2018 and December 18, 2019, Claimant attended 55 sessions with Mr. B[Redacted]. In a report dated November 1, 2019, Mr. B[Redacted] reported that Claimant's core strength had improved, and that Claimant reported "having his first pain free day in almost 10 years," although the date of this "pain free" report is not indicated. Mr. B[Redacted] reported Claimant then had a "flare in low back pain" and was referred to Dr. Akuthota for imaging and treatment. Mr. B[Redacted]'s reports indicate that around May 21, 2019, Claimant aggravated his back while working with a window. Claimant also aggravated his back around September 6, 2019 when doing "2.5-inch hose training." (Ex. 4).

24. On January 1, 2019, Claimant began his new position as a firefighter with [Redacted].

25. On April 8, 2019, Claimant was seen at UCHealth CU Sports Medicine by Brian Hill, M.D. Claimant reported a ten-year history of low back pain waxing and waning over time. Dr. Hill's examination was consistent with mechanical low back pain, with no evidence of radicular findings. He was diagnosed with osteoarthritis of the lumbar spine, mechanical low back pain and chronic low back pain without sciatica. Lumbar x-rays were read as showing minimal degenerative changes along the lumbosacral junction. Dr. Hill recommended continuing rehab and home exercise program and self-massage. (Ex. 5).

26. On May 22, 2019, Claimant saw Lindsay Goldstein-Smith, NP at UCHealth AMC Spine Center. Mr. Goldstein-Smith prepared a report addressed to Richard Drexilius, M.D., indicating Claimant had been referred by Dr. Drexilius. (No records from Dr. Drexilius are in the Court's record). Ms. Goldstein-Smith referred Claimant for a lumbar MRI. (Ex. 5).

27. On June 7, 2019, Claimant underwent a lumbar MRI at Health Images. The radiologist, Arash Momeni, M.D., interpreted the MRI as showing "[d]egenerative changes and facet arthropathy at L3-4 to include a left foraminal small disc protrusion and annular fissure. The findings result in mild left foraminal and lateral recess stenosis with mild encroachment on the L3 and L4 nerve roots, respectively." Additionally, the MRI showed "broad-based disc bulge and left foraminal disc protrusion at L4-5. In concert with facet

arthropathy the findings result in left lateral recess stenosis and mild contact on the L5 nerve root." (Ex. 6).

28. On August 13, 2019, Claimant received a transforaminal epidural steroid injection (ESI) at UCHealth at the L4 level. (Ex. 5).

29. On September 25, 2019, Claimant filed a Worker's Claim for Compensation related to the 2008 Injury and the 2009 Injury. Respondents filed a Notice of Contest for each claim on October 17, 2019. (Ex. 13). Subsequently, the parties entered into a Stipulation, (Ex. 13), which is incorporated herein by reference.

30. On November 4, 2019, Claimant saw J. Scott Bainbridge, M.D., apparently referred by Mr. B[Redacted]. Dr. Bainbridge's assessment was intervertebral disc displacement, lumbar region, and spondylosis without myelopathy or radiculopathy, lumbar region. He opined that "lumbar discogenic pain appears to be the primary pain generator. I cannot rule out a mixed picture with some facet component of pain. The most probable symptomatic levels are L3-5." Dr. Bainbridge noted that Claimant had a previous ESI with Dr. Akuthota. (The ALJ infers that the ESI referenced is the August 13 ESI performed at UCHealth). Dr. Bainbridge recommended a L3-4 interlaminar epidural steroid injection, which Dr. Bainbridge performed on December 5, 2019. On January 19, 2020, Claimant returned to Dr. Bainbridge for a follow-up visit and reported that the December 5, 2019 ESI did not provide substantial long-term benefit. Dr. Bainbridge opined that Claimant's then-current problems "are disc and radicular in nature and related to [Claimant's] work comp injury." Dr. Bainbridge's records do not reflect that he reviewed Claimant's prior medical records or his 2009 MRI. Dr. Bainbridge considered several potential treatment and diagnostic options, including medial branch blocks, and lumbar discography. (Ex. 1).

31. On January 20, 2020, Claimant was seen by Allison Fall, M.D., for an independent medical examination (IME) requested by Respondents. Dr. Fall opined that Claimant was appropriately placed at MMI on July 16, 2009, noting Claimant had returned to full duty as a firefighter at that time, and had a normal physical examination with Dr. Paz. Dr. Fall noted that Claimant did not have to perform physical testing at work until 2012, and that he reported that his physical fitness performance testing became more difficult over time, although he passed the fitness test. Dr. Fall found that there was no indication that Claimant sustained an aggravation of his prior work injury, in part because there was no permanency to his prior condition. She opined it was appropriate for Claimant to pursue injection therapy and a strengthening program, but those modalities would be unrelated to the 2008 and 2009 injuries. (Ex. F).

32. On May 14, 2020, Claimant was seen (through video) by Sander Orent, M.D., for an IME requested by Claimant. Dr. Orent noted Claimant reported seeing a chiropractor in 2012, for approximately 5-6 visits, and later saw a different chiropractor. (No documentation of this care appears in the record). Claimant reported to Dr. Orent that his work with Mr. B[Redacted] "broke him," which Dr. Orent attributed to "very aggressive attempts at physical reconditioning in a patient who was not ready for this." Dr. Orent opined that "it is clear and obvious that this patient has had ongoing and continuing low back pain since his injury in 2009." Dr. Orent opined that Claimant' pain was "probably

discogenic and there is a significant concern about instability of the lumbar spine." When discussing a comparison of Claimant's lumbar MRIs, Dr. Orent stated "We note that the patient in 2009 had an MRI which showed only early degenerative changes, but the MRI of June 2019 now shows significant degenerative changes with facet arthropathy at multiple levels and a retrolisthesis 3 to 4 mm. There is also contact in the left lateral recess of the nerve roots at L4-L5. This is a major significant change showing a marked worsening of the condition." (Ex. 2).

33. Dr. Orent's impression was that Claimant "has the occupational disease of degenerative low back spondylosis. This has obviously progressed in the years from 2009 to 2019, now leading to the possibility of spinal instability with the retrolisthesis that is apparent. This may be the source of his discogenic pain." Dr. Orent opined that Claimant "has never been at maximum medical improvement." (Ex. 2).

34. Claimant underwent range of motion testing on May 27, 2020 at Northgate Physical Therapy, apparently at the request of Claimant's counsel. These range of motion measurements were provided to Dr. Orent who opined that they were valid and assigned Claimant a 20% whole person permanent impairment based on those measurements. (Ex. 2, 3).

35. On July 13, 2020, Claimant saw Anjmun Sharma, M.D., for a Division IME (DIME). Dr. Sharma conducted a review of Claimant's medical records and performed a physical examination. On examination, he found that Claimant had a "fairly normal neurological examination," and pain behaviors when performing range of motion. He noted that comparison of Claimant's 2009 and 2019 MRI showed "significant change over time, mainly, facetogenic findings as well as spinal canal stenosis, spondylosis as well." He found the MRIs consistent with "chronic changes over time and no doubt they have a pattern here where the patient has been working as a firefighter and never changed jobs." Dr. Sharma stated that "pathology is present and I do believe that the patient is qualified for a permanent impairment rating." He diagnosed Claimant with lumbar spine strain, lumbar spondylosis, lumbar facet arthropathy, degenerative disc dieses and lumbar spondylosis, degenerative disc and facet arthropathy L3-L4, left foraminal and lateral recess stenosis with mild encroachment L3-L4 nerve roots, broad based bulge, left foraminal disc protrusion L4-L5, and facet arthropathy L5. (Ex. E).

36. Dr. Sharma disagreed with Dr. Paz's placement of Claimant at MMI on July 16, 2009 and assigned a date of MMI as July 13, 2020. Dr. Sharma assigned a whole person permanent impairment rating of 13% for lumbar range of motion, and an 8% rating for disorders of the lumbar spin (for spondylosis) of 8%. The final combined whole person impairment rating assigned is 20%. (Ex. E).

37. In his report, Dr. Sharma explained his rationale for placing Claimant at MMI on July 13, 2020 as follows:

> I have reviewed the medical records. The patient was placed at maximum medical improvement previously on July 16, 2009 per my review of the medical records. However, the patient continues to have medical care and

> it is not clear whether any final admission of liability was ever filed. For my review of the medical record on March 20, 2020, it does appear that the patient was given a final admission of liability for 0% impairment. This appears be based on Dr. Sander Orent.[1] This appears to be done sometime between Dr. Allison Fall's rating for independent medical examination and Dr. Sander Orent's independent medical examination and so as result while we have two reports that contest each other, Dr. Orent is the only one who had provided a numerical rating officially, but nevertheless the patient has really never been placed at MMI aside from Dr. Mark Paz who indicated MMI early. I disagree that the patient was placed at MMI on July 16, 2009. I also disagree with any MMI date that was assigned by Dr. Fall which echoed the same July 16, 2009 rating as well. Dr. Sander Orent had also performed an independent medical examination but in his report, it does [not] appear that he had actually assigned a date of maximum medical improvement either, but he did provide an impairment rating. So, it is still open for interpretation what the official MMI date is. As a result, I will assign the date of MMI date as the date of the division independent medical examination because I am indicating clearly what the date of maximum medical improvement is and I am tying that together with the potential impairment rating that I will assign for the active range of motion measurements that I took during the division independent medical examination. The date of MMI therefore is July 13, 2020.

(Ex. E).

38. With respect the assignment of a whole person impairment rating, Dr. Sharma’s stated rationale was:

> The patient has a [sic] impairment rating that is fairly significant. No doubt, he has been working in the same field of work for the last 20 years. This has resulted in significant wear and tear on Iris back, clearly from the MRI findings of diagnostic tests indicating 10 years apart. There is significant worsening of degenerative changes in the lumbar spine spondylosis and facet arthropathy. I believe that the impairment rating that I have assigned is commensurate with the current level of functioning. This impairment rating is consistent with the previous impairment rating signed by Dr. Sander Orent and I believe with the reasonable degree of medical probability this reflects the accurate current functioning level of status for the patient.

(Ex. E).

39. Dr. Sharma testified by deposition and was qualified as an expert in occupational medicine without objection. Dr. Sharma testified that since Claimant’s 2009 Injury, he has sustained a series of multiple small injuries over time (80% work-related), resulting in cumulative trauma resulting in his current condition. Dr. Sharma testified “I think there’s

[1] The ALJ infers that the reference to “Dr. Sander Orent” should be to Dr. Paz.

lots of minor injuries that have occurred over time. We're talking about a cumulative trauma here, and I really think that's what we're looking at in this claim." He also testified that the pathology in Claimant's back shown in the 2019 MRI was the result of an accumulation of cumulative trauma. When asked why Claimant's back is the way it is today, Dr. Sharma testified: "I think the answer is because of his constant lifting, pushing, pulling the day-to-day activities that he did as a firefighter for the last 27 years, and you know, since 2008 he's been reporting pain." Dr. Sharma also testified that Claimant is not currently suffering from acute trauma, but that Claimant "has cumulative trauma as a result of acute trauma that commenced in 2008, 2009, and continued through that time up until 2020." He testified that his July 13, 2020 MMI date was for the Claimant's "cumulative trauma." Later, Dr. Sharma testified that his July 13, 2020 was for "acute trauma," and testified "You know, I am still sticking with my date of MMI per my DIME report of July 13, 2020. Nobody assigned it. Nobody assigned a date of MMI in this claim, and so I took it upon myself to assign the date." (Ex. I).

40. Dr. Fall was qualified as an expert in occupational medicine and testified at hearing. Dr. Fall testified she had reviewed Claimant's medical records, MRI reports, Dr. Orent's report, the DIME report and Dr. Sharma's testimony. Dr. Fall opined that if Claimant's current findings were causing symptoms, such as radicular irritation, it would indicate that his symptoms were unrelated to his 2008 and 2009 injuries, given the benign MRI findings in 2009. She opined that the Claimant's 2019 MRI showed more significant degenerative changes and protruding discs that were likely caused by multiple factors, including normal changes expected in a person of Claimant's age, changes generally caused by his work as a firefighter and other reasons. She also testified that the Claimant's current complaints are consistent with the pathology shown on Claimant's 2019 MRI, but that they would not be attributable to the events of 2009. Dr. Fall credibly testified that Claimant sustained two acute injuries in 2008 and 2009, and was brought to MMI appropriately for those claims, based on the Claimant's presentation and findings indicated in the contemporaneous medical records. She opined that the acute trauma Claimant experienced as a result of the 2008 and 2009 Injuries were no longer a factor contributing to his current condition. She testified that she believed there is a third issue, which is the cumulative effects of Claimant's work as a firefighter over time. She testified that is not plausible that Claimant's impairment in 2020 was caused by trauma occurring ten years earlier.

41. Claimant testified that he has not been pain free since the 2009 Injury. He testified that following the "window" incident in 2019, the pain resolved within 5 days and he missed four work shifts as a result. Claimant also testified that he has not sustained any new injuries to his back since 2009. He testified that he has experienced "flare ups" in his back over time, with no real prediction of what would cause issues, and that the "flare ups" have always resolved. Claimant testified that he sought additional medical treatment from his employer at some point in time but was told his case was closed.

42. In rebuttal, Respondent called Ragan J[Redacted] a claims specialist who was the designated adjuster for Claimant's worker's compensation claims. Ms. J[Redacted] testified that she has reviewed Claimant's claim records going back to 2009, and the

records do not reflect that Claimant requested any medical treatment since 2009, or that any requests for medical treatment had been denied.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

OVERCOMING DIME ON IMPAIRMENT AND MMI

The Act defines MMI as "a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." § 8-40-201(11.5), C.R.S.

Where disputes exist on whether a Claimant has reached MMI, the ALJ must resolve that issue.

Under § 8-42-107 (8)(b)(III), C.R.S., a DIME physician's opinions concerning MMI and whole person impairment carry presumptive weight and may be overcome by clear and convincing evidence. "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance'; it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411, 414 (Colo. App. 1995). Accordingly, a party seeking to overcome a DIME's MMI determination and/or whole person impairment rating must present "evidence demonstrating it is 'highly probable' the DIME physician's MMI determination or impairment rating is incorrect and such evidence must be unmistakable and free from serious and substantial doubt. *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001); *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015, 1019 (Colo. App. 2002). Whether a party has overcome the DIME physician's opinion is a question of fact to be resolved by the ALJ. *Metro Moving & Storage*, 914 P.2d at 414.

The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café*, W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services,* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.*, W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015); *compare In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation, and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

Respondent has established by clear and convincing evidence it is highly probable that the date of MMI and impairment rating provided by the DIME physician Dr. Sharma are incorrect. Dr. Sharma's rationale for placing Claimant at MMI on July 13, 2020 is not credible, persuasive, or supported by the evidence. Dr. Sharma asserted Claimant "continued to have medical care" following Dr. Paz's assignment of MMI on July 16, 2009 and testified that Claimant sought treatment “throughout the entire time” between 2009 and 2019. This conclusion, however, ignores that from July 16, 2009 until August 26, 2016, Claimant received no documented medical care except one physical therapy appointment on July 21, 2009, which documents that Claimant’s symptoms resolved after therapy. (There is some indication that Claimant received a limited amount of chiropractic care in 2012, but no chiropractic records were offered or admitted into evidence to determine the nature of that treatment.) Claimant’s next documented medical treatment was seven years later – on August 26, 2016 – when he reported his back pain began three months earlier, after which he received no care again until October 2017. Dr. Sharma failed to offer a cogent explanation how Claimant’s medical care from 2016 (or 2012) through 2020 was related to either the 2008 Injury or the 2009 Injury. Dr. Fall opined that Dr. Paz correctly placed Claimant at MMI on July 16, 2009, because, at the time, Claimant had a normal physical examination, benign MRI findings, and returned to full duty at his job. She further opined that there no indication that Claimant sustained an aggravation of his preexisting condition. The evidence, including the lack of evidence that Claimant sought or received medical care or had complaints of aggravation of his 2008 or 2009 Injuries after being placed at MMI on July 16, 2009, clearly and convincingly establishes it highly probable that Dr. Sharma’s assigned MMI date of July 23, 2020 is incorrect.

With respect to the impairment rating assigned by Dr. Sharma, again, the evidence clearly and convincingly establishes it highly probable that the 20% whole person impairment he attributed to Claimant’s 2009 Injury or 2008 Injury is incorrect. Dr. Sharma, Dr. Fall and Dr. Orent agree Claimant’s impairment is attributable to the pathology demonstrated on his 2019 MRI. These experts also agree that pathology is the result of many small work-related traumas that occurred between the 2009 MRI and the 2019 MRI, and other non-work-related factors. Although it is uncontroverted that Claimant’s back pathology (as demonstrated in the 2019 MRI) is likely related to his occupation as a firefighter to some extent, Dr. Sharma’s reports and testimony offer no explanation to establish how his current condition was caused by either the 2008 or 2009 Injury. Dr. Sharma testified that Claimant’s occupation caused 80% of the pathology in his back, including his work for Employer and [Redacted], but offered no explanation as to how the multiple incidents of “small trauma” he sustained over the years were caused by either the 2009 Injury or the 2008 Injury. His testimony that Claimant has “cumulative trauma now as a result of acute trauma that commenced in 2008, 2009 and continued through that time up until 2020,” is conjecture, not supported by the evidence, and not persuasive.

Dr. Fall credibly opined that Claimant’s 2008 and 2009 Injuries were no longer a factor contributing to Claimant’s current condition. Dr. Fall also credibly testified that Dr. Paz correctly determined Claimant had no permanency when he was evaluated in 2009 and placed at MMI. This opinion supported by the lack of treatment for years after being placed at MMI, Claimant’s ability to continue full duty work, and the uncontroverted evidence that Claimant’s current impairment is the result of other “small” injuries that have occurred since 2009. The ALJ finds that the totality of the evidence clearly and convincingly demonstrates that Dr. Sharma’s assignment of a 20% whole person permanent impairment rating caused by the 2009 Injury or the 2008 Injury is highly probably incorrect.

ORDER

It is therefore ordered that:

1. Respondents have established by clear and convincing evidence that the DIME physician's opinion that Claimant reached MMI for his January 13, 2009 injury on July 13, 2020 is incorrect.

2. Respondents have established by clear and convincing evidence that the DIME physician's assignment of a 20% whole person impairment rating for Claimant's January 13, 2009 work injury is incorrect.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 19, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-103-649-004

ISSUES

I. Whether Respondents established, by clear and convincing evidence, that the 21% whole person impairment rating provided by the DIME physician was issued in error.

II. Whether Claimant established, by a preponderance of the evidence, an increase to her AWW, thereby impacting PPD benefits owed.

III. Whether Claimant established, by a preponderance of the evidence, entitlement to maintenance medical benefits – including a right hip MRI and orthopedic referral.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant was injured on January 15, 2018. At the time of her injury, Claimant had worked for employer for about 20 years.
2. Claimant was injured while getting out of her car at work. While getting out of her car, Claimant's left foot slipped on some ice and she fell - while her right foot and leg were still in the car.
3. Right after her accident, Claimant presented to Rocky Mountain Urgent Care. At her first appointment, Claimant reported pain all over. This included her back, legs, shoulders, and neck. They performed x-rays of her neck and shoulders and they did not show any fractures.
4. On January 17, 2018, Claimant came under the are of Dr. Martin Kalevik. Claimant again described slipping while getting out of her car. She also told Dr. Kalevik that she thought she strained her right hip during the fall since her right leg was caught in the car when she fell. After obtaining a detailed history from Claimant, he examined Claimant and concluded that Claimant suffered the following myofascial and soft tissue injuries:
   - Cervical
   - Thoracic
   - Left shoulder
   - Lumbar – with the worst being her right lower back. (Ex. I, p.68-69)
5. Dr. Kalevik also concluded that Claimant did not aggravate any of her preexisting conditions, which included her right shoulder and neck. (Ex. I, p.68-69)

6. On February 19, 2018, Claimant started treating with Dr. Chan. Claimant complained of pain from her cervical spine to her lumbar spine as well as pain radiating into her right lower extremity. She also complained of numbness and tingling involving her entire right lower extremity. She rated her overall pain at 5/10. Dr. Chan physically evaluated Claimant. As part of his evaluation, Dr. Chan performed some additional tests to see if they would increase her pain complaints. Dr. Chan performed axial loading, truncal rotation, and minimal skin folding tests. None of those tests exacerbated Claimant's pain complaints. Based on his assessment, he ordered an MRI.

7. On April 2, 2018, Dr. Chan reviewed the MRI. He concluded that the MRI demonstrated findings consistent with a right L5 radiculitis versus right SI joint dysfunction.

8. On May 1, 2018, Claimant returned to see Dr. Chan. At this appointment, Dr. Chan noted that Claimant's back pain was essentially unchanged. Her pain was localized over the right lumbar spine area. She also complained of pain that radiated into her right lower extremity – laterally – in a L5-S1 distribution. (Ex. J., p. 147) Dr. Chan stated that Claimant's MRI also showed facet arthropathy that was causing foraminal stenosis on the right side. He also noted that her examination demonstrated findings suggestive of SI joint pain as well. He recommended an epidural steroid injection – versus an SI joint injection – for therapeutic and diagnostic purposes.

9. On May 14, 2018, Claimant returned to Dr. Chan. At this appointment, Dr. Chan noted that Claimant did have degenerative findings on her MRI. He also noted Claimant still had symptoms that radiated into her right lower extremity in a L5 distribution. But, at that point, he did not know whether the findings on the MRI were causing some of Claimant's pain complaints. He also noted that on physical examination there were findings that would also suggest sacroiliac joint dysfunction. As a result, he recommended Claimant undergo an epidural steroid injection and then follow up with him one week later. (Ex. J, p. 152.)

10. On May 16, 2018, Claimant underwent an L5 transforaminal epidural steroid injection (ESI). One week after the ESI, Claimant returned to Dr. Chan. At this visit, Dr. Chan noted that Claimant's MRI also demonstrated "a paracentral disc protrusion at the L5-S1 level along with facet hypertrophy causing subarticular stenosis abutting against traversing L5 nerve roots bilaterally." Dr. Chan also commented on her ESI. He noted that:

> Her pre-injection pain level was 7/10, post-injection pain level was 0-1/10. She noted that she is rather pleased with her improvement Even though the pain complaint is slightly returning, she describes that current pain is only about 3/10.' She is able to increase her activity level. (Ex. J, p. 154.)

11. On June 21, 2018, Claimant returned to Dr. Chan. At this visit Dr. Chan noted that Claimant "did have [a] positive diagnostic and therapeutic response to the right L5 transforaminal epidural steroid injection that was performed on May 16, 2018." But he also noted that it felt like her back pain was starting to return and that her pain had increased to a 4/10 to 6/10 and that the pain was reminiscent of the pain that

she had. He also noted that Claimant said her pain was radiating into her right lower extremity posteriorly and laterally. Dr. Chan concluded that because Claimant had a positive diagnostic and therapeutic response to the epidural steroid injection, that another right L5-S1 transforaminal epidural steroid injection should be considered for pain management. (Ex. J, p. 158-159)

12. On July 11, 2018, Claimant underwent a repeat L5-S1 transforaminal epidural steroid injection.

13. On July 18, 2018, Claimant followed up with Dr. Chan to go over her response to the epidural steroid injection that was performed last week. Based on her response, Dr. Chan concluded that Claimant had "a rather profound diagnostic benefit from the epidural steroid injection that was performed one week ago." (Ex. J, p. 174)

14. On August 3, 2018, Claimant was re-evaluated for her low back pain by Dr. Chan. Based on her response to the injections, Dr. Chan stated: "The patient did have rather significant diagnostic benefits from the epidural steroid injections; therefore, I do feel that the MRI findings do correlate well with the patient's current subjective symptoms." (Ex. Q, p. 290)

15. On September 10, 2018, Claimant underwent a surgical evaluation with Dr. Castro. At this appointment, which was about 8 weeks after her repeat L5-S1 transforaminal epidural steroid injection, Dr. Castro noted Claimant had good range of motion, but there is no indication he formally measured her range of motion. Based on his assessment, Claimant was not a surgical candidate at that time. (Ex. L, pp. 246-250)

16. On September 18, 2018, Claimant returned to Dr. Chan. At this appointment, Dr. Chan noted that Claimant's MRI did show a disk protrusion at the L5-S1 level laterally to the left side but affecting the bilateral L5 nerve roots. He again noted that Claimant was "post right L5 transforaminal epidural steroid injections, May 16, 2018, and July 11, 2018, with "profound diagnostic but short-term benefits." (Ex. J, p. 187)

17. On October 8, 2018, Claimant returned to Dr. Chan. At this appointment, he explained that while the EMG he recently performed did not demonstrate a frank neuropathic lesion, the findings could represent Claimant's pain generator. So, although "normal", the EMG findings provided Dr. Chan with some evidence that Claimant's pain was due to the compression or irritation of a nerve root coming from Claimant's lumbar spine. As a result, he thought Claimant's pain could be multifactorial – low back and SI joint. (Ex. J, p. 203)

18. On November 7, 2018, based on Dr. Chan's assessment that Claimant's pain might also be coming from her SI joint, he performed a right SI joint injection.

19. On, November 20, 2018, Claimant followed up with Dr. Chan to go over the results of the injection. Dr. Chan noted that Claimant had a rather significant diagnostic and therapeutic response to the SI joint injection.

20. As of November 20, 2018, Claimant had had significant diagnostic and therapeutic responses to her epidural steroid injections and SI injection.

21. On December 31, 2018, Claimant returned to Dr. Chan. He noted that Claimant had more than 7 weeks of pain relief from her SI injection, but that she felt like her pain was starting to return. As a result, he recommended another SI injection.

22. On January 16, 2019, Claimant underwent a repeat SI joint injection. Claimant returned to Dr. Chan about a month later and noted that her most recent SI injection did not provide as much relief as the first one.

23. On February 15, 2019, Claimant followed up with Dr. Kalevik. At this appointment, Claimant said that while she did get relief from the last SI injection, she did not get as much pain relief as she did from the prior injections. At this time, Claimant was still taking Celebrex to help manage her pain which she currently rated at 3/10. Dr. Kalevik concluded Claimant had predominately right sided discogenic disease with some radiation into her buttocks and tingling down her right leg. At this appointment, he determined Claimant reached MMI. He anticipated that Claimant would have permanent impairment and would require maintenance medical treatment such as injections. However, he deferred to Dr. Chan to provide an impairment rating and address maintenance medical treatment at Claimant's next appointment. (Ex. I, pp. 129-133.)

24. On March 14, 2019, Claimant returned to Dr. Chan. He agreed Claimant was at MMI and provided Claimant an impairment rating. This appointment was held about 8 weeks from her last injection. At this time, Claimant rated her pain at 4/10. Based on the pain relief provided by the prior injections, which provided Claimant over 7 weeks of pain relief before her pain started coming back, the ALJ infers that Claimant was still getting some pain relief from the latest injection. Plus, at this time, Claimant was also taking Celebrex to manage her pain. Thus, the ALJ finds that the temporary pain relief being provided by the injection and the Celebrex allowed Claimant to have greater range of motion at this time. (Ex J, p. 233-234)

25. Dr. Chan assessed Claimant's impairment pursuant to the AMA Guides. Dr. Chan provided Claimant a 5% whole person impairment rating. The rating was based on a 5% rating from Table 53 of the AMA Guides. Dr. Chan also measured Claimant's range of motion. Based on his measurements, he concluded Claimant did not have any additional impairment due to any range of motion deficits. Dr. Chan also addressed maintenance medical treatment. He concluded that Claimant may continue using Celebrex and lidocaine patches on a p.r.n. basis for the next 2-3 months.

26. On July 18, 2019, Respondents filed a Final Admission of Liability. Respondents admitted for the 5% rating provided by Dr. Chan. Since Claimant did not miss any time from work due to her work injury, Respondents did not admit for any temporary disability benefits. Respondents did, however, admit for maintenance medical benefits.

27. On September 5, 2019, Claimant underwent a Division IME (DIME) with Dr. Stanley Ginsburg. At this appointment, Claimant said that the pain in her back was intolerable and getting worse. (Ex. Q, p. 292) At this time, Claimant was no longer taking Celebrex and had not had any injections since January 2019. After reviewing

Claimant's medical records and performing an evaluation, Dr. Ginsburg concluded Claimant suffered a:

> Lumbar strain with radicular symptoms, but without radicular or myelopathic findings, superimposed on pre-existing degenerative disease.

28. Based on his assessment, he rated Claimant's impairment pursuant to the AMA Guides. First, Dr. Ginsburg provided Claimant a 7% rating pursuant to Table 53 II(C) of the AMA Guides. Second, Dr. Ginsburg measured Claimant's range of motion. Based on his measurements, which were valid under the AMA Guides, he provided Claimant an additional 15% impairment rating. The 7% Table 53 II(C) rating combined with the 15% rating for Claimant's range of motion deficits resulted in a 21% whole person impairment rating. After providing Claimant a 21% rating, he then added the following comment:

> I spoke to the patient before and during my obtaining the lumbar spine measurements. I frequently encouraged her to do the best she could and it is very obvious that she moved minimally, even after I had asked her "to cooperate." This is obvious when one compares my findings with Dr. Chan's findings.

29. Dr. Ginsburg also commented on maintenance medical treatment. Dr. Ginsburg concluded that Claimant should be seen by her primary workers' compensation doctor four times during the next year for medication management.

30. Based solely on Dr. Ginsburg's report, it looks like he merely measured Claimant's range of motion measurements and determined her impairment based on the tables in the AMA Guides without determining whether it made anatomical and medical sense based on the injury and Dr. Chan's range of motion measurements which demonstrated zero impairment. In other words, it looks like he accepted his range of motion measurements without using his medical judgement to determine whether the deficits were caused by her work injury.

31. Dr. Ginsburg testified at the hearing and his testimony provided context to his report and demonstrated that he did use his medical judgement is deciding to use his range of motion measurements in calculating Claimant's impairment. During his deposition, Dr. Ginsburg explained how he rated Claimant's impairment and how he determined the range of motion measurements he obtained were valid under the AMA Guides. He also explained why - in his medical judgement – he used the range of motion measurements he obtained in calculating Claimant's impairment.

32. First, Dr. Ginsburg testified about the process he went through in determining the Table 53(II)(C) rating of 7%. He testified that under Table 53(II)(B) of the AMA Guides, a 5% rating is based on non to minimal degenerative changes to the lumbar spine as demonstrated by an MRI. He testified that when rating under the AMA Guides, Claimant's MRI demonstrated more than non to minimal degenerative changes. In his opinion, Claimant's MRI findings demonstrated moderate findings – which supports a 7% impairment under Table 53(II)(C) of the AMA Guides. As a

result, he determined that the next level of impairment – which is 7% - more accurately reflected Claimant's MRI findings and her symptoms from her injury.

33. Dr. Ginsburg also discussed how he measured Claimant's range of motion and how he concluded that the measurements were valid pursuant to the AMA Guides. He also testified that he used his medical judgement to conclude that the range of motion measurements he obtained should be used to determine Claimant's final impairment rating pursuant to the AMA Guides.

34. Dr. Ginsburg also testified that Claimant probably has some behavioral aspects - or conversion aspects – that are impacting her range of motion. Thus, Claimant might think she is a little bit more impaired than she really is. On the other hand, he was adamant that Claimant was not malingering. He further testified based on his clinical judgement, the range of motion deficits he measured are a direct manifestation of her back injury and considered ratable medical impairment under the AMA Guides.

35. He also testified that he found the 0% range of motion deficits noted by Dr. Chan to be suspect based on Claimant's age and her MRI findings. In other words, Dr. Chan's measurements did not make clinical sense to Dr. Ginsburg based on his experience in evaluating and rating impairment. As a result, he provided Claimant a 21% impairment for her work-related back injury.

36. Dr. Ginsburg also testified that although he could have had Claimant come back for repeat range of motion measurements, he concluded that Claimant's ROM measurements would be similar upon repeat testing.[1]

37. On December 6, 2019, at Respondents' request, Claimant underwent an IME with Dr. John Raschbacher. He issued a report and also testified via deposition. (*See* Rs' Ex. E, and his deposition testimony.) This appointment occurred three months after Claimant's DIME with Dr. Ginsburg.

38. The essence of Dr. Raschbacher's opirnion is that Claimant is intentionally limiting her range of motion. More specifically, Dr. Raschbacher believes that Claimant's limited range of motion, which was measured by Dr. Ginsburg and Dr. Raschbacher, is intentional and that Claimant is malingering for secondary gain.

39. According to his report, Dr. Raschbacher noted that Claimant said that she felt that her condition was getting worse. He specifically noted:

> She states that she is currently getting worse at both the back and the leg. At the low back she has more pain. At the lower extremity on the right she states she has worsening of numbness and tingling. (Ex. E, p. 38)

40. Dr. Raschbacher also noted Claimant's medications. That said, it is not clear from his report whether he merely listed medications she had been prescribed in the past or medications she was currently taking. For example, he lists "Celecoxib 200 mg", but does indicate the frequency it was being taken. As a result, the ALJ infers Claimant was not taking it at that time.

[1] This conclusion was substantiated by Dr. Raschbacher's ROM measurements that were performed three months after Dr. Ginsburg's DIME and were remarkably similar.

41. As for Dr. Chan's MMI report and findings, Dr. Raschbacher reiterated that the 5% issued under Table 53(II)(B) was appropriate for six months of medically documented pain and rigidity with none-to-minimal degenerative changes. (DT: 15; 10 – 15) He also noted that her ROM measurements on March 14, 2019 were "good" and that she moved well enough on that date that she appropriately qualified for 0% ROM impairment. *Id.* His report also provided that, per Division guidelines, if someone has pain and it is presumed that the pain is coming from the SI joint, a 5% rating under Table 53 is appropriate and the default rating. (Ex. E, 0044) It was his contention that in this case, there were no clear radicular findings, that she exhibited negative straight leg raising, and the EMG results did not support any radicular symptomatology in the lower extremities whatsoever. *Id.*

42. He also asserted that there was no clear reason why Dr. Ginsburg would elect to impose a 7% specific diagnosis rating rather than 5%. (DT: 28; lines 18 – 25) He also indicated that Claimant's MRI was normal and "benign" for someone her age and that a 7% rating presupposes she had a pain generator from her lumbar spine, which he contended was not medically documented to be the case. (DT: 29; lines 7 – 15)

43. When asked about Dr. Ginsburg's 21% whole person impairment rating from the DIME, Dr. Raschbacher testified that he "heartily disagree[d]." (DT: 17; line 2) In support of this conclusion, Dr. Raschbacher noted that her ROM testing with Dr. Chan on March 14, 2019 yielded the following results: 62 degrees of forward flexion, 30 degrees extension… (*see also* Ex. J, 000236 for a complete review of the range of motion measurements), which qualified Claimant for a 0% range of motion impairment. (DT: 17; 10 – 22) Essentially, he testified that her ROM in March 2019 was normal while her ROM with Dr. Ginsburg during the DIME was "all of a sudden…much, much worse." *Id.* It was also his opinion that there was no medical reason or justification for the considerable discrepancy. *Id.* He stated the same was true of his own IME examination, during which she similarly exhibited very reduced range of motion findings for which Dr. Raschbacher asserted was without a clear explanation or medical justification. *Id.*

44. When asked whether any medical records were reviewed and/or a medical history that would explain such a dramatic increase from March 2019 until September 2019, or a period of approximately six (6) months, Dr. Raschbacher testified that there was no medically documented justification for such a *decrease* in her ROM abilities. (DT: 18; 10 – 18)

45. Dr. Raschbacher also testified that he routinely conducts Division IMEs and that a DIME physician is "never relieved of the requirement that things have to make sense medically." (DT: 19 – 20; lines 20 – 25, 1 – 25) He clarified that a DIME physician has several options when such a considerable inconsistency exists, including (1) utilizing someone else's measurements if they represent a more accurate depiction of a claimant's condition and/or (2) having the claimant return for repeat measurements. (DT: 21; lines 1 – 9) He reiterated that no DIME physician is obligated to accept their own range of motion measurements when they are clearly disproportional to the ATP's findings, as they were here. (DT: 22; lines 1 – 15) Thus, even if the measurements taken are "valid," the DIME physician is not obligated to

accept them if they do not make medical sense and not relieved of his/her duty that the findings must make sense medically. (DT: 23; lines 1 – 8)

46. He further testified that per the AMA Guides, ratings from measurements amongst examiners should be "reasonably consistent" and that here, the rating discrepancy was "grossly inconsistent." (DT: 23; lines 20 – 25) Dr. Raschbacher was of the opinion that Dr. Ginsburg merely ignored the discrepancy and imposed his own rating and that doing so was "clearly improper." (DT: 24; lines 3 – 16) Without having the benefit of Dr. Ginsburg's testimony at hearing, Dr. Raschbacher concluded that Dr. Ginsburg's decision to accept his range of motion measurements rose "to the level of an error so egregious." (DT: 24; lines 17 – 19)

47. In summary, he testified that Dr. Ginsburg's decision to impose a 15% ROM impairment, and 7% specific diagnosis impairment, was clearly erroneous. (DT: 32; 5 – 18) He maintained that the discrepancy and decision was made in error and not simply a difference of opinion. (DT: 32; 19 – 24; *see also* Rs' Ex. E, 0044)

48. Again, Dr. Raschbacher concluded that the range of motion deficits measured by Dr. Ginsburg were based purely on Claimant intentionally limiting her range of motion for secondary gain.

49. Dr. Raschbacher next testified that based on his review of the medical records, Claimant never complained of right hip pain. (DT: 16; 4 – 8) That said, the medical and physical therapy records are replete with complaints by Claimant about her right hip. (*See* Ex., pp. 55-62; 68; 73; 76; 79; 84; 86; 88; and 129.)

50. When asked to directly opine on the right hip MRI and report from Dr. Amador (C's Exh. 3), Dr. Raschbacher noted it was for a right acetabular labrum tear, which would be located right at the hip joint. DT: 30; 16 – 25. He reiterated that not only was there no mention of the right hip ever being involved in this claim but that the report itself also noted a fall from January 2020. DT: 31; lines 4 – 12. However, despite this notation of a January 2020 fall, he did not ask Claimant if that was accurate or not. He merely accepted it as fact. Claimant, however, testified that she did not fall in January 2020, but that the January fall referenced her fall in this case, which was January 2018.

51. Based on the testimony of Dr. Ginsburg, the testimony of Claimant, and the medical record as a whole, the ALJ does not find Dr. Raschbacher's opinions to be credible and persuasive for several reasons.

52. As noted, Dr. Raschbacher concluded that Claimant's decrease in ROM is based on malingering and secondary gain. Dr. Raschbacher, however, arrives at that conclusion without performing any meaningful analysis.

53. For example, Dr. Raschbacher did not consider other factors that could have caused such a difference in the ROM measured by Dr. Chan and the ROM measured by both Dr. Ginsburg and Dr. Raschbacher. For example, Dr. Raschbacher did not appear to consider the following:

    - Claimant said her condition and symptoms had worsened since being placed at MMI. Dr. Raschbacher, however, did not consider the possibility that her symptoms and range of motion actually got worse. As a result, he failed to inquire and assess why Claimant's symptoms – and range of motion – might be getting worse.

- Claimant had also undergone several injections. Pursuant to the Colorado Medical Treatment Guidelines, each injection is only expected to provide short-term relief. The Guidelines specifically indicate that the purpose of each injection is to: "facilitate active therapy by providing short-term relief through reduction of pain and inflammation." [2] As a result, Claimant's decrease in range of motion could have been based on the short-term relief from the injections wearing off.
- Claimant also testified that Dr. Chan actively helped Claimant perform her range of motion. As a result, this active assistance would also explain why the range of motion measurements obtained by Dr. Chan were much better than the range of motion measurements obtained by Dr. Ginsburg and Dr. Raschbacher.
- When Claimant had her range of motion measurements taken by Dr. Chan, she was also taking Celebrex. When Dr. Ginsburg took her ROM measurements, it does not appear she was taking Celebrex – since her treating physicians would not schedule any follow up appointments.

54. By failing to address each of the above factors individually, Dr. Raschbacher also failed to consider them concurrently.

55. In addition, Dr. Raschbacher also concluded that Claimant's pain generator is limited to her SI Joint and not her lumbar spine. He based his opinion on his contention that Claimant's lumbar epidural steroid injections were not diagnostic in diagnosing a lumbar back problem. Lastly, he also stated the EMG did not support a radicular component to Claimant's injury. Such assertions, however, conflict with the findings of Claimant's medical providers. As found above, the findings of Claimant's physicians showed that the injections were diagnostic for a lumbar injury at the L5-S1 level and that the EMG – although normal – still showed some evidence of possible nerve root irritation.

56. In addition, Dr. Raschbacher stated that the medical records do not reference Claimant complaining of hip pain, but a review of Claimant's medical records reflects she did complain of hip pain.

57. In the end, the ALJ finds Dr. Raschbacher's opinion that Claimant's decreased ROM is based on malingering and secondary gain – and not because of her injury - to be nothing more than subjective belief and unsupported speculation. As a result, the ALJ does not find his opinions to be credible or persuasive.

[2] *See* Rule 17, Exhibit 1, Low Back Pain Medical Treatment Guidelines, page 45.

58. Dr. Ginsburg testified at length regarding his analysis in this case. Dr. Ginsburg testified that in the end, it was Claimant's injury, residual pain, and individualized response to her injury that caused her reduced range of motion. In other words, while the same injury might not have reduced another person's range of motion as much as it did Claimant's, it did reduce Claimant's range of motion as measured. He also credibly testified how he applied the AMA Guides and rated Claimant's impairment. Overall, the ALJ finds Dr. Ginsburg's opinions and testimony to be credible and persuasive.

59. Claimant credibly testified that when Dr. Chan performed range of motion measurements for her impairment rating, he physically assisted her achieve the range of motion he measured. (Tr. p. 71, lines 3-23)

60. Claimant credibly testified that she tried to go back to both Dr. Kalevik and Dr. Chan with ongoing complaints after she reached MMI, but they would not see her because they said her case was closed. (Tr., pp. 73-74) As a result, she then went on her own to see Dr. Liberty Amador who has recommended a repeat MRI and a referral to an orthopedic surgeon for her hip. (Tr., p. 75)

61. The ALJ finds that when Claimant was placed at MMI, and afterwards, she needed maintenance medical treatment to relieve her from the effects of her work injury. As a result, the ALJ finds Claimant is still in need of maintenance medical treatment to relieve her from the effects of her work injury.

62. Claimant testified that she worked a significant amount of overtime with her employer and earned $70,917.77 in the year leading up to the accident. (Tr., p. 6 line 5) Respondents' provided these same earnings as exhibit D. Based on Claimant's testimony and Exhibit D, these earnings equal an average weekly wage of $1,363.80, and results in a temporary total disability rate of $909.20.

63. The ALJ finds Claimant's presentation and statements to her medical providers to be consistent and reliable. This finding is supported by Claimant's diagnostic response to her injections (as initially reported by Dr. Chan) and the overall consistency of her statements contained in her medical records. The ALJ also finds Claimant's testimony is consistent with – and tracks – her medical records. As a result, the ALJ finds Claimant's testimony to be credible.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondents established, by clear and convincing evidence, that the 21% whole person impairment rating provided by the DIME physician was issued in error.

The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Sharpton v. Prospect Airport Services* W.C. No. 4-941-721-03 (ICAO, Nov. 29, 2016). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Watier-Yerkman v. Da Vita, Inc.* W.C. No. 4-882-517-02 (ICAO Jan. 12, 2015);

Compare *In re Yeutter*, 2019 COA 53 ¶ 21 (determining that a DIME physicians opinion carries presumptive weight only with respect to MMI and impairment). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

As found, Dr. Ginsburg credibly and persuasively set forth how he rated Claimant's impairment pursuant to the AMA Guides. Dr. Ginsburg also credibly and persuasively set forth why he chose to use his range of motion measurements which varied from Dr. Chan's. In the end, the ALJ found his opinion to be well reasoned and supported by the medical record and in accordance with the AMA Guides.

Dr. Raschbacher's opinions, while different, were not found to be credible or persuasive. As a result, Dr. Raschbacher's opinions do not rise to the level of clear and convincing evidence. Moreover, the other arguments raised by Respondents which they contend establish that Dr. Ginsburg's rating is wrong also fails to rise to the level of clear and convincing evidence. While the discrepancy between Dr. Chan's and Dr. Ginsburg's rating is significant, the rating provided by Dr. Ginsburg is still well founded and supported by the medical record and supportable under the AMA Guides. As a result, Respondents failed to overcome the opinion of Dr. Ginsburg by clear and convincing evidence.

II. Whether Claimant established, by a preponderance of the evidence, an increase to her AWW, thereby impacting PPD benefits owed.

Section 8-42-102(2), C.R.S., requires the ALJ to calculate the claimant's AWW based on the earnings at the time of injury as measured by the claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating the AWW. However, if for any reason the ALJ determines the default method will not fairly calculate the AWW § 8-42-102(3), C.R.S., affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. Section 8-42-102(3) establishes the so-called "discretionary exception." *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

Claimant credibly testified about her earnings for the year before the industrial accident. Respondents gave no reason or argument about how they arrived at the AWW of $885.00.

The ALJ finds and concludes that using the Respondents' Average weekly wage would not fairly approximate Claimant's actual earnings at the time of her industrial accident. Based on Claimant's annual earnings of $70,917.77 in the year leading up to the accident, Claimant's average weekly wage is $1,363.80. Thus, her corresponding TTD rate is $909.20. This figure should be applied to all retroactive and future benefits paid and due and owing.

III. Whether Claimant established, by a preponderance of the evidence, entitlement to maintenance medical benefits - including a right hip MRI and orthopedic referral.

a. Whether Claimant established she is entitled to a general award of maintenance medical benefits.

The need for medical treatment may extend beyond the point of maximum medical improvement where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

As found, when Claimant was placed at MMI, Dr. Kalevik concluded that Claimant would require maintenance medical treatment such as injections. Moreover, when Dr. Chan agreed Claimant reached MMI and rated Claimant, he also concluded Claimant would require maintenance medical treatment such as Celebrex and lidocaine patches on a p.r.n. basis for approximately 2-3 months. Moreover, Claimant attempted to obtain maintenance medical treatment for her work injury from Dr. Kalevik and Dr. Chan, but they would not see her. As a result, Claimant established by a preponderance of the evidence that she is entitled to a general award of maintenance medical benefits to relieve her from the effects of her work injury.

b. Whether Claimant established by a preponderance of the evidence that she is entitled to a right hip MRI and a referral to an orthopedic surgeon as recommended by Dr. Amador.

An ALJ is without jurisdiction to order Respondents to pay for any specific treatment that is not prescribed by an authorized provider. *See Potter v. Grounds*

Service Company, W.C. No. 4-935-523-04 (Aug. 15, 2018); *Torres v. City and County of Denver*, W.C. No. 4-917-329-03 (May 15, 2018); and *Short v. Property Management of Telluride*, W.C. No. 3-100-726 (May 4, 1995). Such opinions hold that an ALJ may not order a Respondent to pay for treatment that has not been prescribed by an authorized provider unless it is requested pursuant to a DIME and is an “essential test’ as referenced by WCRP 11-5(D).

As found, after being placed at MMI, Claimant was unable to get maintenance medical treatment through Dr. Chan or Kalevik. However, it is not clear from the record that the issue of whether the right to select an authorized treating physician passed to Claimant based on Dr. Chan and Dr Kalevik refusing to provide maintenance medical treatment for non-medical reasons was endorsed and tried based on the pleadings, statement of the issues made at the beginning of the hearing, the evidence presented, and each party’s post hearing submissions. Therefore, the issue of the MRI and referral to an orthopedic surgeon made by Dr. Amador, and whether Dr. Amador is authorized, is reserved for future determination.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents failed to overcome the opinion of Dr. Ginsburg regarding Claimant’s impairment rating.
2. Respondents shall pay Claimant permanent partial disability (PPD) benefits based on a 21% whole person impairment rating. (Respondents may take a credit for any previously admitted and paid PPD benefits.)
3. Claimant’s average weekly wage is $1,363.80. Respondents shall pay Claimant her PPD benefits based on an average weekly wage of $1,363.80, which results in a temporary total disability rate of $909.20.
4. Claimant is entitled to a general award of maintenance medical benefits to relieve her from the effects of her industrial injury.
5. Claimant’s request for a repeat MRI of her right hip and a referral to an orthopedic surgeon for her right hip based on the referral from Dr. Amador – and whether Dr. Amador is an authorized provider - is reserved.
6. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 22, 2021

/s/ Glen Goldman___________
Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-118-916-001

ISSUES

I. Whether Claimant suffered a compensable neck injury on September 24, 2019.

II. Whether Claimant is entitled to reasonable and necessary medical treatment.

III. Whether Claimant is entitled to temporary total disability benefits or is Claimant at-fault for her termination and subsequent wage loss.

STIPULATION

The parties stipulated that Claimant's average weekly wage is $673.07.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is a 30-year-old former Assistant General Manager for Employer for whom she began working on or after July 30, 2019. She alleges an injury to her cervical spine on September 24, 2019, when she was reaching for a sauce bottle and felt a crack/pop sensation in her upper back, neck, or both.

Past Medical History

2. Claimant has a past medical and claim history. Claimant testified that she sustained a low back injury in 2016 while working for [Redacted]. She testified that the mechanism of injury in that case was "bending forward reaching for something." **Hrg Tr. 43:18-24.**

3. More recently, in February 2019, Claimant reportedly sustained injuries in an assault while she was working for [Redacted]. Claimant denied any complaints and treatment for her neck, which is contradicted by the limited medical records from Concentra.

4. Claimant presented to Concentra on February 11, 2019 asserting back pain, neck pain, and joint swelling after a work-related assault the day before. **Exhibit A**, **p. 2.** She was referred for physical therapy and psychotherapy to treat Post Traumatic Stress Disorder (PTSD).

5. Claimant testified at the September 22, 2020 hearing about the 2019 assault, stating that she was thrown on the ground, hit in the back of the head twice, and kicked several times in the legs. She testified that "the only thing that bothered me from [the assault] was the head pain and my-- he strained my lower back." Claimant testified that "there was no neck pain." **Hrg. Tr. 29.**

6. Medical records from Claimant's February 11, 2019 Concentra evaluation also include complaints of "headache, worsening baseline anxiety, difficulty sleeping, episodic nausea and dizziness." **Exhibit A, p 1.** She reported complaints of palpitations ('with anxiety') and shortness of breath ('with anxiety'). She also reported a headache, dizziness, tremors, anxiety, depression, and insomnia**.** The February 11, 2019 records mention musculoskeletal complaints, including back pain, neck pain, and night pain**. Exhibit A, p 2.**

7. While neck pain was not the most prominent complaint in the 2019 Concentra records, the medical records support that neck complaints were reported and treated in connection with the February 10, 2019 work-related assault. For example, at her February 15, 2019 physical therapy appointment related to the assault, Claimant reported "Pt helping neck tightness—evident second visit." **Exhibit A, p 8.**

8. In connection with the February 2019 assault, Claimant reported attending five physical therapy appointments and a referral for psychological treatment for PTSD with Dr. Boyd. Claimant testified that Dr. Boyd was "actually quite rude" and she did not return for treatment. **Hrg Tr 31:1-8.** Claimant also testified that she was physically able to go back to work following the 5 PT sessions, but testified that "mentally, I wasn't ready" to return to work at Illegal Pete's. **Hrg. Tr. 31: 9-13.** She testified: "I'm still suffering from [PTSD]" related to the February 10, 2019 assault. **Hrg. Tr. 31:14-16.**

9. Claimant presented for her initial psychological interview with Dr. Boyd on February 20, 2019, reporting a history of psychological and behavioral problems. She endorsed sleeping problems (4-6 hours per night), tight muscles, heart palpitations, and panic symptoms. She also reported "difficulty spending time with others." Claimant also reported "problems standing due to bad knees." She was taking no prescribed medications at the time. **Exhibit B, pp 10-11**.

10. Dr. Boyd presumptively diagnosed Claimant with acute stress reaction, bipolar disorder by history, and "rule out borderline personality disorder." **Exhibit B, p 12.** Dr. Boyd recommended 8 sessions of cognitive behavioral therapy to treat work-related PTSD.

11. At her February 22, 2019 Concentra follow-up, Claimant reported resolution of neck and back symptoms and a desire to return to work. Dr. Miller released Claimant to full duty. **Exhibit C, pp 14-15.**

12. Claimant was late to her first cognitive behavioral treatment appointment with Dr. Boyd on February 25, 2019. Since Claimant was late, Dr. Boyd started talking to another provider which resulted in Claimant waiting for about 10 minutes. Claimant refused to engage or listen to anything being said during the session because she was "resentful" for having to wait for Dr. Boyd. Claimant terminated the session and did not return to Dr. Boyd or any other physician for treatment of her PTSD or any other injuries sustained in the assault. **Exhibit D, p 16.**

13. Claimant no showed to her next two scheduled appointments with Dr. Miller at Concentra on March 8, 2019 and April 8, 2019. **Exhibit E.** On April 11, 2019

Claimant signed a Voluntary Abandonment of Claim form, indicating that she was "waiving entitlement to any current and future medical benefits…" along with wage loss and permanency benefits. **Exhibit F**.

14. Claimant testified that she closed the February 2019 assault claim because she "didn't want to think about it anymore." **Hrg. Tr. 31.** Claimant testified that she left her job at Illegal Pete's in June 2019 due to "personal reasons arising from the assault." **Hrg. Tr. 44:14-17.**

15. As a result of Claimant telling Dr. Miller that her neck symptoms had resolved and abandoning her claim, the ALJ finds that when Claimant signed the Voluntary Abandonment of her prior claim, she did not have any ongoing physical complaints or symptoms regarding her neck or upper back based on the assault.

Claimant Hired by Employer

16. Claimant was hired by Employer on or about July 30, 2019. **Exhibit G, pp 20-24.** When Claimant was hired, the day-to-day operations were in "chaos." **Exhibit I, p. 31**. Claimant testified that she quit less than a month after she was hired, when she walked out on her shift on August 27, 2019. **Hrg Tr. 44.**

17. The next day, the new General Manager, David S[Redacted], rehired Claimant as his Assistant General Manager (AGM), as documented in an email exchange and attested to by Claimant. **Exhibit I, p 31; Hrg. Tr. 45.**

18. According to Claimant, her position involved "a little bit of everything" including putting away orders, ordering supplies, working the grill, and making milkshakes. As a result, her job duties required a lot of physical work and she worked 50–plus hours per week. Her job duties included:

    - Putting product away in the basement after it was delivered to the restaurant.
        - This required Claimant to carry heavy boxes of product on one of her shoulders while going down the greasy stairway into the basement.
    - Getting product out of storage from the basement to use in the restaurant.
        - This required Claimant to carry the heavy boxes of product on one of her shoulders while going up the greasy stairway from the basement.
    - Making 300 hamburgers in less than two hours.
        - This required repetitive reaching over the hot grill and gripping the sauce, toppings, and buns.
    - Bagging French fries.
    - Making milkshakes.

    Hrg. Tr. 22-23.

19. Not only was her job physically demanding, but Claimant had to perform her job in an extremely small kitchen. The exceedingly small kitchen caused her to work at very awkward angles when making the hamburgers, fries, and milkshakes. **Hr. Tr. 23**. As a result, Claimant had to perform her job in awkward postural positions.

Claimant's Incident at Work and Medical Treatment

20. Claimant reported arriving for work on September 24, 2019 between 10:00-10:30 AM. **Hrg. Tr. 24:11-15.** She reported performing her opening routine, lighting the grills, bringing the heavy boxes of frozen fries up the stairs and "prepping everything for the day." **Hrg. Tr. 24:20-23**.

21. Claimant testified that she was "reaching forward for the sauce bottle" when she "felt the pop – the tweak, and I just -- I froze." Claimant testified that she was afraid to move because it hurt so much. Claimant testified that Mr. S[Redacted] was present and "saw it when it happened…" Claimant testified that, after she froze, Mr. S[Redacted] asked her if she was okay, to which she responded by shaking her head no and crying. **Hrg. Tr. 25:14-22.**

22. Claimant went to another part of the restaurant, a trailer used for dry storage. She testified that she laid down on the floor of the trailer and then called Mr. S[Redacted] on her cell phone for help and "to get me to the hospital." **Hrg. Tr. 25:10-13**. Claimant refused an ambulance, so Mr. S[Redacted] ordered her an Uber to the hospital. **Hrg. Tr. 26:1-8.**

23. Claimant received emergency treatment at Boulder Community Hospital on September 24, 2019 at almost 1:00 p.m. The medical report from that visit states the incident occurred 30 minutes ago while reaching for something at work while turning and twisting. The emergency room (ER) notes indicate:

> She states that she noticed some mild discomfort 2 days ago however at work today she works at a sandwich shop she ***was reaching for something and turning her upper thoracic spine*** and felt upper thoracic spine pain. She felt a pop and then states she has rather severe pain (emphasis added).
>
> Pain started getting worse **after she twisted at work to reach for something** (emphasis added).
>
> **Exhibit L, p 35**.

24. Claimant underwent a thoracic x-ray at the ER**,** which showed a potential disc herniation in her lower cervical spine. A cervical MRI was performed, which showed a large disc herniation at C6-7 causing "severe central canal stenosis with cord compression and deformity…" along with mild degenerative disk disease with "moderate central canal stenosis secondary to a right paracentral disk herniation" at C5-C6. **Exhibit M, p. 42.** Based on the disc herniation and moderate spinal canal stenosis, Claimant was admitted to Boulder Community Hospital and a neurosurgery consultation was ordered. **Exhibit L.**

25. The next day, Claimant underwent a neurosurgical consultation at Boulder Community Hospital with Adam Levine, DO. Dr. Levine noted that Claimant had a “very large cervical disk herniation that is the cause of her current clinical complaint and she apparently herniated this disk while on the job at [Redacted]’s.” Dr. Levine noted that Claimant could “be given surgical consideration” but “there is a chance that she may do okay with medical management alone.” **Exhibit N, p. 45**. He said the lack of “hard neurological findings of evidence of cord compression” and her young age in recommending conservative treatment as tolerated. **Exhibit N, 45-46.** As a result, Claimant was prescribed steroids and a collar and directed to seek follow up treatment in one week. **Exhibit N, p. 47.**

26. A week later, as directed by Boulder Community Hospital, Claimant followed up at Clinica Family Health. The notes from that visit indicate Claimant was not having any radicular symptoms, but she was having was neck pain. **Exhibit O.**

27. On October 10, 2019, Claimant was first seen at Concentra by Bree Willis, M.D. Dr. Willis wrote a brief description of the work incident. Dr. Willis noted:

> She was reaching for a sauce bottle at work with left hand outstretched when she felt a cracking shift in the vertebrae of her neck. She had immediate severe pain. . . . She reports that earlier in the day when she woke up she felt like she slept wrong. She reports she had soreness in her neck. Worsened when she reached for the sauce bottle.

Dr. Willis also completed a “Physician’s Report of Workers’ Compensation Injury” form on which she answered “Yes” to the question: “Are your objective findings consistent with history and/or work-related mechanism of injury/illness?”

Dr. Willis prescribed medication and physical therapy. She also restricted Claimant to modified duty and imposed work restrictions, which precluded Claimant from performing her regular job duties. These restrictions consisted of:

- May lift up to 10 lbs. Occasionally- up to 3 hrs/day.
- May push/pull up to 10 lbs. Occasionally - up to 3 hrs/day.
- May bend - Occasionally - up to 3 hrs/day.

Ex. P., p. 56-60.

28. Although the providers at Boulder Community Hospital did not provide Claimant with specific work restrictions, the ALJ finds that based on Claimant’s injury, and the restrictions imposed by Dr. Willis, Claimant was unable to perform her regular job duties as of September 24, 2019 when she injured her neck and suffered a disc herniation.

29. Claimant presented to her first physical therapy session on October 11, 2019. The record states:

> Pt woke up really stiff and thought she slept wrong and pt went to reach for a sauce bottle and felt a sharp pop in the

> middle of her neck. Felt instant nerve pain down both arms.
> Shoots primarily down R but sometimes L.

Ex. Q, p. 61.

30. At her second PT appointment on October 15, 2019, the therapist noted that Claimant had radicular symptoms “that worsen with worsening posture.” **Exhibit Q, p. 64**.

31. Claimant testified that, right after the incident, she felt pain “at the top of…my shoulder area in between my shoulders…”, which she testified she reported to Mr. S[Redacted] when he requested the Uber. **Hrg. Tr. 26:12-23.** She also testified that, before September 24, 2019, she never experienced neck problems or sought medical treatment for her neck. **Hrg. Tr. 28:2-8.**

32. On October 20, 2019, Claimant returned to the Boulder Community Hospital ER with complaints of numbness in all extremities and difficulty breathing. According to the ambulance records, Claimant “was found sitting up in her bed hyperventilating and stating her hands and feet felt numb.” Claimant was coached to breathe slower and her numbness improved. She reported “throwing up all day.” The ambulance notes reveal that Claimant denied drugs or alcohol to the EMTs. **Exhibit T.**

33. Despite the ambulance notes revealing Claimant denied using alcohol, Claimant reported “she went out to a party last night and had some drinks with friends. Around 5 AM this morning she awoke feeling nauseous, with multiple episodes of vomiting. **Exhibit U, p 88**. Claimant reported concern that her symptoms were connected to her C6-7 disk herniation. **Exhibit U, p. 80.**

34. On October 20, 2019, while in the hospital, Claimant texted her supervisor, Mr. Mr. S[Redacted], and asked if she was on the schedule the day after since she was probably going to stay in the hospital that night. Mr. S[Redacted] responded and advised Claimant that “You do not work tomorrow.” **Exhibit 16**. Thus, because Claimant was told by her supervisor that she did not have to work the next day, Claimant did not go into work the next day on October 21st.

35. The ER physician concluded: “I think that hyperventilation and nausea and vomiting is much more likely as a source for her numbness and tingling peripherally than her cervical spine.” **Exhibit U, p. 81**. Hospital records noted that Claimant’s arrival complaint was “vomiting all day, anxiety.” **Exhibit U, p 84**. While in the ER, Claimant denied neck pain or related symptoms. **Exhibit U, p 94.** The discharge note from the ER shows that Claimant was offered “supportive management in the outpatient setting; however, she is refusing at the time of disposition.” **Exhibit U, p 94.**

36. Claimant followed up at Concentra on October 21, 2019 and was evaluated by Devin Jacobs, PA-C. Claimant was tearful in recounting her ER visit the day before. PA Jacobs concluded that Claimant's reported symptoms were “**likely multifactorial including anxiety and hyperventilation**.” PA Jacobs noted that further imaging was unnecessary and recommended that Claimant follow up with her primary care provider “for follow up of SOB/post hospital admission.” **Exhibit**

V, p 98. Claimant testified that PA Jacobs never told her that "because he knows I don't have a PCP." **Hrg. Tr. 50.**

37. On October 21, 2019, the day after Claimant's supervisor – Mr. S[Redacted] - advised Claimant by text message that she was not scheduled to work that day, he completed a Disciplinary Action Form. Mr. S[Redacted] specified on the form that Claimant violated their attendance policy by failing to show up for work that day. He wrote: "Theresa missed work due to a text out that she was again in the hospital forcing the GM to come in for this shift" and was terminated. **Exhibit S, p. 75**.

38. Thus, Claimant was told by Mr. S[Redacted], her manager, that she was not scheduled to work on October 21st - but was terminated for not working on October 21st. As a result, Claimant is not at-fault for her termination.

39. On October 23, 2019, Claimant presented to Cornerstone Orthopedics for an orthopedic consultation. Claimant reiterated that she woke up the morning of September 24, 2019 "with stiffness in her back." She reported "leaning forward to pick something up and felt the sudden onset of a popping sensation in her neck with severe neck pain." Claimant told Dr. Castro that her symptoms had "increased significantly**"** at one of her recent physical therapy visits. **Exhibit X, p 102**. She reported "doing reasonably well until physical therapy 2-3 days ago." **Exhibit X, p 105.**

40. Based on Claimant's report to Dr. Castro, he concluded that "she had symptoms as a result of a reaching injury, and I think it would be considered within a degree of medical probability that her symptoms are related to the accident in question without a doubt." He prescribed a Medrol Dosepak. **Exhibit X, p. 105.**

41. Claimant underwent a follow-up MRI of her cervical spine on December 10, 2019. The impressions from that MRI include "disc protrusion with annular tearing and cord contact C6-C7 level. Central canal stenosis. Mild right foraminal compromise. No signal alteration of the cord." Claimant also had findings at the C5-C6 level. **Exhibit EE.**

42. Claimant followed up with Dr. Castro on December 11, 2019. Dr. Castro stated that Claimant's MRI was "markedly improved." Dr. Castro noted: **"**I was hoping this would be the case as free fragment disc herniation's do typically resolve on their own." Claimant reported intermittent arm symptoms was some right tingling in her hand and "numbness and tingling episodes in her feet…" She also reported constipation, fatigue, night sweats, dizziness, and headache. **Exhibit FF, pp. 145-147**. Dr. Castro encouraged Claimant to exercise and continue with physical therapy. **Exhibit FF, p. 148.**

43. Claimant returned to Concentra on December 17, 2019, and was evaluated by Devin Jacobs, PA. **Exhibit GG, p.150.** Claimant reported continued discomfort in her neck and a burning sensation in her right shoulder. Claimant noted improvement in her symptoms but said that they return she reported intermittent numbness and tingling to her right hand and occasionally in her feet. PA Jacobs

noted “mild blunted affect but mood overall improved from prior visits.” **Exhibit GG, p. 154.**

44. On December 29, 2019, Claimant started working at [Redacted]. Claimant continued working with [Redacted] until February 22, 2020.

45. On February 20, 2020, Claimant was evaluated by Dr. Felix Meza at Concentra. At this appointment, Dr. Meza provided Claimant work restrictions, which precluded Claimant from performing her regular job duties. These restrictions included:

    - May lift up to 15 lbs. occasionally.
    - May push/pull up to 15 lbs. occasionally.
    - No lifting overhead.
    - At Least 15 min rest for every two hours worked.

    Exhibit NN, p. 192.

46. On March 5, 2020, Claimant underwent a cervical interlaminar epidural steroid injection at C7-T1 on March 5, 2020. **Exhibit OO, pp.193-194.** The injection, however, did not make things better. Instead, she was worse for a couple of weeks. **Hrg. Tr. 51.**

47. On May 14, 2020, Claimant was seen by Allison Fall for an independent medical examination (IME). Claimant reported “extreme pain following the injection on March 5, 2020” and reported that the injection gave her a headache. She reported 8/10 pain after completing paperwork for the IME. Claimant disclosed the February 2019 assault to Dr. Fall, stating that she “had bruises but no neck pain.” She reported that her injuries under that claim resolved and she was “past it.” **Exhibit PP, p. 195.** This is contradicted by Claimant’s hearing testimony that she is still suffering from PTSD related to the February 2019 assault.

48. Dr. Fall concluded, within a reasonable degree of medical probability, “the large disc extrusion causing severe stenosis was not caused by reaching forward while at work.” Dr. Fall cited Claimant report to the ER that she had neck symptoms two days earlier. Dr. Fall concluded that Claimant’s neck condition is “an evolving process” and while moving her arm may have led to Claimant experiencing symptoms, such action did not “cause the disc abnormality or the need for treatment.” Dr. Fall noted that Claimant did not have any neurological compromise and her second MRI was reassuring. She concluded that “no further treatment is indicated at this time whether work-related or not.” **Exhibit PP, p. 198.**

49. Dr. Fall also testified at hearing as an expert in occupational medicine. **Hrg Tr. 56.** Dr. Fall testified that disc protrusions, annular tears, and bulges are part of the natural aging process, and while there can be traumatic causes, the most common reason for a disc herniation is “age-related degenerative changes because of [a] genetic component, because there is a familial history or certain people are more predisposed.” **Hrg. Tr. 59.** Dr. Fall also stated that many of

these findings are common and found in over 50% of the population who are 50 and older. **Hrg. Tr. 59**.

50. Dr. Fall concluded that Claimant "would be just as likely to feel symptoms whether she were at home or at work" because the alleged mechanism of reaching "did not cause any stress that would cause any damage to her disc…" **Hrg. Tr. 62.** Thus, it was her opinion that Claimant's job activities did not cause the disc herniation. Instead, it was her opinion that the disc herniation is the result of Claimant's natural aging process and that it merely became symptomatic while Claimant was at work and not because of Claimant's work.

51. However, when rendering her opinion, Dr. Fall did not appear to consider the specific circumstances of Claimant and her job duties. For example, although Dr. Fall said disc herniations can be common – and naturally occur in people who are 50 and older, Claimant was only 29 years old at the time of the incident. Moreover, not only was Claimant's job physically demanding, but Claimant had to perform her job in an extremely small kitchen that caused her to work at very awkward angles when making hamburgers, fries, and milkshakes. Moreover, this injury occurred around 12:20 p.m., which is arguably a busy time since it is lunchtime. As a result, at the time of the injury, and while grabbing the bottle of sauce, Claimant was most likely performing her job duties in an awkward postural position and at a production pace.

52. Furthermore, the medical records from the emergency room specifically state Claimant was injured while turning and twisting. Dr. Fall concluded, within a reasonable degree of medical probability that "the large disc extrusion causing severe stenosis was not caused by reaching forward while at work." **Ex. PP, p. 98**. Despite the emergency room records containing the exact mechanism of injury, Dr. Fall fails to address the actual job tasks Claimant was performing at the time of the injury, which included turning and twisting. In the end, Dr. Fall did not even address the actual mechanism of injury - which included reaching, turning, and twisting. As a result, Dr. Fall's failure to address the actual mechanism of injury asserted by Claimant degrades the quality of her opinion.

53. Dr. Fall's opinion is further degraded due to her failure to comprehensively interview and question Claimant about her job duties and document that information in her report. Absent from Dr. Fall's analysis is an assessment of the actual physical requirements of Claimant's job – overall – and at the critical time when Claimant was injured. For example, and as set forth above, the medical records say Claimant was turning and twisting at the time of the incident. Dr. Fall did not ask about how Claimant was turning and twisting and how she reached for the bottle of sauce. Although the sauce might have been in front of Claimant, instead of behind her, there is a range of turning and twisting that is required to grab a bottle of sauce that is two feet to the left and two feet in front from where Claimant was standing compared to a bottle of sauce that is directly in front of Claimant and requires little to no effort to reach and grab. Add to that the added positional stress created if Claimant had to reach around another coworker or reach over a grill or counter, with her hips flush against the front of the grill or counter, to grab the bottle of sauce. Compare that scenario to Claimant having

to reach for a bottle of sauce directly in front of her and in an ergonomically neutral position where Claimant's body is aligned and balanced - placing minimal stress on her upper thoracic and lower cervical spine – thereby minimizing the stress and force exerted through her upper thoracic and lower cervical spine while reaching and grabbing the bottle of sauce.

54. The ALJ is not finding that Claimant had to contort her body in an extreme and unnatural way to reach and grab the bottle of sauce. The ALJ is, however, finding that Dr. Fall's failure to question Claimant and determine exactly how Claimant was reaching for the sauce is fatal to her opinion. In other words, as an expert, Dr. Fall has an obligation to interview Claimant about the mechanism of injury in a manner that provides her a reasonable and complete factual basis from which she can form and provide an expert opinion. Claimant is not an expert, so she does not know which facts matter and Claimant is not in control of the IME. But Dr. Fall is an expert and is in control of the IME and arguably knows which facts matter. Thus, Dr. Fall's failure to inquire about the facts and details regarding what Claimant was doing when she had the immediate onset of pain at work while reaching for a bottle of sauce renders her opinions unreliable and unpersuasive.

55. As a result, the ALJ does not find Dr. Fall's causation opinions in her report and testimony to be credible or persuasive.

56. The ALJ has also considered the expert opinion of Dr. Castro. Dr. Castro concluded Claimant's disc herniation is related to her work activities of reaching for the bottle of sauce. The ALJ finds Dr. Castro's opinion on causation to be credible and persuasive because it aligns with, and supported by, the underlying contemporaneous medical records that describe the mechanism of injury and Claimant's description of the incident and the symptoms she felt at the time of incident and afterward.

57. The ALJ has also considered the testimony of Mr. S[Redacted]. Overall, Mr. S[Redacted] was not a reliable witness. He had a poor memory of events and his documentation of events was also found to not be accurate. As a result, the ALJ does not find his testimony to be credible or persuasive.

58. The Judge does, however, find Claimant's testimony to be credible and persuasive. Although there are some inconsistencies in her testimony, such as her contention that she did not have any neck complaints after her assault in February 2019, the ALJ finds such inconsistencies to be inconsequential. As found, on April 11, 2019, Claimant signed a Voluntary Abandonment of Claim form, stating that she was waiving entitlement to any current and future medical benefits. She had advised Dr. Miller, her treating physician, that her neck symptoms had resolved. As a result, the ALJ finds Claimant was neither claiming nor having ongoing neck pain that required medical treatment as of April 2019. The ALJ also finds her testimony related to her termination to be credible and persuasive as well. Claimant testified she checked with her supervisor to see whether she had to work the next day, October 21, 2019. As documented by Mr. S[Redacted]'s text message to Claimant, Claimant was told she did not have

to work on October 21, 2019. Even so, Claimant was written up and terminated for not working that day. A day she was told by her supervisor, Mr. S[Redacted], that she did not have to work.

59. The ALJ finds that Claimant reaching for a bottle of sauce – while twisting and turning - caused her to suffer a herniated disc in her cervical spine.

60. The ALJ also finds that the herniated disc necessitated the need for medical treatment to cure her from the effects of her work injury. This treatment includes, but is not limited to, the treatment she received at Boulder Community Hospital, Clinica Family Health, Concentra, Spine West, and Cornerstone Orthopedics.

61. The ALJ also finds that Claimant's work injury to her cervical spine precluded her from performing her regular job duties for more than three shifts. The ALJ further finds that Claimant is not at-fault for her termination and subsequent wage loss. Thus, the ALJ finds Claimant's wage loss is caused by her injury.

62. Pursuant to the stipulation between the parties, Claimant's average weekly wage is $673.07.

63. Claimant testified at the September 22, 2020 hearing that she is currently working at Stop-n-Go and had been working there for "a month" prior to the hearing. **Hrg. Tr. 41: 20-25.** Therefore, Claimant returned to work on August 22, 2020.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant suffered a compensable neck injury on September 24, 2019.

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl's Department Stores*, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc., W.C. No. 4-588-675, (*ICAO, Sept. 1, 2006*).*

Although Claimant had some minor neck and/or upper back pain a couple of days before the incident at work and might have had some minor neck pain when she woke up the morning of the incident at work, it was Claimant's actions at work of twisting, turning, and reaching for a bottle of sauce that proximately caused her to suffer a herniated disc in her cervical spine, immediately necessitated the need for medical treatment, and caused her disability. In support of this finding, the ALJ credited Claimant's testimony and the statements she made to her medical providers. The ALJ also found Claimant's testimony to be persuasive. In evaluating Claimant's testimony, the ALJ did consider some of the inconsistencies in Claimant's testimony. The ALJ, however, found such inconsistencies to be inconsequential.

In reaching the findings above, the ALJ also relied upon, and credited, the opinion of Dr. Castro who also determined the incident at work was the cause of Claimant's herniated disc and neck pain. As found, Dr. Castro's opinion was consistent with the underlying medical records and the history provided by Claimant.

As found above, the ALJ did not find Dr. Fall's opinions regarding causation to be credible or persuasive. In essence, Dr. Fall failed to obtain a detailed history regarding Claimant's job duties in general – and specifically - at the time of Claimant's. Moreover, Dr. Fall also failed to consider Claimant's twisting and turning motion while reaching for the bottle of sauce in her causation assessment. Consequently, Dr. Fall's opinion is based on an analysis which failed to consider all relevant facts; accordingly, the ALJ will not credit her conclusion. Like a house built on sand, an expert's opinion is no better than the facts and data on which it is based. *See Kennemur v. State of California*, 184 Cal. Rptr. 393, 402–03 (Cal. Ct. App. 1982).

As a result, the ALJ finds and concludes Claimant established by a preponderance of the evidence that she suffered a compensable injury involving her neck while she was twisting, turning, and reaching for a bottle of sauce while working for Employer.

II. Whether Claimant is entitled to reasonable and necessary medical treatment.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

As found, Claimant suffered a compensable injury to her cervical spine in the form of a herniated disc. As further found, upon herniating her disc, Claimant was taken to Boulder County Hospital's emergency room and was admitted into the hospital and stayed overnight. After being released from the hospital, Claimant followed up with other providers, which included Clinica Family Health, Concentra, Spine West, and Cornerstone Orthopedics. The ALJ found the medical treatment to be reasonable and necessary to cure Claimant from the effects of her work-related cervical disc herniation.

As a result, the ALJ finds and concludes Claimant established by a preponderance of the evidence that she is in need of reasonable and necessary medical treatment to cure her from the effects of her compensable neck injury.

III. Whether Claimant is entitled to temporary total disability benefits or is Claimant at-fault for her termination and subsequent wage loss.

To prove entitlement to Temporary Total Disability (TTD) benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that Claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

However, under the termination statutes in §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v.*

Digital Equipment, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus “responsible” if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep’t of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

As found, Claimant suffered a compensable injury on September 24, 2019, in the form of a herniated disc in her neck. As further found, Claimant’s work injury resulted in physical restrictions that prevented her from performing her regular job duties. Although the record is not clear as to the exact date Claimant started missing time from work because of her work injury, Claimant established by a preponderance of the evidence that when she was terminated on October 21, 2019, she was unable to perform her regular job duties due to her work injury.

The ALJ also found that Claimant was not at-fault for her termination. As found, Claimant was told on October 20, 2019, by her supervisor Mr. S[Redacted], that she was not scheduled to work the next day on October 21, 2019. Despite being told by her supervisor that she did not have to work the next day, Claimant was terminated the next day for not working that day. As a result, it was found that Claimant was not at-fault for her termination. Thus, Respondents failed to establish by a preponderance of the evidence that Claimant was at-fault for her termination and subsequent wage loss.

Therefore, the ALJ finds and concludes Claimant established by a preponderance of the evidence that she is entitled to temporary total disability benefits as of October 21, 2019.

As found, Claimant worked at [Redacted] from December 29, 2019, through February 22, 2020. Thus, Claimant is not entitled to temporary total disability benefits during that period.

However, as found, on February 20, 2020, Dr. Meza issued work restrictions which precluded Claimant from performing her regular job duties. Therefore, the ALJ also finds and concludes that Claimant established by a preponderance of the evidence that she is entitled to temporary disability benefits as of February 22, 2020, when she stopped working at [Redacted].

As found, Claimant started working again on August 22, 2020 when she started working at [Redacted]. Therefore, Claimant’s right to temporary total disability benefits ceased on August 22, 2020.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury involving her neck.

2. Claimant is entitled to reasonable and necessary medical treatment to treat her neck injury, which includes a herniated disc.

3. Respondents shall pay Claimant temporary total disability benefits as of October 21, 2019, based on an average weekly wage of $673.07. This shall include the following periods:

   a. Respondents shall pay Claimant TTD from October 21, 2019, through December 29, 2019, when Claimant started working at [Redacted].

   b. Respondents shall also pay Claimant TTD from February 22, 2020, when Claimant ceased working at [Redacted], until August 22, 2020, when she started working at Stop-N-Go.

4. The issue of temporary partial disability benefits was not addressed since that issue was not endorsed. Moreover, the record is not clear as to whether Claimant is entitled to TTD before October 21, 2019. As result, these issues are reserved.

5. Any other issues not expressly decided herein are also reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 24, 2021.

Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-106-555-003

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on January 5, 2021, in Denver, Colorado. The hearing was recorded by Google Meets (reference: 1/5/21 Google Meets, beginning at 8:30 AM, and ending at 11:00 AM).

Claimant's Exhibits 1 through 4 were admitted into evidence, without objection. Respondents' Exhibits A through MX S and T were admitted into evidence, without objection. The transcripts of the evidentiary depositions of Daniel Possley, D.O., John Raschbacher, M.D. and Brian Reiss, M.D. were admitted into evidence in lieu of their testimony during the hearing

At the conclusion of the hearing, the ALJ ruled from the bench in favor of the Respondents, referring preparation of a proposed decision to counsel for the Respondents, which was submitted on January 8, 2021, and giving the Claimant two working days within which to file objections thereto. No timely objections having been filed, the matter was submitted for decision on January 13, 2021.

ISSUES

The issue to be determined by this decision is whether Respondents can terminate the post maximum medical improvement (MMI) general maintenance medical admission under their December 5, 2017 Final Admission of Liability, (FAL), pursuant to. § 8-43-201, C.R.S.

Respondents bear the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant is a 37 year old man with a work related back injury of January 24, 2014.

2. As a result of the work-related injury, the Claimant underwent a partial laminecetomy and discectomy at L5-S1 on December 23, 2014. It is undisputed that the Claimant had degenerative changes throughout his spine at the time of the work injury. *Ex. N, Bate 306-308.* The Claimant received treatment under the claim for his L5-S1 until MMI was determined by 24-month DIME Dr. Franklin Shih. *Ex. C.* Dr. Shih found MMI as of July 13, 2016 and provided a 15% whole person impairment rating for the L5-S1 level of the lumbar spine (Respondents' *Exhibit. C, bates 52*).

3. Respondents filed a Final Admission of Liability (FAL), based upon the opinion of Franklin Shih, M.D.. The FAL was dated December 5, 2017, and noted, "We admit for reasonable and necessary and related medical treatment and/or medications after MMI.

4. It is undisputed that the Claimant left work with the Employer and became a self-employed carpenter/handyman after his work injury (Respondents' *Exhibit. D, bates 57*). The evidence establishes that the Claimant has since worked in a full duty capacity as a self-employed carpenter and that job requires heavy labor. The heavy labor done during the self-employment caused symptoms and complaints in the low back. During his treatment, Dr. Keith Graves, D.C., indicated that the Claimant was making poor progress, and stated: "Lasting functional relief from his symptomatology and any change in physical examination have not occurred primarily due to his continued labor intensive workloads as a self employed general contractor (Respondents' *Exhibit D, bates 67*). "He has increased lumbar spine/lumbosacral junction pain/symptomatology with labor-intensive workloads as a general contractor" (Respondents' *Exhibit. D, bates 61*). On November 17, 2015, Chiropractic Dr. Graves's notes reflected a flare of symptoms while loading his residence without much help (Respondents' *Ex. D ,bates 61*). Chiropractor Graves also said, "Most of the patient's continued flare-ups occur with his work as a self-employed general contractor" (Respondents' *Exhibit. D, bates 72*). Dr. Graves repeated this thought throughout his treatment.

5. The Claimant has received maintenance medical treatment under this claim since the FAL was filed. In November of 2018, Daniel Alan Drennan, M.D. became the authorized treating physician (ATP) providing maintenance treatment to the Claimant (Respondents' *Exhibit. F, bates* 83)

6. On March 10, 2020, the Claimant appeared for follow up with Dr. Drennan. The Claimant reported a pain score of 6/10 with medication. He described a constant sharp ache that was not relieved by anything (Respondents' *Exhibit F, bates 141*)*.* Dr. Drennan prescribed morphine 15 mg, Butrans 20 mcg/hour transdermal patch, and Baclofen 10 mg. He recommended a bilateral L4/5 L5/S1 transforaminal epidural steroid injection, a Spinal Q Vest, a surgical evaluation, and noted that the Claimant may benefit from a referral to behavioral medicine for depression, anxiety and coping Respondents' *Exhibit F, bates 142-143*)*.*

7. The Claimant's activities were captured on video on March 10, 2020. He is seen in this video arriving at his March 10, 2020 appointment with Dr. Drennan. The Claimant is in a pick up truck with a construction trailer attached. The truck is parked and another individual waits in the truck while the Claimant attends his appointment. Following the appointment, the two proceed to Home Depot. The video then shows the Claimant repeatedly loading framed doors into the construction trailer. The person with him and the Home Depot employee near him watch the Claimant as he bends, lifts, and carries the doors into the trailer. There is no visible hesitation in his movement while he is doing this. He is not assisted by the others in his lifting.

8. The video was presented to Dr. Drennan, and he was asked whether his recommendations for treatment would change based upon the video. Dr. Drennan replied that it did not, and stated, "He does have a labor intensive job. I have back pain and problems as well, but still work on my farm, lifting heavy items that make me hurt. However, the work still has to be done, regardless of the pain it causes (Respondents' *Exhibit F, bates 147*)*.*

9. In the September 8, 2020 appointment with the Claimant, Dr. Drennan noted continued low back complaints. He also noted that the Claimant's neck popped and clicked and there was occasional pain and tingling in his arms and hands "that has not been addressed" (Respondents' *Exhibit. F, bates 160*). Dr. Drennan prescribed voltaren gel for the knees and requested a right knee MRI (magnetic resonance imaging) and a right lateral genicular knee nerve block. He repeated his recommendations for spinal injections, a Spinal Q Vest and a spinal surgical evaluation. He refilled the Claimant's medication, including morphine, buprenorphine, and baclofen (Respondents' *Ehibitx. F, bates 161-163*)*.*

10. The Claimant took the evidentiary deposition of Dr. Possley, orthopedic surgeon. Dr. Possley last saw the Claimant for treatment on March 6, 2020, a few days prior to the video of March 10, 2020. During that appointment, the Claimant represented

that his condition had gotten worse six weeks prior to that appointment. He reported that he was having trouble working, with activities of daily living and with self care. (*Possley Depo. p. 15, Claimant's Exhibit. 2, bates* 10)7*.* Dr. Possely recommended injections. Dr. Possley felt that the Claimant's current symtoms were from a herniation at L4-5 and bone spurs at L5-S1. He stated that the need for treatment at these levels was a combination of acute and chronic issues (*Possley Depo. p. 16*)*.* He agreed that he had not done a causation analysis and that his opinion was not specific to a work diagnosis. *Id., p. 22.* Dr. Possley's opinion was only based upon what the Claimant had told him about his back feeling worse. Dr. Possely admitted that he had not reviewed all of the Claimant's MRI reports, and could not comment on whether these showed a difference in the spinal condition since MMI. He testified that he had not done a causation analysis, and had not reviewed the Dr. Shih's DIME (Division Independent Medical Examination) report. Dr. Possely's opinion was advanced as his recommendation for treatment of the Claimant's present complaints, without consideration of causation, and without the benefit of the medical records or the March 10, 2020 video. The ALJ finds that Dr. Possley's opinion is not found to include a determination of whether his recommendations are related to the work injury of January 24, 2014.

11. Dr. Reiss testified by deposition. Dr. Reiss is also an orthopedic spinal surgeon. Dr. Reiss had performed a face-to-face evaluation with the Claimant on July 5, 2017. He also performed an updated records review addressing the question of the reasonableness, necessity, and relatedness of continued maintenance treatment under this claim. He provided a summary of all medical records (Respondents' *Exhibit. A*). In comparison with the pre-MMI MRI (Respondents *Exhibit. B, bates 14; Exhibit. N and Reiss Depo p. 14*)*.* Dr. Reiss concluded that it was not reasonable or necessary to repeat epidural injections at this point in time, given the limited benefit from injection therapy in the past (Respondents' *Exhibit. A, Bates 14*)*.* He noted, "It must be remembered that [Claimant] was having significant lower back and left lower extremity pain prior to the minor work incident. [The Claimant's] symptomatology was irritated by his activating including work which is no different than his probable condition right now." *Id.* Dr. Reiss was of the opinion that the Claimant was back to his pre-injury **baseline** and that the need for treatment is related to his pre-existing ongoing condition (Respondents' *Exhibit A, bates 15; Reiss Depo p. 12-16*) *.* Dr. Reiss testified that the bilateral knees are not related to the work injury of January 24, 2014.

12. Dr. Raschbacher testified by deposition. Dr. Raschbacher conducted independent medical examinations (IMEs) of the Claimant on May 1, 2014, March 8, 2016, and July 28, 2017. He provided physician staffing opinions regarding requested medical treatment, and he performed a medical records review and provided a report addressing the reasonableness, necessity, and relatedness of ongoing maintenance medical treatment dated June 22, 2020 (Respondents' *Exhibit.B).* Dr. Raschbacher was of the opinion that continued treatment, including Dr. Drennan's current recommendations, is not reasonable, necessary, or causally elated to the workers'

compensation claim of January 24, 2014 (Respondents' *Exhibit. B, bates 47*). Consistent with Dr. Reiss, he was of the opinion that any aggravation of the Claimant's back symptoms at this time are from his current self-employed work related activities, as illustrated by the March 10, 2020 video (Respondents' *Exhibit. B, bates 47; Raschbacher Depo. P. 29*). According to Dr. Raschbacher continued maintenance treatment is not reasonable, necessary or causally related to the work injury (*Raschbacher Depo p. 30.* Dr. Raschbacher testified that neither the bilateral knees nor the neck are related to the original work injury (*Raschbacher Depo p. 39, 42*).

Ultimate Findings

13. The ALJ finds the opinions of Drs. Reiss and Raschbacher highly credible ,*i.e.,* that Claimant's present back condition is not causally related to the admitted work-related injury of January 24, 2014, nor is there any indication of work-relatedness in their opinions. Further, Dr. Possley was unable to express an opinion concerning work-relatedness. In fact, only ATP Drennan implies work relatedness of the admitted back injury. The ALJ rejects Dr. Drennan's implied opinion as inadequately founded or expressed. Therefor, the ALJ finds his opinion lacking in credibility to support work-relatedness.

14. Between conflicting opinions and testimony, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Drs. Reiss and Raschbacher, which do not support work-relatedness of the January 24, 2014 admitted claim and to reject the implied opinion of work-relatedness, expressed by ATP Dr. Drennan.

15. The Respondents have established that the Claimant's current post-MMI medical maintenance treatment is **not** causally related to the admitted injury of January 24, 2014.

16. Respondents have proven, by a preponderance of the evidence that the Claimant's current post-MMI medical maintenance treatment is **not** causally related to the January 24, 2014 back injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Drs. Reiss and Raschbacher were highly credible ,*i.e.,* that Claimant's present back condition is not causally related to the admitted work-related injury of January 24, 2014, nor is there any indication of work-relatedness of post-MMI medical maintenance treatment in their opinions. Further, Dr. Possley was unable to express an opinion concerning work-relatedness of post-MMI medical maintenance treatment. In fact, only ATP Drennan implies work relatedness of the post-MMI medical maintenance treatment to the admitted back injury. The ALJ rejects Dr. Drennan's implied opinion as inadequately founded or expressed. Therefore, the ALJ finds his opinion lacking in credibility to support work-relatedness of post-MMI medical maintenance treatment..

Substantial Evidence

b. ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007);

Brownson-Rausin v. Indus. Claim Appeals Office, 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions and testimony, the ALJ made rational choice, based on substantial evidence,

Compensability—Aggravation/Acceleration of Pre-Existing Conditions

c. A compensable injury is one that arises out of and in the course and scope of employment. § 8-41-301 (1) (b), C.R.S. The "arising out of test is one of causation. As found, the Claimant has failed to adequately causally connect his present medical problems to the alleged "tree-falling" incident. The alleged "tree-falling" incident only satisfies the "course and scope" test. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment isa compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). If the employment-related activities aggravate, accelerate, or combine with a pre-existing condition to cause disability, a compensable phenomenon has occurred. § 8-41-301 (1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. Pp. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). *Also see* § 8-41-301 (1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998] *Witt v. James J. Kell, Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the Respondents having the burden of proof to justify a withdrawal of the portion of the operative FAL concerning post-MII medical maintenance treatment have established that the Claimant's current post-MMI medical maintenance treatment is **not** causally related to the admitted injury of January 24, 2014.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d

786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Respondents have sustained their burden of prospectively justifying withdrawal of the portion of the operative FAL, admitting for post-MMI medical maintenance benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits are hereby denied and dismissed.

DATED this 25th day of January 2021..

ISSUES

- Did R.G. die of a "heart attack," thereby requiring Claimant to satisfy the requirements of the "heart attack statute," § 8-41-302(2)?

- If R.G. died of a "heart attack," did Claimant prove it was proximately caused by unusual exertion arising out of and within the course of employment?

- If the cause of death was not a "heart attack," did Claimant prove it was proximately caused by an injury arising out of and in the course of employment?

STIPULATIONS

The parties stipulated Claimant is R.G.'s dependent and is entitled to death benefits if the claim is found compensable. The parties also stipulated to an average weekly wage of $622.15 for purposes of this order, which corresponds to a compensation rate of $414.77. Claimant reserved the right to argue for an increase in the stipulated AWW if warranted in the future.

FINDINGS OF FACT

1. Employer operates a farming and ranching operation in northeastern Colorado. The business is owned by Patrick and Mike G[Redacted]. In June 2019, its employees were Mike G[Redacted], Patrick G[Redacted], R.G., Erika G[Redacted], Coy G[Redacted], Cade G[Redacted], and Brooklyn G[Redacted]. R.G. was Mike and Patrick G[Redacted]'s cousin.

2. R.G. worked for Employer as a ranch and farm hand for more than 20 years. He performed a variety of duties depending on the season. In terms of volume, most of his time was spent in sedentary or light activities such as driving farm equipment, driving a pickup truck to observe parts of the farm, and walking. The job also required periods of physical exertion, such as moving hay, setting up pipe fence corrals, and sorting cattle. The physically demanding activities tended to be sporadic and performed at discrete times during the year. For example, R.G. periodically loaded twenty-four (24) 50-pound bales of hay onto a flatbed pickup truck, and then drove the truck around while a co-worker dispersed the hay to the cattle. The evidence showed R.G. last moved hay bales in April 2019, two months before his death. Occasionally R.G. performed other random tasks such as welding or fixing a fence.

3. On June 17, 2019, R.G. collapsed suddenly while at work. Paramedics were summoned and he was taken to the Colorado Plains Medical Center emergency department. The EMTs documented ventricular fibrillation and pulseless electrical activity despite multiple defibrillation attempts. R.G. was in cardiac arrest when he arrived at the ER at 8:02 AM. Additional efforts to resuscitate R.G. were unsuccessful, and he was pronounced dead at 8:40 AM. The final diagnosis was "cardiac arrest."

4. An autopsy was performed on June 18 by pathologist James Wilkerson IV, M.D. The report notes "the deceased was reportedly working with cattle and was observed to have fallen. . . . He has not seen a physician for years, however recently he underwent a blood test with Community Health Profile and reportedly nothing unusual was found." Inspection of the coronary arteries showed "severe, yellow-brown atherosclerosis narrowing the lumen 70 to 100%." There was a possible thrombosis of the right coronary artery. The left ventricular free wall was thickened. Histologic examination showed high-grade coronary artery stenosis with near 90% occlusion and areas of recent hemorrhage into the plaque. Heart sections showed some mild perivascular and perifascicular fibrosis but no acute changes. There was no gross or microscopic evidence of myocardial cell damage or death. Dr. Wilkerson concluded, "Based upon the history and autopsy findings, it is my opinion that [R.G.] a 59-year-old while male, died of sudden cardiac death from his hypertensive atherosclerotic cardiovascular disease. The manner of death is natural." The death certificate listed the cause of death as "sudden cardiac death" and "ASCVHD."

5. R.G. underwent a "Life Line Screening" on May 13, 2019, approximately one month before his death. The report notes cardiovascular risk factors such as BMI of 32, lack of exercise, dietary habits, family history of diabetes, family history of coronary heart disease, family history of stroke or TIA, and age. Testing of the carotid artery was normal and there was no evidence of peripheral arterial disease.

6. Although R.G. had pre-existing atherosclerosis and coronary stenosis, it was asymptomatic before June 17, 2019. There is no persuasive evidence R.G. was aware of his underlying coronary artery disease before his death.

7. Erika G[Redacted], Mike G[Redacted], Brooklyn G[Redacted], Coy G[Redacted], and Cade G[Redacted] testified at hearing regarding R.G.'s activities the morning of June 17, 2019. All witnesses worked directly with R.G. that morning except Mike G[Redacted] who had to get the feed down, change two heads of water, and deal with the brand inspector. The primary task that morning was sorting cattle that were to be loaded onto trucks and transported to Nebraska. R.G. started his shift earlier than usual because the trucks were scheduled to arrive at 7:00 AM. R.G. and Brooklyn used ATVs to bring the cattle from the pasture to the holding pen area. Erika, Coy, and Cade joined them and sorted the cattle. After the sorting was finished, Coy, Cade, and R.G. loaded the ATVs onto a flatbed trailer. One of the ATVs "bottomed out" on the trailer lip and had to be lifted to get it on the trailer. Coy was on the side of the ATV and R.G. was at the back. Cade was sitting in the driver position to apply the gas once the undercarriage was freed from the trailer lip. R.G. and Coy lifted the ATV two or three times before it was able to pull onto the trailer bed. R.G. was noticeably straining and grunting while trying to lift the ATV. After the ATVs were loaded, R.G. chatted and joked with Brooklyn for a few minutes. He then told Brooklyn was going to pass out and abruptly collapsed. The persuasive evidence shows R.G. collapsed within 10-15 minutes after sorting cattle and five minutes or less after lifting the ATV.

8. The persuasive evidence shows R.G. sorted cattle approximately 12-20 times per year. However, the exertion associated with sorting cattle the morning of June 17 was unusual in several respects:

- Usually, they sorted 50-120 cattle but that morning they had 200 cattle and four bulls. Erika testified they sorted 200 head of cattle 2-3 times a year on average, and Mike recalled the last time they sorted that many cattle was in 2018. Erika, Coy, and Brooklyn credibly testified the larger number of cows increased the exertional requirement and stress level associated with sorting.

- They were working at a new property Employer had recently acquired. Neither R.G. nor the witnesses had never sorted cattle at that facility, so they had not learned the most efficient way to do it. This caused extra work. As Erika G[Redacted] testified, “we ran them all in and that didn’t work right. So, then we had to run them back out and figure out how we were going to use that facility to sort the cattle.” Additionally, the cows’ unfamiliarity with the facility made them harder to sort.

- R.G. had to “run off” an uncooperative bull four times. This required additional running to try to “beat” the bull back to the herd.

- The sorting area was wider than their other pens, which required additional lateral movement (described as akin to a “defensive shuffle in basketball”).

- The trucks arrived early, which caused mental pressure to hurry and complete the sorting. Erika G[Redacted] noticed R.G. seemed more stressed by the activity than normal because he was snapping at the boys.

9. The most strenuous activity of the morning was lifting the ATV. Compared to R.G.’s typical duties, the exertion associated with lifting the ATV was unusual in multiple respects. All witnesses agreed the ATV is very heavy. It requires tremendous effort to lift the ATV simply to the limit of the suspension travel. There is no persuasive evidence R.G.’s normal duties required him to lift anything else of similar weight. The ATV had “bottomed out” in similar fashion before, but such an occurrence was rare because they usually parked the trailer in a depression and could simply drive onto the trailer bed. No depression was available at the new property, so the trailer had to be parked on level ground. Although Erika and Mike testified the ATV became stuck “all the time,” when asked to quantify the frequency of its occurrence, Mike estimated once per year, and Erika estimated 1-2 times per year. Cade agreed the ATV gets stuck once per year. The ALJ finds the witnesses’ specific estimates more persuasive than generalities such as “all the time.” Moreover, R.G. did not participate in lifting the ATV every time it had become stuck in the past.

10. Dr. Barry Wolinsky performed a record-review for Claimant. Dr. Wolinsky opined R.G. had extensive coronary artery disease (CAD) and died of sudden cardiac death (SCD). Dr. Wolinsky opined SCD “is different than a heart attack/MI. A heart attack typically results from the sudden cessation of blood supply to the myocardium (heart muscle) resulting in myocardial cell death. While SCD can occur during or after an MI, it is not typically the initial presentation.” He concluded, “there is a high degree of probability that [R.G.]’s death was due to SCD and not a heart attack.” Dr. Wolinsky noted R.G. had no apparent symptoms consistent with ischemia immediately before his sudden loss of consciousness, the ER physician and EMTs documented ventricular fibrillation before his

arrival at the hospital, and the autopsy found no gross or microscopic evidence of myocardial injury to suggest death due to MI. Dr. Wolinsky explained SCD results from sudden cessation of cardiac function, typically due to a fatal arrhythmia (such as ventricular fibrillation). Dr. Wolinsky opined an increased risk of SCD up to 30 minutes after strenuous physical activity by susceptible individuals “is well documented and supported in the scientific literature.” The autopsy confirmed R.G. had extensive CAD and was therefore susceptible to stress induced SCD. Dr. Wolinsky also opined the timing of R.G.’s cardiac arrest—within minutes of engaging in strenuous physical activity—supported a causal connection. Dr. Wolinsky concluded the strenuous physical activity R.G. performed before suddenly losing consciousness increased the oxygen demand of the myocardium and triggered a fatal arrhythmia and caused SCD.

11. Dr. Sander Orent performed a record-review for Claimant and testified at hearing. Dr. Orent agreed with Dr. Wolinsky that R.G. did not have a “heart attack.” He opined “heart attack” is the “colloquial” term for a myocardial infarction. He explained an MI involves death of heart tissue, and there is no evidence of myocardial tissue damage or death in the autopsy. Dr. Orent opined R.G. died of ventricular fibrillation (V-fib) triggered by inadequate oxygen/blood supply to the heart. Although R.G. probably would have had an MI “had he survived,” he died from the V-fib before any heart damage could occur. Dr. Orent agreed many individuals experience MIs and SCD with no precipitating event, but believes exertion was causative in R.G.’s case. He opined the temporal proximity of events—10-15 minutes after sorting cattle and at most 5 minutes after lifting the ATV—was well within the timeframe necessary to support a causal connection. Dr. Orent explained,

> The final common pathway here is the imbalance between oxygen demand of the heart and the ability of the arteries and the body to supply that oxygen. So, because he was exerting himself in an extraordinary way, the blockage in his arteries was such that he could not supply his heart muscle with enough oxygen to prevent it from becoming electrically unstable. And that in my opinion is what happened here, that there was a profound imbalance because of the narrowing—the pre-existing narrowing—and then there was this abrupt hemorrhage in the coronary artery, that obstructed the flow distal to that hemorrhage, and that created an electrical instability of the heart and that went on to cause a cardiac arrest, sudden cardiac death. Or “out-of-hospital ventricular fibrillation.”

Dr. Orent concluded, “there is virtually no question” R.G.’s death was caused by “unusual exertion both in dealing with an unusual number of cows, a recalcitrant bull, and perhaps most importantly the lifting of the four-wheeler.”

12. Dr. Barry Smith, a cardiologist, performed a record-review for Respondents and testified via deposition. Dr. Smith agreed with Dr. Wolinsky and Dr. Orent that “a heart attack and a myocardial infarction are synonymous.” Dr. Smith opined R.G. had an MI, although he provided conflicting opinions regarding the type of MI. In his report, he opined R.G. suffered a non-ST elevation myocardial infarction (NSTEMI), whereas in his deposition he opined it was a ST elevation myocardial infarction (STEMI). Dr. Smith testified R.G. had chronic coronary atherosclerosis and evidence of acute inflammatory

response with ruptured plaque hemorrhage and thrombus in the coronary artery. Dr. Smith agreed hypertensive ASCVD can cause sudden death from V-fib without a heart attack. Dr. Smith thought it was “very clear” from the autopsy findings R.G. died of an MI even though the autopsy report contains no mention of an MI. He testified that 86% of MIs, or “heart attacks,” are caused by plaques that are not bad enough to restrict blood flow and therefore will not cause symptoms even on a stress test. Dr. Smith was unimpressed by literature showing increased relative risk associated with strenuous exertion because the increase in absolute risk was much smaller. He also noted data that shows 4-5 percent of MIs occurred after strenuous activity means 95-96 percent did not. Dr. Smith opined R.G.'s death was caused by an acute inflammatory response in the coronary arteries unrelated to his activities at the time. He opined R.G.'s death could have occurred at any time, in any situation, including outside of work. In Dr. Smith’s opinion, the contribution of pre-existing coronary disease versus exertion at work is 100% coronary artery disease and 0% work activities.

13. Dr. Orent and Dr. Wolinsky’s opinions are credible and more persuasive than the contrary opinions offered by Dr. Smith. Although Dr. Orent is not a cardiologist, he persuasively described his training and experience treating patients with cardiac issues. He cited medical literature to support his opinions, and his reports and testimony demonstrated command of the subject matter. Dr. Orent’s opinions are also consistent with and supported by Dr. Wolinsky’s opinions.

14. Claimant proved R.G. died from ventricular fibrillation which caused SCD. He did not have a “heart attack.”

15. Claimant proved R.G.’s death was proximately caused by an unusual exertion arising out of and in the course of his employment.

CONCLUSIONS OF LAW

As an initial matter, the ALJ agrees with Respondents that Claimant has the burden of proof on all issues in this matter. It is Claimant’s burden to prove the cause of R.G.’s death and establish it was proximately caused by his work. If R.G. died of a “heart attack,” Claimant must prove “unusual exertion.” This case involves no affirmative defenses and Respondents are not required to prove (or disprove) anything.

To receive compensation, a claimant must prove they suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove an injury directly and proximately caused the condition for which they seek benefits. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).). A claimant must prove entitlement to benefits by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The facts in a workers’ compensation case are not interpreted liberally in favor of either the claimant or the respondents. Section 8-43-201.

The Act imposes an additional evidentiary requirement when the alleged injury or death results from a "heart attack." Section 8-41-302(2) (the "heart attack statute") provides,

> "Accident," "injury," and "occupational disease" shall not be construed to include disability or death caused by heart attack unless it is shown by competent evidence that such heart attack was proximately caused by an unusual exertion arising out of and within the course of the employment.

Before enactment of the heart attack statute in 1971, the General Assembly had not singled out heart-related injuries for special treatment under the Act. The "overexertion" requirement originated in caselaw in the 1920s as a gloss on the concepts of "accident" and "arising out of" employment. *See Ellerman v. Industrial Commission*, 213 P. 120 (Colo. 1923). The decedent in *Ellerman* died of "acute dilation of the heart preceded by chronic myocarditis." The Industrial Commission had determined "heart disease of any kind causing death in the course of employment could not be held to be an accident." The decedent had been moving heavy wheelbarrows filled with concrete and dropped dead while dumping the third load. The Supreme Court held death from heart disease could be considered an "accident" if it was caused by "overexertion arising out of the employment." Thereafter, courts applied the "overexertion" requirement to "heart cases," most of which involved myocardial infarctions.[1] However, as Respondents' counsel points out, some of those cases involved conditions other than myocardial infarction.[2]

The "overexertion" standard prevailed until a 1965 statutory amendment expanded the definition of "accident" to cover unforeseen or unexpected events unrelated to trauma. The Supreme Court subsequently determined "the legislative intent of the 1965 amendment was to make compensable an injury or death which results from exertion in the performance even of usual duties within an employee's scope of employment. There

[1] *E.g., U.S. Fidelity & Guaranty Co. v. Industrial Commission*, 219 P.2d 315 (Colo. 1950) ("myocardial infarction due to coronary occlusion"); *Peter Kiewit Son' Co. v. Industrial Commission*, 236 P.2d 296 (Colo. 1951) ("occlusion of the coronary artery with early myocardial infarction"); *Bennett v. Durango Furniture Mart*, 319 P.2d 494 (Colo. 1957) ("myocardial infarction"); *Industrial Commission v. Horner*, 325 P.2d 698 (Colo. 1958) ("an anterolateral myocardial infarction which is in lay language a heart attack."); *Baca County school District No. RE-6 v. Brown*, 400 P.2d 663 (Colo. 1965) ("myocardial infarction"); *Evans v. City and County of Denver*, 438 P.2d 698 (Colo. 1968) ("myocardial infarction"); *Industrial Commission v. Bysom*, 444 P.2d 627 (Colo. 1968) ("myocardial infarction.); *Jasinski v. Ginley-Soper Construction Co*., 458 P.2d 754 (Colo. 1969) ("acute myocardial infarction and coronary occlusion").

[2] A handful of cases referred to a diagnosis of "coronary occlusion" or "coronary thrombosis." However, because occlusion and thrombosis are common elements of MI, it is unclear whether those claimants also had MIs. *E.g.*, *T & T Loveland Chinchilla Ranch v. Bourn*, 477 P.2d 457 (Colo. 1970) ("coronary occlusion."); *Curtis v. Industrial Commission*, 447 P.2d 1012 (Colo. 1968) ("coronary occlusion"); *Huff v. Aetna Ins. Co*., 360 P.2d 667 (Colo. 1961) ("coronary thrombosis"); *Industrial Commission v. Hesler*, 370 P.2d 428 (Colo. 1962) ("coronary thrombosis"); *Industrial Commission v. Havens*, 314 P.2d 698 (Colo. 1957) ("coronary occlusion.'). *See also*, *Industrial Commission v. McKenna*, 104 P.2d 458 (Colo. 1940) ("acute heart failure or acute dilatation of the heart."); *City and County of Denver v. Phillips*, 443 P.2d 379 (Colo. 1968) ("congestive heart failure").

must, of course, be the chain of causation necessary in all workmen's compensation cases." *T and T Loveland Chinchilla Ranch v. Bourn*, 477 P.2d 457, 462 (Colo. 1970).

The General Assembly adopted the "heart attack" statute in 1971, presumably in response to the *Chinchilla Ranch* decision. The General Assembly thought causation of many heart attacks was "inherently difficult" to establish, and wanted to limit compensability only to those heart attacks caused by "unusual exertion." *Death of Kohler v. Industrial Commission*, 671 P.2d 1002 (Colo. App. 1983). However, rather than using broad language such as "heart disease" or "heart conditions," the General Assembly only applied the special proof requirement to "heart attacks."

In *Prestige Homes, Inc. v. Legouffe*, 658 P.2d 850 (Colo. 1983)[3], the court held that the heart attack statute was intended to resurrect the "unusual exertion" requirement as relates to "heart attack-related injuries." There was no suggestion the special proof requirements were intended to apply to conditions other than those considered "heart attacks." Consistent with that interpretation, *Eisenberg v. Colorado Industrial Commission*, 624 P.2d 361 (Colo. App. 1981) held that "the statutory provision is applicable only where the claimant has suffered a 'heart attack.' The record discloses the claimant never suffered a 'heart attack.' [Case remanded] to determine whether the Claimant's heart condition is the result of an accident, injury, or occupational disease."

Despite reviewing numerous appellate decisions, the ALJ could not locate a case that squarely defines the term "heart attack" for purposes of the statute. Nor was any such case identified by the parties. However, for multiple reasons, the ALJ concludes the term should be interpreted to refer to a myocardial infarction.

First, the experts involved in this case uniformly agree the term "heart attack" refers to a myocardial infarction. According to Respondents' expert, "a heart attack and a myocardial infarction are synonymous." Claimant's experts agreed with this interpretation. Dr. Orent referred to "a heart attack, or a myocardial infarction, let's call it what it is properly." Dr. Wolinsky used the terminology "heart attack/MI." Although "heart attack" may be a "colloquial" term, it is a term frequently used by medical professional, with a specific, generally accepted meaning in the medical community. Indeed, the term "heart attack" was already understood to refer to a myocardial infarction when the statute was amended. In *Industrial Commission v. Horner*, 325 P.2d 698 (Colo. 1958), the court described the applicable diagnosis as "an anterolateral myocardial infarction *which is in lay language a heart attack*." The first rule of statutory construction is to apply the plain meaning of the statute. It is unlikely the General Assembly intended the term "heart attack" to mean "heart disease" or "heart conditions." It makes the most sense to conclude the General Assembly used the term consistent with its generally accepted meaning as "synonymous" with myocardial infarction.

[3] The decedent's medical condition in *Legouffe* was described as "myocardial infarction (heart attack)."

Second, many cases decided under the heart attack statute simply refer to a "heart attack" without identifying a specific medical diagnosis. But, of the cases that reference a specific diagnosis, none refer to anything other than "myocardial infarction." [4]

Finally, several cases have held the heart attack statute was inapplicable where the cardiac condition was something other than MI. In *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985), the worker died of "cardiac arrhythmia" and "did not have a heart attack." Based on that finding, the heart attack statute did not apply, and compensability was decided on basis of standard rules regarding proximate cause. The same reasoning was applied in *Spurlock v. Atlantic North American*, W.C. No. 3-779-865 (April 12, 1988) and *Cortez v. Colorado Springs Disposal*, W.C. No. 4-544-111 (November 23, 2005). In *Spurlock*, the cause of death was "ventricular fibrillation which caused an arrythmia and cardiac arrest." In *Cortez,* the diagnosis was "cardiac arrhythmia secondary to calcific aortic valve stenosis." The unusual exertion requirement did not apply in either of those cases because the claimants did not suffer a "heart attack."

As found, R.G. died from ventricular fibrillation triggered by his work activities. He did not die from a "heart attack." Accordingly, the heart attack statute does not apply.

Because R.G. did not die of a "heart attack," the question of whether his death resulted from "unusual exertion" could be considered somewhat academic. Nevertheless, although not a strict requirement of compensability in this case, the issue of whether the precipitating exertion was unusual remains a useful touchstone because it increases the likelihood the activity was causative. Moreover, the fact R.G. engaged in unusual exertion was a significant factor in Dr. Orent's persuasive opinions regarding causation.

When determining whether a claimant engaged in unusual exertion, the ALJ must compare the duties at the time of the heart attack to the claimant's job history. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 975 P.2d 1131 (Colo. App. 1997). However, the exertion need not be different in nature from the employee's usual work. *Id*. Moreover, unusual exertion is not limited to physical activities, but can also arise from increased stress. *E.g., In re Carr v. Industrial Commission*, 709 P.2d 52 (Colo. App. 1985) (even though the employee was performing "normal and routine duties" at the time he suffered a heart attack, the amount of work he performed that day required significantly greater physical exertion and involved more emotional stress than did his normal work); *Apache Corp v. Industrial Commission*, 717 P.2d 1000 (Colo. App. 1986) (unusual exertion was found where a petroleum engineer worked unusually long hours under abnormally stressful circumstances).

[4] E.g., Prestige Homes v. *Legouffe*, 658 P.2d 850 (Colo. 1983) ("myocardial infarction (heart attack)"); *Amen's Chevron v. Amen*, 536 P.2d 324 (Colo. App. 1975) ("acute myocardial infarction (heart attack)"); *City and County of Denver v. Industrial Commission*, 579 P.2d 80 (Colo. 1978) ("cardiac arrest due to a myocardial infarction"); *Dravo Corp. v. Industrial Commission*, 569 P.2d 345 (Colo. App. 1977) ("myocardial infarction (heart attack)"); *Townley Hardware Co. v. Industrial Commission*, 636 P.2d 1341 (Colo. App. 1981) ("acute myocardial infarction"); *Matter of Death of Talbert*, 694 P.2d 864 (Colo. App. 1984) ("myocardial infarction"); *Stephen Equip. Co. v. Baca*, 703 P.2d 1332 (Colo. App. 1985) ("fatal myocardial infarction"). *See also Schultz v. Colorado Division of Wildlife*, W.C. No. 3-993-024 (July 9, 1992) ("myocardial infarction"); *Algiene v. City and County of Denver*, W.C. No. 4-134-568 (January 6, 1995) ("myocardial infarction").

The preponderance of persuasive evidence shows R.G. engaged in unusual exertion the morning of his death, and this unusual exertion proximately caused the onset of V-fib and ultimately SCD. The exertion and stress associated with sorting the cattle was unusual in several respects, including the larger herd, the unfamiliar location, the “recalcitrant” bull, and the waiting trucks. The strenuous activity culminated with lifting the ATV several times. Lifting the ATV was more strenuous than any other known activity R.G. performed as part of his job. And even though the ATV occasionally became stuck in that manner, it was not a common or “usual” occurrence. To the contrary, it was something they tried to avoid because it was so strenuous. Because R.G. only rarely lifted the ATV, it cannot reasonably be characterized as part of his “normal” or “usual” duties. Given the degree of pre-existing arterial stenosis, the exertion from sorting cattle probably stressed R.G.’s heart and pushed it to the edge of its tolerance for reduced oxygen supply. Lifting the ATV was probably the proverbial “final straw” that caused the plaque to rupture and ultimately triggered the fatal V-fib.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant death benefits of $414.77 per week, based on the stipulated average weekly wage of $622.15, commencing June 18, 2019 and continuing until terminated by law.

2. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 25, 2021

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUE

1. Whether Claimant established by a preponderance of the evidence that the right endoscopic carpal tunnel release with right wrist arthroscopy with debridement of the scapholunate ligament requested by In Sok Yi, M.D. is reasonable, necessary, and related to Claimant's January 16, 2020 work injury.

FINDINGS OF FACT

1. On January 16, 2020, Claimant was driving a truck for Employer when his vehicle was struck from behind at a high rate of speed. As the result of this motor vehicle accident, Claimant sustained an admitted injury to his right arm and wrist.

2. On January 20, 2020, Claimant was seen at NextCare Urgent Care by Stephanie Boisvert, PAC. Claimant reported, among other injuries, pain in his right wrist and elbow. Examination of Claimant's right hand was documented as "normal." Claimant was diagnosed with, among other things, contusions of the right wrist and elbow. (Ex. 3).

3. On January 7, 2020, Claimant was seen by James Fox, M.D. Dr. Fox did not note complaints related to Claimant's wrist or elbow and did not examine Claimant's wrist or arm. On Claimant's next visit with Dr. Fox, on February 3, 2020, Claimant reported pain in his right wrist and elbow. On examination of Claimant's right wrist, Dr. Fox found focal tenderness over the wrist at the distal ulna without any obvious deformity, bruising or swelling. He noted decreased grip strength and moderate pain with grasping and movement. Dr. Fox diagnosed Claimant with a right wrist strain and lateral epicondylitis of the right elbow. Claimant was also diagnosed with strains of the thorax, lower back, and neck, and a contusion of his right knee, all related to the January 16, 2020 accident. Dr. Fox recommended a physical medicine referral. (Ex. 4).

4. On February 10, 2020, Claimant returned to Dr. Fox, reporting worsening pain in his right knee and severe pain in his mid-back. Dr. Fox ordered MRIs of Claimant's knee and back. (Ex. 4).

5. On February 20, 2020, Claimant was seen at Panorama Orthopedics by Shasta Van Sickle for evaluation of his thoracic spine. In addition to complaints related to his neck, upper back and low back, Claimant reported pain in his right knee and arm. Claimant returned to Panorama Orthopedics on March 2, 2020, March 30, 2020, April 21, 2020, and May 4, 2020, and was seen by Mitchel Robinson, M.D., and Michael Horner, D.O. Treatment and assessment during this time addressed Claimant's knee and back and did not address either his wrist or elbow. (Ex. 6) .

6. Dr. Fox noted in his March 6, 2020 treatment notes that Claimant continued to have numerous complaints, including right wrist and elbow pain. Dr. Fox stated: "[Claimant] is still complaining of quite a bit of pain in his right wrist and elbow, particularly the wrist. He states that he has had cramping and difficulty moving the wrist while doing physical therapy. X-rays of the wrist and elbow done previously were unremarkable and [MRIs] will be ordered, pending insurance authorization. His pain level is 5." On examination, Dr. Fox noted Claimant had moderate focal tenderness over the dorsum of the wrist, particularly on the ulnar side and also some tightness and pain over the volar wrist. Decreased grip strength and limited range of motion. He also noted that Claimant had "locking" in his right wrist. (Ex. 4).

7. By letter dated March 3, 2020, Dr. Fox dismissed Claimant from his care for reasons not specified in the discharge letter. (Ex. 4).

8. On June 17, 2020, Claimant saw Roberta Anderson-Oeser, M.D. At that time, Claimant reported his chief complaints were cervical, thoracic, and low back pain, headaches, right elbow and wrist pain, bilateral hand paresthesias, and right knee pain. Claimant reported that he had received physical therapy and other treatment for is lower back, and right knee, but had not yet received therapy for his right arm. He reported frequently dropping objects from his right hand and sharp pain in the right wrist. HE reported losing feeling in the 3rd and 4th digits of his right hand, and numbness in his left hand. Claimant reported burning, stabbing, and aching pains in the right elbow and wrist. Dr. Anderson-Oeser diagnosed Claimant with lateral epicondylitis of the right elbow, and pain in the wrist. She recommended that Claimant see an occupational therapist for his wrist and hand pain and paresthesias. (Ex. 8).

9. On July 7, 2020, Claimant reported to Dr. Robinson that he had bilateral hand numbness, on the right hand approximately three months earlier, and more recently in his left hand. He was diagnosed with bilateral hand numbness. (Ex. 6).

10. At his July 16, 2020 visit with Dr. Anderson-Oeser, Claimant indicated that Dr. Fox had placed an order for an MRI of his elbow and wrist, but that the MRIs were not performed for an unknown reason. Dr. Anderson-Oeser re-ordered these studies, noting that Claimant continued to have ongoing right lateral elbow pain and right wrist pain. (Ex. 6).

11. On July 29, 2020, Claimant underwent an MRI arthrogram of his right wrist. The MRI was interpreted as showing a scapholunate ligament tear, mild arthrosis involving the distal radial ulnar articulation, and first CMC joint spurring. An MRI of Claimant's right elbow performed on the same day shows a small partial-thickness tear of the common extensor origin with underlying tendinosis and mild tendinosis of the common flexor origin (Ex. 5).

12. On August 5, 2020, Claimant returned to Dr. Anderson-Oeser, who reviewed Claimant's elbow and wrist MRI results. Dr. Anderson-Oeser referred Claimant to In Sok Yi, M.D., for a hand surgery consult for treatment of the scapholunate ligamentous tear

and the mild arthrosis involving the distal radial ulnar articulation. He was also referred to Dr. Patel for treatment of his right elbow. (Ex. 6).

13. Between August 10, 2020, and August 25, 2020, Claimant received occupational therapy at Integrated Sports and Spine to address pain ad weakness in his hands, elbows forearms and wrists. (Ex. 10).

14. On August 14, 2020, Claimant was seen by Timothy Johnson, PA-C, a physician assistant for Dr. Yi, for evaluation of his right wrist. PA Johnson noted that Claimant had a partial tear of the scapholunate ligament, and "given the nature of his injury and the diagnosis today that there is a high degree of medical probability it was related to the motor vehicle accident."

15. On August 19, 2020, Dr. Anderson-Oeser performed EMG/NCS studies on Claimant's right wrist and arm. The testing was consistent with a right median neuropathy at the wrist, moderate in severity. She recommended Claimant see Dr. Yi to discuss decompressive surgery to avoid further compromise of the median nerve. (Ex. 6).

16. On August 21, 2020, PA Johnson diagnosed Claimant with strain of the tendons and the wrist and hand level and carpal tunnel syndrome of the right wrist, confirmed by EMG study. On August 21, 2020, PA Johnson performed a therapeutic injection of Claimant's right carpal tunnel. He recommended Claimant undergo a right endoscopic carpal tunnel release with a right wrist arthroscopy with debridement of the scapholunate ligament. On August 27, 2020, Dr. Yi submitted to Insurer a request for authorization to perform a right endoscopic carpal tunnel release, wrist arthroscopy and scapholunate ligament debridement. (Ex. 11).

17. On August 31, 2020, Insurer denied Dr. Yi's request for authorization to perform a right endoscopic carpal tunnel release, wrist arthroscopy and scapholunate ligament debridement as "medically unreasonable, unnecessary and non-work related." (Ex. 14).

18. On September 8, 2020, Claimant underwent an independent medical examination with John Burris, M.D., at respondent's request. Dr. Burris opined that Claimant had no objective findings on examination, and that his current diagnosis was "diffuse myofascial pain complaints involving his low back, right elbow, right wrist and right knee." Dr. Burris opined that no further treatment be approved until Claimant completed a psychology evaluation and treatment. (Ex. 12).

19. On September 25, 2020, Dr. Burris issued a report at Insurer's request regarding Dr. Yi's request for authorization of Claimant's carpal tunnel release. Dr. Burris opined that "based on the nature of [Claimant's' injuries, the diagnosis of carpal tunnel syndrome cannot be causally related to the 1/16/20 MVA." He further opined that the physical findings on examination did not correlate with Claimant's wrist condition and "do not seem to meet the criteria for a surgical condition." Dr. Burris concluded that the request for wrist arthroscopy and debridement is not reasonable, necessary, or related. (Ex. 12).

20. On September 28, 2020, Insurer reiterated its denial of Dr. Yi's request for authorization to perform a right endoscopic carpal tunnel release, wrist arthroscopy and

scapholunate ligament debridement as “medically unreasonable, unnecessary and non-work related.” (Ex. 14).

21. On November 11, 2020, Claimant underwent an IME performed by John Hughes, M.D., at Claimant’s request. Based on his examination and review of records, Dr. Hughes diagnosed Claimant with, as relevant to this hearing, “right wrist sprain/strain with development of electrodiagnostically-confirmed carpal tunnel syndrome and internal derangements as seen on the MR arthrogram of the right wrist, meriting hand surgical evaluation and potentially surgical treatment.” Dr. Hughes opined that Claimant was not at MMI and that stabilization of Claimant’s psychological status before proceeding with additional surgical treatment was appropriate. Dr. Hughes continued “This being said, I do endorse consideration of a carpal tunnel release of the right median nerve as there is electromyographic evidence of denervation as documented by Dr. Anderson-Oeser and this may be progressive.” In an addendum dated November 16, 2020, Dr. Hughes clarified that he recommended performance of the carpal tunnel release surgery due to the potential for progressive motor component radiculopathy and permanent loss of strength in his right thumb musculature. He noted the same consideration was not present with respect to the right wrist internal injuries/derangements seen on MRI, that a hand surgeon may stage the interventions, possibly beginning with a corticosteroid injection, and arthroscopic surgical treatment for Claimant’s internal wrist injuries was a superior treatment option. (Ex. D).

22. Dr. Burris was admitted as an expert in occupational medicine and testified at hearing. Dr. Burris testified that he agreed with Dr. Hughes’ opinion that surgery on Claimant’s torn wrist ligament is not an emergency condition immediately requiring surgery. He also testified that he did not believe Claimant’s carpal tunnel syndrome was related to Claimant’s work injury and that a carpal tunnel release was not reasonable and necessary or work-related. On cross-examination, Dr. Burris agreed that Claimant’s right wrist and elbow complaints have been consistent since his work injury, and that he did not review any records of treatment before Claimant’s work injury. Dr. Burris testified that trauma can be a cause of carpal tunnel syndrome even in the absence of a wrist fracture. Dr. Burris testified that Claimant’s EMG and diagnosis of carpal tunnel syndrome are consistent. He agreed that Claimant’s condition (i.e., carpal tunnel syndrome) if not treated may place him at risk of progressive motor component radiculopathy and permanent loss of strength in his right thumb musculature.

23. Claimant testified at hearing that he did not specifically recall where his hands were placed when the accident occurred, but that he would typically maintain both hands on the steering wheel while operating a vehicle for his employer, and that this was consistent with his training. Claimant also testified that before January 16, 2020, he had no history of problems with his right wrist or elbow. Claimant testified that he continues to experience issues with his right hand and that his symptoms have not improved, and that he would like to undergo the surgery recommended by Dr. Yi.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SPECIFIC MEDICAL BENEFITS AT ISSUE

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be considered a “medical benefit” it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant’s physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995)*; Karim al Subhi v. King Soopers, Inc.,* W.C. No. 4-597-590, (ICAO. July 11, 2012). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).” *In the Matter of the Claim of Bud Forbes, Claimant*, No. W.C. No. 4-797-103, 2011 WL 5616888, at *3 (Colo. Ind. Cl. App. Off. Nov. 7, 2011). When the respondents challenge the claimant’s request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009).

Claimant has established by a preponderance of the evidence that the right endoscopic carpal tunnel release with right wrist arthroscopy with debridement of the scapholunate ligament requested by In Sok Yi, M.D. is reasonable, necessary, and related to Claimant’s January 16, 2020 work injury. Claimant was injured in a significant motor vehicle accident arising out of the course of his employment with Employer. Claimant credibly testified that his hands were likely on the steering wheel when his vehicle was struck from behind and complained of symptoms in his right wrist and elbow at his initial medical appointment. Claimant’s complaints of right wrist and elbow pain where consistently reported throughout his treatment, and an MRI to evaluate these conditions was originally ordered by Dr. Fox on March 6, 2020, within two months of the injury. The MRI was not completed until July 2020, likely due to Dr. Fox’s decision to terminate his physician-patient relationship with Claimant. Once the MRIs were performed, Claimant’s injuries were objectively confirmed. Subsequently, Claimant’s diagnosis of carpal tunnel syndrome was confirmed by EMG/NCS study. Dr. Burris’ opinion that Claimant’s carpal tunnel syndrome was not causally related to his accident is not credible or persuasive, and is contradicted by the opinions of Dr. Hughes, Dr. Anderson-Oeser and Dr. Yi’s physician assistant, PA Johnson. The ALJ finds it more likely than not that Claimant’s carpal tunnel syndrome and scapholunate ligament tear, mild arthrosis involving the distal radial ulnar articulation, and first CMC joint spurring, were the result of the January 16, 2020 work-injury, and that the surgery requested by Dr. Yi is reasonably necessary to cure or relieve the effects of these injuries. Although Dr. Hughes and Dr. Burris are of the opinion that Claimant should wait until completing psychological assessment and treatment until such surgeries are performed, the ALJ does not find the reasons explained by either physician to be compelling evidence for delaying surgical intervention, if Claimant chooses to undergo the procedures, and that the timing of surgery should be directed by Claimant’s treating providers.

ORDER

It is therefore ordered that:

1. Claimant’s request for authorization of the right endoscopic carpal tunnel release with right wrist arthroscopy with debridement of the scapholunate ligament requested by In Sok Yi, M.D. is granted.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 26, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

- Did Claimant prove treatment for Chiari I malformation is causally related to her admitted May 3, 2018 work accident?

- What is Claimant's average weekly wage (AWW)?

- Did Claimant prove entitlement to TTD and TPD benefits commencing March 13, 2019?

FINDINGS OF FACT

1. Claimant suffered admitted injuries in a rear-end motor vehicle accident on May 3, 2018.

2. Claimant sought treatment at Banner Health emergency department the day of the accident. She reported pain in her left shoulder, back of her scalp, and back. Claimant specifically denied any neck pain, headaches, vision or hearing changes, numbness or tingling. Examination showed no spinous process tenderness throughout her back from the neck to the lumbar spine. There was a seatbelt mark on the anterior aspect of the left shoulder. Claimant was diagnosed with left shoulder pain, left shoulder contusion, posterior scalp contusion, and possible concussion. She was given Flexeril and discharged.

3. On May 14, 2018, Claimant was evaluated at the Monfort Family Clinic for "ER follow up MVA." She reported "some back and shoulder pain." She was taking Tylenol but had not tried the Flexeril because she was breast-feeding. Physical examination revealed low back and shoulder pain. There was no indication of any neck issues, headaches, or neurological problems. An x-ray of the left shoulder was unremarkable.

4. Claimant returned to the Monfort Family Clinic on June 15, 2018. She reported continued left shoulder pain and weakness, causing her to drop boxes at work. Claimant felt the pain radiated down the back of her arm into her wrist but denied paresthesias. Examination showed full strength and normal sensation. There was some tightness and mild tenderness to palpation of the trapezius muscles. The provider recommended an MRI of the left shoulder.

5. On July 13, 2018, Claimant underwent a left shoulder MRI, which showed a small supraspinatus tendon tear.

6. Claimant followed up at the Monfort Family Clinic on August 18, 2018, complaining of ongoing left shoulder pain. She did not report any neck complaints, headaches, or other problems.

7. Claimant saw Dr. Daniel Heaston, an orthopedic surgeon, on August 28, 2018. She described persistent left shoulder pain since the MVA. There was no mention of any neck pain, headaches, or numbness and tingling in her extremities. The physical examination included the neck, which was described as "supple." Dr. Heaston diagnosed rotator cuff inflammation and tightness. He did not believe Claimant was a surgical candidate and recommended conservative treatment for the left shoulder. There was no diagnosis suggesting any neck-related issue.

8. Claimant started physical therapy on September 5, 2018. At the initial appointment, she reported significant left shoulder pain after the MVA. The physical examination revealed left shoulder pain with limitations. Claimant reported no neck issues or headaches. Claimant participated in physical therapy through October 12, 2018, with some improvement noted by the therapist. The therapy notes contain no reference to neck problems or headaches, and the only documented neurological-type symptom was an isolated report of "a little numbness in fingers" on September 21, 2018.

9. On January 3, 2019, Claimant returned to the orthopedic clinic saw Dr. Thomas Pazik regarding her left shoulder and. Dr. Pazik documented, "Since she began physical therapy, she has had some intermittent tingling in all fingers of the left hand. This is worse at night and in the morning. By the time of this evaluation, she is not having any other symptoms." Examination of the neck revealed mild range of motion deficits and pain down the left arm with Spurling's maneuver. This was the first description of any radicular-like symptoms since the MVA. Dr. Pazik diagnosed "whiplash" and opined Claimant appeared to have a chronic cervical myofascial sprain. He also diagnosed possible left-sided radiculopathy and referred Claimant to Dr. David Blatt for a neurosurgical evaluation.

10. Claimant saw Dr. Blatt's PA-C, Sherrie Kay, on January 15, 2019. Claimant reported posterior neck pain and left shoulder pain "since" the MVA. She stated both hands and all her fingers were numb. Palpation of the neck showed no muscle spasms and normal range of motion. She had good strength and sensation throughout the bilateral upper extremities. Phalen's test was positive and Tinel's was positive bilaterally. Ms. Kay prescribed NSAIDs for myofascial pain and ordered cervical imaging.

11. A cervical spine x-ray on January 24, 2019 was normal.

12. On February 8, 2019, Claimant underwent a cervical MRI, which revealed small disc herniations at C4-5 and C5-6 with no canal stenosis or nerve root impingement. The cerebellar tonsils extended 15 mm below the cranial cervical junction, consistent with Chiari Type I malformation. There was severe narrowing of the craniocervical junction.

13. Dr. Blatt evaluated Claimant on February 19, 2019. Claimant complained of increased hand numbness that was causing her to drop things. The numbness and tingling were worse at night. Claimant denied headaches and changes in walking or balance. Dr. Blatt opined, "MRI brain shows a Chiari malformation. No headaches or other symptoms that are typical of that. It is possible that the hand numbness and tingling is related however. The Chiari malformation nevertheless may be asymptomatic." He noted

Claimant's symptoms and clinical findings were consistent with carpal tunnel syndrome. Diagnosed carpal tunnel syndrome and Chiari I malformation. He recommended a brain MRI and electrodiagnostic testing of the upper extremities.

14. The brain MRI was completed on February 24, 2019. The radiologist noted the Chiari I malformation but saw no other intercranial abnormality.

15. Claimant returned to the Monfort Family Clinic on March 5, 2019. She reported bilateral hand tingling, along with tingling on the bottoms of her feet. Review of systems was positive for "numbness, tingling, 'clumsiness' of hands" but negative for "headaches, vision changes, confusion." Claimant had an EMG in the past that showed carpal tunnel syndrome, but Claimant did not think that was the problem and wanted a second opinion. She was referred to Dr. John Oro, a noted Chari malformation specialist, for a second opinion.

16. Claimant resigned from her job with Employer on March 13, 2019. At hearing, Claimant attributed her separation to increased pain from the Chiari I malformation and (primarily) cognitive decline, including memory and "thinking" issues. She described not knowing where she was or who she was. She did not relate her separation to the shoulder injury. At hearing, Claimant conceded that at the time of her resignation, no physician has imposed any work restrictions that prevented her from performing her regular work activities.

17. On March 22, 2019, Claimant completed a lengthy Chiari questionnaire in anticipating of her evaluation with Dr. Oro. She endorsed numerous symptoms not otherwise documented in the post-MVA medical records, including headaches, pain in the back of the neck, general body weakness, blurred vision, problem swallowing, dizziness, face pain/numbness, problems speaking, short-term memory problems, problems with thinking, nausea, leg pain, leg weakness, and leg cramps.

18. On April 4, 2019, Monfort Family Clinic documented Claimant was "getting headaches off and on." This is the first time a medical provider documented headaches since the MVA. Claimant reported numbness in her hands and feet every day and it was waking her up at night.

19. Claimant saw Dr. Oro on May 9, 2019. She reported left shoulder pain since the MVA. She also told Dr. Oro she had pain in the back of her neck at the time of the MVA. Her main complaint was numbness and tingling in her arms and hands causing her to periodically drop things. She also described headaches "off and on." Claimant reported additional symptoms such as blurry vision, difficulty swallowing, dizziness, and short-term memory loss, which she indicated started after the MVA. Dr. Oro recommended a repeat brain MRI.

20. Claimant returned to Dr. Oro on May 16, 2019 to review the MRI. He noted tonsillar herniation of 17 mm compressing and stretching the brainstem. Dr. Oro assessed severe Chiari I malformation with significant crowding at the craniocervical junction. He

recommended a visual evaluation for pseudotumor cerebri, and pending the results, thought Claimant was a candidate for surgical decompression.

21. Claimant returned to the Monfort Family Clinic on June 4, 2019, complaining of headaches. She followed up on June 19, 2019, and reported difficulty walking because of numbness and tingling in her legs. Physical examination showed normal strength in both legs, with a slow but steady gait. The provider completed paperwork for a temporary handicapped parking permit.

22. Dr. Oro performed a posterior craniovertebral decompression for the Chiari I malformation on August 5, 2019. Claimant responded well to the surgery and “felt tons better.” She had to undergo a second procedure in October 2019 to address a cerebrospinal fluid leak but has continued to enjoy significant improvement since recovering from the second surgery.

23. Dr. Oro wrote a letter to Claimant’s counsel on August 24, 2019 addressing causation of the surgery. He opined the MVA aggravated the pre-existing Chiari I malformation and caused the need for treatment. He noted, [Claimant] was rear-ended and ‘smashed’ into the car in front of her. She noted a sudden ‘bad headache’ and developed multiple new neurological symptoms. The headaches were in the ‘back of the neck’ and were described as a pressure and were worsened with bending forward and looking up.” He also opined Claimant developed multiple other symptoms “following the MVC,” including numbness and tingling in her fingers, dysphagia, dizziness, facial numbness, difficulty with speech and short-term memory, and thinking.” Dr. Oro reviewed the emergency room report and thought it was “strongly suggestive” of a whiplash injury. He opined, “whiplash forces can tighten the already crowded area at the base of the skull to the top of the spinal canal and because malfunction of a number of nerve circuits and related centers (nuclei) in the brainstem that because multiple neurological symptoms. These symptoms which were persistent for 10 months following the MVC and, in view of the severe crowding at the base of the skull, would be very unlikely to resolve on their own.”

24. Respondents admitted Claimant suffered a compensable work injury from the May 3, 2018 MVA. But Respondents denied benefits relating to Chiari I malformation as unrelated to the work accident.

25. Claimant testified she developed neck pain, headaches, and dizziness immediately after the MVA. Claimant continued working her regular duties after the MVA, but testified she got help from co-workers with lifting because of her shoulder pain, neck pain, and headaches. Claimant testified she had pain “just about everywhere you can imagine.” She testified she developed dysphagia “a couple of months” after the accident. She testified her pain and other symptoms were getting “worse and worse” around March 2019. On cross-examination, Claimant stated she could not remember when her neck pain started because of her memory issues. Claimant testified she experienced headaches and pain in her neck, shoulder, feet, and legs, and had difficulty walking.

26. Dr. Oro testified at hearing to explain the pathophysiology of Chiari I malformation and elaborate on his opinions regarding the causal relationship to the MVA. Chiari I malformation is a congenital condition in which the skull cavity is too small for the cerebellum and the cerebellar tonsils are pushed out the foramen magnum into the spinal canal. This can compress the brainstem and cause neurologic symptoms. In Claimant's case, the herniated cerebellar tonsils extended up to 17mm into the spinal canal, which Dr. Oro described as significant. He opined the MVA aggravated Claimant's previous asymptomatic Chiari I malformation and caused the need for treatment. He testified Chiari I malformation is frequently undiagnosed or misdiagnosed because "the symptoms don't add up." He opined Claimant began experiencing cognitive decline "right after" the MVA. Dr. Oro described Chiari I generally as a "progressive condition" and many individuals have the anatomical abnormality for many years without symptoms. He conceded most cases of Chiari I become symptomatic without trauma or a specific precipitating event. Dr. Oro explained he drafted the August 24, 2019 letter based on his examination and Claimant's reported history and did not review her post-accident medical records. Dr. Oro testified a whiplash injury can aggravate a previously asymptomatic Chiari I malformation but conceded he would expect the individual to experience neck pain at the time.

27. Dr. Neil Brown, a neurosurgeon, prepared a report and testified at hearing. Dr. Brown reviewed and summarized medical records from the date of accident through Claimant's post-surgical treatment. Dr. Brown opined the Chiari symptoms Claimant had when she saw Dr. Oro did not manifest for many months after the accident. The first documentation of neck pain was not until January 2019, and typical Chiari I symptoms were not documented until Claimant completed Dr. Oro's questionnaire in March 2019. Dr. Brown testified the MVA was unlikely to have aggravated Claimant's Chiari I symptoms because of the delayed presentation. He emphasizes the importance of contemporaneous medical documentation in a causation assessment because patients often provide inaccurate histories because of "telescoping" or the attempt to relate current symptoms to a specific event. He noted the history Claimant provided is not consistent with the medical records. Dr. Brown's causation analysis and opinions are credible and more persuasive than the contrary opinions offered by Dr. Oro.

28. Claimant failed to prove treatment for Chiari I malformation is causally related to the May 3, 2018 work accident.

29. Before April 2018, Claimant was concurrent employed part-time by Employer and also worked for a school district. She left the school district and started working full-time as Employer's general manager on April 16, 2018. Wage records show she earned $1,438.56 in the 18 days before the accident. Claimant's average weekly wage is $559.44 ($1,438.56 ÷ 18 days = $79.92 x 7 = $559.44).

30. Claimant failed to prove she suffered a wage loss because of the work accident. Claimant continued working until March 2019, and left work because of an unrelated medical condition—Chiari I malformation. There is no persuasive evidence she was disabled by the effects of the work accident or suffered any injury -related wage loss.

CONCLUSIONS OF LAW

A. Medical benefits relating to Chiari I malformation

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101. The mere occurrence of a compensable injury does not compel the ALJ to approve all requested treatment. Even if the respondents admit liability and pay for some treatment, they retain the right to dispute the reasonable necessity or relatedness of any other treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove the treatment is reasonably necessary and causally related to the industrial accident. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

The existence of a pre-existing condition does not preclude a claim for medical benefits if an industrial injury aggravates, accelerates, or combines with the pre-existing condition to produce the need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The ultimate question is whether the need for treatment was proximately caused by an industrial aggravation or merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

As found, Claimant failed to prove treatment for Chiari I malformation is causally related to the May 3, 2018 work accident. Dr. Brown's causation analysis is persuasive. Although temporal proximity does not necessarily prove causation, it is an important indicator of a causal nexus. Claimant's testimony she experienced neck pain and headaches immediately after the MVA is not supported by the medical records or other persuasive evidence. Claimant admitted to memory problems from the Chiari, which makes the medical documentation all the more important in determining the sequence of events.

Dr. Oro is clearly knowledgeable and skilled in diagnosing and treating Chiari I malformation. By the time Claimant got to him, the Chiari was obviously symptomatic and the focus was on treatment. There is no doubt the treatment Dr. Oro provided was reasonably needed and helpful. But his opinions regarding causation are only as good as the information he had regarding the onset and progression of symptoms. Dr. Oro agreed he would expect immediate neck pain if a patient experienced a whiplash sufficient to aggravate Chiari I malformation. He was under the mistaken impression Claimant experienced neck pain and headaches related to whiplash since the MVA. Dr. Oro conceded he relied primarily on the history reported to him by Claimant and did not perform an exhaustive record review. Nor would he be expected to do so, because the specific reason the Chiari became symptomatic was not particularly salient to the treatment she needed. Nevertheless, his reliance on an inaccurate history undercuts the persuasiveness of his opinions. Admittedly, medical records can and do contain errors, and providers are not infallible when it comes to documenting a patient's complaints. But there are simply too many medical records, from too many providers, over too long a time, to conclude Claimant was reporting significant neck pain or Chiari-related symptoms that were not being recorded. Chiari I malformation is a generally progressive condition and most patients develop symptoms without any trauma or other identifiable trigger. Claimant's symptoms associated with Chiari I malformation and need for treatment probably reflect the natural progression of her underlying congenital condition, without contribution from the work accident.

B. Average weekly wage

Section 8-42-102(2), C.R.S. provides compensation shall be based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). As found, Claimant started working full time on April 16, 2018 and earned $1,438.56 in the 18 days before the work accident. That equates to an AWW of $559.44. No persuasive evidence was presented to warrant basing the AWW on a different, post-injury period.

C. Temporary disability benefits

A temporarily disabled claimant is entitled to TTD benefits to compensate for a wage loss that is proximately caused by a work-related injury and lasts longer than three days. Section 8-42-105(1); *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Montoya v. Industrial Claim Appeals Office*, ___ P.3d ___, 17CA 0322 (Colo. App. 2018). TPD benefits are payable when a temporarily disabled claimant earns less than their AWW. Section 8-42-106. As found, Claimant failed to prove the work injury proximately caused a wage loss. Claimant stopped working because of symptoms attributable to the Chiari I malformation, a nonwork-related condition. Accordingly, Claimant failed to establish a causal connection between the work injury and her wage loss.

ORDER

It is therefore ordered that:

1. Claimant's request for medical benefits related to Chiari I malformation is denied and dismissed.

2. Claimant's average weekly wage is $559.44.

3. Claimant's request for TTD and TPD benefits commencing March 13, 2019 is denied and dismissed.

4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 27, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that his average weekly wage (AWW) should be higher than the previously admitted to AWW of $1,341.64.

FINDINGS OF FACT

1. The claimant worked for the employer at the X[Redacted] (a coal mine) for 20 years. In January 2020 he was working full-time in Y[Redacted] on the overland belts. The claimant earned a different hourly rate depending upon the shift worked. In addition the claimant was eligible for overtime pay. The different hourly rates were negotiated by the union and ratified every five years.

2. The claimant suffered an injury at work on January 17, 2020. The respondents have admitted liability for the injury. In addition, the respondents have admitted an average weekly wage (AWW) of $1,341.64.

3. The ALJ calculates that when the admitted AWW is multiplied by 52 weeks in a year, the total indicates annual earnings of $69,765.28.

4. The respondents began paying the claimant temporary total disability (TTD) benefits based upon the AWW of $1,341.64 beginning on January 18, 2020.

5. The pay records entered into evidence indicate that the claimant's year to date gross earnings for 2019 were $82,541.45. The claimant argues that this is the amount that should be used in calculating the claimant's AWW on the date of his injury in January 2020. When this total is divided by 52 weeks in a year, it results in an AWW of $1,587.33.

6. In December 2019, the claimant was paid $6,939.59 for "Annual Incentive". Danny C[Redacted], Human Resources Manager for the employer testified that this annual incentive fluctuates each year. The amount of the incentive depends upon market conditions, mine production, the quality of the coal produced, whether or not there are MSHA[1] or other safety violations. An employee can be paid a bonus between zero percent to 10 percent of their gross wages. This rate is determined by mine ownership.

7. The pay records indicate that the claimant received a YTD total of $2,049.84 for "Bonus". This was paid to the claimant in three payments. The first was on January 11, 2019 in the amount of $375.00. The second was on January 25, 2019 in the amount

[1] Mine Safety and Health Administration.

of $324.84. The claimant was then paid an additional $1,350.00 on November 15, 2019. The parties agree that the payment of $1,350.00 was the annual Christmas bonus.

8. Mr. C[Redacted] testified that each year all employees are paid a Christmas bonus, which fluctuates between $1,200.00 to $1,500.00 per year. In 2019, the claimant's Christmas bonus was $1,350.00.

9. The pay records indicate that the claimant received a YTD total of $1,817.02 for "Incentive". Mr. C[Redacted] testified that such payments are paid as an "extra bonus".

10. Each year, the claimant is paid a clothing allowance of $650.00 per year. Mr. C[Redacted] testified that in 2019 employees were paid an additional clothing allowance of $1,000.00. This one time payment was paid pursuant to the union contract.

11. The claimant was also paid $600.00 in 2019 for "Safety". Mr. C[Redacted] testified that these payments are made following a monthly drawing. Each month in which there are no safety violations, employees are entered into a drawing to win between $100.00 and $500.00.

12. The claimant testified that the clothing allowance of $650.00 and the Christmas bonus are paid every year. The claimant also testified that all other incentives and bonuses are not paid every year. When these other incentives and bonuses are paid, the payments fluctuate in amount.

13. The respondents agree that the claimant's AWW should be increased. However, the respondents argue that such an increase should only reflect the annual Christmas bonus and annual clothing allowance. The respondents calculate that the AWW should be increased by $62.03 per week, for a total AWW of $1,403.67.

14. The ALJ is persuaded that the annual clothing allowance and a Christmas bonus of between $1,200.00 and $1,500.00 are paid to the claimant every year and the claimant can rely on receiving those payments. As the Christmas payment for 2019 was $1,350.00, the ALJ adopts this amount in calculating the claimant's AWW.

15. In calculating the claimant's AWW, the ALJ declines to include the 2019 "Annual Incentive", "Incentive", "Bonus", and "Safety" amounts as these vary each year, and are not always paid to employees. Therefore, the claimant does not have access to those amounts on a day-to-day basis, or an immediate expectation of receiving the benefit under appropriate, reasonable circumstances.

16. The ALJ calculates that the claimant's AWW for this claim should be $1,393.94. The ALJ reaches this AWW as follows: The claimant's gross earnings for 2019 were $82,541.45. The ALJ deducts from that total $6,939.59 in Annual Incentive; $2,049.84 in Bonus; $1,817.02 in Incentive; and $600.00 in Safety for a total of $71,135.00. Then, the ALJ adds back $1,350.00 for the Christmas bonus for a new total of $72,485.00. When this is then divided by 52 weeks in a year, the average is $1,393.94.

17. The ALJ recognizes that there is an order on appeal regarding the claimant's entitlement to temporary total disability (TTD) benefits beginning on May 26, 2020 and thereafter. The present order is not intended to impact, in any way, any rulings,

decisions, orders, or appeals related to that prior matter. Therefore, this present order applies to the calculation of TTD benefits from January 18, 2020 through May 25, 2020. Any additional TTD benefits which may be found to be due beginning May 26, 2020, would be assessed utilizing the new AWW of $1,393.94, once the current appeals have been exhausted on that prior matter.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; Celebrity Custom Builders v. Industrial Claim Appeals Office, 916 P.2d 539 (Colo. App. 1995).

5. Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's average weekly wage (AWW) on his earnings at the time of the injury. In order for a particular payment to be considered "wages" it must have a "reasonable, present-day, cash equivalent value," and the claimant must have access to the benefit on a day-to-day basis, or an immediate expectation interest in receiving the benefit under appropriate, reasonable circumstances. *Meeker v. Provenant Health Partners*, 929 P.2d 26 (Colo. App. 1996). Under some circumstances, the ALJ may determine the claimant's TTD rate based upon his AWW on a date other than the date of the injury. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ

discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

6. Section 8-40-201(19)(a), C.R.S., defines wage as "the money rate at which the services rendered are recompensed under the contract of hire in force at the time of injury." Section 8-40-201(19)(b), C.R.S., provides that "wages" shall include the value of certain fringe benefits including health insurance, and the reasonable value of board, rent, housing, and lodging. However, it also states that wages, "shall not include any similar advantage or fringe benefit not specifically enumerated in this subsection (19)."

7. In *Meeker v. Provenant Health Partners*, 929 P.2d 26, the Colorado Court of Appeals developed a test for whether an employer-paid benefit is a wage or enumerated fringe benefit. *Meeker* held that an employer-paid benefit constitutes wages if it has a "reasonable, present-day, cash equivalent value," and the employee has access to the benefit on a "reasonable day-today basis," or has "an immediate expectation interest in receiving the benefit under appropriate, reasonable circumstances." *Id.*

8. In *Dan Yex v. ABC Supply Company and Ace/ESIS Insurance*, W.C. No. 4-910-373 (May 16, 2014), ICAP relied on the *Meeker* case, and its progeny *Orrell v. Coors Porcelain*, WC No. 4-251-934 (May 22, 2997), and determined that an employee's bonus earned during the employer's busy season was properly excluded from the AWW. The claimant in *Yex* had injured his back in December 2012 and asserted he received a bonus in April 2012. The ALJ found the employees were awarded bonuses if their branch showed a profit in the previous calendar year. Some years resulted in a bonus and others did not. Under *Meeker*, the ALJ reasoned that the bonus did not have a present day cash equivalent value, the claimant did not have access to the proceeds of the bonus on a day to day basis, and did not have an immediate expectation of receiving the bonus. The bonus was appropriately identified as a fringe benefit not included in the calculation of wages.

9. As found, the claimant was paid fringe benefits in the form of "Annual Incentive", "Incentive", "Bonus", and "Safety" as these payments were not paid every year, and when paid would vary in amount. As found, the claimant did not have access to those amounts on a day-to-day basis, or an immediate expectation of receiving the benefit under appropriate, reasonable circumstances. However, with regard to the annual payments for a Christmas bonus and clothing allowance, the claimant did have an immediate expectation of receiving the benefit under appropriate, reasonable circumstances. As found, the AWW for this claim shall be $1,393.94.

ORDER

It is therefore ordered:

1. The claimant's AWW for this claim shall be $1,393.94.

2. As noted above, this order shall be applied to the calculation of TTD benefits from January 18, 2020 through May 25, 2020.

3. Any additional TTD benefits which may be found to be due beginning May 26, 2020, would be assessed utilizing the new AWW of $1,393.94, once the current appeals have been exhausted on that prior matter.

4. The respondents shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined here are reserved for future determination.

Dated this 28th day of January 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment recommended by Dr. Raymond Kim (including left total hip replacement) is reasonable medical treatment necessary to maintain the claimant at maximum medical improvement (MMI).

2. Whether the claimant has demonstrated, by a preponderance of the evidence, that her claim should be reopened pursuant to Section 8-43-303, C.R.S. due to a worsening of her condition.

3. If the claimant's claim is reopened, whether the claimant has demonstrated, by a preponderance of the evidence, that medical treatment recommended by Dr. Raymond Kim (including left total hip replacement) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted June 15, 2017 work injury.

FINDINGS OF FACT

1. The claimant works for the employer at the Colorado Regional Center as a psychology technician. On June 15, 2017, she had a one-on-one interaction with one of the behavioral residents. At that time, the resident began to strike her own head on the floor. The claimant attempted to intervene by placing a blocking pad under the resident's head. In response, the resident kicked the claimant in the knees. This caused the claimant to fall to the floor. The claimant testified that while she was on the floor, the resident continued to kick her. Immediately after this incident the claimant had soreness on her left side and in her left hip.

2. The claimant's authorized treating provider (ATP) for this claim is Dr. Robert McLaughlin. During this claim, Dr. McLaughlin has referred the claimant to physical therapy and chiropractic treatment. Dr. McLaughlin has listed the claimant's diagnoses as left hip pain, left sacroiliac (SI) joint pain, left knee pain, and left leg pain.

3. The claimant testified that following the June 15, 2017 incident, she continued to work full time. However, she moved to working during the night shift, which was less physically demanding than the day shift.

4. On February 14, 2018, the claimant was seen by Dr. McLaughlin. At that time, the claimant reported that chiropractic treatment would provide some relief, but the pain would return. In addition, Dr. McLaughlin noted that physical therapy "seemed to flare [the claimant's] muscle strain". On that date, Dr. McLaughlin referred the claimant to orthopedist, Dr. Kennan Vance for a consultation.

5. The claimant was first seen by Dr. Vance on February 26, 2018. On that date, x-rays of the claimant's left hip and pelvis showed osteoarthritis. Dr. Vance recommended a steroid injection to the claimant's left hip.

6. On March 19, 2018, Dr. Bjorn Irion administered the recommended injection. This injection initially provided some relief to the claimant.

7. On April 11, 2018, Dr. McLaughlin referred the claimant to Dr. Mitchell Burnbaum for a neurological consultation to rule out nerve entrapment. On May 16, 2018, Dr. McLaughlin noted that the nerve tests administered by Dr. Burnbaum were normal.

8. On June 1, 2018, Dr. McLaughlin placed the claimant at maximum medical improvement (MMI). In addition, Dr. McLaughlin assessed a permanent impairment rating of four percent for range of motion in the claimant's left knee, and 8 percent for range of motion in the claimant's left hip. This resulted in a total scheduled impairment rating of 12 percent for the claimant's left lower extremity. With regard to maintenance medical treatment, Dr. McLaughlin recommended follow up (as needed) with both himself and the orthopedist, continued use of a TENS unit, and a gym pass. He also listed possible hip injections.

9. On June 25, 2018, the respondent filed a Final Admission of Liability (FAL) admitting for the MMI date of June 1, 2018 and the scheduled impairment of 12 percent for the claimant's left lower extremity.

10. The claimant testified that after she was placed at MMI, she continued working her normal job, but she found that her work demands grew heavier. In addition, the employer was requiring mandatory overtime, which resulted in the claimant working more hours and she was on her feet more. The claimant also testified that it was during this time that she began to have increased hip pain and developed a limp.

11. On November 12, 2018, the claimant returned to Dr. Vance. At that time, Dr. Vance noted that the claimant had significant osteoarthritis in her left hip. He suggested an additional injection to the claimant's left hip. However, he also noted that the claimant would likely need a left total hip replacement. A repeat injection was administered by Dr. Irion on November 27, 2018.

12. On November 18, 2019, the claimant returned to Dr. Vance. On that date, Dr. Vance reviewed updated x-rays of the claimant's left hip. At that time, Dr. Vance noted that the claimant's left hip was arthritic and would eventually require a left hip replacement. Dr. Vance recommended the claimant see a surgeon, either Dr. Stryker or Dr. Copeland.

13. On March 9, 2020, the claimant returned to Dr. McLaughlin and reported that the effects of the injection had worn off, and she had been struggling. At that time, Dr. McLaughlin referred the claimant to an orthopedist to consider surgery. With regard to MMI, Dr. McLaughlin noted: "[I]n my opinion she continues at MMI, but if surgery is recommended to be undertaken that would imply that there is improvement that can be done medically for the underlying condition and she would not be at MMI at that point".

14. On March 31, 2020, the claimant was seen by Dr. Louis Stryker. In the medical record of that date, Dr. Stryker noted that the claimant "has reached an end in regard to her [left] hip". Dr. Stryer recommended a total left hip arthroplasty.

15. On April 4, 2020, Dr. McLaughlin noted that the claimant would proceed with surgery with Dr. Stryker. Dr. McLauglin agreed with the surgical recommendation, and noted that the claimant was no longer at MMI:

> [T]here has been a surgical recommendation that will improve the underlying condition. The hip has worsened enough that it now requires surgery. There has been a worsening of the condition her continued working at [Employer] following the trauma that occurred on [June 15, 2017] and there is new treatment that will improve the underlying condition.

16. On April 27, 2020, the claimant was seen by Dr. McLaughlin. At that time, Dr. McLaughlin noted that Dr. Vance had recommended a left hip arthroplasty, to be done by Dr. Stryker. The claimant communicated to Dr. McLaughlin that she had not heard back from Dr. Stryker regarding scheduling the surgery. Dr. McLaughlin also noted that the claimant had reduced range of motion and increased pain. Terfore, he concluded that the claimant's condition had worsened and she was no longer at MMI.

17. On May 29, 2020, Dr. Stephen Lindenbaum reviewed the authorization request for a total left hip arthroplasty. In his report, Dr. Lindenbaum opined that a total hip arthroplasty was medically necessary. He noted that the claimant had experienced several years of hip pain despite a number of treatment modalities. He also noted the claimant had decreased range of motion. Finally, he noted that both physical examination and imaging showed severe osteoarthritis.

18. The recommended left hip arthroplasty was scheduled with Dr. Stryker for early June 2020. However, the claimant was notified by Dr. Stryker's office staff that the scheduled surgery was cancelled.

19. On June 23, 2020, the claimant attended an independent medical examination (IME) with Dr. Tashof Bernton. In connection with the IME, Dr. Bernton reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Bernton opined that a total left hip replacement is reasonable treatment due to the condition of the claimant's left hip. He further opined that the claimant's need for a hip replacement is not related to the injury she sustained on June 15, 2017. In support of this opinion, Dr. Bernton noted that when the claimant initially received medical treatment following the injury "it was not initially appreciated that her symptoms were from her hip". He also noted that the incident on June 15, 2017 did not cause the osteoarthritis in the claimant's left hip. In addition, it is Dr. Bernton's opinion that the incident on June 15, 2017 did not aggravate the preexisting osteoarthritis in the claimant's left hip to the point of changing the natural progression of the degenerative process.

20. On July 8, 2020, the claimant returned to Dr. McLaughlin. On that date, they discussed that Dr. Stryker was relocating. As a result, Dr. McLaughlin referred the claimant to surgeon Dr. Raymond Kim.

21. On July 23, 2020 the claimant was seen at The Steadman Clinic by Dr. Kim. On that date, Dr. Kim recorded that the claimant was continuing to experience pain that had worsened over time. The claimant described her pain as aching, stabbing, and throbbing. In addition, she reported experiencing giving way/instability, popping, pain, and weakness. Following his exam and additional x-rays, Dr. Kim opined that the best treatment for the claimant would be a left total hip arthroplasty. In support of this opinion, Dr. Kim noted that the claimant had exhausted all conservative treatment.

22. On September 3, 2020, the claimant filed a Petition to Reopen based on a change in medical condition. With the Petition, the claimant included the April 27, 2020 medical record from Dr. McLaughlin and the July 23, 2020 record from Dr. Kim.

23. Dr. Bernton's testimony was consistent with his written report. During his testimony, Dr. Bernton reiterated his opinion that although a left hip replacement would be reasonable treatment for the claimant, that the need for surgery was not work related. He noted that a hip replacement was inevitable, given the significant and chronic osteoarthritis in the claimant's left hip. In addition, Dr. Bernton stated that the osteoarthritis in the claimant's left hip was not aggravated or exacerbated by her injury on June 15, 2017. Dr. Bernton also noted that the Colorado Medical Treatment Guidelines (MTG) would require a structural change (as evidenced by radiographic studies) to warrant consideration of a hip replacement.

24. The ALJ takes administrative notice of WCRP 17 and notes that Section (E)(3)(b) of the Lower Extremity Guidelines states that for aggravation of osteoarthritis of the hip to be work-related, there must be "a change in the patient's baseline condition and a relationship to work activities or specific injury to the hip." WCRP 17, Exhibit. 6.

25. The claimant testified that prior to the June 15, 2017 injury she enjoyed hiking, fishing and four-wheeling. The claimant testified that she is unable to engage in these activities because of her left hip pain. In addition, prior to her injury she would exercise three to four times per week using an elliptical machine. At this time, using the elliptical is painful. The claimant also testified that she is unable to stand long enough to cook a meal. Since being placed at MMI, the claimant has had more pain, uses more over the counter pain medications, (such as Tylenol and ibuprofen). The claimant also testified that she wants to undergo the recommended surgery.

26. The ALJ credits the claimant's testimony, the medical records, and the opinions of Dr. McLaughlin and finds that the claimant has demonstrated that it is more likely than not that, due to a worsening of her condition, the claimant is no longer at MMI. The ALJ notes that the claimant was not a candidate for total hip replacement at the time she was placed at MMI in 2018. However, since that time she has continued to have issues at work and at home, received additional maintenance treatment, and then

became a surgical candidate. The ALJ specifically credits Dr. McLaughlin's March 9, 2020 and April 4, 2020 reports on this issue.

27. The ALJ credits the claimant's testimony, the medical records, and the opinions of Drs. McLaughlin, Lindenbaum, Vance, Stryker, and Kim over the conflicting opinions of Dr. Bernton, and finds that the claimant has demonstrated that it is more likely than not that the left total hip replacement recommended by Dr. Kim is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Section 8-43-303(1) provides that "any award" may be reopened within six years after the date of injury "on the ground of fraud, an overpayment, an error, mistake, or a change in condition." Reopening for "mistake" can be based on a mistake of law or fact. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). A claimant may request reopening on the grounds of error or mistake even if the claim was previously denied and dismissed. *E.g., Standard Metals Corporation v. Gallegos*, 781 P.2d 142 (Colo. App. 1989); *see also Amin v. Schneider National Carriers*, W.C. No. 4-81-225-06 (November 9, 2017). The ALJ has wide discretion to determine whether an error or mistake has occurred that justifies reopening the claim. *Berg v.*

Industrial Claim Appeals Office, 128 P.3d 270 (Colo. App. 2005); *Travelers Ins. Co. v. Industrial Commission*, 646 P.2d 399 (Colo. 1981).

5. A change in condition refers to "a change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition which can be causally connected to the original compensable injury." *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 222 (Colo. App. 2008). The ALJ is not required to reopen a claim based upon a worsened condition whenever an authorized treating physician finds increased impairment following MMI. *Id.* The party attempting to reopen an issue or claim shall bear the burden of proof as to any issues sought to be reopened. Section 8-43-303(4), C.R.S.

6. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

7. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

8. As found, the claimant has successfully demonstrated, by a preponderance of the evidence, that, due to a worsening of her condition, the claimant is no longer at MMI. Therefore, the claimant's claim shall be reopened. As found, the claimant's testimony, the medical records, and the opinions of Dr. McLaughlin are credible and persuasive.

9. As found, the claimant has successfully demonstrated, by a preponderance of the evidence, that the left total hip replacement recommended by Dr. Kim is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted work injury. As found, the claimant's testimony, the medical records, and the opinions of Drs. McLaughlin, Lindenbaum, Vance, Stryker, and Kim are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant's claim is reopened, due to a worsening of her condition.

2. The respondents shall pay for the recommended left total hip replacement, pursuant to the Colorado Medical Fee Schedule.

3. All matters not determined herein are reserved for future determination.

Dated this 28th day of January 2021.

Cassandra M. Sidanycz
Administrative Law Judge

Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUE

1. Whether Claimant established by a preponderance of the evidence that right shoulder surgery requested by Dr. McCarty is reasonably necessary to cure or relieve the effects of his March 26, 2019 work-related injury.

2. Whether Claimant established by a preponderance of the evidence that diagnostics and/or surgery to correct an inguinal hernia is reasonably necessary to cure or relieve the effects of his March 26, 2019 work-related injury.

PROCEDURAL POSTURE

Claimant initially endorsed the issue of the reasonableness and necessity of recommended lumbar transforaminal epidural steroid injections. In his position statements, Claimant stated that the issue was mistakenly endorsed, and that the issue is moot. Consequently, the ALJ considers the issue withdrawn and does not address the issue in this Order.

FINDINGS OF FACT

1. Claimant sustained an admitted work-related injury on March 26, 2019, when he fell approximately 12-15 feet from the top of a wall to the ground. At the time, he was setting floor joists with a coworker.

2. On March 26, 2019, Claimant was initially seen at Concentra. Claimant reported that he fell from a height of approximately 12 feet and reported pain from the top of his right knee to his ankle. Claimant reported that he did not hit his head and that all of his weight went onto his ankle. He denied neck pain, chest pain, back pain, and hip pain. Claimant was diagnosed with right ankle sprain, contusion of right knee, and closed non-displaced fracture of right calcaneus. Claimant's physical examination included evaluation of his head, abdomen, right knee, right ankle, right foot, cervical, thoracic, and lumbar spine. Claimant was given a Toradol injection, prescribed pain medication, a walking boot, and crutches. The records noted Claimant was "not covered under work comp insurance and has no personal insurance," and he was referred to Denver Health for further treatment and evaluation. (Ex. 2).

3. On March 30, 2019, Claimant was seen at Denver Health Medical Center emergency room, reporting shoulder and foot pain, and was evaluated by Paul Leccese, M.D. Claimant reported being seen a few days earlier at urgent care for a right calcaneus fracture. He reported no chest, abdomen, neck, or back pain. He reported bilateral shoulder pain, worse while using crutches without padding in the bilateral axilla (armpits). It was noted that Claimant was tender over the shoulder (AC joint), and a shoulder x-ray

was obtained to rule out a missed injury. Right shoulder x-rays showed no fracture or dislocation, the radiologist noted "high riding humeral head suggests rotator cuff tear." (Ex. C). Left shoulder x-rays were normal. Claimant was diagnosed with a closed, nondisplaced fracture of the right calcaneus, and bilateral shoulder pain, of "unspecified chronicity." (Ex. C).

4. On April 1, 2019, Claimant was seen by David Yamamoto, M.D. Claimant reported he did not remember the details of his fall, but reported he landed on his right heel, and that he did not hit his head. Claimant reported, in addition to his heel, that he injured his shoulders, wrists and right knee. Dr. Yamamoto noted that Claimant "did not hit his head but is complaining of a moderate headache." Claimant reported bilateral shoulder pain and that he was not sure how he injured his shoulder. Claimant also reported moderate pain in the lower abdomen. On examination of Claimant's shoulder, Dr. Yamamoto found anterior and superior tenderness of both shoulders, with 90 degrees flexion and abduction in both shoulders. Dr. Yamamoto examined Claimant's abdomen and found mild tenderness and "no hernias present." Among other things, he diagnosed Claimant with a strain of the right and left shoulder and lower abdominal pain. Dr. Yamamoto noted that he was not yet authorized to treat Claimant and scheduled a follow up appointment in two weeks. (Ex. E).

5. On April 5, 2019, Claimant was seen at Denver Health by Stephen Stacey, M.D. Claimant's chief complaints were documented as a right calcaneus fracture and arthritis of both shoulder regions. Claimant reported that he had aggravated his shoulders at the time of his injury and more with use of crutches. He noted that pain was located deep in the shoulder. On examination, Claimant was found to have a positive Neer test with pain in the anterior and lateral shoulder. X-rays of Claimant's right shoulder were performed which showed moderate inferior glenohumeral joint degenerative changes and mild AC joint degeneration, and no fractures. (Ex. C).

6. On April 16, 2019, Claimant returned to Dr. Yamamoto. At that time, Claimant continued to report bilateral shoulder pain, and lower abdominal pain. He also reported lower back pain, which Claimant indicated he had "from the beginning." Claimant indicated he (apparently mistakenly) marked his lower abdominal area on his initial pain diagram rather than his lower back. Dr. Yamamoto's examination of Claimant's shoulders and abdomen was unchanged from his prior visit. Examination of Claimant's lower back was noted as positive for tenderness over the right lower back. Dr. Yamamoto added "lumbar sprain" to Claimant's diagnosis, and prescribed pain medications. (Ex. E).

7. On May 7, 2019, Claimant was seen at the Denver Health Emergency Department for evaluation of a potential sexually transmitted disease. As part of the evaluation, the emergency room physician performed an examination of Claimant's abdomen and noted "hernia confirmed negative" in both the right and left inguinal area. Similarly, an ultrasound of Claimant's pelvic area was interpreted as showing no evidence of inguinal hernia. (Ex. C).

8. On May 19, 2019, Respondents filed a General Admission of Liability, admitting for medical benefits for "multiple body parts, both wrist[s], both shoulders, head, neck, both legs, back." (Ex. 1). It is undisputed that Claimant sustained fracture of the right calcaneus as a result of the March 26, 2019 work injury.

9. In his May 29, 2019 record, Dr. Yamamoto noted that Claimant "stated that he is not sure how he injured the shoulders. He did have basically a two part fall as he fell from a joist to the edge [of] the roof to the ground and he likely put out his arms." This explanation of Claimant's fall is included in each of Dr. Yamamoto's subsequent records. It is unclear from the record whether Claimant reported a putting his arms out, or whether this description is Dr. Yamamoto's hypothesis of how the injury occurred. Dr. Yamamoto ordered MRIs of the Claimant shoulders, a CT scan of his abdomen and a lumbar MRI. (Ex. E).

10. Between June 18, 2019 and August 9, 2019, Claimant received physical therapy at Atlas Physical Therapy. The therapy provided was directed to Claimant's heel and gait, and did not address Claimant's shoulders. (Ex. F).

11. On June 21, 2019, MRIs of Claimant's shoulders were performed. The right shoulder MRI showed a moderate glenohumeral degenerative joint disease with circumferential labral degeneration and fraying, mild supraspinatus tendinosis with a tiny low-grade tear, mild infraspinatus tendinosis, and moderate acromioclavicular degenerative joint disease. MRI of his left shoulder showed mild tendinosis of the supraspinatus and infraspinatus, small high-grade cartilage erosion of the inferior glenoid with probable inferior labral degeneration but no identifiable tear, and mild acromioclavicular degenerative joint disease. Claimant's lumbar MRI showed lower lumbar degenerative disc disease and facet arthrosis, with no significant spinal canal stenosis, mild bilateral foraminal narrowing at L4-5, and minimal bilateral foraminal stenosis at L3-4. (Ex. D).

12. On June 26, 2019, Dr. Yamamoto referred Claimant to an orthopedist for shoulder pain and to Kristin Mason, M.D., for evaluation of lower back pain. (Ex. E).

13. On July 30, 2019, saw Hector Mejia, M.D., at Panorama Orthopedics for further evaluation of his shoulders. X-rays taken on July 30, 2019 showed glenohumeral and acromioclavicular arthritis of both shoulders. Claimant reported to Dr. Mejia that when he fell on March 26, 2019, "his shoulders popped out," a report not made to previous health care providers. Dr. Mejia reviewed Claimant's right shoulder MRI and described it as follows: "Right shoulder MRI shows some glenohumeral chondral changes and arthritic changes with what looks like chronic inferior humeral changas as well as labral degenerative teras and cystic changes both in the glenoid and the humeral side." Dr. Mejia indicated Claimant would possibly need shoulder replacement in the future due to his preexisting condition. Dr. Mejia acknowledged a "possibly temporary aggravation of preexisting condition," and indicated he would defer to Dr. Yamamoto to determine causation. Dr. Mejia performed two glenohumeral joint injections and recommended physical therapy. Dr. Mejia diagnosed Claimant with primary osteoarthritis of the shoulder. (Ex. G).

14. Claimant returned to Dr. Yamamoto on August 2, 2019, and complained of headaches (migraines), lower back pain and bilateral shoulder pain. Dr. Yamamoto noted that Claimant had “essentially full range of motion of both shoulders.” Dr. Yamamoto referred Claimant to Eric McCarty, M.D., for a second opinion regarding his shoulders, and a MRI of his right elbow.

15. Claimant saw Dr. Mason for initial evaluation on August 9, 2019. At that time, he reported falling approximately 14 feet and landing predominantly on his right leg but also causing pain in the knee and hip and low back. Claimant reported posterolateral right leg pain, with occasional numbness and weakness, as well as intermittent anterior thigh or groin pain. Claimant reported not receiving any treatment for his back. Dr. Mason’s assessment was lumbar disc and facet arthropathy with likely some degree of both at L3-4, L4-5 and L5 intermittent radiculopathy on the right. She also noted “some concern relevant to hip pathology.” Dr. Mason ordered lumbar x-rays and recommended that Claimant initiate physical therapy for his back. (Ex. H).

16. Between August 15, 2019 and October3, 2019, Claimant received physical therapy at Denver Physical Therapy. The therapy he received was directed to Claimant’s lumbar spine, and did not address Claimant’s shoulders. (Ex. I).

17. From September 3, 2019 through July 14, 2020, Claimant continued to see Dr. Yamamoto approximately monthly. At each visit, Dr. Yamamoto noted that Claimant had bilateral shoulder pain. Claimant reported no significant improvement in his shoulder pain throughout this time frame. (Ex. D).

18. On September 4, 2019, Claimant saw Stephen Thon, M.D. and Eric McCarty, M.D. at UC Health.[1] Dr. Thon noted that Claimant had “a significant fall resulting in multiple injuries including to bilateral shoulders.” Claimant reported pain and his shoulder “slipping out of socket.” Claimant reported seeing another orthopedist who “recommended shoulder replacement /reconstruction.” Claimant reported his right shoulder pain was significantly worse than the left. On examination, Dr. Thon found Claimant’s acromioclavicular joint and biceps tendon to be non-tender, pain on “empty can” testing, and positive instability tests. He reviewed Claimant’s shoulder MRIs and indicated “they demonstrate a small Bankart lesion of the anterior inferior labrum bilaterally. He also has degenerative changes of both shoulders, the right is worse than the left.” Dr. Thon characterized Claimant’s shoulders as a “difficult problem.” He stated: “It appears that he has 2 issues going on. He has a significantly torn labrum the anterior inferior aspect of his shoulder, which results in positive apprehension sig, and a positive relocation sign. What is difficult is that he also has evidence of glenohumeral degenerative joint disease.” Dr. Thon stated “I have no doubt that his injury which occurred at work has exacerbated his symptoms and made his shoulders worse.” Dr. Thon discussed two possible treatment options, including a labral reconstruction or total shoulder arthroplasty.

[1] The September 4, 2019 medical record from UCHealth is signed by Dr. Thon, and co-signed by Dr. McCarty on September 15, 2019.

Claimant indicated he would like to pursue labral reconstruction. Dr. Thon advised Claimant to follow up with Dr. McCarty. (Ex. J).

19. On September 10, 2019, Dr. Mason evaluated Claimant and included within her assessment a probable hip labral tear based on her examination. Dr. Mason ordered an MRI arthrogram to evaluate Claimant for labral pathology. (Ex, H).

20. On September 18, 2019, Dr. McCarty submitted a request for authorization of surgery to Insurer. The indicated procedure was right shoulder arthroscopy, debridement, and anterior labral repair. (Ex. J).

21. On September 20, 2019, Andrew Parker, M.D., conducted a review of portions of Claimant's medical records. Dr. Parker opined that Claimant should complete a course of physical therapy and conservative management before proceeding to a surgical intervention. He indicated if Claimant were to have surgery, a labral repair/debridement would likely be preferable to arthroplasty. He opined arthroplasty would be related to chronic degenerative arthritis and not work-related. (Ex. L).

22. On October 8, 2019, Claimant saw Dr. Mason. She noted Claimant had seen Dr. McCarty for his shoulders. Dr. Mason diagnosed Claimant with lumbar disk and facet arthropathy with intermittent right L5 radiculopathy, right hip labral tear (fairly extensive) and right calcaneus fracture. She noted that Claimant's back and hip pain could be the result of two pain generators, in the lumbosacral area and hip, and recommended a diagnostic hip injection. (Ex. H).

23. On October 31, 2019, Claimant was evaluated by Sean Baran, M.D., of Western Orthopedics for right hip pain. Dr. Baran noted that Claimant's September 25, 2019 MRI demonstrated a tear of the anterior superior portion of his right labrum. Dr. Baran recommended conservative management of Claimant's right hip, but did recommend a diagnostic injection of the hip. Dr. Baran further noted that he "would like to have [Claimant] referred to a general surgeon to rule out any abdominal etiology or hernia as a source of his pain. On the same date, Dr. Baran authored a letter to Dr. Yamamoto in which he stated: "I am concerned that a lot of his symptoms today do seem to be coming from his abdomen, potentially a hernia, and I would recommend prior to use thinking about any surgery for the hip that [Claimant] have general surgery evaluation for the abdominal/pelvic portion of the pain." (Ex. L).

24. On November 8, 2019, Dr. Mason saw Claimant. She noted that Dr. Baran had recommended a general surgery evaluation "for ruling out a hernia in the area as a potential contributing." Claimant reported he was reluctant to have a corticosteroid injection because "he had a bad experience with them in a previous shoulder injury." (Ex. H).

25. On December 10, 2019, Claimant saw Dr. Mason. Claimant reported more pain in his lower back and hip. She noted that Claimant's MRI demonstrated nerve root contact from disk disease and facet arthropathy at L4-5 on both sides. Claimant also reported concerns about residual effects from a concussion. She noted that diagnostic injections should be concluded before pursuing interventional pain management for Claimant's back. (Ex. H).

26. On December 20, 2019, Claimant was seen at Denver Health for headaches. Claimant reported that he hit his head on concrete when he fell on March 26, 2019, and that he had chronic daily headaches since that time, but he was "was never evaluated from that fall, never had imaging." (Ex. C).

27. Between December 27, 2019 and January 17, 2019, Claimant attended four physical therapy sessions at Atlas Physical Therapy. The therapy provided was directed to Claimant's right shoulder. On January 17, 2020, the physical therapist noted that "progress throughout the course of therapy has been limited secondary to pain and apprehension. [Claimant] reports R>L shoulder will 'pop out' if he goes further with ROM interventions. Recommend further investigation into shoulder dysfunction/impairment as minimal progress has been made to date." It was noted that Claimant was "more concerned about further diagnostics of shoulder than participating with PT interventions." (Ex. F).

28. On January 21, 2020, Claimant saw Dr. Mason. Dr. Mason noted that Claimant was complaining of groin pain, as well as back pain. (Ex. H).

29. On January 29, 2020, Dr. Erickson performed an Independent medical Examination (IME) of Claimant at Respondents request. Dr. Erickson examined Claimant and reviewed Claimant's medical records. As relevant to the issues presented in this hearing, Dr. Erickson opined that Claimant's right shoulder pathology is significant and substantial, but "clearly not related to an injury that occurred on 3/26/19." With respect to Claimant's right shoulder, Dr. Erickson opined that Claimant suffered a serious dislocation of the shoulder in the past, but not on March 26, 2019. He further opined that an arthroscopic labral repair would be unlikely to benefit the Claimant, and that it would be more appropriate to consider a joint replacement, although that procedure would not be work-related. (Ex. M).

30. In conjunction with his IME, Dr. Erickson asked a radiologist, Elizabeth Carpenter, M.D., to review Claimant's post-accident shoulder MRI. Dr. Carpenter reviewed Claimant's MRI from June 2019 and prior imaging from 2014, and issued a report dated March 10, 2020. Based on her review of imaging studies, Dr. Carpenter opined that the degree of glenohumeral osteoarthritis seen on Claimant's June 21, 2019 right shoulder MRI was consistent with degenerative changes identified in 2014. She noted that the findings were "age indeterminant but most consistent with degenerative change and not suggestive of a recent traumatic event. In fact, there are no imaging findings suggestive of recent traumatic injury." (Ex. N).

31. On February 18, 2020, Claimant reported to Dr. Mason that he appeared for a hernia evaluation with another physician, but the clinic was "backed up" and he could not wait, so he rescheduled the evaluation. Claimant indicated he wanted to proceed with a labral repair in his hip, and Dr. Mason indicated that it would not likely explain Claimant's back pain which she characterized as a separate issue. (Ex. H).

32. On February 21, 2020, Claimant underwent surgery on his right foot, including an Achilles' tendon debridement with repair, flexor hallucis longus deep tendon transfer, partial excision of the right calcaneus, performed by Premjit Deol, D.O., of Panorama Orthopedics. (Ex. G).

33. On March 3, 2020, Dr. McCarty responded to an inquiry from Claimant's counsel regarding Claimant's right shoulder. Dr. McCarty believed the recommended right shoulder surgery was reasonable and necessary and related to Claimant's March 26, 2019 work injury. He opined that Claimant's injury appeared to have exacerbated an ongoing problem with his shoulder. Dr. McCarty stated that Claimant "appears to have a new exacerbation of the shoulder which is now giving him problems based on his exam and his history. The procedure of arthroscopy with labral repair is recommended." Dr. McCarty's records and reports do not indicate that Dr. McCarty reviewed Claimant's medical records pre-dating his involvement. (Ex. J).

34. On March 16, 2020, Dr. Yamamoto prepared a Physician's Report of Worker's Compensation Injury that was submitted to Insurer. Dr. Yamamoto noted that Claimant's work-related medical diagnoses were right calcaneus fracture, right shoulder labral tear, left shoulder labral tear, right hip labral tear, lumbar strain, bilateral wrist pain, right elbow extensor tendon tear, bilateral knee meniscal tears, headaches, and depression. (Ex. E).

35. On March 17, 2020, Claimant was seen by Anthony Canfield, M.D., for evaluation of a potential hernia. Dr. Canfield diagnosed Claimant with a broad based indirect right inguinal hernia and a small left sided hernia, neither of which were incarcerated. Dr. Canfield recommended that Claimant undergo bilateral hernia repair. Dr. Canfield's records do not address the cause of Claimant's hernias, and indicate that Claimant wanted to be seen for a hernia evaluation before hip surgery. Dr. Canfield's records do not indicate whether hernia repair was a necessary prerequisite for Claimant's proposed hip surgery. (Ex. O).

36. On March 20, 2020, Claimant returned to Dr. Mason, and reported he had undergone foot surgery approximately one month earlier. Claimant reported he was found to have two inguinal hernias which may be contributing to Claimant's groin and lower abdominal pain. (Ex. H).

37. On May 5, 2020, Claimant received bilateral transforaminal epidural steroid injections at the L4-5 level, performed by Nicholas Olsen, D.O., a partner of Dr. Mason. (Ex. H).

38. On May 15, 2020, Claimant had a telemedicine visit with Dr. Mason, during which Dr. Erickson's IME report was reviewed. Claimant reported the epidural steroid injection

from May 5, 2020 provided about 30% benefit. Dr. Mason noted "With respect to causation, I think it makes senses with someone who fell 15 feet could potentially sustain injuries up the kinetic chain, and there is a frequent association of lumbar spine injuries with calcaneal fractures. I have also seen this mechanism of injury result in a labral tear. The patient denies a prior history of pain in those areas. I am a little surprised that he had so any many other complaints in the upper quadrants as those have not been issues that he has discussed with me." Dr. Mason also stated: "I feel the height of his fall would indicate that it is certainly more likely than not that his hip and back issues were caused by the fall. I do not have an explanation for why there was a delay in report of his complaints." (Ex. H). Dr. Mason's records do not contain any recommendations for treatment of Claimant's hernia, or any statement that treatment of Claimant's hernia would facilitate her treatment of Claimant's back.

39. On April 15, 2020, Albert Hattem, M.D., provided Insurer with a report related to the causation of Claimant's hernias. Dr. Hattem opined that there was no documentation of a work-related injury that would have involved the increased intra-abdominal necessary to cause an inguinal hernia. He opined that treatment for Claimant's hernias was not work-related. (Ex. Q).

40. On April 30, 2020, Dr. Hattem issued a second report after conducting a review of Claimant's medical records. Dr. Hattem opined that Claimant's work-related diagnoses were limited to a fracture of his right calcaneus, Achilles tendinosis, and aggravation of preexisting degenerative medial meniscus tear, right knee. He opined that Claimant's left knee pain, elbow pain, right hip pain, bilateral shoulder pain, bilateral inguinal hernias, headaches, and low back pain were not related to his work injury of March 26, 2019. (Ex. Q). Dr. Hattem opined that Claimant's bilateral shoulder pain was not work-related because Claimant "first complained of shoulder pain, on March 30, 2019,4 days after the work injury." He further opined that had Claimant suffered a work-related shoulder injury, more likely than not Claimant would have reported the injury oat his initial visit on March 26, 2019, and that when Claimant initially complained of shoulder pain he attributed it to the use of crutches. With respect to Claimant's inguinal hernias, Dr. Hattem opined that Claimant did not complaint of hernia pain until months following the initial injury, and that the mechanism of injury was inconsistent with an inguinal hernia.

41. Claimant testified at hearing that, while working for Employer, he fell from a height of approximately 9-11 feet while framing a wall. He testified that he did not remember the fall, but recalls two impacts and that he landed on his right side. Claimant testified at hearing that fell from a wall and did not recall how the fall occurred. He testified that he recalled two impacts, but did not remember what he hit or how the two impacts occurred. HE testified that his right side hit the ground. He reported feeling pain throughout his entire body, but his primary area of pain was his right leg. Claimant testified that Mr. R[Redacted] indicated he was not insured and that he would take Claimant for medical care. Mr. R[Redacted] took Claimant to Concentra. Claimant testified that on the ride to the Concentra, he did not tell Mr. R[Redacted] what body parts were injured, but that he believed both parties knew his leg was injured. Claimant testified that when he arrived at Concentra, Mr. R[Redacted] told Claimant only to get checked for his leg. When describing the accident and his initial evaluation at Concentra, Claimant did not testify

that he had shoulder, back or abdomen pain when seen at Concentra on March 26, 2019. Claimant testified that he does not have private health insurance or other insurance, such as Medicaid or Medicare.

42. Claimant indicated when he was seen at Denver Health on March 30, 2019, he complained of pain in his ankle, knee and both shoulders. Claimant indicated that there were other body areas that were hurting when he was at Denver Health, but he did not report other body parts as injured. Claimant testified that his shoulder pain began the day of the fall, and that he had pain in his armpits and the upper part of his shoulder.

43. Claimant testified that his former attorney referred him to Dr. Yamamoto. Claimant testified that when he saw Dr. Yamamoto on April 1, 2019, he reported ankle, knee, wrist, abdominal and back pain. He testified that his back had been in pain prior to the visit since March 26, 2019. Claimant testified that he would like to pursue surgery recommended for his right shoulder, and surgery for his hernia.

44. Claimant testified that prior to his fall on March 26, 2019, he did not have any pain in his right shoulder or functional limitations of his right shoulder. He testified that over the previous 8 years he had been employed in construction framing, and that during that time period he had no limitations on his right shoulder. Since March 26, 2019, Claimant testified that he experiences subluxations and pain in his right shoulder. Claimant testified that prior to March 26, 2019, he had no pain or functional limitations in his shoulder back. Claimant testified that he had abdominal pain in December 2017 that may have begun a few years prior to that, and that it had gone away prior to his March 26, 2019 fall.

45. Claimant testified that sometime after his accident, and after beginning treatment with Dr. Yamamoto, he recalled that he struck his head during his fall, but that he did not have any bruises or bumps and that it did not hit hard. Claimant testified that he is now having issues with his memory, migraines, and headaches, but that these conditions were stress-related.

46. Claimant testified that when he saw Dr. Erickson for his IME, that he did not mention certain areas of pain because he was on pain medication. Claimant testified that he did not have any bruising or abrasions on his right shoulder, elbow, hip, knee, hands, or head.

47. Dr. Yamamoto was accepted as an expert in occupational medicine and testified at hearing. Dr. Yamamoto testified that in a fall from the height of Claimant's injury multiple injuries are possible. Dr. Yamamoto testified that he believes, to a reasonable degree of medical probability that Claimant injured his right ankle, right knee, left knee, right shoulder, and lumbar spine (lower back) as a result of his March 26, 2019 fall. He testified that Claimant's fall could have injured or aggravated his right shoulder and back. Dr. Yamamoto testified that all of Claimant's areas of complaint "could have" been related to or caused by his March 26, 2019 fall.

48. Dr. Yamamoto testified that it was reasonable to infer that Claimant intended to report his lower back to him on April 1, 2019, when he circled his abdomen on his pain diagram. Dr. Yamamoto also testified that at his initial appointment he performed a physical examination of Claimant, and that he questions patients on the areas of pain, which would direct his physical examination. He testified that if Claimant reported his lower back was in pain, he would have conducted a physical examination. On cross-examination, Dr. Yamamoto testified that Claimant did not report lower back pain at the April 1, 2019 office visit. Dr. Yamamoto testified that his "review of systems" for Claimant's April 1, 2019 visit, in which "no back pain" is noted, is only in the record for billing purposes, and not because a full review of systems was performed. Dr. Yamamoto also testified that Claimant's purported back injuries may not have been addressed at his initial visit due to time constraints. Dr. Yamamoto testified that Claimant had an acute injury to his lower back, and that the force of his fall "could have" injured Claimant's lower back.

49. Dr. Yamamoto testified he believes Claimant aggravated a pre-existing right shoulder condition, and that his fall on March 26, 2019 accelerated the degeneration of Claimant's right shoulder. He opined that treatment for Claimant's right shoulder is reasonable and necessary, and related to his March 26, 2019 work injury. He also testified that he did not know the mechanism of injury for Claimant's right shoulder, and that he was speculating when stating that Claimant had a "two-part fall." He further testified that Claimant did not sustain a blow to the shoulder when he fell, and that Claimant did not sustain a severe shoulder injury. Dr. Yamamoto testified that he believes Claimant's recommended right shoulder surgery is reasonable, necessary, and related to his work-injury.

50. Dr. Yamamoto testified that it is more likely than not that Claimant aggravated a preexisting hernia which could have been worsened by his fall, and could have aggravated the condition, but he did not know for sure. He testified that Claimant's hernia was an incidental finding but would only be speculating that the fall caused or worsened any hernia. Dr. Yamamoto testified that Claimant needs to address his hernias to address his right hip issues, and that Claimant's surgeon wanted to address the hernia before addressing Claimant's hip.

51. Dr. Hattem was accepted as an expert in occupational medicine and testified at hearing by deposition. Dr. Hattem testified that based on his review of the Claimant's medical records, he did not believe Claimant sustained an injury to his right shoulder or sustained an aggravation of a preexisting shoulder condition as a result of his March 26, 2019 work injury. Similarly, Dr. Hattem testified that he did not believe that Claimant sustained in injury to his lower back as a result of his March 26, 2019 work injury, based on Claimant's delay in reporting symptoms related to his lower back. With respect to Claimant's hernia, Dr. Hattem testified that the Claimant's mechanism of injury (i.e., a fall) was unlikely to cause, aggravate or accelerate a hernia. Dr. Hattem testified that someone who falls on their feet and then onto their right side can sustain injuries to the right side of the body based on landing on their right side.

52. Dr. Ericson was accepted as an expert in occupational medicine and orthopedic surgery and testified at hearing by deposition. Dr. Erickson testified that based on his review of the Claimant's post-injury shoulder MRI, that there was evidence of severe degenerative disease and what he interpreted as evidence of a significant shoulder dislocation in the past (prior to March 26, 2019), although he did not believe that it explained Claimant's reported pain and motion limitations. Dr. Erickson testified that he believed psychosocial factors may be influencing Claimant's injuries. Dr. Ericson testified that the proposed arthroscopic labral repair surgery would not be likely to alleviate Claimant's pain or arthritic condition. Dr. Erickson opined that Claimant did not sustain an injury to his right shoulder as a result of his March 26, 2019 fall.

53. J. Isabel R[Redacted] testified in rebuttal through a post-hearing deposition through a translator. Mr. R[Redacted] testified that he did not witness Claimant's injury but took him for medical treatment at Concentra after being advised of the injury. Mr. R[Redacted] testified that he and Claimant did not discuss Claimant's injuries on the drive to Concentra, although Claimant indicated he had a problem with his foot and that he was having pain in his foot. Mr. R[Redacted] testified that Claimant was on the phone while Mr. R[Redacted] was driving him to Concentra. He testified that he did not tell Claimant that he could only have his leg checked or that he should tell Concentra physicians that he only injured his leg. Mr. R[Redacted] testified on arrival at Concentra, the Claimant spoke to Concentra personnel because Claimant speaks English and Mr. R[Redacted] does not. He further testified that he was not asked if he had insurance while at Concentra, and that he paid for Claimant's medical treatment in cash. Mr. R[Redacted] testified that after taking Claimant to Concentra he called his insurance and initiated the claim.

Claimant's Prior Medical Treatment

54. In July 2004, Claimant sustained an injury to his right shoulder and was evaluated at Denver Health. (Ex. 3). X-rays performed at the time showed no evidence of acute fracture or dislocation.

55. On December 26, 2017, Claimant was seen at Denver Health for complaints of lower abdominal pain and testicular pain that started 2-3 years earlier. Claimant reported he had been seen for that condition before and had an MRI performed, but was unsure of the results. Claimant reported that his pain had worsened over the previous two months, and that he did not follow up due to lack of insurance. (Ex. C).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the

evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

REASONABLENESS, RELATEDNESS AND NECESSITY OF SPECIFIC MEDICAL CARE

To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S. § 8-41-301(1)(c). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.*, 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the ALJ. Faulkner, 12 P.3d at 846. A compensable injury is an injury which "arises out of" and "in the course of" employment. See C.R.S. § 8-41-301(1)(b); *Price v. Industrial Claim Appeals*, 919 P.2d 207 (Colo. 2012).

"A preexisting condition does not disqualify a claimant from receiving workers' compensation benefits. Rather, where the industrial injury aggravates, accelerates, or combines with a preexisting disease or infirmity to produce the need for treatment, the treatment is a compensable consequence of the industrial injury." *Duncan v. Industrial Claim Appeals Office*, 107 P.3d 999, (2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo.App.1990).

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995)*; Karim al Subhi v. King Soopers, Inc.,* W.C. No. 4-597-590, (ICAO. July 11, 2012). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002)." *In the Matter of the Claim of Bud Forbes, Claimant*, No. W.C. No. 4-797-103, 2011 WL 5616888, at *3 (Colo. Ind. Cl. App. Off. Nov. 7, 2011).

RIGHT SHOULDER

Claimant has failed to establish by a preponderance of the evidence that he sustained an injury to his right shoulder arising out of the course and scope of his employment with Employer

The ALJ finds that the evidence does not establish a mechanism of injury to Claimant's right shoulder. Claimant's medical records indicate that Claimant fell hard on his right heel, with sufficient force to fracture his heel, and possibly injure his knee, hip and back. (The ALJ makes no findings as to the causation of injuries to these body parts). At Claimant's initial visit to Concentra on March 26, 2019, Claimant reported that all of his weight went on to his ankle and falling to the side. Claimant testified that he did not have any bruising or abrasions on his right shoulder, elbow, or hands, which is consistent with his initial report to Concentra. When Claimant first reported shoulder pain, Claimant reported that the pain was the result of his use of crutches, and located in his armpit, although some AC joint tenderness was noted. If, as Claimant reported to Dr. Mejia that his shoulders “popped out” as a result of his fall, one would expect this would have been reported at that time. Notwithstanding, when Claimant initially saw Dr. Yamamoto, he indicated that he was not sure how he injured his shoulder. Approximately two months later, on May 29, 2016, either Claimant or Dr. Yamamoto indicated that Claimant “likely put out his arms.” However, Dr. Yamamoto this explanation of Claimant’s fall appears to have been Dr. Yamamoto’s speculation as to how Claimant could have sustained a right shoulder injury.

Neither Dr. Yamamoto nor Dr. McCarty provided a causation analysis. Dr. Yamamoto testified that Claimant’s shoulder injury “could have” been related to his work fall but offered no cogent explanation as to the mechanism of injury, and he ultimately admitted he did not know the mechanism of injury. Dr. McCarty’s March 3, 2020 statement is similarly not persuasive because Dr. McCarty did not document any mechanism of injury or document any causation analysis and appears to have relied on Claimant’s statement that the March 26, 2019 fall resulted in bilateral shoulder injuries.

Claimant’s testimony that he did not report shoulder symptoms or trauma to his shoulder at Concentra on March 26, 2019 because Mr. R[Redacted] instructed Claimant not to report injuries other than his leg is not credible. Both Claimant and Mr. R[Redacted] testified that on the car ride to Concentra they did not discuss Claimant’s injuries, other than Claimant indicating that his foot hurt. Claimant’s assertion that Mr. R[Redacted] instructed Claimant to only have his leg examined and treated fails to explain why Mr. R[Redacted] would tell Claimant to report exclusively leg injuries if Mr. R[Redacted] was not aware of other areas of purported injury. The ALJ finds Mr. R[Redacted]’ testimony credible on this issue.

The ALJ finds that Claimant failed to establish that it is more likely than not that he sustained an injury to his right shoulder or aggravated or exacerbated any preexisting condition as a result of his May 26, 2019 work injury.

With respect to the requested surgery, because Claimant has failed to establish that it is more likely than not that he sustained an injury to his right shoulder or aggravated or exacerbated a preexisting condition, the request for right shoulder surgery is denied.

HERNIA

Claimant contends that the hernia surgery recommended by Dr. Canfield is “an incidental service necessary to obtain claim-related hip and lumbar care.” Respondents are required to provide ancillary “pre-operative treatment” for non-industrial conditions if the evidence establishes that the ancillary care is a reasonably necessary prerequisite to surgery and must be given to achieve optimum treatment of the compensable injury. *Public Service Co. v. Industrial Claim Appeals Office,* 979 P.2d 584 (Colo. App. 1999); *Walling v. Asa Electric*, Inc., W.C. No. 4-760-050-02, (ICAO, Dec. 10, 2013). The question of whether the claimant has established that the need for ancillary treatment is a reasonably necessary prerequisite to achieve optimal treatment is one of fact for the ALJ. *Public Service Co. v. Industrial Claim Appeals Office, supra*.

In support of this contention, Claimant asserts that "before Dr. Baran can request authorization for the claim-related hip surgery, Claimant needs to have his inguinal hernia's [sic] repaired as indicated by Dr. Baran" in his October 31, 2019 letter to Dr. Yamamoto. Dr. Baran did not testify at hearing and his records do not indicate that repair of Claimant's hernia was a necessary precursor to addressing Claimant's hip condition. Rather, Dr. Baran's records demonstrate that Dr. Baran was concerned that Claimant's hernia may have been a source of Claimant's reported groin and hip pain, and he recommended evaluation by a general surgeon to evaluate that condition.

Neither Dr. Baran, Dr. Canfield nor Dr. Mason made any statements that repair of Claimant's hernias must be done before Claimant's proposed hip surgery or treatment, that hip surgery or treatment could not be performed until Claimant's hernias are repaired, or that surgery on Claimant's hernias would be necessary to cure or relieve the effects of Claimant's work injury. Claimant's contention that Dr. Mason "has also indicated that repairing Claimant's hernias will allow her to better diagnose and treat Claimant's work-related lumbar injury," is not supported by Dr. Mason's medical records. The ALJ finds that Claimant has failed to establish that the recommended hernia surgery is a reasonably necessary prerequisite to treatment of Claimant's hip or that such surgery must be performed to achieve optimum treatment of Claimant's compensable injuries.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained an injury to his right shoulder arising out of the course and scope of his employment with Employer on March 26, 2019.

2. Claimant's request for authorization of right shoulder arthroscopy, debridement, and anterior labral repair is denied.

3. Claimant's request for authorization of hernia repair surgery is denied.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: January 29. 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered a compensable right knee injury during the course and scope of her employment with Employer on January 31, 2020.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical treatment for her January 31, 2020 industrial incident.

FINDINGS OF FACT

1. Claimant works for Employer as a Merchandizing Specialist. Her job duties involve organizing product orders and returns, performing cycle counts and preparing items for distribution.

2. On November 30, 2015 Claimant obtained treatment for chronic knee pain from Craig Anthony, M.D. at St. Anthony's Family Medicine Center North. Dr. Anthony reported that Claimant presented with chronic right knee pain that began after bending down to pick something off the floor. His physical examination revealed right knee swelling, tenderness to palpation over the proximal lateral patella and upward radiating pain. Dr. Anthony suspected an ACL injury but x-rays only revealed mild tricompartmental osteoarthritis. He provided Claimant with an excused absence note and stated Claimant could return to full duty work.

3. On December 28, 2015 Claimant returned to Dr. Anthony for an examination. Dr. Anthony recounted that Claimant was experiencing worsening right knee symptoms including instability, locking and popping. Claimant specifically reported her knee felt unstable, locks, pops and gives out. A physical examination revealed mild tri-compartmental osteoarthritis and tenderness with a McMurray test. Dr. Anthony discussed a possible arthroscopic debridement and referred Claimant for an orthopedic evaluation. However, Claimant did not follow-up with treatment.

4. Claimant testified that she received an injection into her right knee in late 2015 or early 2016. She did not receive any further right knee treatment until December 2019.

5. On December 9, 2019 Claimant obtained right knee treatment from Tam Minh This Nguyen, PA-C at St. Anthony's Family Medicine North. PA-C Nguyen reported that Claimant injured her right knee on November 21, 2019 when someone fell and struck the inside of her right knee with his or her shoulder. Claimant's knee condition was improving without treatment until she experienced a pop on Thanksgiving Day. Claimant subsequently felt a constant throb in her medial right knee. She disclosed her chronic knee pain and noted she had undergone a cortisone injection in the past. A physical examination revealed right knee swelling and tenderness to palpation. PA-C Nguyen and

her supervising doctor Bruce Williams, M.D., suspected patellar tendonitis. They instructed Claimant to wear a knee brace while at work, continue NSAIDs and undergo x-rays.

6. Claimant testified the November 21, 2019 incident occurred while in a mosh pit at a concert. She explained that her right knee condition improved and returned to baseline for pain and functionality without any further medical treatment. Claimant did not undergo the recommended x-rays but utilized a knee brace while at work and continued to take NSAIDs.

7. Claimant remarked that she stopped wearing a knee brace in early January 2020 but continued to wear a knee compression sleeve. She commented that she was able to walk without any assistive device, climb ladders, kneel down, squat, bend and lift in excess of 60 pounds. Nevertheless, Claimant worked her full duties before and after the mosh pit incident.

8. Claimant explained that on the morning of January 31, 2020 she was reading a cycle count sheet while hastily walking through Employer’s facility. She struck her right foot against a roll of dense carpet-like material that was improperly positioned in the walkway. Claimant specified that she struck the inside of her right big toe. The force pushed her right foot outward and caused intense burning pain in the interior or medial side of her right knee. After a moment, she slowly lowered herself to the ground. Eventually a coworker arrived and helped Claimant into a chair. Claimant then called Employer’s nurse line and was referred for treatment.

9. Later on January 31, 2020 Claimant visited Lisa Grimaldi, PA-C at Concentra Medical Centers. PA-C Grimaldi recorded that she had difficulty understanding the exact mechanism of Claimant’s injury. She noted that Claimant developed right knee pain when she was walking and hit something hard with her right foot. Claimant then went forward and hit her right knee, but did not strike the ground. PA-C Grimaldi noted Claimant’s pain at a level of 10/10. Claimant had difficulty walking, arrived in a wheelchair and was using a cane to ambulate. Claimant noted she had chronic knee pain for years and used a knee brace. Physical examination was difficult because Claimant experienced pain with all movements. Claimant underwent x-rays that were normal. PA-C Grimaldi administered a Toradol injection and prescribed medication, a “hinged” knee brace, pain gel and physical therapy. She also assigned work restrictions.

10. Claimant initially denied any prior right knee injuries during the evaluation with PA-C Grimaldi. However, while at the appointment, a medical assistant overheard Claimant discussing a right knee injury with her husband that occurred at a “mosh pit” in November 2019. Because the medical assistant relayed the information to PA-C Grimaldi, she asked Claimant again about prior injuries. Claimant acknowledged she had suffered a right knee injury a couple of months earlier when she was in a mosh pit. At hearing, Claimant explained that her husband pressured her not to disclose her right knee problems to her medical providers.

11. On February 1, 2020 Claimant visited Marc Passo, M.D. at Arvada Emergency and Urgent Care. Dr. Passo reported that Claimant was experiencing right knee pain from a trip and fall at work one day earlier. Claimant disclosed she injured her

right knee in November 2019, but her condition improved without any acute medical intervention. X-rays were again normal and a physical examination revealed right knee swelling.

12. On February 3, 2020 Misty Merritt filed Employer's First Report of Injury on behalf of Respondents. Ms. Merritt reported that Claimant injured her right knee on January 31, 2020. The document noted that at the time of injury Claimant was walking and looking at a piece of paper. She then tripped over a bag that was sitting on the floor.

13. On February 4, 2020 Claimant returned to Concentra and was evaluated by Janine Kennedy, PA-C under the supervision of Authorized Treating Physician (ATP) Amanda Cava, M.D. PA-C Kennedy reported that Claimant was utilizing crutches and needed adjusted restrictions to allow her to return to work. A physical examination revealed limited flexion and extension. PA-C Kennedy requested Claimant's medical records regarding her prior right knee treatment. She diagnosed Claimant with a sprain or strain of the right knee or lower extremity. PA-C Kennedy instructed Claimant to continue physical therapy and use the brace and crutches. She limited Claimant to sedentary work only,

14. On February 11, 2020 Claimant returned to PA-C Kennedy for an evaluation. During the physical examination Claimant demonstrated limited flexion and extension. PA-C Kennedy referred Claimant for an MRI and instructed her to continue physical therapy and medications.

15. On February 17, 2020 Claimant underwent a right knee MRI. The MRI revealed a large medial meniscus bucket-handle tear with moderately advanced patellofemoral chondromalacia and arthritis.

16. On February 27, 2020 Claimant was evaluated by John Papilion, M.D. Dr. Papilion reported that Claimant injured her right knee while walking in a warehouse at work when she caught her right foot, twisted her right knee and fell to the ground. Claimant developed significant swelling within 24 hours and has been unable to extend the knee since the incident. Although Claimant disclosed a right knee injection approximately five years earlier, she did not mention the November 2019 mosh pit incident. Dr. Papilion diagnosed an incarcerated bucket-handle tear of the right medial meniscus. He determined that Claimant required surgery to address her ongoing right knee issues and noted she could not extend her knee due to the locked meniscus. On February 28, 2020 Dr. Papilion requested authorization to perform surgery on Claimant's right knee.

17. On March 11, 2020 Respondents filed a Notice of Contest.

18. On March 12, 2020 Claimant provided a recorded statement to Sue Massey on behalf of Respondents. Claimant disclosed her chronic knee pain, stated that she had received a cortisone injection in the past and noted she injured her right knee in a mosh pit incident in November 2019. She relayed that on January 31, 2020 she was reading a cycle count sheet while walking through her store when she struck her right foot against a roll of floor dry material. Claimant specified that she did not trip or strike her knee, but instead slowly lowered herself to the ground.

19. On March 16, 2020 Clamant returned for an evaluation with PA-C Kennedy at Concentra. PA-C Kennedy noted that Claimant had suffered a knee sprain with a large bucket handle tear of the medial meniscus. She remarked that the requested medical records for prior right knee injuries "did not supply much information as there was a limited knee exam done at the time and no imaging and therefore do not support a significant prior knee injury." PA-C Kennedy summarized that Claimant had not made any further progress in physical therapy and still could not fully flex or extend her right knee.

20. On March 19, 2020 Respondents sent a denial of the requested right knee surgery to Dr. Papilion.

21. On July 14, 2020 Claimant underwent an independent medical evaluation with Timothy O'Brien, M.D. Dr. O'Brien recorded that on January 31, 2020 she was pushing a cart, struck her right foot and jolted her right knee. She did not fall, but slowly lowered herself to the ground. Dr. O'Brien remarked that Claimant did not twist her knee or slip. Claimant did not describe hitting her knee but only her foot. He reviewed Claimant's medical records and conducted a physical examination. Dr. O'Brien explained that Claimant was not a "creditable, reliable, or trustworthy examinee and therefore her representation that she sustained a work injury on January 31, 2020 by hitting her foot against an object should not be supported." He detailed that Claimant was not forthcoming with Dr. Papilion at her first evaluation, with PA-C Grimaldi on January 31, 2020 or with PA-C Kennedy on February 4, 2020. Dr. O'Brien commented that Claimant should have apprised the three examiners that she sustained an injury requiring treatment weeks earlier. Furthermore, Claimant made historical revisions and exhibited inconsistencies about the mechanism of her January 31, 2020 injury. Moreover, in 2015 Claimant "had significant symptomology following an innocuous daily activity such as leaning forward" that was consistent not only with osteoarthritis but also a meniscus tear. In fact, the examiner in 2015 suggested arthroscopic surgery might be indicated and initiated an orthopedic referral, but Claimant did not follow through. Dr. O'Brien determined that it was medically probable that Claimant had a meniscus tear in 2015.

22. Dr. O'Brien also explained that Claimant's described mechanism of injury on January 31, 2020 would not have caused a meniscus tear. Specifically, kicking something with the foot or hitting the knee after kicking something with the foot is not an injury mechanism that produces a meniscus tear. Dr. O'Brien detailed that meniscus tears occur when the foot remains planted and the body rotates through a knee that is either actively flexing or extending. He noted that many times meniscus tears occur on fields of play such as soccer and football. Dr. O'Brien summarized that the most contemporaneous historical input provided by PA-C Grimaldi on the date of the incident "was not consistent with that type of injury mechanism that would produce a meniscus tear." He determined that Claimant had a pre-existing bucket-handle meniscus tear. Accordingly, Claimant did not suffer a right knee meniscus tear while working for Employer on January 31, 2020.

23. On November 5, 2020 Respondents sent a letter to ATP Dr. Cava asking her to review Dr. O'Brien's independent medical examination and complete a questionnaire. On December 3, 2020 Dr. Cava submitted answers. The first question inquired whether Claimant suffered a work related injury on January 31, 2020. Dr. Cava stated that, after considering Claimant's pre-existing injuries and the "very mild

mechanism" that occurred on January 31, 2020, her "meniscal tear was not work-related." Question number six asked about Claimant's permanent work restrictions. Dr. Cava responded "[a]s the meniscal injury is not work-related, any permanent work restrictions should come from personal physician," Finally, Dr. Cava agreed that Claimant's symptoms constituted a "personal health issue."

24. On December 7, 2020 the parties conducted the pre-hearing evidentiary deposition of Dr. O'Brien. He maintained that Claimant did not suffer an industrial injury to her right knee while working for Employer on January 31, 2020. He remarked that Dr. Papilion over-interpreted the MRI findings and they did not reflect surgical intervention by way of arthroscopy was emergent or necessary. Instead, the bucket handle meniscus tear shown on the MRI was not caused by the January 31, 2020 incident because there was no evidence of an acute injury. Instead, Dr. O'Brien reasoned that Claimant had some type of meniscus tear dating back to 2015 that was substantial enough to result in a wobbly and very unstable knee. He detailed that Claimant's symptoms included right knee locking, popping, instability and giving way. Dr. O'Brien noted that Claimant's complaints in 2015 constituted "classic symptoms" for a medial meniscus. In fact, the treatment provider at the time suggested an orthopedic referral and possible arthroscopic surgery. Moreover, Claimant suffered another substantial injury in a mosh pit in November 2019. Dr. O'Brien remarked that when Claimant visited PA-C Nguyen on December 9, 2019 at St. Anthony's Family Medicine North she stated that she was shouldered in the knee when another person was falling. The mechanism was also described as an aversion injury where the knee was flexed laterally. Dr. O'Brien explained that, although Claimant did not specifically mention the mosh pit, there was an event in which someone fell into Claimant's right knee and forced the knee outward. He characterized the accident as "a tackling type of injury" that would occur on a football or soccer field. He remarked that "this is a classic injury for something that would consistently produce a meniscus tear." Dr. O'Brien summarized that Claimant had a meniscal tear in 2015 and developed similar symptoms as a result of the November 2019 mosh pit incident.

25. Dr. O'Brien also explained that Claimant's January 31, 2020 mechanism of injury would not have caused a meniscus tear. He commented that, because Claimant's foot was in motion, she was in a single-leg stance on the left moving her foot forward on the right at the time her foot impacted the object. Her right foot could not have been planted on the ground. The preceding action could not have produced a tear because the meniscus tears when the foot is planted and there is torsion and sometimes direct loading of the knee. Meniscus tears can only be produced in the lab when the foot is stationary. Dr. O'Brien detailed that the January 31, 2020 incident did not involve any torsion. He remarked that, when any individual kicks an object, there is a straightforward force that loads the patellofemoral joint. In contrast, the mosh pit incident created a load between the femorotibial part of the knee that compressed the meniscus. Dr. O'Brien further reasoned that the right knee MRI revealed arthritis at the patellofemoral joint. When she kicked an immovable object, she loaded the arthritic patellofemoral joint, not the femorotibial joint or meniscus. Claimant's right knee pain was thus consistent with her underlying arthritic condition at the patellofemoral joint that manifested itself when her foot struck an immovable object. Nevertheless, Claimant did not suffer an injury on January 31, 2020 because there was no bruising and the right knee appeared normal. Moreover, the MRI scan did not reflect any evidence of an acute injury. Although Claimant

had pain in her arthritic joint, there was no new tissue breakage or yielding. Accordingly, Claimant did not suffer an injury to her right knee meniscus while working for Employer.

26. Dr. O'Brien concluded that, within a reasonable degree of medical probability, Claimant did not suffer an injury that required medical treatment as a result of the January 31, 2020 work incident. He summarized that Claimant had some type of meniscus tear dating back to 2015 that was substantial enough to result in a wobbly and very unstable knee. Moreover, Claimant suffered another substantial injury in a mosh pit in November 2019. Finally, Dr. O'Brien did not believe Dr. Papilion knew about Claimant's medical history and over-interpreted the MRI scan. Furthermore, the mechanism and forces created by kicking an object would not have caused a meniscus tear. Although Claimant may have been more susceptible to pain as a result of kicking an object due to significant right knee degeneration, she did not suffer a right knee injury. Accordingly, Claimant did not suffer an industrial injury to her right knee while working for Employer on January 31, 2020.

27. Claimant has failed to demonstrate that it is more probably true than not that she suffered a compensable right knee injury during the course and scope of her employment with Employer on January 31, 2020. Initially, Claimant explained that on the morning of January 31, 2020 she was reading a cycle count sheet while hastily walking through Employer's facility. She struck her right foot against a roll of dense carpet-like material and immediately experienced right knee pain. Employer referred Claimant to Concentra for medical treatment. Medical providers diagnosed Claimant with a sprain or strain of the right knee or lower extremity. Claimant subsequently received conservative treatment in the form of physical therapy and medications. A February 17, 2020 right knee MRI revealed a large medial meniscus bucket-handle tear with moderately advanced patellofemoral chondromalacia and arthritis. Dr. Papilion subsequently diagnosed an incarcerated bucket-handle tear of the right medial meniscus. On February 28, 2020 Dr. Papilion sought authorization to perform surgery on Claimant's right knee. Respondents denied the surgical request.

28. The record reveals that Claimant had the following significant pre-existing right knee problems prior to the January 31, 2020 incident:

- Claimant's previous right knee issues dated back to at least 2015 and included a positive McMurray's test with referral to an orthopedic specialist regarding possible surgical intervention;

- Claimant had ongoing popping in her knee where she would feel like she would need to fall down at times;

- Claimant had an injury to her right knee in November of 2019 when it was impacted by another person's shoulder in a mosh pit. Medical records reveal Claimant presented with bruising and swelling of her right knee after the incident;

- On Thanksgiving Day 2019 Claimant again sought treatment for pain in her right knee after it popped while simply walking and she had to sit down due to significant pain.

- Claimant was continuing to treat for pain associated with her right knee issues on January 31, 2020. She had been wearing a knee sleeve or brace and took Ibuprofen for pain shortly before the work incident.

29. In addition to Claimant's pre-existing right knee symptoms, the persuasive opinions of Drs. O'Brien and Cava also reflect that it is unlikely Claimant suffered a right knee injury during the course and scope of her employment with Employer on January 31, 2020. Dr. O'Brien maintained that the bucket handle meniscus tear shown on the MRI was not caused by the January 31, 2020 incident because there was no evidence of an acute injury. Instead, Dr. O'Brien specified that Claimant's significant right knee symptoms in 2015 were consistent with a meniscus tear. He detailed that Claimant's symptoms included right knee locking, popping, instability and giving way. Moreover, Claimant suffered another substantial injury in a mosh pit in November 2019. Dr. O'Brien explained that, although Claimant did not specifically mention the mosh pit, there was an event in which someone fell into her right knee and forced the knee outward. He remarked that "this is a classic injury for something that would consistently produce a meniscus tear." Dr. O'Brien summarized that Claimant had a meniscal tear in 2015 and developed similar symptoms as a result of the November 2019 mosh pit incident. The persuasive opinion of Dr. O'Brien thus reveals that Claimant's right knee meniscus tear likely preceded the January 31, 2020 work incident.

30. Claimant's January 31, 2020 mechanism of injury also likely would not have caused a meniscus tear. Dr. O'Brien commented that the January 31, 2020 event could not have produced a tear because the meniscus tears when the foot is planted and there is torsion and sometimes direct loading of the knee. He remarked that, when an individual kicks an object, there is a straightforward force that loads the patellofemoral joint. In contrast, the mosh pit incident created a load between the femorotibial part of the knee that compressed the meniscus. Dr. O'Brien further reasoned that the right knee MRI revealed arthritis at the patellofemoral joint. Claimant's right knee pain was very consistent with her underlying arthritic condition at the patellofemoral joint that manifested itself when her foot struck an immovable object. Nevertheless, Claimant did not suffer an injury on January 31, 2020 because there was no bruising and the right knee appeared normal. Moreover, the MRI scan did not reflect any evidence of an acute injury. Although Claimant had pain in her arthritic joint, there was no new tissue breakage or yielding. Furthermore, ATP Dr. Cava persuasively agreed with Dr. O'Brien's assessment. On December 3, 2020 Dr. Cava submitted answers to Respondents' questionnaire. The first question inquired whether Claimant suffered a work related injury on January 31, 2020. Dr. Cava stated that, after considering Claimant's pre-existing injuries and the "very mild mechanism" that occurred on January 31, 2020, her "meniscal tear was not work-related." Based on Claimant's pre-existing right knee condition as well as the persuasive opinions of Drs. O'Brien and Cava, Claimant did not likely suffer an injury to her right knee meniscus while working for Employer. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAO, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO, Feb. 15, 2007); *David Mailand v. PSC Industrial Outsourcing LP*, W.C. No. 4-898-391-01, (ICAO, Aug. 25, 2014).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAO, Aug. 18,

2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAO, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAO, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. The provision of medical care based on a claimant's report of symptoms does not establish an injury but only demonstrates that the claimant claimed an injury. *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020). Moreover, a referral for medical care may be made so that the respondent would not forfeit its right to select the medical providers if the claim is later deemed compensable. *Id.* Because a physician provides diagnostic testing, treatment, and work restrictions based on a claimant's reported symptoms does not mandate that the claimant suffered a compensable injury. *Fay v. East Penn manufacturing Co., Inc.*, W.C. No. 5-108-430-001 (ICAO, Apr. 24, 2020); *cf. Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. App. 1997) ("right to Workers' Compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence, that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment"). While scientific evidence is not dispositive of compensability, the ALJ may consider and rely on medical opinions regarding the lack of a scientific theory supporting compensability when making a determination. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO, June 3, 2020).

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered a compensable right knee injury during the course and scope of her employment with Employer on January 31, 2020. Initially, Claimant explained that on the morning of January 31, 2020 she was reading a cycle count sheet while hastily walking through Employer's facility. She struck her right foot against a roll of dense carpet-like material and immediately experienced right knee pain. Employer referred Claimant to Concentra for medical treatment. Medical providers diagnosed Claimant with a sprain or strain of the right knee or lower extremity. Claimant subsequently received conservative treatment in the form of physical therapy and medications. A February 17, 2020 right knee MRI revealed a large medial meniscus bucket-handle tear with moderately advanced patellofemoral chondromalacia and arthritis. Dr. Papilion subsequently diagnosed an incarcerated bucket-handle tear of the right medial meniscus. On February 28, 2020 Dr. Papilion sought authorization to perform surgery on Claimant's right knee. Respondents denied the surgical request.

9. As found, the record reveals that Claimant had the following significant pre-existing right knee problems prior to the January 31, 2020 incident:

- Claimant's previous right knee issues dated back to at least 2015 and included a positive McMurray's test with referral to an orthopedic specialist regarding possible surgical intervention;

- Claimant had ongoing popping in her knee where she would feel like she would need to fall down at times;

- Claimant had an injury to her right knee in November of 2019 when it was impacted by another person's shoulder in a mosh pit. Medical records reveal Claimant presented with bruising and swelling of her right knee after the incident;

- On Thanksgiving Day 2019 Claimant again sought treatment for pain in her right knee after it popped while simply walking and she had to sit down due to significant pain.

- Claimant was continuing to treat for pain associated with her right knee issues on January 31, 2020. She had been wearing a knee sleeve or brace and took Ibuprofen for pain shortly before the work incident.

10. As found, in addition to Claimant's pre-existing right knee symptoms, the persuasive opinions of Drs. O'Brien and Cava also reflect that it is unlikely Claimant suffered a right knee injury during the course and scope of her employment with Employer on January 31, 2020. Dr. O'Brien maintained that the bucket handle meniscus tear shown on the MRI was not caused by the January 31, 2020 incident because there was no evidence of an acute injury. Instead, Dr. O'Brien specified that Claimant's significant right knee symptoms in 2015 were consistent with a meniscus tear. He detailed that Claimant's symptoms included right knee locking, popping, instability and giving way. Moreover, Claimant suffered another substantial injury in a mosh pit in November 2019. Dr. O'Brien explained that, although Claimant did not specifically mention the mosh pit, there was an event in which someone fell into her right knee and forced the knee outward. He remarked that "this is a classic injury for something that would consistently produce a meniscus tear." Dr. O'Brien summarized that Claimant had a meniscal tear in 2015 and developed similar symptoms as a result of the November 2019 mosh pit incident. The persuasive opinion of Dr. O'Brien thus reveals that Claimant's right knee meniscus tear likely preceded the January 31, 2020 work incident.

11. As found, Claimant's January 31, 2020 mechanism of injury also likely would not have caused a meniscus tear. Dr. O'Brien commented that the January 31, 2020 event could not have produced a tear because the meniscus tears when the foot is planted and there is torsion and sometimes direct loading of the knee. He remarked that, when an individual kicks an object, there is a straightforward force that loads the patellofemoral joint. In contrast, the mosh pit incident created a load between the femorotibial part of the knee that compressed the meniscus. Dr. O'Brien further reasoned that the right knee MRI revealed arthritis at the patellofemoral joint. Claimant's right knee pain was very consistent with her underlying arthritic condition at the patellofemoral joint that manifested itself when her foot struck an immovable object. Nevertheless, Claimant

did not suffer an injury on January 31, 2020 because there was no bruising and the right knee appeared normal. Moreover, the MRI scan did not reflect any evidence of an acute injury. Although Claimant had pain in her arthritic joint, there was no new tissue breakage or yielding. Furthermore, ATP Dr. Cava persuasively agreed with Dr. O'Brien's assessment. On December 3, 2020 Dr. Cava submitted answers to Respondents' questionnaire. The first question inquired whether Claimant suffered a work related injury on January 31, 2020. Dr. Cava stated that, after considering Claimant's pre-existing injuries and the "very mild mechanism" that occurred on January 31, 2020, her "meniscal tear was not work-related." Based on Claimant's pre-existing right knee condition as well as the persuasive opinions of Drs. O'Brien and Cava, Claimant did not likely suffer an injury to her right knee meniscus while working for Employer. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: January 29, 2021.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that Respondents have waived their right to select an ATP, thus making Dr. Kenneth Danylchuk Claimant's ATP?

II. Have Respondents shown, by a preponderance of the evidence, that Claimant, by refusing several demand appointments, persisted in an injurious practice which tended to imperil or retard his recovery, or refused to submit to medical treatment as reasonably essential to promote recovery?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Injury, and Subsequent Treatment

1. Claimant suffered an injury to his low back on December 6, 2019, while attempting to pat down an inmate. Claimant reported the injury to his employer on December 8, 2019. Claimant elected to receive care through Centura Centers for Occupational Medicine ("CCOM").

2. Claimant first saw Brendon Madrid, NP, at CCOM on December 9, 2019. (Ex. E). Claimant subsequently saw Daniel Olson, M.D., at CCOM. Claimant acknowledged at hearing that he might have been referred to a different orthopedist by Dr. Olson, but cannot recall the name, nor did he consult with him. The record is devoid of any formal referral process or documentation.

3. Respondents filed a Notice of Contest for further investigation on January 28, 2020.

4. Claimant presented to Kenneth Danylchuk, M.D., at St. Mary Corwin Hospital in January of 2020 due to issues with incontinence. Dr. Danylchuk was not in the chain of referral from CCOM. After Claimant continued to have issues, Dr. Danylchuk performed emergency surgery (laminectomy) on February 18, 2020. There is no dispute in the record that this surgery was of an *emergent nature*, and the ALJ so finds.

5. Respondents denied this surgery, as the claim was presented under a Notice of Contest at the time. However, at hearing, the Adjuster indicated that Respondents were willing to pay for *nonsurgical* treatment with Dr. Danylchuk since February 2020.

6. Claimant subsequently returned to CCOM and treated through Dr. Olson post-operatively. Claimant likewise maintained follow-up visits through Dr. Danylchuk for post-operative recommendations and treatment.

Denial of Treatment by Dr. Olson

7. On April 9, 2020, Claimant saw Dr. Olson for a follow-up visit. At this visit, Dr. Olson noted:

> He [Claimant] continues to have diffuse back pain. He's got discomfort in his buttocks. He states he has numbness in his feet and continues to have a waddling gait. He continues to notice some urgency but has not had any accidents. His pain level is 4. (Ex. 4, p. 33).

Under Medical Causation, Dr. Olson notes: *"The cause of this problem is related to work activities." Id* at 34. (emphasis added).

8. Dr. Olson noted, apparently for the first time, that the insurance company had denied the case. (Ex. B, p. 7). Dr. Olson stated that "Since the insurance company has denied the claim I will not set up any further follow-ups at this time. If they change their mind I would be happy to see him again." *Id* at 8. Dr. Olson further indicated that Claimant would continue follow-ups with Dr. Danylchuk and possibly Dr. Leggett. There was, however, no indication in the record of a formal transfer of care by Dr. Olson to another provider, or an offer to transfer medical records to another provider.

9. Respondents now allege that Claimant's former attorney withdrew from the claim on April 16, 2020, and that Claimant's present attorney entered his appearance with the DOWC and OAC on April 17, 2020. However, there is neither testimony nor documentation in the record to substantiate those dates. What is clear from the testimony is that Claimant's original [first] attorney withdrew from representation sometime in April, 2020, and a substitution occurred at some point thereafter.

Claimant's Hearing Testimony

10. At hearing, Claimant acknowledged that he did not send notice to Respondents notifying of the discharge or requesting additional treatment through another provider. Claimant testified that he did notify his [first] attorney at the time that he was discharged from care and wanted additional treatment. Claimant testified that he was not aware of whether his first attorney sent notice to Respondents requesting to see another provider. There is no evidence that Claimant or his first attorney submitted notice to Respondents regarding the discharge, or a request to transfer care to another provider.

Hearing Testimony of Adjuster Patricia Richardson

11. Patricia Richardson is the claims adjuster assigned to this claim. At hearing, she testified that the Insurer did not receive notice of discharge within three business days from Dr. Danylchuk, or receive any offer to transfer care or medical records to another provider. She testified that she never received any notification by certified mail, and that no one at the insurer ever signed a return receipt. She testified that treatment through Dr. Olson or CCOM was never denied, and that to her knowledge, no notice was ever sent by Insurer to Dr. Olsen indicating treatment was being denied.

12. Ms. Richardson further testified that the Insurer never received any notice *from Claimant or his attorney* that his treatment was being denied, or a request to transfer care or medical records to a new provider. She stated that she did not send the Notice of Contest directly to Dr. Olson, but "If they [CCOM} asked for it [Notice of Contest], we would've." She did not know *how* Dr. Olson became aware of the Notice of Contest.

13. However, she testified that she did receive the April 9, 2020 medical report from Dr. Olsen on an unspecified date in April, but that *she believed Dr. Olson was still willing to see the Claimant* based on his statement in the report. [The ALJ finds this to be a breathtakingly strained interpretation of Dr. Olson's report; to her credit, Ms. Richardson backed off this interpretation later in the hearing].

14. Ms. Richardson further testified that she did not reach out to Claimant or his [then] attorney and indicate that Insurer would, in fact, continue to pay for treatment with Dr. Olson- or some other physician. Nor did she contact Dr. Olsen to inform him that Insurer would, in fact, pay for Claimant's continued treatment. She stated that no correspondence (nor any other effort) from Insurer tried to get Claimant back to CCOM since Dr. Olson's 4/9/2020 letter until September, 2020.

15. Ms. Richardson testified that because Claimant had retained an attorney, she refrained from communication with either Claimant or Dr. Olson. She was not aware that Dr. Olson had retired until August of 2020, when she made an effort to set up an appointment, since the General Admission of liability had just been filed.

16. Ms. Richardson stated that Insurer has been paying Dr. Danylchuk's bills (at least those bills that he forwarded to Insurer) for services since February of 2020, but not for the surgery itself. She stated that she did not know if Insurer had reimbursed the private health carrier for the surgery, and stated that Insurer has not reimbursed Claimant for his payments towards the surgery, since, "it hasn't been requested."

A GAL is filed, but no ATP is agreed upon

17. Respondents eventually filed a GAL on August 24, 2020. (Ex. A). The record is unclear why, or under what circumstances, Respondents waited until August to admit this claim.

18. Claimant then filed this Application for Hearing on September 24, 2020, with the sole issue for determination being Authorized Medical Provider.

19. Respondents' then contacted CCOM and learned that Dr. Centi was the only presiding physician at the facility after Dr. Olson's retirement. Respondents scheduled Claimant for an appointment at CCOM, and sent a letter to Dr. Centi on September 4, 2020. That letter requested that Dr. Centi resume treatment at CCOM, as Dr. Olson had retired. (Ex. D, p. 27). Claimant's attorney objected to return to CCOM, specifically with Dr. Centi.

20. Respondents scheduled Claimant for a visit with Dr. Centi on October 12, 2020, and notified Claimant (through his attorney of record at that time, [Redacted]) of such in a letter sent on September 29, 2020. (Ex. D, p. 32). Claimant did not attend, as he objected to Dr. Centi on a personal basis.

21. Respondents made a second effort to bring Claimant to treatment at CCOM, and scheduled an appointment on October 26, 2020, with notice to Claimant by letter to Mr. S[Redacted] on October 14, 2020. (Ex. D, p. 33). Claimant did not attend.

22. On November 9, 2020, Dr. Centi indicated, in a reply to correspondence from Respondents, that he was no longer willing to see Claimant, because he had two no-shows at the CCOM office. (Ex. D, p. 36).

23. After an effort to negotiate providers, Respondents designated J.D. Bradley, M.D., at Concentra, due to Dr. Centi's refusal to treat. There were apparently no other Level II accredited physicians remaining at CCOM. In a letter to Mr. S[Redacted] dated December 4, 2020, Respondents scheduled Claimant for an appointment with Dr. J.D. Bradley on December 15, 2020. (Ex. D, p. 38). Claimant did not attend this December 15, 2020 appointment.

24. As of the date of hearing, Claimant has continued to receive bills from service providers (including anesthesia and surgical center) in connection with the emergency surgery by Dr. Danylchuk in February of 2020. (Ex. 1, pp. 1-15). Claimant continues to make partial payments towards these bills, but some have now gone to collections. *Id*.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability

and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing the weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Moreover, the weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of an expert witness. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

4. In this instance, each party presented one witness. The ALJ finds Ms. Richardson to have testified sincerely overall, with the conspicuous exception of her initial interpretation of Dr. Olson's 4/9/2020 report re: "if *they* change their mind." To her credit she later appeared to back off that interpretation, but in the process, it was exposed that this file simply got away from her, leaving Claimant to his own devices. Another problematic interpretation is her stated willingness, on behalf of Insurer, to provide conservative care through Dr. Danylchuk all along, but not the surgery itself. Given Claimant's desperate circumstances, this seems akin to offering a gunshot victim pain medication and hrypnotherapy, but not surgery to remove the bullet.

5. As a result, Claimant (who the ALJ finds to be credible throughout) haplessly found himself in a tug-off-war between an Insurer who wished to deny an emergency work-related surgery, and his own attorney, who is reluctant to send him to a different Level II

physician, lest it be deemed a waiver of the right to choose his ATP. The results have been unfortunate.

Right of ATP Selection

6. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

7. In this case, there is no dispute that Claimant chose CCOM in the first instance. Further, there is nothing to suggest that his choice was confined to Dr. Olson specifically; rather, CCOM *as a facility* was chosen as Claimant's ATP, including NP Madrid, as well as all physicians on staff. This arrangement worked fine for a while, to everyone's apparent satisfaction.

8. However, §8-43-404(5), C.R.S. implicitly contemplates that the Respondent will designate a physician who is willing to provide treatment. *See Ruybal v. University Health Sciences Center*, 768 P.2d 1259, 1260 (Colo. App. 1988). If the employer fails to timely tender the services of a physician, the right of selection passes to the claimant and the selected physician becomes an ATP. *See Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987); *Garrett v. McNelly Construction Company, Inc.*, W.C. No. 4-734-158 (ICAO, Sept. 3, 2008). Whether the ATP refused to treat the claimant for non-medical reasons, whether the insurer received notice of the refusal to treat and whether the insurer "forthwith" designated a physician who was willing to treat the claimant are questions of fact for resolution by the ALJ*. Garrett v. McNelly Construction Company, Inc.*, W.C. No. 4-734-158 (ICAP, Sept. 3, 2008); *see Ruybal*, 768 P.2d at 1260.

9. The ALJ finds and concludes that Dr. Olson refused treatment for non-medical reasons, effective 4/9/2020. Dr. Olson clearly believed that Claimant's condition was due to work-related reasons. He was aware that Claimant had sought emergency treatment through Dr. Danylchuk, as opposed to through a traditional WC chain of referral. *He was still willing to treat Claimant, knowing all of this.* Through channels which might remain forever a mystery, Dr. Olson became aware that this claim was under a Notice of Contest by Respondents. For that reason alone, Dr. Olson declined further treatment—

unless **Insurer** changed its mind, and reauthorized his involvement. This finally occurred, with the eventual, unexplained filing of the GAL, and subsequent outreach to get CCOM back onboard. In the meantime, Claimant continued to treat with Dr. Danylchuk, which the ALJ finds to have been reasonable and necessary.

10. As a corollary, the ALJ finds that Insurer received *actual notice* of Dr. Olson's 4/9/2020 report sometime later in April of 2020. While the formal procedures were not followed in re-designating an ATP, Insurer knew full well that Dr. Olsen got off the case, and they did…nothing…for over four months. Respondents would now, it appears, place the onus on Claimant to try to clear up any misunderstanding; this, despite that this claim remained under a Notice of Contest until August, 2020. The ALJ cannot accept Respondents' logic that Claimant was responsible to get the case back on track. Respondents' failure to act for over four months after knowing of Dr. Olson's withdrawal does not qualify as "forthwith." As a result, the ALJ concludes that Respondents surrendered any control they might have had over the selection of Claimant's ATP.

Emergency Care by Dr. Danylchuk

11. Section 8-43-404(5)(a), C.R.S. grants employers the initial authority to select the Authorized Treating Physician (ATP). However, in a medical emergency a claimant need not seek authorization from her employer or insurer before seeking medical treatment from an unauthorized medical provider. *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777, 781 (Colo. App. 1990). A medical emergency affords an injured worker the right to obtain immediate treatment without the delay of notifying the employer to obtain a referral or approval. *In Re Gant*, W.C. No. 4-586-030 (ICAP, Sept. 17, 2004). Because there is no precise legal test for determining the existence of a medical emergency, the issue is dependent on the particular facts and circumstances of the claim. *In re Timko,* W.C. No. 3-969-031 (ICAP, June 29, 2005). Once the emergency is over the employer retains the right to designate the first "non-emergency" physician. *Bunch v. Indus. Claim Appeals Office of State of Colorado*, 148 P.3d 381, 384 (Colo. App. 2006); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

12. The ALJ finds that the surgery performed by Dr. Danylchuk in February, 2020 was of an emergency basis. There was no time, therefore, to seek the usual chain of Workers Compensation referrals. Therefore Dr. Danylchuk became an ATP by virtue of the emergency. Had Respondents not issued their Notice of Contest and simply overseen Claimant's care through CCOM, they would have maintained control over the ATP. This did not occur. As a result, Dr. Danylchuk remains Claimant's ATP. One of them, at least.

Penalties for Injurious Practice or Refusal to Submit to Care

13. Section 8-43-404(3), C.R.S., states in pertinent part:

> If any employee persists in any unsanitary or injurious practice which tends to imperil or retard recovery or refuses to submit to such medical or surgical treatment or vocational evaluation as is reasonably essential to promote

> recovery, the director shall have the discretion to reduce or suspend the compensation of any such injured employee.

14. As noted by Claimant, there is no *compensation* for the Director – or ALJ – to suspend, even if Claimant's refusal to attend these appointments were deemed to be injurious. However, the ALJ (and without opining on any allegations towards any other CCOM provider) finds that an Application for Hearing on the very issue of ATP was already pending at the time these demand appointments were set up. Even the adjuster acknowledged that there was a need for a Level II accredited provider, primarily to complete this case and provide a rating. There was no *treatment* being refused; Claimant did not want to accept the offered ATPs, once he felt a waiver had occurred by Respondents. By such actions, Claimant did nothing to retard his own recovery; to the contrary, he sought treatment for a dangerous condition where he could find it, and has apparently, faithfully followed up in an attempt to get better. No penalty claim has been stated by Respondents.

Where do we go from here?

15. Respondents raise a valid point in seeking a Level II accredited physician to be assigned. Dr. Danylchuk is apparently not level II accredited. A Level II physician should oversee all aspects of care farmed out to specialists, place Claimant at MMI, and provide an impairment rating. A Level II physician will be needed here, and the sooner the better. While the ALJ has found that the right of selection fell to Claimant, it is anticipated that Dr. Danylchuk will be best positioned to now designate a Level II provider to finish out the case - unless, of course, the parties can simply come to the table and agree on a new Level II provider.

ORDER

It is therefore Ordered that:

1. Claimant has shown that the right to select an ATP passed to him. Dr. Danylchuk is now an Authorized Treatment provider.

2. Respondents' claim for penalties for an Injurious Practice is denied and dismissed.

3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: January 29, 2021

/s/ William G. Edie

William G. Edie

Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUE

1. Determination of Claimant's average weekly wage effective July 20, 2018.
2. Whether Claimant is entitled to additional temporary disability benefits.
3. Whether Claimant has established by a preponderance of the evidence that the permanent impairment rating assigned by the DIME physician is incorrect.

FINDINGS OF FACT

1. On July 12, 2018, Claimant sustained an admitted work-related injury to her right Achilles tendon arising out of the course of her employment with Employer.

2. In June 2018, Claimant applied for a position with a new employer, Icon Specialties ("ICON"), and interviewed for the position on July 6, 2018. (Ex. 10).

3. On July 6, 2018, Claimant accepted an offer of employment from ICON, with an planned start date of July 30, 2018. Claimant's starting pay at ICON was $23.00 per hour with an anticipated work week of 40 hours per week. (Ex. 10).

4. On July 9, 2018, Claimant notified Employer that she had accepted new employment and provided Employer with two-weeks' notice.

5. On July 12, 2018, Claimant sustained her admitted work-related injury.

6. On July 26, 2018, Claimant saw Robert Watson, M.D., at Workwell. Dr. Watson imposed a work restriction of "no work capacity" until July 30, 2018. (Ex. 6).

7. Due to her work-related injury and work restrictions, Claimant was unable to begin her position at ICON on July 30, 2018 as anticipated.

8. On July 30, 2018, Claimant underwent an MRI of her right ankle which confirmed a tear of the Achilles tendon. The MRI demonstrated that although a thin strand of the tendon was attached, functionally, the tendon was completely torn. (Ex. D).

9. On July 31, 2018, Dr. Watson changed Claimant's work status to "Restricted Duty," imposing restrictions of sitting work only, using crutches, and no driving until August 14, 2018. (Ex. 6).

10. On August 10, 2018, Claimant underwent surgical repair of her Achilles tendon tear. (Ex. 3).

11. On August 27, 2018, Dr. Watson changed Claimant's work status to "No Work Capacity" until her next visit, two weeks later. (Ex. 6).

12. On September 10, 2018, Dr. Watson revised Claimant's work status to "Restricted Duty," including restrictions for sitting work only, being allowed to elevate her right leg, use of crutches and no driving. The work restriction remained unchanged until November 19, 2018. (Ex. 6).

13. On September 14,2018, Claimant's right ankle range of motion was measured during physical therapy as -25° dorsiflexion, 71° plantar flexion, 40° inversion, and 13° eversion. (Ex. A).

14. On November 16, 2018, Claimant's right ankle range of motion was measured during physical therapy as -25° dorsiflexion, 71° plantar flexion, 40° inversion, and 13° eversion. (Ex. A & 6).

15. On November 19, 2018, Katherine Drapeau, D.O. of WorkWell, modified Claimant's work restrictions to sitting work only and being allowed to elevate her right leg. (Ex. 6).

16. On December 3, 2018, Dr. Drapeau again modified Claimant's work restrictions to four hour shifts per day, with total of two hours walking and two hours sitting per day, alternating as needed, and no lifting more than 5 pounds. This work restriction remained in place until March 12, 2019, when she was placed on regular duty by Dr. Watson.

17. On December 3, 2018, Claimant was able to start her position at ICON, working four hours per day. ICON was able to accommodate Claimant's work restrictions at that time. (Ex. 10).

18. On February 19, 2019, Claimant's ankle range of motion was measured during physical therapy. Claimant's measurements were 3° dorsiflexion, 76° plantar flexion, 38° inversion, and 16° eversion. (Ex. A).

19. On March 7, 2019, Claimant underwent an IME performed by Wallace Larson, M.D., at Respondents' request. Dr. Larson measured the range of motion of Claimant's right ankle as 10° dorsiflexion, 50° plantar flexion, 40° inversion, and 20° eversion. Dr. Larson opined that Claimant reached MMI on March 7, 2019 and assigned a 4% lower extremity impairment rating for Claimant's right ankle. (Ex. D).

20. On March 12, 2019, Dr. Watson modified Claimant's work restrictions and authorized Claimant to return to regular duty. (Ex. 6).

21. In April 2019, Dr. Watson modified Claimant's work restrictions, and recommended that Claimant be limited to only seated work. (Ex. 6, Ex. C).

22. ICON was unable to accommodate Claimant's "sitting only" work restriction and terminated Claimant. Claimant's last week with ICON was the week of April 26, 2019 and her last paycheck was on May 3, 2019. (Ex. 10). Based on Claimant's payroll records,

the ALJ infers that Claimant's last date of employment with ICON was Sunday, April 28, 2019[1].

23. On October 29, 2019, Dr. Watson modified Claimant's work restriction to limiting walking to 15 minutes per hour. (Ex. 6).

24. On December 10, 2019, Dr. Watson opined that Claimant was at maximum medical improvement (MMI) on that date. Dr. Watson measured Claimant's right ankle range of motion as 5° dorsiflexion, 50° plantar flexion, 30° inversion, and 5° eversion. Dr. Watson assigned Claimant a right lower extremity permanent impairment of 5% based on loss of dorsiflexion and 3% based on loss of eversion, for a combined impairment rating of 8%. Dr. Watson indicated that Claimant's work status was "Restricted Duty" effective December 10, 2019, with a permanent restriction to limit walking to 30 minutes per hour. (Ex. 4).

25. On May 14, 2020, Claimant underwent a Division independent medical examination (DIME) with Kathy McCranie, M.D. Dr. McCranie agreed Claimant was at MMI on the date assigned by Dr. Watson Dr. McCranie measured Claimant's right ankle range of motion as 5° dorsiflexion, 65° plantar flexion, 32° inversion, and 22° eversion. Based on her evaluation, Dr. McCranie assigned a 5% permanent impairment rating of the right lower extremity for loss of motion of the right ankle (entirely attributed to loss of range of motion in dorsiflexion). Dr. McCranie noted that Claimant had been given a permanent work restriction limiting walking to 30 minutes per hour, which Dr. McCranie found reasonable. (Ex. A).

26. On June 24, 2020, Respondents filed a Final Admission of Liability admitting permanent partial disability benefits based on Dr. McCranie's impairment rating, and for temporary disability benefits as follows:

a. Temporary Total Disability (TTD) benefits from July 13, 2018 through December 5, 2018 at the rate of $257.57 per week (totaling $5,747.60).

b. Temporary Partial Disability (TPD) benefits from December 6, 2018 through March 11, 2019 in the total amount of $1,593.11.

c. TTD benefits from June 18, 2019 through December 9, 2019 at the rate of $257.57 per week (totaling $6,889.25).

(Ex. A).

27. Respondents admitted to an average weekly wage of $413.35, which resulted in an admitted disability rate of $275.57 per week. (Ex. A).

28. Claimant's Exhibit 10 includes partial wage records for the period of December 3, 2018 through February 3, 2019. Payroll records for the period of December 24, 2018-

[1] Claimant's pay stubs show that the final day of each pay period was a Sunday, and that pay checks were issued five days later.

December 30, 2019, January 28, 3019 – February 3, 2019 and March 4, 2019 – March 11, 2019 are not included in the Court record. (Ex. 10).

29. Claimant credibly testified that she did not earn any wages between April 26, 2019 and December 10, 2019.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

AVERAGE WEEKLY WAGE and TEMPORARY DISABILITY BENEFITS

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's Average Weekly Wage (AWW) on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993).

"The entire objective of wage calculation [under the Act] is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. Although [AWW] generally is determined from the employee's wage at the time of injury, if for any reason this general method will not render a fair computation of wages, the administrative tribunal has long been vested with discretionary authority to use an alternative method in determining a fair wage." *Avalanche Indus., Inc. v. Indus. Claim Appeals Office,* 166 P.3d 147, 153 (Colo. App. 2007), *aff'd sub nom. Avalanche Indus., Inc. v. Clark*, 198 P.3d 589 (Colo. 2008), as modified on denial of reh'g (Jan. 20, 2009) Citing Campbell v. IBM Corp., supra, 867 P.2d at 82 (citation omitted).

The statute provides an ALJ "with broad discretion to determine whether the circumstances of a particular case requires [the ALJ] to employ an alternative method of computing compensation benefits based upon the employee's average wage." Coates, Reid & Waldron v. Vigil, 856 P.2d 850 (Colo. 1993). An AWW determination may be based on anticipated wages when such wages were foreseeable. For example, in Pizza Hut v. Indus. Claim Appeals Office, 18 P.3d 867, 868 (Colo. App. 2001), a pizza delivery driver who had been attending nursing school and obtained employment at a hospital shortly after the accident was awarded the higher average weekly wage associated with the nursing position. The ALJ found that the wage paid by the employer at the time of the accident "would significantly understate the impact of Claimant's injury on his future loss of earning capacity." *Id.*

The ALJ finds that Claimant has proven by a preponderance of the evidence that her AWW as of July 30, 2018 was $920.00 per hour. Before sustaining her work-related injury, Claimant had accepted a full-time position with ICON, with a reasonable expectation of earning $23.00 per hour for 40 hours per week (i.e., $920.00 per week). The ALJ finds that the wages Claimant anticipated receiving at ICON were not speculative or contingent on anything other than the passage of time. Claimant had been offered and accepted the position to begin less than four weeks later, Claimant had provided Employer with two-weeks' notice, and but for her industrial injury, would have begun earning $920.00 per week effective July 30, 2018. When Claimant began work for ICON in December 2018, she was, in fact, paid $23.00 per hour, but could not work 40 hours per week due to her industrial injury, which limited her earning capacity. Calculating Claimant's AWW as $413.35 per week would significantly understate the impact of Claimant's injury on her earning capacity. The ALJ finds that Claimant's AWW were $413.35 per week from the date of injury until July 29, 2018, and $920.00 per week after July 30, 2019.

Temporary Partial Disability (TPD)

Section 8-42-106(1), C.R.S., provides for an award of Temporary Partial Disability (TPD) benefits based on the difference between the claimant's AWW and the earnings during the continuance of the temporary partial disability. In order to receive TPD benefits the claimant must establish that the injury has *caused* the disability and consequent partial wage loss. Section 8-42-103(1), C.R.S.; *Safeway Stores, Inc. v. Husson,* 732 P.2d 1244 (Colo. App. 1986) (temporary partial compensation benefits are designed as a partial substitute for lost wages or impaired earning capacity arising from a compensable injury).

Claimant has established an entitlement to TPD benefits from December 5, 2019 through March 11, 2019 (a period of 13 5/7 weeks), based on an AWW of $920.00 per month (adjusted to $613.33 per week). The evidence in the record is insufficient for the Court to calculate the TPD benefits due Claimant for this time period. Respondents shall pay Claimant TPD benefits for the period of December 6, 2019 through March 11, 2019 based on an AWW of $920.00. Respondents shall receive credit for TPD benefits previously paid.

Temporary Total Disability (TTD)

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* 8-42-105(1). C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Claimant has established by a preponderance of the evidence an entitlement to TTD benefits from July 30, 2018 through December 5, 2018 (18 2/7 weeks) and from April 29, 2019 through December 9, 2019 (32 weeks), based on an AWW of $920.00 per week (adjusted to $613.33 per week). Respondents shall receive credit for TTD benefits previously paid.

OVERCOMING DIME ON IMPAIRMENT

Claimant seeks to overcome Dr. McCranie's right lower extremity impairment rating. Impairment of a lower extremity is a scheduled injury under § 8-42-107(2)(w) & (w.5), C.R.S. The increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that "when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in §8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The court of appeals has explained that scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. Specifically, the procedures of § 8-42-107(8)(c), C.R.S. only apply to non-scheduled impairments. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000); *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Gagnon v. Westward Dough Operating CO. D/B/A Krispy Kreme* W.C. No. 4-971-646-03 (ICAO, Feb. 6, 2018). Claimant has the burden of showing the extent of his scheduled impairment by a preponderance of the evidence. *Burciaga v. AMB Janitorial Services, Inc., and Indemnity Care ESIS Inc*., W.C. No. 4-777-882 (ICAO, Nov. 5, 2010); *Maestas v. American Furniture Warehouse and G.E. Young and Company*, W.C. No. 4-662-369 (ICAO, June 5, 2007).

Claimant has failed to establish by a preponderance of the evidence that Dr. McCranie's assigned right lower extremity impairment rating of 5% is incorrect or that she is entitled to the greater impairment rating assigned by Dr. Watson. Both Dr. Watson's and Dr. McCranie's impairment ratings were based on range of motion measurements of Claimant's right foot and ankle. Both physicians measured Claimant's dorsiflexion at 5°, which corresponds to a 5% impairment. Both physicians' measurements of Claimant's plantar flexion and inversion did not support an impairment rating. The only substantive difference between the impairment ratings was Dr. Watson's measurement of Claimant's eversion of the foot at 5° (3% impairment rating), and Dr. McCranie measurement of 22° (0% impairment rating). The eversion measurement accounts for the difference in impairment ratings.

Claimant has offered no evidence to establish that Dr. McCranie's ankle eversion measurement was incorrect or that Dr. Watson's is the more accurate measurement. Claimant's argument that Dr. Watson's measurement is more accurate because it was taken at the date of MMI is not persuasive. The evidence demonstrates that Claimant's right ankle eversion was measured four times prior to Dr. Watson's measurement (three times at WorkWell physical therapy, and once by Dr. Larson) and one time after (by Dr. McCranie). Specifically, the measurements of Claimant's ankle eversion were 13° on September 14, 2018 and November 16, 2018, 16° on February 19, 2019 (each at WorkWell physical therapy), 20° on March 7, 2019 (Dr. Larson), and 22° on May 14, 2020 (Dr. McCranie). With the exception of Dr. Watson's measurement, the measurements taken by others demonstrate a slow but clear improvement in range of motion over time, and each of these measurements showed significantly greater eversion range of motion than Dr. Watson's measurements. The ALJ finds that the measurements taken by Dr. McCranie are consistent with the improvement shown on other eversion measurements and are the more credible and reasonable measurements. Claimant has failed to establish by a preponderance of the evidence an entitlement to a greater impairment rating for her right ankle range of motion.

ORDER

It is therefore ordered that:

1. Claimant's average weekly wage from the date of injury until July 29, 2018 was $413.35.

2. Claimant's average weekly wage from July 30, 2018 to December 10, 2019 was $920.00 per week.

3. Respondents shall pay Claimant TTD benefits from July 30, 2018 to December 5, 2019, and April 29, 2019 to December 9, 2019 based on an AWW of $920.00 (adjusted to $613.33). Respondents are entitled to credit for all TTD benefits previously paid.

4. Respondents shall pay Claimant TPD benefits from July 30, 2018 to December 5, 2018 based pm an AWW of $920.00 (adjusted to $613.33). Respondents are entitled to credit for all TPD benefits previously paid.

5. Claimant is entitled to a right lower extremity impairment rating of 5% as assigned by Dr. McCranie. Claimant's request to increase her right lower extremity impairment rating is denied and dismissed.

6. Insurer shall pay statutory interest at the rate of 8% per annum on compensation benefits not paid when due.

7. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 1, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that she sustained a compensable occupational disease arising out of and in the course and scope of her employment with the employer.

If the claim is found compensable, whether the claimant has demonstrated, by a preponderance of the evidence, that treatment she has received from Dr. Jennifer Copeland is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the occupational disease.

Although other issues were endorsed for hearing, the parties have agreed to resolve those issues via stipulation, should the claim be found compensable.

FINDINGS OF FACT

1. The claimant has worked for the employer since September 17, 2019 as a deli clerk. The claimant's job duties include helping customers with deli orders, making sandwiches, slicing meats and cheeses, making salads, and cleaning.

2. In July 2020, the employer replaced the meat slicers in the deli. The claimant testified that the new slicers were installed lower than the old slicers. As a result, she had to bend over to use the slicer. The claimant testified that she would operate the slicer between four and six hours during an eight hour shift. The claimant also testified that she noticed that using the new slicers caused her to experience pain in her low back. The claimant further testified that this pain began on August 5, 2020. The claimant reported her back pain to supervisors "Brad" and "Steve".

3. Subsequently A[Redacted], Assistant Store Manager completed an Employer's First Report of Injury on August 12, 2020. The claimant testified that it was A[Redacted] who sent her to seek medical treatment.

4. The claimant was first seen by her authorized treating physician (ATP), Dr. Jennifer Copeland with Glenwood Medical Associates, on August 13, 2020. On that date, the claimant reported that she developed low back pain after using the deli slicer. Dr. Copeland identified the claimant's diagnoses as arm/shoulder strain, and neck/whiplash strain. Dr. Copeland took the claimant off of all work and ordered an x-ray of the claimant's lumbar spine. A lumbar spine x-ray was performed on August 13, 2020 and showed mild degenerative changes and arthritis.

5. The claimant returned to Dr. Copeland on August 20, 2020 and reported mild improvement of her symptoms. Dr. Copeland released the claimant to return to work

with restrictions. The specific work restrictions were no lifting, carrying, pushing, or pulling over 10 pounds. Dr. Copeland also referred the claimant to physical therapy.

6. The medical records entered into evidence show that the claimant sought medical treatment for back pain prior to using the new slicers at work. On November 11, 2015, the claimant was seen at Mountain Family Health Centers and reported aching and burning back pain in her middle back. On December 21, 2016, the claimant reported to Nicole Stalter, APN-C that she was experiencing low back pain. More recently on January 15, 2020, the claimant was seen at Mountain Family Health Centers for low back pain. The medical record of that date identifies the claimant's symptoms as "unspecified chronicity", with an onset of "about a week ago". On March 25, 2020, the claimant returned to Mountain Family Health Centers and reported two weeks of acute left-sided low back pain.

7. On October 27, 2020, Torrey Beil, Vocational Consultant, conducted a job analysis of the claimant's position with the employer. In her November 3, 2020 report, Ms. Beil explained that she reviewed the claimant's medical records and job description. In addition, she observed two other employees performing the job of deli clerk. This observation included watching these workers use the specific deli slicer at the claimant's workplace. Based upon her observations, Ms. Beil noted that the slicer was used a total of 17 times in a two hour period. She also recorded that the average time the slicer was used these 17 times was for one minute and 23 seconds. Finally, Ms. Beil reviewed OSHA, industry, and manufacturer recommendations regarding the installation and height placement of the specific slicer equipment. Ms. Beil opined that operation of the slicer would not require bending of the spine, or any awkward or sustained posture. Ms. Beil's testimony was consistent with her written report. Ms. Beil testified that the slicers she saw during her observation were installed in compliance with manufacturer and OSHA recommendations.

8. On November 17, 2020, the claimant attended an independent medical examination (IME) with Dr. Tashof Bernton. In connection with the IME, Dr. Bernton reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In addition, he reviewed the job description for the claimant's position and the job analysis authored by Ms. Beil. In his IME report, Dr. Bernton opined that the use of the slicer did not cause the claimant's back pain. Dr. Bernton also opined that the claimant's back pain symptoms are not work related. In support of this opinion, Dr. Bernton noted that there are no activities listed in the claimant's job description that "would be consistent with an occupational disease resulting in [the claimant's symptoms]". He also noted that the claimant has a history of multiple low back complaints prior to the installation of the new deli slicers. Finally he noted that the job duties described to him by the claimant as well as in the job analysis "do not represent the type and magnitude of force" necessary to cause the claimant's symptoms.

9. The ALJ does not find the claimant's testimony to be credible or persuasive with regard to the nature and onset of her symptoms. The ALJ credits the medical records, the opinions of Ms. Beil, and Dr. Bernton and finds that the claimant has failed to demonstrate that it is more likely than not that she sustained a compensable occupational disease arising out of and in the course and scope of her employment with

the employer. As noted by Dr. Bernton, the claimant has a history of similar complaints prior to the installation of the new slicers. The ALJ is persuaded by Ms. Beil's opinion that operation of the slicer would not require bending of the spine, or any awkward or sustained posture.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

5. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as

> a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

6. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that she sustained a compensable occupational disease arising out of and in the course and scope of her employment with the employer. As found, the medical records, and the opinions of Ms. Beil, and Dr. Bernton are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim is denied and dismissed.

Dated this 1st day of February 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

- Did Claimant prove he suffered a compensable low back injury on August 18, 2019?

- Did Claimant prove entitlement to Temporary Total Disability (TTD) benefits from August 31, 2019 until he was placed at Maximum Medical Improvement (MMI) on August 26, 2019?

- Is Claimant liable to Respondents for charges associated with a missed IME with Dr. John Burris?

STIPULATIONS

The parties stipulated to an Average Weekly Wage (AWW) of $570.21 if the claim is found compensable.

FINDINGS OF FACT

1. Employer is a staffing agency. Claimant was a temporary worker assigned as a machinist at a company named Jabil. Claimant worked overnight on the “third shift.”

2. Claimant typically attended a team meeting at the start of each shift, after which the team dispersed to their respective “cells” to work. Each cell was composed of eight machines controlled by two operators.

3. Claimant was assigned to lathe machines that shave metal parts. The metal shavings fall inside the base of the machine into a “chip bin.” Claimant had to empty the chip bins when they became full, approximately every two days. To do so, Claimant had to “lean down, reach out really far, pull the chips forward . . . then get up and take that bucket to the trash can.” Claimant generally emptied at the chip bins at the beginning of the shift.

4. On August 18, 2019, Claimant began work at his usual time. He had to clean more machines than usual that morning because his “cell mate” was absent. As a result, Claimant had to empty the bins on all eight machines instead of just four.

5. Claimant emptied the bins on his four machines and started working on the other machines in the cell. He stood directly in front of one machine, crouched down, leaned forward and reached to pull out the chip bin. While doing so, Claimant experienced severe shooting pain in his back. The pain was primarily in Claimant’s lower back, but he subsequently developed tingling in his right leg. Claimant retreated to the restroom for a few moments to wait for the pain to subside and regain his composure. The pain continued, so Claimant reported the injury to “Lee,” the ranking Jabil employee on site at

the time. Claimant declined medical treatment that night because he wanted to see how he felt the next day. Lee sent Claimant home, and Jabil personnel walked Claimant out to his car to make sure he was okay. Lee advised Claimant someone from Employer would contact him about the injury.

6. Claimant did not receive communication from Employer for several days. He contacted Lee at Jabil on August 19 to call off work and ask for help getting in touch with his supervisor with Employer. [1] Claimant eventually got ahold of his supervisor with Employer and was directed to UC Health Urgent Care.

7. Claimant saw Dr. Cynthia Schafer at his initial evaluation at UC Health on August 23, 2019. Dr. Shafer's report documents the reason for the appointment as, "lower right side back pain that radiates up spine 8.19.19 at 10:30 p.m. patient leaned over to clean a machine and had a shooting pain in lower right side that made him lightheaded." Dr. Shaffer documented a 2017 motor vehicle accident in which Claimant suffered head and shoulder injuries but there is no indication of any previous back injury. She noted Claimant did no regular exercise or stretching. Jabil had a stretching program but Claimant only participated in that approximately once a week. The physical examination showed normal lumbar range of motion except a slight decrease in left rotation and left lateral flexion. There was diffuse soft tissue tenderness, primarily the right lumbar paraspinal muscles and right gluteus medius. There was also some mild thoracic soft tissue tenderness. Dr. Shafer diagnosed a low back strain with mild facet rotation and compensatory thoracic pain. She opined, "I believe this occurred because his muscles were tight as he does no regular stretching so leaning over 'tweaked' his back. There are no signs of serious injury." Dr. Schafer opined the findings were consistent with the history and/or a work-related mechanism of injury. She prescribed muscle relaxers and recommended up to four sessions of chiropractic treatment with Dr. Brian Polvi. She imposed restrictions of no lifting over 15 pounds and "limited bending/twisting at the waist."

8. Employer provided Claimant a light duty assignment at The Arc. No modified job offer was entered into evidence and no one from Employer testified regarding the details of the modified assignment. The ALJ infers from the evidence presented Claimant was given minimal instructions regarding the modified work process. Claimant worked at The Arc on August 28, 29 and 30, 2019. On the fourth day, he tried to access Employer's timecard application to clock in but could not. Claimant called his supervisor with Employer and had to leave a voicemail. Claimant never received a return call from his supervisor or anyone else with Employer. As a result, Claimant testified, "I assumed I was terminated." Claimant did not work after August 30, 2019 until he was put at MMI on December 26, 2019.

9. For unknown reasons, Dr. Schafer's office did not generate the order for treatment with Dr. Polvi until August 27, 2019. On August 29, 2019, Claimant contacted Dr. Schafer's office and expressed concern about the "lag time" for being approved and scheduled with Dr. Polvi. He made an appointment for September 4, 2019 with a different

[1] Claimant could not recall the name of his supervisor with Employer.

chiropractor at his own expense. After Claimant's call, Dr. Schafer's office submitted an authorization request to Insurer.

10. Claimant saw Dr. Arter at Thrive Chiropractic on September 4, 2019. X-rays were taken and Claimant was told he had or may have a "ruptured disc." At hearing, Claimant acknowledged he was not referred to Thrive Chiropractic and did not expect Respondents to pay for it.

11. Claimant had his initial appointment with Dr. Polvi on September 9, 2019. Dr. Polvi diagnosed a sprain and administered trigger point dry needling to the lumbar muscles.

12. Claimant followed up with Dr. Schafer on September 10, 2019. Physical examination showed soft tissue tenderness in the lumbar area and right SI joint. Dr. Schafer noted Claimant had been seen at Thrive Chiropractic and "they talked him into doing a long-term treatment for which he paid up front." Dr. Schafer noted there were no signs of a herniated disc on either examination she performed, and she was concerned "he is being fed what appears to be false information." The physical examination was largely unchanged from the initial appointment. Dr. Schafer opined, "This is an unfortunate situation where he has basically been sold a bill of goods by a chiropractor group for whom I do not have a great deal of respect. He does not have signs of HNP, but does have SI strain and piriformis syndrome, which will mimic sciatica of course. He feels torn between what he was told by the people he chose to spend his money with versus myself and the chiropractor that I sent him to." Dr. Schafer continued Claimant's work restrictions.

13. At his next appointment with Dr. Schafer on October 4, 2019, Claimant reported low back pain with some radiation into his right leg. Claimant had seen Dr. Polvi four times without significant benefit so he returned to Thrive Chiropractic "whom he prefers." He noted Thrive had "a decompression machine which he says helped him the most." Examination of the low back showed soft tissue tenderness, increased muscle tone, and slight range of motion deficits. Dr. Schafer opined, "this again simply does not fit with being a herniated disc no matter what he is being told by his primary chiropractor. I think he was probably very tight such that the simple leaning tweaked his muscles." She referred Claimant to physical therapy and liberalized Claimant's work restrictions to 20 pounds lifting.

14. Claimant underwent a lumbar MRI on December 1, 2019, which was unremarkable.

15. Dr. Schafer reevaluated Claimant on December 26, 2019. Claimant's low back and SI pain had resolved and he was starting a new job on January 6, 2020. Dr. Schafer placed Claimant at MMI with no impairment and no restrictions.

16. Respondents arranged for an IME with Dr. John Burris in the summer of 2020. Claimant failed to attend the first appointment and it was rescheduled for August 4, 2020. Claimant requested a different date because he was working nights and could not

get up to Denver "early" in the day. Respondents rescheduled the IME to July 20, 2020, but Claimant advised that date did not work either. Respondents then reset the IME for August 4. Respondents also scheduled a Prehearing Conference seeking an order compelling Claimant's attendance at the IME.

17. On July 23, 2020, PALJ Barbo ordered Claimant to attend the August 4, 2020 IME with Dr. Burris, with a check in time of 11:00 AM. Judge Barbo noted discovery and the hearing process regarding this matter had been delayed by "claimant's significant failure to timely comply with the discovery process. These actions include the failure to return the requested authorizations for the release of information, the failure to respond to discovery requests, and the failure to attend a prior appointment for an independent medical examination." Judge Barbo also stated, "The claimant needs to be aware that failure to comply with an order of court may be deemed a willful violation of a court order pursuant to W.C.R.P 9-1 (G). A willful violation of a court order can subject the claimant to sanctions as provided by C.R.C.P 37, and include sanctions up to dismissing his claim." Judge Barbo's order was duly served on Claimant's counsel.

18. Claimant admitted he missed the August 4 IME appointment. He testified 11:00 AM is too early for him because he works nights and typically arises at 1:00 PM. Claimant testified missing the appointment was "my bad," but claimed he "thought it was being rescheduled."

19. Because Claimant failed to attend the second IME on August 4, 2020, Respondents asked Dr. Burris to perform a record review. Dr. Burris authored a report on November 20, 2020. Dr. Burris noted the medical records demonstrate Claimant was leaning over when he "tweaked" his back. Dr. Burris opined the act of bending over is an activity of daily living and not a unique risk factor associated with work. According to Dr. Burris, the Division of Workers' Compensation teaches, "if a worker is performing an activity they would normally be expected to perform in day-to-day tasks at home, the injury would not be work-related." Dr. Burris further opined the forces involved in leaning or bending over are not sufficient to aggravate, accelerate, or contribute to lumbar spine issues. Thus, Dr. Burris opined Claimant sustained no work-related injury.

20. Dr. Burris reiterated and elaborated on his opinions in his deposition testimony. Dr. Burris testified the described mechanism of injury was that Claimant leaned over, which is consistent with an activity of daily living. Dr. Burris testified that as part of the Division's Level I curriculum, when an activity is performed that would be consistent with an activity of daily living, it would not be work-related. Dr. Burris opined that the spine is designed to move and bend, so simply bending over would not cause harm.

21. Claimant's testimony was credible regarding the accident and circumstances relating to his employment. Claimant's testimony regarding the reason he missed the IME appointments was not credible or persuasive.

22. Dr. Schafer's opinions regarding causation in conjunction with Claimant's testimony are more persuasive than the opinions of Dr. Burris.

23. Claimant proved he suffered a compensable injury to his low back on August 18, 2019. Although bending over and reaching for a bin could be considered an activity of daily living in another context, it was done here to accomplish a specific work task. As opined by Dr. Schafer, Claimant's "tight muscles" made him more susceptible to injury from an otherwise potentially innocuous activity. The act of bending over and reaching to pull out the chip bin caused a soft tissue strain for which Claimant appropriately received conservative treatment.

24. Claimant proved he was disabled and suffered a wage loss commencing August 31, 2019.

25. Respondents failed to prove Claimant was responsible for termination of his employment.

26. Respondents proved Claimant should be sanctioned under CRCP 37 for missing the August 4, 2020 IME after being ordered to attend. Claimant failed to provide a legitimate excuse for missing the appointment or otherwise show his failure was substantially justified. Charging the cancellation fee to Claimant is a reasonable sanction for violation of a discovery order.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove they are a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). The claimant must prove an injury directly and proximately caused the condition for which they seek benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

The terms "arising out of" and "in the course of" are not synonymous. The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" is narrower and requires an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001).

As found, Claimant proved he suffered a compensable injury on August 18, 2019. As an initial matter, notations in medical records that Claimant merely "leaned over" are not entirely accurate. The persuasive evidence shows Claimant crouched down, leaned forward, and reached for the chip bin. Dr. Schafer persuasively opined Claimant had "tight muscles" that made him more susceptible to injury from otherwise potentially innocuous activity. There is no persuasive evidence Claimant had any pre-existing low back symptoms or required treatment for a back problem. According to Dr. Schafer, bending over to retrieve the chip bin "tweaked" Claimant's back and resulted in a minor soft tissue strain. Even a "minor strain" can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused them to seek medical treatment. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004). Here, the activity that caused the strain was directly related to and performed in furtherance of Claimant's work duties.

Claimant's case is similar to *Reinhard v. Pikes Peak Broadcasting Co., Inc*., W.C. No. 4-114-050 (May 20, 1993), in which the claimant suffered a compensable injury merely by turning a corner at the bottom of a staircase. The ALJ found the injury had its origins in the distinctly work-related activity of descending the stairs to obtain his next work assignment. The injury was compensable notwithstanding the opinion of the respondents' expert that the claimant's injury could have occurred from similar activities outside the scope of employment.

B. Temporary total disability benefits

To receive temporary disability benefits, the claimant must prove the injury caused disability and a wage loss. Section 8-42-103(1); *PDM Molding v. Stanberg*, 898 P.2d 542 (Colo. 1995). The persuasive evidence shows Claimant could not perform his regular job after the injury, and he suffered a wage loss commencing August 31, 2019.

Respondents argue Claimant is ineligible for TTD benefits because he was responsible for termination of his modified employment. Sections 8-42-103(1)(g) and 8-42-105(4)(a) provide, "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." The respondents must prove by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The concept of "volitional conduct" is not necessarily related to culpability, but instead requires the exercise of some control or choice in the circumstances leading to the discharge. *Richards v. Winter Park Recreational Association*, 919 P.2d 983 (Colo. App. 1996). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for his termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

As found, Respondents failed to prove Claimant was responsible for termination of his employment. Claimant stopped working on August 31 because Employer did not respond to his inquiry regarding the inability to clock in. Claimant was a temporary worker with an injury that prevented him from doing the work he was originally hired to do. There is no persuasive evidence he was given specific instructions regarding the nature or duration of his light duty assignment. Claimant's testimony he could not enter his time and tried unsuccessfully to reach his supervisor is credible and unrebutted by any witness for Respondents. Claimant's inability to access the timecard application coupled with Employer's silence after he asked for help reasonably caused Claimant to question whether he was still their employee. Claimant's assumption about his work status was reinforced when he did not hear back from his supervisor or anyone else with Employer. Under the circumstances, it was reasonable for Claimant to await instructions from Employer before returning to work. Employer's failure to communicate or respond to inquiries cannot be ascribed to Claimant. Claimant's termination did not result from volitional action on his part. Rather, it resulted from Employer's inaction. Respondents failed to prove Claimant was responsible for termination of his employment.

Once commenced, TTD benefits continue until terminated by one of the events in § 8-42-105(3). Claimant was put at MMI by an ATP on December 26, 2019. Accordingly, he is entitled to TTD benefits from August 31, 2019 through December 25, 2019.

C. IME cancellation fee

Section 8-43-207(1)(p) allows the ALJ to impose sanctions provided in the Colorado Rules of Civil Procedure, except civil contempt, for "willful failure to comply with any order of an administrative law judge" regarding discovery. Violation of an order compelling a party to participate in discovery is "presumed willful." WCRP 9-1(G). IMEs are a form of discovery under CRCP 35. If a party fails to obey an order regarding discovery, the court may impose sanctions including requiring the violating party "to pay the reasonable expenses . . . caused by the failure," unless the failure to comply was substantially justified or other circumstances make an award of expenses unjust.

As found, Respondents proved Claimant should be sanctioned under CRCP 37 for missing the August 4, 2020 IME in violation of Judge Barbo's July 23, 2020 order compelling his attendance. Claimant admitted he knew about the IME and provided no substantial justification for missing the appointment. Claimant's argument he could not arise early enough to be in Denver by 11:00 AM is not persuasive. Judge Barbo's order makes clear Respondents tried to accommodate Claimant's schedule and otherwise acted reasonably regarding scheduling the IME. Judge Barbo specifically advised Claimant he could be subject to sanctions if he did not attend the August 4, 2020 IME. Charging Claimant with the cancellation fee is a reasonable sanction for his unjustified violation of the discovery order.

Fahler v. Redbox, W.C. No. 5-111-049 (August 17, 2020), cited by Claimant, is distinguishable because *Fahler* did not involve violation of an order compelling the claimant's attendance at an IME. Here, § 8-43-207(1)(p) and CRCP 37 provide authority to require reimbursement of the cancellation fee.

ORDER

It is therefore ordered that:

1. Claimant's claim for an August 18, 2019 low back injury is compensable.

2. Insurer shall cover medical treatment from authorized providers reasonably needed to cure and relieve the effects of Claimant's compensable injury.

3. Claimant's average weekly wage is $570.21, with a corresponding TTD rate of $380.14.

4. Insurer shall pay Claimant TTD benefits at the rate of $380.14 per week from August 31, 2019 through December 25, 2019.

5. Insurer shall pay Claimant statutory interest of 8% per annum on all indemnity benefits not paid when due.

6. Claimant shall reimburse Insurer for the cancellation fee from the August 4, 2020 IME appointment with Dr. Burris.

7. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: February 3, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-112-522-002

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the scheduled impairment rating for his ankle should be converted to a whole-person impairment rating?

II. Has Claimant shown, by a preponderance of the evidence, that the scheduled impairment rating for his wrist should be converted to a whole-person impairment rating?

III. Has Claimant shown, by a preponderance of the evidence, that he is entitled to Medical Maintenance ("Grover") Benefits?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Injury, and Subsequent Treatment

1. Claimant is employed as a ski instructor. He sustained an admitted injury on December 24, 2018, when he was struck by another skier. He was treated at CHPG SA Breckenridge – Emergent and Urgent Care Center for mild pain over the lateral aspect of his left ankle. He denied neck or back pain. (Ex. A, pp. 6–16.)

2. MRI's were performed on May 23, 2019 and July 19, 2019, demonstrating an ununited fracture of the anterior colliculus [sic] of the medial malleolus with bone marrow edema patters.

3. Claimant was referred to orthopedist Michael Simpson, M.D., on September 9, 2019, for a second opinion regarding his left ankle pain. Dr. Simpson's assessment was left ankle pain, osteochondral lesion of talar dome, and closed displaced fracture of medial malleolus of right tibia with nonunion. He recommended arthroscopic evaluation and debridement of the medial gutter and removal of the ununited fragment of the medial malleolus. He also planned to assess the posterior lateral talar dome injury and noted repairs that might be needed. (Ex. K, pp. 62–66.)

4. On September 17, 2019, Dr. Simpson performed arthroscopy left ankle with extensive debridement including debridement of nonunion of medial malleolus, debridement of medial gutter, debridement of anterior compartment fibrotic scarring, and debridement of anterolateral ankle joint; arthroscopy left ankle with excision of osteochondral lesion posterolateral talar dome and marrow stimulation using drilling; and stress fluoroscopy left ankle. (Ex. M, pp. 79–80.)

5. On December 16, 2019, Claimant followed up with Dr. Simpson, he noted Claimant's overall prognosis is good:

> JC is doing very well. He has excellent pain relief. He has good range of motion good stability. I will release him from orthopedic care at this point. He is effectively at maximal (sic) medical improvement. I think he can return to full activity activities (sic) including skiing and even snowboarding. No orthopedic follow-up is scheduled. (Ex. R, pp. 96–98.)

6. Claimant was then seen by ATP Dr. Olson on December 16, 2019. Dr. Olson noted Claimant was not taking any medications, and he walked without a limp. Dr. Olson released him for regular duty without restrictions. Claimant was to follow up in one month, at which time he would be considered for MMI. (Ex. Q, pp. 93–94.)

7. On January 14, 2020, Claimant followed up with Dr. Olson. He reported he had been skiing and had not noticed any episodes of instability. Claimant did note, however, that his ankle aches at the end of the day, and he ices and elevates it. As far as his Eustachian tube dysfunction, he had not had any trouble on the ski slopes. He was not taking any medications. (Ex. S, pp. 100–102.)

8. On March 5, 2020, Dr. Olson noted Claimant had been skiing a great deal since he last saw him. He had not had any problems with instability or any difficulties with walking. He did notice a little bit of discomfort when he first gets up in the morning. His gait was normal. Dr. Olson also noted Claimant's left wrist was doing well overall, although he did have some mild discomfort in the scapholunate area. He had no numbness or tingling pain when using it. He had completed a motorcycle ride down to Baja California and back and his wrist was a little sore after that but overall did well. Dr. Olson noted Claimant's Eustachian dysfunction was still taking a little bit longer to equalize but did [eventually] equalize.

9. Dr. Olson placed Claimant at MMI as of March 5, 2020, with no permanent impairment, no restrictions, and no need for maintenance care after MMI. Dr. Olson noted that "Functionally he is doing well with increased activities." (Ex. T, pp. 108–111.)

DIME

10. Claimant then requested a DIME. On July 24, 2020, Anjmun Sharma, M.D., performed his examination. Claimant reported that his biggest problem was the left ankle. Dr. Sharma noted that, overall, he had done very well. If he did extreme activity during the day, he did experience pain, but overall for most part he was able to move his ankle fairly well. He was able to also function with regard to the left wrist. There was a dull nagging pain in each of these two joints, but overall Claimant was capable of working full duty, no restriction.

11. Claimant was ready to do so when the ski season began, and felt that he had had adequate time to rest and rehabilitate his injured body parts. Regarding his ear, Claimant reported that he had not had problems with equilibration. He has gone to the mountain

area and had not suffered any issues or pain. Overall, it was just a ‘nagging sensation’ from time to time. (Ex. U, p. 121.)

12. Dr. Sharma’s clinical diagnoses were: 1. Left wrist sprain; 2. Left wrist contusion; 3. Left ankle osteochondritis dissecans; 4. Left ankle status post arthroscopy; 5. Chronic nonunion left medial malleolus; 6. Osteochondral lesion posterior lateral left talar dome; and 7. Right ear barotrauma, resolved. He agreed Claimant had reached MMI on March 5, 2020.

13. Dr. Sharma rated Claimant’s impairment for his ankle injury at 12% of the lower extremity. He rated Claimant’s impairment for his wrist injury at 6% of the upper extremity. He did not provide a rating for Claimant’s right ear barotrauma, which he noted had resolved. Dr. Sharma opined Claimant could return to work full duty, no restrictions, and he did not need maintenance care. (Ex. U, pp. 122–123.)

14. Respondents filed a Final Admission of Liability on August 10, 2020, admitting for Dr. Sharma’s extremity ratings. Respondents denied liability for maintenance care after MMI. (Ex. 1, p. 1). Claimant timely objected to the FAL and filed an Application for Hearing on the issues of Grover medical benefits and conversion. (Ex. 2, p. 33).

Claimant Testifies at Hearing

15. Claimant testified at hearing. While walking, he was hit by another skier at high speed, and was knocked to the ground, striking his head and left hand. He realized that his left knee and left ankle also hurt. His ear was “uncomfortable.” During his treatment, was told by one of his physicians that he might have TMJ issues.

16. He stated still has pain and swelling in his ankle, and pain in his wrist. He did not testify that either of his rated injuries caused any functional impairment with any other part of his body. When specifically asked about his low back by his attorney, Claimant testified that, if the pain in his ankle has affected his low back, he hasn’t noticed. Claimant also prefers not to use pain medications.

17. Claimant testified that he hasn’t stopped doing anything because of his ankle injury, but he does make compromises, such as wearing a taller hiking boot, so he can continue doing things he likes to do. By the end of a long day, he tends to favor his left ankle. He testified he has not tried scuba diving because of his equilibrium concerns, but not due to his ankle. Claimant did not testify that he needs specific further treatment for this injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). In this instance, the ALJ finds Claimant to be sincere and credible, both in his hearing testimony, and in providing the most accurate information to all healthcare providers he came into contact with. Claimant is the antithesis of a malingerer or whiner. Due to his comparative youth and positive outlook, he is an active participant in his own health and wellbeing, and just wants to maintain that as best he can.

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). In this instance, while there was no expert testimony, the ALJ has considered the contents of all medical records and reports submitted.

E. Further, courts are to be "mindful that the Workmen's Compensation Act is to be liberally construed to effectuate its humanitarian purpose of assisting injured workers." *James v. Irrigation Motor and Pump Co.*, 503 P.2d 1025 (Colo. 1972).

Conversion to Whole Person, Generally

F. Whether the Claimant sustained a "loss of an arm at the shoulder" within the meaning of § 8-42-107 (2) (a), C.R.S., or a whole person medical impairment compensable under § 8-42-107 (8), C.R.S. is one of fact for determination by the ALJ. In resolving this question, the ALJ must determine the situs of the Claimant's "functional impairment," and the situs of the functional impairment is not necessarily the location of the injury itself. Langton v. Rocky Mountain Health Care Corp., supra; Strauch v. PSL Swedish HealthcaSystem, supra. Because the issue is factual in nature, we must uphold the ALJ's determination if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; Walker v. Jim Fuoco Motor Co., 942 P.2d 1390 (Colo. App. 1997). This standard of review requires us to defer to the ALJ's resolution of conflicts in the evidence, credibility determinations, and plausible inferences drawn from the record. Metro Moving and Storage Co. v. Gussert, 914 P.2d 411 (Colo. App. 1995).

G. Whether the Claimant has sustained an "injury" which is on or off the schedule of impairment depends on whether the claimant has sustained a "functional impairment" to a part of the body that is not contained on the schedule. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Functional impairment need not take any particular impairment. Discomfort which interferes with the claimant's ability to use a portion of his body may be considered "impairment." *Mader v. Popejoy Construction Company, Inc.*, W.C. No. 4-198-489, (ICAO August 9, 1996). Pain and discomfort which limits a claimant's ability to use a portion of his body may be considered a "functional impairment" for determining whether an injury is on or off the schedule. *See, e.g., Beck v. Mile Hi Express Inc.*, W.C. No. 4- 238-483 (ICAO February 11, 1997).

Conversion, as Applied / Ankle and Wrist

H. There is insufficient evidence in the record that Claimant's injuries to either his ankle or his wrist has caused any functional impairment to his whole person. In fact, when asked, Claimant stated he hasn't noticed if his ankle problems have caused any issues with his low back. No *medical records* note any functional impairment beyond the affected extremities. While he has experienced some swelling and discomfort as a result of his injuries, Claimant's own testimony indicates that he is able to 'soldier on', and engage in, for example, skiing at a high level, and long distance motorcycle trips. Without sufficient evidence of a functional impairment not on the schedule of disabilities, Claimant's impairment for his industrial injury remains as a *scheduled impairment* within the meaning of § 8-42-107(2)(a), C.R.S.

Medical Maintenance Benefits, Generally

I. To prove entitlement to medical maintenance benefits, the Claimant must present *substantial evidence* to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710- 13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment [s]he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). An award for *Grover*-type medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that a claimant is actually receiving medical treatment. *Holly Nursing Care Center v. ICAO,* 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. ICAO*, 916 P.2d 609 (Colo. App. 1995). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

Medical Maintenance Benefits, as Applied

J. While neither of Claimant's ATPs or the DIME physician has seen the need for Grover Maintenance Benefits, the ALJ sees it differently. Claimant has consistently and credibly described certain levels of pain or discomfort in both his wrist and ankle, long after being placed at MMI. His ankle swells on occasion, requiring ice and elevation. He feels it in the morning on occasion, or after a long day, especially given his active lifestyle. There is no evidence that Claimant experienced these discomforts before his work injury. While Claimant (to his credit) prefers not to take medication on a regular basis, the ALJ finds that Claimant has earned the right to change his mind. There are non-narcotic pain relievers and anti-inflammatories, for example, that Claimant might wish to explore further, perhaps on an ad hoc basis. This process could take a while to get him dialed in. So be it. Physical therapy or acupuncture to maintain his current conditioning is but another reasonable alternative. As noted, while Claimant was not assigned an impairment rating for his Eustachian tube issues, he still has difficulty equalizing on occasion. This could get worse without continued intervention, and the ALJ further finds that Claimant may seek any maintenance care for this condition through his ATP that is appropriate. Claimant has presented substantial evidence in support of a general award of medical maintenance benefits.

A Note on Worsening of Condition

K. While this issue is not before the ALJ, nothing in this Order prevents Claimant from seeking additional care and treatment should his work-related conditions worsen with time.

ORDER

It is therefore Ordered that:

1. Claimant's request to convert his scheduled impairment ratings to that of the Whole Person is denied and dismissed.

2. Claimant is entitled to a General Award of Medical Maintenance Benefits.

3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

ISSUES

- Did Claimant prove she suffered a compensable injury on December 28, 2018?

- Is Claimant's claim barred by claim preclusion?

- If the claim is compensable, did Claimant prove entitlement to medical benefits?

- If the claim is compensable, did Claimant prove entitlement to TTD benefits?

- What is Claimant's average weekly wage (AWW)?

FINDINGS OF FACT

1. Claimant worked for Employer as a housekeeper. She alleges a low back injury on December 28, 2018. On that date, Claimant was vacuuming a day hall used by the residents. She testified the vacuum was "heavy," although she did not know its weight. Claimant had to move some couches and chairs to fully vacuum the area. Claimant testified she developed severe low back pain after approximately 30 minutes of this activity. She did not identify any specific incident that caused her pain. She testified, "I was in the middle of vacuuming the day hall. And then, I just couldn't move anymore. I just felt all that pain coming through me, and the heat in the body, like the burning in my back." Claimant testified the pain became so severe she had to be wheeled out to her car in an office desk chair.

2. Claimant testified sought treatment at the Southern Colorado Clinic urgent care the next morning. She testified she was "turned away" and did not receive treatment. However, the evidentiary record contains a December 28, 2018 report from PA-C James Anderson at the Southern Colorado Clinic urgent care. The report describes Claimant's presenting condition as, "63-year-old female who presents with back pain. The symptoms began 3 days ago. The intensity is described as severe. . . . Pt states she fell at work a few years ago, evaluation and treatment to date includes epidural steroid injection." The report makes no mention of vacuuming or any other recent work associated with the onset of back pain. Mr. Anderson prescribed a Medrol Dosepak.

3. Claimant saw Dr. Dr. Michelle Pennington at Pueblo Community Health Center on January 7. She reported acute back pain and weakness that started "2 weeks ago." The pain was described as persistent and worsening. Dr. Pennington noted, "Xmas spent in bed. Stiff. UC gave Medrol Dosepak. Can't get comfortable. Doesn't have strength. Works as a janitor. Fell at work parking lot 2 years ago. Workmen's Comp. Told couldn't help anymore. Still was having pain. Intermittent flares." Claimant described difficulty arising and walking and had borrowed her sister's walker. She also reported urinary urgency with incontinence. Dr. Pennington was concerned about possible cauda equina syndrome because of "red flag" symptoms of saddle anesthesia, urinary

incontinence, and severe lower extremity weakness. She advised Claimant to go to the Parkview Hospital emergency Department for an MRI. The report contains no indication of any recent accident or incident at work.

4. No records from Parkview Hospital are in evidence.

5. Claimant followed up with Dr. David Krause at Pueblo CHC on January 11, 2019. Dr. Krause documented,

> She said around Christmas her pain became worse and she started having more weakness and numbness in her legs. She was seen here and sent to the emergency room so she could get a stat MRI. The MRI showed severe spinal cord stenosis at L4-L5 and severe foraminal stenosis at the same level. She had lesser degrees of stenosis at L2-L3 and L3-L4.

ALJ Lamphere previously found the MRI also showed segmental instability at L3-4 and L4-5. Although the MRI report is not in evidence, the ALJ infers it showed no acute findings, and the demonstrated pathology existed well before December 28, 2018. Dr. Krause's report makes no mention of any work-related accident or activity that allegedly triggered Claimant's worsened pain.

6. Claimant eventually underwent a four-level lumbar fusion with Dr. Roger Sung on March 5, 2019. The only report in evidence from Dr. Sung is dated September 26, 2019. The report states "overall, she feels good." X-rays showed the hardware was in good position and the fusion was consolidating well. Dr. Sung recommended Claimant continue physical therapy and released her to follow-up "as needed." Dr. Sung provided no opinion attributing the extensive surgery to any work-related cause.

7. Claimant had an extensive history of low back problems before December 28, 2018, including a prior work-related injury from a trip and fall accident on October 31, 2016.

8. Dr. Terrance Lakin was Claimant's primary ATP for the October 31, 2016 injury. X-rays from her initial appointment at Dr. Lakin's office revealed lumbar spondylosis at L4 and L5 that "appear[ed] longstanding" and "not work related." Claimant had fallen multiple times within a few months before the accident. An EMG in February 2017 showed chronic right L5 radiculopathy, indicating past denervation with subsequent reinnervation. The electrodiagnostic abnormalities were probably pre-existing and not related to the work accident. Claimant received conservative care for the October 2016 back injury including trigger point therapy, massage therapy, cognitive behavioral therapy, and injections. The conservative treatment improved Claimant's back pain, and in May 2017, Dr. Lakin noted she had "return[ed] to baseline by her report."

9. On August 15, 2017, Dr. Lakin addressed Claimant's pre-existing lumbar spine issues in detail. He noted Claimant "had long-standing right toe paresthesias and lumbar pain in the past" and "she had been having paresthesias/radicular pain for some time." He noted that a lumbar MRI performed 1-2 months after the accident showed significant degenerative changes with severe facet disease, disk bulging, severe central

canal stenosis, and foraminal narrowing bilaterally. Dr. Lakin considered the October 2016 injury a "minor exacerbation" of Claimant's underlying pre-existing condition. He expected her back problems to worsen with time because of "normal progression of disease." Dr. Lakin opined Claimant's ongoing low back and lower extremity radicular symptoms were "nonoccupational, back to baseline several months ago, now progressing and needs to see [PCP]."

10. Dr. Lakin issued an impairment rating report on November 10, 2017.[1] He opined Claimant had no ratable lumbar spine impairment because her ongoing pain and limitations were not causally related to the October 2016 accident. Dr. Lakin diagnosed "severe lumbar degenerative disc disease/degenerative joint disease (DDD/DJD) with exacerbation and return to baseline." He noted "severe numbness in her right toe for approximately 4 years," which her PCP thought was related to lumbosacral radiculopathy. Dr. Lakin elaborated on his previous opnion Claimant's low back problems were not work-related:

> We have received medical records from her primary care manager. Upon review of those records, it clearly indicated that she had been having ongoing lumbar issues for several years. She had been complaining of paresthesias in a radicular pattern for several years with her primary care provider and they had discussed proceeding with MRI and consideration of epidural injections in the past. Given her mechanism of injury that would not likely result in significant trauma to her lumbar back, along with her significant pre-existing disease on MRI, I believe she had some exacerbation of her lumbar disease that had been returned to baseline level with treatment under this injury. I would not support further treatment . . . . She was urged to continue further lumbar care . . . with her primary care provider.

11. Claimant had a DIME with Dr. Kenneth Finn on March 23, 2018. At that time, her primary complaint was "right-sided lumbosacral pain." Claimant also reported numbness and tingling in her toes and weakness in her legs. Claimant denied any pre-injury low back or radicular symptoms, which Dr. Finn noted was "in contradiction to accompanying records." Dr. Finn opined the October 2016 accident aggravated Claimant's pre-existing condition and was appropriately treated as a work-related. Dr. Finn assigned a spinal impairment rating, but agreed with Dr. Lakin that future care for the low back would be unrelated to the October 2016 accident. Dr. Finn stated, "any ongoing issues with her low back should be taken care of under her regular health insurance."

12. Respondent filed an FAL based on Dr. Finn's DIME report. The FAL admitted for reasonably necessary medical treatment from authorized providers after MMI.

[1] The October 31, 2016 claim also involved a shoulder injury, for which Claimant received a rating.

13. Between June and December 2018, Claimant continued to receive treatment directed to her low back from her PCP at Pueblo CHC. Treatment included physical therapy, additional steroid injections, Toradol injections, and gabapentin. During an examination on October 11, 2018, Claimant lost her balance and fell to the left while getting off the exam table. She could not sense monofilament testing over the majority of the plantar aspect of her feet, and her gait was noted to be unstable on both sides without an assistive device. On December 11, 2018, her PCP documented "absent monofilament sensation bilaterally, absent vibratory sensation on the right and diminished by 50% sign at [the] medial and lateral malleolus on the left." On December 18, 2018 (10 days before the alleged work accident) Claimant received a Toradol injection for "chronic low back pain" related to "fairly severe spinal stenosis at several levels."

14. On May 13, 2019, Claimant applied for a hearing on the issues of "Medical Benefits - Authorization of back treatment and/or surgery and Authorized Provider." This application was filed in relation to the October 31, 2016 injury only, with no reference to any alleged new injury on December 28, 2018.

15. Dr. Michael Rauzzino performed an IME for Respondent on August 26, 2019. Dr. Rauzzino conducted a thorough review of Claimant's medical records, both before and after the October 2016 injury. During the IME, Claimant denied experiencing low back trouble, having x-rays, or receiving treatment for her low back before the October 2016 trip and fall accident. Dr. Rauzzino noted Claimant had suffered "multiple other falls" that were "no less in terms of mechanism" to the fall that caused the work injury. Dr. Rauzzino opined the October 2016 accident caused no structural injury to Claimant's spine. He opined the accident neither accelerated her "chronic degenerative condition" nor caused any permanent neurologic change that required treatment. Dr. Rauzzino agreed with Dr. Finn and Dr. Lakin that any ongoing need for low back treatment was unrelated to the October 31, 2016 work injury. Dr. Rauzzino noted that Claimant's "condition clearly worsened in June and particularly in December 2018 and this was related to the natural course of her chronic degenerative condition and not to the isolated slip and fall that occurred on 10/31/2016." Dr. Rauzzino opined the surgery performed by Dr. Sung was done to treat the underlying severe degenerative pathology and unrelated to the work accident.

16. The parties went to hearing before ALJ Richard Lamphere on October 24, 2019. The primary issue was whether the surgery performed by Dr. Sung was reasonably necessary and related to the October 2016 work accident. Although Claimant testified regarding the same events at work on December 28, 2018 that form the basis for the present claim, she did not seek to prove a new injury at that time. ALJ Lamphere determined the low back treatment Claimant had received, including the multilevel fusion surgery, was reasonably necessary but not related to the work injury. Instead, ALJ Lamphere found that "Claimant's subsequent need for low back surgery was likely caused by the natural progression of her long-standing pre-existing degenerative disc disease."

17. Claimant did not appeal ALJ Lamphere's order. Instead, Claimant filed the current claim alleging a new injury. Whereas Claimant had previously argued to ALJ

Lamphere her worsening back pain in December 2018 was a continuation of the 2016 injury, she now claims it was caused by vacuuming at work on December 28, 2018.

18. In November 4, 2018, Respondent asked Dr. Rauzzino to revisit Claimant's case with an eye toward the new claim. Dr. Rauzzino noted he had taken a detailed history at the prior IME regarding Claimant's condition and potential injuries. Claimant also completed a patient questionnaire on which she attributed her symptoms solely to the October 2016 trip and fall accident, with no mention of any injury in December 2018. Claimant told Dr. Rauzzino her pain worsened in December 2018 "but she did not relate the history of any sort of injury which would have caused a worsening of her pain." Dr. Rauzzino reviewed the transcript of the October 24, 2019 hearing and noted Claimant had testified, "I had been having trouble for days, you know, with my legs and stuff" before December 28, 2018. Dr. Rauzzino thought it "clear that no new occupational injury occurred." He saw "no evidence to indicate that she sustained a new occupational injury on 12/28/18 which caused her to need treatment or surgery." He further opined, from a mechanical standpoint, there is no reason to believe an episode of vacuuming caused Claimant's back condition to worsen. Nothing about her occupational activities on December 28, 2018 because or necessitated any need for treatment. Dr. Rauzzino reiterated Claimant's low back symptoms on and after December 28, 2018 simply reflected the natural progression of her underlying degenerative condition.

19. Claimant is not a reliable historian or credible witness. Respondents' position statement persuasively outlines numerous inconsistencies throughout the record that preclude giving Claimant's testimony any weight.

20. Dr. Lakin and Dr. Rauzzino's causation opinions are credible and persuasive.

21. Claimant failed to prove she suffered a compensable injury on December 28, 2018. Claimant's low back and leg symptoms before, on, and after December 28 were manifestations of her pre-existing condition. Claimant had severe degenerative stenosis and spinal instability that was progressively symptomatic for years. The apparent worsening of Claimant's condition in December 2018 reflects the natural progression of her underlying pre-existing degenerative spinal condition, without contribution from her work.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove that she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The claimant must prove that an injury proximately caused the condition for which benefits are sought. Section 8-41-301(1)(c); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). For an injury to be compensable under the Act, there must be a "sufficient nexus" between the employment and the injury. *In re Question Submitted by* *the U.S. Court of Appeals*, 759 P.2d 17 (Colo. 1988). The claimant must prove entitlement to benefits by a preponderance of the evidence.

The existence of a pre-existing condition does not preclude a claim for compensation if an industrial injury aggravates, accelerates, or combines with the pre-existing condition to produce the need for medical treatment or disability. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain was proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). But the mere fact that a claimant experiences symptoms at work does not necessarily mean the employment aggravated or accelerated the pre-existing condition or caused a compensable injury. *Madonna v. Walmart*, W.C. No. 4-997-641-02 (August 21, 2017); *Cotts v. Exempla*, W.C. No. 4-606-563 (August 18, 2005). The ultimate question is whether the need for treatment was proximately caused by an industrial aggravation or merely reflects the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

Respondent makes a well-supported and persuasive argument this claim is barred by the doctrine of claim preclusion under the holding in *Holnam, Inc. v. Industrial Claim Appeals Office*, 159 P.2d 795 (Colo. App. 2006). The ALJ is inclined to agree with Respondent's analysis. But it is not necessary to decide that question because, even assuming *arguendo* that claim preclusion does not apply, the preponderance of persuasive evidence shows the worsening of Claimant's low back condition in December 2018 was not causally related to her work. Dr. Lakin and Dr. Rauzzino's causation analysis and opinions are credible and persuasive. Claimant had longstanding, progressive lumbar spine problems before the alleged work accident, including severe canal and foraminal stenosis and multi-level instability. The pre-existing pathology caused chronic and progressive radiculopathy for which Claimant was actively treated by her personal providers. Claimant's condition was bad enough that she requested and received a Toradol injection ten days before the alleged injury. Contemporaneous medical records do not document or support any injury occurring on December 28, 2018. In fact, the December 28, 2018 urgent care clinic report states "the symptoms began 3 days ago." This is consistent with Claimant's sworn testimony at the prior hearing with ALJ Lamphere that she "had been having trouble for days . . . with my legs and stuff" before December 28, 2018. And Claimant told Dr. Pennington she had spent Christmas "in bed" because of back problems. Claimant's work on December 28, 2018 caused no structural change to Claimant's underlying pathology. Nor did it aggravate, accelerate, or combine with the pre-existing condition to proximately cause her need for treatment. While the ALJ does not doubt the surgery performed by Dr. Sung was reasonably needed to address Claimant's severe, progressive neurological deficits, it was in no way related to her work on December 28, 2018. Claimant failed to prove she suffered a compensable injury on December 28, 2018.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is requested that you send a courtesy copy of your Petition to Review to the Colorado Springs OAC office via email at oac-csp@state.co.us**

DATED: February 5, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered a compensable right shoulder injury during the course and scope of her employment with Employer on April 17, 2020.

2. Whether Respondents have proven by a preponderance of the evidence that Claimant willfully failed to obey a safety rule in violation of §8-42-112(1)(b) C.R.S. on April 17, 2020 and her non-medical benefits should thus be reduced by fifty percent.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $970.00.

FINDINGS OF FACT

1. Claimant worked for Employer as a Utility Line Locator. Her job duties involved traveling to job sites to locate underground gas and electrical lines.

2. As part of Claimant's employment, she received a primary truck and a spare truck. She stored both of the trucks at her home.

3. In order to pay for minor repairs and routine maintenance on the trucks, Employer provided Claimant with a credit card or "fleet card." Prior to using the fleet card, employees were required to obtain a supervisor's permission for repairs and maintenance.

4. As an added safety measure, Employer provided employees with "Yaktrax" devices for use while working in the field. Yaktrax are safety devices that attach to the bottom of an individual's shoes. They are used in snowy and icy conditions to provide additional grip and traction to the bottom of a shoe or boot. Employer made Yaktrax available to employees through a number of sources, including area managers, operations managers and general managers.

5. On the morning on April 17, 2020 Claimant's primary company truck was stuck in the snow at her house. Because the truck had bald tires and a bad gas fuel injector, she sought to take the truck to a shop for repairs. Claimant's spare truck had a dead battery and required a jump to be operational.

6. Claimant exchanged several text messages and had multiple telephone calls with her supervisor and Employer's Operations Manager Rachel E[Redacted] on April 16, 2020 and the morning of April 17, 2020. Ms. E[Redacted] was responsible for

fleet vehicle maintenance. The parties specifically discussed options to address the problems with each of the trucks at Claimant's house.

7. At about 6:30 a.m. on the April 17, 2020 Ms. E[Redacted] advised Claimant to determine whether she could get her primary truck to an auto repair shop to have the tires replaced. Claimant would drop the truck off at the repair shop and Ms. E[Redacted] would pick her up.

8. Ms. E[Redacted] testified at the hearing in this matter. After considering the snowfall and weather conditions, Ms. E[Redacted] realized that Claimant's primary truck was not safe to drive. She called Claimant and instructed her not to drive anywhere. Ms. E[Redacted] specified that she would direct a technician who lived near Claimant to stop by to jump the battery of the second truck. She specifically instructed Claimant not to travel to the auto repair shop. Instead, Ms. E[Redacted] would arrange to have the primary truck moved to the repair facility for maintenance work. She emphasized that she clearly explained the plan and Claimant verbally agreed.

9. Claimant also testified at the hearing in this matter. She explained that she texted Ms. E[Redacted] on the morning of April 17, 2020 and was advised to take her primary truck to Advanced Auto Body shop located at 505 Orchid Road. The repair facility was located about two miles from Employer's office.

10. In a text message from Claimant to Ms. E[Redacted] time-stamped at 6:31 a.m. on April 17, 2020, she stated "okay we're not going to move this truck in the snow and the other truck the battery is dead." One minute later Claimant noted "[s]o I should get another truck and then my block look like a little [Employer] LOL." Ms. E[Redacted] responded at 6:32 a.m. "call fleet please."

11. Despite her communications with Ms. E[Redacted] Claimant drove her primary truck with bald tires to Advance Auto. When she arrived at the facility at approximately 7:00 a.m. Claimant planned to walk up to the front doors of the building to determine whether it was open. However, before leaving her vehicle, Claimant called Ms. E[Redacted] and told her she needed to be picked up from the facility. Ms. E[Redacted] testified she was confused about why Claimant had gone to Advanced Auto. She had specifically instructed Claimant to remain home so a nearby technician could stop by to jump the battery of the secondary truck.

12. Employer's Regional Operations Manager Nicholas Rizk testified regarding Employer's recommended use of Yaktrax. He explained that Employer frequently discussed the use of Yaktrax at weekly meetings because of the hazards associated with slips, trips and falls when locators are performing their job duties during inclement weather. However, Mr. Rizk acknowledged that Employer did not have a written policy addressing the use of Yaktrax on April 17, 2020. Nevertheless, he remarked that employees could receive a disciplinary write-up for failing to wear the devices.

13. Claimant testified that she never received a written policy regarding the mandatory use of Yaktrax. She remarked that, although she had heard discussions about Yaktrax at meetings, she did not think that wearing them was mandatory. Claimant commented that she never received Yaktrax or money to purchase them. She noted that she never received a write up for failing to wear the devices and noticed other utility locators not wearing Yaktrax.

14. Despite noticing that there was snow and ice on the area where she would be walking on April 17, 2021, Claimant did not wear Yaktrax. As Claimant walked up to Advanced Auto she slipped on ice and fell to the ground. She landed on the right side of her back. Claimant experienced pain in her right arm and shoulder area immediately after the fall.

15. Claimant was able to return to her feet after the fall. A colleague picked Claimant up from Advanced Auto and took her home to retrieve the spare truck. After they jumped the truck's battery, Claimant went to work and completed her scheduled shift.

16. Claimant reported her injuries to Employer's Administrative Assistant Rhonda Stroud. Ms. Stroud testified that Claimant informed her she had slipped on ice and hurt her shoulder. She told Claimant to report the incident and seek treatment. Ms. Stroud advised Ms. E[Redacted] that Claimant had been injured and suggested visiting a doctor because of the pain.

17. On April 23, 2020 Claimant visited Authorized Treating Physician (ATP) Nicole Leitch, M.D. at Concentra Medical Centers for an examination. Dr. Leitch noted that on April 17, 2020 Claimant "was dropping off a truck at auto shop and slipped and fell on ice" and "had pain immediately in her right shoulder." On physical examination Claimant exhibited tenderness in the AC joint, bicipital groove, deltoid, anterior glenohumeral joint and supraspinatus muscle. Dr. Leitch recommended an x-ray, physical therapy and Ibprofen. She assigned work restrictions of occasionally lifting 10 pounds and pushing/pulling not to exceed 20 pounds.

18. On April 27, 2020 Claimant returned to Dr. Leitch for an evaluation. She reported a 5/10 pain level. Claimant exhibited limited right shoulder movement in all planes. Dr. Leitch recommended physical therapy and continued work restrictions.

19. In a May 31, 2020 report ATP Theodore R. Villavicencio, M.D. determined that Claimant reached Maximum Medical Improvement (MMI) on May 26, 2020. Dr. Villavicencio noted that Claimant could work without restrictions and did not require medical maintenance treatment.

20. Claimant has failed to demonstrate that it is more probably true than not that she suffered a compensable right shoulder injury during the course and scope of her employment with Employer on April 17, 2020. Initially, Claimant injured her right shoulder when she slipped on ice while walking up to Advanced Auto for repairs on her primary work truck. Notably, Employer provided Claimant with a fleet card to pay for minor repairs

and routine maintenance on work trucks. However, prior to using the fleet card, employees were required to obtain a supervisor's permission. On April 16-17, 2020 Claimant consulted with her supervisor Ms. E[Redacted] regarding repairs on her truck. Ms. E[Redacted] noted the repair facility was located at 505 Orchid Road or about two miles from Employer's office. At about 6:30 a.m. on the April 17, 2020 Ms. E[Redacted] advised Claimant to determine whether she could take her primary truck to the auto shop to have the tires replaced. Claimant would drop the truck off at the facility and Ms. E[Redacted] would pick her up.

21. After considering the snowfall and weather conditions, Ms. E[Redacted] realized that Claimant's primary truck was not safe to drive. She called Claimant and instructed her not to drive anywhere. Ms. E[Redacted] specified that she would direct another technician who lived near Claimant to stop by and jump the battery of the second truck. She specifically told Claimant not to travel to the auto shop. Ms. E[Redacted] emphasized that she clearly explained the plan and Claimant verbally agreed. In fact, in a text message to Ms. E[Redacted] time-stamped at 6:31 a.m. on April 17, 2020, Claimant stated "okay we're not going to move this truck in the snow and the other truck the battery is dead." One minute later Claimant noted "[s]o I should get another truck and then my block look like a little [Employer] LOL." Ms. E[Redacted] responded at 6:32 a.m. "call fleet please." Ms. E[Redacted]'s credible testimony and Claimant's acknowledgment that she should not move the truck in the snow reflects that Claimant was aware she should not travel to Advanced Auto for repairs. Ms. E[Redacted]'s direct instructions reveal that Claimant lacked approval for any travel with the truck on April 17, 2020.

22. Despite Ms. E[Redacted]'s instructions, Claimant drove her primary truck with bald tires to Advanced Auto. She then slipped and injured her right shoulder. Although Claimant possessed a fleet card for truck maintenance and repairs, Ms. E[Redacted] specifically instructed her not to move the truck because of the weather conditions. In driving the truck to Advance Auto Claimant was not performing mandatory or incidental duties of her employment. Instead, her conduct constituted such a deviation from the circumstances and conditions of her employment that she stepped aside from her job duties. Claimant's decision to drive the truck to Advanced Auto, despite Ms. E[Redacted]'s instructions, thus removed her from the employment relationship. In willfully deciding to drive to Advanced Auto on April 17, 2020, Claimant was no longer engaged in an activity connected with her job-related functions. Claimant's conduct therefore constituted a personal deviation that did not arise within the course and scope of her employment. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of

the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The claimant must prove by a preponderance of the evidence that her injury was proximately caused by an injury arising out of and in the course of his employment with employer. Section 8-41-301(1)(b) & (c), C.R.S*.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment when the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991); *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014).

5. The "arising out of" element is narrower and requires the claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). It is not essential to compensability that an employee's activity at the time of the injury result from a job duty if the activity is sufficiently incidental to the work to be properly considered as arising out of and in the course of the employment. *Panera Bread, LLC v. Industrial Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006); *Rodriguez v. Pueblo County* W.C. No. 4-911-673-01 (ICAO, Aug. 2, 2016).

6. When the employer asserts a personal deviation from employment "the issue is whether the activity giving rise to the injury constituted a deviation from employment so substantial as to remove it from the employment relationship." *Roache v. Industrial Commission,* 729 P.2d 991 (Colo. App. 1986); *In Re Laroc,* W.C. 4-783-889 (ICAO, Feb. 1, 2010). If an employee substantially deviates from the mandatory or incidental duties of employment so that he is acting for his sole benefit at the time of injury, his claim is not compensable. *Kater v. Industrial Commission,* 729 P.2d 746 (Colo. App. 1986); *Laroc v. Labor Ready, Inc.* W.C. No. 4-783-889 (ICAO, Feb. 1, 2010). The issue is thus whether the "claimant's conduct constitutes such a deviation from the

circumstances and conditions of the employment that the claimant stepped aside from his job and was performing an activity for his sole benefit." *In Re Laroc,* W.C. 4-783-889 (ICAO, Feb. 1, 2010); *see Panera Bread, LLC v. Industrial Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006). It is thus not essential that the activities of an employee emanate from an obligatory job function or result in a specific benefit to the employer for a claim to be compensable. *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985).

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered a compensable right shoulder injury during the course and scope of her employment with Employer on April 17, 2020. Initially, Claimant injured her right shoulder when she slipped on ice while walking up to Advanced Auto for repairs on her primary work truck. Notably, Employer provided Claimant with a fleet card to pay for minor repairs and routine maintenance on work trucks. However, prior to using the fleet card, employees were required to obtain a supervisor's permission. On April 16-17, 2020 Claimant consulted with her supervisor Ms. E[Redacted] regarding repairs on her truck. Ms. E[Redacted] noted the repair facility was located at 505 Orchid Road or about two miles from Employer's office. At about 6:30 a.m. on the April 17, 2020 Ms. E[Redacted] advised Claimant to determine whether she could take her primary truck to the auto shop to have the tires replaced. Claimant would drop the truck off at the facility and Ms. E[Redacted] would pick her up.

8. As found, after considering the snowfall and weather conditions, Ms. E[Redacted] realized that Claimant's primary truck was not safe to drive. She called Claimant and instructed her not to drive anywhere. Ms. E[Redacted] specified that she would direct another technician who lived near Claimant to stop by and jump the battery of the second truck. She specifically told Claimant not to travel to the auto shop. Ms. E[Redacted] emphasized that she clearly explained the plan and Claimant verbally agreed. In fact, in a text message to Ms. E[Redacted] time-stamped at 6:31 a.m. on April 17, 2020, Claimant stated "okay we're not going to move this truck in the snow and the other truck the battery is dead." One minute later Claimant noted "[s]o I should get another truck and then my block look like a little [Employer] LOL." Ms. E[Redacted] responded at 6:32 a.m. "call fleet please." Ms. E[Redacted]'s credible testimony and Claimant's acknowledgment that she should not move the truck in the snow reflects that Claimant was aware she should not travel to Advanced Auto for repairs. Ms. E[Redacted]'s direct instructions reveal that Claimant lacked approval for any travel with the truck on April 17, 2020.

9. As found, despite Ms. E[Redacted]'s instructions, Claimant drove her primary truck with bald tires to Advanced Auto. She then slipped and injured her right shoulder. Although Claimant possessed a fleet card for truck maintenance and repairs, Ms. E[Redacted] specifically instructed her not to move the truck because of the weather conditions. In driving the truck to Advance Auto Claimant was not performing mandatory or incidental duties of her employment. Instead, her conduct constituted such a deviation from the circumstances and conditions of her employment that she stepped aside from her job duties. Claimant's decision to drive the truck to Advanced Auto, despite Ms. E[Redacted]'s instructions, thus removed her from the employment relationship. In willfully deciding to drive to Advanced Auto on April 17, 2020, Claimant was no longer

engaged in an activity connected with her job-related functions. Claimant's conduct therefore constituted a personal deviation that did not arise within the course and scope of her employment. Accordingly, Claimant's request for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-114-437-002

ISSUE

1. Whether Claimant established by a preponderance of the evidence that the right knee synovectomy, requested by authorized treating physician ("ATP") Aaron T. Baxter, M.D., is reasonable, necessary, and causally related to her admitted industrial injury of July 26, 2019.

FINDINGS OF FACT

1. Claimant is 61-years-old and works for Employer as an ultrasound technician.

2. On July 26, 2019, Claimant sustained an admitted injury to her right knee arising out of the course of her employment with Employer.

3. Claimant was seen at Rehabilitation Associates of Colorado, by Nicholas Olsen, Olsen, M.D., Franklin Shih, M.D., and later by Kristin Mason, M.D., her authorized treating physician (ATP) In September 2019, Dr. Mason referred Claimant to Aaron Baxter, M.D., for an orthopedic evaluation for her left knee. However, Claimant experienced a pulmonary embolus which delayed her ability to see Dr. Baxter at that time. Later, in March 2019, Dr. Mason again referred Claimant to Dr. Baxter and for physical therapy. Claimant's ability to undergo physical therapy was initially delayed due to COVID issues, but she was ultimately able to begin physical therapy for her knee.

4. On August 2, 2019, an MRI of Claimant's right knee was performed. The MRI was interpreted as showing a partial tear of the proximal ACL, no appreciable meniscus tear, and tricompartmental chondromalacia, with Grade 3-4 thinning and fibrillation in the lateral tibial plateau, medial patella, and central and medial trochlea. The MRI also showed "joint effusion, synovitis and joint debris without body evidence." (Ex. 5, 6).

5. On December 20, 2019, Mark Failinger, M.D., performed an independent medical examination (IME) at Respondents' request. Dr. Failinger concluded that Claimant had pre-existing chondromalacia, which was accelerated by her work injury. Dr. Failinger opined that the most reasonable initial treatment modality, that arthroscopy was not a "first line treatment and in fact does not have high probability of helping patients." He also noted that "[m]echanical symptoms can be treated with arthroscopic measures, and would be a reasonable treatment in this case should she fail all of the conservative measures and if she has mechanical symptoms of locking or catching. A loose body is present, along with some of her chondromalacia, and those may case those type of symptoms or may progress to such." (Ex. 6).

6. X-rays performed on May 14, 2020 demonstrated mild osteoarthritis within the knees, and mildly decreased joint space in the medial compartment. Kellgren-Lawrence Grading scale 2. (Ex. 1).

7. Claimant saw Dr. Baxter three times between May 14, 2020 and July 21, 2020. Dr. Baxter discussed with Claimant multiple conservative treatment options, including physical therapy, Visco injections and cortisone injections. Claimant participated in physical therapy, but elected not to undergo injections. Dr. Baxter's records do not reflect that he assigned Claimant any diagnosis. Specifically, the records state "no diagnosis found." At Claimant's July 21, 2020 visit, she reported popping in the lateral aspect of her knee with occasional pain. At the July 21, 2020 visit, Dr. Baxter discussed the possibility of arthroscopic surgery with Claimant, but did not document any explanation as to the reasons for surgery or the specific condition sought to be addressed. (Ex. 5).

8. On July 28, 2020, Dr. Baxter submitted a request for authorization for surgery to Insurer. The authorization identifies the requested surgery as "Right Knee Scope, Synovectomy." The authorization identifies a diagnosis code, without further explanation. (Ex. 5).

9. On August 2, 2020, Dr. Failinger performed a record review to address Dr. Baxter's surgical request, in which he opined that the requested knee surgery was not reasonable, and that a scope with synovectomy would not be reasonably expected to improve Claimant's condition. Dr. Failinger opined that performing a "clean up" of Claimant's cartilaginous debris is not reasonable unless there are mechanical symptoms that appear to be significantly affecting Claimant's life. (Ex. 9).

10. On August 5, 2020, Respondent (through its third-party administrator), advised Claimant that the request for authorization for surgery on her right knee was denied, based on Dr. Failinger's August 2, 2020 report. (Ex. 1).

11. Claimant testified at hearing that she experiences snapping and catching in her right knee that are associated with pain. She also testified that her right knee "gives out" at times, and that this has been consistent since the date of her injury. She testified that she has experienced benefits from physical therapy, Toradol and use of a TENS unit, and that her condition has improved, but not to the point where she is able to function normally. Claimant testified that she would like to undergo the surgery recommended by Dr. Baxter, and does not wish to undergo cortisone injections because she believes the injections to be a temporary fix. Claimant testified she understood the surgery proposed by Dr. Baxter to be one to "clean up" her knee.

12. Dr. Failinger was admitted to testify as an expert in orthopedic surgery and sports medicine. Dr. Failinger testified that Claimant has a compensable knee injury, and that treatment for her knee is reasonable and related to her injury. In Dr. Failinger's opinion, however, a right knee synovectomy is not medically probable to improve or cure Claimant's condition.

13. Dr. Failinger testified that a synovectomy is a procedure used to address pathology of the synovium. The synovium is the tissue that makes up the lining to the joint that provides lubrication. Typically, a synovectomy is indicated for synovial tumors, plica, and rheumatoid arthritis. Dr. Failinger does not believe the Claimant has any of these conditions, and that Dr. Baxter's reports did not explain the rationale for the proposed surgery. He testified that a cortisone injection or visco-supplementation recommended by Dr. Baxter would be reasonable treatment options with a better chance to improve Claimant's condition than surgery. Dr. Failinger believes that Dr. Baxter's request for a synovectomy was a poor choice of words, and that the request was likely for a chondroplasty.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

SPECIFIC MEDICAL BENEFITS AT ISSUE

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the claimant's physical needs. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). The existence of evidence which, if credited, might permit a contrary result affords no basis for relief on appeal. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002)." *In the Matter of the Claim of Bud Forbes, Claimant*, No. W.C. No. 4-797-103, 2011 WL 5616888, at *3 (Colo. Ind. Cl. App. Off. Nov. 7, 2011). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, W.C. No. 3-979-487, (ICAO, Jan. 11, 2012); *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO, Feb. 12, 2009).

Claimant has failed to establish by a preponderance of the evidence that the right knee arthroscopic synovectomy requested by Dr. Baxter is reasonable, necessary, or related to Claimant's July 26, 2019 work injury. Dr. Failinger credibly testified that the requested synovectomy is not reasonably likely to cure or relieve the effects of Claimant's injury. Neither Dr. Baxter's request for surgery nor his supporting medical records demonstrate that Claimant has a work-related diagnosis that would benefit from a synovectomy. While Dr. Failinger opined that Dr. Baxter's use of the term "synovectomy" may have been a poor choice of words, and that Dr. Baxter may have been referring to a "chondroplasty," the ALJ cannot speculate that Dr. Baxter intended to seek authorization for any procedure other than a synovectomy. Dr. Baxter requested authorization to perform a synovectomy using a scope. Neither the records nor the request for authorization indicate that a debridement or chondroplasty, or other procedure was requested.

Dr. Failinger opined that an arthroscopic "clean-up" of Claimant's knee may be appropriate if her symptoms are mechanical in nature. Claimant similarly understood the procedure Dr. Baxter requested to be a "clean up." However, the ALJ does not find this was the procedure recommended by Dr. Baxter. Consequently, the ALJ makes no findings or conclusions as to the reasonableness or necessity of such a procedure because the ALJ lacks authority to order an ATP to provide a particular form of treatment which has not been prescribed or recommended the ATP. *Torres v. City and County of Denver*, W.C. No. 4-937-329-03 (ICAO, May 15, 2018) *citing Short v. Property Management of Telluride*, W.C. No. 3-100-726 (ICAP May 4, 1995).

ORDER

It is therefore ordered that:

1. Claimant's request for authorization of a right knee synovectomy is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 16, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the left shoulder surgery, recommended by Dr. Norman Lindsay Harris, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted June 10, 2019 injury.

Whether the claimant has demonstrated, by a preponderance of the evidence, that magnetic resonance imaging (MRI) of the claimant's brain, as recommended by Dr. Edward Maurin, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted June 10, 2019 injury.

FINDINGS OF FACT

1. The claimant worked for the employer as a carpenter. On June 10, 2019, the claimant and a coworker were installing a header above a door. The claimant testified that as he was lifting the header over his head, his ladder twisted. This caused the claimant's body to twist. The claimant testified that he immediately felt pain in his neck, left shoulder, left arm, the back of his head, and his face. The claimant testified that his pain was "10 out of 10".

2. Following the incident the employer sent the claimant home. However, the claimant was in such a high degree of pain, that he sought treatment at the emergency department (ED) at Grand River Medical Center. The claimant testified that while he was in the ED, he had burning pain in the top of his left shoulder and into his arm. In addition, he had extreme burning pain between his shoulder blades. The claimant also testified that while in the ED, he was given pain medication and an injection was administered into his neck.

3. The claimant further testified that since June 10, 2019, he has undergone physical therapy, massage therapy, and injections. However, none of these treatment modalities have helped the claimant's symptoms.

4. The June 10, 2019 medical record from Grand River Medical Center ED lists the claimant's complaints as left sided neck pain. On exam, it was noted that the claimant has cervical muscular tenderness into the claimant's left trapezius muscle. Examination of the claimant's extremities was noted to be normal. The claimant was diagnosed with a cervical strain and sprain. The medical record also notes that although trigger point injections were offered to the claimant, he declined those injections. The claimant was prescribed cyclobenzaprine to address muscle spasm.

5. The claimant's authorized treating provider (ATP) for this claim is Grand River Occupational Health. The claimant has been seen in that practice by Cynthia Bjerstedt, PA-C and Dr. Dustin Cole. The claimant was first seen by Ms. Bjerstedt on June 11, 2019. On that date, the claimant reported constant sharp pain and tingling in the left side of his neck. He also reported some burning on the left side of his face. Ms. Bjerstedt diagnosed a strain of the muscle, fascia and tendon of the neck. She recommended use of a muscle relaxer, ice, and heat. She also referred the claimant to physical therapy.

6. On September 5, 2019, a magnetic resonance image (MRI) of the claimant's cervical spine showed a 0.3 cm synovial cyst at the C5-C6 level, likely contacting the left C6 nerve root; cervical spondylosis with mild central canal stenosis and severe left neural foramen stenosis at the C3-C4 level; and cervical spondylosis with moderate left neural foramen stenosis at the C2-C3 level.

7. Following the MRI, Ms. Bjerstedt began to list the claimant's diagnosis as cervical radiculopathy.

8. The claimant was first seen by Dr. Cole on September 12, 2019. Dr. Cole listed the claimant's diagnoses as an acute cervical strain, cervical spondylosis, and radiculopathy. Dr. Cole opined that the claimant's injury triggered pain in the claimant's left C2-C3 and C3-C4 joints due to his advanced facet arthropathy. Dr. Cole recommended the claimant undergo injections. However, the claimant declined injections at that time. Dr. Cole referred the claimant to chiropractic treatment.

9. On October 10, 2019, the claimant returned to the ED at Grand River Medical Center and reported continued left sided neck pain, with shooting pain down his left arm. The claimant requested a "work note" because his pain was aggravated while he was at work that day.

10. On October 17, 2019, the respondents filed a General Admission of Liability (GAL) admitting for the June 10, 2019 injury.

11. On November 4, 2019, the claimant was transported to the Grand River Medical Center ED by ambulance. At that time the claimant reported ongoing left sided neck pain, with numbness in his face, left arm, and left leg. The claimant requested pain medication to address his ongoing left sided neck pain. The diagnosis was listed as chronic neck pain and the treating provider, Dr. Kenneth J. Eckstein, declined to prescribe the claimant anything "stronger than Tylenol/ibuprofen".

12. On November 18, 2019, the claimant was evaluated by Dr. Cole. The medical record of that date indicates that there was "no shoulder pain per se." the claimant described his pain as sharp, burning, dull, stabbing and aching. Concerning the shoulder, the claimant had "fully preserved active range of motion" but there was significant pain at the terminal arc of abduction and flexion. Dr. Cole did not see a need for neurosurgical evaluation but continued to recommend injection therapy.

13. Subsequently, Dr. Cole referred the claimant to Dr. Giora Hahn for epidural steroid injections. On November 26, 2019, the claimant was seen by Dr. Hahn. At that

time, Dr. Hahn recommended the claimant undergo left sided C2-C3 and C3-C4 facet injections.

14. On December 4, 2019, Dr. Mitchell Burnbaum performed nerve conduction studies related to the claimant's reported facial symptoms. Dr. Burnbaum noted that he was unable to determine the cause of these symptoms. He further noted that it was "very hard for me to understand this. He does not appear to have any problem at C2 and for him to have facial numbness from the problem in the neck, he would have to have a problem intrinsic to the spinal cord, so it does not make a lot of sense."

15. Dr. Hahn evaluated the claimant on December 13, 2019. Dr. Hahn noted that the claimant's complaints were primarily in the left axial upper neck. He further noted that the claimant had appropriate motor strength in the bilateral upper extremities. Dr. Hahn's diagnosis was cervical degenerative disc disease with facet arthropathy. Dr. Hahn suggested facet injections.

16. On December 20, 2019, the claimant told Dr. Hahn that the injections provided excellent improvement for a few hours.

17. On January 9, 2020, the claimant was seen by Dr. Cole. On that date, Dr. Cole reviewed the records from Dr. Burnbaum. Like Dr. Burnbaum, Dr. Cole remarked that the results were hard for him to understand, and that they did not "make a lot of sense." Dr. Cole opined that there was likely psychosocial overlay with some somatic symptom amplification. He did not think further facet injections, medial branch blocks, or rhizotomy were indicated. He stated he would make a referral for a surgical evaluation but was not convinced that claimant would be a surgical candidate considering "the scope of pain and ill-defined symptoms."

18. On February 4, 2020, the claimant returned to Dr. Cole. On that date, Dr. Cole administered an occipital nerve block.

19. On February 18, 2020, the claimant returned to Dr. Hahn and reported no significant improvement from the nerve block. At that time, Dr. Hahn opined that the claimant's symptoms were neuropathic and further injections would not be beneficial.

20. On March 5, 2020, Ms. Bjerstedt noted that the claimant began reporting left shoulder issues in October.

21. On April 8, 2020, the claimant was seen by Dr. Norman Lindsay Harris. On that date, Dr. Harris opined that the claimant's left shoulder symptoms were consistent with a rotator cuff tear. He also noted the "chronicity" of the claimant's left shoulder symptoms. Dr. Harris noted that dependent upon imaging findings he would recommend either injections or surgery. Dr. Harris ordered an MRI of the claimant's left shoulder for this purpose.

22. On April 15, 2020, an MRI of the claimant's left shoulder showed a 7 mm articular tear of the distal anterior supraspinatus footplate; a ⅓ cm articular tear of the

distal anterior infraspinatus fibers; mild subscapularis tendinosis; and mild acromioclavicular joint osteoarthritis.

23. On April 22, 2020, the claimant returned to Dr. Harris to address the MRI findings. Based upon the MRI findings, Dr. Harris recommended the claimant undergo arthroscopic left shoulder surgery for a possible biceps tenodesis and possible rotator cuff repair.

24. On May 1, 2020, Dr. Jon Erickson reviewed the request for left shoulder surgery. Dr. Erickson identified the requested procedure as left shoulder arthroscopy with possible rotator cuff repair, and a left biceps tenodesis. Dr. Harris recommended denial of the requested surgery. Dr. Erickson noted that the claimant did not begin to report left shoulder symptoms for "a significant number of months". Dr. Erickson also noted that the MRI of the claimant's left shoulder does not clearly indicate a surgical lesion. Therefore, he also recommended "denial of any claim for a work-related left shoulder problem."

25. The respondents denied authorization for the requested left shoulder surgery.

26. On May 6, 2020, the claimant was seen by neurosurgeon, Dr. Edward Maurin. Dr. Maurin reviewed the cervical spine MRI and noted that the MRI showed congenital central spinal stenosis at the C3-C4 level with severe foraminal stenosis associated with a large facet complex at the C4-C5 on the left. Dr. Maurin recommended the claimant undergo a decompression and fusion at C2-3-4. Dr. Maurin opined that there was no anatomical connection between the claimant's spine and his symptoms of facial numbness. As a result, Dr. Maurin recommended the claimant undergo a brain MRI before pursuing cervical surgery.

27. On June 2, 2020, Dr. Albert Hattem reviewed the request for a brain MRI. Dr. Hattem noted that Dr. Maurin requested the MRI to evaluate the claimant's facial numbness. Dr. Hattem further noted that while a brain MRI is reasonable to evaluate facial numbness, that symptom is not related to the claimant's June 10, 2019 neck strain. Therefore, Dr. Hattem recommended denial of the brain MRI.

28. The respondents denied authorization for the requested brain MRI.

29. On September 22, 2019, the claimant attended an independent medical examination (IME) with Dr. J. Raschbacher. In connection with the IME, Dr. Raschbacher reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. Dr. Raschbacher opined that as a result of the June 10, 2019 incident at work, the claimant suffered a cervical strain injury. That cervical strain has resolved and the claimant reached maximum medical improvement (MMI) on November 18, 2019. Dr. Raschbacher further opined that the claimant's current complaints are not related to the work injury. In addition, it is the opinion of Dr. Rashbacher that the claimant did not injure his left shoulder on June 10, 2019. In support of that opinion, Dr. Raschbacher noted that the claimant had full range of motion in his left shoulder on November 18, 2019 as well as full range of motion at the IME.

30. Dr. Raschbacher’s testimony by deposition was consistent with his written report. Dr. Raschbacher testified that it is his opinion that the claimant’s left shoulder was not injured on June 10, 2019, nor was any preexisting left shoulder condition aggravated on that date. Dr. Raschbacher also testified that at the IME, the claimant’s lack of range of motion in his left shoulder “didn’t make a great deal of sense”. With regard to the claimant’s complaints of face numbness and burning, Dr. Raschbacher testified that there is no indication on the imaging studies to explain those symptoms.

31. The claimant testified that his left shoulder pain has not gone away, and has actually gotten worse. He described it as feeling like his shoulder is tearing, with burning, and throbbing. The claimant testified that he had facial numbness on the date of the injury and that numbness continues.

32. Mr. Henrickon is Director of Operations with the employer. One of his job duties involves investigating work related injuries. In that capacity, Mr. Henrickon spoke with the claimant about the June 10, 2019 injury on either June 11 or June 12, 2019. Mr. Henrickon understood that the claimant injured his neck. He was not made aware that the claimant was claiming an injury to his left shoulder.

33. The ALJ credits the medical records and the opinions of Dr. Raschbacher and finds that the claimant has failed to demonstrate that it is more likely than not that his left shoulder was injured June 10, 2019 and no preexisting left shoulder condition aggravated on that date. Therefore, the ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that left shoulder surgery, (as recommended by Dr. Harris), is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted June 10, 2019 injury.

34. The ALJ credits the medical records and the opinions of Dr. Raschbacher and finds that the claimant has failed to demonstrate that it is more likely than not that a brain MRI, (as recommended by Dr. Maurin), is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted June 10, 2019 injury.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. The existence of a pre-existing medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

6. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that left shoulder surgery, (as recommended by Dr. Harris), is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted June 10, 2019 injury. As found, the medical records and the opinions of Dr. Raschbacher are credible and persuasive.

7. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, brain MRI, (as recommended by Dr. Maurin), is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted June 10, 2019 injury. As found, the medical records and the opinions of Dr. Raschbacher are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant's request for left shoulder surgery, (as recommended by Dr. Harris), is denied and dismissed.

2. The claimant's request for a brain MRI, (as recommended by Dr. Maurin), is denied and dismissed.

3. All matters not determined here are reserved for future determination.

Dated this 17th day of February 2021.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts** 1525 Sherman St., 4th Floor, Denver, CO 80203, or **via email at oac-ptr@state.co.us**. Use of this email address constitutes filing with the Denver Office of Administrative Courts and therefore complies with Section 8-43-301(2), C.R.S. and OACRP 26. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S.

For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-130-933-003

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that penalties should be assessed against the respondents pursuant to Sections 8-43-304 and 8-43-305, C.R.S. for the respondents' alleged failure to comply with ALJ Mottram's June 24, 2020 order.

FINDINGS OF FACT

1. On October 2, 2019, the claimant suffered an injury while working for the employer. The claim was initially denied by the respondents and the parties went to hearing before ALJ Keith Mottram on June 11, 2020. The issues for hearing were: 1) whether the claimant sustained a compensable injury; 2) whether medical treatment the claimant had received was reasonable and necessary to relieve him from the effects of the injury; and 3) whether the claimant was entitled to temporary total disability (TTD) benefits.

2. As of the date of the hearing, no provider had recommended cervical spine surgery.

3. On June 24, 2020, ALJ Mottram issued Findings of Fact, Conclusions of Law and Order. In that order, ALJ Mottram found that the claimant had suffered a compensable injury while employed with the employer. ALJ Mottram also found that the claimant's injury "includes both his left shoulder and cervical spine" and "the medical care **provided** by [the claimant's] treating physicians, including Dr. Spence, Dr. Liotta, Dr. Miller and Dr. Triehaft is reasonable and necessary to cure and relieve Claimant from the effects of his work injury." (*emphasis added*).

4. ALJ Mottram's order also stated that the claimant had proven, by a preponderance of the evidence, that "medical treatment **provided** by his treating physicians in this case including Dr. Spense, Dr. Liotta, Dr. Miller and Dr. Trifehaft was reasonable and necessary to cure and relieve the claimant from the effects of the work injury." (*emphasis added*).

5. Finally, ALJ Mottram ordered, *inter alia*, that "[r]espondents shall pay for the reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury." The order did not award any specific medical treatment or procedure.

6. As of the date of ALJ Mottram's order, no provider had recommended cervical spine surgery.

7. ALJ Mottram's June 24, 2020 order was not appealed.

8. On October 2, 2020, the claimant was seen by Dr. Ceola. At that time, the claimant reported continued neck pain that radiated into his left arm. Dr. Ceola recommended the claimant undergo an anterior cervical discectomy, pending an updated cervical spine MRI.

9. At the request of the respondents, Dr. Michael Janssen reviewed the requested cervical spine surgery. In his report, Dr. Janssen opined that the cervical spine MRI taken on November 1, 2019 showed a long standing and preexisting C5-C6 osteophyte complex with effacement of the spinal canal that level. Dr. Janseen opined that although the claimant may be a surgical candidate, the need for the recommended surgery was not related to the October 2, 2019 work injury. When compared to an MRI done on October 15, 2020, Dr. Janssen noted that the condition of the claimant's cervical spine was non-traumatic. Dr. Janssen recommended denial of the requested surgery.

10. Based upon the opinions of Dr. Janssen, the respondents denied the requested cervical spine surgery.

11. On October 27, 2020, the claimant filed an Application for Hearing. The issues endorsed for hearing were medical benefits, reasonable and necessary, and penalties alleging a violation of ALJ Mottram's June 24, 2020 order.

12. Subsequently, the recommended cervical spine surgery was authorized by the respondents. The claimant underwent that surgery on January 6, 2021.

13. The claimant asserts that ALJ Mottram's June 24, 2020 order, provides that the respondents are liable for any and all treatment of the claimant's cervical spine. As the ALJ understands the claimant's assertion, because ALJ Mottram found that the claimant suffered an injury to his cervical spine on October 2, 2019, all treatment to that body part shall be paid for by the respondents. The claimant further asserts that the respondents' initial denial of the cervical surgery constitutes a violation of ALJ Mottram's order. The ALJ is not persuaded by the claimant's assertions.

14. The ALJ notes that ALJ Mottram's June 24, 2020 order found that the respondents' were responsible for treatment provided to the claimant by Drs. Spence, Liotta, Miller, and Treihaft. The use of the past tense "provided" clearly indicates that the order addressed treatment provided prior to the date of the order. The ALJ does not interpret the language of ALJ Mottram's order to mean any future treatment of the claimant's cervical spine.

15. As further addressed below, the ALJ finds that the claimant has not demonstrated that it is more likely than not that the respondents violated ALJ Mottram's June 24, 2020 order. Therefore, the claimant has failed to demonstrate that an assessment of penalties against the respondents would be appropriate.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1),

C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Before penalties may be assessed, the ALJ must first determine whether a party has violated any provision of the Workers' Compensation Act or an order. If the ALJ finds such a violation, penalties may be imposed if it is also found that the employer's actions were objectively unreasonable. Section 8-43-304, C.R.S*. City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Jimenez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The "objective standard" is measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995).

5. An order is defined as including "any decision, finding and award, direction, rule, regulation, or other determination arrived at by the director or an administrative law judge." Section 8-40-201(15), C.R.S.

6. In this case, the claimant seeks penalties for an alleged violation of ALJ Mottram's June 24, 2020 order. Specifically, the claimant asserts that the respondents violated the order with the denial of the cervical spine surgery (as recommended by Dr. Ceola on October 2, 2020).

7. The ALJ recognizes that ALJ Mottram's June 24, 2020 order provides for a general award of medical benefits. However, no specific medical treatment was awarded by that order. In addition, at the time of the June 11, 2020 hearing and ALJ Mottram's June 24, 2020 order, there had been no recommendation for a cervical spine

surgery. The ALJ finds that ALJ Mottram's June 24, 2020 order did not contemplate future recommendations for medical treatment.

8. Although a particular body part is considered "covered" under a claim, that does not mean that all future treatment of that body part is the responsibility of the respondents. In a workers' compensation case, any requested medical treatment must be deemed reasonable, necessary, and related to the occupational injury. The respondents do not waive the ability to contest the reasonableness, necessity, or relatedness of a specific treatment simply because a body part is deemed compensable.

9. This issue is addressed in *Hardesty v. FCI Constructors, Inc.*, WC No. 4-611-326 (ICAO July 7, 2005). In that case, the ICAO noted that "regardless of the filing of a [General Admission of Liability] for medical benefits or an order containing a general award for medical benefits, insurers retain the right to dispute whether the need for medical treatment was caused by the compensable injury." The ICAO also found that "the mere admission that an injury occurred and treatment is needed cannot be construed as a concession that all conditions and treatments which occur after the injury were caused by the injury." *Id*.

10. With regard to penalties, the ICAO has rejected the assertion that an insurer violates an order by contesting the reasonableness, necessity, or relatedness of medical treatment when that treatment was not specifically provided for by a prior order, even when that order provides for general medical treatment, or orders other specific medical treatment. *Young v. Bobby Brown Bail Bonds, Inc.*, WC No. 4-632-376 (ICAO April 7, 2020); *Calvert v. Roadway Express, Inc.*, WC 4-355-715 (ICAO February 6, 2003).

11. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the respondents violated ALJ Mottram's June 24, 2020 order. As found, the June 24, 2020 order did not address nor contemplate cervical spine surgery. Therefore, the respondents' initial denial of that surgery was not in violation of ALJ Mottram's order. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that penalties are appropriate in this matter.

ORDER

It is therefore ordered that the claimant's request for penalties related to an alleged violation of ALJ Mottram's June 24, 2020 order is denied and dismissed.

Dated this 17th day of February 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts

Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

- Whether Claimant has demonstrated by a preponderance of the evidence that she sustained a compensable injury arising out of and in the course of her employment with employer?

- If Claimant has proven a compensable injury, whether Claimant has proven by a preponderance of the evidence that she is entitled to an award of temporary total disability ("TTD") benefits for the period of March 9, 2019 through August 14, 2019?

- The parties stipulated that if the claim is found compensable, Dr. Carrie Burns of Concentra Denver would be the authorized treating physician ("ATP") for Claimant's injury.

FINDINGS OF FACT

1. Claimant is employed as a Warehouse Associate with Employer. Claimant testified at hearing that on March 8, 2019 she was performing her regular job with Employer when she was lifting a tote filled with intravenous ("IV") water and felt pain on her upper back on the right side. Claimant testified that the injury occurred 1-2 hours after she started her shift.

2. Claimant testified that she reported her injury to the Coordinator of the Floor, "J[Redacted]", and then went to the office and reported the injury to her supervisor, Mr. M[Redacted]. Claimant testified she informed Mr. M[Redacted] that she hurt her neck and back and pointed to the right side of her shoulder and back. Claimant was referred to Skyridge Emergency Room ("ER") for medical treatment.

3. According to the medical records from Skyridge Emergency Room, claimant reported to the ER with right upper posterior shoulder pain which started a year ago and has been intermittent and was worse again today. Claimant reported she worked for employer where she lifts a lot of heavy objects and wraps large packages, mostly using her right arm. Claimant reported that whenever she starts to wrap packages, she starts to have pain in that area. Claimant denied any anterior shoulder pain, weakness or numbness. Claimant underwent an x-rays of her thoracic spine, which were negative for any acute abnormality.

4. Claimant has a prior history of a work related injury with employer from December 19, 2017. In relation to this injury, claimant underwent a magnetic resonance image ("MRI") of her cervical spine on May 10, 2018 which demonstrated minimal cervical spondylosis, without evidence of neural impingement. Claimant was placed at

maximum medical improvement ("MMI") for the prior injury on August 1, 2018 with no restrictions or permanent impairment.

5. After being placed at MMI, Claimant sought additional treatment with physicians' assistant ("PA") Bodkin on November 21, 2018. Claimant reported complaints of pain in her right shoulder blade area which she reported developed when she wraps plastic around the orders at work. PA Bodkin recommended a thoracic MRI and follow up with physiatry.

6. Claimant testified at hearing that in August 2018 she still felt pain when she was wrapping pallets at work. Claimant testified that between August 2018 and March 2019 she did not have problems with her upper back and neck, but would follow up with Concentra for any problems she did have.

7. Claimant returned to PA Bodkin on March 12, 2018 for a one-time evaluation related to her prior injury. Claimant reported to PA Bodkin that she was working on March 6, 2019 and had to wrap pallets when she felt a pulling sensation in her right upper thoracic back. Claimant reported she continued to work until Friday when she lifted heavy product and had a sharp stabbing pain in her right upper back. Claimant reported she was having pain from her right upper back in to her trapezoid, shoulder and right neck. Claimant reported she was having trouble moving her neck.

8. Claimant was diagnosed with a sprain of her right shoulder and muscle spasm. PA Bodkin recommended reopening her prior workers compensation case with restrictions that included no lifting greater than 10 pounds and no overhead lifting. Claimant was referred for massage therapy.

9. Claimant was examined by Dr. Burns on March 18, 2019. Dr. Burns noted Claimant was alleging a new injury to her right upper back and shoulder after lifting a tote. Dr. Burns noted that Claimant had been seen two times for "one time evaluations" and her case had not been reopened. Dr. Burns diagnosed Claimant with a sprain of the right shoulder, and trapezius muscle spasm. Dr. Burns referred Claimant for physical therapy.

10. Video surveillance of Claimant at work on March 8, 2019 was entered into evidence at hearing. The video surveillance does not show any obvious injury to Claimant. The surveillance shows Claimant working in a normal manner and does not demonstrate Claimant experiencing an onset of injury during her shift on March 8, 2019.

11. Dr. Burns issued an addendum on March 25, 2019 after reviewing additional records and the surveillance video. Dr. Burns opined in her March 25, 2019 report that there was "no evidence of injury on March 8th video". Dr. Burns further opined that the appeared to be secondary gains from her injury report. Dr. Burns opined that Claimant's current condition was not compensable.

12. D[Redacted], the environmental health and safety supervisor for Employer, testified by deposition in this matter. Mr. D[Redacted] testified that after

Claimant reported an injury on March 8, 2019, he downloaded and reviewed the video surveillance that was entered into evidence in this case.

13. Dr. Burns testified by deposition in this matter on September 25, 2020. Dr. Burns testified in her deposition that she had evaluated Claimant on March 8, 2019. Dr. Burns testified that Claimant reported having suffered an acute injury at work when she was lifting a tote and had hurt her upper right back and shoulder. Dr. Burns testified that Claimant had a prior injury that Dr. Burns described as minor and noted that it took months for Claimant to recover from the injury. Dr. Burns opined that her physical examination of Claimant was very difficult because Claimant did not want to be touched and did not want to move. Dr. Burns opined that Claimant's effort was questionable.

14. Dr. Burns testified that after reviewing the video surveillance from Employer, she did not see any evidence of an injury occurring at the time Claimant reported she was injured in the way Claimant described the injury. Dr. Burns testified that if an injury would have occurred, she would have expected to see Claimant stop what she was doing or change her body mechanics when she experienced the onset of pain.

15. The ALJ credits the surveillance that was entered into evidence along with the opinion expressed by Dr. Burns over Claimant's testimony at hearing and finds that Claimant has failed to demonstrate that it is more probable than not that she sustained a compensable injury arising out of and in the course of her employment with Employer on March 8, 2019.

16. The ALJ notes that Dr. Burns' testimony is consistent with the video surveillance and the medical records entered into evidence in this matter. Based on the the finding that the testimony of Dr. Burns regarding the Claimant's injury is found to be credible, the ALJ finds that Claimant has failed to meet her burden of proof in this matter.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to

a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. There is no requirement that a claimant present medical evidence to prove the cause of an injury. *See Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997); *Apache Corp. v. Industrial Commission*, 717 P.2d 1000 (Colo. App. 1986). Similarly, the claimant is not required to prove the cause of his injuries by "medical certainty." *Industrial Commission v. Riley*, 165 Colo. 586, 441 P.2d 3 (1968). To the contrary, the claimant's testimony, if credited, may be sufficient to establish the requisite nexus between an industrial injury and the disability for which benefits are sought. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983). However, to the extent expert medical testimony is presented, it is the ALJ's sole prerogative to assess its weight and sufficiency. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990).

5. As found, the surveillance entered into evidence at hearing along with the testimony of Dr. Burns' are credited over the testimony of Claimant at hearing. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she sustained a compensable injury arising out of and in the course of her employment with Employer.

ORDER

It is therefore ordered:

1. Claimant's claim for benefits is denied and dismissed.

Dated February 17, 2021

Keith E. Mottram

You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. .

ISSUES

I. Whether Claimant is entitled to ongoing temporary total disability payments.

II. Whether Claimant is permitted to designate David Yamamoto, M.D., as the authorized treating physician ("ATP") under C.R.S. 8-43-404(5)(a)(I)(A).

STIPULATIONS

I. Claimant sustained a compensable work injury on September 16, 2019.

II. The medical treatment Claimant received from September 16, 2019 to September 20, 2019, is reasonable, necessary, and related medical treatment.

FINDINGS OF FACT

1. Claimant is a 33-year-old male who worked for Employer as a swim instructor. His job duties included teaching swim lessons.

2. While teaching a swim lesson on September 16, 2019, Claimant passed out and nearly drowned in the swimming pool. Claimant's co-workers pulled him from the pool and performed CPR. Claimant was then intubated by emergency medical technicians and transported to Swedish Medical Center, where he was admitted for suspected seizure and near-drowning.

3. Claimant received treatment at Swedish Medical Center from September 16, 2019 to September 20, 2019. The medical records note a history of alcohol disorder, alcohol pancreatitis, and a seizure two years prior. Claimant underwent a brain MRI and head and neck CT, which were negative for acute abnormalities. Claimant also underwent an abdominal ultrasound which was normal with the exception of liver disease. Claimant was extubated by September 18, 2019. The treating physicians placed Claimant on Keppra, an anti-epileptic medication, and monitored Claimant for seizure activity. Providers noted that the cause of Claimant's suspected seizure was alcohol abuse or polydipsia. Treating physicians noted Claimant's seizure could have occurred from alcohol withdrawal. It was further noted that there was no evidence of significant water aspiration or respiratory failure. Claimant was discharged from Swedish Medical Center on September 20, 2019. Claimant reported feeling well on the day of discharge. No complaints or findings of issues with balance, headaches or memory loss were noted. It was recommended Claimant continue on anti-epileptic medication for at least a few months.

4. Upon his discharge, attending physician, neurologist Emily Lampe, M.D., restricted Claimant from getting into swimming pools. She released Claimant to resume light duty work outside of the pool beginning September 30, 2019. Claimant was to follow-up with neurology in three months.

5. Claimant testified that in the days following his discharge from Swedish Medical Center he had communications with Employer regarding his physical condition and a potential return to modified employment. Claimant testified that Employer verbally offered him work performing cleaning and front desk tasks. Claimant stated he was having concerns returning to work due to balance and memory issues, so he was unable to leave the house and "the offer kind of seemed like it expired." Claimant testified that the topic of him returning to work was never revisited after he expressed his concerns to Employer. A written offer of modified employment was never tendered to Claimant.

6. Claimant testified that, subsequent to the September 16, 2019 work injury, he was able to participate in acting and singing activities three to five days a week at local theater companies. He participated in theater activities until the theaters closed due to COVID-19.

7. Claimant has not returned to work since September 16, 2019.

8. Claimant was not tendered a designated provider list as required by C.R.S. 8-43-404(5)(a)(I)(A). Claimant testified he did not receive further medical treatment within the workers' compensation system because Respondents denied liability for his claim. Claimant testified he has not received any medical treatment to address the effects of the September 16, 2019 work injury since his discharge from Swedish Medical Center. Claimant testified he does not have health insurance and was not able to receive treatment outside the workers' compensation system due to his inability to pay. Claimant testified he was unable to undergo the three-month neurology follow-up recommended by Dr. Lampe for the same reasons. No ATP has placed Claimant at maximum medical improvement ("MMI").

9. On December 4, 2019, Respondents filed a Notice of Contest and formally denied liability for Claimant's September 16, 2019 work injury.

10. On May 26, 2020, Claimant experienced another seizure while at home. When emergency medical services arrived, Claimant was sitting up and conversing, but exhibited some confusion. Claimant again underwent evaluation at Swedish Medical Center. Claimant reported a recent increase in habitual alcohol use due to the COVID-19 pandemic, but denied having any drinks in the past two days. Claimant reported having a seizure in September 2019 when he tried to cut down on his alcohol consumption. Abram Albizo, M.D. opined that Claimant's recent seizure was also likely due to alcohol withdrawal. Dr. Albizo decided to defer anti-epileptic therapy at the time, as the September 2019 and May 2020 seizures occurred in the setting of potential alcohol withdrawal. He recommended Claimant undergo alcohol counseling and alcohol cessation.

11. Claimant met with case worker Isable Hughes on May 27, 2020 to discuss his drinking. Ms. Hughes recommended Claimant seek treatment with a psychiatrist with antidepressants, but noted he was at a high risk for readmission.

12. A May 28, 2020 brain MRI was normal.

13. On July 7 2020, Kathy McCranie, M.D. performed an independent medical examination ("IME") at the request of Respondents. Claimant described his symptoms as occasional unsteadiness, headaches and memory issues. Claimant reported his history of the initial seizure on September 16, 2019 and a subsequent seizure in May 2020, but stated that the May 2020 seizure was due to low electrolytes and potassium. Claimant reported that he is no longer able to sing, act and run due to his work injury. Physical examination, including a neurological exam, was normal. Dr. McCranie assessed Claimant with near-drowning secondary to a non-work related seizure at work. Dr. McCranie diagnosed Claimant with a history of alcoholism and opined that the most likely cause of his seizure was either alcohol withdrawal or electrolyte imbalance. She opined that Claimant's seizure on September 16, 2019 was not causally related to his employment with Employer. She noted, however, that the result of the seizure, near-drowning, was a work-related result of Claimant's non-work-related condition.

14. Dr. McCranie opined that Claimant likely reached MMI by November 1, 2019, with 5% impairment per the AMA Guides, either under page 105, Category 1 for disturbances of complex integrated cerebral function, or for headaches under page 106, Category 1 for episodic neurologic disorders. She reiterated that Claimant's seizures are non-work-related and would not be rated. Dr. McCranie opined that Claimant may require restrictions for his non-work-related seizures, but does not require restrictions or further treatment for the work injury.

15. Respondent filed a General Admission of Liability on September 16, 2020.

16. Dr. McCranie testified at hearing on behalf of Respondents. She testified consistent with her IME report. Dr. McCranie testified that the only restriction Claimant assigned to Claimant was to not get in a pool, and that this restriction was due to Claimant's non-industrial seizure condition and not any effects of the near-drowning work injury Dr. McCranie opined that while Claimant could experience some lingering issues with headaches or memory issues from the near-drowning work injury, he was not unable to work due to memory or balance issues. She testified that Claimant's seizure condition limited him from working. Dr. McCranie further opined that no sequela from his work injury would have affected or inhibited his ability to lift.

17. Claimant testified at hearing that he has lingering effects from his near-drowning work injury consisting of issues with balance, vocal cords, and memory. He testified he is able to do activities of daily living, including chores around his house.

18. The ALJ finds the opinion of Dr. McCranie, as supported by the medical records, more credible and persuasive than Claimant's testimony.

19. Claimant failed to prove by a preponderance of the evidence he is entitled to TTD benefits from September 17, 2019 and ongoing.

20. The right to select the ATP has passed to Claimant. Claimant has selected David Yamamoto, M.D. as his ATP.

21. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Authorized Treating Physician

Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

In a medical emergency a claimant need not seek authorization from her employer or insurer before seeking medical treatment from an unauthorized medical provider. *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777, 781 (Colo. App. 1990). A medical emergency affords an injured worker the right to obtain immediate treatment without the delay of notifying the employer to obtain a referral or approval. *In Re Gant*, W.C. No. 4-586-030 (ICAP, Sept. 17, 2004). Because there is no precise legal test for determining the existence of a medical emergency, the issue is dependent on the particular facts and circumstances of the claim. *In re Timko,* W.C. No. 3-969-031 (ICAP, June 29, 2005). Once the emergency is over the employer retains the right to designate the first "non-emergency" physician. *Bunch v. Indus. Claim Appeals Office of State of Colorado*, 148 P.3d 381, 384 (Colo. App. 2006); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990).

Claimant underwent emergent medical care at Swedish Medical Center from September 16, 2019 to September 20, 2019. Subsequently, Claimant has not received further evaluation or treatment related to the near-drowning work injury. Respondents, who were aware of the work injury, did not provide Claimant a designated provider list as required by Section 8-43-404(5)(a)(I)(A), C.R.S., and WCRP 8-2 and 8-3. Accordingly, the right to select the ATP has passed to Claimant to select a provider of his choosing, David Yamamoto, M.D.

Temporary Total Disability Benefits

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Claimant contends that the near-drowning work injury caused a disability resulting in medical incapacity evidenced by Claimant's loss and restriction of neurological body function. Claimant points to the restrictions assigned by Dr. Lampe, restricting Claimant from work for two weeks and releasing Claimant to light duty work as of September 30, 2019.

While Claimant was placed on work restrictions subsequent to the work injury, there is insufficient evidence that the work injury, near-drowning, resulted in a disability causing Claimant to leave work and sustain lost wages. Claimant was hospitalized following the near-drowning incident from September 16, 2019 to September 20, 2019 for monitoring of neurological and seizure activity. Claimant was extubated by September 18, 2019 with no evidence of significant water aspiration or respiratory failure. MRI and CT scans were negative. Claimant reported feeling well at the time of discharge, with no complaints or findings of balance, headache or memory issues. Claimant was to continue on anti-epileptic medication and attend a neurological follow-up. Physicians who evaluated and treated Claimant for the September 16, 2019 incident and the May 28, 2020 incident, along with Dr. McCranie, have all opined that the likely cause of Claimant's seizures is alcohol withdrawal.

Dr. McCranie credibly opined that the restrictions and any inability to resume prior work were due to the non-work-related seizure disorder and not the effects of any disability caused by the near-drowning incident. Dr. McCranie further opined that no sequela from his work injury would have affected or inhibited his ability to lift. Moreover, although Claimant alleges that he unable to work due to headaches, balance and memory issues, Claimant conceded that, subsequent to the work injury, he was participating in acting and singing activities three to five days a week at local theater companies. There is insufficient credible and persuasive evidence that any continuing issues related to the near-drowning incident, such as Claimant's purported headaches, memory issues and balance issues, resulted in Claimant's inability to work and lost wages. The preponderant evidence establishes Claimant was unable to resume his regular work due to the inherent risk Claimant's personal seizure condition presented in working in and around swimming pools. As such, Claimant failed to prove it is more likely than not he is entitled to TTD benefits.

ORDER

1. Claimant suffered a compensable injury on September 16, 2019.

2. The medical treatment Claimant underwent from September 16, 2019 through September 20, 2019 was reasonable and necessary medical treatment to cure and relieve the effects of his compensable work injury.
3. The right to select an ATP passed to Claimant. Claimant has selected David Yamamoto, M.D. as his ATP.

4. Claimant is not entitled to TTD benefits from September 17, 2019 and ongoing.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Should Respondents be penalized under § 8-43-304(1) for failure to timely to exchange the complete claim file by November 19, 2019?

FINDINGS OF FACT

1. Claimant suffered severe injuries in a motor vehicle accident on February 13, 2002. Respondents admitted liability for permanent total disability ("PTD") benefits commencing February 14, 2003.

2. Claimant was awarded Social Security Disability Insurance ("SSDI") benefits effective August 2003. In June 2004, Insurer requested Claimant provide information regarding his SSDI award. Claimant never provided the requested SSDI benefit information and Insurer neglected to follow up on the matter. Insurer paid indemnity and medical benefits and there is no persuasive evidence any disputed issues arose for many years.

3. In February 2016, Claimant's claim was assigned to Scott D[Redacted], a senior claims examiner with Insurer. During a routine file review in Fall 2019, Mr. D[Redacted] realized Insurer had no information in its file regarding Claimant's SSDI benefits, and consequently had never taken the statutory offset. Mr. D[Redacted] wrote to Claimant and requested he provide documentation regarding his SSDI award.

4. Claimant was unrepresented during most of his claim but retained counsel in response to Mr. D[Redacted]'s inquiry. On October 21, 2019, Claimant's counsel requested a copy of Insurer's claim file under § 8-43-203(4). Claimant's counsel subsequently agreed to an extension of time to November 19, 2019 for exchange of the claim file.

5. Insurer maintains its files in a computerized case management system that contains claim notes and documents attached in electronic format. After receiving the request for the claim file, Mr. D[Redacted] instructed Insurer's operations personnel to perform a "print all" of the electronic file and send it to Respondents' counsel for review and exchange.

6. On November 15, 2019, Respondents' counsel sent the claim file to Claimant's counsel with a privilege log. The initial exchange contained 1,095 pages. At that time, Mr. D[Redacted] believed the entire file had been exchanged.

7. Respondents filed an Application for Hearing on April 28, 2020 seeking a determination regarding the SSDI offset and recovery of the overpayment. The hearing was set for August 12, 2020.

8. Some time later, Claimant's counsel determined he did not have the complete file and requested a supplemental exchange from Respondents.

9. Mr. D[Redacted] researched the matter and discovered Insurer had other documents regarding the claim archived in paper format at an off-site storage facility. Insurer had transitioned from paper to electronic files in the mid-2000s. At the time of the transition, some documents were scanned and added to the electronic file and the remaining paper documents were sent to storage. Mr. D[Redacted] requested the paper documents be retrieved, copied, and sent to Respondents' counsel to exchange with Claimant's counsel. On an unknown date, Respondents' counsel advised Claimant's counsel Insurer had located additional documents and was preparing them for exchange.

10. Claimant died on July 11, 2020. Claimant had no dependents at the time of his death.

11. Despite the fact he no longer had a client, Claimant's counsel filed an Application for Hearing on August 5, 2020 endorsing PTD benefits, death benefits, and penalties. The basis for the penalty claim was described as:

> Respondent/insurer was asked by letter dated 10/21/19 to produce a complete copy of the claim file pursuant to § 8-43-203(4) and WCRP 9-1(F) and on 11/15/19, Respondents' counsel produced a copy of approximately 1000 pages were produced, however, approximately 10,000 pages of the actual claims file, including the daily activity log, and correspondence between the insurer and the Claimant, were never produced and have not been produced to date.

12. On August 6, 2020, Respondents' counsel exchanged 6,563 pages that had been retrieved from the archived paper file.

13. On August 12, 2020, the undersigned ALJ convened a hearing regarding Respondents' April 28, 2020 application. After learning Claimant had died, the ALJ determined Claimant's estate was a necessary party and had to be joined before the overpayment issue could proceed. Accordingly, the ALJ continued the hearing so the estate could be joined and given proper notice of the proceedings. Claimant's counsel did not know who would be the estate's administrator but agreed to contact Claimant's son, Kennith S[Redacted], to investigate the issue. At that time, Claimant's August 5, 2020 application was pending and had not been set. To conserve judicial resources, the ALJ consolidated the August 5 application with Respondents' April 28 application for hearing.

14. Mr. D[Redacted] attended the August 12, 2020 hearing, although no testimony was taken. After listening to statements of Claimant's counsel regarding the claim file, Mr. D[Redacted] requested his operations team perform a "reprint" of the claim file to make sure nothing had been missed. Mr. D[Redacted] explained occasionally there are "glitches" in the system and attachments are not always copied completely.

15. The requested “reprint” produced tens of thousands of additional documents, the vast majority of which were duplicates. Mr. D[Redacted] forwarded the additional documents to Respondents’ counsel for review and exchange with Claimant.

16. The ALJ convened a telephonic status conference regarding this matter on August 21, 2020. In attendance were Respondents’ counsel, Claimant’s counsel, and Mr. S[Redacted]. Mr. S[Redacted] explained he was seeking appointment as the estate administrator from the Probate Court in Nevada. He was waiting for a copy of the death certificate to submit with the application. Although probate was not formally required due to the small size of Claimant’s estate, Mr. S[Redacted] wanted to “cover all the bases.” Mr. S[Redacted] had not yet decided whether to retain counsel but agreed to participate in the rescheduled hearing.

17. During the status conference, Respondents’ counsel advised she had received over 85,000 additional pages of documents from Insurer, most of which appeared to be duplicates. To avoid conducting a “data dump” on Claimant’s counsel, several associate attorneys from her firm had been assigned to cull the duplicates. The associates started reviewing the documents immediately after receipt, and Respondents’ counsel expected the deduplication process and preparation of the privilege log to be complete within a week. Claimant’s counsel did not object to the ongoing process outlined by Respondents’ counsel or request he be provided with 85,000 pages of mostly duplicate materials.

18. Consistent with the procedure discussed at the status conference, Respondents’ counsel sent Claimant’s counsel an additional 8,923 pages of documents on August 26, 2020. This final exchange included everything that had not already been provided except duplicates.

19. At hearing, Mr. S[Redacted] testified had no formal appointment from any probate court as the administrator of Claimant’s estate. Mr. S[Redacted] testified he retained Mr. Fraley to represent the estate in September 2020.

20. Mr. D[Redacted]’s hearing testimony was credible and persuasive. Each time claim documents were retrieved and forwarded to Respondents’ counsel, Mr. D[Redacted] genuinely believed he had produced all documents in Insurer’s possession. The final document exchange resulted from additional inquiry on Mr. D[Redacted]’s own initiative. Based on Mr. D[Redacted]’s credible testimony, the ALJ finds Insurer acted in good faith and had no intent to withhold documents. Insurer’s inadvertent failure to produce the entire file within the initial production period was purely the result of honest mistakes. And there is no persuasive evidence the delay in producing the complete file caused any harm or prejudice to Claimant.

21. Claimant failed to prove Respondents should be penalized for their handling of the claim file. Insurer’s inadvertent failure to produce all 16,581 pages of the claim file by November 19, 2019 resulted from honest mistakes and objectively reasonable. Furthermore, Respondents produced the entire claim file within the statutory “cure” period as extended by Claimant’s acquiescence at the August 21, 2020 status conference, and

Claimant failed to prove by clear and convincing evidence Respondents knew or reasonably should have known they violated the claim file statute.

CONCLUSIONS OF LAW

Section 8-43-304(1) provides that an insurer "who violates any provision of [the Workers' Compensation Act] . . . shall be punished by penalties of up to $1,000 per day."

The assessment of penalties is governed by an objective standard of negligence and involves a two-step analysis. First, the ALJ must determine whether the insurer or employer violated the Act, a rule, or an order. Second, the ALJ must determine whether the violation was objectively reasonable. *Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312 (Colo. App. 1997); *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003). A party establishes a *prima facie* showing of unreasonable conduct by proving that an insurer violated the statue or a rule of procedure. If the claimant makes a *prima facie* showing, the burden shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra*; *Human Resource Co. v. Industrial Claim Appeals Office,* 984 P.2d 1194 (Colo. App. 1999). An insurer acts unreasonably if it fails to take action a reasonable insurer would take to comply with a statute, rule or order. *Pioneers Hospital, supra*. To be objectively reasonable, an insurer's actions (or inaction) must be predicated on "a rational argument based in law or fact." *Diversified Veterans Corporate Center v. Hewuse, supra*.

If the alleged violator cures the violation within 20 days of the mailing of an application for hearing seeking penalties, no penalty shall be assessed unless the party seeking the penalty proves by clear and convincing evidence that the alleged violator knew or should reasonably have known they were in violation. Section 8-43-304(4).

Even assuming, *arguendo*, the OAC had jurisdiction to accept the August 5, 2020 Application for Hearing filed on behalf of a claimant who was no longer living, and that any claim for penalties would survive Claimant's death, Claimant failed to prove Respondents should be penalized in this case.

Claimant argues Respondents violated § 8-43-203(4), which requires the insurer to provide "a complete copy of the claim file" within 15 days of a written request. Respondents initially only provided the contents of the electronic file and did not include copies of paper records archived off-site. Although Claimant may have shown a technical violation of the statute, the ALJ credits Mr. D[Redacted]'s credible testimony in determining Insurer's actions were objectively reasonable. Insurer transitioned from paper to electronic files during the course of this claim. It was reasonable for Insurer to archive the paper documents rather than convert them to electronic format, particularly since this was an admitted PTD claim with no disputed issues. When Claimant's counsel requested the claim file, Insurer produced a copy of its electronic file but neglected to retrieve the paper documents from the off-site archive. As Mr. D[Redacted] explained, Insurer works with the electronic file and does not reference the paper archives. Once Mr. D[Redacted] learned Insurer had paper documents that had not been exchanged, he requested the archived documents. A large number of additional documents were exchanged and Mr. D[Redacted] was unaware that more paper documents were in the archives. Mr. D[Redacted] reasonably believed each exchange of documents was complete at the time and worked diligently to remedy the oversight upon learning documents had not been exchanged properly. Insurer's failings with respect to production of the complete file resulted from honest mistakes and objectively reasonable.

Additionally, the final exchange of documents on August 26, 2020 timely "cured" any alleged violation. Admittedly, August 26 was twenty-one days after Claimant's application for hearing, and ordinarily would be considered outside the 20-day statutory cure window. But two unique factors in this case preclude a purely mechanical counting of days. First, Claimant's August 5, 2020 hearing application was improperly filed because Claimant was deceased and Claimant's counsel had not been retained or authorized by the estate to take any action on its behalf. Respondents did not move to strike the application because they did not know the status of Claimant's estate until after the hearing commenced on August 12, 2020, although such a motion would have been well founded. *People in Interest of R.D.S*., 514 P.2d 772 (Colo. 1973). It would be inequitable to hold Respondents strictly to a deadline established by a hearing application that should not have been filed or accepted in the first place. Second, and more important, Claimant's counsel and Mr. S[Redacted] participated in the August 21 status conference at which Respondents' counsel disclosed the existence of the additional documents and explained the process her firm was undertaking to cull duplicates and transmit the documents to Claimant's counsel as quickly as possible. At no time did Claimant's counsel object or insist he be provided with all the documents, including duplicates. Had he done so, Respondents' counsel could have dumped the 85,000-plus pages on Claimant's counsel before the 20-day period expired. A party should not be heard to complain if they sit in silence while the opposing party outlines its anticipated course of action, and thereby induce the opposing party to miss a deadline. Additionally, § 8-43-207(1) permits the ALJ to "grant reasonable extensions of time for the taking of any action contained in this article." The ALJ issued no formal order extending the time to de-duplicate and exchange the documents because it did not appear necessary based on the discussion at the status conference. But Respondents certainly demonstrated good cause to extend the deadline to cure the alleged violation. Under the circumstances here, Respondents' time to "cure" was constructively extended, tolled, and/or Claimant is estopped from asserting the final exchange was untimely. Therefore, Insurer timely cured the violation and Claimant failed to prove by clear and convincing evidence Insurer knew or reasonably should have known it was in violation.

Claimant's argument that Respondents still have not produced the "complete" file because they removed duplicates is unpersuasive. Everything in the claim file was exchanged by August 26, 2020, except duplicates. Section 8-43-203(4) does not require the carrier to bury the claimant with reams of duplicate documents, nor does it preclude the professional courtesy shown by Respondents of culling tens of thousands of duplicate pages at their own expense.

ORDER

It is therefore ordered that:

1. Claimant's claim for penalties is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 19, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the left shoulder replacement surgery recommended by Dr. Leslie Vidal is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted March 23, 2018 work injury.

FINDINGS OF FACT

1. The claimant has worked for the employer since 2013 as an equipment operator. The claimant's job duties include running heavy equipment, related to road construction. On March 23, 2018, the claimant was fueling equipment when he slipped and fell backwards approximately two to three feet to the ground. The claimant testified that he reached out with his left arm as he fell. He felt like he had "jammed everything" with pain in his low back, left arm, and neck.

Medical Treatment Prior to March 23, 2018

2. Prior to his injury on March 23, 2018, the claimant sought treatment for his low back, neck, and bilateral shoulders.

3. On October 26, 2009, the claimant was seen by Dr. Steven Heil for an orthopedic evaluation of his left shoulder. At that time, the claimant reported left shoulder problems dating back six years, when he was involved in a motor vehicle accident. The claimant also reported increased left shoulder pain, decreased range of motion, and strength in that shoulder over the last year. On exam, Dr. Heil noted decreased range of motion and diagnosed left shoulder rotator cuff dysfunction, with some early degenerative changes and a large os acromialis. Dr. Heil ordered magnetic resonance imaging (MRI) of the claimant's left shoulder.

4. On October 28, 2009, an MRI of the claimant's left shoulder showed an os acromiale; moderately large superior paralabral cyst with labral tear extending into the biceps tendon; tendinopathy infraspinatus tendon and subscapularis tendon with minimal partial thickness tearing of distal infraspinatus tendon; and degenerative joint disease.

5. On October 28, 2009, the claimant returned to Dr. Heil and reported continuing left shoulder symptoms. Upon his review of the MRI results, Dr. Heil noted that the claimant had advanced degenerative disease of the shoulder at the glenohumeral joint. Dr. Heil opined that the claimant's symptoms were coming from his joint and "certainly the degenerative labral tears are more consistent with degenerative arthritis". On that date, Dr. Heil administered a left shoulder injection.

6. The claimant testified that he did not recall seeing Dr. Steven Heil in 2009 with shoulder complaints. He also did not recall undergoing a left shoulder MRI, or injection. The claimant also testified that between 2009 and 2014 he did not seek treatment for his shoulders.

7. On October 29, 2014, the claimant was seen by Dr. Douglas Huene for treatment of right shoulder pain. At that time, the claimant reported having problems with his right shoulder for the past several months to a year, "with a long history of neck problems and left shoulder problems". Dr. Huene administered an injection to the claimant's right shoulder.

8. On February 11, 2015, the claimant returned to Dr. Huene and reported ongoing pain in both shoulders. The medical record of that date indicates that the claimant had experienced "problems with the shoulders for the past several months to years". Dr. Huene performed range of motion measurements and noted limited range of motion in the claimant's left shoulder. Dr. Huene also noted that the claimant's left shoulder pain was due to "[glenohumeral] bone on bone arthritis, acromial clavicular arthritis with biceps tendonitis". On that date, Dr. Huene administered injections to both of the claimant's shoulders.

9. The claimant was again seen by Dr. Huene on May 6, 2015. At that time, the claimant reported increased right shoulder pain and ongoing left shoulder pain. Dr. Huene noted limited range of motion and again attributed the claimant's left shoulder pain to bone on bone arthritis, acromioclavicular arthritis with biceps tendonitis. On that date, Dr. Huene administered injections to both of the claimant's shoulders.

10. On July 10, 2015, the claimant returned to Dr. Huene, reporting increased shoulder pain and that he was "just miserable" with the right shoulder. Dr. Huene noted the claimant had limited range of motion in his left shoulder. On that date, the claimant elected to undergo right shoulder surgery. In addition, he received an injection to the left shoulder.

11. The medical records entered into evidence indicate that the claimant underwent a right rotator cuff repair on July 15, 2015.

12. The claimant testified that after the right shoulder surgery, and the left shoulder injection, his left shoulder symptoms improved.

13. Following surgery, the claimant participated in physical therapy. On July 20, 2015, the claimant was seen by Colleen Walsh, MSPT. In the medical record of that date, Therapist Walsh noted that the claimant had a long history of bilateral shoulder pain. The claimant reported to Therapist Walsh that he needed to have a total shoulder replacement on his left shoulder. Therapist Walsh also noted that the claimant had significant deficits in left shoulder range of motion.

14. On August 12, 2016, the claimant was seen by Dr. Huene. On that date, the claimant reported that his left shoulder "is bad again, it's really killing me". The

claimant also reported that lifting his left arm over his head or a turning motion aggravated his shoulder Dr. Huene noted that although the claimant was experiencing left shoulder pain, the recent steroid injection had “really helped”. On that date, Dr. Huene discussed conservative modalities such as physical therapy and injections, as well as a total shoulder replacement. Dr. Huene noted that the claimant “is thinking about surgery on the left”. On that date, the claimant elected to undergo another injection.

15. On June 9, 2017, the claimant returned to Dr. Huene. The medical record of that date notes that the claimant reported that his left shoulder “is bad again, it’s really killing me”. Dr. Huene again documented that the claimant reported that he felt he “needed to go for surgery”, but that the Claimant elected to undergo another left shoulder injection.

16. On September 8, 2017, the claimant was seen by Dr. Huene and reported that his left shoulder was “miserable”. As with the prior two appointments, Dr. Huene noted that he discussed treatment options (including a total shoulder replacement) and the claimant’s statement that he “needed to go for surgery”. Dr. Huene administered an injection at that time.

17. The claimant testified that he recalled discussing right shoulder surgery with Dr. Huene before he underwent right shoulder surgery. He also testified that he did not recall discussing left shoulder surgery with Dr. Huene in 2015, 2016, and 2017.

18. The claimant also testified that following the September 9, 2017 injection to his left shoulder, he had reduced pain and improved range of motion. He further testified that he was working full time with no restrictions. This included operating equipment and using hand tools. In addition, he did not have issues climbing up into work equipment and was able to reach above his head with his left arm during that time period.

Medical Treatment after March 23, 2018

19. On April 3, 2018, the claimant was first seen by Dan Burnell, PA-C at Surface Creek Family Practice. At that time, the claimant reported that he fell straight back and injured his left shoulder and low back. The claimant also reported a prior history of low back and left shoulder injuries and surgeries. PA Burnell diagnosed a rotator cuff injury to the left shoulder, contusion of the low back, and left cervical strain. On that date, PA Burnell ordered x-rays of the claimant’s lumbar spine[1] and left shoulder.   PA Burnell did not place the claimant under any work restrictions and the claimant was able to return to full duty work.

20. The claimant returned to PA Burnell on April 17, 2018 and reported less neck pain, with no changes to his left shoulder and low back. In the medical record of that date, PA Burnell noted that the left shoulder x-ray showed moderate to severe

[1] Throughout this claim the claimant has undergone low back treatment. As that body part and related medical treatment are not at issue in this order, the ALJ does not enumerate all treatment of the claimant’s low back.

degenerative joint disease of the glenohumeral joint. On that date, PA Burnell ordered magnetic resonance imaging (MRI) of the claimant's left shoulder.

21. On April 26, 2018, an MRI of the claimant's left shoulder showed an os acromiale; downsloping of the acromion with thickening of the coracoacromial ligament; tendinosis of the distal supraspinatus tendon; severe arthritic changes of the glenohumeral joint; possible tear of the posterior glenoid labrum; a possible ganglion cyst; and shoulder joint effusion.

22. On October 23, 2018, PA Burnell noted that the claimant continued to have left shoulder complaints. PA Burnell also noted that an orthopedic surgeon, Dr. John Knutson, recommended the claimant see a shoulder specialist.

23. On October 31, 2018, the claimant was seen by Dr. Mitchell Copeland. At that time, the claimant reported his left shoulder symptoms as pain, grinding, weakness, decreased range of motion, and sleep disturbance. Dr. Copeland noted that the claimant had end state osteoarthritis that was exacerbated by his fall at work. Dr. Copeland also stated that the claimant "will eventually need a total shoulder replacement." Dr. Copeland recommended and administered an injection to the claimant's left glenohumeral joint.

24. The claimant participated in physical therapy for his left shoulder beginning on November 8, 2018. In the medical record of that date, Peter Brown, DPT noted that the claimant had substantial pain and difficulty raising his left arm above chest height.

25. On November 30, 2018, Therapist Brown did not feel further physical therapy was warranted at the time. In support of this opinion, Therapist Brown noted the claimant continued to have left shoulder symptoms and had "no clinically significant improvement in function". Therapist Brown referred the claimant back to Dr. Copeland.

26. The claimant testified that physical therapy helped his left shoulder pain and function. However, his condition "leveled out" and at that "leveling off point" he felt that he was worse than he was before the March 23, 2018 fall.

27. On November 28, 2018, Dr. Copeland noted that the claimant had reported that he felt he improved after the injection and physical therapy, but "is still not back to normal."

28. On January 2, 2019, Dr. Copeland noted that the claimant had been improving, but "he feels he has plateaued and is no longer making progress with physical therapy."

29. On February 27, 2019, the claimant was seen by Dr. Copeland. At that time, the claimant reported constant pain, grinding, weakness, and loss of range of motion in his left shoulder. Dr. Copeland again opined that the claimant had a "work related exacerbation of his end stage glenohumeral arthritis." In addition, Dr. Copeland opined that the claimant was at maximum medical improvement (MMI) for his left shoulder. Dr. Copeland also noted that the claimant would require total shoulder arthroplasty in the future but the "timeframe was unknown". In addition, Dr. Copeland recommended intermittent injections.

30. The claimant testified that in February 2019 he continued to have constant pain and limited range of motion in his left shoulder. He further testified that he understood from Dr. Copeland that the only remaining treatment for his left shoulder was replacement surgery.

31. On March 5, 2019, the claimant returned to PA Burnell. On that date, PA Burnell noted that the claimant had deficits in left shoulder range of motion and described the claimant's shoulder condition as "unchanged".

32. On March 25, 2019, the claimant underwent lumbar spine surgery with Dr. James Gebhard.

33. On April 4, 2019, the respondent filed a General Admission of Liability (GAL) admitting for medical benefits and temporary total disability (TTD) benefits.

34. On June 23, 2020, the claimant returned to Surface Creek Family Practice and was seen by Danny Mingus, PAC. At that time, the claimant reported increased left shoulder pain. PA Mingus noted that the claimant believed "he needs a total shoulder replacement" and requested a referral to Dr. Vidal at the Steadman Clinic.

35. On June 23, 2020, PA Mingus made a referral to Dr. Vidal for an orthopedic consultation to address whether the claimant needed "at total arthroplasty".

36. On July 21, 2020, the claimant was seen by Dr. Leslie Vidal. At that time, an x-ray of the claimant's left shoulder was taken and showed glenohumeral arthritis with decreased joint space and an inferior humeral head osteophyte. Dr. Vidal noted that the claimant had attempted one steroid injection with two to three months of relief, and had attempted physical therapy without any relief. On that date, Dr. Vidal diagnosed primary osteoarthritis of the claimant's left shoulder and recommended a total shoulder arthroplasty.

37. On August 12, 2020, Dr. Vidal's office submitted a request for authorization for the recommended shoulder arthroplasty.

38. On August 17, 2020, Dr. William Ciccone issued a report, following his review of the claimant's medical records. Dr. Ciccone was asked to state an opinion regarding treatment of the claimant's left shoulder. Dr. Ciccone stated that it was his opinion that on March 23, 2018, the claimant suffered a temporary aggravation of his pre existing left shoulder degenerative disease, and symptoms related to that temporary aggravation had improved at the time he was placed at MMI for his shoulder in February 2019. In support of this opinion, Dr. Ciccone noted that the April 2018 left shoulder MRI did not show any acute injury. In addition, the claimant has continued to work full duty, without restrictions. Dr. Ciccone noted that he agrees that the claimant will be in need of a future left shoulder replacement. However, such a replacement would not be related to the claimant's fall at work on March 23, 2018. Dr. Ciccone also opined that the claimant's

current left shoulder symptoms are related to the natural progression of his shoulder arthritis and not a work injury.

39. On December 8, 2020, the claimant attended an independent medical examination (IME) with Dr. James Lindberg. In connection with the IME, Dr. Lindberg reviewed the claimant’s medical records, obtained a history from the claimant, and performed a physical examination. In his December 29, 2020 IME report, Dr. Lindberg opined that the claimant suffers from preexisting degenerative arthritis that he treated for prior to the March 2018 work injury. Dr. Lindberg also noted his agreement with Dr. Ciccone in that the claimant’s preexisting arthritic condition had returned to baseline followed by the natural progression of his underlying severe end stage osteoarthritis.

40. Based upon the opinions of Dr. Lindberg, the respondent has denied authorization for the left shoulder surgery recommended by Dr. Vidal.

41. Dr. Lindberg’s testimony was consistent with his written report. In his testimony, Dr. Lindberg reiterated his opinion that the claimant suffered a temporary aggravation on March 23, 2018, and that aggravation has resolved. Dr. Lindberg further testified that the claimant likely needed a left shoulder replacement while treating with Dr. Huene, and the injections the claimant has received have been “just buying time”.

42. The claimant testified that shortly after his March 2018 fall, he was promoted to a manager’s position that was less physically demanding. However, in the fall of 2020, he was moved to a labor position that was more physically demanding. The claimant also testified that he has continued to work since his injury, despite his left shoulder symptoms. He has been able to do so by using pain medications and Gabapentin. The claimant also testified that because of his inability to raise his left arm over his head, he was unable to do everything asked of him at work.

43. The ALJ credits the medical records, the claimant’s testimony, and the opinions of Dr. Copeland and PA Mingus over the contrary opinions of Drs. Ciccone and Lindberg. The ALJ specifically credits the opinions of Dr. Copeland that the claimant’s preexisting left shoulder condition was exacerbated by the March 23, 2018 work injury, and that exacerbation has resulted in the need for medical treatment, including surgery. The ALJ specifically credits the claimant’s testimony that despite prior treatment for his left shoulder, he was able to perform all of his normal job duties leading up to the March 23, 2018 work injury. In addition, although the claimant’s preexisting shoulder condition was identified and treated prior to March 23, 2018, that condition was not independently disabling. The ALJ finds that if not for the claimant’s work injury, he would not have experienced increased pain and decreased range of motion that necessitated the need for physical therapy and consultations with Drs. Copeland and Vidal.

44. Therefore, the ALJ finds that the claimant has demonstrated that it is more likely than not that his need for the recommended left shoulder replacement is reasonable medical treatment necessary to cure and relieve him from the effects of the admitted work injury.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” *See H & H Warehouse v. Vicory, supra.*

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. Pain is a typical symptom from the aggravation of a preexisting condition, and if the pain triggers the claimant’s need for medical treatment, the claimant has suffered a compensable injury. *Maryman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). The employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). The mere fact that a claimant has suffered a compensable aggravation of a preexisting condition does not oblige the ALJ to conclude

that any subsequent disability or need for treatment is causally connected to such aggravation. *University Park Care Center v. ICAO*, 43 P.3d 637 (Colo. App. 2001). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other cause. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985).

7. The ALJ takes administrative notice of WCRP 17 Medical Treatment Guidelines for shoulder injuries. Specifically, WCRP 17 Exhibit 4 Section G(6) provides that total shoulder arthroplasty can be performed due to post-traumatic arthritis, and that "[t]otal shoulder arthroplasty is usually performed in cases of severe arthritis when all reasonable conservative measures have been exhausted without sufficient return to activities of daily living."

8. As found, the claimant has demonstrated, by a preponderance of the evidence, that the left shoulder replacement surgery recommended by Dr. Vidal is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted March 23, 2018 work injury. As found, the claimant's preexisting left shoulder condition was aggravated and accelerated by the fall on March 28, 2018. As found, if not for the work injury, the claimant would not have needed medical treatment, including the need for surgery. As found, the medical records, the claimant's testimony, and the opinions of Dr. Copeland are credible and persuasive.

ORDER

It is therefore ordered:

1. The respondents shall pay for the left shoulder replacement surgery recommended by Dr. Vidal, pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined here are reserved for future determination.

Dated this 22nd day of February 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that treatment of her right elbow, including a platelet rich plasma (PRP) injection as recommended by Dr. Matthew Gnirke, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted January 4, 2020 work injury.

2. What is the claimant's average weekly wage (AWW) for this claim?

3. Whether the claimant has demonstrated, by a preponderance of the evidence, that she is entitled to temporary total disability (TTD) and/or temporary partial disability (TPD) benefits beginning July 17, 2020 and ongoing.

4. If it is determined that the claimant is entitled to TTD and/or TPD benefits, whether the respondents have demonstrated, by a preponderance of the evidence, that the claimant committed a volitional act that led to the termination of her employment.

FINDINGS OF FACT

1. The claimant worked for the employer as a housekeeper and as a housekeeping inspector. As a housekeeper, the claimant was responsible for cleaning various properties for the employer. As a housekeeping inspector, the claimant was responsible for inspecting the cleanliness of a unit in preparation for guest occupancy.

2. On January 4, 2020, the claimant was at work performing her normal job duties. On that date, while carrying a large bag of linens up a staircase, the claimant's foot slipped on some ice. This movement caused the bag of linens to shift. The claimant held the linens tightly with her right arm to avoid dropping them.

3. The claimant testified that she immediately felt pain in her entire arm. Despite this pain, she continued working.

4. On January 5, 2020, the claimant sought medical treatment at Vail Heath Urgent Care in Avon, Colorado. The claimant was seen by Rebecca Novak, NP. At that time, NP Novak recorded that after lifting a bag of linen, the claimant felt pain in her left[1] trapezius and shoulder. The claimant also reported numbness and tingling down into her fingers. Despite this description by NP Novak, an x-ray was taken of the claimant's right shoulder. In addition, NP Novak noted that on examination of the claimant's right upper extremity, there was no tenderness over the SC joint, AC joint, humorous, and elbow. NP Novak did note tenderness over the right acromion. The claimant was diagnosed with a

[1] Based upon the evidence and testimony at hearing, the ALJ notes that the parties agree that the claimant's right upper extremity is the subject of this claim, and not the left.

trapezius muscle strain, and neuropathy of the right upper extremity. NP Novak prescribed a Medrol dose pack and cyclobenzaprine. She recommended that the claimant follow up with occupational health

5. Eventually the claimant began treating with Dr. Guy Kovacevich, as her authorized treating provider (ATP) for this claim. The claimant was first seen by Dr. Kovacevich on February 7, 2020 At that time, the claimant reported that she strained her right shoulder while carrying heavy bags of towels and bedsheets. Dr. Kovacevich diagnosed radiculopathy of the cervicothoracic region and referred the claimant to physical therapy. The claimant did not report any right elbow symptoms.

6. The claimant returned to Dr. Kovacevich on February 26, 2020. Dr. Kovacevich noted that the claimant had experienced “modest improvement” in her symptoms. The claimant reported that she had not yet started the recommended physical therapy, but she had been seeing a chiropractor. On a WC-164 issued on that date, Dr. Kovacevich restricted the claimant to no lifting, carrying, pushing, or pulling over 15 pounds.

7. On March 19, 2020, the claimant was seen by Dr. Kovacevich and reported continued discomfort in the posterior shoulder and lower cervical area. The claimant also reported increasing pain in her right elbow. Dr. Kovacevich added a diagnosis of right elbow lateral epicondylitis and referred the claimant for an orthopedic consultation. Dr. Kovacevich continued to restrict the claimant to no lifting, carrying, pushing, or pulling over 15 pounds.

8. The claimant continued treating with Dr. Kovacevich. Beginning on June 24, 2020, Dr. Kovacevich altered the claimant’s work restrictions to limited use of her right upper extremity and no lifting.

9. On April 14, 2020, the claimant was seen by Dr. Matthew Gnirke with Vail-Summit Orthopaedics & Neurosurgery. On that date, the claimant reported right neck and arm pain, with numbness and tingling. Dr. Gnike opined that the claimant was experiencing cervical radiculopathy in a C-6 distribution. He recommended that the claimant undergo magnetic resonance imaging (MRI) of the cervical spine.

10. On June 9, 2020, the claimant returned to Dr. Gnirke. On that date, the claimant reported continuing pain from her right posterior shoulder into her fingers. Dr. Gnirke recorded that the claimant had severe nerve type pain in a large distribution of her right upper extremity, with severe tenderness over her common extensor tendon. Dr. Gnirke diagnosed lateral epicondylitis of the right elbow and recommended electromyography (EMG) testing of the claimant’s right upper extremity. In addition, he recommended magnetic resonance imaging (MRI) of the claimant’s right elbow.

11. On June 15, 2020, an MRI of the claimant’s right elbow was performed and showed a low grade partial thickness tear of the common extensor tendon; mild enlargement of th the ulnar nerve (which was noted to be suggestive of of ulnar neuritis); and mild ulnar collateral ligament scarring.

12. On June 23, 2020, the claimant was seen by Dr. Gnirke. In the medical record of that date, Dr. Gnirke noted that the MRI showed a partial thickness tear of the claimant's right common extensor tendon. He also noted mild ulnar collateral ligament (UCL) scarring with mild stripping of the UCL from its distal insertion. At that time, Dr. Gnirke recommended a platelet rich plasma (PRP) injection to address the "intrasubstance tear and UCL". Subsequently, a request for authorization for the recommended injection was submitted to the insurer.

13. The respondents asked Dr. Jeffrey Raschbacher to review the claimant's medical records and opine as to whether the claimant's right elbow symptoms are related to the January 4, 2020 injury. In his June 26, 2020 report, Dr. Raschbacher stated that it is his opinion that the diagnosis of epicondylitis and the claimant's right elbow symptoms are not related to the January 4, 2020 injury. In support of this opinion, Dr. Raschbacher noted that the claimant did not report right elbow symptoms when she first received treatment on January 5, 2020. He further notes that the medical record of that date indicates that the claimant had no tenderness at the elbow. Dr. Raschbacher also noted that if the claimant had experienced a right extensor tendon tear on January 4, 2020, the claimant would have mentioned right elbow symptoms earlier than she did. Dr. Raschbacher recommended that the respondents deny any treatment of the claimant's right elbow (including PRP injections).

14. Based upon Dr. Raschbacher's report, on June 29, 2020 the respondents denied the recommended PRP injection.

15. On July 28, 2020, Dr. Gnirke authored a letter to the insurer regarding the denial of the PRP injection. In his letter, Dr. Gnike stated that it is his opinion that the partial thickness tear of the claimant's right common extensor tendon was "likely post-traumatic in nature" and related to the claimant's January 4, 2020 injury. He also noted that the claimant was suffering from myofascial periscapular pain and resolving right ulnar neuritis which was "the underlying etiology of her upper extremity neuropathic symptoms". Dr. Gnirke further opined that this was also related to the claimant's work injury. He requested reconsideration of the denial of the PRP injection.

16. On July 30, 2020, Dr. Raschbacher was asked to again review the recommended PRP injection. In his report of that date, Dr. Raschbacher reiterated his opinion that the claimant's right elbow symptoms are not related to the January 4, 2020 work injury. Dr. Raschbacher again noted that the claimant did not initially have right elbow tenderness. He also opined that if there had been "an acute tear attributable to [the claimant's] injury claim date, she should have had significant, localized, easily identifiable discomfort at the right lateral epicondyle". Dr. Raschbacher recommended that the respondents deny any treatment of the claimant's right elbow (including PRP injections).

17. Based upon Dr. Raschbacher's report, on August 3, 2020 the respondents denied the recommended PRP injection.

18. On August 13, 2020, the respondents filed a General Admission of Liability (GAL) admitting liability for medical treatment of the claimant's right shoulder.

19. The claimant testified that even with the work restrictions assigned by Dr. Kovacevich, the claimant continued working and performing her normal job duties between January 4, 2020 and July 17, 2020.

20. The claimant testified that her employment with the employer was terminated on July 17, 2020. The claimant also testified that the employer ended her employment because of events that occurred on July 4, 2020.

21. On July 4, 2020, the claimant was instructed to inspect a unit for the employer. The claimant testified that day was her daughter's birthday, and she was preparing a meal for her daughter. As a result, the claimant asked her daughter to inspect the unit. The claimant's daughter was not an employee of the employer. The claimant informed the employer that she completed the inspection and the unit was ready for guests, even though she sent her daughter to do so.

22. Athena M[Redacted], was the General Manager for the employer in July 2020. She was the individual that directed the claimant to inspect the unit on July 4, 2020. The claimant did not have permission to ask a non-employee to complete her job duties. Ms. M[Redacted] understood from the claimant that she had completed the inspection and the unit was ready. However, when the guests arrived, they contacted the employer because the unit had not been cleaned.

23. Subsequently, the claimant admitted to the employer that she had asked her daughter to inspect the unit, and her daughter did not do so. The employer reviewed the incident and on July 17, 2020, the claimant's employment was terminated. In the July 17, 2020 termination letter, the employer noted that the claimant "clearly and willfully, provided false, misleading information with regards to the status of a property, ultimately costing our business loss in revenue and guest goodwill".

24. The claimant testified that prior to her termination on July 17, 2020, she was not reprimanded or disciplined by the employer.

25. On October 28, 2020, the claimant attended a psychiatric independent medical examination (IME) with Dr. Robert Kleinman. In connection with the psychiatric IME, Dr. Kleinman reviewed the claimant's medical records, and obtained a history from the claimant. In his IME report, Dr. Kleinman diagnosed adjustment disorder with anxiety. In addition, he opined that the claimant's "physical complaints are expanding and inconsistent with her activities of daily living."

26. Since her employment with the employer ended, the claimant has been self employed cleaning residences. The claimant testified that while working for the employer she earned approximately $1,500.00 per week. Now that she is self employed, she earns approximately $800.00 per week.

27. In the claimant's Worker's Claim for Compensation dated July 27, 2020, the claimant's average weekly wage (AWW) is identified as $1,375.00.

28. A payroll summary for the period of August 2019 through July 2020 was entered into evidence. That document indicates that the claimant earned $49,824.00

during that one year period. When that amount is divided by 52 weeks in a year, it is equal to a weekly average of $958.16.

29. In the termination letter dated July 13, 2020, the employer noted that the claimant's pay structure was changed on May 1, 2020 "during the COVID-19 shutdown" at a "set rate". The letter also states that the claimant was paid a total of $8,750.00 for the period of May 1, 2020 through July 13, 2020. This was a 78 day period. When the claimant's total wages for that period are divided by 78 days, then multiplied by seven days in a week, it equals an average of $785.26.

30. The ALJ has considered all of this information and finds that the claimant's wages from August 1, 2019 through her final day of employment in July 2020 is most reflective of her accurate AWW at the time of her injury on January 5, 2020. Therefore, the claimant's AWW for this claim is $958.16.

31. Checks made issued to the claimant's name were entered into evidence. These checks appear to reflect payments made to the claimant in her capacity as a self employed housekeeper. These checks are dated in July, August, and September 2020. The August checks total $3,055.40. The September checks total $2,510.00. Although the checks do not clearly indicate when the work was performed, the ALJ infers that the August and September checks reflect the claimant's self employment wages earned during those two months. The ALJ calculates that the claimant earned a total of $5565.40 over that 61 day period (August 1, 2020 through September 30, 2020). When divided by 61 days and then multiplied by 7 days in a week, this results in an average of $638.65. Based upon these calculations, the ALJ finds that in self employment the claimant earns an average of $638.65 per week.

32. With regard to the recommended medical treatment, the ALJ credits the medical records and the opinions of Dr. Raschbacher over the contrary opinions of Dr. Gnirke. The ALJ does not find the claimant's testimony to be credible or persuasive with regard to the nature and onset of her right elbow symptoms. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that treatment of the claimant's right elbow (including a PRP injection) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. The ALJ specifically credits Dr. Raschbacher's opinion that the claimant's right elbow symptoms are not related to the claimant's January 4, 2020 work injury.

33. With regard to the issue of temporary total disability (TTD) benefits and temporary partial disability (TPD) benefits, the ALJ notes that although Dr. Kovacevich continued to assess work restrictions,the claimant worked for the employer as usual from January 4, 2020 until July 17, 2020 when her employment was terminated. The ALJ further notes that the claimant did suffer a wage loss between her AWW of $958.16 and her average self employment wages of $638.65. Despite this numerical reduction, the ALJ finds that the claimant did not suffer a wage loss as a result of her admitted work injury, as discussed in more detail below.

34. With regard to the termination of the claimant's employment, the ALJ credits the testimony of the claimant and Ms. M[Redacted] regarding the events of July 4, 2020.

The ALJ finds that the respondents have successfully demonstrated that it is more likely than not that the claimant is responsible for the termination of her employment with the employer.

35. The claimant was directed to complete a task that she did not complete and then was not initially honest about her actions. In addition, the claimant directed a non-employee to complete the required task. The ALJ finds that a reasonable person would find that the claimant's actions were not appropriate and could lead to the loss of one's employment. The ALJ further finds that the claimant exercised control over her actions that ultimately led to the termination of her employment.

36. Furthermore, any wage reduction the claimant may have experienced after July 17, 2020 is solely due to the loss of her employment from the employer. The claimant has continued to work as a self employed housekeeper. The ALJ is persuaded that had the claimant not engaged in the volitional acts of July 4 2020 that led to her job loss of July 17, 2020, she would have continued working for the employer in her normal capacity with no wage loss. Therefore, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she is entitled to TTD or TPD benefits. The claimant did not suffer a wage loss as a result of her work restrictions.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that treatment of the claimant's right elbow (including a PRP injection) is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, medical records and the opinions of Dr. Raschbacher are credible and persuasive.

6. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

7. Section 8-42-102(2), C.R.S. requires the ALJ to base claimant's AWW on his earnings at the time of the injury. Under some circumstances, the ALJ may determine the claimant's TTD rate based upon her AWW on a date other than the date of the injury. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), C.R.S. grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO, May 7, 2007).

8. As found, the claimant's AWW as of the date of her work injury on January 4, 2020 is $958.16. As found, the payroll records are credible and persuasive.

9. To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *Id*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume her prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

10. As found, the claimant suffered a reduction in her wages from an AWW with the employer of $958.16 to her self employment wages of $638.65. As found, this reduction in earnings was not the result of the claimant's work injury and her related work restrictions. As found, the claimant has failed to demonstrate, by a preponderance of

evidence that she is entitled to TTD and/or TPD benefits. As found, the payroll records and the medical records are credible and persuasive.

11. Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., contain identical language stating that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment the resulting wage loss shall not be attributable to the on-the-job injury." In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P3d 1061 (Colo. App. 2002), the court held that the term "responsible" reintroduced into the Workers' Compensation Act the concept of "fault" applicable prior to the decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Hence, the concept of "fault" as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. *Kaufman v. Noffsinger Manufacturing*, W.C. No. 4-608-836 (Industrial Claim Appeals Office, April 18, 2005). In that context, "fault" requires that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. *See Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995) *opinion after remand* 908 P.2d 1185 (Colo. App. 1995).

12. As found, the respondents have successfully demonstrated, by a preponderance of the evidence, that the claimant is responsible for the termination of her employment with the employer. Therefore, even if it were determined that the claimant was entitled to TTD and/or TPD benefits, such benefits would have ceased upon the termination of the claimant's employment, as the ALJ has found that the claimant was responsible for the termination of that employment. As found, the testimony of the claimant and Ms. M[Redacted] regarding the events of July 4, 2020, are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant's request for treatment of her right elbow, including PRP injections, is denied and dismissed.

2. The claimant's AWW for this claim is $958.16.

3. The claimant's request for TTD and TPD benefits is denied and dismissed.

4. All matters not determined here are reserved for future determination.

Dated this 22nd day of February 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts

222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. **In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUE

1. Whether Claimant established by preponderance of the evidence that he sustained a compensable injury arising out of and in the course of employment with Employer on or about May 13, 2020.

2. Whether Claimant established by a preponderance of the evidence an entitlement to a general award of reasonable and necessary medical benefits causally related to his May 13, 2020 injury.

FINDINGS OF FACT

1. Employer is a gutter installation and fabrication company owned by Jose M[Redacted]. In May 2020, Employer employed two workers in addition to Mr. M[Redacted] – Claimant and Mr. M[Redacted]'s son, Juan M[Redacted].[1] Claimant and Juan M[Redacted] were both "installers," and their job duties included installing gutters on buildings. The installers used ladders to access buildings, and given the nature of the work, moved ladders around the building as gutters were installed at different locations. Mr. M[Redacted]'s was primarily a gutter fabricator and did not typically install gutters. Instead, he operated a gutter fabrication machine on Employer's work truck. Typically, the work truck/fabrication machine would be located a short distance from the building where installers were working. Mr. M[Redacted] fabricated gutters, and the installers affixed the gutters to buildings.

2. On Thursday, May 14, 2020, Claimant, Jose M[Redacted], and Juan M[Redacted] were performing a gutter installation at a residence located in Bennett, Colorado (the "Bennett Project"). Claimant and Juan M[Redacted] performed their normal job duties as installers, and Jose M[Redacted] worked fabricating gutters. Jose M[Redacted] testified that Employer has a 32' fiberglass ladder, but that ladder was not used at the Bennett Project. Instead, that day the installers used 28' and 24' aluminum ladders. Claimant worked the full day on May 14, 2020, from approximately 8:00 p.m. until approximately 6:00 p.m.

3. Employer did not have any projects in Bennett, Colorado on May 12 or 13, 2020.

4. Claimant worked a full day on Friday, May 15, 2020, Monday, May 18, 2020, and Tuesday, May 19, 2020, and was paid his full day wages of $250.00 per day for each of these days.

[1] In this Order, Jose M[Redacted] will be referred to "Mr. M[Redacted]" or by his full name.

5. On May 20, 2020, Claimant was ill at work, and had flu-like symptoms. Jose M[Redacted] took Claimant home in the middle of the workday, and Claimant did not complete his shift. Claimant was paid for the hours worked on May 20, 2020.

6. The following day, Jose M[Redacted] called Claimant to check on him. Claimant did not work for Employer on May 21, 2020. That day, Mr. M[Redacted] had a previously-scheduled appointment for himself at Swenson Family Chiropractic and offered to take Claimant to be seen by Dr. Swenson. Mr. M[Redacted] completed a "Personal History" form for Claimant and identified the reason for Claimant's consultation was "low back pain." (Ex. 1). Dr. Swenson's records from this date indicated Clamant had low back pain and right-sided sciatica with severe to moderate muscle spasms. Dr. Swenson's records do not indicate the source or cause of Claimant's low back pain/sciatica, attribute it to a work injury, or indicate a date of injury. Jose M[Redacted] personally paid for Claimant's treatment at Swenson Family Chiropractic. (Ex. 1).

7. Claimant returned to work for Employer on Monday, May 25, 2020 (Memorial Day). On that day, Juan M[Redacted] fell from a ladder while working for Employer. Claimant contacted Jose M[Redacted], who was not at the work-site. At approximately 11:00 a.m., Jose M[Redacted] came to the work-site and drove Juan M[Redacted] for medical treatment. Initially, Mr. M[Redacted] attempted to take Juan M[Redacted] to Concentra, the location Mr. M[Redacted] understood to be the appropriate provider for a workers' compensation claim. However, presumably because it was Memorial Day, Concentra was closed. Consequently, Mr. M[Redacted] drove Juan to another medical facility for evaluation. Mr. M[Redacted] and Juan M[Redacted] returned to the job site, and Claimant had left the job site prior to the end of the workday.

8. The following day, on May 26, 2020, Mr. M[Redacted] contacted Claimant by phone to inquire why Claimant had left early the previous day and if he would be returning to work. Claimant reported to Employer that he (Claimant) had sustained a work-related injury and needed to see a doctor. Claimant did not work for Employer again after May 25, 2020.

9. On May 28, 2020, Employer filed a "First Report of Injury or Illness" (FROI) regarding Claimant's injury. The information on the FROI was provided to Insurer by Jose M[Redacted]. The FROI indicates the date of injury was May 12, 2020, and that Claimant injured his hip while carrying a ladder. The ALJ infers from the testimony that Claimant provided Jose M[Redacted] with the information regarding his injury and the date of injury. (Ex. A).

10. On May 28, 2020, Claimant was evaluated by Jordan Maas, P.A., at Concentra. Claimant reported that he was carrying a ladder, lifted, and hoisted it to one side and felt immediate pain in his right lower back. Claimant reported that he had not been able to work due to discomfort and functional deficits. Ms. Maas testified that no interpreter was present, but that she is sufficiently fluent in Spanish to communicate with Claimant. Ms. Maas diagnosed Claimant with a lumbar strain, and referred Claimant for physical therapy. Ms. Maas testified that Claimant's reported mechanism of injury was consistent with the injuries she diagnosed. (Ex. O).

11. Later, on May 28, 2020, Claimant was seen at Concentra for an initial physical therapy evaluation by Kevin Holmes, DPT. Mr. Holmes' record describes the mechanism of injury as: "Patient went to lift a gutter and felt a strain within his spine." Claimant reported he sustained an injury on May 13, 2020 while carrying a ladder. Claimant indicated he lifted the ladder, hoisted it to one side, and felt immediate pain in the right low back. Claimant reported he had not been able to work due to discomfort and functional deficits. During the examination, Claimant reported that the intensity of his pain resulted in Claimant becoming sick to his stomach and experiencing dizziness. (Ex. P).

12. On June 10, 2020, an MRI of Claimant's lumbar spine was performed that showed degenerative disc and joint changes with a slight dural sac indentation without root sleeve deformity at the L4-5 level. (Ex. 6).

13. On June 11, 2020, Claimant filed a Worker's Claim for Compensation (WC Claim). Claimant indicated the date of injury was May 13, 2020, and that he was injured "while carrying a ladder on even ground. I stood up the ladder, it began to fall sideways and when I tried to prevent the fall I felt a severe pain at the back of my hip and low back." Claimant identified the injury as occurring in Bennett, Colorado. Claimant also indicated he informed Employer of his injury on May 13, 2020. (Ex. B).

14. On July 13, 2020, Insurer filed a Notice of Contest with the Division, citing the need for further investigation. (Ex. C).

15. On August 27, 2020, Claimant filed an Application for Expedited Hearing, requesting a hearing on compensability and medical benefits. (Ex. G).

16. On October 9, 2020, Claimant was seen by John Raschbacher, M.D., for an independent medical examination (IME), at the request of Respondents. In conjunction with the IME, Claimant completed a form describing his injury as occurring while he was trying to hold onto a ladder that was falling, resulting in a pulling/sprain sensation in his lower back. Claimant also reported that he could stand for a maximum of two hours and sit for a maximum of ½ hour with minimal or no pain. (Ex. 7).

WITNESS TESTIMONY

Claimant

17. Claimant testified he was injured on May 13, 2020 while performing work for Employer in Bennett, Colorado. Claimant indicated that he was attempting to place a 32" fiberglass ladder on uneven ground when the latter fell, and he grabbed it. Claimant estimated the ladder's weight as 150 lbs. Claimant testified he felt immediate pain in his back, and that Jose M[Redacted] was directly in front of him when the incident occurred. Claimant testified he informed Mr. M[Redacted] he had been hurt, but Mr. M[Redacted] directed him to continue working. Claimant testified he returned to work, installing a few gutters and brackets, and that he felt immediate pain when he stepped off the ladder. Claimant, however, continued to work the remainder of his shift on May 13, 2020. Claimant testified that he informed Mr. M[Redacted] multiple times on May 13, 2020 that he had injured his back.

18. Claimant testified he did not return to work the following day, and did not return to work until after he was seen by a chiropractor on Friday, May 21, 2020. Claimant also testified that he did return to work and worked light duty, although the dates Claimant asserts he returned to work were not clearly articulated in his testimony. Additionally, Claimant did not articulate what constituted "light duty" and what tasks he performed. Claimant's testimony in this regard conflicts with the testimony of Mr. M[Redacted] and Juan M[Redacted], both of whom testified that Claimant worked on May 15, 2020, May 18, 2020, May 19, 2020 and May 20, 2020, and that Claimant performed his full unrestricted job duties on those days.

19. Claimant testified that Mr. M[Redacted] came to his house and took him to the chiropractic clinic on May 21, 2020. Claimant testified that after going to the chiropractor, he was able to return to work in limited duty, and had to lay down on the job due to his back pain, and he could not sit for more than 30 minutes.

20. Claimant testified that, prior to May 26, 2020, he informed both Jose M[Redacted] and Juan M[Redacted] several times that he had injured his back at work.

Jose M[Redacted]

21. Jose M[Redacted] has owned Employer for approximately 8-10 years. Mr. M[Redacted] testified that the Bennett Project was on May 14, 2020, not May 13, 2020, and that Employer did not have a 32' fiberglass ladder on the project site. Instead, 24' and 28' aluminum ladders weighing approximately 40 pounds were used. At the Bennett Project, Mr. M[Redacted] primarily worked with the gutter fabrication machine that was located 50-80 feet away from the residence where Claimant and Juan M[Redacted] were working. Because he was not working directly with Claimant, Mr. M[Redacted] did not see Claimant catch a falling ladder at the Bennett Project or otherwise witness any injury. Mr. M[Redacted] testified he did not see Claimant injured at the Bennett Project and that Claimant did not tell Mr. M[Redacted] he sustained any injury at the Bennet Project on May 14, 2020. The ALJ finds Mr. M[Redacted]'s testimony in this regard credible.

22. Mr. M[Redacted] testified that Claimant worked on Friday, May 15, 2020; Monday, May 18, 2020; and Tuesday, and May 19, 2020. On each of these days, Claimant performed his normal job duties and did not tell Mr. M[Redacted] that he was injured, or that he was in pain. Mr. M[Redacted] testified that Claimant was paid $250.00 per day for his work, and that he was paid for full days' work on for May 15, May 18, and May 19, 2020. Mr. M[Redacted]'s testimony that Claimant was paid for work on each of these days was credible.

23. On May 20, 2020, Mr. M[Redacted] took Claimant home from work early because Claimant was experiencing flu-like symptoms. On May 21, 2020, Mr. M[Redacted] was preparing to attend a previously-scheduled chiropractic appointment for himself, and spoke to Claimant on the phone. Mr. M[Redacted] offered to take Claimant to the chiropractor, and ultimately drove Claimant to the chiropractic appointment.

24. At the chiropractic visit on May 21, 2020, Mr. M[Redacted] completed Claimant's intake form, and indicated that the reason for Claimant's visit was "low back pain." Mr. M[Redacted] paid for Claimant's chiropractic appointment.

25. Mr. M[Redacted] testified he spoke with Claimant several times in-person and over the phone between May 13, 2020 and May 25, 2020. Mr. M[Redacted] testified that Claimant did not tell him at any time that he had sustained a back injury during the course of his employment with Employer. The ALJ finds credible Mr. M[Redacted]'s testimony that Claimant did not inform him of a work-related injury, although the evidence does indicate Claimant informed Mr. M[Redacted] he was experiencing back pain at least on May 21, 2020.

26. Mr. M[Redacted] testified that May 26, 2020 was the first time Claimant indicated to Mr. M[Redacted] that Claimant had sustained a work-related injury. Mr. M[Redacted] testified Claimant did not indicate how he injured his back, only that he needed to see a doctor. After Claimant informed Mr. M[Redacted] of a work-related injury, Mr. M[Redacted] notified Insurer, indicating that Claimant had injured his hip while working with a ladder.

Juan M[Redacted]

27. Juan M[Redacted] is the son of Jose M[Redacted], and has worked for Employer for approximately four years. Juan M[Redacted] typically worked with Claimant on Employer's gutter installation projects.

28. Juan M[Redacted] worked with Claimant at the Bennett project from approximately 8:00 a.m. until approximately 6:00 p.m. Juan M[Redacted] testified he did not witness the Claimant sustain an injury at the Bennett project, and Claimant did not tell Juan M[Redacted] that he was injured on that date.

29. Juan M[Redacted] testified that Claimant did not tell him on any later dates that Claimant was injured on the job, or that Claimant was experiencing back pain. Mr. M[Redacted] testified that he did not observe Claimant behaving as if he was injured at any subsequent job, and that Claimant was able to perform his job duties without restriction.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641.

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury “has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee’s service to the employer in connection with the contract of employment.” *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equipment Company,* W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

Claimant has failed to establish by a preponderance of the evidence that he sustained an injury arising out of the course of his employment with Employer associated with the Bennett project. The threshold issue in this case is whether Claimant sustained a work-related injury on or about May 13, 2020. Central to Claimant’s claim is his testimony that he sustained a significant back injury while working on the Bennett Project for Employer. Although the testimony and records conflict as to the actual date of the project, the discrepancies in the date are not determinative. Claimant’s testimony that he sustained an acute back injury at the Bennett Project was not credible in several respects.

First, Claimant described catching a fiberglass ladder that was not used at the Bennett project. Next, Claimant alleges he sustained an injury resulting in immediate pain in front of Mr. M[Redacted]. The ALJ does not find it credible that Mr. M[Redacted] witnessed Claimant sustain a work-related injury at the Bennett Project only to ignore it, and initiate the workers’ compensation process 12 days later based on a verbal report that Claimant needed to see a physician. The evidence demonstrates that Mr. M[Redacted] was not reluctant to submit a workers’ compensation claim on behalf of his employees, or to take employees for treatment at Concentra if a work-related injury occurred. This was demonstrated by Mr. M[Redacted]’s attempt to take Juan M[Redacted] to Concentra on May 25, 2020. Also, when Claimant did inform Mr. M[Redacted] that he needed to see a physician for a work-related injury, Mr. M[Redacted] promptly notified Insurer and initiated the process for Claimant to receive treatment through the workers’ compensation system.

Next, Claimant alleges his injury was significant enough that he did not return to work until after seeing the chiropractor on May 21, 2020, or that he returned to work on light duty prior to that date. Claimant’s testimony regarding this was contradicted by the testimony of Mr. M[Redacted] and Juan M[Redacted], both of whom testified that Claimant worked on at least four days between May 14, 2020 and May 21, 2020, and that Claimant performed his full job duties on those days, without restrictions. Juan M[Redacted] also testified that he worked directly with Claimant and did not observe

Claimant exhibiting any pain behaviors or unable to perform his full work duties. The ALJ finds credible Mr. M[Redacted]'s testimony that Claimant worked full duty on May 15, 18, 19 and 20, 2020, and was paid for work performed on those dates.

While the evidence establishes that Claimant informed Mr. M[Redacted] that Claimant had low back pain on May 21, 2020, nothing in the Claimant's chiropractic records shows that Claimant reported that he sustained an injury while working for Employer. It is not credible that Mr. M[Redacted] would have paid for Claimant's chiropractic treatment, rather than initiate a workers' compensation claim if Claimant had reported to him a work-related injury.

Claimant has failed to meet his burden of establishing by a preponderance of the evidence that he sustained an injury to his lower back arising out of the course of his employment with Employer on or about May 13 or 14, 2020 at the Bennett Project.

MEDICAL BENEFITS

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

Because Claimant has failed to establish that he sustained a compensable work-related injury, his request for medical treatment is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable work-related injury on or about May 13, 2020 or May 14, 2020. His claim is denied and dismissed.

2. Claimant has failed to establish by a preponderance of the evidence an entitlement to medical benefits. His claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 26, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Whether Claimant provided clear and convincing evidence to overcome the Dr. Gregory Reichhardt's DIME opinion on permanent impairment.

II. Whether Claimant is entitled to ongoing maintenance medical benefits.

STIPULATIONS

The parties stipulated that DIME physician Dr. Reichhardt changed his opinion regarding permanent medical impairment in his November 9, 2020 deposition. The parties agree that Dr. Reichhardt's true opinion is now that there is no permanent medical impairment associated with Claimant's September 27, 2019 work injury.

FINDINGS OF FACT

1. Claimant is a 42-year-old male who worked for Employer as an insulation installer.

2. Claimant sustained an admitted industrial injury on September 27, 2019 when a piece of drywall fell and struck Claimant on his hard hat and nose. Claimant testified that the impact caused a laceration on his nose and broke the inside of his hard hat. Claimant testified that, as a result of the impact, he passed out for approximately five to seven minutes. Claimant testified he immediately felt a fire-like sensation on the top and back of his head and in the back of his neck. Claimant continued to work and indicated to Employer he did not require medical treatment at the time. Claimant did not seek medical treatment until approximately two weeks later.

3. On October 11, 2019, Claimant presented to authorized treating physician ("ATP") John Raschbacher, M.D. at Midtown Occupational Health Services with complaints of nose and neck pain. Claimant reporting being struck by a piece of drywall that knocked off his safety helmet and lacerated his nose. Dr. Raschbacher noted Claimant was not knocked to the ground and did not lose consciousness or have any issues with memory. Claimant reported being a little dizzy and lightheaded the first day or so after the injury. No shoulder or back pain was reported. X-rays of the spine revealed some degenerative changes at the cervical level but no acute findings. Dr. Raschbacher assessed Claimant with blunt facial trauma at the nose and a cervical strain. He referred Claimant for physical therapy and massage therapy and released Claimant to full work.

4. At a follow-up evaluation with Dr. Raschbacher on November 4, 2019, Claimant complained of continued neck pain at 7/10. He also reported a head contusion and low back pain. Dr. Raschbacher prescribed Claimant ibuprofen.

5. Claimant continued to report neck pain, low back pain, headache and dizziness to Dr. Raschbacher on December 5, 2019. Dr. Raschbacher ordered a cervical spine MRI, which was performed on December 12, 2019. The MRI revealed multilevel degenerative changes. Anterior osteophyte formations were shown at C4, C5, and C6 levels, with a straightening of the cervical spine and mild reversal of cervical lordosis.

6. Dr. Raschbacher reviewed the cervical MRI on January 2, 2020 and noted mild to moderate pre-existing degenerative changes with no acute findings. He recommended Claimant continue physical therapy for two weeks.

7. On January 15, 2020, Claimant's physical therapist noted Claimant performed all of his exercises to completion. He noted Claimant presented with "very inconsistent symptoms without clear biomechanical pain generator," and suspected Claimant had no significant limitations and was more so unable to cope with the pain.

8. Claimant returned to Dr. Raschbacher for a follow-up evaluation on January 23, 2020. Claimant continued to report neck pain. Dr. Raschbacher noted that the cervical MRI did not reveal anything correlating with Claimant's subjective complaints. On examination of the cervical spine, Dr. Raschbacher noted mild soft tissue tenderness and "fairly good" neck range of motion with no radiation. He did not document specific range of motion measurements. His final diagnosis remained blunt facial trauma and cervical strain. Dr. Raschbacher placed Claimant at maximum medical improvement ("MMI") and discharged him from care, with no permanent impairment and no work restrictions. He provided a prescription for Ibuprofen as needed and opined that Claimant could complete his remaining physical therapy visits as maintenance.

9. At physical therapy on January 24, 2020, Claimant reported that his cervical spine felt within normal limits.

10. Respondents filed a Final Admission of Liability ("FAL") on February 25, 2020 based upon Dr. Raschbacher's report. Respondents admitted for reasonable and necessary maintenance care. Claimant objected to the FAL and requested a DIME.

11. Prior to the DIME taking place, Claimant sustained a separate work-related injury to his chest on March 9, 2020 after striking his chest on a pipe. Claimant treated for the chest injury with Lawrence Cedillo, D.O. and Lawrence Lesnak, M.D. Dr. Cedillo prescribed Claimant ibuprofen 800 mg and referred Claimant for physical therapy. Claimant reported to Dr. Cedillo and Dr. Lesnak diffuse neck pain related to his September 27, 2019 work injury. Dr. Cedillo's examinations for the March 9, 2020 injury included examination of the cervical spine. On more than one occasion, these examinations showed the neck to be non-tender to palpation and range of motion within normal limits without difficulty. At Dr. Lesnak's July 7, 2020 evaluation, Dr. Lesnak noted full cervical range of motion without reproduction of any symptoms. Cervical root tension maneuvers and cervical facet joint loading activities also reproduced no symptoms. Dr. Lesnak noted self-limited thoracic spine range of motion.

12. Dr. Reichhardt performed the DIME on July 22 and July 23, 2020. Regarding the mechanism of injury, Claimant reported that he was struck in the head by sheet rock that fell from the second floor. Claimant reported that he lost consciousness and fell to the ground for several minutes. He reported neck and low back pain, as well as cognitive symptoms, memory issues, blurred vision, a pins and needles sensation in his hands, and left knee pain. On examination of the cervical spine, Dr. Reichhardt noted tenderness to palpation, pain with flexion and extension, and limited range of motion. He diagnosed Claimant with neck pain and agreed Claimant reached MMI as of January 23, 2020. Dr. Reichhardt provided a 17% whole person permanent impairment, consisting of 12% for range of motion deficits and 6% under Table 53 of the AMA Guides. He did not assign any work restrictions. As maintenance care, Dr. Reichhardt recommended Claimant attend four follow-up evaluations and four physical therapy sessions as needed over the course of the following year.

13. On September 28, 2020, Elizabeth Bisgard, M.D. performed an independent medical examination ("IME") at the request of Respondents. As part of the IME she reviewed the medical records, including the records associated with Claimant's March 9, 2020 work injury. On examination, Dr. Bisgard found Claimant's range of motion invalid, inconsistent and nonphysiologic. She noted that on distraction, Claimant was able to fully extend and rotate his neck bilaterally while demonstrating his work activity. Dr. Bisgard reviewed surveillance video of Claimant dated August 20, 2020, August 22, 2020, August 30, 2020 and September 6, 2020. Dr. Bisgard described the videos, noting that Claimant did not appear to be limited in any movement, and did not show hesitation or pain.

14. Dr. Bisgard opined that Claimant had reached MMI for what she diagnosed as a head contusion and nasal abrasion, resolved, and cervical pain, inconsistent with examination findings. She indicated that no further treatment was warranted, nor was any permanent impairment, for either range of motion deficits or for a Table 53 rating. Dr. Bisgard explained that there was no specific diagnosis or pathology correlating to Claimant's subjective symptoms. She noted that multiple examiners noted inconsistencies and opined that Claimant's reported pain is inconsistent with any physiologic findings. Dr. Bisgard further explained that Claimant did not meet the requirement under Table 53 of the AMA Guides for a minimum of six months of medically documented pain and rigidity, as there were only four months from the date of injury to MMI. She further noted that documentation from the providers did not show rigidity. Dr. Bisgard also explained that, without a Table 53 diagnosis, range of motion measurements cannot be used for a rating.

15. Dr. Reichhardt testified by deposition on November 9, 2020. During the deposition, Dr. Reichhardt was also shown the surveillance video viewed by Dr. Bisgard and, subsequently, by Dr. Hughes. Dr. Reichhardt stated that he did not see "anything that looked unusual or necessarily representative of restricted neck motion." *Dr. R. Depo, P. 39, l. 19-21.* He was also provided and reviewed medical records from Claimant's subsequent work injury of March 9, 2020, which showed cervical evaluations between the date of MMI and the DIME appointment. When Dr. Reichhardt was asked if he was still of the opinion that Claimant had a 17% cervical impairment, he responded that Claimant

did not. He testified, “This is difficult. But I would say after reviewing Dr. Cedillo's notes and after reviewing the surveillance video, along with the other concerns that there have been about inconsistencies, I would say that it is medically probable that he does not have permanent cervical impairment.” *Dr. R Depo. P. 34, l. 16-21.*

16. On November 10, 2020, John Hughes, M.D. performed an IME at Claimant’s request. Dr. Hughes reviewed medical records and surveillance video, and performed a physical examination. Dr. Hughes concluded that Claimant sustained a medically documented injury to the cervical spine with continued pain, and thus qualified for 4% permanent impairment under Table 53(II)(B). He opined that an impairment for range of motion was not appropriate. Dr. Hughes explained that, on his examination, Claimant exhibited highly limited range of motion that was “clearly discrepant” with what he observed on the surveillance video, what was documented by Dr. Raschbacher and Claimant’s physical therapists.

17. Dr. Hughes testified at hearing as a Level II accredited expert in occupational medicine. He testified consistent with his IME report. Dr. Hughes opined that Dr. Reichhardt erred by not providing Claimant an impairment rating for a specific disorder under Table 53(II)(B). He explained that Claimant has a medically documented injury to his cervical spine with more than six months of documented pain. Dr. Hughes testified he was not able to review several records regarding the cervical evaluations done under the subsequent claim between the MMI of Dr. Raschbacher and the DIME evaluation. Dr. Hughes stated that provision of a Table 53 rating is at the discretion of the rater.

18. Claimant testified at hearing he continues to experience ongoing symptoms as a result of the September 27, 2019 work injury, including popping and pain in his neck, tingling in his hands and memory issues. Claimant testified that he cannot bend down or lift greater than 60-70 pounds due to back pain.

19. Surveillance video of Claimant obtained in August and September 2020 shows Claimant lifting and loading a piano into the back of a pickup truck. He is further observed on the surveillance video bending over on multiple occasions.

20. The ALJ finds the opinions of Drs. Reichhardt, Raschbacher, and Bisgard more credible and persuasive than the opinion of Dr. Hughes and Claimant’s testimony.

21. Claimant failed to overcome Dr. Reichhardt’s DIME opinion on permanent impairment by clear and convincing evidence.

22. Respondents proved by a preponderance of the evidence maintenance medical benefits are no longer reasonable, necessary or related to Claimant’s September 27, 2019 work injury.

23. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME

The finding of a DIME physician concerning the claimant's non-scheduled medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015).

The questions of whether the DIME physician properly applied the *AMA Guides*, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000); *Paredes v. ABM Industries* W.C. No. 4-862-312-02 (ICAO, Apr. 14, 2014). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, Mar. 22, 2000); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAO, July 26, 2016).

Claimant failed to prove it is highly probable Dr. Reichhardt's DIME opinion on permanent impairment is incorrect. Although Dr. Reichhardt initially opined that Claimant sustained 12% impairment for range of motion deficits and 6% impairment under Table 53, he subsequently changed his opinion and ultimately opined that Claimant did not sustain any permanent impairment as a result of the September 27, 2019 work injury. Dr. Reichhardt's opinion that Claimant did not sustain any permanent impairment is based on his review of additional medical records and surveillance video, along with concern for inconsistencies in Claimant's reporting and presentation. Dr. Reichhardt's ultimate opinion that Claimant did not sustain any permanent impairment is consistent with the opinions of Claimant's ATP, Dr. Raschbacher, as well as Dr. Bisgard.

Although Claimant consistently complained of neck pain, inconsistencies regarding Claimant's reports of the injury, his symptoms, his presentation, and objective findings call Claimant's credibility into question. Dr. Raschbacher noted the MRI findings did not correlate with Claimant's subjective complaints. Claimant's physical therapist specifically remarked that Claimant presented with inconsistent symptoms without a clear biomechanical pain generator. Subsequent to being placed at MMI, Drs. Cedillo and Lesnak noted normal cervical range of motion without reproduction of symptoms on examination. Dr. Bisgard credibly opined that Claimant's findings on examination were inconsistent and nonphysiologic. Surveillance video of Claimant shows Claimant exhibiting more function and range of motion than he purports. Dr. Reichhardt took all of this into consideration when issuing his ultimate opinion. Dr. Reichhardt's opinion is joined by Dr. Bisgard, who credibly explained Claimant is not entitled to a permanent impairment rating under Table 53 or for range of motion deficits. Dr. Hughes acknowledged that the provision of a Table 53 rating is within the discretion of the examiner. Here, to the extent Dr. Hughes' opinion differs from that of the DIME physician, such disagreement represents a mere difference of opinion and does not rise to the level of clear and convincing evidence that Dr. Reichhardt erred in his opinion.

Maintenance Medical Benefits

Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, WC 4-471-818 (ICAO, May 16, 2002). There is no bright line test to distinguish treatment designed to cure an injury from treatment designed to relieve the effects of the injury. Surgery may be designed to cure an injury or may be maintenance treatment designed to relieve the effects or symptoms of the injury. Post-MMI treatment may be awarded regardless of its nature. *Corley v. Bridgestone Americas*, WC 4-993-719 (ICAO, Feb. 26, 2020).

To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, WC No. 3-979-487, (ICAO, Jan. 11, 2012). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* WC 4-461-989 (ICAO, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

In contrast, when respondents seek to terminate medical maintenance benefits they have the burden to prove that medical maintenance benefits are no longer reasonable, necessary or related to the industrial injury. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990); *see* §8-43-201(1), C.R.S. (specifying that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification").

The preponderant evidence establishes Claimant is not entitled to ongoing maintenance medical benefits. Respondents' February 25, 2020 FAL admitted for reasonable, necessary and related post-MMI medical treatment pursuant to Dr. Raschbacher's January 23, 2020 MMI report. As maintenance, Dr. Raschbacher prescribed Claimant ibuprofen as needed and recommended Claimant complete any remaining physical therapy sessions. Claimant attended his final physical therapy appointment as related to the September 27, 2019 work injury on January 24, 2020. At that physical therapy session, Claimant reported that his cervical spine felt within normal limits. Subsequent physical therapy sessions were related to Claimant's March 9, 2020 injury. Claimant was also prescribed ibuprofen as part of his March 9, 2020 work injury. Dr. Bisgard credibly opined Claimant does not require maintenance treatment as a result of the September 27, 2019 work injury. Furthermore, Claimant's testimony regarding ongoing neck issues as a result of the September 27, 2019 work injury are not credible and persuasive. Accordingly, Respondents proved it is more likely than not medical maintenance benefits are no longer reasonable, necessary or related to Claimant's September 27, 2019 work injury.

ORDER

1. Claimant failed to overcome Dr. Reichhardt's DIME opinion on permanent impairment.

2. Ongoing maintenance medical benefits are not reasonable, necessary or related to the September 27, 2019 work injury.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant make a proper showing for a change of physician to Dr. Miguel Castrejon?

FINDINGS OF FACT

1. Claimant works for Employer as a firefighter. He suffered an admitted injury to his right shoulder on December 4, 2019.

2. Claimant has a lengthy history of right shoulder problems, including multiple dislocations. He had bony and labral changes that developed over many years.

3. Claimant saw Dr. Michael Simpson on February 10, 2020 for a surgical consultation. Dr. Simpson noted MRI findings of "marked deformity superior labral aspect of the humeral head consistent with an old Hill-Sachs deformity and corresponding Bankart injuries." Dr. Simpson ordered a shoulder CT, which showed significant glenoid insufficiency. Dr. Simpson opined, "I think he is going to require an anterior shoulder stabilization with a bone block procedure or glenoid augmentation. That is not a surgical procedure I perform. Therefore, we will need to get him referred to another provider. He was asking me about surgeons in town who perform that since I do not. He would like to be referred to Dr. Chris Jones and I will try to facilitate that."

4. Claimant was evaluated by Dr. Jones on February 24, 2020. Dr. Jones recommended a bone reconstruction (Latarjet procedure) and possible allograft. He also recommended arthroscopy to evaluate the Hill-Sachs deformity and a possible rotator cuff repair.

5. Dr. Nicholas Kurz became Claimant's primary ATP on February 25, 2020. Based on the lack of any acute new pathology shown on imaging, Dr. Kurz opined the recommended surgery was related to Claimant's pre-existing condition and was not work-related. Dr. Kurz opined Claimant suffered a work-related strain on December 4, 2019 but had recovered. He put Claimant at MMI on March 31, 2020 and advised Claimant to follow up with his personal physicians for further treatment, including surgery. Dr. Kurz agreed surgery was necessary and encouraged Claimant to pursue treatment under health insurance immediately and not wait for liability issues to be sorted out. He explained if the surgery were later determined to be work-related, Claimant could return to Employer's clinic and would be reimbursed for treatment received in the interim.

6. Dr. William Ciccone II performed an IME for Respondent on May 29, 2020. Dr. Ciccone noted Claimant's extensive pre-existing history and underlying pathology that predated the work injury. However, Dr. Ciccone opined the work injury aggravated Claimant's pre-existing condition and proximately caused the need for surgery.

7. On June 5, 2020, Dr. Christopher Jones performed a right shoulder arthroscopic debridement. Dr. Jones initially planned a Latarjet procedure but he "elected to abort on that procedure" because intraoperative inspection revealed a "massive humeral head defect." Dr. Jones opined, "his only real option is to consider humeral reconstruction and that would be within allograft or an arthroplasty procedure. Certainly, the million-dollar question is what to do with the glenoid. Should we do hemiarthroplasty or does he need a bony procedure." Claimant requested a referral to Dr. Proventure at the Steadman Clinic, and Dr. Jones referred Claimant for what he believed was a second opinion. Dr. Jones advised Claimant to return in four weeks.

8. Claimant saw Dr. Proventure and decided to have him perform surgery.

9. Respondent filed a General Admission of Liability on July 16, 2020 and agreed to authorize surgery with Dr. Provencher.

10. Claimant returned to Dr. Kurz on July 28, 2020 to resume treatment under his workers' compensation claim. Dr. Kurz noted Respondent had accepted the claim and told Claimant, "Awesome. Good for you." Claimant explained he was scheduled for surgery with Dr. Proventure in August. Claimant stated Dr. Jones had referred him out because "the case was too complicated for him." Dr. Kurz informed Claimant he had no notes or other information from Dr. Proventure. Dr. Proventure had ordered a pre-op nerve conduction study and Claimant said he was "trying to find" a doctor to perform it. Dr. Kurz advised Claimant he could see Dr. Leppard or Dr. Bowser, who usually see patients "within a week." Claimant did not pursue the electrodiagnostic testing.

11. On August 18, 2020, Dr. Provencher performed a right shoulder anterior stabilization procedure with an open distal tibial allograft and talus allograft.

12. Claimant testified he no longer wants to see Dr. Kurz because "I don't feel like Dr. Kurz has my best interests at heart. I don't feel like he is taking my injuries seriously. He initially ruled it as a sprain. I've had to undergo one of the most intense shoulder reconstruction surgeries that you can have. I no longer trust his medical opinion. I don't trust that he has anything for me as a patient that he wants to continue to improve me. I feel as though he wants to perpetuate his own initial diagnosis and won't consider any other diagnosis outside of that . . . . Every time I go into that office, I feel as though I'm being treated as a criminal that's being interrogated instead of a patient speaking to a physician . . . . I've never had a relationship with the physician like this. And as a medical professional myself, I would never treat any of my patients the way that I've been treated by Dr. Kurz." Claimant testified Dr. Kurz does not listen to him and "I don't even feel like he is in the room when I am discussing my complaints." Claimant does not believe he has an effective doctor-patient relationship with Dr. Kurz, and "I feel more like there's an interrogator-interrogatee relationship." Claimant testified he "absolutely" feels "threatened" by Dr. Kurz.

13. Claimant secretly recorded his appointments with Dr. Kurz on March 31, July 28, August 11, and September 1, 2020. The recordings were entered into evidence at hearing. After listening to the recordings, the ALJ finds Claimant's descriptions of the

appointments are inaccurate and his perceptions of his interactions with Dr. Kurz are objectively unreasonable.

14. Claimant testified Dr. Kurz told him to perform “pendulum” exercises after surgery. Claimant testified Dr. Provencher’s postop notes made clear that he was not to perform pendulum exercises until approved by Dr. Provencher. Claimant testified he believed Dr. Kurz may have been trying to get him to do something that would cause more damage to his shoulder.

15. Dr. Kurz had no postop notes from Dr. Proventure at the September 1, 2020 appointment. The recording shows Dr. Kurz did not recommend or suggest Claimant perform pendulum exercises but merely asked if Claimant was performing such exercises. Claimant’s suggestion that Dr. Kurz wanted him to cause further injury to the shoulder is irrational and appears paranoid. Claimant’s criticisms of Dr. Kurz regarding pendulum exercises are unpersuasive.

16. Claimant testified he dreaded the visits with Dr. Kurz and his apprehension was evidenced by his vital signs. Claimant testified when he sees Dr. Kurz, his “heart rate is in the 120s, 130s and my blood pressure is in the 140 over like 80, which is a very strong indicator of extreme stress.”

17. Contrary to Claimant’s testimony, his heart rate did not reach the 120s or 130s when his vital signs were taken at appointments with Dr. Kurz. Nor do the records corroborate he repeatedly had higher blood pressure with Dr. Kurz than other providers.

18. Claimant testified he lost feeling in his pinky before surgery. He believes Dr. Kurz should have evaluated the complaint and “it would have warranted a visit to a neurologist.” But Dr. Proventure had already ordered nerve conduction studies when Claimant first mentioned the symptoms to Dr. Kurz on July 28. Dr. Kurz recommended Claimant see Dr. Leppard or Dr. Bowser who could probably do the testing “within a week” but Claimant did not follow through. Claimant’s accusation that Dr. Kurz somehow failed him regarding the ulnar nerve issue is misplaced and unpersuasive.

19. Also at the July 28, 2020 visit, Dr. Kurz asked if Claimant had returned to Dr. Jones. Claimant said Dr. Jones told him the “case was too complicated for him [Dr. Jones]” so he referred Claimant to Dr. Proventure. On August 11, 2020, Claimant again stated Dr. Jones had told him “he wasn’t able to perform the procedure that I needed.”

20. Contrary to Claimant’s statements, Dr. Jones’ June 5, 2020 report did not indicate Claimant’s case was “too complicated” or that he was unwilling or unable to perform surgery. In fact, it was Claimant who requested the referral to Dr. Proventure. Dr. Jones’ report documents, “Patient actually inquired about going to the Steadman clinic to see Dr. Provencher. Apparently, he was referred there by some friends. I am certainly happy to see if I can help facilitate that. I am not sure if those guys have any more experience doing osteochondral graft, but I am certainly happy to help the patient obtain another opinion if he would like.”

21. At hearing, Claimant expressed great concern with the way he felt he was treated by Dr. Kurz at his August 11, 2020 appointment. As reflected on the recording, Dr. Kurz did not request the appointment and did not know why Claimant was there because he previously told Claimant to follow-up after surgery. Claimant appears to blame Dr. Kurz for the appointment, even though he knows Dr. Kurz played no part in scheduling the visit. The clinic staff set the appointment after Claimant called about a WC 164 form he could not find. The appointment probably resulted from miscommunication or misunderstanding by administrative staff and/or PA-C Homberger but had nothing to do with Dr. Kurz. The ALJ finds this complaint to be unpersuasive.

22. Claimant testified Dr. Kurz left the examination room during the August 11 appointment for about "10 to 15 minutes" but the recording shows Dr. Kurz was out of the room for only 4.5 minutes. Claimant testified Dr. Kurz returned with a "massive" file at which point "the appointment became completely unprofessional and something I would never expect a physician to do." As with Claimant's other allegations, this testimony is not supported by the recordings. Dr. Kurz was puzzled because Dr. Jones' June 5, 2020 report contradicted Claimant's story that Dr. Jones "wasn't able to perform the procedure I needed." It was certainly appropriate for Dr. Kurz to inquire about the discrepancy between Claimant's statements and Dr. Jones' report. Claimant later became defensive when Dr. Kurz asked about his lengthy history of narcotic use. Despite Claimant's complaints he felt "threatened" by Dr. Kurz at the August 11, 2020 visit and felt Dr. Kurz's demeanor was accusatory and aggressive, the ALJ did not receive the same impression upon listening to that recording. The ALJ heard nothing "unprofessional" on the recording.

23. Claimant testified every meeting with Dr. Kurz was as if Dr. Kurz just met him for the first time. The recordings do not support this testimony. To the contrary, Dr. Kurz appeared familiar with Claimant's situation, except for some details when he had not been provided reports from other providers. Dr. Kurz congratulated Claimant on enrolling and paramedic school and later inquired how school was going.

24. The audio recordings show Dr. Kurz was cordial and professional at all times. Dr. Kurz never raised his voice to Claimant, including on March 31, 2020 when Claimant asked for an explanation why Dr. Kurz changed his opinion on causation of the shoulder injury.

25. Claimant has received quality treatment through Employer's clinic. Dr. Kurz credibly testified he will "absolutely" provide the medical care Claimant needs. Dr. Kurz testified Claimant's prior inconsistencies are "water under the bridge" and will not hinder his future treatment.

26. Dr. Kurz's hearing testimony was credible and persuasive.

27. Claimant was not a credible witness.

28. Claimant failed to make a proper showing for a change of physician.

CONCLUSIONS OF LAW

A claimant can obtain a change of physician "upon the proper showing to the division." Section 8-43-404(5)(a)(VI)(A); *Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996). Section 8-43-404(5)(a)(VI)(A) does not define a "proper showing," and the ALJ has broad discretion to decide if the circumstances justify a change of physician. *Jones v. T.T.C. Illinois, Inc.*, W.C. No. 4-503-150 (May 5, 2006). The ALJ should exercise this discretion with an eye toward ensuring the claimant receives reasonably necessary treatment while protecting the respondents' legitimate interest in being apprised of treatment for which they may ultimately be held liable. *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); *Landeros v. CF & I Steel*, W.C. No. 4-395-315 (October 26, 2000). The ALJ may consider many factors including whether the claimant has received adequate treatment, whether the claimant trusts the ATP, the level of communication between the claimant and the ATP, the ATP's expertise and skill at managing a condition, and the ATP's willingness to provide additional treatment. *E.g.*, *Carson v. Wal-Mart*, W.C. No. 3-964-07 (April 12, 1993); *Merrill v. Mulberry Inn, Inc.*, W.C. No. 3-949-781 (November 1995); *Greenwalt-Beltmain v. Department of Regulatory Agencies*, W.C. No. 3-896-932 (December 5, 1995); *Zimmerman v. United Parcel Service*, W.C. No. 4-018-264 (August 23, 1995). An ALJ need not approve a change of physician because of a claimant's personal reasons, including mere dissatisfaction with the ATP. *McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (November 27, 2007). On the other hand, the ALJ is not precluded from considering the claimant's subjective perception of his relationship with the physician. *Gutierrez v. Denver Public Schools*, W.C. No. 4-688-075 (December 18, 2008).

As found, Claimant failed to establish a basis for a change of physician. Although Claimant appeared credible at first blush, the ALJ developed serious doubts about the reliability of his testimony as additional information was revealed regarding the history and Claimant's perception of events. For instance, Claimant testified Dr. Jones referred him to Dr. Proventure because the proposed surgery was "too complicated." That testimony is contradicted by Dr. Jones' June 5, 2020 report, which makes clear Dr. Jones was willing to perform surgery an only made the referral to Dr. Proventure because Claimant requested it. Claimant's perception of Dr. Kurz as dismissive, hostile, and "threatening" is not supported by the surreptitious recordings of the appointments. To this ALJ's ear, Dr. Kurz sounded professional and courteous at every visit. Although the March 31, 2020 discussion regarding Dr. Kurz's opinion that Claimant's ongoing shoulder problems were not work-related undoubtedly involved some tension, Dr. Kurz was cordial and encouraged Claimant to move forward with treatment under health insurance while the liability issue was being resolved. At the July 28, 2020 appointment, when Claimant informed Dr. Kurz that Respondent accepted the claim and had authorized surgery, Dr. Kurz replied, "awesome. Good for you." The ALJ perceived no resentment or resistance in Dr. Kurz's tone. Claimant's testimony he feels like "a criminal being interrogated, instead of a patient speaking to a physician" is refuted by the recordings. Dr. Kurz credibly testified his prior assessment of causation has no impact on the treatment he will provide going forward. As Dr. Kurz noted, he is not in the "risk" department and the decision whether to cover a claim is distinct from his role as the primary ATP. There is no persuasive evidence Claimant received substandard care, and in fact, the record shows the contrary.

ORDER

It is therefore ordered that:

1. Claimant's request for a change of physician is denied and dismissed.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 25, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-105-877-002, 5-135-043-002, and 5-177-030-002

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury to his right hand on March 6, 2019.

II. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury to his right hand on September 5, 2019.

III. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury to his right elbow on March 6, 2020.

PROCEDURAL BACKGROUND

Claimant alleges he suffered three separate compensable injuries. Claimant alleges he suffered his first injury on March 6, 2019 when he injured his right hand. This first claim has been assigned W.C. Claim No. 5-105-877.

Claimant also alleges he suffered a second injury on September 5, 2019, when he again injured his right hand. This second claim has been assigned W.C. Claim No. 5-135-043.

Claimant further alleges he suffered a third injury on March 6, 2020, when he injured his right elbow. This last claim has been assigned W.C. Claim No. 5-177-030.

Claimant filed a motion and moved to consolidate all three claims for hearing. Claimant's motion was granted on November 13, 2020. As a result, all three claims were heard at the January 14, 2021 hearing.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant has worked in the grocery industry since approximately 1988. Claimant worked for Employer for about 14 years. Claimant then switched to [Redacted] for about another 14 years, working essentially the same job. Claimant returned to work for Employer in July 2018, again primarily stocking shelves with grocery product. Claimant worked at Employer's Store No. 69 at all relevant times.

2. Claimant testified that he sustained at least two work-related injuries while working for [Redacted], and that when he was working for Employer in December 2018, he knew he had to report work-related injuries to a supervisor. [Hearing Transcript, pp. 41:43 – 42:3].

W. C. No. 5-105-877, March 6, 2019, alleged injury

3. Claimant works the night shift, appearing for work at midnight and working through 8:00 a.m. [Hearing Transcript, pp. 23:23 - 24:1; 46:7-9]. Claimant testified that on March 6, 2019, as he was stocking peanut butter jars on aisle 7, he spread out his right hand to grab two jars of peanut butter when he felt a stabbing pain in his right hand. [Hearing Transcript, p. 30:13-23]. Claimant testified that his hand "changed color and swelled up immediately." [Hearing Transcript, p. 39:4-7]. Claimant testified that after his hand changed color and swelled immediately, he told someone named Chris [Hearing Transcript, p. 31:3-13] and someone named Kayla [Hearing Transcript, p. 31:14-20], to "look at my hand." Both individuals allegedly told Claimant that he needed to talk to Assistant Store Manager Mark P[Redacted].

4. Assistant Store Manager Mark P[Redacted] testified that Employer's Assistant Store Managers rotate morning, evening and night shifts and that at the time of the alleged injury of March 6, 2019, he was working the 10:00 a.m. to 8:00 p.m. shift. Mr. P[Redacted] testified that on March 7, 2019, Employer had scheduled an "inventory crew" to count inventory in the entire store beginning at 6:00 a.m. Thus, because all stocking had to be completed by 6:00 a.m. on March 7, 2019, Claimant started his shift at 10:00 p.m. on March 6, 2019, and Mr. P[Redacted] worked late, leaving the store "somewhere close to midnight." [Hearing Transcript, pp. 47:11 – 48:11]. Thus, while Mr. P[Redacted] and Claimant normally would not be working together, they both were working around midnight on March 6, 2019.

5. Mr. P[Redacted] testified that Claimant approached him either late-night March 6 or early-morning March 7, 2019, stating that Claimant had hurt his hand. When Mr. P[Redacted] asked when the injury occurred, Claimant stated that he was not sure, but probably the week before Christmas in December 2018. [Hearing Transcript, p. 49:17-23]. Mr. P[Redacted] was the head of the store safety team, which included reporting and handling worker-related injury claims. [Hearing Transcript, p. 68:10-25]. Thus, Mr. P[Redacted] asked Claimant to whom Claimant had reported the injury in December. Claimant told Mr. P[Redacted] that he had not reported the alleged injury to anyone. [Hearing Transcript, pp. 50:8 – 51:20]. Mr. P[Redacted] then informed Claimant that he would complete the store incident report packet when he came in the following morning, but that because Claimant had not informed anyone of the alleged injury in December 2018, he was not sure if Sedgwick would accept the claim. [Hearing Transcript, pp. 52:14 – 53:2].

6. Despite Mr. P[Redacted] telling Claimant that Sedgwick might not accept the alleged hand injury claim because of Claimant's delay in reporting the alleged injury from December 2018 until March 2019, Mr. P[Redacted] testified that Claimant never mentioned anything allegedly occurring on March 6 or 7, 2019, and mentioned nothing about his hand swelling or changing color. Furthermore, despite allegedly asking both Chris and Kayla to look at his hand, Claimant never asked Mr.

P[Redacted] to look at his hand. Instead, Claimant testified that he was "not real sure" if he informed Mr. P[Redacted] of the events allegedly occurring on March 6, 2019. [Hearing Transcript, pp. 39:24 – 40:2].

7. The following morning, March 7, 2019, Mr. P[Redacted] spoke to Assistant Store Manager Ed M[Redacted], who informed Mr. P[Redacted] that Claimant had reported a hand injury to Mr. M[Redacted], so Mr. M[Redacted] started the incident report packet. Because Mr. P[Redacted] was head of the store's safety team and he had already spoken to Claimant about the alleged hand injury, Mr. P[Redacted] took over completing the incident packet.

8. On the Associate Incident In-Store Investigation Report, where the form states, "Date of Injury": Mr. P[Redacted] wrote, "December 2018." [Exhibit A, p. 4]. This corroborates and confirms Mr. P[Redacted]'s testimony that Claimant never mentioned anything to Mr. P[Redacted] about an incident on March 6, 2019 when he initially reported his injury. In addition, on the same report, there is a section for information about managers notified of the alleged injury. In that section, under "Mgr Notified of Injury", Claimant wrote, "Alonzo n/c." [Ex. A, p. 4]. Mr. P[Redacted] testified that "Alonzo n/c" referred to a night crew supervisor that normally worked with Claimant on the overnight crew. That said, Alonzo had not worked at Store No. 69 since January 2019. Thus, when Claimant documented that he reported the alleged injury to Alonzo, Claimant necessarily had to have been referring to the alleged injury occurring in December 2018, since Alonzo did not work for Store No. 69 in March 2019. Thus, Claimant's statement in the Associate Incident In-Store Investigation Report on March 7, 2019, that he reported the alleged injury to Alonzo, is consistent with Claimant not mentioning an incident occurring on March 6, 2019.

9. Consistent with the Associate Incident In-Store Investigation Report, Claimant's own written statement on the Associate Work Related Injury / Illness Report dated March 7, 2019, does not mention an incident on March 6, 2019. [Exhibit A, p. 6]. The Associate Work Related Injury / Illness report provides: "In your-own words, describe in detail how the Injury happened: (include the size and weight of objects, the type and condition of any equipment involved, conditions of the area where injury/illness occurred)." Clamant wrote: "in Dec I was reaching for some product and it felt like I got stabbed between the first and second finger. I tryed [sic] to see if would get better but it hasn't it has gotten progressively worse. To the point of my fingers turning blue." [Exhibit A, p. 6]. Thus, Claimant again did not mention an incident occurring on March 6, 2019.

10. Furthermore, in the section of the Associate Work Related Injury / Illness Report which states "Date of Injury" there are scribbled marks across the original date listed by Claimant, but the number 2018 can be seen, which is consistent with Claimant's original report to Mr. P[Redacted] and his written narrative on the Associate Work Related Injury / Illness Report in which he alleged an injury in December 2018. Mr. P[Redacted] testified that a few days after Claimant completed the Work Related Injury / Illness Report, Claimant asked to change the report and wrote the date "3-6-2019." [Hearing Transcript, p: 60:14-22 – 61:2]. This is consistent with the Claimant's statement in the Associate Incident In-Store Investigation Report, in which, by alleging that he reported the alleged injury to "Alonzo", who had not

worked at Store No. 69 since January 2019, Claimant established that he was reporting an alleged injury in December 2018 rather than an incident occurring on March 6, 2019.

11. Claimant's testimony that he sustained an injury on March 6, 2019, is not supported by his own statements to Mr. P[Redacted] on March 6, 2019, or in his own written statement on March 7, 2019. Both times Claimant did not mention an incident on March 6, 2019, instead stating that an injury occurred sometime in December 2018. If Claimant had experienced an injury on March 6, 2019, which caused immediate swelling and discoloration, it is highly unlikely that he would not have told Mr. P[Redacted] about that injury when speaking to Mr. P[Redacted] less than 20 minutes later, especially when Mr. P[Redacted] informed Claimant that Sedgwick may not accept the alleged injury because of the 3-month delay in reporting an injury. Claimant testified that he experienced immediate pain, swelling and discoloration before speaking to Mr. P[Redacted] on March 6, 2019. If this were true, Claimant would not have focused on an alleged incident in December 2018, especially after Mr. P[Redacted] mentioned the delay in reporting the alleged December injury. Rather, Claimant would have told Mr. P[Redacted] that the incident occurred only a few minutes before on March 6, 2019.

12. Claimant's credibility is also undermined by the multiple inconsistencies in Claimant's testimony and the records about the alleged incident in December 2018:

   - Claimant testified that he informed "Michelle" on the day of the alleged incident in December 2018, whom he claims wanted to send Claimant to the hospital [Hearing Transcript, p. 37:6-14];
   - Mr. P[Redacted] testified that during his conversation with Claimant in the late-evening of March 6 or early-morning of March 7, Claimant stated he told no one of the alleged incident in December 2018. [Hearing Transcript, pp. 50:8 – 51:20].
   - The following morning of March 7, 2019, when Claimant provided information for the Associate Incident In-Store Investigation Report, Claimant alleged that he informed "Alonzo" of the alleged December 2018 injury. [Ex. A, p. 4].
   - Claimant told hand surgeon Jonathan Sollender, M.D., on April 4, 2019, that he had not informed anyone of the alleged incident in December 2018. [Ex. C, p. 26].

13. Jonathan Sollender, M.D., a fellowship-trained hand surgeon, performed an Independent Medical Examination of Claimant on April 4, 2019, at the request of Respondent. Claimant's complaints were listed as soreness of the palmar and dorsal side of the index finger and swelling of the long (middle) finger of the right hand. Dr. Sollender diagnosed Claimant with a strain of the right hand and concluded that the strain was not caused by work activities based on his review of job demands analyses of other individuals he has treated in the same position as Claimant. [Ex. C, p. 27].

14. Jill Adams, CRC, CCM, CEAS II performed a Job Demands Analysis and Risk Factor Analysis of Claimant's position for Employer on July 8, 2020. Her report dated July 9, 2020, found that Claimant's job duties did not reach the Primary or Secondary Risk Factors associated with cumulative trauma in the Cumulative Trauma Conditions Medical Treatment Guidelines, W.C.R.P. 17, Exhibit 5. [Ex. N, pp. 132-33]. This Job Demands Analysis supports Dr. Sollender's original opinion on April 4, 2019, that Claimant's hand strain – as an occupational disease - was not caused by Claimant's job duties.

15. Caroline Gellrick, M.D., performed an Independent Medical Examination of Claimant on April 16, 2020, at the request of the Claimant. Dr. Gellrick diagnosed Claimant with a "right hand sprain and strain." [Ex 9, p. 154]. She concluded that "the March 2019, injury appears to be more of an occupational disease." [Ex. 9, p. 155]. Dr. Gellrick then contended that Claimant's right-hand strain was caused by his work activities, referring to W.C.R.P. 17, Exhibit 5, medical causation analysis. But Dr. Gellrick's opinion is flawed because she lacked information which she specifically stated would be dispositive of the causation question. Dr. Gellrick's report says that her opinion on causation rested on assumptions about the ergonomic risk of Claimant's job duties which she could not quantify without a job demands analysis. [Ex. 9, p. 155]. She stated that "[i]f jobsite evaluation and formal Job Demands Analysis does not support the patient's claims of 03/06/19 or 03/06/20, it is understood that the [c]laims may need to be reviewed for pre-existent work at [Redacted]." [Ex. 9, pp. 9-10]. The Job Demands Analysis performed by Jill Adams on July 8, 2020, established that Claimant's job duties did not reach either primary or secondary risk factors for development of a cumulative trauma condition. [Ex. N, pp. 132-33]. Dr. Gellrick did not issue a supplemental report addressing this flaw in her opinion. Since Dr. Gellrick specifically acknowledged that her opinion on causation would change if the Job Demands Analysis established that Claimant's job duties did not meet the primary or secondary risk factors as outlined in W.C.R.P. 17, Exhibit 5, medical causation analysis, her original opinion on causation is not persuasive.

16. While Claimant may have sustained an injury to his right hand in December 2018, that issue is not before the Administrative Law Judge. The sole question in W. C. No. 5-105-877 is whether Claimant sustained an injury to his right hand on March 6, 2019. Claimant has failed to prove it is more likely than not that he sustained an injury to his right hand on March 6, 2019, as Claimant did not initially mention any incident on March 6, 2019, or of any worsening of a pre-existing condition on March 6, 2019. Rather, Claimant's statement to Mr. P[Redacted] on March 6, 2019, and his own initial written statements on March 7, 2019, reference only an alleged incident in December 2018. As a result, Claimant's contention that he suffered an injury on March 6, 2019, is not found to be credible. Claimant has thus failed to sustain his burden of proving an injury or aggravation of a pre-existing condition on March 6, 2019.

W. C. No. 5-117-030, September 6, 2019, alleged injury

17. Claimant testified that by September 2019 "because my hand was bad, they [[Redacted] management] were trying to figure out something else I could do."

[Hearing Transcript, p. 33:2-3]. Thus, Claimant alleges an already "bad" hand for which Claimant had alleged two workers' compensation injuries, both of which Respondent denied.

18. Claimant testified that he was pinching an item with his right hand when he felt a pop in the back of his hand and wrist area. [Hearing Transcript, p. 33:12-19]. However, when Claimant completed the Associate Work Related Injury / Illness Report on September 7, 2019, Claimant did not mention a wrist injury. Rather, he stated, "I felt a pop in my hand and it got really swollen and my hand looked a different color." [Ex. E, p. 50]. Thus, Claimant's description of this "new" injury is identical to his description of his two prior alleged injuries – swelling and discoloration of his hand.

19. Claimant presented to NextCare Urgent Care on September 7, 2019. Claimant's comments on intake were documented as "hurt R hand at work x 6 months ago, since has always been swollen and sore, he was operating a new machine and heard a pop in his R hand x 1 days ago." [Ex. G, p. 63]. Thus, Claimant did not mention any new pain or swelling, instead stating that his hand had been in the same condition as the prior six months.

20. Furthermore, the location of Claimant's alleged "new" injury in September 2019 was the same location as the pain from the alleged incidents in December 2018 and March 2019. Jonathan Sollender, M.D., a fellowship-trained hand surgeon, performed an Independent Medical Examination of Claimant on April 4, 2019, at the request of Respondent. Claimant's complaints were listed as soreness of the palmar and dorsal side of the index finger and swelling of the long (middle) finger of the right hand. Caroline Gellrick, M.D., performed an Independent Medical Examination of Claimant on April 16, 2020, at the request of the Claimant. She documented that Claimant's pain complaints in March 2019 consisted of "gripping pain in his right hand and numbness between his index and middle long fingers." [Ex. 9, p. 152]. Claimant's complaint of pain to NextCare on September 9, 2019, was listed as "dorsum, proximal phalanx, index finger." [Ex. G, p. 65]. Thus, Claimant's complaints in September 2019 were essentially identical to the pain complaints in March 2019, and Claimant specifically stated that his hand had been in the same condition for the prior six months.

21. On September 10, 2019, Claimant presented to Concentra again, where he was examined by Deana Halat, NP. [Ex. F, p. 55-58]. Ms. Halat documented that Claimant was told that he had osteoarthritis and diagnosed Claimant with a right wrist sprain. That said, she stated that additional information was needed to determine causation.

22. Claimant's description of his hand condition to his medical providers after the alleged incident on September 6, 2019, establishes that Claimant continued to complain of the same pain complaints as he did after the alleged December 2018 incident and the alleged March 2019 incident, and that Claimant's hand condition over the prior six months was essentially the same as after the alleged incident on September 6, 2019. Furthermore, the multiple inconsistencies in Claimant's testimony and in the medical records as documented in ¶¶ 4-12, *supra*, make Claimant's credibility highly suspect. As a result, the Administrative Law Judge finds that Claimant has failed to

prove it more likely than not that Claimant sustained an injury or aggravation of his pre-existing hand pain on September 6, 2019.

W. C. No. 5-135-043, March 6, 2020, alleged injury

23. On March 7, 2020, Claimant reported an injury to his right elbow and arm on March 6, 2020. Claimant's explanation of the injury in the Associate Work Related Injury / Illness report dated March 7, 2020, states: "Went home after work and my arm felt really sore, couldn't even use a fork to eat lunch. When I work up to go to work and could not straighten my right arm." [Ex. H, p. 74].

24. Claimant's expert, Caroline Gellrick, M.D., did not issue a diagnosis of Claimant's right elbow because she was not provided with medical records for Claimant's treatment of the March 6, 2020, complaints. [Ex. 9, p. 154. Furthermore, Dr. Gellrick specifically stated that "[i]f jobsite evaluation and formal Job Demands Analysis does not support the patient's claims of 03/06/19 or 03/06/20, it is understood that the [c]laims may need to be reviewed for pre-existent work at [Redacted]." [Ex. 9, pp. 9-10]. The Job Demands Analysis performed by Jill Adams on July 8, 2020, established that Claimant's job duties did not reach either primary or secondary risk factors for development of a cumulative trauma condition as outlined in the medical causation analysis found in W.C.R.P. 17, Exhibit 5. [Ex. N, pp. 132-33]. Since Dr. Gellrick did not have any medical records related to Claimant's elbow condition and could not provide a diagnosis and deferred her opinion on causation to the Job Demands Analysis, Dr. Gellrick essentially offered no opinion on causation of Claimant's elbow condition.

25. Dr. Sollender issued a report dated July 13, 2020, in which he stated that Claimant sustained a strain of the right elbow and that "[b]ased on the supplied job demand analysis, the claimant is not exposed to any degree of repetition, forceful use of his hand, awkward posture, vibration, cold or computer work. These were [sic] all be required to be present in combination to support industrial causation. As there was not a singular incident such as a blow or fall or contusion, this claim must be evaluated as a cumulative trauma disorder. As such, rule 17, exhibit 5 is required which includes industrial causation analysis. Such an analysis requires the presence of a primary or multiple secondary risk factors. In this case, there are none present in the work he does or did. Therefore, I do not find industrial causation ..." [Ex. O, p. 140].

26. Dr. Gellrick did not find Claimant's elbow condition to be caused by his stated work activities. Plus, Dr. Sollender concluded that Claimant's elbow condition was not caused by Claimant's job duties based on the findings in the Job Demands Analysis.

27. The fact that they both found that Claimant had symptoms involving his elbow that might be due to cumulative trauma is not dispositive of the issue of causation. W.C.R.P. 17, Exhibit 5 states that "The mere presence of a diagnosis that may be associated with cumulative trauma does not presume work-relatedness unless the appropriate work exposure is present. Mechanisms of injury for the development of cumulative trauma related conditions have been controversial. However, repetitive

awkward posture, force, vibration, cold exposure, and combinations thereof are generally accepted as occupational risk factors for the development of cumulative trauma related conditions." W.C.R.P. 17, Exhibit 5, p. 6.

28. Claimant's testimony about job duties was limited to a summary of general tasks he would perform daily and the weights of items he would lift, without directly addressing repetitive awkward posture, force, vibration, or cold exposure.

29. Likewise, Dr. Gellrick's report did not address repetitive awkward posture, force, vibration, or cold exposure, other than to state:

- "He constantly shelves food items using the RT hand, picking up 2 items at a time. Now the peanut butter jars can be big, up to 1 lb. or more and in that case, there may be six of them or 12 of them, or sometimes there are 24 jars of jelly." [Exhibit 9, p. 152];
- "On interview with the patient, he has repetitive stocking of 8 oz, 16 oz, to 24 oz jars or cans, up to 200 cases a night, which does require a formal jobsite evaluation to actually quantify the actually ergonomic risk" [Ex. 9, p. 155]

30. Thus, while the Job Demands Analysis prepared by Ms. Adams may not be dispositive of Claimant's job duties, she specifically found that the job duties of someone in Claimant's position did not reach any primary or secondary risk factors associated with the development of cumulative trauma related conditions as identified in W.C.R.P. 17, Exhibit 5, and neither Claimant's testimony nor Dr. Gellrick's report provide sufficient credible and persuasive evidence to establish that Claimant's job duties exposed him to repetitive awkward posture, force, vibration or cold exposure in sufficient degree to cause a cumulative trauma condition. As a result, the Administrative Law Judge finds that Claimant has failed to prove by a preponderance of the evidence that he sustained a discrete injury or occupational disease involving his right elbow that is causally related to his job duties with Employer.

CONCLUSIONS OF LAW

General Provisions

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Where the medical evidence is subject to conflicting inferences, it is the ALJ's sole prerogative to resolve the conflict. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998).

Compensability

Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office,* 224 P.3d 397 (Colo. App. Div. 5 2009). To recover benefits under the Worker's Compensation Act, the Claimant's injury must both occur "in the course of" employment and "arise out of" employment. See § 8-41-301, C.R.S. (2014). The Claimant must establish that the injury meets this two-pronged requirement by a preponderance of the evidence. See § 8-43-201(1), C.R.S. (2014).

The course of employment requirement is satisfied when it is shown that the injury occurred within the time and place limits of the employment relation and during an activity that had some connection with the employee's job-related functions. *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Triad Painting Co. v. Blair,* 812 P.2d 638 (Colo. 1991). The arising out of requirement is satisfied when it is shown that there is a causal connection or nexus between the conditions and obligations of employment and the employee's injury. *Horodyskyj v. Karanian*, 32 P.3d 470 (Colo. 2001). There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission*, 437 P.2d 542 (Colo. 1968). An injury "arises out of" employment when it has its "origin in" an employee's work-related functions and is "sufficiently related to" those functions so as to be considered part of employment. *Popovich v. Irlando*, 811 P.2d 379 (Colo. 1991); *Horodyskyj v. Karanian*, 32 P.3d 470 (Colo. 2001). The mere fact that a claimant experiences pain at work does not necessarily require a finding of a compensable injury. Pain is a typical symptom caused by the aggravation of a pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable aggravation. *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007).

W. C. No. 5-105-877, March 6, 2019, alleged injury

While Claimant may have sustained an injury to his right hand in December 2018, that issue is not before the Administrative Law Judge in W. C. No. 5-105-877. The sole issue in W. C. No. 5-105-877 is whether Claimant sustained an injury to his right hand on March 6, 2019. The Administrative Law Judge finds and concludes that Claimant has failed to meet his burden of proving by a preponderance of the evidence that his right-hand strain arose out of and occurred within the course of employment on March 6, 2019. When Claimant spoke to Assistant Store Manager Mark Mr. P[Redacted] during the late-evening of March 6 or early-morning of March 7, 2019, he reported that he injured his hand sometime in December 2018 and did not mention an injury on March 6, 2019. Even after Mr. P[Redacted] informed Claimant that Sedgwick might not accept the claim because of a three-month delay in report, when Claimant completed the incident report packet the following morning, Claimant still did not mention anything happening on March 6, 2019, and twice referenced an alleged incident in December 2018. In addition, Claimant's testimony about the alleged incident of December 2018 and the alleged incident of March 6, 2019, were inconsistent and contradictory.

The mere fact that Claimant experienced pain at work on March 6, 2019, does not require a finding of a compensable aggravation of his pre-existing right-hand pain since December 2018. An incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable aggravation. *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007). Claimant did not report to Mr. P[Redacted] a worsening of his pain as a result of anything on March 6, 2019. Rather, when reporting the pain to Mr. P[Redacted] on March 6, 2019, and completing the injury packet forms, Claimant repeatedly associated his pain with an incident in December 2018. As a result, Claimant has not met his burden of proving a compensable aggravation of his pre-existing hand pain in the form of an accident or occupational disease.

W. C. No. 5-117-030, September 6, 2019, alleged injury

The Administrative Law Judge finds and concludes that Claimant has failed to meet his burden of proving an injury to his right hand or wrist on September 6, 2019. Claimant testified that by September 2019 "because my hand was bad, they [[Redacted] management] were trying to figure out something else I could do." [Hearing Transcript, p. 35:2-3]. Thus, Claimant alleges an already "bad" hand for which Claimant had alleged two workers' compensation injuries, both of which Respondent denied. Claimant's description of his hand condition to his medical providers after the alleged incident on September 6, 2019, establishes that Claimant continued to complain of the same pain and swelling between his first two fingers as he did after the alleged December 2018 incident and the alleged March 2019 incident, and that Claimant's hand condition over the prior six months was essentially the same as after the alleged incident on September 6, 2019.

Furthermore, the multiple inconsistencies in Claimant's testimony and in the medical records as documented in ¶¶ 4-12, supra, make Claimant's credibility highly suspect. While Claimant describes a "pop" on September 6, 2019, this does not establish any difference in Claimant's hand pain before September 6, 2019, and after the alleged "pop." An incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable aggravation. *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007). As a result, the Administrative Law Judge finds and concludes that Claimant has failed to meet his burden of proving an injury or aggravation of his pre-existing right-hand pain dating back to December 2018.

W. C. No. 5-135-043, March 6, 2020, alleged injury

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified, or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner v. Industrial Claim Appeals Office, supra*. In this regard the mere occurrence of symptoms in the workplace does not require the conclusion that the conditions of the employment were the cause of the symptoms, or that such symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc*., W.C. No. 4-606-563 (I.C.A.O. August 18, 2005). Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

When determining the issue of causation, the ALJ may consider the provisions of the *Medical Treatment Guidelines* because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, the *Medical Treatment Guidelines* are not dispositive of the issue of causation. Rather, the ALJ may decide the weight to be assigned the provisions of the *Guidelines* upon consideration of the totality of the evidence. *See Cahill v. Patty Jewett Golf Course*, WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services*, WC 4-535-290 (ICAO November 21, 2006).

The Administrative Law Judge finds and concludes that Claimant has failed to prove it more likely than not that his left elbow condition was caused by his job duties with Employer. Both Claimant's expert and Respondent's expert essentially opined that Claimant's elbow condition was not caused by Claimant's job duties based on the findings in the Job Demands Analysis as applied to the medical causation analysis found in W.C.R.P. 17, Exhibit 5.

While the *Medical Treatment Guidelines* provide for specific steps in analyzing whether there is sufficient proof to connect casually Claimant's conditions and need for treatment to his job activities, the Court is not bound by the *Medical Treatment Guidelines* in deciding individual cases on the Guidelines or the principles contained therein alone. Indeed, § 8-43-201(3) specifically provides:

> It is appropriate for the director or an administrative law judge to consider the medical treatment guidelines adopted under section 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to

> an industrial injury or occupational disease. The director or administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations.

Notwithstanding this caveat, Claimant still has the burden of proving that his job duties caused his right elbow condition. In addressing Mechanisms of Injury, the Cumulative Trauma Conditions *Medical Treatment Guidelines* provide:

> The mere presence of a diagnosis that may be associated with cumulative trauma does not presume work-relatedness unless the appropriate work exposure is present.
>
> Mechanisms of injury for the development of cumulative trauma related conditions have been controversial. However, repetitive awkward posture, force, vibration, cold exposure, and combinations thereof are generally accepted as occupational risk factors for the development of cumulative trauma related conditions.

W.C.R.P. 17, Exhibit 5, p. 6.

Considering the totality of the evidence, Claimant has failed to provide credible evidence on causation of his elbow condition. Dr. Sollender diagnosed an elbow strain and opined that the injury was not caused by work based on the Job Demands Analysis completed by Ms. Adams. Dr. Gellrick provided no diagnosis and indicated that if the Job Demands Analysis did not establish any primary or secondary risk factors the undiagnosed elbow condition would not be caused by Claimant's employment at Employer. Amanda Cava, M.D., diagnosed a right elbow sprain, but did not obtain any information from Claimant as to his job duties or address causation in any meaningful way. Claimant's testimony about his job duties and Dr. Gellrick's report provided no credible and persuasive evidence about the existence of repetitive awkward posture, force, vibration, cold exposure. Thus, the Administrative Law Judge finds and concludes that Claimant has failed to meet his burden of proving that his right elbow condition was caused or aggravated by a specific incident or in the form of an occupational disease due to his job duties at Employer.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. W. C. No. 5-105-877 alleging a right-hand injury on March 6, 2019, is denied, and dismissed.
2. W. C. No. 5-117-030 alleging a right-hand/wrist injury on September 6, 2019, is denied, and dismissed.
3. W. C. No. 5-135-043 alleging a right elbow injury on March 6, 2020, is denied, and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 1, 2021.

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

Whether the claimant has demonstrated, by a preponderance of the evidence, that the right total shoulder arthroplasty recommended by Dr. Mark Luker is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted January 9, 2020 work injury.

FINDINGS OF FACT

1. The claimant has worked for the employer's irrigation business since 1993. In January 2020, the claimant's job duties included driving a truck, spraying chemicals, testing water, operating mowers and backhoes, carrying irrigation pipe, and assisting with system and headgate maintenance.

2. On January 9, 2020, the claimant was working on canal maintenance when he slipped on ice and fell to the ground. The claimant testified that he heard a "pop" and landed on his right shoulder, head, and buttocks. The claimant immediately felt "tremendous" pain in his right arm. The claimant was transported from the job location to undergo medical treatment.

Medical Treatment Prior to January 9, 2020

3. The claimant's primary care provider is the VA Medical Center. Records from the VA demonstrate that the claimant had prior treatment of his back, neck, and bilateral shoulders. A February 26, 2015, medical record indicates that the claimant had experienced bilateral shoulder symptoms for six to seven years. On that same date, it was noted that abduction of either shoulder was painful. Due to complaints of right shoulder pain, on March 26, 2015, a right shoulder x-ray was taken. That x-ray showed mild degenerative change at the ac joint and degenerative change of the glenoid.

4. On April 2, 2015, the claimant was diagnosed with right shoulder and neck muscle spasm. At that time, Dr. John Seevers opined that this was "probably due to [degenerative joint disease]". On April 29, 2015, the claimant returned to Dr. Severs and reported right shoulder and left knee pain. Dr. Severs referred the claimant to orthopedics for possible injections.

5. On July 27, 2015, Dr. Walter Boardwine administered an injection to the claimant's right shoulder. At that time, Dr. Boardwine identified the claimant's osteoarthritis as "moderate". He recommended the claimant participate in physical therapy for his right shoulder. Dr. Boardwine also mentioned the possibility of arthroscopic releases.

6. On March 24, 2019, the claimant was involved in a motor vehicle accident (MVA). Immediately following the MVA, the claimant reported issues with his left shoulder. On that same date, bilateral shoulder x-rays were taken. These x-rays showed severe glenohumeral degenerative joint disease (DJD) in both shoulders.

7. The claimant testified that during this period of time, he was able to perform his normal job duties.

Post-Injury Medical Treatment

8. After his January 9, 2020 fall, the claimant obtained medical treatment in the emergency department (ER) at St. Mary's Hospital that same day. X-rays were taken and showed a non-displaced proximal humerus fracture. The claimant was provided with a sling and advised to use ice, elevation, and pain medications. In addition, the claimant was referred for an orthopedic consultation with Dr. Adam Cota.

9. The claimant's authorized treating provider (ATP) for this claim is Dr. R. James McLaughlin. The claimant was first seen by Dr. McLaughlin on January 13, 2020. At that time, Dr. McLaughlin noted that the claimant had been diagnosed with a closed non-displaced fracture of the surgical neck of the right humerus. Dr. McLaughlin recommended that the claimant see an orthopedist.

10. On January 15, 2020, the claimant was seen at SCL Health Orthopaedics by Dr. Cota. At that time, the claimant reported that he knew he had arthritis in his right shoulder, but was not experiencing shoulder pain prior to the January 9, 2020 fall. Dr. Cota noted that the humerus fracture had "acceptable alignment" and recommended conservative treatment.

11. On January 21, 2020, the respondents filed a General Admission of Liability (GAL).

12. The claimant continued to treat with Dr. McLaughlin. On January 30, 2020, the claimant was seen by Dr. McLaughlin who noted that the humerus fracture was not yet healed. Dr. McLaughlin also noted that Dr. Cota had recommended that the claimant begin physical therapy. On February 21, 2020, Dr. McLaughlin referred the claimant to a physical rehabilitation specialist, Dr. Brittany Matsumura. On February 27, 2020, Dr. McLaughlin recommended a magnetic resonance image (MRI) of the claimant's right shoulder.

13. On March 18, 2020, an MRI of the claimant's right shoulder was performed. The MRI showed that the humerus fracture was "ununited". The MRI also showed severe right glenohumeral DJD.

14. Subsequently, the claimant was referred to surgeon Dr. Mark Luker, who also practices in SCL Health Orthopaedics. The claimant was first seen by Dr. Luker on April 29, 2020. Dr. Luker noted that x-rays taken on that date showed that the humerus fracture was healing. Dr. Luker opined that the claimant would eventually need a right total shoulder arthroplasty. However, Dr. Luker preferred to wait for the humerus fracture to heal before pursuing surgery.

15. On June 2, 2020, the claimant was seen by Dr. Matsumura. Dr. Matsumura recommended physical therapy focused on improving range of motion in the claimant's right shoulder. She also recommended the use of a TENS unit and acupuncture.

16. The claimant was seen by Dr. Luker on June 10, 2020 and July 22, 2020. Dr. Luker continued to recommend that they wait for the humerus fracture to heal before discussing surgery.

17. On July 21, 2020, Dr. Albert Hattem was asked to state an opinion regarding the causation of the claimant's right shoulder, cervical spine[1], and thoracic spine conditions. In his report, Dr. Hattem opined that the non-displaced right humerus surgical neck fracture was related to the claimant's January 9, 2020 work injury. Dr. Hattem recommended that respondents should authorize treatment of that fracture. With regard to the claimant's shoulder complaints, Dr. Hattem noted that the claimant has pre-existing severe glenohumeral arthritis. Dr. Hattem recommended that the claimant undergo an independent medical examination (IME) to ascertain the causation of the claimant's shoulder symptoms.

18. On September 22, 2020, the claimant returned to SCL Health Orthopaedics and was seen by Michaela Lee, MA. At that time, the claimant reported severe and persistent right shoulder pain. MA Lee noted that the humerus fracture had adequately healed and was no longer contributing to the claimant's pain. MA Lee discussed total shoulder arthroplasty. In addition, MA Lee recommended the claimant undergo a right shoulder computed tomography (CT) scan.

19. On September 30, 2020, Dr. Hattem issued a second report. In this report, he reviewed Dr. Luker's recommendation for a right shoulder CT and a right total shoulder arthroplasty. Dr. Hattem opined that it may be medically reasonable and necessary for the claimant to undergo a right total shoulder arthroplasty. However, he does not believe that the condition of the claimant's right shoulder (and the related need for surgery) is related to the work injury. In support of this opinion, Dr. Hattem noted that the claimant suffered a right humerus fracture at the time of the work injury. He further noted that the bilateral glenohumeral arthritis was pre-existing and was not caused or aggravated by the January 9, 2020 fall.

20. On October 1, 2020, the claimant attended an IME with Dr. Carlos Cebrian. In connection with the IME, Dr. Cebrian reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his October 29, 2020 IME report, Dr. Cebrian opined that the claimant's need for right shoulder arthroplasty was not caused by the January 9, 2020 fall at work. Dr. Cebrian future opined that while the January 9, 2020 fall resulted in a humerus fracture, there was no injury to the claimant's right shoulder. Dr. Cebrian also opined that the severe glenohumeral

[1] As the claimant's cervical and thoracic spine conditions and related medical treatment are not at issue at this time, the ALJ does not enumerate all such treatment and/or provider opinions regarding those body parts.

osteoarthritis in the claimant's right shoulder was not aggravated when he fell on January 9, 2020.

21. Dr. Cebrian's deposition testimony was consistent with his written report. Dr. Cebrian testified that the claimant's fall at work did not cause the arthritic condition of his right shoulder. Dr. Cebrian also testified that the claimant did not suffer an acute injury to his right shoulder joint. Dr. Cebrian reiterated his opinion that the January 9, 2020 fall did not aggravate the progression of the arthritis in the claimant's right shoulder. He further testified that if the claimant had not fallen on January 9, 2020, he would still have needed a right total shoulder arthroplasty to address the degenerative condition in his right shoulder.

22. On October 14, 2020, the claimant was seen by Dr. McLaughlin. In the medical record of that date, Dr. McLaughlin stated his opinion that the claimant's work injury and resulting humerus fracture aggravated the pre-existing condition in the claimant's right shoulder. In support of this opinion, Dr. McLaughlin noted that prior to the work injury, the claimant was able to work full duty with severe shoulder osteoarthritis.

23. On November 18, 2020, Dr. McLaughlin reiterated his opinion that when the claimant fell on January 9, 2020, and did so with "significant force to lead to a humerus fracture" the claimant's pre-existing glenohumeral osteoarthritis was aggravated.

24. On December 2, 2020, Dr. Luker authored a letter to the claimant's attorney. In that letter, Dr. Luker opined that the recommended right total shoulder arthroplasty was medically necessary to treat the claimant's right shoulder condition. Dr. Luker also noted that the claimant's pre-existing severe shoulder osteoarthritis was aggravated by the January 9, 2020 fall and related fracture of his right humerus.

25. Dr. Luker testified by deposition in this matter. Dr. Luker testified that although the fall on January 9, 2020 did not cause the arthritis in the claimant's right shoulder, the fall did aggravate that condition to the point of necessitating surgery. Dr. Luker also stated that it is his opinion that because the claimant's fall occurred with enough force that it resulted in a humerus fracture, the fall also aggravated the arthritis in the claimant's right shoulder.

26. The claimant testified that prior to the fall on January 9, 2020, he felt that his right shoulder was functioning normally. In addition, he was able to perform the manual labor aspects of his job duties. He also testified that prior to the injury he coped with occasional aches and discomfort. However, those aches were not as severe as the right shoulder symptoms he has experienced since January 9, 2020.

27. The ALJ credits the opinions of Drs. Luker and McLaughlin over the contrary opinions of Drs. Cebrian and Hattem. The ALJ specifically credits the opinion of Dr. Luker that the fall on January 9, 2020 (which was sufficient to cause a humerus fracture) aggravated and accelerated the arthritic condition of the claimant's right shoulder, necessitating the need for a right total shoulder arthroplasty. The ALJ also credits the medical records and the claimant's testimony. The ALJ finds that the claimant has successfully demonstrated that it is more likely than not the right total shoulder

arthroplasty recommended by Dr. Luker is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted January 9, 2020 work injury.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it “aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment.” *See H & H Warehouse v. Vicory, supra.*

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. Pain is a typical symptom from the aggravation of a preexisting condition, and if the pain triggers the claimant’s need for medical treatment, the claimant has suffered a compensable injury. *Maryman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). The

employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). The mere fact that a claimant has suffered a compensable aggravation of a preexisting condition does not oblige the ALJ to conclude that any subsequent disability or need for treatment is causally connected to such aggravation. *University Park Care Center v. ICAO*, 43 P.3d 637 (Colo. App. 2001). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other cause. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985).

7. As found, the claimant has demonstrated, by a preponderance of the evidence, that the right total shoulder arthroplasty recommended by Dr. Luker is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted January 9, 2020 work injury. As found, the medical records, the claimant's testimony, and the opinions of Drs. Luker and McLaughlin are credible and persuasive.

ORDER

It is therefore ordered:

1. The respondents shall pay for the right total shoulder arthroplasty recommended by Dr. Mark Luker, pursuant to the Colorado Fee Schedule.

2. All matters not determined here are reserved for future determination.

Dated this 1st day of March 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the

Denver Office of Administrative Courts. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-139-355-002

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

[Redacted],
Claimant,

v.

[Redacted]
Employer,

and

[Redacted],
Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on February 10, 2021, in Denver, Colorado. The hearing was digitally recorded (reference: 2/10/21, Google Meets, beginning at 1:30 PM, an ending at 3:30 PM) .

The Claimant was present in person, virtually, and represented by [Redacted], Esq. [Redacted], Esq. Respondents were represented by

Hereinafter [Redacted] shall be referred to as the "Claimant." [Redacted] shall be referred to as the "Employer." All other parties shall be referred to by name.

Claimant's Exhibits 1 through 7 were admitted into evidence, without objection. Respondents' Exhibits A through I were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents, which was filed, electronically, The proposed decision was filed, electronically, on February 17, 2021, mistakenly labeled as "Respondents' Opening Position Statement and which is hereby considered as a proposed decision as ordered.. Claimant filed no timely objections as to form. After a consideration of the proposed decision, the ALJ has modified the proposal and hereby issues the following decision.

ISSUES

The issue herein concerns Respondents' request to overcome the Division Independent Medical Examination (DIME) of Brian Shea, D.O.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. On April 21, 2020, while working for the Employer, Claimant was repairing a street light. **Ex. A:1**. While doing so, a trailer being pulled by a pick-up truck broke loose and collided with the street light pole. **Ex. A:1**. The pole then hit the Claimant in the head, cracked his hard had, and caused a head laceration. **Ex. A:1**. The Claimant lost consciousness and was taken to the emergency room (ER) via ambulance. **Ex. A:1**.

2. The ER physicians evaluated the Claimant and reported that he denied neck pain, back pain, and any other symptoms other than the laceration on his head. **Ex. C:17, 19**.

3. The next day, the Claimant presented to Troy Manchester, M.D., at Concentra, who reported that the Claimant denied neck pain, back pain, and joint pain. **Ex. D:25**.

4. Dr. Manchester placed the Claimant at maximum medical improvement (MMI) on April 28, 2020 once the Claimant's staples were removed. **Ex. D:24**. Dr. Manchester reported that the Claimant had "excellent recovery" and "no ongoing symptoms of concern." **Ex. D:24**. Accordingly, the Claimant was released to full duty with no follow-up and no work restrictions. **Ex. D:25**.

5. On May 5, 2020, the Claimant underwent a left L4-5 laminotomy/decompression by physicians at Cornerstone, for a **non-work** related lumbar disc herniation with radiculopathy. **Ex. 5:35**.

6. On May 21, 2020, Dr. Manchester discharged the Claimant from care without impairment, noting in the narrative report that the Claimant was at MMI on April 28, 2020 (**Ex. D:24; 29**), but reporting the date of MMI on the WC164 form as May 21, 2020. **Ex. D:28**.

7. On June 5, 2020, the Claimant went back to Cornerstone with complaints of peritrapezial and periscapular pain. **Ex. 5:33**. The Claimant was assessed with lumbar disc herniation with radiculopathy, lumbar radiculopathy, lumbar spine pain, cervical spine pain, and thoracic pain. **Ex. 5:36**.

8. The Respondents filed a Final Admission of Liability (FAL) on June 18, 2020, consistent with Dr. Manchester's reports, admitting to an MMI date of May 21,

2020. **Ex. I:48**. Respondents admitted to zero impairment and denied maintenance medical benefits. **Ex. I:48**.

9. The Claimant timely objected to the FAL and requested a DIME.

The Division Independent Medical Examination (DIME) of Brian Shea, D.O.

10. Dr. Shea conducted the DIME on October 1, 2020, and stated the opinion without any explanation that the Claimant's date of MMI was October 1, 2020. **Ex. B:12**. Dr. Shea gave the Claimant a 6% whole person impairment rating, allegedly resulting from a 2% range of motion (ROM) deficit of the cervical spine and 4% from Table 53, Section 2b of the AMA Guides. **Ex. B:12**. Dr. Shea was of the opinion that the Claimant's other back complaints were not related to this work accident. **Ex. B:12**

11. In his report, Dr. Shea wrote:

> Note: the specific disorders table for the spine states 6 months must have gone by before the impairment rating is done. Mr. [Redacted]'s injury happened a little over 5 months ago. I pointes (sic) this out to the Division. Their reply was go ahead with the DIME – the lawyers will work it out. **Ex. B:12**.

12. Dr. Shea's DIME opinion is fatally flawed. The AMA Guides state that Table 53.II.B. applies to injuries of intervertebral disc or other soft-tissue lesions that are "Unoperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity with or without muscle spasm, associated with none-to-minimal degenerative changes on structural tests."

13. Impairment is given at the time of MMI, and thus, the application of the AMA Guides is made at the time of MMI. Claimant had not sustained a minimum of six months of medically documented pain and rigidity by the time he reached MMI regardless of whether one utilized April 29, 2020, May 21, 2020, or October 1, 2020 as the date of MMI. Accordingly, Dr. Shea erred and his opinions are discredited and the ALJ relies on thE of Dr. Manchester, that Claimant was at MMI on April 28, 2020 with no impairment and no recommended maintenance medical care.

Independent Medical Examination (IME) of Allison Fall, M.D.

14. Dr. Fall, M.D., performed a Respondent-sponsored IME of the Claimant. **Ex. A**. She wrote and testified consistent therewith, that the Claimant's onset of neck pain would not merit a permanent impairment because he had sustained a significant cervical spine injury, symptoms would have been noticed in the initial timeframe after the work injury. **Ex. A:8**. Furthermore, according to Dr. Fall, myofascial complaints are not a separate ratable condition pursuant to the AMA Guides Evaluation of Permanent Impairment, 3 Ed, Rev.. **Ex. A:8**. Finally, the Claimant did not have six months of medically documented pain to merit application of Table 53 and the ALJ so finds. **Ex. A:8**.

The ALJ notes that the six-months of medically documented pain is pivotal to the use of Table 53, upon which Dr. Shea based his rating.

Ultimate Findings

15. The ALJ finds that DIME Dr. Shea's MMI date and rating, without adequate explanation, are inadequate and for this reason lack credibility. In fact, it is highly likely, unmistakable and free from serious and substantial doubt that DIME Dr. Shea's MMI date and permanent impairment rating are clearly erroneous.

14. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to reject DIME Dr. Shea's opinions and to accept the opinions of Dr. Manchester and Dr. Fall.

15. For the above reasons, the Respondents have sustained their burden of proof by clear and convincing evidence.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, DIME Dr. Shea's MMI date and rating, without adequate explanation, are inadequate and for this reason lack credibility. In fact, it is highly likely, unmistakable and free from serious and substantial doubt that DIME Dr. Shea's MMI date and permanent impairment rating are clearly erroneous. As further found, the opinions of Dr. Manchester and Dr. Fall are credible.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to reject DIME Dr. Shea's opinions and to accept the opinions of Dr. Manchester and Dr. Fall.

Elevated Burden of Proof

c. The DIME's determinations regarding MMI and whole person impairment are binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S.; *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998).

d. "Clear and convincing evidence means evidence which is stronger than a mere 'preponderance;' it is evidence that is highly probable and free from serious or substantial doubt." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Therefore, the party challenging a DIME's conclusions must demonstrate it is "highly probable" that the MMI and impairment findings are incorrect. *Qual-Med*, 961 P.2d at 592. A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Indus. Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). As found,the Respondents have sustained their burden of clear and convincing evidence regarding the rating and MMI date of Dr. Shea.

e. A DIME physician must rate impairment in accordance with the provision of the AMA Guides. Section 8-42-101(3.7), C.R.S.; *Wilson v. Indus. Claim Appeals Office*, 81 P.3d 1117 (Colo. App. 2003). Whether the DIME physician properly applied the AMA Guides is an issue of fact for determination by the ALJ. *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000). Once the ALJ determines that the DIME's rating has been overcome in any respect, the ALJ is free to calculate the claimant's impairment rating based upon the preponderance of the evidence. *Garlets v. Memorial Hospital*, W.C. No. 4-336-566 (Sept. 5, 2001). As found, the rating and MMI date of the authorized treating physician (ATP), Dr. Manchester is the correct rating and MMI date.

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to post-MMI medical maintenance benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See Grover v. Indus. Comm'n*,, 759 P.2d 705 (Colo. 1988). The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, Respondents have sustained their burden with respect to the proposition that Clamant is **not** entitled to post-MMI medical maintenance benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents having successfully over come the Division Independent Medical Examination (DIME) opinions of Brian Shea, D.O., the Final Admission of Liability, dated June 18, 2020, is hereby affirmed as if fully restated herein.

DATED this______day of March 2021.

WORKERS' COMPENSATION NO. WC 5-129-565-002

ISSUES

- Did Claimant prove entitlement to a general award of medical benefits after MMI?

- Did Claimant prove Respondent is liable for a March 12, 2019 office visit with Dr. Gwynn Antonson?

STIPULATIONS

The parties stipulated Dr. Antonson is not an authorized treating physician and will not become authorized even if Respondent is ordered to cover the March 12, 2019 office visit as reasonably needed treatment for the admitted work injury. The parties waived the authorization issue solely with respect to the March 12, 2019 visit to allow a final order.

FINDINGS OF FACT

1. Claimant works for Employer as a Mill Technician Mechanical. He repairs and maintains equipment at Employer's steel mill.

2. Claimant suffered an admitted neck injury on May 17, 2017 when he hit his head on a steel beam. Claimant's hardhat prevented a head injury but suffered a soft tissue injury to his left trapezius muscle.

3. Claimant received conservative treatment from Employer's in-house medical clinic, Onsite Innovations. At his initial visit on May 17, 2018, Claimant reported pain in his for head, lower neck, and low back.

4. Claimant returned to Onsite Innovations on May 18, 2017, with continued complaints of neck pain. He was referred for cervical and lumbar x-rays.

5. Claimant underwent cervical and lumbar x-rays on May 19, 2017. The cervical x-rays showed degenerative changes but no fracture or other acute injury. The lumbar x-rays showed degenerative changes and a probable remote L1 endplate fracture or alternatively physiologic wedging.

6. Claimant continued working without restrictions. He was seen three more times at Onsite Innovations between May 26, 2017 and September 14, 2017. He received conservative treatment, including topical ointments and OTC pain medication.

7. Dr. Charles Hanson took over as Claimant's ATP on December 14, 2017. At the initial appointment, Claimant described persistent pain in his left upper trapezius area extending over the posterior aspect of his left shoulder to the lateral aspect of the proximal upper arm. He also described occasional tingling in his left hand. Examination

of Claimant’s neck showed slight range of motion deficits but no muscle spasm or tenderness. Dr. Hanson diagnosed mild to moderate C5-6 degenerative disc disease, persistent post-traumatic left upper trapezius pain and occasional paresthesias in the left hand due to degenerative disc disease and probable left C6 radiculopathy. Dr. Hanson prescribed a Medrol Dosepak followed by OTC Aleve. He also ordered a cervical MRI and bilateral upper extremity nerve conduction testing.

8. Claimant underwent electrodiagnostic testing with Dr. Sumant Rawat on February 5, 2018. The testing showed severe right carpal tunnel syndrome, moderately severe left carpal tunnel syndrome, and left ulnar neuropathy with possible entrapment at the elbow.

9. Claimant could not tolerate an MRI because of claustrophobia but he underwent a cervical CT scan on March 29, 2018. The CT scan showed asymmetric enthesopathic change at C5-6 and possible neuroforaminal narrowing.

10. Claimant saw Dr. Hanson on June 6, 2018. Dr. Hanson maintained the same diagnoses and added bilateral carpal tunnel syndrome, which he opined was unrelated to Claimant’s work injury. Dr. Hanson placed Claimant at MMI for the May 17, 2017 work injury with no impairment and no need for work restrictions. Dr. Hanson included a generic statement in his narrative report that Claimant could return to the clinic on an “as-needed basis” but made no specific recommendations. Dr. Hanson indicated on the accompanying WC164 form that Claimant required no maintenance care after MMI.

11. Claimant saw his PCP, Dr. Gwynn Antonson on March 12, 2019 for an annual “comprehensive physical examination.” His reported complaints included neck and upper back pain. The musculoskeletal examination was entirely normal. Claimant’s neck was “supple” with full range of motion. Dr. Antonson’s list of diagnoses included “chronic neck pain – August 1986” and “Strain of trapezius muscle – PT, U/S, NSAIDs.” It is unclear whether the reference to “PT, U/S, NSAIDs” was intended as a prescription or merely a description of prior treatment. Even if it was a prescription, there is no discussion of why such treatment would be reasonably needed, and more important, causally related to a soft-tissue injury that occurred in May 2017.

12. Claimant filed a Workers’ Claim for Compensation on January 30, 2020.

13. On February 21, 2020, Respondent filed a Final Admission of Liability (FAL) admitting to medical benefits only but no maintenance medical per Dr. Hanson’s June 6, 2018 MMI report.

14. Claimant objected to the FAL and requested a DIME.

15. Dr. Frank Polanco performed an IME for Respondent on April 20, 2020. Examination of Claimant’s neck showed normal tone with no paracervical tenderness, trigger points, or spasm. Cervical range of motion was “full and fluid” in all planes. Dr. Polanco diagnosed cervical degenerative disk disease, severe right carpal tunnel

syndrome, moderately severe left carpal tunnel syndrome, and left ulnar neuropathy. He opined these conditions were pre-existing and unrelated to the work accident. Dr. Polanco opined Claimant's ongoing complaints of neck pain were probably related to the natural progression of his pre-existing degenerative disc disease. He opined Claimant had been at MMI since December 15, 2017 and required no further diagnostics or treatment.

16. Claimant attended a DIME with Dr. William Watson on June 16, 2020. Dr. Watson noted a normal examination of Claimant's cervical, thoracic, and lumbar spine. Dr. Watson agreed Claimant was at MMI as of his June 8 [sic], 2018 appointment with Dr. Hanson. Even though Claimant continued to have trapezius discomfort, Dr. Watson determined he was not entitled to a Table 53 rating and therefore had no ratable impairment. Dr. Watson also noted full range of motion of Claimant's cervical, thoracic, and lumbar spines. Dr. Watson opined Claimant had no permanent work restrictions and required no maintenance care.

17. Dr. Polanco issued an addendum to his IME report on October 1, 2020. He agreed with Dr. Watson's determination Claimant was at MMI with no permanent impairment. He agreed Claimant requires no further treatment related to the work accident.

18. Claimant does not think he ever returned to baseline and his ongoing neck pain is related to the work accident. Claimant would like to return to the Hanson Clinic when his symptoms flare. Claimant identified no specific treatment he desires or thinks he needs.

19. The opinions of Dr. Hanson, Dr. Watson, and Dr. Polanco that Claimant requires no further treatment related to the work accident are credible and persuasive.

20. Claimant failed to prove he requires additional treatment to relieve symptoms or prevent deterioration of his injury-related condition.

21. The March 12, 2019 appointment with Dr. Antonson was not causally related to the work accident.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment from authorized providers reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if the claimant requires maintenance care to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI, subject to the respondents' right to dispute compensability, reasonableness, or necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003). A claimant need not be receiving treatment at the time of MMI nor prove that a particular course of treatment has been prescribed to obtain a general award of *Grover*-

type medical benefits. *Miller v. Saint Thomas Moore Hospital*, W.C. No. 4-218-075 (September 1, 2000). Proof of a current or future need for “any” form of treatment will suffice for an award of post-MMI benefits. *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). The DIME’s opinion regarding medical treatment after MMI is not entitled to any special weight but is simply another medical opinion for the ALJ to consider when evaluating the preponderance of the evidence. *See Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995). The claimant must prove entitlement to medical benefits after MMI by a preponderance of the evidence. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant failed to prove any additional medical treatment is reasonably needed or causally related to his May 17, 2017 work accident. Dr. Hanson, Dr. Polanco, and Dr. Watson persuasively opined Claimant requires no further treatment for any injury-related condition. Dr. Antonson provided no discussion or analysis of causation to support the “recommendations” for “PT, U/S, and NSAIDs." There is no persuasive evidence Dr. Antonson reviewed Claimant’s imaging studies or other medical records pertinent to a causation determination. Claimant’s ongoing neck pain is probably related to the natural progression of his underlying preexisting degenerative disc disease, and not a minor soft tissue injury suffered almost four years ago. Even if he needs treatment, the persuasive evidence shows any such treatment is not work-related.

ORDER

It is therefore ordered that:

1. Claimant’s request for a general award of medical benefits after MMI is denied and dismissed.

2. Claimant’s request to have Respondent cover the March 12, 2019 visit with Dr. Antonson is denied and dismissed.

If you are dissatisfied with the Judge’s order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: March 3, 2021

Office of Administrative Courts

ISSUE

Whether Claimant has proven by a preponderance of the evidence that he is incapable of earning any wages and is entitled to receive Permanent Total Disability (PTD) benefits as a result of industrial injuries he sustained during the course and scope of his employment with Employer on June 29, 2017.

FINDINGS OF FACT

1. Claimant is a 58 year old former driver/loader for Employer who injured his back on June 29, 2017 while uncoupling a trailer from his truck. Specifically, Claimant was lifting a gear and felt a pop in his back. He initially received conservative treatment that included physical therapy and chiropractic care.

2. During the course of the claim Claimant received treatment from Authorized Treating Physician (ATP) Levi Karl Miller, D.O. Imaging revealed disc damage and Claimant underwent two separate back surgeries. Giancarlo Barolat, M.D. subsequently implanted a spinal cord stimulator.

3. Although Claimant initially reported improvement with the stimulator, he failed to obtain long-term relief. In a July 1, 2019 follow-up visit with Dr. Barolat Claimant expressed a high level of frustration with the lack of relief. Claimant eventually reported some improvement with his lower extremity pain but stated that the stimulator had not improved his lower back symptoms. The lack of improvement ultimately led to a recommendation for a peripheral nerve stimulator trial. The trial was completed on December 9, 2019 followed by implantation of the peripheral lumbar stimulator on February 27, 2020. At his three-month follow up with Dr. Barolat Claimant reported tremendous relief.

4. Claimant subsequently underwent telemedicine evaluations with Dr. Miller on April 8, 2020 and May 6, 2020. On June 17, 2020 Claimant visited Dr. Miller for an impairment evaluation. Claimant had been using opioid medications for pain control but transitioned to gabapentin during the opioid taper. Dr. Miller determined that Claimant reached Maximum Medical Improvement (MMI) on June 17, 2020. He assigned a 15% whole person impairment for a specific disorder of the lumbar spine and a 15% whole person impairment for range of motion deficits. Combining the ratings yields a 28% whole person impairment. Dr. Miller recommended a Functional Capacity Evaluation (FCE) to assign Claimant's permanent work restrictions. He recommended maintenance treatment that included three years of medication management and life-long follow-up for the spinal cord stimulators.

5. On September 3, 2020 Claimant underwent an FCE with Sue Moore, MS, PT, MTC from Brookside Physical Therapy, P.C. During the FCE Claimant demonstrated the ability to work in the light to medium category with the following capacities:

a. Lift carry: He demonstrated the ability rarely to occasionally lift up to 40 pounds, frequently 30 pounds, and constantly 20 pounds.
b. Lifting from floor to waist: 35 pounds occasionally, 25 pounds frequently, and 15 pounds constantly.
c. Waist to shoulder: 35 pounds occasionally, 25 pounds frequently, and 15 pounds constantly.
d. Push-pull: 92 pounds pushing, 99 pounds pulling, occasionally. 45 pounds pushing frequently, 50 pounds pulling frequently. 23 pounds pushing constantly, 25 pounds pulling constantly.
e. Hand grip was 82 pounds on the right and 75 pounds on the left occasionally. Grip was 41 pounds on the right frequently and 37 pounds on the left. 20 pounds on the right and 19 pounds on the left constant. Pinch grip was 12 pounds occasionally on the right and 11 pounds on the left. Frequently, pinch grip was 6 pounds on the right and 5 pounds on the left. Constantly, pinch grip was right hand 3 pounds and left hand 2.5 pounds.
f. With regard to hand coordination, he needed more time for fine objects, but could do it constantly although at his own pace.
g. With regard to sitting, he could sit constantly. With regard to standing and walking, he could stand constantly. With regard to bench reach, he could do that occasionally.

The FCE report did not document that Claimant required breaks between activities.

6. On October 6, 2020 Claimant underwent an independent medical examination with Marc Steinmetz, M.D. Dr. Steinmetz reviewed Claimant’s medical history and performed a physical examination. He noted that Claimant’s lower back was tender but had no spasms. Dr. Steinmetz agreed with Dr. Miller that Claimant had reached MMI on June 17, 2020. He recommended permanent work restrictions consistent with the FCE and concluded Claimant was capable of working in the light to medium work category.

7. On October 27, 2020 Claimant visited Vocational Consultant Sara Nowotny, MA, CCM, CRC of Genex Services, Inc. for a vocational assessment. Ms. Nowotny noted that the FCE and Dr. Steinmetz placed Claimant in the light-medium work category with an occasional lifting capacity of 35-40 pounds. She considered the restrictions specified in the FCE and adopted by Dr. Steinmetz. Ms. Nowotny also conducted labor market research to assess the availability of employment within Claimant’s current skill level and physical capacities. Research revealed that Claimant was capable of returning to work in the light to medium category including jobs such as gate guard, production worker and parking/car wash cashier. Ms. Nowotny summarized that Claimant “is able to work and earn a wage.”

8. On December 7, 2020 Claimant visited Sherry Young, OTR with Starting Point for a second FCE. Claimant demonstrated the ability to lift weights similar to

amounts in the prior FCE, including 30 pounds from floor to waist and 25 pounds from waist to shoulder and overhead. Nevertheless, Ms. Young determined that Claimant was not capable of returning to work due to positional intolerances and other issues that would limit his lifting ability. She specifically remarked that Claimant's lifting abilities partially met the light work category. Ms. Young commented that Claimant was not capable of frequent lifting and his "lifting tolerances will vary greatly and there will be times when symptoms prevent him from lifting at all." She detailed that Claimant spent 1.3 hours or 33% of the 4-hour FCE "resting." Ms. Young summarized that "these types of rest would not be tolerated in typical work settings. [Claimant's] inability to perform even sedentary activities back-to-back in a reliable and dependable manner for more than 30 minutes is the main barrier to return to work."

9. In a December 31, 2020 report Ms. Moore reviewed and responded to the FCE performed by Ms. Young. She first identified the DSI model she had used that included standardized testing methods that provided more objective and reliable results. Ms. Moore noted that Claimant demonstrated similar lifting capacities at both the September and December FCEs. His lifting abilities placed him in the medium to light category. The similar results thus validated the tests. She also identified multiple errors and deficiencies in Ms. Young's testing. Ms. Moore specified that Ms. Young failed to include a physical examination and honor proper body mechanics during the lift test. She explained that a physical examination is important because it helps to confirm or deny the results of the testing. Ms. Moore noted that in the DSI model, physical limitations are correlated with physical abilities rather than self-limitation.

10. Ms. Moore specifically delineated her concerns about Ms. Young's FCE. Notably, Ms. Young failed to follow the DSI model and properly correlate Claimant's reported fatigue with actual physical limitations. Additionally, Ms. Young did not have Claimant use proper body mechanics when performing lifting activities. Ms. Moore detailed that Ms. Young reported Claimant had "bended to lift from the floor" when performing floor to waist lifting. Ms. Moore described the failure to use proper body mechanics as "alarming." She specified that the spine should be in a vertical position and lifting should be performed from the lower extremities instead of the back when starting from the floor. Ms. Moore also reiterated that Claimant had not requested breaks during her evaluation as he had during Ms. Young's FCE.

11. On September 30, 2020 Claimant underwent a vocational evaluation with Bob Van Iderstine, CRC, with Western Slope Rehabilitation, Inc. On December 23, 2020 Mr. Van Iderstine issued a written report. After reviewing the medical records and report from Ms. Nowotny, Mr. Van Iderstine concluded that, if he used the restrictions from the September 3, 2020 FCE with Ms. Moore, Claimant was employable. However, if he used the restrictions from the December 7, 2020 FCE performed by Ms. Young, Claimant was not capable of returning to work. Mr. Van Iderstine ultimately adopted the restrictions assessed by Ms. Young and determined that Claimant was not capable of returning to competitive employment or earning any wages.

12. Claimant testified at the hearing in this matter. He described the circumstances of his June 29, 2017 industrial injury and how it has affected his daily

routine. Claimant remarked that he suffered constant pain and it took him approximately one hour to complete tasks he had previously performed in one-half hour. He noted that, after lifting 35 pounds at the September 3, 2020 FCE, he rested for 15 minutes because his heart rate was too high. Claimant further explained that he needed to change positions from sitting to standing every 15 minutes. He denied telling Ms. Nowotny that he could lift 35 pounds. Although Claimant acknowledged he lifted 30 pounds at the FCE conducted by Ms. Young on December 7, 2020, he stated that he was only "barely" able lift the weight. Finally, Claimant commented that none of the treatment he has received throughout the claim, including the stimulators, improved his symptoms.

13. Mr. Van Iderstine also testified at the hearing in this matter. He maintained that Claimant was unable to return to competitive employment based on his interview and the results of the December 7, 2020 FCE performed by Ms. Young. He reiterated that, if the restrictions identified by Ms. Moore and adopted by Dr. Steinmetz were utilized, then Claimant could obtain competitive employment. However, Mr. Van Iderstine explained that he did not rely upon Ms. Moore's restrictions because they were not consistent with Claimant's description of his "day-in-and-day-out activities." Instead, Claimant's activity levels were better captured by Ms. Young's evaluation.

14. On cross-examination Mr. Van Iderstine maintained that he did not rely upon the restrictions from Ms. Moore and Dr. Steinmetz because they were "completely different from what" Claimant told him. He emphasized that Ms. Young assigned appropriate restrictions based on Claimant's physical capabilities at the December 7, 2020 FCE. Mr. Van Iderstine acknowledged that he had conducted labor market research solely by looking at the Connecting Colorado Workforce Center site. Finally, he also used a subjective 10 pound lifting limit relayed by Claimant but not imposed by any medical provider.

15. Dr. Steinmetz also testified at hearing in this matter. He generally explained that Claimant's physical examination on the date of the Independent medical examination was consistent with his presentation to Dr. Miller on the date of MMI. Dr. Steinmetz did not notice any unsteadiness, altered gait or anything else suggesting Claimant could not stand or walk. He noted that FCEs are useful in identifying an individual's physical capabilities. After reviewing the medical records, examining Claimant and considering the September 3, 2020 FCE, he determined the restrictions identified by Ms. Moore were medically appropriate. Dr. Steinmetz summarized that Claimant was medically and physically capable of returning to work within the identified restrictions.

16. After his evaluation Dr. Steinmetz received the December 7, 2020 FCE completed by Ms. Young. He did not agree with the restrictions and recommendations in the report. Dr. Steinmetz noted several problems with the FCE that rendered the results invalid. Initially, he noted that the shorter length of the FCE performed by Ms. Moore and the lack of documentation that Claimant required breaks during the evaluation supported employability. More importantly, he remarked that Ms. Young's FCE occurred under unsafe conditions. Dr. Steinmetz observed that Claimant's resting heart rate at the start of the FCE of 120 beats per minute was considered tachycardia. Furthermore, Ms. Young began the evaluation with Claimant lifting 30 pounds and gradually decreasing the

weights rather than working up to the heavier weights. There was no documented warm up and Claimant used improper body mechanics as identified by Ms. Moore. Moreover, Dr. Steinmetz emphasized that Ms. Young ignored concerning and potentially dangerous cardiovascular issues. Specifically, Ms. Young's report noted that, after taking a break from lifting heavy weights, Claimant performed grip strength testing and his heart rate increased. Claimant's oxygen level also decreased. Dr. Steinmetz remarked that Claimant's symptoms suggested a serious cardiovascular issue that required cessation of the FCE. However, Ms. Young continued the FCE and attributed Claimant's symptoms to fatigue from lifting. However, based on the medical records, Dr. Steinmetz determined that Claimant had suffered a worsening of his underlying cardiovascular issues after the June 17, 2020 MMI date.

17. Ms. Nowotny also testified at the hearing in this matter. She maintained that Claimant was capable of earning wages based on the FCE completed by Ms. Moore and the restrictions assigned by Dr. Steinmetz. She reviewed the FCE completed by Ms. Young but found it concerning because it had not been reviewed by a physician. Furthermore, Ms. Young made "leaps" and extrapolations with no clear basis. Ms. Nowotny also disagreed with Mr. Van Iderstine's conclusion that Claimant was not capable of employment based on the FCE by Ms. Young. She explained that the 10 pound weight limit used by Mr. Van Iderstine was not supported by the medical records and inconsistent with Claimant's representations at her evaluation. An evaluation based only on Claimant's subjective report did not adequately consider all evidence. Ms. Nowotny also noted that Mr. Van Iderstine's methodology for completing labor market research was incomplete because it only considered open jobs posted with Workforce Center. Mr. Van Iderstine failed to include any "cold calls" to employers in appropriate fields to determine whether there were available jobs within Claimant's restrictions and skill set. She maintained that Claimant was capable of returning to work in the light to medium category in positions such as gate guard, production worker and parking/car wash cashier.

18. Claimant has failed to prove that it is more probably true than not that he is incapable of earning any wages and is entitled to receive PTD benefits as a result of the industrial injuries he sustained during the course and scope of his employment with Employer on June 29, 2017. The record reveals that Claimant has demonstrated physical abilities that enable him to function in the light to medium work category and render him a suitable candidate for a number of employment opportunities. Initially, Claimant injured his back while uncoupling a trailer from his truck at work. He received conservative treatment that included physical therapy and chiropractic care. Claimant subsequently underwent two back surgeries and the implantation of a spinal cord stimulator. He reached MMI on June 17, 2020 with a 28% whole person permanent impairment. Dr. Miller referred Claimant for an FCE to assign permanent work restrictions.

19. In the September 3, 2020 FCE with Ms. Moore Claimant demonstrated the ability to work in the light to medium category. Ms. Moore specifically documented that Claimant could lift 35 pounds occasionally, 25 pounds frequently, and 15 pounds constantly from floor to waist and waist to shoulder. Dr. Steinmetz subsequently reviewed Claimant's medical history and performed a physical examination. He agreed with Dr.

Miller that Claimant had reached MMI on June 17, 2020. Dr. Steinmetz recommended permanent work restrictions consistent with the FCE and concluded Claimant was capable of working in the light to medium work category. Vocational consultant Ms. Nowotny considered the restrictions specified in the FCE and adopted by Dr. Steinmetz. Ms. Nowotny also conducted labor market research to assess the availability of employment opportunities within Claimant's current skill level and physical capacities. Research revealed that Claimant was capable of returning to work in the light to medium category and obtain employment in jobs such as gate guard, production worker and parking/car wash cashier.

20. In contrast, Ms. Young conducted an FCE and determined that Claimant was not capable of returning to work due to positional intolerances and other issues that would limit his lifting ability. She specifically remarked that Claimant's lifting abilities partially met the light work category. Ms. Young commented that Claimant was not capable of frequent lifting and his "lifting tolerances will vary greatly and there will be times when symptoms prevent him from lifting at all." She detailed that Claimant spent 1.3 hours or 33% of the 4-hour FCE "resting" and summarized that "these types of rest would not be tolerated in typical work settings." Ms. Young characterized that Claimant's inability to perform even sedentary activities in a reliable and dependable manner for more than 30 minutes was the main barrier in returning to work. Relying on Ms. Young's FCE, vocational consultant Mr. Van Iderstine determined that Claimant was not capable of returning to competitive employment or earning any wages.

21. Despite the conclusions of Ms. Young and Mr. Van iderstine, the record reveals that Claimant is capable of earning wages. The FCE performed by Ms. Moore on September 3, 2020 and the restrictions adopted by Dr. Steinmetz accurately reflect Claimant's functional abilities. The opinions of Ms. Young are not persuasive based on the errors and mistakes involved with administration of the FCE. The deficiencies include the following: failing to perform a physical examination, failing to have Claimant warm up prior to beginning moderate to heavy lifting, failure to ensure Claimant utilized proper lifting techniques during the evaluation and failing to heed her own instructions regarding cardiovascular compromise. Moreover, Ms. Nowotny persuasively disagreed with Mr. Van Iderstine's conclusion that Claimant was not capable of employment based on the FCE by Ms. Young. She explained that the 10 pound weight limit used by Mr. Van Iderstine was not supported by the medical records and inconsistent with Claimant's representations at her evaluation. Ms. Nowotny also noted that Mr. Van Iderstine's methodology for completing labor market research was incomplete because it only considered open jobs posted with Workforce Center. She explained that Claimant was capable of returning to work in the light to medium category in positions such as gate guard, production worker and parking/car wash cashier. Finally, Dr. Steinmetz observed that Claimant's resting heart rate at the start of his FCE with Ms. Young was elevated at 120 beats per minute. He emphasized that Ms. Young ignored concerning and potentially dangerous cardiovascular issues. Dr. Steinmetz remarked that Claimant's symptoms suggested a serious cardiovascular issue that required cessation of the FCE. Based on the medical records, Dr. Steinmetz determined that Claimant had suffered a worsening of his underlying cardiovascular issues after the June 17, 2020 MMI date.

22. Although there is conflicting evidence regarding the extent of Claimant’s physical capacities, the record reveals that Claimant has demonstrated physical abilities that enable him to function in the light to medium work category and render him a suitable candidate for a number of employment opportunities. Considering Claimant’s vocational attributes and human factors including age, education, work history, transferable skills, communication skills and work restrictions Claimant is capable of earning wages in some capacity. Accordingly, the record reflects that employment exists that is reasonably available to Claimant under his particular circumstances. Accordingly, Claimant’s request for PTD benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge’s factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Permanent Total Disability (PTD) is defined as the inability to earn “any wages in the same or other employment.” §8-40-201(16.5)(a), C.R.S.; *Christie v. Coors Transportation Co.,* 933 P.2d 1330, 1333 (Colo. 1997). A claimant is not permanently and totally disabled if he is able to earn some wages in modified, sedentary or part-time employment. *McKinney v. ICAO*, 894 P.2d 42 (Colo. App. 1995). The claimant carries the burden of proof to establish that he is permanently and totally disabled by a preponderance of the evidence. The question of whether the claimant has proven PTD is a question of fact for resolution by the ALJ. *Id.*

5. A claimant must demonstrate that his industrial injuries constituted a “significant causative factor” in order to establish a claim for PTD. *In Re Olinger,* W.C. No. 4-002-881 (ICAO, Mar. 31, 2005). A “significant causative factor” requires a “direct causal relationship” between the industrial injuries and a PTD claim. *In Re Dickerson,* W.C. No. 4-323-980 (ICAO, July 24, 2006); *see Seifried v. Industrial Comm’n,* 736 P.2d 1262, 1263 (Colo. App. 1986). The preceding test requires the ALJ to ascertain the “residual impairment caused by the industrial injury” and whether the impairment was sufficient to result in PTD without regard to subsequent intervening events. *See Joslins Dry Goods Co. v. Indus. Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001). Resolution of the causation issue is a factual determination for the ALJ. *In Re of Dickerson,* W.C. No. 4-323-980 (ICAO, July 24, 2006).

6. In ascertaining whether a claimant is able to earn any wages, the ALJ may consider various “human factors,” including a claimant's physical condition, mental ability, age, employment history, education, and availability of work that the claimant could perform. *Weld County School District RE-12 v. Bymer*, 955 P.2d 550, 556 (Colo. 1998); *Holly Nursing v. Indus. Claim Appeals Office,* 992 P.2d 701, 703 (Colo. App. 1999). The critical test, which must be conducted on a case-by-case basis, is whether employment exists that is reasonably available to the claimant under his particular circumstances. *Bymer*, 955 P.2d at 557. Ultimately, the determination of whether a Claimant suffers from a permanent and total disability is an issue of fact for resolution by the ALJ. *In Re Selvage,* W.C. No. 4-486-812 (ICAO, Oct. 9, 2007). The ability to earn wages inherently includes consideration of whether claimant is capable of getting hired and sustaining employment. *See Christie*, 933 P.2d at 1335; *Cotton v. Econ. Lub-N-tune*, W.C. No. 4-220-395 (ICAO, Jan. 16, 1997).

7. The test for determining “availability of work” is whether employment exists “that is reasonably available to claimant under his or her particular circumstances.” *Christie*, 933 P.2d at 1335; *Bymer,* 955 P.2d at 554-55. Respondents are not required to prove the existence of a particular job that a specific employer has made available to the claimant. *Labiak v. Bader Burke & Co.,* W.C. No. 4-134-999 (ICAO, Oct. 14, 2009) *citing Beavers v. Indus. Claim Appeals Office*, No. 96CA0275 (Colo. App., Sept. 5, 1996).

8. As found, Claimant has failed to prove by a preponderance of the evidence that he is incapable of earning any wages and is entitled to receive PTD benefits as a result of the industrial injuries he sustained during the course and scope of his employment with Employer on June 29, 2017. The record reveals that Claimant has demonstrated physical abilities that enable him to function in the light to medium work category and render him a suitable candidate for a number of employment opportunities. Initially, Claimant injured his back while uncoupling a trailer from his truck at work. He received conservative treatment that included physical therapy and chiropractic care. Claimant subsequently underwent two back surgeries and the implantation of a spinal cord stimulator. He reached MMI on June 17, 2020 with a 28% whole person permanent impairment. Dr. Miller referred Claimant for an FCE to assign permanent work restrictions.

9. As found, in the September 3, 2020 FCE with Ms. Moore Claimant demonstrated the ability to work in the light to medium category. Ms. Moore specifically

documented that Claimant could lift 35 pounds occasionally, 25 pounds frequently, and 15 pounds constantly from floor to waist and waist to shoulder. Dr. Steinmetz subsequently reviewed Claimant's medical history and performed a physical examination. He agreed with Dr. Miller that Claimant had reached MMI on June 17, 2020. Dr. Steinmetz recommended permanent work restrictions consistent with the FCE and concluded Claimant was capable of working in the light to medium work category. Vocational consultant Ms. Nowotny considered the restrictions specified in the FCE and adopted by Dr. Steinmetz. Ms. Nowotny also conducted labor market research to assess the availability of employment opportunities within Claimant's current skill level and physical capacities. Research revealed that Claimant was capable of returning to work in the light to medium category and obtain employment in jobs such as gate guard, production worker and parking/car wash cashier.

10. As found, in contrast, Ms. Young conducted an FCE and determined that Claimant was not capable of returning to work due to positional intolerances and other issues that would limit his lifting ability. She specifically remarked that Claimant's lifting abilities partially met the light work category. Ms. Young commented that Claimant was not capable of frequent lifting and his "lifting tolerances will vary greatly and there will be times when symptoms prevent him from lifting at all." She detailed that Claimant spent 1.3 hours or 33% of the 4-hour FCE "resting" and summarized that "these types of rest would not be tolerated in typical work settings." Ms. Young characterized that Claimant's inability to perform even sedentary activities in a reliable and dependable manner for more than 30 minutes was the main barrier in returning to work. Relying on Ms. Young's FCE, vocational consultant Mr. Van Iderstine determined that Claimant was not capable of returning to competitive employment or earning any wages.

11. As found, despite the conclusions of Ms. Young and Mr. Van iderstine, the record reveals that Claimant is capable of earning wages. The FCE performed by Ms. Moore on September 3, 2020 and the restrictions adopted by Dr. Steinmetz accurately reflect Claimant's functional abilities. The opinions of Ms. Young are not persuasive based on the errors and mistakes involved with administration of the FCE. The deficiencies include the following: failing to perform a physical examination, failing to have Claimant warm up prior to beginning moderate to heavy lifting, failure to ensure Claimant utilized proper lifting techniques during the evaluation and failing to heed her own instructions regarding cardiovascular compromise. Moreover, Ms. Nowotny persuasively disagreed with Mr. Van Iderstine's conclusion that Claimant was not capable of employment based on the FCE by Ms. Young. She explained that the 10 pound weight limit used by Mr. Van Iderstine was not supported by the medical records and inconsistent with Claimant's representations at her evaluation. Ms. Nowotny also noted that Mr. Van Iderstine's methodology for completing labor market research was incomplete because it only considered open jobs posted with Workforce Center. She explained that Claimant was capable of returning to work in the light to medium category in positions such as gate guard, production worker and parking/car wash cashier. Finally, Dr. Steinmetz observed that Claimant's resting heart rate at the start of his FCE with Ms. Young was elevated at 120 beats per minute. He emphasized that Ms. Young ignored concerning and potentially dangerous cardiovascular issues. Dr. Steinmetz remarked that Claimant's symptoms suggested a serious cardiovascular issue that required cessation of the FCE. Based on

the medical records, Dr. Steinmetz determined that Claimant had suffered a worsening of his underlying cardiovascular issues after the June 17, 2020 MMI date.

12. As found, although there is conflicting evidence regarding the extent of Claimant's physical capacities, the record reveals that Claimant has demonstrated physical abilities that enable him to function in the light to medium work category and render him a suitable candidate for a number of employment opportunities. Considering Claimant's vocational attributes and human factors including age, education, work history, transferable skills, communication skills and work restrictions Claimant is capable of earning wages in some capacity. Accordingly, the record reflects that employment exists that is reasonably available to Claimant under his particular circumstances. Accordingly, Claimant's request for PTD benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for PTD benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

DATED: March 1, 2021.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence he sustained a change of medical condition since being placed at maximum medical improvement ("MMI") on March 26, 2018, for the admitted August 27, 2015, left shoulder/elbow injury.

II. Whether Respondents proved by a preponderance of evidence that no further medical care is reasonable, necessary and related to the August 27, 2015 injury.

FINDINGS OF FACT

Prior History

1. Claimant has a significant pre-existing history of treatment for his left shoulder, left elbow/hand/wrist/arm, back, neck, hip, cognitive issues, complex region pain syndrome/reflex sympathetic dystrophy ("CRPS/RSD") of the left hand and arm, and chronic low back, neck and whole body pain. Claimant has treated for several years with opioids and other medications.

2. In April 2001, Claimant was involved in a motor vehicle accident ("MVA") during which he sustained injuries to his low back, neck, left shoulder and left knee. Claimant underwent a left shoulder open acromioplasty with distal claviculectomy and rotator cuff repair in 2003.

3. Prior to the admitted August 27, 2015 work injury that is the subject of this claim, Claimant had four previous workers' compensation claims, including a June 27, 2006 work injury where Claimant was working for Employer as a maintenance man. Claimant fell six feet from a ladder. He was diagnosed with CRPS/RSD of the left arm and hand, chronic pain syndrome and injuries to his hip, left shoulder, left elbow, left wrist, left arm, chronic neck, low back pain and all over body pain, headaches and severe depression.

4. A June 27, 2007 EMG/Nerve Conduction Study of the left upper extremity conducted by Dr. Sparr was abnormal, indicative of cubital tunnel syndrome and C-7 cervical radiculopathy and Claimant was diagnosed CRPS/RSD of the left upper extremity and partial-thickness rotator cuff tear. Claimant underwent MRIs and imaging of various body parts, as well as multiple medical treatment modalities including back and neck injections, sympathetic blocks to the left upper extremity and left elbow, and numerous therapies, opiates, narcotics, pain medication and anti-depressants. Jose Vega, Ph.D., diagnosed Claimant with major depression and chronic post-traumatic stress disorder and

chronic pain disorder and saw Claimant twenty-two times, documenting episodes of uncontrollable weeping, tearfulness, complaints of forgetfulness, depression and frustration.

5. Claimant's authorized treating physician ("ATP") for the June 2006 work injury, Dr. Sparr, placed Claimant at MMI on March 5, 2008. He assigned a 46% whole person impairment consisting of 30% impairment for CRPS for the left upper extremity, 6% impairment for left rotator cuff tear, 10% cervical spine impairment and 9% lumbar spine impairment. Claimant reported having no use whatsoever of his left hand. Dr. Sparr reviewed surveillance video of Claimant and noted "obvious inconsistences" with Claimant's presentation. According to Dr. Sparr, based on inconsistencies noted in numerous reports and Claimant's attempts to display profound cognitive dysfunction, Claimant's subjective complaints were seen as "inconsistent and volitional." Dr. Sparr noted that psychological impairment was not appropriate as Claimant's psychological dysfunction was "purely subjective" and there were "obvious inconsistencies making determination of a psychological impairment impossible." Dr. Sparr gave permanent work restrictions, stating that Claimant "has significant limitations in the left upper extremity use preventing him from performing greater than sedentary duties."

6. On January 20, 2009, following a hearing, ALJ Stuber awarded Claimant the then-maximum dollar amount of $2,000 for disfigurement because Claimant "has a visible disfigurement to the body consisting of atrophy of the left hand and forearm, scarring of the left forearm and proximal phalanx of the left index finger; and loss of all range of motion of the left hand."

7. On July 8, 2008, Bruce Magnuson, M.A., Claimant's vocational expert, reported that per Claimant, prior to the 2006 work injury, Claimant was "able to speak some English" but he has been unable to do so since the injury. Mr. Magnuson, who evaluated Claimant in person, noted Claimant's "left arm was clearly atrophying. He was wearing a glove on the left hand and showed me that he was unable to extend that arm" and his ex-wife stated that Claimant's "left arm was shattered." Claimant's ex-wife, in Claimant's presence, indicated that Claimant was "very depressed" all the time and "in a lot of pain." Claimant reportedly "yanks out his hair and bite his tongue a lot," while staring at the wall. Magnuson observed Claimant was "a very distraught emotionally" fragile individual. "He appears to be visibly in significant pain. He is unable to sit for any prolonged period of time. He has a visibly atrophied left arm." Mr. Magnuson concluded that Claimant was permanently totally disabled and unable to earn any wages in a part or full time basis and is not a candidate for formal training or able to sustain work in any capacity for the rest of his life.

8. During Claimant's July 3, 2008 vocational evaluation with Katie Montoya, both Claimant and his ex-wife were crying and Claimant presented in a catatonic state. Claimant stated he spoke no English "at all," had ongoing pain in his back, head and body and felt like he was in a "completely differently body" than prior to the June 2006 work injury. Claimant purportedly did not understand what was going on and had difficulty remembering what he did. Claimant removed the glove he had been wearing over his

right hand and arm to show Montoya the appearance of the arm/hand and claimed he was unable to use the left hand at all. According to Claimant, he could not concentrate and forgets things. Claimant could not lift anything more than small things and is up and down all through the day.

9. On August 19, 2009, Claimant entered into a full and final settlement for his 2006 claim for injuries sustained to his left hand, left wrist, left shoulder, head, neck, spine, back, nerves, CPRS/RSD, chronic pain, psychiatric condition, brain, headaches, left elbow, dizziness, cognitive dysfunction, hips, right leg and left leg, for indemnity in the amount of $152,017.60 (consisting of $40,000 in up-front cash and $112,917.60 in a structured settlement. The settlement included a Medicare Set-Aside funded by Respondents with an initial deposit of $1,721 and periodic payments of $957 per year for 30-years.

10. After settling his case, Claimant worked on windows and as a painter in 2011. Clamant also ran his own business for a time as he had a contractor's license. In 2012, Claimant worked for a different employer doing remodels, painting and roofing. Claimant was working in his own business in 2014 when Employer stopped by his home and rehired Claimant. Claimant returned to his pre-2006 work injury employment with Employer as a maintenance worker, doing painting, drywall, roofing, remodeling and climbing ladders. He also put in a sprinkler system, digging for the line.

August 27, 2015 Work Injury

11. Claimant sustained an admitted industrial injury while working for Employer on August 27, 2015. Claimant was installing drywall into a house ceiling and was standing on a ladder approximately three steps up when a 4x8 piece of drywall weighing approximately 30 pounds began to fall. Claimant attempted to catch the piece of drywall and felt left shoulder pain. Claimant was first seen by his primary care physician ("PCP"), Dr. Abool, with complaints of left shoulder, left hip, and back pain. X-rays of the left shoulder, cervical spine, lumbar spine and left hip revealed no acute findings.

12. On October 26, 2015, Scott Primack, D.O., noted Claimant's significant history of chronic pain which affected Claimant's back and other parts of his body. Dr. Primack opined that the only injury Claimant sustained on August 27, 2015 was to the left shoulder.

13. On December 9, 2015, Claimant was seen by shoulder surgeon Dr. Simpson. Dr. Simpson noted a left shoulder MRI revealed a high grade partial thickness tear of the posterior aspect of the supraspinatus tendon. Dr. Simpson opined that left shoulder surgery may be an option, but only after Claimant returned to his family physician to address his chronic pain issues and his relatively high dose opiate pain medications he was taking prior to the August 27, 2015, injury.

14. On December 23, 2015, then ATP Dr. Bradley opined that the only diagnosis related to the August 27, 2015 work injury was to Claimant's left shoulder. In a handwritten note to Insurer, Dr. Bradley stated that the body parts related to the injury included "the

left shoulder only." He also noted that no treatments by Claimant's PCP, Dr. Abool, should be authorized as part of the claim involving the August 27, 2015 work injury.

15. On February 25, 2016, Claimant underwent an Independent Medical Examination ("IME") with Dr. Erickson, who opined that the August 27, 2015 work injury exacerbated Claimant's chronic, non-specific low back pain, and resulted in a left shoulder rotator cuff tear and new lateral left hip pains.

16. On referral by Dr. Bradley, Claimant attended an initial physiatry evaluation with Miguel Castrejon, M.D. on June 10, 2016. Dr. Castrejon diagnosed Claimant with left shoulder rotator cuff tear with clinical evidence of impingement, chronic lumbar musculoligamentous sprain/strain with sacroiliac versus facet mediated pain, chronic pain with opioid dependency, and reactive depression/anxiety. He also noted consideration of left hip acetabular impingement. Dr. Castrejon prescribed Claimant additional medications.

17. Claimant continued to see Drs. Bradley, Castrejon and Dr. Vega. Dr. Castrejon noted that a MRI arthrogram results of left hip revealed findings consistent with femoroacetabular impingement.

18. On October 4, 2016, Lawrence A. Lesnak, D.O. performed an IME at the request of Respondents. Dr. Lesnak performed comprehensive records review and physical examination of Claimant. He noted numerous pain behaviors and nonphysiologic findings on examination. Claimant reported never having any previous shoulder, low back, neck, or hip injuries or similar symptoms in the past. For past medical history, Dr. Lesnak documented the left forearm surgery from the 2006 work injury and chronic depression, but Claimant "could not recall" if he received a prior impairment rating. Dr. Lesnak agreed with Drs. Bradley and Primack that the only work injury Claimant sustained on August 27, 2015 was to the left shoulder, opining that Claimant may have factitious disorder. Dr. Lesnak opined that Claimant reached MMI as of September 7, 2016, and that he was not a candidate for further treatment due to inconsistent pain complaints and psychosocial factors. He assigned 5% permanent impairment of the left shoulder.

19. On November 30, 2016, Dr. Primack issued a letter in response to Respondents' counsel. Dr. Primack noted he reviewed Dr. Lesnak's IME report and agreed Claimant reached MMI as of September 7, 2016 with 5% left shoulder impairment and no recommendations for further treatment.

20. On December 8, 2016, Dr. Bradley issued a response to Respondents' counsel after reviewed Dr. Lesnak's IME report. Dr. Bradley also agreed Claimant reached MMI with no need for maintenance care.

21. On December 15, 2016, Respondents filed a Final Admission of Liability ("FAL") based on the reports of Drs. Bradley, Lesnak and Primack, stating Claimant reached MMI on September 7, 2016, with a 5% scheduled impairment to the left shoulder and no maintenance treatment.

22. Claimant continued to treat with Dr. Castrejon and Dr. Simpson. Dr. Simpson performed a rotator cuff repair on April 18, 2017.

23. On April 25, 2017, Respondents filed a General Admission of Liability ("GAL") reinstating temporary total disability to Claimant as of April 18, 2017 due to the shoulder surgery. Dr. Bradley sent Insurer a letter stating that he did not transfer Claimant's medical care to Dr. Castrejon but Claimant himself transferred his care to Dr. Castrejon. Dr. Castrejon continued to treat Claimant and diagnose injuries to Claimant's back, neck, hip, left arm, left elbow, left hand, left shoulder and depression as related to the August 27, 2015, injury.

24. Dr. Castrejon conducted an EMG in June 2017 and opined there was likely preexisting underlying ulnar neuropathy aggravated by use of splint postoperative for shoulder surgery. Dr. Lesnak opined Claimant's condition was not work-related.

25. On March 5, 2018, Claimant underwent a 24-month Division Independent Medical Examination ("DIME") by John Aschberger, M.D. Dr. Aschberger issued a DIME report dated March 26 2018. Dr. Aschberger reviewed Claimant's medical records beginning September 1, 2015. Claimant reported to Dr. Aschberger that his 2006 injury was not treated under workers' compensation. Dr. Aschberger did not document any reports by Claimant of his prior CRPS/RSD diagnosis to his left arm, hand and elbow, inability to use his hand following the 2006 work injury, or chronic low back, neck and body pain and severe depression. Dr. Aschberger opined assessed, *inter alia*, complications of chronic left should pain, restricted range of motion and left elbow flexion contracture, and muscular atrophy at the left hand and EMG findings most consistent with ulnar neuropathy. Dr. Aschberger recommended that Claimant undergo a repeat EMG to assure that there was no associated abnormality that would affect a C8 T1 distribution. He opined Claimant was an unlikely candidate to proceed with further intervention for the ulnar nerve. He stated that, if the EMG confirmed ulnar neuropathy and Claimant is not a surgical candidate, no further intervention other than medication management would be warranted. arranged. Dr. Aschberger also mentioned the possibility of further psychological and radiological evaluation. Nonetheless, Dr. Aschberger opined that Claimant reached MMI on March 26, 2018. He assigned a 54% scheduled impairment rating for the ulnar nerve and for range of motion deficits of the left shoulder and left elbow. He recommended medication management with Dr. Castrejon as maintenance care.

26. On April 5, 2018, Respondents filed a final admission of liability ("FAL") consistent with Dr. Aschberger's opinion regarding MMI and impairment and admitting to maintenance benefits. The Certificate of Mailing of the FAL includes the addresses of, *inter alia*, Claimant and Claimant's then attorney.

27. No evidence was offered that Claimant applied for hearing to overcome Dr. Aschberger's DIME opinion on MMI and impairment. Consequently, the claim closed 30 days after the date the FAL was filed and remains closed, except as to the issue of

maintenance treatment. No evidence was offered that Claimant previously filed a petition to reopen.

28. Following Dr. Aschberger's DIME, Claimant continued to see Dr. Castrejon. Dr. Castrejon did not opine that Claimant's medical condition worsened but, rather, he continued treating Claimant for left hand/wrist/elbow atrophy, back, neck and hip pain and depression that he deemed were all related to the August 25, 2017, injury. Respondents continued to deny authorization of payment for Dr. Castrejon's treatment recommendations for anything other than left-shoulder and elbow medical maintenance.. Dr. Castrejon opined that Claimant should undergo a repeat EMG to compare it with the 2015 EMG that was done because of profound atrophy at Claimant's elbow, arm and hand. Dr. Aschberger, who reviewed Dr. Castrejon's records for the DIME, repeated Dr. Castrejon's EMG recommendation, still opined Claimant was at MMI.

29. According to both Drs. McCranie and Lesnak, comparison of the 2007 EMG and an EMG performed after the August 27, 2015 work injury showed that Claimant's left ulnar neuropathy improved in 2015 compared to what it was in 2007, and the atrophy was far less profound.

30. On January 8, 2019, Dr. Castrejon declared Claimant "at MMI" and suggested that Respondents send Claimant back for a follow up DIME with Dr. Aschberger. Respondents did not refer Claimant back to Dr. Aschberger as the claim had closed and Claimant was never officially taken off MMI by any physician.

31. On December 17, 2019, Dr. Castrejon opined that Claimant was no longer at MMI from his January 8, 2019 MMI date because of significant decline mentally and on a musculoskeletal basis. Claimant reported being depressed and experiencing an overall worsening of his condition with neck and bilateral arm pain, with the left arm being useless with no movement. Dr. Castrejon noted Claimant's reported significant loss of left upper limb and progressive myofascial symptoms impacting Claimant's function. Dr. Castrejon recommended psychological treatment and additional treatment with Dr. Kelly.

32. On March 4, 2020, Kathy McCranie, M.D. conducted an IME at the request of Respondents. She reviewed Claimant's medical records dating back to 1992, including the 2006 work injury. Dr. McCranie agreed with Drs. Bradley, Lesnak, Primack and Aschberger that the only body part related to the August 27, 2025, injury is the left shoulder and elbow. Dr. McCranie opined Claimant should not be taken off MMI as his physical and psychological condition have not worsened. She noted that Claimant had several pre-existing conditions prior to the August 27, 2015 work injury including, *inter alia*, left ulnar neuropathy, cervical radiculopathy, issues with the left upper extremity, and depression. Dr. McCranie explained that, although Claimant was reporting worsening pain and psychological symptoms, Claimant's current documented pain levels were the same as the pain levels noted by Dr. Aschberger at the time of the DIME. Referring to Claimant's June 2007 EMG, Dr. McCranie noted that subsequent EMGs in 2016 and 2017 actually reflected improvement in Claimant's left ulnar neuropathy. She opined that

Claimant remained at MMI and any further treatment, including medication management and psychological treatment, would be maintenance treatment.

33. Claimant did not undergo any additional treatment recommended by Dr. Castrejon. Noting additional treatment had not been authorized, Dr. Castrejon ultimately opined Claimant reached MMI on September 16, 2020 with 61% whole person impairment rating. He continued to opine Claimant required psychological evaluation and treatment as a result of the work injury.

34. On October 18, 2020, Dr. Kleinman conducted a psychiatric IME at the request of Respondents. Dr. Kleinman and reviewed Claimant's medical records dating back to the 2006 work injury. Dr. Kleinman noted that Claimant's presentation after the August 27, 2015 work injury has presented in the same pattern of mispresenting his complaints to appear as invalid. He noted Claimant reported the same and similar issues after the 2006 work injury but that Claimant attributes the issues to the 2015 work injury. Dr. Kleinman opined that Claimant's pre-existing and recurrent anxiety and depression has not changed, and merely waxed and waned, as is the natural course. Dr. Kleinman opined that Claimant is no worse now from a mental health perspective than he was when placed at MMI in 2018 and that Claimant's claims to be mentally disturbed are unreliable and not convincing. He concluded that Claimant remains at MMI psychologically since being placed at MMI by Dr. Aschberger in March 2018. Dr. Kleinman opined Claimant does not require any additional mental health treatment for the August 27, 2015 work injury.

35. Katie Montoya conducted a second vocational assessment of Claimant on September 14, 2020. Claimant took the glove off of his hand and arm to show Ms. Montoya who opined that the appearance of Claimant's condition has improved. Ms. Montoya noted that, although Claimant presented to her at this assessment the same as he did in 2008 with complaints of pain, cognitive issues and functional limitations, Claimant was more interactive and had better recall in 2020 than in 2008.

36. Surveillance of Claimant from February 20, 2020, shows Claimant driving a vehicle, dropping off children at school, picking up a board that blew from a fence with both arms and placing the board over an opening, using his left arm to hold wood, waling with a normal, fast gait and repeatedly bending at the waist.

37. Dr. McCranie testified at hearing as a Level II accredited expert in physical medicine and rehabilitation and pain medicine. In her IME report, Dr. McCranie initially opined that Claimant could undergo 4-6 sessions of psychological treatment and 3-6 months of medication management as maintenance treatment. Dr. McCranie changed her opinion and testified that no further medical treatment is reasonable, necessary or related to the August 27, 2015 injury. Dr. McCranie pointed to Dr. Kleinman's psychiatric IME report, noting he did not recommend further psychological treatment for Claimant. She explained that her initial recommendation for 3-6 months of medication management no longer applies, as such time period had already transpired.

38. Claimant testified at hearing that his left arm is limp and numb and will not straighten. Claimant testified he lost sensation in left hand after undergoing the left shoulder surgery. Claimant stated that since March 2018 his pain worsens with changes in the weather and he continues to have back, left shoulder, neck and hip pain. Claimant testified that he has suffered from depression since 2006. Claimant testified that he has experienced pain from the 2006 work injury and that Respondents did nothing to help him. Claimant stated that due to his injuries he cannot work or support his family. Claimant testified that he wants to undergo the treatment recommended by Dr. Castrejon, including seeing a psychologist.

39. The ALJ finds the opinions of Drs. Primack, Bradley, Aschberger, Lesnak, McCranie and Kleinman more credible and persuasive than the opinion of Dr. Castrejon and Claimant's testimony.

40. Claimant failed to prove it is more probable than not he sustained a change of medical condition since being placed at MMI by Dr. Aschberger on March 26, 2018 for his August 27, 2015, work injury.

41. Respondents proved it is more probable than not that no further medical care is reasonable, necessary and related to the August 27, 2015, work injury. Evidence and inferences contrary to these findings were not credible and persuasive.

42. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Reopening a Claim

Section 8-43-203(2)(b)(II), C.R.S. provides that a claim will automatically close after the date of the FAL unless the claimant contests the FAL in writing and requests a hearing on any disputed issues that are ripe for hearing including selection of a DIME. *See Stefanski v. Industrial Claim Appeals Office,* 128 P.3d 282 (Colo. App. 2006) (noting that “any pleading that adequately notifies the employer that the claimant does not accept the FAL constitutes substantial, if not actual, compliance with the statutory obligation to provide written objection”).The statutory automatic closure provisions are designed to “promote, encourage, and ensure prompt payment of compensation to an injured worker without the necessity of a formal administrative determination in cases not presenting a legitimate controversy.” *Dyrkopp v. Industrial Claim Appeals Office,* 30 P.3d 821, 822 (Colo. App. 2001).

Once a claim is closed by an FAL, issues resolved by the FAL are not subject to further litigation unless reopened under §8-43-303, C.R.S. *Leewaye v. Industrial Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007). The overall statutory scheme is designed to provide a method to determine the claimant’s medical condition, afford the claimant an opportunity to contest a medical determination, close all undisputed issues and permit reopening on appropriate grounds. *See Peregoy v. Industrial Claim Appeals Office,* 87 P.3d 261 (Colo. App. 2004). Despite the decision in *Harman-Bergstedt v. Loofbourrow,* 320 P.3d 327 (Colo. 2014) a claimant who receives a FAL that only admits for medical benefits and denies temporary disability and permanent impairment benefits is entitled to request a DIME. However, unless he does so within the statutorily-required 30 days, he is jurisdictionally barred from making the request. *Suomie v. Spectrum Retirement Communities*, WC 5-050-347 (ICAO, June 14, 2019).

Section 8-43-303(1), C.R.S. provides that a worker’s compensation award may be reopened based on a change in condition. In seeking to reopen a claim, the claimant shoulders the burden of proving his condition has changed and is entitled to benefits by a preponderance of the evidence. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005). A change in condition refers either to a change in the condition of the original compensable injury or to a change in a claimant's physical or mental condition that is causally connected to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1084 (Colo. App. 2002). A "change in condition" pertains to changes that occur after a claim is closed. *In re Caraveo,* WC 4-358-465 (ICAO, Oct. 25, 2006). Reopening is appropriate if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000). The determination of whether a claimant has sustained her burden of proof to reopen a claim is one of fact for the ALJ. *In re Nguyen,* WC 4-543-945 (ICAO, July 19, 2004).

As found, Claimant failed to prove by a preponderance of the evidence a change in condition occurred warranting the reopening of his claim. It is undisputed Claimant has an extensive and complicated history involving multiple injuries and body parts. At hearing Claimant repeatedly referred to his 2006 work injury, for which he purportedly does not believe he received adequate treatment. Claimant alleges the same for his 2015 work injury, at times conflating the two. The issue before the ALJ concerns Claimant's 2015 work injury, which Drs. Primack, Lesnak, McCranie, Bradley, and Aschberger all credibly and persuasively opined is limited to the left shoulder and elbow. Although Dr. Aschberger referred to Claimant potentially undergoing additional diagnostic treatment, he ultimately opined that Claimant reached MMI for the August 27, 2015 work injury with a 54% impairment rating for the left shoulder and elbow. Respondents filed a FAL consistent with Dr. Aschberger's DIME report and there is no evidence Claimant timely challenged Dr. Aschberger's DIME opinion on MMI and impairment. Accordingly, the claim closed with the exception of maintenance medical benefits.

Claimant continued to see Dr. Castrejon who, at some later point, opined that Claimant was no longer at MMI due to worsening psychological and musculoskeletal issues. As noted by Dr. McCranie, Dr. Castrejon's opinion appears, in large part, to be based on Claimant's subjective reports, which have been credibly called into question by Drs. Lesnak, McCranie and Kleinman. Dr. McCranie credibly explained that there has been no change or worsening of Claimant's condition since being placed at MMI. Dr. Kleinman credibly opined Claimant remains at MMI from a psychological perspective. There is insufficient objective evidence of any worsening of Claimant's condition that is causally connected to the August 27, 2015 work injury. Accordingly, Claimant failed to meet his burden of proof to reopen his claim with for the August 27, 2015 work injury.

Maintenance Medical Benefits

Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Hanna v. Print Expediters Inc.*, 77 P.3d 863, 865 (Colo. App. 2003). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Hastings v. Excel Electric*, WC 4-471-818 (ICAO, May 16, 2002). There is no bright line test to distinguish treatment designed to cure an injury from treatment designed to relieve the effects of the injury. Surgery may be designed to cure an injury or may be maintenance treatment designed to relieve the effects or symptoms of the injury. Post-MMI treatment may be awarded regardless of its nature. *Corley v. Bridgestone Americas*, WC 4-993-719 (ICAO, Feb. 26, 2020).

To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995)*.* When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Martin v. El Paso School District No.11*, WC No. 3-979-487, (ICAO, Jan. 11, 2012). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* WC 4-461-989 (ICAO, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

In contrast, when respondents seek to terminate medical maintenance benefits they have the burden to prove that medical maintenance benefits are no longer reasonable, necessary or related to the industrial injury. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990); *see* §8-43-201(1), C.R.S. (specifying that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification").

As found, the preponderant evidence establishes Claimant is not entitled to ongoing maintenance medical benefits as related to the August 27, 2015 work injury. Respondents' April 5, 2018 FAL admitted for reasonable, necessary and related post-MMI medical treatment pursuant to Dr. Aschberger's DIME report. Claimant continued to see Dr. Castrejon, who recommended additional pre-MMI treatment for Claimant, which Respondents repeatedly denied. Drs. McCranie and Kleinman credibly and persuasively explained that Claimant does not require further treatment for his physical or psychological conditions as related to the August 27, 2015 work injury. To the extent Claimant Accordingly, Respondents proved it is more likely than not medical maintenance benefits are no longer reasonable, necessary or related.

ORDER

1. Claimant failed to prove by a preponderance of the evidence he sustained a change in condition causally related to the August 27, 2015 work injury. Claimant's petition to reopen his claim is denied and dismissed.

2. Respondents proved by a preponderance of the evidence no further medical care is reasonable, necessary or related to the injury in this claim. Claimant's claim for further medical maintenance care is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 1, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant prove he suffered a compensable injury to his left shoulder on March 28, 2020?

If the claim is compensable, the ALJ will address the following additional questions:

- Is Claimant entitled to TTD benefits commencing April 22, 2020?
- Was Claimant responsible for termination of his employment?
- Should TTD benefits be reduced under § 8-43-102 based on "late reporting" of the injury?

STIPULATIONS

The parties reached the following stipulations:

1. If the claim is compensable, the date of injury as March 28, 2020.

2. Claimant's average weekly wage is $324.86.

3. Medical benefits provided by and on referral from CCOM were reasonably necessary and authorized.

4. The issue of TPD is withdrawn and reserved for future determination, if necessary.

FINDINGS OF FACT

1. Claimant worked for Employer as a grocery clerk. He was hired in March 2020 and assigned overnight stocking duties. Although Claimant's employment application indicates he was available for "any shift," he verbally explained to Employer he was only willing to work the night shift. Claimant was concerned about contracting COVID-19 and had promised his wife he would only work the night shift to minimize his contact with the public.

2. Employer's workforce is unionized and Employer has procedures regarding work assignments based on specific criteria such as seniority. Claimant had no seniority that allowed him the right to pick his shift, hours, or days. As Employer's witnesses persuasively explained, Claimant could have been assigned to any shift on any day. Employer uses a process called "Select-a-Shift" and promising Claimant a certain shift would violate union rules. Employer was willing to assign Claimant to the night shift in accordance with its established shift selection procedures, but Claimant received no guarantee or contractual commitment he would only be assigned to the night shift.

3. Claimant's first shift started at midnight on March 28, 2020. Claimant stocked grocery items with his brother, a long-time employee of Respondent. The store received an unusually large delivery of goods to be stocked that night. Claimant testified there were approximately 4,500 cases of product, whereas a more typical night would have 1,500 cases. Claimant separated cases of product and put the product on grocery shelves. Claimant testified he "got after it" the first night because he wanted to impress Employer with his work ethic. Claimant's shift ended at 8:30 AM on March 28, 2020. He felt no symptoms while working.

4. Claimant went home after his shift and went to bed. Claimant testified his back, hands, and left shoulder felt "sore" when he awoke. Claimant assumed he was simply unaccustomed to the work and figured the soreness would pass. He continued working as a night stocker for several weeks.

5. Claimant testified the soreness in his back and hands improved but the shoulder pain persisted and worsened over the next few weeks. Claimant testified he worked hard and received praise for stocking quickly despite progressive shoulder pain.

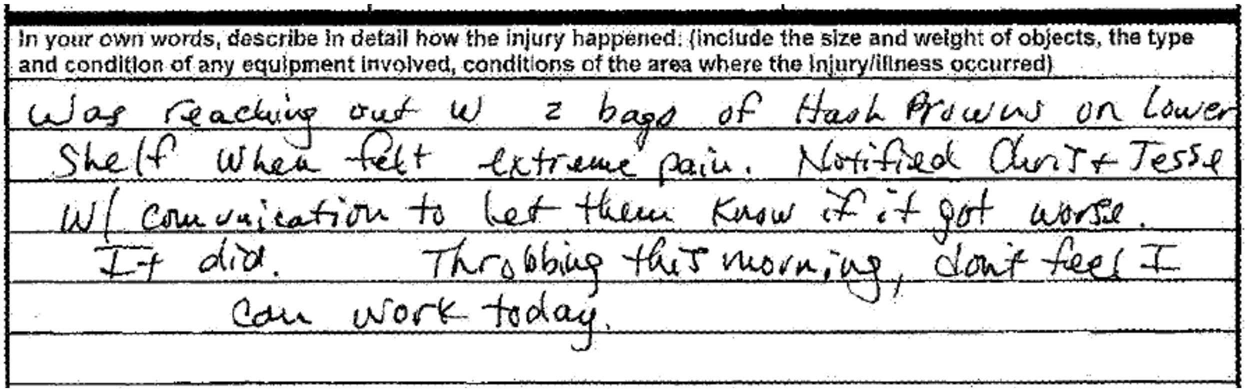
6. Claimant testified he reported left shoulder pain to his immediate supervisor, Jesse O[Redacted], and the Grocery Manager, Chris C[Redacted], on April 13, 2020. Claimant testified he told Mr. O[Redacted] and Mr. C[Redacted] "every detail" about the onset of his symptoms. Claimant testified he has been "very clear with everyone" that the injury started on his first night of work and progressively worsened over the next several weeks. Claimant testified the pain became severe on April 20, 2020 so he reported the injury to upper management. Claimant testified he described an incident while stocking frozen hash browns because "they told me they needed a specific incident" on the accident report.

7. Mr. O[Redacted] corroborated that Claimant verbally reported shoulder pain on or about April 13, 2020, but testified Claimant said he hurt the shoulder "at his day job" in the cannabis industry. Mr. O[Redacted] did not recall Claimant saying the shoulder pain was related to his work for Employer. Mr. O[Redacted] testified he asked if Claimant could continue working and Claimant responded affirmatively. Mr. O[Redacted] put Claimant in the chips aisle because it was lighter and "kept an eye on him" the rest of the night. Mr. O[Redacted] did not observe Claimant having any difficulty performing his work. He did not recall Claimant ever stating he injured his shoulder stocking frozen hash browns. Mr. O[Redacted] testified Claimant was not a "fast" stocker because he was new and inexperienced. Claimant was frequently teamed with his brother, one the store's best stockers, and Claimant's brother typically did a higher percentage of each aisle.

8. Mr. C[Redacted] testified the store was "really crazy" in March and April 2020 and the night crew was stocking more product than usual because of COVID-19. Mr. C[Redacted] recalled one occasion he had asked if Claimant could stay longer and Claimant said his shoulder was bothering him. Mr. C[Redacted] testified he told Claimant, "if you have an injury, you need to speak with someone higher up than me." He testified Claimant did not say the shoulder pain was related to his work for Employer. Mr. C[Redacted] assumed Claimant was simply using the pain as an excuse to avoid having

to work longer. Mr. C[Redacted] could not recall the date of the conversation but agreed it was probably “close to” April 13, 2020. He did not recall Claimant ever mentioning he injured his shoulder stocking frozen hash browns.

9. On April 20, 2020Claimant formally reported a shoulder injury to Andrew N[Redacted], the Assistant Store Manager. Mr. N[Redacted] and Claimant discussed the matter and completed injury reports. Claimant stated the injury occurred on April 13, 2020 at approximately 6:00 AM. He described the accident in the following terms:



In your own words, describe in detail how the injury happened: (include the size and weight of objects, the type and condition of any equipment involved, conditions of the area where the injury/illness occurred)

Was reaching out w 2 bags of Hash Browns on lower
Shelf When felt extreme pain. Notified Chris + Jesse
W/ comunication to let them know if it got worse.
It did. Throbbing this morning, don't feel I
can work today.

Claimant’s accident report does not reference progressive shoulder pain over several weeks.

10. Mr. N[Redacted] completed a manager’s incident report and described the injury in terms similar to Claimant’s description. As with Claimant’s statement, there is no mention of symptoms starting on or shortly after Claimant’s first day of work. Mr. N[Redacted] testified he completed his report based on Claimant’s description of the injury. Mr. N[Redacted] testified Claimant said nothing about developing pain after the first day of work that progressively worsened. Mr. N[Redacted] testified he did not tell Claimant to list a specific incident and merely advised Claimant consistent with the instructions on the form.

11. Employer provided Claimant a list of physicians and he selected CCOM. His initial visit took place on April 22, 2020 with Valerie Joyce, FNP. The report described the history of injury as:

> Pt presents to the clinic with left shoulder pain, says he started working for King Soopers on 3/27/2020, his first night at work he had to stock a huge load of product/cases, 4500 cases – he feels he over did it for his first day on the job, his shoulder was very sore the next day, on 4/13/2020 he had to stock the frozen section – hash browns – his shoulder progressively worsened afterwards.

12. Ms. Joyce diagnosed an “unspecified strain of left shoulder joint.” She gave Claimant work restrictions of no lifting, pushing, pulling, or overhead work with the left arm.

13. Employer offered Claimant modified duty performing light cleaning and sanitizing on a day shift. Claimant resigned his position because he was only willing to work at night to minimize exposure to COVID-19.

14. Dr. Wallace Larson performed an IME for Respondent on October 26, 2020. Dr. Larson opined Claimant's left shoulder symptoms are related to an underlying age-related degenerative condition and were not caused by his work for Employer.

15. On November 6, 2020, Claimant saw Dr. Timothy Hall for an IME at his counsel's request. Crediting Claimant's description of events, Dr. Hall opined Claimant's left shoulder symptoms and need for treatment are causally related to his work for Employer.

16. Claimant's testimony is no more credible or persuasive than the conflicting testimony of Employer's witnesses.

17. Claimant failed to prove he suffered a compensable injury to his left shoulder.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). A pre-existing condition does not disqualify a claim for compensation if a work accident aggravates, accelerates, or combines with the underlying condition to cause disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The mere fact an employee experiences symptoms at or after work does not automatically establish a compensable injury. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (October 27, 2008); *Garamella v. Paul's Creekside Grill, Inc.*, W.C. No. 4-519-141 (March 6, 2002). The claimant must prove entitlement to benefits by a preponderance of the evidence. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is evidence that leads the ALJ to find a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). Put another way, the standard is met when the existence of a contested fact is "more probable than its nonexistence." *Industrial Commission v. Jones*, 688 P.2d 1116, 1119 (Colo. 1984). The facts in a workers' compensation case are not interpreted liberally in favor of either the claimant or the respondents. Section 8-43-201.

As found, Claimant failed to prove he suffered a compensable injury to his left shoulder. Although the accident report claims an injury on April 13 stocking hash browns, Claimant testified he did not injure the shoulder on April 13. He believes he injured his shoulder on March 28, 2020 and all subsequent incidents were simply manifestations of the injury. There is no persuasive independent corroborative evidence to show Claimant suffered an injury such as video surveillance, eyewitness testimony, or contemporaneous documentation. As a result, proof of an injury rests entirely on Claimant's statements. The witness testimony was highly conflicting and impossible for this ALJ to reconcile. Claimant's testimony appeared credible and his story is plausible. But Employer's witnesses also appeared credible. Mr. O[Redacted]' testimony that Claimant said he injured his shoulder at his "day job" is particularly challenging for Claimant case, because there is no persuasive evidence of any animosity, bias, or other motivation on Mr. O[Redacted]' part to fabricate testimony. Based on the evidence presented, Respondent's version of events is at least as likely as Claimant's version. Additionally, Dr. Larson persuasively explained shoulder symptoms like those experienced by Claimant are frequently seen in patients over 50 with no precipitating event or identifiable cause other than age-related degeneration. Although a causal nexus between Claimant's work and his shoulder symptoms is possible, Claimant failed to prove such a relationship is more probable than not.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: March 2, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-139-115-001

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he sustained a compensable work injury on May 13, 2020.

II. Whether Claimant established by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment.

III. Whether Claimant established by a preponderance of the evidence that the surgery recommended by Dr. Beard is reasonable, necessary, and related to his May 13, 2020, work injury.

IV. Whether Claimant established by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits from May 13, 2020 and ongoing.

V. Determination of Claimant's average weekly wage (AWW).

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant is a 33-year-old male who was hired by Employer as a delivery driver on April 8, 2020.
2. Employer is a trucking company that delivers packages for [Redacted].
3. Claimant's duties for Employer included loading a delivery truck with packages, then driving the truck, and delivering those packages. Claimant would make approximately 150 stops per day and deliver about 250-300 packages. The packages could weigh up to 100 pounds. The most common package Claimant delivered was pet food and those packages weighed approximately 60 pounds.
4. Claimant started delivering packages for Employer on April 8, 2020.
5. Shortly after Claimant began working for Employer, he began to develop knee pain. As a result, Claimant began complaining of knee pain to other employees.
6. Lisa R[Redacted], co-owner and manager of Employer, Jeff C[Redacted], route manager for Employer, and Tracy Z[Redacted], manager for Employer, all testified that Claimant complained to them about knee pain within his first two weeks of work.
7. Ms. R[Redacted] testified that Claimant's job was physically demanding and that it is not unusual for new employees to experience pain due to the physical demands of the job.
8. The ALJ finds that Claimant's job was physically demanding and hard on his knees.

9. Both Ms. R[Redacted], and Mr. Z[Redacted] testified that Claimant told them he had been previously diagnosed with knee arthritis. Mr. Z[Redacted] testified that Claimant told him he had received knee treatment in California before moving to Colorado. (Hrng. Audio Part 3, 7:00) Claimant, however, disputed such. Claimant testified he never had any knee issues, or knee treatment, before beginning work for Employer. Consistent with Claimant's testimony, no medical records were submitted showing Claimant treated for knee arthritis or knee pain before working for Employer.

10. After a week or two on the job, Claimant developed pain in his left knee based on the physical demands of his job. Claimant reported this to his supervisor, Lisa R[Redacted], who told him that knee pain was normal for people starting out on the job, and it was likely because of muscular fatigue, much like working out at the gym after a long layoff.

11. On April 20, 2020, Claimant was seen by Kathryn Gibbs, PA-C, at UC Health Urgent Care because of left knee pain. *Exhibit 8, page 82*. Based on her assessment, Ms. Gibbs referred Claimant to physical therapy for left anterior knee pain.

12. On April 23, 2020, Claimant was seen by Derek Haverley at Colorado in Motion for physical therapy. Mr. Haverley noted Claimant complained of 2-3 weeks of insidious left knee pain and pressure behind his kneecap and that his knee would occasionally give out. Claimant said that stepping in and out of the delivery truck would aggravate his pain. Lastly, Claimant denied undergoing any prior treatment for his left knee. *Exhibit 9, page 83*.

13. Claimant also testified that while the medical records for treatment Claimant received after he started working for Employer indicate Claimant's knee was "giving out", Claimant credibly and persuasively defined that phrase as meaning that he had instability and pain within the knee - not that it was making him fall as occurred on May 13, 2020. Claimant's definition is consistent with the medical records submitted into evidence in that they do not indicate Claimant was falling – before May 13, 2020 - because of his knee problems.

14. On May 13, Claimant arrived at a house to deliver a heavy package. The package was a 60-pound box of dog food from Chewy.com. To deliver the package, Claimant had to carry the package from the truck to the house. This required Claimant to pick up the package and get out of the truck. After getting out of the truck, Claimant then had to walk with the heavy package and then walk up a short flight of stairs with the heavy package of dog food. While trying to walk up the stairs to deliver the heavy package Claimant's left knee gave out and he fell to the ground.

15. The ALJ finds that for Claimant to walk up the stairs with the package, he had to exert additional force to propel himself – and the 60-pound package – up the stairs. It was this exertional effort to carry the package up the stairs that proved too much for his knee. As a result, he injured his left knee, his knee "gave out," and Claimant fell on his hands and knees.

16. After Claimant composed himself, he eventually made his way back to his work truck and immediately informed his supervisor that he had been injured on the job. He

also advised his employer that because of his injury, he was unable to keep driving and delivering packages that day. Thus, a co-worker picked Claimant up and drove him to emergency room at UCHealth.

17. On May 13, 2020, Claimant was seen at UCHealth Longs Peak Emergency Room. Claimant presented with left knee pain. It was noted that Claimant had been seen about a month ago for left knee pain, but denied any previous slips, falls, sporting injuries, or trauma to his left knee. Consistent with Claimant's testimony, the report from this visit indicates Claimant said he was going up some steps to deliver a package when his knee gave out and he fell to the ground. Claimant was diagnosed with a left knee strain and derangement involving a ligament of his left knee. At that time, the differential diagnosis included "knee strain, chondromalacia patella, ligament injury, attribution of ligament strain, anterior cruciate ligament tear, PCL strain, PCL tear." Because of the injury that occurred while delivering the heavy package of dog food, Claimant was placed in a knee immobilizer, restricted from work, and referred to the Orthopedic Center of the Rockies for further assessment and treatment. *Ex. 9, pages 85-97, and Ex. 10, page 130*.

18. On May 15, 2020, Claimant was seen at Concentra and evaluated by Dr. Jeffrey Baker. Claimant provided the same history to Dr. Baker – that he started having knee pain at work while delivering packages and that his knee gave out while delivering a package to a house. *Exhibit 7, page 78*. Based on his assessment, Dr. Baker concluded that Claimant's objective findings were consistent with the history and/or work-related mechanism of injury and that there was a greater than 50% probability that Claimant's injury was work related. Dr. Baker ordered an MRI to determine the extent of Claimant's injury and to determine future treatment. He also provided restrictions which precluded Claimant from performing his regular job duties. *Exhibit 7, pages 76-77*.

19. On May 18, Claimant underwent an MRI of his left knee. The MRI showed the following:

    i. Multifocal bone contusions in the left knee predominantly affecting the medial compartment.

    ii. Acute grade 1 MCL sprain with an intermediate grade sprain of the medial retinaculum.

    iii. Small simple effusion with diffuse soft tissue edema and a partially ruptured Baker's cyst.

    iv. Complex tear in the posterior horn of the medial meniscus. *Exhibit 5.*

20. On May 19, 2020, Glenn L[Redacted] filled out a Workers Compensation – First Report of Injury of Illness form. Mr. L[Redacted] listed the date of injury/illness as 5/13/2020, and it noted that "knee gave out while making a delivery." *Exhibit 1, page 1*.

21. On May 19, 2020, Claimant was seen by Dr. Ross at Orthopedic and Spine Center of the Rockies (OCR). Dr. Ross reviewed Claimant's MRI and noted that it looked like Claimant had "a little bit of bone bruising" and a medial meniscus tear, "but no

other acute findings." As a result, he referred Claimant to a surgeon in their practice. *Ex. 6, page 43*.

22. On June 2, 2020, Claimant was seen by Dr. Beard at OCR. Dr. Beard reviewed the history of injury, Claimant's MRI, and determined the findings were:

> Consistent with bone marrow edema along the medial femoral condyle and medial tibial plateau. There is a grade 1 strain of the MCL. The cruciate ligaments are intact. There is a tear of the posterior horn of the medial meniscus, with a small joint effusion present.

Dr. Beard recommended a left knee arthroscopy to address the meniscal pathology caused by the work injury and to cure Claimant from the effects of his work injury. Dr. Beard also sought authorization for the surgery from Insurer. *Exhibit 6, pages 39 and 41*.

23. On June 17, 2020, Claimant was seen by Stephen Toth at Concentra. Mr. Toth noted they were still awaiting approval of the surgery recommended by Dr. Beard. On July 8, 2020, Claimant was again seen by Dr. Toth. At this appointment, it was noted that Claimant was still having swelling and pain in his left knee, with locking daily.

24. On July 29, 2020, Claimant was again seen by Dr. Toth. Claimant was still having problems with his knee to the point Dr. Toth could not perform a complete physical evaluation of Claimant's knee. Dr. Toth concluded that Claimant needed the surgery requested by Dr. Beard to cure Claimant from the effects of his work injury. *Exhibit 7, page 51*.

25. On August 31, 2020, Claimant was seen by Amber Payne, PA-C, at Workwell, Occupational Medicine. Ms. Payne checked "yes," that Claimant's objective findings were consistent with the history and/or work-related mechanism of injury/illness. *Exhibit 3, page 16*. Ms. Payne also noted in her report, "Causality Statement: based on the information given to me at this time, there is a > than 50% medical probability that this is a work-related injury." *Exhibit 3, page 19*.

26. On September 30, 2020, Claimant was seen by Dr. Dupper at Workwell. Dr. Dupper also checked "yes," that his objective findings were consistent with history and/or work-related mechanism of injury/illness. Dr. Duper also concluded that the incident on May 13, 2020 caused a "left knee medial femoral contusion, medial posterior horn meniscus tear and a grade 1 MCL sprain." *Exhibit 3, page 15*. Dr. Dupper also noted "The history and examination are consistent with the mechanism described as a work-related condition." *Claimant's Exhibit 3, page 12*. Since Claimant was still symptomatic, Dr. Dupper prescribed Claimant a cortisone injection for his knee to help reduce Claimant's pain and inflammation caused by the May 13, 2020 injury. *Ex. 3, page 15.*

27. On October 19, 2020, Claimant was seen by Dr. Rizza at Workwell. After evaluating Claimant, Dr. Rizza also checked "yes," that her objective findings were consistent with history and/or work related mechanism of injury/illness. *Exhibit 3, page 10*. At this visit, she gave Claimant a left knee injection.

28. On November 11, 2020, Claimant was seen by Dr. Dupper at Workwell Occupational Medicine. Again, Dr. Dupper checked “yes,” that his objective findings were consistent with history and/or work related mechanism of injury/illness. It was noted at this visit that Claimant had no improvement and was not yet ready to advance to additional activity. Dr. Dupper also noted “The history and examination are consistent with the mechanism described as a work related condition.” *Claimant’s Exhibit 3, page 5*. Dr. Dupper further noted in his report, “Causality Statement: based on the information given to me at this time, there is a > than 50% medical probability that this is a work related injury.” *Exhibit 3, page 6*.

29. On December 17, 2020, Claimant returned to Dr. Dupper at Workwell. Again, Dr. Dupper checked “yes,” that his objective findings were consistent with history and/or work-related mechanism of injury/illness. It was noted that Claimant had no improvement and was not yet ready to advance to additional activity. Dr. Dupper also noted “The history and examination are consistent with the mechanism described as a work-related condition.” *Claimant’s Exhibit 3, page 3*.

30. The ALJ finds the opinions of the medical providers at Concentra and Workwell that determined Claimant’s injury was work related to be credible and persuasive for many reasons. First, each provider obtained a similar history from Claimant. Second, each provider came up with a similar diagnosis. Third, none of the providers documented Claimant had prior left knee problems and was treating for any prior left knee problems before his employment with Employer. Fourth, Claimant could perform his job duties until the incident on May 13, 2020. As a result, their opinions are consistent with – and supported by – the medical records.

31. On January 5, 2021, Claimant underwent an independent medical examination with Carlos Cebrian, M.D., at the request of Respondents. *Ex. N, page 121.* Claimant reported that he started developing knee pain about two weeks before the May 13, 2020, incident. As noted by Claimant, his symptoms first started after he began working for Employer, and his symptoms would include pain, spasms, and the “knee locking or stiffening up.” Claimant also noted that the pain was in the center of his knee, in the region of the patella, and migrated to the medial aspect. Claimant also stated he developed increased generalized swelling and a protuberance at the back of the knee, which he had not noticed until pointed out by the physical therapist. Claimant, however, denied any prior knee issues. *Id. at 121-22*. Claimant described how he injured his knee at work. Claimant reported that on May 13, 2020, he was carrying a large box to a house and there were three stairs. He was going up one of the steps when his knee gave out and he then fell forward onto both palms and both knees. This work accident caused increased pain in the left knee. Claimant reported that before May 13, 2020 his knee had never given out and. *Id. at 122.*

32. Claimant told Dr. Cebrian his job for Employer would require him to deliver packages up to 100lbs. The most common package was pet food weighing 60lbs. He would make about 150 stops per day and deliver 250-300 packages. *Id.* at 123. Dr. Cebrian testified that he evaluated this claim assuming Claimant was carrying a 100lb package at the incident. *Cebrian Depo, pg. 34, ln. 4-10*.

33. Dr. Cebrian assessed Claimant with obesity, hyperlipidemia, left knee patellofemoral syndrome, and he agreed with most of the radiologist's findings in Claimant's May 18 MRI. But Dr. Cebrian stated that none of the findings related to Claimant's work. *Ex. N, page 131*. Dr. Cebrian highlighted the inconsistencies in the medical records with respect to Claimant's mechanism of injury, and he testified that he did not believe Claimant to be a credible historian. Dr. Cebrian found it significant that Claimant was now denying his knee would give out before May 13 despite many contrary statements in the medical records. *Ex. N, page 132; Cebrian Depo, pages 21-22, ln. 20-4.*

34. Dr. Cebrian concluded that it is not medically probable that Claimant's left knee complaints, before May 13, were causally related to Claimant's work for Employer. He cited the Medical Treatment Guidelines and noted Claimant's mechanism of injury, making 150 stops while delivering 250-300 packages per day over a two-week period, is not consistent with the development of patellofemoral syndrome. Further, the symptoms Claimant complained of during this period, such as swelling and the sensation of the knee giving out, are more consistent with a meniscal or ligament pathology. *Ex. N, pages 132-133; Cebrian Depo, pages 15-19*. Additional objective findings, such as the development of a Baker's cyst and quadriceps atrophy, are indicative of a chronic condition in Claimant's left knee before May 13 that cannot be plausibly associated with Claimant's work for Employer. *Cebrian Depo, pg. 15-19*. Dr. Cebrian testified that he would expect Claimant's condition to naturally worsen over time. *Id. at pg. 28, ln. 1-3*.

35. Dr. Cebrian testified that Claimant has never provided a plausible mechanism of injury to cause a complex meniscus tear or a MCL sprain *Id. at page 23-24; 30*. Dr. Cebrian also concluded that Claimant's alleged fall on May 13, 2020, could have caused the bone contusions, but the reason that Claimant fell on that date would have been because of his preexisting knee condition and not his duties for Employer.

In his deposition, Dr. Cebrian stated:

> So in assessing all the information, the reason his knee gave out was due to his preexisting condition that was causing his knee to give out previously, which would likely be secondary to a preexisting meniscal tear because of the Baker's cyst which indicates a chronic finding. *Cebrian Depo, page 26, ln. 17-22.*

36. Dr. Cebrian also stated that Claimant's activities on May 13, 2020, did not contribute to his fall. In other words, Dr. Cebrian stated that Claimant's activities of carrying a 60-pound package, or even a 100-pound package, did not raise the risk of Claimant's knee giving out. It was his opinion that Claimant's fall could have just as easily occurred walking at home or somewhere else and the fact that it happened at work was mere coincidence. (*Id.* at pg. 26-27)

37. The ALJ credits Dr. Cebrian's opinion to the extent that Claimant had a preexisting condition involving his knee. Such opinion is supported by the finding of a Baker's cyst and the atrophy noted by the physical therapist.

38. The ALJ does not, however, credit that portion of Dr. Cebrian's opinion where he states and concludes that Claimant's job duties of delivering a 60-pound package did not cause Claimant's knee injury and necessitate the need for medical treatment on May 13, 2020, and thereafter.

39. Dr. Cebrian's opinion that the activity and force involved in carrying a 60-pound box (or even a 100-pound box) and Claimant placing his left foot on the first step and exerting sufficient force to carry the box up the steps did not increase the risk of Claimant's knee going out seems implausible. As a result, the ALJ does not credit his opinion regarding the cause of Claimant's injury, the cause of Claimant's knee going out, and the cause of Claimant's need for medical treatment.

40. The ALJ does find Claimant's statements to medical providers and testimony at hearing to be credible and persuasive. Claimant's statements and testimony was consistent with the underlying medical records and – for the most part – consistent with the testimony of the employer witnesses. Except for the testimony about whether Claimant told co-workers he had previously been diagnosed or treated for knee arthritis, Claimant's testimony was consistent and supported by the medical record.

41. The ALJ finds that it was the force exerted by Claimant through his left knee that was required to carry the 60-pound box up the stairs on May 13, 2020 that:

    - Caused Claimant's knee injury at that specific time.
    - Caused Claimant's knee to go out at that specific time.
    - Caused Claimant to develop significant pain and swelling in his knee at that specific time and thereafter.
    - Caused Claimant's need for medical treatment at that specific time and thereafter.
    - Caused Claimant's disability at that specific time and thereafter.

42. As a result, the ALJ finds that it was not Claimant's preexisting condition that caused his knee to go out and caused him to fall. Instead, the ALJ finds that it was his work activities of trying to carry a 60-pound package of dog food up a small flight of stairs that caused him to suffer an injury and necessitated the need for medical treatment and caused his disability.

43. The ALJ also finds that before working for Employer Claimant could work and did not have significant left knee symptoms. It was not until after the injury that Claimant's knee began to swell, he developed significant pain, symptoms of his knee catching, and was unable to work. Moreover, an MRI of Claimant's knee showed that Claimant had a complex tear in the posterior horn of his medial meniscus. As a result, the surgery recommended by Dr. Beard is intended to cure Claimant from the effects of his injury – which includes addressing the meniscal pathology. Moreover, no physician has indicated that the surgery recommended by Dr. Beard is not reasonable and necessary to treat Claimant's knee symptoms and torn meniscus. As a result, the ALJ finds that the surgery recommended by Dr. Beard is reasonable,

necessary, and related to treat Claimant from the effects of the May 13, 2020 work injury.

44. Because of his work injury, Claimant was unable to perform the physical requirements of his regular job duties as a delivery truck driver and to deliver packages. As a result, Claimant has been unable to perform his regular job duties since the May 13, 2020 accident. Nor has Claimant performed his regular job duties – or other job duties - since his injury. Thus, Claimant has suffered an actual wage loss as of May 13, 2020.

45. Claimant's first day of work was April 8, 2020. The wage records submitted by Respondents establish Claimant worked between 45 and 60.50 hours per week. The records also establish that between April 8, 2020, and May 2, 2020, (24 days) Claimant earned $3,746.24. *Ex. M*. This results in a daily wage of $156.09 and a weekly wage of $1,092.65. As a result, the ALJ finds Claimant's weekly earnings averaged $1,092.65.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that he sustained a compensable work injury on May 13, 2020.

The claimant must prove by a preponderance of the evidence that her injury was proximately caused by an injury arising out of and in the course of her employment with the employer. Section 8-41-301(1)(b) & (c), C.R.S.*; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991); *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair*, *supra. City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014).

The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); *Sanchez v. Honnen Equipment Company,* W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

If the precipitating cause of an injury is a preexisting health condition that is personal to the claimant, the injury does not arise out of the employment unless a "special hazard" of the employment combines with the preexisting condition to contribute to the accident or the injuries sustained. *National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992); *Rice v. Dayton Hudson Corp.,* W.C. No. 4-386-678 (ICAO, July 29, 1999); *Alexander v. Emergency Courier Services,* W.C. No. 4-917-156-01 (ICAO, Oct. 14, 2014). This rule is based upon the rationale that, unless a special hazard of the employment increases the risk or extent of injury, an injury due to the claimant's preexisting condition lacks sufficient causal relationship to the employment to meet the arising out of employment test. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989); *Alexander v. Emergency Courier Services,* W.C. No. 4-917-156-01 (ICAO, Oct. 14, 2014)*.* In order for a condition of employment to qualify as a "special hazard" it must not be a "ubiquitous condition" generally encountered outside the workplace. *Ramsdell v. Horn, supra*; *Briggs v. Safeway,* Inc. W.C. No. 4-950-808-01 (ICAO, July 8, 2015). Conversely, if the precipitating cause of the injury involves conditions or circumstances of the employment, there is no need to prove a “special hazard” for the injury to arise out of the employment. *Cabela v. Industrial Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008); *H&H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

On May 13, 2020, while at performing his work functions, Claimant was delivering a heavy package of dog food that weighed approximately 60 pounds. To deliver the heavy package of dog food, Claimant had to exert sufficient force through his knees to carry the heavy package up the stairs. It was while exerting the additional force necessary to carry this heavy package up the stairs that Claimant injured his left knee resulting in it going out and causing Claimant to fall to the ground.

Right after the incident Claimant developed pain and swelling and could barely walk. As a result, Claimant called Employer and reported the injury. Because Claimant was unable to keep working, they had a co-worker pick Claimant up and drive him to the emergency room at UC Health.

Claimant was evaluated at the UC Health Emergency Room. He was diagnosed with a left knee strain and derangement of a left knee ligament. The differential diagnosis included “knee strain, chondromalacia patella, ligament injury, attribution of ligament strain, anterior cruciate ligament tear, PCL strain, PCL tear.” Claimant was placed in a knee immobilizer, restricted from work, and referred to the Orthopedic Center of the Rockies for further assessment and treatment.

There was testimony from co-workers indicating Claimant told them he was previously diagnosed with arthritis in his knee(s). Claimant, however, denied stating such to any of his co-workers. Even so, even if Claimant did have preexisting arthritis, the ALJ finds and concludes that it was Claimant’s job duties, delivering a heavy package, that caused Claimant’s injury, his knee to go out, and necessitated the need for medical treatment.

While medical records for treatment Claimant received after he started working for Employer indicate Claimant’s knee was “giving out”, Claimant defined that phrase as meaning that he had instability and pain within the knee and not that it was making him fall. Moreover, such symptoms were brought on by the physical demands of his job with Employer.

Respondents also submitted the opinions of Dr. Cebrian. The ALJ did credit that portion of Dr. Cebrian’s testimony where he concluded that Claimant suffered from a preexisting condition in his knee, which included a Baker’s cyst. That said, because of the physical demands of the job, and the timing of the incident in relation to carrying a 60-pound package up some stairs, the ALJ did not find his opinion that Claimant’s need for medical treatment is due to the natural progression of Claimant’s preexisting condition to be persuasive.

All of Claimant’s treating doctors believed Claimant was injured at work. This includes Dr. Baker, who saw Claimant days after the incident occurred, as well as Dr. Rizza and Dr. Dupper at Workwell Occupational Medicine. And while the specialists did not make an explicit statement about causation one way or another, Dr. Beard did seek to get authorization for the surgery through the Workers’ Compensation process.

The ALJ finds and concludes that the job demands were just too much for Claimant's knee. The requirement to deliver 150-250 packages per day, many of which weighed between 60 and 100 pounds, was too much for Claimant's knee to bare. As a result, the ALJ finds and concludes Claimant established by a preponderance of the evidence that he suffered a compensable injury to his left knee on May 13, 2020 while carrying a 60-pound package of dog food up some stairs.

II. Whether Claimant established by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

Immediately after the accident, Claimant was taken to the emergency room at UC Health. Claimant was evaluated, provided medical treatment, and directed to seek additional medical treatment due the injury to his knee.

After treating at UC Health, Claimant started treating at Workwell. The providers at Workwell evaluated and assessed Claimant's knee injury. The treatment recommendations included an MRI and referral to an orthopedic surgeon to treat Claimant's knee injury.

As a result, the ALJ finds and concludes that Claimant established by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment for his left knee.

III. Whether Claimant established by a preponderance of the evidence that the surgery recommended by Dr. Beard is reasonable, necessary, and related to his May 13, 2020, work injury.

As found, Claimant suffered a compensable injury to his knee. Because of his injury, Claimant suffers from pain, swelling, catching, and a torn meniscus. As a result, Dr. Beard recommended - and sought authorization for - arthroscopic surgery to "scope" Claimant's knee and perform a partial meniscectomy. As found, the surgery recommended by Dr. Beard is to cure Claimant from the direct effects — symptoms — caused by his work injury and repair the meniscal pathology which was caused by Claimant's work injury. There was no credible and persuasive evidence submitted by Respondents establishing that the surgery recommended by Dr. Beard is not reasonable and necessary to cure Claimant from the effects of his knee injury.

As a result, the ALJ finds and concludes Claimant established by a preponderance of the evidence that the surgery recommended by Dr. Beard is reasonable, necessary, and related to his work injury.

IV. Whether Claimant established by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits from May 13, 2020 and ongoing.

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*.

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

As found, Claimant has been unable to perform his regular job duties since the May 13, 2020 work accident involving his left knee. Plus, Claimant has not returned to employment since his work accident. As a result, Claimant has suffered an actual wage loss as of May 13, 2020. Therefore, the ALJ finds and concludes Claimant has established by a preponderance of the evidence that he is entitled to temporary total disability benefits as of May 14, 2020.

V. Determination of Claimant's average weekly wage (AWW).

Section 8-42-102(2) requires the ALJ to base the claimant's Average Weekly Wage (AWW) on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

As found, Claimant's first day of work was April 8, 2020. The wage records submitted by Respondents established Claimant worked between 45 and 60.50 hours per week. The records also established that between April 8, 2020, and May 2, 2020, (24 days) Claimant earned $3,746.24. This results in a daily wage of $156.09 and a weekly wage of $1,092.65. As a result, the ALJ finds and concludes that Claimant's average weekly wage is $1,092.65.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury on May 13, 2020.

2. Claimant is entitled to reasonable and necessary medical treatment to cure him from the effects of his left knee injury.

3. Respondents shall pay for the left knee surgery recommended by Dr. Beard.

4. Claimant's average weekly wage is $1,092.65.

5. Respondents shall pay Claimant temporary total disability benefits as of May 14, 2020, based on an average weekly wage of $1,092.65.

Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 8, 2021.

/s/ Glen B. Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

1. Whether Respondents proved by a preponderance of the evidence sufficient grounds to withdraw their General Admission of Liability.

2. Did Claimant prove, by a preponderance of the evidence, an EMG study requested by John Sacha, M.D., is reasonable, necessary and related to Claimant's alleged work injury on January 3, 2020.

FINDINGS OF FACT

1. Claimant is a 43-year old man who was employed by Employer on January 3, 2020. Claimant began working for employer in approximately December 2019.

2. Prior to his employment with Employer, Claimant had a history of lower back pain, dating to at least 2016. Between March 2016 and approximately October 2018, Claimant sought treatment for chronic lower back pain and regularly took Percocet for lower back pain. During this time frame, Claimant indicated that his lower back pain was the result of a prior work injury and also the result of a motor vehicle accident. (Ex. C & F).

3. In December 2018, Claimant was seen at Medical Center of Aurora for abdominal and groin pain on the right side. (Ex. F). In March 2018, Claimant reported left sided groin pain radiating into his left thigh and back. Claimant reported to Medical Center of Aurora physicians that he believed the abdominal pain was due to lifting in the course of his employment with a different employer. (Ex F). Over the course of the next six months, through September 25, 2019, Claimant was evaluated multiple times at Medical Center of Aurora and Cornerstone Family Medicine for bilateral groin pain, left treater than right. (Ex. D & F). Claimant's groin pain was variously diagnosed as inguinal hernia and inguinal lymphadenopathy. In June 2019, Claimant noted that that his groin pain had improved with antibiotics. In June and July 2019, Claimant received physical therapy at CACC Physical Therapy for bilateral hip pain, diagnosed as iliopsoas syndrome. (Ex. E and D).

4. On September 23, 2019, Claimant was seen at Cornerstone Family Medicine, and reported that he was experiencing bilateral groin pain that had been progressive since December of 2018. Claimant reported that he had bilateral hip pain radiating to his groin and associated with bilateral back pain. (Ex. D).

5. On January 3, 2020, while Claimant was working in the freezer section for Employer, Claimant was attempting to pull a heavy pallet jack from the freezer. While pulling the pallet jack, Claimant experienced a sudden sharp pain in his lower stomach. (Ex. K).

6. On January 3, 2020, Claimant reported to Employer that he sustained an abdominal injury arising out of the course of his employment with Employer when pulling a frozen pallet onto the salesfloor. (Ex. A). Employer filed an Employer's First Report of Injury (FROI) with the Division on or about January 3, 2020. (Ex. A).

7. On January 3, 2020, Claimant was seen at the Medical Center of Aurora emergency department, and reported he had pulled hard on a pallet at work and felt a sudden pain in his left groin and a small area of swelling in his left groin with a tender node. Claimant indicated his previous left groin symptoms has resolved approximately three months earlier, and that the symptoms returned that day after pulling the pallet while working for Employer. Examination of Claimant's groin revealed a small tender node in the left groin, but no swelling or hernia. A CT of Claimant's abdomen was performed and was negative for hernia. The treating physician, Dr. Alan Como, did not find any sign of an inguinal or abdominal wall hernia. (Ex. F).

8. On January 6, 2020, Claimant was seen at Concentra. Claimant reported left groin pain, swelling and tenderness. Claimant reported pulling a pallet and feeling a sudden and sharp pain in his left groin that made his left leg numb. Deana Halat, NP, diagnosed Claimant with an abdominal wall strain and groin swelling. Ms. Halat was unable to make a determination as to whether Claimant's lymph node groin swelling or abdominal wall strain was causally related to Claimant's work. On January 8, 2020, Ms. Halat opined that Claimant's swollen groin lymph nodes were not work-related. (Ex. G).

9. Over the course of the following months, Claimant returned to Concentra for evaluation of his groin pain and was primarily seen by Sophia Rosebrook, D.O. Claimant attended 17 visits at Concentra between January 6, 2020 and September 3, 2020, and was assessed and treated for an abdominal wall or groin injury, diagnosed as abdominal wall strain and groin swelling. On February 12, 2020, Dr. Rosebrook noted that Claimant's diagnosis was "severe groin tear that does not qualify for surgical repair." With the exception of three dates (February 28, 2020, March 13, 2020, and March 27, 2020), Claimant did not report experiencing back pain. On those dates "leg pain and back pain" were noted in the medical records "review of systems" section, but no other discussion or evaluation was documented. (Ex. E).

10. On May 21, 2020, Dr. Rosebrook noted that Claimant's symptoms had not improved as they should for a classic groin tear/strain. (Ex. G).

11. On September 3, 2020, Claimant was seen by general surgeon John Weaver, M.D., also at Concentra for ongoing pelvic pain.. At that point in time, Claimant reported experiencing back pain that had started over the previous three weeks. Dr. Weaver indicated that he did not believe the Claimant's pain was the result of an inguinal hernia, and noted that multiple imaging studies and physical examinations did not show any evidence of a hernia. (Ex. G).

12. On September 17, 2020, Claimant saw Tanya Manning, P.A., at Concentra. Ms. Manning noted that Claimant had evidence of lymphadenopathy on MRI that would not be work related. Ms. Manning also noted that because Claimant had not presented with

back pain, she did not feel an orthopedic referral was appropriate. Ms. Manning also noted that Claimant had no pathology consistent with his pain presentation. Ms. Manning referred Claimant to John Sacha, M.D., for evaluation and “possible closure of case,” including a possible MMI determination. (Ex. G).

13. On September 23, 2020, Carlos Cebrian, M.D., issued a report regarding a record review he performed regarding Claimant. Dr. Cebrian noted that Claimant had a prior known history of inguinal lymphadenopathy and a history of similar groin pain for approximately one year prior to his accident. Dr. Cebrian opined that Claimant’s groin pain was not causally related to his work for Employer nor was a preexisting condition aggravated. Dr. Cebrian opined that there was no objective evidence to support a work-related condition which would lead to complaints of ongoing and increasing pain over 8 months. He further opined that there was not any claim-related condition to support an acute injury or aggravation of chronic back pain or hip osteoarthritis. (Ex. J).

14. Dr. Cebrian testified at hearing by deposition, which was not attended by Claimant, and testified consistent with the opinions stated in his September 23, 2020 report. Dr. Cebrian testified that in his opinion, Claimant’s groin pain was not related to the January 3, 2020 work incident because the mechanism of injury was very minor and that pulling a pallet was not a “significant mechanism.” Neither Dr. Cebrian’s testimony nor his reports, which total 54 pages, indicate that Dr. Cebrian determined the weight of the pallet or the way in which Claimant pulled the pallet. The ALJ finds Dr. Cebrian’s opinion that Claimant sustained “no injury,” to lack credibility. The ALJ does, however, find Dr. Cebrian’s opinions that Claimant did not sustain a hernia, lymphadenopathy, hip injury or lower back injury credible.

15. Dr. Cebrian also testified that Dr. Sacha’s request for authorization of an EMG was not reasonable, necessary or related to the events of January 3, 2020. This was primarily because, in his opinion, it was not medically probable that Claimant suffered a back injury resulting in radiculopathy on January 2, 2020. The ALJ finds Dr. Cebrian’s testimony credible on this issue.

16. Also on September 23, 2020, Respondents’ counsel wrote to Dr. Rosebrook requesting responses to questions regarding maximum medical improvement (MMI) and impairment rating. In the letter, Respondents’ counsel referenced Dr. Cebrian’s opinions and noted that Claimant had similar groin complaints for approximately one-year prior to January 3, 2020. Ms. Halat responded that Claimant should be at MMI on October 1, 2020 and that he was scheduled for an impairment rating with John Sacha, M.D. for September 29, 2020. (Ex. G).

17. On September 28, 2020, Claimant was seen by John Sacha, M.D., at Concentra. Dr. Sacha. Dr. Sacha found that Claimant had occasional low back pain and occasional anterior thigh numbness and tingling. Dr. Sacha opined that it was unclear whether Claimant’s ongoing symptoms were related to a work injury. To evaluate Claimant’s symptoms, Dr. Sacha recommended that Claimant undergo a course of oral steroids and electrodiagnostic testing to determine whether any further care was indicated. Dr. Sacha declined to place Claimant at MMI until after these tests were performed. (Ex. G).

18. On November 3, 2020, Respondents filed a General Admission of Liability (GAL), admitting for medical benefits an temporary partial disability benefits. (Ex. B).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

WITHDRAWAL OF ADMISSION OF LIABILITY - COMPENSABILITY

When respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for the modification. §8-43-201(1), C.R.S.; *see also Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (ICAO, June

5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (ICAO, July 8, 2011). Section 8-43-201(1), C.R.S., provides, in pertinent part, that “a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification.” The amendment to §8-43-201(1), C.R.S. placed the burden on the respondents and made a withdrawal the procedural equivalent of a reopening. *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838-01 (ICAO, Oct. 1, 2013). Respondents must, therefore, prove by a preponderance of the evidence that the Claimant did not suffer a compensable injury as defined under Colorado law. §8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979).

A compensable injury is one that arises out of the course and scope of employment with one’s employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires that the injury has its “origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee’s service to the employer.” *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991). There must be a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990); *Enriquez v.* Americold D/B/A Atlas Logistics, W.C. No. 4-960-513-01, (ICAO, Oct. 2, 2015)

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Atsepoyi v. Kohl’s Department Stores*, W.C. No. 5-020-962-01, (ICAO, Oct. 30, 2017). The question of whether the requisite causal connection exists is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). *Fuller v. Marilyn Hickey Ministries, Inc., W.C. No. 4-588-675, (*ICAO, Sept. 1, 2006*).*

Respondents’ request to withdraw their General Admission of Liability is based on the assertion that Claimant did not sustain a compensable injury on January 3, 2020. Respondents have failed to establish by a preponderance of the evidence that Claimant did not sustain a compensable work injury on January 3, 2020, and therefore have not established a basis for withdrawal of its November 3, 2020 General Admission of Liability. Claimant’s reports to Insurer and his various health care providers, were consistent in that Claimant reported experiencing pain in his lower abdomen when pulling a heavy pallet jack from Employer’s freezer which resulted in groin pain and an abdominal wall strain. Respondents have established that Claimant did not sustain a hernia, inguinal lymphadenopathy, back or hip injury as the result of his January 3, 2020 work incident. However, the medical records indicate Claimant did sustain an abdominal wall strain as the result of his January 2, 2020 work incident. Although Claimant had a significant history of groin pain in the year prior to January 3, 2020, nothing in the record demonstrates that Claimant did not sustain an abdominal wall strain and/or aggravate a preexisting condition on January 3, 2020 or that the January 3, 2020 incident did not occur as reported.

In addition, Respondents were aware that Claimant had an approximately one-year history of groin pain by at least September 23, 2020, as demonstrated by Dr. Cebrian’s report and Respondents’ letter to Dr. Rosebrook, in which Claimant’s history of a pre-existing condition was referenced. Nonetheless, Respondents filed their General Admission of Liability on November 3, 2020 with this information available to them. The ALJ concludes that the General Admission of Liability was not improvidently filed.

MEDICAL BENEFITS

A claimant is entitled to medical benefits that are reasonably necessary to cure or relieve the effects of the industrial injury or to maintain his condition at MMI. *See* § 8-42-101(1), C.R.S. 2003; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office, supra*. Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003).

Claimant has failed to establish by a preponderance of the evidence that the EMG requested by Dr. Sacha is reasonable, necessary or related to his work injury of January 3, 2020. As found, Claimant sustained an injury to his abdominal area which likely aggravated a pre-existing groin condition. However, the EMG requested by Dr. Sacha is intended to evaluate Claimant’s back and hip pain. As found, Claimant did not complain of back pain or hip pain related to the January 3, 2020 work injury until significant time had passed after the initial injury. Aside from three cursory mentions of back pain in February and March 2020, Claimant did not complain of back pain again until seeing Dr. Sacha in September 2020, and then noted that the back pain began three weeks earlier. Similarly, Claimant did not complain of hip pain until June 4, 2020, five months after his initial injury. Because the ALJ finds that Claimant’s back and hip conditions are not caused by a work-related injury nor were they aggravated by his work-injury, evaluation and treatment of these conditions is not reasonable, necessary or related to his January 3, 2020 work injury.

ORDER

It is therefore ordered that:

1. Respondents' request to withdraw their November 3, 2020 General Admission of Liability is denied and dismissed.

2. Claimant's request for authorization of an EMG recommended by Dr. Sacha is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 8, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-130-031-001

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he suffered a compensable injury on October 15, 2019.

II. Whether Claimant established by a preponderance of the evidence that medical treatment, including proposed surgery from Dr. Hatzidakis, is reasonable, necessary, and related.

STIPULATIONS

I. Claimant's Average Weekly Wage is $1,022.56.

II. If compensable, Drs. Ogrodnick, Hatzidakis and Sieber are Claimant's authorized treating providers.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant, Luis G[Redacted] is a 39-year-old male. His primary language is Spanish.
2. Claimant was employed by Employer, [Redacted] as an oiler. This involves doing field maintenance on vehicles.
3. Claimant has no history of injury, treatment, pain or complaints in and about his left shoulder joint.
4. On October 15, 2019, while working for Employer, Claimant was involved in a motor vehicle collision while traveling from the Employer's shop to the location where the equipment he needed to service was located.
5. The incident occurred at the intersection of East 120th Avenue and Pennsylvania Street. At the time of the accident, Claimant was driving the Employer's 2007 Chevrolet C/K 3500 service truck.
6. The accident occurred when Claimant, who was wearing his seatbelt, was rear-ended by another driver - who was ultimately cited for driving under the influence.
7. The force of the collision caused Claimant's entire body to be thrown forward into the seatbelt. Immediately after the impact, Claimant "almost hit the windshield and struck against the steering wheel." Immediately after the impact, he also felt the force and pressure of the seatbelt around his left shoulder - which the seatbelt went across.
8. The service truck did not appear to be hit in an area that contained any absorption zones that could have absorbed the force from the vehicle that rear-ended Claimant's service truck. Instead, it looks like the force from the impact was directed

directly into the frame of the vehicle. This caused the bumper to curl under the vehicle and also resulted in bending the frame of Claimant's service truck. The amount of force of the accident also broke the seatbelt Claimant was wearing. According to Claimant, after the accident, the portion of the seatbelt where you click the seatbelt was locked and no longer worked. (Claimant's Exhibits, pp. 12-28; Hearing Testimony)

9. On October 15, 2019, the day of the accident, Claimant saw Dr. Ogrodnick. Claimant reported he was rear-ended earlier that morning and that he was wearing his seatbelt. He told Dr. Ogrodnick that he first noticed some mild chest discomfort on the scene which had resolved. He also said that he had some burning over the lower sternum which developed about 45 minutes before the appointment. It was noted in the report from this visit that Claimant felt good, but that his boss insisted he present for medical attention. As for preexisting medical conditions, it was noted that Claimant suffers from psoriatic arthritis for which he takes Humira. At this appointment, Claimant believed he could return to full duty work. On examination, Claimant had no back pain, joint pain, myalgias or neck pain. Claimant had full fluent and pain free shoulder range of motion and could perform multiple push-ups against the exam table. He had no change in chest symptoms with repeated squats. He was tender just lateral to the left sternum costal junction. The sternum was not tender, and he had no abrasions. He was assessed only with a contusion of the chest wall. Dr. Ogrodnick felt Claimant's symptoms were likely muscular in etiology and that Claimant could use NSAIDs for pain. At the end of the appointment, Claimant was released to full duty, and told to return in three days for a follow up evaluation.

10. On October 18, 2019, Claimant returned to Dr. Ogrodnick and had increasing symptoms. At this appointment, Claimant stated that although his chest pain went away after his last visit, he eventually developed right sided neck pain and left sided upper back pain. As further noted by Dr. Ogrodnick, this left sided upper back pain was also accompanied with tenderness between Claimant's left scapula and his thoracic spine. (Ex. B, pp. 68-69.) Despite these findings, Dr. Ogrodnick also noted Claimant had full, fluent pain-free bilateral shoulder abduction and full rotator cuff strength without impingement. His assessment at that time was (i) contusion of chest wall, (ii) muscular neck strain, and (iii) thoracic myofascial strain. As before, Claimant was returned to full duty. Claimant said that he was confident he would make a full recovery but wanted to make one more appointment just in case. As a result, Claimant was scheduled to return on or about November 1, 2019. (Ex. B, pp. 68-69.)

11. Claimant did not attend the November 1, 2019, appointment. However, because of ongoing and progressing symptoms, Claimant called to obtain another follow up appointment. Although it is not clear from the record when he called to make a follow up appointment with Dr. Ogrodnick at SCLH Medical Group – they could not schedule an appointment for Claimant to be seen until December 20, 2019.

12. On December 20, 2019, Claimant returned for a visit with Andrew Hildner, PA-C at SCLH Medical Group. This was only his third medical appointment for his work accident and the first appointment where the medical records note that an interpreter

was used during the appointment. At this appointment, Claimant reported that he "still" had muscular tightness, tense, and aching pain in his neck, upper back, left shoulder, and tender anterior shoulder. Claimant also noted his left shoulder as an area where he experienced pain on the pain diagram. PA Hildner referred the Claimant for six sessions of physical therapy. He also noted, "orders placed are related, reasonable, and necessary to treat/evaluate the worker's comp injury, and within Colorado Div of Worker's Comp guidelines." (Claimant's Exhibit 3, pp. 36-37.)

13. On January 7, 2020, Claimant returned for a follow up appointment. At this appointment, PA Hildner requested "imaging due to concern for permanent damage that may cause problems in the future." PA Hildner referred the Claimant to massage therapy. If the Claimant did not feel improvement, he would refer him for a Magnetic Resonance Imaging (MRI). (Claimant's Exhibit 3, p. 55)

14. On January 28, 2020, Claimant presented to Dr. Ogrodnick. Claimant reported his pain as "it used to be throbbing, now pain…before it hurt to raise my arm now it hurts all the time." He also reported soreness when having to bend over or kneel while at work. Dr. Ogrodnick ordered an MRI of Claimant's left shoulder. (Claimant's Exhibit 3, 75-77)

15. On February 3, 2020, Claimant presented for a follow up appointment with Dr. Ogrodnick. At this appointment, Dr. Ogrodnick placed Claimant on modified duty. (Claimant's Exhibit 3, p. 82)

16. On February 6, 2020, Claimant underwent an MRI of his left shoulder. The MRI report reflects Claimant has an interstitial tear of the distal subscapularis tendon with subacromial impingement. (Claimant's Exhibit 5, pp. 211-212)

17. On February 20, 2020, Claimant presented to PA Hildner. Based on the MRI findings, PA Hildner referred Claimant to Armodios Hatzidakis, M.D. for an orthopedic surgical consultation. (Claimant's Exhibit 3, p. 88)

18. On March 17, 2020, Claimant presented to Dr. Hatzidakis. Dr. Hatzidakis performed a physical examination and reviewed the MRI of Claimant's left shoulder. Dr. Hatzidakis discussed conservative and surgical management. The surgery would include, "an arthroscopic rotator cuff repair, debridement with subacromial decompression, and biceps tenodesis." Furthermore, Dr. Hatzidakis discussed conservative measures, which included, "anti-inflammatories, physical therapy, and cortisone injections." Claimant chose a cortisone injection. Dr. Hatzidakis performed the cortisone injection and instructed the Claimant to return in two months to discuss options of any arthroscopic surgery. (Claimant's Exhibit 4, pp. 199-200).

19. On May 28, 2020, Claimant returned to Dr. Hatzidakis for a follow up appointment. Dr. Hatzidakis noted the corticosteroid injection provided the Claimant relief for three weeks of 20% to 30% relief, but Claimant's pain increased after the injection. Claimant reported his pain five out of ten. Claimant reported conservative therapy was not improving with his regimen. It was also noted that Claimant had, "seven months of conservative care with persistent symptoms and has become a reasonable candidate for arthroscopic surgical management…an arthroscopic evaluation of the glenohumeral joint and subacromial space likely subacromial

decompression, possible rotator cuff repair and long head of biceps tenodesis, if required." (Claimant's Exhibit 4, p. 206)

20. Dr. Hatzidakis reviewed the transcription and images of the Claimant's MRI of his left shoulder. (Deposition Transcription, Armodios Hatzidakis, M.D., p. 16) Dr. Hatzidakis testified Claimant's MRI of his shoulder presented with, "bony structure was good, the joint space was normal, meaning there wasn't severe arthritis in the joint that required a joint replacement. There was nothing really abnormal on the x-rays, no fracture or evidence of dislocation or other problems." (Deposition Transcription, Armodios Hatzidakis, M.D., p. 15)

21. Dr. Hatzidakis agreed with the findings set forth in the MRI report, however, he opined, "there was a little more damage to upper subscapularis, and perhaps even a bit of what's called subluxation or abnormality of the biceps that results from the upper part of the tendon having degeneration or a tear." (*Id*., p. 16)

22. Dr. Hatzidakis performed multiple tests on the Claimant to test his level of pain and assist with his diagnosis. Based on his tests, Dr. Hatzidakis found the Claimant, "had some pain with resisted abduction, or lifting the arm, pain with the hand rotated out or in, keeping the arm up, a positive painful arc lifting the left shoulder." Dr. Hatzidakis also noted Claimant had positive impingement and tenderness over his bicep. (*Id.*, p. 21)

23. Dr. Hatzidakis also opined there is a possibility of tendinosis in the Claimant's left shoulder. (*Id*., p. 13)

24. Dr. Hatzidakis concluded Claimant's left shoulder strain was secondary to the motor vehicle collision the Claimant sustained on October 15, 2019. Dr. Hatzidakis also stated he believes – based on the motor vehicle collision - the Claimant has a partial-thickness rotator cuff tear to the subscapularis, which may involve other parts of the rotator cuff as well. (*Id.*, p. 18)

25. Dr. Hatzidakis surmised surgery is the last option for the Claimant since he has exhausted conservative care. Dr. Hatzidakis concluded:

> [I]f a 38-year-old patient injures their shoulder and they don't get better,… during this long duration of time…so that's 13 months of symptoms, so if he still has the same symptoms now, in most cases, you find something that requires treatment. You find a partial tear, you find -- you find pathology that requires treatment to get better, and in young, active laborer-workers, such as this patient, that's really the only way to get them back to work, typically. Because if they've had this kind of dysfunction this long, they're not going to get back unless you get them back on track with the surgery. (*Id.*, p. 28)

26. The ALJ finds Dr. Hatzidakis' opinions to be credible and persuasive for several reasons. First, Dr. Hatzidakis is an orthopedic surgeon – specializing in shoulders. His education and training include a shoulder and upper extremity fellowship in San Francisco and another year of shoulder fellowship training in Europe. At the

completion of his fellowship in Europe, he started practicing in Denver 17 years ago. Second, he has been board certified in orthopedic surgery for about 17 years and is Level II accredited. Lastly, he spends 3-4 days per week in the operating room performing surgery - and 95% of those surgeries are shoulder surgeries. He was qualified as an expert during his deposition. (Deposition of Dr. Hatzidakis) As a result, the court finds Dr. Hatzidakis to be an expert in the area of orthopedics – with a specialty in the diagnosis and surgical treatment of shoulder conditions.

27. Moreover, Dr. Hatzidakis is Claimant's authorized treating orthopedic surgeon. Most notably, Dr. Hatzidakis testified that a 2-4-week delay in symptoms becoming noticeable is not inconsistent for a shoulder injury involving a subtle or small tear. And Claimant's MRI reveals what is likely a small interstitial tear of the distal subscapularis tendon of his rotator cuff. (Exhibit C.) According to Dr. Hatzidakis, some shoulder injuries just take a while to "declare themselves" and become symptomatic. He also testified that Claimant did have symptoms – peripherally around the shoulder – that were consistent with Claimant suffering a shoulder injury during the accident. For example, Claimant had pain around the scapula. In the end, he ultimately concluded that based on the evidence in front of him, other than the motor vehicle accident, he could not determine any other cause for Claimant's shoulder complaints and need for surgery. As a result, he concluded that the motor vehicle accident is the most likely cause of Claimant's shoulder injury and need for surgery.

28. Again, the ALJ also finds Dr. Hatzidakis' opinions regarding causation to be credible and persuasive for many reasons. First, Dr. Hatzidakis has devoted his entire medical career to diagnosing and repairing shoulder injuries. Second, Dr. Hatzidakis' testimony that some shoulder injuries involving subtle tears take a while to become symptomatic seems plausible because such opinion is supported by Claimant's testimony as well as the MRI report that demonstrated what looks like a small interstitial tear of the distal subscapularis tendon. Third, Claimant did complain of scapular pain shortly after the accident. While not the exact location of pathology found on the MRI, and the ultimate location of his primary symptoms, it is consistent with an injury to Claimant's shoulder girdle. Fourth, the timing (or temporal relationship) between the accident and the development of Claimant's symptoms – within 2-4 weeks of the accident - is medically probable based on the experience of Dr. Hatzidakis and based on Claimant's MRI findings. Fifth, there is no credible and persuasive evidence Claimant had shoulder pain and symptoms before the motor vehicle accident and there is no credible and persuasive evidence that Claimant developed shoulder pain and symptoms based on an accident or incident that occurred after the motor vehicle accident.

29. On April 2, 2020, Claimant presented to Dr. Vanderhorst for a tele-health visit. Claimant reported gradual improvement of his symptoms and reported decreased pain post injection. Claimant reported soreness with flexion and overhead activities and weakness with extended arm or overhead activities. Dr. Vanderhorst placed Claimant on five-to-ten-pound restrictions. (Claimant's Exhibit 3, pp. 110-111)

30. On April 17, 2020, Claimant returned for a follow up appointment with PA Hildner. Claimant reported less pain in his left shoulder. Claimant further reported "doing

better with sleep and less pain turning over." PA Hildner provided Claimant a thirty-pound restriction. (Claimants Exhibit 3, pp. 113-117)

31. On May 8, 2020, Claimant presented to PA Hildner and he also concluded that Claimant, "is not making any progress, may benefit from surgery." (Claimant's Exhibit 3, p. 126)

32. On March 20, 2020, Claimant underwent Respondent's Independent Medical Examination with Michael Striplin, M.D. Dr. Striplin reported Claimant, "suffered a chest wall contusion, most likely related to his use of a seat belt, and possibly suffered a mild cervical strain and thoracic myofascial pain as well." (Claimant's Exhibits, p. 218)

33. Dr. Striplin stated in his report that:

> The mechanism of injury associated with the motor vehicle accident, on 10/15/2019, and the delay in onset of left shoulder pain for at least two weeks after the accident, do not support a contention that the accident caused, or substantively aggravated, the left shoulder pathology noted on the MRI scan or that the accident resulted in an injury to the left shoulder.
>
> In summary, it appears this patient suffered a chest wall contusion, and possibly a cervical strain and thoracic myofascial pain, related to the motor vehicle accident on 10/15/2019, with a full recovery. It cannot be determined that the patients left shoulder pain, and pathology noted on the MRI scan, are causally related to the motor vehicle accident.
>
> (Exhibit 1, p. 6.)

34. Dr. Striplin also testified via deposition. Dr. Striplin is board certified in occupational medicine and Level II accredited. Dr. Striplin has been practicing since 1976 and has treated hundreds of patients with shoulder conditions. He was also qualified as an expert during his deposition and the court also finds him to be qualified as an expert in the area of occupational medicine. In his report and deposition, Dr. Striplin concluded that Claimant's shoulder condition and need for surgery is unrelated to the motor vehicle accident. The basis of his opinion is two-fold. The first basis is that the delayed onset of symptoms is inconsistent with the injury being caused by the motor vehicle accident. The second basis is that rear-end accidents generally do not cause shoulder problems – unless the accident results in a rollover accident in which the occupant is jostled around and possibly supported upside down by a seat belt when the car rolled over. He also concluded that the surgery recommended by Dr. Hatzidakis is to address the pathology noted on the MRI and that the pathology noted on the MRI was not caused by the motor vehicle accident or aggravated by the motor vehicle accident. Again, the primary basis for this conclusion is the timing of the onset of Claimant's shoulder symptoms. Overall, the ALJ does not find Dr. Striplin's opinions to be as persuasive as Dr. Hatzidakis'

opinions on causation since Dr. Striplin is not a surgeon and has not evaluated and surgically repaired shoulder injuries as has Dr. Hatzidakis.

35. On September 1, 2020, Claimant underwent a Claimant's Independent Medical Examination with Mark Winslow, D.O. Dr. Winslow determined Claimant's complaints and injury resulted from the October 15, 2019 motor vehicle collision. Dr. Winslow also reported, "there is evidence in the medical literature supporting the fact that impingement syndrome and shoulder pain are reported to occur in patients following MVA injuries. In fact, according to one study in the Journal of Orthopedic Surgery and Research 2008, 3:25 the diagnosis is, frequently overlooked and shoulder pain is attributed to pain radiating from the neck resulting in long delays before treatment. Direct seatbelt trauma to the shoulder is one possible explanation for this etiology, according to this report. Meantime to diagnosis in some of the cases in this study was 8.8 months with a range of 2-20 months…treatable condition is diagnosed late or not at all due to the lack of awareness of the association between neck injury and subacromial impingement." Dr. Winslow also opined the October 15, 2020 motor vehicle accident was, "the cause of aggravation of this patient's underlying (possible) and previous to this injury asymptomatic shoulder condition." (Claimant's Exhibit 8, pp. 227-228)

36. The ALJ also finds Claimant's testimony to be credible and persuasive.

37. Based on the totality of the evidence, which includes the credible and persuasive testimony of Claimant and Dr. Hatzidakis, the ALJ finds and concludes Claimant suffered a compensable injury on October 15, 2019 due to the motor vehicle accident. The ALJ also finds this includes an injury to Claimant's left shoulder.

38. The ALJ also finds that the work injury caused pain and disability for which Claimant required medical treatment. The ALJ finds that the medical treatment provided to date has been reasonable and necessary to evaluate Claimant's injury, determine the extent of his injury, and to determine the type of treatment that is reasonable and necessary to cure Claimant from the effects of his work injury.

39. The ALJ further finds that Claimant's shoulder injury has caused pain and disability which has failed to improve with conservative treatment. The ALJ also finds that because Claimant has failed to improve with conservative treatment, the surgery recommended by Dr. Hatzidakis is the next reasonable and necessary step to cure Claimant from the effects of his work injury. As a result, the ALJ find that the surgery recommended by Dr. Hatzidakis is reasonable and necessary, to cure Claimant from the effects of his work injury. Thus, the need for surgery also relates to the work accident.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that he suffered a compensable injury on October 15, 2019.

A claimant is required to prove by a preponderance of the evidence that at the time of the alleged injury he was performing service arising out of and in the course of employment and the alleged injury or occupational disease was proximately caused by the performance of such service. §8-41-301(1)(b)&(c), C.R.S. The Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." §8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Mailand v. PSC Industrial Outsourcing LP*, WC 4-898-391-01, (ICAO, Aug. 25, 2014).

As found, Claimant was involved in a work-related motor vehicle accident on October 15, 2019. Although Claimant presented for medical treatment on October 15, 2019, he did not have the immediate onset of left shoulder pain. That said, when Claimant returned for medical treatment on October 18, 2019, the emergence of shoulder pain was staring to develop. As noted by Dr. Ogrodnick, Claimant had left sided upper back pain that was also accompanied with tenderness between Claimant's left scapula and his thoracic spine. Although Claimant cancelled his November 1, 2019, appointment, he rescheduled a medical appointment based on worsening left shoulder symptoms. As found, on December 20, 2019, Claimant returned for medical treatment and was seen by PA Hildner. This was only his third medical appointment for his work accident and the first appointment where the medical records note that an interpreter was used during the appointment. At this appointment, Claimant reported that he "still" had muscular tightness, tense, and aching pain in his neck, upper back, left shoulder, and tender anterior shoulder. Claimant also noted his left shoulder as an area where he experienced pain on the pain diagram.

Claimant underwent an MRI that showed an interstitial tear of the distal subscapularis tendon with subacromial impingement. After that, Claimant was referred to Dr. Hatzidakis, an orthopedic surgeon, for evaluation and treatment. Dr. Hatzidakis evaluated Claimant and discussed conservative treatment options, such as a cortisone injection and surgical options. Claimant first chose conservative treatment and underwent a cortisone injection. When the cortisone injection failed to provide relief, Dr. Hatzidakis recommended surgery.

Dr. Hatzidakis testified via deposition. As explained above, the ALJ found his testimony to be credible and persuasive. Dr. Hatzidakis credibly and persuasively concluded that Claimant suffered a shoulder injury during the accident and that the delay in onset of symptoms of 2-4 weeks is consistent with some shoulder injuries that involve subtle tears like Claimant's.

As a result, the ALJ finds and concludes Claimant established by a preponderance of the evidence that he suffered a compensable injury to his left shoulder.

II. Whether Claimant established by a preponderance of the evidence that medical treatment, including proposed surgery from Dr. Hatzidakis, is reasonable, necessary, and related.

Respondents are liable for medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. §8-42-101(1)(a), C.R.S. Whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* WC 4-835-556-01 (ICAO, Nov. 15, 2012).

As found and concluded, Claimant suffered a compensable injury involving his left shoulder. As also found, the work injury caused pain and disability for which Claimant required medical treatment. The medical treatment provided to date has been reasonable and necessary to evaluate Claimant's injury, determine the extent of his injury, and to determine the type of treatment that is reasonable and necessary to cure Claimant from the effects of his work injury.

Claimant underwent an MRI that showed an interstitial tear of the distal subscapularis tendon with subacromial impingement. After that, Claimant was referred to Dr. Hatzidakis, an orthopedic surgeon, for evaluation and treatment. Dr. Hatzidakis evaluated Claimant and discussed conservative treatment options, such as a cortisone injection, and surgical options. Claimant first chose conservative treatment and underwent a cortisone injection. When the cortisone injection failed to provide relief, Dr. Hatzidakis recommended surgery. As for the need for surgery, Dr. Hatzidakis credibly and persuasively stated and concluded that surgery is the last option for Claimant since he has exhausted conservative care and Claimant still has symptoms - and associated disability. Dr. Hatzidakis concluded that:

> [I]f a 38-year-old patient injures their shoulder and they don't get better,… during this long duration of time…so that's 13 months of symptoms, so if he still has the same symptoms now, in most cases, you find something that requires treatment.· You find a partial tear, you find··- you find pathology that requires treatment to get better, and in young, active laborer-workers, such as this patient, that's really the only way to get them back to work, typically.· Because if they've had this kind of dysfunction this long, they're not going to get back unless you get them back on track with the surgery.

As a result, the ALJ finds and concludes that Claimant has established by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment to cure him from the effects of his work injury. The ALJ also finds and concludes Claimant has established that the medical treatment provided up through the date of the hearing has been reasonable, necessary, and related to his work injury. Moreover, the ALJ finds and concludes that Claimant established by a preponderance of the evidence that the surgery recommended by Dr. Hatzidakis is reasonable and necessary to cure Claimant from the effects of his work injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury on October 15, 2019.
2. Claimant suffered a compensable injury – which includes his left shoulder.

3. Respondents shall pay for reasonable and necessary medical treatment to cure Claimant from the effects of his work injury – which includes his left shoulder.

4. Respondents shall pay for the left shoulder surgery recommended by Dr. Hatzidakis.

5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-129-652-001

ISSUE

1. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury to his left knee on December 18, 2019 arising out of the course of his employment with Employer.

2. Whether Claimant established by a preponderance of the evidence that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injury.

3. Whether Claimant established by a preponderance of the evidence that the medical treatment he received between December 18, 2019 and January 6, 2020 was reasonably necessary to cure or relieve the effects of his industrial injury.

4. If Claimant proves a compensable injury, what is his average weekly wage?

5. Whether Claimant established by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits.

PROCEDURAL HISTORY

1. On October 9, 2020, Claimant filed an Application for Hearing in WC 5-129-652-001. The Application for Hearing was mailed to Employer, c/o Marlon M[Redacted] at 1010 980 S. Zeno Way, Aurora, CO 80017.

2. On October 23, 2020, the Office of Administrative Courts (OAC) sent a Notice to Set to Claimant and to Respondent at 980 S. Zeno Way, Aurora, CO 80017 providing notice that this matter would be set for hearing pursuant to OACRP Rule 8.H.

3. On November 16, 2020, the OAC sent a Notice of Hearing to Claimant and to Respondent at 980 S. Zeno Way, Aurora, CO 80017, that this matter was scheduled for hearing on January 26, 2021 at 8:30 a.m.

4. The January 26, 2021 hearing was vacated and rescheduled. On January 26, 2021, the OAC sent a Notice of Hearing to Claimant and to Respondent at 980 S. Zeno Way, Aurora, CO 80017, that this matter was scheduled for hearing on February 25, 2021 at 8:30 a.m.

5. On January 28, 2021, Claimant mailed a copy of his Case Information Sheet for the hearing to Employer addressed to Marlon M[Redacted], [Redacted], 980 S. Zeno Way, Aurora, CO 80017.

6. Respondent did not respond to the Notice to Set or either Notice of Hearing, and has not appeared or otherwise participated in this matter. Respondent did not appear for hearing on February 25, 2021.

FINDINGS OF FACT

7. Claimant was employed by Employer from early December 2019 until December 31, 2019, as a delivery driver. Claimant's job duties included driving a large box-truck and delivering furniture. Respondent earned $150.00 per day and worked six total days prior to his injury. The ALJ finds Claimant's average weekly wage is $750.00 per week.

8. On December 18, 2019, Claimant sustained an injury arising out of the course of his employment with Employer when he stepped out of the cab of a box truck onto ice and his foot slipped causing an injury to his left knee.

9. Claimant reported his injury to Employer on December 18, 2019. Respondent failed and/or refused to provide Claimant with information regarding workers' compensation benefits.

10. On December 18, 2019, Claimant was treated at UCHealth for knee pain. Claimant was seen by Katie Sloter, PA-C, who recommended that Claimant be off work until December 22, 2019. Claimant was directed to follow up with an orthopedic surgeon. Claimant utilized his personal health insurance for this visit. For this visit, Claimant incurred reasonable and necessary medical expenses related to his work injury of that were not paid by insurance in the amount of $1,380.76. (Ex. 1).

11. On December 20, 2019, Claimant was seen at Advanced Orthopedic & Sports Medicine Specialists by James D. Ferrari, M.D. Dr. Ferrari provided Claimant with a work restriction to be off work until he was evaluated after the performance of an MRI. For this visit, Claimant incurred reasonable and necessary medical expenses related to his work injury of $174.29 that were not paid by his insurance. (Ex. 1).

12. On December 28, 2019, Claimant had an MRI of his left knee performed at OCC Imaging. The MRI showed a Grade 2 MCL sprain with tearing of the deep meniscofemoral fibers, and a small bone contusion in the anterior-peripheral medial femoral condyle. For the MRI, Claimant incurred reasonable and necessary medical expenses related to his work injury of $600.26. (Ex. 1).

13. Respondent returned to Dr. Ferrari on January 6, 2020. For this visit, Claimant incurred reasonable and necessary medical expenses related to his work injury of $125.00. Dr. Ferrari prescribed Claimant a hinged knee brace. Claimant incurred reasonable and necessary medical expenses related to his work injury for the knee brace in the amount of $598.00. (Ex. 1).

14. Claimant's left knee injury resulted in a restriction of his ability to use his left leg and resulted in a medical incapacity which rendered Claimant unable to resume his prior work.

15. No physician has been designated as Claimant's authorized treating provider and no physician has placed Claimant at maximum medical improvement.

16. On December 31, 2019, Employer terminated Claimant's employment without fault of Claimant. Claimant did not earn income from December 18, 2019 until approximately August 19, 2020. For approximately ten weeks from late August 2020 until mid-November 2020, Claimant earned $15.00 per hour working 35 hours per week.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

COMPENSABILITY

A claimant's right to recovery under the Workers Compensation Act is conditioned on a finding that the claimant sustained an injury while the claimant was "at the time of the injury, … performing service arising out of and in the course of the employee's employment." § 8-41-301(1)(b), C.R.S.; *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The Claimant must prove his injury arose out of the course and scope of his employment by a preponderance of the evidence. § 8-41-301(1)(b) & (c), C.R.S.; *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). "Arising out of" and "in the course of" employment comprise two separate requirements. *Triad Painting Co.*, 812 P.2d at 641.

An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d at 641; *Hubbard v. City Market,* W.C. No. 4-934-689-01 (ICAO, Nov. 21, 2014).

The "arising out of" element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury "has its origin in an employee's work-related functions and is sufficiently related thereto as to be considered part of the employee's service to the employer in connection with the contract of employment." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991); *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). The mere fact that an injury occurs at work does not establish the requisite causal relationship to demonstrate that the injury arose out of the employment. *Finn v. Industrial Commission,* 437 P.2d 542 (Colo. 1968); *Sanchez v. Honnen Equipment Company,* W.C. No. 4-952-153-01 (ICAO, Aug. 10, 2015).

Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his left knee arising out of the course of his employment with Employer. The evidence demonstrates that Claimant sustained an injury to his left knee while exiting a truck he was driving for Employer. The injury occurred during work hours and while Claimant was performing duties for Employer.

MEDICAL BENEFITS

Under section 8-42-101(1)(a), C.R.S., respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of the industrial injury. *See Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187, 1188 (Colo. App. 2002). The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d

1192 (Colo. App. 2002). All results flowing proximately and naturally from an industrial injury are compensable. *Id., citing Standard Metals Corp. v. Ball*, 474 P.2d 622 (Colo. 1970). Claimant is entitled to a general award of medical benefits to treat his left knee as he has established that his claim is compensable.

Claimant has further established by a preponderance of the evidence that the following medical treatment he received was reasonable and necessary to cure or relieve the effects of his injury: December 18, 2019 UC Health emergency department visit; December 20, 2019 and January 6, 2020 evaluations at Advanced Orthopedic & Sports Medicine Specialists by James D. Ferrari, M.D.; December 28, 2019, left knee MRI performed at OCC Imaging; and knee brace prescribed by Dr. Ferrari. Respondent is responsible for payment of these services in the amount of $2,878.31.

AVERAGE WEEKLY WAGE

Section 8-42-102(2), C.R.S. requires the ALJ to base the claimant's Average Weekly Wage (AWW) on his or her earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, §8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993).

The ALJ finds that Claimant’s average weekly wage at the time of his injury was $750.00 per week, representing $150.00 per day, five days per week.

TEMPORARY TOTAL DISABILITY

To prove entitlement to Temporary Total Disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *See* 8-42-105(4); *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term “disability” connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595, 597 (Colo. App. 1998) (citing *Ricks v. Industrial Claim Appeals Office*, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant’s testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

Claimant has established an entitlement to temporary total disability benefits until terminated by law. The evidence demonstrates that Claimant sustained a disability lasting more than three work shifts, and that he left work as a result of the disability. The ALJ finds that the disability resulted in actual wage loss for the period of December 18, 2019 until August 19, 2020, when Claimant returned to regular employment, a period of 35 weeks. The record is insufficient for the ALJ to determine whether Claimant's wage loss extended beyond this point in time, or the amount of any wage loss after that date. Pursuant to § 8-42-105 (1), C.R.S., Claimant is entitled to payment of sixty-six and two-thirds percent of Claimant's average weekly wage as TTD benefits in the amount of $17,500.00 for the period of December 18, 2019 until August 15, 2020, or $500.00 per week for 35 weeks.

ORDER

It is therefore ordered that:

1. Claimant sustained a compensable injury to his left knee arising out of the course of his employment with Employer on December 18, 2019.

2. Respondent shall pay for all medical treatment that is reasonably necessary to cure or relieve the effects of Claimant's December 18, 2019 work injury.

3. Respondent shall pay Claimant $2,878.31 for reasonable and necessary medical expenses previously incurred.

4. Claimant's average weekly wage is $750.00 per week.

5. Claimant is entitled to temporary total disability benefits for the period of December 18, 2019 until August 19, 2020, and Respondent shall pay Claimant $17,500.00 for such benefits.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 28, 2021

Steven R. Kabler
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, Colorado, 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that the trial neurostimulator as recommended by Dr. Wolkowitz is reasonable, necessary, and related to his admitted work injury?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Injury and Initial Treatment

1. Claimant is a foreman for employer. He sustained an admitted injury to his back on April 18, 2019. An excavator that he was operating came off of its tracks and Claimant felt pain in his back when he tried to shove the excavator back onto its tracks.

2. Claimant began treatment on April 19, 2019 with Dr. Daniel Lombardo at First Street Family Health. Claimant complained of feeling a popping sensation in his back with immediate pain after the incident. He reported left sided pain around the top of his lumbar spine, radiating down to the back of his left knee and some tingling in the left foot. Claimant also complained that his left leg gives out when trying to get in his truck. He was originally diagnosed with a low back strain, and lumbar radiculopathy.

3. Dr. Lombardo referred Claimant to physical therapy and prescribed oxycodone (1-2 tablets up to three times daily), a steroid burst, and gabapentin. (Ex. 1, pp 1-2).

4. Claimant returned to Dr. Lombardo on April 26, 2019 with worsening symptoms to include sudden spasms of pain that shoot down his leg. Dr. Lombardo referred Claimant for an MRI of the Lumbar Spine. (Ex. 1, pp. 6-7).

5. An MRI was taken on May 9, 2019, which was contrasted with an earlier study dated 11/23/2015. It showed degeneration at L4 – L5, which was noted to be more prominent in this more recent study. There was also possible compression at the left L5 nerve root that was not significantly changed from the prior study. (Ex. 2, pp. 62-63).

6. On May 10, 2019, Claimant was seen by Dr. Lombardo, with continuing complaints of radicular pain down the left leg and somewhat down his right leg. Dr. Lombardo recommended continued physical therapy and prescribed oxycodone 1-2 tablets, three times daily as needed. (Ex. 1, pp. 9-10).

7. On May 13, 2019, Claimant went to Heart of the Rockies Regional Medical Center (HRRMC) for physical therapy. Claimant initially participated in numerous sessions of physical therapy through September 9, 2019 but continued to have significant low back pain which still radiated down the left leg. (Ex. 2, pp. 64-80, 85-99,103-111).

8. Translaminar epidural steroid injections at L5 and S1 were performed on August 21, 2019 by Dr. Leek. (Ex. 2, pp. 100-101) On September 10, 2019, Claimant told Dr. Leek that the injections did not help at all and that he still had low back and left leg pain. Dr. Leek referred Claimant to Dr. Ernest Braxton and Vail Summit Orthopedics. (Ex. 2, pp. 112-115).

9. On September 17, 2019, Claimant was seen by Dr. Braxton. Claimant was complaining of a constant 8 out of 10 burning, throbbing, and shooting pain in his left lower back radiating down his left lower back and his left posterior lateral leg into his foot. Claimant was also having associated left lower extremity numbness and paresthesia in the L5 distribution. Claimant told Dr. Braxton at this visit that he feels significantly debilitated and is unable to do his normal work or daily activities due to the pain. After performing a physical examination and reviewing the May 9, 2019 MRI, the diagnosis included lumbar radiculopathy, lumbar disc herniation, lumbar degenerative disc disease and lumbar foraminal stenosis. Dr. Braxton recommended an L5-S1 artificial disc replacement surgery. (Ex. 3, pp 199-202).

10. An anterior lumbar total disc arthroplasty at L5 – S1 was performed by Dr. Braxton and Dr. Jonathan Schoeff on October 25, 2019. (Ex. 3, pp. 205-209).

Lumbar Disc Arthroplasty is Unsuccessful

11. Claimant was seen by Dr. Braxton on November 26, 2019. On that day, Claimant was reporting 6/10 low back pain, 3/10 mid back pain, with 7/10 leg pain. In addition, Claimant continued to have aching and burning down the posterior aspect of his left leg and to the anterior groin and thigh of his left leg. It was noted that Claimant is currently taking oxycodone and tramadol for pain control. X-Rays taken at this visit revealed a "well-seated" arthroplasty device at the L5-SI level with interval increase in foraminal height. Due to his pain complaints, Dr. Braxton performed a caudal epidural steroid injection. (Ex. 3, pp. 210-213).

12. On December 19, 2019, Claimant complained to Dr. Lombardo that he still had pain in his low back and left lower extremity. Claimant told Dr. Lombardo that he had experienced no resolution, and reported a popping sensation that was causing him "unbelievable pain." Claimant stated that he was now worse than he was prior to the procedure.

13. On January 7, 2020 Claimant was seen by Colleen Mintz, N.P. at Vail Summit Orthopedics. On this date Claimant was having constant 7 out of 10 pain in his back which radiates to both legs, left more than right. Claimant described the pain as burning and achy with numbness, tingling, and weakness in both legs, left worse than

right. According to NP Mintz' note, Claimant had failed conservative care and was taking 10 mg of oxycodone 5 times a day, Flexeril at night, and Naprosyn twice daily. Physical examination revealed an antalgic gait, diminished sensation in left posterior lateral calf, big toe, and dorsum of foot, a positive straight leg test bilaterally, and "normal range of motion" with lumbar flexion and extension. NP Mintz prescribed Cymbalta and ordered an MRI. (Ex. 3, pp. 214-216).

14. Claimant was seen again at Vail Orthopedics on January 14, 2020. Claimant reported that since his last visit he felt a pop in his back and had immediate pain, with paralysis in both legs for 20 minutes. Claimant was having more pain and sleep issues. Claimant had new onset of fecal and urinary incontinence, and was reporting 9-10/10 pain. Physical examination was similar to that performed on January 7, 2020. Revision surgery was discussed, pending a new MRI. (Ex. 3, pp. 217-220).

15. An MRI report of the lumbar spine dated January 16, 2020 indicated that there were no acute findings and no evidence of nerve root compression. Other than insertion of the artificial disc, there was no significant change from prior CT and MRI scans. (Ex. 1, pp. 128-129).

16. Dr. Braxton ultimately recommended a hardware removal, arthrodesis and revision surgery. This was performed on February 14, 2020 by Dr. Braxton and Dr. Schoeff. The artificial disc had to be removed in a piecemeal fashion, and was replaced with a biomechanical fusion device. Post-operative diagnoses were hardware failure of L5 – S1 anterior lumbar disc total arthroplasty, resulting in debilitating low back pain and radiculopathy, and severe retroperitoneal fibrosis following prior retroperitoneal lumbar spine exposure.

Revision Surgery and Subsequent Treatment

17. Following the revision procedure, Claimant reported improvement. On March 4, 2020, Claimant told Dr. Lombardo that the pain down his left leg was "completely gone" and that pain was now limited to the buttock and lower back. Claimant reported sleeping longer at night. Dr. Lombardo noted that Claimant could return to work soon. Claimant was prescribed amitriptyline, cyclobenzaprine, Naprosyn, and oxycodone 1 10mg tablet up to 6 per day. (Ex. 1, p. 33). He further noted that Claimant was taking six oxycodone tablets per day, but that he could start cutting down on that medication soon.

18. Claimant began physical therapy following the revision procedure on March 12, 2020. He was evaluated by Kristi Spanier, DPT at Heart of the Rockies Regional Medical Center. Claimant told Dr. Spanier that he was in tremendous pain for ten months preceding the surgery with pain all of the way down his left leg to his toes. Claimant reported that he felt that his pain was "already better than prior." His pain (6/10) was now extending down to the mid-thigh on the left leg and that he was walking better and more than he had in nearly a year. (Ex. 2, p. 132).

19. On March 17, 2020, Claimant consulted with Dr. Braxton. Claimant told Dr. Braxton that his leg pain was now minimal, with a level of one or two out of ten. Claimant did endorse continued back pain, but stated that he was “100 times better than he was after his index operation.” Dr. Braxton wrote that Claimant’s “lower extremity pain has all but resolved following revision of total disc arthroplasty device….” He recommended that Claimant continue goal directed exercise-based physical therapy. He noted that Claimant would follow up in eight to twelve weeks, or sooner if problems arose.

20. On March 19, 2020, Claimant returned to Heart of the Rockies for physical therapy. The PT note reflects that Claimant was getting slowly better. Physical examination revealed antalgic/guarded gait, weakness in left extension hallicus, dorsiflexors, and left plantarflexors. Pain was noted to be 6/10. (Ex. 2, p. 133). He told PT Spanier that he had no pain down his right leg. He was tolerating more than he had previously been able to. PT Spanier added strength work to Claimant’s home exercise program and walking as well.

21. On March 25, 2020, Claimant returned to Heart of the Rockies for more physical therapy. He was evaluated by Alice Smyth, PT. In her note it was recorded that Claimant’s back got “really mad” after his last visit, but he is unsure what aggravated it. Claimant was unable to do any exercises for two days and then resumed them. He did not perform as many reps Sunday, and then even fewer reps Monday, but it was still aggravated. This same note indicates Claimant was better today but on Friday morning was having pain down both legs to the back of the knee and now just down the left. Physical examination revealed weakness in left extensor hallicus and dorsiflexors as well as left plantarflexors. Pain was noted to be 6/10 (Ex. 2, p. 134).

22. On March 31, 2020, Claimant told his physical therapist that he walked two miles yesterday and is flared up today down the thigh and into the calf which he has not had since his second surgery. Claimant told the physical therapist that the flare up may be related to working the clutch on his car which was “tight”. No physical exam was performed. (Ex. 2, p. 137).

23. Claimant returned for physical therapy on April 3, 2020, stating that he was frustrated as his pain level was not changing, although the location was changing between the back and the leg. He reported back pain on that date. That same date, Claimant told Dr. Lombardo that he was doing “alright” but that he still had some popping in his back when he stepped over something. Claimant was participating in physical therapy and continued to report improved sleep. He further advised the therapist it doesn’t seem to make a difference whether or not he does his exercises. Claimant remarked that his pain was being controlled, but with five tablets of oxycodone per day. Dr. Lombardo cleared Claimant to return to light duty office work of up to four hours per day. He wrote that he planned to continue to taper Claimant’s pain medications. Dr. Lombardo noted that Claimant was very slowly improving and prescribed Trazadone. (Ex. 1, pp. 35-36).

24. On April 7, 2020, Claimant continued his physical therapy. Claimant remarked that he was walking more and had cut back on some exercises. He reported

feeling better. Claimant stated that he had done a five mile walk the day prior. He also had been able to do a lap around Wal-Mart, an activity that usually would have bothered him. He felt like he would have been able to do it again. Claimant began pool therapy on this date.

25. On April 10, 2020, Claimant returned for more physical therapy. He said that he had been sore for about 18 hours after the pool therapy, but then was back to normal. He stated that he planned to continue tapering his pain medications. PT Smyth wrote that Claimant "seems to be tolerating exercise better and having quicker recovery time." Claimant was able to increase time on an exercise bike and was less tender with manual therapy.

26. Claimant returned for more physical therapy on April 14, 2020. He stated that "today is rough," noting that he had overdid it at work the day prior and had a ride in a truck on a rough road. Claimant participated in pool therapy, and was able to add reps and more exercises.

27. PT Smyth treated Claimant again on April 17, 2020. Claimant noted that he was still getting pain "that moves back and forth from back to left leg." Pain was averaging a six out of ten but could still get up to a ten out of ten. Claimant noted that he had felt good after pool therapy during the last session. PT Smyth wrote that Claimant's pain was down to five out of ten with treatment, and that his gait was improved with less limp. Claimant was tolerating exercises without a back brace, and that he seemed to be tolerating four hours of work per day without significant increase in pain.

28. On April 21, 2020, Claimant returned for more physical therapy. He reported that he still had pain, which had been intense the prior Monday, but doesn't know why, since he took it easy on Sunday. (Ex. 2, p.152). He stated that he had still been able to tolerate exercises, walking and therapy.

Claimant Slips and Falls in Late April

29. On April 28, 2020, Claimant returned to PT Smyth. He told her that he had fallen the last Thursday [April 23, 2020], while walking down an icy ramp at his home. He stated that he now had more pain. He was still able to do his walking, but the pain on his left side was now worse than it was before this fall, though still not as bad as it was pre-surgery. This same note indicates that it felt good to do pool therapy and Claimant felt better post treatment than prior to coming in. (Ex. 2, pp. 154-155).

30. On May 1, 2020, Claimant told Dr. Lombardo that he had fallen the prior Friday [April 24, 2020] walking down the ramp at his home, and had not been doing well. He landed on his left side. Claimant reported repeated popping/cracking in his back with certain movements. Dr. Lombardo remarked that Claimant's "pain has been much worse with the fall, though he was having *more* issues even *leading up* to this fall in the last couple weeks." Dr. Lombardo noted that Claimant's extremity pain had worsened though was still stopping at the left knee. He recorded that Claimant had "been taking 5 per day

of his pain medication since the fall, was not able to reduce down to 4 tablets as discussed previously."

31. Claimant met with Dr. Braxton via telemedicine again on May 8, 2020. Dr. Braxton recorded:

> Patient reports that following surgery he was doing well and making gradual improvements in his low back and left leg symptoms. However unfortunately patient notes that last week he had a fall from standing [position] and landed on his side. Patient states that he slipped on some ice and felt a pop in his back when he hit the ground. Since that time the patient has had a significant exacerbation of his axial back pain symptoms as well as his left lower extremity radiating pain symptoms which go down the back of his leg to his mid-calf. Patient denies any new numbness or weakness. He reports that his pain symptoms are as severe as a 7 or 8 out of 10. The patient is concerned that he has damaged his instrumentation in the fall. (Ex. 3, p. 236).

32. Dr. Braxton wrote that Claimant "has had a new exacerbation of symptoms following a recent fall from standing." X-rays taken that date showed that Claimant's surgical instrumentation was still intact and Dr. Braxton reassured Claimant that additional neurosurgical treatment was not necessary at that time. Dr. Braxton believed that Claimant would continue to improve with time. He referred Claimant back to Dr. Leek for consideration of injection therapy to help with his acute pain symptoms due to the fall. *Id.*

33. Claimant was evaluated by Mark Lynch, NP at Dr. Leek's office on May 12, 2020. Claimant complained of low back pain and radicular symptoms radiating laterally and into the knee. Pain was reported 8/10. Dr. Leek recommended a L5-S1 transforaminal steroid injection. There was also a discussion concerning the possibility of a spinal cord stimulator. (Ex. 2, pp. 158-160).

34. The request for injections was reviewed by Dr. Albert Hattem on behalf of Insurer. He issued a review opinion on May 19, 2020. When asked his opinion whether the injection proposed by Dr. Leek was secondary to Claimant's April 18, 2019 injury, Dr. Hattem wrote:

> No, it is clear from the medical records reviewed that Dr. Braxton referred [Claimant] for injection therapy related to the exacerbation that occurred in early May [sic] 2020 when [Claimant] slipped and fell on the ramp at his home. But for this slip and fall, the injection treatment by Dr. Leek would not be necessary. I therefore advise that if [Claimant] would like to proceed with this injection, then it should be provided outside of workers' compensation. Ex. D, pp. 45-47).

However, Dr. Hattem further opined that Claimant was not at MMI and that he was in need of further physical therapy and an opioid tapering regimen. *Id.*

35. Claimant returned to Heart of the Rockies for therapy on May 12, 2020 and told PT Spanier that he was very sore and was not walking as much. She recommended brain training exercises. On May 15, 2020, Dr. Lombardo noted that Claimant was still unable to further taper his medications. On May 26, 2020, Claimant told PT Spanier that he was walking better with the assistance of a cane.

Conservative Treatment to no Avail

36. Claimant did undergo a L4-L5 transforaminal epidural steroid injection performed by Dr. Richard Wolkowitz on May 28, 2020. (Ex. 2, pp. 165-166). The injection offered only hours of relief per Claimant's report. *Id at 170.*

37. Claimant was seen again by Dr. Leek on June 19, 2020 with continued complaints radiating to the left leg. The pain was in the left low back with posterior thigh discomfort of burning pain, occasional short stabbing sensation and pins-and-needles with occasional muscle spasm. Claimant's pain was noted to be 7/10. According to this note, Claimant's symptoms are exacerbated when standing or sitting, as well as in the supine position. Physical exam revealed mild diffuse tenderness to lower lumbar spine midline. There was worsened tenderness at the facet joints left great than right. Straight leg raise was positive but improved. Dr. Leek ordered an EMG to rule out a left S1 radiculopathy and noted that a spinal cord stimulator could be a possibility. (Ex. 2, pp. 171-174).

38. On June 23, 2020 at physical therapy, Claimant was overall more comfortable but continues to have terrible nerve pain. (Claimant's Submissions – Bates # 00175). On July 14, 2020 Claimant told his physical therapist that he had been very busy at work and because of that he is sore. *Id at 177.*

39. An EMG taken on July 22, 2020 showed left leg findings of "*mild subacute to chronic* S1 radiculopathy." (Ex. 2, p. 178).

Neurostimulator Trial is Recommended

40. Claimant was seen by Dr. Wolkowitz on July 27, 2020. At this visit Claimant had complaints of some pain in the low back, left buttock, and left leg. Pain was noted to be 6/10. Physical exam reflected negative straight leg raise but there was noted dermatomal weakness or numbness in the lower extremities. Dr. Wolkowitz diagnosed lumbar radiculopathy and post laminectomy syndrome. Dr. Wolkowitz recommended a trial of neuromodulation due to Claimant's ongoing radiculopathy, pain complaints from the prior back surgery, and interference with Claimant's activities of daily living, all of which have not been responsive to conservative care. (Ex. 2 pp. 179-181).

41. The request for the spinal cord stimulator trial was reviewed by Dr. Hattem on August 5, 2020. Dr. Hattem remarked that he had previously recommended denial of the post-fall injections on the basis that this fall was an intervening event. He

recommended denial of the spinal cord stimulator trial. He further wrote that it was not clear that the extremity pain was at least 50% or greater of Claimant's overall pain. At that time, Dr. Hattem remarked that it was unclear whether a psychological evaluation required by the Medical Treatment Guidelines had been performed.

42. On August 11, 2020, Claimant underwent a psychological evaluation and was found to be a viable candidate for a neuro spinal stimulator. (Ex. 2, pp. 182-188).

43. On September 9, 2020, Claimant was seen by Dr. Braxton. He wrote that Claimant was approximately 7 months post-surgery, yet is still experiencing low back and left buttock pain. Pain was noted to be 7/10. Dr. Braxton felt that Claimant had failed conservative care and has been suffering from a chronic pain syndrome for greater than 6 months. In addition, X-Rays were taken and Dr. Braxton opined that there were no structural abnormalities that can be corrected. Furthermore, the risk/benefit analysis outweighs any further surgical correction. Therefore, Dr. Wolkowitz recommended a trial implantation of a spinal cord stimulator. (Ex. 3, pp. 239-241).

44. A September 10, 2020 office note from Dr. Lombardo revealed that Claimant was experiencing 9/10 pain but was still working. The pain was noted to be throbbing, stabbing, a little burning and radiating down the left leg. (Ex. 2, pp. 51-52).

45. On a follow up visit with Dr. Lombardo on September 17, 2020, it was noted that Claimant's pain was 7.5/10 with pain in the lower back and left leg. *Id at 55-56.*

46. On September 23, 2020, Claimant was seen by N.P. Elizabeth Curie, with continued complaints of low back pain and left lower extremity radicular pain which he reported was interfering with his vocational and avocational activities. Claimant reported pain of 7/10. Ms. Curie changed Claimant's medication regimen to start OxyContin up to 4 times daily if needed. (Ex. 2, pp.191-192).

47. In a follow up with NP Curie on October 19, 2020, Claimant was experiencing back pain, leg pain, and thigh pain. Claimant told Ms. Curie that his pain had been best controlled in a long time after a recent medication change. It was noted, however,

> He notes if he does anything that takes physical effort, such as pushing a grocery cart for 5 minutes, he has severe acute pain exacerbation in his lower back and leg. He has to go home and be 'done for the day.' He sits on the couch or lays down after a short walk or trip to grocery store. (Ex. 2, pp. 195-196).

48. A November 9, 2020 office note from Dr. Lombardo revealed Claimant had an episode a week ago when he was squatting down and had an onset of sharp stabbing pain in his lower back and left leg. Claimant needed help in getting up. Claimant's pain at this visit was a 7/10. (Ex. 1, pp. 58-59).

Record Review Opinion of Dr. Ramaswamy

49. Dr. Annu Ramaswamy performed a records review and issued a report on November 30, 2020. He recounted the history of Claimant's symptoms, noting his improvement following the revision surgery and worsening pain after the intervening fall. Dr. Ramaswamy opined that a spinal cord stimulator trial would not be reasonable, necessary and related to the industrial injury. He wrote that after review of the medical records that it was fairly clear that while Claimant "did not improve after the lumbar arthroplasty procedure, he did finally improve after the lumbar fusion procedure." He remarked that the April 2020 fall caused an aggravation in the lower back and left lower extremity conditions, pointing out that the post-surgical steroid injection and spinal cord stimulator were not recommended by his ATPs until after the intervening fall.

50. Dr. Ramaswamy stated that the spinal cord stimulator would be treating the aggravated symptoms related to the April of 2020 fall, and not the April of 2019 injury. He indicated that he also agreed with Dr. Hattem that Claimant's providers did not document the extent of extremity symptomatology. He further indicated that Dr. Wolkowitz' physical examination from July of 2020 did not demonstrate an active radiculopathy. This led Dr. Ramaswamy to question whether the spinal cord stimulator trial was clinically indicated based upon examination. Dr. Ramaswamy noted that Claimant would have reached MMI for his work related condition, but recommended continued medications for at least one year as maintenance, along with home exercise. (Ex. C, p. 43).

Deposition Testimony of Dr. Wolkowitz

51. Dr. Wolkowitz testified by pre-hearing deposition on December 21, 2020. He was tendered as an expert witness in the fields of anesthesiology, pain management and spinal cord stimulators without objection. He estimates he has implanted over 1000 spinal cord stimulators. However, he is not level I or II accredited by the Colorado Division of Workers Compensation. Dr. Wolkowitz testified that Claimant meets the criteria under the MTG for implantation of a spinal cord stimulator. Specifically, Dr. Wolkowitz felt Claimant has a L5 radiculitis as evidenced by pain in the hip, lateral thigh, lateral calf, into the dorsal foot as recreated with a straight leg raise or dorsiflexion of the foot and great toes. This, coupled with Claimant's history of increased pain with weight bearing, and increased pain over the course of the day fits the criteria for an L5 radiculitis.

52. In addition, Dr. Wolkowitz felt that medical records reflect Claimant has a burning pain in a distribution of amenable stimulation coverage along with pain at night not relieved by position. Furthermore, Claimant's pain is at least 50% or greater of his pain complex. Finally, Dr. Wolkowitz stated that he reviewed the psychological evaluation performed, and feels that, emotionally and mentally, Claimant is a good candidate for a neurostimulator.

53. Regarding causation, Dr. Wolkowitz testified that the need for a spinal stimulator is due to the April 18, 2019 work injury. Dr. Wolkowitz explained that Claimant's initial injury was to the L5 nerve root, which once injured or impinged, gets better and gets

worse based on activity levels as one goes through life. Dr. Wolkowitz further explained that one doesn't have continuously recurring problems *unless there is an initial injury.* Dr. Wolkowitz clarified that symptoms of an injured nerve can wax and wane. Even after a surgery the symptoms can chronically recur. Dr. Wolkowitz stated that in absence of his fall in late April 2020, Claimant would likely have needed the neurostimulator, due to the waxing and waning of symptoms that often occur when a nerve root is injured.

Hearing Testimony of Claimant

54. Claimant testified at hearing. He testified that his initial surgery in October of 2019 was a "complete disaster." He testified that he had significantly increased pain in his low back and left leg to the point that he was in the emergency room, as well some issues with incontinence. His pain was getting up to a ten out of ten. Claimant testified that after the revision surgery, he still had some pain, but that it was different than before. He testified that after the revision surgery his pain still did get to a ten out of ten level, but not as often or long as it had after the initial procedure. Claimant stated that he was able to walk better after the revision procedure, because the radicular pain no longer extended down to the toes.

55. Claimant testified that he slipped and fell on April 23, 2020 coming down an icy ramp at his house. According to Claimant, he landed on his left side but was able to catch the majority of his weight and momentum with his arm. He felt his back "pop" when he fell. Right after he fell, Claimant testified that he felt terrible and was having increased pain which radiated down his left leg into his lower calf. The pain was a strong 9 to low 10. Claimant testified that after the fall he went back into his house and took some pain medication. Claimant further testified that he saw his physical therapist on April 28 and was still having increased pain, but by May 1 he was noticing his pain was decreasing down to "semi-normal" level.

56. According to Claimant, in the two weeks leading up to the April 23 fall he was noticing increased pain and numbness, as well as a painful popping in his lower back. Claimant went on to testify that since the fall, his symptoms have returned to where they were prior to the fall. These symptoms include pain that averages around a 6 but can go up to an 8 or to a 10 when he is having a really bad day. According to Claimant his left leg pain is significantly more problematic than his back pain.

57. Claimant testified that insofar as his symptoms are concerned, he has good days and bad days, but is unable to pinpoint any specific activities that exacerbate his symptoms. Claimant stated that after his second surgery, he returned back to part-time work until March 30, 2020 and then returned back to full-time work on May 8, 2020 which was after the fall. Claimant continues to work full-time in a supervisory capacity.

58. When asked about Dr. Braxton's March 17, 2020 office note wherein it indicates Claimant's leg pain was down to a 1 out of 10, Claimant testified that he told Dr. Braxton he was better than before but nowhere near a 1 or 2. Claimant did not dispute he told Dr. Braxton that he was a hundred times better than before the revision surgery, since

prior to the revision surgery he was feeling miserable and experiencing extreme pain, incontinence, and significant issues walking.

Deposition Testimony of Dr. Ramaswamy

59. Dr. Ramaswamy testified by post-hearing deposition on January 4, 2021. He was received as an expert witness in medicine, specifically internal medicine, with level II accreditation per the Colorado Division of Workers' Compensation. He testified consistent with his report that the intervening fall did cause Claimant's need for the spinal cord stimulator trial. He stated that Claimant had demonstrated improvement following the revision procedure, and that no physician had recommended additional interventional care until after the intervening fall.

60. Dr. Ramaswamy testified that he treats patients who undergo the type of surgery that Claimant underwent in February of 2020. He testified that in a case such as Claimant's, "the nerve has been irritated for quite a long time. And so when you go ahead and start doing surgical procedures, we have to remember that the nerve takes time to heal." Dr. Ramaswamy stated that patients who have undergone a fusion would notice stiffness and postoperative pain. He also noted that as patients rehabilitate and start moving around, they can deal with inflammation. He testified that there was no indication from the records of Dr. Lombardo or Dr. Braxton suggesting that the revision procedure had failed. He testified that the records overall supported the conclusion that Claimant showed clinical improvement following the revision surgery. He testified that there was no indication from the materials of Dr. Braxton or Dr. Lombardo prior to the intervening fall that Claimant's recovery from the fusion procedure was abnormal in terms of pain level, symptomatology, functional gains or recovery time. He testified that there was nothing in any of Claimant's medical records to suggest that the revision surgery had failed or that Claimant's pre-fall recovery was outside of what was generally expected for patients recovering from that type of procedure.

61. Dr. Ramaswamy remarked that he would have expected Claimant to continue improving in his recovery had the fall from April of 2020 never occurred. He stated that "the improvement we saw after the procedure, typically we wouldn't expect that improvement not to continue."

62. Dr. Ramaswamy opined that he had not reviewed all of Claimant's physical therapy notes. He did note that there were times that Claimant's pain levels after the intervening fall were similar to those prior to the intervening fall, typically with activity. With regard to physical therapy records that were referenced to him by Claimant's counsel, Dr. Ramaswamy remarked that the notes of pain were common "because he was only a couple months out from the fusion."

63. Dr. Ramaswamy acknowledged that the more information one has, the better the causation analysis. He never spoke to or examined Claimant. Dr. Ramaswamy also conceded that the medical records both pre and post slip and fall are similar in terms of Claimant's pain levels and location of said pain.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In this instance, the ALJ finds Claimant to be credible in recounting the work incident, and in describing her ongoing symptoms to his medical providers and IMEs to the best of his abilities. Claimant has been sincerely dismayed at his condition, and has made every reasonable effort to rehabilitate from his injury and become as fully productive as possible. The ALJ sees no evidence of seeking secondary gain; to the contrary, Claimant wants to get as well as he can, even if that means a lower impairment rating at the end of this process.

D. The ALJ further finds that the medical experts in this case have all rendered sincere medical opinions, but as is not infrequent, such opinions differ. In final analysis, the ALJ must decide who is more *persuasive* (as opposed to *credible*, per se), in light of their respective expertise and access to all pertinent information.

E. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits, Generally

F. Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012). Our courts have held that in order for a service to be considered a "medical benefit" it must be provided as medical or nursing treatment, or incidental to obtaining such treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995). *A service is medically necessary if it cures or relieves the effects of the injury and is directly associated with the Claimant's physical needs. Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006). A service is incidental to the provision of treatment if it enables the claimant to obtain treatment, or if it is a minor concomitant of necessary medical treatment. *Country Squires Kennels v. Tarshis,* 899 P.2d 362 (Colo. App. 1995)*; Karim al Subhi v. King Soopers, Inc.,* W.C. No. 4-597-590, (ICAO. July 11, 2012). The determination of whether services are medically necessary, or incidental to obtaining such service, is a question of fact for the ALJ. *Bellone v. Industrial Claim Appeals Office,* 940 P.2d 1116 (Colo. App. 1997); *Parker v. Iowa Tanklines*, Inc., W.C. No. 4-517-537, (ICAO, May 31, 2006).

Reasonable and Medically Necessary

G. Indicators for the use of a neurostimulator pursuant to Rule 17, Exhibit 9 (H)(I)(C)(i) of the MTG include the following:

1.) Clear neuropathic radicular pain (Radiculitis);

2.) The extremity pain should be greater than 50% of the overall back and leg pain experienced by the patient.

3.) A comprehensive psychiatric or psychological evaluation should be performed with favorable findings.

H. Dr. Wolkowitz is a specialist in pain management, and the implantation of spinal cord stimulators. He has considerable practical experience in this field as well. Unlike Respondents' record-reviewing physicians, he has met Claimant, and laid hands on him-as have Claimant's numerous medical providers. This is an integral part of the art of medicine. The ALJ is satisfied with his opinion that Claimant meets the criteria for a trial stimulator. He has adequately identified Claimant's neuropathic pain, based upon Claimant's lengthy history and the objective data available. Such extremity pain is greater than 50% of the overall leg and back pain Claimant has experienced. Conservative treatment has been sincerely attempted, and exhausted, to no avail. Claimant has met the psychological criteria for implantation, and has realistic expectations of what his results might be. In summary, while the result is far from guaranteed, Claimant has earned the right to give it a try. If this trial does not yield the anticipated results, perhaps at that point Respondents can say 'I told you so'. But not until then. The ALJ finds and concludes, by a preponderance of the evidence, that the trial implantation is *reasonable and medically necessary* to cure Claimant of his current condition.

Related to Work Injury, Generally

I. All results flowing proximately and naturally from an industrial injury are compensable. *See, Standard Metals Corp. v. Ball, 172 Colo. 510, 474 P.2d 622 (1970)*. However, no compensability exists when a later accident or injury occurs as the direct result of an independent intervening cause. *Post Printing & Publishing Co. v. Erickson, 94 Colo. 382, 30 P.2d 327 (1934)*. "If the need for treatment results from an intervening injury or disease unrelated to the industrial injury, then treatment of the subsequent condition is not compensable. This…is a question of fact for resolution by the ALJ." *See, e.g., Merrill v. Pulte Mortgage Corp.*¸ W.C. No. 4-635-705-02 (ICAO May 10, 2013) (citing *Owens v. Industrial Claim Appeals Office*, 49 P.3d 1187 (Colo. App. 2002)).

Related to Work Injury, as Applied

J. Taken as whole, the medical records, and Claimant's testimony, support the conclusion that while Claimant began an upward trajectory after his fusion, things were already deteriorating prior to his fall in April. These signs began in late March, 2020. His back got "really mad" at him for no apparent reason. Claimant could experience a setback simply by riding over a rough road, or working the clutch on his own car. Prescribed exercises seemed to make his radiculopathy worse. There were other bouts of intense pain earlier in April for which no real correlation could be made to what he had done.

K. Then Clamant took a hard fall onto his side at his own home in late April, 2020. Clearly, his symptoms were exacerbated, including his axial back pain and radiculopathy. He was even concerned that he might have damaged his fusion hardware from the fall. *X-rays showed, however, that he had not damaged this hardware.* Instead, Claimant began to improve once again, but then levelled off once again, with symptoms as a whole consistent with what Claimant was experiencing in April, prior to his fall. The EMG taken in July showed "*mild subacute to chronic*" S1 radiculopathy. While clearly hard to pinpoint a timeline from this, this EMG does not demonstrate to the ALJ that Claimant's radicular symptoms occurred in April. In fact, the records demonstrate that Claimant took a hard spill at home; unsurprisingly, this really hurt for a while. It made him temporarily worse. Then he got over the fall, and continued to deal with his underlying radiculopathy, which remains to this day. The ALJ therefore concludes that the exacerbation of Claimant's symptoms from this fall was temporary in nature. Claimant's continuing need for treatment was not due to the fall in April; instead, it is due to his original work injury, and the ALJ so finds by a preponderance of the evidence.

ORDER

It is therefore Ordered that:

1. Respondents shall pay for the trial neurostimulator as recommended by Dr. Wolkowitz

2. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

and HUGH MACAULAY, M.D.,Individually,,

Employer,

and

[Redacted],

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on December 21, 2020, January 8, 2020 and February 19, 2020 (reference: Google Meets: 12/21/20, 1/8/21, and 2/19/21).

The Claimant was present in person, virtually, and represented by Chris Forsyth, Esq. Representing Denver Water and its insurance carrier were Eric J. Pollart, Esq. and Kristi Robarge, Esq. Representing Dr. Macauley, individually, was David J. Dworkin, Esq.

Hereinafter [Redacted] shall be referred to as the “Claimant."   [Redacted] shall be referred to as the “Employer.” All other parties, including Dr. Macauley, shall be referred to by name.

Claimant’s Exhibits 1 to 3, 5 to 13, 15 to 19, 22, and 25 to 35 and 36 (page 82 of a transcript were admitted into evidence, without objection. Respondents’ Exhibits A through I were admitted into evidence, without objection. Employer’s Exhibit JJ was admitted into evidence without objection Dr. Macaulay’s exhibits were reserved.

On February 19, 2021, the last of the three-day hearing, the Claimant and Respondent Employer informed the ALJ that they agreed to a full and final settlement contingent on approval of a Medicare set aside. The proceedings between Claimant and Respondent Employer were held in abeyance and will be dismissed upon finalization of a full and final settlement or resume if the Medicare set aside is not approved.. The hearing between Claimant and Dr. Macaulay proceeded.

At the conclusion of the Claimant's case in chief, Respondent Dr. Macaulay moved for a judgment in the nature of a directed verdict on the ground that the Claimant, at that juncture, had not sustained his burden of proof on penalties, by preponderant evidence. At the conclusion of the Claimant's case-in-chief, the ALJ ruled from the bench, granting Dr. Macaulay's motion and denying and dismissing Claimant's penalty claims against Dr. Macaulay, and referred preparation of a proposed decision to Dr. Macaulay's counsel, which was submitted on February 24, 2021. On or about March 8, 2021, Claimant filed a 25-page "Amended Objection to Macaulay's Proposed Order." The ALJ infers that Claimant does **not** understand why he was given an opportunity to object as to form. Claimant's Objection goes to great length to present Claimant's version of alternative facts, to which the ALJ disagrees. Perhaps, Claimant can use his Objection as an opening brief in an appeal. Nonetheless, the ALJ has modified Respondents' Proposed Order and an appeal is not ripe until the ALJ has affixed his signature to , and mailed, the actual Full Findings to the parties. The ALJ hereby determines that the penalty matter was submitted for decision on March 8, 2021.

ISSUES

The issues concerning Dr. Macaulay include: (1) whether Claimant established that Dr. Macaulay violated § 8-43-203 (3)(b)(IV), C.R.S., by allowing alleged nurse case managers to attend Claimant's medical appointments without Claimant's consent, and whether penalties should be awarded pursuant to § 8-43-304, C.R.S; (2) whether Claimant established that Dr. Macaulay violated § 8-47-203 (1), C.R.S., by allowing access to Claimant's medical file and records to an alleged nurse case manager employed on Claimant's claim; (3) whether penalties should be awarded pursuant to § 8-43-304, C.R.S; (4) whether Claimant's penalty claims are barred by the one-year statute of limitation, pursuant to § 8-43-304(5), C.R.S; and, (5) whether Claimant's penalty claims are barred for failure to file a certificate of review pursuant to § 13-20-602, C.R.S.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant worked for Denver Water from 1996 to 2016. He reported that a work-related injury occurred on March 25, 2015.

2. At all times relevant to this matter, the Employer maintained an employee health clinic on its premises (hereinafter the "Employer's Clinic"). The Employer's Clinic provided medical care to its employees, including physicals, vision and hearing testing, commercial driver's license (CDL) certifications, and other medical issues.

3. At all times relevant to this matter, the Employer employed nurses and a physician assistant who served as the full-time staff of the Clinic. These employees included the health services manager/nursing supervisor, Angela "Dawn" Cogan, R.N.; Jessica Thompson, R.N., Patricia Holschuh, R.N, Sue Baker, R.N., and Erin Lay, P.A. (collectively " Clinic Staff"). The Clinic Staff are salaried employees of the Employer and their compensation was not affected by seeing workers' compensation patients vs. non-workers' compensation patients. None of the Clinic Staff was hired by, paid by, or received compensation from the Employer's insurance carrier..

4. In addition, the Employert contracted with a physician, Dr. Macaulay, who served as the authorized treating physician (ATP) for workers' compensation claimants and who provided other services to the Employer's employees. Typically, Dr. Macaulay worked Clinic hours Mondays and Wednesdays. Otherwise, Dr. Macaulay was reasonably available by phone or email.

5. Dawn Cogan managed the Employer's Clinic, and was the day-to-day supervisor of nurse Thompson, nurse Holschuh, Physician's Assistant (PA) Lay and nurse Baker. Dr. Macaulay did not have a supervisory role over the Clinic Staff for employment purposes. Instead, the Clinic Staff worked under Dr. Macaulay's direction with respect to implementing his plan of medical care, recommendations, referrals, prescriptions, and restrictions for injured workers. Dr. Macaulay exercised his independent medical judgment and decision making with respect to his assessment, diagnoses, treatment, recommendations, orders, and work restrictions for injured workers. The Clinic Staff had no authority to approve, reject or countermand Dr. Macaulay's decision making and judgment.

6. The Clinic Staff provided reasonable, necessary, and appropriate assistance to Dr. Macaulay in his role as the ATP for injured workers. The Clinic staff brought the patient to the examination room, took the patient's vital signs and/or performed other examinations, as necessary. When Dr. Macaulay examined a patient at the Clinic. Clinic Staff was present in the examination room to assist Dr. Macaulay and to facilitate patient care. The Clinic Staff member documented Dr. Macaulay's orders, recommendations, referrals, and work restrictions. The Clinic Staff's presence helped ensure that Dr. Macaulay's referrals, prescriptions, and restrictions were correctly understood and implemented. The Clinic Staff scheduled injured workers' appointments

with Dr. Macaulay and with outside providers such as physical therapy, imaging, and specialists; they ordered prescriptions; communicated with pharmacies; and informed injured workers of the status of their appointments. The Clinic Staff communicated work restrictions to injured workers' supervisors to help assure the Employer's compliance with the restrictions. Also, Clinic Staff fielded calls from injured workers and addressed injured workers' questions in person and over the phone. Clinic Staff's duties included contact with the insurance carrier to inform the Insurer of the injured workers' work restrictions, missed time, referrals, and recommended treatment, so the insurer could process claims and authorize benefits. In some instances, Clinic Staff contacted the Insurer to verify authorization of benefits for prescriptions, referrals, or treatment. Clinic staff did not attend medical appointments with injured workers away from the Clinic.

7. In general, one Clinic Staff member served as the "assigned nurse" for each workers' compensation claim, and was primarily the individual involved in attending appointments and performing the functions described above. The "assigned nurse," however, was not an official designation and other Clinic Staff members were involved in the injured workers' case. At times, Clinic Staff used the terms "case management" or "nurse case manager" in reference to functions performed with respect to a given case. Based on the totality of the evidence, the ALJ finds that Clinic nurses did **not** understand the meaning of "nurse case manager," as a word of art within the meaning of the Workers' Compensation Act (hereinafter "the Act').

Clinic Staff Activities

8. The Clinic Staff documented their attendance at appointments and the functions performed in an electronic progress note format maintained by the Clinic ("Progress Notes"). Within the Progress Notes, the Clinic Staff created individual notes labeled, among other things, "Case Management," "Dr. Exam," "Phone Consult" and "Medication." When a Clinic Staff member attended an appointment with Dr. Macaulay, the Progress Note entry was typically labeled as "Dr. Exam." The ALJ infers and finds that when "Case Management" was documented, the meaning was "case management" by a treating nurse.

9. Dr. Macaulay documented his examination, assessment, treatment, recommendations, and decision making for each appointment with an injured worker in a written medical record. Upon the completion of documentation, Dr. Macaulay provided a copy of his documentation to the Clinic Staff for inclusion in the injured workers' medical record file.

Dr. Macaulay

10. Dr. Macaulay testified that he understood the term "case manager" or "nurse case manager" to mean a nurse employed by an insurance company or some other third party to observe and to relay to the insurance carrier the nature of the care

and the problems experienced by the injured worker. Dr. Macaulay understood that "nurse case managers" hired by the insurance company are passive observers who do not take an active role in a patient's medical treatment. For example, a "nurse case manager" does not take a patient's vital signs, help implement the physician's recommendations for prescriptions or referrals, or perform other nursing duties. Dr. Macaulay understood that the Employer's Clinic Staff were present at the clinic and in the examinations in their capacity as Clinic medical staff who assisted Dr. Macaulay in providing medical care to patients who worked for the Employer, and that the Clinic Staff were not "nurse case managers" hired by an insurance company. Dr. Macaulay was not aware that Clinic Staff referred to themselves as case managers on occasion. The ALJ infers and finds that the Clinic nurses were mistaken in their generic reference to themselves as "case managers," and they did not understand that "case manager" within the meaning of the Act is a phrase of art and it did not include the nurse treaters at the Clinic.

Nurses at the Clinic

11. Nurse Dawn Cogan testified that she was confused about the meaning of "nurse case manager." She did not know the Act's definition of "nurse case manager" or "case management." She used the term "case management" at the Clinic to refer to providing services, taking vital signs, making referrals, calling in medications, applying warm compresses; those things to help facilitate care for the patient. Ms. Cogan understands a different workers' compensation definition may exist such as expressed by Dr. Macaulay.

12. Nurse Jessica Thompson testified that she worked at the Clinic as an occupational health nurse. Nurse Thompson never worked for Travelers Insurance Company and was never paid by Travelers Insurance Company. Thompson testified that to the extent she identified as a nurse case manager, she used the term as it related to her job as a registered nurse (RN) assigned to a workers' compensation patient. Her job duties included patient assessment to determine if urgent care was necessary, schedule appointments, implement Dr. Macaulay's orders and referrals, communicate with the supervisors about the patient's restrictions, assist Dr. Macaulay during medical examinations, take a patient's vitals, gather supplies, provide nursing treatment requested by the doctor, take notes, and follow up on doctor's orders.

13. The nurses at the Employer's clinic were **not** "nurse case managers" as inferentially defined by the statutory provision defining "nurse case management." Quite simply, "nurse case management" requires "nurse case managers" to implement "nurse case management." The insurer did not deploy "nurse case managers" in this case.

The Claimant's Involvement with the Employer's Clinic

14. The Claimant treated at the Employer's Clinic and with other medical providers including Gary Gutterman, M.D. and Robert Kawasaki., M.D. The Claimant testified that he considered the Clinic Staff treating nurses. The Clinic Staff offered treatment, brought him into the examination room, took vital signs, helped schedule appointments, and helped him arrange for prescriptions. Also, the Claimant testified that the Clinic Staff did not advise Claimant they were "nurse case managers," and did not request the Claimant's permission or consent to be present in the examination room with Claimant and Dr. Macaulay. Claimant did not request of any of the Clinic Staff to not remain present in the examination room. Similarly, Dr. Macaulay did not advise the Claimant the Clinic Staff were "nurse case managers," or request the Claimant's consent for Clinic Staff members to be present in the examination room. The ALJ infers and finds that this lack of disclosure as "nurse case managers" is the gravamen of the Claimant's request for penalties. The ALJ, however, rejects the theory that the Clinic nurses were, in fact, "nurse case managers" within the meaning of the Workers' Compensation Act. For this reason, disclosure of the Clinic nurses as "nurse case managers," which they were **not**. Compliance with § 8-43-203 (3) (b) (iv), C.R.S. , was factually necessary because the Clinic nurses were not "nurse case managers" within the meaning of the Workers' Compensation Act.

Teresa Manshardt

15. Teresa Manshardt testified that she adjusted the Claimant's workers' compensation claim for Travelers. On April 9, 2015, Travelers filed a General Admission of Liability (GAL). The GAL indicated that Travelers mailed the GAL to the Claimant with a "WC brochure enclosed for injured worker." Manshardt testified that the Insurer's standard procedure in April 2015 was for an administrative assistant to assemble admissions of liability, including attachments, and then deliver the documents to the adjusters. Manshardt's habit and practice was to review the draft for typographical errors and to confirm any referenced attachments were included with the GAL. Once Manshardt reviewed the documents, she would sign them and return them for mailing. Manshardt testified that she would not sign a GAL until she verified that a WC brochure was attached for an injured worker. When a WC brochure was included with a GAL mailed to a claimant, the WC brochure itself would not be maintained in the claims file. Instead, the Insurer relied on the notation on the GAL of the WC brochure's inclusion as evidence it was attached and sent. In the course of handling Claimant's claim, Manshardt sent other documents to the Claimant at his home address. Manshard was not aware of any correspondence or other documents sent to the Claimant that were returned to the Insurer as undeliverable or for an incorrect address. The ALJ finds Manshardt's testimony credible --that she followed her standard practice and that the WC brochure was attached to the April 9, 2015 GAL and mailed to Claimant on April 9, 2015, and the ALJ finds that the brochure was attached to the GAL. In the face of a convincing showing that the brochure was attached to the GAL, the Claimant's denial of receipt thereof is not credible.

16. The April 9, 2015 GAL states under “Remarks” – “WC brochure enclosed for injured worker” indicating that the WC brochure was enclosed with the copy of the GAL sent to Claimant.

The Claimant

17. Claimant’s attorney, also represented the Claimant in 2015. On October 8, 2015, he authored and sent an email to Respondents’ then attorney, Jon Robbins. Claimant’s attorney referenced “an email missing where Dawn Cogan says she’s the nurse case manager.” (Employer-Respondents’ Exhibit JJ).

18. On December 14, 2015, Claimant’ represented Claimant at a hearing before ALJ Peter Cannici. In anticipation of that hearing, on October 14, 2015, Claimant’s attorney deposed Employer Clinic Physician Assistant (PA) Lay. The Claimant was present at PA Lay’s deposition. PA Lay testified that she functioned as a case manager for work comp. Claimant’s attorney asked what PA Lay meant. PA Lay responded that she assisted Dr. Macaulay in making appointments for employees, making certain that prescriptions for physical therapy (PT) were sent correctly, that the patient was scheduled for what they needed, and that she scheduled Claimant’s follow-up examinations with Dr. Macaulay. Then, at the December 14, 2015 hearing, at which Claimant was present, Clinic nurse Jessica Bedwell Thompson testified in response to a question from Claimant’s attorney about Bedwell Thompson’s job at the Clinic, and Bedwell Thompson said: We do workers’ comp case management. Again, Bedwell Thompson said thios without regard to the meaning of “case manager” as defined by the Workers’ Compensation Act.

19. In the current case, Claimant admitted he received the April 9, 2015 GAL, but he did not recall receiving the WC brochure. Claimant admitted that he provided his attorney a copy of the April 9, 2015 GAL and that they submitted a copy of the April 9, 2015 GAL at the hearing in 2015. Claimant admitted that he did not allege failure to receive the WC brochure at the hearing in 2015. In light of the established business practices of the Clinic, Claimant’s lack of recall is **not** sufficient to rebut the presumption of receipt of the brochure.

20. On April 4, 2019, Claimant filed an Application for Hearing and alleged penalties against Dr. Macaulay-- that related to Claimant’s allegations that a “nurse case manager” attended medical appointments without proper disclosure and that “nurse case managers” improperly accessed medical records in violation of §§ 8-43-203(3)(b)(iv) and 8-47-203(1)., C.R.S. Specifically, the Claimant listed penalty claims:

- for March 25, 2015, April 1, 2015, April 20, 2015, May 13, 2015, May 27, 2015, July 29, 2015, and August 5, 2015, alleging that Nurse Jessica Bedwell Thompson, attended Claimant’s medical appointments with Dr.

Hugh Macaulay without proper disclosure to Claimant in violation of § 8-43-203(3)(b)(iv), C.R.S.

- On March 25, 2015, April 1, 2015, April 20, 2015, May 13, 2015, May 27, 2015, July 29, 2015, and August 5, 2015, Dr. Macaulay allegedly allowed Nurse Bedwell Thompson, access to Claimant's medical file in violation of § 8-47-203(1), C.R.S.

- On April ,13, 201515 and July 13, 2015, nurse case manager, Dawn Cogan, attended Claimant's medical appointments with Dr. Hugh Macaulay without proper disclosure to Claimant in violation of C.R.S. 8-43-203(3)(b)(iv);

- On April 13, 2015 and July 13, 2015, Dr. Macaulay allegedly allowed Nurse Dawn Cogan access to Claimant's medical file in violation of § 8-47-203(1).

- On June 3, 2015 and June 22, 2015, Nurse Bedwell Thompson or Dawn Cogan, attended Claimant's medical appointments with Dr.Macaulay without proper disclosure to Claimant in violation of § 8-43-203(3)(b)(iv), C.R.S.

- On June 3, 2015 and June 22, 2015, Dr. Macaulay allowed Nurse Jessica Bedwell Thompson or Dawn Cogan, access to Claimant's medical file in violation of § 8-47-203(1), C.R.S.
- On April 29, 2015 nurse case manager, Erin Lay, attended Claimant's medical appointment with Dr. Hugh Macaulay without proper disclosure to Claimant in violation of C.R.S. 8-43-203(3)(b)(iv);

- On April 29, 2015, Dr. Macaulay allowed Erin Lay access to Claimant's medical file in violation of § 8-47-203(1)., C.R.S.

21. Dr. Macaulay treated the Claimant after his March 25, 2015 work injury. Dr. Macaulay last treated the Claimant in 2015 and last worked at the Employer's Clinic in 2015. Dr. Macaulay first learned of the Claimant's penalty allegations in this case when Dr. Macaulay received the Claimant's Application for Hearing dated April 4, 2019. At that time, Dr. Macaulay had not worked at the Clinic for 3 ½ years and Dr. Macaulay was in no position to investigate or cure the Claimant's penalty allegations at the Clinic.

Ultimate Findings

22. Insofar as the Employer Clinic's nurses did not properly comprehend the legal meaning of "nurse case manager," as found hereinabove, the ALJ infers and finds that their self-description as "nurse case manager" is **not** credible. By their own description of their duties, which is credible, they were nurse treaters, as found

hereinabove. Dr. Macaulay's testimony, however, was credible and persuasive. The Claimant's testimony that he does not remember receiving the brochure with the GAL, although there is no reason to doubt his credibility, fails to disprove that the brochure was included with the GAL In fact, Teresa Manshardt's testimony concerning the official procedure of including the brochure with the GAL, as found, was credible and established that the brochure was included with the GAL Claimant's lack of recall is insufficient to overcome Manshardt's establishment of the fact that the brochure was included with the GAL. in 2015 Claimant never raised Respondents' alleged failure to include the brochure at a hearing in 2015. The fact that Claimant raised this proposition almost five years later, although he has been continuously represented by counsel since 2015, causes the ALJ to question the Claimant's credibility.

23. Between conflicting sets of fact, the ALJ makes a rational choice, based on substantial evidence, to accept Dr. Macaulay's description of the situation and the Clinic nurses' description of their jobs, *sans* their legal conclusions that they were "nurse case managers," and to reject the Claimant's legal conclusion that they were "nurse case managers," allegedly as contemplated by the Workers' Compensation Act.

24. The ALJ hereby finds that the Clinic nurses were not "nurse case managers" as contemplated by §8-43-203 (3) (b) (IV), C.R.S. As found, the Clinic nurses were there to assist Dr. Macaulay with treatment of the Claimant and **not** to manage the case for the insurance carrier. The ALJ rejects the Claimant's theory that the Clinic nurses were "nurse case managers" in the accepted meaning thereof, thus triggering the Claimant's right to refuse their presence when Dr. Macaulay was treating the Claimant, allegedly contrary to §8-43-203 (3) (b) (IV). "Nurse case management" is defined in the Act. As found hereinabove, "nurse case management" requires "nurse case managers" to implement it. The Clinic nurses, as found hereinabove, were not engaged in "nurse case management as defined by the Act.

25. The Claimant failed to prove, by preponderant evidence at the conclusion of the Claimant's case-in-chief that Dr. Macaulay, the Clinic nurses and the Employer knowingly or negligently violated provisions of the Workers' Compensation Act ("the Act'), thus triggering the penalty provisions of the Act. Consequently, a judgment in the nature of a directed verdict is appropriate.

CLAIMANT'S STATED POSITION IN OBJECTION TO PROPOSED ORDER

The Claimant argues for an outcome contrary to the decision announced from the bench at the conclusion of his case. Specifically, the Claimant argues that Dr. Macaulay violated § 8-43-203 (3)(b)(IV), C.R.S., beginning on March 25, 2015 and ongoing from March 9, 2015, pleading other violation dates including: April 1, 2015; April 13, 2015; April 20, 2015; April 29, 2015; May 13, 2015; May 27, 2015; June 3, 2015; June 22, 2015; July 13, 2015; July 29, 2015; and August 5, 2015. Claimant alleges that the penalty violations were ongoing from each date, based on Dr.

Macaulay's failure to identify staff as nurse case managers. Claimant argues that It was Dr. Macaulay's ongoing business practice to allow nurses (who, according to Claimant were "nurse case managers") into Claimant's medical appointments without Claimant's consent. , C.R.S., from March 25, 2015, to the date of this order. The ALJ rejects this argument and prayer for relief because the Clinic nurses were not "nurse case managers," as contemplated by the Act.

Claimant further argues that Dr. Macaulay violated § 8-47-203 (1), C.R.S., beginning on March 25, 2015 and ongoing from March 9, 2015; and, other violation dates including: April 1, 2015; April 13, 2015; April 20, 2015; April 29, 2015; May 13, 2015; May 27, 2015; June 3, 2015; June 22, 2015; July 13, 2015; July 29, 2015; and August 5, 2015. Claimant alleges that the penalty violations were ongoing from each date, based on Dr. Macaulay's providing Clinic nursing staff access to his medical records which they had access to continually. Claimant further argues that it was Dr. Macaulay's ongoing business practice to allow Clinic nurses at the Employer's clinic access to Claimant's medical records. The ALJ rejects this argument because the Clinic nurses were nurse treaters and required access to Claimant's medical records to effectively augment Dr. Macaulay's treatment. The Claimant requested additional penalties in the amount of $325.00 per day, pursuant to § 8-43-304, C.R.S., from March 25, 2015, to the date of this order. The ALJ rejects this argument and all requests for penalties, *in toto*, because the Clinic nurses were nurse treaters and **not** "nurse case managers" as commonly defined.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Judgment in the Nature of a Directed Verdict

a. Colo. Rules of Civil Procedure, Rule 41(b) (1), provides that, after a plaintiff in a civil action *tried without a jury* has completed the presentation of his evidence, the defendant may move for a dismissal on the grounds that the plaintiff has failed to present a prima facie case for relief. In determining whether to grant a motion to dismiss or in the nature of a directed verdict, the court is not required to view the evidence in the light most favorable to the plaintiff, as argued by a claimant. *Rowe v. Bowers*, 160 Colo. 379, 417 P.2d 503 (Colo. 1966)*; Blea v. Deluxe/Current, Inc.*, W.C. No. 3-940-062 [Indus. Claim Appeals Office (ICAO), June 18, 1997] (applying these principles to workers' compensation proceedings). Neither is the court required to "indulge in every reasonable inference that can be legitimately drawn from the evidence" in favor of the Claimant. Rather, the test is whether judgment for the respondents is justified on the claimant's evidence. *Amer. National Bank v. First National Bank*, 28 Colo. App. 486, 476 P.2d 304 (Colo. App. 1970); *Bruce v. Moffat County Youth Care Center*, W. C. No. 4-311-203 (ICAO, March 23, 1998). The question of whether the Claimant carried this burden was one of fact for resolution by the ALJ. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). As found, the Claimant's case for penalties against Dr. Macaulay could not have gotten any better as of the time the Claimant rested his case-in-chief. At that point, the Claimant had not carried his burden by a preponderance of the evidence. Therefore, dismissal of the penalty claims was warranted.

Credibility

b. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, insofar as the Employer Clinic's nurses did not properly comprehend the legal meaning of "nurse case manager," as found hereinabove, the ALJ infers and finds that their self-description as "nurse case manager" is **not** credible. By their own description of their duties, which is credible, they were nurse treaters. Dr. Macaulay's testimony, as found, was credible and persuasive. The Claimant's testimony that he does not remember receiving the brochure with the GAL, although there is no reason to doubt his credibility, fails to disprove that the brochure was included with the GAL The ALJ infers that the Claimant was not paying careful attention when he received the GAL in 2015. The fact that he did not raise this proposition at a 2015 hearing corroborates this inference. In fact, Teresa Manshardt's testimony concerning the official procedure of including the brochure with the GAL, as found, was credible and established that the brochure was included with the GAL Claimant's lack of recall is insufficient to overcome. The fact that Claimant raised this proposition almost five years later, although he has been continuously represented by counsel since 2015, causes the ALJ to question the Claimant's credibility.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985).   It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting sets of fact, the ALJ made a rational choice, based on substantial evidence, to accept Dr. Macaulay's description of the situation and the Clinic nurses' description of their jobs --that they were **not** "nurse case managers," and the ALJ rejects reject the Claimant's conclusion that they were "nurse case managers."

Penalties

d. The Claimant failed to meet his burden and prove that Dr. Macaulay violated a provision of the Workers' Compensation Act, did any act prohibited by the Act, failed or refused to perform any duty lawfully enjoined, or failed or neglected or refused to obey any lawful order that could subject Dr. Macaulay to a penalty. Claimant alleged penalties against Dr. Macaulay based on Claimant's allegations that a nurse case manager attended medical appointments without proper disclosure in violation of § 8-43-203(3)(b)(iv) C.R.S. and that nurse case managers improperly accessed medical records in violation of § 8-47-203(1) C.R.S. As found, the Clinic nurses were nurse treaters and **not** "nurse case managers,' and they necessarily attended Dr. Macaulay's treatment sessions in order to medically assist Dr. Macaulay.

e. § 8-43-203(3)(b)(iv), C.R.S. does not create a duty for treating physicians. The primary task in construing a statute is to ascertain and give effect to the Legislature's intent. *East Lakewood Sanitation Dist. v. District Court,* 842 P.2d 233, 235

(Colo. 1992); *In Interest of* R.C., 775 P.2d 27, 29 (Colo. 1989). To determine that intent, the ALJ looks first to the plain language employed by the General Assembly (*e.g., Farmers Group, Inc. v. Williams,* 805 P.2d 419, 422 (Colo. 1991)). "Words and phrases [are] given effect according to their plain and ordinary meaning, and [the ALJ must choose a construction that serves the purpose of the legislative scheme, and must not strain to give language other than its plain meaning, unless the result is absurd."' *Id.* (quoting *Colorado Dep't of Social Servs. v. Board of Comm'rs,* 697 P.2d 1, 18 (Colo. 1985)). If a statute is unambiguous, there is no need to resort to interpretive rules of statutory construction or the legislative history, e.g., *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542, 545 (Colo. 1995). The ALJ should not read nonexistent provisions into the Colorado Workers' Compensation Act. *See Kraus v. Artcraft Sign Co*., 710 P.2d 480, 482

The Brochure

f. The plain language of § 8-43-203(3)(b)(iv), C.R.S. provides that at the time that the employer or, if insured, the employer's insurance carrier provides notice whether liability is admitted or contested, the **employer** or **insurance carrier** shall provide to the claimant a brochure written in easily understood language, in a form developed by the director after consultation with employers, insurance carriers, and representatives of injured workers, describing the claims process and informing the claimant of his or her rights…The brochure shall…contain (b) The claimant's right to receive medical care for work-related injuries or occupational diseases paid for by the employer or the employer's insurance carrier including (iv) The claimant's right to discuss with his or her doctor who should be present during a claimant's medical appointment, and the right to refuse to have a "nurse case manager" employed on the claimant's claim present at the claimant's medical appointment (Emphasis supplied) .

g. The the plain language of § 8-43-203(3)(b)(iv), C.R.S. does not create or place a duty on treating physicians, such as Dr. Macaulay, to provide the Claimant a brochure. The statute does not create or place a duty on treating physicians, such as Dr. Macaulay, to advise a Claimant about the brochure in the event the employer or insurance carrier does not provide the Claimant with a copy of the brochure. The plain language of the statute does not, as Claimant suggests, create or place a duty on Dr. Macaulay to disclose to Claimant if a "nurse case manager" attends Claimant's medical appointment. The Claimant reads into the statute a duty which is not present in the plain language of the statute and the ALJ may not read nonexistent provisions into the Act. Nonetheless, as found, the Claimant was furnished a brochure with the GAL and simply does not remember receiving it.

h. The Employer's Clinic staff are not "nurse case managers" identified in § 8-43-203(3)(b)(iv), C.R.S. "Nurse case manager" is not defined in § 8-43-203(3)(b)(iv), C.R.S. That section provides that the brochure must include a statement that the claimant has the right to refuse to have a "nurse case manager" present during a medical appointment. The may look to other statutory provisions for guidance. The primary task in construing a statute is to ascertain and give effect to the Legislature's intent. *East Lakewood Sanitation Dist. v. District Court, supra*; *In Interest of* R.C., 775 P.2d 27, 29 (Colo. 1989). To determine that intent, the ALJ looks first to the plain language employed by the General Assembly (e.g., *Farmers Group, Inc. v. Williams,* 805 P.2d 419, 422 (Colo. 1991)). "Words and phrases [are] given effect according to their plain and ordinary meaning, and [the court] 'must choose a construction that serves the purpose of the legislative scheme, and must not strain to give language other than its plain meaning, unless the result is absurd.'" Id. (quoting *Colorado Dep't of Social Servs. v. Board of Comm'rs, supra.* "Words and phrases that have acquired a technical or particular meaning, whether by legislative definition or otherwise, shall be construed accordingly." § 2-4-101, C.R.S. An ALJ may consider dictionary definitions, but also the context in which the words are used to harmonize the meaning with the remainder of the statutory provisions. *People v. Berry, 459 P.3d 578, 581 (Colo. App. 2017).*

i. Statutes should be construed in the context of the other provisions of the statutory scheme, so as to give consistent, harmonious, and sensible effect to all parts of the act); See *Henderson v. RSI, Inc.*, 824 P.2d 91 (Colo. App. 1991); *See also Climax Molybdenum v. Walter,* 812 P.2d 1168 (Colo. 1991) (specific statutory provisions should prevail over general statutory provisions). The ALJ should not read nonexistent provisions into the Colorado Workers' Compensation Act. *See Kraus v. Artcraft Sign Co*., 710 P.2d 480, 482 (Colo. 1985).

j. As noted, § 8-43-203(3)(b)(iv), C.R.S. does not define "nurse case manager", however, § 8-42-101(3.6)(p)(I)(A), C.R.S. defines "case management" as a system developed by the insurance carrier in which the carrier shall assign a person knowledgeable in workers' compensation health care to communicate with the employer, employee, and the treating physician to assure that appropriate and timely medical care is being provided. § 8-42-101(3.6)(p)(I)(A), C.R.S. helps make sense of the term "nurse case manager." The logical construction is that the language of §8-42-101(3.6)(p), C.R.S is linked to the language of §8-43-203(3)(b)(IV), C.R.S. As found, the Clinic nurses were **not** engaged in "nurse case management," and were, therefore, not "nurse case managers," the trigger to activate the Claimant's right to disclosure of their role and Claimant's statutory right to refuse their presence. It is illogical for a claimant to refuse the presence of a nurse treater, who is present to augment a physician's medical treatment.

k. As found, Dr. Macaulay's testimony provides evidence as to the understanding of the term "nurse case manager" as it relates to workers' compensation matters. Dr. Macaulay understood the term "case manager" or "nurse case manager" to mean a nurse employed by an insurance company or some other third party to observe and to relay to the insurance carrier the nature of the care and the problems experienced by the injured worker. Dr. Macaulay understood that "Nurse Case

Managers," hired by the insurance company are passive observers who do not take an active role in a patient's medical treatment. A "nurse case manager" does not take a patient's vital signs, help implement the physician's recommendations for prescriptions or referrals, or perform other nursing duties. Dr. Macaulay's understanding is consistent with the statutory definition of "nurse case management."

l. Words and phrases that have acquired a technical or particular meaning, whether by legislative definition or otherwise, should be construed accordingly." The more reasonable construction of § 8-43-203(3)(b)(IV), C.R.S., is that the term "nurse case manager" allegedly employed on the Claimant's claim" has a technical, or particular meaning, and refers to a person who represents the interest of a third-party and who is not directly involved in implementing the ATP's plan of care.

m. As found, the Employer's Clinic nurses were nurse treaters and the fact that the Clinic nurses called themselves case managers is not controlling. There is no reasonable dispute that the Clinic Staff provided treatment and rendered services normally obtained in a doctor's office. As found, they weighed patients and took vitals. They assisted Dr. Macaulay to implement referrals, prescriptions, and restrictions. As further found, they were employed by the Employer to work at the Clinic and they were not "employed" by an insurance carrier "or third-party. As further found, the insurer did not deploy "nurse case managers" in this case.

n. The Claimant cites to *Nanez v. Indus.l Claim Appeals Office*, 444 P.3d 820 (Colo App. 2018) as defining the role of a "nurse case manager," in a conservator related case. In *Nanez*, a claimant sought benefits for conservator or guardian services under the Act. In denying the claimant's request, the Court of Appeals compared some of the proposed functions of a conservator to a nurse case manager who had already been employed on claimant's case. The court did not define the role of a "nurse case manager," but noted the existing nurse case manager had scheduled, and reminded the claimant of upcoming medical appointments, maintained contact with medical providers to keep updated on his progress, facilitated treatment recommendations and compliance with those recommendations, monitored medications and complaints for possible medical needs, and attended medical appointments. The Court did not, however, make any legal determination that a person who performs these functions is a "nurse case manager employed on the claimant's claim" under §8-43-203(3)(b)(IV), C.R.S. The holding in *Nanez* is inapposite to the facts in the present case.

o. Taking all the above into consideration, the ALJ concludes that the term "nurse case manager employed on claimant's claim," as used in § 8-43-203(3)(b)(IV), C.R.S., does not mean treating nurses or staff of a clinic where a claimant receives treatment and who assist the physician in implementing his plan of care or who assist a claimant in scheduling appointments. Instead, the ALJ concludes that "nurse case manager employed on a claimant's claim" means a person representing the interest of a third-party and who is not directly involved in implementing the ATP's plan of care.

Therefore, the Clinic Staff were not “nurse case managers employed on Claimant’s claim” as the term is extrapolated from the Act.

The Brochure

p. the Claimant received the Workers’ Compensation brochure, and thus knew or should have known of his right to discuss who may be present during his appointment and his right to refuse the presence of a nurse case manager employed on his claim. Because the Clinic nurses were **not** “nurse case managers” receipt or lack thereof is not relevant to the question of disclosure of the nurses’ role and whether the Claimant had a right to refuse their presence when Dr. Macaulay was treating the Claimant.

q. As found, Teresa Manshardt adjusted the Claimant’s workers’ compensation claim for Travelers. Manshardt credibly testified that she sent the April 9, 2015 GAL and the WC brochure to Claimant in compliance with § 8-43-203(3)(b)(IV), C.R.S. The business practice of Insurer was to review all GAL’s before mailing to assure the referenced attachments were included in the documents to be mailed, including assuring the WC brochure was attached to the version sent to Claimant. Although Insurer does not maintain in its claims file a copy of each WC brochure sent to a claimant, the Insurer documents the inclusion on the GAL. The April 9, 2015 GAL states under “Remarks” – “WC brochure enclosed for injured worker” indicating that the WC brochure was enclosed with the copy of the GAL sent to Claimant. Ms. M[Redacted] also testified that she only signed off on a GAL after assuring that the WC brochure was attached. Ms. M[Redacted]’s testimony is corroborated because she sent Claimant other documents to the same address to which she sent the GAL and the WC brochure and Ms. M[Redacted] did not recall that any mail sent to Claimant was returned as undelivered or returned due to an incorrect address. Also, neither Claimant nor his attorney raised the issue of a missing WC brochure in 2015.

r. In addition, “There is a rebuttable presumption that a letter which was properly addressed, stamped, and mailed was duly delivered to the addressee.” *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). “[T]he existence of a business custom or practice is sufficient to warrant a presumption that a particular letter was duly posted.” *National Motors, Inc. v. Newman*, 484 P.2d 125, 126 (Colo. App. 1971), *see also EZ Bldg. Components Mfg., LLC v. Industrial Claim Appeals Office of State*, 74 P.3d 516 (Colo. App. 2003) (“The existence of a business custom is sufficient to warrant a presumption that notice was sent, and it is the province of the trier of fact to decide whether that presumption is overcome by other evidence”) . As further found, Claimant’s lack of recall concerning receipt of the brochure is **insufficient** to rebut the presumption of receipt.

Clinic Nurses’ Access to Claimant’s Medical Records

s. The Claimant asserts that alleged "nurse case managers" access to Claimant's medical file was a violation of § 8-47-203(1), C.R.S. The plain language of §8-47-203(1), C.R.S. provides that the filing of a claim for compensation is deemed to be a limited waiver of the doctor-patient privilege to persons who are necessary to resolve the claim. Access to claim files maintained by the Division of Workers' Compensation (DOWC) will be permitted for limited purposes including availability for inspection upon request by the parties to the claim, including the claimant, the employer, and the insurer or their attorneys or other designated representatives.

t. The Claimant failed to meet his burden by proving that Dr. Macaulay violated § 8-47-203(1), C.R.S. As found, Dr. Macaulay created treatment notes for his appointments with Claimant and provided those notes to the Clinic Staff for inclusion in the Claimant's medical file. The Clinic Staff were not "nurse case managers" under the Act. Also, § 8-47-203(1), C.R.S. does not prevent Dr. Macaulay from providing his medical records to Clinic staff, nurses, Physician Assistants (PAs), or Nurse Practitioners (NPs). This is a normal use of medical records within a medical facility for which no waiver of the doctor-patient privilege is required.

u. Even if the Clinic staff were "nurse case managers" hired by an insurance company to act on behalf of the insurance company, § 8-47-203(1), C.R.S. specifically considers the insurance company a necessary party to whom a physician may provide medical records. The ALJ concludes that Dr. Macaulay did not violate § 8-47-203(1), C.R.S., or do any act prohibited by § 8-47-203(1), C.R.S., or fail or refuse to perform any duty lawfully enjoined, or fail or neglect or refuse to obey any lawful order that could subject him to a penalty.

Borden of Proof

v. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to penalties. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to sustain his burden with respect to all penalty claims against Dr. Macaulay.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all penalty claims against Hugh Macaulay are hereby denied and dismissed.

DATED this 11th day of March 2021.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Thomas G. Fry, M.D. that Claimant suffered a 31% whole person impairment rating as a result of his October 10, 2017 admitted left upper extremity injury.

2. Whether Claimant has demonstrated by a preponderance of the evidence that the reverse shoulder arthroplasty recommended by Nathan D. Faulkner, M.D. is reasonable, necessary and causally related to his October 10, 2017 admitted industrial injury.

FINDINGS OF FACT

1. This is an admitted claim for an October 10, 2017 left hand crush and shoulder injury. Specifically, Claimant was operating a pneumatic industrial forklift while working for Employer when he lost control of the machine and pinned his left hand between the forklift and a metal wall. He suffered fractures of his left thumb proximal phalanx and second metacarpal.

2. Claimant was transported to the emergency department at the University of Colorado where he underwent x-rays of the left shoulder, left wrist and left hand. In addition to Claimant's finger fractures, x-rays of the left shoulder revealed mild degenerative changes in the acromioclavicular joint and a full-thickness rotator cuff tear.

3. Claimant underwent left hand surgery to address the fractures and conservative treatment for the left shoulder. After Claimant's hand symptoms resolved he was discharged from care. However, Claimant had ongoing left shoulder symptoms and ultimately underwent an MRI. The October 27, 2017 left shoulder MRI revealed a large full-thickness rotator cuff tear of the supraspinatus and infraspinatus tendons as well as an anterior-superior labral tear.

4. On December 12, 2017 Claimant underwent left shoulder surgery with Nathan D. Faulkner, M.D. The surgery specifically addressed Claimant's left massive full-thickness, acute rotator cuff tear involving the supraspinatus and infraspinatus, a longitudinal biceps tear, adhesive capsulitis with extensive glenohumeral synovitis, and subacromial bursitis and impingement.

5. On January 19, 2018 Claimant visited Dr. Faulkner for a follow-up examination. Claimant noted his pain has improved since his last visit. He had been attending physical therapy and reported improved range of motion.

6. On April 23, 2018 Claimant underwent a repeat left shoulder MRI. The imaging revealed that the rotator cuff repair appeared to be intact. The MRI also reflected evidence of atrophy that was unchanged from his preoperative MRI.

7. On December 5, 2018 Claimant returned to Dr. Faulkner for an examination. He noted Claimant was about one year removed from left shoulder surgery. The repeat MRI showed an intact rotator cuff repair. Claimant exhibited functional range of motion and minimal pain. Dr. Faulkner determined that Claimant had reached Maximum Medical Improvement (MMI). He assigned permanent restrictions of no lifting more than 20 pounds overhead.

8. Claimant's shoulder symptoms and range of motion initially continued to improve. At physical therapy sessions he noted that he had shoveled snow and engaged in yard work. When Claimant returned for therapy on April 16, 2019 he stated "my shoulder hurts from doing so much yard work." The physical therapy report specifically documented that "Pt using LUE for yard work this weekend."

9. Claimant subsequently reported an increase in left shoulder symptoms that included ongoing weakness. Due to positive impingement signs on examination, Authorized Treating Physician (ATP) Matthew Lugliani, M.D. recommended a repeat left shoulder MRI to rule out the possibility of a re-tear.

10. On May 6, 2019 Claimant underwent a left shoulder MRI. The imaging revealed the following: little to no intact supraspinatus tissue; suggestion of proximal full-thickness disruption and distal tendon retraction; and mild to moderate acromioclavicular and mild glenohumeral osteoarthritis. Notably, based on the reading by Frank Crnkovich, M.D. the imaging reflected an "intact rotator cuff repair, I believe, but the tendons are thinned and of increased signal intensity."

11. On June 19, 2019 Claimant returned to Dr. Faulkner for an orthopedic surgery consultation. Claimant reported little to no pain and was not taking any pain medications, but merely had pain while performing overhead activities involving his left shoulder. Dr. Faulkner noted that the May 6, 2019 left shoulder MRI showed "a recurrent tear of the supraspinatus and infraspinatus with grade 3/4 atrophy. The MRI was compared to the previous MRI from last April that showed the rotator cuff to be intact with edema in the tendon and minimal rotator cuff atrophy." Dr. Faulkner remarked that Claimant did not obtain any significant relief from a superior medial steroid injection. He commented that Claimant had experienced "pain/persistent dysfunction and failure of more conservative treatment" and recommended a reverse left total shoulder arthroplasty. Dr. Faulkner did not address causality regarding the recommended surgery.

12. Claimant subsequently developed symptoms consistent with left ulnar entrapment neuropathy at the left elbow. On January 20, 2020 Scott Primack, M.D. confirmed the condition with EMG testing.

13. On May 12, 2020 Claimant visited Dr. Lugliani for an impairment evaluation. Dr. Lugliani noted that Claimant had suffered a work-related left hand crush injury and

undergone failed rotator cuff labral repairs. He concluded that Claimant reached MMI on May 12, 2020. Relying on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*), Dr. Lugliani assigned Claimant a 16% permanent impairment rating for the left hand. He noted that Claimant also had a 3% permanent impairment for the left wrist based on flexion/extension range of motion deficits. Dr. Lugliani also assigned a 10% rating for the left shoulder based on range of motion deficits. Combining the 16% left hand impairment with the 3% left wrist rating yields a 19% scheduled impairment. Combining the 19% rating with the 10% left shoulder impairment yields a 27% left upper extremity impairment. Finally, Dr. Lugliani converted the 27% left upper extremity rating to a 17% whole person impairment. He did not diagnose Claimant with a left elbow injury.

14. Based on the results of a Functional Capacity Examination (FCE), Dr. Lugliani assigned Claimant permanent restrictions of left hand and upper extremity lifting not to exceed 5 pounds, pushing and pulling of no more than 20 pounds and no reaching above shoulder height or away from the body with the left arm. He recommended maintenance medical treatment of two years for follow-up with orthopedics for reverse shoulder surgery, "if indicated."

15. Respondents filed a Notice and Proposal with an Application for a Division Independent Medical Examination (DIME) on June 19, 2020. Thomas G. Fry, M.D. was selected with a scheduled appointment on September 15, 2020. Dr. Fry issued a report on September 20, 2020. However, on October 8, 2020 the Division of Workers' Compensation issued an Incomplete Notice – DIME report, outlining six distinct issues that needed to be addressed by the DIME physician. Dr. Fry issued a supplemental report on November 18, 2020. However, on December 2, 2020 the Division issued a second Incomplete Notice – DIME Report, outlining two additional issues that needed to be addressed. Dr. Fry eventually clarified his report and the Division issued a Notice of DIME Process Complete.

16. Dr. Fry diagnosed Claimant with "arthritis left shoulder; complete rotator cuff tear left shoulder, failed repair, labral tear left shoulder, impingement syndrome left shoulder, adhesive capsulitis left shoulder, post biceps tenodesis with residual pain; loss of elbow motion; loss of wrist motion; multiple digit loss of motion; loss of grip strength; loss of superficial radial nerve function." He agreed that Claimant had reached MMI on May 12, 2020. Dr. Fry recommended a re-examination of Claimant's left shoulder in six months. He also noted that it was appropriate for Claimant to have a reverse shoulder arthroplasty if he elected. However, Dr. Fry did not comment on causality regarding the need for surgery.

17. In his final corrected report, Dr. Fry assigned Claimant a 24% permanent impairment of the left hand. He also assigned Claimant a 10% impairment of the wrist that included 2% for loss of superficial radial nerve function. Moreover, Dr. Fry assigned a 2% impairment for the left elbow based on range of motion deficits. Finally, Dr. Fry assigned a 26% impairment of the left shoulder that included a 12% upper extremity rating for crepitus. Combining the ratings yields an overall 52% left upper extremity scheduled rating that converts to a 31% whole person impairment.

18. On July 9, 2020 Claimant underwent an independent medical examination with Lawrence A. Lesnak, D.O. He interviewed Claimant, completed a medical record review and performed a physical examination. Ultimately, Dr. Lesnak determined that Claimant's injuries on October 10, 2017 injuries were limited to his left shoulder, left hand, left thumb and left index finger.

19. Dr. Lesnak testified that Claimant likely suffered a shoulder strain/sprain injury and noted significant pathology involving the left shoulder on MRI. However, the pathology probably predated Claimant's October 10, 2017 work incident. Dr. Lesnak remarked that, because Claimant possibly aggravated pre-existing pathology at the time of his work injury, he was entitled to a left shoulder impairment rating.

20. Dr. Lesnak determined that the recommended left shoulder surgery is not related to Claimant's work injury. He commented that Claimant's post-operative left shoulder MRI showed an intact rotator cuff repair. Dr. Lesnak remarked that, when surgeon Dr. Faulkner placed Claimant at MMI on December 5, 2018, he was still improving. Claimant had no specific pain in the shoulder other than some intermittent popping sensations. Dr. Lesnak concluded that Claimant's rotator cuff re-tear was unrelated to the occupational incident. Notably, Claimant's repair was intact 4½ months after surgery. Finally, Dr. Lesnak noted that, while surgery has been recommended, neither ATP Dr. Lugliani, surgeon Dr. Faulkner nor DIME Dr. Fry have specified that the need for surgery is causally related to Claimant's October 10, 2017 work injury.

21. Dr. Lesnak thoroughly addressed **Claimant's** permanent impairment rating. He assigned Claimant an 8% permanent impairment for the left shoulder based on range of motion deficits. Range of motion impairment specifically consisted of 4% for abnormal flexion, 2% for abnormal abduction and 2% for abnormal internal rotation. Dr. Lesnak explained that Claimant also qualified for a 9% total left hand impairment rating for residual abnormalities involving his left thumb, left index and left middle fingers. The 9% hand impairment rating converted to an 8% upper extremity impairment rating pursuant to Table 2 of the *AMA Guides*. Dr. Lesnak explained that the 8% upper extremity impairment for Claimant's left hand, thumb and fingers combined with the 8% upper extremity impairment for his left shoulder for an overall 15% upper extremity permanent impairment rating.

22. Dr. Lesnak detailed that Claimant did not warrant a permanent rating for the left wrist. He reasoned that there was no evidence of any type of injury to Claimant's left wrist and he never had any specific documented ongoing complaints of left wrist symptoms that qualified for a formal diagnosis as a result of the October 10, 2017 occupational incident. Furthermore, Dr. Lesnak agreed with Dr. Lugliani that Claimant did not qualify for any left elbow impairment. Although Dr. Primack identified an electrodiagnostic abnormality on his EMG testing, there was no evidence to suggest that the nerve entrapment was related to Claimant's work activities. Dr. Lesnak commented that the mechanism of injury that involved the crushing of the left hand "would be completely inconsistent with development of a left ulnar neuropathy at the elbow." Similarly, Dr. Lesnak did not assign impairment ratings for Claimant's left ring finger or left little finger for the industrial incident.

23. Claimant testified at the hearing in this matter. He remarked that he did not have any problems with his left wrist, arm, elbow or shoulder prior to the work incident. He further explained that he suffered inflammation, soreness and pain in his left elbow beginning on the date of his industrial injury. Specifically, when he attempted to rotate his hand and wrist in physical therapy, he developed pain in his left elbow. Claimant remarked that "when I pulled my arm away and tore the rotator cuff, it also caused that injury to the elbow." Finally, Claimant denied that he was able to shovel snow. He testified that his neighbors had shoveled for him until he bought a power snow "thrower" to push.

24. Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Fry that Claimant suffered a 31% whole person impairment rating as a result of his admitted left upper extremity injury. Initially, on October 10, 2017 Claimant was operating a pneumatic industrial forklift while working for Employer when he lost control of the machine and pinned his left hand between the forklift and a metal wall. He suffered fractures of his left thumb proximal phalanx and second metacarpal. Claimant subsequently underwent left hand and left shoulder surgeries. The shoulder surgery addressed Claimant's left, massive, full-thickness, acute rotator cuff tear. After an MRI revealed an intact rotator cuff, Claimant subsequently reported an increase in left shoulder symptoms that included ongoing weakness. After a subsequent left shoulder MRI revealed a recurrent rotator cuff tear, Dr. Faulkner recommended a reverse left total shoulder arthroplasty. By May 12, 2020 ATP Dr. Lugliani determined that Claimant had reached MMI. He assigned Claimant a 16% permanent impairment rating for the left hand, 3% for the left wrist and 10% for the left shoulder for a total 27% left upper extremity impairment as a result of his October 10, 2017 industrial injuries.

25. DIME Dr. Fry agreed that Claimant had reached MMI on May 12, 2020. He noted that it was appropriate for Claimant to have a reverse shoulder arthroplasty if he elected. However, Dr. Fry did not address causation regarding the proposed surgery. Dr. Fry assigned Claimant a 24% permanent impairment of the left hand. He also assigned Claimant a 10% impairment of the wrist that included 2% for loss of superficial radial nerve function. Moreover, Dr. Fry assigned a 2% impairment for the left elbow based on range of motion deficits. Finally, Dr. Fry assigned a 26% impairment of the left shoulder that included a 12% upper extremity rating for crepitus. Combining the ratings yields an overall 52% left upper extremity scheduled rating that converts to a 31% whole person impairment.

26. The record reveals that Respondents have produced clear and convincing evidence that Dr. Fry's impairment determination is incorrect. Initially, neither ATP Dr. Lugliani nor Dr. Lesnak assigned Claimant an impairment rating for his left elbow ulnar neuropathy. The record reflects that Claimant's elbow symptoms and diagnoses are unrelated to the occupational injury of October 10, 2017. The complaints warranting the diagnostic testing for the left elbow occurred more than two and one-half years after the original work injury. Moreover, the work injury was limited to the hand, fingers and left shoulder. Although Claimant testified that he developed left elbow symptoms as a result of his October 10, 2017 industrial injury, his comments are inconsistent with the medical records. Importantly, Dr. Fry failed to note a causal connection between the October 10, 2017 industrial injury and the subsequent emergence of left elbow symptoms. As Dr.

Lesnak noted, the mechanism of injury that involved the crushing of the left hand "would be completely inconsistent with development of a left ulnar neuropathy at the elbow." Based on the medical records and persuasive opinion of Dr. Lesnak, Respondents have produced unmistakable evidence free from serious or substantial doubt that Dr. Fry's assignment of a 2% left elbow impairment rating as a result of Claimant's October 10, 2017 industrial injury is incorrect.

27. Because Respondents' have carried the initial burden of overcoming Dr. Fry's impairment rating by clear and convincing evidence, the Claimant's correct rating is a matter of fact based upon the lesser burden of a preponderance of the evidence. The record reveals that Dr. Fry also erred in assigning a 12% upper extremity rating for crepitus of Claimant's left shoulder. Neither ATP Dr. Lugliani nor Dr. Lesnak assigned Claimant an impairment rating for left shoulder crepitus. Dr. Lesnak testified that his shoulder rating and the rating of Dr. Lugliani are "pretty similar." Dr. Lugliani and Dr. Lesnak appropriately limited the impairment for the left shoulder solely to range of motion deficits. Accordingly, as Dr. Lugliani determined, Claimant suffered a 10% impairment for his left shoulder based on range of motion deficits. Furthermore, despite Dr. Lesnak's testimony, the record reveals that Claimant suffered a 3% left wrist impairment as a result of his work injury. Dr. Lugliani noted that Claimant warranted a 3% permanent impairment for the left wrist based on flexion/extension range of motion deficits. Dr. Fry also assigned a left wrist impairment rating based on range of motion deficits.

28. Reviewing the record and considering the impairment ratings assigned by Drs. Lugliani, Fry and Lesnak, Claimant suffered a total 25% left upper extremity rating as a result of his October 10, 2017 work injury. Specifically, Claimant suffered a 16% left hand impairment, a 3% left wrist rating and a 10% left shoulder impairment. Although Dr. Lugliani calculated a 27% total left upper extremity rating for the preceding impairments, Table 2 of the *AMA Guides* reveals that the 19% rating for the left hand and wrist converts to 17% of the upper extremity. The 17% upper extremity rating for Claimant's left hand and wrist, combined with the 10% shoulder rating yields a total 25% left upper extremity impairment rating.

29. Claimant has failed to demonstrate that it is more probably true than not that the reverse shoulder arthroplasty recommended by Dr. Faulkner is reasonable, necessary and causally related to his October 10, 2017 admitted industrial injury. The record reveals Claimant initially underwent left shoulder surgery on December 12, 2017 to address his left massive, full-thickness, acute rotator cuff tear caused by his industrial accident. On April 23, 2018 Claimant underwent a repeat left shoulder MRI. The imaging revealed that the rotator cuff repair appeared to be intact. Although Claimant's left shoulder symptoms initially improved, his condition subsequently began to worsen. On May 6, 2019 Claimant underwent another left shoulder MRI that revealed a recurrent rotator cuff tear and Dr. Faulkner recommended a reverse left total shoulder arthroplasty. However, Dr. Faulkner did not address causality regarding the recommended surgery.

30. Dr. Lesnak persuasively explained that the requested left shoulder surgery is not related to the October 10, 2017 work injury. Claimant achieved MMI following his initial surgery, never returned to work and continued to use his left upper extremity for

activities of daily living. Notably, Claimant's rotator cuff repair was intact 4½ months after surgery. The record reflects that the new pathology relating to the new rotator cuff tear is not a result of the October 10, 2017 work injury. Dr. Lesnak's opinion is consistent with the medical records from Claimant's treating physicians and surgeons who noted he does not really have any significant pain or require the use of pain medication despite the re-tear. Moreover, while surgery has been recommended, neither Claimant's ATP, surgeon nor Dr. Fry have specified that the need for surgery is causally related to the initial work injury. Although the medical records document a rotator cuff re-tear, there is a lack of persuasive medical evidence to support a causal connection between the new tear and the original work injury. Accordingly, Claimant's request for a left reverse shoulder arthroplasty is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any

subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAO, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAO, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAO, Apr. 16, 2008).

6. A DIME physician's opinions concerning MMI and impairment carry presumptive weight pursuant to §8-42-107(8)(b)(III), C.R.S.; *see Yeutter v. Industrial Claim Appeals Office*, No. 18CA0498 (Apr. 11, 2019) 2019 COA 53. The statute provides that "[t]he finding regarding [MMI] and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence." *Id.* Subparagraph (II) is limited to parties' disputes over "a determination by an authorized treating physician on the question of whether the injured worker has or has not reached [MMI]." §8-42-107(8)(b)(II). "Nowhere in the statute is a DIME's opinion as to the cause of a claimant's injury similarly imbued with presumptive weight." *See Yeutter*, 2019 COA 53 ¶ 18. Accordingly*,* a DIME physician's opinion carries presumptive weight only with respect to MMI and impairment. *Id.* at ¶ 21.

7. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000).

8. If a party has carried the initial burden of overcoming the DIME physician's impairment rating by clear and convincing evidence, the ALJ's determination of the correct rating is then a matter of fact based upon the lesser burden of a preponderance of the evidence. *See Deleon v. Whole Foods Market, Inc*., WC 4-600-47 (ICAO, Nov. 16, 2006). When applying the preponderance of the evidence standard the ALJ is "not required to dissect the overall impairment rating into its numerous component parts and determine whether each part or sub-part has been overcome by clear and convincing evidence." *Deleon v. Whole Foods Market, Inc*., WC 4-600-47 (ICAO, Nov. 16, 2006). When the ALJ determines that the DIME physician's rating has been overcome, the ALJ may independently determine the correct rating. *Lungu v. North Residence Inn*, WC 4-

561-848 (ICAO, Mar. 19, 2004). An ALJ's statutory power to render evidentiary decisions does not disappear merely because the ATP and the DIME doctor agree that a claimant has not reached MMI. An ALJ may thus determine whether a claimant has reached MMI and assign an impairment rating as a question of fact. *Destination Maternity and Liberty Mutual Insurance Company v. Burren*, 19SC298 (Colo. May 18, 2020); *see Niedzielski v. Target Corporation*, WC 5-036-773-001 (ICAO, Mar. 9, 2020) (when an ALJ determines that a DIME opinion has been overcome, the issue of the claimant's correct impairment rating becomes a question of fact and the ALJ may calculate the impairment based upon a preponderance of the evidence).

9. As found, Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Fry that Claimant suffered a 31% whole person impairment rating as a result of his admitted left upper extremity injury. Initially, on October 10, 2017 Claimant was operating a pneumatic industrial forklift while working for Employer when he lost control of the machine and pinned his left hand between the forklift and a metal wall. He suffered fractures of his left thumb proximal phalanx and second metacarpal. Claimant subsequently underwent left hand and left shoulder surgeries. The shoulder surgery addressed Claimant's left, massive, full-thickness, acute rotator cuff tear. After an MRI revealed an intact rotator cuff, Claimant subsequently reported an increase in left shoulder symptoms that included ongoing weakness. After a subsequent left shoulder MRI revealed a recurrent rotator cuff tear, Dr. Faulkner recommended a reverse left total shoulder arthroplasty. By May 12, 2020 ATP Dr. Lugliani determined that Claimant had reached MMI. He assigned Claimant a 16% permanent impairment rating for the left hand, 3% for the left wrist and 10% for the left shoulder for a total 27% left upper extremity impairment as a result of his October 10, 2017 industrial injuries.

10. As found, DIME Dr. Fry agreed that Claimant had reached MMI on May 12, 2020. He noted that it was appropriate for Claimant to have a reverse shoulder arthroplasty if he elected. However, Dr. Fry did not address causation regarding the proposed surgery. Dr. Fry assigned Claimant a 24% permanent impairment of the left hand. He also assigned Claimant a 10% impairment of the wrist that included 2% for loss of superficial radial nerve function. Moreover, Dr. Fry assigned a 2% impairment for the left elbow based on range of motion deficits. Finally, Dr. Fry assigned a 26% impairment of the left shoulder that included a 12% upper extremity rating for crepitus. Combining the ratings yields an overall 52% left upper extremity scheduled rating that converts to a 31% whole person impairment.

11. As found, the record reveals that Respondents have produced clear and convincing evidence that Dr. Fry's impairment determination is incorrect. Initially, neither ATP Dr. Lugliani nor Dr. Lesnak assigned Claimant an impairment rating for his left elbow ulnar neuropathy. The record reflects that Claimant's elbow symptoms and diagnoses are unrelated to the occupational injury of October 10, 2017. The complaints warranting the diagnostic testing for the left elbow occurred more than two and one-half years after the original work injury. Moreover, the work injury was limited to the hand, fingers and left shoulder. Although Claimant testified that he developed left elbow symptoms as a result of his October 10, 2017 industrial injury, his comments are inconsistent with the medical records. Importantly, Dr. Fry failed to note a causal connection between the October 10,

2017 industrial injury and the subsequent emergence of left elbow symptoms. As Dr. Lesnak noted, the mechanism of injury that involved the crushing of the left hand “would be completely inconsistent with development of a left ulnar neuropathy at the elbow.” Based on the medical records and persuasive opinion of Dr. Lesnak, Respondents have produced unmistakable evidence free from serious or substantial doubt that Dr. Fry’s assignment of a 2% left elbow impairment rating as a result of Claimant’s October 10, 2017 industrial injury is incorrect.

12. As found, because Respondents’ have carried the initial burden of overcoming Dr. Fry’s impairment rating by clear and convincing evidence, the Claimant’s correct rating is a matter of fact based upon the lesser burden of a preponderance of the evidence. The record reveals that Dr. Fry also erred in assigning a 12% upper extremity rating for crepitus of Claimant’s left shoulder. Neither ATP Dr. Lugliani nor Dr. Lesnak assigned Claimant an impairment rating for left shoulder crepitus. Dr. Lesnak testified that his shoulder rating and the rating of Dr. Lugliani are “pretty similar.” Dr. Lugliani and Dr. Lesnak appropriately limited the impairment for the left shoulder solely to range of motion deficits. Accordingly, as Dr. Lugliani determined, Claimant suffered a 10% impairment for his left shoulder based on range of motion deficits. Furthermore, despite Dr. Lesnak’s testimony, the record reveals that Claimant suffered a 3% left wrist impairment as a result of his work injury. Dr. Lugliani noted that Claimant warranted a 3% permanent impairment for the left wrist based on flexion/extension range of motion deficits. Dr. Fry also assigned a left wrist impairment rating based on range of motion deficits.

13. As found, reviewing the record and considering the impairment ratings assigned by Drs. Lugliani, Fry and Lesnak, Claimant suffered a total 25% left upper extremity rating as a result of his October 10, 2017 work injury. Specifically, Claimant suffered a 16% left hand impairment, a 3% left wrist rating and a 10% left shoulder impairment. Although Dr. Lugliani calculated a 27% total left upper extremity rating for the preceding impairments, Table 2 of the *AMA Guides* reveals that the 19% rating for the left hand and wrist converts to 17% of the upper extremity. The 17% upper extremity rating for Claimant’s left hand and wrist, combined with the 10% shoulder rating yields a total 25% left upper extremity impairment rating.

Medical Benefits

14. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re Parker*, W.C. No. 4-517-537 (ICAO, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAO, Nov. 13, 2000).

15. As found, Claimant has failed to demonstrate by a preponderance of the evidence that the reverse shoulder arthroplasty recommended by Dr. Faulkner is reasonable, necessary and causally related to his October 10, 2017 admitted industrial injury. The record reveals Claimant initially underwent left shoulder surgery on December 12, 2017 to address his left massive, full-thickness, acute rotator cuff tear caused by his industrial accident. On April 23, 2018 Claimant underwent a repeat left shoulder MRI. The imaging revealed that the rotator cuff repair appeared to be intact. Although Claimant's left shoulder symptoms initially improved, his condition subsequently began to worsen. On May 6, 2019 Claimant underwent another left shoulder MRI that revealed a recurrent rotator cuff tear and Dr. Faulkner recommended a reverse left total shoulder arthroplasty. However, Dr. Faulkner did not address causality regarding the recommended surgery.

16. As found, Dr. Lesnak persuasively explained that the requested left shoulder surgery is not related to the October 10, 2017 work injury. Claimant achieved MMI following his initial surgery, never returned to work and continued to use his left upper extremity for activities of daily living. Notably, Claimant's rotator cuff repair was intact 4½ months after surgery. The record reflects that the new pathology relating to the new rotator cuff tear is not a result of the October 10, 2017 work injury. Dr. Lesnak's opinion is consistent with the medical records from Claimant's treating physicians and surgeons who noted he does not really have any significant pain or require the use of pain medication despite the re-tear. Moreover, while surgery has been recommended, neither Claimant's ATP, surgeon nor Dr. Fry have specified that the need for surgery is causally related to the initial work injury. Although the medical records document a rotator cuff re-tear, there is a lack of persuasive medical evidence to support a causal connection between the new tear and the original work injury. Accordingly, Claimant's request for a left reverse shoulder arthroplasty is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have overcome Dr. Fry's DIME opinion regarding Claimant's permanent impairment. Claimant suffered a 25% left upper extremity impairment rating as a result of his October 10, 2017 industrial injury.

2. Claimant's request for a left reverse shoulder arthroplasty is denied and dismissed.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that the medical treatment recommended by David L. Reinhard, M.D. is reasonable, necessary, and causally related to her admitted industrial injury.

FINDINGS OF FACT

Prior History

1. In March 2016 Claimant sought treatment at Norris Chiropractic with 5/10 cervical spine pain and 4/10 headaches related to a motor vehicle accident ("MVA") that occurred on March 11, 2016. Claimant treated at Norris Chiropractic until September 7, 2016, when she was released from care with no further treatment recommended.

2. Claimant subsequently began treating at Complete Chiropractic in September 2017, reporting her history of a MVA one year prior, with current complaints of 7/10 neck pain with tingling and numbness, dizziness, ear and sinus problems, right shoulder pain, upper back pain, 3/10 low back pain that stopped her from walking, right TMJ pain, and poor circulation in her feet. Claimant treated for these conditions up to March 5, 2018.

3. On March 9, 2018, Claimant was involved in a second MVA where she was rear-ended by another vehicle. She reported experiencing immediate upper back pain with dizziness, light headedness, blurry vision, confusion, and numbness/tingling. Claimant sought treatment at Complete Chiropractic, where the chiropractor noted Claimant's symptoms from the 2016 MVA had resolved prior to this visit. Claimant attended 85 chiropractic visits from September 14, 2017 until January 28, 2019.

4. On January 17, 2019, Claimant saw her primary care physician ("PCP") at Clinix Health Services for a lump on her collarbone. She also requested refills of Sertraline and Breo Ellipta inhaler medication. Claimant reported neck pain and frequent severe headaches, as well as depression. She requested physical therapy for her neck pain.

5. As of January 28, 2019, Claimant continued to report neck, upper back and shoulder pain with nausea and general malaise discomfort. She rated her neck pain at 4/10 on both sides of her neck with limited range of motion. Claimant's chiropractor opined that it was reasonable to believe that Claimant's recovery may take longer than an average patient with an uncomplicated case. Trigger point injections and alternative treatment were recommended to resolve Claimant's ongoing issues.

January 31, 2019 Work Injury

6. On January 31, 2019, Claimant sustained an admitted industrial injury when she struck the left side of her forehead on a steel beam. Video footage of the incident shows Claimant turning around and running into a metal beam. Claimant did not fall to the ground or lose consciousness. Claimant is observed placing her hand on the left side of her head and walking off camera.

7. Claimant presented to her PCP on February 1, 2019 reporting hitting her head on a beam and not feeling like herself. The physician noted a contusion and bruise on the frontal region of Claimant's head. Claimant indicated she did not lose consciousness but felt dizzy. She reported neck pain and pain on the left side of her head associated with a headache. Claimant described feeling "out of it," dazed, slow, and off-balance. She described her head injury as aggravated by movement or bending over. Claimant's PCP diagnosed Claimant with a concussion without loss of consciousness. The PCP advised Claimant not to drive and to stay home from work for the remainder of the week and beginning of the following week.

8. Claimant was also seen on February 1, 2019 by her chiropractor who Claimant had a regular treatment schedule. The chiropractic notes reflect that Claimant hit her head on a metal beam at work. Claimant advised that she had been to the doctor and diagnosed with a concussion. She noted that she had a headache and was having trouble focusing and speaking coherently. Claimant complained of increased pain in her neck and mid back tingling head returned worse than it had been in months.

9. Claimant returned to her PCP on February 6, 2019 reporting some improvement but continued symptoms. Claimant complained of visual difficulties with her left eye, slurring and stuttering, numbness, and a tingling sensation in the left parietal region radiating down to her neck. Claimant's PCP kept her off of work.

10. Claimant subsequently underwent evaluation and treatment at authorized provider Concentra. Claimant presented to Kathryn Bird, D.O. on February 7, 2019 with complaints of neck and left shoulder pain, pain in the left side of her face, intermittent nausea, blurred vision in the left eye, dizziness worsened by bending and movement, photophobia, headache, speech disturbance, impaired balance, and poor coordination. Dr. Bird diagnosed Claimant with a head contusion and neck strain and referred her for physical therapy.

11. On February 12, 2019, Dr. Bird released Claimant to return to modified work of seated duty only.

12. On February 21, 2019, Claimant continued to complain of blurred vision, headaches, dizziness, tingling and numbness. Dr. Bird prescribed medication and ordered physical therapy for benign paroxysmal positional vertigo and bilateral strain of the neck muscle. Dr. Bird provided work restrictions requiring Claimant to be seated for

half of her shift and no squatting, kneeling, bending or climbing ladders the other half of the shift.

13. Dr. Bird reexamined Claimant on March 7, 2019. Claimant had ongoing complaints of constant headache, dizziness, confusion, balance issues, confusion, problems with conversing, forgetfulness, and light sensitivity. Claimant informed Dr. Bird that she had a history of two prior rear-end MVAs with chiropractic care, the most recent in March of 2018, and had been receiving medical care for her neck prior to the current work injury. Dr. Bird referred Claimant to John Sacha, M.D. for evaluation and treatment of a whiplash injury to her neck. She continued Claimant on work restrictions.

14. Dr. Sacha first evaluated Claimant on March 20, 2019. Claimant reported left-sided neck pain, headaches, blurry vision, dizziness and photophobia. Dr. Sacha found Claimant exhibited good concentration, memory and attention to task, and was able to answer all questions without difficulty. He opined that there was a concern of a concussion, but that Claimant's symptoms were not consistent with a concussion, and instead were consistent with mild upper cervical facet syndrome or whiplash disorder. Dr. Sacha noted Claimant had a recent car accident with similar symptoms and opined that Claimant was likely experiencing an exacerbation of a pre-existing problem. Dr. Sacha diagnosed Claimant with cervical facet syndrome, posttraumatic in nature, whiplash associated disorder, and occipital neuralgia. He provided medications and ordered a cervical MRI.

15. On March 21, 2019, Dr. Bird referred Claimant for vestibular therapy.

16. At her initial vestibular therapy appointment on March 29, 2019, Claimant complained of constant cloudy vision in the left eye; intermittent double vision; left sided head face numbness, difficulty swallowing; intermittent stuttering, word finding difficulty; decreased memory; dizziness and confusion; and decreased sensitivity to light. She reported having difficulty with driving, reading, balance, household chores since she hit her head. The therapist assessed that Claimant presented with symptoms consistent with vestibular dysfunction, post concussive syndrome and cervicalgia.

17. Claimant returned to Dr. Sacha on May 1, 2019 with continued complaints of neck pain, headaches, lightheadedness and dizziness. Dr. Sacha noted that an April 27, 2019 cervical MRI showed evidence of straightening of Claimant's cervical lordosis consistent with a whiplash disorder and modest degenerative disc disease and facet spondylosis. Dr. Sacha recommended that Claimant undergo medial branch block injections bilaterally from C2-C5 and possibly radiofrequency ablation.

18. On June 3, 2019 Dr. Bird performed a neurologic exam and noted equivocal Romberg and tandem gait, cranial nerves grossly intact, normal gait and normal mental status. Dr. Bird referred Claimant for a head MRI and massage therapy.

19. On June 5, 2019, the parties agreed to a change of physician to Barton Goldman, M.D.

20. On June 24, 2019, Claimant reported continuing symptoms to Dr. Bird. She reported having fallen several times. Dr. Bird noted a normal neurologic exam.

21. Prior to examining Claimant, Dr. Goldman performed a comprehensive medical records review of records dating back to September 12, 2017. He prepared a report dated August 1, 2019. Dr. Goldman noted that prior to the work injury Claimant had ongoing chronic neck, thoracic and upper back pain with bilateral shoulder paresthesias for more than a year in the range of 4/10 and was in the process of a physical therapy referral for these conditions. He further noted prior complaints of numbness, tingling, dizziness, lightheadedness, blurry vision and confusion. Dr. Goldman remarked that the medical notes established "a pattern of passive modality and chiropractic overutilization with lack of clearly documented functional and symptomatic progress, as well as a possible proclivity on the part of the patient to overly emphasize a more proximate trauma within the context of prior musculoskeletal injuries and accidents." (Ex. A, p. 225).

22. Dr. Goldman opined that, as a result of the work injury, Claimant had (1) a concussion without loss of consciousness with a mild traumatic brain injury ("TBI") and complaints of residual short term memory, processing, left facial paresthesias, vestibular and visual deficits; (2) exacerbation of pre-existing chronic cervical strain and facet dysfunction that had returned to her pre-work injury baseline; (3) deconditioning; and (4) occupational situation. Dr. Goldman commented that he may not be the ideal authorized treating physician ("ATP") for Claimant, as his goal was aggressive and active physical rehabilitation, and he sensed Claimant wanted a physician with nurturing skills.

23. Dr. Goldman evaluated Claimant on August 8, 2019 and September 6, 2019. He noted that, based on Claimant's pain drawings and history, her physical examination was considered physiological with evidence of slowly improving mild residual balance and slower processing speed that may be post concussive or medication/anxiety/depression/somatization-related. He concluded that Claimant's neck issues probably pre-existed the work-related injury. Dr. Goldman opined that, until Claimant's post concussive complaints have been objectively clarified, Dr. Bird's placement of Claimant at MMI is premature. He opined that objective quantification of Claimant's post concussive symptoms would require neuropsychological and neuropsychometric testing, neuroontological workup, and neurological evaluation. Dr. Goldman agreed to supervise and evaluate the testing evaluations as an ATP if all parties were supportive of his treatment plan.

24. On August 20, 2019, Claimant returned to Dr. Bird with complaints of frequent headaches with nausea, balance issues, headaches on the left side and near each temple, memory issues, and confusion. On neurologic examination Claimant demonstrated normal gait, normal heel-toe test, normal balance, normal mental status, intact cranial nerves, and normal sensation to light touch. Dr. Bird released Claimant at

maximum medical improvement (“MMI”) on August 20, 2019 with a return to full duty work. She recommended six sessions of vestibular therapy as maintenance treatment.

25. On September 17, 2019, Dr. Goldman requested authorization for Dr. Hammerberg to conduct a neurological evaluation of post concussive headaches and “fullness” increase of intracerebral pressure; for Dr. Alan Lipkin to evaluate Claimant for dizziness/balance issues; for Dr. Jennifer Geigo or Dr. Thwaites to conduct a complete neuropsychological and neuropsychometric evaluation for post concussive symptoms; and for Dr. Drucker, Dr. Chester Roe or Dr. Ronald Wise to conduct ophthalmology or optometry evaluations.

26. On September 26, 2019, Respondents contested and denied the medical treatment referrals recommended by Dr. Goldman pursuant to WCRP Rule 16.

27. On October 7, 2019, Dr. Goldman formally discharged Claimant from his practice, noting that Respondents had denied his requests for evaluation and it was not an agreed upon situation in which all parties could work in harmony towards the best possible outcome as soon as possible. Dr. Goldman noted that he found sufficient and consistent presentation of symptoms that supported his recommendations and possible treatment prior to declaration of MMI. Dr. Goldman provided referrals to one of three physicians to serve as Claimant’s ATP: Dr. Reinhard, Dr. Gellrick or Dr. Macaulay.

28. Claimant requested a change of physician to Dr. Reinhard on October 16, 2019, which was granted by Respondents on October 29, 2019.

29. Claimant first presented to Dr. Reinhard on November 8, 2019. Dr. Reinhard noted Claimant had pre-existing neck issuing for which she was undergoing chiropractic care leading up to the work injury, and that by Claimant’s report, her pre-existing neck symptoms did not change after to the work injury. Dr. Reinhard opined that Claimant experienced head trauma on January 31, 2019 which resulted in a Grade 2 concussion with resulting post concussive syndrome. Claimant had neurocognitive complaints, vertigo and imbalance, mood changes with emotional flatness, photophobia, and cephalgia. Dr. Reinhard wanted to rule out cerebral dysfunction. He also diagnosed posttraumatic headaches as a result of head trauma. Dr. Reinhard recommended an MRI of the head, formal neuropsychological testing, the continuation of vestibular therapy, and an ENT evaluation with Dr. Lipkin. He provided work restrictions of no ladders, no waiting on customers, and no activities requiring significant new learning, speed of task completion or multitasking.

30. On November 17, 2019, Allison Fall, M.D. performed an Independent Medical Examination (“IME”) at the request of Respondents. Dr. Fall reviewed Claimant’s medical records dating back to February 2, 2014. Claimant described her symptoms as a headache, unbalanced, memory issues, with 3-6/10 pain. Dr. Fall reviewed the medical records and noted a prior history of depression, chronic neck pain, dizziness, numbness and tingling, malaise, and muscle tension headaches. She diagnosed Claimant with a mild concussion and temporary exacerbation of cervicothoracic

myofascial pain, resolved. Dr. Fall remarked that psychosocial issues may be playing a role in Claimant's complaints, and that Claimant has a reliance on passive modalities with no medical explanation for her neurologic deficits. Dr. Fall opined that the requests for neurological, neuroontological, and neuropsychological or neuropsychometric evaluations or any other recommended care was not reasonable, necessary or related. She concluded Claimant reached MMI on August 5, 2019 without impairment.

31. On November 27, 2019, Respondents denied testing and referrals requested by Dr. Reinhard based on the opinions of Dr. Fall.

32. On December 19, 2019, Claimant attended a follow-up evaluation with Dr. Reinhard who limited Claimant's work hours to 4 hours/day, 4 days/week with no ladders, no waiting on customers, and no significant cognitive demands in the area of new learning, multitasking and speed of task completion. Dr. Reinhard noted Claimant continued to experience numerous post concussive symptoms. He continued to recommend an ENT consultation for a vestibular workup, neuropsychological testing, a head MRI, and vestibular therapy.

33. Claimant returned to Dr. Reinhard on March 6, 2020. He reviewed a brain MRI Claimant paid for personally and noted that the MRI was normal aside from chronic microvascular changes. Dr. Reinhard also responded to questions from Claimant's counsel after reviewing Claimant's pre-existing chiropractic records as well as the reports of Dr. Goldman and Dr. Fall. Dr. Reinhard continued to opine that Claimant's work-related diagnosis is a Grade 2 concussion with resultant post-concussion syndrome including neurocognitive complaints, vertigo and imbalance, changes in mood, photophobia, and post traumatic headaches. Dr. Reinhard disagreed with Dr. Fall that Claimant reached MMI and he continued to recommend formal neuropsychological testing, ENT consultation with vestibular testing, a head MRI, and additional vestibular therapy. Dr. Reinhard noted that, although Claimant had been involved in two prior rear-end MVAs, she did not sustain a concussion in either of those accidents. He further noted that Claimant's concussion was a direct result of the work-related head trauma sustained on January 31, 2019. Dr. Reinhard opined that additional workup and treatment should be performed to further evaluate Claimant's complaints as opposed to assuming Claimant's complaints are non-physiologic and inconsequential. Dr. Reinhard stated that the recommendations made by himself and Dr. Goldman were consistent with the Colorado Division of Workers Compensation Medical Treatment Guidelines and should be pursued prior to placing Claimant at MMI. Dr. Reinhard maintained Claimant's work restrictions.

34. On July 13, 2020, Dr. Fall issued an addendum to her IME report after reviewing additional medical records, video footage of the work incident, and surveillance video of Claimant. Dr. Fall continued to opine that Claimant's work-related injury consisted of a left forehead contusion with possible mild temporary exacerbation of pre-existing cervical myofascial pain. She opined that Claimant's continued reported symptoms were not related to the work injury and were inconsistent with Claimant's presentation on surveillance footage.

35. On August 19, 2020, Dr. Fall issued a second addendum report after reviewing the February 11, 2020 MRI report. Dr. Fall opined that the MRI indicated a chronic microangiopathic ischemic, otherwise known as microvascular disease, which are changes in the walls of the blood vessels of the brain and can be asymptomatic and can also cause complaints consistent with Claimant's current complaints of cognitive impairment, balance problems, and dementia-like symptoms. She concluded that those changes could be responsible for Claimant's current complaints. She opined that the chronic microangiopathic ischemic changes do not have any relation to Claimant's January 31, 2019 injury, explaining that they are not caused by hitting one's head. She noted that the cause of microangiopathic ischemic changes is often multifactorial, and risk factors include age, hypertension, diabetes and smoking.

36. On August 21, 2020, Dr. Reinhard issued an addendum after reviewing Dr. Fall's August 19, 2020 report. While he agreed with Dr. Fall in her explanation of micro ischemic changes, he opined that micro ischemic changes are not the cause of Claimant's cognitive impairment, balance difficulties and mood changes. He indicated these findings on MRI are common in people over 60 years old, and Dr. Fall acknowledged they can be asymptomatic. Dr. Reinhard indicated that since Claimant was not experiencing these problems prior to the work injury, it is most probable that the ischemic changes were asymptomatic. He also noted that ischemic changes present slowly and over time, not suddenly. He indicated that the timing and nature of Claimant's symptoms are more consistent with work injury rather than the incidental finding of microangiographic ischemic changes found on the February 11, 2020 MRI.

37. Dr. Fall testified by post-hearing deposition as an expert in physical medicine and rehabilitation. Dr. Fall stated she reviewed the video footage of how the incident occurred and opined that Claimant did not suffer whiplash. She testified that the findings on her physical and neurologic examination of Claimant were normal. Dr. Fall noted that, although Claimant reported memory issues and provided some vague responses, she did not detect verbal word forming issues or comprehension issues. Claimant's balance and coordination were both good. Dr. Fall further noted that Dr. Goldman discussed somatoform disorder as a potential cause of Claimant's symptoms, and that she agreed with Dr. Goldman.

38. Dr. Fall testified that if Claimant did suffer a concussion as a result of the work injury, it was a mild concussion with an excellent prognosis given the lack of initial neurologic symptoms, the fact that she did not lose consciousness, and the lack of retrograde amnesia. Dr. Fall explained that symptoms from a mild concussion are expected to resolve within days or a few weeks with no permanency, barring some other pre-existing or stress/anxiety issues. Dr. Fall noted that anxiety, pain or whiplash from a MVA can resemble symptoms of a concussion, such as a headache, nausea and dizziness. She testified that a concussion does not require specific treatment beyond rest and time, and thus there is no indication for any further treatment for Claimant, including but not limited to the recommendations of Dr. Reinhard.

39. Dr. Fall reviewed Claimant's brain MRI and noted no acute findings, but did note chronic microvascular changes, which she explained is an issue present when blood and oxygen do not get to tips of vessels in the brain, common in older individuals. Dr. Fall further explained that, if this condition is symptomatic, it can cause memory and cognitive issues, mood changes, balance issues, and depression. Dr. Fall opined that the chronic microvascular changes seen on Claimant's MRI are idiopathic and were not caused or otherwise related to the work injury.

40. Claimant testified at hearing that, at the time of the work injury, she was finishing chiropractic treatment for her right side, directed at her neck, shoulders, and spine. Claimant testified that the character of her headaches changed after the work injury. She described her pre-injury headaches as general tension and her post-injury headaches as severe pain from temple to temple, resulting in imbalance and confusion. Claimant testified that, over time, everything has slowly improved, although she continues to have time limits on what she can do before she has to sit down. She stated that she currently does not have any neck issues because she is not performing heavy work and that her balance has improved. She explained that her imbalance issues comes with workload and stress. She testified that she has issues multitasking, confusion, and forgetfulness and comprehension. Claimant testified she experiences sharp pains through her temples, especially on the left side when there are loud noises. She explained that her pre-existing headaches stemmed from the right side. Claimant testified that her symptoms wax and wane depending on sleep and stress. She stated that prior to the work injury was able to perform her job duties.

41. Surveillance footage from March 11, 2020 documents Claimant working at a thrift store. She is observed standing and walking with no altered gait, removing small items from a shopping cart to a shelf and organizing clothing on clothing racks. Claimant also is observed walking to and getting into a vehicle, walking in a parking lot with a slightly altered gait, and carrying a wooden chair and putting the chair into the backseat of her vehicle. Surveillance footage from June 16, 2020 shows Claimant performing yardwork without assistance.

42. The ALJ finds the opinions of Drs. Reinhard and Goldman, as supported by the medical records and testimony, more credible and persuasive than the opinion of Dr. Fall.

43. Claimant proved it is more probable than not the treatment recommended by Dr. Reinhard is reasonable, necessary and related to the January 31, 2019 work injury.

44. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

Respondents are liable to provide medical treatment that is causally related and reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). *Hobirk v. Colorado Springs School District #11,* W.C. No. 4-835-556-01 (ICAO Nov. 15, 2012).

Claimant proved it is more probable than not the treatment recommended by Dr. Reinhard is reasonable, necessary and related to her January 31, 2019 work injury. Claimant's mechanism of injury is consistent with a head injury. Both Drs. Goldman and

Reinhard diagnosed Claimant with a concussion as a result of the work injury and post concussive symptoms. Dr. Goldman opined that objective quantification of Claimant's post concussive symptoms would require neuropsychological and neuropsychometric testing, neuroontological workup, and neurological evaluation. He continued to recommend evaluation and treatment when he discharged Claimant from his care. Dr. Goldman made his determinations and recommendations after having examined Claimant and performing a comprehensive review of Claimant's records pre-dating the work injury. Dr. Goldman noted, and was thus aware of, Claimant's prior complaints of numbness, tingling, dizziness, lightheadedness, blurry vision, confusion and headaches, yet continued to recommended additional evaluation and treatment as a result of the work injury. He credibly explained that he found sufficient and consistent presentation of symptoms supporting his recommendations.

Dr. Goldman's credible opinion provides support for the opinion and recommendations of Claimant's current ATP, Dr. Reinhard. Dr. Reinhard reviewed Claimant's records, including those of Dr. Goldman and the IME reports of Dr. Fall, which document Claimant's pre-existing conditions and complaints prior to the work injury. Subsequent to reviewing those records, Dr. Reinhard repeatedly continued to opine that Claimant required additional evaluation and treatment as a result of the work injury. Dr. Reinhard explained that, unlike the January 31, 2019 work injury, Claimant's prior MVAs did not result in concussions. While Dr. Reinhard agrees with Dr. Fall that Claimant's brain MRI revealed micro ischemic changes, he credibly opined that the timing and nature of Claimant's symptoms are more consistent with the work injury rather than the incidental finding of microangiographic ischemic changes found on the February 11, 2020 MRI. Dr. Fall opined that the findings evidenced on MRI *could* cause some of Claimant's complaints. She did not opine that such findings were the more likely cause of Claimant's complaints.

Dr. Reinhard's recommendations appear in line with the Medical Treatment Guidelines for Traumatic Brain Injuries, Rule 17, Exhibit 2, which discuss imaging, neurological, neuropsychological, and neuroontological evaluation and treatment as accepted methods used in the diagnosis and management of traumatic brain injuries. Based on the credible and persuasive opinions of Drs. Reinhard and Goldman, such treatment is related to the work injury and is reasonably necessary to further define, cure and relieve Claimant's condition.

ORDER

1. The medical treatment recommended by Dr. Reinhard is reasonable, necessary and related to Claimant's January 31, 2019 work injury. Respondents shall authorize and pay for the neuropsychological testing, ENT consultation with vestibular testing, head MRI, and additional vestibular therapy, as ordered by Dr. Reinhard.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 12, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Does the ALJ have jurisdiction to consider Claimant's request for medical benefits even though Dr. Thomas Centi stated Claimant was at MMI on August 4, 2020 and no DIME has taken place?

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his left arm on February 17, 2020. He fell and struck his left hand on some metal shelving.

2. Dr. Thomas Centi at CCOM has been Claimant's primary ATP. Dr. Centi diagnosed contusions of the left hand and wrist.

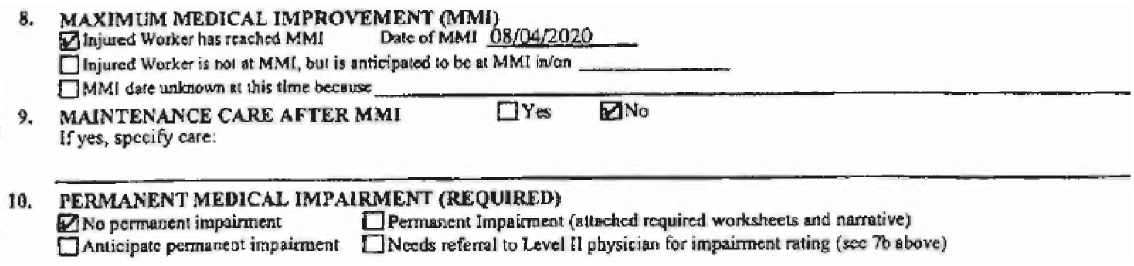
3. Claimant was referred to Dr. Karl Larsen, an orthopedic surgeon, who diagnosed a symptomatic carpal boss and tendon subluxation. On May 26, 2020, Dr. Larsen performed carpal boss excisions of the left index and left middle fingers.

4. On July 14, 2020, Dr. Larsen requested authorization for a second surgery, to include a left carpal tunnel release, revision ulnar neurolysis at the elbow with flexor/pronator lengthening, and possible nerve wrap. Dr. Larsen opined the surgery "appears directly related" to the work accident.

5. Dr. Centi's July 16, 2020 report states the surgery "does not appear to be related" to Claimant's industrial injury. Dr. Centi anticipated Claimant would reach MMI on August 18, 2020.

6. Dr. Jonathan Sollender performed a Rule 16 review for Respondent on July 19, 2020. Dr. Sollender opined the proposed surgery was not related to the work accident.

7. Claimant followed up with Dr. Centi on August 4, 2020. Claimant described ongoing pain and numbness in his left hand and wrist. Dr. Centi noted, "IME does not find CTS and cubital tunnel surgery related to contusion, now hand surgery is talking about a fusion, this does not seem related either." Dr. Centi released Claimant to regular duty with no need for further treatment. Dr. Centi completed a WC164 form on which he checked the following boxes related to MMI:



8. MAXIMUM MEDICAL IMPROVEMENT (MMI)
☑ Injured Worker has reached MMI Date of MMI 08/04/2020
□ Injured Worker is not at MMI, but is anticipated to be at MMI in/on ______________
□ MMI date unknown at this time because ______________

9. MAINTENANCE CARE AFTER MMI □ Yes ☑ No
If yes, specify care:

10. PERMANENT MEDICAL IMPAIRMENT (REQUIRED)
☑ No permanent impairment □ Permanent Impairment (attached required worksheets and narrative)
□ Anticipate permanent impairment □ Needs referral to Level II physician for impairment rating (see 7b above)

8. Respondent filed a Final Admission of Liability on August 28, 2020 based on Dr. Centi's August 4, 2020 report.

9. Claimant timely objected to the FAL and initiated the DIME process. Claimant also applied for a hearing on September 24, 2020, seeking approval of the surgery recommended by Dr. Larsen.

10. PALJ Tenreiro convened a Prehearing Conference on October 16, 2020 to address Respondent's motion to strike Claimant's Application for Hearing without prejudice and Claimant's motion to hold the DIME process in abeyance pending the outcome of the hearing. PALJ Tenreiro denied Respondent's motion because the issues required factual determinations by a "merits" ALJ. PALJ Tenreiro granted Claimant's motion and held the DIME process in abeyance "until the ALJ issues a final order."

11. The record contains conflicting opinions from multiple ATPs regarding whether Claimant is at MMI. Dr. Larsen does not think Claimant is at MMI and believes further treatment is reasonably needed to cure and relieve the effects of the industrial injury. Dr. Centi determined Claimant reached MMI on August 4, 2020 because he does not believe the recommended surgery is related to the work accident.

12. The ALJ lacks jurisdiction to adjudicate Claimant's entitlement to further medical treatment before the DIME process has been completed.

CONCLUSIONS OF LAW

Sections 8-42-107(8)(b)(I)-(III) provide:

> An authorized treating physician shall make a determination as to when the injured employee reaches maximum medical improvement . . . . If either party disputes a determination by an authorized treating physician on the question of whether the injured worker has or has not reached maximum medical improvement, an independent medical examiner may be selected . . . . A hearing on this matter shall not take place until the finding of the independent medical examiner has been filed with the division.

Taken together, these provisions establish that once an ATP places a claimant at MMI, a DIME is a "mandatory, jurisdictional prerequisite" to a hearing regarding additional medical treatment. *Whiteside v. Smith*, 67 P.3d 1240, 1246 (Colo. 2003).

Absent a completed DIME, the ALJ may not hear or decide any issue that constitutes an actual or constructive challenge to MMI. *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995). "[A]fter MMI [is] declared, the ALJ lack[s] jurisdiction to award or deny medical benefits to cure and relieve the claimant's condition." *McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (January 27, 2006); *see also Eby v. Wal-Mart Stores Inc*., W.C. No. 4-350-176 (February 14, 2001) ("once an authorized treating physician places the claimant at MMI, an ALJ lacks jurisdiction to award additional medical benefits for the purposes of curing the industrial injury and assisting a claimant to reach MMI unless the claimant undergoes a DIME."); *Anderson-Capranelli v. Republic Industries, Inc*., W.C. No. 4-416-649 (November 25, 2002); *Cass v. Mesa County Valley School District*, W.C. No. 4-69-69 (August 26, 2005).

Claimant cites *Blue Mesa Forest v. Lopez*, 928 P.2d 831 (Colo. App. 1996) for the proposition the ALJ can resolve the competing MMI opinions of Dr. Centi and Dr. Larsen. But the situation in Claimant's case is governed by *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002), which held that any ATP can put a claimant at MMI and trigger the DIME requirement. ALJs have jurisdiction to resolve conflicting or ambiguous opinions from *one* ATP but cannot resolve conflicts among *multiple* ATPs.

As found, Dr. Centi determined Claimant is at MMI because he does not think the recommended surgery is related to the work injury. Determining MMI "inherently" includes an assessment of what condition(s) or treatments are causally related to the work accident. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998). Dr. Centi is "an authorized treating physician" within the meaning of § 8-42-107(8)(b)(I)-(III). Accordingly, Claimant must go through the DIME process notwithstanding Dr. Larsen's contrary opinions regarding MMI and causation.

ORDER

It is therefore ordered that:

1. Claimant's September 24, 2020 Application for Hearing is dismissed without prejudice pending the DIME process.

2. The stay of the DIME is LIFTED and the DIME process hereby is REINSTATED.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

I. ISSUES

1. Whether Claimant established by a preponderance of the evidence that the DW Respondents committed fraud thereby permitting Claimant to reopen his claim.

2. Whether Claimant established by a preponderance of the evidence that the DW Respondents violated § 8-43-203 (3)(b)(IV), C.R.S., by having nurse case managers attend Claimant's medical appointments without Claimant's consent, and whether penalties should be awarded pursuant to § 8-43-304, C.R.S.

3. Whether Claimant established by a preponderance of the evidence that the DW Respondents violated § 8-42-101 (3.6)(p)(II), C.R.S., by forcing Claimant into case management without Claimant's consent, and whether penalties should be awarded pursuant to § 8-43-304, C.R.S.

4. Whether Claimant established by a preponderance of the evidence that Dr. Macaulay violated § 8-43-203 (3)(b)(IV), C.R.S., by allowing nurse case managers to attend Claimant's medical appointments without Claimant's consent, and whether penalties should be awarded pursuant to § 8-43-304, C.R.S.

5. Whether Claimant established by a preponderance of the evidence that Dr. Macaulay violated § 8-47-203 (1), C.R.S., by allowing access to Claimant's medical file and records to a nurse case manager employed on Claimant's claim, and whether penalties should be awarded pursuant to § 8-43-304, C.R.S.

II. FINDINGS OF FACT

Claimant's March 4, 2015 Workers' Compensation Claim

1. Claimant is a 59-year-old man who began working for [Redacted] in approximately 1996 as a driver. Claimant sustained multiple admitted injuries when he slipped and fell on ice in the performance of his duties as an employee of [Redacted] on March 4, 2015.

2. Claimant has lived at the same address in Lakewood, Colorado for approximately 15 years without interruption ("Home Address"). Claimant resided at his Home Address at the time of his March 4, 2015 injury, receives his mail at that address and maintains no other address.

[Redacted]'s Employee Health Clinic

3. At all times relevant to this matter, [Redacted] maintained an employee health clinic on its premises (hereinafter the "DW Clinic"). The DW Clinic provided medical care to [Redacted] employees for work-related injuries and other medical services associated with [Redacted], including physicals, vision and hearing testing, commercial driver's license (CDL) certifications, and other medical issues.

4. During the relevant time frame from 2015 through 2017, [Redacted] employed nurses and a physician assistant who serves as the full-time staff of the DW Clinic. These employees included the health services manager/nursing supervisor, Dawn Cogan, R.N.; nurses Jessica Thompson, R.N., Patricia Holschuh, R.N, and Sue Baker, R.N.; and physician assistant Erin Lay, P.A. (collectively "DW Clinic Staff"). In addition, [Redacted] contracted with a physician who served as the authorized treating physician (ATP) for workers' compensation claimants, and provided other services to [Redacted] employees. For approximately 22 years, Dr. Macaulay filled this role, until sometime in late 2016 or early 2017, at which time Dr. Danahey assumed Dr. Macaulay's role at the DW Clinic. From at least March 2015 through the end of his tenure, Dr. Macaulay was typically physically present at the DW Clinic two days per week, (typically Mondays and Wednesdays) approximately five hours per day.

5. During the relevant time frame, when [Redacted] employees with work-related injuries ("Injured Workers") were seen in the DW Clinic, the standard practice was for a DW Clinic Staff member to be present in the examination room with Dr. Macaulay and the Injured Worker during the appointment. During these visits, the DW Clinic Staff member would observe the appointment and document Dr. Macaulay's orders, recommendations, referrals, and work restrictions.

6. DW Clinic Staff members attended appointments to facilitate certain functions they performed with respect to workers' compensation claims and to assist implementing Dr. Macaulay's orders, recommendations, and work restrictions.

7. These functions were fairly broad in scope and included scheduling Injured Workers' appointments with Dr. Macaulay; scheduling appointments with outside providers (such as physical therapy, imaging, and specialists); ordering prescriptions; communicating with pharmacies; and informing Injured Workers of the status of their appointments. The DW Clinic Staff communicated work restrictions to Injured Workers' supervisors to help assure [Redacted]'s compliance with the restrictions. DW Clinic Staff also notified supervisors of the dates of Injured Workers' appointments and referrals so the supervisors would be aware of the reasons for any absences due to work-related injuries. In addition, DW Clinic Staff fielded calls from Injured Workers and addressed Injured Workers' questions in person and over the phone.

8. DW Clinic Staff's duties also included contact with Insurer. These contacts included informing Insurer of Injured Workers' work restrictions, missed time, referrals, and recommended treatment, so Insurer could process claims and authorize benefits. In

some instances, DW Clinic Staff contacted Insurer to verify authorization of benefits for prescriptions, referrals, or treatment.

9. In general, one DW Clinic Staff member served as the “assigned nurse” for each workers’ compensation claim, and was primarily the individual involved in attending appointments and performing the functions described above. However, the “assigned nurse,” was not an official designation and other DW Clinic Staff members also were involved in the implementation of Injured Workers’ cases. Insurer had no input or involvement in the assignment of “assigned nurses” or the tasks performed by the “assigned nurses.” At times, DW Clinic Staff used the terms “case management” or “nurse case manager” in reference to functions performed with respect to a given case.

10. During the relevant time frame, the DW Clinic Staff documented their attendance at appointments and the functions performed in an electronic progress note format maintained by the DW Clinic (“Progress Notes”). (*See, e.g.*, Ex. 3, G, T, U). Within the Progress Notes, the DW Clinic Staff created individual notes labeled as, among other things, “Case Management,” “Dr. Exam,” “Phone Consult” and “Medication.” When a DW Clinic Staff member attended an appointment with Dr. Macaulay, the Progress Note entry was typically labeled as “Dr. Exam.”

11. The DW Clinic Staff are salaried employees of [Redacted] and their compensation was not affected by the type of patients they treated. That is, DW Clinic Staff compensation was unaffected by seeing workers’ compensation patients vs. non-workers’ compensation patients. None of the DW Clinic Staff was hired by, paid by, or received compensation from Insurer.

12. Dawn Cogan manages the DW Clinic, and was the day-to-day supervisor of Ms. Thompson, Ms. Holschuh, Ms. Lay and Ms. Baker. Dr. Macaulay did not have a supervisory role over the DW Clinic Staff nurses for employment purposes. Instead, the DW Clinic Staff worked under his direction with respect to implementing his plan of care, recommendations, referrals, prescriptions, and restrictions for Injured Workers. The DW Clinic Staff provided reasonable, necessary, and appropriate assistance to Dr. Macaulay in his role as the ATP for Injured Workers.

13. In his role at the DW Clinic, Dr. Macaulay exercised his independent medical judgment and decision making with respect to his assessment, diagnoses, treatment, recommendations, orders, and work restrictions for Injured Workers. The DW Clinic Staff had no authority to approve, reject or countermand Dr. Macaulay’s decision making and judgment. Dr. Macaulay documented his examination, assessment, treatment, recommendations, and decision making for each appointment with an Injured Worker in a written medical record on his own letterhead. Upon the completion of documentation, Dr. Macaulay provided a copy of his documentation to the DW Clinic Staff for inclusion in the Injured Workers’ medical record file.

Claimant's injury and course of treatment

14. On Wednesday, March 4, 2015, Claimant sustained an admitted injury to his lower back when he slipped and fell on ice in the course and scope of his employment. As a result of this injury, Claimant sustained injuries to his head, hip, neck, and back. Ms. Cogan went to the site of Claimant's injury and stayed with him until an ambulance arrived and took Claimant to Denver Health.

15. On March 4, 2015, Claimant was taken to Denver Health to evaluated and was discharged. Ms. Baker met with Claimant and advised him to follow up at the DW Clinic the following day. (Ex. 3).

16. On March 4, 2015, Claimant's injury was reported to Insurer. (Ex. 10).

17. Claimant was referred to Joel Cooperman, D.O., whom he saw on March 5, 2015. (Ex. 6). (The ALJ infers that Claimant was referred to Dr. Cooperman because March 5, 2015 was a Thursday, and Dr. Macaulay was not scheduled to be in the DW Clinic on that day). Dr. Cooperman evaluated Claimant and prescribed hydrocodone-acetaminophen (Vicodin). (Ex. 6).

18. On the morning of March 5, 2015, Ms. Baker spoke with an adjuster at Insurer, advised Insurer of Claimant's injury, that he would follow with a "DO" (presumably Dr. Cooperman), and would see Dr. Macaulay on Monday. Ms. Baker also advised Claimant was expected to be released to return to work on Monday, but would know more after the visit with Dr. Macaulay. (Ex. 10).

19. The following morning, March 6, 2015, Claimant began feeling sick, contacted the DW Clinic and spoke to Ms. Baker. Ms. Baker contacted Dr. Macaulay who ordered Claimant to go to Guardian Urgent Care for evaluation. Claimant was seen at Guardian Urgent Care, where he was advised his nausea and vomiting was likely a side effect of a mild concussion. Claimant called Ms. Baker at the DW Clinic to report the results of his visit at Guardian Urgent Care. (Ex. 4).

20. On Monday, March 9, 2015, Claimant reported to the DW Clinic, where he met with Dr. Macaulay. Dr. Macaulay documented his appointment with Claimant in a medical record. (Ex. 2). Ms. Baker was present in the examination room with Claimant and Dr. Macaulay, and created a note in the DW Clinic's electronic "progress notes." Ms. Baker's record is labeled "Dr. Exam on 3/9/2015 @ 06:64." Ms. Baker's note states: "Went to 3/6, told he has mild concussion. Felt better able to move around yesterday, today back and hip more painful again today. Injury leave 3/5, 6, 9 WC 3/10 Recheck 3/11." (Ex. 3)

21. On March 10, 2015, Claimant called the DW Clinic and spoke to Ms. Thompson. Claimant reported, among other things, he had seen Dr. Cooperman that morning, and Dr. Cooperman recommended Claimant stay off work the rest of the week. Ms. Thompson advised Claimant Dr. Macaulay would make the determination of Claimant's return to work date, and noted Claimant had an appointment with Dr. Macaulay the following day. (Ex. 3).

22. On March 11, 2015, Claimant saw Dr. Macaulay at the DW Clinic.[1] Again, Dr. Macaulay documented his appointment in a medical record. (Ex. 2). Ms. Baker was present in the examination room and created a note in the DW Clinic's electronic progress notes. Ms. Baker's note is labeled "Dr. Exam on 3/11/2015 @ 9:30." Ms. Baker's note states: "F/U appt with Dr Macaulay, less nausea, no vomitting [sic] for 2 days. Saw Dr Cooperman yesterday, he did not manip SIJ due to muscle tightness, next appt. 3/17/15. To remain off work until 3/16/15. Recheck with Dr Macaulay 3/18/15. To call if any concerns in the meantime. T. Manshardt and supervisor, Jeff Chavez notified of time off." (Ex. 3).

23. On March 16, 2015, Claimant saw Dr. Macaulay. Again, Dr. Macaulay documented his appointment in a medical record. (Ex. 2). Ms. Baker was present in the examination room and prepared a Progress Notes labeled "Dr. Exam on 3/16/2015 @ 8:30." Ms. Baker's note states: "F/U appt with Dr Macaulay. Continue massage and OMT. Activity for comfort, avoid stressful activities. Recheck in 1 wk." (Ex. 3).

24. On March 23, 2015, Claimant saw Dr. Macaulay, and Dr. Macaulay documented his appointment in a medical record. (Ex. 2). Ms. Baker was present in the examination room with Claimant and Dr. Macaulay, and created a Progress Note labeled "Dr. Exam on 3/23/2015 @ 7:15." Ms. Baker's note states: "F/U appt with Dr Macaulay. Continue OMT with Dr Cooperman and MFR with Terry Winter. Restricted duty, no lifting > 30lbs, 20lbs repetitively, avoid stressful activities. Recheck in 1 wk." (Ex. 3).

25. Claimant attended a follow up appointment with Dr. Macaulay on April 1, 2015. (Ex. 2). As with the previous appointments, Ms. Baker was present in the examination room, and created a Progress Note. (Ex. 3).

26. On April 15, 2015, Claimant saw Dr. Macaulay, and Dr. Macaulay documented his appointment in a medical record. (Ex. 2). Ms. Baker was present in the examination room with Claimant and Dr. Macaulay, and created Progress Note labeled "Dr. Exam on 4/15/2015 @ 9:36" Ms. Baker's note states: "Employee to clinic for visit with Dr. Macaulay. Recheck with Cooperman 4/21/15. Saw massage therapist yesterday. Feels much better after visit. He will continue to stretch. He has some difficulties with memory at this time. Rarely. He is improving daily. Ibuprofen prn. Difficulty with climbing in trucks that are to [sic] tall. Recheck in 2 weeks. Continue restrictions. Massage x 2 more times." (Ex. 3).

27. Claimant attended a follow up appointment with Dr. Macaulay on April 29, 2015. Dr. Macaulay referred Claimant to Gary Gutterman, M.D., for postconcussive stress-related issues. (Ex. 2). Erin Lay, PA, was present in the examination room, and created a Progress Note labeled "Dr. Exam on 4/29/2015 @7:32." Ms. Lay's note states: "F/U with Macaulay. Seeing OMT. Stopped massage/MFT and buttock/hip sx increased; has had to use narcotics. Headaches improving but notes feeling uneasy or "startled" at times. Continue OMT; restart Massage/MFR twice weekly. HEP. Message left for Terry winter

[1] All of Claimant's appointments with Dr. Macaulay took place at the DW Clinic.

for Dr. Macaulay. Refer to Dr. Gutterman, Psychiatry; message left. Continue current restrictions. Recheck 2 weeks with Dr. Macaulay." (Ex. 3).

28. Claimant saw Dr. Macaulay on May 6, 2015. (Ex. 2). Ms. Lay was present in the examination room, and created Progress Note. Ms. Lay's note, labeled "Dr. Exam on 5/6/2015 @9:30" states: "F/u with Dr. Macaulay. D/C OMT. Scheduled with Dr. Gutterman 5/18/15 @ 9:00 am. Continue MFR. Continue same restrictions. Recheck 1 week." (Ex. 3).

29. Claimant saw Dr. Macaulay on May 6, 2015. (Ex. 2). Ms. Lay was present in the examination room, and created a Progress Note. Ms. Lay's note, labeled "Dr. Exam on 5/6/2015 @7:32" states: "F/U with Macaulay. Seeing OMT. Stopped massage/MFT and buttock/hip sx increased; has had to use narcotics. Headaches improving but notes feeling uneasy or "startled" at times. Continue OMT; restart Massage/MFR twice weekly. HEP. Message left for Terry winter for Dr. Macaulay. Refer to Dr. Gutterman, Psychiatry; message left. Continue current restrictions. Recheck 2 weeks with Dr. Macaulay." (Ex. 3).

30. Claimant attended follow up appointments with Dr. Macaulay on May 11, 2015, May 15, 2015, May 27, 2015, June 15, 2015, and June 29, 2015. (Ex. 2). Ms. Baker was present at visits on May 27, 2015, June 15, 2015, and June 29, 2015. Ms. Baker's notes from these visits generally document Dr. Macaulay's orders, prescriptions, referrals, and work restrictions. (Ex. 3).

31. Claimant saw Dr. Macaulay on May 6, 2015. (Ex. 2). Ms. Lay, was present in the examination room, and created a Progress Note labeled "Dr. Exam on 5/6/2015 @7:32." Ms. Lay's note states: "F/U with Macaulay. Seeing OMT. Stopped massage/MFT and buttock/hip sx increased; has had to use narcotics. Headaches improving but notes feeling uneasy or "startled" at times. Continue OMT; restart Massage/MFR twice weekly. HEP. Message left for Terry winter for Dr. Macaulay. Refer to Dr. Gutterman, Psychiatry; message left. Continue current restrictions. Recheck 2 weeks with Dr. Macaulay." (Ex. 3).

32. On July 13, 2015, Claimant had a follow up visit with Dr. Macaulay. (Ex. 2). Ms. Baker was present in the examination room, and created a Progress Note. Ms. Baker's note, labeled "Dr. Exam on 7/13/2015 @7:00" states: "F/U apt with Dr Macaulay. Schedule return visit to Dr Gutterman. Biofeedback with Terry Teis when [Claimant] s ready. Restricted duty, ok to try driving large trucks, no lifting > 40lbs, 20lbs repetitively MFR 1x/wk. Recheck in 2 wks." (Ex. 3).

33. On July 27, 2015, Claimant had a follow up visit with Dr. Macaulay. (Ex. 2). Ms. Thompson was present in the examination room, and created a Progress Note. Ms. Thompson's note, labeled "Dr. Exam on 7/27/2015 @7:31" states: "F/u with Dr. Macaulay. [Claimant] states last week he was in excavator when machine jerked and he hit his head against back window while head turned to left. Now c/o pain to left neck/shoulder areas. [Claimant is now driving large trucks on the highway with no

difficulty. Dean states he is off Xanax. Count MFR. F/u with Gutterman in about six weeks. No restrictions. Recheck 3 weeks." (Ex. 3)

34. On August 17, 2015, Claimant had a follow up visit with Dr. Macaulay. (Ex. 2). Ms. Thompson was present in the examination room, and created a Progress Note. Ms. Thompson's note, labeled "Dr. Exam on 8/17/2015 @7:18" states: "Recheck with Dr. Macaulay; Cont MFR with Terry Winter once a week. F/u with Gutterman next month. Increase Lexapro to 20mg daily. No restrictions. Recheck 2 weeks." (Ex. 3)

35. Claimant attended follow up appointments with Dr. Macaulay on August 31, 2015, September 16, 2015, September 21, 2015, September 30,2015, October 7, 2015, and October 14, 2015. (Ex. 2). Ms. Thompson was present at each visit. Ms. Thompson's Progress Notes from these visits generally document Dr. Macaulay's orders, prescriptions, referrals, and work restrictions. In addition, Ms. Thompson documented her calls to outside providers regarding scheduling appointments and referrals. (Ex. 3).

36. On October 21, 2015, Claimant had a follow up visit with Dr. Macaulay. (Ex. 2). Ms. Thompson was present in the examination room, and created a Progress Note labeled "Dr. Exam on 10/21/2015 @7:10." The note states: "F/u with Dr. Macaulay. Refer to Dr. Goldman, left VM. Refer MRI thoracic and lumbar spine, scheduled at Health Images at Cherry Hills 10/26/15. Refer EMG/NCVS, left VM with Dr. Treihaft's office. No restrictions." (Ex. 3).

37. On November 16, 2015, Claimant had a follow up visit with Dr. Macaulay. (Ex. 2). Ms. Thompson was present in the examination room, and created a Progress Note labeled "Dr. Exam on 11/16/2015 @7:03," which states: "F/u with Dr. Macaulay. Will see Dr. Goldman 11/20. EMG/NCVS 11/23/. F/u with Dr. Gutterman. No restrictions. Recheck 11/25/15." (Ex. 3).

38. On December 7, 2015, Claimant saw Dr. Macaulay for a follow up visit. (Ex. 2). Ms. Thompson was present in the examination room, and created a Progress Note. Ms. Thompson's note, labeled "Dr. Exam on 12/7/2015 @7:05" states: "F/u with Dr. Macaulay. Cont PT and MFR. Restrictions of sitting for 1 hour max at a time, limit to one major load per day, Recheck 2-3 weeks." (Ex. 3).

39. Claimant attended follow up appointments with Dr. Macaulay on January 4, 2016, January 20, 2016, and February 3, 2016. (Ex. 2). Ms. Thompson was present the January 4, 2016 and January 20, 2016 visits, and Ms. Holschuh was present at the February 3, 2016 visit. The Progress Notes from these visits generally document Dr. Macaulay's orders, prescriptions, referrals, and work restrictions. In addition, calls to outside providers regarding scheduling appointments and referrals are documented. (Ex. 3).

40. On February 17, 2016, Claimant saw Dr. Macaulay for a follow up visit. (Ex. 2). Ms. Holschuh was present in the examination room, and created a Progress Note. Ms. Holschuh's note, labeled "Dr. Exam on 2/17/2016 @6:54" states: "Appointment with Dr. Macaulay; missed appointment with Dr. Gutterman 02/16/16; patient to contact office to

reschedule; return to full duty 02/17/16 with no restrictions; anticipate IR next appointment; recheck with Dr. Macaulay 03/02/2016 0700." (Ex. 3).

41. March 2, 2016, March 23, 2016, April 11, 2016, May 2, 2016, June 1, 2016, and June 22, 2016. Ms. Thompson was present the March 2, 2016, March 23, 2016, May 2, 2016, June 1, 2016, and June 22, 2016 visits, and Ms. Lay was present at the April 11, 2016 visit. The progress notes from these visits generally document Dr. Macaulay's orders, prescriptions, referrals, and work restrictions. In addition, calls to outside providers regarding scheduling appointments and referrals are documented. (Ex. 3).

42. On July 6, 2016, Claimant saw Dr. Macaulay. (Ex. 2). Dr. Macaulay found Claimant was at maximum medical improvement and noted Claimant could return to work at his regular duties. Dr. Macaulay assigned Claimant a 17% whole person impairment. Ms. Holschuh was present in the examination room, and created a Progress Note. Ms. Holschuh's note, labeled "Dr. Exam on 7/6/2016 @8:03" states: "Appointment with Dr. Macaulay; impairment rating conducted; D/C from care at MMI to full duty without restrictions; patient to continue HEP; to return to ECH [employee health clinic] for appointment with Dr. Macaulay 10/3/2016 0700." (Ex. 3).

43. On September 7, 2016, Claimant saw Dr. Macaulay for a follow up visit. (Ex. 2). Claimant reported had indicated to his supervisors he had pain with certain activities, and beyond what Claimant found he could reasonably handle. Dr. Macaulay noted if Claimant had restrictions, his CDL would be in jeopardy, and if he lost his CDL he would probably be removed from his job. Dr. Macaulay ordered a functional capacity evaluation. Dr. Macaulay also indicated Sandra Miller reviewed his job with his supervisors and wrote a work/task job description. Ms. Thompson was present in the examination room, and created a Progress Note labeled "Dr. Exam on 9/7/2016 @10:30." The note states: "F/u with Dr. Macaulay. No restrictions. [Claimant] is scheduled for FCE on 9/19. Next at with Dr Macaulay 9/26. Per Dr. [M]acaulay, volataren refill for 30-day supply called into King Soopers at 303-936-7403 " (Ex. 3).

44. On September 26, 2016, Claimant saw Dr. Macaulay for a follow up visit. (Ex. 2). Ms. Holschuh was present in the examination room, and created a Progress Note. Ms. Holschuh's note, labeled "Dr. Exam on 2/17/2016 @6:54" states: "Appointment with Dr. Macaulay; missed appointment with Dr. Gutterman 02/16/16; patient to contact office to reschedule; return to full duty 02/17/16 with no restrictions; anticipate IR next appointment; recheck with Dr. Macaulay 03/02/2016 0700." (Ex. 3).

45. On September 26, 2016, Claimant saw Dr. Macaulay for a follow up visit. (Ex. 2). Dr. Macaulay noted Claimant had undergone a functional capacity evaluation, and "With his job description [in] hand, the occupational therapist indicated that [Claimant] was capable of performing his job within the parameters outlined in his job description." Dr. Macaulay noted Claimant was "concerned that, with restrictions, he will be released from [duty] at [Redacted]. If, on the other hand, he has no restrictions then he believes that his pain would be preclusive of performing his job duties. He indicated that he would discuss these issues with his attorney." Ms. Lay was present in the examination room, and created a Progress Note labeled "Dr. Exam on 9/26/2016 @7:24." The note states:

"Reeval with Dr. Macaulay today. Reviewed Biometric results. No restrictions. Reeval on 9/28/16 at 8am." (Ex. 3).

46. On September 28, 2016, Claimant returned to Dr. Macaulay. Claimant and Dr. Macaulay discussed Claimant's work restrictions and the impact of restrictions on Claimant's CDL, and job requirements. Claimant discussed the possibility of moving to a different position at [Redacted], although he did not want to take the job due to a reduction in pay. Dr. Macaulay told Claimant "that if he had work restrictions, he would not have a CDL and his job would probably be vacated." Dr. Macaulay documented he "thought the best alternative for [Claimant] was to continue his job without restrictions and try to work out some of the other issues." Dr. Macaulay noted Ms. Cogan "spoke with [Claimant] and recommended FMLA. This would cover him on the days that he felt unable to work and would protect his job." Ms. Lay was present in the examination room, and created a Progress Note. Ms. Lay's note, labeled "Dr. Exam on 9/28/2016 @9:15" states: "Reeval with Dr. Macaulay. Patient remains at MMI without permanent restriction. No further appointments scheduled in clinic. Pt's questions directed to Georgeann Chapman, HR." (Ex. 3).

47. Over the course of his claim, Dr. Macaulay referred Claimant to various providers, including Gary Gutterman, M.D., for psychiatric evaluation and care; Dr. Cooperman, Barton Goldman, M.D., physical therapy and to Select Physical Therapy for a functional capacity evaluation. (Exs. 2, 3, 6, 7 O & P). None of the DW Clinic Staff attended these appointments with Claimant.

48. During the course of Claimant's treatment at the DW Clinic, the DW Clinic Staff did not advise Claimant they were "nurse case managers," and did not request Claimant's permission or consent to be present in the examination room with Claimant and Dr. Macaulay. Claimant did not request any of the DW Clinic Staff not be present in the examination room. Similarly, Dr. Macaulay did not advise Claimant the DW Clinic Staff were "nurse case managers," or request Claimant's consent for DW Clinic Staff members to be present in the examination room.

49. On October 31, 2016, Claimant filed an application for Division Independent Medical Examination ("DIME") with the Division. (Ex. D).

50. On January 18, 2017, Claimant underwent a DIME performed by Stephen Gray, M.D. Dr. Gray agreed with Dr. Macaulay's MMI date of July 6, 2016, and assigned Claimant a whole person impairment of 18%. (Ex. S).

51. On March 1, 2017, Insurer filed an FAL. The FAL admitted for reasonable and necessary medical care, temporary total disability benefits, and permanent partial disability benefits. The FAL also states: "Any benefits and penalties not specifically admitted herein are denied. (Ex. E).

52. Claimant did not file an objection to the March 1, 2017 FAL or file an application for hearing challenging any aspect of the March 1, 2017 FAL.

53. On April 5, 2018, Ms. Cogan testified in a hearing in W.C. Case No. 5-056-432-001 between Claimant and [Redacted]. At this hearing, Ms. Cogan testified the DW Clinic Staff served as "case managers" for Claimant's workers' compensation claim, overseeing referrals, making sure Claimant received his medications, and communicating with Claimant. She further testified that in this role, DW Clinic Staff were not present in appointments in a treatment capacity. (Ex. 34).

54. In the present hearing, Ms. Cogan testified she does not know the Act's definition of "nurse case manager" or "case management." In the context of the DW Clinic, she used the term "case management" to refer to monitoring an Injured Worker's case to make sure nothing was missed or "'[fell] through the cracks," to make it easier on the patient.

55. On April 4, 2019, Claimant filed the Application for Hearing in this matter, seeking to reopen Claimant's claim on the basis of fraud, and seeking penalties for alleged violations of the Act. (Ex. 15).

DW CLINIC NURSES ROLES

56. Between March 4, 2015 and October 23, 2017, Claimant regularly communicated with the DW Clinic Staff regarding various aspects of his care, treatment, and workers' compensation claim. The DW Clinic Staff documented the interactions in Progress Notes. In multiple telephone calls, DW Clinic Staff advised Claimant of his scheduled appointments with outside providers to whom he was referred by Dr. Macaulay. In other calls or in--person, Claimant discussed with DW Clinic Staff issues with obtaining prescriptions, his symptoms, his treatment preferences, and his work restrictions. After appointments with outside providers, Claimant on several occasions called DW Clinic Staff to advise them of the appointments and what occurred during those appointments, including the recommendations of those treating providers. The Progress Notes are maintained by the DW Clinic, and were not sent to Insurer. (Ex. 3).

57. In March 2015, Ms. Baker sent emails to Ms. Manshardt advising Insurer of the status of Claimant's claim, and his work restrictions. On April 2, 2015, Claimant spoke to Ms. Baker and indicated he had not received a check for his lost workdays. Ms. Baker contacted Ms. Manshardt by email to advise Ms. Manshardt of the days Claimant was on injury leave, that Claimant had lost workdays, and when he returned to work. (Ex. 11).

58. On June 22, 2017, Ms. Thompson received a call from one of Claimant's physical therapy providers regarding the status of payment of outstanding bills. Ms. Thompson emailed Ms. Manshardt to ask for the status of the bills. (Ex. 3).

59. On November 12, 2015, Ms. Thompson received notice from a pharmacy that Claimant's prescription for Lexapro had been denied. Ms. Thompson contacted Ms. Manshardt who called the pharmacy to approve the prescription. (Ex. 3).

60. On May 18, 2016, Ms. Thompson called Ms. Manshardt regarding Insurer's authorization of trigger point injections with Dr. Goldman and medical massage with another provider. Ms. Manshardt communicated that these services would be covered.

Ms. Thompson relayed Insurer's approval to Dr. Goldman's office. Ms. Thompson credibly testified when she contacted Ms. Manshardt regarding the approval of trigger point injections, she did not express any opinion as to whether the treatment should or should not be approved. (Ex. 3).

61. On June 3, 2016, Claimant called Ms. Thompson and expressed concern that payment for a prescription for Lexapro was denied and that he had never received mileage reimbursement from Insurer. Ms. Thompson called Ms. Manshardt regarding these issues. Ms. Thompson submitted Claimant's mileage sheet to Ms. Manshardt on Claimant's behalf, and was informed Ms. Manshardt would call the pharmacy to approve Claimant's prescription. (Ex. 3)

62. On several other occasions, DW Clinic Staff faxed information regarding Claimant's treatment or referrals to Insurer. (Ex. 13).

WC BROCHURE

63. On April 9, 2015, Insurer filed a General Admission of Liability (GAL) with respect to Claimant's claim, admitting for medical benefits and temporary total disability. (Ex. A). The GAL's indicates it was mailed to the Claimant on April 9, 2015 at Claimant's Home Address in Lakewood, Colorado.[2] The GAL states under "Remarks": "WC brochure enc'd for IW." Insurer's adjuster assigned to Claimant's claim, Teresa Manshardt, testified that the brochure referenced in the Remarks section was the document entitled "Information Regarding Workers' Compensation and A Claimant's Rights" included in Exhibit A, pages 0004-0006 (hereinafter "WC Brochure").

64. Insurer's standard procedure in April 2015, was for an administrative assistant to assemble admissions of liability, including attachments, and then deliver the documents to the adjusters the day prior to the admission being issued. Ms. Manshardt's habit and practice was to review the draft for typographical errors and to confirm any referenced attachments were included in the documents. Once Ms. Manshardt reviewed the documents, she would sign then and return them for mailing. Ms. Manshardt testified that she would not sign a GAL until she verified that a WC Brochure was attached for an injured worker. When a WC Brochure was included with a GAL mailed to a claimant, the WC Brochure itself would not be maintained in the claims file. Instead, Insurer relied on the notation on the GAL of the WC Brochure's inclusion as evidence it was attached and sent. Ms. Manshardt testified the WC Brochure is always sent with Insurer's first "position statement" (i.e., a General Admission of Liability or Notice of Contest). In the course of her handling of Claimant's claim, Ms. Manshardt sent other documents to Claimant at his Home Address, and was not aware of any correspondence or other documents being returned to Insurer as undeliverable or for an incorrect address.

65. The ALJ finds credible Ms. Manshardt's testimony that she followed her standard practice and assured that the WC Brochure was attached to the GAL and that the GAL was mailed to Claimant on April 9, 2019.

[2] The address listed on the GAL as Claimant's address is Claimant's Home Address.

66. Claimant testified that he did not receive the April 9, 2015 General Admission of Liability (Ex. A, p. 1-2), around the time it was mailed and that he never received the document in the mail at his home. At some point in time, Claimant hired an attorney (Mr. H[Redacted]) to assist him in contesting Dr. Macaulay's MMI determination. Claimant testified he received pages 1 and 2 of the GAL (Ex. A) (i.e., the GAL form, but not the WC Brochure) in a box of documents he received from Mr. H[Redacted] and provided to his new attorney (Mr. F[Redacted]). No evidence was offered to explain how Mr. Holley came into possession of the GAL. (Ex. A, p. 1-2).

67. Claimant testified he first became aware of the WC Brochure on the first day of hearing, January 27, 2020. He testified that he did not receive the WC Brochure and that it was not included in the box of documents he received from Mr. H[Redacted].

68. The WC Brochure (Ex. A, p. 4-6) contains the information required to be provided to Claimant's pursuant to § 8-43-203 (3)(b), C.R.S. (Ex. A).

69. In an email exchange on September 26, 2018, Ms. Cogan emailed Ms. Manshardt asking if Ms. Manshardt had documentation Claimant was provided the WC Brochure. Ms. Manshardt replied:

> "On the enclosed 04/09/15 General Admission of Liability, you'll see a reference under the Remarks section that the WC brochure was enclosed for the Injured Worker. That is really the only documentation we have. However, my signature (or where I hand-printed my name) essentially serves as my certification to all the included parties that the document was in fact sent. Typically, the brochure is always sent at the time the initial filing is made with the Division of Workers' Compensation regardless of whether it is a General Admission of Liability, a Notice of Contest or a Final Admission of Liability."

(Ex. 10).

70. Claimant could not recall if he received Ex. B, Ex. C, Ex. D, or Ex. E in the mail at his Home Address. Exhibits B, C and E each indicate Claimant was sent these documents at his Home Address on either a certificate of mailing or certificate of service.

WITNESS TESTIMONY

Claimant

71. Claimant was employed by [Redacted] for twenty-one years. During that time, Claimant had multiple workers' compensation claims for which he received treatment at the DW Clinic. With respect to the present claim, a DW Clinic Staff member was present at each of his appointments with Dr. Macaulay. He was not asked for his permission to have a nurse in the room, or to do "case management" on his case.

72. The DW Clinic Staff member would sit in the room, observe, and take notes, and sometimes speak with him or Dr. Macaulay. The DW Clinic Staff who were present at his

appointments would explain to him Dr. Macaulay's orders, the next steps with respect to referrals. The DW Clinic Staff set up referral and follow up appointments with him, and he found this to be helpful to him.

73. During the first few visits after his injury, Ms. Baker was present during his appointments with Dr. Macaulay. Claimant could not remember precisely what Ms. Baker did or whether she interacted with Claimant or the doctor. He did recall Ms. Baker took his vital signs and sat in the examination room during the appointments. He could not recall if Ms. Baker took notes during the appointments.

74. Later, Ms. Thompson began attending appointments, and she would type on a computer while Claimant and Dr. Macaulay were talking and occasionally speak to Dr. Macaulay. Claimant's testimony regarding Ms. Thompson's discussions with Dr. Macaulay was vague, but Claimant believed Ms. Thompson informed Dr. Macaulay that certain referral providers were not used anymore. In one instance, Claimant complained about being referred to a chiropractor whom Claimant asserted hurt him. Claimant testified that Ms. Thompson told Claimant "You need to go back. The doctor wants you to see him. You need to go back." Claimant testified he returned to the chiropractor because "I didn't have a choice." In another instance, Dr. Macaulay mentioned sending Claimant to a specific physical therapy provider, and Ms. Thompson and Dr. Macaulay engaged in a discussion about the physical therapy provider to which Claimant would be referred. Claimant testified Ms. Thompson engaged in discussions with Dr. Macaulay. At or around the time of these visits, Claimant perceived Ms. Thompson to be directing his care.

75. Claimant could not recall specifically how Ms. Lay participated in appointments at which she was present, but he did not "think she really participated." Claimant recalled Ms. Lay advised him if he had work restrictions, he would not be able to maintain a commercial driver's license (CDL). This conversation occurred outside of a medical appointment.

76. Claimant testified Ms. Holschuh took notes at one appointment, but most of the time she "just sat in the back."

77. Claimant recalled Ms. Cogan attended one of his appointments with Dr. Macaulay and took notes on a computer. He testified Ms. Cogan was "just kind of helping Macaulay," and "doing nurses' things."

78. Claimant testified he requested treatment for his head at visits with Dr. Macaulay, and was not adequately treated for a head injury. Claimant believes if the DW Clinic Staff had not been in the appointments, he "could have maybe talked [Dr. Macaulay] into sending me to a neurologist or something else besides just [Dr.] Gutterman because the Gutterman thing made me just think they are trying to think I was crazy and not really healing my head." Claimant believes the presence of the DW Clinic Staff in his medical appointments affected the amount of treatment he received for his head injury, back, hip, shoulder, and neck.

79. Claimant agreed he was able to discuss with Dr. Macaulay the nature of his injuries and symptoms, and report whether his symptoms had improved, worsened, or stayed the same at his appointments. He also discussed with Dr. Macaulay how he was doing at work and whether he was able to work within restrictions or needed more assistance.

80. Claimant was present at the April 5, 2018 hearing and heard Ms. Cogan's testimony in that hearing. Claimant testified that is when he first became aware the DW Clinic Staff were putative "nurse case managers." Claimant testified he has come to believe the DW Clinic Staff were present in his appointments to "spy" on him, take notes and give the notes to Insurer or others.

81. Claimant believes by having the DW Clinic nurses in his appointments his treatment was curtailed and he "could have gotten different treatment done with a one-on-one with the doctor. And being able to put out [his] frustration to him and him being able to look at it in more of a caring way…."

Dustin E[Redacted] and Ronald D[Redacted]

82. The ALJ considered the testimony of Dustin E[Redacted] and Ronald D[Redacted], witnesses called by Claimant regarding their experiences with the DW Clinic. Neither witness had direct knowledge of Claimant's care or treatment, or the role of DW Clinic Staff in Claimant's claim. Accordingly, the ALJ found the testimony of Mr. E[Redacted] and Mr. D[Redacted] to be of no persuasive effect and of little evidentiary value.

Jessica Thompson, R.N

83. Ms. Thompson is a registered nurse and has been employed as an occupational nurse at [Redacted] since December 2012. Until approximately 2015, Ms. Thompson's last name was "Bedwell," and her notes prior to changing her name were signed "JB". Ms. Thompson has never been hired or paid by Insurer, and she has not represented herself to anyone as an insurance representative.

84. The appointments she scheduled for Claimant were done at the direction of Dr. Macaulay, and she did not take any direction from Insurer with respect to Claimant's treatment.

85. Ms. Thompson was never told to "spy" on Claimant and report what she observed. She did not attend any of Claimant's appointments with outside providers and was only present at Claimant's appointments in the DW Clinic. Ms. Thompson credibly testified she attended appointments so she could be kept up to date on everything happening in the claim, including referrals, restrictions and when the Claimant would need to follow up with Dr. Macaulay.

86. Ms. Thompson credibly testified she never told Dr. Macaulay what to do medically and never approved or rejected any of Dr. Macaulay's medical recommendations. Ms. Thompson did not make any determinations related to times Claimant would be out of work, and those decisions were made by the physician. Similarly, Ms. Thompson made no determination of whether Claimant was at maximum medical improvement.

87. At times, Ms. Thompson would receive or make calls to outside providers regarding the status of authorizations, and Ms. Thompson would contact Ms. Manshardt to verify the status of an authorization. Ms. Thompson credibly testified this was done merely to expedite the process and help assure Claimant could receive timely treatment.

Patricia Holschuh, R.N.

88. Ms. Holschuh is a registered nurse who has been employed by [Redacted] since 2015. At the appointments Ms. Holschuh attended with Claimant, she created a Progress Note either during the visit or after the visit to document the "highlights" of the visit.

89. Ms. Holschuh's role in workers' compensation appointments was to attend and document the visit, and based on the determination of the physician, assist in coordinating care, including referrals to other providers and orders issue by the physician. Ms. Holschuh testified that being present in the examination assisted in allowing the DW Clinic Staff to respond to questions from injured employees.

90. In her role at the DW Clinic, Ms. Holschuh had limited contact with insurance claims adjusters, that typically involved receiving questions from the claims representatives regarding the timing of patient evaluations and requests for information. She also notified Injured Workers' supervisors when an Injured Worker was being discharged, any applicable restrictions, and of Injured Workers' appointments. This was done so supervisors would be aware an Injured Worker may be missing from their regular work site while attending appointments.

91. Ms. Holschuh credibly testified that she does not participate in directing patient care, and Dr. Macaulay made the treatment decisions with respect to Claimant. Ms. Holschuh was not pressured by Employer to attempt to countermand any of Dr. Macaulay's treatment recommendations. She was not asked by Insurer to send "secret documents" or to ask Dr. Macaulay to deny treatment.

92. Ms. Holschuh characterized the Progress Notes (Ex. 3) as an efficient way to document, at a high level, what occurred during appointments, and to have that information available for other nurses in her absence. She considers the Progress Notes to be a quick reference to see what the care had been, and the plan of care proposed. The Progress Notes were not sent to anyone, absent a request with an authorization. Specifically, Claimant's Progress Notes were not sent to Insurer.

Dawn Cogan, R.N.

93. Ms. Cogan is a registered nurse who has been employed by [Redacted] since 2008. Ms. Cogan's job title is currently "health services manager" and she was previously the "nursing supervisor," although her job duties have remained the same. Ms. Cogan's job responsibilities are primarily managerial.

94. Although Ms. Cogan's managerial duties include "cost containment," during the relevant time frame, she did not have directions to reduce medical treatment of injured workers, and medical decisions for treatment of Injured Workers were made by Dr.

Macaulay. Ms. Cogan did not have the ability to challenge or question Dr. Macaulay's medical decisions, and did not instruct Ms. Thompson, Ms. Holschuh or Ms. Lay to attempt to limit Claimant's medical care.

95. With respect to workers' compensation claims, part of Ms. Cogan's duties was supervision of the [Redacted] workers' compensation program, including reporting, recordkeeping, review of payment of claims and the modified duty program. Ms. Cogan did not have any role in adjusting Claimant's claim and did not have any direct involvement in decisions regarding payment of Claimant's workers' compensation benefits.

Hugh Macaulay, M.D.

96. Hugh Macaulay, M.D., is a board-certified family medicine physician, Level II accredited, and has practiced in occupational medicine since 1992. At one time, Dr. Macaulay served as the cochair for the development of the Medical Treatment Guidelines for traumatic brain injury. Dr. Macaulay was offered and admitted to testify as an expert in occupational medicine.

97. Dr. Macaulay worked as an independent contractor for the DW Clinic for approximately 22 years. In addition, Dr. Macaulay maintains a separate private practice at a different office. At the DW Clinic, Dr. Macaulay's job duties included serving as the medical review officer, performing CDL certifications, surveillance for exposure to materials, and provided primary care for injured workers. Dr. Macaulay had no contracts with Insurer.

98. Dr. Macaulay worked with various nurses, PAs, and nurse practitioners at the DW Clinic, and testified these providers were necessary to help him provide treatment to Injured Workers at the DW Clinic. Dr. Macaulay was typically present at the DW Clinic two days per week (Mondays and Wednesdays) approximately five hours per day. If he was not physically present at the DW Clinic, the DW Clinic staff would contact him by telephone with issues requiring his attention. In situations where a patient needed attention and Dr. Macaulay was unable to come to the DW Clinic on non-scheduled workdays, the patient may be referred to urgent care or an emergency department.

99. A DW Clinic Staff member was always present in the examination room when Dr. Macaulay examined a workers' compensation patient. Dr. Macaulay testified this was to facilitate patient care, to make sure information was being appropriately heard and interpreted, to facilitate nursing care for patients and to implement orders that might be necessary following the visit. Dr. Macaulay follows this procedure in his private practice as well.

100. Dr. Macaulay's understanding is that a "nurse case manager" is an individual hired by a third-party (typically an insurance company) to represent the third-party in the scope of the evaluation. In his private practice Dr. Macaulay has had experience with nurse case managers hired by third-parties.

101. In this context, "nurse case managers" do not take patient's vital signs, assist in following up with the physician's recommendations for prescriptions or referrals. Third-party nurse case managers are not incorporated into the management of patient care. Instead, the nurses or medical assistants employed by Dr. Macaulay would implement the orders he generated. To his knowledge, no nurse case manager hired by a third-party or insurance company attended any of his medical appointments with Claimant.

102. Neither the DW Clinic Staff, nor anyone at [Redacted] instructed Dr. Macaulay on how to make referrals, prescribe medicine or practice medicine in general. He testified that [Redacted] did not influence his treatment of patients. He does not believe his medical treatment of Claimant was impeded by the presence of DW Clinic staff in appointments with Claimant.

103. Dr. Macaulay did not prevent Claimant from speaking about anything during his appointments, and he did not have the impression that Claimant was intimidated during his appointments. Dr. Macaulay did not knowingly conceal anything from Claimant.

104. Dr. Macaulay did not refer Claimant to a neurologist for evaluation of a head injury because most mild concussions resolve within 90 days, and he did not believe a referral was necessary.

105. Dr. Macaulay ordered an FCE for Claimant, and that the initial FCE report recommended certain restrictions on Claimant. Dr. Macaulay testified that the FCE indicated that Claimant could perform most of the essential functions of his job. Dr. Macaulay testified he discussed the limitations with Claimant and Claimant was concerned about possible termination from his job if work restrictions were imposed Dr. Macaulay testified, he did not want the Claimant to lose his job if he might be able to have accommodations that would let Claimant perform his job. Out of concern expressed by Claimant, Dr. Macaulay "tailored the work restrictions" to permit Claimant to continue in his job, and asked Claimant to return and let him know if the restrictions needed to be altered.

RETAINED EXPERT WITNESSES

Nathaniel Moore, M.D.

106. Nathaniel Moore, M.D. was admitted as an expert in family medicine and clinic management. Dr. Moore was previously Level II accredited, but is not currently Level I or Level II accredited. Currently, Dr. Moore sees approximately 1-2 workers' compensation patients per month.

107. Dr. Moore testified that in his career, he has never seen an outside third-party nurse case manager present in a clinic. Dr. Moore understood a "nurse case manager" is a person involved in the patient's care and who "has a role in helping decide what kind of care the patient might receive." Dr. Moore testified that his understanding of the functions performed by DW Clinic Staff included both treating patients in a nursing capacity, and "they would enter the room with the treating physician and help determine the treatment of the patient on an ongoing basis."

108. Dr. Moore's current clinic does use nurses in the role of a "nurse case manager." In this capacity, the "nurse case manager's" role is "to help coordinate care, obtain prior authorizations, send in prescriptions, coordinate imaging studies and referrals to outside specialists." In this role, staff plays an important role in assisting patients with prior authorizations, referrals to specialists, transportation issues and medication questions. He testified that in his clinic "nurse case managers" do not go into the examination room with the physician. He agreed that different doctors may choose different ways of utilizing a nurse's services.

109. Dr. Moore opined that DW Clinic Staff's roles changed for workers' compensation cases, and that nurses would act as a "case manager." He opined there should have been a notification to the patient of the "change in roles." Dr. Moore also testified that in his experience treating injured workers, he has "never once had a nurse case manager come in the room," because he made his own treatment decisions, and did not need a nurse case manager to help make treatment decisions.

110. Dr. Moore opined that nurses acting in two separate roles (i.e., treating provider and "nurse case manager") creates a conflict of interest at [Redacted] because the nurses became friendly with workers over time, and that in their role as "nurse case managers" they might not have the best interest of the patient in mind. Dr. Moore testified he has not worked with "nurse case managers" in his practice, and that the role of a nurse case manager is to help facilitate ongoing care, treatment, and evaluation of the injured worker, and who assists the medical provider, employer, and insurance company. He also opined that a nurse case manager can be hired by "any of those" (i.e., the provider, employer, or insurance company). Dr. Moore testified that it was unreasonable and inappropriate for [Redacted] to permit "nurse case managers" into patient appointments without the patient's consent. He further testified that such consent should be in writing.

111. Dr. Moore testified that physician-patient interactions and medical records are confidential, and may be accessed by the medical provider, the patient, and (certain parts) the insurance carrier.

Henry Roth, M.D.

112. Henry Roth, M.D., is a physician who practices physical and occupational medicine. Dr. Roth was offered and admitted to testify as an expert in physical occupational medicine.

113. Dr. Roth testified that it is optional, but common for physicians to have a third-person present during a patient examination. In some contexts, the third-person is present for the administration and management of the claim, including executing the physician's orders and plan. He testified that it is easier to have the person who is responsible for coordinating and communicating appointments, procedures, and follow-up in the examination room. Generally, Dr. Roth testified, the third-person in the room is a nurse or a medical assistant.

114. Dr. Roth testified that his understanding of a nurse case manager in the workers' compensation context is a person who is an employee or agent of the insurance carrier to help coordinate and manage the claim. He testified that nurse case managers employed by an insurance company never take an active role during the examination and treatment of a patient, and they are not a participant in the clinical practice.

III. CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant, nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on the merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals* Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. *Id*. at 641. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

A. CLAIMANT’S PETITION TO REOPEN FOR FRAUD

1. NECESSITY TO REOPEN TO ASSERT PENALTY CLAIMS

a) DW RESPONDENTS

Once a case has been closed, the issues resolved by a Final Admission of Liability are not subject to litigation unless they are reopened pursuant to § 8-43-303, C.R.S. § 8-43-203 (2)(d), C.R.S.; *see also Berg v. Industrial Claim Appeals Office*, 128 P.3d 270, 272 (Colo. App. 2005); *Webster v. Czarnowski Display Service Inc*., W.C. No. 5-009-761-03 (ICAO, Feb. 4, 2019). This requirement is equally applicable to claims for penalties. *Villegas v. Denver Water,* W.C. 4-889-298-002 (ICAO Feb. 5, 2021). Thus, if the issue of penalties has been closed by a Final Admission of Liability, a claimant may not assert a penalty claim against the party or parties who filed the FAL unless the claim is properly reopened.

The DW Respondents filed a Final Admission of Liability on March 1, 2017. The GAL did not admit for any penalties and included the following language: “Any benefits and penalties not specifically admitted herein are denied.” (Ex. E). Claimant did not object to the March 1, 2017 FAL or request a hearing within 30 days, as required by § 8-43-203 (2)(b)(II), C.R.S. Accordingly, and the issue of penalties with respect to the DW Respondents closed effective April 1, 2017 by operation of law. Consequently, Claimant may only litigate the issue of penalties against the DW Respondents if Claimant establishes a basis for reopening under § 8-43-303.

b) DR. MACAULAY

Claimant is not required to reopen his claim to assert a penalty claim against Dr. Macaulay. Section 8-43-304 (1), C.R.S., authorizes penalty claims against any person, and is not limited to only employers or insurers. Because only an employer and its insurance carrier may file a Final Admission of Liability under § 8-43-203(b)(I), C.R.S., the closure of issues through the March 1, 2017 Final Admission applies only to the DW Respondents. As found in *Villegas v. Denver Water*, W.C. 4-889-298-002 (ICAO Feb. 5, 2021), the Claimant is not required to reopen his claim under § 8-43-203(2)(d) as a prerequisite to asserting penalties against Dr. Macaulay.

2. REOPENING AGAINST DW RESPONDENTS

Claimant seeks to reopen his claim on the ground of fraud. Fraud may justify reopening an otherwise final award of benefits, under § 8-43-303, C.R.S., which provides, in relevant part:

> At any time within six years after the date of injury, the director or an administrative law judge may, after notice to all parties, review and reopen any award on the ground of fraud, an overpayment, an error, a mistake, or a change in condition ….

The elements of fraud or material misrepresentation are well-established in Colorado law. The elements are: (1) A false representation of a material existing fact, or a representation as to a material fact with reckless disregard of its truth; or concealment of a material existing fact; (2) Knowledge on the part of one making the representation that it is false; (3) Ignorance on the part of the one to whom the representation is made, or the fact concealed, of the falsity of the representation or the existence of the fact; (4) Making of the representation or concealment of the fact with the intent that it be acted upon; (5) Action based on the representation or concealment resulting in damage. *Arczynski v. Club Mediterranee of Colorado, Inc.*, W.C. No. 4-156-147 (ICAO, Dec. 15, 2005), *citing Morrison v. Goodspeed*, 68 P.2d 458, 462 (Colo. 1937). "Where the evidence is subject to more than one interpretation, the existence of fraud is a factual issue for resolution by the ALJ." *Arczynski, supra*

The power to reopen is permissive, and is therefore committed to the ALJ's sound discretion. Further, the party seeking to reopen bears the burden of proof to establish grounds for reopening. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Barker v. Poudre School Dist.*, W.C. No. 4-750-735 (ICAO, Mar. 7, 2012).

To prevail on his fraud claim, Claimant must establish that the DW Respondents made a material misrepresentation or knowingly concealed a material existing fact. Although not well-articulated, the ALJ discerns that Claimant believes the DW Respondents committed fraud by allegedly failing to send Claimant the WC Brochure and/or failing to affirmatively disclose the DW Clinic Staff roles as putative "nurse case managers," and thereby knowingly concealed a material existing fact that should have been disclosed. In his position statement, Claimant argues his "penalty allegations support his fraud claim because he thought the staff at [Redacted]'s facility were there to treat him. He did not know that the staff members were nurse case managers and that he had the right to refuse their presence."

a) MATERIAL EXISTING FACT - "NURSE CASE MANAGER[S] EMPLOYED ON CLAIMANT'S CLAIM".

The alleged material existing fact upon which Claimant's fraud claim is based is the assertion that the DW Clinic Staff were "nurse case mangers employed on claimant's claim" as that term is used in § 8-43-203 (3)(b)(IV), C.R.S. That section requires that the employer or insurer provide claimants with the WC Brochure "informing the claimant of his or her rights," and which advises a claimant, among other things, of:

> (IV) The claimant's right to discuss with his or her doctor who should be present during a claimant's medical appointment, and the right to refuse to have a nurse case manager employed on the claimant's claim present at the claimant's medical appointment…

§ 8-43-203 (3)(b)(IV), C.R.S.

The parties assign different meaning to the term “nurse case manager.” Claimant asserts the term includes individuals who, like the DW Clinic Staff, in a non-treating capacity, schedule medical appointments for claimants, reminded claimants of upcoming appointments, and facilitating treatment. Respondents, on the other hand, contend that a “nurse case manager” is a person assigned or hired by the insurer on a specific claim.

Because the term “nurse case manager” is not defined in § 8-43-203 (3), C.R.S. or elsewhere in the Act (or in any Colorado statute), the ALJ must begin by attempting to discern the plain and ordinary meaning of the term. When construing a statute, the ALJ must give effect to the General Assembly’s purpose and intent as reflected in the plain language of the statute. *State Dept. of Labor and Employment v. Esser*, 30 P.3d 189, 195 (Colo. 2001). “To that end, the words in a statute should be given their plain and ordinary meanings, and the statute should be construed so as to give consistent, harmonious, and sensible effect to all its parts.” *In Re Spencer*, WC. 4-580-221 (ICAO June 15, 2004) (citations omitted). “Words and phrases that have acquired a technical or particular meaning, whether by legislative definition or otherwise, shall be construed accordingly.” § 2-4-101, C.R.S. A court may consider dictionary definitions, but also the context in which the words are used to harmonize the meaning with the remainder of the statutory provisions. *People v. Berry*, 459 P.3d 578, 581 (Colo. App. 2017). “[I]t is an axiom of statutory construction that statutes must be construed as a whole, and the several parts of a statute reflect light upon each other.” *People ex rel. Dunbar v. Gym of America, Inc.*, 493 P.2d 660, 665 (Colo. 1972). The ALJ should not depart from the plain meaning unless it leads to an absurd result. *Colo. Dep't of Soc. Servs. v. Bd. of County Comm'rs*, 697 P.2d 1 (Colo.1985).

If, after applying these principles, the statute remains ambiguous, the court may resort to other rules of statutory construction. *Francen v. Colo. Dept. of Revenue*, 411 P.3d 693, 698 (Colo. App. 2012); *Midboe v. Industrial Claim Appeals Office*, 88 P.3d 643 (Colo. App. 2003). Colorado’s Construction of Statutes law, § 2-4-203, C.R.S., provides “[i]f a statute is ambiguous, the court, in determining the intention of the general assembly, may consider among other matters: (a) the object sought to be attained; [and] … (e) the consequences of a particular construction.”

The ALJ has found no Colorado case, dictionary or other secondary legal source which provides a cogent, accepted definition of the term. The term “case management” is defined in the Act, and provides guidance on the intended meaning of the term. Section 8-42-101 (3.6)(p)(I)(A), provides that “case management” means “a system developed by the insurance carrier in which the carrier shall assign a person knowledgeable in workers’ compensation health care to communicate with the employer, employee, and treating physician to assure that appropriate and timely medical care is being provided.”

The expert testimony of Drs. Moore, Roth and Macaulay also provides evidence as to the understood meaning of the term as it relates to workers’ compensation claims. Dr. Roth understands a “nurse case manager” to be a person employed by the insurance carrier to help coordinate and manage a claim, and in this context, a “nurse case manager” does not participate in the physician’s clinical practice. Similarly, Dr. Macaulay testified that a “nurse case manager” is a person hired by a third-party to represent the third-party in the scope of the evaluation. Dr. Moore testified that "nurse case managers" in his office to help coordinate care, obtain prior authorizations, send in prescriptions, coordinate imaging studies and referrals to outside specialists. However, he also testified that in the context of workers' compensation, a conflict exists because a "nurse case manager" may direct and make decisions about the care a patient may need, and may have the best interest of the employer or insurer rather than the patient, in mind. Implicit in Dr. Moore's testimony is that the conflict he addresses would only exist if the "nurse case manager" was employed by a third-party for the purpose representing that party's interest.

The testifying experts' opinions are consistent in their understanding that, in the context of workers' compensation, a "nurse case manager" is a person whose role is to represent the interest of a third-party (typically the insurer), rather than the interest of the claimant. The definitions provided by Dr. Roth, Dr. Macaulay and Dr. Moore are consistent with the statutes' reference to "nurse case managers employed on claimant's claim."

The expert testimony is consistent with Colorado cases in which referenced "nurse case managers" were engaged by a party other than the treating provider and played a role in directing patient care, such as directly referring the claimant to health care providers. *See e.g., Vargas v. Tetra Technologies*, W.C. No. 4-771-845 (ICAO, Dec. 18, 2009) (insurer's nurse case manager referred claimant to provider); *Rokvic v. U.S. Home*, W.C. No. 4-513-682 (ICAO, Dec. 7, 2007) (nurse case manager referred claimant to provider); *Ries v. Subway of Cherry Creek, Inc.*, W.C. No. 4-674-408 (ICAO, Aug. 4, 2011) (nurse case manager employed by respondents to assist in locating out-of-state physician for claimant); *Watson v. Grey Wolf Drilling*, W.C. No. 4-372-314 (ICAO, Nov. 29, 2006) (nurse case manager employed by employer's medical management firm recommended treatment and investigated claim prior to claimant receiving treatment from a physician).

As noted above, Colorado's rules of statutory construction provide that the object sought to be obtained and the consequences of a particular construction may be considered when construing an ambiguous statute. The object of the Act is "to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers…" § 8-40-102 (1), C.R.S. That objective is not furthered by requiring the insurer to notify a claimant of a right to preclude a member of the treating physician's staff from an appointment regardless of that person's role in a claimant's case. Instead, the more reasonable construction of § 8-43-203 (3)(b)(IV), is that the term "nurse case manager employed on the claimant's claim" refers to a person representing the interest of a third-party and who is not directly involved in implementing the ATP's plan of care.

Claimant cites to *Nanez v. Industrial Claim Appeals Office*, 444 P.3d 820 (Colo App. 2018) as defining the role of a "nurse case manager." In *Nanez*, a claimant sought benefits for conservator or guardian services under the Act. In denying the claimant's request, the Court of Appeals compared some of the proposed functions of a conservator to a nurse case manager who had already been employed on claimant's case. The court did not define the role of a "nurse case manager," but noted the existing nurse case manager had scheduled, and reminded the claimant of upcoming medical appointments, maintained contact with medical providers to keep updated on his progress, facilitated treatment recommendations and compliance with those recommendations, monitored medications and complaints for possible medical needs, and attended medical appointments. The Court did not, however, make any legal determination that a person who performs these functions is a "nurse case manager employed on the claimant's claim" under §8-43-203 (3)(b)(IV), C.R.S.

Taking into consideration the statutory definition of "case management," expert testimony, relevant case law, and the rules of statutory construction, the ALJ concludes that the term "nurse case manager employed on claimant's claim," as used in § 8-43-203 (3)(b)(IV), C.R.S., does not mean nurses or staff of a clinic where a claimant receives treatment and who assist the physician in implementing his plan of care or who assist a claimant in scheduling appointments. Instead, the ALJ concludes that "nurse case manager employed on a claimant's claim" means a person representing the interest of a third-party and who is not directly involved in implementing the ATP's plan of care.

The evidence demonstrates that DW Clinic Staff were not employed or assigned by Insurer and did not represent the Insurer's or Employer's interests with respect to Claimant's claim. The functions performed by the DW Clinic Staff were done to implement the Claimant's care recommended by Dr. Macaulay. As such, the ALJ finds and concludes that the DW Clinic Staff were not "nurse case managers employed on claimant's claim" as the term is used in the Act.

b) KNOWING MISREPRESENTATION OR CONCEALMENT

Notwithstanding the conclusion that the DW Clinic Staff were not "nurse case mangers employed on claimant's claim," the ALJ concludes that Claimant has failed to establish that the DW Respondents made knowing or reckless misrepresentations or knowingly concealed any material existing fact from Claimant, or that Claimant was ignorant of a concealed fact or false representation.

Even assuming, *arguendo*, the DW Clinic Staff were "nurse case managers" because they scheduled and reminded Claimant of medical appointments, facilitated treatment, and functioned in a non-treating role, as Claimant argues, the evidence does not demonstrate that either [Redacted] or Insurer made any false representation to the Claimant or concealed any material existing fact from Claimant. Claimant presented no competent evidence that the DW Respondents made any affirmative misrepresentations about the roles performed by DW Clinic Staff. Similarly, neither the DW Respondents, DW Clinic Staff nor Dr. Macaulay made any effort to conceal from the Claimant the functions being performed by the DW Clinic Staff, or their role in his claim.

To the extent Claimant's fraud allegation relies upon the assertion that Claimant did not receive the WC Brochure from Insurer, the Claimant has failed to establish that the alleged failure to provide the WC Brochure was done knowingly, or an active concealment. To the contrary, the March 1, 2017 GAL sent to Claimant indicates the WC Brochure was enclosed and sent to the Claimant, and Ms. Manshardt's testimony confirms that it was Insurer's standard business practice to send the WC Brochure to workers' compensation claimants with its initial GAL or notice of denial. The ALJ finds that, even assuming Claimant did not receive the WC Brochure, Claimant has failed to establish by a preponderance of the evidence that the DW Respondents knowingly concealed any information from Claimant.

The ALJ concludes that Claimant has failed to establish that the DW Respondents made any knowing misrepresentation or concealment of a material existing fact.

c) IGNORANCE OF MISREPRESENTATION OR CONCEALMENT.

To establish fraud, the Claimant must also establish his ignorance of the fact allegedly concealed, of the falsity of the representation or the existence of the fact. Again, Claimant has failed to meet this burden.

The evidence establishes Claimant knew DW Clinic Staff were present in his appointments on the date of each appointment. The Progress Notes document numerous communications between Claimant and DW Clinic Staff regarding the conduct he asserts constitute "nurse case management." Claimant solicited and accepted assistance from DW Clinic Staff in scheduling appointments for him with Dr. Macaulay, scheduling appointments with outside referrals and reminding him of those appointments. Claimant was also aware and involved in discussions with DW Clinic Staff regarding his compliance with recommendations. Claimant was also aware that he was not receiving treatment directly from DW Clinic Staff. Whether Claimant was aware that DW Clinic Staff occasionally used the term "case manager" or "nurse case manager" to describe their role is irrelevant. The mere use of the phrases "nurse case manager," "case manager" or "case management" does not convert the DW Clinic Nurses to "nurse case managers" as that phrase is used in the Act. Claimant was aware that the DW Clinic Staff were performing the functions he now characterizes as fraud.

Claimant has failed to establish by a preponderance of the evidence that the DW Respondents committed fraud or that he is otherwise entitled to reopen his claim pursuant to § 8-43-303, C.R.S.

3. FRAUD BASED OF FAILURE TO DISCLOSE DR. MACAUALY'S POSITION AT THE DW CLINIC.

In his Position Statement, Claimant argues that "[t]he misrepresentation to the DIME physician that Claimant did not treat in an on-site clinic constitutes fraud." Claimant contends that Dr. Macaualy did not treat Claimant at an on-site because Dr. Macaulay's medical reports were created under Dr. Macaualy's letterhead, rather than [Redacted] letterhead and that Dr. Macaualy was a contractor, rather than an employee of the DW Clinic. A fact is material if a reasonable person under the circumstances would attach importance to it in determining his or her course of action. *See Rosenthal v. Dean Witter Reynolds, Inc.*, 908 P.2d 1095, 1102 (Colo. 1995) *citing* CJI-Civ.3d 19:4. As found, Claimant treated at the DW Clinic which is an on-site clinic. Notwithstanding, even assuming *arguendo* that Claimant's interpretation of the facts was correct, Claimant did not establish by a preponderance of the evidence that a reasonable DIME physician would attach importance to Claimant not being treated at the DW Clinic, to Dr. Macaualy's employment status or the to letterhead on which his medical reports were issued. Similarly, Claimant has failed to establish that the DIME physician, Dr. Gray, was ignorant of any fact allegedly concealed or misrepresented, or that Dr. Gray took action based on the alleged concealment or misrepresentation. Accordingly, the ALJ concludes that Claimant has failed to satisfy the elements of fraud with respect to this allegation.

B. CLAIMANT'S PENALTY CLAIMS

Claimant seeks penalties against the DW Respondents and Dr. Macaulay for multiple alleged violation of the Workers' Compensation Act pursuant to § 8-43-304, C.R.S. Whether statutory penalties may be imposed under § 8-43-304(1), C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties where the any party "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel…" Thus, the ALJ must first determine whether a party's conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* W.C. No. 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the offending party know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

The question of whether a party's conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see also Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party makes a *prima facie* showing of unreasonable conduct by proving that a party violated a rule of procedure . *Pioneers Hospital v. Industrial Claim Appeals Office, supra*. If the claimant makes such *prima facie* showing the burden of persuasion shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra, Human Resource Co. v. Industrial Claim Appeals Office*, 984 P.2d 1194 (Colo. App. 1999).

When penalties are imposed under § 8-43-304(1), C.R.S., such penalties may include "a fine of not more than one thousand dollars per day for each offense, to be apportioned, in whole or part, at the discretion of the director or administrative law judge, between the aggrieved party and the Colorado uninsured employer fund created in section 8-67-105; except that the amount apportioned to the aggrieved party shall be a minimum of twenty-five percent of any penalty assessed."

1. PENALTIES AGAINST [REDACTED] RESPONDENTS

a) VIOLATION OF § 8-43-203 (3), C.R.S.

In his position statement, Claimant seeks penalties against the DW Respondents for allegedly violating § 8-43-203 (3), C.R.S., by failing to provide Claimant with the statutorily-mandated brochure advising Claimant of his rights under the Act. Section 8-43-304 (4) requires that "[i]n any application for hearing any penalty pursuant to subsection (1) of this section, the applicant shall state with specificity the grounds on which the penalty is being asserted." Claimant's Application for Hearing does not assert a claim for penalties for violation of § 8-43-203 (3), C.R.S., based on the alleged failure to provide Claimant with the WC Brochure. As such, this issue is not properly before the ALJ.

Notwithstanding the fact that this penalty was not alleged in Claimant's Application for Hearing, Claimant has failed to establish grounds for reopening his claim, and may not assert this penalty claim against the DW Respondents.

b) VIOLATION OF § 8-42-101 (3.6)(p)(II), C.R.S.

Claimant's Application for Hearing (paragraph 49) asserts the DW Respondents violated § 8-42-101 (3.6)(p)(II), C.R.S., by forcing Claimant into "case management" without Claimant's consent, and seeks penalties for an alleged violation of this section. As found, Claimant has failed to establish grounds for reopening his claim, and therefore may not assert this penalty claim against the DW Respondents.

c) VIOLATION OF 8-43-203 (3)(b)(IV), C.R.S.

Claimant's Application for Hearing (paragraphs 1, 4, 7, 10, 13, 16, 19, 22, 25, 28, 31, 34, 37, 40, 43, and 46) asserts the DW Respondents violated § 8-43-203 (3)(b)(IV), C.R.S., by utilizing DW Clinic Staff as "nurse case managers" in connection with Claimant's claim without informing Claimant of his right to refuse nurse case management or the presence of nurse case managers in his appointments. As found, Claimant has failed to establish grounds for reopening his claim, and therefore may not assert this penalty claim against the DW Respondents.

2. PENALTIES AGAINST DR. MACAULAY

a) VIOLATION OF § 8-43-203 (3)(b)(IV), C.R.S.

Claimant's Application for Hearing (paragraphs 2, 5, 8, 11, 14, 17, 20, 23, 26, 29, 32, 35, 38, 41, 44 and 47) asserts Dr. Macaulay violated § 8-43-203 (3)(b)(IV), C.R.S., by allegedly failing to identify "nurse case managers" present in 16 appointments. Specifically, Claimant asserts "Penalties pursuant to C.R.S. § 8-43-304 for a violation of § 8-43-203 (3)(b)(IV)", and for each penalty asserts:

> "[Dr. Macaulay] allowed a nurse case manager to attend Claimant's appointments with Macaulay at [Redacted]'s Clinic without identifying the

> nurse case manager as a nurse case manager. Claimant was under the impression that the [Redacted] Clinic employee was there to treat him. He did not know to exercise his right to have the nurse case manager leave the room because he did not know she was a nurse case manager. [Dr. Macaulay][violated Claimant's right to refuse to have a nurse case manager employed on Claimant's claim present at Claimant's medical appointment."

Section 8-43-304 (1), C.R.S., permits the imposition of penalties against "Any employer or insurer, or any officer of agent of either, or any employee, or any other person who violates articles 40 to 47 of this title 8, or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel, for which no penalty has been specifically provided …." Thus, to prevail on his claim for penalties against Dr. Macaulay, Claimant must establish that Dr. Macaulay performed an act prohibited by the Act, of failed or refused to perform a duty required by the Act.

Claimant has failed to establish that the Act imposed a duty upon Dr. Macaulay, to identify the DW Clinic Staff as "nurse case managers." Section 8-43-203 (3)(b)(IV), imposes a duty on "the employer, or if insured, the employer's insurance carrier" to provide the Claimant with the WC Brochure advising the Claimant of his rights. As found, Dr. Macaulay served as Claimant's ATP, he is neither the Claimant's employer nor Employer's insurer. The Act imposes no duty on physicians to advise Claimant of his rights, or to identify individuals present within an appointment. Requiring a treating physician to advise a claimant of his rights, or to identify putative "nurse case managers" would improperly read a nonexistent provision into the Workers' Compensation Act, which is not allowed. *See Kraus v. Artcraft Sign Co.*, 710 P.2d 480, 482 (Colo. 1985) (The appellate courts of this state have "uniformly held that a court should not read nonexistent provisions into the . . . Act."). The ALJ declines to read into the Workers' Compensation Act provisions that do not exist.

Claimant's claim for penalties against Dr. Macaulay fails for a second reason. As found above, the DW Clinic Staff engaged in administrative functions to implement the care and treatment recommended by Dr. Macaulay. As found, the DW Clinic Staff were not "nurse case managers employed on claimant's claim" within the meaning of § 8-43-203 (3)(b)(IV), C.R.S. As such, even if a duty existed under the Act for Dr. Macaulay to identify to Claimant nurse case managers in his appointment, the duty would not apply in this case because the DW Clinic Staff were not "nurse case manager[s] employed on [Claimant's] claim."

Claimant's claim fails for a third reason as well. The ALJ finds it more probable than not that Claimant received the WC Brochure, and thus knew or should have known of his right to discuss with Dr. Macaulay who should be present during his appointment and to refuse the presence of a nurse case manager employed on his claim. Among the rights about which a claimant is to be informed through the WC Brochure is "[t]he claimant's right to discuss with his or her doctor who should be present during a claimant's medical appointment, and the right to refuse to have a nurse case manager employed on the claimant's claim present at the claimant's medical appointment." § 8-43-203 (3)(b)(IV).

As found, Insurer sent Claimant a General Admission of Liability on April 9, 2015. The GAL indicates that the WC Brochure was attached to the copy of the GAL sent to Claimant at Claimant's Home Address, and the WC Brochure advised Claimant of his rights in compliance with § 8-43-203 (3)(b)(IV). Ms. Manshardt credibly testified that the business practice of Insurer was to review all GAL's before mailing to assure the referenced attachments were included in the documents to be mailed, including assuring the WC Brochure was attached to the version sent to Claimant. Although Insurer does not maintain in its claims file a copy of each WC Brochure sent to a claimant, Insurer documents the inclusion on the GAL. The April 9, 2015 GAL states under "Remarks" – "WC brochure enc'd for IW," indicating that the WC Brochure was enclosed with the copy of the GAL sent to Claimant. Ms. Manshardt also testified that she would only sign off on a GAL after assuring that the WC Brochure was attached. Ms. Manshardt's testimony is corroborated by her email to Dawn Cogan dated September 26, 2018.

"There is a rebuttable presumption that a letter which was properly addressed, stamped, and mailed was duly delivered to the addressee." *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). "[T]he existence of a business custom or practice is sufficient to warrant a presumption that a particular letter was duly posted." *National Motors, Inc. v. Newman*, 484 P.2d 125, 126 (Colo. App. 1971), *see also EZ Bldg. Components Mfg., LLC v. Industrial Claim Appeals Office of State*, 74 P.3d 516 (Colo. App. 2003) ("The existence of a business custom is sufficient to warrant a presumption that notice was sent, and it is the province of the trier of fact to decide whether that presumption is overcome by other evidence.")

The ALJ does not find Claimant's testimony that he never received the GAL or WC Brochure in the mail to be sufficient evidence to establish that Insurer failed to follow its business custom of attaching the WC Brochure to the GAL sent to him on April 9, 2015. Accordingly, the ALJ finds and concludes it more likely than not that Claimant received the WC Brochure.

Claimant has failed to establish by a preponderance of the evidence that Dr. Macaulay performed any prohibited act, or failed or refused to perform a required duty required by the Act under § 8-43-203 (3)(b)(IV), and that no basis for imposing penalties against Dr. Macaulay exists.

b) VIOLATION OF § 8-47-203 (1), C.R.S.

Claimant's Application for Hearing (paragraphs 3, 6, 9, 12, 15, 18, 21, 24, 27, 30, 33, 36, 39, 42, 45 and 48) asserts Dr. Macaulay violated § 8-47-203 (1), allowing DW Clinic Staff to access to Claimant's medical records on 16 dates. Specifically, Claimant asserts "Penalties pursuant to C.R.S. § 8-43-304 for a violation of § 8-47-203 (1)", and for each penalty asserts:

> "Dr. Macaulay allowed access to Claimant's medical file and records to a nurse case manager who was hired by Respondents and who was not necessary to resolve Claimant's claim. In doing so, Macaulay violated the limited waiver of the doctor-patient privilege provided by C.R.S. § 8-47-203 (1). Macaulay violated the doctor-patient privilege."

Section 8-47-203 (1) provides "Notwithstanding the provisions of section 8-47-202, the filing of a claim for compensation is deemed to be a limited waiver of the doctor-patient privilege to person who are necessary to resolve the claim."

Claimant asserts that Dr. Macaulay violated § 8-47-203 (1), "because Macaulay left his records for [Redacted] staff members." As found, the DW Clinic Staff were not functioning a "nurse case managers" under the Act. Dr. Macaulay created treatment notes for his appointments with Claimant and provided those notes to the DW Clinic Staff for inclusion in Claimant's medical file. The evidence does not reflect that DW Clinic Staff distributed or disseminated Dr. Macaulay's treatment notes, or did anything with the notes other than include them in Claimant's medical file maintained by the DW Clinic, and possibly use the records to implement Dr. Macaulay's recommendations and orders. These are normal uses of medical records within a medical facility for which no waiver of the doctor-patient privilege is required. The ALJ need not determine whether the DW Clinic Staff were "necessary to resolve the claim," because the Claimant has cited no authority supporting the proposition any waiver of doctor-patient privilege was required for Dr. Macaulay to provide his records to the DW Clinic for inclusion in the medical file or to implement his treatment recommendations.

Claimant has failed to establish that, by providing treatment notes to the DW Clinic Staff to include in Claimant's medical file, or to utilize in implementing his treatment recommendations, Dr. Macaulay violated § 8-47-203 (1), C.R.S. Accordingly, the ALJ finds no basis for imposing penalties against Dr. Macaulay.

3. RESPONDENTS' AFFIRMATIVE DEFENSE OF § 8-43-304 (4)

In their respective Responses to Claimant's Application for Hearing, the DW Respondents and Dr. Macaulay assert that Claimant's penalty claims are barred by the one-year statute of limitations for penalty claims contained in § 8-43-304 (4), C.R.S. Because the ALJ finds that Claimant has failed to meet his burden of proof on each of his claims, the ALJ does not address the Respondents' affirmative defense under § 8-43-304(4), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant's petition to reopen his claim is denied and dismissed.

2. Claimants request for penalties against [Redacted] and Travelers for violation of § 8-43-203 (3)(b)(IV), C.R.S., is denied and dismissed.

3. Claimant request for penalties against [Redacted] and Travelers for violation of § 8-42-101 (3.6)(p)(III), C.R.S., is denied and dismissed.

4. Claimants request for penalties against Dr. Macaulay for violation of § 8-43-203 (3)(b)(IV), C.R.S., is denied and dismissed.

5. Claimants request for penalties against Dr. Macaulay for violation of § 8-47-203 (1), C.R.S., is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, Colorado, 80203

ISSUES

1. Whether Claimant provided clear and convincing evidence to overcome Dr. Regan's DIME opinion that Claimant reached maximum medical improvement ("MMI") for his December 9, 2017 right knee injury.

2. Whether Pinnacol proved by clear and convincing evidence that Dr. Sacha erred in failing to apportion Claimant's right knee impairment rating.

FINDINGS OF FACT

1. This claim involves two separate claims and dates of injury: November 18, 2016 (WC# 5-037-178) and December 9, 2017 (WC# 5-064-719).

2. Claimant has a prior history of right knee injury and treatment. Claimant suffered an admitted industrial injury to his right knee on April 26, 2007. A July 2, 2007 right knee MRI revealed focal advanced degenerative changes along the medial half of the medial facet of the distal femoral trochlear sulcus with an apparent osteochondral insult to the superior third of the patellar ridge and a full-thickness chondral fissure.

3. On October 23, 2007, Claimant underwent right knee surgery with Michael Hewitt, M.D. Dr. Hewitt diagnosed Claimant with a right knee medial meniscus tear, grade II medial chondromalacia, and grade III and IV patellofemoral chondromalacia. A 50% excision of the posterior horn was required during the surgery. Dr. Hewitt released Claimant from his care on January 7, 2008. Dr. Hewitt opined that most of Claimant's continued pain was likely due to arthritis and recommended Claimant undergo viscosupplementation injections. The request for viscosupplementation injections was denied.

4. Claimant's authorized treating physician ("ATP"), Robert Watson, M.D., placed Claimant at maximum medical improvement ("MMI") on January 23, 2008 with a 10% right knee permanent impairment rating. The impairment rating consisted of 5% under Table 40-II of the AMA Guides for the partial meniscectomy and 5% for range of motion loss. For maintenance medical benefits, Dr. Watson recommended a trial of viscosupplementation injections. Claimant was given permanent work restrictions of no kneeling or crawling.

5. On February 27, 2008, Respondents in the WC# 5-037-178 claim filed a Final Admission of Liability ("FAL") consistent with Dr. Watson's MMI report.

6. On November 18, 2016, Claimant slipped and fell on ice and snow while exiting his work truck. Claimant presented to ATP Lori Rossi, M.D. on November 18, 2016 with complaints of back and left elbow pain. At a follow-up evaluation with Dr. Rossi on November 21, 2016, Claimant reported right knee pain. Claimant reported increased right knee symptoms with prolonged standing, walking kneeling, squatting, and bending. Dr. Rossi noted increased right knee pain with range of motion. Dr. Rossi assessed a low back contusion, left elbow contusion, right knee strain and neck strain. She recommended physical therapy, and prescribed ibuprofen.

7. Dr. Rossi subsequently placed Claimant at MMI on December 20, 2016 with 0% permanent impairment. At this evaluation, Claimant reported that he had returned to working regularly and that he was feeling back to baseline. Dr. Rossi observed Claimant to have an antalgic gait secondary to his chronic right knee issues.

8. On July 18, 2017, Claimant underwent a DIME with John Sacha, M.D. Claimant complained of ongoing lower back and right knee issues, including pain localized to the right lateral and posterior knee, worse with kneeling and walking up/down hills. Claimant reported having a prior knee injury and surgery and some residual pain. Dr. Sacha diagnosed Claimant with work-related lumbosacral facet syndrome and a right knee strain, which he noted was a flare-up of Claimant's pre-existing right knee condition. He opined that Claimant was not at MMI and recommended additional treatment for the low back and right knee, including six physical therapy visits for the right knee, and a trial of Synvisc injections of the right knee for symptom control. Dr. Sacha provided an advisory 7% whole person impairment rating, consisting of 5% whole person low back impairment under Table 53 of the AMA Guides, and 5% lower extremity impairment under Table 40 for chondromalacia (2% whole person impairment). He noted apportionment was not appropriate as Claimant did not have medical care for two years prior to this injury.

9. On August 31, 2017, Pinnacol filed a General Admission of Liability ("GAL") reopening the claim.

10. Claimant returned to Dr. Rossi on November 22, 2017. Dr. Rossi noted that Claimant complained of right knee pain after his initial visit, and that the knee pain had been longstanding. Claimant informed Dr. Rossi that his lawyer asked the insurance company for him to be seen. Dr. Rossi stated that Claimant was wanting his case reopened. He complained that his knee instability had caused the 11/18/2016 injury, which Dr. Rossi noted was not previously mentioned or documented. Claimant complained that he has difficulty moving or bearing weight, and that he had two additional falls in March and two months prior to this visit. During this visit, Dr. Rossi noted that it was the first time Claimant had mentioned the prior treatment for the work related injury to his right knee back in 2008, and understood that he needed a right total knee replacement. Dr. Rossi again reported that his gait was "quite antalgic." Dr. Rossi observed some diffuse swelling of his right knee. A McMurray test, abduction/adduction stress testing and ballottement all caused significant discomfort for the Claimant. Dr. Rossi noted Claimant had limited extension and flexion, as well as significant pain. Claimant's left knee was unremarkable. Dr. Rossi explained to Claimant that the case

documentation did not support the instability of his right knee as being the cause of his November 2016 fall, as he did not document or disclose his 2008 knee injury. Dr. Rossi opined that, while Claimant does have a significant knee problem, treatment should be covered under his private insurance and not the workers' compensation system.

11. Prior to returning to Dr. Sacha for a follow-up DIME regarding the November 18, 2016 work injury, Claimant sustained another work injury on December 9, 2017.

12. Claimant sought treatment for his December 9, 2017 right knee injury on December 10, 2017 at the Saint Joseph Hospital Emergency Department. Claimant reported slipping and hitting his right knee on the corner of a dishwasher. He complained of difficulty straightening and bending his knee due to pain. The physician noted Claimant's right knee had a large effusion, ecchymosis distal to his patella, tenderness, and significantly decreased range of motion due to pain. X-rays revealed a small joint effusion and tricompartmental degenerative joint disease most pronounced in the medial aspect of Claimant's knee. The physician diagnosed Claimant with right knee hemarthrosis and aspirated Claimant's right knee. Claimant was provided crutches and prescribed medication.

13. On January 15, 2018, Claimant treated at Concentra with Elizabeth Palmer, PA-C under the supervision of ATP Stephen Danahey, M.D. Claimant stated that he tripped on a rug and landed on his right knee. Claimant reported that he had a right knee meniscectomy in 2008 and has had intermittent knee pain since then. PA Palmer diagnosed Claimant with a knee sprain, prescribed him medication and a knee brace, and referred Claimant for three weeks of physical therapy. Claimant was released to work full duty.

14. On January 25, 2018, Claimant returned to PA Palmer reporting that he had been to five physical therapy sessions with no improvement. He reported right knee locking, stiffness, and instability. PA Palmer referred Claimant for a MRI and prescribed new medications.

15. Liberty filed a General Admission of Liability ("GAL") on January 25, 2018 admitting liability for medical treatment.

16. Claimant underwent a right knee MRI on February 6, 2018 which revealed a medial meniscus bucket-handle type cleavage tear without a focally localized fragment, effusion and debris in the posterior joint recess, advanced arthrosis in the medial compartment, mild arthritic change at the patellofemoral interval, and a grade II PCL sprain.

17. On February 8, 2018, Claimant returned to PA Palmer and complained of on-and-off right knee pain. PA Palmer reviewed the MRI findings and referred Claimant to orthopedic specialist John Schwappach, M.D.

18. From January 16, 2018, through February 19, 2018, Claimant had six physical therapy sessions. At his first physical therapy appointment, Claimant reported right knee pain popping, clicking, and occasional instability. Claimant reported walking, standing, and getting up out of a chair are difficult. Claimant reported on and off again pain since his prior 2007 right knee injury.

19. Claimant presented to Dr. Schwappach on February 16, 2018. Dr. Schwappach reviewed Claimant's medical history, mechanism of injury, and treatment to date. Dr. Schwappach reviewed Claimant's MRI and noted a history of an old medial meniscus bucket-handle cleave tear. On examination, Dr. Schwappach noted knee effusion and a noticeable limp. He opined that Claimant had advanced osteoarthritis in the right knee. Dr. Schwappach's impression was post-traumatic osteoarthritis of the right knee. He administered a cortisone injection and recommended Claimant undergo a right total knee arthroplasty.

20. On March 16, 2018, John Papillion, M.D., performed an Independent Medical Examination ("IME") at the request of the respondents in the WC# 5-064-719 claim. Dr. Papillion noted Claimant's 2007 and 2016 right knee injuries and treatment. He diagnosed Claimant with tricompartmental degenerative osteoarthritis with varus deformity and grade I post-traumatic posterior cruciate ligament laxity. Dr. Papillion opined that Claimant's December 9, 2017 industrial injury mildly exacerbated, but was not the proximate cause of, Claimant's underlying degenerative arthritis. He opined Claimant reached MMI. Dr. Papillion agreed that Claimant has significant arthritis and has likely failed conservative treatment. Dr. Papillion noted Claimant could consider viscosupplementation injections and opined that he is likely a candidate for a right total knee arthroplasty, but that such treatment is not work-related and should be pursued under Claimant's private insurance.

21. In an addendum dated March 23, 2018, Dr. Papillion opined Claimant sustained 15% lower extremity impairment (6% whole person), consisting of 10% under Table 40 #5 of the AMA Guides for underlying arthritis, and 5% under Table 40 #7 of the AMA Guides for a partial posterior cruciate ligament tear. He apportioned Claimant's 2008 4% whole person impairment from his calculated 6% whole person impairment, resulting in a whole person impairment of 2%.

22. Claimant returned to Dr. Danahey for a follow-up evaluation on April 12, 2018, at which time Dr. Danahey placed Claimant at MMI for his December 9, 2017 work injury with no permanent impairment. Dr. Danahey opined that a right total knee replacement is necessary, but that the indication for the surgery pre-dated the work injury.

23. On May 8, 2018, Claimant attended a follow-up DIME with Dr. Sacha for his November 18, 2016 work injury. Dr. Sacha opined that Claimant sustained an intervening new injury on December 9, 2017 that resulted in a permanent exacerbation of Claimant's preexisting right knee and lower back issues. Dr. Sacha placed Claimant at MMI for the November 18, 2016 work injury as of December 9, 2017. He assigned the impairment rating he referenced in his July 18, 2017 DIME report, 5% whole person for the low back

and 5% lower extremity for the right knee, with no apportionment. Dr. Sacha opined that, with the significant worsening due to the December 9, 2017 injury, no maintenance treatment for the right knee was related to the November 18, 2016 work injury. As related to the November 18, 2016 work injury, Dr. Sacha recommended maintenance for the low back in the form of 6-8 chiropractic and acupuncture sessions, a low back MRI, and bilateral L4-S1 facet injections.

24. On May 29, 2018, Respondents in WC# 5-064-719 filed a FAL based on Dr. Danahey's April 28, 2018 MMI report.

25. On June 20, 2018, Pinnacol filed a FAL based on Dr. Sacha's May 8, 2018 DIME report.

26. On October 21, 2018, Claimant underwent a DIME with James Regan, M.D. for the December 9, 2017 work injury. Dr. Regan issued a DIME report dated November 5, 2018. Dr. Regan reviewed Claimant's medical records including, *inter alia*, Dr. Watson's January 23, 2008 impairment report and Dr. Sacha's DIME reports. He noted that the medical records showed significant arthritis dating back to 2008 with subsequent imaging and evaluations demonstrating the same. Dr. Regan noted that the February 2018 right knee MRI evidenced advanced arthritis and an old meniscal tear without any new internal derangement. He opined that Claimant's advanced right knee arthritis engendered the total knee arthroplasty discussion. He noted range of motion measurements for both knees were identical.

27. Dr. Regan opined that Claimant's December 9, 2017 knee strain had resolved and placed Claimant at MMI for the December 9, 2017 work injury as of November 5, 2018. Dr. Regan provided 5% right knee impairment (2% whole person) under Table 40 for his meniscal tear. He noted no additional Table 40 rating for the December 9, 2017 work injury. Dr. Regan explained,

> Dr. Sacha uses chondromalacia for 5%. This is fine. Either the meniscal tear, or the chondromalacia, the value remains 5%. This is not a new meniscal tear from 12/09/17, but would likely date back to 2008. The Table 40 diagnosis is no different regarding the 12/09/17 than it was regarding the 11/2016 event.

28. Dr. Regan apportioned the rating by subtracting Dr. Sacha's 5% lower extremity impairment from his 5% lower extremity impairment, resulting in 0% apportioned impairment for the right knee. Dr. Regan opined that Claimant's continued right knee pain and need for treatment was the result of advanced degenerative arthritis and not a consequence of the 2007 meniscal tear, November 2016 knee strain, or December 2017 knee strain.

29. On November 28, 2018, Liberty filed an Amended Final Admission based on Dr. Regan's November 5, 2018 Division IME report.

30. On November 9, 2019, orthopedic surgeon Philip Stull, M.D. performed an IME at the request of Claimant. Dr. Stull reviewed Claimant's medical records and performed a physical examination. Dr. Stull noted Claimant's persistent symptoms since his December 2017 knee injury. Dr. Stull took x-rays of both knees. He noted the right knee x-rays showed advanced medial compartmental arthritis with mild to moderate patellofemoral compartment arthritis, while the left knee x-rays revealed only minimal arthritic changes and reasonably well-preserved joint space throughout the joint. Dr. Stull noted that Claimant's right knee arthritis is multifactorial, but opined that the predominant factor is work-related activity and injury. Dr. Stull noted that at the time of Claimant's 2008 right knee surgery, the surgeon removed 50% of his medial meniscus and found only grade II chondromalacia. Now, Claimant is bone-on-bone. Dr. Stull concluded,

> The arthritic changes that are present in his knee joint at this time are the result of the work related injury in 2008 and the partial meniscectomy. He is continuing to do physically demanding work, and the aggravating injuries he sustained to his knee in 2016 and 2017 provoke exacerbation of his symptomatology.

31. Dr. Stull opined that Claimant is a candidate for a right knee replacement. He concluded that if it were not for the repeated work-related insults to the right knee, Claimant would not have advanced arthritis in his right knee and would not require a knee replacement at this time.

32. Dr. Stull testified by deposition as an expert in orthopedic surgery. Dr. Stull testified consistently with his IME report. Dr. Stull testified that Claimant's need for knee replacement and ongoing treatment is multifactorial and related to his multiple work injuries including the 2007, 2016 and 2017 injuries. Dr. Stull opined that Claimant's 2007 injury and surgery predisposed Claimant to the gradual progression of arthritis and subsequent injuries likely made him more symptomatic. Dr. Stull did not differentiate between the 2016 and 2017 work injuries. He indicated that his opinion was based upon Claimant's representation that he did "reasonably well" after the 2007 surgery and had not had functional or gait issues before the recent claims.

33. Dr. Regan testified by deposition as an expert in internal medicine. He testified consistent with his DIME report and explained Claimant suffered a right knee sprain as a result of the December 9, 2017 work injury. Dr. Regan explained that Claimant's arthritis is degenerative and pre-existing. He stated that although it was "conceivable" Claimant's pre-existing arthritis was worsened, aggravated and accelerated by the workers' compensation injuries, such conclusion would be conjecture and could not be proven. Dr. Regan testified that the bucket handle tear evidenced on MRI was an old tear, and that there was no MRI evidence of any partial tear, contrary to Dr. Papillion's finding. Dr. Regan continued to opine Claimant is at MMI for the December 9, 2017 work injury and that further treatment, including a total knee arthroscopy, would be related to Claimant's unrelated pre-existing degenerative arthritis. Regarding permanent impairment, Dr. Regan explained that he apportioned Dr. Sacha's 5% rating for chondromalacia from his

5% rating for the meniscus, resulting in no additional impairment for the December 2017 work injury.

34. Dr. Sacha testified by deposition. Dr. Sacha continued to opine Claimant remains at MMI for the November 18, 2016 work injury. He testified that Claimant continued to have symptomatic pain in his knee from arthritis when he was put at MMI for the 2007 work injury and given impairment on January 9, 2008. He testified Clamant likely was not symptom-free after the 2007 work injury. After reviewing records from the 2007 work injury, Dr. Sacha continued to opine that apportioning the 5% rating for the 2007 work injury from his rating for the 2016 work injury was inappropriate. He testified that Dr. Watson's prior rating did not use the correct terms and explained the difference between arthritis and chondromalacia. Dr. Sacha determined that the 2008 impairment rating was not for the same "injury", as he rated for chondromalacia and Dr. Watson rated the meniscus. Dr. Sacha testified that, on his examination, Claimant had no meniscal findings or complaints consistent with a meniscal injury. He explained that he rated Claimant on complaints of anterior knee pain. Dr. Sacha stated,

> And with no evidence of other chondral ratings with no rating given to a meniscus, which had been done before, you don't apportion. It's fairly straightforward. Level II accreditation course and Colorado statute are all straightforward when it comes to that. It's not a prior diagnosis. It's not a prior injury that was rated. It was not a prior injury that was even treated. And finally, he had no care for the prior two years. So the state of Colorado is straightforward on this. So, no, you can't apportion that.

Dr. Sacha Depo. Tr. 20:21-25; 21:1-7.

35. Dr. Sacha further testified that the December 9, 2017 work injury caused a permanent aggravation of a pre-existing problem. He opined that Dr. Regan prematurely placed Claimant at MMI for the December 9, 2017 work injury, and that additional treatment, including a trial of Synvisc injections, pool/physical therapy, and strength/conditioning, would be needed to attempt to get Claimant back to baseline. He acknowledged that pool therapy can be prescribed as maintenance treatment. Dr. Sacha opined Claimant's need for a total knee arthroplasty dates back several years and is not a result of the December 9, 2017 work injury. Dr. Sacha disagreed with Dr. Stull that Claimant currently requires knee surgery, noting some nonphysiologic presentation.

36. On the issue of apportionment of the November 18, 2016 work injury, the ALJ finds the opinion of Dr. Sacha more credible and persuasive than the opinion of Drs. Stull and Regan.

37. On the issue of MMI for the December 6, 2017 work injury, the ALJ finds the opinion of Dr. Regan more credible and persuasive than the opinions of Drs. Stull and Sacha.

38. Claimant failed to overcome Dr. Regan’s DIME opinion on MMI by clear and convincing evidence.

39. Respondents in WC# 5-037-178 claim failed to overcome Dr. Sacha’s DIME opinion on apportionment by clear and convincing evidence.

40. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers’ Compensation Act of Colorado (the “Act”), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’ testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming Dr. Regan's DIME Opinion on MMI for the December 9, 2017 Work Injury

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007); *Powell v. Aurora Public Schools* W.C. No. 4-974-718-03 (ICAO, Mar. 15, 2017). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (ICAO, Mar. 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO, May 20, 2004).

The party seeking to overcome the DIME physician's finding regarding MMI and impairment bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998); *Lafont v. WellBridge D/B/A Colorado Athletic Club* W.C. No. 4-914-378-02 (ICAO, June 25, 2015). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO, Nov. 21, 2008); *Licata v. Wholly Cannoli Café* W.C. No. 4-863-323-04 (ICAP, July 26, 2016).

Claimant contends Dr. Regan erred by placing him at MMI for his December 9, 2017 work injury. Claimant argues that the December 9, 2017 work injury resulted in a permanent aggravation of his prior condition and that Claimant requires additional treatment to return to baseline. The evidence does not establish it is highly probable Dr. Regan erred in finding Claimant reached MMI.

As part of his evaluation, Dr. Regan performed a records review and was aware of Claimant’s 2007 and 2016 work injuries when making his determinations. Dr. Regan noted that the February 2018 MRI showed advanced arthritis with an old meniscus tear and no new pathology. He thoroughly assessed Claimant’s condition and determined that the component related to the December 2017 work injury, a knee strain, had resolved and required no further treatment.

It is undisputed Claimant has significant, pre-existing osteoarthritis dating back to at least 2008 and that surgery has been recommended. Dr. Regan credibly opined that, while a total knee arthroplasty may be reasonable and necessary, it is not related to Claimant’s December 9, 2017 work injury. Dr. Regan’s opinion that Claimant has reached MMI and the need for surgery is related to Claimant’s pre-existing, chronic and degenerative arthritis is corroborated by Drs. Papillon and Danahey. Although Dr. Sacha disagrees Claimant has reached MMI for the December 2017 work injury, with respect to the need for surgery, he also opined that such need was due to Claimant’s pre-existing arthritic condition. While Dr. Stull opines that the 2016 and 2017 work injuries aggravated and exacerbated Claimant’s symptomatology and caused the need for a total knee arthroplasty, Dr. Stull does not differentiate between the 2016 and 2017 work injuries.

Claimant argues that, while the pathology requiring surgery may date back to 2008, Claimant did not develop symptoms until after the 2016 and 2017 work injuries, and there is no record of a recommendation of surgery being made until February 2018. The ALJ notes that three weeks prior to the December 9, 2017 work injury, Claimant presented to Dr. Rossi with complaints of longstanding knee pain and instability, reporting that he had fallen on multiple occasions in the past nine months. Claimant wanted to reopen his claim. In reference to the 2008 injury, Dr. Rossi noted Claimant understood he needed a total knee replacement. Considering the totality of the credible and persuasive evidence, the absence of an actual recommendation for knee surgery prior to February 2018 is not dispositive of whether the December 2017 work injury caused the need for such treatment, or that Dr. Regan erred in his opinion on MMI. To the extent Dr. Stull and Dr. Sacha disagree Claimant has reached MMI for the December 9, 2017 work injury, their opinions represent mere differences of opinion and do not rise to the level of clear and convincing evidence.

Overcoming Dr. Sacha’s DIME Opinion on Permanent Impairment for the November 18, 2016 Work Injury

Section 8-42-104(5)(a)&(b), C.R.S. and WCRP 12-3(B) provide that apportionment is required only after the DIME physician initially determines that the industrial injury has caused ratable impairment under the AMA Guides. Hernandez v. Dairy Farmers of America, WC 5-028-658 (ICAO, Feb. 4, 2020). Apportionment is made by subtracting from the injured worker's impairment the preexisting impairment as it existed at the time of the subsequent injury. Section 8-42-104(5)(a)&(b), C.R.S. explicitly provides that a permanent medical impairment rating applicable to a body part shall be deducted from the permanent medical impairment rating for a subsequent injury to the same body part. Similarly, WCRP 12-3(B) specifies that "apportionment shall be made by subtracting from the injured worker's impairment the preexisting impairment as it existed at the time of the subsequent injury or occupational disease." Consequently, both the statute and Rule presume that apportionment applies as long as there is a subsequent permanent impairment causally related to the industrial injury. See Hernandez v. Dairy Farmers of America, WC 5-028-658 (ICAO, Feb. 4, 2020); In re Marquez, WC 4-896-504-04 (ICAO, Aug. 7, 2014). The purpose of this statute is to preclude a claimant from recovering twice for the same impairment. See In re Kellebrew, WC 964-409-01 (ICAO, Feb. 6, 2017).

Respondents in the WC# 5-037-178 claim argue Dr. Sacha erred in failing to apportion Claimant's prior Table 40 impairment from the Table 40 impairment for the 2017 work injury. Respondents argue that the term "body part" referenced in the statute and WCRP should effectively be interpreted to mean a ratable unit under the AMA Guides, and the AMA Guides consider the knee joint as one unit of the lower extremity. As found, Respondents failed to prove Dr. Sacha clearly erred in his opinion on apportionment.

Table 40 of the AMA Guides provides for impairment ratings for the lower extremity for other disorders of the knee. Table 40 outlines the impairment values for different disorders including, *inter alia*, pallectotomy, anterior cruciate ligament loss, posterior cruciate ligament loss, patella replacement, and knee replacement arthroplasty. Section 5 of Table 40 provides for a 0-20% impairment rating for arthritis due to any cause including trauma; chondromalacia. Section 2 of Table 40 of the AMA Guides provides for a 0-10% impairment for one meniscus. As noted in the footnotes to Table 40, impairment values in the table can be combined with other impairment values in the table, as well as with loss of motion impairments using the Combined Values Chart.

Dr. Sacha's 5% impairment rating for chondromalacia falls within the impairment range noted in the AMA Guides. There is objective evidence of chondromalacia in the record. Dr. Sacha explained that he did not apportion Claimant's 2008 rating as the prior rating was for impairment resulting from Claimant's meniscus, not chondromalacia. He further explained that, on his examination of Claimant, there were no meniscal findings or complaints consistent with a meniscal injury. Dr. Sacha credibly opined Claimant's underlying chondromalacia was his primary pain complaint/generator, not his meniscus. Accordingly, Dr. Sacha's impairment rating would not result in Claimant recovering twice for the same impairment. Dr. Sacha's rating was based on the AMA Guides and he provided an analysis of the nature of the impairment and the medical basis for his conclusions and opinions. There is insufficient evidence establishing it is highly probable Dr. Sacha erred in his DIME opinion regarding apportionment.

ORDER

1. Claimant failed to overcome Dr. Regan's DIME opinion on MMI. Claimant is at MMI for the December 6, 2017 work injury.

2. Respondents failed to overcome Dr. Sacha’s DIME opinion on apportionment. Claimant’s impairment for the November 18, 2016 work injury is 5% whole person for the low back and 5% lower extremity under Table 40 of the AMA Guides.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 15, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether the claimant has demonstrated, by a preponderance of the evidence, that on December 6, 2018, he sustained an injury arising out of and in the course and scope of his employment with the employer.

2. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that treatment he has received for his right elbow, (including right elbow surgery performed by Dr. Frank Kopich on June 1, 2020), breathing issues, and his right hip, was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

3. If the claimant proves a compensable injury, what is the claimant's average weekly wage (AWW)?

4. If the claimant proves a compensable injury, whether the claimant has demonstrated, by a preponderance of the evidence, that he is entitled to temporary total disability (TTD) and/or temporary partial disability (TPD) benefits beginning December 6, 2018 through and including February 7, 2020.

5. If the claimant is found to be entitled to TTD and/or TPD benefits, whether the respondents have demonstrated, by a preponderance of the evidence, that the claimant was responsible for the termination of his employment with the employer.

6. The issue of whether the claimant is entitled to indemnity benefits beginning February 8, 2020 is reserved for future determination, if necessary.

FINDINGS OF FACT

1. At hearing the parties provided a great deal of information regarding a number of events and issues related to this matter. In an effort to clearly communicate her findings of fact, the ALJ has organized these findings in chronological order.

2. In 2017, the claimant attended training to become a farrier (horseshoer). The claimant testified that he wanted to become a horseshoer so he could save money by shoeing his own horses and his father's horses. However, not long after the claimant completed his farrier training, his father sold his horses. The claimant currently owns two horses and he maintains the condition of their hooves. The claimant testified that since completing his farrier training, he has not worked on any other horses.

3. Some time thereafter, the claimant established a Facebook page for "Eric's Farrier Service", which includes photos of the claimant shoeing horses. The claimant testified that these photos were taken while he was attending farrier training.

4. Prior to December 6, 2018, the claimant has sought treatment for back pain. On April 10, 2017, the claimant was seen at Grand River Primary Care (Grand River) with complaints of back pain. On that date, he reported that in March 2017 he had been seen at the emergency department (ED) in Fort Collins, Colorado for right sided radiculopathy.

5. On September 20, 2017, the claimant returned to Grand River. At that time, the claimant reported an increase in his back symptoms after shoeing a mule.

6. The medical records indicate that the claimant's left upper extremity issues began in early 2018. On April 27, 2018, the claimant was seen at Grand River regarding complaints of numbness in his left fourth and fifth fingers. At that time, Lydia Steinbach, CFNP noted that the numbness was reproducible by tapping on the medial side of the claimant's elbow. NP Steinbach recommended the claimant use splints and padding.

7. On May 17, 2018, the claimant returned to Grand River and was seen by NP Steinbach. On that date, the claimant reported finger numbness with left elbow pain. NP Steinbach diagnosed lateral epicondylitis of the left elbow and referred the claimant for an orthopedic consultation.

8. On May 23, 2018, the claimant was seen by surgeon, Dr. Frank Kopich. At that time, the claimant reported six weeks of left elbow pain. He also reported that the pain began while he was shoeing a horse. Dr. Kopich diagnosed left lateral epicondylitis and administered an injection to the claimant's left elbow. The medical record of that date indicates that the claimant intended to begin work as a welder rather than continue as a horseshoer.

9. When the claimant completed the employment application for the employer, he stated that he had worked as a farrier for Parachute Horse Shoeing Service from 2012 to 2018. The claimant testified that he made up Parachute Horseshoeing Service because he did not want the employer to think that he had gaps in his employment history. The claimant also testified that although he had several jobs in 2018 that predated his work for employer, he did not list any of those jobs on his application for the employer.

10. The claimant began working for the employer in September 2018 as a fabricator and shop foreman. He was paid $22.00 per hour. The claimant's job duties included working the "CNC" table and plasma torch to cut out pieces of steel for welding. The claimant testified that the CNC table was approximately 10 feet by 18 feet in size. The working surface of the table was approximately three to three and one half feet above the ground.

11. The steel that is cut on the CNC table comes in flat sheets that measure four by eight feet, and sometimes 5 by 10 feet. The steel sheets vary in thickness from one-sixteenth of an inch to one-half inch. The claimant testified that the thickness of these sheets will impact the weight. The claimant further testified that depending upon the weight of the steel he would load the sheet onto the table himself. However, two or three people would be needed to lift the heavier sheets.

12. On September 24, 2018, the claimant was seen at Grand River. At that time, he reported experiencing shortness of breath. However, that symptom was noted as “not changed from usual.”

13. The claimant testified that in November 2018, the exhaust fan on the CNC table broke. This resulted in smoke from the plasma torch filling the work area. The claimant also testified that this smoke continued for two weeks before the fan was repaired. The claimant did not use a mask while working in this smoke. He attributes his breathing issues to this smoke exposure.

14. The claimant testified that while he was working for the employer, he began to have issues with his left elbow. However, on December 6, 2018, his right elbow also began to bother him.

15. The claimant testified that on December 7, 2020 he informed Mr. A[Redacted] that he was having issues with his elbows and would not be able to work. The claimant also testified that the employer did not offer him medical treatment on that date.

16. Office Manager Mr. B[Redacted]. and Owner/Supervisor Mr. A[Redacted] testified. Both testified that the claimant complained of pain and medical issues while employed with them. These complaints included issues related to the claimant’s elbows. However, the claimant did not complain of any workplace injury, nor did he attribute his symptoms to his job duties. Mr. B[Redacted] testified that the claimant relayed to him that these elbow issues were related to shoeing horses and riding motorbikes.

17. With regard to the broken CNC exhaust fan, Mr. A[Redacted] testified that he and the claimant replaced the broken fan the same date that it became broken.

18. On December 7, 2018, the employer presented the claimant with a letter addressing the claimant’s job performance. The letter stated that the claimant's work ethic had decreased; other employees did not feel comfortable working with him; contractors and clients had complained; and that his fabrication abilities were not “100%”. Given these job performance issues, the employer offered the claimant the opportunity to work at the reduced rate of $18.00 per hour. The letter also provided that if the claimant found this offer unacceptable, he could resign.

19. Mr. B[Redacted] and Mr. A[Redacted] testified regarding the December 7, 2018 letter. Both witnesses testified that they did not believe the claimant would continue his employment after the modified employment offer. However, they planned to allow the claimant to continue working if he had accepted the reduction in pay.

20. The claimant did not accept the reduced pay, and quit his employment on December 7, 2020. The claimant testified that he had recently purchased a new vehicle and could not afford to work for $18.00 per hour.

21. After separating from his employment on December 7, 2018, the claimant sought treatment in the emergency department (ED) at Valley View Hospital. On that date, the claimant was seen by Dr. Brandy Drake. The claimant reported bilateral elbow pain and a sore throat. The claimant also reported a longstanding left elbow injury that had worsened as a result of heavy lifting at work and the onset of right elbow symptoms the day prior. The claimant also asserted a belief that smoke and fumes at work contributed to his sore throat symptoms. On exam, Dr. Drake noted slight effusion of the left elbow and pain with range of motion. The claimant's right elbow was "tender throughout". X-rays were taken of both of the claimant's elbows. Dr. Drake noted that no fracture was evident on the x-rays. In addition, a chest x-ray taken that day and was read as normal. Dr. Drake recommended the use of wrist braces, rest, and ice.

22. On December 11, 2018, the claimant sought treatment at Grand River and was seen by Tami Griffith, CFNP. On that date, the claimant reported bilateral elbow pain and requested referral to an orthopedist.

23. On December 18, 2018, the claimant was seen by Dr. Kopich. In the medical record of that date, Dr. Kopich referenced the May 2018 injection he administered to the claimant's left elbow. On December 18, 2018, the claimant reported to Dr. Kopich that he began having left elbow pain in October and right elbow pain in December 2018. On exam, Dr. Kopich noted that the claimant had no erythema, warmth, or swelling in either elbow. In addition, the claimant had full range of motion in both elbows. Dr. Kopich diagnosed lateral epicondylitis in both elbows. He administered an injection to the claimant's left elbow and referred him to physical therapy.

24. On December 24, 2018, the claimant began working for H&K Trucking as a water truck driver in the oil and gas industry.

25. On January 15, 2019, the claimant returned to Dr. Kopich and reported that his left elbow symptoms had improved after the injection. However, he continued to have right elbow issues. The claimant also reported worsening symptoms when pulling hoses at his new job. On that date, Dr. Kopich administered an injection to the claimant's right elbow.

26. The claimant testified that while working for H&K Trucking the fumes from the oil tankers bothered him and he separated from that job on January 20, 2019.

27. Thereafter, the claimant continued to seek medical treatment at Grand River for various issues. However, he did not seek treatment for elbow, back, or lung symptoms. On January 29, 2019, Dr. Edward Wright diagnosed the claimant with osteopenia. On February 1, 2019, the claimant reported medication related rashes, sluggishness, and vertigo. On February 13, 2019, Dr. Alan Saliman evaluated ongoing issues with blood pressure medication and noted that the claimant had osteopenia (bordering on osteoporosis) in his back and hip.

28. On April 8, 2019, the claimant was seen by NP Griffith for ongoing lumbar pain. NP Griffith noted that the claimant had returned to working as a farrier. In addition

to his lumbar symptoms, the claimant also reported an elevated pulse when working on horses.

29. The claimant returned to Grand River on May 9, 2019 and was seen by Andrew Sever, PA-C. On that date, PA Sever noted that the claimant's low back and elbow pain had worsened, and he was requesting an injection. The claimant reported that he had difficulty squeezing and gripping while performing farrier work.

30. On June 29, 2019, the claimant began working for Screamin' Eagle Trucking & Excavating. The claimant testified that he worked only as a truck driver and did not perform any work outside of his work vehicle.

31. The claimant testified that he did not sustain any new injuries while working for H&K Trucking and Screamin' Eagle. However, while working for those employers, he experienced elbow pain with activity, especially when the relief from the injections wore off. The claimant further testified that he continued to engage in activities that aggravated his symptoms because it was required by his job. When the symptoms became worse, he would seek additional injections.

32. On November 4, 2019, the claimant was seen by PA Sever and reported relief from the prior injection. However, the claimant also reported that he performed heavy lifting at work and now had symptoms in both elbows. At that time, the claimant requested bilateral elbow injections, which PA Sever administered. In addition, PA Sever noted that "[l]ateral epicondylitis is notoriously difficult to treat, especially if you do lots of strenuous work with your hands."

33. On January 2, 2020, the claimant was seen by Dr. Saliman for energy and mood issues. At that time, the claimant told Dr. Saliman that he was extremely short of breath. The claimant also reported "that in his usual work environment he is shoeing as many as 5 – 8 horses per day. Off season he does little activity and pretty much sits around the house." Dr. Saliman opined that the claimant's shortness of breath was exertional in nature and related to claimant's sedentary lifestyle and deconditioning.

34. On January 14, 2020, the claimant established care with Dr. Heath Cotter at Grand River. Dr. Cotter reviewed the claimant's history, and noted mild airflow obstruction. He also noted that the claimant reported that he was exposed to fires while shoeing horses. Dr. Cotter recommended an albuterol inhaler for the claimant's symptoms.

35. On January 14, 2020, the claimant was also seen by Dr. Kopich. At that time, the claimant reported improvement of his right elbow symptoms. However, he had increased left elbow symptoms after driving a truck that did not have power steering. Dr. Kopich administered an injection to the claimant's left elbow. On January 30, 2020, Dr. Kopich administered an injection to the claimant's right elbow.

36. Claimant testified that he did not work for Screamin' Eagle after February 8, 2020 because of a lack of work due to the COVID-19 pandemic and related restrictions.

37. On March 12, 2020, the claimant was seen by NP Griffith. At that time the claimant reported that he was feeling winded when shoeing horses. NP Griffith diagnosed mild reactive airway disease and recommended continued use of the inhaler.

38. On May 5, 2020, the claimant was seen by Dr. Kopich. On that date, the claimant reported worsening right elbow pain. The claimant also informed Dr. Kopich that he was ready to consider surgery. Dr. Kopich noted that the claimant had exhausted conservative treatment, and recommended surgery to treat right elbow lateral epicondylitis.

39. On May 27, 2020, the claimant was seen by PA Sever and Dr. Kopich. In the medical record of that date, the "inciting event" for claimant's right elbow symptoms was identified as "shoeing horses." The recommended right sided epicondylar release surgery was performed on June 1, 2020

40. The claimant testified that he returned to work for Screamin' Eagle in October 2020 following his right elbow surgery.

41. The ALJ does not find the claimant's testimony regarding the nature and onset of his symptoms to be credible or persuasive. The ALJ credits the medical records and finds that the claimant's elbow symptoms existed prior to his employment with the employer. The ALJ also finds as credible the claimant's resorts to Mr. B[Redacted] that his pain symptoms were due to horseshoeing and riding motorbikes. The ALJ credits the opinion of Dr. Kopich that the claimant's need for right elbow surgery was caused by horseshoeing. In addition, the ALJ credits the medical records that speak of the claimant's ongoing work as a horseshoer/farrier over the contrary testimony of the claimant regarding when he performed horseshoeing.

42. The ALJ credits the testimony of Mr. A[Redacted] over the conflicting testimony of the claimant and finds that the issue with the CNC exhaust fan was remedied the same day that it malfunctioned. The ALJ is not persuaded that the claimant's lung/breathing issues are related to that broken exhaust fan. For all of the foregoing reasons, the ALJ finds that the claimant has failed to establish that it is more likely than not that he suffered an injury to his bilateral elbows, lungs, low back, or right hip while employed with the employer. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that his job duties with the employer aggravated, accelerated, or combined with his preexisting elbow condition to necessitate the need for medical treatment.

43. With regard to the ending of the claimant's employment with the employer, the ALJ credits the testimony of Mr. B[Redacted] and Mr. A[Redacted] over the claimant's contrary testimony. The ALJ finds that continuing work was available to the claimant, albeit at a lower rate of pay. The ALJ finds that the employer's decision to reduce the claimant's rate of pay was reasonable in addressing the claimant's unsatisfactory job performance. The ALJ also finds that the claimant's decision to leave continuing employment was a circumstance within his control. Therefore, the ALJ finds that the claimant's wage loss was not related to his elbow condition or the need for medical treatment. The claimant's wage loss occurred because the claimant quit this employment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probable than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16.

4. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. See *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); see also *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *H & H Warehouse v. Vicory*, supra.

5. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that on December 6, 2018, he sustained an injury arising out of and in the course and scope of his employment with the employer. As found, the claimant has failed to demonstrate, by a preponderance of the evidence, that his job duties with the employer aggravated, accelerated, or combined with a preexisting condition to necessitate treatment. As found, the medical records and the opinions of Dr. Kopich are credible and persuasive.

6. As the ALJ has found that the claim is not compensable, all remaining endorsed issues are dismissed as moot.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits related to an alleged injury occurring on December 6, 2018 is denied and dismissed. All remaining endorsed issues are dismissed as moot.

Dated this 15th day of March 2021.

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. For statutory reference, see section 8-43-301(2), C.R.S. and OACRP 26. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms.

You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: **oac-ptr@state.co.us**. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

In addition, it is recommended that you send an additional copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he sustained a compensable injury arising out of and in the course of his employment with employer?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that the medical treatment he received was reasonable and necessary to cure and relieve the claimant from the effects of the industrial injury?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that employer failed to properly designate a physician to treat claimant's injuries, allowing claimant to choose his own authorized treating physician?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that he is entitled to an award of temporary total disability ("TTD") benefits for the period of June 26, 2019 and continuing?

- If claimant has proven a compensable injury, whether claimant has proven by a preponderance of the evidence that respondents are subject to penalties for failure to timely report the injury pursuant to Section 8-43-103(1), C.R.S.?

- If claimant has proven that respondents are subject to penalties for failing to report the injury timely, whether respondents have proven by a preponderance of the evidence that the cured the penalty?

- If claimant has proven a compensable injury, what is claimant's average weekly wage ("AWW")?

- If claimant has proven by a preponderance of the evidence that he sustained a compensable injury, whether respondents have proven by a preponderance of the evidence that claimant failed to timely report the injury to employer?

STATEMENT OF FACTS

1. Claimant testified at hearing that he was employed by employer as an engineering supervisor. Claimant's job duties included performing the corrective and preventative maintenance on the units in the buildings that were owned by employer. The units were condominiums owned by individuals contained within the building that was owned by employer. Claimant also worked at Wal-Mart where he earned an hourly wage of $19.44.

2. Claimant testified that on June 25, 2019, claimant met with his supervisor in the morning to discuss work, claimant then went to the third floor to check the pool temperature, and then went to his office to eat his lunch. Claimant testified that after lunch, he was doing reports in his office when he heard a strange noise that sounded like water running. Claimant testified he went to investigate the sound and checked the bathroom of a privately owned condominium unit where he suspected the noise was coming from, but did not find any water. Claimant testified he set down his dishes from lunch, and then does not remember what happened after he set down his dishes. Claimant testified the next thing he remembers is when he was seated at his desk and was bleeding from the back left side of his head.

3. Claimant was eventually found by his sons after they had received a strange phone call from claimant. Claimant was taken by his family to Vail Valley Medical Center. Claimant was diagnosed with a fractured skull and underwent a computed tomography ("CT") scan of the head. Claimant also underwent various other tests. The CT scan of the head showed left occipital and temporal bone skull fractures with bifrontal and left cerebellar contusions, subarachnoid hemorrhage and subdural hemorrhage.

4. Claimant was subsequently flown by Flight-For-Life to Denver Health where he remained until July 16, 2019. Claimant then participated in rehabilitation at Denver Health until July 26, 2019. Claimant's diagnosis include a non-traumatic subarachnoid hemorrhage, unspecified, and a fractured skull. Claimant's medical records from Denver Health note that claimant presented with a syncopal episode with head trauma resulting in multifocal intracranial hemorrhages. During claimant's stay at Denver Health, he underwent an MRI of the lumbar spine that revealed moderate subarachnoid hemorrhage in thecal sac below the L3-L4 level with nerve root irritation and small subdural hematoma at L4-L5.

5. Following claimant's treatment with Denver Health, claimant returned to Vail and began rehabilitation with Howards Head Sports Medicine and treatment with Dr. Lipton. Claimant then suffered a second fall when he was at home in the shower on September 24, 2019. Claimant was diagnosed with an acute on chronic subdural hematoma. Claimant underwent surgery for this condition on September 28, 2019.

6. Claimant's medical records document a prior history of diabetes, cardiomyopathy and pulmonary hypertension. Prior to claimant's date of injury, claimant was seen by Dr. Lipton on June 10, 2019. During this visit, Dr. Lipton noted claimant was still on the prescription drug Bydureon for treatment of his diabetes mellitus. Dr. Lipton noted claimant would like to go back on Victoza, but his insurance company wanted him to try Trulicity first. It was noted that Trulicity had been ordered, but had not been delivered to claimant yet.

7. Claimant subsequently took time off from work and traveled to Mexico. Claimant testified he did not change his diabetes medication prior to his work injury. Conflicting evidence was presented at hearing as to whether claimant had started taking the Trulicity prior to his work injury.

8. Mr. A[Redacted], the property manager for employer, testified on behalf of employer. Mr. A[Redacted] testified that he had discussions with claimant on the day of the incident and then later saw claimant changing locks in the ski room. Mr. A[Redacted] testified that he later learned claimant had fallen after speaking to claimant's son. Mr. A[Redacted] testified he proceeded to claimant's office where claimant's wife was holding a towel on the back of his head. Mr. A[Redacted] testified claimant also had a very swollen black eye.

9. Mr. A[Redacted] testified claimant's family proceeded to take claimant to the hospital and asked Mr. A[Redacted] if he could look for claimant's glasses. Mr. A[Redacted] testified he later found claimant's glasses in unit B-11 on the kitchen floor along with a four inch puddle of blood. Mr. A[Redacted] testified that he noticed that the light was on in the bathroom/laundry area of the condominium, and when he went into the bathroom he found more blood on the bathroom floor. Mr. A[Redacted] testified he found claimant's dirty dishes next to the sink. Mr. A[Redacted] testified he did not find any of claimant's tools in the condominium unit. Mr. A[Redacted] testified he did not hear or see anything in the unit that would indicate a leak or a noise was coming from the unit.

10. Claimant underwent an independent medical examination ("IME") with Dr. Orent on October 22, 2019. Dr. Orent reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with the IME. Dr. Orent noted that in his opinion, claimant took a fall for unknown reasons. Dr. Orent opined that claimant was having no cardiac symptoms, no chest pain, no palpitations, no shortness of breath, nothing to suggest a cardiac etiology and no evidence of a stroke. Dr. Orent opined that there was no evidence of any ischemic change in the brain on the imaging and a stroke almost never causes abrupt loss of consciousness as occurred in this case. Dr. Orent opined that the pericardial effusion was not related and had been present since 2007 and unchanged since that time. Dr. Orent further opined that the pericardial effusion would not cause a sudden loss of consciousness.

11. Dr. Orent opined in his report that claimant either fell forward, hit the front part of his head on the shelf of the bathroom causing the black eye, then fell backwards and hit his head either on the toilet or the floor, or the reverse occurred and claimant fell backward hitting his occiput on the shelf and his eye on the toilet.

12. Dr. Orent concluded that he had no idea as to why claimant fell on June 25, 2019 and caused serious injury to his brain.

13. Respondents obtained their own records review IME of claimant with Dr. Lesnak on November 15, 2019. Dr. Lesnak reviewed claimant's medical records and issued a report in connection with his review of the records. Dr. Lesnak opined that claimant suffered an acute change in his mental status between 12:30 p.m. on June 25, 2019 and 5:00 p.m. on that same day. Dr. Lesnak noted that prior to this probably "syncopal episode" on June 25, 2019, claimant's personal physician, Dr. Lipton, had recommended claimant change his blood sugar medication because of claimant's documented chronically elevated blood sugars.

14. Dr. Lesnak opined that claimant suffered a syncopal episode during his work hours on June 25, 2019. Dr. Lesnak opined that the syncopal episode was unrelated to any work activities. Dr. Lesnak opined that it was possible that the syncopal episode may have been related to abnormally high or low blood sugars. Dr. Lesnak also considered the possibility that the syncopal episode was caused by vasovagal episode versus an arrhythmia potentially related to claimant's longstanding cardiomyopathy and pericardial effusion, but did not place any degree of medical probability on the cause of the syncopal episode. Dr. Lesnak did opine that the syncopal episode was not related to claimant's work activities.

15. Dr. Orent testified at hearing consistent with his IME report. Dr. Orent opined that the syncopal episode was not caused by claimant's diabetes or his pericardial effusion, as there was no evidence these would have caused the syncopal episode. Dr. Orent opined that claimant's glucose levels and noted in claimant's glucose monitor were noted the be pretty good, and hypoglycemia does not cause a "drop attack".

16. Dr. Orent testified that claimant's second fall at his home was related to the brain injury suffered in the first fall. Dr. Orent noted that claimant could have developed increasing swelling in the areas of the brain bleed for unknown reasons or he still had a neurologic deficit when he left the hospital.

17. Dr. Orent testified that on June 25, 2019, claimant hit his head on two occasions. Dr. Orent testified claimant hit his head first posteriorly, and second on the two occipitals. Dr. Orent testified that both blows were severe enough to cause brain bleeding and a skull fracture. Dr. Orent testified that the medical records documented several reasons why claimant may have lost consciousness, including intracranial hemorrhage leading to seizure and trauma, but no reason for the fall was definitively diagnosed.

18. Dr. Orent testified that neither he nor Dr. Lesnak could definitively tell why claimant lost consciousness. Dr. Orent testified that claimant's injury occurred when claimant lost consciousness and then fell while at work. Dr. Orent testified that he did not believe that claimant would have hit his head on a shelf in the bathroom after standing up from checking behind the toilet, and then fallen and struck his head, as standing up fast and hitting his head on a shelf was not an adequate mechanism of injury. Dr. Orent testified claimant was unconscious and unprotected when he fell.

19. Dr. Orent further testified that claimant's syncopal episode was not caused by diabetes of her pericardial effusion. Dr. Orent noted that the glucose levels that were tracked through claimant's phone were pretty good. Dr. Orent further testified that hypoglycemia would not cause a drop attack. The ALJ finds the testimony of Dr. Orent to be credible and persuasive regarding the fact that the claimant's blood sugar level was not the cause of the syncopal episode.

20. Dr. Lesnak testified consistent with his report at hearing. Dr. Lesnak testified that claimant sustained a syncopal episode or drop attach while at work. Dr.

Lesnak opined that the syncopal episode could be caused by several pre-existing conditions including chronic cardiomyopathy and pericardial effusion, claimant's hypertension and pulmonary hypertension, cardiac arrhythmia or claimant's diabetes.

21. Dr. Lesnak noted that the medical records showed that there were no other injuries to claimant's body other than the head injury. Dr. Lesnak testified that it was his opinion that that evidence confirmed that claimant was unconscious and then fell. Dr. Lesnak testified that if claimant was conscious prior to falling, he would have had injuries to his hands or arms.

22. Insofar as there is a conflict in the testimony between Dr. Orent and Dr. Lesnak, the ALJ credits the testimony of Dr. Orent over the testimony of Dr. Lesnak. The ALJ notes that both doctors testified that claimant sustained a syncopal episode while at work, but the ALJ credits the testimony of Dr. Orent that the cause of the syncopal evidence is unknown over the testimony of Dr. Lesnak that the syncopal episode was caused by claimant's pre-existing conditions, including chronic cardiomyopathy and pericardial effusion, claimant's hypertension and pulmonary hypertension, cardiac arrhythmia or claimant's diabetes.

23. Respondents argue in their position statement that claimant's fall is not compensable because he had deviated from his employment when he entered the condominium unit. Respondents argue that the presence of the dirty dishes and the lack of any evidence of a leak in the condominium unit establish that claimant was using the unit for personal reasons. The ALJ is not persuaded.

24. Claimant denied using the condominium for personal reasons during his testimony. While claimant's dishes were found in the condominium unit by Mr. A[Redacted] when he went to look for claimant's glasses and found the blood, there is insufficient evidence presented at hearing that claimant was using the condominium unit to perform personal chores at the time he lost consciousness and struck his head.

25. Claimant argues in his position statement that this claim is compensable based on the theory the unexplained falls are compensable under Colorado Workers' Compensation law. Claimant argues that if the cause of a fall at work is unknown, then as a matter of law, the fall arose out of employment. The ALJ finds that in this case, the cause of claimant's fall is not unknown. Based on the testimony of both Dr. Lesnak and Dr. Orent, claimant sustained a syncopal episode that led to his fall at work. Dr. Lesnak and Dr. Orent disagreed on what may have caused the syncopal episode, but agreed that claimant sustained a syncopal episode that led to his fall at work, unconscious and unprotected, resulting in the fractured skull.

26. Because the fall in this case is explained as being the result of a syncopal episode by the medical doctors' testimony at hearing, the fall is not unexplained. Instead, the question becomes whether a fall that results from a syncopal episode occurring at work is compensable in this case.

27. Claimant also appears to argue that because the syncopal episode is unexplained, the injuries from the resulting fall is compensable. The ALJ disagrees. A syncopal episode is a loss of consciousness. See, e.g., Tabers' Cyclopedic Medical Dictionary. A syncopal episode, or fainting spell, is an inherently private risk to the injured worker in that there is a dysfunction within the claimant's body which causes claimant to lose consciousness. Workers' compensation law is well established that injuries arising out of risks or conditions personal to the claimant do not arise out of the employment unless the employment contributes to the risk or aggravates the injury.

28. Despite the syncopal episode being an inherently private risk to claimant, the injury in this case may still be compensable if there is a special hazard of employment that leads to an injury in this case.

29. In this case, Dr. Orent's IME report opines that claimant fell and struck his head two times, and hypothesized that claimant may have fallen forward and hit his head on the shelf, then fallen backward and hit the toilet or the floor, or fell backwards into the shelf, then forward and stuck his face on the toilet. Dr. Orent testified that both falls were severe enough to cause a brain bleed and a skull fracture. Dr. Orent testified on rebuttal testimony that he believed the more likely scenario was that claimant fell forward, hit the front part of his head, which is why he had the black eye and the bleed in the front of the brain, and then fell backwards and hit his head either on the toilet or on the floor.

30. The ALJ notes that the black and white photographs that were entered into evidence at hearing demonstrate blood on the floor of the condo and on the floor of the bathroom in the condo. Additionally, blood is located on the toilet in the bathroom. As indicated by the Panel in their remand order, from the existing evidence, it is impossible to definitively know if the blood spatters on the toilet, wall, toilet paper and shelf were left from an impact with them or were projected onto them when claimant picked himself up, moved around, and left the bathroom, or both.

31. Dr. Lesnak testified at hearing that claimant's black eye would not have resulted in the need for medical care. Dr. Orent disagreed with this opinion and noted that the black eye would be indicative of an underlying condition that would need medical treatment, including a diagnostic sign of a basilar skull fracture. The ALJ credits the testimony of Dr. Orent over the testimony of Dr. Lesnak with regard to this issue and finds that claimant has demonstrated that it is more likely true than not that claimant striking his face on the shelf resulted in an injury that required medical treatment.

32. The evidence establishes that there was blood on the floor and the toilet in the bathroom. Additionally, in addition to claimant's fractured skull, claimant also had a black eye as testified to by Mr. A[Redacted]. The presence of a black eye is persuasive evidence that claimant struck something in the condo after losing consciousness and before striking the floor, which resulted in claimant suffering a black eye.

33. The testimony of Mr. A[Redacted] establishes that there were two pools of blood. One on the kitchen floor and one on the bathroom floor. The ALJ credits the opinion of Dr. Orent and concludes that the evidence establishes that it is more likely true than not claimant suffered a fainting spell while at work, fell and struck his face on the shelf in the bathroom causing the black eye, then fell to the floor, and fractured his skull. The evidence of a blood pool in the kitchen and in the bathroom supports two separate falls, one in each room.

34. The ALJ further finds that the shelf in the bathroom represents a special hazard of employment that caused claimant's black eye and resulted in claimant then falling backwards and fracturing his skull, as opined to by Dr. Orent.

35. The ALJ relies on the medical records entered into evidence in this case and finds that claimant has established that it is more likely true than not that the medical treatment he received following the work in jury on June 25, 2019 was related to the falls he had at work on June 25, 2019. The ALJ credits the opinions expressed by Dr. Orent in this regard in support of this finding. The ALJ further credits the opinion of Dr. Orent and finds that claimant has established that the fall at his home on September 24, 2019 was related to the original skull fracture and claimant's subsequent weakness of his left leg. The medical records establish that the fall at his home on September 24, 2019 was not a syncopal episode, as claimant had a recollection of that event occurring as documented in the medical records and testified to by Dr. Orent. The ALJ therefore finds that the medical treatment related to the September 24, 2019 fall are related to the original injury in this case.

36. Claimant testified at hearing that following his injury, he was never provided with a list of physicians to select an authorized treating provider. Claimant testified that he sought treatment following his injury with his regular doctor, Dr. Lipton.

37. The ALJ credits claimant's testimony and finds that employer did not properly refer claimant to a physician following his injury. The ALJ finds that the choice of authorizing treating provider has therefore transferred to claimant and claimant has selected Dr. Lipton as his treating physician.

38. The ALJ credits claimant's testimony at hearing that since June 25, 2019, he has not been released to return to work and finds that claimant has proven that it is more probable than not that he is entitled to an award of temporary total disability ("TTD") benefits beginning June 26, 2019 and continuing until terminated by law.

39. The parties stipulated at hearing that claimant's average weekly wage ("AWW") for the employer was $1,047.60 per week. Claimant also had concurrent employment with a separate employer. Claimant argued at hearing that his concurrent employment paid him $19.44 per hour and he worked 20 hours per week. Claimant argued that this should result in an increase in the AWW of $388.80. Respondents argued in their position statement that the wage records demonstrated that in the two weeks prior to claimant's vacation, claimant earned $761.65. Respondents argue that claimant's AWW should only be increased by $380.82. The ALJ agrees with

respondents and notes that the wage records do not document consistently working 20 hours per week prior to his work injury for the concurrent employer.

40. Respondents filed a first report of injury on July 20, 2019. A notice of contest was filed on August 8, 2019 Claimant filed a workers' claim for compensation on August 19, 2019, along with an application for hearing alleging penalties against respondents for failing to timely report the injury.

41. Respondents argue that claimant failed to provide notice of his injury in writing. However, the ALJ relies on the medical records entered into evidence at hearing and finds that due to the nature of this injuries, claimant was incapable of providing written notice to employer based on his injury. The ALJ finds that claimant was taken by Flight for Life to Denver for medical treatment and did not have a recollection of his injury. Furthermore, the ALJ finds that claimant's supervisor, Mr. A[Redacted], was present on the day claimant was discovered and was provided with notice of the incident at that time. Therefore, the ALJ finds that respondents have failed to prove that it is more likely than not that claimant should be subject to penalties of one days compensation for failing to provide written notice of his injury to employer.

42. Claimant argues that respondents were required to provide notice of the injury to the Division of Workers' Compensation within ten (10) days of the injury pursuant to Section 8-43-103. The ALJ is not persuaded that respondents are subject to penalties in this matter.

43. While claimant had suffered an injury on June 25, 2019, employer was not specifically aware of the circumstances surrounding the injury and whether those circumstances would constitute a compensable workers' compensation claim. Insofar as the employer reasonably should have known of the need to file a report of injury to the Division of Workers' Compensation, the ALJ finds that the proper paperwork was filed on July 20, 2019, along with a notice of contest on August 8, 2019. The ALJ finds that under the facts of this case, with the questionable nature of the compensability of the injury in question, the acts of the employer and insurance carrier were reasonable under the circumstances.

44. Claimant's application for hearing alleging penalties was filed on August 19, 2019. Therefore, any claim for penalties against respondent was cured by respondents pursuant to Section 8-43-304(4), C.R.S. within 20 days of the filing of the application for hearing. The is no credible evidence that was presented at hearing that would establish that respondents knew or reasonably should have known of the penalty violation prior to the filing of the application for hearing alleging penalties.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving

entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. Claimant must show that the injury was sustained in the course and scope of his employment and that the injury arose out of his employment. The "arising out of" and "in the course of" employment criteria present distinct elements of compensability. *Madden v. Mountain West Fabricators*, 977 P.2d 861 (Colo. 1999). For an injury to occur "in the course of" employment, the claimant must demonstrate that the injury occurred in the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Id.* For an injury to "arise out of" employment, the claimant must show a causal connection between the employment and the injury such that the injury has its origins in the employee's work related functions and is sufficiently related to those functions to be considered a part of the employment contract. *Id.* Whether there is a sufficient "nexus" or relationship between the Claimant's employment and his injury is one of fact for resolution by the ALJ based on the totality of the circumstances. *In re Question Submitted by the United States Court of Appeals*, 759 P.2d 17 (Colo. 1988).

5. All risks that cause injury to employees can be placed within three well-established, overarching categories: (1) *employment risks,* which are directly tied to the work itself; (2) *personal risks*, which are inherently personal or private to the employee

him – or herself; and (3) *neutral risks*, which are neither employment related nor personal. *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014); 2014 CO 7 (emphasis in the original); citing 1 Arthur Larson & Lex K. Larson, *Larson's Workers' Compensation Law* §§ 4.01-4.03, at 4-1 to -3 (2013) (hereinafter *Larson's*).

6. The first category, employment risks, encompasses risks inherent to the work environment itself. *City of Brighton*, supra. Employment risks include, for example, a gas explosion at work that burns an employee's body, or the breakdown of an industrial machine that partially amputated an employee's finger. *Id.* (citations omitted). The causal connection between such prototypical industrial risks and employment is intuitive and obvious, and the resulting injuries are universally considered to "arise out of" employment under the Act. *Id.*

7. Claimant's injury does not fit into this first risk because the condominium was free from any obstruction that would cause claimant's fall.

8. The second category contains risks that are entirely personal or private to the employee him or herself. *Id*. at 503. These risks include, for example, an employee's preexisting idiopathic illness or medical condition that is unrelated to his or her employments, such as *fainting spells*, heart disease or epilepsy. *Id*. (emphasis added). These types of purely idiopathic or personal injuries are generally not compensable under the Act, unless an exception applies. *Id.* (emphasis added). The Colorado Supreme Court in *City of Brighton*, then goes on to discuss what constitutes an "idiopathic injury" in a footnote that represents dicta in the Order. The Supreme Court notes that they have used the term "idiopathic" consistently with the leading treatise in the field:

> Generally understood within the workers' compensation framework to mean "self-originated," [idiopathic] injuries usually spring from a personal risk to the claimant, e.g., heart disease, epilepsy and the like. *Such injuries are to be contrasted with those that are truly "unexplained."* The latter generally are considered [to have arisen] from a neutral risk…. Idiopathic injuries are said to have arisen from a personal risk. Idiopathic injuries, therefore, often are not compensable. *Id*. (emphasis in the original).

9. The exception to idiopathic injuries being non-compensable is when the "special hazard" doctrine applies. Under this doctrine, an injury is compensable even if the most direct cause of that injury is a pre-existing idiopathic disease or condition so long as a special employment hazard also contributed to the injury. *Id.* footnote 3, citing *Ramsdell v. Horn,* 781 P.2d 150, 152 (Colo. App. 1989).

10. Injuries arising out of risks or conditions personal to the claimant do not arise out of the employment unless the employment contributes to the risk or aggravates the injury. *Larson's* Ch. 9. Larson's notes specifically in Chapter 9 that in a fact scenario where an employee, solely because of a non-occupational fainting spell, falls and sustains a skull fracture or other injury, the question arises as to whether the

skull fracture is that an injury arising out of the employment. *Larson's* Ch. 9.1. Larson's notes that the basic rule, on which there is now general agreement, is that the effects of such a fall are compensable if the employment places the employee in a position increasing the dangerous effects of such a fall, such as on a height, near machinery or sharp corners. *Id.*

11. Larson's further notes that this specific question, although often discussed in the same breath with unexplained falls, is basically different, since unexplained fall cases begin with a completely neutral origin of the mishap, while idiopathic fall cases begin with an origin which is admittedly personal and which therefore requires some affirmative employment contribution to offset the prima facie showing of personal origin. *Id.*

12. In this case, claimant has satisfied the burden of proof to establish that his injury occurred "in the course of" employment, as the injury occurred in the time and place limits of his employment. Respondents argue that claimant may have been using the condominium for personal reasons, such as eating lunch or doing dishes, at the time he suffered the syncopal episode. However, the evidence does not establish that claimant was not in the place limits of his employment during his scheduled work day and the ALJ has rejected this argument.

13. The question becomes whether claimant has established that the injury "arose out of" his employment. The ALJ, in crediting the opinions of Dr. Orent, finds that claimant has established by a preponderance of the evidence that when he fell, he struck the shelf in the bathroom which resulted in claimant sustaining the black eye, then fell to the ground striking the toilet. The ALJ therefore finds that claimant has established by a preponderance of the evidence that the injury resulted from a special hazard of employment in that he struck the shelf and the toilet resulting in the injury he sustained in this case.

14. The ALJ rejects the argument from respondents that claimant's cause of the fall was a result of a pre-existing medical condition. The ALJ credits the opinion of Dr. Orent and finds that it is more likely true than not that claimant's fall was the result of a syncopal episode, and that the underlying cause of the syncopal episode is unknown.

15. The ALJ finds that the evidence establishes that the claimant had lost consciousness prior to his fall. This was the consistent testimony of Dr. Lesnak and Dr. Orent. Claimant fell when he was unconscious and unprotected.

16. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Specifically, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." §8-43-404(5)(a)(I)(A), C.R.S. W.C.R.P. Rule 8-2 further clarifies that once

an employer is on notice that an on-the-job injury has occurred, “the employer shall provide the injured worker with a written list of designated providers.” W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that “the injured worker may select an authorized treating physician of the worker’s choosing.”

17. As found, respondents failed to provide claimant with a list of physicians in the first instance. As such, the right to select the authorized treating physician in this case transferred to the claimant. As found, claimant selected Dr. Lipton to serve as his authorized treating physician.

18. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

19. As found, claimant has proven by a preponderance of the evidence that the medical treatment he received in this case following his work injury was reasonable and necessary to cure and relieve the claimant from the effects of the work injury. As found, respondents are liable for the medical treatment provided in this case, including but not limited to the treatment provided by Vail Valley Health, Flight for Life, Denver Health and Dr. Lipton.

20. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998).

21. As found, claimant has proven by a preponderance of the evidence that he is entitled to an award of TTD benefits commencing June 26, 2019 and continuing until terminated by law. As found, claimant’s testimony regarding his being taken off of work is found to be credible and supported by the medical records entered into evidence in this case.

22. The ALJ must determine an employee’s AWW by calculating the money rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

23. As found, the claimant has proven by a preponderance of the evidence that his AWW for the injury is $1,428.42 ($1,047.60 + $380.82 = $1,428.42).

24. Section 8-43-102(1)(a), C.R.S., states in pertinent part

> Every employee who sustains an injury resulting from an accident shall notify said employee’s employer in writing of the injury within four days of the occurrence of the injury. If the employee is physically or mentally unable to provide said notice, the employee’s foreman, super-intendant, manager or any other person in charge who has notice of said injury shall submit such written notice to the employer…. Otherwise, if said employee fails to report said injury in writing, said employee may lose up to one day’s compensation for each day’s failure to so report.

25. As found, the ALJ relies on the medical records in this case and finds that claimant was unable to report the injury to his employer in writing due to his physical and mental condition. Moreover, claimant’s supervisor was made aware that claimant had an injury while at work, although the compensable nature of the injury was not known the claimant’s supervisor at the time of the injury.

26. As found, respondents have failed to prove by a preponderance of the evidence that claimant violated Section 8-43-102(1)(a) by failing to report his injury in writing due to the fact that claimant’s condition left him unable to report the injury to employer in writing.

27. Section 8-43-103(1), C.R.S., provides in pertinent part:

> Notice of an injury, for which compensation and benefits are payable, shall be given by the employer and insurance carrier … within ten days after the injury…. If no such notice is given by the employer, as required by articles 40 to 47 of this title, such notice may be given by any person.

28. Claimant argues that respondents are subject to penalties of up to $1,000 per day for failing to provide written notice to the Division of Workers’ Compensation pursuant to Section 8-43-304(1), C.R.S. which allows for penalties for any violation of the Colorado Workers’ Compensation Act. The ALJ is not persuaded.

29. Section 8-43-304(1), C.R.S. provides that a daily monetary penalty may be imposed on any employer who violates articles 40 to 47 of title 8 if "no penalty has been specifically provided" for the violation. Section 8-43-304(1), C.R.S. is thus a residual penalty clause that subjects a party to penalties when it violates a specific statutory duty and the General Assembly has not otherwise specified a penalty for the

violation. *See Associated Business Products v. Industrial Claim Appeals Office*, 126 P.3d 323 (Colo. App. 2005).

30. Whether statutory penalties may be imposed under §8-43-304(1) C.R.S. involves a two-step analysis. The ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* WC 4-187-261 (ICAO, Aug. 2, 2006). There is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

31. The question of whether the insurer's conduct was objectively unreasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005); *see Pant Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. *See Pioneers Hospital* 114 P.2d at 99. If the claimant makes a prima facie showing the burden of persuasion shifts to the respondents to prove their conduct was reasonable under the circumstances. *Id.*

32. As found, considering the facts of this case and the questionable compensable nature of claimant's injury, the ALJ finds that the acts of respondents in not filing an employer's first report of injury until July 20, 2019 was reasonable. As noted above, claimant had not yet filed notice with employer alleging that his claim was compensable, and employer could reasonable question whether the injury was a compensable claim during this time in question.

33. Section 8-43-304(4), C.R.S. permits an alleged violator 20 days to cure the violation. If the violator cures the violation within the 20 day period "and the party seeking such penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed." The cure statute adds an element of proof to a claim for penalties in cases where a cure is proven. Typically, it is not necessary for the party seeking penalties to prove that the violator knew or reasonably should have known they were in violation. The party seeking penalties must only prove the putative violator acted unreasonably under an objective standard. *See Jiminez v. Indus. Claim Appeals Office*, 107 P.3d 965 (Colo.App.2003). Section 8-43-304(4), C.R.S. modifies the rule and adds an extra element of proof when a cure has been effected. Specifically, the party seeking penalties must prove the violator had actual or constructive knowledge that its conduct was unreasonable. *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312 (Colo. App. 1997); *see In re Tadlock*, WC 4-200-716 (ICAO, May 16, 2007).

34. As found, even assuming respondents violated Section 8-43-103(1), C.R.S., claimant has failed to prove by clear and convincing evidence that respondents knew or reasonably should have known that they were in violation of the statute.

ORDER

It is therefore ordered:

1. Respondents shall pay for the medical treatment reasonably necessary to cure and relieve claimant from the effects of the work injury, including, but not limited to the treatment provided by Dr. Lipton, Denver Health, Vail Valley Medical Center, and Flight for Life.

2. Dr. Lipton is claimant's authorized treating physician for the compensable injury.

3. Respondents shall pay for temporary total disability benefits for Claimant beginning June 26, 2019 and continuing until terminated by law based on an AWW of $1,428.42.

4. Respondents request for penalties against claimant pursuant to Section 8-43-102(1)(a), C.R.S., is denied.

5. Claimant's claim for penalties against respondents for failure to timely provide notice of the injury to the Division of Workers' Compensation is denied.

Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

ISSUE

Whether Claimant has proven by preponderance of the evidence that she is entitled to be reimbursed for mileage expenses for visits to medical appointments that were not submitted until more than 120 days after she incurred the mileage and failed to provide supporting documentation for visits to her providers.

FINDINGS OF FACT

1. Claimant is a 31 year old employee for Employer who injured her left ankle on February 25, 2020 when she slipped on snow. Claimant received medical treatment from Advanced Urgent Care in the form of x-rays, an MRI and physical therapy.

2. On June 23, 2020 Claimant's care was transferred at her request to Injury Care Associates. She began receiving treatment with Margaret A. Irish, D.O.

3. Dr. Irish referred Claimant to Panorama Orthopedics for treatment. On August 6, 2020 Claimant underwent left ankle surgery. Claimant continued to follow-up with Dr. Irish and Panorama Orthopedics. She also underwent physical therapy after surgery. Claimant incurred mileage expenses while attending her medical appointments.

4. On February 28, 2020 Respondents, through Third-Party Administrator Sedgwick Claims Management Services, Inc., filed a General Admission of Liability (GAL) acknowledging medical benefits and Temporary Partial Disability (TPD) benefits. The GAL included the mandatory brochure required by §8-43-203(3) C.R.S. The third page of the attachments to the February 28, 2020 GAL included the language "you are entitled to be reimbursed mileage expenses for travel to and from authorized medical visits and to go to the pharmacy. You will need to request reimbursement in writing and should discuss this process with your adjuster."

5. The attachment to the GAL also included the following statement:

> If you have questions on your claim, the first step is to contact the insurer and speak with the claims adjuster handling your claim. If you have more general questions or don't understand something you can call the Division of Worker's Compensation at 303-318-8700, or toll-free at 1-888-390-7936. You can also check the Division's website at www.colorado.gov/cdle/dwc. Pay special attention to the information contained in the *Employee's Guide,* which is available to you on the website or by calling the Division. You are also free to hire an attorney at your own expense, who can provide you with information and legal advice.

6. On July 21, 2020 Respondents filed a second GAL acknowledging medical benefits and TPD benefits. The new GAL also included the mandatory brochure and the same advisements as the initial GAL.

7. On June 20, 2020 Claimant completed two separate mileage reimbursement request forms. The first form sought reimbursement for 151.4 total miles traveled from February 15, 2020 through April 13, 2020. Claimant signed and dated the form June 20, 2020. The second form requested reimbursement for 134.2 total miles traveled between April 15, 2020 and June 23, 2020. Claimant also signed and dated the form June 20, 2020. Both forms are on Sedgwick Claims Management Service, Inc. letterhead and include the mailing address, phone number and fax number for Sedgwick. Claimant did not return either form to Respondents on or about June 20, 2020.

8. Claimant subsequently retained counsel in July 2020. On August 31, 2020 Claimant submitted both of the preceding June 20, 2020 mileage reimbursement request forms and a third request dated August 31, 2020. The third form sought reimbursement for 416 total miles traveled between June 23, 2020 and July 27, 2020.

9. Respondents determined that Claimant had requested reimbursement for 709.1 total miles. After considering Claimant's requests, Respondents denied reimbursement for 179.7 miles traveled between February 25, 2020 and April 28, 2020 or more the 120 days prior to the date of her request. Respondents also denied an additional 155.2 miles based on the absence of supporting documentation to confirm the travel was related to reasonable and necessary medical care. Accordingly, Respondents only reimbursed Claimant for 374.2 miles traveled at a rate of $.53 per mile for a total of $198.33 for miles traveled between May 6, 2020 and August 24, 2020.

10. Workers' Compensation Rule of Procedure, Rule 16-8(2) (formerly 16-9) effective January 1, 2020, provides in relevant part:

> B. Injured workers shall submit requests for mileage reimbursement within 120 days of the date of service or reimbursement may be denied unless good cause exists.
>
> C. Extenuating circumstances/good cause may include, but are not limited to, delays in compensability being decided or the party has not been informed of this benefit or where to send the bill.

11. Claimant responded to Respondents' determination through counsel. Claimant first asserted Respondents inappropriately applied Rule 16-8(2) retroactively to her claim for reimbursement and asked Respondents to reconsider the request. She contended that she had "good cause" for her untimely request because she was not aware of the 120 day limitation until after retaining counsel. Respondents responded that Rule 16-8(2) became effective on January 1, 2020 and was properly applied to Claimant's February 15, 2020 claim. Respondents also reiterated that supporting documentation for some of the mileage reimbursement requests was lacking.

12. Claimant also presented a handwritten explanation for mileage traveled that was unsupported by other documentation. Claimant's handwritten document noted several dates on which she traveled to a provider's location but had to reschedule the appointment. However, Claimant did not present any WC164 forms or other documentation from any providers confirming that the appointment dates had been rescheduled.

13. Claimant testified at the hearing in this matter. She asserted that Respondents failed to inform her prior to the September 11, 2020 denial of her request that mileage reimbursement requests had to be submitted within 120 days of travel. Claimant remarked that she did not become aware of the time limitation until she retained counsel in July 2020. Within two months of retaining counsel she forwarded her mileage requests to her attorney. Claimant also explained that she traveled to medical facilities on the dates listed on her requests but on several occasions her appointments were rescheduled. Claimant noted that the rescheduling of appointments explained the lack of documentation to support her mileage requests.

14. Claimant only offered limited details regarding the lack of documentation from providers confirming the appointment dates on which she was not seen. For example, Claimant's logs document that she traveled a total of 9.2 miles round trip to see Dr. Chiccoine on April 21, 2020 and April 28, 2020 but had to be rescheduled on both dates. She further explained that she traveled to see Dr. Chan on August 24, 2020 and claimed 44 roundtrip miles for the appointment. Therefore, even assuming Claimant's representations are correct, they only provide a limited explanation.

15. Claimant has failed to demonstrate that it is more probably true than not that she is entitled to receive reimbursement for mileage expenses for visits to medical appointments that were not submitted until more than 120 days after she incurred the mileage and failed to provide supporting documentation for visits to her providers. Initially, Claimant suffered an admitted left ankle injury on February 5, 2020. After undergoing left ankle surgery Claimant incurred mileage expenses while attending follow-up medical appointments and physical therapy.

16. Respondents subsequently filed a GAL that included the mandatory brochure required by §8-43-203(3) C.R.S. The third page of the attachments to the February 28, 2020 GAL advised Claimant that "you are entitled to be reimbursed mileage expenses for travel to and from authorized medical visits and to go to the pharmacy." The brochure additionally directed Claimant to the *Employee's Guide* published by the Division of Workers Compensation and contained on the Division's website. *The Employee's Guide* provides additional information concerning the mileage reimbursement process and specifically states that the claimant must submit reimbursement requests within 120 days. The information was readily available to Claimant from the Division of Workers' Compensation. Respondents further advised Claimant of her right to mileage reimbursement by providing her with a reimbursement form on or before June 20, 2020. Finally, the attachment to the GAL specifically told Claimant that she should hire an attorney at her own expense to obtain legal advice. Respondents thus provided Claimant with the mandatory information statutorily required pursuant to §8-43-203(3) C.R.S.

17. The record reveals that Claimant submitted mileage reimbursement requests more than 120 days after the date of medical service. Specifically, Respondents denied reimbursement for 179.7 miles traveled between February 25, 2020 and April 28, 2020 or more the 120 days prior to the date of her request. There was no evidence establishing that this untimely request was due to a delay in determining compensability, Claimant's failure to be informed about the mileage benefit or where to send the request. Instead, Claimant asserted at hearing that the mileage was untimely because she was unaware of the time limit set forth in Rule 16-8(2) that became effective on January 1, 2020. However, Claimant's ignorance of the 120 time limitation does not afford grounds for relief. Because the record is replete with evidence that Claimant had been apprised of the deadline for submitting mileage reimbursement requests, Respondents properly denied 179.7 miles traveled between February 25, 2020 and April 28, 2020 as untimely.

18. Claimant is only entitled to reimbursement for reasonable and necessary mileage incidental to obtaining medical treatment. However, several of Claimant's timely mileage requests were not supported by documentation establishing that travel was incurred incidental to obtaining medical care. Although Claimant submitted a written explanation regarding disputed mileage dates, she failed to provide documentation to support the majority of the mileage. Specifically, Respondents denied an additional 155.2 miles based on the absence of supporting documentation to confirm the travel was related to reasonable and necessary medical care. Claimant did not present corresponding medical records from her providers or any other documentation to confirm she had appointments on the denied dates. In the absence of supporting documentation, Respondents reasonably denied Claimant's mileage reimbursement requests. Claimant has thus failed to prove that she should be reimbursed for the disputed visit dates totaling 155.2 miles.

19. The record reflects that Respondents denied Claimant's reimbursement request for 179.7 miles traveled between February 25, 2020 and April 28, 2020 as untimely. Respondents also denied an additional 155.2 miles based on the absence of supporting documentation to confirm the travel was related to reasonable and necessary medical care. Claimant has failed to establish good cause that the 120 day time limitation in Rule 16-8(2) should not be applied. Furthermore, Claimant has failed to present documentation to support her timely mileage reimbursement for visit dates that have been denied. Accordingly, Claimant's request for additional mileage reimbursement is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The

facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-101(1)(a), C.R.S. requires the respondents to pay for expenses that are incidental to obtaining reasonable and necessary medical treatment. Specifically, mileage expenses are compensable if "incident" to obtaining medical treatment. *Country Squire Kennels v. Tarshsis*, 899 P.2d 362 (Colo. App. 1995); *Sigman Meat Co. v. Industrial Claim Appeals Office*, 761 P.2d 265 (Colo. App. 1988). Thus, mileage expenses are treated in the nature of a medical benefit.

5. Workers' Compensation Rule of Procedure, Rule 16-8(2) (formerly 16-9) effective January 1, 2020, provides in relevant part:

> B. Injured workers shall submit requests for mileage reimbursement within 120 days of the date of service or reimbursement may be denied unless good cause exists.
>
> C. Extenuating circumstances/good cause may include, but are not limited to, delays in compensability being decided or the party has not been informed of this benefit or where to send the bill.

6. Rule 16-10(G) states "payers shall reimburse injured workers for mileage expenses as required by statute or provide written notice of the reason(s) for denying reimbursement within 30 days of receipt." Rule 16 thus imposes both a time limit on requesting reimbursement for mileage and paying reimbursement for mileage. Prior to the amendment to the Rule effective January 1, 2020, no time limits applied to either the submission of mileage reimbursement requests or payment of the requests. *See Safeway, Inc. v. Industrial Claim Appeals Office*, 186 P.3d 103 (Colo. App. 2008); *Higuera v. Bethesda Foundation*, W.C. No. 4-683-101 (ICAO, Sept. 22, 2009).

7. A claimant in a Workers' Compensation claim is presumed to know applicable statutes and is required to act accordingly. *Paul v. Industrial Commission,* 632 P.2d 638 (Colo. App. 1981). A claimant's ignorance of the applicable procedural rules

thus does not afford grounds for relief. *In the Matter of Swanson,* W.C. 4-589-465 (ICAO, Sept. 13, 2006). It is not the duty or responsibility of the opposing party to advise claimant of any statutory or rule requirements.

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she is entitled to receive reimbursement for mileage expenses for visits to medical appointments that were not submitted until more than 120 days after she incurred the mileage and failed to provide supporting documentation for visits to her providers. Initially, Claimant suffered an admitted left ankle injury on February 5, 2020. After undergoing left ankle surgery Claimant incurred mileage expenses while attending follow-up medical appointments and physical therapy.

9. As found, Respondents subsequently filed a GAL that included the mandatory brochure required by §8-43-203(3) C.R.S. The third page of the attachments to the February 28, 2020 GAL advised Claimant that “you are entitled to be reimbursed mileage expenses for travel to and from authorized medical visits and to go to the pharmacy.” The brochure additionally directed Claimant to the *Employee’s Guide* published by the Division of Workers Compensation and contained on the Division’s website. *The Employee’s Guide* provides additional information concerning the mileage reimbursement process and specifically states that the claimant must submit reimbursement requests within 120 days. The information was readily available to Claimant from the Division of Workers’ Compensation. Respondents further advised Claimant of her right to mileage reimbursement by providing her with a reimbursement form on or before June 20, 2020. Finally, the attachment to the GAL specifically told Claimant that she should hire an attorney at her own expense to obtain legal advice. Respondents thus provided Claimant with the mandatory information statutorily required pursuant to §8-43-203(3) C.R.S.

10. As found, the record reveals that Claimant submitted mileage reimbursement requests more than 120 days after the date of medical service. Specifically, Respondents denied reimbursement for 179.7 miles traveled between February 25, 2020 and April 28, 2020 or more the 120 days prior to the date of her request. There was no evidence establishing that this untimely request was due to a delay in determining compensability, Claimant’s failure to be informed about the mileage benefit or where to send the request. Instead, Claimant asserted at hearing that the mileage was untimely because she was unaware of the time limit set forth in Rule 16-8(2) that became effective on January 1, 2020. However, Claimant’s ignorance of the 120 time limitation does not afford grounds for relief. Because the record is replete with evidence that Claimant had been apprised of the deadline for submitting mileage reimbursement requests, Respondents properly denied 179.7 miles traveled between February 25, 2020 and April 28, 2020 as untimely.

11. As found, Claimant is only entitled to reimbursement for reasonable and necessary mileage incidental to obtaining medical treatment. However, several of Claimant’s timely mileage requests were not supported by documentation establishing that travel was incurred incidental to obtaining medical care. Although Claimant submitted a written explanation regarding disputed mileage dates, she failed to provide

documentation to support the majority of the mileage. Specifically, Respondents denied an additional 155.2 miles based on the absence of supporting documentation to confirm the travel was related to reasonable and necessary medical care. Claimant did not present corresponding medical records from her providers or any other documentation to confirm she had appointments on the denied dates. In the absence of supporting documentation, Respondents reasonably denied Claimant's mileage reimbursement requests. Claimant has thus failed to prove that she should be reimbursed for the disputed visit dates totaling 155.2 miles.

12. As found, the record reflects that Respondents denied Claimant's reimbursement request for 179.7 miles traveled between February 25, 2020 and April 28, 2020 as untimely. Respondents also denied an additional 155.2 miles based on the absence of supporting documentation to confirm the travel was related to reasonable and necessary medical care. Claimant has failed to establish good cause that the 120 day time limitation in Rule 16-8(2) should not be applied. Furthermore, Claimant has failed to present documentation to support her timely mileage reimbursement for visit dates that have been denied. Accordingly, Claimant's request for additional mileage reimbursement is denied and dismissed.

[Intentionally left blank.]

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for additional mileage reimbursement is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at https://oac.colorado.gov/resources/oac-forms*.

ISSUES

I. Have Respondents shown, by a preponderance of the evidence, that Claimant is responsible for his own termination from employment, pursuant to CRS 8-42-103(1)(g), and 8-42-105(4)(a)?

II. What is Claimant's Average Weekly Wage?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Background / Summary

1. Claimant began work on June 17, 2019, as a new employee in the Rail Finishing department as a "Crane Chaser" (Ex. O, p. 68). Claimant is left-hand dominant. Prior to his work injury of 7/3/2019, the Employer's records do not indicate that there were performance issues with Claimant.

2. Respondent requires new employees to complete a 720-hour probationary period. Respondent reviews new employees at certain points in their probation, defined by the number of hours completed, to determine the employee's progress in learning the position. New employees are informed that they should not miss work during the probationary period, except in the case of emergencies or medical appointments with prior notice to their supervisor or general supervisor.

3. Claimant was terminated by Respondent on August 9, 2019. The official reason was for repeated violations of Respondent's attendance policy (Ex. O, pp. 78-79). In Claimant's probationary period with Respondent, Claimant accumulated seven unexcused absences. On one of these occasions, Claimant was a no-call/no-show at a medical appointment that he stated he took time off to attend. On three other occasions, there was no medical appointment scheduled on the date that Claimant informed his supervisor he had a medical appointment. One of Claimant's unexcused absences was a no-call/no-show.

The Work Injury, and Immediate Aftermath

4. Claimant suffered an admitted injury to his left hand on July 3, 2019, when his hand was pulled into the reel for an air hose as the hose was retracting into the reel. Claimant was transported to Respondent's on-site clinic, Onsite Innovations, shortly after the injury. Claimant's left hand was wrapped; he was provided pain medication;

and he was instructed to ice the hand every two hours (Ex. J, p. 38).

5. Claimant completed his shift on July 3, 2019. He was then scheduled off for five days from July 5, 2019, through July 9, 2019, following a company-wide holiday on July 4, 2019 (Ex. O pp. 152-153). At hearing, Claimant testified that Onsite Innovations informed him that he was not allowed to seek treatment during the five-day period that Claimant was off work, following the July 4 holiday. [*Note: Claimant's medical records indicate that Claimant underwent an x-ray of his left finger at Respondent's worksite on July 8, 2019 - two days before he was scheduled to return to work (Ex. K, p. 39).]

Medical Treatment Continues / Work Restrictions

6. Onsite Innovations scheduled an appointment with Dr. Charles Hanson on July 10, 2019, to evaluate Claimant's left hand (Ex. L, p.41). Dr. Hanson diagnosed Claimant with a left fifth finger boutonniere deformity, probably due to a tear of the central slip of the EDL and posterior subluxation of the lateral bands *Id* at 43. Dr. Hanson referred Claimant for a surgical consultation with Dr. Patrick Devanny. *Id.* Dr. Hanson also provided Claimant work restrictions of "may work on a light duty desk type basis with only very slight use of his left hand (less than 5 pounds)." *Id*.

7. Claimant was working a 7:00 pm to 7:00 am shift while he was still under work restrictions by Dr. Hanson (2/1/21 TR at 48; RHE O at 153). According to Claimant, he was initially placed on modified duty (no use of his left hand by Dr. Charles Hanson) that required him to sit in a non-heated room by himself, with no cellphone access, and with nothing to do during his entire shift. Claimant testified that he felt this was done to demoralize him.

8. Claimant was assigned to this duty for five days, one of which was an unexcused absence. It was subsequently determined that there was office work Claimant could perform on the 7:00 am to 3:00 pm shift, and Claimant was transitioned to office work on this shift beginning Monday, July 15, 2019 (Ex. O, p. 153).

9. Claimant was assigned new modified duty based on a July 25, 2019, clarification by Onsite Innovations of Dr. Hanson's work restrictions, stating that Claimant could work in the mill and outside, but he was allowed 'no use of his left hand' (Ex. 3, p. 11).

10. Claimant's new modified duty entailed painting yellow safety rails inside and outside the mill where the paint was degrading. Claimant was instructed that he could not use his left hand to paint or to carry any of the painting supplies, which included a one-gallon bucket of paint and a paintbrush.

Testimony of Chris E[Redacted]

11. Chris E[Redacted] testified at hearing. He was employed by Respondent as a general supervisor in rail mill finishing, which eventually was expanded to general supervisor of rail mill finishing and quality, from October 18, 2017, to October 18, 2019. Mr. E[Redacted] testified that as a general supervisor he was responsible for supervising shifts in rail mill finishing, including supervising the other supervisors.

12. During the period from approximately July 25, 2019, to August 9, 2019, during which Claimant was working light duty painting safety rails, Mr. E[Redacted] talked to Claimant at least three times to ask Claimant how his hand was doing, and he walked by at least twice each day to observe Claimant and confirm that Claimant performing his modified duty within his restrictions. He testified that if an employee expressed concern about their modified work, he would have sent the employee back to Onsite Innovations to work out the issue with the restrictions. The employee would then have been assigned work within any amended restrictions. Mr. E[Redacted] testified that at no time, including in the conversations with Claimant initiated by Mr. E[Redacted], did Claimant inform Mr. E[Redacted] that he was uncomfortable with the job he was performing or that he was having trouble doing his modified duty.

13. Mr. E[Redacted] testified that if an employee for Respondent needs to call off due to an emergency, the proper procedure is to call in to a supervisor on the call-off line. If a supervisor was not available, Mr. E[Redacted] testified that an employee could have attempted to contact him directly. An emergency absence is generally excused if documentation of the emergency is provided to Respondent once the employee returns to work. Mr. E[Redacted] testified that his work cell phone number was given to anyone in the mill who needed or wanted it, and that his work cell phone number was "published out there."

14. Mr. E[Redacted] also testified that if an employee for Respondent needs time off for a doctor's appointment, the proper procedure is to inform a supervisor of the need for time off, which can be granted in good faith. The employee then brings documentation of the appointment back to Respondent, and it is eventually submitted to Respondent's HR department. Employees are required to leave in a timely fashion for appointments and to return to work after doctor's appointments if there is time remaining in their shift after the appointment.

Testimony of Claimant re: Company Procedures

15. Claimant testified that he has no recollection of an orientation with Respondent when he was hired (10/22/20 at 59). Claimant also testified that his appointments with treating providers were made for him by Onsite Innovations, and that his upcoming appointments were revealed to him one at a time, usually a day before the scheduled appointment. When asked directly if he was ever made aware that he was not to miss work during his probationary period, unless it was excused or an emergency, Claimant

simply replied, “I don’t recall.”

Testimony of Regina R[Redacted]

16. Regina R[Redacted] also testified at the hearing. She has worked for Respondent in her current position as a labor relations supervisor for five years. Prior to her position as a labor relations supervisor, Ms. R[Redacted] worked for Respondent in the rod and bar mill. She testified that her duties as a labor relations supervisor include administering the grievance policy, interpreting contracts, and maintaining relations with the union. Ms. R[Redacted] stated that part of her position entails reviewing all discipline to ensure that Respondent is applying discipline in a consistent manner. She testified that she has been involved firsthand in the full-day HR training that occurs on the first day of new hire orientation.

17. A “New Hire Orientation & Training Time Card” signed by Claimant indicates that Claimant attended a five-day orientation conducted by Respondent from June 17, 2019, through June 21, 2019 (Ex. P. p. 201). The training consisted of different topics each day involving Respondent’s employment policies, safety practices, and regulations, taught in sessions lasting approximately seven hours each including a lunch.

18. On June 17, 2019, Claimant attended a training covering the following topics: handbook and policies, boots and uniform sizing, union meeting, and LOP and benefits (Ex. P. p. 201). Respondent’s attendance policy falls under the “handbook and policies” training. Ms. R[Redacted] testified that the HR representative in this training would have gone page-by-page through the employee handbook, including prohibitive conduct and Respondent’s attendance policy. [*Note. Claimant signed a form dated June 17, 2019, confirming that he received a Rocky Mountain Steel Mills Employee Handbook (Ex. O, p. 188).] Ms. R[Redacted] testified that she knows attendance policy during an employee’s probationary period is covered in orientation, as she has personally handled this part of the orientation. This policy is also outlined in the employee handbook that Claimant acknowledged receipt of in writing on June 17, 2019. *Id* at 199.

19. Respondent’s Attendance and Punctuality policy, as outlined in Respondent’s employee handbook, states that employees must notify Respondent of any absence at least twenty-four hours prior to the start of the shift, or as soon as reasonably practicable. *Id* at 189. Respondent’s attendance policy dictates that if an employee’s supervisor is not available, an employee should refer to the “Call Off procedure.” *Id*. Ms. R[Redacted] stated that supervisors must know in advance if an employee intends to miss a scheduled shift so that they can determine how to get coverage for the employee. She testified that a single no-call/no-show during probation is grounds for termination.

20. If an emergency occurs, the proper procedure for an employee to call off is to call in to a "call-off line" established by Respondents. The call-off line is a line that goes directly to a supervisor's office. Whoever is available in the supervisor's office answers the call-off line, and if no one is available, the call goes directly to voicemail and is documented when the voicemail is cleared.

21. Mr. R[Redacted] testified that Respondent provides company cell phones to all of its supervisors to use for employment related matters. Employees are directed to call the call-off line when they must miss a shift, but they are also instructed that they may call supervisors on their work cell phones if the employee needs to reach the supervisor immediately.

22. Ms. R[Redacted] testified that she has been dealing with Onsite Innovations for 13 years, and she has never encountered a situation in which Onsite Innovations makes all the medical appointments for an injured employee. Ms. R[Redacted] testified that in the meeting after which Claimant was terminated, Claimant acknowledged that he knew he needed to make appointments around his schedule and that he was informed that he should contact Onsite Innovations if he needed assistance with his appointments.

23. Mr. R[Redacted] testified that Respondent uses a timekeeping system called "Kronos." Employees for Respondent use a thumb print and an employee ID to clock in and out on a machine and these actions are automatically saved into a timekeeping system. Supervisors can enter notes into the system, including notes as to why an employee was absent on a certain day. Ms. R[Redacted] confirmed that Claimant's Kronos records were entered into evidence as Respondent's Hearing Exhibit O, pages 179 through 182.

July 12, 2019

24. Claimant was scheduled to work from 7:00 pm to 7:00 am on Friday, July 12, 2019 (Ex. O, p. 180). Kronos records for Claimant reflect that Claimant clocked in at 7:00 pm on July 12, 2019; however, there is no indication that Claimant clocked out. Mr. E[Redacted] testified that Claimant came into the plant and spoke with him in the hallway to Mr. E[Redacted]'s office on July 12, 2019, regarding the need to take the day off, due to a death in his family. Mr. E[Redacted] instructed Claimant to take the day off, but instructed him to bring in the required documentation of the family emergency, in order to have the absence excused. Mr. E[Redacted] testified that if he had been provided documentation, he would have approved the absence in Kronos, and sent a pay request to HR for the day.

25. Claimant never provided any documentation to his supervisors regarding the July 12, 2019, absence when he returned to work on July 13, 2019 (Ex. O. p. 180). The July 12, 2019, absence was therefore not approved, and was considered an unexcused

absence.

July 26, 2019

26. On Friday, July 26, 2019, Claimant was scheduled to work from 7:00 am to 3:00 pm (Ex. O, p. 181). Claimant's Kronos records indicate that Claimant clocked in at 6:53 am, then clocked out at 8:00 am, for a total of one hour worked for the day. Claimant informed Mr. E[Redacted] that he had to leave for a doctor's appointment, but did not inform him the time of said appointment. Mr. E[Redacted] instructed Claimant to return after his appointment, as required by Respondent's attendance policy.

27. Claimant testified that he does not remember why he left early on July 26, 2019. He testified that he does not remember why he told Mr. E[Redacted] he needed to leave early, but that he "most likely" told Mr. E[Redacted] he needed to leave for a doctor's appointment. Claimant does not remember which doctor he had an appointment with on July 26, 2019. He did not provide documentation to his supervisors or to Onsite Innovations of a medical appointment on July 26, 2019, as required by Respondent's attendance policy.

28. Claimant testified that he could not produce a medical record verifying that he attended a medical appointment on July 26, 2019. Respondent's subsequent investigation did not locate a medical appointment scheduled for Claimant on July 26, 2019, nor do Claimant's medical records include a medical report from this date (Ex. S, p. 205). In accordance with Respondent's attendance policy, and in the absence of documentation, the July 26, 2019, absence was not approved and was considered an unexcused absence.

August 2, 2019

29. On Friday, August 2, 2019, Claimant was scheduled to work from 7:00 am to 3:00 pm (Ex. O, p. 181). Claimant clocked in at 6:53 am and clocked out at 9:20 am, a total of 2.25 hours. Claimant informed Mr. E[Redacted] that he had a doctor's appointment. Mr. E[Redacted] communicated to Claimant that he must return after the appointment, as he had done each time Claimant informed him of a doctor's appointment. Mr. E[Redacted] stated that Claimant did not provide documentation to his supervisors of a doctor's appointment on August 2, 2019, as required by Respondent's attendance policy.

30. Claimant testified that he left early for a doctor's appointment on August 2, 2019. He could not recall what doctor he saw on August 2, 2019. Claimant acknowledged that he could not produce a medical record verifying that he attended a medical appointment on that date. Ms. R[Redacted] conducted an investigation and found that Claimant had no appointment scheduled with a doctor on August 2, 2019. The August 2, 2019, absence was not approved and was considered an unexcused

absence.

August 5, 2019

31. On Monday, August 5, 2019, Claimant was scheduled to work 7:00 am to 3:00 pm. Claimant's Kronos records document an "unpaid absence" on August 5, 2019 (Ex. O, p.185). This absence is a no-call/no-show, which is considered an unexcused absence. Claimant did not show up for work on the morning of August 5, 2019, and he did not call anyone with Respondent to inform them of his absence, as required by Respondent's attendance policy.

32. Mr. E[Redacted] spoke with Claimant after Claimant's shift would have ended on August 5, 2019, and Claimant informed him that he had a doctor's appointment that day. Mr. E[Redacted] again explained to Claimant Respondent's attendance policy as it relates to missing work for doctor's appointments. On the August 5, 2019, phone call with Mr. E[Redacted], Claimant informed Mr. E[Redacted] that he had a doctor's appointment on August 6, 2019. Respondent's subsequent investigation uncovered that Claimant had an appointment with Dr. Kessler at 8:00 am on August 5, 2019 (Ex. S. p. 205).

33. Mr. E[Redacted] composed email correspondence to Ms. R[Redacted] on August 6, 2019, confirming that Claimant informed him the previous week of a doctor's appointment on August 5, 2019, but that Claimant did not show up for work on August 5, 2019, and did not call until the afternoon of August 5, 2019 (Ex. O, p. 141).

August 6, 2019

34. On August 6, 2019, Claimant was scheduled to work from 7:00 am to 3:00 pm. Claimant's Kronos records indicate that Claimant clocked in at 6:53 am and clocked out at 9:00 am, for a total of two hours worked (Ex. O, p. 154). Claimant had an appointment for an initial evaluation with Hands Plus on August 6, 2019, at 2:00 pm, according to documentation of the appointment that Claimant submitted to Mr. E[Redacted] (Ex. N, p. 59). At hearing, Claimant confirmed that Hands Plus is a facility on Thatcher Avenue in Pueblo, Colorado. He further opined that the Hanson Clinic is located in Pueblo West, approximately 14 miles from EVRAZ, and the drive could take 30 minutes each way. Respondent's place of business is also located in Pueblo, Colorado. Claimant, therefore, clocked out five hours before this appointment was scheduled. In accordance with Respondent's attendance policy, Claimant did not leave for his appointment in a timely manner, and the August 6, 2019, absence was considered an unexcused absence.

August 7, 2019

35. On August 7, 2019, Claimant was scheduled to work from 7:00 am to 3:00 pm.

Claimant's Kronos records reflect that he clocked in at 6:54 am and clocked out at 7:26 am, with a total of .5 hours worked (Ex. O. p. 154). At hearing, Claimant testified that he left that day for a doctor's appointment. Mr. E[Redacted] clarified that Claimant told him that he was leaving for a doctor's appointment, and that he once again reviewed with Claimant Respondent's attendance policies relating to doctor's appointments. This included that an employee must return after an appointment if time remaining in a shift allows. A Daily Billing Slip/Progress Note from Hands Plus dated August 7, 2019, stated that Claimant was a no-show at his August 7, 2019, medical appointment (Ex. N, p. 61). Claimant, therefore, did not attend this appointment he left work to attend, and he also did not return to work. In accordance with Respondent's attendance policy, the August 7, 2019, absence was not approved and was considered an unexcused absence.

August 8, 2019

36. On August 8, 2019, Claimant was scheduled to work from 7:00 am to 3:00 pm. Claimant's Kronos records indicate that he clocked in at 6:54 am and clocked out at 7:08 am, with a total of .25 hours worked (Ex. O, p. 154). Mr. E[Redacted] confirmed that Claimant again told him that he was leaving early for a doctor's appointment. Claimant's medical records do not include a record from an appointment on August 8, 2019. Respondent's investigation into Claimant's medical appointments did not show a medical appointment on August 8, 2019 (Ex. S, p. 205).

37. Claimant testified that he provided Mr. E[Redacted] with doctor's notes from every appointment he attended. Mr. E[Redacted] testified that the only documentation he received from Claimant for a doctor's appointment was from an appointment on August 6, 2019, at 2:00 pm. In accordance with Respondent's attendance policy, and in the absence of documentation, the August 8, 2019, absence was not approved and was considered by Respondents to be an unexcused absence.

Claimant is Terminated by Respondent

38. On August 9, 2019, a meeting was scheduled with Claimant. Present at the meeting were Claimant; George Garcia, the mill superintendent; Chuck Chaffin, Respondent's business partner at the time; a union representative; Chris E[Redacted]; and Regina R[Redacted]. Ms. R[Redacted] questioned Claimant whether he understood the processes around scheduling and attending medical appointments, and he stated that he did. Ms. R[Redacted] and Mr. E[Redacted] each testified that Claimant was provided an opportunity to explain the situation surrounding his absences and provide documentation.

39. Ms. R[Redacted] testified that had Claimant provided any explanation for his absences, the meeting would have been stopped and Claimant's explanations investigated before convening another meeting. Claimant did not provide

documentation to explain of his unexcused absences in July and August 2019. Ms. R[Redacted] testified that neither Claimant, nor the union representative, raised any question that Claimant did not understand the process, or that Claimant did not know what was happening.

40. Claimant testified that he does not recall a meeting on August 9, 2019, involving Regina R[Redacted], but he does remember a meeting with Eric L[Redacted], the union president, Chris E[Redacted], and "all the supervisors."

41. Ms. R[Redacted] testified that after the August 9, 2019, meeting with Claimant, the circumstances surrounding Claimant's probation were discussed and it was decided that Claimant had failed his probationary period due to multiple violations of Respondent's attendance policy. Mr. E[Redacted] testified that the termination had no relationship to the work injury.

42. At hearing, Claimant provided no evidence that the termination related to the work injury, modified duty, or any other aspect of the work injury.

Excerpts from the Medical Records

43. Following his failed probationary period and termination from Respondent, Claimant has continued to treat for his work injury, with no observable change in condition.

44. Dr. Hanson referred Claimant to Dr. Patrick Devanny, a hand surgeon, for evaluation of Claimant's condition. In the note from a July 16, 2020, appointment with Claimant, Dr. Devanny noted that he had seen Claimant more than once, and it appeared to Dr. Devanny that Claimant's "symptoms have been slightly inflated" and that it was difficult for him to assess Claimant's actual pathology (Ex. 9, p. 75). Dr. Devanny concluded that the "organic nature" of Claimant's disorder is in question. *Id*.

45. At Claimant's most recent appointment with Dr. Hanson on October 5, 2020, Dr. Hanson noted x-rays, an MRI, and a nerve test of Claimant's left hand, all ordered by Dr. Devanny, each came back "normal" (Ex. 10, p. 78). Dr. Hanson also noted that he performed routine grab and pinch tests with "no change." *Id*.

Average Weekly Wage

46. Respondents allege Claimant was paid $16.55 hourly. This is supported by Respondents' Exhibit O, pp. 100 and 101. Claimant alleges he was paid $17.02 per hour. No document in support of this hourly wage can be identified from the records supplied. The ALJ finds and concludes that Claimant's hourly wage at the time of injury was $16.55. The contract of employment merely *guaranteed* 32 hours of work per week. *Id.*

47. According to the testimony of Ms. R[Redacted], in the Kronos reporting system, an "*Exception*" is generated any time an employee does not work the hours they were

originally scheduled to. The *Exception* is denoted by the “little bar that has stripes on it that almost looks like a barber pole” (10/22/2020 transcript, p. 148). The existence of an *Exception* in Kronos could mean anything from a no-show, or simply that there was no work to perform, and the employee was thereby allowed to leave his shift early, with no adverse action being inferred (aside, from forfeiting the pay by leaving early). *Id.* [Throughout Claimant’s Kronos report, there are numerous *Exceptions* noted, - even during his initial training week. Except for the disciplinary *Exceptions* discussed, supra, there is no testimony or documentation in the record defining why any of the other *Exceptions* were noted, other than it shows a corresponding reduction in hours worked vs. hours scheduled.

48. By all credible accounts, Claimant was in training his first week, from 6/17/2019 through 6/21/2019. He was scheduled to work 38 hours, 15 minutes, but due to the unexplained *Exceptions*, worked only 36 hours.

49. The following week, from 6/24/2019 through 6/28/2019, Claimant began his regular shift, which was scheduled from 7:00 pm to 7:00 am, Monday through Friday of that week, for a total of 60 hours to be worked. An unexplained *Exception* was noted for 6/28/2019, resulting in only 3.5 hours being worked that day, for a weekly total of 51.5 hours.

50. The week following (during which the injury occurred), from 6/30/2019 through 7/4/2019, Claimant was to continued his regular schedule, but this time from 7:00 am to 7:00 pm, but with 8 hours (apparently paid, however) noted as a Holiday for July 4. Claimant was able to complete his shift on 7/3/2019, and was credited for 12 hours. The running tally of hours worked indicates 48 hours actually *worked.* [*Note: actual *payroll* records were not supplied by either party-nor was any testimony- so it is not entirely clear if Claimant was in fact paid 8 hours for July 4, 2019].

51. The plant shut down for 5 days, beginning July 4, 2019. Claimant was then *scheduled* to work from 7:00 am to 7:00 pm from 7/10/2019 through 7/13/2019, for a total of 48 hours to be worked. [During this period, on 7/12/2019, Claimant incurred his first unexcused, and unpaid absence]. He also incurred another unexplained *Exception* on 7/11/2019, by clocking out early, resulting in 9.75 hours for that day. Claimant, therefore, was only credited for working 33.75 hours that entire week. It is noted that once Claimant’s work restrictions were placed into effect, he was placed on a regular day shift, at 40 hours per week.

52. Respondents’ Exhibit O, page 74, contains unintelligible, unexplained codes, apparently describing differentials for overtime, graveyard shift, swing shift, and Sunday premiums. In the absence of an explanation from the parties, the ALJ is unable to speculate how this might have meaningfully impacted Claimant’s AWW.

53. Claimant applied for Unemployment benefits after his termination. (Ex. O, pp. 127-

132). While the results of that unemployment claim are not pertinent to this ALJ's decision, the written responses (limited herein to the first 4 weeks of employment, in order to attempt to ascertain a pattern) from Respondents (and suppled in their own Exhibits) are germane. In question #4 (*Id* at 127, 128), Respondents were asked:

Q: Prior to being switched to modified duty, what was the claimant's work schedule? Provide the days of the week and the start/end times of the shift.

A: I have listed both the time sheet schedules and the schedules that where (sic) posted in the mills. *There were no differences.*

Time Sheet

1. 6/17-6/21 Monday through Friday 8-4, 730-245, 8-315, 8-4, 8-4
2. 6/24-6/27 Monday through *Friday* 7 pm-7 am *[4 days, or 5?]*
3. 6/30-7/4 Sunday through *Thursday* 7 am-7 pm
4. 7/10-7/13 Wednesday through Saturday (Modified duty 7/10/19) 7pm-7 am

………………………………………………..

Schedule

9. 6/17-6-21 Monday through Friday (orientation not on mill schedule)
10. 6/24-6/27 Monday through Friday 7 pm-7 am *[4 days, or 5?]*
11. 6/30-7/4 Sunday through *Wednesday* 7 am-7 pm
12. 7/10-7/13 Wednesday through Saturday (Modified Duty 7/10/19) 7 pm-7 am

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In this case, the ALJ finds the testimony of Chris E[Redacted] and Regina R[Redacted] to be credible, without ulterior motive, and consistent with the documents in evidence. The ALJ accepts Mr. E[Redacted]'s explanation that it was Claimant's unexcused absences, and not his work injury, that led to his termination. By contrast, Claimant's explanations for his actions are unsupportable, inconsistent with records that he himself was a party to (such as his orientation paperwork), and would often strain credulity. His professed lack of recall that he was made aware of his need to avoid unexcused absences sums it all up. Further, the ALJ does not accept his explanation that Onsite Innovations actually made his medical appointments for him, then only told him a day or two in advance that they had been made. It simply makes no sense.

D. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Was Claimant Responsible for his own Termination?

E. The termination statutes, § 8-42-103(g) and § 8-42-105(4)(a) C.R.S., provide: In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury. The employer must prove by a preponderance of the evidence that a Claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a Claimant was responsible for termination, the Respondents must show the Claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment*

Solutions Personnel, 988 P.2d 1139 (Colo. App. 1988). Whether the Claimant acted volitionally or exercised control over the circumstances of the termination is a question of fact, which must be evaluated based on the totality of circumstances. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

F. A Claimant who voluntarily resigns her job is "responsible for termination" unless the resignation was prompted by the injury. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2008); W.C. No. 4-492-753 (ICAO, May 11, 2004). The term "responsible," as used in the termination statutes, may not be construed in a fashion which undermines the "overall scheme of the Act." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, supra, In *Colorado Springs Disposal* the court held the "word 'responsible' does not refer to an employee's injury or injury-producing activity." The court reasoned that treating a Claimant as "responsible" for the loss of employment caused by physical limitations resulting from the compensable injury itself would significantly alter fundamental principles of the Act. Hence, a Claimant does not act "volitionally" or exercise control over the circumstances leading to the termination if the effects of the injury ultimately lead to her termination. E.g., *Kauffman v. Noffsinger*, W. C. No. 4-608- 836 (ICAO, April 18, 2005); *Blair v. Art C. Klein Construction, Inc.*, W.C. No. 4-556-576 (ICAO, November 3, 2003); *Bonney v. Pueblo Youth Service Bureau*, W.C. No. 4-485- 720 (ICAO, April 24, 2002).

G. Claimant was a probationary employee, and early in his tenure at that. For good reason, Employer keeps a close eye on new hires, to make certain they will have the stamina, aptitude, and work ethic to be a long-term and productive employee. Employer went to great lengths to train and orient Claimant for an entire week to explain his obligations to the company. Claimant also had a supportive network of supervisors to assist him in becoming successful. Absences or tardies were always duly noted, but could be excused for good cause, such as illness, injury, or family emergencies. The ALJ finds that Employer's system treated Claimant fairly, and with adequate due process safeguards in effect. Nonetheless, even one unexcused absence could result in termination as a probationary employee. Employer did not "owe" Claimant any verbal warnings, corrective actions, or 'do-overs'. At Employer's discretion, it can be "one and done".

H. Here, however, Claimant made it "seven and done" and in fairly short order. Not only was Claimant gaming the hours he took off for medical appointments; on occasion he would clock out of work and not even attend appointments that were scheduled. Other times, he would claim time off for appointments that never had been set. Claimant's conduct was downright egregious, and he rightfully earned his termination. The ALJ finds that Respondents have shown, by a preponderance of the evidence, that Claimant was responsible for his own termination and that therefore, his income loss from the date of his termination was not due to his original work injury.

Average Weekly Wage

I. Where the Claimant is earning an hourly wage at the time of the injury, the AWW is to be determined by multiplying the hourly rate by the number of hours in a day the claimant would have worked but for the injury, then multiplying that sum by the number of days in a week the Claimant would have worked. Colo. Rev. Stat. § 8-42-102(2)(d) (2003). However, 8-42-102(3) provides that an ALJ may diverge from the statutorily-prescribed methods of calculating the AWW if, for any reason, they will not fairly compute the AWW. The ALJ has wide discretion to decide whether the statutorily-prescribed methods will fairly calculate the AWW, and if not, to devise a method which will fairly determine the AWW. Because the ALJ's authority is discretionary, appellate courts may not interfere with the AWW determination unless there is an abuse of discretion. An abuse occurs if the order is beyond the bounds of reason, as where it is contrary to the law or not supported by substantial evidence. *Pizza Hut v. Indus. Claim Appeals Office*, 18 P.3d 867 (Colo. Ct. App. 2001). *Vance v. The Brown Schs/Cedar Springs Behavioral Health*, W.C. No. 4-558-130 (I.C.A.O. Aug. 17, 2004).

J. There is a relative dearth of information in the record, and it is particularly challenging to ascertain an Average Weekly Wage when one's tenure is so short, and an injury occurs before a pattern can be ascertained. However, the ALJ makes some observations. The first week on the job was for orientation only. There was no productive work to be performed in the mill at all; that would begin the following week, and on-the-job. Orientation was, by design, done on the day shift, and was never intended to serve as a preview of Claimant's hours in the mill. Even then, Claimant managed to accumulate some *Exceptions*, which reduced his actual hours to 36, from the originally scheduled 38.25. In any event, the ALJ will not factor in the entire first week on the job, as that was clearly was not contemplated by the parties to represent Claimant's work schedule, and therefore, his earnings.

K. In the absence of testimony, or documents in support, it now falls to the ALJ to ascertain a *pattern* of work hours from the remaining three weeks after the conclusion of orientation, and before Claimant was taken off his 12 hour shifts and placed onto the regular day shift, in accommodation of his work restrictions. Such pattern must be viewed both from what Employer would be *offering,* and what the Claimant would realistically *accept.* It is duly noted that Claimant only went one week during his entire tenure without accumulating some sort of *Exception* (it being duly noted that many could be no-fault, voluntary hour reductions) but in each case, his work hours were thereby reduced. He even clocked in two minutes late on the date he was injured (*see* Ex. O, p. 179).

L. Leaving aside all of Claimant's disciplinary *Exceptions*, it appears that he was willing to take off time when offered, even with the commensurate reduction in hours worked. Such pattern was established pre-injury on 6/28/2019 (8.5 hours). *At no point in Claimant's tenure did he ever show he could, and would, actually work a 60-hour week.* The ALJ will not infer that Claimant, even pre-injury, would *accept* all hours *offered* by Employer. Eight hours of voluntary *Exception* time off (instead of more) is being generous to Claimant, but the ALJ will infer that Claimant's actual *accepted* hours are reduced by 8 hours per week, compared with what Employer would actually *offer.* Claimant likes his time off, even when it's legit and unpaid.

M. In the absence of better evidence from the parties, the ALJ finds that Employer would *offer* Claimant work weeks of four,12-hour days (48 hours a week), *alternating* with five, 12-hour days (60 hours per week).

N. Applying Claimant's duly imputed *Exception* hours' reduction of 8 hours per work week, yields alternating actual weeks *offered* and *worked* to 40 hours the first week, and 52 hours the following week. However, those two may not simply be averaged, as overtime earnings must be assigned for the longer week.

O. Claimant's hourly wage is $16.55. In a 40-hour week, he earns $662.00. In a 52-hour week, Claimant earns $959.90 ($662.00 plus 12 hours at $24.83 = $297.90. The average between the two is therefore $662.0 + $959.90 = 1621.90 ÷ 2 = $810.95. The ALJ concludes that Claimant's Average Weekly Wage on the date of injury is $810.95.

ORDER

It is therefore Ordered that:

1. Claimant is responsible for his own termination from employment; therefore his wage loss from August 9, 2019 and ongoing is not attributable to his July 3, 2019 work injury.

2. Claimant's Average Weekly Wage is $810.95.

3. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. *In* *addition, it is recommended that you send a copy of your Petition to Review to the Colorado Springs OAC via email at oac-csp@state.co.us.*

DATED: March 17, 2021

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Whether Respondents proved by a preponderance of the evidence Claimant did not sustain a compensable injury on December 19, 2019 and thus are permitted to withdraw their general admissions of liability.

FINDINGS OF FACT

1. Claimant is a 32-year-old male who works for Employer as an Operations Agent. Claimant's job involves, among other things, assisting and transferring passengers at the airport.

Prior History

2. On May 29, 2019, Claimant underwent a non-work related right inguinal hernia repair as a result of persistent pain and the presence of an indirect right-sided inguinal hernia which had been present since mid-May 2019.

3. Claimant subsequently developed a postoperative testicular infarct and associated hydrocele, as confirmed on a June 4, 2019 ultrasound. Claimant continued to report pain and discomfort, including scrotal swelling. Claimant's urologist, Christopher M. Dru, M.D. at the Urology Center of Colorado, monitored Claimant's condition by physical examination and imaging.

4. On September 6, 2019, Claimant presented to his primary care physician, Johanna Freedman, M.D., for an unrelated respiratory issue. Dr. Freedman noted Claimant was having significant complications after his hernia surgery, including testicular infarct, and continued pain/bleeding/bruising in the scrotum. She noted Claimant recently saw a pain management physician.

5. On October 10, 2019, Claimant underwent another ultrasound which showed the continued presence of a hydrocele and infarct. Dr. Dru noted Claimant was clinically improving and he would continue to monitor Claimant. He planned to have Claimant undergo a repeat ultrasound in approximately six months.

December 3, 2019 Work Incident

6. On December 3, 2019, a passenger elbowed Claimant in the testicular region while lowering himself into a wheelchair held by Claimant.

7. Claimant presented to the emergency department at Platte Valley Medical Center on the evening of December 3, 2019 with complaints of severe pain to his right testicle.

The record notes a history of right inguinal surgery and right testicular infarct. Claimant reported that, prior to the work incident, he experienced minimal intermittent testicular pain several times a week and a follow-up with his urologist had already been scheduled. On examination, the physician noted minimal swelling to the right hemiscrotum without erythema or ecchymosis; and exquisite tenderness of the superior pole of the right testicle with moderate diffuse right scrotal tenderness. A testicular ultrasound was obtained. The radiologist's impression was: "1. Moderate to large right-sided hydrocele containing a septation and internal debris. This could be chronic. 2. Otherwise unremarkable." (Ex. D, p. 215). Claimant was diagnosed with a scrotal injury and hydrocele and discharged with instructions to follow-up with his primary care physician and urologist.

8. On December 4, 2019, Claimant presented to Amanda Cava, M.D. at Concentra. Dr. Cava noted Claimant's prior history of hernia surgery, hydrocele, and testicular necrosis. Claimant reported that his current pain was above his baseline pain. On examination, Dr. Cava noted edema, tenderness and right hydrocele of the scrotum, and swelling of the testes. She assessed Claimant with pain in the right testicle and a right hydrocele. Dr. Cava released Claimant to modified duty with restrictions on lifting/pushing/pulling and walking/standing.

9. Claimant saw Dr. Dru on December 5, 2019. Claimant reported that his chronic right testicular pain had been doing better prior to the reported December 3, 2019 work incident. On examination of the right testicle, Dr. Dru noted tenderness to palpation, + hydrocele, and small scrotal bruising at dependent portion. He noted that an ultrasound showed increased size in the right hydrocele with a few septations and internal debris. Dr. Dru opined that Claimant suffered an acute exacerbation of his pain, but continued to have chronic right orchialgia. He administered a right spermatic cord nerve block to Claimant noting, "The nerve block will show improved concept if a [neurolysis] is possible. If he has some dramatic improvement over the next few hours with the nerve block, he will be a good candidate for a [neurolysis]." (Ex. C, p. 157). Dr. Dru referred Claimant to John Tillett, M.D. and noted Claimant was to follow-up in 7-10 days for a neurolysis evaluation. Dr. Dru released Claimant to return to work with restrictions of no lifting more than five pounds for six weeks.

10. On December 12, 2019, Claimant presented to Dr. Tillett. He reported having right testicular pain since his May/June 2019 surgery, but experiencing an acute worsening after the December 3, 2019 work incident. Dr. Tillett noted the December 3, 2019 ultrasound showed an unchanged large right hydrocele. He noted that a prior scrotal ultrasound on October 10, 2019 also showed the right testicular infarct and a large right hydrocele, and a June 19, 2019 scrotal ultrasound showed a 25% segmental infarction of the right testis, as well as a large right hydrocele. Claimant reported experiencing approximately three days of relief from the nerve cord block administered by Dr. Dru on December 5, 2019. Dr. Tillett discussed treatment options for Claimant's symptomatic hydrocele and chronic testicular pain, including surgery.

11. On December 27, 2019, Claimant underwent a right hydrolectomy and excision of right epididymal neoplasm by Dr. Tillett.

12. Respondents filed an initial General Admission of Liability ("GAL") on January 9, 2020. Respondents allege they filed the GAL prior to discovering Claimant's pre-existing pain and complications from a previous inguinal hernia repair.

13. Claimant continued to treat with his urologists and Concentra and continued to report testicular symptoms.

14. On July 23, 2020, F. Mark Paz, M.D. performed an independent medical examination ("IME") at the request of Respondents. Dr. Paz issued an IME report dated August 10, 2020. As part of his evaluation, Dr. Paz took a history from Claimant, physically examined Claimant, and reviewed records dated May 20, 2019 through May 27, 2020. Regarding the mechanism of injury, Claimant reported that a passenger inadvertently elbowed him in the right testicular region when going to sit down in a wheelchair. Claimant provided Dr. Paz a history of prior right inguinal hernia repair and subsequent 6-7/10 pain. Claimant reported that his right testicle symptoms resolved over time and were not present in the weeks prior to the December 3, 2019, incident. Based on Claimant's history, exam findings, and records, Dr. Paz concluded that Claimant sustained a right testicular contusion as a result of the December 3, 2019 work incident. He opined that the work incident aggravated Claimant's right testicular infarct pain.

15. Dr. Paz explained that, based on the limited records available, Claimant continued to experience pain in the right testicle until July 30, 2019, but had returned to light duty work. There was an increased level of pain in and about the right testicle, with swelling and increased symptoms subsequent to the December 3, 2019, incident. He opined that the treatment provided to Claimant on and subsequent to the work incident was reasonable, necessary and related. He further opined that Claimant was not at maximum medical improvement ("MMI") and may require additional treatment.

16. On August 18, 2020, Dr. Paz issued a supplemental IME report after reviewing additional records from May - July 2019 and September - October 2019. Based on his review of the additional records, Dr. Paz changed his opinion and concluded it was not medically probable the December 3, 2019 work incident caused Claimant's right testicular pain. Dr. Paz explained that, although Claimant reported that his right testicular symptoms had resolved over time and were not present in the many weeks prior to December 3, 2019, a September 6, 2019 medical record documented Claimant continued to experience pain, bleeding, and bruising in the scrotum and was being treated by a pain management physician. He further noted Claimant had a repeat testicular ultrasound on October 10, 2019, which showed persistence of right testicular infarction and identified a large right hydrocele. The findings of Claimant's December 3, 2019 testicular ultrasound were consistent with right testicular infarction, with septation and internal debris, without acute findings. Dr. Paz noted that Dr. Dru reviewed the results of the December 3, 2019 ultrasound, and that Dr. Dru documented the testicle appeared more normal.

17. Dr. Paz opined that Claimant's right testicular contusion and chronic right inguinal/testicular pain and need for treatment are not causally related to the December

3, 2019 work incident. Dr. Paz stated it was not apparent that Claimant's treatment course changed as a result of the December 3, 2019 work incident. He noted that Claimant may have undergone right hydrocele resection on December 27, 2019 with or without the December 3, 2019 incident, and that Claimant's right testicular symptoms have continued to persist despite the right hydrocele resection on December 27, 2019. Dr. Paz explained that, with or without the December 3, 2019 work incident, the medical and surgical treatment proposed and/or completed following the December 3, 2019 work incident were consistent with the treatment considerations for complex chronic pain following herniorrhaphy repair which Claimant underwent in May 2019.

18. Dr. Cava reviewed Dr. Paz's IME reports and responded to a letter from Respondents' counsel on October 12, 2020. In response to the question "Do you agree with Dr. Paz's opinion that Claimant's right testicular symptoms are not causally related to the December 3, 2019 occupational incident?" Dr. Cava circled "Yes." She opined Claimant reached maximum medical improvement ("MMI.") In response to the question "If you think Claimant has reached MMI, please state the date Claimant reached MMI and the basis for such opinion" Dr. Cava wrote: "12/09/19 – post nerve block treatment on 12/5/19 for acute exacerbation of chronic testicular pain. 12/9/19 was Concentra follow-up visit. Subsequent surgery 12/27/19 would be related to the chronic underlying condition." (Ex. B, p. 103).

19. On January 21, 2021, Dr. Paz testified by pre-hearing deposition as a Level II accredited expert in occupational medicine. Dr. Paz testified consistent with his supplemental IME report and continued to opine that the December 3, 2019 work incident did not cause Claimant's symptoms or otherwise aggravate, accelerate or combine with Claimant's pre-existing condition. Dr. Paz testified that Claimant reported to him only experiencing pain in the right groin, not the right testicle, leading up to the work incident. He explained that, contrary to Claimant's history, the September 6, 2019 medical record documented pain and bruising in the scrotum and ecchymosis in the right testicle. Dr. Paz further explained that, per Claimant's provided history, the hydrocele developed on December 3, 2019 and was larger and more painful; but the supplemental records documented a progressive increase in size/dimension of the hydrocele prior to December 3, 2019. Dr. Paz testified that the October 10, 2019 ultrasound did not document dimensions of the hydrocele; however, he did compare the dimensions of the June 19, 2019 ultrasound to those documented on the June 27, 2019 ultrasound, as well as those documented in the pathology report subsequent to the December 2019 hydrocelectomy, and noted progressive increase in the size of the hydrocele. Dr. Paz explained that progressive increase of the hydrocele is consistent with the natural history of a hydrocele. Dr. Paz testified that, if the hydrocele was the cause of Claimant's pain, resection would have been expected to relieve Claimant's symptoms, but it did not.

20. Dr. Paz stated that there is no objective evidence to support any change of anatomical structure subsequent to December 3, 2019. Claimant's diagnoses did not change on or subsequent to the work incident. He concluded that it is more medically probable Claimant's symptomatology is consistent with the natural history of a

progressive condition and the need for treatment was based on Claimant's pre-existing condition.

21. Clamant testified that in the weeks before the work incident he did not have any issues. He testified he scheduled a follow-up appointment with Dr. Dru for December 5, 2019 on the way to see the provider at Concentra on December 4, 2019. Claimant testified that prior to December 3, 2019 he did not have restrictions from his urologist and he was taking 800mg Ibuprofen or 500mg Aleve 1-2 per day as needed.

22. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Withdrawing an Admission of Liability

When the respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for the modification. §8-43-201(1), C.R.S.; *see also Salisbury v. Prowers County School District*, WC 4-702-144 (ICAO, June 5, 2012). Section 8-43-201(1), C.R.S. provides, in pertinent part, that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification." The amendment to §8-43-201(1), C.R.S. placed the burden on the respondents and made a withdrawal the procedural equivalent of a reopening. *Dunn v. St. Mary Corwin Hospital*, WC 4-754-838-01 (ICAO, Oct. 1, 2013).

Respondents note the distinction between the term "accident" and "injury," and contend that, while Claimant may have had an "accident" at work on December 3, 2019, such incident did not cause disability or the need for treatment. The preponderant evidence does not establish Claimant did not sustain a compensable industrial injury.

Although it is clear Claimant had pre-existing testicular conditions and symptoms at the time of the work injury, Drs. Cava, Dru and Tillet all credibly opined Claimant sustained an acute exacerbation of his testicular pain as a result of the work incident. That Claimant's testicular symptoms had not fully resolved by the time of the work injury does not preclude a finding that the work injury exacerbated Claimant's symptoms, even if temporarily. The reported mechanism of injury, being struck in the testicles, is a mechanism of injury that could likely result in aggravation of an already symptomatic, pre-existing testicular condition. While Claimant was actively undergoing follow-up evaluations and experiencing intermittent testicular pain leading up to the work injury, the records note the work injury caused an increase in pain above his baseline, causing Claimant to seek evaluation and treatment at the emergency department.

While Dr. Cava noted she agreed with Dr. Paz that Claimant's symptoms are not work-related, she also opined Claimant reached MMI as of December 9, 2019 after receiving a post nerve block for "acute exacerbation of chronic testicular pain." She specifically noted that the 12/27/19 surgery was related to Claimant's chronic underlying condition. In light of the other medical records, a reasonable interpretation of Dr. Cava's somewhat contradictory October 12, 2020 response is that she agreed Claimant's current and ongoing symptoms are unrelated to the work injury, not that no work injury occurred.

Dr. Paz opines that Claimant did not sustain any work injury, as Claimant had a long-standing history of symptomatic testicular conditions, there were no changes to any anatomical structures, and the work incident did not alter the course of Claimant's treatment, specifically referring to the December 27, 2019 surgery. The record is unclear as to when the December 5, 2019 appointment with Dr. Dru was actually scheduled. Claimant testified he scheduled the appointment on his way to the December 4, 2019

Concentra appointment; however, the ALJ notes the December 3, 2019 emergency room record indicates Claimant already had a follow-up appointment scheduled.

Even assuming, arguendo, the appointment with Dr. Dru had been scheduled prior to the work incident, there remains insufficient evidence establishing the treatment was not due, at least in part, to the work incident, which caused an acute exacerbation of Claimant's chronic pain. As of Claimant's October 10, 2019 examination with Dr. Dru, Dr. Dru noted Claimant was clinically improving and a follow-up ultrasound was to take place in six months. The record does not establish any care received between October 10, 2019 and the date of the work injury, or that the post-nerve block administered on December 5, 2019 was previously recommended or scheduled to take place on December 5, 2019 absent the work injury. While the evidence indicates subsequent treatment, including the December 2019 surgery, may be unrelated to the work injury, the issue of whether such treatment was reasonable, necessary and related, or whether Claimant has reached MMI, is not before the ALJ.

A "temporary" aggravation of a pre-existing condition is compensable, as long as the industrial exposure is the proximate cause of the claimant's need for treatment. *See Merriman v. Industrial Commission, 120 Colo. 400, 210 P.2d 448 (1949); Subsequent Injury Fund v. State Compensation Insurance Authority, 768 P.2d 751 (Colo.App. 1988).* Here, the preponderant evidence establishes Claimant sustained a right testicular contusion that temporarily aggravated his chronic underlying condition, resulting in the need for treatment. As Respondents failed to prove Claimant did not sustain a compensable injury, their request to withdraw admissions of liability shall be denied.

ORDER

1. Respondents failed to prove Claimant did not suffer a compensable injury on December 19, 2019. Respondents' claim to withdraw their admissions of liability is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 19, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that he is entitled to an award of temporary total disability ("TTD") benefits for the period of August 10, 2020 through September 18, 2020?

- If Claimant has proven that he is entitled to an award of TTD benefits, whether Respondents have proven that Claimant committed a volitional act that led to his termination of employment?

- Whether Claimant has proven by a preponderance of the evidence that his average weekly wage ("AWW") should be increased to $1,029.28? With regard to this issue, the parties stipulated that Claimant's AWW would be include $18.23 per week for the cost of health care benefits provided to Claimant by Employer.

- Whether Claimant has proven by a preponderance of the evidence that he is entitled to an award for disfigurement pursuant to Section 8-42-108, C.R.S.?

FINDINGS OF FACT

1. Claimant was employed with Employer as a remove and reinstall technician. Claimant sustained an admitted injury on July 31, 2020 when smashed his left index finger against the bumper of a vehicle while attempting to remove the vehicle.

2. Claimant testified he reported the injury to his supervisor, Mr. W[Redacted]. Claimant testified he later reported the injury to Mr. D[Redacted], Employer's owner when Mr. D[Redacted] returned to the shop. Claimant testified that when he reported the injury to Mr. W[Redacted], he informed Mr. W[Redacted] that he believed his finger was broken. Claimant testified Mr. W[Redacted] advised him that there was nothing a physician could do for him. Claimant testified that Mr. W[Redacted] and Mr. D[Redacted] advised Claimant to take it easy for the rest of the day.

3. Claimant testified he returned to work on Monday, August 3, 2020, and informed Mr. D[Redacted] that he wanted to see a physician for his injury. Claimant testified Mr. D[Redacted] referred him to fill out paperwork, including a First Report of Injury. Claimant was ultimately referred to Workpartners for medical treatment.

4. Claimant was examined at Workpartners on August 3, 2020 by Dr. Fay. Claimant was diagnosed with a contusion of the left index finger with damage to nail

and a fracture of unspecified phalanx of left index finger. Claimant was referred for x-rays which demonstrated an acute tuft fracture of the left index finger. Dr. Fay prescribed Keflex and recommended light duty and splinting to promote healing. Claimant was provided with a 15 pound lifting restriction of the left upper extremity and instructed Claimant to limit pinching.

5. Claimant testified he returned to work with his restrictions and informed Mr. W[Redacted] of his diagnosis. Claimant testified regarding insulting and offensive language Mr. W[Redacted] used in addressing his work injury. Claimant testified that this offensive language was used on the Friday he was injured as well as on Monday when he returned from Workpartners with his work restrictions and diagnosis.

6. Claimant testified he continued to work for employer by doing his regular job with one hand. Claimant testified he was unable to perform his job with one hand and he was provided with work restrictions by Employer.

7. Claimant underwent a performance review on August 6, 2020. Claimant's performance review showed good or excellent marks in all areas except communication skills, safety and attitude, which received fair marks. The review noted Claimant had two injuries under safety and noted Claimant needed to work on consistency on write ups on his communication skills. The performance review did not include a comment under attitude. Claimant testified he felt the performance review went well.

8. Claimant testified that on August 10, 2020, Mr. D[Redacted] held a meeting in the morning where Mr. D[Redacted] presented all employees with a new Drug and Alcohol Policy. Mr. D[Redacted] read the policy to all employees and requested that they sign a copy of the policy. Claimant testified that he did not sign the policy and contacted a law office to make an appointment to discuss the Drug and Alcohol Policy.

9. Claimant testified that he was approached by Mr. D[Redacted] regarding his not signing the policy. Claimant testified that he asked for a third party to be in on the meeting and then informed Mr. D[Redacted] that he was concerned about some of his prescription medications and told Mr. D[Redacted] he wasn't comfortable signing a document that he did not understand. Claimant testified Mr. D[Redacted] told Claimant he could talk to someone about the policy before signing the document.

10. Mr. D[Redacted] testified that he presented the Drug and Alcohol Policy to all employees on August 10, 2020. Mr. D[Redacted] testified that Claimant left the meeting without signing the document and Mr. D[Redacted] later found Claimant outside on his phone. Mr. D[Redacted] testified he approached Claimant between phone calls and asked Claimant if he had questions with regard to the policy. Mr. D[Redacted] testified Claimant informed him that he felt Employer was violating his 4th

Amendment rights. Mr. D[Redacted] testified he did not recall Claimant saying he wanted to speak to an attorney, but did recall Claimant saying he did not understand the document Employer was asking him to sign.

11. Mr. D[Redacted] testified the later approached Claimant at lunch to discuss Claimant signing the policy. Mr. D[Redacted] testified Claimant told him that Claimant was not comfortable revealing his prescription medications. Mr. D[Redacted] testified he told Claimant that they already had his prescription medications on file. Mr. D[Redacted] testified that Claimant then yelled at him that he didn't want to speak with Mr. D[Redacted] on his lunch break.

12. Mr. D[Redacted] testified he then went back to his office, typed up a termination letter and Claimant's last paychecks and provided Claimant with his paychecks and the termination letter. According to the termination letter, Claimant was fired for "personality conflicts".

13. Mr. D[Redacted] testified Claimant was fired because Claimant had become rude and insubordinate and Claimant seemed unwilling to sign the Drug and Alcohol Policy.

14. Mr. D[Redacted] testified Claimant had spoken to him about the language used by Mr. W[Redacted]. Mr. D[Redacted] testified that he told Claimant he would speak to Mr. W[Redacted] with regard to his language.

15. Claimant denied in his testimony yelling at Mr. D[Redacted], but instead testified that he informed Mr. D[Redacted] that he would feel more comfortable speaking to Mr. D[Redacted] after his lunch break.

16. Respondents presented the testimony of Ms. K[Redacted]. Ms. K[Redacted] testified she is the owner of Matco Tool Truck. Ms. K[Redacted] testified she knew Claimant through her work. Ms. K[Redacted] testified that she was aware that Claimant had a couple of injuries with Employer. Ms. K[Redacted] testified that Claimant had informed her that he wanted to quit working for Employer, but his circumstances changed when his parents asked him to move out, and he needed to keep his job. Ms. K[Redacted] testified that Claimant told her he thought his Employer would let him go at any time, and asked if she would help him move his tool box if he was fired.

17. Claimant testified on rebuttal that he had told Ms. K[Redacted] that he felt Employer was trying to get him to quit because of how badly they treated him. The ALJ finds this testimony consistent with Claimant's prior testimony regarding the offensive nature of the language used by Mr. W[Redacted].

18. Claimant returned to Dr. Fay on September 18, 2020. Dr. Fay noted that Claimant's pain and swelling was resolved. Dr. Fay released Claimant to return to work without restrictions and instructed Claimant to return to her office in 2 weeks, at which time he should be at maximum medical improvement.

19. The ALJ credits the testimony of the Claimant with regard to his inability to perform his regular work following the injury as credible and persuasive. The ALJ further credits the work restrictions set forth by Dr. Fay and finds that Claimant has established that it is more likely true than not that his work injury resulted in a medical incapacity evidenced by restriction of bodily function and an impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work.

20. The ALJ credits the testimony of Claimant over the testimony of Mr. D[Redacted] and finds that Respondents have failed to establish that it is more likely than not that Claimant committed a volitional act that led to his termination of employment. According to the employment records, Claimant was terminated for a "personality conflicts" The evidence does not establish that Claimant was advised that he had a set time that he needed to sign the Drug and Alcohol Policy, and the conflict with Employer over the signing of the policy that led to the confrontation with Mr. D[Redacted] would be an understandable workplace conflict. The evidence does not establish that Claimant would reasonably believe that his conduct in this case would lead to his termination of employment.

21. While Claimant had received only a "Fair" grade regarding his attitude on the performance evaluation, the evidence does not establish that Claimant would reasonably expect that he would be terminated over his dispute with Employer over the signing of the Drug and Alcohol Policy. Additionally, while Mr. D[Redacted] testified Claimant had yelled at him during their discussion over lunch, this fact was disputed by Claimant in his testimony at hearing. Moreover, the termination papers in this case do not establish that Claimant was terminated for insubordination in his conduct with Mr. D[Redacted]. Therefore, the ALJ finds that Respondents have failed to establish that Claimant committed a volitional act that led to his termination of employment with Employer.

22. Claimant was paid $19 per hour by Employer. Claimant testified he would also be paid "flag hours" in which he would get paid at a higher rate for jobs he completed in a more timely manner. In the seven (7) weeks prior to his work injury, Claimant was paid by Employer $7,077.35. This time period includes two (2) bonuses, one for $250 and one for $750. The ALJ finds that the appropriate average weekly wage ("AWW") should be based on the wages Claimant was paid in the 7 weeks prior to his injury, plus the stipulated amount for Claimant's health care coverage. The ALJ therefore finds that the AWW should be $1,029.28 ($7,077.35 divided by 7 = $1,011.05 + $18.23 = $1,029.28).

23. Claimant has sustained a disfigurement to his left index finger that includes a small scar measuring approximately 8 millimeters according the medical records and photographs. Claimant also has a small bump on his nail.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. To prove entitlement to temporary total disability ("TTD") benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability, and the disability resulted in an actual wage loss. *See* §§8-42-(1)(g) & 8-42-105(4), C.R.S.; *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S. requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy &*

Co., 964 P.2d 595, 597 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic,* 952 P.2d 831, 833 (Colo. App. 1997).

4. As found, Claimant has proven by a preponderance of the evidence that he is entitled to an award of TTD benefits commencing August 10, 2020 through September 18, 2020. As found, the restrictions set forth by Dr. Fay establish that Claimant had a medical incapacity to perform his regular work. As found, Claimant's testimony regarding his inability to perform his usual work after the injury is found to be credible and persuasive with regard to this issue.

5. Under the termination statutes in §§8-42-105(4) & 8-42-103(1)(g) C.R.S. a claimant who is responsible for his or her termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1131 (Colo. App. 2008). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, WC 4-631-681 (ICAO, Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* WC 4-651-260 (ICAO, Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, respondents must demonstrate by a preponderance of the evidence that the claimant committed a volitional act or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if he or she precipitated the employment termination by a volitional act that he or she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* WC 4-432-301 (ICAO, Sept. 27, 2001).

6. As found, Respondents have failed to prove by a preponderance of the evidence that Claimant committed a volitional act that led to his termination of employment. As found, Claimant was not fired for failing to sign the Drug and Alcohol Policy, or for insubordination, but was fired for a personality conflict with the owner. As found, Respondents have failed to establish that Claimant's conduct in this case in handling his dispute with employer over signing the Drug and Alcohol Policy was a volitional act that Claimant could reasonably expect would lead to his loss of employment.

7. The ALJ must determine an employee's AWW by calculating the money rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the

Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

8. As found, the AWW for claimant in this case is based on Claimant's earnings in the 7 weeks prior to his work injury, and is determined to be $1,029.28.

9. Section 8-42-108(1), C.R.S. provides that Claimant is entitled to additional compensation in the event that the injury results in a serious permanent disfigurement to areas of the body normally exposed to public view.

10. As found, Claimant has proven by a preponderance of the evidence that he is entitled to an award for disfigurement pursuant to Section 8-42-108(1). The ALJ awards $250 for that disfigurement.

ORDER

It is therefore ordered that:

1. Respondents shall pay Claimant TTD benefits for the period of August 10, 2020 through September 17, 2020 based on an AWW of $1,029.28.

2. Respondents shall pay Claimant disfigurement benefits in the amount of $250.00.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

DATED: March 19, 2021

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge

Grand Junction, Colorado 81501

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-937-396-001

ISSUES

I. Whether Claimant established by a preponderance of the evidence that she suffered a compensable injury.

II. Whether Claimant established by a preponderance of the evidence that she is entitled to medical benefits.

PROCEDURAL ISSUES

Respondents reserved the right to appeal Judge Edwin Felter's December 16, 2019 Order on Remand finding that claimant's claim for benefits is not barred by the statute of limitations.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. Claimant started working for the employer as a technical designer in 2005. In this job, she worked with venders designing clothing patterns, fit, and quality control. *Ex. K.* Outerwear was her specialty.

2. In March 2012, the company moved to a new building. Claimant contends that once she started working in the new building, she started developing respiratory and skin disorders. As a result, Claimant contends that her respiratory and skin disorders are caused by the environmental conditions of her job in the new building.

3. Claimant developed a cough, wheezing, and shortness of breath, for which she sought treatment on June 26, 2012. *Ex. J, Bates 550.* Her symptoms, however, started in December 2000, when she developed chest tightness and throbbing in the left arm, loss of coordination, flu-like symptoms, and fatigue. *Ex. I Bates 527.* In her 2012 evaluation, Claimant indicated to her providers that her respiratory symptoms may have been due to smoke in the air from nearby forest fires. She went to an urgent care clinic and was treated with a nebulized bronchodilator and given prescriptions for Advair and albuterol inhalers. She returned to the clinic 4 days later with continued chest complaints. A chest x-ray was "abnormal" and claimant was given additional prescriptions. *Id.* Claimant has a history of "chronic bronchitis" for 2 years beginning in 1970 with symptoms of deep, dry cough. Claimant underwent testing in 1972 and was found to be positive for grass, trees, dust, and mold. *Ex. J; Ex. I, Bates 551, 527.* Claimant's respiratory problems waxed and waned over 2012 and 2013 when she was evaluated by an allergist in June 2013 and was told she was allergic to weeds. *Ex. I, Bates 529; Ex. J, Bates 552.*

4. Claimant's son, daughter, and grandchildren have asthma and allergies. *Ex. E, Bates 522.*

5. In a visit at Banner Health on April 19, 2013, she reported that her symptoms were aggravated by "airborne chemicals, animals, change in weather, dust/dust mites, environmental allergens, molds, respiratory infection, smoke and stress." *Ex. H, Bates 496.*

6. Claimant reported having 1 dog and three cats in her home as of March 2014. *Ex. I, Bates 522.*

7. Around April 2013, claimant became concerned that her respiratory problems and dermatitis may be due to her workplace, and asserted work as the cause of ongoing symptoms to her providers and her employer. Her PCP stated, "[Claimant] is still convinced that her workplace is the etiology of both the dermatitis and her breathing problem. The extensive workup that was done at the workplace did not reveal exposure to large quantities of mold." *Ex. E, Bates 420.*

8. Claimant was evaluated by physicians at National Jewish Health. On September 23, 2013, she brought building inspection results to Dr. Annyce Mayer, M.D. of the Occupational/Environmental medicine department, who said, "We discussed in detail that the environmental report does appear to have been a thorough assessment with air sampling that clearly demonstrates no suggestions of indoor amplification of mold. Therefore, although she smells an odd and musty smell, mold was not identified in the workplace. It is difficult to link all of her symptomatology to a specific diagnosis.**"** *Ex. I, Bates 535.* In the absence of evidence of mold, Dr. Mayer suggested that there should be testing for fiberglass as a possible etiology for her symptoms, but noted, "the erythema of the neck sparing the face and hands and eyes that persists now 2 weeks after going through clothes would be atypical." *Ex. I, Bates 540.*

9. Air monitoring of claimant's office space was conducted on December 11, 2013 by Stuart Bailey MS, CIH, Industrial Hygienist. No workplace hazard was identified. This testing addressed Dr. Mayer's concerns about fiberglass. This testing showed that both fiberglass and organic contaminants in the area were below OSHA, American Conference of Governmental Industrial Hygienists, and NIOSH thresholds. *Ex. B, Bates 13.*

10. The series of microbial evaluations discussed by Dr. Mayer were conducted by Strategic Environmental Management LLC. at claimant's jobsite, the industrial/office warehouse office property located at 14100 East 35th Place, Aurora, CO. No workplace hazard was identified. Their report, dated September 4, 2013, summarized the findings, "the total spores per cubic meter of air for all indoor fungal air sampling locations were significantly lower than those found in the outside control sample. Furthermore, while the first test in the Subject's office tested only at 15% of the outdoor concentration, the third test detected only 7% of the outdoor concentration. Based upon this information, the indoor air at the Site is not in need of remediation." *Ex. A, Bates 3.*

11. OSHA preformed three investigations based on claimant's complaints. *CL Testimony, Tape 4 1:06:10.* OSHA took material from claimant's workplace for testing. *CL Testimony Tape 4 1:07:05.* No workplace hazard was identified. *Id.* The certified OSHA file, with OSHA's redactions, was admitted into evidence. *Ex. C*.

12. On February 25, 2014, OSHA conducted their first investigation. The Compliance Officer was unable to find any air contaminant in the office environment that would induce an adverse respiratory effect. *Ex. C, Bates 25.* The Compliance Officer was unable to find signs that would indicate the presence of mold or fungi. *Id.* The Compliance Officer also investigated the office work environment for the presence of chemicals or other substances that may induce adverse health effects. The Compliance Officer was unable to find a chemical in the office environment that would induce an adverse skin irritation or rash effect. *Id.*[1] A new complaint was filed with OSHA, alleging that employees were potentially exposed to a respiratory hazard causing asthma and to skin contact hazard causing asthma or rash. *Ex. C, Bates 144.* OSHA returned for inspection on September 29, 2014. *Ex. C, Bates 189.*

13. Again, there were no workplace hazards identified. The Compliance Officer concluded that employees were not exposed to formaldehyde in excess of Permissible Exposure Limits and that indoor levels were not in excess of outdoor levels for most fungi. *Ex. C, Bates 144.*

14. Claimant retained Mold Inspection Sciences, Inc. to conduct two separate tests for yet another inspection. This was done on August 14, 2014. *Ex. D.* No workplace hazards were identified in either test. *Cl Testimony Tape 4 1:05:47*. The "testing did not detect a mold problem." *Ex. D, Bates 364,384, 387-388.*

15. Dr. Jeffry Schwartz conducted an evaluation of claimant on May 19, 2014. Dr. Schwartz is a pulmonary and critical care physician, board certified in internal medicine, pulmonary medicine, and critical care medicine. He has been evaluating patients with occupational pulmonary disease for approximately 30 years. He was admitted as an expert. *Schwartz Testimony Tape 4 starting 1:08:30.*

16. After review of the records and his evaluation, Dr. Schwartz concluded that claimant does not have occupational asthma or work-related exacerbation of underlying asthma. *Ex J Bates 554; Ex. I Bates 535; Schwartz Testimony, Tape 4 starting 1:14:00.* Dr. Schwartz concluded in his written report:

> Ms. M[Redacted] has asthma of unknown cause, as is true for the majority of asthmatics. She has many triggers of her asthma. While she expressed concern regarding the air quality in her workplace, an extensive evaluation of the claimant and her workplace has not shown any exposure at work that would account for her increased asthma symptoms over the past two years. Additionally, the claimant's peak flow monitoring has not

[1] Although there were no contaminants found upon OSHA inspection, the employer was cited for deficiencies in their Hazard Communications and complied with OSHA remediation requirements by compiling a hazardous chemicals list, using MSDS's, ensuring containers were labeled, and undergoing training. The employer explained that they did not have a program in place at the time of inspections because they did not feel they were storing or working with hazardous chemicals in their work place. *Ex. C, Bates 165, 286..*

shown values that would suggest work-related exacerbation of her asthma. She, therefore, does not have occupational asthma or work-related worsening of her underlying asthma. *Ex. J, Bates 554.*

17. Dr. Schwartz explained that peak flow measurements are one of the objective means to identify the existence of occupational pulmonary disease. *Schwartz Testimony, Tape 4 1:25:00.* Here, those objective tests did not identify a work-related occupational disease. Dr. Schwartz also noted that claimant's unrelated GERD and Barrett's esophagus could be causing airway inflammation and worsening of her asthma. *Id.*

18. Claimant disputed that she had GERD. Dr. Schwartz explained the claimant does have GERD, managed with medication that reduces the acidity and therefore the noticeability of her reflux, but which does not prevent reflux and its effect on the lungs. He explained that long term GERD can cause the chronic cough claimant experiences.

19. Dr. Schwartz also explained that claimant's diagnostic tests show emphysema. Claimant disputed this, and Dr. Schwartz explained that emphysema is seen in the August 31, 2012 CT of her Thorax. *Ex. G, Bates 472.* He explained that claimant's heavy smoking history placed her well above the threshold for expected damage to the lungs (2 packs a day for approximately 25 years = 50 pack/year history). *Ex. I, Bates 522; Ex. J, Bates 551.* He explained that emphysema is commonly related to smoking. He testified that airway hyper reactivity, interpreted as asthma for claimant, can also be caused by smoking. He explained that claimant has objective evidence of smoking related lung disease and may have asthma as a result of her smoking or may have developed that asthma independent of her smoking. *Schwartz Testimony Tape 4 starting 1:26:00.*

20. Dr. Schwartz testified that the fact that claimant's doctors advised against her working in the employer's building did not change his opinion that there was no occupational disease in this case. He explained that claimant's doctors were not doing a causation analysis. Instead, they were responding to claimant's belief that her workplace was causing her problems with the practical solution of avoiding the workplace. *Id. 1:29:00*. Dr. Schwartz testified that the fact that claimant continues to complain of symptoms but has not been in the employer's building since June 2014 makes work related causation much less likely, because of the lack of temporal exposure to any workplace hazard. *Id. 1:30:45.*

21. Dr. Schwartz' opinions are consistent with - and supported by - Claimant's underlying medical records and the extensive environmental testing that has been performed. Moreover, Dr. Schwartz' opinions are consistent with other providers who have evaluated Claimant and have been unable to provide a causal link between Claimant's work environment, her symptoms, and her underlying medical conditions. As a result, the ALJ finds Dr. Schwartz' opinions and testimony to be credible and persuasive.

22. Claimant testified at hearing. *Tape 3, beginning Tape 4.* Included in her testimony was the following:

a. She discussed her current complaints which she relates to work exposure in 2013. Her coughing and wheezing is ongoing daily. She has very sensitive airways. She gets bronchial spasms from scents. When she goes to the store, she starts coughing and has to use her inhaler. She is irritated by wood burned by her neighbor and the forest fires. She sweats. She has a fever. She cannot travel because she has to know the environment she is going into. She is short of breath if she walks over 50 feet. She is on 4 liters of oxygen at night and probably needs oxygen under exertion. She has a rash from her CPAP machine around her nose. She believes that she has a fungal infection in her eyes.

b. She started working for the employer as a technical designer August 1, 2005. In this job, she worked with venders on clothing patterns, fit, and quality control. Outwear was her specialty. She began working for the employer in a building in Aurora. In March 2012, the company moved to a new building.

c. She sought treatment in June 2012 for coughing a wheezing and not feeling well. In December 2012, she was diagnosed with asthma. After the diagnosis, she went to the internet and researched occupational asthma and triggers. She began to try to identify what she thought were triggers. She noticed that she was feeling worse when she got to the Denver area from her home in Greeley. She noticed that after her commute, she was short of breath by the time she got to her desk at work. She testified that she was feeling a crawling sensation up her legs. She felt she could notice a difference in her breathing in different parts of the building. She testified that she had what she felt was an asthma attack at work in April 2013. She was afraid and used her inhaler. After that, she was afraid to come to work.

d. She ordered a mycotoxin test after researching for herself on the internet. She ordered this herself through the internet. This was not ordered by a doctor. She understands her results were positive for two mycotoxins. After these results were received, she shared them with her providers and National Jewish. *Ex. I; Paragraph 7, above.*

e. She felt that cardboard boxes containing clothing moved from the prior employer building to the new building in 2012 caused a reaction for her in the form of a rash on her chest and her arms and her legs, a spot on her hand, and a fungal infection on her feet. These boxes were kept in her work area and contained clothing that was used as examples during her pattern making. She noted that the same boxes with the same clothing did not bother her when they were located at the old building. She stated that clothing stored in plastic boxes did not bother her. *CL Testimony Tape 4, starting 46:35* She testified that it was her understanding that OSHA took those boxes of clothing for testing.

f. In January 2014 she was admitted to the hospital with influenza and asthma complications. She was in the ICU from 1/14/14 to 1/18/14 for her influenza. Upon release, she was provided an excuse from work. After her release from the hospital, but before her return to work, she developed a rash on her back.

She did not return to the employer until February 24, 2014. Upon her return to work, claimant felt her symptoms increased, including fungal infection in her toes, rash, burning eyes, headaches, sore throat, sweating, and asthma symptoms. Claimant was last in the building June 20, 2014.

g. After leaving work in June 2014, she was weak, had a limited amount of time that she could stand and was too weak to cook. She developed an incisional hernia in the area where she had had a portion of her stomach removed in 2001. She had surgery for that hernia on December 30, 2014. At the time of that surgery, they found "Swiss cheese-like hernias" all over her stomach, and it ended up being a very major surgery. She was then in ICU for 3 days on oxygen. Following this, she had an acute kidney injury, "they don't know why." She was discharged from the hospital 20 days later and was on 8 liters of oxygen. She thinks her muscles went into atrophy because she had leg cramps, foot cramps, pain, burning skin and difficulty breathing. She was also hospitalized with pancreatitis. She believes that the employer's building caused her symptoms and conditions since 2013 and continues to cause her symptoms now.

23. Although the ALJ finds Claimant's reporting of her numerous symptoms to be credible and reliable, the ALJ does not find her association of her symptoms and conditions with her work environment to be persuasive evidence regarding causation.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that she suffered a compensable injury.

For a claim to be compensable under the Act, a claimant has the burden of proving that he or she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. Section 8-41-301(1) (c), C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp*., 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for the determination of the Judge. *Faulkner*, 12 P.3d. at 846.

A claimant seeking benefits for an occupational disease must establish the existence of the disease and that it was directly and proximately caused by the claimant's employment or working conditions. *See Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992). The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section of the Act imposes additional proof requirements beyond that required for an accidental injury by adding the “peculiar risk” test. The “peculiar risk” test requires that the hazards associated with the vocation must be more prevalent in the workplace than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the condition for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

Claimant has consistently and persistently asserted that work exposure after her company moved buildings is the cause of many medical problems. This resulted in multiple testing for various possible hazards by several sources. None revealed workplace hazards. After review of the testing, her PCP and National Jewish doctors did not join her in her belief that her conditions were related to an exposure at work. Dr. Schwartz credibly testified that her condition is not an occupational disease. There are other explanations within claimant’s medical history for her complaints.

There is simply no persuasive evidence of either exposure or persuasive medical evidence that exposure caused claimant’s multiple symptoms, complaints, and conditions. As noted by the Panel in the matter of *Washburn v. City Market*, “From a legal standpoint, claimant may be confusing causation for correlation. The claimant would have us blindly follow the common informal fallacy of “after this therefore because of this” (*post hoc ergo propter hoc*). We decline to do so.” *Washburn v. City Market*, W.C. No. 5-109-470 (ICAO June 3, 2020).

As a result, Claimant has not met her burden to prove that there was exposure at work that caused her multiple symptoms and conditions. It is found and concluded that Claimant did not meet her burden to prove by a preponderance of the evidence that she suffered a compensable occupational disease or an acute injury.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant’s claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 22, 2021.

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-957-582-01

ISSUES

➢ Whether claimant has proven by a preponderance of the evidence that he sustained an injury arising out of and in the course and scope of his employment with employer on September 18, 2020?

STIPULATIONS

➢ If the claim is compensable, Claimant's average weekly wage ("AWW") is $949.44.

➢ If the claim is compensable, Claimant is entitled to an award of temporary total disability ("TTD") benefits for the period of September 19, 2020 through November 30, 2020.

➢ If the claim is compensable, Claimant's medical treatment is deemed to be reasonable and necessary to cure and relieve Claimant from the effects of the work injury.

FINDINGS OF FACT

1. Claimant is employed by Employer as a General Manager. Employer is a fine dining restaurant in Carbondale, Colorado. On September 18, 2020, Employer was hosting a private buy out for a wedding rehearsal dinner. The private buyout was set to host a party of 40-50 guests.

2. Claimant testified he arrived at work at approximately 4:45 p.m. and began to set up for the party. Claimant had two other employees, Ms. Kopman and Mr. Beatty, working the event as servers. Ms. Kopman and Mr. Beatty also helped Claimant set up for the event. Claimant was set to work as the bartender during the wedding rehearsal party. Ms. Conti and Mr. Sweeney, co-owners of Employer were also present on September 18, 2020.

3. Employer's restaurant has a bar area that is on an elevated floor and separated from the restaurant area by a half wall. On the top of the half wall is a flat metal railing that runs the entire length of the half wall. Claimant testified at hearing that the railing is approximately 25 feet long. The evidence indicates that the brass railing weighed between 200-300 pounds.

4. Claimant testified that after finishing setting up, at approximately just before 5:45 p.m., Claimant ran up to the half wall, grabbed the railing and put both feet on the wall underneath the railing. Claimant testified he did this in an attempt to rally Ms. Kopman and Mr. Beatty and hype up the staff before the event. Ms. Kopman

testified that when Claimant put his feet up on the half wall, he said something to the effect of “Look, I’m Spiderman”. Claimant testified he did not recall saying this, but acknowledged that he is a superhero/comic book fan.

5. The railing in this case was not fastened to the half wall. The railing came off the half wall, and landed on Claimant on the ground. Claimant sustained fractures to his left distal tibia shaft, medial malleolus and distal fibula. Claimant was helped to a booth by Ms. Kopman and Mr. Beatty. Ms. Conti and Mr. Sweeney also checked on Claimant having heard the commotion of the railing fall. Ms. Conti contacted Claimant’s girlfriend who came to the restaurant and took Claimant to the Emergency Room. Claimant had surgery on his left leg the next morning.

6. Employer has an employee handbook that was drafted in large part by Claimant. Claimant testified at hearing that the actions he took on September 18, 2020 would not have been acceptable pursuant to the terms of the employee handbook.

7. Claimant filed a Workers’ Claim for Compensation. Respondents filed a Notice of Contest and argued at hearing that the injury in this case was a result of horseplay.

8. By all accounts there are very few disputed facts in this case, other than whether Claimant grabbed the rail and put his feet on the half wall in an attempt to hype up the staff before the event.

CONCLUSIONS OF LAW

1. The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ’s factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the

testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with "a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. Where the alleged deviation from employment involves "horseplay," our courts apply a four-part test to determine whether the resulting injury is compensable. In *Lori's Family Dining v. Industrial Claim Appeals Office,* 907 P.2d 715, 718 (Colo. App. 1995), the Court of Appeals enumerated the following four factors:

> (1) the extent and seriousness of the deviation; (2) the completeness of the deviation, *i.e.,* whether it was commingled with the performance of a duty or involved and abandonment of duty; (3) the extent to which the practice of horseplay had become an accepted part of the employment; and (4) the extent to which the nature of the employment may be expected to include some horseplay.

5. No single factor is determinative, and the claimant need not prove the existence of every factor in order to establish compensability. *Panera Bread, LLC v. Industrial Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006).

9. In *Panera Bread, supra*, the Court of Appeals affirmed a finding of compensability for an injury that occurred when the employee in that case, with a smirk on his face, lifted his right leg as if he were going to kick a coworker, who was ten feet from the cooler and far enough away that he could not have been stuck, and had his left leg slip out from under him, causing him to fall. The court found in that case that the employee's actions did not constitute an extensive or serious deviation from his employment duties.

10. In *Lori's Family Dining, Inc.*, the court held that injuries that occurred when teasing between co-workers escalated to a physical level and when the injured worker attempted to kick his co-worker, the co-worker caught his leg. The employee who attempted to kick his co-worker was injured when he attempted to extract his leg from his co-workers' grip.

11. These two cases have established that horseplay is analyzed under general principles that govern whether a claimant has deviated from employment so substantially as to remove him or her from the course of employment. This case

involves a particular act of horseplay, and not the employment environment in general. Therefore, the act, according to *Panera Bread*, *supra,* is to be judged according to the same standards of extent and duration of deviation that are accepted in other fields, such as resting, seeking personal comfort , or indulging personal errands.

12. In this case, Claimant was not injured when he fell from the railing to the floor. Claimant sustained the fractures to his leg from the brass railing falling on Claimant's legs. The brass railing is a component of Employer's restaurant, and ultimately caused Claimant's injuries. Therefore, the ALJ finds that the ALJ finds that the injury in this case arose out of and in the course of his employment with Employer. (See *Panera Bread*, where the combination of a slippery floor, the employee's shoes and his actions of attempting to kick toward his co-worker combined to cause the injury).

13. The deviation in this case was a brief act by the Claimant in an attempt to be goofy. Claimant had completed setting up for the private party, and was in the area of the restaurant where he was scheduled to be working, so any horseplay did not involve an abandonment of Claimant's duties. The ultimate cause of the injury in this case was Claimant's actions combined with an unsecured brass railing that weighed between 200-300 pounds. Because Claimant was in an area of the restaurant where he was scheduled to work, the horseplay incident was brief in nature, and the cause of the injury involved an unsecured brass rail that was part of Employer's restaurant, the deviation in this case is not so extensive or serious from Claimant's employment duties as to render the injury non-compensable.

14. Respondents shall pay Claimant workers compensation benefits as set forth in the stipulation of the parties at hearing, including reasonable and necessary medical benefits necessary to cure and relieve Claimant from the effects of the injury pursuant to the Colorado Medical Fee schedule and temporary total disability ("TTD") benefits for the period of September 19, 2020 through November 30, 2020 based on an average weekly wage ("AWW") of $949.44

ORDER

It is therefore ordered that:

1. Respondents shall pay claimant TTD benefits beginning August 5, 2014 and continuing until terminated by law based on an AWW of $425.61.

2. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve claimant from the effects of the August 1, 2014 industrial injury provided by Dr. McLaughlin and Dr. Copeland.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it does not need to be mailed to the Denver Office of Administrative Courts.

Grand Junction, Colorado 81501

ISSUES

- Did Respondents overcome the DIME's determination Claimant is not at MMI by clear and convincing evidence?

- If Claimant has reached MMI, should the PPD award for Claimant's left shoulder be based on the schedule or as a whole person impairment?

- If Claimant is not yet at MMI, did Respondents prove Claimant's TTD benefits should be reduced to zero on or after March 14, 2019 for persisting in an "injurious practice" under § 8-43-404(3)?

- Did Respondents prove Claimant received an overpayment of TTD benefits based on his receipt of Social Security Disability Insurance (SSDI) benefits, payment of TTD benefits beyond the date of MMI, and/or payment of TTD benefits after benefits were suspended for persisting in an injurious practice?

PRELIMINARY MATTERS

The hearing in this matter was initiated by Respondents' application challenging the DIME's determination Claimant was not at MMI. Pursuant to Division policy, the DIME also assigned advisory impairment ratings of: 10% whole person for left hemidiaphragm paralysis, and 21% scheduled/13% whole person for Claimant's left shoulder. Respondents do not contest the impairment ratings calculated by the DIME, except Respondents assert Claimant suffered only scheduled impairment to the left shoulder rather than whole person impairment.

Claimant has not contested Respondents' right to terminate TTD benefits to recover an overpayment caused by his concurrent award of SSDI benefits.

FINDINGS OF FACT

1. Claimant was born in September 1956 and is currently 64 years of age.

2. Claimant worked for Employer as a delivery driver. He suffered admitted injuries on August 25, 2016 when he fell from his truck. Claimant injured multiple parts of his body, including his left shoulder, low back, neck, left shoulder, pelvis, right knee. He also developed situational depression and anxiety. Most of the injuries healed relatively quickly, but the left shoulder symptoms and anxiety persisted.

3. Claimant was eventually referred to Dr. Michael Simpson, an orthopedic surgeon, for evaluation of his left shoulder.

4. An MR arthrogram on March 13, 2017 showed a SLAP II tear, moderate AC joint osteoarthritis, and probable bursitis.

5. On June 29, 2017, Dr. Simpson performed an arthroscopic subacromial decompression, distal clavicle excision, and open biceps tenodesis.

6. The surgery was a negative experience for Claimant in many ways. First, he had an adverse reaction to post-operative pain medication, which caused hallucinations. He also developed breathing difficulties shortly after surgery, and his shoulder remained significantly symptomatic.

7. On July 20, 2017, Claimant reported to Dr. Simpson he sometimes had difficulty breathing or catching his breath. In August 2017, Claimant reported increasing dyspnea and difficulty breathing with exertion. A CT scan suggested hemidiaphragm paralysis. Dr. Simpson opined the hemidiaphragm problem was probably related to the nerve block Claimant received for the shoulder surgery.

8. Claimant participated in several months of physical therapy and home exercises attempting to rehabilitate his shoulder.

9. On February 12, 2018, Dr. Simpson noted Claimant was “still struggling” with range of motion and pain. Active shoulder range of motion was “quite restricted”, and Claimant was frustrated with his slow progress. Dr. Simpson opined,

> [Claimant] has pretty significant adhesive capsulitis which is really not improving over time. We had a lengthy discussion about treatment options. At this point, I see there are 2 options available to him. The first option would be to consider an arthroscopic lysis of adhesions and manipulation under anesthesia. . . . The other option, if either he prefers to avoid surgery, or if it is felt that surgery is contraindicated, would be to place him at maximum medical improvement at this time with 2-3 years of maintenance care to monitor resolution of his adhesive capsulitis. Prior to making any determination about the advisability of surgery, I would recommend a repeat CT scan of his chest to evaluate his hemidiaphragm position and evaluation from an internal medicine physician or pulmonologist to make sure that elective surgery would be appropriate at this time.

10. Claimant was evaluated by Dr. Majd Kobitary, a pulmonologist, on March 6, 2018. Dr. Kobitary opined the diaphragmatic paralysis could be related to phrenic nerve injury or could be idiopathic. He recommended no specific treatment and saw no contraindication to additional surgery from a pulmonary perspective.

11. Claimant followed up with Dr. Simpson on March 12, 2018. Claimant was “making some progress” even though his range of motion was still significantly limited. Dr. Simpson indicated Claimant “would like to avoid surgery if at all possible” and “I think it is appropriate to . . . continue to treat him to nonoperatively.” Dr. Simpson believed Claimant was approaching MMI but recommended maintenance care “in the event he decides he wants to proceed with surgery at some point.”

12. Dr. Terrence Lakin has been Claimant's primary ATP for this injury. Dr. Lakin put Claimant at MMI on April 18, 2018 with a 20% scheduled/12% whole person rating for the left shoulder. Dr. Lakin recommended two years of follow-up with Dr. Simpson "including additional imaging and arthroscopic surgery if warranted."

13. Claimant returned to Dr. Simpson on April 22, 2018. Dr. Simpson opined shoulder surgery would be "risky" because of the diaphragmatic issue and recommended Claimant have pulmonary surgery before considering any additional shoulder surgery.

14. On June 11, 2018, Dr. Simpson noted Claimant's range of motion appeared to be improving and "[it appears] he will be placed at maximal medical improvement with recommendation for maintenance care. I think that's very appropriate. With the recent improvement of his range of motion I would be optimistic that he will continue to make slow steady gains . . . and allow him to avoid additional surgical intervention."

15. At his September 10, 2018 appointment, Dr. Simpson noted Claimant's range of motion continued to improve and the best course was nonoperative management.

16. Dr. Gary Zuehlsdorff evaluated Claimant for a DIME on October 16, 2018. Claimant said his left shoulder was approximately 50% better after surgery and he was "frustrated with his level of recovery." Claimant indicated Dr. Simpson "highly recommended going to another procedure, but he is scared of going through another procedure." Claimant was "aggressively" performing home exercises to improve his range of motion. Dr. Zuehlsdorff noted Claimant appeared "very anxious and very wound up." Dr. Zuehlsdorff had received no records regarding the pulmonary condition but spoke with Claimant's pulmonologist by telephone the day after the DIME. Dr. Zuehlsdorff determined Claimant was not at MMI because "he needs a second surgical procedure regarding his left shoulder" and "he also needs to have his left hemidiaphragm evaluated."

17. Respondents accepted the results of the DIME and authorized treatment of Claimant's left shoulder and pulmonary problems.

18. Claimant followed up with Dr. Simpson a few times after the DIME. Dr. Simpson administered two cortisone injections that provided some benefit. On June 10, 2019, Dr. Simpson noted, "As I have told him all along, his symptoms are improving nonoperatively, that I would try very hard to avoid additional surgical treatment." Claimant's last documented appointment with Dr. Simpson took place on September 9, 2019. Dr. Simpson did not recommend surgery at that time.

19. On January 23, 2019, Claimant saw Dr. Michael Weyant, a cardiothoracic surgeon with National Jewish Hospital. Dr. Weyant opined Claimant suffered diaphragmatic paralysis because of the shoulder surgery. Dr. Weyant recommended a diaphragm plication procedure. Claimant wanted to proceed with surgery.

20. Respondents authorized the plication surgery, and it was scheduled for March 14, 2019. Claimant cancelled the surgery shortly before the appointed date.

21. Claimant had a consultation with Dr. Evan Stepp at National Jewish regarding the surgery on May 15, 2019. Dr. Stepp agreed Claimant was an appropriate candidate for the plication procedure but noted, “the patient wishes to defer this for the time being until his shoulder function further improves as he fears recovering from chest surgery may cause him to lose ground in his shoulder recovery.” Dr. Stepp ordered additional workup including “a full pulmonary function test, upright and supine spirometry, and diaphragmatic sniff test. We will also check overnight oximetry to assess for any evidence of nocturnal hypoventilation. . . . I will review these results with him in person at the next visit.”

22. Claimant’s decision to postpone the March 2019 surgery was also partially motivated by the complications he suffered from shoulder surgery and “my fear was I go into surgery and wouldn’t come out. I didn’t understand. I was fearful and scared about what would happen to me in the surgery.”

23. Claimant followed up with Dr. Weyant on June 26, 2019, who the procedure and associated risks explained in detail. Claimant was reassured by the discussion and ready to proceed with surgery. Surgery was scheduled for July 18, 2019.

24. On July 8, 2019, Claimant’s wife of 31 years was diagnosed with advanced cancer. Claimant served as his wife’s primary caregiver and support system while she underwent cancer treatment.

25. The plication surgery was rescheduled for September 26, 2019 but Claimant cancelled the procedure because he was prioritizing his wife’s cancer treatment. Claimant did not reschedule surgery because he did not know how long his wife’s cancer treatment would last.

26. Claimant’s wife passed away on January 21, 2020, which naturally caused Claimant severe emotional distress. He did not attempt to schedule the plication procedure between January and March 2020 because he was struggling to come to terms with his wife’s death.

27. On February 26, 2020, Dr. Lakin opined Claimant remained at MMI. Dr. Lakin did not think additional shoulder surgery was warranted and believed he had “been given an adequate window to pursue surgical intervention” for the diaphragmatic condition. He stated it was reasonable for Dr. Zuehlsdorff to find Claimant not at MMI, but the lack of any significant treatment since the DIME confirmed his original determination of MMI on April 18, 2018. Dr. Lakin opined Claimant should return to Dr. Zuehlsdorff for a pulmonary rating.

28. Dr. Zuehlsdorff conducted a follow-up DIME on March 16, 2020. He maintained his determination Claimant was not at MMI. Dr. Zuehlsdorff noted “everything was put on hold” when Claimant wife was diagnosed with cancer and “the patient simply did not have the moral fortitude to attempt to treat himself during this time when he was actively involved in his wife’s treatment and care.” It had been two since his wife’s death “and he is simply trying to get his life back together.” Claimant told Dr. Zuehlsdorff he

wanted to move forward with the surgeries, first to address the hemidiaphragm abnormality and then to address the left shoulder. Dr. Zuehlsdorff opined both surgeries were reasonably necessary and should be completed before placing Claimant at MMI.

29. On March 19, 2020, Governor Polis issued Executive Order 2020 009 suspending all voluntary or elective surgeries or procedures because of the COVID-19 pandemic until April 14, 2020 at the earliest. The primary reason for suspending elective procedures was to conserve healthcare resources and scarce personal protective equipment.

30. National Jewish resumed elective procedures in mid to late May 2020. Claimant was made aware of this during a telehealth consultation with Dr. Weyant on May 27, 2020. Dr. Weyant explained the technical aspects and risks associated with the procedure. The ALJ infers the "risks" discussed included COVID-19 risks and protocols. Despite multiple contacts from National Jewish staff, Claimant still has not scheduled or undergone the plication surgery due to fears of contracting COVID-19. Claimant testified, "after COVID, I would definitely have the surgery" but does not intend to proceed before COVID-19 is controlled or the vaccine is widely available.

31. Dr. Jeffrey Schwartz, a pulmonologist, performed a record review for Respondents and testified at hearing. Dr. Schwartz agreed Claimant's hemidiaphragmatic paralysis is probably a complication of the shoulder surgery. The plication procedure is relatively simple and has been around for decades. It is the only treatment likely to improve Claimant's lung capacity. The risks of a significant complication from the plication procedure are low, and the likelihood of improvement is high. Dr. Schwartz "absolutely" recommended Claimant undergo the plication procedure, with the caveat he needs a repeat a chest x-ray and spirometry in case Claimant had improved with time (in which case the procedure might no longer be necessary). Dr. Schwartz though Claimant "certainly . . . should benefit" from the procedure, with an 80% chance the procedure would help. Dr. Schwartz has not heard of any patient getting worse from the procedure. Dr. Schwartz opined if Claimant does not have the plication, he was at MMI by June of 2018, not long after the shoulder surgery.

32. Dr. Schwartz persuasively described measures hospitals and surgical centers have undertaken to protect patients from COVID-19 since restarting elective procedures in May 2020. Claimant's risk of contracting COVID-19 while undergoing plication surgery is "exceedingly low" because of rigorous screening, enhanced operative sterility and respiratory precautions, and limited contact only with personnel who are protecting themselves and patients from exposure to COVID-19. To Dr. Schwartz's knowledge, the few surgical patients who acquired COVID-19 were exposed to the virus by their own visitors. Dr. Schwartz acknowledged fear of COVID is common but most of his patients have gone ahead with surgical procedures after being educated about the safety protocols and low actual risk. Dr. Schwartz's testimony was credible and persuasive.

33. Respondents failed to overcome Dr. Zuehlsdorff's MMI determination by clear and convincing evidence. There is no substantial question the plication procedure

is reasonably expected to improve Claimant's condition, and Respondents' argument is based on the premise Claimant has "refused" the procedure. Claimant is willing to undergo the procedure once COVID-19 is controlled or a vaccine becomes widely available. Claimant has not refused the surgery and therefore is not at MMI.

34. The delay of surgery was not an "injurious practice" before May 27, 2020. Claimant's decision to postpone the surgery in March 2019 was reasonable because he needed additional information and reassurance given the bad result from the prior shoulder surgery. Claimant was also reasonably concerned the surgery could cause him to "lose ground in his shoulder recovery." The ALJ also notes Dr. Stepp ordered additional workup on May 15, 2019, to be reviewed before making the final decision. After further consultation with Dr. Stepp and Dr. Weyant, Claimant was scheduled for surgery on July 18, 2019. Claimant probably would have undergone the surgery in July 2019 but for his wife's cancer diagnosis. Claimant's decision to put his treatment on hold and focus on his wife's needs was reasonable. It was also reasonable for Claimant to take a couple of months after his wife's death to "put his life back together." With the advent of COVID-19, Claimant had no opportunity to undergo surgery from March 19, 2020 until mid to late May 2020 because elective procedures were suspended.

35. Claimant's decision to decline plication surgery was no longer reasonable when he was advised about the technical aspects of surgery and risks involved during a telehealth consultation with Dr. Weyant on May 27, 2020. Claimant's subjective fear of contracting COVID-19 from surgery is not objectively reasonable given the heightened COVID-19 precautions and the "exceedingly low" actual risk. Claimant's failure to schedule the surgery after May 27, 2020 was an injurious practice that unreasonably delayed his recovery and attainment of MMI.

36. Claimant's compensation should be suspended and reduced to zero effective May 28, 2020. Such suspension shall continue until he undergoes the plication procedure.

CONCLUSIONS OF LAW

A. MMI

A DIME's determination regarding MMI are binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S. The party challenging a DIME physician's conclusions must demonstrate it is "highly probable" the determination is incorrect. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). A party meets this burden if the evidence contradicting the DIME physician is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002).

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition.

Section 8-40-201(11.5), C.R.S. A finding of MMI is premature if there is a course of treatment that has “a reasonable prospect of success” and the claimant is willing to submit to the treatment. *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080, 1081-82 (Colo. App. 1990).

As found, Respondents failed to overcome Dr. Zuehlsdorff’s MMI determination by clear and convincing evidence. There is no dispute the plication procedure is reasonably needed to cure and relive the effects of Claimant’s injuries. Respondents long ago authorized the procedure and remain willing to cover it should Claimant decide to move forward. Claimant is clearly not at MMI from a *purely medical standpoint*. Admittedly, a claimant is at MMI as a matter of law if they refuse the only remaining treatment proposed to improve their condition. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002). Here, Claimant has not “refused” the procedure, and appears willing to have surgery “after COVID.” Claimant was a generally credible witness, and the ALJ is inclined to give him the benefit of the doubt he will pursue surgery once the threat of COVID-19 recedes. Claimant’s age gives him a reasonable opportunity to receive the vaccine within the next few months (if he has not already done so). If he does not pursue the surgery, Respondents retain the option to petition to close the claim or take any other appropriate measures to conclude the case.

Because MMI is not “divisible,” there is no need to analyze whether Respondents overcame Dr. Zuehlsdorff’s MMI determination with respect to additional shoulder surgery. Although Dr. Zuehlsdorff was under the impression Dr. Simpson is still considering another shoulder surgery, no surgical recommendation has been made by any ATP. Dr. Simpson’s reports indicate he prefers to avoid surgery if Claimant continues to improve and plans to reevaluate Claimant after the plication procedure. If Dr. Simpson recommends shoulder surgery in the future, the parties can adjudicate reasonable necessity and relatedness at that time. If Dr. Simpson does not recommend additional surgery, the issue is moot and Claimant will return to Dr. Zuehlsdorff for another follow-up DIME.

B. Injurious Practice

Section 8-43-404(3) gives ALJs discretionary authority to “reduce or suspend” the compensation of a claimant who “persists in an unsanitary or injurious practice which tends to imperil or retard recovery or refuses to submit to such medical or surgical treatment . . . as is reasonably essential to promote recovery.” Respondents must prove the treatment is reasonably needed to assist the claimant in reaching MMI. *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002); *Parks v. Ft. Collins Ready Mix, Inc.*, W.C. No. 4-251-955 (March 31, 1999). Benefits should not be reduced or suspended if the claimant’s refusal of treatment is reasonable. *Id.* In making this determination, the ALJ should consider what a reasonable person would do given the circumstances facing the claimant. Relevant factors include the history of treatment, the information reasonably available to the claimant, the existence of contrary medical opinions, the importance of the proposed treatment, and other circumstances bearing on the patient’s ability to comply with medical recommendations. *Romero v. Alstom, Inc*., W.C. No. 4-767-1057-06 (April 9, 2015).

As found, Claimant's delay of surgery was not an "injurious practice" before May 27, 2020. The decision to postpone plication surgery in March 2019 was reasonable because Claimant was seeking additional information and reassurance considering the bad result from the prior shoulder surgery. Moreover, Claimant was reasonably concerned the surgery could cause him to "lose ground in his shoulder recovery." Ultimately, Dr. Stepp ordered additional workup on May 15, 2019 to confirm details relating to the plication. After consulting with Dr. Stepp and Dr. Weyant, Claimant scheduled surgery for July 18, 2019, and probably would have undergone the procedure but for his wife's cancer diagnosis. Claimant's decision to put his treatment on hold and focus on his wife's needs was reasonable. It was also reasonable for Claimant to take a couple of months after his wife's death to mourn and "put his life back together." Claimant subsequently had no opportunity to undergo surgery from March 19, 2020 until mid to late May 2020 because elective procedures were suspended.

But Claimant's decision to postpone plication surgery was no longer reasonable after May 27, 2020 when he was advised about the technical aspects of surgery and risks involved during a telehealth consultation with Dr. Weyant. Claimant's subjective fear of contracting COVID-19 from surgery is not objectively reasonable given the heightened precautions implemented when elective procedures resumed and the "exceedingly low" actual risk. Claimant's failure to schedule the surgery after May 27, 2020 was an injurious practice that unreasonably delayed his recovery and attainment of MMI.

Claimant's compensation shall be suspended effective May 28, 2020, and the suspension shall remain in effect until Claimant undergoes the plication procedure. The statute permits the resumption of benefits when "the disqualifying condition has been removed." *Dziewior v. Michigan General Corp*., 672 P.2d 1026, 1030 (Colo. App. 1983). Given the number of times the plication surgery has been scheduled and cancelled, the suspension of TTD should continue until Claimant has the procedure. This provides a verifiable time for cessation of the injurious practice. *See Ganser v. Blue Mountain Energy*, W.C. No. 5-128-084-001 (December 16, 2020).

ORDER

It is therefore ordered that:

1. Respondents' request to set aside the DIME's determination regarding MMI is denied and dismissed.

2. Respondents' request that Claimant's TTD benefits be suspended commencing March 14, 2019 is denied and dismissed.

3. Claimant's TTD benefits shall be suspended effective May 28, 2020. The suspension shall remain in effect until Claimant undergoes the plication procedure.

4. If Claimant does not undergo the plication surgery within six months of this Order, Respondents may petition to close the claim for failure to prosecute or take any other appropriate action(s) to conclude this matter.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

DATED: March 22, 2021

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-122-625-002

ISSUES

I. Whether Claimant suffered a compensable injury.

II. Whether Claimant is entitled to reasonable and necessary medical treatment.

III. Whether Claimant is entitled to temporary disability benefits.

IV. Whether Claimant is at-fault for his wage loss and not entitled to temporary disability benefits.

STIPULATIONS

The parties stipulated to an average weekly wage of $1,411.00. Respondents also agreed that if the claim is found compensable, they are not asserting any of the medical treatment received by Claimant is not authorized.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following specific findings of fact:

1. The Claimant was 31 as of October 11, 2019. He resides in Medford, Oregon.
2. Before working for Employer, Claimant injured his low back in 2011 in a rollover automobile accident. After receiving conservative treatment, which included physical therapy and injections, Claimant made a full recovery. Claimant again injured his lower back in December 2018. He pulled a muscle lifting a heavy chest but made a full recovery with no treatment beyond one visit to the emergency room.
3. Before working for Employer, Claimant worked full duty for his prior employer, Diamond Fire. Claimant worked for Diamond fire as a wildland firefighter throughout the 2019 fire season, up to approximately September 18, 2019.
4. The duties of a wildland firefighter are laborious. They include, but are not limited to, walking long distances in full firefighting gear, using chain saws and other heavy equipment, raking ground, and staging. Staging involves observing the fire to assess how it is spreading to best assess how to control its damage.
5. Employer is a private wildland firefighting company that resides in Midwest City, Oklahoma. In October 2019, Employer assembled a crew of wildland firefighters to combat the Decker Fire raging near Salida, Colorado ("The Crew"). The Crew was around 20 members, including Claimant, Arthur "A.J." B[Redacted], Benjamin "Cade" B[Redacted], Harold "Lee" S[Redacted], James "Jim" H[Redacted], Brandon

W[Redacted], and Cody S[Redacted]. The Crew was led by . S[Redacted].

6. Claimant's tenure with Employer lasted 11 days, from October 2, 2019 to October 12, 2019.

7. The Crew used five fire engines or trucks. The trucks were three-quarter ton Dodge Ram pickup trucks, specially fitted to travel over mountainous terrain. Each member of the Crew was assigned a specific spot in a specific truck. Assignments were based on seniority and Claimant was the lowest ranking member.

8. Claimant was originally assigned to the middle seat of the fourth truck. He asked to move trucks because he objected to one member in his truck sleeping all the time.

9. On October 11, 2019, the keys to one of the trucks went missing while the Crew was eating. Claimant and Mr. B[Redacted] were accused of taking the keys. Claimant was searched as well as his belongings. The keys were not located. Thus, one of the trucks could not be used. As a result, the Crew downsized to four trucks for the evening and headed into the mountains to fight the Decker Fire. In order to fight the fire, the Crew staged on a mountainous hillside near Salida, Colorado on Rainbow Road Trail.

10. Claimant testified that on the night of October 11, 2019, he, Mr. B[Redacted], Mr. H[Redacted], as well as two others (i.e., Dunn and G2), were staging in their fire engine at Rainbow Road Trail. The Crew was waiting for scouts to return and instruct them regarding their next move. Claimant was watching Netflix on a phone while sitting in the back seat of the truck directly behind the passenger seat. Claimant was also vaping. Mr. H[Redacted] was sitting in the front passenger seat when, unprovoked and unannounced, he exited the truck and abruptly opened Claimant's door.

11. It is not clear from the evidence whether Mr. H[Redacted] pulled Claimant out of the truck or whether Claimant was leaning up against the door while watching Netflix and fell out of the truck upon the door being opened abruptly. Regardless, Claimant was either pulled out of the truck or fell out of the truck and landed on the left side of his lower back and on the hard ground. He was also sitting about three feet off the ground while in the truck and had no time to react to brace for the impact with the ground. Once he hit the ground, he laid there in shock and in pain. Mr. H[Redacted] then went around the truck to address Mr. B[Redacted], but Mr. B[Redacted] informed Mr. H[Redacted] that if he were touched a fight would ensue. Mr. H[Redacted] did not engage with Mr. B[Redacted], and instead returned to his seat in the truck. Claimant testified he felt immediate pain in his lower back. Claimant informed Mr. S[Redacted] of the incident and that his lower back was in pain. Mr. S[Redacted] informed Claimant that if he and Mr. H[Redacted] had a problem with each other – they should basically take their problem into the woods and fight it out.

12. Shortly after the incident, Mr. W[Redacted]s, who is an EMT but not for the Crew, checked Claimant for a concussion and instructed him to perform stretches for his lower back pain. Claimant also testified that there was a professional EMT crew nearby that he was instructed not to see because Claimant thought that due to the cause of the injury - which Claimant classified as an assault - the incident could result in the Crew being pulled off the fire.

13. Mr. B[Redacted] testified that the night of October 11, 2019, he, Claimant, and Mr. H[Redacted], along with others, were staging together in the same truck. He and Claimant were in the back of the truck watching Netflix on a phone while awaiting orders on where the Crew would go next. Mr. B[Redacted] was located behind the driver seat and Claimant was located behind the passenger seat. Mr. H[Redacted] was in the front passenger seat when, unprovoked and unannounced, he exited the truck, opened Claimant's door and ripped him out of the truck throwing him to the ground. Mr. H[Redacted] then went around the truck to address Mr. B[Redacted]. But Mr. B[Redacted] locked his door and informed Mr. H[Redacted] that a fight would ensue if Mr. H[Redacted] touched him. Mr. B[Redacted] stated that Mr. H[Redacted] thought Claimant was using cannabis, but Claimant was simply vaping tobacco. Mr. B[Redacted] also testified that Claimant appeared to be in shock after the incident occurred and was in noticeable back pain. The two went to speak with Mr. S[Redacted] about what occurred. Mr. B[Redacted] testified that Claimant informed Mr. S[Redacted] that his back was hurting, but Mr. S[Redacted] instructed Claimant to "rub some dirt on it" and if he took issue with Mr. H[Redacted] to go "fight him in the woods." Mr. B[Redacted] testified that Claimant had no issues with his back and performed all his job duties without the appearance of pain before the incident with Mr. H[Redacted]. Lastly, Mr. B[Redacted] testified that he decided to leave the Crew, along with Claimant and Mr. B[Redacted], the morning of October 12, 2019, due to how this situation was handled by Mr. S[Redacted].

14. Mr. B[Redacted] testified that the night of October 11, 2019, Mr. H[Redacted] "yanked" Claimant out of the backseat of the pickup because Mr. H[Redacted] thought Claimant was using cannabis. After the incident, Claimant was laying on the ground in shock, and appeared to be in pain when he stood up. Mr. B[Redacted] testified that he was staging in the same pickup as Mr. S[Redacted] when the incident occurred and was nearby when Claimant reported the incident to Mr. S[Redacted]. Mr. B[Redacted] testified that he heard Claimant report back pain to Mr. S[Redacted] that was "really bad." Then, he said that Claimant was relocated to the truck Mr. S[Redacted] and Mr. B[Redacted] were in. Mr. B[Redacted] again heard Claimant report back pain to Mr. S[Redacted], to which Mr. S[Redacted] replied, "suck it up, stop being a pussy, and if you have a problem go out to the woods and fight him." In addition, Mr. S[Redacted] did not offer to send Claimant for medical care. Mr. B[Redacted] also testified that Claimant had no issues with his back and could perform all his job duties without the appearance of pain before the incident with Mr. H[Redacted]. Mr. B[Redacted] testified that he decided to leave the Crew, along with Claimant and Mr. B[Redacted], the morning of October 12, 2019, based on how this situation was handled by Mr. S[Redacted]. Mr. B[Redacted] testified the three drove to Idaho where he and Mr. B[Redacted] lived. Mr. B[Redacted] also stated that while on the way to Idaho, Claimant was complaining of back pain, was in noticeable back pain, and they had to pull over multiple times to allow Claimant to stretch and address his back pain.

15. Claimant, Mr. B[Redacted], and Mr. B[Redacted] all testified they do not have special relationships with one another. The first and only time Mr. B[Redacted] and Mr. B[Redacted] met Claimant was while working the Decker Fire. They are not friends and are unrelated.

16. The crew finished its staging shift and returned to camp the morning of October 12, 2019. Claimant, Mr. B[Redacted], and Mr. B[Redacted] decided to quit and leave the Crew. Claimant testified he left because he feared for his safety and needed to seek medical care. Mr. B[Redacted] and Mr. B[Redacted] left the crew because of how Mr. S[Redacted] handled the incident involving Claimant and Mr. H[Redacted]. Both testified they feared they would be involved in fights and be injured or arrested. The three took Mr. B[Redacted]'s truck and drove to Idaho where Mr. B[Redacted] and Mr. B[Redacted] reside. Based on the totality of the evidence, the ALJ finds Claimant's decision to leave and get medical treatment for his back to be reasonable. The ALJ also finds that employees were constantly told work out their problems by basically fighting it out in the woods. Such statements created a difficult environment for employees such as Claimant to work and resolve problems that would arise. Claimant was also unable to keep performing his regular job duties after the incident and injury to his back. As a result, his wage loss is solely attributable to his injury and not his decision to leave and obtain medical treatment.

17. Claimant experienced back pain the entire trip from Colorado to Idaho and had to stop multiple times due to the pain. Claimant arrived in Idaho the evening of October 12, 2019. He stayed with Mr. B[Redacted] that night and booked a flight to Oregon. He arrived in Oregon the evening of October 13, 2019.

18. Mr. S[Redacted] testified that although he did not see the incident involving Claimant and Mr. H[Redacted], he was aware of what happened. He alluded to knowing that Mr. H[Redacted] pulled Claimant out of the truck. He testified that everyone on the Crew was aware of what happened to Claimant. That everyone on the Crew knew Clamant "hit his back" and "did something else to it."

19. Mr. H[Redacted] testified that he did not pull Claimant out of the truck on October 11, 2019. That said, he did acknowledge that after he opened Claimant's door, Claimant fell out of the truck and landed on the hard ground below. He testified that he thought he smelled cannabis in the truck despite everyone in the truck denying using cannabis. Mr. H[Redacted] testified that Claimant laid on the ground for at least a minute after falling, and that Claimant fell from two-and-a-half to three feet. Mr. H[Redacted] testified that it was dark inside the truck, and instead of simply turning on the light to see if anyone was using cannabis, he felt it best to exit the truck and quickly open Claimant's door.

20. Mr. W[Redacted] testified that he examined Claimant after the incident and that Claimant was not injured. He also testified that Claimant declined to be evaluated by the nearby EMT. He also testified that Claimant secretly disclosed to him during the Crew's "Death March" that he was experiencing back pain. Mr. W[Redacted] still works for Employer and his testimony conflicts with Claimant's testimony and the testimony of Claimant's co-workers. Based on the totality of the evidence, the ALJ does not find Mr. W[Redacted]'s testimony to be credible regarding Claimant declining to be evaluated by an EMT and that Claimant complained of back pain during the "Death March."

21. On October 14, 2019, Claimant sought medical care at the Providence Medford Medical Center Emergency Department ("ER"). He reported low back pain that began three days prior (i.e., October 11, 2019). He reported the mechanism of injury as being pulled

out of a truck and slammed to the ground by a coworker while working as a wildland firefighter in Colorado. He disclosed his prior lumbar injuries, but that he was not suffering from chronic lumbar pain at the time of injury. Claimant underwent lumbar x-ray. He was prescribed lidocaine patches, anti-inflammatories, and pain medication. He was scheduled for a one week follow up evaluation. Cl. Ex. 7: 31-37.

22. Claimant was evaluated by Cynthia Lewis-younger, M.D., on October 21, 2019. He reported lower back and upper gluteal pain that radiated into his legs. Claimant again reported the cause of his symptoms as being assaulted by Mr. H[Redacted] on October 11, 2019. Claimant underwent x-ray of his sacrum and coccyx. He was prescribed NSAIDs and schedule for a follow up to occur in one week. Cl. Ex. 7:38-41.

23. Claimant returned to Dr. Lewis-Younger on November 5, 2019. He reported lumbar pain. Dr. Lewis noted a "discrete mass in the soft tissue about his sacrum." Claimant was given a lumbar injection. He was instructed to continue taking medication, and to return for evaluation in one week. Cl. Ex. 7:42-45.

24. On November 7, 2019, Murri E[Redacted], an Employer representative, emailed Patricia O[Redacted]. (Resp. Ex. M, p. 318.) The subject of the email reflects it relates to Claimant's October 11, 2019, injury. In the email, Ms. E[Redacted] provided the exact description of the incident provided by Claimant. Based on Claimant's testimony, and this email, the employer was again provided notice that Claimant was alleging that he suffered a work injury. Despite being provided notice that Claimant was alleging a work injury, there is no indication the employer provided Claimant a list of designated providers with whom he could treat.

25. On November 12, 2019, Claimant missed his scheduled appointment with Dr. Lewis-Younger, and instead presented to the ER because his lumbar pain was radiating into his left leg with numbness. They discussed Claimant getting an MRI, but at this time Claimant was prescribed medication and informed to follow up with Dr. Lewis-Younger. Cl. Ex. 7:46-51.

26. Claimant returned to Dr. Lewis-Younger on November 18, 2019. He reported lumbar pain with worsening left leg pain. Claimant requested another injection and a walking assistive-device because of his worsening symptoms, but Dr. Lewis-Younger recommended against both until he underwent a lumbar MRI. Cl. Ex. 7: 52-54.

27. On December 3, 2019, Claimant returned for evaluation with Dr. Lewis-Younger. Claimant again reported lumbar pain that radiated into his left leg. He was referred for lumbar MRI and placed on no work status. Cl. Ex. 7:55-57.

28. Claimant underwent an MRI on December 9, 2019. When compared to prior lumbar imaging, there is noted an interval progression of the multilevel discogenic and facet degenerative spondylosis primarily involving the L3-4, L4-5, and L5-S1 levels. There was also a large left paracentral disc extrusion at the L4-5 level that encroached upon the left L5 nerve root and a new annular disc tear involving the posterior L3-4 disc. Cl. Ex. 4: 16.

29. Claimant returned to Dr. Lewis-Younger on December 11, 2019 and received an injection of Toradol. Cl. Ex. 7: 58.

30. On December 28, 2019, Claimant returned to the ER. He again reported low back pain that began in October 2019 after being pulled and thrown off a fire truck. Claimant reported his symptoms were worsening with numbness, tingling, and weakness in his left leg. He also complained of numbness and tingling into his right leg, and bowel and bladder incontinence. As a result of his symptoms, he was referred to orthopedics for a surgical evaluation. Cl. Ex. 59-60.

31. On January 1, 2020, Claimant started working for Liberty Tax. Claimant continued working for Liberty Tax through April 15, 2020. Ex. O: 339-350.

32. Claimant was evaluated by orthopedist Timothy Uschold, M.D., at Southern Oregon Neurosurgical & Spine Associates, P.C., on January 14, 2020. Claimant reported lumbar and left leg pain that began on October 11, 2019 when he was "ripped out of his fire engine" while working as a wildland fire fighter. Claimant also reported numbness and tingling into his left foot, otherwise known as "foot drop." Claimant was referred for lumbar surgery. Cl. Ex. 8: 61-66.

33. On January 24, 2020, Claimant underwent left-sided L4-5 microdiscectomy surgery performed by Dr. Uschold. It is noted that Claimant had a large disc herniation at L4-5, and pars defect at the L5 level. There was also an incidental durotomy, which was repaired. Cl. Ex. 5.

34. Claimant returned to his orthopedist on February 11, 2020, where he was evaluated by Anna Uschold, PA-C. He reported "feeling great" for the first four days post-surgery. Yet the symptoms he experienced pre-operatively had returned. It is noted that Claimant was working light duty as an interpreter for Liberty Tax. Claimant was diagnosed with reactive L5 radiculitis. He was prescribed a Medrol Dosepak and referred for lumbar MRI. Cl. Ex. 8: 67-70.

35. Claimant underwent lumbar MRI on February 13, 2020. Interval left L5 laminotomy changes were noted, with small peripherally enhancing fluid collection at the laminotomy site which probably represented postoperative seroma, abscess, or contained CSF leak. There was also a mild residual or recurrent left paracentral disc extrusion at the L4-5 level that contributed to mild stenosis of the left lateral recess. Cl. Ex. 4: 18.

36. Claimant returned to Dr. Uschold February 17, 2020. Claimant moved a bench at home and reported he "felt like he was electrocuted." The event caused an increase in lower back pain, but Claimant was still experiencing left leg pain post-operatively. Cl. Ex. 8: 71-73.

37. On March 9, 2020, Claimant retuned to Dr. Uschold. He reported that his left leg pain had mostly resolved post-surgery, but suddenly returned earlier in the week. The pain was severe and had no specific cause. Claimant reported the pain was the same as the pain he had before surgery. He was referred for an MRI. Cl. Ex. 8: 83-87.

38. Claimant underwent another post-operative MRI on March 12, 2020. The MRI showed a residual and recurrent medium-sized central/left paracentral disc extrusion with minimal caudal migration at L4-5 that was enlarged slightly and resulted in increased, now moderate, narrowing of the left lateral recess. The disc extrusion appeared to contact the traversing left L5 nerve root. Cl. Ex. 4: 20-21.

39. Claimant returned to Dr. Uschold for evaluation on March 17, 2020. Dr. Uschold reviewed the MRI and opined "his MRI scan shows clear evidence of a progressive left L4-5 disc re-herniation/extrusion." Claimant was referred for a revision microdiscectomy. Cl. Ex. 8: 88-95.

40. Claimant underwent an independent medical exam with Gary Zuehlsdorff, D.O., on April 29, 2020. Dr. Zuehlsdorff opined that Claimant suffered a compensable work injury on October 11, 2019. He also concluded that all medical treatment to Claimant's lumbar spine, and associated radiculopathy since that date was reasonable and necessary medical treatment that was related to the October 11, 2019 work injury.

41. On April 30, 2020, Claimant underwent a second lumbar surgery on April 30, 2020. The procedure consisted of a left revision lumbar decompression microdiscectomy. C. Ex. 6.

42. Because of ongoing pain complaints, Claimant underwent a third lumbar surgery consisting of a fusion.

43. Claimant's lumbar injury was caused by Mr. H[Redacted] either abruptly opening the door of the truck and Claimant falling out and onto the ground or Mr. H[Redacted] abruptly opening the door and pulling Claimant from the truck and Claimant falling out and onto the ground. Either way, the injury arose out of and occurred within the course and scope of Claimant's employment.

44. The injury occurred while Claimant was on the clock and within the course and scope of his employment.

45. The injury occurred while Claimant was performing a work duty that arose out of his employment contract with Employer.

46. The incident or altercation did not result from a personal dispute. The incident occurred because of Mr. H[Redacted]'s actions and his belief that Claimant was vaping cannabis.

47. Claimant's testimony is found to be internally consistent and consistent with the medical records. As a result, the ALJ finds Claimant's statements contained in his medical records and his testimony to be credible.

48. The ALJ also finds the testimony of Mr. B[Redacted] and Mr. B[Redacted] to be credible regarding the fact that Claimant fell out of the truck and landed on the ground and suffered an injury. The ALJ does not, however, credit their testimony to the extent that they say they witnessed Mr. H[Redacted] pull Claimant out of the truck and throw Claimant to the ground. The ALJ does not find their testimony about that aspect to be reliable since it was dark when the incident occurred and there was insufficient evidence submitted to demonstrate that they were looking at Claimant when the incident occurred. That said, the exact details of the incident or altercation are irrelevant because it is undisputed that Mr. H[Redacted] opened the truck door and Claimant was either pulled out of the truck or fell out of the truck and landed on the hard ground.

49. Dr. Zuehlsdorff credibly concluded that Claimant's treatment, including the surgeries, were reasonable and necessary medical care that resulted from the incident at work that occurred on October 11, 2019. In addition, Dr. Zuehlsdorff credibly concluded that Claimant did not suffer an intervening injury when he felt a sharp pain in his back moving a bench roughly three weeks after the first surgery.

50. The ALJ finds that the incident caused an injury that necessitated the need for medical treatment. The ALJ finds that the treatment received by Claimant has been reasonable and necessary to cure Claimant from the effects of his back injury that occurred when he was either pulled from the truck or fell out of the truck and landed on the ground. This finding is also supported by the opinion of Dr. Zuehlsdorff – whose opinion was not contradicted by any other physician.

51. Claimant is entitled to all reasonable and necessary medical care that stems from his compensable work injury, including the three lumbar surgeries he has undergone since the injury occurred on October 11, 2019. Again, no credible and evidence was submitted that indicated the treatment Claimant has received was not reasonable, necessary, and related to his work injury.

52. As admitted by Respondents, all medical care Claimant has received to his lumbar spine since October 11, 2019 has been provided by authorized providers.

53. As of October 12, 2019, Claimant's work injury precluded Claimant from performing his regular job duties as a fire fighter. Claimant's wage loss is not attributable to his decision to leave the jobsite and seek medical treatment after the accident. As a result, Claimant is entitled to temporary disability benefits as of October 12, 2019.

54. Based on the evidence submitted at hearing, Claimant is entitled to temporary total disability benefits from October 12, 2019, through December 31, 2019. Claimant worked for Liberty Tax from January 1, 2020 through April 15, 2020. As result, Claimant is entitled to temporary partial disability benefits during that time. As of April 16, 2020, Claimant's right to temporary total disability benefits resumed and he is entitled to such benefits until the one of the termination events listed in C.R.S. 8-42-105 occurs. These benefits are subject to apportionment or offset for unemployment benefits Claimant has received since October 11, 2019.

55. Under the stipulation between the parties, Claimant's average weekly wage is $1,411.00.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence

is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant suffered a compensable injury.

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000).

An injury that results from a risk of employment that is directly tied to the work itself is compensable. *See City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Moreover, actions such as eating, sleeping, resting, washing, toileting, seeking fresh air, getting a drink of water, and keeping warm have been held to be incidental to employment under the "personal comfort" doctrine. *In re Question Submitted by U.S. Court of Appeals*, 759 P.2d 17, 22-23 (Colo. 1988); *Industrial Commission v. Golden Cycle Corp.*, 246 P.2d 902 (1952). Colorado appellate courts consistently have held that under the personal comfort doctrine, a resulting injury arises out of and in the course of the employment while the employee is on the employer's premises ministering to personal necessities. *Industrial Commission v. Golden Cycle Corp., supra*; *Stribling v. Home Depot USA, Inc.*, W.C. No. 4-597-408 (October 13, 2004). Underlying the personal comfort doctrine is the assumption that "personal comfort" is necessary to maintain an employee's health and is indirectly conducive to the employer's purposes. *See Ocean Accident & Guaranty Corp. v. Pallaro*, 66 Colo. 190, 180 P. 95 (1919). Further, it is sufficient if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of employment. *Cf. Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo. App. 1995). This includes discretionary activities on the part of the employee which do not have any duty component and are unrelated to any specific benefit to the employer. *Cf. City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

The law has identified three categories of causation for willful work-place assaults or altercations. The first category are incidents that have an inherent connection to the employment. In *Re Questions Submitted by U.S. Court of Appeals, supra*; *Moorhead Machinery & Boiler Co. v. Del Valle*, 934 P.2d 861 (Colo. App. 1996). Under this category injuries suffered during these incidents are compensable if the altercation grew out of an argument over performance of work, possession of work tools or equipment, delivery of a paycheck, quitting or being terminated.

The second category are incidents that result from a “neutral force”. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991); *In Re Questions Submitted by U.S. Court of Appeals, supra*. A “neutral force” is one that is neither particular to the claimant nor the employment. Instead, the only relationship to the employment is that the conditions and obligations of the employment placed the claimant in the position where he was attacked or where the incident occurred.

This type of altercation has been analyzed under the “positional risk” doctrine. The “positional risk” doctrine is applied to injuries which result from stray bullets, roving lunatics, drunks, assaults by mistake and completely unexplained attacks. *In Re Questions Submitted by the U.S. Court of Appeals, supra*. In such circumstances, the force is neutral because any person then and there present would have been assaulted or subject to the altercation. *Id.*

The third category of assaults or altercations result from a private dispute which the parties import to the workplace. A workplace assault or altercation is compensable unless it arises from a private or personal dispute. *In Re Questions Submitted by U.S. Court of Appeals, supra*. Thus, the critical issue is whether the altercation was motivated by a private dispute imported to the workplace.

As found, Claimant began working for Employer on October 2, 2019, when he flew into Colorado from Oregon. He was contracted to work 14 straight days fighting the Decker Fire. On October 11, 2019, Claimant was staging with the Crew, awaiting scouts to return with instructions on how to best combat the fire that night. Claimant and others were in their respective trucks, keeping warm and occupying their time by watching Netflix on a phone. The Crew was observing the Decker Fire in the distance, ready to roll out at a moment’s notice.

As found, Claimant was “clocked in” at the time of the incident because he was staging with the Crew at Rainbow Road Trail. At the time of the incident, Claimant was where the Employer instructed him to be, performing the job duty his Employer instructed him to do, because the Employer required him to ride and stage in the same truck as Mr. H[Redacted]. The evidence establishes Claimant was staying warm inside the truck on a cold Colorado night and staging - placing his activity at the time the injury occurred squarely under the personal comfort doctrine as well as performing work activities.

Claimant is also permitted to use tobacco, and the evidence establishes multiple members of the Crew were doing so on the night of October 11, 2019. Claimant being targeted by Mr. H[Redacted] does not remove him from the course and scope of his employment. *See In re Question Submitted by U.S. Court of Appeals, supra*. There is no evidence Mr. H[Redacted]'s conduct stemmed from a personal dispute. To the contrary, Mr. H[Redacted] denies intentionally assaulting Claimant, instead testifying Claimant simply fell out of the truck when he quickly opened the door. Thus, the incident that injured Claimant is a neutral force because any person sitting where Claimant was when Mr. H[Redacted] opened the rear passenger door would have been subject to Mr. H[Redacted]'s conduct. *See In Re Questions Submitted by U.S. Court of Appeals, supra*. The ALJ concludes that staging inside his assigned fire truck and being involved in an altercation with a coworker who mistakenly assumed Claimant was vaping cannabis is a risk of employment that is directly tied to Claimant's job of staging in preparation of fighting the Decker Fire.

The ALJ finds Claimant's hearing testimony to be credible and persuasive for many reasons. First, Claimant alleges he injured his lower back when he was pulled from the truck by Mr. H[Redacted] and thrown to ground. Claimant's testimony of either being pulled from the truck or falling out of the truck and landing on the ground was corroborated by co-employee's Mr. B[Redacted], Mr. B[Redacted], and Mr. S[Redacted]. Although it was dark, Mr. B[Redacted] did testify that he witnessed the incident. Mr. B[Redacted] also testified to seeing the altercation from two trucks over. And while the ALJ did not find that Mr. B[Redacted] and Mr. B[Redacted] saw the initial actions which caused Claimant to land on the ground, they did see Claimant on the ground after either being pulled from the truck or falling from the truck.

Second, Claimant's testimony that he felt immediate pain in his lower back was corroborated by Mr. B[Redacted], Mr. B[Redacted], and Mr. S[Redacted]. Both Mr. B[Redacted] and Mr. B[Redacted] corroborated Claimant's testimony that after he hit the ground, he laid there in shock. Further, that once Claimant got to his feet he was in noticeable back pain. Mr. S[Redacted] corroborated this testimony by stating that everyone on the Crew knew Claimant injured his back as a result of the incident involving he and Mr. H[Redacted].

Third, Claimant suddenly falling out of the truck and landing on his back was corroborated by Mr. H[Redacted], the alleged perpetrator of the incident. Mr. H[Redacted] corroborated that Claimant was roughly three feet high, sitting in the truck when he fell to the ground. He also corroborated that Claimant laid on the ground for at least a minute after he hit the ground.

Fourth, Mr. B[Redacted] and Mr. B[Redacted] corroborated Claimant's testimony that he informed Mr. S[Redacted] that his back was hurting shortly after the incident occurred. Further, that Mr. S[Redacted] did nothing to address the situation beyond telling Claimant to suck it and up and go fight Mr. H[Redacted] if he has a problem with what happened.

Fifth, Mr. B[Redacted] corroborated Claimant's testimony that he experienced back pain throughout the trip from Colorado to Idaho, which required pulling over multiple times to allow Claimant to address his back pain by stretching or walking around.

The ALJ finds the majority of Mr. B[Redacted] and Mr. B[Redacted]'s testimony to be credible and persuasive because neither still works for Employer, and there is no credible evidence submitted that Mr. B[Redacted] and Mr. B[Redacted] were friends with Claimant outside of work. Nor is there any evidence Mr. B[Redacted] and Mr. B[Redacted] knew Claimant outside the 11 days they all worked together on the Decker Fire. Claimant lives in Oregon. Mr. B[Redacted] and Mr. B[Redacted] live in Idaho. There is no evidence the three have any other personal or work relationship beyond their time working the Decker Fire. Thus, the ALJ finds Mr. B[Redacted] and Mr. B[Redacted] to be, for the most part, impartial witnesses because neither is beholden to Employer for ongoing employment and were not friends of Claimant.

As a result, the ALJ concludes Claimant established by a preponderance of the evidence that he suffered a compensable injury and injured his lumbar spine during the course and scope of his employment while performing a work activity on October 11, 2019 when he was either pulled out of his fire truck and thrown to the ground or fell out of the fire truck when the door was opened abruptly by Mr. H[Redacted].

II. Whether Claimant is entitled to reasonable and necessary medical treatment.

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a),

C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ*. Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

As found, Claimant suffered a compensable injury when he was pulled from his fire truck and struck the ground. As found, the injury led to a herniated L4-5 disc that has required multiple surgeries to repair.

Claimant suffered two previous lumbar injuries. The first in 2011. The second in December 2018. X-ray from December 13, 2018 indicates Claimant did have degeneration in his lower lumbar spine. Claimant testified he pulled a back muscle lifting a heavy chest, and the only treatment he received was one visit to the ER where he received the x-ray. There is no medical evidence that indicates Claimant received any lumbar treatment in the five years before 2018, or the months between December 2018 and October 14, 2019. The overwhelming evidence supports Claimant's lumbar spine was not an ongoing issue when the industrial injury occurred on October 11, 2019.

As found, Claimant worked for Diamond Fire in Oregon for the entire 2019 fire season, working up to September 18, 219. Claimant worked his full job duties. Claimant was able to perform the full job duties required of him by Employer leading up to the incident on October 11, 2019. Most notably, he was able to complete the "death march" in full gear.

As found, Claimant was unable to seek medical care until October 14, 2019 because he was tasked with getting back to Oregon to seek medical care. The injury happened the night of October 11, 2019. He spent the day of October 12, 2019 traveling to Idaho where he stayed with Mr. B[Redacted] for a night. He was unable to fly from Idaho to Oregon until the night of October 13, 2019. He sought medical care the first day he was back in Oregon on October 14, 2019.

As found, when Claimant sought medical care, he disclosed his prior lumbar injuries, but denied any ongoing pain from those injuries. Claimant reported that his lumbar pain was caused by being thrown to the ground by Mr. H[Redacted] on October 11, 2019. Claimant has consistently reported to every provider he has seen since October 11, 2019 that his lumbar pain and radiculopathy were caused by being thrown to the ground on October 11, 2019. Further, Dr. Zuehlsdorff is the only level II accredited doctor who has evaluated Claimant for his work injury and treatment. Dr. Zuehlsdorff credibly reported that Claimant's treatment, including the surgeries, were reasonable and necessary medical care that resulted from the incident that occurred on October 11, 2019. In addition, Dr. Zuehlsdorff credibly concluded that Claimant did not suffer an intervening injury when he felt a sharp pain in his back moving a bench roughly three weeks after the first surgery.

As a result, the ALJ concludes Claimant has established by a preponderance of the evidence that the Respondents are liable for all reasonable and necessary medical treatment to treat Claimant's lumbar spine, including the three lumbar surgeries he has undergone since the incident on October 11, 2019.

III. Whether Claimant is entitled to temporary disability benefits.

IV. Whether Claimant is at-fault for his wage loss and not entitled to temporary disability benefits.

To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Se*e Sections 8-42-(1)(g), 8-42-105(4); *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004); *City of Colorado Springs v. Industrial Claim Appeals Office*, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a) requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits.

The term "disability" connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his or her prior work. *Culver v. Ace Electric*, 971 P.2d 641, 649 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his or her regular employment. *Ortiz v. Charles J. Murphy & Co*., 964 P.2d 595, 597 (Colo. App. 1998) (citing Ricks v. Industrial Claim Appeals Office, P.2d 1118 (Colo. App. 1991)). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831, 833 (Colo. App. 1997). TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. § 8-42-105(3)(a)-(d), C.R.S.

As found, Claimant left the Decker Fire on October 12, 2019, to seek medical care and because he feared for his safety. When he reported the injury to Mr. S[Redacted] he was not offered medical care. Instead, he was told to suck it up and take matters into his own hands in the form of fighting if he had an issue with Mr. H[Redacted]. Claimant testimony is corroborated by both Mr. B[Redacted] and Mr. B[Redacted].

Claimant leaving the Decker Fire under these circumstances cannot be equated with him being responsible for his termination. No reasonable person would believe he or she is responsible for his or her termination when that person is injured in an altercation at work, nothing is done to the perpetrator, and no medical care is tendered.

As found, Claimant has proven by the preponderance of the evidence that the industrial injury on October 11, 2019, caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. Claimant was unable to work after October 11, 2019 and perform his regular job duties as a wildlands firefighter as a result of his work injury. His treating physician placed him completely off work on December 3, 2019. He has had three lumbar surgeries since that date, all of which have led to disability and impairment to his wage-earning capacity. Claimant has not been placed at MMI. Claimant has not returned to full duty. Claimant is not responsible for any termination or subsequent wage loss.

Claimant credibly testified that he worked modified duty during the 2020 tax season, and that he has received unemployment benefits since November 2020. Claimant is entitled to temporary partial disability benefits for the dates he returned to modified duty. Respondent is entitled to an offset equal to the amount of unemployment benefits Claimant has received since November 2020.

As found, Claimant is entitled to temporary total disability benefits from October 12, 2019, through December 31, 2019. Claimant worked for Liberty Tax from January 1, 2020 through April 15, 2020. As result, Claimant is entitled to temporary partial disability benefits during that time. As of April 16, 2020, Claimant's right to temporary total disability benefits resumed and he is entitled to such benefits until one of the termination events listed in C.R.S. 8-42-105 occurs. These benefits are subject to apportionment or offset for unemployment benefits Claimant has received since October 11, 2019.

ORDER

Based on the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury on October 11, 2019.
2. Respondents shall pay Claimant's reasonable and necessary medical treatment which includes the three lumbar surgeries Claimant has undergone. Respondents shall pay for this medical treatment in accordance with the Colorado Medical Fee Schedule of the Division of Workers' Compensation.
3. Respondents shall pay Claimant temporary total disability benefits from October 12, 2019 through December 31, 2019.
4. Respondents shall pay Claimant temporary partial disability benefits from January 1, 2020, through April 15, 2020.
5. Respondents shall pay Claimant temporary total disability benefits from April 16, 2020 and continuing until terminated by law.
6. Claimant's average weekly wage is $1,411.00. As a result, temporary disability benefits shall be paid based on an average weekly wage of $1,411.00.
7. Respondents are entitled to take the appropriate offset against Claimant's disability benefits based on his receipt of unemployment benefits.
8. Insurer shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.
9. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 23, 2021.

Denver, CO 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that she sustained a compensable occupational disease in the course and scope and arising out of her employment with Employer.

II. If Claimant proved she sustained a compensable occupational disease, whether she is entitled to a left wrist carpal tunnel release surgery recommended by Dr. Timothy Pater.

FINDINGS OF FACT

1. Claimant is a 53-year-old, right hand dominant female who worked for Employer as a quality inspector. Claimant began working for Employer on July 29, 2004. Claimant's primary job was to either visually inspect, or visually inspect and physically test, finished cable/harness assemblies. Claimant's secondary job tasks included file management, paperwork, administrative duties, and at times, production.

2. On May 4, 2020, Claimant reported to Employer suffering from left wrist issues as a result of repetitive movement.

3. On May 12, 2020, Claimant presented to Keith Meier, NP at Concentra with left wrist complaints. Claimant reported that her wrist complaints were the result of repetitive activity and in the past six months she had been having pain with numbness and tingling in her left hand and wrist, which had worsened over the past three months. NP Meier noted Claimant worked 40 hours a week, used a lot of tools and that she may do 100 cables an hour. Claimant complained of pain in the left wrist with constant dull, aching and stinging pain radiating to the left hand. Claimant further reported grip weakness, numbness and weakness of the hand, stiffness and tenderness. She reported experiencing the same feelings in her right hand to a much lesser extent. On physical examination of the left hand/wrist, NP Meier noted tenderness in the ulnar and palmar aspects, decreased sensation to light touch of the median nerve distribution on palpation, full range of motion with pain, and sensation to light touch diminished in left hand. Phalen's and Tinel's carpel tests were positive. NP Meier gave an assessment of right (*sic*)[1] wrist strain and paresthesia of the thumb of the left hand. He referred Claimant for an EMG of the bilateral upper extremities and physical therapy. NP Meier opined that Claimant's condition is work-related with greater than 50% medical probability, noting that it appeared to meet the Colorado Medical Treatment Guidelines ("MTG") for cumulative

[1] Based on the findings and context of the May 12, 2020 medical record, the ALJ infers that NP Meier's assessment of a wrist strain of the right wrist a typographical error and that the diagnosis is in reference to Claimant's left wrist.

trauma. He requested a job description from Employer and released Claimant to modified duty.

4. On May 27, 2020, Claimant saw Michael B. Tracy, D.O. and underwent an EMG/NCS. Claimant reported that she worked for Employer for the past 15 years testing up to 100 cables per hour. She reported that, in November 2019, she began developing pain in her left wrist and numbness, paresthesia and weakness in her left hand. Dr. Tracy concluded that EMG/NCS showed electrophysiological evidence of severe left median nerve compromise at or near the wrist/carpal tunnel affecting the sensory and motor components. He noted that the findings showed active signs of denervation with immature reinnervation potentials, suggesting subacute etiology consistent with patient history. Dr. Tracy recommended that Claimant undergo surgical decompression.

5. Claimant presented to Lori Long Miller, M.D. at Concentra on June 1, 2020. Dr. Miller noted that the EMG/NCS showed severe medial neuropathy. She gave an assessment of carpal tunnel syndrome of the left wrist and referred Claimant to hand specialist Dr. Pater.

6. Claimant presented to Dr. Pater on June 8, 2020. Claimant reported finger and hand pain that began at work and had been persistent for months. Dr. Pater opined that Claimant demonstrates symptoms and clinical exam findings consistent with carpal tunnel syndrome. He requested authorization for left carpal tunnel release surgery on June 10, 2020.

7. On June 9, 2020, Jill Adams, CRC, CCM, CEAS II, performed a job demand analysis ("JDA") of Claimant's position with Employer. Ms. Adams interviewed Claimant as part of her analysis, but observed another employee performing Claimant's usual duties because Claimant was on modified duty. Ms. Adams described Claimant's quality inspector job generally as "inspects and tests completed cables/harness assemblies, inject mold assemblies, and mechanical sub-assemblies related to computer, medical, telecommunications, and automotive cables." (Ex. F, p. 034) The position was further described as sedentary.

8. Under the Essential Functions and Physical Demands section of her June 9, 2020 report, Ms. Adams indicated that the quality inspector job had three essential functions: visual inspections, testing inspections, and production. The essential functions for each of those three job tasks were more specifically described as follows:

a. Visual Inspections: The visual inspection essential functions were 50-60% of Claimant's job tasks, and the visual inspection process involved Claimant obtaining a box of cables from the intake area/cart, removing the box and walking to her work area, removing the cable assemblies from the box, and performing a visual inspection of the cable to ensure that each assembly was correctly performed and that each cable was in working order. Claimant then would replace the cable into the box and obtain forms to complete the order. Claimant would then return the box to the cart when the order was completed. The boxes typically weighed less than ten pounds.

b. Testing Inspections: Testing inspections involved obtaining boxes of cables from the intake area/cart then, at her designated work area, removing the cable to be tested from the box, and then, using outlets at her desk, plugging and unplugging each cable to perform the testing. Claimant would adjust her machine as needed, and she may access other cables from nearby shelves to attach to the one at her desk for proper testing technique. This process required Claimant to grip one end of the cable with her left hand, and plug and unplug the cable with her right hand.

c. Production: The production essential functions involved Claimant assisting with production tasks if needed when her inspection work was low.

9. Ms. Adams' June 9, 2020 JDA report specifically describes the quality inspector demands for lifting/carrying forces, total body pushing/pulling forces, upper extremity pushing/pulling forces, gripping and coupling forces, and reaching and work environment conditions. It also summarizes the quality inspector position's physical demands, and then applies a Risk Factor Assessment analysis. The Risk Factor Assessment was based upon information gained through direct interview of Claimant and observation of her job tasks and working environment, as per the MTG. Ms. Adams concluded that Claimant's position did not meet any of the primary or secondary risk factors for development of carpal tunnel syndrome per the MTG for (1) force and repetition/duration, (2) awkward posture and repetition/duration, (3) computer work, (4) use of handheld vibratory power tools and duration, or (5) cold work environment.

10. Claimant saw Dr. Miller on June 15, 2020 and reported that her right hand was beginning to have numbness. Dr. Miller continued Claimant's restrictions.

11. On June 16, 2020, Davis Hurley, M.D. performed a physician advisor review. He reviewed Claimant's medical records and the June 9, 2020 JDA Dr. Hurley noted that, although Claimant's medical records are consistent with the diagnosis of carpal tunnel syndrome, no primary or secondary risk factors were identified in the JDA to suggest Claimant suffered a work-related repetitive motion injury. Accordingly, Dr. Hurley opined that, while the treatment recommendations are medically reasonable, appropriate and indicated, the treatment is not work-related.

12. Respondents filed a Notice of Contest on June 24, 2020.

13. On September 14, 2020, Ms. Adams performed a follow-up JDA. Ms. Adams issued a second JDA report on September 15, 2020. Ms. Adams indicated that the second JDA was conducted partly in response to Claimant's interrogatory answers, and partly to ensure a complete and thorough observation of as many inspections as possible using two different observation dates. Ms. Adams addressed several issues Claimant raised in her answers to interrogatories, and she provided more detail as to the process followed

in assessing Claimant’s job functions and risk factors. Ms. Adams noted that, in her answers to interrogatories, Claimant alleged, *inter alia,* that Ms. Adams only stayed for less than a half-hour at the first analysis and that certain parts required more force than found by Ms. Adams. Ms. Adams noted that she used a force gauge and an electronic hand dynamometer to measure hand/pinch force; that Claimant used both hands to perform the visual and testing inspections; that she spent more than a half hour of job observation on her first evaluation, and 2.5 hours on her second; that per an employer representative 60% of Claimant’s inspections were visual, and 40% were a combination of visual inspections and testing; that Claimant’s pinch force was not constant; that visual inspections required nothing more than a simple grasp; that order sizes varied; that each order required different fine motor skills; and that in addition to inspections, Claimant regularly performed file management tasks.

14. Ms. Adams updated her risk factor analysis based on the additional information and detailed exactly how the risk factor analysis was conducted for each risk factor. She again concluded that Claimant’s position did not meet any of the MTG primary or secondary risk factors for the development of carpal tunnel syndrome for force and repetition/duration, awkward posture and repetition/duration, computer work, use of handheld vibratory power tools and duration, or cold work environment.

15. Claimant quit her employment with Employer as of September 21, 2020.

16. On September 25, 2020, Jonathan L. Sollender, M.D. performed an Independent Medical Examination (“IME”) at the request of Respondents. As part of his evaluation, Dr. Sollender took a history from Clamant, performed a physical examination, and reviewed Claimant’s records dated May 12, 2020 through September 21, 2020, including both JDA reports prepared by Ms. Adams. Dr. Sollender noted Claimant has two previous wrist-related claims, one in 1998 for bilateral wrist and one in 1999 for the right wrist. Claimant complained of bilateral wrist issues. Dr. Sollender documented Claimant’s description of her job duties. Dr. Sollender agreed that Claimant has left carpal tunnel syndrome, and requires surgery; however, he opined that Claimant’s condition is non-industrial in nature. Dr. Sollender noted that both JDAs reflect insufficient exposure to force, repetition, awkward posture, computer work, vibration or cold exposure to support any allegation that Claimant’s work is responsible for her left or right upper extremity complaints. In reaching this opinion, Dr. Sollender noted that he was aware of Claimant’s concerns with the first JDA, stating the second JDA addressed Claimant’s concerns while confirming that there were no primary or secondary risk factors. He noted that the second JDA showed even less exposure than originally documented.

17. Dr. Sollender detailed a six-step causation analysis from the MTG for Cumulative Trauma Conditions (WCRP Rule 17, Exhibit 5). He explained that the first step is to determine the diagnosis, which he noted is carpal tunnel syndrome, in Claimant’s case. Dr. Sollender explained the next step is to clearly define Claimant’s job duties, which he sated he did by interviewing Claimant, and reviewing the JDAs. The third step was to complete the required comparison/match between the risk factors identified by the Risk Factor Definition Table and the established diagnosis. Dr. Sollender noted that each of

the four sub-categories of work Claimant performed were carefully evaluated and her exposure times carefully documented, and her job was observed for sufficient time to gather objective evidence as to hand and upper extremity usage. Dr. Sollender indicated that "in doing this match there was no exposure to repetition, awkward posture or application of force (as defined in CO DOWC Rule 17, Exhibit 5). This goes for both defined Primary and Secondary Risk Factors." (Ex L. p., 70). Dr. Sollender then went through Step 4 (causal analysis of Claimant's risk factors identified in Step 2 to Secondary Risk Factor definitions). He noted that since no Secondary Risk Factors were present, the Risk Factor definition Table was not utilized. In applying Step 5, Dr. Sollender indicated that because an evidence-based medical causation relationship had not been established through Steps 1-4, and no Secondary Risk Factors had been identified, the analysis ended, as the claim lacked validity as a work-related claim.

18. On July 6, 2020, Dr. Miller discharged Claimant from her care as Claimant's claim had been denied.

19. Claimant testified at hearing that she always had a good work ethic, she worked in an efficient manner, that she had been in the same position for years, and in her opinion her condition was work related because her non-dominant hand is the hand that is injured. Claimant indicated that in order for her to perform her job properly, she must flex her left wrist all the time. She stated she continues to have many of the same wrist symptoms, she has not worked her usual position for more than five months, and there has not really been improvement. Claimant believes the only thing preventing her from getting surgery is the work analysis that was done in June, and lasted only 30 to 45 minutes. Claimant alleges the JDAs are not accurate representations of her position.

20. Claimant further testified that her left wrist problem started in November 2019. She stated her job duties as a quality inspector included visual inspections and testing completely assembled cables and harnesses, and she admitted that visual inspections involved simply holding the cables in her hands, and inspecting the cables with a magnifying glass, without constant flexion, repetitive motion, or hand force. Claimant testified that for the physical testing, she would take a cable, plug it into an outlet on her desk, wait a few moments, and then unplug that cable. She admitted her job also involved completing paperwork, filling orders, and managing files. She believes her job required more testing inspections than visual inspections. She testified that her inspections varied day-to-day. Claimant indicated that Mr. J[Redacted] was the head of quality assurance for Employer for more than 15 years, and she agreed that Mr. J[Redacted] is in a position to properly estimate the number visual inspections versus testing inspections she performed by looking at the order forms she completed. Claimant was asked if she would have reason to disagree with Mr. J[Redacted] if he testified that he pulled Claimant's orders for the first three months of 2020, and those orders reflect that Claimant visually inspected 65% of the orders, and physically tested 35% of those orders. Claimant indicated that she would agree with that testimony, but her work varied, and some days she probably completed more physical testing than visual inspections.

21. J[Redacted] testified at hearing on behalf of Respondents. Mr. J[Redacted] is in charge of quality assurance at Employer, and is responsible for new incoming materials, auditing, and document control. Mr. J[Redacted] has access to the company inspection logs and is familiar with the quality inspector position Claimant performed. He worked with and around Claimant, and is familiar with the functional requirements and physical demands of Claimant's position. He testified that the visual inspections are not hand intensive, and he described the physical testing as being slightly more hand intensive, as it requires the inspector to plug and unplug connectors. Mr. J[Redacted] confirmed that he was the employer representative who notified Ms. Adams that the quality inspector position was 60% visual inspections, and 40% testing and visual inspections. Since that time, he pulled the inspection log sheets for January through March 2020, and determined that during that period 65% of the inspections were visual, and 35% were testing. He indicated that percentage breakdown has been the norm over the years based upon customer order history patterns. Mr. J[Redacted] explained that he did not pull inspection log sheets from 2019 because some of Employer's documents were purged during a relocation. He maintained that based upon his personal knowledge of customer order patterns over the years, Claimant historically performed 60-65% visual inspections, and the remainder was physical testing.

22. B[Redacted] testified at hearing on behalf of Respondents. Ms. B[Redacted] has worked for Employer for 19 years as a floor supervisor, primarily supervising assemblers. She testified that because the quality inspectors are self-sufficient, her involvement with the inspectors primarily involves ensuring they have work and providing direction on what needs to be done and when. Ms. B[Redacted is familiar with the job duties of the quality inspector job, and she reviewed Ms. Adams' JDAs. Ms. B[Redacted] agreed with Mr. J[Redacted] that quality inspectors perform 60-65% visual inspections, and the remainder are testing inspections. She testified that Ms. Adams' September 15, 2020 JDA accurately reflects the demands of the quality inspector position in terms of force, repetitive nature, and positioning. Ms. B[Redacted] testified that Claimant was a good and honest employee, who liked to work quickly and efficiently. She testified that aspects of Claimant's job involved her holding the cable with her left hand, and plugging in the cable with her right.

23. The ALJ finds the testimony of Mr. J[Redacted] and Ms. B[Redacted], as supported by the JDAs, more credible and persuasive than the testimony of Claimant.

24. Claimant failed to prove it is more probable than not she sustained a compensable occupational disease.

25. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard

> to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test. The test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* The onset of a disability occurs when the occupational disease impairs the claimant's ability to perform his regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity. *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App.2002); *In re Leverenz*, WC 4-726-429 (ICAO, July 7, 2010).

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The "rights and liabilities for occupational diseases are governed by the law in effect at the onset of disability." *Henderson v. RSI, Inc.*, 824 P.2d 91, 96 (Colo.App. 1991). The standard for determining the onset of disability is when "the occupational disease impairs the claimant's ability to perform his or her regular employment effectively and properly or when it renders the claimant incapable of returning to work except in a restricted capacity." *City of Colorado Springs v. Industrial Claim Appeals Office*, 89 P.3d 504,506 (Colo. App. 2004). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner,* 12 P.3d at 846. The mere occurrence of symptoms in the workplace does not mandate that the conditions of the employment caused the symptoms or the symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO Aug. 18, 2005).

When evaluating this issue of causation the ALJ may consider the provisions of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, the MTG are not dispositive of the issue of causation and the ALJ need not give them any more weight than he determines they are entitled to in light of the totality of the evidence. *See Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006).

As found, Claimant failed to prove it is more probable than not she sustained a work-related occupational disease. While it is undisputed Claimant suffers from left carpal tunnel syndrome, the preponderant evidence does not establish Claimant's condition was caused by Claimant's employment. Two JDAs were performed in this case, the second of which was performed specifically in part to address issues Claimant had with the first JDA. In performing two JDAs, Ms. Adams had adequate opportunity to assess Claimant's position, and ultimately determined there were no primary or secondary risk factors present for carpal tunnel syndrome. Dr. Sollender performed a detailed causation analysis pursuant to the MTG for Cumulative Trauma Conditions and concluded no work-related casual relationship had been established. While the MTG are not dispositive of the issue of causation, they are instructive and persuasive in light of the totality of the evidence in this case.

The ALJ acknowledges Claimant asserts she performed more testing then visual inspections, that she flexed her wrist all the time, and that her job was extremely repetitive; however, such assertions without further detail and proof were insufficient to establish the requisite causal relationship in light of the credible and persuasive findings of the JDAs, and the testimony of Mr. J[Redacted] and Ms. B[Redacted].

ORDER

1. Claimant failed to establish by a preponderance of the evidence that she sustained a work-related occupational disease. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 23, 2021

Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Did Claimant prove entitlement to TTD benefits commencing October 2, 2020?

- Did Respondents prove Claimant was responsible for termination of his employment?

- Should the admitted AWW be increased to reflect higher wages Claimant earned from subsequent employment?

FINDINGS OF FACT

1. Claimant worked as a part-time stocker and checker at Employer's grocery store in Walsenburg, Colorado. He was hired in mid-December 2019.

2. Claimant suffered an admitted injury to his left clavicle on March 25, 2020 while helping lift an overweight customer who fainted in the store.

3. Claimant continued working after the incident but later noticed pain in his left clavicle. He reported the symptoms to his manager and was directed to the Spanish Peaks Regional Hospital Emergency Department.

4. Claimant was evaluated by Dr. Dunham-Smith at Spanish Peaks Hospital. He reported left-sided neck and clavicle pain from the work accident. Physical examination showed painful range of motion, paraspinous muscle tenderness, and muscle spasm. Dr. Dunham-Smith diagnosed a neck strain and prescribed ibuprofen and a muscle relaxer. She imposed no work restrictions.

5. Claimant was not scheduled to work another shift until the following Monday, March 30, 2020. It was subsequently learned the customer who fainted was diagnosed with COVID-19, so Claimant and several co-workers were instructed to quarantine for fourteen days.

6. Employer voluntarily paid partial wages to the employees who were under quarantine.

7. After completing his quarantine, Claimant returned to work and performed his regular duties for approximately two weeks. Employer was juggling staff and schedules because of COVID-19 and Claimant received fewer hours than he hoped.

8. Claimant failed to report to work as scheduled on April 22, 2020. An unexcused employee absence report dated April 22, 2020 states, "no call no show. Was intoxicated didn't make it home the night before. Called around 5PM that evening. Was scheduled at 6:45 AM. Apologized." Claimant initially testified he did not come to work

because an unexpected schedule change caused a conflict with a side job he had previously lined up. However, Claimant later admitted he did not report to work on April 22 because he had been out drinking the night before. Claimant never returned to work after April 22, 2020. Employer's records document Claimant was a "no call no show" on April 22, 24, and 25, 2020. An entry in Employer's records on April 25, 2020 states, "Quit w/o notice no call no show has not communicated with anyone."

9. Claimant agrees he left his job with Employer and looked for other work because he could not support himself and his son on the low part-time wages he was earning.

10. Claimant quickly found a new job through People Ready at the Vestas manufacturing plant south of Pueblo. He worked as "rigger," assembling and installing rigging for cranes. The job was strenuous and required lifting heavy objects such as slings and shackles weighing up to 50 pounds. Claimant typically worked 50 hours per week. Claimant successfully performed this work from the end of April 2020 until October 2, 2020.

11. After Claimant started working at Vestas he noticed, "There were still significant problems in my chest." Claimant contacted "a couple of doctors" seeking treatment for his ongoing symptoms but was unable to obtain an appointment because he did not have insurance or approval from "workers' comp." Claimant contacted Employer on an undetermined date and requested medical treatment. Employer advised Claimant to return to the Spanish Peak Hospital but Claimant chose not to do so.

12. Claimant has repeatedly denied that his condition worsened between April and October 2020. He testified, "Did my injury get worse? I would not say it got worse, but I did notice that I was still having problems with it." Claimant also affirmed his previous discovery responses wherein he stated, "My condition didn't worsen with the new employer but it also didn't get any better."

13. Insurer filed a General Admission of Liability on August 12, 2020 admitting liability for medical benefits.

14. Given the limited options for providers in Walsenburg, Respondents authorized Claimant to receive treatment from Southern Colorado Clinic. Claimant saw PA-C Emily Rogers at his initial visit on September 8, 2020. Claimant described the accident and his ongoing symptoms. There was no indication of any worsening. Ms. Rogers noted Claimant was "currently working at Vestas Towers without restrictions without issues." Examination showed tenderness to palpation around the medial aspect of the clavicle/sternum with no ecchymosis or swelling. His left shoulder had full range of motion with pain at 160 degrees of flexion and abduction. X-rays showed no acute findings or anything consistent with a seed dissociation. Ms. Rogers diagnosed clavicle pain and a sternoclavicular sprain. She prescribed Voltaren gel and referred Claimant to physical therapy. Even though Claimant had been working without difficulty, Ms. Rogers imposed work restrictions of no lifting over 10 pounds.

15. Claimant saw Dr. Terrence Lakin on September 29, 2020. Claimant told Dr. Lakin his symptoms began on March 25, 2020 and gave no indication of any recent worsening. In fact, Claimant had “improved somewhat” since the first appointment with Ms. Rogers. Dr. Lakin noted mild “fullness” of the paracervical soft tissue and tenderness at the left sternoclavicular joint. Claimant’s left shoulder had essentially full range of motion. Dr. Lakin noted, “Examination today is consistent with left sternoclavicular joint subluxation, perhaps this is getting better but it has been 6 months.” He recommended MRIs of the left shoulder and sternoclavicular joint. He continued Claimant’s 10-pound lifting restriction and added a restriction of no over shoulder work with the left arm.

16. Vestas initially accommodated Claimant’s restrictions but terminated his employment on October 2, 2020 because of “liability” concerns.

17. The MRIs were completed on October 9, 2020. The left shoulder MRI showed some mild tendinopathy, bursitis, and AC joint osteoarthritis. The sternoclavicular MRI was normal except for a small amount of edema and intermuscular fluid adjacent to the medial clavicle.

18. Dr. Lawrence Lesnak performed an IME for Respondents on December 16, 2020. Dr. Lesnak’s examination showed no specific tenderness to palpation over the left sternoclavicular joint and no evidence of any soft tissue or bony abnormality. He noted x-rays and MRIs showed no objective evidence of any trauma related pathology. Dr. Lesnak opined Claimant might have suffered a left sternoclavicular joint sprain or soft tissue strain because of the work accident. He found no current clinical evidence of symptomatic left sternoclavicular joint pathology and thought Claimant’s current symptoms most likely represented some mild myalgias involving the soft tissue surrounding his left medial clavicle. Dr. Lesnak saw no justification for imposing work restrictions in September 2020 because Claimant had been working at Vestas for five months without difficulty and there was no discernible change in his condition. Dr. Lesnak reiterated during his deposition that, “to impose temporary work restrictions after five months of performing what the patient told me was very heavy, strenuous work does not seem to be medically reasonable at all.” Consistent with Claimant’s testimony and discovery responses, Dr. Lesnak opined there was no evidence Claimant’s condition worsened after his termination in April 2020.

19. Respondents proved Claimant was responsible for termination of his employment. Claimant’s termination resulted from volitional actions unrelated to the work injury.

20. Claimant failed to prove his condition worsened after the termination of his employment in April 2020. The clinical findings documented in September 2020 would probably have been noted earlier had Claimant pursued treatment between April and September 2020. The ALJ credits Claimant’s testimony and discovery responses that his condition did not worsen during his work at Vestas. This finding is supported by Dr. Lesnak’s persuasive opinions regarding Claimant’s work capacity and restrictions.

21. Respondents admitted for an average weekly wage (AWW) of $416.27 based on the 14 weeks of work before the injury. The admitted AWW accurately reflects Claimant's earnings at the time of his injury. Claimant's higher earnings at Vestas are not an appropriate touchstone because he is being awarded no indemnity benefits relating to the loss of that employment. Claimant failed to prove a basis to depart from the admitted AWW.

CONCLUSIONS OF LAW

A. Claimant was responsible for termination

Sections 8-42-103(1)(g) and 8-42-105(4)(a) provide, "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." A claimant's responsibility for termination not only provides a basis to terminate temporary disability benefits, but also limits the initial eligibility for TTD. Section 8-42-103(1)(g); *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002); *Valle v. Precision Drilling*, W.C. No. 5-050-714-01 (July 23, 2018). The respondents must prove the claimant was terminated for cause or was responsible for the separation from employment by a preponderance of the evidence. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The concept of "volitional conduct" is not necessarily related to moral turpitude or culpability but merely requires the exercise of some control or choice in the circumstances leading to the discharge. *Richards v. Winter Park Recreational Association*, 919 P.2d 983 (Colo. App. 1996). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for his termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

As found, Respondents proved Claimant was responsible for termination of his employment. Claimant's repeated "no call no shows" were ample justification for his termination on April 25, 2020. Moreover, Claimant agreed he left the job with his Employer to pursue a higher paying job. Although no one would begrudge Claimant's desire to improve his financial standing, his termination was based on his volitional acts unrelated to the work accident.

B. Claimant is not entitled to TTD commencing October 2, 2020

Termination for cause is not a permanent bar to the receipt of temporary disability benefits, and a claimant can reestablish eligibility for TTD by showing a worsened condition that caused a subsequent wage loss. *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004). A post-termination wage loss is "caused by a worsened condition" if the worsening results in limitations which did not exist at the time of the termination, and those limitations cause a limitation on the claimant's temporary earning capacity that did not exist at the time of the termination. *Martinez v. Denver Health*, W.C. No. 4-527-415 (August 8, 2005). The imposition of new work restrictions does not automatically establish a worsening, but is simply one factor to consider when evaluating the preponderance of evidence. *Apex Transportation, Inc. v. Industrial Claim Appeals Office*, 321 P.3d 630 (Colo. App. 2014). The burden of proof to establish a subsequent worsening of condition and consequent wage loss is on the claimant who has been found responsible for a termination. *Green v. Job Site, Inc.*, W.C. No. 4-587-025 (July 19, 2005).

As found, Claimant failed to prove his condition worsened after the termination of his employment in April 2020. The ALJ credits Claimant's testimony and discovery responses that his condition did not worsen during his work at Vestas. This finding is supported by Dr. Lesnak's persuasive opinions regarding Claimant's work capacity and restrictions. Ms. Rogers and Dr. Lakin provided no persuasive explanation for why Claimant suddenly required work restrictions in September 2020 after successfully working a heavy job at Vestas for months. Claimant failed to prove the wage loss commencing October 2, 2020 was caused by a worsening of his condition as opposed to the volitional termination of his employment.

B. Claimant's AWW is $416.27

Section 8-42-102(2), C.R.S. provides compensation shall be based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

As found, the admitted AWW of $416.27 accurately reflects Claimant's earnings at the time of his injury. Claimant's higher earnings at Vestas are not an appropriate touchstone because he is being awarded no indemnity benefits relating to the loss of that employment.

ORDER

It is therefore ordered that:

1. Claimant's request for TTD benefits commencing October 2, 2020 is denied and dismissed.

2. Claimant's average weekly wage if $416.27.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. You may file your Petition to Review electronically by emailing the Petition to Review to the following email address: oac-ptr@state.co.us. If the Petition to Review is emailed to the aforementioned email address, the Petition to Review is deemed filed in Denver pursuant to OACRP 26(A) and Section 8-43-301, C.R.S. If the Petition to Review is filed by email to the proper email address, it need not be mailed to the Denver Office of Administrative Courts. For statutory reference, see Section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: https://oac.colorado.gov/resources/oac-forms

ISSUES

1. Whether Claimant overcame Dr. Counts' DIME opinion on MMI by clear and convincing evidence?

2. Whether Claimant overcame Dr. Counts' DIME opinion on permanent impairment by clear and convincing evidence?

FINDINGS OF FACT

1. On November 29, 2016 Claimant sustained an admitted industrial injury when 600 pounds of sheet metal fell onto Claimant. He was taken to Colorado Mountain Medical with complaints of headache and pain in the right knee, neck, left rib cage, and left shoulder. Jona S. Nykreim, PA-C assessed: mild traumatic brain injury without loss of consciousness, neck pain, right knee pain, laceration of the head, left anterior shoulder pain, and left sided rib pain. Claimant was discharged and instructed to follow up with Edward Dent, M.D.

2. Claimant continued to treat at Colorado Mountain Medical with Dr. Dent on a weekly basis reporting ongoing pain in the neck, shoulder and knee, as well as low back pain. Claimant also reported difficulties with sleep, headaches and concentration.

3. On December 27, 2016 Claimant treated with Dr. Dent and reported improved symptoms with respect to his head injury, but ongoing knee, neck, and left arm symptoms and worsening lumbar pain. Dr. Dent ordered MRIs of Claimant's right knee, left shoulder, cervical spine, and lumbar spine. He subsequently referred Claimant to orthopedic surgeon Richard B. Cunningham, M.D.

4. Claimant first presented to Dr. Cunningham on January 16, 2017. Dr. Cunningham opined Claimant sustained a complete rotator cuff tear/rupture of the left shoulder and strain of the long head of biceps left arm. He recommended Claimant undergo a left shoulder arthroscopic rotator cuff repair and open biceps tenodesis, which was performed by Dr. Cunningham on February 10, 2017.

5. Claimant continued to treat with Dr. Dent. By March 1, 2017 Claimant was reporting resolution of his head injury symptoms, but continued neck, lumbar, and right knee pain.

6. On March 27, 2017 Dr. Cunningham recommended surgery for Claimant's right knee. On May 5, 2017 Claimant underwent a right knee arthroscopy with partial medial and partial lateral meniscectomies, loose body removal, lysis of adhesions, and chondroplasty, performed by Dr. Cunningham.

7. On May 26, 2017 Dr. Dent referred Claimant for chiropractic evaluation and treatment by Scott Raub, D.O. for ongoing lumbar and neck complaints.

8. Claimant presented to Dr. Raub on August 3, 2017 with complaints of neck and lumbar pain, the latter worsened by sitting, bending and lifting. Dr. Raub reviewed Claimant's cervical and lumbar MRIs and noted that the lumbar MRI was "basically unremarkable" with no herniated disc and no significant central or foraminal narrowing. He further noted that there were no facet-type issues on physical exam. Dr. Raub assessment was chronic mechanical low back pain with probable left sacroiliac joint sprain/strain. He opined Claimant's condition would improve over time. Dr. Raub noted that the most aggressive treatment option would be a left sacroiliac joint injection, which Claimant did not want at the time. He recommended Claimant proceed with physical therapy and chiropractic treatment.

9. On October 16, 2017 Claimant resumed physical therapy sessions and reported pain in the left shoulder, lumbar, right knee, and neck. Claimant continued to report low back, neck and left shoulder pain.

10. On December 18, 2017 Dr. Raub requested authorization for a left sacroiliac joint injection, which was denied by Respondents.

11. On February 13, 2018 Dr. Dent noted Claimant's complaints of continued back and left shoulder pain. He referred Claimant back to Dr. Cunningham for evaluation of the shoulder.

12. On April 12, 2018 David Reinhard, M.D., performed an Independent Medical Examination ("IME") at the request of Claimant. Claimant continued to report pain in the left shoulder, right knee, low back, and neck. Dr. Reinhard diagnosed Claimant with, *inter alia*, a lumbar strain and sprain injury with left-sided myofascial pain and dysfunction and left sacroiliac dysfunction. Dr. Reinhard opined that the left sacroiliac injection recommended by Dr. Raub should be authorized as reasonable and necessary. Dr. Reinhard recommended that Claimant receive 1-3 left sacroiliac joint injections and, if the response included a reduction in low back pain, then 12-16 physical therapy sessions to maximize Claimant's low back function. He anticipated that Claimant would have permanent residual impairment for the cervical and lumbar spine injuries, as well as for the left shoulder and right knee.

13. On August 10, 2018 Carlos Cebrian, M.D. performed an IME at the request of Respondents. Dr. Cebrian diagnosed Claimant with, *inter alia,* lumbar spine strain with left SI joint dysfunction. He opined that Claimant was not at MMI and required additional treatment for the lumbar spine in the form of sacroiliac joint injections. Dr. Cebrian opined that if the injections resulted in at least three months of increased, documented functional benefit and at least an 80% initial improvement in pain scales, Claimant could continue with injections and receive a short course of physical therapy. If Claimant did not show

improvement from the injections, he would be at MMI. Dr. Cebrian anticipated Claimant having impairments of the left shoulder, right knee, and lumbar spine.

14. On September 28, 2018 Claimant began treating with Scott Primack, D.O. Dr. Primack performed a computerized outcome analysis to assess Claimant's psychological stressors and physical functioning and opined that the results demonstrated profound psychological stressors. He was unclear if this was a component of the concussion Claimant sustained or perhaps somatization. Regarding the thoracolumbar spine, Dr. Primack noted the MRI demonstrated mild disc bulges at L3-4 and L4-5 with bilateral foraminal narrowing but no significant degenerative changes. He noted that on examination he did not get a sense of any type of sacroiliac dysfunction. Dr. Primack noted that he was "not convinced" interventional spine injections for the lumbar spine would significantly alter Claimant's overall pain symptom complex or function. He recommended Claimant undergo a left shoulder sonographic analysis and EMG/NCS and neuropsychological testing.

15. Claimant underwent sonographic analysis of the shoulders/thoracic outlet on October 15, 2018. Dr. Primack concluded there was no clinical or sonographic evidence of left partial or full-thickness rotator cuff tear, nor any type of left thoracic outlet syndrome. He opined that, at best, there may be a myofascial component at the level of the left shoulder, although there was no evidence of significant shoulder pathology.

16. On October 29, 2018, Claimant presented to neuropsychologist Timothy Shea, Psy.D. Dr. Shea opined Claimant was suffering from depression and anxiety and recommended Clamant undergo counseling and further neuropsychological assessment to evaluate Claimant's cognitive problems.

17. At an October 31, 2018 follow-up evaluation with Dr. Primack, Claimant continued to complain of ongoing pain in the left upper extremity and problems at the sacroiliac joint. Dr. Primack noted that the ultrasound did reveal problems with slight compression of the ulnar nerve at the cubital tunnel on the left side as compared to the right. He opined that Claimant's treatment options for the left upper extremity included wearing a sleeve, further rehabilitation, injections, or a surgical consultation. Dr. Primack noted Claimant was not a candidate for a sacroiliac injection at the time.

18. Dr. Shea conducted a neuropsychological assessment on November 13, 2018, which revealed no clinically significant deficits. Dr. Shea recommended 8-10 sessions of behavioral and cognitive behavioral therapy for Claimant. He noted that if Claimant could adequately engage and manage his mood, he should be able to perform adequately in regard to cognitive functioning. Claimant attended subsequent appointments with Dr. Shea on December 5, 2018, December 12, 2018, December 19, 2018, January 3, 2019, and January 10, 2019. At the January 10, 2019 session, Claimant reported back pain, shoulder pain, frustration and memory issues. Dr. Shea recommended an additional six sessions of behavioral therapy.

19. Claimant returned to Dr. Primack on January 16, 2019, with continued complaints regarding his left elbow, right knee, back, as well as issues with cognition. Dr. Primack opined Claimant was at MMI for his elbow, knee and cognition. He planned to perform a sonographic analysis of Claimant's low back. Using the AMA Guides, Dr. Primack assigned 10% scheduled impairment of the left knee for the chondromalacia patellae (4% whole person), 6% scheduled impairment of the left elbow for sensory loss and deficits (4% whole person), and 5% whole person impairment for disturbances of complex integrated cerebral function. This resulted in a combined 13% whole person impairment.

20. On January 17, 2019, Dr. Primack performed a sonographic analysis of Claimant's thoracolumbar muscles, which revealed two non-work-related lipomas. Dr. Primack opined that there was no specific lumbar spine diagnosis that would necessitate an impairment rating. Based on Claimant's history, clinical examination and functional capacity evaluation, Dr. Primack again opined that Claimant had reached MMI as of January 16, 2019. As maintenance, Dr. Primack recommended Claimant undergo up to four chiropractic sessions for his lumbar spine. He recommended lifting restrictions of 50 pounds occasionally and 25 pounds frequently.

21. Claimant saw Dr. Shea on January 24, 2019, February 28, 2019 and March 7, 2019. At the March 7, 2019 session, Claimant continued to report issues with memory, focus and sleep. He reported some back pain and intermittent flaring of shoulder pain. Dr. Shea noted Claimant had successfully completed treatment, but may require additional therapy sessions upon returning to work for readjustment purposes.

22. Claimant returned to Dr. Primack on March 25, 2019 requesting some form of psychotherapeutic medication. Dr. Primack checked Claimant's computerized outcome analysis scores and compared them to Claimant's October 29, 2018 scores, noting there was "absolutely no change whatsoever." Dr. Primack declined to put Claimant on psychotherapeutics and opined that Claimant remained at MMI.

23. Bryan Counts, M.D. performed a DIME on July 15, 2019. As part of his evaluation, Dr. Counts reviewed Claimant's medical records from the date of injury through Dr. Primack's March 25, 2019 evaluation. Claimant reported to Dr. Counts feeling anxious and depressed, ongoing pain at the left shoulder and low back (rated at 7-10/10 pain levels), ongoing right knee pain that did not prevent mile-long walks, and ongoing memory issues with difficulty finding words. Claimant also reported experiencing headaches 3-4 times per week and mild and intermittent neck symptoms. Claimant estimated that he experienced about 20-30% improvement in symptoms since the date of injury.

24. Dr. Counts diagnosed Claimant with: a traumatic brain injury with brief loss of consciousness; adjustment disorder with major depressive disorder and generalized anxiety disorder; cervical strain; left shoulder rotator cuff and inferior labral tears with tendinosis; status-post bicipital tenodesis; mild left ulnar nerve entrapment at elbow; left sacroiliac strain; right knee meniscal tear and chondromalacia; and chronic pain syndrome. Regarding MMI and treatment, Dr. Counts stated,

> I agree with Dr. Primack, that [Claimant] has been at MMI since 1/16/2019. At this time it is my medical opinion that his psychiatric issues need more treatment I specifically recommend a trial of Zoloft 50 mg in the morning. His ulnar neuropathy and radiating back pain interrupt his sleep, so I would recommend gabapentin at bedtime, beginning with 100 mg nightly and increasing to 600 mg nightly if tolerated and needed.

25. Dr. Counts calculated a 22% whole person impairment using the AMA Guides. The 22% impairment is comprised of 9% scheduled impairment for the left shoulder due to range of motion deficits, 3% scheduled impairment for pain interfering with activity at the peripheral ulnar nerve (under Table 10 and Table 14 of the AMA Guides), 18% scheduled impairment for the left knee for range of motion loss and meniscal surgery (under Table 39 and Table 40 of the AMA Guides), and 10% whole person impairment for emotional disturbances or language difficulties (under Table 1, p. 109 of the AMA Guides). Dr. Counts opined that Claimant did not qualify for a cervical or lumbar impairment rating. Regarding the lumbar spine, Dr. Counts noted Claimant's MRI showed bulging discs with mild bilateral foraminal stenosis at L3-4 and L4-5 with no significant facet arthropathy. He concluded that Claimant's persistent low back pain appeared to be from a left sacroiliac joint strain, which would be unusual to last 2.5 years.

26. Under "Rationale for Decision" Dr. Counts included the following explanation of his impairment rating:

> Today's rating differs from that of Dr. Primack in January of this year in several respects. He did not rate the shoulder, even though there was a surgery as part of this case with residual motion deficits. His knee rating was lower than mine, primarily because he gave no rating for the meniscal surgery. His brain rating was lower than mine, giving only a five percent rating. The language difficulties and emotional disturbances are both high enough to merit a ten percent brain rating.
>
> Regarding the lumbar spine, the persistent low back pain appears to be from a left SI joint strain. It is unusual for this to last 2.5 years. Lumbar spine MRI show bulging discs with mild bilateral foraminal stenosis at L3-4 and L4-5. There was no significant facet arthropathy. Neither Dr. Primack or I chose to rate it. There is very significant depression and some indications of a possible somatoform disorder, so rating the lumbar spine without further psych treatment does not seem prudent. His lumbar spine measurements did not meet validity criteria today, even though his effort seemed fair/good. Sacral motion in flexion and extension were much lower than one would expect with his straight leg raise measurements.

27. As maintenance care, Dr. Counts recommended Claimant be allowed to follow up with Dr. Primack and/or Dr. Shea for the next 12 months. He noted Claimant is a good candidate for psychotropic medications that are non-sedating, recommending Zoloft and Gabapentin.

28. Claimant returned to Dr. Primack on August 26, 2019. Dr. Primack performed a computerized outcome analysis and opined that Claimant remained at his most stable level of functioning. Regarding Claimant's continued left shoulder complaints, Dr. Primack noted Claimant had been working full duty, riding his motorcycle and going to the gym. He recommended Claimant undergo a sonographic analysis to rule out anything further with regards to the work injury. Dr. Primack opined Claimant remained at MMI.

29. On September 3, 2019, Dr. Primack again performed a computerized outcome analysis and a left shoulder sonogram. He noted that the sonogram did not evidence any impingement syndrome, rotator cuff tear or instability. Dr. Primack concluded that Claimant's left shoulder pain was, at best, myofascial in nature. He opined that Claimant was at a stable and stationary level psychologically and physically. Dr. Primack opined that Claimant did not require further treatment and remained at MMI.

30. At a follow-up evaluation with Dr. Primack on October 29, 2019, Claimant reported feeling great and being able to work full duty. Dr. Primack noted Claimant continued to improve on his own and opined that Claimant remained at MMI and could work full duty without restrictions. No further treatment was recommended.

31. On November 29, 2019, L. Barton Goldman, M.D. performed an IME at the request of Claimant. Dr. Goldman reviewed medical records from November 29, 2016 through August 26, 2019. Dr. Goldman opined that Dr. Counts' DIME opinions on MMI and impairment were substantially in error and not in compliance with the AMA Guides. Dr. Goldman opined that Claimant likely was experiencing significant ongoing psychological distress affecting Claimant's function and physical presentation, and that he could be better treated with additional counseling and medication. Claimant reported to him that he was currently not working and had not worked full duty since November 29, 2016. Based on Claimant's reports to him about his symptoms and function, Dr. Goldman noted Dr. Primack was incorrect in indicating Claimant had returned to work full time, and that Dr. Primack was likely overestimating Claimant's functional status. Dr. Goldman opined that it was illogical and contradictory for Dr. Counts' to find Claimant at MMI yet make additional recommendations to improve or address a possible worsening of Claimant's biopsychosocial function. Dr. Goldman stated that the psychosocial care Claimant received was efficient but likely suboptimal based on Dr. Goldman's own experience and the recommendations in the Medical Treatment Guidelines, which document that treatment of a significant adjustment disorder and/or major depressive disorder can often take at minimum two months but often up to six months.

32. Dr. Goldman agreed that Claimant did not sustain any cervical impairment. He opined that Dr. Counts' and Dr. Primack's rating of the left ulnar nerve did not make sense, as the EMG/NCS of the left upper extremity was deemed non-diagnostic. Dr. Goldman further opined that Claimant's brain impairment should instead be calculated as a mental/emotional impairment.

33. Regarding the lumbar spine, Dr. Goldman opined that Dr. Counts should have provided a provisional impairment rating for a Table 53 diagnosis and range of motion deficits based on lumbosacral extension and bilateral lateral flexion range of motion, while requesting that Claimant return for another visit to recheck his range of motion. He noted that, on his examination, Claimant gave good effort and the low back, shoulder and knee measurements were as good or better than those noted by Dr. Counts. He further noted that Claimant's straight leg raising measurements on his exam did not meet validity criteria. Dr. Goldman assessed a provisional lumbar impairment of 10% whole person, comprised of 5% under Table 53 II B, and 5% for range of motion deficits.

34. Dr. Goldman opined that Claimant is not at MMI and requires additional psychological and physical care, including psychiatric evaluation, medication, 6-10 biofeedback sessions, cognitive behavioral therapy, a course of intramuscular stimulation and/or trigger point injections, physical therapy, and possibly additional imaging and testing.

35. Claimant testified at hearing that he continues to experience ongoing symptoms in his left shoulder, right knee, and low back. Claimant stated he experiences left shoulder tingling, numbness, cracking, popping, decreased range of motion and function in the left extremity as compared to the right. He testified that his right knee is painful with weather changes and will crack, pop and give out with bending, walking and weightbearing. He stated he experiences daily low back pain that radiates down left leg and reduced range of motion. Claimant testified he has issues with sleeping, memory, fumbling words, and depression. Claimant is currently working, which he testified increases his symptoms. Regarding his reports to Dr. Primack, Claimant stated that at the August 26, 2019, he told Dr. Primack he was going to start trying to go to the gym. Claimant wants to undergo the treatment recommended by Dr. Goldman to get as close as possible to 100%.

36. Dr. Primack testified by post-hearing deposition as a Level II accredited expert in physical medicine and rehabilitation and neuromuscular skeletal medicine. He testified the placed Claimant at MMI on January 16, 2019 because it was clear Claimant had reached a stable, stationary and highest level of function and would not get that much better. Dr. Primack explained that he did not assign an impairment rating for Claimant's lumbar spine as there was no specific diagnosis and no specific deficits. Dr. Primack testified that, although Claimant reported lumbar symptoms in excess of six months and received treatment for the lumbar spine, there was no rigidity or spasms and no clinical correlation of a defined area of pathology. Dr. Primack explained that pain is not rateable under the AMA Guides.

37. Dr. Primack testified that, after the DIME, he continued to opine Claimant maintained MMI because it was clear, based on physical examination and Claimant's perceptions of his overall functioning, that there were not any appreciable changes. Dr. Counts' maintenance recommendations do not change Claimant's MMI status.

38. Dr. Primack opined that Claimant does not require sacroiliac joint injections. He testified he disagreed with the opinion of Dr. Goldman that Claimant required additional

psychological treatment as Claimant has been through a psychometric assessment and neuropsychological consultation with treatment and had improved to a stable and stationary level of functioning given the computerized outcome analysis data. Dr. Primack stated that Dr. Goldman's determination that the psychological treatment Claimant received was suboptimal was based on opinion.

39. Dr. Primack also expressed concern with the vastly different presentation of Claimant at his evaluation on October 29, 2019 and at Dr. Goldman's November 8, 2019 evaluation. He testified that Claimant had reported to him that he was participating in recreational activities, had attempted to ride his motorcycle, and was begging to be returned to full duty with no restrictions, and had been hitting the gym regularly. Based on this, Dr. Primack questioned Dr. Goldman's recommendations for trigger point injections and myofascial release. Dr. Primack disagreed with Dr. Goldman's recommendations for further care, reiterating that Claimant was active and already at a high level of overall functioning.

40. Dr. Primack reviewed Dr. Goldman's IME report and opined the subjective complaints documented therein, as well as Claimant's continued complaints testified to at hearing, do not change his opinion that Claimant continues to be at MMI.

41. Dr. Primack testified there are no errors with Dr. Counts' impairment rating. He explained that Dr. Counts did not err in failing to rate the lumbar spine, as there was no specific diagnosis and thus no Table 53 rating or rating for range of motion deficits. With regard to the difference in his psychological impairment and the impairment assessed by Dr. Counts, Dr. Primack testified that he did not see any error in the application of impairment for cognitive impairment.

42. The ALJ finds the opinions of Drs. Counts and Primack, as supported by the medical records, more credible and persuasive than the opinion of Dr. Goldman and Claimant's testimony.

43. Claimant failed to prove it is highly probable Dr. Counts' DIME opinion on MMI and impairment in incorrect.

44. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.
